

Supplemental Table S3. Distribution of various reasons given for performing cholecystectomy in the 179 subclinical dogs with gallbladder mucocele (GBM).

Reason given for cholecystectomy	Number
Prophylactic after incidental ultrasonogram detection of GBM	112
Failure of liver enzyme activity improvement or GBM resolution after medical management	23
Ultrasonogram detection of GBM, in conjunction with increased liver enzyme activities	12
Performed in addition to primary surgical procedure:	32
Hepatic mass removal	4
Adrenalectomy	4
Splenectomy	3
Liver biopsy	3
Cystotomy (urinary bladder) for management of urolithiasis	3
Cystotomy (urinary bladder) for unspecified reason	2
Cystotomy (urinary bladder) for neoplasia	2
Intra-abdominal testiculectomy	1
Anal sacculectomy	1
Rectal mass removal	1
Gastrotomy for foreign body removal	1
Nephrectomy	1
Mammary gland neoplasia resection	1
Cutaneous neoplasia resection	1
Intestinal biopsy	1
Intra-abdominal soft tissue sarcoma	1
Abscessed intra-abdominal lymph node	1
Management of cholecystolithiasis	1
