Biological activities of extracts and isolated compounds from *Bauhinia galpinii* (Fabaceae) and *Combretum vendae* (Combretaceae) as potential antidiarrhoeal agents

Ahmed Aroke Shahid

BSc (Chemistry) (ABU), MSc (Chemistry) (UNILAG)

A thesis submitted in fulfilment of the requirements for the degree of Doctor of Philosophy (PhD) in the Phytomedicine Programme in the Department of Paraclinical Sciences, Faculty of Veterinary Science

Promoter: Prof. Jacobus N. Eloff
Co-promoters: Dr Nivan Moodley (CSIR)
Prof. Vinny Naidoo
Dr Lyndy McGaw

January 2012

© University of Pretoria
Declaration

The research work described in the thesis was conducted in the Phytomedicine Programme in the Department of Paraclinical Sciences, Faculty of Veterinary Science, University of Pretoria under the supervision of Professor JN. Eloff, Dr. N. Moodley, Prof. V. Naidoo and Dr. LJ. McGaw

The results presented herewith were generated from my own experiments, except where the work of others are quoted and referenced. There is no part of this work that has been submitted to any other University.

________________________________________

Aroke Shahid, Ahmed
Dedication

This work is dedicated to the memory of the following: My Father (Late Mr. Ahmed Aninya Aroke), my brothers (Late Salihu Aroke and Late Ibrahim Onimisi Ahmed), Late Olukemi Ore Udom (A friend and colleague who started her PhD, but could not finish the programme before death) and my dear sister (Late Mrs. Husseinatu Ohunene Abubakar).
Acknowledgements

This Ph.D. study would not have been possible without the support and encouragement of many people. I will thank my mum Mrs Omeneke Aminatu Ahmed who has been the pillar of my life. The love of my wife Mrs Rabiatu Isoyiza Ahmed and my children Enhu Mazidah, Onize Nusrah, Ometere Shamsiyah, Enze Azeemah and Ava’ami AbdulAleem have been essential to my success. I thank you all for your understanding and endurance during my absence. I also wish to thank my siblings Mr. Aroke Haruna, Mr. Umar Omeiza Aroke and his wife Rukkayat, Mrs. Zulaiha Mubarak, Dr. Halidu Aroke Ahmed, Mrs. Khaltum Khamilu and Aisha Ahmed for their enormous support. I am also deeply indebted to my friends who stuck by me through the years: Dr. Muhammed Awwalu Usman, Engr. Yakubu Adajah, Mr. Yahaya Ohida Yusuf, Mr. Tijani Muhammed Isah, Abdulmumuni Enesi Umar, Dr. Muhammed Onujagbe Onoda, Mrs. Ukachi Ezenwa Igbo, Dr. Caroline Anyakorah, Dr. Oluwatoyn Taiwo and Dr. Chima Cartney Igwe among others. Financial support was a crucial element of my ability to devote so much time to this research. Major support that keeps me and my family afloat during the study was provided by a study leave with pay provide by Federal Institute of Industrial Research Oshodi (FIIRO), Lagos, Nigeria. The University of Pretoria has provided support through University bursary, National Research Foundation (NRF) of South Africa provide fund for the research, Faculty of Veterinary Science also provide research fund through the research committee (RESCOM), and Department of Paraclinical Science also provide research fund.

I am extremely grateful to my supervisor, Prof. J. N. Eloff (overall supervisor) and my co-supervisors, Dr. Nivan Moodley (characterization of isolated compounds), Prof. Vinny Naidoo (isolated organ studies), and Dr. Lyndy J. McGaw (cellular toxicology) for allowing me to tap from the wealth of their knowledge and also giving me much of their time and energy through the duration of this study. I have a great respect and appreciated the instruction and assistance I received from each and every one of you. I sincere thank the Secretary to Phytochemical Programme, Tharien de Winnaar for all her assistance in coordinating the purchase of materials and other important aspects of this project.

I feel honoured to have opportunity to do some of the work at Bioscience, CSIR South Africa and lucky to meet with Dr. Vinesh Maharaj, Dr. Jacqueline Ndlebe, and Ms. Teresa Faleschini who are friends as well as crucial resources of information, techniques and instructions. I express my gratitude to CSIR for allowing me to use her NMR spectroscopic facilities.

