Appendix 2

Optima and tolerances of the most common taxa for weighted averaging (WA) inference models for Na⁺, alkalinity and depth. The total number of occurrences (N), the effective number of occurrences (Hill's N2) and maximum percent abundance (Max) are shown. Log-transformed tolerances were added and subtracted from the log-transformed optima and all 3 numbers back transformed to mgL⁻¹ for Na⁺ and alkalinity. Depth is measured in cm. Tolerance is presented as lower limit to upper limit.
