

**Supplementary table 2: Relapses according to extent of resection**

| <b>Extent of resection</b>      |                          | <b>n</b> | <b>%</b> |
|---------------------------------|--------------------------|----------|----------|
| <b>Total that were operated</b> |                          | 106      |          |
| <b>Alive</b>                    |                          | 31       | 29.3%    |
| <b>Lost to follow up</b>        |                          | 7        | 6.6%     |
| <b>Relapse or progression</b>   |                          |          |          |
| Complete resection<br>n = 56    | Metastatic relapse       | 16       | 28.6%    |
|                                 | Metastatic progression   | 10       | 17.6%    |
|                                 | Local relapse            | 7        | 12.5%    |
|                                 | Status not specified     | 2        | 3.6%     |
| Incomplete resection<br>n = 50  | Local progression        | 19       | 38.0%    |
|                                 | Metastatic relapse       | 11       | 22.0%    |
|                                 | Metastatic progression   | 2        | 4.0%     |
|                                 | Status not specified     | 1        | 2.0%     |
| Combined<br>n = 106             | Metastatic relapse       | 26       | 24.5%    |
|                                 | Local progression        | 19       | 17.9%    |
|                                 | Metastatic progression   | 12       | 11.3%    |
|                                 | Local relapse            | 7        | 6.6%     |
|                                 | Status not specified     | 3        | 2.8%     |
| <b>Radiotherapy</b>             |                          | <b>n</b> | <b>%</b> |
| <b>Total cohort</b>             |                          | 295      |          |
| <b>Alive</b>                    |                          | 41       | 13.8%    |
| <b>Lost to follow up</b>        |                          | 20       | 6.8%     |
| <b>Relapse or progression</b>   |                          |          |          |
| Irradiated<br>n = 47            | Metastatic progression   | 20       | 42.6%    |
|                                 | Metastatic relapse       | 5        | 10.6%    |
|                                 | Local progression        | 4        | 8.5%     |
|                                 | Local relapse            | 3        | 6.4%     |
|                                 | Status not specified     | 5        | 10.6%    |
| Not irradiated<br>n = 248       | Metastatic progression   | 143      | 57.7%    |
|                                 | Local progression        | 14       | 5.6%     |
|                                 | Metastatic relapse       | 7        | 2.8%     |
|                                 | Local relapse            | 4        | 1.6%     |
|                                 | Palliated from diagnosis | 12       | 4.8%     |
|                                 | Status not specified     | 17       | 6.9%     |
| Combined<br>n = 295             | Metastatic progression   | 163      | 55.2%    |
|                                 | Local progression        | 18       | 6.1%     |
|                                 | Metastatic relapse       | 12       | 4.1%     |
|                                 | Local relapse            | 7        | 2.4%     |
|                                 | Status not specified     | 19       | 6.4%     |
