0 = absent, 1= minimal, 2= mild, 3 = moderate, and 4 = severe.

Supplementary Table 2: Histological scores from healthy and IBH-affected ponies at different time points after allergen injection.

Paraffin-embedded biopsies were cut into sections and stained with haematoxylin-eosin (HE). Sections were graded according to a semi-quantitative grading system (0=absent, 1 = minimal, 2 = mild, 3 = moderate, 4 = severe) as previously described ¹²; average and range between brackets.
