THE EFFECT OF HIV/AIDS ON
THE CONTROL ENVIRONMENT:
AN INTERNAL AUDIT PERSPECTIVE

January 2004

Supervisor: Prof. D B van der Schyf
To my family, friends and the colleagues that supported me during this project.
ACKNOWLEDGEMENTS

I would like to thank the following people for their input and guidance, which have helped to make this study possible:

- my study leader, Prof. Daan van der Schyf, for his professional guidance and the encouragement he gave me throughout the project;

- my Head of Department, Prof. Herman de Jager, for giving me the opportunity to complete this project;

- Ms Chrissie Boeyens from the Academic Information Services for her assistance in finding all the relevant material;

- my colleague Mr Rudrik du Bruyn for his ideas, input and constant encouragement;

- all the chief audit executives and all the other people that participated in the survey study for their time;

- Tanya Laubscher for correcting the layout of the document and taking on some of the work pressure;

- Gerda Wickham and Gene van Blommestein for typing some of the tables and figures;

- Sidney Rosen from Boston University for letting me use the information gathered by her team.

All the glory and honour is due to my Lord and Saviour, Jesus Christ, for giving me the wisdom and strength to complete this project.
SUMMARY

The internal auditing profession has undergone considerable changes during the past few years. A new definition has been formulated in 1999 for the profession and the Professional Practices Framework, including the Standards, has had to be adapted to incorporate this new definition. An internal auditor, in addition to being a control specialist, must now also assist management in a consulting capacity with risk management and corporate governance. According to the new Standards, an internal auditor should assist his or her organisation in maintaining effective controls by evaluating its effectiveness and efficiency and by continuously promoting improvement. The basis for the control system is a control environment that provides an atmosphere in which people conduct their activities and this has a direct influence on the way activities are structured, objectives are established and risk is addressed.

HIV/AIDS is a disease that threatens the world as a whole, global economies, individual countries, governments and also the business world, especially individual organisations. It is therefore vital that the consequences of this potential risk on an organisation are studied. Various studies done on this subject have indicated that managements are aware of the possible risk of HIV/AIDS to their organisations, but no study has at yet investigated the role that internal auditors can play or the effect of HIV/AIDS on the control environment.

This study firstly investigated whether HIV/AIDS has an effect on the control environment of an organisation. Secondly, the knowledge of internal auditors regarding the potential risk of HIV/AIDS to the organisation and the role they should play in assisting management with this risk, including its effect on the control environment, was investigated.

The research findings showed that HIV/AIDS does have an effect on certain elements of the control environment, namely the competence of the
workforce, organisational structure and the human resources policies and practices. The study also concluded that internal auditing should treat the risk of HIV/AIDS like all other risks threatening the organisation. Thus they should assist management in managing the risk and giving assurance to all stakeholders that the risk is being adequately managed. It was also concluded that although internal auditors are aware of the risk of HIV/AIDS to their organisations, especially the control environment, only a few internal auditing departments were performing their responsibilities in full. The level of commitment to managing this risk varied from total ignorance of HIV/AIDS in a business environment, to internal auditors performing audits on certain aspects in the management of this risk.

HIV/AIDS is not a normal business risk. Factors such as additional legislation, the disease being non-notifiable, the stigma associated with the illness, the fact that no cure is available, and many more make this a difficult risk to understand and to manage, thus complicating the responsibilities of internal auditors. Professional guidance is needed for the internal auditor on how to handle this risk.
# CONTENTS

## Chapter 1
**Background to the study**

1. **Introduction** 1
2. **Background** 1
   1.2.1 **The role and function of internal auditors** 1
3. **HIV/AIDS** 5
4. **Literature review** 7
5. **Problem formulation and hypotheses** 9
   1.4.1 **Primary problem formulation** 9
   1.4.2 **Sub-problems** 9
   1.4.3 **Hypotheses** 10
6. **Rationale for the research study** 10
7. **Research design** 11
   1.6.1 **Data used** 11
   1.6.2 **Research method** 12
8. **Overview of the study** 13
9. **Summary** 14

## Chapter 2
**Internal auditing as a consulting activity that evaluates and improves the control process**

1. **Introduction** 15
2. **The history of internal auditing** 16
3. **Defining internal auditing** 19
4. **The Professional Practices Framework (PPF)** 22
   2.4.1 **Definition of internal auditing** 23
   2.4.2 **Code of ethics** 23
   2.4.3 **Standards for the professional practice of internal auditing** 23
Chapter 3
The effect of HIV/AIDS as a possible risk to the world, global economy, individual governments, the business environment and organisations
Chapter 6
The research findings on the effect of HIV/AIDS on the control environment and the role of the internal auditor regarding the risk of HIV/AIDS

6.1 Introduction 88
6.2 The effect of HIV/AIDS on specific elements of the control environment 88
   6.2.1 Commitment to competence 91
6.2.2 Organisational structure 95
6.2.3 Human resources policies and practices 97
6.3 The role of internal auditing with regard to the risk of HIV/AIDS 99
   6.3.1 Background data 99
6.3.2 Internal auditing's awareness of HIV/AIDS and risks to the organisation 100
   6.3.3 Internal auditing's assistance to managing the risk of HIV/AIDS 101
   6.3.4 Internal auditing's awareness that HIV/AIDS weakens certain elements of the control environment 103
      6.3.4.1 Commitment to competence 103
      6.3.4.2 Organisational structure 104
      6.3.4.3 Human resources policies and practices 105
6.4 Overall assessment of the research findings and summary 106

Chapter 7
Summary and conclusions 108

7.1 Introduction 108
7.2 Summary of the results of the study 108
7.2.1 The effect of HIV/AIDS on the control environment 108
7.2.2 The role of internal auditors regarding the risk of HIV/AIDS 109
7.3 Interpretation of the results within the limitations of the study 111
7.4 Conclusions and recommendations 113
7.5 Areas for further research 114

Bibliography 115

Annexure A
Questionnaire used in personal interviews with chief audit executives 124

Annexure B
Example of HIV/AIDS risk assessment used in a workplace audit 128
