The Parrot Animan Precinct is a successful example of a development boasting the co-habitation of animals, and humans in the environment. The design responds to each topic studied. The project enables an expansion in the field of Architecture. The Precinct conserves existing nature habitats and is important as a South African recreational space. The Precinct is an experiential nature space important to urban renewal in Tshwane. Furthermore the new development adds new concepts to the design of future animal environments. The use of the design elements and principles to advance, improve and integrate animal and human spaces are evident in the technical drawings provided.
