

3. SECTION B

EXTENSION 6 - SITE AND SERVICE SCHEME

- **Typology 1:** a roof structure with no permanent additions, i.e. looks the same as when they were provided,
- **Typology 2:** a roof structure with permanent additions, but an incomplete structure, and
- **Typology 3:** a completely enclosed roof structure.

HOW WERE THE TYPOLOGIES IDENTIFIED?

Through site visits observations were made. Considering that extension 10 had a progressive developmental outlook in mind, the same was attempted for extension 6. But a different pattern appeared more strongly, i.e. that of the placing of the structures. It was decided to test the decisions made for the placing of the structure.
