A Critical Analysis of the Law On Health Service Delivery in South Africa

By

Deborah Louise Pearmain

Submitted in part fulfilment of the requirements for the degree of

Doctor Legum.

in the

Faculty of Law

at the

University of Pretoria

Promoter: Prof Dr PA Carstens

November 2004
ACKNOWLEDGMENTS

To:

The Hospital Association of South Africa and Dr Anette van der Merwe without whom this journey would not have begun;

Professor Pieter Carstens without whose wisdom, encouragement and patient commitment it would most certainly not have been completed;

And to all those in between:

Professor SA Strauss upon whose shoulders I have stood in reaching for the stars;

The Minister of Health Dr Manto Tshabalala-Msimang and the previous Director-General of the National Department of Health Dr Ayanda Ntsaluba for courage and hope in offering me a job;

Dr Kamy Chetty, the Deputy Director-General: Health Service Delivery for allowing me the space to grow;

My colleagues in the National Department of Health for the faith they have expressed in me;

Pam Dix for keeping the home fires burning during the long and countless hours I spent in front of a computer

I acknowledge my deepest gratitude and thanks

ABSTRACT

This thesis examines the law relating health care in South Africa rather than medical law which is a subset of this field. It attempts to synthesise five major traditional areas of law, namely international, constitutional, and administrative law, the law of contract and the law of delict, into a legal conceptual framework relating specifically to health care in South Africa. Systemic inconsistencies with regard to the central issue of health care across these five traditional fields are highlighted. The alignment of the various pre-existing areas of statutory and common law with the Constitution is an ongoing preoccupation of the executive, the judiciary, the legislature and academia. In the health care context, the thesis critically examines the extent to which such alignment has taken place and identifies areas in which further development is still necessary. It concludes that the correct approach to the constitutional right of access to health care services is to regard it as a unitary concept supported by each of the five traditional areas of law. The traditional division of law into categories of public and private and their further subdivision into, for instance, the law of delict and the law of contract is criticized. It promotes a fragmented approach to a central constitutional construct resulting in legal incongruencies. This is anathema to a constitutionally based legal system. There is no golden thread of commonality discernible within the various public international law instruments that contain references to rights relating to health and it is of limited practical use in South African health law. The rights in the Bill of Rights are interdependent and interconnected. The approach of the courts to the right of access to health care needs to be considerably broader than it is at present in order to fully embrace the idea of rights as a composite concept. Administrative law, especially in the public health sector, offers an alternative basis to pure contract for the provider-patient relationship. It is preferable to a contractual relationship because of the many inbuilt protections and legal requirements for administrative action. Contracts can be unfair but courts refuse to strike them down purely on this basis. Administrative action is much more likely to be struck down on grounds of unfairness. The law of contract as a legal vehicle for health service delivery is not ideal. This is due to the antiquated approach of South African courts to this area of law. There is still an almost complete failure to incorporate constitutional principles and values into the law of contract. The law of delict in relation to health care services has its blind spots. Although it seeks to place the
claimant in the position in which he or she found himself prior to the unlawful act whereas the law of contract seeks to place him in the position he would have occupied had the contract been fulfilled, in the context of health care this is a notional distinction since contracts for health services seldom guarantee a specific outcome.
Many people question the validity of health law as a legal concept. They take the view that it is simply a compendium of aspects, taken within a particular context, of the more traditional legal categories such as constitutional law and the common law of contract and delict. This view is limited in that it ignores the immense value of a teleological approach. Logically speaking, law can never be an end in itself. Law only has meaning when viewed as a means. One can only assess the value and significance of law in the light of how successful and effective a means it proves to be in relation to a particular end. That end, hopefully, is justice within the specific context in which the law has been applied. Law begs the question of application and application begs the question of context. If general principles of law applied in a particular context lead to a result that is irrational or unfair then obviously such an application of the law is ineffectual. The recognition and compilation of a body of law within a particular context, such as health or communications, is thus of considerable value to persons whose daily lives are preoccupied by, and regulated within, that context.

The law relating to health care in South Africa has become significantly more complex of late. There have been many recent legislative changes which have materially altered the law governing both the funding and delivery of health care in this country and there are more such changes to come. A complicating factor in the legislative arena is that, in terms of Schedule 4 of the Constitution of the Republic of South Africa, each of the nine provinces has legislative competence in the area of health services. In addition, there is also a national legislative competence in the area of health services in terms of Schedule 4. The health services industry is therefore likely to be faced with the complexities of an unprecedented plethora of provincial and national legislation governing various aspects of health services. Some of the provinces have already enacted health legislation while others are in the process. The level of sophistication, the extent of the incorporation of constitutional principles and the manner of interpretation of the constitutional rights to
health care services vary considerably across the legislation of the provinces at the time of writing.

In South Africa, the health care arena is subdivided into public and private sectors, both on the side of health services and facilities and on the side of funding. The legal rules governing both the public and private sectors differ substantially in certain areas, for instance pharmacy ownership and the employment of health professionals, whilst in others, for example, licensing and legal operational issues, there is increasing convergence. New, constitutionally mandated human rights legislation such as the Promotion of Access to Information Act\(^1\), the Promotion of Administrative Justice Act\(^2\) and the Promotion of Equality and Prevention of Unfair Discrimination Act\(^3\), present considerable challenges to both private and public health sectors in their various spheres of operation.

The legislation governing the funding of health services in the private sector, and to an increasing extent, the public sector, has also undergone substantial alteration in the preceding six or seven years. In 1998, for the first time a mandatory package of minimum benefits was incorporated into the private health funding legislation and there is regulatory provision for monitoring and reviewing the package and its effects on the market on a regular basis. There is also a growing movement within the health sector towards partnerships between public and private providers of health care services. This has created a real need to explore or even create legal models which are able to successfully integrate the often disparate philosophies and approaches of these two sectors in a workable fashion.

Due to the unprecedented proliferation of legislative and market changes within the health care sector, legal analysis and critique at an academic level has fallen behind. There is presently no in depth, authoritative examination of and commentary on the new legal environment in which providers and funders of health care services in South Africa

\(^{1}\) Act No 2 of 2000

\(^{2}\) Act No 3 of 2000

\(^{3}\) Act No 4 of 2000
are operating. There has never, to the knowledge of the writer, been an attempt to synthesise within a single work the legal principles of South African law as they pertain to health service delivery. There has been some substantive work on the subject of medical negligence⁴, the doctor/patient relationship⁵ and on isolated issues such as informed consent⁶, HIV and AIDS⁷, termination of pregnancy⁸ and res ipsa loquitur⁹ but no in depth framework study of South African law in the health care context exists or has to date been attempted. Since 1994 when the Constitution came into effect, there has been no comprehensive academic scrutiny of the meaning and import of the constitutional Bill of Rights with regard to health service delivery and how it impacts on other law affecting health service delivery although there have been journal articles commenting on landmark cases decided by the constitutional court in this area.

There is also a dearth of case law involving statutes despite the considerable number of statutes that deal with various aspects of health service delivery. The Medicines and Related Substances Act¹⁰ is one of the oldest and most important of these yet since 1977, of the dozen or so cases that significantly featured this Act, the majority of them did not deal specifically with health service delivery issues in relation to medicines but rather

¹⁰ Act No 101 of 1965
with such subjects as search and seizure\(^1\), copyright\(^2\) and trade mark\(^3\), the repackaging of medicines at provincial hospitals\(^4\) for supply to district pharmacists, procedural issues at disciplinary hearings\(^5\) and the possession of dagga (marijuana)\(^6\). There are only three of substantial interest for health service delivery purposes, one relating to the definition of a medicine\(^7\), one relating to product liability in respect of a medicine\(^8\) and the other relating to the supply of an unregistered medicine to an AIDS patient\(^9\). The case law with regard to the Health Act\(^20\), the central legislation governing health service delivery by hospitals and other health establishments in South Africa, is even scarcer. Since 1977 cases that significantly involve this legislation are one relating to the licensing of a private hospital\(^11\), one relating to an administrative decision to terminate a contract for health service delivery\(^22\) and one relating to nuisance caused by offensive odours from sewage treatment works operated by a local authority\(^23\).

While detailed analysis and exposition of statute law is important and valuable work, the practical application of South African health statutes seems to have been a relatively uncomplicated issue for those working within the South African health system judging by the number of cases and their central themes. Very few of these cases are relevant to issues of health service delivery within South African law. Where they are, they have been discussed in this thesis. For the most part, however, detailed discussion of statute law has been avoided because it was felt that a long and tedious exposition of such law would reflect only the views of the writer and very few others besides. There would be no

dynamic in the arguments presented and no way of evaluating them against academic or judicial opinion in order to ascertain their weight or validity. As such they would simply exist until either proven correct or incorrect in the judgment of a court or the relevant section is amended. Furthermore, at the time of writing certain key sections of the Medicines and Related Substances Act relating to pricing of medicines and the licensing of dispensing doctors have only just come into operation and with regard to the latter, the National Department of Health is presently engaged in litigation with the National Convention on Dispensing. The decision of the court in this matter has yet to be handed down. It is thus too early to start discussing the relevant sections of this Act as regards their impact on health service delivery. The National Health Act, destined to repeal the Health Act\(^24\), has been signed by the President and is presently awaiting proclamation. Its regulations have not yet been written. Since much of the mechanics of the legislation will be contained in the regulations, detailed discussion and analysis of the Act at this time would have been premature and largely speculative.

Legislation such as the Hazardous Substances Act\(^25\), the Foodstuffs, Cosmetics and Disinfectants Act\(^26\), the Occupational Injuries in Mines and Works Act\(^27\), the Sterilisation Act\(^28\) and the Choice on Termination of Pregnancy Act\(^29\), while clearly of relevance to specialized issues in health care, are not of sufficient general relevance that it was felt that they should be discussed in any detail in a thesis of this nature. Sterilisation and termination of pregnancy are aspects of health care which undoubtedly raise a number of interesting legal debates but they fall specifically into the category which the Constitution calls ‘reproductive health care’ and the relevant case law is thus dealt with in the section of this thesis dealing with constitutional rights. In a subject as vast as this, one has to set realistic boundaries in order to be able to cover most of the material in sufficient depth to make a meaningful contribution to the field rather than to cover all of the material at a superficial level that, at the end of the day, brings no value.

The scope of the present work is therefore, of necessity, broad. It is an attempt to uncover the central legal principles governing the South African health care system from a critical, analytical perspective. Since critical analysis requires a convergent, as opposed to divergent, conceptual approach, international comparisons are confined to pointed examples of instances in which a particular issue or principle has been dealt with in other jurisdictions by a more or less effective or efficient method. References to international cases and situations are sometimes as much, if not more, for the purpose of demonstrating a particular legal principle from a practical, factual point of view as for examining the relative merits of that principle in the context of a foreign legal system. A selection of more specific issues is canvassed in this work in order to illustrate, in practical terms, the relevance and impact of the general legal principles discussed.

It was felt that broad-brush comparisons with other jurisdictions were neither appropriate nor particularly illuminating in trying to establish the essence of the local legal framework on a particular subject. It is of no use, for instance, to persons operating within the South African health care industry to be told that the right to health care services in Bulgaria is very different, in terms of its content, to that in South Africa. International comparisons are more appropriate at the legal policy level. At the level of practical implementation of the law, careful dissection, analysis and exposition are of greater value.

The Court in *B and others v Minister of Correctional Services and others* expressed much the same sentiments in quoting the words of Lord Simon of Glaisdale in *Miliangos v George Frank (Textiles) Ltd*:

"...the training and qualification of a judge is to elucidate the problem immediately before him, so that its features stand out in stereoscopic clarity. But the beam of light which so illuminates the immediate scene seems to throw the surrounding areas into greater obscurity: the whole landscape is distorted to the view. A penumbra can be apprehended, but not much beyond; so that when the searchlight shifts a quite unexpected scene may be disclosed. The very qualifications for

the juridical process thus impose limitations on its use. This is why judicial advance should be gradual. 'I am not trained to see the distant scene: one step is enough for me' should be the motto on the wall opposite the judge’s desk. It is, I concede, a less spectacular method or progression than somersaults and cartwheels; but it is the one best suited to the capacity and resources of a judge. We are likely to perform better the duties society imposes on us if we recognize our limitations. Within the proper limits there is more than enough to be done which is of value to society.”

It is therefore the object of this work to focus largely on South African law and to provide the necessary dissection, analysis and exposition of this law for the practical benefit both of those whose responsibility it is to ensure or effect the delivery of health services in South Africa and of those whose lives are affected by the delivery of those services.
Introduction

Law neither arises nor operates in a vacuum. It is a medium for the distillation and implementation of the fundamental beliefs and values of the society by and for which it is written. Public policy and the public interest, as determined by the legislature and the judiciary, underpin the creation and application of law. Whilst the preamble¹ and founding provisions² of the South African Constitution are obvious examples of legislative expression of the underlying importance of public values to law, it is by no means a new idea. It was central to Roman law³ and is very much in evidence in the Roman law of contract⁴. From the Roman-Dutch writers it is clear that it survived beyond the time of Rome⁵. Thence it found its way into the South African common law⁶. In the present instance, the question is whether public policy supports a right to health care and if so, on what basis⁷. The issue of whether a person has a fundamental

¹ The Preamble of the Constitution of the Republic of South Africa (Act No 108 of 1996) states that the Constitution is adopted as the Supreme Law of the Republic inter alia so as to—

"heal the divisions of the past and establish a society based on democratic values, social justice and fundamental human rights" and "improve the quality of life of all citizens and free the potential of each person".

² Section 1 of Act No 108 of 1996 states that:

"the Republic of South Africa is one, sovereign democratic state founded on the following values:
(a) Human dignity, the achievement of equality and the advancement of human rights and freedoms.
(b) Non-racialism and non-separatism.
(c) Supremacy of the constitution and the rule of law.
(d) Universal adult suffrage, a national common voters roll, regular elections and a multi-party system of democratic government, to ensure accountability, responsiveness and openness."

³ Ulpian declared that the basic principles of law are to live honourably, not to harm another and to render to each his own (Dig 1 1 10 1). At Dig 45.1.26 Ulpian says: "Generaliter novitius turpes stipulations nullius esse momenti". (We generally recognise that immoral stipulations have no validity.) See also Papinian (Dig 28.7.15): 'Nam quae facta laedunt pintatem, exstimationem, verecundiam nostram et ut generaliter dixerim contra bonos morae sunt, nec facere nosse credendum est.' (For acts which offend our sense of duty, our reputation or our sense of shame, and if I might speak generally which are done against sound morals, it is not to be accepted that we are able to do them.)

⁴ They created remedies such as the excepio doli and the doctrine of laesio enormis which effectively allowed a contracting party to escape his obligations on equity grounds. See also the Digest: Paul (Dig 2.14.27a): 'Pacta quae turpem causam continent non sunt observanda; veluti si pacto se furti agam vel injuriam, si facit: expedit enim timere furti vel injuriam poenam.' (Pacts founded on shameful ground are not to be enforced: an example would be if I make a pact that I will not bring an action for theft or insult if you commit either of these delicts. For it is generally beneficial that there be fear of the penalty for theft or insult.)

⁵ Grotius 3.1.42 and 43 stated that obligations are void "whereby something is promised which is regarded as dishonourable by municipal law and morality; as to do or omit to do anything wicked or to renounce the punishment of some crime not yet committed. In like manner obligations are invalid which arise from some immoral cause or consideration." See also du Plessis P "Good faith and equity in the law of contract" 2002 TIBHR 397, 405-406 where it is stated that "Prominent Roman -Dutch jurists such as Dionysius van der Keessel, Johannes Vost, Ulrik Huber and Johannes van der Linden later adopted the regulatory function of equity and applied it to the various fields of Roman-Dutch law. When taking the influence of Grotius's concept of equity into account, it seems that equity in Roman-Dutch law was viewed as a sophisticated regulatory concept with prohibitive and corrective functions that could be employed to address inequality in performance."

⁶ Robinson v Randfontein Estates GM Co Ltd 1925 AD 173; Minister van Politie v Ewela 1975 (3) SA 590 (A); Administrateur Natal v Trust Bank van Afrika Bpk 1979 (3) SA 824 (A); Schultz v But 1986 (3) SA 667 (A); Marais v Richard en 'n Ander 1981 (1) SA 1157 (A); Pekendorf en Andere v De Flamingh 1982 (3) SA 146 (A); Edouard v Administrateur Natal (2) SA 368 (D).

⁷ In South Africa, the Constitution itself is a powerful indicator of public policy. Thus in Ryland v Edros 1997 (2) SA 690 (C) the court observed that: "It is true that public policy is essentially a question of fact (see the statement by Aquilius (the late Mr Justice F P van den Hoever) in his article 'Immorality and Inlegality in Contract' (1941) 38 SALTJ 337 at 346: 'what is immoral is a factual not a legal problem', on which Mr Trengove strongly relied. This is so even though in most cases the factual finding in question is not based on evidence before the Court but on facts regarded as so notorious that
right to an economic commodity or good strikes at the heart of many of the ideologies of Western society and consequently, the legal principles that entrench them. Examples are the common law principles of freedom of contract and ownership of property. In the context of socio-economic rights, such as a right to health care, these principles take on a new dimension that requires a re-examination of their role in the legal fabric. Many are not keen to undertake such re-examination, perhaps fearful of where it might lead.

---

the Court takes judicial notice of them. In the present case it would be difficult to find that there has been such a change in the general sense of justice of the community as to justify a refusal to follow the Ismail decision if it were not for the new Constitution. In the circumstances I prefer to base my decision on the fundamental alteration in regard to the basic values on which our civil policy is based which has been brought about by the enactment and coming into operation of the new Constitution... In his judgment in Du Plessis and Others v de Klerk and Another (case No CCT 8/95), a decision of the Constitutional Court delivered on 15 May 1996, Ackermann J referred (in para [106] of his judgment) to 'the marked similarity between the provisions of s 35(3) ... and the indirect horizontal application of the basic rights in the (German Basic Law) in German jurisprudence.' In paras [103] and [104] of his judgment Ackermann J said: '[103] Any attempt at a detailed discussion on the operation of mittelbare Drittwirkung (indirect horizontality) in German constitutional law would be out of place here. There are some features, however, which bear on the construction of our own Constitution. The Federal Constitutional Court refers to the radiating effect (Ausstrahlungswirkung) of the basic rights on private law. In the Lütth case the Federal Constitutional Court held as follows: 'The influence of the scale of values of the basic rights affects particularly those provisions of private law that contain mandatory rules of law and thus form part of the ordre public - in the broad sense of the term - that is, rules which for reasons of the general welfare also are binding on private legal relationships and are removed from the domination of private interest. Because of their purpose these provisions are closely related to the public law they supplement. Consequently, they are substantially exposed to the influence of constitutional law. In bringing this influence to bear, the courts may invoke the general clauses which, like art 826 of the Civil Code, refer to standards outside private law. 'Good morals' is one such standard. In order to determine what is required by social norms such as these, one has to consider first the ensemble of value concepts that a nation has developed at a certain point in its intellectual history and laid down in its constitution. That is why the general clauses have rightly been called the points where basic rights have breached the (domain of) private law. '... [104] Thus, in private litigation, the German courts are obliged to consider the basic rights in interpreting concepts such as 'justified', 'wrongful' 'contra bonos mores' et cetera. The basic rights therefore have a radiating effect on the common law through provisions such as, for example, s 138 of the Civil Code, which provides that 'legal acts which are contrary to public policy are void.'

In a footnote giving the reference to the Lütth case, Ackermann J said: 'The word 'radiating' seems preferable to the somewhat pejorative term 'seepage'. In my view it is clear that if the spirit, purport and objects of chap 3 of the Constitution and the basic values underlying it are in conflict with the view as to public policy expressed and applied in the Ismail case then the values underlying chap 3 of the Constitution must prevail.'

Further support for this view may be found in the dictum of Mohamed AJ (as he then was) in S v Achmat 1991 (2) SA 805 (N)(N) at 813A-B: 'The Constitution of a nation is not simply a statute which mechanically defines the structures of government and the relations between the government and the governed. It is a mirror reflecting the national soul, the identification of the ideals and aspirations of a nation; the articulation of the values bonding its people and disciplining its government. The spirit and the tenor of the constitution must therefore preside and permeate the processes of judicial interpretation and judicial discretion.'

In Mthembu v Latalwa and Another 1998 (2) SA 673 (T), the court accepted as correct the conclusion of Farlam J in Ryland v Edrax that if existing notions and views as the public policy are in conflict with the spirit, purport and objects of chapter 3 of the Interim Constitution, and the basic values underlying it, 'then the values underlying chap 3 of the Constitution must prevail.'

In Coetzee v Comitis and Others 2001(1) SA 1254 (C) the court took the view that "... considerations of public policy cannot be constant. Our society is an ever-changing one. We have moved from a very dark past into a democracy where the Constitution is the supreme law, and public policy should be considered against the background of the Constitution and the Bill of Rights. One can think of many situations which would, prior to 1994, have been found not to offend public policy which would today be regarded as inhuman. Examples are so plentiful that I do not believe that it is necessary for me to mention them." There is thus argument for the fact that in South Africa, public policy does support a right to health care in the terms in which it is couched in the Constitution.

See for instance Kelley D "The rights angle - the consequences of a "right" to health care", Reason Magazine, January 1994. Kelley was at the time the executive director of the Institute for Objectivist Studies in Poughkeepsie, New York. He argues that: "the very concept of such a right is corrupt in theory" because "a right is a principle specifying something that an individual should be free to have or do." One of his main objections to so-called "welfare rights" is that the fact that they "impose on others the positive obligation to provide the goods in question." He describes welfare rights as "rights to goods: a right to food, shelter, education, a job etc" - and contrasts them with "liberty rights" which are "rights to freedom of action but don't guarantee that one will succeed in obtaining any particular good one may be seeking." He observes that every right imposes some obligation on others and questions the practicality of this in the light of limited resources.
It is trite that for a right to exist there must be some legal basis for it. The content of a right is shaped by that branch of law from whence it arises. Because, rights tend to be flavoured by the jurisprudence that gave birth to them, when a particular right is reflected as the subject matter of more than one area of law and is developed separately on different legal fronts, and to varying degrees given the conceptual and doctrinal limitations of that particular legal area, there is the potential for dissonance in attempts to conceptualise the right as a single legal construct. In other words, when one encounters the question of a right to health care, one must ask whether there is in fact a single right with a number of different facets, depending upon the legal perspective of the viewer, or whether there are rather many discrete rights to health care within the various branches of law across which synthesis is not possible. In South African law, the idea of a right to health care is addressed to varying degrees in a number of different legal areas notably, international law, constitutional law, the common law of contract, the common law of delict and statutory law. The extent to which these various areas of law may be reconciled to yield a single, multifaceted right to health care is one of the issues explored in this thesis. Some practical implications of a right, or various rights, to health care will be examined by way of a series of situational questions. The relevance and importance of an attempt at synthesis is highlighted by the comparatively recent introduction into South African law of a constitutional Bill of Rights which, in terms of both the Constitution itself and the legal theory behind its construction, must serve as a grundnorm for the further development, in terms of both modification and edification, of the entire legal system.

Synthesis: Some Legal Questions

To illustrate the importance of the possibility of synthesis of various branches of the law, the question has been posed whether the Constitution can give rise to a 'constitutional delict' as distinct from a common law delict or whether the common
law of delict should be used to underscore and remedy violations of constitutional rights that satisfy the recognised common law requirements for delict. In other words, does the constitution create another, new, category of delict outside of the common law, which must be developed in accordance with constitutional law principles or is it more logical to develop the common law of delict so as to accommodate certain violations of the constitutional law therein. A further question could be posed in relation to the law of contract? Would breach of a contractual right, which in itself involves a constitutional right, render the breach of contract unconstitutional? Must one consider two separate actions for the same wrong, one in terms of constitutional law and one in terms of the law of contract - in which case, would the relief claimed differ depending on the basis of the action - or must one regard it as a simple breach of contract?

Even at a purely constitutional level, there is a need to synthesise provincial and national legislation. There is apparently scope for variation in the content of the constitutional right to health care services across provinces insofar as health care services are a Schedule 4, Part A, competency. This means that the provinces and the national government have concurrent legislative power in this area. In terms of section 41(1) (e) all spheres of government and all organs of state within each sphere must respect the constitutional status, institutions, powers and functions of government in the other spheres. The national government may not simply override a provincial government by way of legislation on a particular issue. Section 104(1) of the Constitution gives a provincial government the power to pass legislation for its province with regard to any matter within a functional area listed in Schedule 4. In terms of section 104(3) a provincial legislature is bound only by the Constitution and, if it has passed a constitution for its province, also by that constitution. Given the fact

"requirements for a delict and those for a constitutional wrong differ materially." They also point to the fact that "... unlike a delictual remedy which is aimed at compensation, a constitutional remedy (even in the form of damages) is directed at affirming, enforcing, protecting and vindicating fundamental rights and at preventing or deterring future violations of chapter 2". According to the authors a constitutional wrong and a delict should not be treated alike and for conceptual clarity the term constitutional ‘delict’ or ‘tort’ should rather be avoided. They do state, however, that where a delictual remedy will also effectively vindicate the fundamental right concerned and deter future violations of it, the delictual remedy may be considered to be appropriate constitutional relief and in this way may serve a dual function. The view of the authors that a constitutional wrong must be viewed as distinct from a delict is apparently at odds with the provisions of section 8(3)(a) and (b) of the Constitution which states that in order to give effect to a right in the Bill, a court must apply, or if necessary, develop, the common law to the extent that legislation does not give effect to that right and may develop rules of the common law to limit the right, provided that the limitation is in accordance with section 36(1). This section promotes the understanding that the vehicle for giving effect to rights in the Bill is the common law in the absence of relevant legislation. The concept of constitutional ‘wrongs’ as a discrete category of wrongs apart from common or statutory law does not seem to be in keeping with what is intended by the Constitution itself. Rather the Constitution is to be regarded as the base reference for the edification of the legal system generally.
that the right to health care services is tempered by the state's obligation to ensure the *progressive* realisation of the right within available resources and the possibility that "the state" can mean a provincial or even municipal government as much as it does the national government, how does one reconcile this potential for variation in the content of the right across provinces with the fact that in terms of section 9(1) of the Constitution, "Everyone is equal before the law" and in terms of section 9(2), "Equality includes the full and *equal* enjoyment of all rights and freedoms"? (writer's italics).

Does the Constitution in fact create a right of access to health care services which exists independently of any other legislative or other measure taken by the state in order to achieve the progressive realisation of that right within available resources or does it effectively only impose an obligation upon the state to create instances or facets of such a right by way of legislation as and when the resources are available? The implications of each of the possible answers to this question are profound. If the answer is the former then there exists a fundamental and underlying right of access to health services in question would be determined by a court in the given circumstances

---

12 In analysing what is meant by "the State" in the case of *Greater Johannesburg Transitional Metropolitan Council v Eskom* 2000 (1) SA 866 SCA, at 876 the court stated that: "In its ordinary meaning for the purposes of domestic law the word is frequently used to include all institutions which are collectively concerned with the management of public affairs unless the contrary intention appears. In this sense the State may manifest itself nationally (through the executive or legislative arm of central government), provincially, locally and, on occasion, regionally." In *R v Bethlehem Municipality* 1949 OPD 227 Van den Heever J said the following at 231: "A facile distinction is sometimes drawn between municipalities and other entities with legislative and executive powers on the ground that municipalities are mere creatures of statute. This is undoubtedly so, but so are provincial councils and, for that matter, the Union Parliament. With respect to authority of course they differ vastly and are ordered in a definite hierarchy, but the function of each is government. A municipality is not merely a corporation like a company; it is a phase of government, local it is true, but still government." And in *H millennials v Johannesburg City Council* 1949 (1) SA 842 (A) the same Judge commented at 835: "The modern trend is to recognise that municipal government may be local, yet it is a phase of government." In *Chandler and Others v Director of Public Prosecutions* [1962] 3 All ER 142 (FL) the phraseology that had to be construed was 'the safety and interests of the State'. Lord Devlin, after asking "what is meant by "the State"?" gave the following answer at 156D - E: "Counsel for the appellants submits that it means the inhabitants of a particular geographical area. I doubt if it ever has as wide a meaning as that. I agree that in an appropriate context the safety and interests of the State might mean simply the public or national safety and interests. But the more precise use of the word "State", the use to be expected in a legal context, and the one which I am quite satisfied for reasons which I shall give later was intended in this statute, is to denote the organs of government of a national community." And in the same case Lord Reid suggested that the 'organised community' comes as near to a definition of 'State' as one can get. As Baxter points out in *Administrative Law* at 95, although the expression 'the State' is extensively employed in legislation, it is not used with any consistency. The precise meaning of 'the State' depends on the context within which it is used. It is submitted, in view of the foregoing and in view of the nature of the Constitution itself that the word 'state' as it appears in section 27(2) cannot be interpreted to mean anything other than all of the spheres of government established by and recognised in the Constitution.

13 Section 27(2) of the Constitution states that: "The state must take reasonable legislative and other measures, within its available resources, to achieve the progressive realisation of each of these rights."
of a particular case. If the answer is the latter then it is a right enforceable against the state only and then only to the extent that the state is obliged to take reasonable legislative and other measures to achieve the progressive realisation of the right. The nature, content, level and method of delivery of the health services would be the subject of other legislation and other measures to be adopted by the state and no further legal action to obtain health care services could be taken until those legislative and other measures were in place. In terms of the latter view, the content of the constitutional right of access to health care services is restricted to the state's obligation to take those legislative and other measures to achieve the progressive realisation of the right. The appropriate relief on the latter view, in terms of a Constitution based action, would be a simple order directing the state to enact legislation or adopt certain measures to achieve this. Further discussion of this issue will be undertaken in a later section dealing more closely with the constitutional right of access to health care services.

In the context of statutory law, for example the Compensation for Occupational Injuries and Diseases Act\textsuperscript{14}, can the fact that section 73 of this Act provides for the payment by the Director-General, the employer or the mutual association concerned, as the case may be, of the reasonable costs of medical expenses for occupational injuries and diseases for a period of two years be seen as a legislative measure taken by the state to progressively realise the constitutional right of access to health care services? In other words can the right embodied in section 73 of the Compensation for Occupational Injuries and Diseases Act now be regarded as a subset of the constitutional right of access to health care services or is it merely a right conferred by a statute independently of section 27(1) of the Constitution? If the answer is the former then the section 73 right must be tested against the provisions of section 27 of the Constitution. Is it a reasonable legislative measure?\textsuperscript{15} Does it sufficiently take into account the availability of resources? Should the state take further steps to develop the content of this particular right in this particular context or should it rather be supplemented or complemented by other rights relating to access to health care

\textsuperscript{14} Act No 130 of 1993

\textsuperscript{15} See section 27(2) of the Constitution quoted at fn 13 supra.
services in other contexts? Would the fact that this particular law predates the Constitution mean that it cannot be seen in the broader context of the constitutional right of access to health care services or should it nonetheless now be interpreted in this context irrespective of when it was promulgated?

**Synthesis: Some Practical Questions**

The questions posed above and the manner in which they are answered have a direct impact on practical questions of health service delivery in South Africa. Some of these questions go to the heart of health care delivery systems generally. They relate to the implementation of socio-economic rights in the realities of a less than perfect world. They confront issues such as the rationing and equitable distribution of health care services, acceptable levels of quality and standards for health care, interfaces between the public and private sectors on issues of health care delivery and the need for a balancing of the various interests that contribute to the dynamic of the health sector. Some of practical questions in this context are:

Is there a difference between a right of access to health care services and a right to health care services?

Must the health care services be supplied irrespective of a patient’s ability to pay?

If there is a right to health care services from the perspective of the consumer, is there a corresponding obligation to deliver those health care services, and if so, who bears it and to what extent?

If there is a right to health care services, is it restricted to the indigent or do all consumers, including members of medical schemes, have such a right and, if so, against whom?

Is there a specific level of health care service to which a right to health care applies? For example, is the right restricted to health care services at a primary care level or at

---

16 For instance in the context of Social Health Insurance legislation or even a National Health Act which provides for access to health care services for the population generally.
an emergency care level, or does it extend through all levels of care, including secondary and tertiary levels?

Would the state, and private institutions such as managed care organisations and medical schemes, be able to legitimately restrict access to, or ration, health care services?

Is there a certain standard of health care services implied in the constitutional right to health care services e.g. one which demands that the provider of such services exercises reasonable care in their delivery so as to optimise the efficacy of the services provided?

When a person contracts for certain health care services with a supplier of health care services how does this affect that person’s constitutional right of access to health care services?

Can a person contract out of his or her right to life in a health care setting or contract for a lower standard of health care services than is generally regarded as acceptable?

Would consumers in a particular locality be able to insist that the government constructs and equips a clinic or hospital in the area to serve their health care needs on the basis of a constitutional right of access to health care services?

Would consumers in a particular locality be able to prevent the closure of a state owned hospital or clinic in their area on the basis that such closure would constitute a denial of their right of access to health care services?

Can an individual insist on receiving life prolonging medical treatment when such treatment does not improve the quality of life of the patient and holds no hope of a cure but prolongs his or her life such as it is?

Does a right to health care services imply a right to funding of those services by the state or by a medical scheme?
Is it equitable to institute the implementation of a particular health intervention for select groups of people with a view to increasing coverage to the remainder of the population over a period of time?

What are the rights of providers of health care services in the light of the existence of a constitutional right to such services on the part of consumers?

**Approach and Methodology**

This thesis explores the questions raised above and others in the context of five broad areas of law namely international law, constitutional law, administrative law, the law of contract and the law of delict. These areas of law have in some instances been covered separately with regard to the public and private sectors in order to restrict the size of the chapters and to highlight some of the differences between the two sectors. More particularly the research material is divided into ten chapters in the following way:

- Chapter one explores the concept of a right to health and a right to health care at the level of international law and the usefulness of these concepts in international law to the South African legal system.

- Chapter two deals with the right to health care services and health service delivery from a constitutional law perspective and discusses the relevant judgments of the constitutional court in this area;

- Chapter three examines the significance and relevance of administrative law to health service delivery. The relevant case law in the area of administrative law is discussed;

- Chapter four covers the general principles of the law of contract within the context of health service delivery;

- Chapter five considers the law of contract within the context of the delivery of health services by the public sector and focuses on the case law in this area;
• Chapter six considers the law of contract within the context of the delivery of health services by the private sector and includes focuses on the relevant case law;

• Chapter seven covers the general principles of the law of delict as applicable in the health care context;

• Chapter eight considers the law of delict as it relates to health service delivery within the public sector and focuses on the relevant case law;

• Chapter nine deals with the law of delict as it related to health service delivery within the private sector and focuses on the relevant case law;

• Chapter ten consolidates the conclusions and observations that were made in each of the preceding chapters and offers some concluding thoughts on the subject matter of the thesis.

There are numerous references to articles and publications that have been sourced from the internet in this thesis. This is for a number of reasons. From a practical perspective, given the time that it takes to cover a subject of this magnitude, the internet offers extremely fast and detailed access to many sources of law that would take weeks to uncover in a paper library - assuming that they were available in hard copy in that library to begin with. Sometimes there is as much of an advantage in knowing what is not available as there is in seeing what is present on the shelves. The internet is fast becoming the central repository of knowledge worldwide and it would be nothing short of foolish not to search it for material that is relevant to the topic at hand. It is also much quicker, easier and cheaper to download and store electronically legal articles and reference material for subsequent perusal and study than to physically stand making photocopies in a law library for days. In the context of South African source materials with regard to health law in particular, reference has already been made to the relative paucity of material compared to that available in many foreign jurisdictions. While this thesis does not purport to be anything resembling a
comparative legal study, due largely to the fact that its scope within the South African legal context is extremely broad, it was useful to seek out and include, for illustrative purposes, examples from other jurisdictions of the manner in which they have dealt with issues similar to those under discussion. The internet makes this task a pleasure as opposed to the labour of sweat and tears it would quite literally have been if the writer had been obliged to trawl the law libraries. Most South Africa law libraries have in any event converted to electronic indices that are in some cases offered via subscription services on the internet. When one is attempting a work as substantive as this, it is wise to make the most efficient and effective use of one’s time and other resources in order to be able to arrive at a finished product within externally imposed time constraints.

Although this work could be criticised as somewhat voluminous, some of its size is attributable to detailed coverage of the court judgments in the cases discussed. It was felt that such detailed coverage was necessary and useful for a number of reasons not least of which are -

- The thesis covers a wide expanse of law and few readers will be intimately familiar with every area;
- It was the intention to create a source reference for non-lawyers and those with no ready access to the law reports;
- In order to fully explore the nuances of the cases discussed, it is important to see the detailed thinking of the judges. Law is not a science but an art.

It was also important to cover these five areas of law because a central point of this thesis is the unity of all law in South Africa on the basis of the Constitution. It would not be exaggeration to say that it as much a work of constitutional law as it is of health law. The Constitution requires consistency of all other law not only with itself but also between various fields of law since it embodies the essence of the central themes and the guiding principles of law in this country. One cannot establish the extent to which such constitutional consistency prevails without examining major fields of law. One cannot identify inconsistencies without undertaking the same exercise. The structure of the thesis therefore reflects its approach to law – that there
is a single legal system with many facets rather than a number of different systems that operate discretely and independently of each other.

The Constitution directs South African courts to consider international law and allows them a discretion to consider foreign law. The same approach has been adopted in this thesis. It is not a comparative study of health care law across different jurisdictions. An entire chapter has been devoted to international law but there are comparatively few and highly selective references to foreign law throughout the various chapters. Such references are made where they serve to further illustrate, contextualise or highlight a principle of South African law that is under discussion. In some instances they are the references found within the judgments of South African courts. The dearth of case law in South Africa in the area of health service delivery is one of the principal reasons for these references to foreign law. They serve as practical examples of ‘real life’ situations in which a particular legal principle has been applied and to what effect.

H Nys in the entry for Belgium in the International Encyclopaedia of Laws\(^\text{17}\) explains medical law as follows:

“Medical law is an area of law, medical law does not respect traditional compartments with which lawyers have become familiar, such as torts, contracts, criminal law, family law and public law. Instead, medical law cuts across these subjects and today must be regarded as a subject in its own right. We maintain that it is a discrete area concerned with the law governing the interactions between doctors and patients and the organisation of health care.”

