October 2011
Abstract

This research project investigated the potential of African drumming to enhance the emotional and social well-being of children in residential care. Sixteen children from the Epworth Children’s Village in South Africa were purposively selected to participate in the study. The majority of participants had been exposed to some form of neglect and/or abuse and displayed high levels of anger, anxiety, depression and/or disruptive behaviour. Mixed in terms of gender and ethnicity, they fell within the middle childhood stage of development. The participants attended weekly sessions of African *djembe* drumming over a period of four months. Principles and practices of indigenous African music making formed the foundation of the drum circle facilitation approach used. Gestalt theory, as applied in Gestalt play therapy, provided the theoretical framework from which the therapeutic dimensions of African drumming were explored.

A mixed methods approach, using both quantitative and qualitative methods of data collection and analysis, was employed. For the quantitative component, participants completed the Beck Youth Inventories, measuring self-concept, anxiety, depression, anger and disruptive behaviour, before and after the project. Concerning the qualitative aspects, focused observations were conducted wherein all video-recorded workshops were regularly and systematically analysed to assess the children’s emotional and social functioning. Furthermore, semi-structured interviews and focus groups were conducted with relevant staff members and children, respectively, in an attempt to explore the value and feasibility of presenting such a programme within the residential care setting.

According to the Inventories’ pre- and post-test results, the intervention did not appear to significantly impact upon the participants’ self-concept or levels of depression, anger or disruptive behaviour. Anxiety, on the other hand, increased. Qualitative findings nevertheless suggest that the workshops substantially enhanced the children’s emotional and social functioning, albeit only for the duration of the sessions. The workshops markedly improved participants’ self-esteem and self-confidence, pro-social behaviour, enjoyment, concentration and manifestation of musical capacity (aspects which reflect Gestalt concepts of awareness, contact, self-regulation, self-expression and mastery). Reasons for the failure of these improvements to transfer to the children’s everyday functioning may involve the severity of their socio-emotional difficulties as well as limitations within the drumming intervention itself.

First of all, I humbly acknowledge my Lord and Saviour for the inspiration, courage and strength to first embark upon and then complete this work. May He, our Heavenly Father, keep all children, and especially those less fortunate, in His tender Grace, holding them close in His Everlasting Arms.

I would like to convey my sincere gratitude to my supervisor, Professor Caroline van Niekerk, with whom it has been a great privilege to learn and work. Her consistent and invaluable guidance, support and motivation made this journey not only possible but also a great pleasure. More than just a supervisor, she has, over the years, been a mentor, role model and endless source of inspiration.

Many thanks go also to my co-supervisor, Dr. Liana le Roux, for her willingness to share with me her great knowledge and understanding of the hearts and minds of children. Her insightful and intuitive advice, as well as her sincere love and genuine concern for all young people, made her contribution to my work most meaningful.

I would sincerely like to thank music librarian and information expert Isobel Rycroft, whose patient and skilful assistance in helping me obtain relevant information and literature was truly appreciated.

Thanks go also to Steph Pond from Creative Services at the Department for Education Innovation for her assistance in creating the DVD found at the back of this document.

Furthermore, I’d like to acknowledge Dr. Mike Van der Linde from the Department of Statistics who assisted me with the statistical analysis of the quantitative data as well as interpretation of the results.

Last, but by no means least, my most sincere thanks go to my mum and dad. They have sacrificed a great deal over many years to provide me with this remarkable opportunity. Not one word, nor one drum beat, would have been possible without their loving and patient support.
Dedications

This thesis is dedicated to my father and mother, Shaun and René Flores, who planted within me a great love of music and then did everything in their power to let it grow and flourish. It is also dedicated to my sister, Chantelle Flores, who fully understands the profound mysteries and dynamic life forces inherent in all good music – rock on Chanty!

Finally, I dedicate this work to my best friend, companion and sweetheart, JacoMaré, whose support and inspiration carried me over the final, most challenging phases of completion. Your heart, mind and soul are stronger than blue steel!
“Every living thing has its own rhythm, and everything is held together in a universal dance by some cosmic rhythm.”

Quotation  v  

## Chapter One: Introduction  1
1. Background and location of the current study  1  
2. Personal motivation  2  
3. Aim of the study  3  
4. Research questions  4  
   4.1 The primary research question  4  
   4.2 The secondary research questions  4  
      4.2.1 Quantitative research questions  4  
      4.2.2 Qualitative research questions  4  
5. Delimitation of the study area and sample  5  
6. Limitations of the study  6  
7. Value of the study  7  
8. Research methodology  9  
9. Theoretical framework  10  
10. Ethical considerations  12  
11. Chapter layout  12  
12. Notes to the reader  13  
13. Definition of terms and concepts  15  

