

Supplementary Figure 1. Number of farms among 48 countries, 26 without a control program for paratuberculosis and 22 with a control program for paratuberculosis. The box represents the median, 25th and 75th percentiles and outlying countries as individual data points

Supplementary Figure 2. Average herd size among 48 countries, 26 without a control program for paratuberculosis and 22 with a control program for paratuberculosis. The box represents the median, 25th and 75th percentiles and outlying countries as individual data points

Supplementary Figure 3. Minimum herd size among 48 countries, 26 without a control program for paratuberculosis and 22 with a control program for paratuberculosis. The box represents the median, 25th and 75th percentiles and outlying countries as individual data points

Supplementary Figure 4. Maximum herd size among 48 countries, 26 without a control program for paratuberculosis and 22 with a control program for paratuberculosis. The box represents the median, 25th and 75th percentiles and outlying countries as individual data points