This work is voluminous for yet another reason. It explores more than just medical law. Its focus is South African health law – a much wider concept - and there is no pre-existing foundation upon which to build in this specific context in South African law. It thus had to be done ‘from scratch’. Nys observes that often the term “health (care) law” is used instead of medical law. He states:

“According to Leenen\(^\text{18}\), ‘health law is that branch of law which covers studies on both the individual and social aspects of the right to health care. It can be defined as the body of rules that relates directly to the care for health as well as the application of general, civil, criminal

\(^{18}\) Leenen HJJ ‘Health law and legislation’ Health Services in Europe, 3rd ed vol 1: Regional Analysis, World Health Organisation, Copenhagen 1981, p 60
and administrative law designed to provide healthy conditions. Medical law ("the study of the juridical relations to which the doctor is a party" according to a widely accepted definition of Savatier) is part of health law. In health care there is a large range of juridical relations in which the doctor is not involved."

Furrow et al, authors of a leading American textbook on health law\textsuperscript{19} observe that health law is both broader and narrower than law and medicine as it has been traditionally taught in American law schools. Law and medicine in the past generally focussed on two issues – professional malpractice and forensic medicine. In more recent years, however, law and medicine courses have been expanded to cover new issues that arise at the interface of law and medicine. They state:

"This book grows out of a belief that no longer can one course cover all the issues that now arise from the interaction of law and medicine... We do cover many subjects not previously covered in depths in law and medicine texts: health care financing and cost control, organisation and management of health care institution and access of the poor to health care, to name a few. We shift the focus from law and medicine to law as it affects the health care industry, and examine this law as an integrated whole."

The present writer could do worse than to echo their words in introducing this thesis to the reader.

\textsuperscript{19} Furrow BR, Johnson SH, Jost TS, Schwartz RL. \textit{Health Law: Cases, Materials and Problems} 1st ed West Publishing Company, 1987 p XVII. (Note: There is a third, much later edition of this work but the illustrative quotation above is taken deliberately from the first because it was introducing a new approach at that time).

1.1 Introduction

International law generally is a dynamic concept upon which there are widely differing views amongst lawyers and nation states\(^1\). In fact it would probably not be unfair to say

\(^1\) Savanelli B, "Transformation Of International Law Into Universal Human Rights Law In The Framework Of Pure Theory Of Law", www.jup.org.ps p3 "There are four classical views of the international system: a 'Hobbesian' or realist tradition, a "Vattelian" or internationalist tradition, a "Grotian" or community tradition, and a "Kantian" or universalist tradition. In the Hobbesian or 'realist' tradition, states are seen in a permanent situation of war or hot war. It is the world of power politics, temporary alliances, and national interest, a world which is, however, only zero-sum games. International law merely duplicates this power structure. A new strand of realism substitutes the rivalry of civilizations for that of states. Some 'critical' scholars of international law also seem to embrace a view which emphasizes the difficulty of a legal system attempting to bind different cultures, albeit from a completely different angle... On the other side of the spectrum we find a view labelled by Bull (see below) as 'Kantian' or universalist; this view 'sees at work in international politics a potential community of mankind'. Writers adhering to this view, although acknowledging that the state is here to stay for quite a while, do not regard the state as an aim in itself or even as the 'primary unit of international society. Rather, they tend to underline the role of international 'civil society', multinational cooperation and non-governmental organizations. The systemic value promoted by these authors..."
The concept of international law is explored in this chapter in its various aspects and as perceived and acknowledged by the South African Constitution. Specific attention is given to international law relating to the right to health or health care and the boundaries and content of this construct in order to establish the level and extent of its interface with the domestic legal system. The cogency of international law is considered against the backdrop of South African law and its validity and value for the domestic legal system are critically examined.

The term "international law" in its widest sense includes private and public international law, customary international law and the body of peremptory norms commonly referred to as 'jus cogens'. Article 38(1) of the International Court of Justice Statute states that

"is justice, which may entail a justification of community intervention for the protection of individuals against their own state. In the middle, Bull places a view, which he refers to as 'Grotian' or internationalist. According to this conception, international society is composed of states. Individuals, in principle, count only as representatives of their collectivity. However, cooperation between states is possible, and even to be encouraged in order to realize common values and interests. One view of international society may be called 'Vattelian', or inter-national in the narrow sense. It emphasizes the individual interest of states. Cooperation is the exception, not the rule. In most instances, common interests have to be accommodated in bilateral settings. International institutions may be useful for stabilizing cooperation, but their role is limited by the national interest. This is the view of classical international law, the famous 'Westphalian system'. Its main value is not cooperation, but order. A truly 'Grotian' (or, because of its modern emphasis on institutions, 'neo-Grotian' or 'community') view, on the contrary, sees the international system on its way to an 'organized state community' with an emphasis on common interests, the development of common values, and the creation of common institutions. In the words of Christian Tomuschat, 'it would be wrong to assume that states as a mere juxtaposition of individual units constitute the international community. Rather, the concept denotes an overarching system which embodies a common interest of all states and, indirectly, of mankind.'"

Mehran H 'International Law: Constructing Power?' observes that: "The creation of public international law relies on negotiation and ratification of formal treaties and conventions, and on the formation of custom. Customary international law arises through the "general practice" of states' legally relevant actions resulting in stable expectations, and ultimately in rules widely believed by states to be legal requirements. This is to be contrasted with international law arising from treaties or other formal legal arrangements, which are negotiated by states, and must be signed and ratified in order to be considered legally binding upon a state. States cannot fail to participate in the formation of customary international law concerning their behavior, as it is a product of long term, legally relevant interactions. Conversely, a state may fail to contribute, through choice or through non-recognition by other states, to negotiations of treaties."

These distinctions are far from clear cut. The precise nature and content of jus cogens in relation to other types of international law are the subject of argument. The only South African case which appears to have dealt expressly with the jus cogens is Azanian People's Organisation (Azapo) and Others v Truth and Reconciliation Commission and Others 1996 (4) SA 362 (C) in which the court observed that: 'It is, however, unnecessary, in our judgment, to consider further the applicability of the jus cogens to the interpretation of the Constitution. That is because there is an exception to the peremptory rule prohibiting an amnesty in relation to crimes against humanity contained in Additional Protocol II to the Geneva Conventions, which was adopted on 8 June 1977 by the Diplomatic Conference on the Reaffirmation and Development of International Humanitarian Law Applicable in Armed Conflicts, and which came into force on 7 December 1978. In terms of Article 1(1) thereof this Protocol applies to "all armed conflicts . . . which take place in the territory of a High Contracting
international law has its basis in international custom, international conventions or treaties and general principles of law. A detailed analysis of international law, a vast subject, is not within the scope of this thesis. However, it is necessary to examine a few basic precepts and principles in order to acquire some background understanding of international law as it relates to health and health care.

Public international law generally consists of international conventions and treaties that expressly recognize rules and principles that bind the states parties. Only those states who are parties to such instruments are bound by them. According to some views, international law does not apply to relationships between states and persons or between persons inter se. It applies between nation states. According to others the doctrine that

---

3. Yassuki O 'Is the International Court of Justice an Emperor Without Clothes' International Legal Theory (2002) Vol 8 No 1, p1 states that: "The failure to understand realistically the significance of the ICJ has influenced the attitude of international lawyers toward the question of the "sources" of international law. When discussing the problem of the "sources" of international law, most lawyers begin their argument by referring to Article 38 of the ICJ Statute. Even those who do not explicitly refer to Article 38 generally assume that discussion of the categories of international law should start with, the list of "sources" provided in Article 38(1). Although many leading international lawyers such as Jennings, Cheng, McDougal, Higgins, Falk and Abi-Saab have recognized that using Article 38 for the purpose of explaining the categories of contemporary international law has "an element of absurdity," a tacit reliance on Article 38 still prevails. This fact suggests that most international lawyers tacitly and unconsciously equate the norms of conduct among states with the norms of adjudication to be applied by the ICJ. This further suggests that most international lawyers tacitly accept a domestic analogy and base their argument on this analogy when arguing about the sources of international law."

4. Rosenthal E, and Sundram CJ (fn 2 supra) state that: "International human rights law creates direct legal obligation only on governments and not on private actors although governments can be required to adopt legislation that protects vulnerable populations in the private sphere. They refer in footnote 171 to Ramachan "Equality and Non-Discrimination", The International Bill of Rights, Hankins, ed., and note that one member of the Human Rights Committee observed that "article 26
states are the only subjects of international law is not an accurate statement of the actual legal position. International law is capable of creating legal requirements for relationships between nation states, between states and persons and between persons. There is a view that international human rights law is a separate branch of international law completely.

Clearly international law is a subject that, as a whole, is far from crisp in terms of both content and theory. It is also in a very real sense far less robust than systems of domestic
law. There is considerable debate as to where one area of international law leaves off and the other begins. To complicate matters the content of one area, such as public international law, can by a process of seepage become the content of another, for example, customary international law, depending upon the theory of customary international law to which one subscribes. The steps of this process of seepage and the question of when it is complete are also unclear. For a principle of international law to become customary international law there must be a certain critical mass of support in terms of domestic and international judicial decisions and practice. However, the notion of what that mass should be remains vague. It also does not help that there is an apparently wide variety of types of international law instruments and their relative importance and significance is not always obvious. As the International Labour Organisation (ILO) points out in its definition of key terms used in the UN Treaty Collection, over the past centuries, state practice has developed a variety of terms to refer to international instruments by which states establish rights and obligations among themselves. Commonly used names for these various instruments are “statutes”, “covenants”, “accords”, “treaties”, “conventions”, “declarations” etc. The ILO observes that in spite of this diversity, no precise nomenclature exists and that the meaning of the terms used is variable, changing from state to state, region to region and instrument to instrument. The title of the instrument should not therefore be used as a guide to its relative weight and significance compared to other instruments. The two Vienna

---

7 This is evident from a number of different sources. See for instance Yasuaki fn 3 supra who has noted that: “The ICJ [International Court of Justice] is a refined and extremely fragile construction based on a delicate balance among sovereign states. Once this delicate balance is lost, its power will fall into pieces.” According to him the ICJ is nonetheless, “the most important of the various agents that can settle international conflicts by means of law. It is the only agent that can give authoritative interpretations of international law in an international society made up of sovereign states holding fast to their own conceptions of international law... The ICJ has the image of being the most important judicial organ in international society.” Yet elsewhere he states: “Domestic lawyers can study the law applied by the judiciary (norms of adjudication) with some confidence that it will determine actual disputes. The situation in international society is very different from this domestic model. The ICJ does not have compulsory jurisdiction. The number of states that accept the jurisdiction of the ICJ under Article 38 is only 63 out of some 190 states as of July 1999. Even those states that do accept the Court’s jurisdiction do so with various qualifications. States are generally reluctant to settle international conflicts by means of the ICJ. This is especially the case with politically important issues. Moreover, there is no guarantee of enforcement of the judgment, once given. There have been conspicuous cases in which the losing party has not complied with the judgments. Therefore, the shadow of the court can influence the bargaining process between states much less in international society than it would in domestic disputes. States cannot expect to influence others very much by threatening recourse to the ICJ. Under such circumstances, one can hardly presume to equate norms of conduct with norms of adjudication. States, especially those concerned with their reputation of compliance with international law, may generally seek to behave in accordance with norms of international law, without considering how their conduct will be judged by the ICJ.” Sevasti (fn 1 supra) points out that: “More than a dozen years after the signature of the Vienna Convention on the Law of Treaties, the theory of jus cogens has not yet been put to any practical test. Some scholars are arguing the applicability of principles of ‘jus cogens’ and ‘ergo censum’ to the Human Rights category.” Alston P observes that the enforcement mechanism for human rights at the international level is seriously flawed (referred to in Kasten fn 6 supra).

8 International Labour Organisation (ILO) http://www.ilo.org/englishtext/learn/globall/ilo/law/keyterm.htm
Conventions\(^9\) contain rules for treaties concluded between nation states but neither of them distinguishes between different types of instruments on the basis of their nomenclature. As the ILO points out, although the General Assembly of the United Nations has never laid down a precise definition for the terms “treaty” and “international agreement” and has never clarified their mutual relationship, Article 1 of the General Assembly Regulations to give effect to article 102 of the Charter of the United Nations provides that the obligation\(^10\) to register treaties and international agreements applies to every treaty or international agreement whatever its form and descriptive name. It would seem that there is no absolute truth in international law – only past experience and present perception\(^11\).

To add another layer of complexity to international law, treaties and other international law instruments can be the subject of a number of different actions by states. It is necessary to clarify the nature of these actions in view of subsequent discussions of the various international legal instruments in which South Africa has some involvement. Treaties and international agreements can be adopted, accepted or approved, acceded to, signed or ratified. These various actions do not all mean the same thing. According to the ILO’s Glossary of terms relating to Treaty Actions\(^12\):

“adoption” is the formal act by which the form and content of a proposed treaty text are established. Treaties can be adopted \textit{inter alia} by an international conference which has specifically been convened with the purpose of setting up the treaty – usually by a vote of

\(^{9}\) The 1969 Vienna Convention on the Law of Treaties which came into force on 27 January 1980 and the 1986 Vienna Convention which, at the time of writing has not yet come into force.

\(^{10}\) Article 102 of the Charter of the United Nations requires that “every treaty and every international agreement entered into by any Member State of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretary and published by it.”

\(^{11}\) D’Amato A, "Customary International Law: A Reformulation." \textit{4 International Legal Theory} 1-6 (1998) suggests that the governing rules that result from international controversy are the birth of rules of customary international law. A rule of customary international law joins the body of customary international law precisely because it has led to the resolution of a controversy. He also suggests that the international system adopts controversy-resolving rules because with each adoption, the chances of further interstate controversy and war are reduced. He states that there are two qualifications to the principle that a rule expressed in a treaty can generate customary international law. The first is that the rule must be generalizable. The second is that any provision in a multilateral convention that is subject to reservation cannot generate customary law by virtue of the fact that customary law binds all states and thus there cannot, in principle, be any exceptions. In conclusion he notes that customary law is formed in much the same way that common law is formed – through dispute resolution - but that the difference between the domestic case and the international controversy is that in the latter there is normally no authoritative decision-maker.

\(^{12}\) ILO http://www.ilo.org/english/actwr/homr/e globa//ilo-law/glossary.htm
two thirds of the states present and voting unless they have agreed to apply a different rule;

“acceptance” or “approval” usually means that the state is expressly consenting to be bound by the treaty and have the same legal effect as ratification. Where national constitutional law does not require a treaty to be ratified by the head of state, states have used acceptance and approval instead of ratification;

“accession” is an act whereby the state accepts an offer or opportunity to become a party to a treaty already negotiated and signed by other states and has the same legal effect as ratification. The provisions of the treaty dictate the conditions under which accession may occur and the necessary procedures for it to take place.

“ratification is an act whereby a state indicates its consent to be bound by a treaty if the parties intended to show their consent by such an act. Ratification grants states time to seek approval for the treaty in terms of their domestic law and to enact domestic legislation to give effect to the treaty;

“signature” can be subject to ratification, acceptance or approval in which case mere signature of a treaty by a nation state does not mean that the state is bound by it. In such circumstances signature reflects a willingness on the part of the state signatory to continue the treaty-making process and qualifies the state to proceed to ratification, acceptance or approval. It also creates a good faith obligation to refrain from actions that would defeat the object and purposes of the treaty.

Rosenthal and Sundram\textsuperscript{13} point out that there are a number of important legal differences between international human rights conventions such as the International Convention of Civil and Political Rights (ICCPR), the International Convention on Economic, Social and Cultural Rights (ICESCR), and the General Assembly Resolutions of the United Nations Assembly such as the “Principles for the Protection of Persons with Mental

\textsuperscript{13} Rosenthal and Sundram fn 2 supra
Illness and for the Improvement of Mental Health Care” (the MI Principles)\(^4\) and the resolution on “The Standard Rules on Equalization of Opportunities for Persons with Disabilities” (Standard Rules)\(^5\). They observe that Conventions fall into the category of “hard” international law whereas General Assembly resolutions fall into the category of “soft” international law and note that the latter in the human rights field are also referred to as international human rights “standards”. Soft law is “non-binding” and hard law is “binding”.

The distinctions between the various areas of international law are also important for constitutional purposes. The Constitution\(^6\) distinguishes between public international law, in the sense of treaty law, customary international law, and international law as a whole, in terms of sections 231, 232 and 233 respectively. There is also a difference between section 35(1) of the interim Constitution and section 39(1) of the final Constitution in that the former uses the term ‘public international law’ whereas the latter refers to ‘international law’. In terms of section 39(1), when interpreting the Bill of Rights a court, tribunal or forum must consider ‘international law’. Private international law, although it is of specific relevance to a right to health care in that it includes international intellectual property law and therefore has a significant impact on access to medicines, is not as directly concerned with universal issues as is public international law. It is thus of less general significance in the context of section 39(1) of the Constitution than is public international law which is directly involved in matters of human rights. This said, it must be borne in mind that the values which underlie both public international law and private international law must be the same\(^7\). In the context

---

\(^5\) The Standard Rules are according to Rosenthal and Sundram (fn 2 supra) a revolutionary new international instrument because they establish citizen participation by people with disabilities as an internationally recognised human right. Governments are thus under an obligation to provide opportunities for people with disabilities, and representative organisations to be involved in drafting new legislation on matters that affect them. The Standard Rules call on every country to engage in a national planning process to bring legislation, policies and programs into conformity with international human rights standards.

\(^6\) Act No 108 of 1996

\(^7\) See Maier HG “Extraterritorial Jurisdiction at a Crossroads: An Intersection Between Public and Private International Law”, American Journal of International Law, No2 v76 1982 where he states that “Public international law regulates activity among
of access to medicines this has been recently highlighted with regard to the interpretation of the World Trade Organisation (WTO) agreement on Trade Related Aspects of Intellectual Property Rights 18.

It is therefore not without significance that it has been noted that the relationship between human rights and trade is one of the central issues confronting international lawyers at the beginning of the twenty-first century and that any proposal which purports to marry, almost symbiotically, the two concerns warrants careful consideration 19. In the field of health care in particular there has always been, and there is likely to always be, conflict between commercial interests and health service delivery issues due to the fact that health care goods and services are usually fundamental to survival and the capacity to be human in the fullest sense. The international community is unlikely to want to recognise that the right to health in international law must take precedence over the right to trade since it is driven by powerful global commercial interests. International human rights law and

human beings operating in groups called nation-states while private international law regulates the activities of smaller subgroups or of individuals as they interact with each other. Since the public international legal system co-ordinates the interaction of collective human interests through decentralized mechanisms and private international law coordinates the interaction of individual or subgroup interests primarily through centralised mechanisms, those co-ordinating functions are usually carried out in different forums, each appropriate to the task. The differences between the processes by which sanctions for violation of community norms are applied in the two systems and the differences in the nature of the units making up the communities that establish those norms tend to obscure the fact that both the public and private international systems coordinate human behaviour, and that the values that inform both systems must necessarily be the same."  

Elliott R "TRIPS and Rights: International Human Rights Law, Access to Medicines and the Interpretation of the WTO Agreement on Trade Related Aspects of Intellectual Property Rights" November 2001, www.aidslaw.org, in which the author concludes that states' binding obligations to realize human rights have primacy in international law; that the TRIPS Agreement must therefore be interpreted in a fashion consistent with states' suprising obligations under international law to respect, protect and fulfill human rights; and where this is not possible, states' obligations under the TRIPS Agreement must be recognized as not binding to the extent that there is a conflict with their human rights obligations under international law. At the WTO Ministerial Conference in Dohs in November 2001 a Declaration on the TRIPS Agreement and Public Health was issued which did not go quite as far but did include an agreement that the TRIPS Agreement does not and should not prevent members from taking measures to protect public health (www.globaltreatmentaccess.org/content/trip_releases).  

Alston P "Resisting the Merger and Acquisition of Human Rights By Trade Law: A Reply to Petersmann" 1990-2004 European Journal of International Law www.gll.org/journals/VolNo13/No4/art2 notes that George Soros has recently written: "The WTO opened up a Pandora's box when it became involved in intellectual property rights. If intellectual property rights are a fit subject for the WTO, why not labour rights, or human rights?" and that while Soros opposes such a development there is an increasing number of authors who have called for the 'constitutionalization' of the WTO and who consider that the inclusion of human rights within its mandate would help to overcome the democratic deficit from which it currently suffers. Alston states that: "In philosophical terms it is often difficult to distinguish means from ends and the same applies to abstract or scholarly discussions of human rights theory. But the international law of human rights - the most prominent, positivistic manifestation of which is contained in the UDHR and the two International Covenants - is clearly premised on the recognition of certain specific rights and the consequent downgrading of other values which can then be seen as means by which to sustain certain rights but not as ends in themselves. It is true that this distinction has been blurred by governments which are more concerned to promote their ideological objectives than to protect the integrity of the corpus of human rights. This has been the case most notably in the context of the debates over the right to development, in which the right of individuals to an adequate standard of living has often been conflated with the 'right' of states both to limit the enjoyment of other human rights in the name of development and to receive development aid from richer states. But, far from justifying distortions of the concept of human rights in the name of higher ends, these largely unsuccessful and essentially unnecessary sorties have instead served to reinforce the need to respect the distinction between ends and means. Empirically, it is clear that human beings have been able to enjoy a full range of human rights in societies which do not recognize a human right to free trade as such. Indeed, given the rarity of such formal recognition and the constant threat of free trade in practice, it might not be an exaggeration to say that a list of countries respecting human rights including a right to free trade could be counted on the fingers of one hand."  

18

19
international trade law would seem thus to be eternally bound on a collision course on a number of fronts.

Since international law is contained in a number of different instruments and doctrines it is necessary to examine these in greater detail in order to appreciate the implications at international law of a right to health care. Before an examination of the international law relating to the right to health care can be undertaken, the meaning of the term ‘international law’, particularly in the context of the Constitution, must be ascertained in order to understand the relationship between international law and domestic law as envisaged by the Constitution. More specifically, the concept of international law must be explored in view of the provisions of sections 39(1), 231, 232 and 233 of the Constitution. The relationship between international law and domestic law is a complex one that depends largely upon the manner in which the particular domestic legal system concerned approaches international law. International law is a question of domestic legal perspective. With few exceptions there is no geographic area in the world in which international law exists independently of national or domestic law or where it is the only prevailing system of law. Even in those countries whose legal systems espouse automatic

---

20 In terms of section 39(1), when interpreting the Bill of Rights, a court, tribunal or forum ‘(b) must consider international law’. In terms of section 231, only the national executive may negotiate and sign international agreements. An international agreement binds the Republic only after it has been approved by resolution in both the National Assembly and the Council of Provinces unless it is an agreement of a technical, administrative or executive nature or which does not require ratification or accession. According to section 231(4) any international agreement becomes law in the Republic when it is enacted into law by national legislation provided that a self-executing provision of an agreement that has been approved by Parliament is law in the Republic unless it is inconsistent with the Constitution or an Act of Parliament. Section 232 provides that: ‘Customary international law is law in the Republic unless it is inconsistent with the Constitution or an Act of Parliament’. In terms of section 233: ‘When interpreting any legislation, every court shall prefer any reasonable interpretation of the legislation that is consistent with international law over any alternative interpretation that is inconsistent with international law’.

21 Opakin BR ‘Constitutional Modelling - A Case Study of the Relationship between Domestic Law and International Law’ http://www.eur.nl/foi/isol/papers/opakin.html highlights some of the significant questions that arise in this regard as follows:

- **Do the rules of public international law have direct effect as part of the domestic legal system?** Different answers may be given to this question in relation to different sources of international law, namely, treaties, customary international law, general principles of law or any combination of these.

- **If rules of public international law do have direct effect, do they take precedence over domestic law?**

- **Whether or not there is general provision for rules of public international law to have direct effect as part of the domestic legal system, are some particular rules (for example, human rights norms) given that effect?**

- **Which institutions of government are recognised as competent to negotiate, sign and ratify treaties, and specifically, do these include the legislative organs of government?**

- **Which institutions of government have power to implement treaties in domestic law?**

- **Does the constitution permit or require consideration to be given to rules of public international law when interpreting domestic laws?**

- **In federal states, how is power allocated between central and regional authorities in respect of the negotiation, signature or ratification of treaties, on the one hand or the implementation of treaties on the other?**
incorporation, as opposed to legislative incorporation, of international law into their domestic legal systems, this incorporation is by virtue of domestic, often constitutional, legal provisions rather than any stipulation within international law itself. Consensus of nation states is a key ingredient for the viability as law of international legal principles. An exploration of the approach of the South African Constitution to questions of international law is thus key to an examination of the extent to which international legal norms and standards concerning a right to health care are applicable in South Africa.

1. It has been proposed, for purposes of section 39(1) of the Constitution, that the term ‘international law’ should be interpreted with regard to Article 38(1) of the Statute of the International Court of Justice. The acceptability of this proposal depends upon one’s location upon the spectrum of monism and dualism - whether one is prepared to allow international law to define itself with regard to a domestic system of law or whether one looks to the domestic law’s view of international law for the meaning of the term ‘international law’. A further question is whether the description of international law in Article 38(1) of the Statute of the International Court of Justice may also be used with regard to the term ‘international law’ as used in section 233 of the Constitution. The context in which the term is used in the Constitution is relevant to the extent that ‘international law’ could be interpreted as including all forms of international law such as customary international law and jus cogens or it could be regarded as meaning only public international law. The term ‘international law’, in its Article 38(1) sense, may not be suitable for purposes of section 233 of the Constitution as further discussion will reveal. With regard

22 By Dugard J (see fn 23 infra) with reference to the equivalent provision in the Interim Constitution (section 35(1)) which, in contrast to the Constitution, uses the term ‘public international law’. Section 35(1) states that: “In interpreting the provisions of this Chapter a court of law shall promote the values which underlie an open and democratic society based on freedom and equality and shall, where applicable, have regard to public international law applicable to the protection of the rights entrenched in this Chapter, and may have regard to comparable foreign case law.”

23 Article 38(1) states as follows:
“The Court, whose function is to decide in accordance with international law such disputes as are submitted to it, shall apply:

a. international conventions, whether general or particular, establishing rules expressly recognized by the contesting states;

b. international custom, as evidence of a general practice accepted as law;

c. the general principles of law recognized by civilized nations;

d. subject to the provisions of Article 59, judicial decisions and the teachings of the most highly qualified publicists of the various nations, as subsidiary means for the determination of rules of law.”

The court in J v Makwanyane and Another, 1995 (3) SA 391 (CC) in footnote 46, referred to Dugard J in van Wyk D et al (eds) Rights and Constitutionalism: The New South African Legal Order at 192-5 in which Dugard suggested that s35 of the interim Constitution [the equivalent of section 39 of the current Constitution] requires regard to be had to “all the sources of international law recognised by Article 38(1) of the Statute of the International Court of Justice”.

24 See discussion at section 1.2 of the text below.
specifically to the right of access to health care services\textsuperscript{25}, the right to emergency medical treatment\textsuperscript{26}, the rights of the child to basic health care services\textsuperscript{27} and the rights of prisoners to medical treatment at state expense\textsuperscript{28}, a meaningful consideration of international law must seek to ascertain –

1. Whether there is any customary international law relating to such rights and the extent to which it is law in South Africa in terms of section 232 of the Constitution;

2. Whether there is any public international law, for example international treaties and conventions, on the subject of such rights, which is binding upon South Africa in terms of section 231 of the Constitution, or which must be taken into consideration by a court, tribunal or forum in terms of section 39 of the Constitution when interpreting the Bill of Rights;

3. Whether there are any peremptory norms in terms of \textit{jus cogens} regarding such rights and if so what these are and whether they are applicable in South Africa;

4. Whether there is scope for the application of legal principles embodied in private international legal instruments in terms of sections 39(1) and 233 of the Constitution.

It is the object of this chapter to explore these and related questions.

\section*{1.2 Monism and Dualism}

\textsuperscript{25} Section 27(1) of Act 108 of 1996
\textsuperscript{26} Section 27(3) of Act 108 of 1996
\textsuperscript{27} Section 28(1)(e) of Act 108 of 1996
\textsuperscript{28} Section 35(2)(e) of Act 108 of 1996
There are two opposing views of international law, described as ‘monistic’\(^{29}\) and ‘dualistic’\(^{30}\) respectively\(^{31}\). According to the former, international law and national law comprise a single integrated legal system whereas according to the latter, international law and domestic law are two discrete legal systems. Permutations of these extremes complicate matters. Thus monism may be relevant within a domestic legal system with regard to one area of international law, for example, customary international law, and dualism to another, for example treaty law. Dualism at its most extreme proposes that international law exists only as manifested in domestic courts and that the only real law is the law of any given nation\(^{32}\). Hans Kelsen, on the other hand, expresses the opposite “monistic view” that international law is supreme over the domestic law of all nations. Whenever there is a rule of international law, it supersedes any domestic rule that is inconsistent with it. In terms of Kelsen’s theory, if a nation enacts domestic law that is inconsistent with a rule of international law, and if that nation’s courts proceed to apply the domestic rule instead of the international rule, then - as far as international law is concerned – that nation has violated international law\(^{33}\).

From an international law perspective, irrespective of the provisions of the Constitution, states cannot invoke their domestic law as a justification for not adhering to international legal norms\(^{34}\). The observation of basic human rights, it has been argued, is an international legal norm\(^{35}\). In fact, it has been argued that observation of human rights

---

\(^{29}\) See for example S v Makwanyane and Another (fn 23 supra) cited by Motale Z and Ramphosa C Constitutional Law: Analysis and Cases as an example of monism. See, however the further discussion of Makwanyane’s case below in which it is questioned that the court’s approach is in fact monistic.

\(^{30}\) See for example Australian People’s Organisation (Ampos) and Others v The President of the Republic of South Africa (fn 2 supra) cited by Motale and Ramphosa (fn 29 supra) as an example of dualism.

\(^{31}\) “The monistic tradition derives from natural law theories which see all law as the product of reason. On this view no conflict can arise between international law and domestic law because both are derived from the same source. International law is thus seen to be automatically a part of the domestic legal order, as it is in many civil law systems. The decline of natural law thinking and the rise of legal positivism led, however, to the development of dualism. Dualism sees international law and domestic law as operating on separate planes – the former stipulates norms governing the relations between national states, the latter those governing the relationship between individuals within the state or between individuals and the state. Under the dualist conception, international law plays no role in the domestic legal order except in so far as domestic law adopts an international rule.” Opeskin BR fn 21 supra

\(^{33}\) See Anthony D’Amato fn 11 supra p261

\(^{34}\) According to the Vienna Declaration and Program of Action, World Conference on Human Rights, Vienna, 14-23 June 1993, U.N. Doc A/CONF.157/24, while ‘national and regional particularities and various historical, cultural and other religious backgrounds must be borne in mind, it is the duty of states, regardless of their political, economic and cultural systems, to promote and protect all human rights and fundamental freedoms.’

forms part of the peremptory norms of the *jus cogens* from which no state can lawfully deviate. This aspect of international law will be dealt with in more detail below. South Africa is a party to the United Nations Charter and is therefore obliged to respect human rights. The validity and applicability of international law within a domestic legal system is dependent upon which theoretical view is supported. The dualist view has been criticised as anachronistic and contrary to the principles of international law itself. It is, however, very much alive and from a practical viewpoint seems to be the norm rather than the exception. The sovereignty of states is a key factor in dualist arguments and it has been frequently invoked by even developed countries in international conferences and forums to ground an essentially dualist approach to the relationship between international and domestic legal systems. Some scholars dispute the existence of *jus cogens*. Others observe that in international law the existence of a body of *jus cogens*, peremptory norms from which no state can derogate, has been evidenced by over forty years of thought and debate within the relevant scholarly and political communities.

If one regards international human rights law as a separate, specialised branch of international law then the question of whether or not it operates monistically or dualistically in relation to domestic law cannot be answered with reference to the more general categories of international law such as public international law or customary international law. As noted previously there is quite a strong argument in favour of this view. It might be possible to argue that even if monism is not the state of affairs between

---

35 Segard 'Public International Law', Chaskalson Kentridge Klaaren Marcus Spitz Woolman fn 35 supra at 13-8
37 See Motals and Rammphosa supra fn 29 at 38
38 Article 53 of the Vienna Convention on the Law of Treaties, May 23, 1969, 1155 U.N.T.S states that "A treaty is void if, at the time of its conclusion it conflicts with a peremptory norm of general international law. For the purposes of the Convention, a peremptory norm of general international law is a norm accepted and recognized by the international community of states as a whole as a norm from which no derogation is permitted and which can be modified only by a subsequent norm of general international law having the same character."
39 Countries that subscribe to dualism include: South Africa, the United Kingdom of Great Britain and Northern Ireland, Sweden, Mali, Lesotho, New Zealand, Nigeria, Senegal, Ireland, Japan, Italy, India, France, Belgium, the United States of America, Australia, Denmark, Canada, Norway and Thailand. (See International Humanitarian Law: National Implementation http://www.help.irc.org)
40 For example, it was used by France, the United States of America and Belgium in the course of proceedings concerning the United Nations Convention on the Law of the Sea (UNCLOS). See further discussion below.
41 Perritt Jr, Symposium on the internet and legal theory: The Internet is Changing International Law (fn 2 supra)
the domestic legal system and other branches of international law, it could still be said to prevail in the relationship between the domestic legal system and international human rights law. In the case of customary international law one is beset with evidentiary problems as to its existence before even beginning to consider whether or not it is applicable and the nature of its relationship to a domestic legal system. To make matters worse, customary rules are not static. They change in content depending upon the amplitude of new vectors (state interests). Whilst public international law does not have the same evidentiary problems one can argue that unless a state is a party to the relevant international human rights instruments, it is difficult to argue that it has accepted that particular law as being seamlessly integrated into its domestic legal system.

The problem with international human rights as law is that there is apparently no mechanism at international law for dealing with human rights violations. There is no international court of human rights. If states cannot be held responsible for human rights violations and they are not signatories to the relevant international human rights instruments, it is difficult to see how an argument for monism can be made except at the

---

43 In 'General Principles and Sources of the Law' (http://lawofwar.org/principles.htm) it is noted that: "Custom is an important source of international law but proving its existence may be problematic. In determining whether a valid and binding custom exists the parties must consider not only the amount of usage, but also its weight; that is, whether the custom asserted is practiced by nations with an interest in the matter, and just how much of an interest they really have." In the case of *West Rand Central Gold Mining Company v The King* (2 K.B. 391 [1905]) the court observed that: "There is an essential difference, as to certainty and definiteness, between municipal law and a system or body of rules in regard to international conduct, which, so far as it exists at all (and its existence is assumed by the phrase 'international law') rests upon a consensus of civilized states, not expressed in any code or past, nor possessing, in case of dispute, any authoritative interpreter; and capable, indeed, of proof, in the absence of some express international agreement, only by evidence of usage to be obtained from the action of nations in similar cases in the course of their history.

44 D'Amato A 'Trashin Customary International Law' 81 American Journal of International Law 101 (1987). He points out that human rights interests, for example, have worked a revolutionary change upon many of the classic rules of international law as a result of the realization by states in their international practice that they have a deep interest in the way other states treat their own citizens.

45 Mansson J 'EC Law vs National Law? A Brief Theoretical Examination' Juridisk Tidsskrift, 1994-95 p 659 observes that "...pure monism is hard to defend since it fails to take into consideration the realities of political power relations." He states "Carefully analysing Kelsen's Stufenbau theory (by which states derive their powers from, and within the limits of, the superior system of international law, so that a states exercise of power rests on the Grundnorm provided by international law), Blockman concludes that it runs into insurmountable problems when confronted with the realities of international law and power politics. An examination of the practices of states would, at the very most, leave Kelsen with a situation in which international law is recognized by, and sets some limits on, the legal systems of basically sovereign states."

46 Kastair (fn 6 supra) asks "How are victims of violations to seek remedy? Or more cogently, can remedy be sought at the international level at all?" He points to the observation of Cassese A, that: "The arrival of human rights on the international scene is, indeed, a remarkable event because it is a subversive theory destined to foster tension and conflict among states" and goes on to remark that human rights treaties, like other international treaties, in the words of Fitzmaurice O, "are a source of obligation rather than a source of law. In their contractual aspect, they are no more a source of law than an ordinary private law contract." In keeping with this, states are not themselves criminally liable for breaching human rights treaties, not even in cases of crimes against humanity, according to the recently adopted Draft Articles on Responsibility of States for Internationally Wrongful Acts (2001), elaborated by the International Law Commission (ILC)."
most academic and abstract level. It has been pointed out that the most commonly held rationale for the relevance of international law, and especially treaties, to national conduct is based on the notion of consent. This argument begins with the claim that sovereign states are not subject to any obligation unless they have consented to it. If this theory holds then monism cannot. The applicability of international human rights law is then subject to the consent of individual nation states and does not exist independently of their goodwill and co-operation.

It is submitted that evidence in support of monism is scant to say the least even with regard to international human rights law. Savaneli points out that the legal personality of the individual in the contemporary international law still remains controversial and that it seems still difficult to formulate one doctrine which reflects both a general consensus between scholars as well as lawyers of different legal systems. If the legal personality of the individual at international law is still the subject of such debate it is difficult to argue that the rights of the individual at international law are automatically the same as those within domestic legal systems.

1.3 The Constitutional Approach To International Law

Sections 232 and 233 of the Constitution do not lend complete support to the monistic view of international law. The fact that section 232 of the Constitution expressly singles out customary international law as being law in South Africa unless it is inconsistent with the Constitution or an Act of Parliament, means that other forms of international law do

---

47 Moghalu KC ‘Justice as a Global Commons: Global Responses to Judicial Challenges in Africa’ (paper presented in 2002 at the African Dialogue II Conference Convened by the Office of the United Nations High Commissioner for Human Rights on the theme Promoting Justice and Reconciliation in Africa) points out that “the very idea of international criminal justice for violations of international humanitarian law is predicated on its workability on the cooperation of states with the international criminal tribunals.” He asks “If decisions of the Security Council ought to be automatically binding on states, why does Article 2 of Resolution 955 request states to take any measures necessary under their domestic law to implement the provisions of the resolution and the Tribunal’s Statute?” and notes that in making it mandatory for states to take necessary measures under their domestic law, the Council, intentionally or not, makes a practical recognition of the theories of monism and dualism in the relation between international law and municipal law. According to monism, international law and state laws are mutually reinforcing aspects of one system — law in general...Dualists believe that the juridical origins of state law and international law are fundamentally different... Thus in the dualist view, for international law to apply within the domestic sphere, it needs to be enabled, empowered or validated by domestic legislation.”