At the UPBRC where I got my isolated organ part, the assistance of Dr. Tamsyn Pulleer, Mrs. Stephanie Keulder and Mrs. Ilse Jan van Rensburg were highly appreciated. The ability to collect plant material was essential to this project, and for that I want to recognize the help and outstanding collaboration of Ms Magda Nel of the Manie van der Schyff Botanical Garden and Ms Elsa van Wyk (Curator of the HGW Schweickert Herbarium of the University of Pretoria) for assistance in collection, identification and authentication of the plant samples. My appreciation also goes to Ms Lita Pauw of the Phytomedicine Programme for allowing me access her stored
plant samples. I also appreciated working in harmony with all other students of the Phytomedicine Programme, most especially Mr. Thanyani Ramandwa, Ms Bellonah Sakong, Ms Salaelo Raphatlelo, Ms Imelda Ledwaba and Mrs Edwina Muleya. I thank you all for you co-operation and immeasurable assistance.

CHAPTER THREE
Plant selection, collection, extraction and analysis of selected species

3.1. Introduction
3.2. Solid-liquid extraction
3.3. Liquid-liquid fractionation
3.4. Thin layer chromatography (TLC)
3.4.1. Phytochemical fingerprints

3.5. Materials and Methods
3.5.1. Selection of South Africa medicinal plants for antidiarrhoeal screening
3.5.2. Collection of plant materials
3.5.3. Preparation of plant material and optimization of phenolic-enriched extraction process
3.5.4. Phytochemical profiling

3.6. Quantification of the phenolic constituents of the extracts
3.6.1. Determination of total phenolic constituents
3.6.2. Determination of total tannin
3.6.3. Determination of proanthocyanidin
3.6.4. Determination of condensed tannin
3.6.5. Determination of hydrolysable tannin (gallotannin)
3.6.6. Determination of total flavonoids and flavonol
3.6.7. Determination of anthocyanin

3.7. Results
3.7.1. Yield of extractions and fractionations processes
3.7.2. Phytochemical screening (fingerprints)
3.7.3. Phenolic composition of the crude extracts

3.8. Discussion
3.8.1. Yield
3.8.2. Thin layer chromatogram
3.8.3. Phenolic constituents of the crude extract

3.9. Conclusion
5.2.2.4. DPPH 84  
5.2.2.5. ABTS 85  
5.2.2.6. Ferric reducing antioxidant power (FRAP) 85  

5.3. Materials and Methods 85  
5.3.1. Antioxidative profile of the crude extracts and fractions using DPPH radical solution 85  
5.3.2. Antioxidative assays 86  
5.3.2.1. DPPH free radical-scavenging method 86  
5.3.2.2. ABTS free radical-scavenging method 86  
5.3.2.3. Ferric reducing antioxidant power (FRAP) 86  
5.3.2.4. Hydroxyl radical scavenging assay 87  
5.3.2.5. Lipid peroxidation inhibition assay 87  

5.4. Result 87  
5.4.1. TLC-DPPH analyses 87  
5.4.2. DPPH effective concentration (EC50) 90  
5.4.3. ABTS effective concentration (EC50) 92  
5.4.4. FRAP gradient 93  
5.4.5. Hydroxyl radical effective concentration (EC50) 94  
5.4.6. Lipid peroxidation inhibition effective concentration (EC50) 95  

5.5. Discussion 96  
5.5.1. Qualitative antioxidant analyses (DPPH-TLC bioautography) 96  

5.6. Conclusion 98  

CHAPTER SIX  
Anti-inflammatory activities of the crude extracts as antidiarrhoeal mechanisms  
6.0. Introduction 100  
6.1. Effect of cyclooxygenases (COX) on GIT 101  
6.2. Effects of lipoxygenase (LOX) on GIT 101

