

**Denaturing gradient gel electrophoresis characterisation of
microbial communities in polycyclic aromatic hydrocarbon
and polychlorinated biphenyl contaminated soil**

BY

ANGELA KAREN JOANNA SURRIDGE

A thesis submitted in partial fulfilment of the requirements for the degree of

Philosophiae Doctor

In the Faculty of Natural and Agricultural Sciences, Department of Microbiology and
Plant Pathology, University of Pretoria, Pretoria, South Africa

February 2007

Supervisors: Prof. T.E. Cloete
Prof. F.C. Wehner

I hereby declare that “**Denaturing gradient gel electrophoresis characterisation of microbial communities in polycyclic aromatic hydrocarbon and polychlorinated biphenyl contaminated soil**“ is my own work and has not been submitted to any other institution.

Signed:

Date:

Dedication

This thesis is dedicated to

My Family

*To Dad who is always willing to try and understand the biology of a
“Physics subset”*

To Mum who smiles, nods and always makes sure I pull through

To Daniel who listens and always questions

To Aunty Barbara and Uncle Eddie who are always there to offer a moment of clarity

To my doggie and kitty babies who love me unconditionally

Acknowledgements

The author would like to thank the University of Bergen, Norway, for use of their laboratories in initial studies and the Forestry and Agricultural Biotechnology Institute at the University of Pretoria for use of their laboratory and computer facilities. Special thanks are extended to Prof Eugene Cloete and Prof Fritz Wehner for their unstinted mentorship and guidance throughout the years of this study. Particular thanks are extended to Ms Adriaana Jacobs, Dr Karine Drønen, Ms Draginja Pavlic, Dr Tony SurrIDGE, Dr Martin Ginster, Dr Zander Myburgh, Mr Wayne Truter, Ms Frida Lise Daae and Dr Lise Øvereås for intellectual input and advice. Special thanks are also extended to Ms Kelley Reynolds for providing the degenerate *nifH* primers used in this study. The National Research Foundation of South Africa has provided financial support.

Special acknowledgements

To God who has always steered me along the right path and provided me with trials to make me strong and pillars of support to help me along.

To my family, Mum, Dad and Daniel thank you providing the environment for me grow and flourish, for being the pillar of support that you are, for always looking out for me and keeping a safe haven for me to come home to.

To my chosen family, Aunty Barbara and Uncle Eddie thank you for the late Friday afternoon “AmaZulu’s”, for always listening, giving perspective and never judging.

To Aunty Nicky and Uncle Ian thank you for your support, encouragement and friendship over the last 22 years.

To Riana Jacobs, my closest friend and confidant, who is always ready to listen and offer advice, beyond doubt I couldn’t have come this far without you. Your counsel is truly appreciated both in and out of the lab.

To my science mates Draginja Pavlic, Eddie Venter, Dirk Swanevelder, Albe van der Merwe, Wayne Truter and Kelley Reynolds thank you for your friendship and support, your contributions, patience and recommendations throughout my years at university.

To Norman Talbot, my inspiration to grasp the unknown without fear, thank you for your constant support and belief in me, for always offering to help and go the extra mile and for all the late nights working to understand the “language of science”.

To David McConnell, the man who motivates me to follow my dreams, thank you for believing in me and in so doing giving me courage in a leap of faith, thank you for your friendship and support.

To my overseas friends, Sam, Kim, Tess and Sean thank you for all the late night phone calls and pages of email that remind me of your support and confidence in me.

To the external examiners, Prof Cowan and Prof Aitken, thank you for taking the time to assess and evaluate this thesis, your contributions are greatly valued.

To my supervisors:

Prof. Eugene Cloete, you were the one who inspired me to follow a microbiology career and then gave me the means to do so, thank you for always believing in me and giving me the opportunity, motivation and courage to follow my dreams.

Prof. Fritz Wehner, thank you for your friendship and encouragement during the last 10 years, for always being available with a ready ear and sound advice. You are the one constant in my under- and post-graduate studies that has given me the strength to grow both emotionally and academically, for giving me the tools to go forward into the future and complete one of the most important eras of my life.