48 Guzman AT ‘A Complianc eof Based Theory of International Law’ (http://www.berkeley.edu)  
49 Savaneli, fn 1 supra  
50 Dugard, ‘Public International Law’, Chaskalson Kenridge Klaaren Marou Spitz Woolman (fn 35 supra) 13-4
not necessarily enjoy the same status\(^\text{51}\). The provisions of section 232 also mean that
domestic statutory law and the Constitution take precedence over customary international
law\(^\text{52}\) - an essentially dualist approach. Under section 231(4) of the Constitution an

\(^{51}\) It has been observed that the provisions of section 232 may have little substantive effect because the codification of
international law in the post-war era has significantly reduced the practical relevance of customary international law to
the domestic legal system. (Oepskin fn 21 supra). This view may be overly simplistic. See, for instance, Kinney D "The
International Human Right To Health: What Does This Mean For Our Nation and Our World?" Indiana Law Review 2001,
34, 1457 where she observes that under the principles for the development of customary international law, widespread
ratification of UN and regional treaties and other instruments recognizing international human rights establishes an
international customary law of human rights. She notes that specifically treaties, declarations and other instruments become
evidence of a general state practice in which states engage out of a sense of legal obligation. As evidence of general practice
followed out of a sense of legal obligation, they establish human rights obligations in the instrument as customary
international law. Thus, for example, the International Convention on Economic, Social, and Cultural Rights (ICESCR) is
arguably customary international law due to its widespread acceptance internationally. Kinney's approach would have the
effect in many instances of bypassing the provisions of section 231 of the Constitution effectively implementing by way of
customary international law, the provisions of international agreements which have not been negotiated, signed or ratified in
terms of section 231. Her argument is an intriguing example of the lenient discussions that seem to characterise
international law. It seeks to either or promote a monistic outcome apparently by accepting and using an essentially dualist
rational.

\(^{52}\) The question is whether the same applies to provincial constitutions and legislation which does not technically constitute "the
Schedule 6. In terms of section 10(4) a provincial legislature is bound only by the Constitution and, if it has passed a
constitution for its province, also by that constitution, and must act in accordance with the limits of the Constitution and that
provincial constitution. The question is of particular relevance in the health care context due to the fact that health services are
a functional area listed in Schedule 4 over which provinces have legislative competence. The Constitution itself does not
define the term "Act of Parliament". In Zanturi v the Council of State (Ciskei) and Others, 1993 (4) SA 615 (CC) the
constitutional court held that the term "Act of Parliament" as used in the sections of the Constitution relating to the jurisdiction
of the supreme court included Acts of the Parliament of the Republic of South Africa passed before and after the coming into
effect of the Constitution but excluded laws passed by the legislatures of the four nominally independent homelands. The
Interpretation Act 33 of 1957 defines "law" as "any law proclamation ordinance, Act of Parliament or other enactment having
the force of law" and "parliament" as "the Parliament of the Republic". Many provinces currently have their own substantial
health legislation in place. Municipal health services are listed in Part B of Schedule 4 and both the national and provincial
governments have legislative competence over such health services subject to the conditions laid down in the Constitution. If
there is a conflict between international customary law and a provincial Act or constitution what would be the legal position?
Logic dictates that such a situation could be resolved with regard to sections 146 and 147 of the Constitution except that these
sections deal only with conflicts between national and provincial legislation as opposed to national and provincial law.
Customary international law is not legislation in the sense of codified law. If customary international law has the same status
as national law then it should apply within the provinces to the exclusion of contradictory provincial law except under
circumstances similar to those contemplated within sections 146 and 147 of the Constitution. For example, there prior to the
National Health Act which was just recently enacted, there was no national legislation dealing with the right to health care
services as expressed in the Constitution. However, the KwaZulu Natal Health Act conferred certain rights pertaining to
health care upon residents of KwaZulu-Natal. One of these is that "A health care user is entitled to the progressive realisation
within the Province's available resources, to the right of access to primary health care services" (Section 29(2)(b) of the
KwaZulu-Natal Health Act, 2000). The International Convention on Economic, Social and Cultural Rights, however, states that
everyone has the right to the enjoyment of the highest attainable standard of physical and mental health. If one assumes, for purposes of illustration, that in terms of customary international law this has been consistently interpreted to
mean a right of access to the full range of health care services available in a particular region as opposed to just primary health
care services, how would the courts approach this provision in the KwaZulu-Natal Health Act in the absence of the national
legislation? It is not an Act of Parliament. There would be no national legislation against which it could be measured except
the Constitution. The Constitution states that customary international law is law in South Africa unless it is in conflict with
the Constitution or and Act of Parliament. It might be possible to invoke the available resources argument to show that the
KwaZulu-Natal Health Act is in fact consistent with the ICESCR but the fact of the matter is that more than just primary health
care services are available in KwaZulu-Natal although the other services are probably not as widely available as the
primary health care services. The KwaZulu-Natal Act has clearly adopted a 'lowest common denominator' approach to the
subject of the right to health care services which, as discussion in later chapters will reveal, is not necessarily constitutional
neither is it the best approach to adopt when dealing with human rights issues in which the interests of the individual as
opposed to that of the group are often emphasised. The converse question is whether provinces can enact the terms of
international agreements and other instruments of international law into provincial legislation which have not been enacted
into national legislation. Strictly speaking, provided that a province has legislative competence (which it does in the case of
health care services) in a particular area, there appears to be no legal obstacle to the enactment of legislation in terms that
reflect those of an international agreement or other instrument of international law. It will probably not be possible to
incorporate the treaty or covenant in question into provincial law by direct reference due to the provisions of section 231 but it
is difficult to see how a province could be prevented from enacting the terms and provisions similar to those of an
international covenant or treaty into provincial law - especially in the absence of national framework legislation on the
international agreement is not law in the Republic unless it is enacted into law by national legislation. The Constitution's support of the right of the South African people as a whole to self-determination serves to underline the fact that the approach of the South African legal system to international law is dualist. In terms of section 2 of the Constitution, it is the 'supreme law' of the Republic and law or conduct inconsistent with the Constitution is invalid. The Bill of Rights applies to all law and binds the legislature, the executive, the judiciary and all organs of state. However, the Constitution does require consistency with international law where this is reasonable since, when interpreting any legislation, every court must prefer any reasonable interpretation that is consistent with international law over any alternative interpretation that is inconsistent with international law. The relationship of international law to South African common and customary law is not directly expressed in the Constitution. In terms of section 39(2) when developing the common law or customary law, every court, tribunal or forum must promote the spirit, purport and objects of the Bill of Rights. Since in terms of section 39(1) when interpreting the Bill, courts must consider international law, this will result in an indirect influence by international law on customary and common law. The Bill of Rights, in terms of section 39(3) does not deny the existence of any other rights or freedoms that are recognized or conferred by common law, customary law or legislation, to the extent that they are consistent with the Bill. The provisions of section 231 explain in some detail at what point other forms of international law, such as international agreements, become law in South Africa. In view of the Constitution's largely dualistic approach it is therefore necessary to consider from a constitutional perspective, rather than an international law perspective, questions of 'international law' and 'customary law'.

1.3.1 Section 39(1)

subject. The existence of the National Health Act No 61 of 2003 now renders this discussion somewhat academic but it does illustrate the importance of being alive to these technical legal issues.

53 Section 235 of Act 108 of 1996
54 Section 8 of Act 108 of 1996
55 Section 233 of Act 108 of 1996
56 These include treaties, conventions, declarations, charters, covenants, pacts, protocols and exchanges of notes (see Dugard fn 35 supra at 13-1)
The primary difference between section 39(1) of the Constitution and the other sections that deal with international law is that the former requires the use of international law as an interpretational tool whereas the latter indicates the legal status of various areas of international law within the Republic. From the point of view of the interpretation of the rights relating to health care services in the Constitution, this is an important distinction because it means that a court can have regard to the numerous treaties, covenants, conventions and other international legal instruments on the subject whether or not they have been enacted into law in South Africa. How then does one use international law as an interpretational tool in understanding the rights in the Bill of Rights? A consideration of existing case law on the interpretation and application of section 35(1) of the interim Constitution and section 39(1) of the Constitution would be beneficial to an understanding of the approach of the courts to the injunction to consider international law when interpreting the Bill of Rights. In *S v Makwanyane* the court held with reference to section 35(1) of the interim Constitution that:

"In the context of section 35(1), public international law would include non-binding as well as binding law. They may both be used under the section as tools of interpretation. International agreements and customary international law accordingly provide a framework within which chapter 3 can be evaluated and understood, and for that purpose, decisions of tribunals dealing with comparable instruments, such as the United Nations Committee on Human Rights, the Inter-American Commission on Human Rights, the Inter-American Court on Human Rights, the European Commission on Human Rights, the European Court of Human Rights and, in appropriate cases, reports of specialised agencies such as the International Labour Organisation, may provide guidance as to the correct interpretation of particular provisions of chapter 3."

Analysis of this statement reveals that the court is advocating a very wide definition of the term ‘public international law’. It must be seen as inclusive of international agreements, customary international law and decisions of international tribunals dealing with comparable instruments. The reference in the judgment to reports of “specialised agencies” such as the International Labour Organisation even suggest that for the purposes of section 39(1) in appropriate cases, private international law may be of relevance in the interpretation of particular provisions of chapter 3 of the Constitution. The court is thus effectively construing ‘public international law’ as ‘international law’ in...
the fullest sense. A further point deserving of attention is the fact that the section is being interpreted by the court to mean that the consideration of international law does not mean the application of international law but rather the application of national law interpreted in a manner that is consistent with international law if more than one interpretation of a particular right in the Bill of Rights exists. This would be in keeping with the provisions of section 233 which require the courts to prefer any reasonable interpretation of any national legislation that is consistent with international law. It should also be noted that the court did not regard the use of an interpretation of a similar right at international law to evaluate and understand a right in the Bill of Rights as mandatory but rather as a guideline. The injunction in section 35(1) to consider international law was not interpreted by the court to mean that international law interpretations of rights appearing in the Bill of Rights must be exclusively applied. In *Grootboom*, the court held that:

"The relevant international law can be a guide to interpretation but the weight to be attached to any particular principle or rule of international law will vary. However where the relevant principle of law binds South Africa, it may be directly applicable."

The court then went on to consider the question of minimum core content.

The statement of the court in *Grootboom* highlights the two different roles of international law. The one is that of interpretational tool. The other is its application as law where it satisfies the provisions of sections 231 and 232 of the Constitution. Where the rule of international law under consideration is customary international law which is not in conflict with the provisions of the Constitution or an Act of Parliament, the rule of customary international law may be used as an interpretational tool in terms of section 39 but where applicable, it must also be applied as law in South Africa. Where the rule of international law is in conflict with the provisions of the Constitution or an Act of Parliament, it may only be used as an interpretational tool. Similarly where a rule of public international law has been enacted into law as contemplated by section 231(4), the

---

60 This may explain the substitution of the latter term for the former in the final Constitution.
61 *Grootboom* fn 57 supra
62 See later for further discussion
63 But see later the further discussion concerning the use of law that is in conflict with the Constitution or an Act of Parliament as an interpretational tool.
rule can be used as an interpretational tool and, where it is directly applicable as law, it must be applied as such. If the approach in *S v Makwanyane*⁶⁴ is adopted then all relevant international law must be considered whether or not it is binding since it is being used as an interpretational tool. Whether or not it is binding within South Africa and upon whom is a separate issue.

The question of the applicability of international law was also raised in the case of *Azanian Peoples Organisation (Azapo) and Others v The President of the Republic of South Africa*⁶⁵. The court observed with regard to the provisions of section 231(1) and 231(4)⁶⁶ of the interim Constitution:

"These subsections of the Constitution would, it would seem, enable Parliament to pass a law even if such law is contrary to the *jus cogens*. The intention to legislate contrary to the *jus cogens* would, however, have to be clearly indicated by Parliament in the legislation in question because of the *prima facie* presumption that Parliament does not intend to act in breach of international law."

The idea that a nation state may legitimately enact law that is contrary to a principle of *jus cogens* is anathema to protagonists of the concept of *jus cogens* at international law⁶⁷. The interrelationship between section 35(1) and the other provisions of the Constitution dealing with international law was discussed in the same case by the constitutional court. Mahomed DP held in the *Azapo*⁶⁸ case that:

"It is clear from this section (section 231(1))⁶⁹ that an Act of Parliament can override any contrary rights or obligations under international agreements entered into before the commencement of the Constitution. The same temper is evident in s 231(4) of the Constitution, which provides that: ‘(t)he rules of customary international law binding on the Republic, shall, unless inconsistent with this Constitution or an Act of Parliament, form part of the law of the Republic’. Section 35(1) of the Constitution is also perfectly consistent with these conclusions. It reads as follows:

---

⁶⁴ *Makwanyane* fn 23 supra. As to the post interim Constitution relevance of *Makwanyane*, the constitutional court has stated in *Mohamed and Another v President of the Republic of South Africa and Others (Society for the Abolition of the Death Penalty in South Africa and Another Intervening)* 2001 (3) SA 893 (CC): "There is nothing in the final Constitution of the Republic of South Africa Act 108 of 1996 to suggest that *Makwanyane* has ceased to be applicable - on the contrary, the values and provisions of the interim Constitution relied upon in *Makwanyane* are repeated in the 1996 Constitution."

⁶⁵ *Azanian Peoples Organisation (Azapo) and Others v The President of the Republic of South Africa* (fn 2 supra)⁶⁶

"The rules of customary international law binding on the Republic shall, unless inconsistent with this Constitution or an Act of Parliament, form part of the law of the Republic."

⁶⁷ See below for further discussion.

⁶⁸ *Azapo* see fn 2 supra

⁶⁹ In the final Constitution this situation was remedied by section 231(5) according to which the Republic is bound by international agreements which were binding on the Republic when the Constitution took effect.
“In interpreting the provisions of this chapter a court of law shall promote the values which underlie an open and democratic society based on freedom and equality and shall, where applicable, have regard to public international law applicable to the protection of the rights entrenched in this chapter, and may have regard to comparable foreign case law. The Court is directed only to ‘have regard’ to public international law if it is applicable to the protection of the rights entrenched in the chapter.”

The final Constitution is not as restrictive in that it does not specifically require that only public international law that is applicable to the protection of the rights entrenched in the chapter must be considered. It simply requires that international law be considered. This view of the constitutional court, as expressed in *Azapo*70 that domestic law takes precedence over international law has been criticised as being contrary to international law72. It is submitted that particularly in the context of section 39(1), this is not a valid criticism since the most that the courts are required to do is ‘consider’ international law.

The Constitution adopts a dualist approach73. Courts that seek to apply a monistic

---

70 See Downwood and Another v Minister of Home Affairs and Others; Shabalala and Another v Minister of Home Affairs and Others; Thomas and Another v Minister of Home Affairs and Others 2000 (1) SA 997 (C) at 1034 in which the Cape Provincial Division observed that Section 39(1) of the “Constitution provides that a court, when interpreting the Bill of Rights, (a) must consider international law; and (b) may consider foreign law’. As pointed out by Chaskelen P in *S v Motshwari and Another* (fn 23 supra) at para 39 “[i]n dealing with comparative law we must bear in mind that we are required to construe the South African Constitution, and not an international instrument or the constitution of some foreign country, and that this has to be done with due regard to our legal system, our history and circumstances, and the structure and language of our own Constitution. We can derive assistance from public international law and foreign case law, but we are in no way bound to follow it. It must, however, also be borne in mind that “the lawmakers of the Constitution should not lightly be presumed to authorize any law which might constitute a breach of the obligations of the state in terms of international law” (per Mahomed DP in *Azapo and Others v President of the Republic of South Africa* and *Others 1996 (4) SA 671 (CC) (1996 (8) BCLR 1015) at para [26], read together with paras [27] and [28]; see also Prince v President of the Law Society, *Cape of Good Hope and Others 1998 (8) BCLR 976 (C) at 985C - H and 989A - 990A”).

71 Azapo fn 2 supra

72 Motala Z and Ramaphosa C (fn 29 supra) who state at 38: “The Court erroneously adopted the position in *Azapo* that international human rights protections are not part of the South African Constitution unless they are adopted by the legislature. In the *Azapo* decision the Court should have interpreted s29(1) of the Constitution as Makgabo J did in *Motshwari*, as an obligation that requires ‘courts to proceed to public international law and foreign case law for guidance in constitutional interpretation, thereby promoting the ideal and internationally accepted values in the cultivation of a human rights jurisprudence for South Africa.’

73 Dugard J, ‘International Law and the South African Constitution’ European Journal of International Law argues that the South African common law “adopts the monist approach to customary international law. Customary international law is part of South African law and courts are required to ‘ascertain and administer’ rules of customary international law without the need for proof of law – as occurs in the case of foreign law.” He observes that as a species of common law, customary international law is subordinate to all forms of legislation. He then goes on to state that the common law is given constitutional endorsement by section 232 of the 1996 Constitution which, in language substantially similar to the Interim Constitution, provides that “Customary international law is law in the Republic unless it is inconsistent with the Constitution or an Act of Parliament.” In saying that the Constitution has endorsed the common law position of international customary international law in South Africa, Dugard is apparently saying that the Constitution is monist in its approach. If one looks closely at his discussion of the wording of section 231(4) of the Interim Constitution which provided that “the rules of customary international law binding on the Republic shall, unless inconsistent with this Constitution or an Act of Parliament, form part of the law of the Republic” (writer’s italics) the matter is not that cut and dried. He points out that the omission of the word ‘binding’ from the final Constitution has led one commentator to argue that all rules of customary international law, including those to which South Africa may have “persistently objected” are part of municipal law. In a neat bit of sophistry that fully exploits the looseness of the concept of customary international law, Dugard avoids this argument by saying that the better view is that the word ‘binding’ was dropped from the 1996 Constitution on the grounds that it was considered to be unnecessary and indeed tautological. As far as South Africa is concerned, a practice to which it has persistently objected is simply not a customary rule.” He then goes on to concede that on the other hand there can be little doubt that the omission of the word ‘binding’ will facilitate the proof of customary international law. It is submitted that the sophistry in saying that South African law follows a monist approach only in terms of its own definition of customary international law. Thus where
approach therefore run the risk of acting unconstitutionally. International law must therefore be considered from the perspective of domestic law generally and the Constitution specifically. As stated previously, they are not obliged to apply international law unless it has become law in South Africa as contemplated in sections 231 and 232 of the Constitution. The courts have stressed the need to take cognisance of South Africa’s legal system, its history and circumstances and the structure and language of its Constitution. It is clear from the various dicta of the courts on this subject that a cautious and rational approach to the consideration of international law when interpreting the Bill of Rights, which takes into account the unique identity of South Africa as a

South Africa has consistently objected to a rule of customary international law that other nation states regard as customary international law, it does not constitute customary international law for the purposes of the Constitution. This is despite the fact that Dugard goes on to recognize that while early South African decisions hold that only those rules of customary international law that have been universally recognized by states form part of South African law, later decisions hold that general acceptance is sufficient. Dugard’s argument is also in conflict with the decision in S v Potane 1988 (3) SA 31 (C) in which the court observed that in Nhlatuli and another v Minister of Justice and Others 1979 (1) SA 893 (A), the Appellate Division accepted that customary international law was, subject to its not being in conflict with any statute or common municipal law, directly operative in the national sphere. The Appellate Division described the attributes of a rule of customary international law which would make it applicable in South Africa. It would have to be either universally recognized or it would have to have received the assent of this country. In holding this, the court referred to a passage in Oppenheimer International Law (Cauteruite) 8th ed vol 1 at 39 which states the conditions concerning universal acceptance or state assent for recognition of a rule of customary international law as part of the law of England saying that: “Our law and English law in this respect is therefore the same. It is not clear to me whether Rumpff CJ in giving the judgment meant to lay down any stricter requirements for the incorporation of international law usages into South African law than the requirements laid down by international law itself for the acceptance of usages by states. International law does not require universal acceptance for a usage of states to become a custom. Margo J, in giving the judgment of the Full Transvaal Court in Inter-Science Research and Development Services (Pty) Ltd v Republica Popular de Mocambique 1980 (2) SA 111 (T) did not think that the word ‘universal’, despite its ordinary meaning, was really intended to mean universal. I do not think so either. In the present case, however, the distinction between universal and general recognition makes no difference. I am prepared to accept that where a rule of customary international law is recognized as such by international law it will be so recognized by our law [writer’s italics]. Monism, it is submitted, contains the seeds of its own destruction in the sense that it is an all or nothing theory. Either international law applies equally within all domestic jurisdictions or it does not. How can it apply in some jurisdictions but not others if monism is a characteristic of international law itself rather than a concession of a sovereign state? Either it is binding at an objective level of certainty across all nation states or it fails as an argument. The monist that considerations of relativity come into play – one state subscribes to monism but another to dualism; one area of international law, eg jus cogens, applies within all states but another applies only with the consent of nation states; a single state, at its discretion, regards certain international legal provisions as binding but not others – monism is defeated. As such it is a concept of extremely limited value. It is clear from discussions elsewhere in this chapter that there are many powerful nation states that subscribe to dualism. This factor alone defies arguments in favour of the universal applicability of international law in all countries i.e. monism. Dugard’s comment that the South African common law adopts the monist approach and the subsequent implication that the Constitution does as well because it endorses in the sense that customary international law is only binding, in terms of both the common law and the Constitution, if it does not conflict with legislation. To the extent that its domestic legislation has the capacity to out a rule of customary international law, it is submitted that to assert that a legal system follows a monistic approach is to hold an extremely weak view of monism – so weak in fact, that it approaches dualism. Dugard points out that as far as treaties are concerned before 1994, South Africa followed the English dualist approach to the incorporation of treaties and that the drafters of the 1996 Constitution elected to return to the pre-1994 position relating to the incorporation of treaties without abandoning the need for parliamentary ratification of treaties.

S v Mkhwananyane and Another (fn 23 supra) at para [39] quoted with approval in Dowood and Another v Minister of Home Affairs and Others; Shabibi and Another v Minister of Home Affairs and Others; Thomas and Another v Minister of Home Affairs and Others (fn 70 supra). See also Park-Ross and Another v Director: Office for Serious Economic Offences 1993 (2) SA 148 (C) in which the court observed with regard to the interim Constitution: “While it is indeed so that s 34(1) of the Constitution provides that, in interpreting the provisions of chap 3 thereof, the Court may ‘have regard to comparable foreign law’, this should be done with circumspection because of the different contexts within which other constitutions were drafted, the different social structures and milieu existing in those countries as compared with those in this country, and the different historical backgrounds against which the various constitutions came into being. I agree with Fromeman J in Quemati v Minister of Law and Order and Another 1994 (3) SA 625 (E) at 633F-G that one must be wary of the danger of unnecessarily importing doctrines associated with those constitutions into an inappropriate South African setting.” The South African Constitution must be interpreted within the context and historical background of the South African setting" cited with approval in Govender v Minister of Safety and Security 2000 (1) SA 959 (D)."
nation, rather than a headlong rush to absorb willy-nilly every fashionable international legal principle into the South African legal system, is the correct one. S v Makwanyane has been cited as an example of a monistic approach to international law but closer examination of the judgment in this case reveals that this is not a necessary conclusion. The court in Makwanyane emphasised a value-based interpretation of the Constitution with specific reference to South African conditions and faithfulness to the Constitution.

1.3.2 Sections 231, 232 and 233

There is the question as to what extent if any the interpretation provisions of the Constitution in sections 231, 232 and 233 modify the meaning of section 39(1). In other words, should the fact that the drafters of the Constitution saw fit to write a separate section 232 and 233, do not apply to interpretations of the Bill of Rights or should the two sets of provisions be read in conjunction with each other? If the latter, then how does

---

75 The court in Park-Ross (fn 74 supra) quoted with approval these words of Mahomed AJ as he then was in S v Acheson 1991 (2) SA 805 (Nim) at 813A-B: "The constitution of a nation is not simply a statute which mechanically defines the structures of government and the relations between the government and the governed. It is a 'mirror reflecting the national soul', the identification of the ideals and aspirations of a nation; the articulation of the values bonding its people and disciplining its government. The spirit and the tenor of the constitution must therefore preside and permeate the processes of judicial interpretation and judicial discretion."

76 Makwanyane fn 23 supra

77 Motala and Ramaphosa fn 29 supra at p37

The court in Makwanyane (fn 23 supra at p415) said that: "In dealing with comparative law we must bear in mind that we are required to construe the South African Constitution, and not an international instrument or the constitution of some foreign country, and that this has to be done with due regard to our legal system, our history and circumstances, and the structure and language of our own Constitution. We can derive assistance from public international law and foreign case law, but we are in no way bound to follow it". See also the observations of Sachs J in Costas v Government of the Republic of South Africa; Mataso and Others v Commanding Officer, Port Elizabeth Prison, and Others 1995 (4) 631 (CC) who states at p 656: "If I might put a personal gloss on these words, the actual manner in which they were applied in Makwanyane (the capital punishment case) shows that the two phases are strongly interlinked in several respects: firstly, by overt proportionality with regard to means, secondly, by underlying philosophy relating to values, and, thirdly, by a general contextual sensitivity in respect of the circumstances in which the legal issues present themselves. I make these points because of what I regard as a tendency by counsel, manifested in this case, to argue the two-stage process in a rather mechanical and sequentially divided way without paying sufficient attention to the commonalities that run through the two stages. In my view, faithfulness to the Constitution is best achieved by locating the two-stage balancing process within a holistic, value-based and case-oriented framework. The values that must suffice the whole process are derived from the concept of an open and democratic society based on freedom and equality, several times referred to in the Constitution. The notion of an open and democratic society is thus not merely aspirational or decorative, it is normative, furnishing the matrix of ideals within which we work, the source from which we derive the principles and rules we apply, and the final measure we use for testing the legitimacy of impugned norms and conduct. If I may be forgiven the excursion, it seems to me that it also follows from the principles laid down in Makwanyane that we should not engage in purely formal or academic analysis, nor simply restrict ourselves to ad hoc technicism, but rather focus on what has been called the synergistic relation between the values underlying the guarantees of fundamental rights and the circumstances of the particular case. There is no legal yardstick for achieving this. In the end, we will frequently be unable to escape making difficult value judgments, where, in the words of MoLoshin J, logic and precedent are of limited assistance. As she points out, what must be determinative in the end is the court's judgment, based on an understanding of the values our society is being built on and the interests at stake in the particular case; this is a judgment that cannot be made in the abstract, and, rather than speak of values as Platonic ideals, the Judge must situate the analysis in the facts of the particular case, weighing the different values represented in that context." [footnotes omitted].
one reconcile the two. Kentridge and Spitz\(^79\) ask whether there is any difference of principle between the interpretation of the Constitution as a whole and the interpretation of the Bill of Rights in particular and note that there is such a difference\(^80\). They observe however, that:

> "the differences between the interpretation of the Bill of Rights and the Constitution as a whole is a difference of degree rather than a difference in kind and that because the Bill of Rights is more widely worded, there is more room for explicit value judgments in interpreting the Bill. Where other chapters of the Constitution are being interpreted the words themselves tend to provide a clearer indication of what is required."\(^81\)

Despite these observations, it is submitted that this is a significant basis for an argument that sections 231, 232 and 233 in particular are not applicable to the Bill of Rights. The Bill of Rights must be interpreted, with reference to international human rights law generally as opposed to only those aspects of international law that are binding within the Republic because international human rights law is relevant to South Africa as a nation state insofar as it acknowledges and upholds the underlying values contained in the Constitution, irrespective of the provisions of other South African domestic law which is still in the process of reform. This would also explain why the constitutional court, in considering the rights in the Bill of Rights has not done so with specific reference to sections 231, 232 or 233 of the Constitution.

If the Bill of Rights must be interpreted in the same way as the remainder of the Constitution then one has to attempt a reconciliation of sections 39(1) and 232 to 233. In the light of the wording of section 232, it could be argued that it is superfluous to read the term ‘international law’ in section 39(1) of the final Constitution as inclusive of ‘customary international law’ that is binding in South Africa. The provisions of section 232 imply that a court must apply customary international law that is not in conflict with

---

79 Chaskalson, Kentridge, Klaaren, Marcus, Spitz and Woolman, (fn 35 supra) at para 11.5.
80 Chaskalson et al fn 35 supra. This difference is expressed at 11-12 where they observe: "understanding the character of the Constitution as a whole and the Bill of Rights in particular is necessary in order to comprehend the essential difference between statutory and constitutional interpretation. A statute is an instrument by means of which a legislature elected by a majority of citizens governs those citizens. It is a set of instructions from the legislature to the officials who enforce the statute and to the citizens who are required to comply with its provisions... Judges interpreting the Constitution are engaged in a different task altogether. They are attempting to understand and to clarify the way in which government itself is required to function. In doing so they are trying to establish a scheme or pattern of government which complies with the values which the Constitution claims to uphold. More particularly, in interpreting the Bill of Rights, the courts are attempting to establish those values which allow individuals to make claims against the majority."
81 Chaskalson et al fn 35 supra 81 p11-15
the Constitution or an Act of Parliament since customary international law is law in South
Africa. Consideration is a subset of application. Must the inference then be drawn that
the injunction in section 39(1) to consider customary international law must apply to
customary international law that is in conflict with the Constitution or an Act of
Parliament? Should section 39(1) be interpreted to mean that a court must consider those
rules of customary international law that are in conflict with the Constitution or an Act of
Parliament or should it be interpreted to mean that the term ‘international law’ in section
39(1) does not include customary international law at all because this is dealt with in
section 232 of the Constitution? If one takes into account that the injunction in section
39(1) is to ‘consider’, as opposed to ‘apply’, international law and the fact that the
Constitution itself leans towards dualism in terms not only of section 232 but also section
231, the latter interpretation is the most logical option from a domestic law viewpoint on
the basis that the law that does not apply in South Africa and which is in conflict with an
Act of Parliament is not relevant. A consideration of a rule of customary law which is
directly in conflict with the declared intention of the legislature as expressed in an Act of
Parliament seems more than a little subversive especially if such consideration would
lead to an interpretation of a right in the Bill of Rights which is also in conflict with that
particular Act of Parliament. However, many would argue that, at least to the extent that
the customary international law in question contains a peremptory norm and is therefore a
part of the jure cogens, such an approach cannot be valid. The rule stated in section 8 of
the Constitution that the Bill of Rights is binding upon the legislature could also be
invoked in support of the argument that an Act of Parliament cannot be validly contrary
to a principle of jure cogens. If this argument holds then the next logical step would be
that a court, taking into account a principle of customary international law that conflicts

---

82 Sarkin J 'The Effect of Constitutional Borrowings on the Drafting of South Africa’s Bill of Rights and Interpretation of
of the interim Constitution which provides: “the rules of customary international law binding on the Republic shall, unless
inconsistent with this Constitution or an Act of Parliament, form part of the law of the Republic” observes: “Thus a particular
human rights standard, which has become accepted as a rule of customary international law, must be implemented by a South
African court in a decision, unless this rule is incompatible with the Constitution or an Act of Parliament. The proviso sets an
important limit, permitting parliamentary supremacy in this area as in the past.”

83 See for instance Dugard, fn 73 supra, who states that: “Peremptory norms include the prohibitions on aggression, genocide,
racial discrimination, slavery, the denial of self-determination, and the suppression of basic human rights. It is inconceivable
that Parliament, as constituted under the interim or final Constitution, would violate a peremptory norm.” He points out that
the obiter dictum of the Cape Provincial Division in Azanian Peoples Organisation (AZAPO) and Others v Truth and
Reconciliation Commission & Others 1996(4) SA 362 (C) that the interim Constitution would “enable Parliament to pass a
law, even if such law is contrary to the jure cogens”, “was both unnecessary and unwise as it seriously undermines the
Constitution’s clear intention of establishing harmony between international law and municipal law.”
with the Act of Parliament in question, declares the Act to be unconstitutional to the extent that it conflicts with the court’s interpretation of the rights in the Bill of Rights. The dualist principle expressed in section 232 of the Constitution would thus be avoided in favour of the more monistic vista of legal possibility.

The considerable differences in scope between a right to health as expressed at international law, and this right as expressed in the Constitution create a real possibility that courts could potentially read into the expression of the right in the Constitution a much wider interpretation than was initially intended and use it to overturn a statute dealing with the right to health care services which is based on the narrower interpretation. In this way, customary international law that is in conflict with an Act of Parliament could be introduced into the South African legal system via the backdoor of the constitutionally mandated manner in which the Bill of Rights could be interpreted. Admittedly it would take a court that was either ignorant of the implications of considering section 39(1) in isolation from section 232 or one that was determined to incorporate a principle of customary international law into the domestic legal system such as might happen where a principle of *jus cogens* is involved. So far, however, the constitutional court has sensibly adopted a fairly conservative approach which has meant that international law concepts such as minimum core content of socio-economic rights, have been rejected on the grounds of pragmatism. It is submitted that when faced with a conflict between a principle of *jus cogens* and an Act of Parliament, a court is likely to take into account the stipulation in section 39(1)(a) which requires it to “promote the values that underlie an open and democratic society based on human dignity, equality and freedom” to resolve such conflict. The values that underlie an open and democratic society are more likely to be consistent than inconsistent with the *jus cogens*. In practice such conflicts are seldom likely to arise given the spirit of the Constitution generally and the fact that Parliament is, as has been pointed out, unlikely to intentionally violate a peremptory norm. In the context of health care, however, a conflict between domestic law and the *jus cogens* could conceivably in future arise in the context of euthanasia\(^\text{84}\) where a

\(^{84}\) Proponents of euthanasia would find their arguments strengthened if a right to euthanasia based on fundamental human rights was more widely recognized internationally than at present. In *Pretty v United Kingdom* (application no 2346/02) the European Court of Human Rights held that there had been no violation of Article 2 (right to life) of the European Convention
law prohibiting assisted suicide is challenged on the basis that it constitutes a violation of the fundamental human rights of human dignity and the right to bodily and psychological integrity. While such rights in general may be part of the *jus cogens*, however, it is unlikely that they would be well received as specifically supportive of the idea of euthanasia given the decision of the European Court of Human Rights in the case of *Pretty v The United Kingdom*. It would be extremely difficult to argue that a right to euthanasia is presently a principle of *jus cogens*. Another potential area of conflict is in the rationing of health services. An example of this would be a domestic rule which allows health authorities to avoid the supply of anti-retroviral drugs to HIV/AIDS patients contrary to a principle of *jus cogens* which requires that states give their citizens access to life-saving drugs as part of the right to health.

If one sees section 39(1) as ousting the relevance of sections 232 and 233 of the Constitution to the Bill of Rights then the courts would still be engaged in a dual exercise concerning customary international law in that they would be considering and applying customary international law which is law in South Africa and merely considering customary international law which is not. A wide interpretation of section 39(1) carries the further implication that all international agreements, whether formal or informal, must be taken into account in interpreting the Bill of Rights. The question is to what extent informal agreements and arrangements between states, which do not necessarily form part of international law for the purposes of section 231 of the Constitution, must be taken into account for purposes of section 39(1)? Do they form part of international law for the purposes of section 39(1) or not? Longstanding and widely supported informal agreements or arrangements between states can approximate customary international law and can serve as evidence that a practice has become a rule of

84 See further the discussion of *Soodramoney v Minister of Health, KwaZulu-Natal 1998 (1) SA 765 (CC)* in chapter 2.

85 See discussion of informal international agreements under section 231 infra.

86 See the discussion of *Pretty fn 84 supra.*
customary international law. It is submitted, however, that in view of the fact that informal agreements and arrangements between states that do not constitute international agreements, as envisaged by section 231, are unlikely to constitute public international law or customary international law unless they have been recognised as such in terms of a treaty, convention or similar instrument or by an international forum such as the International Court of Justice, these should not as a rule be considered by a court, tribunal or forum as international law for the purposes of section 39(1). This would appear also to be in keeping with Article 38(1)(f) of the Statute of the International Court of Justice.

1.3.3 Section 231 – International Agreements

In terms of section 231(1) of the Constitution all international agreements must be negotiated and signed by the National Executive. An international agreement binds the Republic only after it has been approved by resolution in both the National Assembly and the National Council of Provinces, unless it is an agreement referred to in subsection (3) of section 231.

According to subsection (3) of section 231 an international agreement of a technical, administrative or executive nature, or an agreement which does not require either ratification or accession, entered into by the national executive, binds the Republic without approval by the National Assembly and the National Council of Provinces, but must be tabled in the Assembly and the Council within a reasonable time. The question of whether an international agreement is of a “technical, administrative or executive nature” is likely to prove problematic for South African courts until such time as they have built up a reasonable level of jurisprudence on the subject. There is a tendency for complex international agreements to be structured so that the principal agreement sets out the general framework and principles for the various activities or projects to be undertaken by the parties and then provides for subordinate agreements between various organs of state and the international partner in order to spell out the details of and implement in practical terms, those various projects or activities envisaged by the main agreement. It is

---

90 Article 38 of the Statute of the ICJ in 23 supra
possible that the Constitution envisages subordinate agreements of this nature in referring to agreements of a technical administrative or executive nature. It is important to emphasise in this regard, however, that international agreements bind only the Republic vis-à-vis other nations. Generally speaking, they are not binding upon South Africans or inhabitants of South Africa since they are not law in the country until enacted as such by national legislation.

Any international agreement becomes law in the Republic when it is enacted into law by national legislation but a self-executing provision of an agreement that has been approved by Parliament is law in the Republic unless it is inconsistent with the Constitution or an Act of Parliament. The power of a province to effectively, if not directly, enact into provincial legislation the provisions of an international agreement has already been discussed. The absence of framework legislation in an area in which both the national and provincial spheres of government have legislative competence, such as health services, is likely to increase the possibility that provinces would exercise such a power. Whether such legislation would survive a challenge of unconstitutionality on the basis that it is effectively in violation of the provisions of section 231 is an interesting question.

In the context of health care currently, the only international agreement that has so far been expressly enacted into law is contained in the International Health Regulations Act. The object of this legislation is to apply the International Health Regulations, adopted by the World Health Assembly, in South Africa. The International Health Regulations are focused mainly on the control of malaria, yellow fever, cholera and smallpox, and their hosts and (where applicable) insect vectors, across international borders. They also provide for notification of the World Health Organization by states of the occurrence within their territory of a disease that is the subject of the regulations.

The term “international agreement” in the context of section 231 refers to all kinds of international agreements which, in international law are known by many different names.

---

91 Section 231(4) of Act No 108 of 1996
92 See discussion of provincial legislation at fn 52 supra
93 Act No 28 of 1974
such as treaty, convention, charter etc. It must be observed that not all international agreements are such for the purposes of section 231 of the Constitution. The question as to what is meant by the term “international agreement” was considered by the court in *S v Harksen*94. In that case the President of South Africa consented to Harksen’s extradition to Germany in terms of the Extradition Act95. There was no extradition agreement or treaty between Germany and South Africa and it was argued that the President’s consent to the extradition brought into existence a bilateral international agreement in conflict with section 231 of the Constitution. The court held that in order to establish whether or not the relevant documentation gave rise to an international agreement, it must be carefully considered and that it must indicate that the parties intended to conclude an internationally binding agreement with reciprocal rights and duties or obligations96. The court emphasised the importance of consensus between the parties and their intentions and held that although the Vienna Convention does not, in its definition of ‘treaty’, refer to the consensual aspect or intention underlying any international agreement, it clearly cannot be an agreement without the requisite intention or *consensus*97. The court observed that it is this intention and consent which distinguishes treaties from informal or *ad hoc* agreements or arrangements.