Abstract

Diarrhoea is one of the killer diseases resulting from the dehydration and loss of electrolytes through profuse and excessive excretion of loose stool. The pathoaetiologies include infections, intestinal inflammation, imbalanced intestinal oxidative homeostasis and altered motility. Treatment with oral rehydration therapy (ORT) is a key intervention especially in secretory diarrhoea as supportive therapy. Symptomatic and non-symptomatic therapies directed at treating the intestinal tissues are available. However, these conventional treatments are still not sufficient in curing diarrhoea due to their associated hazards such as the development and spread of drug-resistant pathogens, changes in normal intestinal bacteria flora and potential chronic toxicity. Therapies targeted at intestinal tissue include antimotility and antisecretory agents have adverse effects such as addictiveness, constipation and fatal ischaemic colitis. Many ethnopharmacological and ethnobotanical therapies for treating diarrhoea exist among different cultures. The aims of this study were to evaluate the biological activities of plant extracts against some diarrhoeal pathophysiology.

A literature search in English of published articles and books that discussed ethnobotanical uses of medicinal plants in southern Africa was conducted. A list of 230 medicinal plants used in South African traditional medicines for treating diarrhoea and associated complications was created. The list included family, genus, species, biological activities and bioactive isolates as well as the remedies for diarrhoea. Twenty seven species were selected to evaluate for antimicrobial, antioxidant and anti-inflammatory activities. Safety of the plants was determined by determining the cytotoxicity of the crude extracts against Vero African green monkey kidney cell lines using a standard method. Motility effects of Bauhinia galpinii (BGE) and Combretum vendae (CVE) were determined by modulation of the contractility process of the isolated rat ileum induced by spasmogens.

Phenolic compositions of the crude extract were determined using various standard methods and finally bioactivity guided isolation of antimicrobial and antioxidant compounds from BGE and CVE were carried out using open column chromatography. Identification and characterization of the isolated compounds was achieved by NMR, EI-MS and UV spectroscopy.

The non-polar fractions had good antimicrobial activities with MIC ranged between 19 - 1250 μg/ml while the polar fraction had moderate antimicrobial activities with MIC ranged between 39 - >2500 μg/ml. In general the non-polar fractions had a higher antimicrobial activity.

The crude extracts contained wide range phenolic compounds with a total phenolic (74.91±1.26 to 467.04±15.82 mg GAE/g plant material), and total flavonoids (11.27±3.37 to 176±5.96 mg EQ/g plant material). The antioxidant activities were concentrated and potentiated in the polar fractions. The non-polar fractions had poor antioxidant activities with EC50 values ranging from 0.21±0.03 to 303.65±3.84 μg/ml for DPPH radical scavenging and 0.43±0.03 to 1709±91.44 μg/ml for ABTS radical scavenging.

The crude extracts had selective COX-1 inhibitory activities ranging between 41.70 to 84.61% and had no COX-2 inhibitory activity. All the extracts tested had 15-LOX inhibitory capacity with LC50 values ranging between 0.86±0.27 and 111.44±37.28 μg/ml. The cytotoxicity results indicated a wide variation in toxic potential of the crude extracts with LC50 values ranging from 3.51 to 741.90μg/ml.
The BGE extracts had dual activities as spasmolytic by stimulating the spontaneous contractility and also agonised contractions induced by spasmogens but it inhibited K+ induced contraction. CVE had spasmodic activities through a multiple mechanisms inhibiting contractions induced by spasmogens and K+ in a dose-dependent manner.

Several bioactive compounds were isolated from the *Combretum vendae* leaves. There were triterpenoids (ursol-12-en-28-oic acid, mixtures of corosolic acid and maslinic acid, and asiatic acid and arjunolic acid) as well as bibenzyls combretastatin B5-O-2’-β-D-glucopyranoside, combretastatin B1-O-2’-β-D-glucopyranoside and a flavonoid (apigenin).

*From Bauhinia galpinii* the following bioactive compounds were isolated and characterized: β-3 ethoxy sitosterol, one new flavone (5, 7, 4’ 5’ tetrahydroxy-2’-methoxyflavone (isoetin 2’-methyl ether) or 5, 7, 2’ 5’ tetrahydroxy-4’-methoxyflavone (isoetin 4’-methyl ether)), 3, 5, 7, 3’, 4’-pentahydroxyflavone and 3, 5, 7, 3’, 4’, 5’ hexahydroxyflavone, quercetin-3-O-β-galactopyranoside and myricetin-3-O-β-galactopyranoside.

