## DECLARATION

I, the undersigned, hereby declare that the thesis submitted herewith for the degree Philosophiae Doctor to the University of Pretoria contains my own, independent work and has not been submitted for any degree at any other university.

Name:.....  
Belinda Huntley

Date:.....

## ABSTRACT

In this study, I investigate how successful provided response questions, such as multiple choice questions, are as an assessment format compared to the conventional constructed response questions. Based on the literature on mathematics assessment, I firstly identify an assessment taxonomy, consisting of seven mathematics assessment components, ordered by cognitive levels of difficulty and cognitive skills. I then develop a theoretical framework, for determining the quality of a question, with respect to three measuring criteria: discrimination index, confidence index and expert opinion. The theoretical framework forms the foundation against which I construct the Quality Index (QI) model for measuring how good a mathematics question is. The QI model gives a quantitative value to the quality of a question. I also give a visual representation of the quality of a question in terms of a radar plot. I illustrate the use of the QI model for quantifying the quality of mathematics questions in a particular undergraduate mathematics course, in both of the two assessment formats – provided response questions (PRQs) and constructed response questions (CRQs). I then determine which of the seven assessment components can best be assessed in the PRQ format and which can best be assessed in the CRQ format. In addition I also investigate student preferences between the two assessment formats.

**Keywords:** Mathematics assessment, Quality Index, good mathematics questions, assessment components, assessment taxonomies, provided response questions, constructed response questions, multiple choice questions.

## DEDICATION

“Yea, if thou criest after knowledge, and liftest up thy voice for understanding; if thou seekest her as silver, and searchest for her as for hidden treasures; then shalt thou understand the fear of the Lord, and find the knowledge of God. For the Lord giveth wisdom; out of His mouth cometh knowledge and understanding”.

PROVERBS 2: 3 - 6

## ACKNOWLEDGEMENTS

The author would hereby like to thank all people and organisations whose assistance and co-operation contributed to the completion of this thesis, and in particular:

My supervisor, Professor Johann Engelbrecht, for setting high professional standards which provided the much-needed challenge and motivation, and for his interest and moral support.

My co-supervisor, Professor Ansie Harding, for her invaluable guidance and expert assistance throughout the period of this research.

Elsie Venter, a senior lecturer from the Centre for Evaluation and Assessment, School of Education, University of Pretoria, for introducing me to the Rasch method of data analysis and for her assistance in analysing my research data.

Marie Oberholzer, for editing and type-setting the final draft of my thesis with great care and diligence.

My parents, Roland and Daisy Hill, for their prayers of upliftment and loving support.

My husband, Brian and children, Byron, Christopher and Cayla, for their total devotion and patience and on-going faith in my abilities.

## TABLE OF CONTENTS

	<u>Page</u>
DECLARATION	i
ABSTRACT	ii
DEDICATION	iii
ACKNOWLEDGEMENTS	iv
INDEX OF TABLES	v
INDEX OF FIGURES	vi
CHAPTER 1: INTRODUCTION	
1.1 Purpose of study	1
1.2 Statement of problem	2
1.3 Significance of the study	4
1.4 Context of this study	7
1.5 Outline of study	11
CHAPTER 2: LITERATURE REVIEW	
2.1 Terminology	15
2.2 The changing nature of university assessment in the South African context	17
2.3 Assessment models in mathematics education	21
2.4 Assessment taxonomies	24
2.5 Assessment purposes	33
2.5.1 Diagnostic assessment	33
2.5.2 Formative assessment	33
2.5.3 Summative assessment	35
2.5.4 Quality assurance	37
2.6 Shifts in assessment	38
2.7 Assessment approaches	39
2.7.1 The traditional approach	40
2.7.2 Computer-based (online) assessment	40
2.7.3 Workplace- and community-based/learnership assessment	44
2.7.4 Integrated or authentic assessment	44
2.7.5 Continuous assessment	48
2.7.6 Group-based assessment	49
2.7.7 Self-assessment	49
2.7.8 Peer-assessment	50
2.8 Question formats	51
2.9 Constructed response questions and provided response questions	52
2.10 Multiple choice questions	56
2.10.1 Advantages of MCQs	60
2.10.2 Disadvantages of MCQs	63

2.10.3	Guessing	67
2.10.4	In defense of multiple choice	69
2.11	Good mathematics assessment	70
2.12	Good mathematics questions	74
2.13	Confidence	77
CHAPTER 3: RESEARCH DESIGN AND METHODOLOGY		
3.1	Research design	82
3.2	Research questions	84
3.3	Qualitative research methodology	85
3.3.1	Qualitative data collection	86
3.4	Quantitative research methodology	89
3.4.1	The Rasch model	89
3.4.1.1	Historical background	91
3.4.1.2	Latent trait	96
3.4.1.3	Family of Rasch models	101
3.4.1.4	Traditional test theory versus Rasch latent trait theory	105
3.4.1.5	Reliability and validity	107
3.4.2	Quantitative data collection	109
3.5	Reliability, validity, bias and research ethics	115
3.5.1	Reliability of the study	115
3.5.2	Validity of the study	116
3.5.3	Bias of the study	118
3.5.4	Ethics	119
CHAPTER 4: QUALITATIVE INVESTIGATION		
4.1	Qualitative data analysis	122
4.2	Qualitative investigation	122
CHAPTER 5: THEORETICAL FRAMEWORK		
5.1	Mathematics assessment components	135
5.1.1	Question examples in assessment components	138
5.2	Defining the parameters	149
5.2.1	Discrimination index	150
5.2.2	Confidence index	153
5.2.3	Expert opinion	157
5.2.4	Level of difficulty	159
5.3	Model for measuring a good question	160
5.3.1	Measuring criteria	160
5.3.2	Defining the quality index (QI)	163
5.3.3	Visualising the difficulty level	167
CHAPTER 6: RESEARCH FINDINGS		
6.1	Qualitative data analysis	172
6.1.1	Methodology	172
6.2	Data description	178
6.3	Component analysis	179
6.4	Results	232

6.4.1	Comparison of PRQs and CRQs within each assessment component	232
CHAPTER 7: DISCUSSION AND CONCLUSIONS		
7.1	Good and poor quality mathematics questions	235
7.2	A comparison of PRQs and CRQs in the mathematics assessment components	239
7.3	Conclusions	242
7.4	Addressing the research questions	244
7.5	Limitations of study	247
7.6	Implications for further research	248