The phrase ‘international agreements’ as used in section 231 must, it seems, therefore be given the narrow meaning of legally binding agreements. Informal agreements or arrangements of an international nature do not fall within the phrase ‘international agreements’ in section 231 which means that they would probably fall into the general category of international law as contemplated in section 233 of the Constitution and may fall within the scope of customary international law as contemplated in section 232 depending upon the circumstances.

---

94 *S v Harksen; Harksen v President of the Republic of South Africa and Others; Harksen v Wagner No and Another* 2000 (1) SA 1183 (C)
95 Act No 67 of 1962
96 *Harksen fn 94 supra at 1200 D-E.
97 *Harksen fn 94 supra at 1201 A-B.* The court held that: “This appears unequivocally from the definitions (in art 2.1 (f) and (g) respectively of the Vienna Convention) of ‘contracting state’ and ‘party’. They are said to be a state or party which has ‘consented to be bound by the treaty.’ The means of expressing this consent is dealt with in art 11, which provides that ‘[t]he consent of a state to be bound by a treaty may be expressed by signature, exchange of instruments constituting a treaty, ratification, acceptance, approval or accession, or by any other means so agreed.’ The court quoted from *Reuter P Introduction to the Law of Treaties* (translation of Mioc and Hagenmacher) at 30. A treaty is defined as ‘an expression of consensual wills attributable to two or more subjects of international law and intended to have legal effect under the rules of international law’. 
The distinction between international agreements as contemplated in section 231 and informal international agreements or arrangements is important for the provinces because only the national executive may, in terms of section 231(1) negotiate and sign international agreements. Provinces have an obligation to respect, protect, promote and fulfil the rights in the Bill of Rights as much as does the national government. In the case of health care services in particular, the national department of health seldom if ever delivers these services itself. The provinces are responsible, in practical terms, for such service delivery. They own the various hospitals and health facilities and employ the various health professionals necessary to deliver health care services. The national department of health does, however, play a key role in issues of policy co-ordination and support of provinces in health service delivery and certain functions such as the procurement of pharmaceuticals are centralised. The national department has control over certain funding which it allocates to provinces in the form of conditional grants which are over and above the equitable share allocated directly to the provinces by the National Treasury.

When it comes to health care services which are the subject of international agreements, it is the role of the national department of health to enter into these agreements even if it only concerns a single province. There is no indication in the Constitution that provinces have the power to enter into such agreements in their own right. From a contractual point of view this can create problems for the national department of health which, in the absence of a back-to-back agreement between itself and the province, does not have direct legal authority to ensure performance by the province. It may also not have the resources to itself fulfil the obligations imposed by the contract. The legislation envisaged by the Constitution on the subject of co-operative government has not yet materialised and while the Constitution does require the different spheres of government in South Africa to govern co-operatively, the politics of the situation are such that it is not inconceivable for a rogue province to flout the terms of an international agreement, entered into by the national executive, which requires certain actions on the part of that province. The provisions of section 100 of the Constitution, may, depending on the
circumstances, be invoked to deal with the situation but it will not necessarily always be appropriate to do so.

The dynamic between the provinces and the national government on health care issues is complex and can be exploited by unscrupulous international agencies to further their own ends or simply to favour one province over another for various reasons. The fact of the matter is that if health care services in one province are superior to those in neighbouring provinces, for instance because a particular province is the beneficiary of substantial international donor funding, the more affluent province might find itself providing health care services to inhabitants of a neighbouring province at an unprecedented and unsustainable level or, alternatively, failing in its constitutional obligations to respect, protect, promote and fulfil the right of South African residents to health care services. The interface between the national government and nine provincial governments concerning the delivery of health care services rests upon a delicate balancing act in the distribution of health care resources and policy relating to the delivery of health care, which if disrupted, could lead to serious financial and other difficulties for a province.

A good example is the question of health tourism. A wealthier province which has health facilities of a generally higher standard, possibly even some of an international standard, compared to those of other provinces, may decide to embark on an active campaign to attract health tourists and may even wish to enter into an agreement with for example the British National Health System (NHS) for the treatment of British patients in provincial facilities. The agreement between the British National Health System and the province in question may not necessarily be an international agreement due to the fact that the NHS has an existence independent of the British government. The utilisation of public health facilities in this province by foreign nationals will affect the availability of those facilities to South African residents who may in turn be forced to seek certain levels of health care services in neighbouring provinces. The province that is servicing the health tourists could find itself faced with legal action for violation of constitutional rights. The power of the national executive to impose policy upon the provinces was discussed to a limited
extent in *Minister of Education v Harris*. In that case a statute gave the Minister of Education the power to determine national policy for the planning, provision, financing, co-ordination, management, governance, programmes, monitoring, evaluation and well-being of the education system. The constitutional court nevertheless observed that:

“Policy made by the Minister in terms of the National Policy Act does not create obligations of law that bind provinces, or for that matter parents or independent schools... In the light of the division of powers contemplated by the Constitution and the relationship between the Schools Act and the National Policy Act, the Minister's powers under s 3(4) are limited to making a policy determination and he has no power to issue an edict enforceable against schools and learners... Complex constitutional questions arise as to whether the Minister is permitted at all to oblige MECs to enforce national policy in this way. It is not necessary to decide such questions in this case, for s 3 of the National Policy Act does not accord the Minister such power. It follows that the notice purports to impose legally binding obligations upon independent schools and upon MECs, and is ultra vires the powers granted to the Minister by s 3 of the National Policy Act.”

Health services are in much the same constitutional position as education in that they are a Schedule 4 competency over which both the national and provincial spheres of government have jurisdiction.

1.3.4 Section 232 – Customary International Law

Customary international law is law in the Republic unless it is in conflict with the Constitution or an Act of Parliament.

As stated previously, for the purposes of the interpretation of the Bill of Rights, a tribunal or forum must apply customary international law since it is law within the Republic. The only ground for not doing so is that it would be inconsistent with the Constitution or an Act of Parliament. Customary international law, unlike other international law, is thus more than just a tool of interpretation in relation to the Bill of Rights. It is national law, applicable to the interpretation of the Bill of Rights, as law in its own right.

Does the provision in section 232 of the Constitution effect an increase or diminution in the status of customary international law within South Africa? According to the monist

---

98 *Harris* 2001 (4) SA 1297 (CC)
view of international law, customary international law has a higher status than national or
domestic law and in the event of a conflict customary international law prevails.
However, if it is reduced to the status of national law within the Republic, then it cannot
have a status higher than other national law. In fact it is only law in South Africa to the
extent that it does not conflict with domestic law. One ends up with the tautology that
certain customary international law is in fact not international law at all but domestic law
by virtue of the Constitution. The alternative is a dual role for customary international
law as both domestic and international law. Logically speaking the alternative is more
appealing since it recognizes that South Africa as a nation state and also its inhabitants
are both bound by the customary international law in question. However the boundaries
of customary international law that binds South Africa as a subject of international law
may not necessarily be coterminous with those of the body of customary international
law that binds its inhabitants due to the requirement of consistency with Acts of
Parliament and the Constitution.

The pertinent question, with regard to the provisions of section 39(1) as read with section
232, is what is the position of a court where a rule of customary international law is in
conflict with the provisions of the Constitution or an Act of Parliament? Should the court
still take into account the rule of customary international law in interpreting a right in the
Bill of Rights or should it avoid it on the basis that Parliament has signified a rejection of
it in another law or the Constitution itself? It is submitted that the answer is to be found
in the judgement of the Cape Provincial Division in Dawood⁹⁹. It took the approach that
although in dealing with comparative law one is required to construe the South African
Constitution, and not an international instrument or the constitution of some foreign
country, and that this has to be done with due regard to the domestic legal system,
national history and circumstances, and the structure and language of the South African
Constitution, it must also be borne in mind that ‘the lawmakers of the Constitution should
not lightly be presumed to authorise any law which might constitute a breach of the
obligations of the state in terms of international law’.

⁹⁹ Dawood fn 70 supra
The view has been expressed that section 39(1) requires that binding and non-binding international law must be considered when interpreting the Bill of Rights\textsuperscript{100}. However, the Constitution itself provides for a situation in which statutory domestic law overrides international law in the event of a conflict. There is a significant difference between a rule of law that is merely "non-binding" as opposed to a rule of law that has been quite clearly contradicted by an Act of Parliament. The approach of the court in *Dawood* suggests that one must adopt a cautious approach in concluding that the lawmakers would have intentionally breached an obligation of the state in international law does not detract from the requirement to construe the South African Constitution with due regard to the domestic legal system. If the lawmakers have in fact written a law that is contrary to a principle of *jus cogens* as contained in customary international law, the principle of *jus cogens* does not form part of the domestic law and should not be applied. The fact that principles of *jus cogens* seem in the main to be devoid of meaningful content renders it very unlikely that there will be such a conflict in practice. In the field of health care the closest one can perhaps come to an alleged principle of *jus cogens* is the concept of minimum core obligations but this concept does not seem to have been recognised as *jus cogens* largely because there are no clear criteria for identification of exactly when a rule becomes part of the *jus cogens*. A vague and indeterminate right to health can and does mean different things to different people as evidenced by the various approaches to this right in countries around the world. It could hardly be argued that such a right is a rule of *jus cogens* if the minimum content of the right cannot be convincingly identified by way of international consensus\textsuperscript{101}. The criticism levelled against the judgment in the *Azapo* case is apparently based at least in part upon the notion that the customary international law in question formed part of the *jus cogens*. The cardinal question is whether this is in fact the case. There is apparently no agreement as to the point at which a principle of international law becomes part of the *jus cogens*. The apparent supremacy\textsuperscript{102} of *jus cogens* over even the Constitution raises some fairly tautologous arguments.

\textsuperscript{100} Motala *et al. fn 7 supra
\textsuperscript{101} See further discussion of *jus cogens* infra
\textsuperscript{102} The manner and mechanisms for the creation of *jus cogens* norms, and therefore the question as to whether a particular rule constitutes *jus cogens*, are by no means clear. So too is the approach to *jus cogens* by various states. There is no consensus amongst states that their rights under international law can be altered without their consent. The United States for instance, has said that it could not accept the suggestion that, without its consent, other states would be able, by resolutions or statements to deny or alter its rights under international law. (IX UNCLOS at 106) France has made it clear that "no
1.3.5 Section 233 – International Law

International law, other than customary international law, is not law in South Africa unless it meets the requirements of section 231 i.e. it has been approved by resolution in the National Assembly and the Council of Provinces or it is a section 231(3) agreement. South Africa is asserting its sovereignty in such a provision. However, in terms of the view expressed by the court in *Makwanyane* in the interpretation of the Bill of Rights irrespective of whether or not it is law in South Africa or binding upon South Africa.

In terms of section 233:

“When interpreting any legislation, every court must prefer any reasonable interpretation of the legislation that is consistent with international law over any alternative interpretation that is inconsistent with international law.”

The Bill of Rights and the Constitution logically both fall into the category of ‘any legislation’. The rationale behind the inclusion within section 39(1) of a specific injunction to consider international law when interpreting the Bill of Rights when such an injunction, and more, is also effectively contained in section 233 of the Constitution is

---

government could be bound under international law unless it agreed to be so bound in a treaty, and that is no case could a government be bound by a legal rule which others sought to impose on it. Belgium has said that “no state could be bound by international law without its consent.” There are serious doubts as to whether an instrument which at best can lay down rules vaguely described as “soft law” (meaning still not hard genuine law) may by some ‘alchemists’ become a legitimate vehicle for the creation of ‘higher law’. In reality, only treaties of a truly universal nature establishing general international law may produce peremptory rules.... The existing experience clearly demonstrates that opposition by an important element of the international community, even if it constitutes a small minority, can effectively prevent the emergence of new norms of *jus cogens* See for further details concerning the above ‘International Jus Cogens: Issues of Law Making’ 1990-2002 European Journal of International Law. More majority support of a particular norm as *jus cogens* is not sufficient to make it so. There is also by no means consensus as to exactly when a particular rule or norm becomes part of the *jus cogens.* The author points out that “An analysis of the negotiations at both UNCLOS and the 1983 Vienna Conference on Succession of States indicates that many states once again confirmed their traditional and widely shared view according to which the UN General Assembly resolutions are not even capable of producing ordinary legally binding obligations, let alone the norms of *jus cogens.*”

The extent to which the terms ‘international agreement’ and ‘international law’ are synonymous is problematic given that there is no precise nomenclature for international instruments. It was concluded by the court in *S v Harkesen* (1996) SATC 62 that informal or *ad hoc* agreements or arrangements between states do not constitute international agreements as contemplated in section 231 of the Constitution.

The court quoted Olivier M, ‘Informal International Agreements under the 1996 Constitution’ (1997) SATC 63 at 73 who states: “(T)he term ‘international agreement’ as it appears in s231 is used in the narrow sense of the word to refer only to legally binding documents. Informal or legally non-binding international agreements fall outside the ambit of section 231, although they can, strictly speaking, also be regarded as agreements of an international nature.” Olivier distinguishes between informal international agreements and treaties as follows: “The basic criterion for distinguishing between treaties and informal international agreements lies in the intention of the parties – in other words, whether or not the parties intended creating a legally binding document. Certain criteria have been developed to assist in ascertaining the intention of the parties. These criteria are, however, not always easy to apply and may lead to conflicting inferences.” Among the criteria she suggests are: language, designation, subject-matter, surrounding circumstances, whether or not the agreement has been internationally registered and the way in which municipal law describes and deals with the agreement.

---

103 The extent to which the terms ‘international agreement’ and ‘international law’ are synonymous is problematic given that there is no precise nomenclature for international instruments. It was concluded by the court in *S v Harkesen* (1996) SATC 62 that informal or *ad hoc* agreements or arrangements between states do not constitute international agreements as contemplated in section 231 of the Constitution.

104 *Makwanyane* fn 23 supra
not entirely clear unless one adopts the view that the Bill of Rights must be interpreted differently to other legislation, including the remainder of the Constitution. The injunction in section 233 is more favourably inclined towards international law than that in section 39(1) in that it requires a court to prefer any reasonable interpretation that is consistent with international law over one that is not. Does this oblige a court\textsuperscript{105} considering international law in the context of section 39(1), to prefer any interpretation of the Bill of Rights which is consistent with international law over one that is not? It is submitted that the answer is a qualified ‘yes’, the qualification being based upon the word ‘reasonable’ in section 233. Both sections 39(1) and 233 use the phrase ‘international law’ but the courts have held that for the purposes of section 39(1) both binding and non-binding international law must be considered whereas they have not yet expressed a view of what is meant by ‘international law in the context of section 233. Dugard\textsuperscript{106} has observed that:

“it is inconceivable that Parliament as constituted under the interim or a final constitution would violate a peremptory norm. The obiter dictum of the Cape Provincial Division in Azanian People’s Organization (AZAPO) & Others v Truth and Reconciliation Commission & Others that the interim Constitution would enable Parliament to pass a law, even if such law is contrary to the \textit{jus cogens}, was both unnecessary and unwise as it seriously undermines the Constitution’s clear intention of establishing harmony between international law and municipal law.”

But what of non-binding international law? In \textit{Grootboom}\textsuperscript{107} the court stated that the weight to be attached to any particular principle or rule of international law will vary. In \textit{Makwanyane}\textsuperscript{108}, Chaskalson P emphasised the need to construe the Constitution with due regard to the South African legal system, South African history, and circumstances and the structure and language of the South African Constitution. He said that assistance can be derived from public international law but the courts were in no way bound to follow it. The courts have adopted a conservative approach to the absorption or alignment of international legal principles into or with domestic law. In terms of the ordinary rules of statutory interpretation, the phrase ‘international law’ should not be interpreted differently between the two sections unless there is a very clear intention to the contrary.

\textsuperscript{105} This is despite the fact that Section 233 refers specifically to a court unlike section 39(1) which refers to a court, tribunal or forum.

\textsuperscript{106} Chaskalson, Kantridge, Klaaren, Maruus, Spitz and Woolman \textit{fn 35 supra} para 13.4 at 13-7

\textsuperscript{107} Grootboom \textit{fn 57 supra}

\textsuperscript{108} Makwanyane \textit{fn 23 supra}
The court in *Makwanyane*\textsuperscript{109} has indicated that the term ‘international law’ as used in section 39(1) should be given a wide interpretation rather than a narrow one. It follows that, in terms of this rule of statutory interpretation, the same term as it appears in section 233 should be given the same interpretation. The question has, however, been raised as to whether the Bill of Rights and the remainder of the Constitution must be interpreted differently\textsuperscript{110}. The commentators and courts, in their discussions of section 39(1) (or section 35(1) of the interim Constitution) have tended to focus on the provisions of section 39(1) exclusively, without reference to section 233. If the Bill of Rights is to be interpreted differently to the remainder of the Constitution then the meaning of the term “international law” in sections 39(1) and section 233 need not be the same.

It is possible that the phrase ‘any legislation’ used in section 233 was not intended to include the Constitution, and therefore the Bill of Rights, in view of the fact that the Constitution, including the Bill of Rights, is not just ‘any legislation’ but rather the grundnorm for the South African legal system and therefore has supremacy over every other law in South Africa and in view of the fact that there is express provision for the ‘consideration’ of international law in section 39(1). The difference between constitutional interpretation and the interpretation of other legislation has been recognised in cases on constitutional interpretation throughout the world\textsuperscript{111}. The courts have espoused a purposive approach to interpretation of the Constitution\textsuperscript{112}. It is submitted that this approach, particularly in terms of the dynamic expounded by O’Regan J in *Makwanyane*\textsuperscript{113}, would create considerable uncertainty if applied to legislation other than the Constitution. The message behind the purposive approach is that it is not static and that reliance upon judicial precedent in interpreting the Constitution and especially the

\textsuperscript{110} Chaskalson *et al* fn 35 supra

\textsuperscript{111} Chaskalson *et al* fn 35 supra. See para 11.4, pp 11-10 to 11-14 and the cases there cited, in particular *Mattoo v Commanding Officer, Port Elizabeth Prison, & Another* 1994(4) SA 592 (SE)

\textsuperscript{112} See for example, *Minister of Land Affairs and Another v Sandle & Others* 1999 (4) BCLR 421 (LCC) at 421B-C; *S v Mhlungu & Others* 1995 (3) SA 867 (CC); *Ferreira v Levin No & Others* 1996(1) SA 984 (CC); *R v Big M Drug Mart Ltd* (1983) 18 DLR (4th) 321 at 339-40 cited with approval in *S v Zuma* 1995 (2) SA 642 (CC). In *S v Makwanyane*, (fn 23 supra) O’Regan J states that: “This purposive or teleological approach to the interpretation of rights may at times require a generous meaning to be given to the provisions of Chapter 3 of the Constitution and at other times a narrower, specific meaning. It is the responsibility of the courts, and ultimately this court, to develop fully the rights entrenched in the Constitution. But this will take time. Consequently any minimum content which is attributed to a right may in subsequent cases be expanded and developed.”

\textsuperscript{113} *Makwanyane* fn 23 supra
Bill of Rights will not necessarily provide the same safeguards as reliance on judicial precedent regarding other legislation.

The requirement to prefer any reasonable interpretation consistent with international law over one that is inconsistent therewith does not contain the same qualification as does section 232 – the proviso that it is not inconsistent with the Constitution or an Act of Parliament. It is possible that an interpretation, consistent with international law, of a particular statute could be inconsistent with another statute or the Constitution itself. What would be the position in this event? It is submitted that one must look to the requirement of reasonableness in section 233 to resolve such situations. It is submitted that an interpretation which is inconsistent with the Constitution could not be considered reasonable, neither could an interpretation which clearly flew in the face of an Act of Parliament. Section 232 (3) of the interim Constitution provided that ‘no law shall be constitutionally invalid solely by reason of the fact that the wording used is prima facie capable of an interpretation which is inconsistent with a provision of this Constitution, provided that such a law is reasonably capable of a more restricted interpretation which is not inconsistent with any such provision, in which event such law shall be construed as having a meaning in accordance with the said more restricted interpretation’.

The constitutional court in particular does not seem to have taken specific cognisance of the provisions of section 233 when interpreting the Bill of Rights in two leading cases involving socio-economic rights114. In fact the court has expressly avoided the direct application of an international law interpretation of these rights which seems to have been favoured elsewhere. The interpretation in question relates to the concept in international law of minimum core obligations.115 In the case of *Mzeku and Others v Volkswagen SA (Pty) Ltd and Others*116, the court rejected an argument that the provisions of ILO Convention 87 on Freedom of Association and the Right to Organise and ILO Convention 98 on the Right to Organise and Collective Bargaining are part of South

116 *Mzeku* 2001 (4) SA 1009 (LAC)
African law on the basis of the provisions of sections 231(5) and 233 of the Constitution. Counsel in that case submitted that the result of these conventions being part of South African law is that an employer has no right to dismiss employees for participating in a strike of any nature. The effect of this submission was that employees can go on strike without having to follow the procedures prescribed by the Labour Relations Act 66 of 1995 and when they do that an employer has no right to dismiss them. The court said, “In our judgment it is a misrepresentation of the position to suggest that the ILO Conventions inevitably preclude national legislation from prescribing the type of conditions contained in the Act before there can be an exercise of the right to strike.”

1.4 Customary International Law and the Right To Health

Like many concepts in international law, customary international law is not easy to define. Although writers speak glibly of state practice and *opinio juris* as being the two elements of customary international law, when one makes any attempt to explore these two concepts in any depths, their ethereal nature becomes apparent. According to section 102 of the Restatement (Third) of Foreign Relations Law of the United States, international customary law is described as follows:

“Customary international law results from a general and consistent practice of states followed by them from a sense of legal obligation.”

The distinction between international customary law and other types of international law is neither clear nor simple. It would seem that sufficiently widespread recognition of a principle within public international law, such that it amounts to general practice followed out of a sense of legal obligation, can bring that principle within the ambit of

117 "State practice refers to general and consistent practice while *opinio juris* means that the practice is followed out of a belief of legal obligation. This distinction is problematic because it is difficult to determine what states believe as opposed to what they say.” Roberts fn 118 *infra* at p757

118 Kinney “The International Human Rights To Health: What Does This Mean For Our Nation and World?” (fn. 51 supra). See also Dugger International Law: A South African Perspective 24-32 and S v Peters (fn. 73 supra). According to Kinney the two major elements of customary international law are state practice and *opinio juris*. Dugger refers to them as “settled practice (usus)” and “the acceptance of an obligation to be bound (*opinio juris*)”.
customary international law. According to this view, modern customary international law is therefore likely to be fed by and derived largely from international treaties and conventions although this is not without controversy. Traditional customary international law results from general and consistent practice followed by states from a sense of legal obligation whereas modern custom is derived by a deductive process that begins with general statements of rules rather than particular instances of practice.

According to some views, the difference between customary international law and public international law is that whereas the latter is strictly speaking binding only upon the states parties, the former can bind states regardless of treaty ratification. Some claim that customary international law is dying whilst others speak of its growing importance. It has been claimed specifically with reference to global health governance that customary international law is 'an awkward instrument' in connection with dealing with global public health concerns and that it is 'currently under attack as a source of international law for various theoretical and practical reasons'.

Despite these conflicting views, it would seem that the importance of customary international law should not be underestimated. Depending upon which view is held of international customary law, it may have the potential even to supersede the importance

---

119 Torres (fn 130 infra) and Kinney (fn 51 supra).
120 Roberts AE 'Traditional and Modern Approaches To Customary International Law: A Reconciliation' *American Journal of International Law* v 95 737
121 See fn 120 supra. Roberts points out that 'Modern custom can develop quickly because it is deduced from multilateral treaties and declarations by international fora such as the General Assembly, which can declare existing customs, crystallize emerging customs and generate new customs.'
122 Kinney (fn 51 supra) and also Roberts fn 120 at p765 -766 who observes that "By contrast [to declarations and treaties], custom is generally binding except for the limited and contentious persistent objector rule. Transforming declarations and treaties into custom changes their nature because customs can bind non-parties to treaties and declarations and are not affected by reservations or denunciation...Modern custom evinces a desire to create general international laws that can bind all states on important moral issues". See however, Perritt Jr Symposium on the Internet and Legal Theory: The Internet Is Changing International Law (fn 2 supra) who observes that "A sovereign state can opt out by refusing to sign a treaty or by manifesting its lack of consent for a norm of customary international law...Because customary international law is consensual, states can exempt themselves from a norm of customary international law by manifesting an intent not to be bound by it... The growing importance of customary law, along with treaty based law has spawned a lively debate in American legal literature as to whether federal courts should incorporate customary international law into federal common law"
123 Perritt fn 2 supra p757
124 Roberts fn 120 supra p757
125 Perritt (fn 2 supra) and Roberts fn 120 supra where she observes that "At the same time custom has become an increasingly significant source of law in important areas such as human rights obligations. Codification conventions, academic commentary and the case law of the International Court of Justice...have also contributed to the contemporary resurrection of custom".

126 Fidler D 'Global Health Governance: Overview of the Role of International Law in Protecting and Promoting Global Public Health', May 2002 Discussion Paper No 3 of the Centre on Global Change and Health London School of Hygiene & Tropical Medicine and the Department of Health & Development of the World Health Organization at p41. Fidler says that while arguments from customary international law are made in many international legal contexts, 'the real action takes place in treaty law'.
of the instrument of international law from whence it originated. Modern international customary law has been criticised for ‘normative chauvinism’. For example it has been stated that human rights obligations reflect a Western tendency to give primacy to individual rights over communal or group needs. The fact that section 232 of the Constitution stipulates that customary international law is law in South Africa creates an obligation to establish the content of the customary international law on the legal topic at issue.

It must be observed in passing that to the extent that the phrase ‘international custom, as evidence of a general practice accepted as law’ in paragraph b of Article 38(1) of the Statute of the International Court of Justice coincides with the term ‘customary international law’ in section 232 of the Constitution, such international custom is law in South Africa and the courts do not have a discretion as to whether to apply it. A failure on the part of a South African court to apply customary international law, except where it is inconsistent with the Constitution or an Act of Parliament, may therefore not only be a violation of international law but would also be unconstitutional in terms of section 232.

In view of the fact that section 39(1) deals with international law generally as an interpretational tool rather than as hard law, a court might well be able to use even conflicting customary international law as such a tool to arrive at an interpretation of a right in the Bill of Rights which is not itself necessarily in conflict with the Constitution.

125 This can become something of a chicken-and-egg debate if one takes into account the probability that for a legal principle to be expressed in an international treaty or convention it would very likely have gained widespread or significant international acceptance before being reduced to writing in such treaty or convention. In this sense, therefore customary law precedes the more formal international law instruments. Possibly the best term to describe the relationship between customary international law and other types of international law is “symbiotic”. See Roberts fn 120 supra p763 who gives the example that some rights set out in the Universal Declaration of Human Rights of 1948 are expressed in mandatory terms and have achieved customary status even though infringements are “widespread, often gross and generally tolerated by the international community”. As a result modern custom often represents progressive development of the law masked as codification by lex foroidea [what the law should be] as lex lata [what the law is].
127 Roberts fn 120 supra at 769.
128 The legal principle expressed in section 232 of the Constitution is not new to South African law. See Nduli and Another v Minister of Justice and Others (fn 73 supra) and S v Pelana (fn 73 supra) in which the court stated that: “In Nduli and Another v Minister of Justice and Others 1978 (1) SA 893 (A), the Appellate Division accepted that customary international law was, subject to its being in conflict with any statutory or municipal law, directly operative in the national sphere. The Appellate Division described the attributes of a rule of customary international law which would make it applicable in South Africa. It would have to be either universally recognised or it would have to have received the assent of this country. In holding this the court referred to a passage in Oppenheim International Law 9th ed v1 at 39 which states the conditions concerning universal acceptance or state assent for recognition of a rule of customary international law as part of the law of England. Our law and English law in this respect is therefore the same.”
or an Act of Parliament and which promotes 'the values that underlie an open and
democratic society based on human dignity, equality and freedom'. The content of
customary international law on the issue of a right to health or health care depends upon
which view of international customary law is espoused. In terms of so-called modern
customary international law, the various treaties and conventions dealing with human
rights and socio-economic rights would be of relevance in establishing the content of a
customary international law right to health or health care. However, in view of the fact
that these instruments will be discussed in detail in the section on public international
law, they will not be canvassed here. In the context of the right to health it has been
observed that the absence of international case law on the right to health heightens the
international legal importance of national cases brought pursuant to the right to health.\footnote{130}
Even if it may not constitute customary international law at this stage, the Venezuelan
case of \textit{Cruz Bermudez, et al v Ministerio de Sanidad y Asistencia Social}\footnote{131} is of interest
in this context because of certain similarities and contrasts with the leading South African
case on access to health care, \textit{Minister of Health and others v Treatment Action
Campaign and Others}\footnote{132}.

It is a useful illustration of the need to ground the implementation of the human right to
health care in the realities of the economic and sociological situation since law in the
abstract is of no value outside of the world of ideas. In \textit{Cruz Bermudez}, heard by the
Venezuelan Supreme Court in 1999, the plaintiffs argued that the Venezuelan
government had violated their rights to life, health and access to scientific advances under
Venezuelan law by failing to provide them with antiretroviral (ARV) medication. They
asked that the Venezuelan court order the Ministry of Health to remedy these violations
by:

\footnotesize
\begin{itemize}
\item \footnote{130} Torres MA 'The Human Right To Health National Courts and Access To HIV/AIDS Treatment: A Case Study from Venezuela' \textit{Chicago Journal of International Law} Spring 2002 105 who observes that 'National court decisions can inform international legal analysis in a number of ways. First, national court decisions involving treaty obligations could be said to constitute subsequent state practice under those treaties for the purpose of treaty interpretation. Second, national court decisions can be considered evidence of state practice and \textit{opinio juris} for purposes of determining rules of customary international law. Third, as Article 38(1)(d) of the Statute of the International Court of Justice provides, national court decisions are subsidiary means for interpreting rules of international law.' Torres states that the cases being brought by people living with HIV/AIDS against various governments for failing to provide access to ARV therapies and this violating the right to health constitute an important set of materials for international legal analysis of the right to health.
\item \footnote{131} See the report on this case by Torres (fn 130 supra)
\item \footnote{132} \textit{TAC} (fn 113 supra)
\end{itemize}
• providing periodically and regularly all medicines necessary, including ARV therapies and drugs for opportunistic infections, to persons living with HIV/AIDS in Venezuela,
• covering the expenses of persons living with HIV/AIDS for blood tests needed to monitor the disease and the effect of the medication; and
• developing and funding policies and programs to provide medical treatment and assistance for persons living with HIV/AIDS in Venezuela.

The Ministry of Health argued that the government could not pay for ARV therapy and related medicines for all persons living with HIV/AIDS in Venezuela because such expenses would be impossible to sustain. The Ministry in its defence pointed to its programs on HIV/AIDS prevention involving the distribution of informational booklets and condoms and the implementation of a safe sex initiative as evidence of its fulfilment of its obligations under Venezuelan law concerning health. It argued that it was progressively achieving improvements in connection with HIV/AIDS given the budgetary constraints it was facing as a health ministry in a developing country.

The Venezuelan court focused its opinion on the right to health. Under Venezuelan law there are strong expressions of the right to health in terms of Venezuela’s constitution and its international law obligations. Venezuela is a party to the International Convention on Economic Social and Cultural Rights (ICESCR). Venezuela apparently has a monistically inclined view of international law in that treaty duties such as those in the ICESCR create obligations for the state of Venezuela that are directly enforceable by citizens against the government. Furthermore, Venezuela’s constitution contains a constitutional right to health.

The Venezuelan court noted that:

• HIV positive people and people with AIDS are protected by the Venezuelan constitution and also by international law.

---

133 Torres (fn 130 supra)
• that on the basis of the evidence presented by the parties, the Ministry of Health was not complying with its duty under the right to health, the immediate consequence of which was to place the lives of the plaintiffs at risk.

• that the Ministry’s non-compliance was not intentional but resulted from its lack of financial resources.

• that despite the serious financial constraints the government had violated the plaintiff’s right to health and that the Ministry had available mechanisms under Venezuelan law through which it could seek additional funds for the purpose of dealing with the medical requirements of persons living with HIV/AIDS.

• that the Ministry’s failure to utilize these mechanisms contributed to the court’s view that the Ministry had violated the right to health.

• that its ruling applied to all persons living with HIV/AIDS in Venezuela and not only the plaintiffs.

The court ordered the Ministry inter alia to:

• request immediately from the President the funds needed for HIV/AIDS prevention and control for the remaining fiscal year and an increase in budgetary allocations for future needs and

• provide ARV therapies and associated medicines to any persons living with HIV/AIDS in Venezuela.

Despite the court’s ruling, the Venezuelan government has done ‘little or nothing to improve the access to ARV therapies for persons living with HIV/AIDS.134

134 Source: Torres (fn 128 supra)
The case is of interest because the court chose to ignore the Health Ministry’s plea of poverty even though it acknowledged that Venezuela was facing an economic crisis. It chose to make an order which the Venezuelan government was apparently unable to fulfil. The Venezuelan situation highlights a number of practical problems relating to the right to health care and the monistic approach to international law. International law is as much an ideology as it is a system of law. In some cases, much like the South African Constitution, it is a postulation of what should be rather than what is. It is an instrument to indicate the direction in which nations should move rather than a map of where they currently find themselves. Practically speaking, unless the international community is prepared to rally support for international law as perceived by a domestic court in order to facilitate implementation of a court order supporting that international law, such orders are meaningless and so is the monistic approach to international law. If the international community had made funding available to the Venezuelan government such that it could reasonably implement the court order, the judgment of the Venezuelan Supreme Court would have been of more legal and practical significance. As things stand, however, it is apparently nothing more than a juristic white elephant, reflecting in Venezuelan domestic law, the ideological and abstract nature of much of the international law which informed it.

It is submitted that whilst such a situation may be acceptable in terms of international law, it is not acceptable in terms of domestic law because it not only calls into question the credibility and enforceability of all domestic law, elevating it in the process above the level of law to a lofty, but abstract, ideal, but also the power of domestic courts to uphold domestic law in any meaningful way. To a large extent, the manner of development of international law is very different to that of domestic legal systems. Enforcement is a

135 Torres (fn 130 supra) She observes that the reality that the Venezuelan government ignores the court’s ruling in the Bermader case with impunity only contributes to the widespread perception that the right to health is symbolic rather than vital to the life of the nation and that the active and intelligent participation of the government is critical to improving a population’s health, especially in the face of disease threats such as HIV/AIDS.

136 Khalo v Minister of Safety and Security 1994 (4) SA 218 (W) quoted with approval Dickson J, as he then was, in Hunter et al v Southam Inc (1985) 11 DLR (4th) 641 (SCC) [(1985) 14 CCC (3d) 97 SCC] at 649 (a case dealing with the Canadian Charter, which also incorporates a Bill of Rights) “A constitution... is drafted with an eye to the future. Its function is to provide a continuing framework for the legitimate exercise of governmental power and, when joined by a (Bill of) Charter of Rights, for the unceasing protection of individual rights and liberties... The judiciary is the guardian of the Constitution and must in interpreting its provisions, bear these considerations in mind.”
major feature of the latter and its practical implementation is a question not of possibility but of fact. Very often domestic legal systems are reactive rather than proactive within their economic and social environments. They reactively reflect developments in trade practices, technology and societal beliefs and values that have usually preceded them by a number of years.

Legal certainty is a prerequisite for the fairness and credibility of a domestic legal system. Such certainty is necessary not only in relation to what the law is on any given topic but also on the reliability of the legal remedy upheld by the courts. Contrary to international law, domestic law, generally speaking, is not a plea for utopia but rather a periodically updated street map indicating the highways and byways of current commercial and cultural practices, social values and beliefs. Socioeconomic rights in particular are inextricably linked with social and, most importantly, economic realities. By definition, any attempt to divorce them from the economic realities of a given situation renders them empty of meaning and value. The judgment of the Venezuelan court directed the Ministry of Health to request more funding from the President for ARV therapies and related medication, despite the fact that Venezuela was facing an economic crisis. There does not appear to have been a concurrent obligation imposed upon the President to make such funds available, even assuming that they existed. If such funds did not in fact exist, any order imposing upon the President a duty to make them available would in any event have been pointless. Without the additional funding, the Ministry of Health could not implement the remaining injunctions to make ARV therapies available not only to the plaintiffs but to all Venezuelans. The Venezuelan court effectively wrote a prescription that the Ministry of Health could not fill. The value of such a prescription to the patient is severely limited.

The ethereal quality of the judgment of the Venezuelan court is in marked contrast to the groundedness of the judgment of the South African constitutional court in the TAC case. The South African constitutional court judgment not only recognised expressly the need for government to be able to set policy and determine the allocation of scarce

---

\[137\] _TAC fn 113 infra_
resources but also ‘that the corresponding rights themselves are limited by reason of the lack of resources’\textsuperscript{138}. It observed that ‘Courts are ill-suited to adjudicate upon issues where court orders could have multiple social and economic consequences for the community.’ The court acknowledged that the Constitution ‘contemplates rather a restrained and focused role for the courts, namely, to require the state to take measures to meet its constitutional obligations and to subject the reasonableness of these measures to evaluation’\textsuperscript{139}. The result was an order far more capable of implementation which carefully balanced the power of the executive branch of government to make policy against the rights of the poor to access to medical treatment whilst maintaining the credibility of the court\textsuperscript{140}. The government was ordered without delay to –

- Remove the restrictions that prevented Nevirapine from being made available for the purpose of reducing the risk of mother-to-child transmission of HIV at public hospitals and clinics that were not research training sites.

- Permit and facilitate the use of Nevirapine for the purpose of reducing the risk of mother-to-child transmission of HIV and to make it available for this purpose at hospitals and clinics when in the judgment of the attending medical practitioner acting in consultation with the medical superintendent of the facility concerned this was medically indicated, which would if necessary include that the mother concerned has been appropriately tested and counselled.

- Make provision if necessary for counsellors based at public hospitals and clinics other than the research and training sites to be trained for the counselling necessary for the use of Nevirapine to reduce the risk of mother-to-child transmission of HIV.