The extraction protocol used in this work potentiated the antimicrobial activities in the non-polar fractions while antioxidant activities were potentiated in the polar fractions. This indicated that using polar solvents as extractant for treating infectious diarrhoea may not be quite effective unless some other antidiarrhoeal mechanisms are involved. Therefore, mixture of organic solvent (ethanol) and water can be recommended for broad-based activity.

*Bauhinia galpinii* extracts had a dual-mechanism of action (prokinetic and relaxant) on gastro-intestinal motility, depending on the prevalent patho-physiological condition and *Combretum vendae* mediated spasmyolytic effects on isolated rat ileum through multiple inhibitions of a wide range of contractile stimuli. Hence, the presence of multiple acting spasmyolytic activities in the plant extract might be contributing towards its effectiveness in treating diarrhoea and abdominal spasm. The uses of these plants in traditional medicine need to be monitored closely because of the selective inhibition of COX-1 and its associated GIT injury, and the high toxicity potential of some of the extracts.

Further work evaluating the antidiarrhoea mechanisms, identification and isolation of bioactive compounds, sub-acute and acute toxicity of the plant extracts is recommended.

Key words: Antimicrobial, antioxidant, anti-inflammatory, diarrhoeal, antispasmyolytic, enteric nervous system, cytotoxicity.

Chapter 6
Table 6.1. Lipoxygenase inhibitory activity of the crude extracts 108

Chapter 7
Table 7.1. The LD₅₀ of the cytotoxicity assay of some medicinal plants used in South African traditional medicine to treat diarrhoea and related ailments 113

Chapter 9
Table 9.1: NMR experiments commonly applied for natural product structural elucidation 127
Table 9.2: Minimum inhibitory concentration (μg/ml) of the isolated compounds from the leaf extract of *C. vendae* 135
Table 9.2: Minimum inhibitory concentration (μg/ml) of the isolated compounds from the leaf extract of *B. galpinii* 139
**List of Appendix**

<thead>
<tr>
<th>Appendix</th>
<th>Page number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Appendix 9.0.</td>
<td>Ethnobotanical and literature information of medicinal plant species used traditionally for treating diarrhoea in South Africa</td>
</tr>
<tr>
<td>Appendix 9.1.</td>
<td>1D and 2D NMR spectra data of Ursolic acid</td>
</tr>
<tr>
<td>Appendix 9.2.</td>
<td>1D and 2D NMR spectra data of mixture of corosolic acid and maslinic acid</td>
</tr>
<tr>
<td>Appendix 9.3.</td>
<td>1D and 2D NMR spectra data of mixture of asiatic acid and arjunolic acid</td>
</tr>
<tr>
<td>Appendix 9.4.</td>
<td>1D and 2D NMR spectra data of combretastatin B5-2'-O- glucopyranoside</td>
</tr>
<tr>
<td>Appendix 9.5.</td>
<td>1D and 2D NMR spectra data of combretastatin B1-2'-O- glucopyranoside</td>
</tr>
<tr>
<td>Appendix 9.6.</td>
<td>1D and 2D NMR spectra data of 3β-ethoxy sitosterol</td>
</tr>
<tr>
<td>Appendix 9.7.</td>
<td>1D and 2D NMR spectra data of quercetin</td>
</tr>
<tr>
<td>Appendix 9.8.</td>
<td>1D and 2D NMR spectra data of myricetin</td>
</tr>
<tr>
<td>Appendix 9.9.</td>
<td>1D and 2D NMR spectra data of isoeetin 2' methyl ether/ isoeetin 4' methyl ether</td>
</tr>
<tr>
<td>Appendix 9.10.</td>
<td>1D and 2D NMR spectra data of quercetin-3-O-β-galactopyranoside</td>
</tr>
<tr>
<td>Appendix 9.11.</td>
<td>1D and 2D NMR spectra data of myricetin-3-O-β-galactopyranoside</td>
</tr>
