

CONCLUSION

The proposed project suggest an alternative form that allows for development within previously disadvantaged communities situated at the periphery of the Inner City, based on the specific needs of the communities and on existing facilities within the urban context.

The proposed forms are integrated into the architectural context as an attempt to achieve a positive solution in order to recreate and create an all encompassing integrated urban environment, thereby encouraging the use and contextualisation of Marabastad as a node for socio-cultural and economic development with the greater context of Pretoria City.