\textsuperscript{138} \textit{Minister of Health and Others v Treatment Action Campaign and Others (No 2) (in 113 supra)} quoting with emphasis
\textsuperscript{139} \textsl{Sociobarmacy v Minister of Health, KwaZulu-Natal (in 86 supra)}.
\textsuperscript{140} \textit{TAC in 113 supra at 1047 E-F}

See chapter 2 for a full discussion of the case.
• Take reasonable measures to extend the testing and counselling facilities at hospitals and clinics throughout the public health sector to facilitate and expedite the use of Nevirapine for the purpose of reducing the risk of mother-to-child transmission of HIV.

The court expressly stated that the abovementioned orders did not preclude government from adapting its policy in a manner consistent with the Constitution if equally appropriate or better methods became available to it for the prevention of mother-to-child transmission of HIV. The drug, Nevirapine, was at the time of the judgment available to the government free of charge.

The efficacy and usefulness of customary international law with regard to enforcement of the right to health has been questioned by more than one writer despite the fact that customary international law has been identified as one of two major sources of international human rights law that are relevant to the right to health.

Kinney points out that under the principles for the development of customary international law, widespread ratification of UN and regional treaties and other instruments recognizing international human rights can establish an international customary law of human rights. She says that specifically treaties, declarations and other instruments become evidence of a general state practice in which states engage out of a sense of legal obligation. As evidence of general practice followed out of a sense of legal obligation, they establish the human rights obligations on states, including the United States, that have not ratified treaties. She gives as an example the possibility that the International Convention on Economic Social and Cultural Rights (ICESCR) is arguably customary international law due to its widespread acceptance internationally. As a consequence it may be binding on all countries regardless of ratification. This said, Kinney concedes that recognition of an international right to health as a matter of

141 Fidler, (fn 125 supra) and Kinney (fn 51 supra)
142 Kinney "The International Human Right To Health: What Does This Mean for Our Nation and our World?" (fn 51 supra) at p 1459.
143 Kinney (fn 51 supra) at p1465. This view is not without its opponents both with regard to this method of derivation of customary international law and to the fact that customary international law can bind states without their consent.
international customary law 'has some problems', observing that 'there is a circularity in the rationale for international customary law that is problematic'. She goes on to say that 'Realistically, implementation and enforcement of the international right to health is difficult particularly if predicated on customary international law' and that the United States and other nations would probably not tolerate excessive interference in their domestic affairs if they have not ratified the ICESCR.

Depending upon which approach one adopts to customary international law, and despite the claims of Kinney, it may well be that there is in fact no real customary international law right to health or health care and that the relevant international law is not customary international law at all but rather public international law in the form of written conventions and treaties. The reason for such a conclusion relates in part to the difficulty of establishing the content of a right to health or health care at customary international law. Kinney herself acknowledges that there are significant economic, social and cultural differences among the nations of the world which render it difficult to specify the content of a universal international right to health in a meaningful way.

1.5 Public International Law and the Right To Health

The right to health is expressed in different ways in a number of different international instruments. The preamble to the constitution of the World Health Organisation, adopted in 1946, states that:

"The enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social conditions."

---

144 Kinney (fn 51 supra) at p 1467
145 Kinney (fn 51 supra) at p 1472
146 Kinney (fn 51 supra) proposes as a solution to these economic social and cultural differences that a first step would be to define universal outcome measures that measure compliance with the core state obligations of the human right to health. Unfortunately this begs the question. How does one go about establishing a set of core obligations given the diversity of the economic social and cultural circumstances in which different states find themselves? The very idea of a core assumes a certain common denominator in terms of economic, social and cultural factors. The South African constitutional court has rejected the direct application of the concept of minimum core in both the Grootboom (fn 57 supra) and the TAC (fn 113 supra) cases. The imposition upon a state of minimum core obligations which it cannot possibly fulfill for economic, social or cultural reasons simply invalidates the minimum core concept as a realistic method of ascertaining the contents of the right.
The variety of the language used in the various international instruments whose scope includes rights impacting on health illustrates the need for a detailed focus on the content of the rights that are recognised. There is also the question of whether the international instrument concerned should be interpreted using a textual approach so that the rights contained therein are interpreted purely with regard to the wording of the instrument itself or whether regard must also be had to other international legal instruments containing similar provisions. Put differently, are the various rights to health expressed in international treaties and conventions all expressions of different rights or different expressions of the same global right? If the latter, then what is the content and implications of such right? If it could be shown that there was such a single right, the arguments for the existence of such a right as part of customary international law and even *jus cogens* might be stronger than if there existed a number of different rights which were not widely supported or recognised by significant numbers of nation states. If the right is fragmented then it could be argued that certain fragments have passed into customary international law or *jus cogens* but not others. It is all very well to ardently allege that human rights are principles of *jus cogens* and that socio-economic rights as a sub-category of such human rights are thus also part of the *jus cogens* but if there is no significant agreement as to the content of such rights then their categorisation as *jus cogens* is academic.

South Africa is a signatory of the International Convention on Economic, Social and Cultural Rights (ICESCR) and has ratified the Convention on the Rights of the Child (CRC) and the Convention on the Elimination of all forms of Discrimination Against Women (CEDAW). It has not, however, expressly enacted every provision of these international agreements into domestic law as contemplated by section 231(4) of the Constitution. The Constitution for instance contains a general prohibition on unfair discrimination, including discrimination on the basis of gender but this is not in the express terms of CEDAW. Whilst the Bill of Rights reflects the rights of children to certain essentials, it certainly does not reflect the sweeping language of the CRC. The
Promotion of Equality and Prevention of Unfair Discrimination Act\textsuperscript{147} deals with issues of discrimination but does not expressly enact CEDAW. The constitutional obligation of the state to achieve the progressive realisation of certain socio-economic rights echoes the ICESCR obligation to achieve progressively the full realisation of the rights but the constitutional right of access to health care services does not contain the specific provisions of Article 12 of the ICESCR relating to reduction of stillbirths and infant mortality, the prevention and control of diseases and the improvement of all aspects of industrial and environmental hygiene. Thus, whilst these conventions are binding upon the Republic as a nation state at international law, they are not necessarily binding upon inhabitants of the Republic as domestic law.

There are a number of international commentaries upon the ICESCR which have attempted to add flesh to the bare bones of the rights expressed in the instrument itself. General comment number 14 of the United Nations Committee on Economic, Social and Cultural Rights is one such document. This comment observes that the ICESCR ‘provides the most comprehensive article on the right to health in international human rights law’. It is not clear whether this is a claim to supremacy over other international instruments referring to a right to health. However, it is of interest that the statement implies that there is a single right to health in international human rights law and that there may be different statements of this single right in other international law instruments. A further point of interest possibly in contrast to the implication that there is a single right to health in international law is that the Committee states expressly that in drafting article 12 of the ICESCR the Third Committee of the United Nations General Assembly did not adopt the definition of health contained in the preamble to the constitution of the WHO. The Committee is thus distancing the right as expressed in the ICESCR from that expressed in the WHO constitution. It observes that the reference in article 12.1 of the Covenant to “the highest attainable standard of physical and mental health” is not confined to the right to health care and that the drafting history and express wording of article 12.2 acknowledge that the right to health embraces a wide range of

\textsuperscript{147} Act No 4 of 2000. See also the Domestic Violence Act 116 of 1998 and the Criminal Law (Sexual Offences) Amendment Bill (B50-2003), which is not yet law. They both acknowledge CEDAW in their preambles. The latter makes provision for sexual offences such as rape and compelled or induced indecent acts while the former provides for the issuing of protection orders with regard to domestic violence. They seek to give effect to CEDAW without necessarily enacting its express provisions.
socio-economic factors that promote conditions in which people can lead a healthy life. The Committee points out that this extends to the underlying determinants of health such as food and nutrition, housing, access to safe and potable water and adequate sanitation, safe and healthy working conditions and a healthy environment.

Significantly, the Committee refers to the right to health as a goal and observes that in many cases, especially for those living in poverty, this goal is becoming increasingly remote. The nature of the right to health contemplated in the ICESCR is thus an ideal rather than a practical reality. The idea of using the law to attain ideals is in many respects peculiar to international law. Constitutions aside, domestic legal systems still tend to approach the question of rights from the perspective of what is presently reasonably attainable. Generally speaking, in domestic law terms a right which cannot be enforced or protected in a practical way is hardly worth the name. Furthermore, ideals of this nature, at least in the South African context, are very much the province of the executive and legislative branches of government as opposed to the judiciary, given the role of the judiciary as expressed by Chaskalson P in the TAC case. The progressive realisation of the right to health care services in South Africa, it is submitted, is rather more the task of the national executive than it is of the courts who by their own admission are ill-suited to make decisions which could have multiple social and economic consequences for the community. It is further submitted that an overly idealistic interpretation by the judiciary of the socio-economic rights granted in the Bill of Rights would diminish the effective value of the right in question by elevating it beyond the realms of what is practical and achievable. One ends up with judgments which, although laudable in their intentions and limitless in their scope, are not realistically capable of implementation. The right, when interpreted by the judiciary in such a manner, becomes hollow and the practical ends that the right is designed to achieve are thus defeated. A more limited and pragmatic judgment that can be put into

148 This nicety appears to have escaped the Venezuelan court in the Cruz Bermudes case (fn 130 supra)
149 TAC fn 113 supra
effect is of considerably greater value as indicated by the outcomes for the holders of the rights in the *Grootboom* and *TAC* cases.

When one comes to an examination of the right to health care services in terms of section 27 of the Constitution in the light of international law, it is submitted that one must bear in mind that direct comparisons, and inferences of direct relationships, between domestic rights and international ones may not always be appropriate due to the fact that the domestic rights must be considered for the most part in the light of present realities rather than that of dreams of the future. This precept has been clearly recognised by the South African constitutional court with regard to the concept of the minimum core content of socio-economic rights in both *Grootboom* and the *TAC* cases. It also illustrates the fact that whilst a nation state may recognise the basic principle of a right as stated in an instrument of public international law, the content of the right is subject to interpretation with regard to domestic legal and other circumstances. The relationship between international and domestic law is not as simple or direct as certain *amici curiae* have argued.

Comparisons of rights in international law with rights expressed in the

---

130 *Grootboom* fn 57 supra

131 The Constitutional court in *TAC* (fn 113 supra) pointed to the statement in *Grootboom* (fn 57 supra) that "millions of people are living in deplorable conditions and in great poverty. There is a high level of unemployment, inadequate social security and many do not have access to clean water or to adequate health services. These conditions already existed when the Constitution was adopted..." as the relevant context in which socio-economic rights need to be interpreted. While it is true that Madala J in *Soobramoney* stated that "Some rights in the Constitution are the ideal and something to be strived for. They amount to a promise in some cases, and an indication of what a democratic society aspiring to save lives, dignity, freedom and equality should embark upon. They are values which the Constitution seeks to provide nurture and protect for a future South Africa" and so some of the rights in the Constitution are also ideals, they must have some degree of substance within the present in order to be meaningful. The fact that the test used by the courts to ascertain whether or not the state is fulfilling its constitutional obligations is one of reasonableness supports this assertion since it implies that the present circumstances in which the right is sought to be upheld are the relevant context for such test. Madala J in *Soobramoney* acknowledges this need for present value in pointing out that "in its language, the Constitution accepts that it cannot solve all our society's woes overnight, but must go on trying to resolve these problems." The Constitutional Court pointed out in *Ex parte Chairperson of the Constitutional Assembly: In re: Certification of the Constitution of the Republic of South Africa 1996* (1996 (4) SA 744 (CC) at para 78) in dealing with an objection that socio-economic rights are not justiciable, that "At the very minimum, socio-economic rights can be negatively protected from improper invasion." The content of the right may change as circumstances change, but it must have some degree of content in the present. In the *TAC* case the court, referring to *Soobramoney*, explicitly recognised the fact that "the corresponding rights themselves are limited by reason of the lack of resources". This observation, coupled with the fact that the test is one of reasonableness, leads to the inevitable conclusion that the content of the right may be subject to fluctuation, depending upon changing circumstances and the availability of resources. This is why, as Yacoob J stated in *Grootboom* (fn 37 supra at 61) "The question is therefore not whether socio-economic rights are justiciable under our Constitution, but how to enforce them in a given case. This is a very difficult issue which must be carefully explored on a case-by-case basis." The concept of a minimum core is rigid and as such does not sit comfortably with the flexibility of the test of reasonableness in the prevailing circumstances. What is reasonable for today may not be reasonable for tomorrow if there has been a change in the available resources.

132 *In Government of the Republic of South Africa and Others v Grootboom and Others* (fn 57 supra) and *Minister of Health and Others v Treatment Action Campaign and Others* (fn 113 supra)

55
Constitution are further complicated by the postulate of international law that all human rights are indivisible and interdependent.\(^\text{153}\)

Whilst this postulate is not disputed within South African domestic law,\(^\text{154}\) the body of rights granted by the Bill of rights is not expressed in exactly the same terms as the body of similar rights at international law. One is therefore not engaging upon a simple comparison of a single right at international law with a single right at domestic constitutional law but rather a comparison at various levels of complex matrices of rights (one of which is openly recognised as an expression of ideals whilst the other also seeks to achieve tangible and practical legal realities) often beset with their own internal conflicts. Where there is an internal conflict between constitutional rights, a balancing of the rights must take place. Where there is an internal conflict between human rights at international law and an internal conflict between similar rights in domestic law, it is submitted that the internal conflict between the domestic rights\(^\text{155}\) must first be resolved before any consideration of international law can fruitfully take place.\(^\text{156}\) Consistency is a prerequisite of a rational and clearly principled domestic legal system. Considerations of international law which do not promote such consistency are likely to lead ultimately to an internally fragmented and chaotic domestic legal order with diminution of the value of the body of rights it seeks to confer. Once a balance between the domestic rights has been

\(^{153}\) Fact Sheet No 16 (Rev.1) The Committee on Economic, Social and Cultural Rights www.ohchr.org/h/download/english/fs16.htm and General Comment No 14: The Right to the Highest Attainable Standard of Health of the United Nations Committee on Economic, Social and Cultural Rights E/C.12/2000/4 where it is stated that: "The right to health is closely related to and dependent upon the realization of other human rights as contained in the International Bill of Rights, including the right to food, housing, work, education, human dignity, life, non-discrimination, equality, the prohibition against torture, privacy, access to information and the freedoms of association, assembly and movement. These and other rights and freedoms address integral components of the right to health."

\(^{154}\) See for instance the observations of the court in S v Makwanyane and Another (fn 23 supra) concerning the centrality of the rights to dignity and life and their interrelationship with other rights. See also Government of the Republic of South Africa and Others v Grootboom and Others (fn 57 supra) where the court stated that: "The right of access to adequate housing cannot be seen in isolation. There is a close relationship between it and the other socio-economic rights. Socio-economic rights must all be read together in the setting of the Constitution as a whole. The state is obliged to take positive action to meet the needs of those living in extreme conditions of poverty, homelessness or intolerable housing. Their interconnectedness needs to be taken into account in interpreting the socio-economic rights, and, in particular, in determining whether the state has met its obligations in terms of them."

\(^{155}\) Sachs J in Soobramoney v Minister of Health, KwaZulu-Natal, (fn 86 supra) at 783 observes that: "Traditional rights analyses accordingly have to be adapted so as to take account of the special problems created by the need to provide a broad framework of constitutional principles governing the right of access to scarce resources and to adjudicate between competing rights bearers. When rights by their very nature are shared and inter-dependent, striking appropriate balances between the equally valid entitlements or expectations of a multitude of claimants should not be seen as imposing limits on those rights (which would then have to be justified in terms of s 36), but as defining the circumstances in which the rights may most fairly and effectively be enjoyed." See also Gansler v Minister of Law and Order and Another 1994 (3) SA 625 (E) which states that when rights clash a balancing of the rights must take place.

\(^{156}\) Obviously if such conflicts have been encountered and resolved at international law this may serve as a useful guide for resolving similar conflicts within domestic law.
achieved, a balancing of the conflicting rights at international law should be undertaken and the result should then be considered with regard to the balance achieved with regard to the conflicting rights at domestic law. In view of the foregoing, the processes of legal reasoning envisaged by section 39(1) of the Constitution require at first, a wide angled, global consideration of both the relevant international and domestic law as systems of law, before the convergent, analytical approach of Lord Simon of Glaisdale\textsuperscript{157} may successfully be applied to individual principles within those systems. Synthesis is thus as much a necessity as analysis in this particular area of law.

1.6 Minimum Core

Minimum core content has been described as the non-negotiable foundation of a right to which all individuals, in all contexts under all circumstances are entitled. The term 'core content' refers to the entitlements which make up the right. Minimum core content is not the same as the core content of a right\textsuperscript{158}. The question of availability of resources, although recognised by the ICESCR, is played down to some extent by the United

\textsuperscript{157} Milutum viv George Frank (Textiles) Ltd [1976] AC 443 ([1975] 3 All ER 801 (HL)) at 481-2 (AC) and 834h-824a (All ER) in which Lord Simon of Glaisdale observed that: "(T)he training and qualification of a Judge is to elucidate the problem immediately before him, so that its features stand out in stereoscopic clarity. But the beam of light which so illuminates the immediate scene seems to throw surrounding areas into greater obscurity; the whole landscape is distorted to the view. A penumbra can be apprehended, but not much beyond; so that when the searchlight shifts a quite unexpected scene may be disclosed. The very qualifications for the judicial process thus impose limitations on its use. This is why judicial advance should be gradual. I am not trained to see the distant scene: one step is enough for me should be the motto on the wall opposite the Judge's desk. It is, I concede, a less spectacular method of progression than somersaults and earthquakes; but it is the one best suited to the capacity and resources of a Judge. We are likely to perform better the duties society imposed on us if we recognise our limitations. Within the proper limits there is more than enough to be done which is of value to society"

\textsuperscript{158} Provea (a South American non-governmental organisation) 'Health as a Right: Framework for the National and International Promotion of the Human Right to Health', Carsos, 1996 at 39. Proves states that: "We consider that by establishing a minimum, uniform "floor" below which a state may not descend does not weaken the right in question, provided that the content is understood as a starting point and not as the arrival point. Furthermore, establishing a framework assures a uniform basis to be respected, even by the states with insufficient economic resources or subjected to critical economic situations." See paragraph 10 of General Comment 3 of the United Nations Committee on the ICESCR referred to in van Bijnon and Others v Minister of Correctional Services and Others 1997 (4) SA 441 (C) at 451.

Provea (a South American non-governmental organisation) 'Health as a Right: Framework for the National and International Promotion of the Human Right to Health', Carsos, 1996 at 39. Proves states that: "We consider that by establishing a minimum, uniform "floor" below which a state may not descend does not weaken the right in question, provided that the content is understood as a starting point and not as the arrival point. Furthermore, establishing a framework assures a uniform basis to be respected, even by the states with insufficient economic resources or subjected to critical economic situations." See paragraph 10 of General Comment 3 of the United Nations Committee on the ICESCR referred to in Groothoom where it is said: '10. On the basis of the extensive experience gained by the Committee, as well as by the body that preceded it, over a period of more than a decade of examining states Parties' reports the Committee is of the view that minimum core obligation to ensure the satisfaction of, at the very least, minimum essential levels of each of the rights is incumbent upon every state party. Thus, for example, a state party in which any significant number of individuals is deprived of essential foodstuffs, of essential primary health care, of basic shelter and housing, or of the most basic forms of education, is prima facie, failing to discharge its obligations under the Covenant. If the Covenant were to be read in such a way as not to establish such a minimum core obligation, it would be largely deprived of its raison d'être. By the same token, it must be noted that any assessment as to whether a state has discharged its minimum core obligation must also take account of resource constraints applying within the country concerned. Article 2(1) obligates each state party to take the necessary steps "to the maximum of its available resources". In order for a state party to be able to attribute its failure to meet at least its minimum core obligations to a lack of available resources it must demonstrate that every effort has been made to use all resources that are at its disposition in an effort to satisfy, as a matter of priority, those minimum obligations." See also the reference in Minister of Health and Others v Treatment Action Campaign and Others [fn 113 supra] to General Comment 3 "The nature of states parties obligations (Art 2, par.1)" 12/12/90
Nations Committee in its General Comment No 3\(^{159}\) possibly because this concept has been criticised as being a loophole for states parties to use in order to escape their obligations in terms of the Convention. The exact nature of the minimum core of the right to health care is not expressly stated in any instrument of international law\(^{160}\).

In their arguments concerning the minimum core concept the *amici* in *Grootboom* referred firstly to Article 11.1 of the Covenant on Economic Social and Cultural Rights which provides that:

"The States Parties to the present Covenant recognise the right of everyone to an adequate standard of living for himself and his family including adequate food, clothing and housing and to the continuous improvement of living conditions. The States Parties will take appropriate steps to ensure the realisation of this right recognising to this effect the essential importance of international co-operation based on free consent."

They then referred to the relevant general comments issued by the United Nations Committee on Economic, Social and Cultural Rights concerning the interpretation and

\(^{159}\) In General Comment 3 on the ICESCR at paragraph 11, the United Nations Committee on the ICESCR notes that: "The Committee wishes to emphasise, however, that even where the available resources are demonstrably inadequate, the obligation remains for a state party to strive to ensure the widest possible enjoyment of the relevant rights under the prevailing circumstances. Moreover the obligations to monitor the extent of the realization, or more especially the non-realization, of economic, social and cultural rights, and to devise strategies and programmes for their promotion, are not in any way eliminated as a result of resource constraints."

\(^{160}\) There appears to be considerable controversy surrounding the definition of minimum core at international level. Some are of the view that it is too difficult to establish universally approved standards. The United Nations Committee on Economic, Social and Cultural Rights (CESCR) appears to support such a view. It has stated that: "As the ideal of the human being is to attain the highest possible standard of living, it is not possible to fix a uniform minimum limit below which a given state is considered to be in breach of its health-related obligations" (Juan Averna-Vila, "Discussion note" in CESCR Report on the ninth session, E/C.12/1999/19, p63. Vila is a former member of the CESCR) By contrast, Provea, a Venezuelan Non-Governmental Organisation (NGO), undertook a systematic research project on the right to health. An intensive bibliographical search revealed that most of the sources consulted either addressed specific aspects of the right to health, or treated it in an introductory or general manner. When it discovered that there was insufficient material defining the right to health, Provea attempted to delineate a conceptual framework for promoting the right to health. Some of the principles that informed the work of Provea were:

- Defining minimum core content is a relatively unexplored area, but it is necessary to arrive at an objective definition of each right;
- The minimum core content of a right establishes the minimal conditions that each individual should enjoy, in the absence of which the right is understood to be absent;
- Having a definition of content is a valuable instrument for enforcement, as it makes it possible to have a minimum standard for evaluating the observance of a right;
- Defining minimum contents needs to be understood as a dynamic process;
- The principle of universality is assumed, i.e. all human beings by nature are entitled to all human rights. The fact that different legal orders may establish different levels of protection does not mean that some have more of a right than others do;
- In a world of constant change and diverse scenarios, it is possible to identify common elements that constitute a core aspect of the right, independent of available resources or political, economic, social or cultural context;
- For health the starting point for arriving at a definition is to be found in the standards established in treaties that provide for the protection of the right, which are a necessary frame of reference but which always need to be improved;
- A secondary source is a comprehensive view of health emanating from the international doctrine as to what constitutes health that has been developed by the World Health Organization, among others.

See further [www.hrusa.org/hrm/sterilis/blemsrc/ades/moldes2.htm](http://www.hrusa.org/hrm/sterilis/blemsrc/ades/moldes2.htm).
application of the Covenant and argued that these general comments constitute a significant guide to the interpretation of section 26 of the Constitution. Paragraph 10 of general comment 3, issued by the Committee in 1990 states:

"10. On the basis of the extensive experience gained by the Committee, as well as by the body that preceded it, over a period of more than a decade of examining States Parties' reports the Committee is of the view that minimum core obligation to ensure the satisfaction of, at the very least, minimum essential levels of each of the rights is incumbent upon every State Party. Thus, for example, a State party in which any significant number of individuals is deprived of essential foodstuffs, of essential primary health care, of basic shelter and housing, or of the most basic forms of education, is prima facie, failing to discharge its obligations under the Covenant. If the Covenant were to be read in such a way as not to establish such a minimum core obligation, it would be largely deprived of its raison d'être. By the same token, it must be noted that any assessment as to whether a State has discharged its minimum core obligation must also take account of resource constraints applying within the country concerned. Article 2(1) obligates each State party to take the necessary steps ‘to the maximum of its available resources’. In order for a State party to be able to attribute its failure to meet at least its minimum core obligations to a lack of available resources it must demonstrate that every effort has been made to use all resources that are at its disposition in an effort to satisfy, as a matter of priority, those minimum obligations."161

Yacoob J observed that it was clear from this extract that the committee considered that every state party is bound to fulfil a minimum core obligation by ensuring the satisfaction of a minimum essential level of the socio-economic rights, including the right to adequate housing and that a state in which a significant number of individuals is deprived of basic shelter and housing is regarded as prima facie in breach of its obligations under the Covenant. He also observed that it was to be noted that the general comment does not specify precisely what minimum core is although a guideline is given in that it is

---

161 Yacoob J in Grootboom (fn 57 supra) at 64-65. General Comment No 14: The Right to the Highest Attainable Standard of Health Document Number E/C.12/2000/4 of the United Nations Committee on Economic, Social and Cultural Rights identifies core obligations of the right to health as:

(a) to ensure the right of access to health facilities, goods and services on a non-discriminatory basis, especially for vulnerable or marginalized groups;
(b) to ensure access to the minimum essential food which is nutritionally adequate and safe, to ensure freedom from hunger to everyone;
(c) to ensure access to basic shelter, housing and sanitation, and an adequate supply of safe and potable water;
(d) to provide essential drugs, as from time to time defined under the WHO Action Programme on Essential Drugs;
(e) to ensure equitable distribution of all health facilities, goods and services;
(f) to adopt and implement a national public health strategy and plan of action, on the basis of epidemiological evidence, addressing the health concerns of the whole population; the strategy and plan of action shall be devised, and periodically reviewed, on the basis of a participatory and transparent process; they shall include methods, such as right to health indicators and benchmarks, by which progress can be closely monitored; the process by which the strategy and plan of action are devised, as well as their content, shall give particular attention to all vulnerable or marginalized groups.

The Committee also confirmed that the following obligations are of comparable priority:
(a) to ensure reproductive, maternal (pre-natal as well as post-natal) and child health care;
(b) to provide immunization against the major infectious diseases occurring in the community;
(c) to take measures to prevent, treat and control epidemic and endemic diseases;
(d) to provide appropriate training for health personnel, including education on health and human rights.
determined generally by having regard to the needs of the most vulnerable group that is entitled to the protection of the right in question\(^\text{162}\).

Yacoob J rejected the principle of minimum core with the following logic:

"It is not possible to determine the minimum threshold for the progressive realisation of the right of access to adequate housing without first identifying the needs and opportunities for the enjoyment of such a right. These will vary according to factors such as income, unemployment, availability of land and poverty. The differences between city and rural communities will also determine the needs and opportunities for the enjoyment of this right. Variations ultimately depend on the economic and social history and circumstances of a country. All this illustrates the complexity of the task of determining a minimum core obligation for the progressive realisation of the right of access to adequate housing without having the requisite information on the needs and the opportunities for the enjoyment of this right. The committee developed the concept of minimum core over many years of examining reports by reporting states. This Court does not have comparable information. The determination of a minimum core in the context of 'the right to have access to adequate housing' presents difficult questions. This is so because the needs in the context of access to adequate housing are diverse: there are those who need land; others need both land and houses; yet others need financial assistance. There are difficult questions relating to the definition of minimum core in the context of a right to have access to adequate housing, in particular whether the minimum core obligation should be defined generally or with regard to specific groups of people. As will appear from the discussion below, the real question in terms of our Constitution is whether the measures taken by the State to realise the right afforded by s 26 are reasonable. There may be cases where it may be possible and appropriate to have regard to the content of a minimum core obligation to determine whether the measures taken by the State are reasonable. However, even if it were appropriate to do so, it could not be done unless sufficient information is placed before a Court to enable it to determine the minimum core in any given context. In this case, we do not have sufficient information to determine what would comprise the minimum core obligation in the context of our Constitution. It is not in any event necessary to decide whether it is appropriate for a Court to determine in the first instance the minimum core content of a right."

The court appeared to regard even the concept of minimum core as being variable in content depending upon the given context. Despite this reasoned and clear rejection by the constitutional court of the general concept of a minimum core obligation as expressed in international law, the \textit{amici} in the \textit{TAC} case renewed attempts to have it introduced into South African law. The constitutional court in this case referred to the judgements in both \textit{Grootboom}\(^\text{163}\) and \textit{Soobramoney}\(^\text{164}\) and stated bluntly that, "It is impossible to give everyone access even to a "core" service immediately. All that is possible, and all that can be expected of the state, is that it act reasonably to provide access to the socio-

\(^{162}\text{Grootboom (fn 57 supra) at p65}\)

\(^{163}\text{Grootboom (fn 57 supra)}\)

\(^{164}\text{Soobramoney (fn 86 supra)}\)
economic rights identified in sections 26 and 27 on a progressive basis." The constitutional court in the TAC case concluded that "section 27(1) of the Constitution does not give rise to a self-standing and independent positive right enforceable irrespective of the considerations mentioned in section 27(2). Sections 27(1) and 27(2) must be read together as defining the scope of the positive rights that everyone has and the corresponding obligations of the state to 'respect, protect, promote and fulfil' such rights.

It is submitted that the nomenclature 'minimum core' or "core obligations" is in any event a misnomer when the extent of the enunciation of the United Nations Committee on the International Covenant on Economic, Social and Cultural Rights of what it considers to be core obligations in General Comment No. 14 is considered. The 'core' obligations listed in the Comment are so comprehensive that it is difficult to conceive of any obligations that might be on the periphery concerning the right to health.

1.7 International Legal Principles Applied Locally

The constitutional court's rejection of the minimum core principle is indicative not only of the manner in which the constitutional court is implementing section 39(1) but also of the fact that international law interpretations of rights contained in instruments such as the International Convention on Economic, Social and Cultural Rights will not be applied without question to situations involving similar rights in domestic law. International legal principles are applicable within the South African legal system only to the extent that they are consistent with the principles of the Constitution and South Africa's unique historical and social context. Arguments which attempt to import piecemeal international legal principles and doctrines into the South African legal system not only indicate an overly simplistic view of the South African legal system but are also distinctly

---

165 TAC fs 113 supra at 1046 G
166 General Comment of ICESCR Committee see fs 161 supra
167 Yacoob J in Groothoof (fs 57 supra at p 62) stated: "Interpreting a right in its context requires the consideration of two types of context. On the one hand, rights must be understood in their textual setting. This will require a consideration of chap 2 and the Constitution as a whole. On the other hand, rights must also be understood in their social and historical context. Our Constitution entrenches both civil and political rights and social and economic rights. All the rights in our Bill of Rights are inter-related and mutually supporting."
inadvisable given the holistic and teleological approach of the South African courts to questions of interpretation of constitutional rights and the consideration of international law. Yacoob J in *Grootboom* expressly detailed the differences between the right to housing expressed in the ICESCR and the right to housing expressed in the Constitution. He pointed out that the Covenant provides for a right to adequate housing while section 26 provides for right of access to adequate housing, that the Covenant obliges states parties to take appropriate steps which must include legislation while the Constitution obliges the South African state to take *reasonable* legislative and other measures. If one performs the same exercise with regard to Article 12 of the ICESCR and section 27 of the Constitution the differences that emerge are as follows:

1. The ICESCR recognizes the right of everyone to the enjoyment of the “highest attainable standard of physical and mental health” while section 27(1) of the Constitution refers explicitly to a right of *access* to health care services, including reproductive health care. The South African Constitution thus does not even recognise a right to health *per se* but rather a right to health care services in particular. This right is defined in terms of access which implies *inter alia* that the health services in question will not necessarily be free of charge. A standard of health, attainable or not, is not a feature of section 27(1).

2. The right to health in the ICESCR makes no specific mention of emergency medical treatment as does section 27(3) of the Constitution.

3. The right to health in the ICESCR details certain specific steps to be taken by states parties in order to achieve the full realization of the right to health such as the provision for the reduction of the stillbirth-rate and of infant mortality and for the development of the healthy child; the improvement of all aspects of environmental and industrial hygiene; the prevention, treatment and control of epidemic, endemic, occupational and other diseases; the creation of conditions which would assure to all medical service and medical attention in the event of sickness. Section 27 contains no such detailed prescriptions. Instead, section 27(2) provides that the state must take...
reasonable legislative and other measures within its available resources to achieve the progressive realisation of each of these rights.

These differences are clearly considerable and even greater than those elucidated by Yacoob J with regard to the right to housing in Grootboom. Yacoob J stated in that case that "The differences between the relevant provisions of the Covenant and our Constitution are significant in determining the extent to which the provisions of the Covenant may be a guide to interpretation of section 26". The ICESCR is thus of limited value as an interpretational tool when considering the right to health care services under section 27 of the Constitution.

This said, a study of the judgments of the Constitutional Court relating to socio-economic rights reveals that the court is indeed developing its own jurisprudence on human rights generally and socio-economic rights in particular, many of which are not inconsistent, in broad terms, with international legal principles relating to such rights. From the judgments in Soobramoney vs Minister of Health (Kwazulu-Natal), Government of the Republic of South Africa and others v Grootboom and Others, and Minister of Health and Others v Treatment Action Campaign and Others, it is clear that certain legal principles are gradually coalescing to flesh out the bare bones of the constitutional provisions relating to these rights. These principles are as follows:

1. There must be provision by the state within legislative and policy frameworks for mechanisms to address 'hard cases' or, as the constitutional court has put it, the situation of people "in desperate need".

---

168 Grootboom (fn 57 supra)
169 Grootboom (fn 57 supra) st p64
170 Soobramoney (fn 86 supra)
171 Grootboom fn 57 supra
172 TAC fn 113 supra
173 Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra): "The nationwide housing program falls short of obligations imposed upon national government to the extent that it fails to recognise that the state must provide for relief for those in desperate need. They are not to be ignored in the interests of an overall program focused on medium and long-term objectives. It is essential that a reasonable part of the national housing budget be devoted to this, but the precise allocation is for national government to decide in the first instance" and also "The state is obliged to take positive action to meet the needs of those living in extreme conditions of poverty, homelessness or intolerable housing."
2. There must be flexibility in state policies and programmes to address changing situations and needs174.

3. The state is responsible for the creation of circumstances in which the rights of the individual may be realized and must take positive action175.

4. Socio-economic rights and the corresponding obligations of the state must be interpreted within their social and historical context176.

5. The test of reasonableness will be applied. State policies and programmes must be reasonable both in their conception and their implementation177.

6. Urgency of the need is an important factor. Of relevance here is the degree of discrepancy between the “haves” and the “have-nots” with regard to the right in question178.

174 Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra) “The program must be balanced and flexible and make appropriate provision for attention to housing crises and to short, medium and long term needs. A program that excludes a significant segment of society cannot be said to be reasonable. Conditions do not remain static and therefore the program will require continuous review.” Also Minister of Health and Others v TAC and Others (fn 113 supra) “The rigidity of government’s approach has affected its policy as a whole... A factor that needs to be kept in mind is that policy is and should be flexible.”

175 Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra): “A right of access to adequate housing also suggests that it is not only the state who is responsible for the provision of houses, but that other agents within our society, including individuals themselves, must be enabled by legislative and other measures to provide housing. The state must create the conditions for access to adequate housing for people at all economic levels of our society. State policy dealing with housing must therefore take account of different economic levels in our society” and also “to be reasonable, measures cannot leave out of account the degree and extent of the denial of the right they endeavour to realise.” Also Minister of Health and Others v TAC and Others (fn 113 supra): “The state is obliged to take reasonable measures progressively to eliminate or reduce large areas of severe deprivation that afflict our society”.

176 Minister of Health and Others v TAC and Others (fn 113 supra) at 1043; Soobramoney v Minister of Health, KwaZulu-Natal (fn 57 supra); Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra).

177 Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra) “The state is required to take reasonable legislative and other measures. Legislative measures by themselves are not likely to constitute constitutional compliance. Mere legislation is not enough. The state is obliged to set to achieve the intended result, and the legislative measures will invariably have to be supported by appropriate, well-directed policies and programs implemented by the Executive. Those policies and programs must be reasonable both in their conception and their implementation. The formulation of a program is only the first stage in meeting the state’s obligations. The program must also be reasonably implemented. An otherwise reasonable program that is not implemented reasonably will not constitute compliance with the state’s obligations.” Also Minister of Health and Others v TAC and Others (fn 113 supra): “This does not mean, however, that until the best programme has been formulated and the necessary funds and infrastructure provided for the implementation of that programme, Nevirapine must be withheld from mothers and children who do not have access to the research and training sites. Nor can it reasonably be withheld until medical research has been completed.”

178 Government Of The Republic Of South Africa And Others v Grootboom And Others (fn 57 supra) “In this regard, there is a difference between the position of those who can afford to pay for housing, even if it is only basic though adequate housing, and those who cannot. For those who can afford to pay for adequate housing, the state’s primary obligation lies in unlocking the system, providing access to housing stock and a legislative framework to facilitate self-built houses through planning laws and access to finance. Issues of development and social welfare are raised in respect of those who cannot afford to provide themselves with housing. State policy needs to address both these groups. The poor are particularly vulnerable and their needs require special attention. It is in this context that the relationship between s 26 and 27 and the other socio-economic rights is most apparent. If under s 27 the state has in place programs to provide adequate social assistance to those who are otherwise unable to support themselves and their dependants, that would be relevant to the state’s obligations in respect of other socio-
7. The exclusionary effects of a policy or programme are constitutionally significant, especially exclusion of a significant segment of society. A programme for the realisation of socio-economic rights must be balanced and flexible\(^\text{179}\).

8. Transparency and proper communication is an important aspect of programmes for the realisation of socio-economic rights\(^\text{180}\).

Principles 1 to 8 listed above are in the spirit, if not the form, of the ICESCR and General Comment No 14. Principles 1, 2, 3, 7 and 8 above are entirely consistent with core obligation (f) in General Comment No 14 to the effect that states must:

"adopt and implement a national public health strategy and plan of action, on the basis of epidemiological evidence, addressing the health concerns of the whole population; the strategy and plan of action shall be devised, and periodically reviewed, on the basis of a participatory and transparent process; they shall include methods, such as right to health indicators and benchmarks, by which progress can be closely monitored; the process by which the strategy and plan of action are devised, as well as their content, shall give particular attention to vulnerable or marginalized groups."

