## ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to:

- \* My Creator, Lord and Saviour for granting me the ability, courage and guidance to complete my post-graduate studies.
- \* My promoter, Prof. Dr. M.S.E. du Preez for her expertise, thorough guidance and continuous support.
- \* The Embassy of the United States of America, for granting me a Fulbright Scholarship to complete a Master of Social Work degree at the George Warren Brown School of Social Work, at Washington University, United States of America in 1987. This opportunity enabled me to gain extensive experience and broadened my knowledge and research in the field of infertility. This was made possible by working for a year as a medical social worker at the Infertility Unit of the Jewish Hospital at Washington University Medical Centre, St. Louis, with renowned infertility specialists dr. Ronald Strickler and mrs. Sima Needleman. Their worthy publications have also been utilized in this study.
- \* The superintendent of the H.F. Verwoerd Hospital and the Dean of the Medical Faculty of the University of Pretoria for granting me permission to undertake this research at the Infertility Clinic of the H.F. Verwoerd Hospital.
- \* The 30 respondents who were willing to partake in this study despite the delicacy of the issue and the secrecy surrounding their infertility.
- \* Dr. Chris B. van O. Sevenster of the Infertility Clinic at the H.F. Verwoerd Hospital, for his co-operation and interest in this study, as well as his willingness to verify the medical contents of this dissertation.

- \* Dr. Danie du Toit of the Andrology Clinic, for checking the accuracy of the andrological contents of this dissertation.
- \* Mr. Chris Botha of the H.S.R.C. for his thorough guidance regarding the questionnaire.
- \* Prof. Dr. R.P. de la Rey, for his statistical computer analysis of the data.
- \* My brother-in-law, dr. Andrew Jarvis, for teaching me the Harvard Graphics computer program, and thereby enabling me to produce my own graphical representations for this dissertation which was an enriching and a rewarding experience.
- \* My sister Desirée Jarvis, and mrs. S.M. Hofmeyr for their thorough grammatical editing of this dissertation.
- \* Mrs. Marie Lues, for her neat and devoted typing of the dissertation on the word processor, as well as her continuous support.
- \* My parents, for enabling and always encouraging me to further my studies and for their constant love and concern throughout my studies.
- \* My husband Giuseppe for all his love, patience, toleration and encouragement throughout my studies, as well as his willingness to take over some of the household tasks, thereby enabling me to complete my dissertation.

Thank you all

CHARLENE LAURENCE  
OCTOBER 1989

Dedicated to my parents,  
Cecil and Louise Laurence  
and my husband,  
Giuseppe Carbonatto

## SUMMARY

### THE PSYCHO-SOCIAL EFFECTS OF INFERTILITY ON A COUPLE: A MEDICAL SOCIAL WORK PERSPECTIVE

**Candidate :** Charlene Laurence  
**Department:** Social Work, University of Pretoria  
**Promoter :** Prof. Dr. M.S.E. du Preez  
**Degree :** M.A.(SW) Medical Social Work.

This research is aimed at studying and describing the psycho-social effects of infertility on couples. Infertility is a reasonably new field of specialization in Medical Social Work, with a limited amount of research findings and literature available. A definite need for research therefore exists in this field.

The stages and procedures of research used in this study are firstly described, as well as the problems experienced with the study and definitions of terms used.

Subsequently, infertility is described in detail to provide the necessary knowledge of and insight into the problem and also to understand what infertile couples have to endure during the whole treatment period. This includes the initial interview, the medical investigations, the causes of infertility, the treatment procedures available and the psycho-social effects of infertility.

The roles, tasks, skills and knowledge of the medical social worker in a multi-professional health setting are described next, followed by a guideline for medical social workers as regards the infertile couple at an Infertility Clinic. This guideline describes the roles and tasks of the medical social worker regarding each step of the entire infertility treatment plan.

Hereafter the research findings and graphical representations of this exploratory and descriptive study of the psycho-social effects of infertility on couples, are presented and discussed. The hypothesis for this study: "Infertility has various psycho-social effects on a couple" is accordingly supported.

Finally the general summary, conclusions and recommendations arising from this study are provided.

## **OPSUMMING**

### **DIE PSIGO-SOSIALE EFFEKT VAN INFERTILITEIT OP 'N EGPAAR: 'N GENEESKUNDIGE MAATSKAPLIKEWERK-PERSPEKTIFF**

**Kandidaat : Charlene Laurence**  
**Departement: Maatskaplike Werk, Universiteit van Pretoria**  
**Promotor : Prof. dr. M.S.E. du Preez**  
**Graad : M.A. (MW) Geneeskundige Maatskaplike Werk**

Die doel van hierdie navorsing was om die psigo-sosiale uitwerking van infertiliteit op 'n egaar te bestudeer en te beskryf. Die veld van infertiliteit is 'n betreklik nuwe spesialiteitsterrein in Geneeskundige Maatskaplike Werk, met beperkte beskikbare navorsingsbevindinge en ontoereikende literatuur.

Die stappe en procedures van navorsing wat in hierdie studie gevvolg is, word eerstens bespreek, gevvolg deur 'n beskrywing van die probleme wat ervaar is, asook die definisies van die terme wat gebruik is.

Vervolgens, word infertiliteit breedvoerig bespreek, om sodoende die nodige kennis en insig met betrekking tot infertiliteit te voorsien, asook begrip van wat die infertiele egaar gedurende die volkome behandelingsperiode moet deurmaak. Dit sluit die aanvanklike onderhoud, die mediese ondersoek, die oorsake van infertiliteit, die beskikbare behandelingsprosedures, asook die psigo-sosiale uitwerking van infertiliteit in.

Die rolle, take, vaardighede en kennis van die geneeskundige maatskaplike werker in 'n multi-professionele gesondheidsopset word hierna bespreek, gevvolg deur 'n riglyn vir die geneeskundige maatskaplike werker tydens elke stap van die algehele behandellingsprogram.

In opvolging hiervan word die navorsingsbevindinge en grafiese voorstelle van hierdie verkennende en beskrywende studie oor die psigo-sosiale uitwerking van infertiliteit op die egpaar, bespreek. Die hipotese vir hierdie studie: "Infertiliteit het verskeie psigo-sosiale uitwerkings op 'n egpaar", word ooreenkomstig ondersteun.

Laastens word die algemene opsomming, gevolgtrekkings en aanbevelings vanuit hierdie studie gebied.