## Chapter Two: Emotional and social development and the effects of residential placement in middle childhood  17  
1. Middle childhood  17  
   1.1 Development of the self-concept  19  
      1.1.1 The self-concept and cognitive development  19  
      1.1.1.1 Piaget’s theory  20
1.1.1.2 Information processing theories
1.1.2 The self-concept and psychosocial development
   1.1.2.1 Erikson’s theory
   1.1.2.2 Social-cognitive factors
   1.1.2.3 Social-environmental factors
1.2 Emotional development
1.3 Social development
   1.3.1 The self-concept and self-regulation
   1.3.2 Social competency and peer interaction
   1.3.3 Cultural identity, prejudice and discrimination
2. Emotional and social well-being of children within residential care
   2.1 The effects of residential care
   2.2 The effects of placement and relocation
   2.3 The effects of prior trauma resulting in removal from the home
      2.3.1 Maltreatment
         2.3.1.1 A Systemic Overview
         2.3.1.2 The effects of maltreatment in middle childhood
      2.3.2 Domestic violence
      2.3.3 Poverty
      2.3.4 Family stress
         2.3.4.1 Stress and overall family dysfunction
         2.3.4.2 Family stress and attachment formation
      2.3.5 Macro-level factors: Structural violence and social instability
3. Gestalt principles and concepts
   3.1 Gestalt theory
   3.2 Important principles of Gestalt theory
      3.2.1 Organismic self-regulation
      3.2.2 Holism
      3.2.3 Integration
      3.2.4 Contact
      3.2.5 Awareness
      3.2.6 Structure of the personality
4. Conclusion
Chapter Three: Promoting social and emotional well-being of children in the middle years utilising African Drumming

1. Music and children
   1.1 The importance of music in childhood
   1.2 The benefits of general music education
   1.3 The relationship between music education and therapy
   1.4 Music as a medium for intervention with children
      1.4.1 The appropriate duration of therapy with children
      1.4.2 Play therapy
      1.4.3 Gestalt play therapy

2. Benefits of drumming and rhythm: An overview
   2.1 The innately restorative potential of rhythm and drumming
   2.2 The psychological benefits of drumming

3. The potential contribution of drumming to enhance the emotional and social well-being of children
   3.1 Drumming to enhance communication and social skills
   3.2 Drumming to enhance awareness and contact with the self
   3.3 Drumming to strengthen sense of self
      3.3.1 Defining the self
      3.3.2 Making choices
      3.3.3 Experiencing mastery
      3.3.4 Owning projections
      3.3.5 The setting of boundaries and limitations
      3.3.6 The ability to be playful and use the imagination
      3.3.7 Experiencing power and control
      3.3.8 Contact with one’s aggressive energy
   3.4 Drumming as a form of play

4. Conclusion

Chapter Four: Methods for exploring the potential benefits of African drumming with children in residential care

1. Introduction
2. Research design
2.1 Quantitative data collection: Psychological assessment 80
2.2 Qualitative data collection: Focused observations 80
2.3 Qualitative data collection: Focus groups and semi-structured interviews 81

3. Methodology 82
3.1 Research instrument 82
3.2 Data 84
  3.2.1 Sampling 85
  3.2.2 Intervention 87
    3.2.2.1 Procedures at the Epworth Children’s Village 87
    3.2.2.2 Overview of the project and philosophical underpinnings 89
    3.2.2.3 Drum circle facilitation 90
    3.2.2.4 The workshops: Structure, processes and objectives 91
3.3 Analysis 93
  3.3.1 Quantitative analysis 93
  3.3.2 Qualitative analysis 94
    3.3.2.1 Focused observations 94
    3.3.2.2 Focus group discussions and semi-structured interviews 96

4. Limitations 98
5. Ethical procedures 100
6. Conclusion 102

Chapter Five: Presentation and discussion of quantitative research findings 104
1. Introduction 104
2. General discussion of empirical data 107
  2.1 Self-concept 108
  2.2 Anxiety 108
  2.3 Depression 109
  2.4 Anger 109
  2.5 Disruptive behaviour 109
3. Discussion of empirical data in relation to individual participants 110
4. Discussion of findings 118
5. Conclusion 121
Chapter Six: Presentation and discussion of qualitative research findings 122

1. Introduction 122
2. Rates of attendance 122
3. Focused observations 124
   3.1 Group one 124
      3.1.1 Angela 125
      3.1.2 Tiny 127
      3.1.3 Thabo 129
      3.1.4 Princess 131
      3.1.5 Kabelo 133
   3.2 Group two 136
      3.2.1 Marna 136
      3.2.2 Wonderful 139
      3.2.3 Dezi 141
      3.2.4 Gift 143
      3.2.5 Precious 145
   3.3 Group three 147
      3.3.1 Jabu 148
      3.3.2 Sipho 150
      3.3.3 Michaela 152
      3.3.4 Meki 154
      3.3.5 Lucy 157
   3.4 Mzi 159
4. Interviews and focus group discussions 162
   4.1 Staff interviews 162
   4.2 Participant focus groups 167
5. Conclusion 168

Chapter Seven: Findings, conclusions and recommendations 170

1. Summary of findings 170
   1.1 Findings from quantitative data 170
   1.2 Findings from qualitative data 171
      1.2.1 Emotional functioning 172