The statement in General Comment No 14 that:

"States parties are referred to the Alma-Ata Declaration which proclaims that the existing gross inequality in the health status of the people, particularly between developed and developing countries, as well as within countries, is politically, socially and economically unacceptable and is, therefore, of common concern to all countries” may be aligned with principle 6 above. Part (a) of the core obligations identified by the United Nations Committee on the ICESCR states that states must “ensure the right of access to health facilities, goods and services on a non-discriminatory basis, especially for vulnerable or marginalized groups.”

\(^{179}\) Government Of The Republic Of South Africa And Others v Groothoom And Others (fn 37 supra) “A program that excludes a significant segment of society cannot be said to be reasonable.” (quoted with approval in Minister of Health and Others v TAC and Others (fn 113 supra)).

\(^{180}\) Minister of Health and Others v TAC and Others (fn 113 supra) “In order for it to be implemented optimally, a public health programme must be made known effectively to all concerned... Indeed, for a public programme such as this to meet the constitutional requirements of reasonableness, its contents must be made known appropriately.”
Principle 7 above can be readily equated with core obligation (c) enunciated in General Comment No. 14 to the effect that states must “ensure equitable distribution of all health facilities, goods and services”.

Principle 8 above relates to the additional core obligations (d) and (e) of General Comment No. 14 which stipulates that states must provide education and access to information concerning the main health problems in the community including methods of preventing and controlling them” and “provide appropriate training for health personnel including education on health and human rights”. The need for communication of this nature was a notable feature of the judgment in the TAC case113.

The significance of this is that the constitutional court has not rejected many of the basic principles to be found in public international law concerning minimum core obligations so much as it has rejected the idea that they constitute a minimum core. The content of a socio-economic right is defined inter alia by the resources that are available and since the availability of resources is not a constant in any given situation, there can be no hard and fast minimum core. The only constant against which the state’s performance can be measured is reasonableness viewed in the particular circumstances of each case. It is submitted with respect, that given the apparent inability of international legal forums to define minimum core content of the right to health, or even to agree that such definition is necessary, the rejection of the South African constitutional court of the concept of minimum core content was fully justified. The concept of minimum core content in relation to socio-economic rights is in any event a moving target since one cannot justify the implementation of only the barest legal necessities in the face of a greater than minimal supply of relevant resources. The court’s approach to the definition and determination of the content of the constitutional right of access to health care services and other socio-economic rights in South Africa is far more beneficial and pragmatic in terms of both its flexibility and its capacity to afford efficient, effective and appropriate relief to those the need it. For as long as the content of a right cannot be substantively defined at international level, the relevance and applicability of public international law

113 TAC (fn 113 supra)
within domestic legal systems will be limited. Perhaps that is as it should be. The South African judiciary has demonstrated its ability to effectively resolve key issues relating to the content of human rights using domestic constitutional precepts and legal principles as opposed to the direct application of rules of international law. Questions of the application or implementation of human rights must inevitably lead at some point to a discussion of the rights of vulnerable groups and the ranking of rights. In the context of the delivery of health care services this is of particular importance since resource allocation decisions have to be rational and justifiable. If there is some ranking or ordering of rights that is internationally recognised then this may have a bearing on such decisions. Furthermore it is evident from the foregoing discussions that the South African judiciary has expressly recognised a requirement to consider those who are in most desperate need. This clearly indicates that certain groups must receive some special attention. It is important, however, to justify the basis on which a particular group is given such special attention in the context of resource allocation decision. For the purposes of this chapter, it is thus necessary to explore the international law position in more detail on this issue. At the outset, however, it must be stressed that this is a topic worthy of a doctoral thesis in its own right and that it cannot possibly be canvassed in all its complexity in this thesis.

1.8 Rights of Vulnerable Groups

The question of whether the rights of vulnerable groups should take preference in health resource allocation decisions must be considered at two different levels. At the first level there is the nature of their rights as opposed to those of others and the question of whether there is a difference in terms of the legal status or weight of these rights relative to the rights of others. At the second level is the priority or preference, if any, that must be given to the implementation or enforcement of the rights of vulnerable groups over those of others, even if the rights themselves are of equal weight or status. This question of the prioritisation of rights will be considered in the context of South African constitutional law in the next chapter but it is necessary to look at relevant international law instruments and guidelines in order to establish the international position in this
regard. As stated previously, it is of considerable importance in the context of resource allocation decisions.

1.8.1 The Status of One Right Relative to Another

On the subject of a hierarchy of human rights generally there appears, as one has by now come to expect from international law, to be no agreement. The rights ‘cake’ can be sliced in a number of different ways in terms of hierarchies which makes for a number of different types of hierarchies and this, it is submitted, is part of the reason why there are such differing reactions to the issue of the ranking of rights. There is the hierarchy of one right over another for instance in terms of the balancing of rights in individual cases. Where one right cuts across another, which one must take precedence? An example of this in South African law is the power of a woman to terminate a pregnancy based on the right to freedom and security of the person in section 12 of the Constitution as opposed to the right of a health care worker to freedom of religion and conscience under section of the Constitution where the worker’s religious beliefs condemn abortion. Can the worker be compelled to assist the woman to terminate her pregnancy? Then there is the concept of derogable as opposed to non-derogable rights such as is found in the South African Constitution but to which it is by no means unique\textsuperscript{112}. Although non-derogable rights are usually referred to in the context of states of emergency, the concept certainly lends weight to the general idea that there are certain rights which are so fundamentally important that they may not be disregarded, even in the direst circumstances, and that there are others that do not enjoy the same status.

\textsuperscript{112} The International Covenant on Civil and Political Rights (ICCPR) names seven non-derogable rights. These are the right to life, freedom from torture or degrading treatment, freedom from slavery, freedom from imprisonment for breach of contract, freedom from retrospective criminality, recognition as a person before the law and freedom of thought, conscience and religion. It is interesting that Prasap-Palzse N in “Life and Death Decisions” http://www.org/ev/freedom/self/life.html should comment on this in the context of triage as practised by humanitarian agencies and workers in war zones. He points out that while “Agencies like Community Aid Abroad are committed to all of the rights housed in the Universal Declaration of Rights and the two associated Covenants: Economic and Social Rights; and Civil and Political Rights”... “trade-offs are becoming increasingly necessary between ‘core’ and ‘long term’ rights.” He notes that in practice the recognition of certain non-derogable rights means “concentrating on survival and the protection and improvement of health.” The United Nations Commission on Human Rights (33rd Session Agenda Item 16) in its statement of International Educational Development/Humanitarian Law Project states that “Because the non-derogable rights are jus cogens, they apply to any state at all times.”
There is the other hierarchy of so-called first generation, second generation and third generation rights. Advanced by French jurist Karel Vasak and inspired by the three themes of the French Revolution, Vasak identified these as the first generation of civil and political rights (liberté), the second generation of economic, social and cultural rights (égalité) and the third generation of solidarity rights (fraternité). This distinction has fallen into a measure of disfavour in some quarters. First generation rights are often perceived as individual rights whereas second generation rights are more likely to be perceived as group or collective rights.

The views of the international community on the subject of ranking of rights seem to be divided.

114 Weston BH ‘Encyclopedia Britannica: Human Rights’ http://www.cie.org/encyclopedia/eb/weston4.shtml. The author states that Vasak’s mode is a simplified expression of an extremely complex historical record and it is not intended to suggest a linear process in which each generation gives birth to the next and then dies away. Nor is it to imply that one generation is more important than the other. He notes that the three generations are understood to be cumulative, overlapping and interdependent and interpenetrating. See also Lynoh OJ and Chaudhry S ‘Human Rights, Environment, and Economic Development: Existing and Emerging Standards in International Law and Global Society’ http://www.ciel.org/Publications/oh3v.html who state that: Third Generation or “solidarity” rights is the most recently recognized category of human rights. This grouping has been distinguished from the other two categories of human rights in that its realization is predicated not only upon both the affirmative and negative duties of the state, but also upon the behaviour of each individual: “[Third Generation Rights]...may be both invoked against the state and demanded of it; but above all (and herein lies their essential characteristics) they can be realized only through the concerted efforts of all actors on the social scene: the individual, the state, public and private bodies and the international community." Rights in this category include self-determination, as well as a host of normative expressions whose status as human rights is controversial at present. These include the right to development, the right to peace, and a right to a healthy environment. Some texts such as the Final Report of the United Nations Commission on Human Rights, Sub-commission on Prevention of Discrimination and Protection of Minorities appear to take it as given that there is already an existing right to environment recognized in international instruments.

185 See Stanley RH ‘Human Rights in a New Era’ Thirty-Eighth Strategy for Peace Conference Airline Center, Warrenton, Virginia October 23, 1997: ‘That distinction can now be seen as artificial. The demise of the Cold War and an emerging global economic justice movement have blurred the lines between first-generation and second-generation rights and sparked debate over categories and priorities. Social, economic, and cultural issues are increasingly understood to be root causes of conflict.”

185 See Lynoh OJ and Chaudhry S (fn 183 supra) who note that: “Second generation rights have generally been considered as rights which require affirmative government action for their realization. Second generation rights are often styled as ‘group rights’ or ‘collective rights’, in that they pertain to the well-being of whole societies. They contrast with first generation rights which have been perceived as “individual entitlements,” particularly the prerogatives of individuals contrary to those of collectivities. Principle advocates of collective rights have been developing countries and formerly the Socialist Bloc countries. Some countries supporting second-generation rights have argued for their realization first. as a pre-condition for the eventual realization of civil and political rights. Additionally, some advocates for the pre-eminence of second generation collective or group rights have postulated that contrary to Western conceptions, the substance of human rights is not universal and that economic, social and cultural factors determine the applicability of particular rights in different countries. This has been used as a justification for denying civil and political rights or delaying their protection until group rights have been realized. Religious, cultural or socio-economic factors in a state therefore might be relied upon to preclude recognition of “alien” western ideas such as freedom of conscience or press freedom. Human rights advocates such as Higgins disagrees with this line of reasoning: “It is sometimes suggested that there can be no fully universal concept of human rights, for it is necessary to take into account the diverse cultures and political systems of the world. It is rarely advanced by the oppressed, who are only too anxious to benefit from perceived universal standards. The non-universal, relativist view of human rights in fact a very state-centered view and loses sight of the fact that human rights are human rights and not dependent on the fact that states, or groupings of states, may behave differently from each other so far as their policies, economic policy, and culture are concerned.” They point out that: The Vienna Declaration of 1993 disclaimed any priority of rights. It declared that: "While development facilitates the enjoyment of all human rights, the lack of development may not be invoked to justify the abridgement of internationally recognized human rights."
Article 5 of the Vienna Declaration states that:

“All human rights are universal, indivisible and interdependent and interrelated. The international community must treat human rights globally in a fair and equitable manner and on the same footing and with the same emphasis. While the significance of national and regional particularities and various historical, cultural and religious backgrounds must be borne in mind, it is the duty of States, regardless of their political, economic and cultural systems to promote and protect all human rights and fundamental freedoms.”

The concept of a hierarchy of rights has been criticised and even denied by some.

It has been argued that:

“The danger in establishing a hierarchy of rights is that it reinforces the tendency to relegate the ‘ordinary’ rights that affect the majority of the world’s people to the sphere of international neglect... This narrow focus, this de facto establishment of a small category of fundamental rights, ultimately undermines the potential event to prevent future atrocities of the kind international criminal justice concerns itself with. It is likely to diminish the importance of the wide web of rights and the culture of rights that the idea of a ‘web’ signifies.”

Hathaway refers to a hierarchy of human rights set out in the international human rights instruments based in order of importance as:

- those that are non-derogable in terms of the ICCPR. He says that the failure to ensure these rights under any circumstances is appropriately considered to be tantamount to persecution;

186 Whelan “Women, Human Rights and Vulnerability to HIV: Findings From the Women and AIDS Research Program” Oral Presentation delivered at the XI International Conference on AIDS, July 1996 http://www.hmph.harvard.edu/O rganizations/healthnet/HIV/docs/see aids/hrpt/hrpt11.txt; See also Matas D “The Universal Declaration of Human Rights: Fifty Years Later” (2000) 46 McGill L. J. 203 at 208 who states that: “The Universal Declaration of Human Rights does not rank rights, and quite properly so.” Robinson ‘Human Rights and Global Civilization’ in the BP Annual Lecture of November 2001 states that: “The truth is that divisions and ranking of rights is artificial. When President Roosevelt spoke of the famous ‘four freedoms’, freedom from want stood equally alongside freedom from fear. Human rights will not be truly achieved until all accept economic, social and cultural rights as rights that deserve and require equal attention to civil and political rights and freedoms.” http://www.bp.com/centres/press/a_detail.asp?id=142; Sidoti C in “Introducing Human Rights Law” a speech delivered in May 1997 in Hanoi Vietnam, states that “Some states give priority to some rights over other rights or even accept some categories of human rights while rejecting other categories... The United states for example has ratified the ICCPR but not the ICESCR and China has clearly argued for a hierarchy of human rights. Its White Paper on Human Rights says “it is a simple truth that, for any country or nation, the right to subsistence is the most important of all human rights, without which all other rights are out of the question”... But this argument is now closed... Virtually all nations now accept human rights law as indivisible and equally binding on nations.” (http://www. hnooc.gov.vn/speeches/human_rights/intro_br_law.htm)

188 Hathaway JC The Law of Refugee Status p104-105
those that are in the UDHR and concretised in binding and enforceable form in the ICCPR but which are derogable in times of public emergency. These rights include protection of personal and family privacy and integrity;

those that are contained in the UDHR and carried forward in the ICESCR. With regard to this category Hathaway points out that in contrast to the ICCPR, the ICESCR does not impose absolute immediately binding standards of attainment but rather requires states to take steps to the maximum of their available resources to progressively realise the rights;

those rights in the UDHR that were not codified in either the ICCPR or the ICESCR and which may thus be outside the scope of the state’s basic duty of protection. Such rights are the right to own and to be free of arbitrary deprivation of property and the right to be protected against unemployment.

This hierarchy is apparently based on the relative immediacy of the rights coupled with the strength of the state’s obligation to observe them in all circumstances.

The Council of Europe\textsuperscript{189} has recognized the right to life as “supreme value in the international hierarchy of human rights”. In a Background Paper\textsuperscript{190} delivered by Fabra and Arnal at a joint UNEP-OHCHR in January 2002, the authors refer to the fact that the courts are moving the right to a healthy environment “up the hierarchy of human rights by recognising it as a fundamental right.”

Koji\textsuperscript{191} notes that considerable confusion has surrounded the question of whether there exists a hierarchy of human rights in contemporary international law and that most human rights studies do not recognise such a hierarchy mainly because of their emphasis

\textsuperscript{190} Background Paper No 6 available at http://www.unohchr.ch/environment/bp6.html

\textsuperscript{191} Koji T ‘Emerging Hierarchy in International Human Rights and Beyond: From the Perspective of Non-Derogable Rights’ European Journal of International Law Vol 12 (2001), No 5 at p917 onwards.
on the indivisibility of human rights. His paper claims to provide a coherent understanding of this issue from the perspective of non-derogable rights which demonstrate the existence of a hierarchy of human rights most clearly in international law concepts. He observes that it is a serious mistake to regard non-derogable rights as a unitary concept and that such rights can be identified in at least three different ways i.e. by means of value-oriented, function-oriented and consent-oriented criteria and states that within this analytical framework, and particularly with respect to the first two criteria, non-derogable rights need to be distinguished from similar concepts such as core human rights, *jus cogens* and obligations *erga omnes*.

Arguments around cultural relativism and allegations that human rights law is fundamentally a Western concept further complicate questions of hierarchies of human rights.

It has been suggested that the right to life 'stands head and shoulders above all the others’ but that even the right to life is preceded by the right to freedom from incitement to discrimination without which the right to life cannot be assured. Whilst this is a view which sees the right to life relatively narrowly in the context of war and genocide it illustrates the polycentric nature of human rights generally. The right to life is dependent upon the observation of many other rights, for example the right to bodily integrity, and cannot be seen in isolation from them. Killing a person is after all a fundamental invasion of his right to bodily integrity. All human rights are in this sense indivisible, interrelated and interdependent. This is why arguments about the importance of an individual right relative to those of others tend to be circular in nature. This does not, however, necessarily defeat the question of hierarchies of rights.

---

192 Matas (fn 186 supra) at 209
193 Matas points out that the Holocaust began with hate speech.
194 Matas (fn 186 supra) after observing that the UDHR does not rank rights and correctly so, goes on to state that ranking of rights nonetheless occurs. He refers by way of example to a statement by the editor of *The Globe and Mail* claiming that freedom of expression is the superior core human right -- “a seminal, grammatical, essential, necessary, prior right in the pantheon of rights”. After some debate about how and why people prioritise their ‘favourite’ right, however, he comes to the conclusion that “because human rights are an interconnected whole, it is easy to link one right to another. Free expression is important to other rights, as other rights are important to respect for freedom of expression. Take any thread out of the quilt of rights and the quilt unravels. To choose only one thread and proclaim ‘This is the thread that counts!’ is arbitrary.”
It is submitted that there is a sense in which both camps are correct. This is due in part to the oversimplification of these arguments in terms of polarisation i.e. the idea that rights hierarchies are either permissible or not with no room for debate. It is submitted that a hierarchy is simply a conceptual tool with many uses. Its primary function is to express relativities. If one accepts the polycentric nature of the human rights system then hierarchies remain useful tools with which to analyse the particular factual situation with which one is confronted in order to arrive at meaningful decisions since in a polycentric system one can only speak in terms of relativities. The concern of this thesis, in keeping with its exploration of the law relating to the delivery of health services, is pragmatism.  

Whilst there may be room for argument in the lofty world of ideals and human rights in the abstract that there can be no hierarchy of rights on the basis that the Universal Declaration of Human Rights (UDHR) does not recognised any hierarchy, it is submitted that when it comes down to the practical implementation of human rights, hierarchies play a useful role. The fact is that the UDHR has been fleshed out or concretized by two major instruments of international law, the ICCPR and the ICESCR, and the former, to the extent that it recognises that certain rights are derogable in times of emergency whilst others are not, implicitly accepts the broad concept of rights hierarchies. In human rights law there are apparently no absolute truths – only past experience and present perspectives. It is submitted that the real answer to whether or not there is a legitimate hierarchy of human rights depends on the circumstances of the particular situation in which the hierarchy is formulated and applied. The truth of this argument can be seen in the different contexts in which hierarchies of rights are in fact recognised as in the situation of a court having to balance competing rights against each other in a particular case and in the situation of national emergencies in which certain rights take superiority over others. It is submitted that the validity of hierarchies is as much dependent upon the purpose for which distinctions between the various types of rights are drawn as it is upon the circumstances in which the hierarchy is constructed.

---

195 Matsuda M 'Liberal Jurisprudence and Abstracted Visions of Human Nature: A Feminist Critique of Rawls' Theory of Justice', Feminist Legal Theory: Foundations note 84 at 476, 477, argues that political philosopher John Rawls' (Rawls, A Theory of Justice) construction of an imaginary "original position" from which rights can be deduced cannot adequately justify protecting rights that are particularly important to women, claiming that abstraction: "as a methodology [in law] encompasses the belief that visions of social life can be constructed without reference to the concrete realities of social life. The choice of abstraction is a key move that allows Rawls to ignore powerful alternative constructions and give his theory an attractive internal logic" as quoted by Splittgerber S in "The Need for Greater Protection For the Human Rights Of Women: The Cases of Rape in Bosnia and Guatemala" 15 (1996) Wisconsin. International Law Journal at p 185
It is submitted that a hierarchy such as the one postulated by Hathaway referred to previously is legitimate for the purpose of attempting to categorise the various rights in terms of the relative immediacy of the obligations they impose upon nation states. To contend otherwise would be to deny the manner in which the various rights have been conceptualised in the relevant international legal instruments themselves. The ICCPR is explicit that certain rights are non-derogable even in states of national emergency and the ICESCR is just as explicit that certain rights are subject to progressive realisation based on the availability of resources. Such a hierarchy does not diminish the value of the rights in question. It simply recognises them as being different from a particular perspective. There can be no valid objection to a hierarchy that classifies human rights into first, second and third generation rights in order to illustrate the history of their evolution or their type whilst stressing that such a classification does not illustrate their relative importance.

Apart from debates about the legitimacy of hierarchies of rights one cannot ignore the larger debates about the various types of international law and their relative or hierarchical status. The argument that *jus cogens* takes precedence over public and customary international law, that public international law takes precedence over customary international law etc and that certain rights form part of the *jus cogens* whilst others do not, renders nonsensical bald denials of the existence of hierarchies of rights in international law. Elsewhere in this chapter it has been pointed out that the fact that there is a number of significantly sized and powerful countries who do not accept that *jus cogens* is binding upon them without their consent cannot be ignored. It is all very well to make bold assertions in principle but if they do not reflect reality then it is submitted that they are of little value. A problem with international law at the broadest possible level is its enforceability and the power dynamics involved. The concept of the sovereignty of nations has a tendency to stick in the craw of international law at many different levels.

If the legitimacy in broad terms of a hierarchy of human rights can be tested against the purpose of the hierarchy and its context then there is nothing to fear from the idea of
hierarchies of human rights. To the extent that a hierarchy is used to defeat the objects of an international law instrument such as the ICESCR by a nation state that is bound by it, such a hierarchy is not legitimate. However, in a situation in which a nation state has expressly signified its intention not to be bound by an instrument of international law and uses a hierarchy to justify its decision, questions of a hierarchy of rights are largely irrelevant since any number of different reasons can be put forward by a powerful nation state as to why it chooses not to be bound. The real question in such a situation is the extent to which other nation states have the power to challenge such a choice.

1.8.1 Preference of the Rights of Certain Groups

Irrespective of whether all rights are of the same weight and standing and everyone’s rights are essentially the same, there still seems to be a very strong view in international law that the rights of some groups should be given special attention. This view must be regarded at the level of implementation of human rights. On the basis that it is not possible to give effect to the rights of everyone at once – especially in the context of those rights which require extensive resources – and that one has to start somewhere, it is necessary to find and justify particular areas of focus. Enter the vulnerable groups. It is submitted that it is both logical and justifiable, even assuming that all human rights are equal, to give special attention to the rights of vulnerable groups. This is due to the fact that while at an abstract level all human beings are equal in their entitlement to the observation of their rights, such equality is not reflected at a practical level. Less powerful members of society are often victimised, oppressed and otherwise abused by the more powerful members of society. Most societies in the world are male dominated which means that women and children are often marginalized and abused. Ironically, the problem of rectifying this situation often becomes one of ranking if not of rights then of vulnerable groups themselves.

There is the question of children’s rights versus women’s rights (often in relation to questions of terminations of pregnancy and reproductive rights); the rights of future generations versus the rights of present generations in environmental issues; the rights of
the disabled child versus the rights of the non-disabled child; the rights of children as opposed to those of disabled adults; the rights of female victims of crime as opposed to those of prisoners; the rights of prisoners as opposed to those of refugees. International human rights instruments are divided along many different planes so that one has the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) and the Convention on the Rights of the Child (CRC) on the one hand and the International Covenant on Economic, Social and Cultural Rights (ICESCR) and the Universal Declaration of Human Rights on the other. The latter tend to deal more with the rights of everyone to various ‘goods’ while the former deal with those rights as they relate to vulnerable groupings.

When one starts ascribing rights to specific groups of people it is easy to see how the logic that says that all rights are equal and indivisible can become clouded. If the rights of men and women are equally important and fundamentally the same then what is the significance of CEDAW in relation to the ICESCR? What is the purpose of specifically recognising the rights of children in a separate document if their rights are no greater or no different to those of all people as expressed in the Universal Declaration of Human Rights or the ICESCR? It could be, and in fact has been, argued that the rights of vulnerable groups are deserving of special attention and that this is why they have been singled out. But if the rights of these groups are given special attention, or are prioritised at the expense of others, is this not tantamount to adding a gloss on their rights to say that they are superior in some way to the rights of others?

To misquote George Orwell, it would seem that although all rights are equal some are more equal than others.

Vulnerable groups that have been identified in international law are women, children, prisoners, refugees, the disabled and people living with HIV/AIDS. In many countries,

---

especially developing countries, these groups taken together make up the vast majority of the population. Even individually, they in some instances comprise majority groups rather than minority groups. This creates problems in the allocation of resources across vulnerable groups. In the context of HIV and AIDS this problem is highlighted by the question of whether one treats only the children of parents with HIV and AIDS when the growing numbers of AIDS orphans are creating problems of a different kind for governments of developing countries. This concern has been misconstrued by HIV and AIDS activists to imply that one should not treat the children but rather allow them to die than become yet another problem for society. In fact it has been used to support the logic that one cannot only treat the children. One must treat their parents as well. It is important to preserve the family unit and not just individuals. In practical terms, however, in the context of limited resources this implies that some adults and children must die whereas other adults and children can be saved. This logic says that children should not get preference simply because they are children. In such a scenario, in international law terms one is in effect weighing up the ICESCR against the CRC.

The choices involved in the allocation of resources to particular vulnerable groups in preference to others are often based on the values of the society that makes them but there is a certain utilitarian logic that comes into play in certain circumstances. Can a relatively youthful society where the number of economically active and productive adults is declining exponentially afford to devote all of its resources to saving children? Can an ageing society, in which laws significantly limit the number of children a couple can have, afford not to devote a significant percentage of its resources to protecting and saving its children? It is necessary to canvass in more detail the various international instruments and guidelines that deal with the rights to health care of vulnerable groups as opposed to others not only in order to lay the groundwork for the some of the discussion in chapter 2 of these rights in terms of the Constitution, but also to ascertain the nature and extent of the rights afforded to these groups in terms of international law.

1.9 Rights of Children
It is necessary to consider the rights of children in particular because of the specific recognition of the rights and interests of children in international law and in order to ascertain the substantial differences if any between the international law approach and the South African approach. Grootboom\textsuperscript{197} and TAC\textsuperscript{198} involved the rights of children and in both these cases, as has been noted previously, the constitutional court expressly rejected the application of the international law concept of minimum core. In this area South African law differs from international law. These two cases will be discussed in further detail in chapter two which deals with the constitutional aspects of rights involving health care services, including those of children. However the Convention on the Rights of the Child (CRC)\textsuperscript{199} is a significant international law instrument relating specifically to children and in view of the fact that the Constitution also makes specific mention in section 28 of children’s rights it is necessary to explore the rights of children as contemplated in the CRC in relation to the delivery of health care services. With regard to emotive issues such as treatment of HIV/AIDS and the preference of one group, e.g. children, over another, e.g. adults with a view to the allocation of scarce resources, for the purpose of antiretroviral treatment for instance, the question of whether the rights of vulnerable groups take precedence over those of other groups is of importance.

1.9.1 The Convention on the Rights of the Child

The CRC defines a child as every person under the age of 18 unless under a particular law, the age of majority is attained earlier\textsuperscript{200}.

The question is whether the CRC contains any recognition that the rights of children are of greater force or deserving of more stringent recognition than those of others. In the preamble to the CRC there are acknowledgements of general human rights and there is

\textsuperscript{197} Grootboom (fn 57 supra)
\textsuperscript{198} TAC (fn 113 supra)
\textsuperscript{199} On November 20, 1989, the United Nations General Assembly unanimously adopted the Convention on the Rights of the Child (CRC). It has been described as the most comprehensive treaty for the protection and support of children in existence today (Canadian Coalition for the Rights of Children 2002 http://www.rightsofchildren.ca and Rosenthal and Sundram (fn 2 supra at p34) who point out that the CRC has been ratified even more widely than has the ICESCR.) The USA and Somalia are the only countries that have not ratified the CRC.
\textsuperscript{200} CRC article 1
express reference to the Charter of the United Nations, and the Universal Declaration of Human Rights. Thereafter are the following statements:

“Recalling that, in the Universal Declaration of Human Rights, the United Nations has proclaimed that childhood is entitled to special care and assistance”

and

“Recognizing that, in all countries in the world, there are children living in exceptionally difficult conditions, and that such children need special consideration”.

At first glance these statements would seem to suggest that the rights of children should take precedence over those of others but if the wording is considered more carefully it is submitted that they are simply saying that children and the rights of children are deserving of special attention and should be the subject of a conscious focus in international law. It is submitted that the reason that childhood is entitled to special care and assistance is due to the fact that the circumstances of children, their power to cope with the world and to obtain benefits are different to those of adults. The rights themselves are not necessarily superior to the rights of adults or higher in terms of ranking. This reasoning is supported by statements such as that contained in General Comment No 14 (2000) of the United Nations Committee On Economic, Social And Cultural Rights (CESCR) which states in article 1 that:

“Health is a fundamental human right indispensable for the exercise of other human rights. Every human being is entitled to the enjoyment of the highest attainable standard of health conducive to living a life in dignity.”

It is difficult to conceive of a higher standard of health than “the highest attainable standard of health conducive to living a life in dignity”. Moreover it is an entitlement of ‘every human being’ and not just that of children. The International Covenant on Economic, Social and Cultural Rights (ICESCR) provides the most comprehensive article on the right to health in international human rights law. In accordance with article 12.1 of the ICESCR, states parties recognize “the right of everyone to the enjoyment of the highest attainable standard of physical and mental health” (writer’s italics). It is submitted that there is no higher standard than the “highest attainable standard”. At a
more practical level therefore, it is submitted that it would be difficult to justify in terms of international law the medical treatment of children at the expense of the treatment of adults in terms of resource allocation decisions. Furthermore such a decision may even run counter to the importance placed by the CRC on the child's rights to family relationships and family life. Children are generally recognised as more vulnerable than adults and therefore deserving of special efforts and attention but it is in the implementation of their rights rather than in the legal content of those rights that the difference becomes real.

In this context it is significant that the language of the CRC in article 24, which relates specifically to health rights, does not differ materially from the language of the other human rights instruments cited previously relating to the right to health. In terms of this Article:

"1. States Parties recognize the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health. States Parties shall strive to ensure that no child is deprived of his or her right of access to such health care services."

The second paragraph of article 24 fleshes out some of the practical implications of this right as follows:

"2. States Parties shall pursue full implementation of this right and, in particular, shall take appropriate measures:
(a) To diminish infant and child mortality;
(b) To ensure the provision of necessary medical assistance and health care to all children with emphasis on the development of primary health care;
(c) To combat disease and malnutrition, including within the framework of primary health care, through, inter alia, the application of readily available technology and through the provision of adequate nutritious foods and clean drinking-water, taking into consideration the dangers and risks of environmental pollution;
(d) To ensure appropriate pre-natal and post-natal health care for mothers;
(e) To ensure that all segments of society, in particular parents and children, are informed, have access to education and are supported in the use of basic knowledge of child health and nutrition, the advantages of breastfeeding, hygiene and environmental sanitation and the prevention of accidents;
(f) To develop preventive health care, guidance for parents and family planning education and services."
Article 24, at paragraph 3, requires states parties to take all effective and appropriate measures with a view to abolishing traditional practices prejudicial to the health of children.

In wording that is reminiscent of section 27(2) of the South African Constitution, paragraph 4 of article 24 stipulates that:

"States Parties undertake to promote and encourage international co-operation with a view to achieving progressively the full realization of the right recognized in the present article. In this regard, particular account shall be taken of the needs of developing countries."

In terms of Article 3 of the CRC:

1. In all actions concerning children, whether undertaken by public or private social welfare institutions, courts of law, administrative authorities or legislative bodies, the best interests of the child shall be a primary consideration.

2. States Parties undertake to ensure the child such protection and care as is necessary for his or her well-being, taking into account the rights and duties of his or her parents, legal guardians, or other individuals legally responsible for him or her, and, to this end, shall take all appropriate legislative and administrative measures.

3. States Parties shall ensure that the institutions, services and facilities responsible for the care or protection of children shall conform with the standards established by competent authorities, particularly in the areas of safety, health, in the number and suitability of their staff, as well as competent supervision.

This article sets the tone for the general obligations of states towards children. It is the best interests of the child which must be of primary consideration. The measures that must be taken by states parties are both legislative and administrative - similar to the legislative and other measures required of the state by section 27(2) of the South African Constitution in the progressive realisation of the right of access to health care services. The CRC recognises that parents have the primary responsibility to secure the health and wellbeing of their children but also clearly imposes certain obligations upon the state in article 24(2) and (3).
The CRC acknowledges the very wide right of children to health as well as the narrower right to health care services. It is a comprehensive international instrument that is concerned with the well-being of children on all fronts rather than just that of health care. In chapter 2 there is a discussion of the right to health as opposed to a right of access to health care services.

Geißler observes that children were not completely unprotected from a legal point of view before the CRC came into force because there were other general human rights agreements in force prior to the CRC such as the International Pact on Civil and Political Rights (IPCR) of 1966 and the Anti-Torture Agreement of 1984 which applies equally to adults and children. He reflects that the CRC is part of a multi-layered complex of international and regional agreements on human rights which were mainly inspired by the Universal Declaration of Human Rights in 1948.

1.9.2 WMA Declaration of Ottawa

The World Medical Association Declaration of Ottawa on the Rights of the Child to Health Care was adopted at the 50th World Medical Assembly in Ottawa, Canada on October 1998. Whilst it is not necessarily of the same status and legal standing as the CRC it may nonetheless provide some useful guidelines on the rights of children to health care. In the Preamble it is stated that:

1. The health care of a child, whether at home or in hospital, includes medical, emotional, social and financial aspects which interact in the healing process and which require special attention to the rights of the child as a patient.

2. Article 24 of the 1989 United Nations Convention on the Rights of the Child recognises the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health, and States that nations shall strive to ensure that no child is deprived of his or her right of access to such health care services.

3. In the context of this Declaration a child signifies a human being between the time of birth and the end of her/his seventeenth year, unless under the law applicable in the country concerned children are legally recognized as adults at some other age.

---

201 Geißler N "Creating a Procedure for submitting Individual Complaints pursuant to the Convention on the Rights of the Child" Asserting the Rights of the Child Documentation of conference in Berlin in April 2001 Kinderhilfe, Joint Conference Church and Development (GKKE)
Article 4 of the Declaration acknowledges that every child has an inherent right to life, as well as the right of access to the appropriate facilities for health promotion, the prevention and treatment of illness and the rehabilitation of health and stipulates that physicians and other health care providers have a responsibility to acknowledge and promote these rights, and to urge that the material and human resources be provided to uphold and fulfil them. The Declaration states as general principles that every effort should be made:

I. to protect to the maximum extent possible the survival and development of the child, and to recognise that parents (or legally entitled representatives) have primary responsibility for the development of the child and that both parents have common responsibilities in this respect;

II. to ensure that the best interests of the child shall be the primary consideration in health care;

III. to resist any discrimination in the provision of medical assistance and health care from considerations of age, gender, disease or disability, creed, ethnic origin, nationality, political affiliation, race, sexual orientation, or the social standing of the child or her/his parents or legally entitled representatives;

IV. to attain suitable pre-natal and post-natal health care for the mother and child;

V. to secure for every child the provision of adequate medical assistance and health care, with emphasis on primary health care, pertinent psychiatric care for those children with such needs, pain management and care relevant to the special needs of disabled children;

VI. to protect every child from unnecessary diagnostic procedures, treatment and research;

VII. to combat disease and malnutrition;

VIII. to develop preventive health care;

IX. to eradicate child abuse in its various forms; and

X. to eradicate traditional practices prejudicial to the health of the child.

To a significant extent it is simply a restatement of the principles contained in the CRC but it does add a few details that are more specific to health care services such as pain management, preventive health care and psychiatric care.

1.9.3 African Charter on the Rights and Welfare of the Child

This document has a comprehensive approach to the protection of disabled children. Article 13 reads as follows:

‘Every child who is mentally or physically disabled shall have the right to special measures of protection in keeping with his physical and moral needs and under conditions which ensure his dignity, promote his self-reliance and active participation in the community.’
The states parties are required, subject to available resources, to ensure a disabled child, and to those responsible for his or her care, of assistance for which application is made and which is appropriate to the child’s condition.

1.12.4 Comparison With The Constitution

In section 28(1)(b) and (c), the Constitution states that

“every child has the right-
(b) to family care or parental care, or to appropriate alternative care when removed from the family environment;
(c) to basic nutrition, shelter, basic health care services and social services”.

The Convention on the Rights of the Child (CRC) contains much more comprehensive provisions in its Article 24(1) alone:

“States Parties recognize the right of the child to the enjoyment of the highest attainable standard of health and to facilities for the treatment of illness and rehabilitation of health. States Parties shall strive to ensure that no child is deprived of his or her right of access to such health care services.”

Part 2 of Article 24 elaborates even further as follows:

“States Parties shall pursue full implementation of this right and, in particular, shall take appropriate measures:
(a) to diminish infant and child mortality;
(b) to ensure the provision of necessary medical assistance and health care to all children with emphasis on the development of primary health care;
(c) to combat disease and malnutrition, including within the framework of primary health care, through, inter alia, the application of readily available technology and through the provision of adequate nutritious foods and clean drinking-water, taking into consideration the dangers and risks of environmental pollution;
(d) to ensure appropriate pre-natal and post-natal health care for mothers;
(e) to ensure that all segments of society, in particular parents and children, are informed, have access to education and are supported in the use of basic knowledge of child health and nutrition, the advantages of breastfeeding, hygiene and environmental sanitation and the prevention of accidents;
(f) to develop preventive health care, guidance for parents and family planning education services.”
The Constitution does not expressly provide for such measures. The constitutional court in the *TAC* case\(^{202}\) did not refer to the Convention on the Rights of the Child in its judgement although it did discuss the interpretation of section 28(1) and did refer to the fact that children are a highly vulnerable group\(^{203}\).

General Comment No 14 of the United Nations Committee on the ICESCR states that States parties should provide a safe and supportive environment for adolescents, that ensures the opportunity to participate in decisions affecting their health, to build life-skills, to acquire appropriate information, to receive counselling and to negotiate the health behaviour choices they make. Article 12.2 (a) of the ICESCR outlines the need to reduce infant mortality and promote the healthy development of infants and children.

The constitutional court in the *TAC* case has supported the view first expressed in *Grootboom* that while the primary obligation to provide basic health services rests on those parents who can afford to pay for such services, this does not mean that the state incurs no obligation in relation to children who are being cared for by their parents and families.

In *Grootboom*\(^{204}\) the court expressly referred to the Convention on the Rights of the Child as being ratified by South Africa in 1995 and observed that it-

\[\text{"seeks to impose obligations upon State parties to ensure that the rights of children in their countries are properly protected. Section 28 is one of the mechanisms to meet these obligations. It requires the State to take steps to ensure that children's rights are observed. In the first instance, the State does so by ensuring that there are legal obligations to compel parents to fulfil their responsibilities in relation to their children. Hence, legislation and the common law impose obligations upon parents to care for their children. The State reinforces the observance of these obligations by the use of civil and criminal law as well as social welfare programs."}\]^\(^{205}\)

---

\(^{202}\) *TAC* (fn 113 supra)

\(^{203}\) See *TAC* (fn 113 supra) at 1056 G where the court stated: "Their needs are 'most urgent' and their inability to have access to Nevirapine profoundly affects their ability to enjoy all rights to which they are entitled. Their rights are 'most in peril' as a result of the policy that has been adopted and are most affected by a rigid and inflexible policy that excludes them from having access to Nevirapine."

