

**Fluid, electrolyte and thermoregulatory
responses to *ad libitum* water replacement
during prolonged exercise**

by

Heinrich Wilhelm Nolte

Submitted in partial fulfilment of the requirement for the degree

**DOCTOR PHILOSOPHIAE
(Option Biokinetics)**

In the

Department of Biokinetics, Sport and Leisure Sciences

University of Pretoria

September 2011

This thesis is dedicated to my wife and best friend, Kim.

ACKNOWLEDGEMENTS

I would like to express my sincere thanks and gratitude to the following persons and institutions for their guidance and without who's assistance, this study would not have been possible.

Prof. Timothy Noakes: It was a privilege to work with him. His passion for South African science, expert subject knowledge and enduring support formed the cornerstone of my research.

Dr Bernard van Vuuren: For his valuable guidance, time and assistance afforded to me in the completion of this study.

ERGOTECH: For providing me with one of the most interesting jobs that one could ask for, without which this study would not have been possible.

South African National Defence Force: For providing me with the opportunity to study fluid replacement amongst South African soldiers and to contribute towards fluid replacement strategies within the SANDF. A special thanks to all the soldiers who participated during the studies.

Friends, family and colleagues: For their interest, support and encouragement throughout.

My wife: For her motivation, understanding and loving support throughout this journey. Having you to share this with made it all worth it.

The Almighty: In Him anything is possible.

TABLE OF CONTENTS

Chapter 1: General Introduction	6
1.1 FLUID REQUIREMENTS AND REPLACEMENT STRATEGIES WITHIN A MILITARY CONTEXT	7
1.2 STATEMENT OF THE PROBLEM.....	8
1.3 AIMS AND OBJECTIVES	9
1.4 ABSTRACT	10
1.5 PUBLICATIONS.....	18
1.6 REFERENCES.....	20
Chapter 2: Effect of <i>ad libitum</i> and restricted fluid replacement strategies during prolonged exercise on various hydration markers and performance of selected military tasks in soldiers	22
2.1 INTRODUCTION.....	23
2.2 MATERIALS AND METHODS	25
2.3 RESULTS	28
2.4 DISCUSSION.....	39
2.5 REFERENCES.....	44
Chapter 3: Overview of assessing total body water using the diluted isotope (deuterium oxide) technique	48
3.1 INTRODUCTION.....	49
3.2 GENERAL OVERVIEW	49
3.3 CORRECTIONS AND TBW CALCULATIONS.....	51
3.4 ISOTOPE ADMINISTRATION	52
3.5 CHOICE OF PHYSIOLOGICAL FLUID AS SAMPLE MEDIUM.....	54
3.6 COLLECTION AND STORAGE OF SAMPLES.....	54
3.7 SUMMARY OF TBW METHOD AS APPLIED DURING STUDIES PRESENTED IN CHAPTERS 4, 5 AND 6 ..	55
3.8 DEUTERIUM ABUNDANCE ANALYSIS.....	57
3.9 REFERENCES.....	59
Chapter 4: <i>Ad libitum</i> fluid replacement maintains total body water, plasma osmolality and serum sodium concentrations in military personnel during a 4 hour route march.....	63
4.1 INTRODUCTION.....	64
4.2 METHODS	66
4.3 RESULTS	70
4.4 DISCUSSION.....	74
4.5 REFERENCES	79
Chapter 5: Protection of total body water content and absence of hyperthermia despite 2% body mass loss (“voluntary dehydration”) in soldiers drinking <i>ad libitum</i> during prolonged exercise in cool environmental conditions	86
5.1 INTRODUCTION.....	87
5.2 MATERIALS AND METHODS	90
5.3 RESULTS	95
5.4 DISCUSSION.....	102
5.5 REFERENCES.....	110
Chapter 6: Appropriately trained humans can safely perform vigorous, competitive self-paced exercise in extreme heat (44°C) when drinking water <i>ad libitum</i>	121
6.1 INTRODUCTION.....	122
6.2 METHODS	124
6.3 RESULTS	130
6.4 DISCUSSION.....	141
6.5 REFERENCES.....	148

Chapter 7: Comments on Baker et al.'s "Change in body mass accurately and reliably predicts change in body water after endurance exercise"	156
7.1 BACKGROUND TO LETTER	157
7.2 LETTER TO THE EDITOR	157
7.3 REFERENCES	167
Chapter 8: Summary, general conclusions and recommendations	169
8.1 INTRODUCTION.....	170
8.2 MAIN FINDINGS	171
8.3 RECOMMENDATIONS FOR RESEARCH AND PRACTICE	176
Appendices.....	179
