Appendix S1 Appendix S1 Supporting tables (Table S1 & S2), figure (Fig. S1) and data (Data S1 and S2).

Table S1. Voucher information and GenBank/EBI accession numbers for trees in southern Africa. Taxa with only genus names are those which are not southern African, but are included to have a representation of the lineage.

Table S2 Presence/absence of five types of diversity metrics within existing phyloregions of southern Africa. Values indicate the number of hotspots cells overlapping phyloregions. CWE = corrected weighted endemism, EDGE = evolutionary distinctiveness and global endangerment, PD = phylogenetic diversity, PE = phylogenetic endemism, SR = species richness.

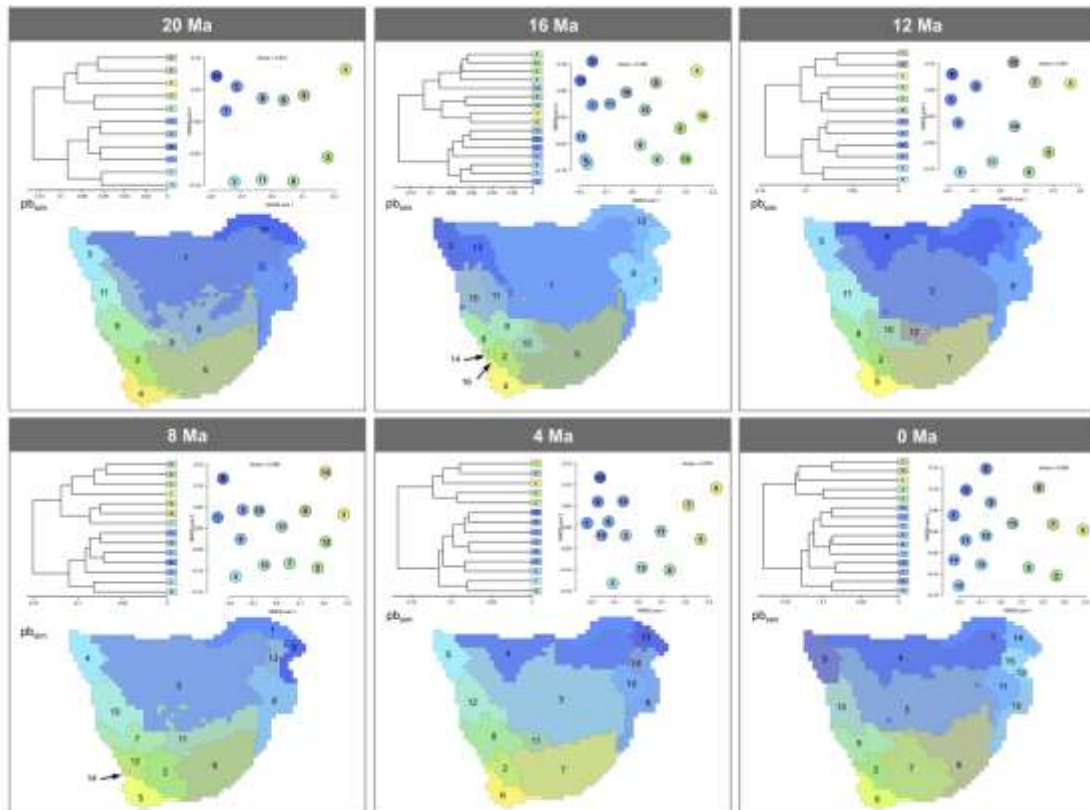

Figure S1 Evolution of modern phyloreions in southern Africa between 20 Ma to present day. Relationships among phyloreions at each depth are depicted as hierarchical dendrograms, NMDS ordinations and in geographic space based on UPGMA clustering of phylogenetic beta diversity ($p\beta_{sim}$) within 50×50 km grid cells (see Methods). Colors differentiating between phyloreions depict the amount of phylogenetic turnover among phyloreions.