\(^{204}\) *Grootboom* (fn 57 supra)

\(^{205}\) The court went on to state that: "In the first place, the state must provide the legal and administrative infrastructure necessary to ensure that children are accorded the protection contemplated by s 28. This obligation would normally be fulfilled by passing laws and creating enforcement mechanisms for the maintenance of children, their protection from maltreatment, abuse, neglect or degradation, 50 and the prevention of other forms of abuse of children mentioned in s 28. In addition, the state is required to fulfil its obligations to provide families with access to land in terms of s 25, access to adequate housing in
The court in *Grootboom* was more preoccupied with the interpretation of the constitutional rights of children with regard to housing and other basic necessities than it was with a critical analysis of the manner in which the Convention on the Rights of the Child has been implemented in South Africa. It did not use the CRC as an interpretational tool for the purposes of deriving the meaning of section 28 of the Constitution but rather referred to it as one of the international legal obligations of South Africa. This is possibly due to the fact that the court did not find any conflict between domestic legal provisions concerning the rights of the child and those of the CRC. The court did refer, however, to the overlap between a child's right to basic health care services in terms of section 28(1)(c) and the right to health care services created in terms of section 27(1). It observed that this overlap is not consistent with the notion that s 28(1)(c) creates separate and independent rights for children and their parents.

In constitutional terms, therefore, the right of a child to basic health services in terms of section 28 is a subset of the broader right of everyone in terms of section 27(1) rather than a separate and independent right. This supports the argument that the Constitution, at least, envisages a single right to health care services rather than multiple, fragmented rights. It remains to be seen whether this conceptualisation can be extended to other areas of South African law but the Constitutional support it enjoys is an important positive indicator at this stage.

### 1.10 Rights of Women

It has been said that “So pervasive and systematic are the human rights abuses against women that they are regarded as part of the natural order”\(^{206}\) and that to adequately address structural biases, theories of international law and human rights must take terms of s 26 as well as access to health care, food, water and social security in terms of s 27. It follows from this judgment that as 25 and 27 require the state to provide access on a programmatic and coordinated basis, subject to available resources. One of the ways in which the state would meet its s 27 obligations would be through a social welfare program providing maintenance grants and other material assistance to families in need in defined circumstances.”\(^{206}\) Kerr J "The Context and the Goal", *Ours By Rights: Women’s Rights as Human Rights* 1, 3 as cited by Splittgerber (in 195 supra).

---

account of the reality of women’s lives. The reality of women’s lives is a justification for special consideration of women’s rights. A denial that there can be hierarchies of rights on the basis that all rights are universal and all people equal in relation to all rights is a denial of the reality of people’s lives and is more likely to hinder rather than help people in the exercise or realisation of their rights.

The rights of women to health or health care at international law are recognised in a number of different instruments, the most notable being the Convention Against All forms of Discrimination Against Women (CEDAW).

Article 12 provides that:

12.1 States Parties shall take all appropriate measures to eliminate discrimination against women in the field of health care in order to ensure, on a basis of equality of men and women, access to health care services, including those related to family planning.

12.2 Notwithstanding the provisions of paragraph 1 of this article, States Parties shall ensure to women appropriate services in connection with pregnancy, confinement and the postnatal period, granting free services where necessary, as well as adequate nutrition during pregnancy and lactation.

In its preamble, the states parties note their concern that in situations of poverty women have the least access to food, health, education, training and opportunities for employment and other needs.

207 See Splittergerber (fn 193 supra) at p 8. He notes that international legal organizations must articulate program goals within legal discourse that acknowledge gendered disparities of power rather than assuming all people are equal in relation to all rights...” and that without greater female representation in international legal institutions, these goals will not be met.

208 In “The right to the highest attainable standard of health”: 11/08/2000/E.C.12/2000/4, CESC General Comment 14. (General Comments) there is a paragraph (21) entitled “Women and the Right to Health”. It states that: “To eliminate discrimination against women, there is a need to develop and implement a comprehensive national strategy for promoting women’s right to health throughout their life span. Such a strategy should include interventions aimed at the prevention and treatment of diseases affecting women, as well as policies to provide access to a full range of high quality and affordable health care, including sexual and reproductive services. A major goal should be reducing women’s health risks, particularly lowering rates of maternal mortality and protecting women from domestic violence. The realization of women’s right to health requires the removal of all barriers interfering with access to health services, education and information, including in the area of sexual and reproductive health. It is also important to undertake preventive, promotive and remedial action to shield women from the impact of harmful traditional cultural practices and norms that deny them their full reproductive rights.” Other instruments that deal with the health of women are the Declaration on the Elimination of Violence Against Women 199 U.N.T.S. 135; Beijing Declaration and Platform of Action A/CONF.177/20(1995) and A/CONF 177/20/Add.1 (1995). Article 17 of the Beijing Declaration states that the governments who participated in the Declaration are convinced that: “The explicit recognition and reaffirmation of the right of all women to control all aspects of their health, in particular their own fertility, is basic to their empowerment”. Included in the Platform of action is the statement the participants are determined inter alia to: “30. Ensure equal access to and equal treatment of women and men in education and health care and enhance women’s sexual and reproductive health as well as education.”
The Constitution does not expressly recognise the rights of women in the Bill of Rights. However, it could be said that in its prohibition of unfair discrimination on the grounds of *inter alia*, gender, it does recognise that the rights of women are equal to those of men. It is significant that the most prominent international law instrument dealing with the rights of women is CEDAW which is addressed specifically at the elimination of discrimination against women. In the context of access to health care services both CEDAW and the Constitution reflect the need to ensure that women’s health needs are met and that they have at least as much access to health care services as do men. The implications of the specific reference in section 27(1) of the Constitution to reproductive health care are discussed in detail in chapter two.

The fact that the so-called ‘women’s Bill of Rights’ is a document premised on discrimination against women indicates that although women enjoy equal rights to men generally, in terms of implementation they are not given the same recognition as men. It is thus at the level of implementation, rather than conceptualisation, that the rights of women are perceived as being in need of special attention.\(^\text{209}\)

1.11 Rights of Refugees

The Convention relating to the Status of Refugees was adopted on 28 July 1951 by the United Nations Conference of Plenipotentiaries on the Status of Refugees and Stateless Persons convened under General Assembly resolution 429(v) of 14 December 1950. It came into force on 22 April 1954 in accordance with article 43. The Convention defines a ‘refugee’ as any person who:

\(^{209}\) “In its 1995 Human Development Report, the United Nations plainly states that ‘in no society today do women enjoy the same opportunities as men. Similarly the U.S Department of State, in its 1995 annual report on human rights practice, left no doubt that as the global community approaches the turn of the century, the condition and status of women world-wide is one of social, political, educational, legal and economic inequality. Although the early human rights documents promised women a standard of non-discrimination on the basis of sex, that pledge, as the 1995 Country Reports and the U.N.'s Development Report indicates, is still, today, not a reality.” (Hernandez-Traylor BE 'Sex, Culture and Rights: A Re-Conceptualization of Violence for the Twenty First Century' 60 (1997) Albany Law Review 607 - footnotes omitted)
Has been considered a refugee under the Arrangements of 12 May 1926 and 30 June 1928 or under the Conventions of 28 October 1933 and 10 February 1938, the Protocol of 14 September 1939 or the Constitution of the International Refugee Organization;...

As a result of events occurring before January 1951 and owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable, or owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable of, owing to such fear, is unwilling to return to it...

The Convention stipulates in article 20 that where a rationing system exists which applies to the population at large and regulates the general distribution of products in short supply, refugees shall be accorded the same treatment as nationals. In article 23 the Convention states that the contracting states shall accord to refugees lawfully staying in their territory the same treatment with respect of public relief and assistance as is accorded their nationals. Article 24 deals with social security and states that states must accord to refugees lawfully staying in their territory the same treatment as is accorded to nationals in respect of inter alia social security (legal provisions in respect of employment injury, occupational diseases, maternity, sickness, disability, old age, death, unemployment, family responsibilities and any other contingent which, according to national law or regulations is covered by a social security scheme) subject to the following limitations:

(i) There may be appropriate arrangements for the maintenance of acquired rights and rights in the course of acquisition;

(ii) National laws or regulations of the country of residence may prescribe special arrangements concerning benefits or portions of benefits which are payable wholly out of public funds and concerning allowances paid to persons who do not fulfill the contribution conditions prescribed for the award of a normal pension.

The Constitution does not recognise specifically the rights of refugees. However, its use of the word ‘everyone’ in connection with socio-economic rights is of considerable significance in this context and is canvassed in detail in chapter 2. The Refugees Act No 130 of 1998 has as its objects to give effect within the Republic of South Africa to the
relevant international legal instruments, principles and standards relating to refugees; to provide for the reception into South Africa of asylum seekers; to regulate applications for and recognition of refugee status; and to provide for the rights and obligations flowing from such status. In the Preamble to this Act it is observed that the Republic of South Africa has acceded to the 1951 Convention Relating to Status of Refugees, the 1967 Protocol Relating to the Status of Refugees and the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa as well as other human rights instruments, and has in so doing, assumed certain obligations to receive and treat in its territory refugees in accordance with the standards and principles established in international law. This is the background against which this legislation has been enacted.

1.12 Rights of Prisoners

It is obviously important from a human rights perspective to ensure that people who are vulnerable to infringement of their rights because they have been incarcerated should have some special attention devoted to their rights in order to preclude human rights abuses in penal institutions. This view is obviously based on the premise that even though people have been incarcerated and one of the rights, the right to freedom of movement, has thus been restricted, they are still human beings for the purposes of the remaining human rights.

The Standard Minimum Rules for the Treatment of Prisoners\textsuperscript{210} (Standard Minimum Rules) were adopted by the First United Nations Congress on the Prevention of Crime and Treatment of Offenders, held at Geneva in 1955, and approved by the Economic and Social Council by its resolution 633 C (XXIV) of 31 July 1957 and 2076 (LXII) of 13 May 1977. Under the preliminary observations it is noted that the rules seek only on the basis of contemporary thought and the essential elements of the most adequate systems of today to set out what is generally accepted as being good principle and practice in the treatment of prisoners and the management of institutions. It is acknowledged that in

view of the great variety of legal, social, economic and geographical conditions of the world, not all of the rules are capable of application in all places and at all times. Under the heading ‘Medical Services’ the Rules of General Application stipulate various conditions that must be created or maintained in penal institutions in order to ensure that medical services are available to prisoners. Included in these conditions are the availability of at least one qualified medical officer who has some knowledge of psychiatry and the availability of the services of a qualified dental officer to every prisoner. In women’s institutions there must be special accommodation for all necessary pre-natal and post-natal care and treatment and arrangements must be made wherever possible for children to be born in a hospital outside the institution.

The medical officer must see and examine every prisoner as soon as possible after admission to prison and thereafter as necessary with a view to discovery of physical or mental illness and “the taking of all necessary measures”. The medical officer must have the care of the physical and mental health of the prisoners and must daily see all sick prisoners, all who complain of illness and any prisoner to whom his attention is especially directed. Whenever a medical officer considers that a prisoner’s physical or mental health has been or will be injuriously affected by continued imprisonment or by any condition of imprisonment he is required to report this to the director. Upon the death or serious illness of or serious injury to a prisoner, or his removal to an institution for the treatment of mental illness the director is required to immediately inform the spouse of the prisoner or the nearest relative and must in any event inform any other person previously designated by the prisoner.

There are specific rules applicable to special categories such as “Prisoners Under Sentence”, “Insane and Mentally Abnormal Prisoners” and “Prisoners Under Arrest or Awaiting Trial”. In the case of “insane and mentally abnormal” prisoners, persons who are found to be insane must be detained in mental institutions and not prisons. Prisoners who suffer from ‘other mental diseases or abnormalities’ must be observed and treated in ‘specialized institutions’ under medical management. During their stay in a prison, such prisoners must be placed under the special supervision of a medical officer.
The Constitution in section 35(2) recognises the right of prisoners to adequate medical treatment and to communicate with, and be visited by, their chosen medical practitioner. This right is discussed in more detail in chapter 2. It is of interest that in South African law a prisoner has a right to be visited by his or her chosen medical practitioner. This implies a right to choose a particular medical practitioner to attend to him whilst a prisoner which means that the right is wider than the Standard Minimum Rules allow. The latter refers to an obligation on the part of the authorities to have available at least one medical officer to take care of the health needs of the prisoners.

Sections 4 to 35 of the Correctional Services Act\textsuperscript{211} are grouped in Chapter III under the heading ‘Custody Of All Prisoners Under Conditions Of Human Dignity’. Section 4 stipulates that the minimum rights of prisoners entrenched in this Act must not be violated or restricted for disciplinary or any other purpose, but the Commissioner may restrict, suspend or revise amenities for prisoners of different categories.

The term, ‘medical treatment’ is defined in this Act as treatment, regimen or intervention prescribed by a medical practitioner, dentist or psychologist as defined in section 1 of the Medical, Dental and Supplementary Health Service Professions Act\textsuperscript{212} while 'medical practitioner means a medical practitioner as defined in section 1 of the Health Professions Act. Section 12 of the Correctional Services Act deals with health care. It provides that:

(1) The Department must provide, within its available resources, adequate health care services, based on the principles of primary health care, in order to allow every prisoner to lead a healthy life.

(2) (a) Every prisoner has the right to adequate medical treatment but no prisoner is entitled to cosmetic medical treatment at State expense.

(b) Medical treatment must be provided by a medical officer, medical practitioners or by a specialist or health care institution or person or institution identified by such medical officer except where the medical treatment is provided by a medical practitioner in terms of subsection (3).

\textsuperscript{211} Act No 111 of 1998
\textsuperscript{212} Act No 56 of 1974. Its name was subsequently changed to "Health Professions Act".
(3) Every prisoner may be visited and examined by a medical practitioner of his or her choice and, subject to the permission of the Head of Prison, may be treated by such practitioner, in which event the prisoner is personally liable for the costs of any such consultation, examination, service or treatment.

(4) (a) Every prisoner should be encouraged to undergo medical treatment necessary for the maintenance or recovery of his or her health.

(b) No prisoner may be compelled to undergo medical intervention or treatment without informed consent unless failure to submit to such medical intervention or treatment will pose a threat to the health of other persons.

(c) Except as provided in paragraph (d), no surgery may be performed on a prisoner without his or her informed consent, or, in the case of a minor, with the written consent of his or her legal guardian.

(d) Consent to surgery is not required if, in the opinion of the medical practitioner who is treating the prisoner, the intervention is in the interests of the prisoner's health and the prisoner is unable to give such consent, or, in the case of a minor, if it is not possible or practical to delay it in order to obtain the consent of his or her legal guardian.

There appears to be no inconsistency between these provisions and the requirements of international law concerning the delivery of health care services to prisoners.

1.13  Jus Cogens and the Right To Health

In light of foregoing discussions one must ask whether a right to health has become a principle of *jus cogens*. Would an international instrument that was in conflict with a right to health be unlawful under international law? The general idea behind *jus cogens*, as stated previously, is that it represents a body of non-derogable, peremptory norms from which no domestic legal system or government may legitimately depart. Article 53 of the Vienna Convention States that a peremptory norm of general international law is a norm accepted and recognised by the international community of states as a whole as a norm from which no derogation is permitted and which can be modified only by a subsequent norm of general international law having the same character. It specifies that a treaty conflicting with *jus cogens* at the time of its conclusion is void. In terms of article 64, a treaty also becomes void if it is in contradiction with a peremptory norm of international law which has newly emerged (*jus cogens supervenientis*). The International Law Commission observed in 1969 in its commentary on the draft articles for the
international law of treaties that there is no simple criterion which would allow one to
determine whether a rule belongs to *jus cogens*. This is unfortunate as it does not take the
concept of *jus cogens* very far in practical terms.

Although few would, in the abstract, dispute a right to health, inextricably linked as it is
with those most fundamental of all human rights – the right to life and the right to
dignity, the content of such a right is another matter. A right to health does not
necessarily mean a right to health care services and *vice versa*. Furthermore, it seems that
no two international instruments can express the concept of a right to health or even
health care in the same language. Should health care services be provided as a matter of
state obligation? Should they be free of charge or is it more a question of access? Are
there special groups deserving of particular benefits or consideration? What level of care
should be provided? Should only primary health care be provided or should all levels of
care be provided? Should health care be both curative and preventive or only preventive
or curative? What kinds of services must be made available? Does health mean a
minimum standard sufficient that people are able to work or does it mean the highest
level of health attainable? Should the public health care system carry the burden alone or
should there be some reliance on private health care services? Should there be access to
the highest levels of health technology or only certain minimum levels? Should there be
access to the latest patented expensive drugs or only generics? Public international law is
not particularly homogenous when it comes to establishing the content of a putative
peremptory norm concerning a right to health or health care.

In terms of Article 25 of the Universal Declaration of Human Rights, each person has
“...the right to security in the event of ...sickness...”.

Article 10 of the Additional Protocol to the American Convention on Human Rights in
the Field of Economic, Social and Cultural Rights advises states to satisfy the health
needs of the highest risk groups and of those whose poverty makes them most vulnerable.
In the African Charter on People’s Rights, Article 18(4) stipulates that the disabled should have the right to special measures of protection in keeping with their physical needs whilst in terms of Article 13 of the European Social Charter, states are required to ensure that any person who is without adequate resources and who is unable to secure such resources be granted adequate assistance and the care necessary in the case of sickness.

In the Declaration of Alma-Ata, Article V states that governments are responsible for the health of their people which can be attained by the provision of adequate health and social measures whilst Article VII (6) states that those in need should have priority in health care and Article VIII advises governments, in co-ordination with other sectors, to formulate national policies, strategies and plans of action to launch and sustain primary health care as part of a comprehensive national health system.

Article 12 of the International Covenant on Economic, Social and Cultural Rights recognises the right of everyone to the enjoyment of the highest attainable standard of physical and mental health and requires states to create conditions which will assure to all medical service and attention in the event of sickness.

In the Declaration on Social Progress and Development, Article 10(d) states that social progress and development should aim at the achievement of the highest standards of health and the provision of health protection for the entire population whilst Article 19 points out that free health services, adequate preventive and curative facilities and welfare medical services are the means to be used.

Article 7 of the Convention on the Rights of the Child states that whenever possible, the disabled child should be provided with health care services free of charge.

Article 7 of the Convention concerning Medical Care and Sickness Benefits states that the contingencies covered by the Convention should include:

(a) need for medical care of a curative and preventive nature and
incapacity for work resulting from sickness and involving suspension of earnings, as defined by national legislation.

Article 8 states that medical care should comprise of at least:
(a) general practitioner care;
(b) specialist care at hospitals;
(c) the necessary pharmaceutical supplies;
(d) hospitalisation and
(e) medical rehabilitation.

Article 18 states that sickness benefits are periodical benefits and that sickness means any morbid condition, whatever its cause. Articles 22 and 23 provide that a periodical payment shall be such as to attain at least 60 percent of the total previous earning of the beneficiary or 60 percent of the total wage of an ordinary adult male labourer. Article 29 states that every claimant shall have a right of appeal in the case of refusal of benefit or complaint as to its quality or quantity.

Article 7 of the Convention concerning Employment Promotion and Protection against Unemployment requires states to secure persons the benefit in respect of a condition requiring medical care of treatment of a preventive or curative nature which, according to Article 10, must include at least:
(a) general practitioner care;
(b) specialist care at hospitals;
(c) the necessary pharmaceutical supplies; and
(d) hospitalisation.

Article 13 advises states to secure persons the provision of sickness benefit whilst Article 16 requires the sickness benefit to be a periodical payment.

Article 5(4) (g) advises states to ensure the provision of medical care to persons in receipt of unemployment benefit as well as their dependents.
Paragraph 118 of the Word Programme concerning Disabled Persons encourages the establishment and development of a public system of social care and health protection whilst paragraph 96 advises states to co-ordinate programmes for the prevention of disability which include community-based primary health care systems that reach all segments of the population, and for public health activities that will assist people in attaining lifestyles that will provide the maximum defence against causes of impairment.

The Preamble to the Constitution of the World Health Organisation states that the enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being.

Article 12(1) of the Convention on the Elimination of all forms of Discrimination Against Women requires states parties to take all appropriate measures to eliminate discrimination against women in the field of health care in order to ensure, on a basis of equality of men and women, access to health care services, including those relating to family planning while Article 12(2) requires states parties to ensure to women appropriate services in connexion with pregnancy, confinement and the post-natal period, granting free services where necessary, as well as adequate nutrition during pregnancy and lactation.

It is submitted that it is not possible to discern within the foregoing, a golden thread of commonality of content which could prove the universal acceptance of a right to health at some level. Some of them single out specific groups whilst others refer to specific levels of services. Others do not speak of services at all but rather a state of being. One could adopt the lowest common denominator approach213 or alternatively, an approach which takes the widest expression of the right as being the overarching one of which all the others are simply subsets expressed at different levels and for various elements of the general population. Rights without content are a menu without a meal.214 It is possibly for

213 This would effectively be the minimum core approach.
214 Kinney (fn 51 supra) observes that "When all is said and done, legal rights should be enforceable."
this reason that the concept of minimum core obligations has been argued so strenuously by some protagonists of socio-economic rights.

The concept of minimum core, if recognised sufficiently widely, may go some way towards establishing a commonality of content for a right to health care although this would not in itself necessarily establish it as a rule of *jus cogens*.214 However, despite reference to it in various international legal commentaries216, it does not appear to have sufficient levels of acceptance amongst nation states and has certainly been rejected in South Africa as a key aspect of fundamental human rights both with regard to the right to housing and with regard to the right to health care services. The fact that the South African Constitution recognises not a right to health but a right to health care services is highly significant in an international law context. The court in *Grootboom*, which involved a right to housing, was at pains to point out the differences in the wording between the ICESCR on the subject of the right to housing and the expression of a similar right in the Constitution217. The variance between the wording in section 27 of the right of access to health care services and article 12 of the ICESCR of the right to physical and mental health is even greater than that relating to rights to housing between the two documents. The South African Constitution does not expressly recognise a right to health – only a right of access to health care services.

All socio-economic rights are dependent upon the availability of resources. To imply otherwise is to lose touch with reality and to demote socio-economic rights to the world of academia. The public international law instruments dealing with socio-economic rights do recognise this limitation to some extent but there is a disturbing tendency amongst

---

215 The language of the Maastricht Guidelines on Violations of Economic, Social and Cultural Rights (see fn 216 below) comes very close to implying that the minimum core obligations alleged to be inherent in the socio-economic rights are a part of the *jus cogens*.

216 For example, the Maastricht Guidelines on Violations of Economic, Social and Cultural Rights, January 22-26, 1997 (www.edu/hum.mэфд/mas/maastrichtguidelines.htm) which state at paragraph 9 that violations of the Covenant occur when a state fails to satisfy what the Committee on Economic, Social and Cultural Rights has referred to as "a minimum core obligation to ensure the satisfaction of, at the very least, minimum essential levels of each of the rights [...]. Thus for example, a state party in which any significant number of individuals is deprived of essential foodstuffs, of essential primary health care, of basic shelter and housing, or of the most basic forms of education is, prima facie, violating the Covenant." Such minimum core obligations apply irrespective of the availability of resources of the country concerned or any other factors and difficulties.

217 *Government of the Republic of South Africa and Others v Grootboom and Others* (fn 57 supra). The Court observed at 66: "The right delineated in s 26(1) is a right of "access to adequate housing" as distinct from the right to adequate housing encapsulated in the Covenant. This difference is significant."
some writers to view this as a loophole – an escape route for states not wishing to ensure the fulfilment of the right. This argument, in the mouths of those who would argue that a right to health, including a right of access to health care services, is part of *jus cogens* appears to be something of a contradiction in terms since in order for a rule of international law to become part of the *jus cogens*, it should be a norm accepted and recognised by the international community of states *as a whole*. In theory therefore, states who plead poverty should at least be given the benefit of the doubt. The Committee on the ICESCR recognised the legitimacy of the phrase ‘progressive realisation’ if the concept of minimum core does not meet with general acceptance, if the concept of progressive realisation within available resources is legally valid, then it is submitted that it is difficult indeed to conceive of a right to health or even to health care services as being part of the *jus cogens*. What would be the content of such peremptory norm? To say that the peremptory norm incorporates the concept of progressive realisation within available resources allows for a great deal of variation in the scope of the right. How then, would one establish whether or not a state is acting in violation of the norm? Admittedly activities which deprive people of services they already have would be more obvious than those which fail to ensure the provision of services within available resources but this only advances the concept of a right to health services as *jus cogens* in a negative way. The obligations to respect and protect may be covered but not those to promote and fulfil. The availability of resources is an extremely complex issue since it goes to the heart of national resource allocation decisions and the right to self-determination which itself has been alleged to be a rule of *jus cogens*.

A more general difficulty is how does one establish the point at which a rule becomes a norm, let alone a peremptory norm recognised by the community of states as a whole as

---

218 See for example Torres (fn 130 supra).

219 In paragraph 9 of general comment 3 of 1990, the Committee observed: 'Nevertheless, the fact that realisation over time, or in other words progressively, is foreseen under the Covenant should not be misinterpreted as depriving the obligation of all meaningful content. It is on the one hand a necessary flexibility device, reflecting the realities of the real world and the difficulties involved for any country in ensuring full realisation of economic, social and cultural rights. On the other hand, the phrase must be read in the light of the overall objective, indeed the raison d'être, of the Covenant which is to establish clear obligations for state parties in respect of the full realisation of the rights in question. It thus imposes an obligation to move as expeditiously and effectively as possible towards that goal. Moreover, any deliberately retrogressive measures in that regard would require the most careful consideration and would need to be fully justified by reference to the totality of the rights provided for in the Covenant and in the context of the full use of the maximum available resources.'

220 Dugard fn 35, para 13.5 at p13-7
being non-derogable. A norm that enjoys general international acceptance is not necessarily a part of the *jus cogens*. It may be customary international law but *jus cogens* must, by definition, be something more than the customary international law. Similarly a norm of *jus cogens* must be more than mere public international law. It is after all the gold standard against which instruments of public international law must be measured. Kaghan\textsuperscript{221} tries to argue that the phrase "states as a whole" means that for a norm to be recognized by the international community as a whole, "it would suffice if all the essential components of the international community recognize it" and that "a considerable majority of those who have commented upon this seemed to accept the views of Yasseen\textsuperscript{222}. Unfortunately when one is dealing with concepts as fundamental as *jus cogens*, the views of a majority of a majority are not necessarily convincing and the agreement of "most" that the "lack of acceptance or even the expression of opposition on the part of one of a few states is no obstacle to a norm having peremptory status"\textsuperscript{223} would have a hollow ring in the face of defiance of such a norm by a powerful nation such as the United States of America\textsuperscript{224}.

In view of the fact that writers such as Kinney and Torres\textsuperscript{225} still try to argue the existence of a right to health at customary international law and, in the case of Kinney, observe that, "Realistically, implementation and enforcement of the international right to health is difficult, particularly if predicated on customary international law", one cannot help but

\textsuperscript{221}Kaghan C *Jus Cogens and the Inherent Right To Self-Defence* fn 42 supra

\textsuperscript{222}Yasseen MK, chairman of the Drafting Committee of the Vienna Convention has observed that "By inserting the words "as a whole" in article 50 the Drafting Committee had wished to stress that there was no question of requiring a rule to be accepted and recognized as a peremptory norm by all states. It would be enough if a very large majority did so; that would mean that, if one state in isolation refused to accept the peremptory character of a rule, or if that state was supported by a very small number of states, the acceptance and recognition of the peremptory character of the rule by the international community as a whole would not be affected." Hamitlamen L *Peremptory Norms (Jus Cogens) in International Law* (1988). Unfortunately it is still not clear what exactly is a "large majority" and whether the dissent of powerful nations such as the USA, France and Belgium can be legitimately ignored in *jus cogens* debates. Mohners (fn 2 supra) points out that: "Customary international law, to a greater extent than the treaty, favors powerful states, as their behavior is more likely to be unopposed and so evolve through general practice into customary law. Despite this, various principles of customary international law [transform] applications of raw power into legitimate power, thereby creating rights to apply power within certain structures using certain means."

\textsuperscript{223}Torres fn 130 supra

\textsuperscript{224}Kinsey (fn 51 supra) states at p 1457 that: "Throughout my career I have searched for ways to compel access to needed health services of all types for all people in need. My search would be simple if there were a legal mandate in some source of law that required societies to assure adequate and affordable health care services. Unfortunately, at least in the United States, the right to health is not generally a legal right. Thus, whether one recognizes a right to health depends on one's political persuasion and moral values. In other words "right to health" is an option."

\textsuperscript{225}Kinsey *The International Human Right To Health: What Does This Mean for Our National and Our World?* (fn 51 supra) and Torres *The Human Right To Health, National Courts and Access to HIV/AIDS Treatment: A Case Study from Venezuela*, (fn 130 supra)
feel that if an international right to health cannot even be successfully argued at customary international law, it is even more difficult to argue such a right as part of the *jus cogens*.

The concept of *jus cogens* as non-derogable almost flies in the face of a principle that every lawyer comes to recognise intuitively as fundamental to the dynamics of any living system of law – for every rule there is an exception. Legal systems are not closed circles. They are spiralling reflections of the ever-changing communities which recognise and uphold them. The fact that the Vienna Convention on the Law of Treaties provides that a norm of *jus cogens* can be modified only by a subsequent norm of general international law having the same character simply begs the question. D'Amato\(^{226}\) points out that someone has yet to explain how a purported norm of *jus cogens* arises. However much the concept of *jus cogens* may be gaining acceptance and winning the support and approval of international lawyers, it is submitted that it remains of extremely limited practical efficacy in the area of a right to health. The principles of public international law in this area are more useful and are likely to remain so for some time to come.

### 1.14 Private International Law and the Right To Health

The question of *jus cogens* and the right to health is especially interesting in the context of the World Trade Organisation’s (WTO) activities and instruments. In the Report of the In-Depth Study Session on the WTO for Human Rights Professionals held in Morges, Switzerland in July 2001\(^{227}\), the first speaker in the session on the introduction to the international human rights regime and WTO dispute settlement considered the relationship between trade and human rights law and asked whether there was any legal obligation on WTO member states to help developing countries or to promote economic, social and cultural rights. Reference was made to Articles 55 and 56 of the UN Charter which state that UN Members shall cooperate in the UN’s promotion of *inter alia* higher

---

\(^{226}\) D'Amato A ‘It's a Bird, It’s A Plane, It’s Jus Cogens! 6 Connecticut Journal of International Law 1 (1991). D’Amato argues that norms of *jus cogens*, when considered logically, serve only, illogically, to protest against the terms of treaties between states that are so senseless that no state is likely to incorporate them into a treaty anyway. He states that “What we require – like the third bowl of soup in the story of the three bears – is a theory of *jus cogens* that is Just Right. I do not know if such a theory is possible. I don’t even know if one is conceivable.”

standards of living, full employment, solutions for international economic, social, health and related problems and universal respect of human rights. He also referred to the ICESCR and the CRC. The speaker identified different methods of approaching a conflict between WTO law and activities and human rights law. One of these was to resort to Article 103 of the United Nations Charter which gives the Charter priority over other conflicting international obligations. However, he observed that trade law might be considered a *lex specialis* and thus escape the article 103 presumption. Another identified approach was to qualify human rights as *erga omnes*, peremptory norms which would trump WTO law but this argument was discarded as weak because there was little consensus as to the content of such *erga omnes* norms. The view is thus that *jus cogens* norms are not even strong enough to trump WTO law due to their fundamental weakness—lack of content. The preferred solution was, in the view of the speaker, that of Article 41 of the CRC according to which nothing in the CRC shall affect any national or international provisions which are more conducive to the realization of the rights of the child.

Article 23 of the WTO Dispute Settlement Understanding (DSU) is of crucial importance for a dispute that involves WTO law and human rights law in that it specifies that if a dispute involves an allegation of a violation of WTO law, recourse to the WTO dispute settlement mechanism is compulsory and exclusive. It excludes the possibility of recourse to any other jurisdiction when WTO rules are at stake, even if other rules such as human rights are also affected\(^\text{228}\).

The WTO’s Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS Agreement) was the subject of some discussion at the WTO’s Ministerial Conference at Doha in 2001\(^\text{229}\). The TRIPS Agreement has the potential to interfere with access to medicines, affording as it does, international protection of intellectual property rights. The Declaration on the TRIPS Agreement and Public Health was issued in November

---

\(^{228}\) Second speaker in Morgcs (fn 227 *supra*)

2001 pursuant to the discussions at the Ministerial Conference. The states parties *inter alia* recognized that intellectual property protection is important for the development of new medicines and the concerns about the effects of intellectual property protection on prices. They also recognized the gravity of the public health problems afflicting many developing and least developed countries especially those resulting from HIV/AIDS, tuberculosis, malaria and other epidemics and agreed that the TRIPS Agreement does not prevent Members of the WTO from taking measures to protect public health. They affirmed that the Agreement can and should be interpreted and implemented in a manner supportive of WTO Members' right to protect public health and in particular, to promote access to medicines for all. One of the details upon which the Members agreed was that "The effect of the provisions in the TRIPS Agreement that are relevant to the exhaustion of intellectual property rights is to leave each Member free to establish its own regime for such exhaustion without challenge..."230

Private international law has the potential to impact significantly upon the right of access to health care services in general and medicines in particular unless there is conscious cognisance of human rights law in the formulation of instruments of international trade. The rapidly increasing globalisation of markets renders the penetration of private international law by human rights principles even more urgent. The legal aspects of access to medicines will be covered in more detail in another chapter. It should be noted, however that activists have observed that wealthy countries and drug companies refuse to compromise patent monopolies in poor countries that have no domestic capacity. The Doha declaration was criticised as being watered down in its language as a result of opposition by rich countries231. It may be that in practice there is still much to be done in the area of private international law to ensure the proper observation of human rights.

1.15 Summary and Conclusions

---

230 www.globaltreatmentaccess.org/content/press-releases/01/111401_WTO-TRIPS
231 www.globaltreatmentaccess.org.za
International law is fragmented and internally inconsistent between its different branches. It is a much more abstract and imprecise concept than domestic law. This makes it difficult to interpret and apply without reference to the relevant domestic legal system. It also contributes to the potentially large number of various interpretations and practical consequences of its application. It is debatable whether there is any kind of hierarchy within the different branches of international law or across international law governing different aspects of international relations. Whilst a lack of a rights hierarchy may not necessarily be a bad thing, there is no indication at international law as to how balancing exercises must be undertaken when there is a conflict of rights or how the different rights interrelate. Within public international law there is still a lack of harmony between human rights law and international trade law. In some instances, at a practical level, there can even be conflict between these two in the health care arena since the one seeks to promote access to health care services on the basis that it is a public good which everyone should have whether they can pay for it or not while the other seeks to obtain the greatest commercial benefit from health products and services through international agreements such as TRIPS and GATS. There are no clear jurisdictions within international law and there is no real hierarchy of jurisdiction either. It is possible that a single dispute or

232 Benvenisti E 'Margin of Appreciation, Consensus, and Universal Standards' International Law and Politics Vol 31 p 843 writes: "Judgments of the European Court of Human Rights (ECHR) and views of the Human Rights Committee (HRC) resonate in numerous national decisions concerning human rights issues. Their jurisprudence has become an indelible source of inspiration for judges in courts around the globe. Prominent among these international human rights organs is the ECHR, whose jurisprudence enlightens not only national judges but also judges and committee members of the other international human rights organs. The judicial output of the ECHR and other international bodies carries the promise of setting universal standards for the protection and promotion of human rights. These universal aspirations are to a large extent, compromised by the doctrine of margin of appreciation. This doctrine, based on the notion that each society is entitled to certain latitude is resolved in the inherent conflicts between individual rights and national interests or among different moral convictions." In 'Three Interacting Human Rights Systems: UN, OSCE, Council of Europe' it is stated that: "There is not a hierarchy of rights nor priorities among rights... The effectiveness of international law in general depends upon the willingness of states to surrender some of their sovereign powers to wider international control, or on reciprocity, the understanding that each party will act in a certain way because the other will. International human rights law is largely based on a system of multilateral treaties that establish objective standards for state conduct, rather than reciprocal rights and obligations. And these treaties place duties on states in relation to individuals within their jurisdiction rather than to the other state parties. Perhaps because of their characteristics, most international human rights instruments are entitled charters or covenants, rather than treaties or conventions." http://suninfo.state.gov/products/pubs/archive/humrts/three.htm

233 See for instance Kookenniemi M "Hierarchy in International Law: A Sketch" European Journal of International Law Vol 8 No 4 www.ejil.org/journal/Vol18/Noc3/art2.pdf. See also the discussion by Weiler JIH and Paulus AL 'The Structure of Change in International Law or Is There a Hierarchy of Norms in International Law' Symposium: The Changing Structure of International Law Revisited (Part 2), essay published in European Journal of International Law Vol 8 No 4

234 Alston P (in fn 19 supra) states that trade and competition rules, far from acting as a complement to human rights guarantees are the exact opposite. "A very limited and narrow range of economic freedoms, many of which are not per se recognized as economic rights within the framework of international human rights law, has assumed principal importance. As Bessec link has recently observed in examining the relationship between these two sets of rights, 'it is difficult to analyze the case law of the ECHR on human rights in terms of the predominance of economic (fundamental) rights over the classic human rights [Bessec link 'Case Note' 38 CMLR (2001) 1307, at 1308 and 1335]... The EU is struggling even today, to determine the appropriate role for human rights in its future constitutional order."
related aspects of the same dispute may be adjudicated before different fora such as the Human Rights Committee, a national court, a regional court and a WTO panel or the Appellate Body. Different jurisdictions may reach different or inconsistent conclusions. There is no clear hierarchy either of rights in international law or within the different branches of international law. Too frequently there is no certainty as to what exactly is international law as opposed to an international policy or viewpoint. It is by no means clear that the international community regards international human rights law as paramount. International law at most tells nation states how they should behave and is binding upon them but it seldom gives guidance at the level of the individual citizen.

The other problem is that wealth is increasingly being held not by national states but by multinational corporations whose turnover in many cases far exceeds the Gross Domestic Product of many countries. It is becoming a legal challenge as to how to apply principles of international law to, and enforce them against, such entities.

