Supplementary Figure 2. Epistatic interaction identified by QTLNetwork [74] in the F₁ hybrid map (*E. urophylla* BC family). The upper panel shows the epistatic interaction detected among three wood basic density QTLs on linkage groups 2, 8 and 10. The red circles represent the positions of QTLs identified by QTLNetwork and the red line connects interacting loci. Only linkage groups with main effects detected are shown. The interaction effects are shown in the lower panel.

AA, Additive by additive effect; SE, Standard error
