

Heterogeneity of epiphytic diatoms in shallow lakes: implications for lake monitoring

Electronic Supplemental Material

Appendix A Non-metric multidimensional scaling (NMDS) ordinations of monthly functional group abundances

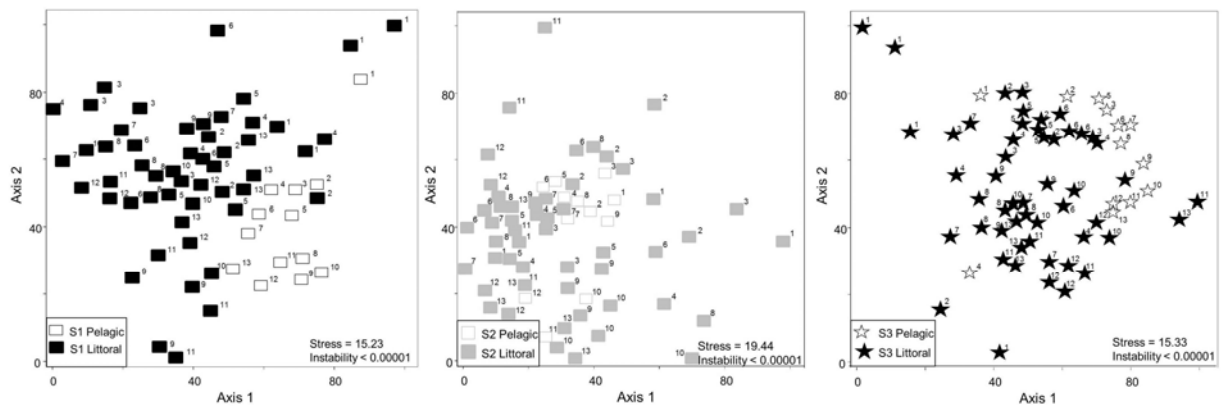

Fig. S1. Non-metric multidimensional scaling (NMDS) ordinations of monthly functional group abundances from the 4 random littoral sites and the pelagic site during each month ($n=13$) at each study lake, S1, S2 and S3. Numbers refer to successive monthly samples from March 2011 to February 2012.