Table of Contents

CHAPTER 1

INTRODUCTION	11
--------------------	----

CHAPTER 2

LITERATURE REVIEW	20
2.1 Introduction.....	20
2.1.1 The fossil fuel industry in South Africa.....	20
2.1.2 Soil health	24
2.1.3 Pollution.....	25
2.1.4 Plants and phytoremediation.....	26
2.1.5 Biodegradation.....	28
2.2 Rhizosphere	33
2.2.1 Exudates.....	33
2.2.2 Microbial communities	34
2.2.3 Assessment of species richness and diversity.....	35
2.2.4 Remediation	37
2.3 Techniques for culture-independent assessment of microbial communities ..	40
.....	40
2.3.1 Microbial community analysis.....	42
2.3.2 Denaturing gradient gel electrophoresis	44
2.3.3 Single-strand-conformation polymorphism	45
2.3.4 Amplified ribosomal DNA restriction analysis	46
2.3.5 Reverse transcription PCR.....	46

2.3.6	Base-specific fragmentation and mass spectrometry	47
2.3.7	Signature lipid biomarker analysis/environmental nucleic acid probes	47
2.3.8	Terminal restriction fragment length polymorphism.....	48
2.3.9	Other techniques	49
2.3.10	Possible molecular pitfalls	50
2.4	DGGE technique and application	51
2.4.1	Community diversity analysis	57
2.4.2	Community dynamics studies.....	58
2.4.3	Molecular community mapping across varied environments.....	59
2.4.4	Niche differentiation.....	59
2.4.5	Determining species diversity.....	60
2.5	Alternatives to PCR-based analyses	61
2.5.1	Morphology	61
2.5.2	Catalase reaction.....	62
2.5.3	Aerobic and anaerobic bacteria.....	62
2.5.4	Identification using API and Biolog.....	63
2.5.5	DNA reassociation.....	64
2.6	Use of 16S rDNA sequences for parsimony and distance analysis.	65
2.6.1	Characterisation of 16S region	67
2.6.2	Characteristic base-pairs	68

CHAPTER 3

MATERIALS AND METHODS.....	70
3.1 Soil samples	70
3.2 Bacterial isolates	73

3.3	DNA extraction.....	73
3.4	Polymerase chain reaction	74
3.4.1	16S PCR.....	74
3.4.2	16S rDNA colony PCR.....	75
3.4.3	Internal transcribed spacer sequence PCR.....	75
3.4.4	<i>xylE</i> and <i>ndoB</i> gene fragment PCR.....	76
3.4.5	<i>xylE</i> and <i>ndoB</i> gene fragment colony PCR.....	78
3.4.6	<i>nifH</i> PCR.....	78
3.5	DGGE	81
3.6	Sequencing.....	82

CHAPTER 4

RESULTS	86	
4.1	Phylogeny of microbial communities from crude oil-polluted soil according to DGGE profiles	86
4.2	Comparative DGGE fingerprint analysis of pro- and eukaryotes in PAH-polluted soil.....	98
4.3	DGGE analysis of toluene and naphthalene degraders in polluted soil....	103
4.4	Molecular identification of toluene and naphthalene degrading capacity of bacteria from PAH-polluted soil.....	110
4.5	DGGE community analysis of nitrogen-fixing bacteria in polluted soil..	113

CHAPTER 5

DISCUSSION	118	
5.1	Phylogeny of microbial communities from crude oil-polluted soil according to DGGE profiles	118

5.2	Comparative DGGE fingerprint analysis of pro- and eukaryotes in PAH-polluted soil.....	122
5.3	DGGE analysis of toluene and naphthalene degraders in polluted soil....	126
5.4	Molecular identification of toluene and naphthalene degrading capacity of bacteria from PAH-polluted soil.....	129
5.5	DGGE community analysis of nitrogen-fixing bacteria in polluted soil..	132
 CHAPTER 6		
	CONCLUSION	137
