

# **Using a matrix strategy to teach graphic symbol combinations to children with limited speech during shared storybook reading**

Kerstin Monika Tönsing

A thesis submitted in partial fulfilment of the requirement for the degree

## **Philosophiae Doctor in Augmentative and Alternative Communication**

in the Centre for Augmentative and Alternative Communication

**UNIVERSITY OF PRETORIA  
FACULTY OF HUMANITIES**

**SUPERVISOR:** Dr Shakila Dada  
**COSUPERVISOR:** Prof. Erna Alant

September 2012

## **Soli Deo Gloria**

*“Let him who boasts boast in the Lord.”*

*1 Corinthians 1: 27*

I am grateful to the Triune God, my Lord, my Maker and my Saviour for the opportunity granted to me to study. Through my studies He has taught me so much—about myself but more importantly about His nature—His faithfulness and unfailing love. All glory and honour and praise belong to Him, Who was and Who is and Who is to come.

## **Acknowledgements**

Human endeavours are rarely solitary undertakings. This dissertation is no exception. I have been blessed to have the help, support and encouragement of many people. In particular, I would like to express my sincere gratitude to the following persons and institutions:

- My supervisor, Dr Shakila Dada, whose thoughtful and meticulous guidance greatly contributed to shaping my thinking and writing; thank you, Shakila, not only for your expert academic guidance, but also for your encouragement and kindness. Your courage and faith in times of adversity are a great example to me.
- My cosupervisor, Prof. Erna Alant, who first kindled my love for research; Erna, your passion for enquiry has always inspired me. Thank you for gently persuading me to enrol in the PhD programme, for your expert coaching along the way and for always encouraging me to reach for the stars.
- The director of our Centre, Prof. Juan Bornman, for her support and guidance as manager of the PhD programme and for making possible many weeks of study leave at cost to herself and the rest of the team; Juan, I could not have done it without your support, both on an academic and emotional level. It is a privilege to work with you.

- My family—thank you for your unquestioning sacrifices to allow me time and space to follow the path I needed to walk. Your unconditional love and support has given me wings.
- My friends... where do I start? Alecia Samuels—fellow student, colleague, friend. It has been fun studying with you. We should write a song about it... Thank you for always making me laugh, for seeing the lighter side of life, but also for your deep insights and pertinent questions, and for your prayers. I am so grateful that you are in my life.
- Michele Ruiters, Anri-Louise Oosthuizen, Mavis Louw and Carmen Truter, faithful friends over many years, women of courage and faith; thank you for your calls, your words of encouragement and your prayers. Thank you for your understanding and patience. How precious you are, sisters in Christ.
- My wonderful colleagues, who laughed with me, cried with me, and shouldered many of my responsibilities at crunch times without batting an eyelid and with a smile on their faces. Guys, you are simply the best.
- The PhD group—what is a journey without companions to share it? Our discussions always stimulated thought and expanded academic and personal horizons. I am grateful for the times we have had together. You have enriched my life.
- Ilze Strauss and Enid Moolman who acted as independent raters, thank you for your expert services.
- Anita Cruywagen, who developed the picture material for the storybooks;
- Rina Owen and Dana Donohue for much-needed advice on the statistical analysis;
- Herman Tesner for language editing the dissertation;
- The children who participated in the study, their parents, teachers and therapists for consenting to take part; it was a privilege to get to know each of you.
- The principals and governing bodies of the schools and the Gauteng Education Department, for allowing me to conduct the study at the particular schools;
- The University of Pretoria, for financial assistance; the opinions expressed in this report and the conclusions arrived at are those of the author and not necessarily those of the University of Pretoria

## Abstract

Children with limited speech using graphic symbols for communication often express themselves predominantly through single symbols rather than symbol combinations. This study aimed to investigate the effect of an intervention strategy that was incorporated into shared storybook reading on the production of graphic symbol combinations. Three children between the ages of 7;9 (years;months) and 10;8 with limited speech and physical impairments participated in the study. A multiple probe design across behaviours (3 different types of semantic symbol combinations) was used, replicated across the 3 participants. Intervention entailed prompting the production of strategic symbol combinations (generated from a matrix) during shared storybook reading by using a prompting hierarchy. The participants' production of combinations targeted during intervention as well as their ability to generalize to nontarget combinations from the matrix was monitored using a probe test (picture description task). All 3 participants showed some gains in acquiring the combinations and generalizing to nontarget combinations, as measured by the probe test. While 1 participant showed convincing effects, the other 2 showed lower effects. Lower effects may be partly ascribed to participant characteristics as well as to the discrepancies between the intervention and probe contexts. All participants performed better within the shared storybook reading context. Results suggest that the production of symbol combinations can be facilitated during shared storybook reading and that the matrix strategy promotes generalization to untrained semantic combinations. However, participant gains may not reflect immediately in formal testing situations.

### **Keywords:**

Aided communication, augmentative and alternative communication, children, graphic symbol combinations, language learning, limited speech, matrix strategy, multiple probe design, prompting hierarchy, shared storybook reading.

## Opsomming

Kinders met beperkte spraak wat grafiese simbole vir kommunikasie gebruik, druk hulself dikwels hoofsaaklik deur die gebruik van enkel simbole uit, eerder as deur die gebruik van simboolkombinasies. Hierdie studie het gepoog om die effek van 'n intervensiestrategie wat by gedeelde storieboekles geïnkorporeer is op die produksie van grafiese simboolkombinasies te ondersoek. Drie kinders tussen die ouderdomme van 7;9 (jare;maande) en 10;8 met beperkte spraak en fisiese gestremdheid het aan die studie deelgeneem. 'n Ontwerp vir veelvuldige proewe oor gedragsvorme heen (3 verskillende tipes semantiese kombinasies) en wat oor 3 deelnemers herhaal is, is gebruik. Intervensie het behels dat die produksie van strategiese simboolkombinasies (soos gegenereer vanaf 'n matriks) gedurende gedeelde storieboekles deur die gebruik van 'n hiërargie van leidrade aangemoedig is. Die deelnemers se aanleer van die kombinasies wat gedurende intervensie geteiken is, asook hulle vermoë om te veralgemeen na nie-teiken kombinasies van die matriks, is deur die gebruik van 'n toets (prentbeskrywingstaak) gemonitor. Al 3 deelnemers het 'n mate van vordering getoon in die aanleer van kombinasies en die veralgemening na nie-teiken kombinasies, soos gemeet deur die toets. Terwyl 1 deelnemer oortuigende effekte getoon het, het die ander 2 laer effekte getoon. Laer effekte kan gedeeltelik aan eienskappe van die deelnemers asook die gebrek aan ooreenstemming tussen intervensie- en toetskontekste toegeskryf word. Alle deelnemers het in die konteks van die gedeelde storieboekles beter presteer. Resultate dui aan dat die produksie van simboolkombinasies gedurende gedeelde storieboekles gefasiliteer kan word en dat die matriksstrategie die veralgemening na ongeteikende semantiese kombinasies kan bevorder. Deelnemers se wins in vaardighede mag egter nie dadelik in formele toetsituasies reflekteer nie.

### **Sleuteltermes:**

Aanleer van taal, aanvullende en alternatiewe kommunikasie, beperkte spraak, gedeelde storieboekles, gesteunde kommunikasie, grafiese simboolkombinasies, hiërargie van leidrade, kinders, matriksstrategie, veelvuldige proef ontwerp.
