

University of Pretoria – Botha, A. (2006)

# **The use of mobile phones to mediate a design experiment in a secondary school**

by

Adele Botha

Submitted in partial fulfilment of the requirements for the degree

Magister Educationis

in

Computer-Integrated Education

in the

Department of Curriculum Studies

Faculty of Education

University of Pretoria

Supervisor: Professor Dr J.C. Cronjé

2006

I dedicate this dissertation to my husband, Phil, and my children, Danielle and Jean-Philippe.

Thank you for always being there...

## **Acknowledgements**

I would like to express my appreciation to the following people who contributed in various ways to this study:

- My supervisor, Professor Cronjé, for his enthusiasm, guidance and support
- My college and friend, Jacqueline Batchelor, who acted as a sounding board for my ideas and who supported me throughout this course
- My friends and family, who strengthened me with their support, prayers and encouragement
- The management and staff of Cornwall Hill College, for making this study possible
- My colleges at Meraka Institute, for their support and fervour
- Elizabeth Makobe, for her unfailing encouragement
- The students who participated in this study and provided the data

**Above all, to God, in humble gratitude and appreciation.**

Figure 4-19: Students' suggestions for making improvements to the MobileED wiki -----	94

## Summary

Current advances in mobile technology have enabled the formation of mobile technology enriched learning environments. This study documents a specific experimental research project in which secondary school learners used mobile cellular phones as a form of mobile technology to create, support and enhance a learning event in physical science studies.

Although students used their own mobile phones for the duration of the research, they could connect to the Mobiled platform used in this study to access information that they had previously created online. Mobile phones therefore served to extend the physical boundaries of the classroom by creating an ubiquitous and personal learning experience for each student. The experimental learning event was central to the design of the research. The iterative component of the design made it possible for the facilitator to operate as a “reflective practitioner” (Reeves, 2005) who could manipulate the components of the lesson in a quest for optimal success.

The data and conclusions of the study confirm that that the texting function of mobile phones may be effective in furthering communication, cooperative learning and access to content.