---

236 Marcoux G, 'WTO Dispute Settlement and Human Rights' European Journal of International Law Vol 13 No 4. She notes that at present international jurisdictions are multiplying. So far, however, co-ordination rules have not yet been agreed upon to limit states in their decision to choose between two jurisdictions. Marcoux points out that: "A call for order was made by the President of the International Court of Justice, Judge Schwebel, and again by the present President, Judge Guillaume against the dangers of forum-shopping and the development of a fragmented and contradictory international law. Principles of international commercial law such as forum non conveniens, res judicata and, lis pendens, abuse of process, and procedural rights etc., cannot find application in the overlap of jurisdictions between public international law tribunals. States' choices seem based on economic, political and legal opportunities. Moreover, some treaties contain prescriptive jurisdiction clauses that can easily clash with other jurisdictions." She cites by way of example "NAFTA and the WTO, which both contain an exclusive jurisdiction clause for matters relating to SPS measures".

237 Alston P, fn 19 supra, states that: "There are, in fact relatively few rights which have achieved jure gestionis status and it would be extremely difficult to argue that those that have, such as the prohibition against genocide and slavery, may be implemented in different ways depending on the state concerned or the treaty involved. All the more so since no particular treaty is involved, at least not in the sense of providing the foundation for, or the formulation of, a jure gestionis norm."

238 Alston P fn 19 supra observes that human rights were, on virtually all accounts of the evolution of European integration through the common market, an afterthought. He writes: "They were not mentioned in the Treaty of Rome of 1957, which specifically eschewed the strategy of its failed forerunner, the proposed European Political Community, that would have incorporated the ECHR. Even when limited human rights provisions were included in the Treaty on European Union they were far from reflecting an integrated human rights vision for the Community. Instead, they were grafted on to a set of Treaties which, despite the broad range of powers and policies covered, were for a long time very largely focused on economic aims and objectives with very little reference to other values. The EEC Treaty was essentially a blueprint which sought to promote integration through a functional economic approach. The second reason is that when human rights in the form of fundamental rights begins to make their way into the jurisprudence of the European Court of Justice it was in relation to a narrow range of rights, such as the right to property and the freedom to pursue a trade or profession, rather than to any balanced conception of human rights."

239 McCorquodale R ‘Feeling the Heat of Human Rights Branding: Bringing Transnational Corporations Within the International Human Rights Fence’ in Addo MK (ed) A Review of Human Rights Standards and the Responsibility of Transnational Corporations The Hague: Kluwer Law International, 1999 starts with two quotes: "The social responsibility of business is to increase its profit" - Milton Friedman and "Markets...cannot fairly allocate public goods, or foster social accountability in the use of resources or democracy at the workplace, or meet social and individual needs that cannot be expressed in the form of purchasing power, or balance the needs of present and future generations – Steven Lukes. He states that the tension evidenced in these two statements between the roles of corporations to increase profits for the benefit of shareholders or to act in a way that is beneficial to the community generally – and whether these are alternative roles – is a feature of the debate about the effects of globalization. He states: "In a world where more than half of the top economies are corporations and where an increasing amount of investment is private, including in areas formerly in public ownership, it is vital that
If one returns to the questions posed at the beginning of this chapter they may be answered as follows.

1. Depending upon which theory of customary international law one adopts, it may be possible to say that a right to health has passed into customary international law. However even those proponents of the more positive view that widespread observation of rules in public international law can give rise to rules of customary international law and who hope to use such customary international law as a tool for compelling nations that do not recognise a right to health to do so, concede that customary international law is not without its problems. At the other end of the spectrum is the view that customary international law is of little or no value with regard to a right to health and that the real action in respect of this right is in public international law. Certainly it has not been possible to establish any rules of customary international law relating to a right to health which could be said to be law in South Africa in terms of section 232 of the Constitution.

2. There is a considerable body of public international law on the subject of the right to health but much of it is not binding upon South Africa or its subjects. South Africa has not ratified the International Covenant on Economic, Social and Cultural Rights which contains the most comprehensive statement of the right to health in public international law according to its drafters. It is merely a signatory of this instrument. South Africa has ratified the Convention on the Rights of the Child and the Convention on the Elimination of all forms of Discrimination Against Women. However, it has not expressly enacted the provisions of these instruments into its domestic law. Section 231 of the Constitution adopts a distinctly dualist approach to international agreements in that they must be enacted into law by way of national legislation before they can become law in the Republic. The constitutional court has expressly and repeatedly refused to apply the public international law concept of minimum core obligations to socio-economic rights as expressed in the South
African Constitution. This does not mean, however, that the approach of the constitutional court is entirely at odds with principles of international law. At a macro-level it is possible to conclude that there is a measure of consistency with the broad principles of international law in the area of socio-economic rights. Such consistency is more subtle, however, than a simple one-on-one comparison of domestic constitutional and international law rights.

3. There are at this stage no peremptory norms, or principles of *jus cogens*, concerning a right to health or even health care services. This may be as much because of procedural problems in identifying principles of *jus cogens* as it is due to lack of acceptance of a right to health or health care services by a majority of states.

4. Private international law presents more of a hindrance than a help with regard to the right to health at present in that it is only relatively recently that the need to reconcile the values of private international law and public international law has been openly recognized. Instruments such as the World Trade Organisation’s Agreement on Trade Related Aspects of Intellectual Property Rights have proved to be problematic for the South African government in its attempts to respect, protect, promote and fulfil the right of access to health care services conferred by section 27(1) of the Constitution. In 1997, the Pharmaceutical Manufacturers Association of South Africa challenged on the basis of the TRIPS Agreement, legislation which was passed with the express intention of improving the access of medicines to South Africans. The challenge, although ultimately unsuccessful and settled out of court, served to effectively delay the implementation of the legislation in question for a period of five years.

In general it must be observed that the constitutional court has adopted a cautious and conservative approach to the application of international legal principles within South

---

240 *The Medicines and Related Substances Control Amendment Act No 90 of 1997*. Although the out of court settlement was effected some three years after commencement of the litigation, the government thereafter adopted a cautious approach to the development of the regulations which serve as the mechanism whereby the legislation is to be implemented with the result that it has taken a significant amount of time after the settlement to bring the law into effect. It was deemed further necessary to fine-tune certain aspects of Act 90 of 1997 relating implementation in the form of another amendment - Act 59 of 2002.
Africa. The essentially dualist approach of the Constitution itself is no doubt largely responsible for this. However, it is submitted with respect that this sensible and pragmatic approach which renders the Constitution and the decisions of the courts in South Africa so effective in dealing with socio-economic and other constitutional rights.

The role of international law in interpreting the provisions of the Bill of Rights, whilst it is acknowledged as being important, has not been overplayed by South African courts and the need to consider international legal principles in the South African context, taking into account local conditions and the country’s history has been repeatedly emphasised. It is submitted with respect that as long as South African courts continue in this vein, both domestic and international lawyers can look forward to a meaningful and significant body of South African jurisprudence on the subject of human rights generally which will enrich the culture of human rights within South African and international law.

Since the focus of this thesis is not international law and the right to health, a subject which undoubtedly deserves a thesis of its own, but rather an assessment of how international law and the right to health care interfaces with the South African legal system, it is not appropriate to consider the subject further. However there are a number of other references which are relevant to the subject of health and human rights which bear mention and for this reason are listed below. Although in general terms it can be said that international law has significantly influenced the South African legal system, more particularly the Constitution and many of the principles it endorses, it cannot be said that the Constitution is the result or product of international law. It is a product of the history and culture of South Africa and the values and aspirations of its people. The right to health is not expressly contained in the Constitution but the rights that are the essential

building blocks for health are very much in evidence. The right to health care services in the Constitution has been recognised as justiciable and applied by the constitutional court on more than one occasion as the following chapter will demonstrate. The courts have not, however, treated the right to health care services in the light of international law principles. They have, for instance, expressly rejected the minimum core approach espoused by international law with regard to socio-economic rights. In South African law, the right to health care services has yet to fully permeate the law of contract and to a lesser extent, the law of delict as will be demonstrated in subsequent chapters. It can also not be said that the influence of international law is greater on the domestic legal system than it was prior to the Constitution. South African courts have long taken cognisance of international law where they felt the need. The Constitution has simply focused this practice and made it mandatory. Whilst international law will always be a guide to the domestic legal system, it is dependent for its authority and status on its recognition by the Constitution in its various aspects. As such, it is of limited value in defining, interpreting and applying the constitutional rights that relate to health care services in the South African context.

It is clear from the discussion in this chapter that the Constitution is the legal lodestone that guides the interpretation and understanding of the law of health service delivery in South Africa. It is the uniquely South African lens through which principles of international law must pass in order to acquire legal weight and validity within the domestic legal system. The importance to the people of South Africa of their past, their culture, and their values is such that it cannot be otherwise. Whilst the principles enshrined in the Constitution may well be consistent with those of international law in a general way, it is still to the Constitution that one must turn when seeking to apply those principles to particular circumstances in the South African context. International law does not override the Constitution for the purposes of the South African legal system. Section 2 of the Constitution clearly states that:

“This Constitution is the supreme law of the Republic; law or conduct inconsistent with it is invalid, and the obligations imposed by it must be fulfilled.” [writer's italics]
International law, whether it is at the level of public international law, customary international law or even *jus cogens* (the latter two depend heavily upon 'conduct' for their legal status) that is inconsistent with the Constitution is invalid in South Africa. It is therefore necessary to consider issues of health service delivery in the context of the Constitution.

2.1 Introduction

The concept of values permeates the Constitution\(^1\). It is thus hardly surprising that the constitutional court has committed itself to a purposive approach to interpretation of the Bill of Rights\(^2\). Since the Constitution is the supreme law of the Republic and law or

---

1. Act No 108 of 1996. Cookrell A, ‘Rainbow Jurisprudence’ (1996) SAJHR 1 notes that: “A convenient starting point is to focus on the one word which resonates like a leitmotiv throughout the judgements of the Constitutional Court in the past year: ‘values’.

Many commentators have foregrounded the permanent place of ‘values’ in our new constitutional dispensation. See for example Botha H, ‘The values and principles underlying the 1993 Constitution’ (1994) 9 SAJHR 233, who states that ‘the Constitution is a repository of values’ (at 233) and goes on to identify the following values in the constitutional text: national unity, limited government; liberty and equality, and pluralism. See also AJ van der Walt ‘Tradition on trial: A critical analysis of civil-law tradition in South African property law’ (1995) 11 SAJHR 169 at 191-192 who echoes those ‘constitutional values’ and concludes that ‘the Constitution must be interpreted in terms of values which take the past into account, but in doing so it looks towards the future, towards reconstruction and reconciliation in an “open and democratic society based upon freedom and equality”...’ (at 192).

The impatient observer might be tempted to dismiss this persistent refrain regarding the role of ‘values’ in constitutional adjudication as mere verbiage or rhetorical bluster. In my view that would be a mistake. The Constitutional Court’s preoccupation with the intrusion of ‘values’ into the adjudicative process provides us with an important clue for understanding the changes that have occurred at a deep level within the South African legal system over the past year. In this article I wish to investigate that clue in detail, and probe some of the implications which are attendant on the value-based nature of constitutional adjudication...In essence my argument will be that the explicit intrusion of constitutional values into the adjudicative process signals a transition from a “formal vision of law” to a “substantive vision of law.”

2. See de Waal, Currie, Erasmus The Bill of Rights Handbook (4 ed) p 130 and the cases referred to there in footnote 13, where it is observed that the purposive approach is also sometimes referred to as “value oriented” or “teleological”. According to the court in Balooa And Others v University Of Pretoria And Others 1995 (4) SA 197 (B), (Act 200 of 1993): “Chapter 3 contains at least one section (s 35) which deals with its interpretation in explicit terms. According to a s 35(1) a court interpreting the provisions of the chapter is firstly required to (“...shall”) promote the values which underlie an open and democratic society based on freedom and equality. This formula opens the door to the evolution of a teleological approach to the interpretation of chap 3 which, amongst others, allows for the interpretative adaptation of the human rights norms embodied in it to constantly changing circumstances. This can be done without necessarily compromising the element of constancy inherent in the chapter and embodied in durable values fundamental to any (hypothetically) open and democratic society based on freedom and equality. The mandatory nature of this intrinsically teleological interpretation formula is bolstered up by two further provisions forming part of a s 35(1), namely that, where applicable, a court shall have regard to applicable norms of international law (note the mandatory language) and that it may have regard to comparable foreign case law (the court, in other words, has a discretion).” Ackerman J in Pierrera v Levin No And Others; Vryenhoek And Others v Powell No And Others 1996 (1) SA 984 (CC) noted that: “A teleological approach also requires that the right to freedom be construed generously and extensively. In Makwanyane, O’Regan J, adopting such a teleological approach, correctly observed as follows: “Respect for the dignity of all human beings is particularly important in South Africa. For apartheid was a denial of a common humanity. Black people were refused respect and dignity and thereby the dignity of all South Africans was diminished. The new Constitution rejects this past and affirms the equal worth of all South Africans. Thus recognition and protection of human dignity is the touchstone of the new political order and is fundamental to the new Constitution. In my view exactly the same approach needs to be adopted in the case of the right to freedom.” In Thoroughbred Breeders’ Association v Price Waterhouse 2001 (4) SA 551 (SCA) Ollivier J, commenting on the virtues of the teleological approach stated at p623 that: “The last-mentioned approach, in particular, not only accommodates in a synthesis the meritorious aspects of other theories and excludes their limitations (Devenish Interpretation of Statutes (1992) at 53) but also gives expression to the fundamental principles and ethos of the legal system as a whole: it is a value-coherent approach which best accords with the values of our Constitution.”

O’Regan J in S v Makwanyane And Another 1995 (3) SA 391 (CC) commented at para 325, p306: “In giving meaning to s 9, we must seek the purpose for which it was included in the Constitution. This purposive or teleological approach to the interpretation of rights may at times require a generous meaning to be given to provisions of chap 3 of the Constitution and at other times a narrower or specific meaning. It is the responsibility of the courts, and ultimately this Court, to develop fully the rights
conduc\textsuperscript{t} inconsistent with it is invalid\textsuperscript{3}, values must have a profound and pervading impact on the way that law is interpreted and applied in South Africa. The evolving South African legal order emphasises values\textsuperscript{4} in a way that the pre 1994 legal system did not. To the extent that values represent the spirit of the law, the Constitution and more especially, the Bill of Rights, in many respects embodies the spirit of the law leaving the letter of it to subordinate legislation\textsuperscript{5}. The specific values it promotes are those that underlie an open and democratic society based on human dignity, equality and freedom\textsuperscript{6}. This said, there existed

entrenched in the Constitution. But that will take time. Consequently any minimum content which is attributed to a right may in subsequent cases be expanded and developed."

\textsuperscript{3} Act No 108 of 1996 section 2

\textsuperscript{4} See for instance the judgement of Mahomed J in \textit{S v Mkhwayane And Another} (In 2 supra) at 487 where he states: "In some countries the Constitution only formalises, in a legal instrument, a historical consensus of values and aspirations evolved incrementally from a stable and unbroken past to accommodate the needs of the future. The South African Constitution is different: it retains from the past only what is defensible and represents a decisive break from, and a ringing rejection of, that part of the past which is disgracefully racist, authoritarian, inhuman, and repressive, and a vigorous identification of and commitment to a democratic, universalist, caring and aspirationally egalitarian ethos expressly articulated in the Constitution. The contrast between the past which it repudiates and the future to which it seeks to commit the nation is stark and dramatic." See also the same judgment at p 498 where he states: "The Constitution makes it particularly imperative for courts to develop the entrenched fundamental rights in terms of a cohesive set of values, ideal to an open and democratic society. To this end common values of human rights protection the world over and foreign precedent may be instructive." At p 501, O'Regan J observes that: "In interpreting the rights enshrined in s 3(3), therefore, the Court is directed to the future: to the ideal of a new society which is to be built on the common values which made a political transition possible in our country and which are the foundation of its new Constitution. This is not to say that there is nothing from our past which should be retained. Of course this is not so. As Kentridge AJ described in the first judgment of this Court \textit{S v Duma and Others} 1995 (2) SA 642 (CC) (1995 (1) SACR 568), many of the rights entrenched in s 25 of the Constitution concerning criminal justice are long-standing principles of our law, although eroded by statute and judicial decision. In interpreting the rights contained in s 25, those common law principles will be useful guides. But generally s 35(1) instructs us, in interpreting the Constitution, to look forward not backward, to recognise the evils and injustices of the past and to avoid their repetition." In \textit{Ryland v Edrol} 1997 (2) SA 690 (C) at p709, the court stated that: "I agree with the submission that the values of equality and tolerance of diversity and the recognition of the plural nature of our society are among the values that underlie our Constitution. In my view those values 'irradiate', to use the expression of the German Federal Constitutional Court cited earlier, the concepts of public policy and boni mores that our Courts have to apply. Contrary to public policy (as opposed to those that are contra bonas mores) are contracts which might redound to the public injury, see Voet 11.14.16. The distinction is clearly put by Aquilina in the article to which I have already referred ((1941) 38 SALJ 335 at 346)... In my view the 'radiating' effect of the values underlying the new Constitution is such that neither of those grounds for holding the contractual terms under consideration in this case to be unlawful can be supported." In \textit{S v Jordan And Others} (See Workers Education And Advocacy Task Force And Others As Amici Curia) 2002 (6) SA 642 (CC), at p 670 the court observed that: "The Constitution itself makes plain that the law must further the values of the Constitution. It is no answer then to a constitutional complaint to say that the constitutional problem lies not in the law but in social values when the law serves to foster those values. The law must be conscientiously developed to foster values consistent with our Constitution. Whence, although neutral on its face, its substantive effect is to undermine the values of the Constitution, it will be susceptible to constitutional challenge."

\textsuperscript{5} See for instance sections 9 (equality), 22 (freedom of trade, occupation and profession), 23 (labour relations), 24 (environment), 25 (property), 26 (housing), 27 (health care, food, water and social security) section 32 (the right to access to information), section 33 (the right to just administrative action) and section 41 (co-operative government) all of which contemplate legislative measures and expressly, in the case of sections 32, 33 and 41 mandate legislation to give effect to the principles enunciated in the Constitution. Section 39(2) provides that a court, tribunal or forum interpreting legislation and developing the common law must promote the 'spirit, purport and objects of the Bill of Rights'. It is submitted that the same holds true, subject to the provisions of section 36, for Parliament when exercising its legislative power. (Section 44 (4) of the Constitution states that "when exercising its legislative authority, Parliament is bound only by the Constitution, and must act in accordance with, and within the limits of, the Constitution. Section 36(2) states that "except as provided in subsection (1) or in any other provision of the Constitution, no law may limit any right entrenched in the Bill of Rights.")

\textsuperscript{6} Act No 108 of 1996, section 1 states that: "The Republic of South Africa is one, sovereign, democratic state founded on the following values: (a) Human dignity, the achievement of equality and the advancement of human rights and freedoms (b) non-racialism and non-sectarian (c) supremacy of the constitution and the rule of law (d) universal adult suffrage, a national common voters roll, regular elections and a multi-party system of democratic government, to ensure accountability, responsiveness and openness. Section 7 states that: "The Bill of Rights is a cornerstone of democracy in South Africa. It enshrines the rights of all people in our country and affirms the democratic values of human dignity, equality and freedom". Section 39(1) requires that the rights in the Bill of Rights must be interpreted in such a way that the values that underlie an open and democratic society based on human dignity, equality and freedom are protected".

114
before the Constitution a long established and well defined legal order which did not employ or apply the same principles and values that are now found in the Constitution. Whilst the importance of the South African historical background has been emphasised by the courts, they have also pointed to the need to break with the past and to retain from it only that which is defensible. For a legal system that is strongly premised upon precedent, this creates more than a little turbulence and a great deal of uncertainty in untried constitutional waters. As a result, the transformation of the South African legal system, not only in terms of procedural law but also the substantive law, in line with constitutional principles and thinking is an ongoing process. There is thus great value in the thoughtful application and consideration of constitutional legal principles, and the underlying values, in relation to factual situations that arise in the delivery of health care services. Such labour in the abstract is likely to produce fruit in reality because the individual facets of often complex and multi-faceted situations have been explored conceptually in a rational and methodical way so as to arrive at some conclusions which can be of considerable value in their practical application. Since a number of different branches of law are involved in the delivery of health care services, not least of which are the law of contract, delict and administrative law, it is critical to fully understand the nature of the rights conferred by the

---

7 De Vos P ‘A Bridge Too Far? History as Context in the Interpretation of the South African Constitution’, South African Journal of Human Rights (2001) 17 SAJHR 1 at p 3-4, expresses this tension in the following terms: “The fact that the text of the 1996 Constitution is often vague, ambiguous and seemingly contradictory, means that it cannot provide a self-evident and fixed meaning to those who read it. Instead, it requires interpretation, and to do so it seems necessary to invoke sources of understanding and value external to the text and other legal materials. Most judges, lawyers and legal academics in South Africa seem profoundly uncomfortable with the notion that judicial decision-making in the constitutional sphere is not (always) aimed merely at discovering a ‘true’, ‘objective’ or ‘original’ meaning of the text and hence is not based (solely) on predictable and neutral principles. For if this is so, the interpreter of the constitutional text will (often) have to rely on other, subjective and extratextual factors – perhaps even the interpreter’s own personal, political and philosophical views to give meaning to that text. The discomfort flows from the fact that most judges, lawyers and legal academics in South Africa broadly adhere to the traditional liberal school of adjudication, a tradition that jealously guards the boundary between law and politics. As Karl Klare has recently pointed out, this traditional view of adjudication maintains a view of law as describing rational decision procedures…with which to arrive at determinate legal outcomes from neutral, consensus-based general principles expressed or implicit within a legal order.”(Footnotes omitted)

8 Klare K ‘Legal Culture and Transformational Constitutionalism’ (1998) 14 SAJHR 146 argues that the 1996 Constitution can be understood as establishing a long-term project described as ‘transformational constitutionalism’ in terms of which the Constitution is seen as a transformative, dynamic document that requires continual reinvention to make sense of a changing world. It is a project with no instant solutions, requiring constitutional enactment, interpretation and enforcement committed to transforming South African social and political institutions and power relationships in a democratic, participatory and egalitarian direction. He points out that “transformational constitutionalism connotes an enterprise of inducing large-scale social change through non-violent political processes grounded in law. I have in mind a transformation vast enough to be inadequately captured by the phrase ‘reform’, but something short of or different from ‘revolution’ in any traditional sense of the word.” It is submitted that the South African legal system itself must therefore be seen as being in a considerable state of flux as traditional legal doctrines, methods of statutory interpretation and legal principles stand in line to be tested against the new standard set by the Constitution. Uncertainty, at least in the beginning, is the price one pays for a new legal order. Brand D in “A Review of Important Cases and International Developments Relating to Economic and Social Rights” ESR Review Vol 1, No 1 March 1998 (http://www.community企业发展.org.za/seer/vol1998/1998march_cases.php) observes: “A fledgling jurisprudence on economic and social rights is at last starting to develop in South African law.” Khoza R in “Understanding the Synergy Between the Bill of Rights and Commercial Activity” points out that the Bill of Rights is not an end in itself. Its overarching objective is to promote and to secure growth and prosperity for all. (http://www.law.org.za/publications/SeminarReports/Business%20%20Human%20Rights/khoza.pdf).
Constitution with regard to health care services in order to ascertain how the delivery of health care services is likely to be treated within these various branches. Constitutional law affecting the delivery of health care services must inform all other branches of law that relate to the delivery of health care services in light of the foregoing.

In this chapter it is proposed to embark on a number of conceptual exercises in which the consideration and manipulation of constitutional principles and precepts will hopefully lead to an improved understanding of the constitutional aspects of health services delivery generally and of certain practical aspects of health services delivery in particular. The relevance of a right to health, as opposed to a right to health care services, will be examined in order to establish the approach of South African constitutional law relative to the principles of international law on health care, the latter having been canvassed in more detail in the preceding chapter. An analysis of the elements of the constitutional right of access to health care services will also be undertaken with the intention of arriving at a full appreciation of the scope and content of the right. Similar exercises will be conducted with regard to the rights of children and prisoners to basic health care services and medical treatment respectively and also the right not to be refused emergency medical treatment. No discussion of rights, especially socio-economic rights, is complete without an exploration of the question of the limitation of those rights and so a consideration of both implicit and explicit rationing of health care services is included. Lastly, the question of rights must provoke the question of obligations and so the chapter undertakes an examination of the roles of the various spheres of government in respect of the various constitutional rights relating to health care services.

2.2 The Right To Health Care Services v The Right to Health

Chaskalson, A notes in “The Impact of Seven Years of Constitutionalism on Law and Government in South Africa” that the Constitutional Court has stated in The Pharmaceutical Manufacturers Association of South Africa in re: The ex parte Application of the President of the Republic of South Africa 2000(3) BCLR 241 (CC) para 44 that: “There are not two systems of law, each dealing with the same subject matter, each having similar requirements, each operating in its own field with its own highest court. There is only one system of law. It is shaped by the Constitution which is the supreme law, and all law, including the common law, derives from the Constitution and is subject to constitutional control.” He also observes that in Carmichele v Minister of Safety and Security and Another 2001 (1) SA 489 (SCA) the court said that “where the common law deviates from the Bill of Rights the courts have an obligation to develop it by removing that deviation.”

The Constitution contains a number of different references to health care services and medical treatment. Apparently in contrast to international law, there is no express mention of a broad right to health. This said, it must, however, be borne in mind that the rights in the Bill of Rights are not discrete legal concepts but rather elements of a system of fundamental rights that are inextricably interlinked. There is a suite of rights which, when viewed collectively, could be said to constitute a right to health. These rights are, the right to life, the right to dignity, the right to bodily and psychological integrity, the right to privacy, the right to an environment that is not harmful to health or well-being, the right to emergency medical treatment, the right of access to health care services and the rights to sufficient food and water and social security, including appropriate social assistance. The overall result of this rights matrix would seem to be in general accordance with the World Health Organization’s definition of health as ‘a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.’ However, for the purposes of legal exposition and practical implementation it is submitted that a right to health is unwieldy and less valuable than its component parts. Since it is not the intention in this thesis to embark upon an in-depths examination of all, or even the majority, of the rights in the Bill of Rights, the discussion of the various rights in this chapter is confined to

10 In Government Of The Republic Of South Africa And Others v Groothoom And Others 2001 (1) SA 46 (CC) the court observed at p33: “But s 26 is not the only provision relevant to a decision as to whether state action at any particular level of government is reasonable and consistent with the Constitution. The proposition that rights are interrelated and are equally important is not merely a theoretical postulate. The concept has immense human and practical significance in a society founded on human dignity, equality and freedom. It is fundamental to an evaluation of the reasonableness of State action that account be taken of the inherent dignity of human beings.”

11 Act No 108 of 1996, section 11

12 Act No 108 of 1996, section 10. Concerning the fundamental importance of the right to dignity, O’Regan J observed in Dowood And Another v Minister Of Home Affairs And Others; Shabibi And Another v Minister Of Home Affairs And Others; Thomas And Another v Minister Of Home Affairs And Others 2000 (3) SA 936 (CC) at 962-962 that: “The value of dignity in our constitutional framework cannot therefore be doubted. The Constitution asserts dignity to contradict our past in which human dignity for black South Africans was routinely and cruelly denied. It asserts it too to inform the future, to invest in our democracy respect for the intrinsic worth of all human beings. Human dignity therefore informs constitutional adjudication and interpretation at a range of levels. It is a value that informs the interpretation of many, possibly all, other rights. This Court has already acknowledged the importance of the constitutional value of dignity in interpreting rights such as the right to equality, the right not to be punished in a cruel, inhuman or degrading way, and the right to life. Human dignity is also a constitutional value that is of central significance in the limitations analysis. Section 10, however, makes it plain that dignity is not only a value fundamental to our Constitution, it is a justifiable and enforceable right that must be respected and protected. In many cases, however, where the value of human dignity is offended, the primary constitutional breach occasioned may be of a more specific right such as the right to bodily integrity, the right to equality or the right not to be subjected to slavery, servitude or forced labour.” (footnotes omitted)

13 Act No 108 of 1996, section 12 (2)

14 Act No 108 of 1996 section 14

15 Act No 108 of 1996 section 24 (a)

16 Act No 108 of 1996 section 27(1)(a)

17 Act No 108 of 1996 section 27(1)(b) and (c)

their relevance to the delivery of health care services. The elemental rights that could be said to comprise a right to health are discussed briefly below in order to obtain a clearer picture of their contribution to such right. Further and more detailed discussion of the rights that relate specifically to the delivery of health care services, and which are thus of central importance in this thesis, is to be found later in the chapter.

2.2.1 Life

The right to life has been characterized as the most fundamental of all human rights. Without life, the other aspects of the right to health are meaningless. At the same time the right to life does not mean life ‘as mere organic matter... but the right to human life the right to live as a human being, to be part of a broader community, to share in the experience of humanity’. The right to life attaches only to persons recognized as such by the law. Since the law in South Africa does not recognize a foetus as a person, it does not enjoy a constitutional right to life. The government has an obligation to protect the life of everyone in South Africa. With regard to dying, the constitutional court observed in Soobramoney that dying is part of life – its completion rather than its opposite, and that there is in reality no meaningful way in which it can constitutionally be extended to encompass the right indefinitely to evade death. In the context of the delivery of health care services the relevance of this observation cannot be overstated. Although the government has a constitutional duty to respect, protect, promote and fulfil the right to life, there are

---

19 Per Lord Bridge in R v Home Secretary, Ex Parte Bugdaycay (1987) AC 514 (1987) 1 All ER 940 (HL) at 531G (AC) cited in Makwanyane fn 2 supra at 429. Concerning the fundamental nature of the right to life and the interdependence of the rights to life and human dignity, O'Regan J observed in Makwanyane beginning at para 326, p506: "The right to life is, in one sense, antecedent to all the other rights in the Constitution. Without life, in the sense of existence, it would not be possible to exercise rights or to be the bearer of them. But the right to life was included in the Constitution not simply to enshrine the right to existence. It is not life as mere organic matter that the Constitution cherishes, but the right to human life: the right to live as a human being, to be part of a broader community, to share in the experience of humanity. This concept of human life is at the centre of our constitutional values. The Constitution seeks to establish a society where the individual value of each member of the community is recognised and treasured. The right to life is central to such a society. The right to life, thus understood, incorporates the right to dignity. So the rights to human dignity and life are entwined. The right to life is more than existence - it is a right to be treated as a human being with dignity: without dignity, human life is substantially diminished. Without life, there cannot be dignity."

21 Christian Lawyers Association of SA and Others v Minister Of Health and Others 1998 (4) SA 1113 (T). This issue is discussed in more detail later in this chapter.

22 Mohamed And Another v President Of The Republic Of South Africa And Others (Society For The Abolition Of The Death Penalty In South Africa And Another Intervening) 2001 (3) SA 893 (CC) at p 917

23 Soobramoney v Minister Of Health, KwaZulu-Natal 1998 (1) SA 765 (CC) per Sachs J at para 57 p784. The facts of this case and the judgment are discussed in detail further on in this chapter.
limitations upon this duty when it comes to prolonging life indefinitely through health care services. This is a good example of a situation in which the protection aspect outweighs the promotion and fulfilment aspects of the state’s obligations with regard to a right in the Bill of Rights. Protection of life implies a negative obligation to ensure that no one else can take it away. It may seem a fine distinction but the only apparent manner in which one can reconcile the government’s duty to protect life and the view of the court in Soobramoney that this cannot be seen as a right to evade death indefinitely is to take the view that not all health care services serve to protect life. Some of them actively promote and fulfill it. Emergency medical treatment protects life. This is why, in terms of section 27(3) of the Constitution, it cannot be refused. Protection of a right as opposed to its promotion or fulfilment comes close to being something of a minimum standard of recognition of a right. Other health care services go further than protection. They are the positive aspect of the state’s obligations with regard to a right in the Bill of Rights. Protection of life implies a negative obligation to ensure that no one else can take one’s possession of it should be respected but the extent to which one

When the state is involved in the health care service sector, this differential treatment of the protection and promotion aspects of rights is best understood if one regards life as a limited resource which inevitably dwindles over time, rather than as a binary state of life versus death, which is what Sachs J seems to be stating in his judgment in Soobramoney. Constitutionally speaking, one should not be robbed of the internal resource called life and one’s possession of it should be respected but the extent to which one is entitled to have that resource replenished when it is running low is a question of the balancing of the rights of others to that same resource relative to the availability of the external resources which

24 Ackerman et Goldstone JJ pointed out in Carmichele v Minister Of Safety And Security And Another (Centre For Applied Legal Studies Intervening) 2001 (4) SA 938 (CC) at paras 44-45 p 957-958: “Section 8(1) of the Constitution provides: ‘The Bill of Rights applies to all law, and binds the Legislature, the Executive, the Judiciary and all organs of state.’ It follows that there is a duty imposed on the state and all of its organs not to perform any act that infringes these rights. In some circumstances there would also be a positive component which obliges the State and its organs to provide appropriate protection to everyone through laws and structures designed to afford such protection. In the United States, a distinction is drawn between ‘action’ and ‘inaction’ in relation to the ‘due process’ clause of their Constitution (the 14th Amendment). In De Shaney v Winnebago County Department of Social Services, the majority declined to hold a government authority liable for a failure to take positive action to prevent harm. As stated in the dissent of Brennan J: ‘The Court’s baseline is the absence of positive rights in the Constitution and a concomitant suspension of any claim that seems to depend on such rights.’ The provisions of our Constitution, however, point in the opposite direction. So too do the provisions of the European Convention on Human Rights (Convention). Article 2(1) of the Convention provides that ‘(e)veryone’s right to life shall be protected by law’. This corresponds with our Constitution’s entrenchment of the right to life. We would adopt the following statement in Osman v United Kingdom: ‘It is common ground that the state’s obligations in this respect extends beyond its primary duty to secure the right to life by putting in place effective criminal law provisions to deter the commission of offences against the person backed up by law-enforcement machinery for the prevention, suppression and sanctioning of breaches of such provisions. It is thus accepted by those appearing before the Court that art 2 of the Convention may also apply in certain well-defined circumstances a positive obligation on the authorities to take preventive operational measures to protect an individual whose life is at risk from the criminal acts of another individual.’ It could be argued that respect of a right, rather than its protection, is the absolute minimum form of recognition but it is submitted that respect in many ways begs the question of protection since respect without protection, i.e. the enforcement of respect, is largely worthless in practice. In the real world, the obligation to respect is given teeth by machinery designed to protect rights. The checks and balances of the Constitution and the existence of the three branches of government are all designed to ensure inter alia that the rights enshrined in the Constitution are protected even from violation by a particular branch of government.

119
are necessary to replenish it. In this sense the right to life takes on some of the nature of a socio-economic right. This is because in the context of health care services, the preservation of life is dependent upon the availability of health care resources. This is no doubt the conclusion which is so abhorrent to critics of the decision of the judgment in *Soobramoney*. For idealists, life is sacrosanct and can under no circumstances be compromised. In reality this objection is simply yet another iteration within the larger fractal of the dynamic that pits the interests of the individual against those of the collective. In reality, life is a concept that is not readily described or defined, its complexity often highlighted by the many unique and emotionally charged situations that present in the context of health services delivery.

2.2.2 Dignity

There is a close connection between health and human dignity, another right that has been identified as central both in the founding provisions of the Constitution and by the constitutional court. Health is an essential for life and for human dignity. Human dignity is both a constitutional value and a right. The enjoyment of the rights to life and human dignity is obviously significantly diminished by poor health. In the context of health care, situations which throw into stark relief the concepts of life and human dignity and their interdependence are those in which patients are so severely injured that they can no longer function as human beings yet remain biologically speaking, alive. Thirion J observed in the case of *Clarke v Hurst*:

"As it was put in 58 US Law Week 4936: ‘Medical advances have altered the physiological conditions of death in ways that may be alarming: highly invasive treatment may perpetuate human existence through a merger of body and machine that some might reasonably regard as an insult to life rather than its continuation.’

---

26 Section 1(a) of Act No 108 of 1996
27 In *Makwanyane*, fn 2 supra, the court said that: “The importance of dignity as a founding value of the new Constitution cannot be overemphasised. Recognising a right to dignity is an acknowledgement of the intrinsic worth of human beings: human beings are entitled to be treated as worthy of respect and concern” at 507 ... and “The rights to life and dignity are the most important of all human rights, and the source of all other personal rights in chap 3. By committing ourselves to a society founded on the recognition of human rights we are required to value these two rights above all others” at 431.
28 Act 108 of 1996 section 1(a) and section 10 respectively.
29 *Clarke* 1992 (4) SA 630 (D) at p633
Patients may be resuscitated and maintained alive when there is not the remotest possibility that they would ever be able to consciously experience life.”

In the terminology of health care, dignity usually equates to quality of life. In a situation in which a person no longer has quality of life, his or her dignity is usually significantly impaired. Dignity is thus a prerequisite of health in the sense contemplated by the constitution of the World Health Organisation.

2.2.3 Bodily and Psychological Integrity

Section 12 (2) of the Constitution lends further support to the concept of a right to health in its provision to the effect that –

“Everyone has the right to bodily and psychological integrity, which includes the right-

(a) to make decisions concerning reproduction;
(b) to security in and control over their body; and
(c) not to be subjected to medical or scientific experiments without their informed consent.

Although there is an express right of access to health care services, including reproductive health care\(^{30}\), a right to health, being broader than a right to medical treatment, must also protect and respect a person’s physical and mental well being which includes bodily and psychological integrity. This right is a part of the larger right of freedom and security of the person. Kriegler J observed in *Ex Parte Minister Of Safety And Security And Others: In Re S v Walters And Another*\(^{31}\):

“What looms large in both the threshold and the limitation phases of the exercise in the present case is that the right to life, to human dignity and to bodily integrity are individually essential and collectively foundational to the value system prescribed by the Constitution. Compromise them and the society to which we aspire becomes illusory. It therefore follows that any significant limitation of any of these rights would for its justification demand a very compelling countervailing public interest.”

In the health care context, the right to bodily and psychological integrity implies a right to informed consent. This right is also used as support for the argument that a woman is

---

\(^{30}\) Section 27(1) of Act 108 of 1996

\(^{31}\) Walters 2002 (4) SA 613 (CC) at para 28 p631
entitled to terminate a pregnancy. The post-constitutional legal position with regard to terminations of pregnancy differs significantly from the pre-constitutional legal position and the former now permits 'abortion on demand'. In *G v Superintendent, Groote Schuur Hospital, And Others*\(^{32}\) the pregnant woman, N, and her grandmother, agreed that she should terminate her pregnancy while N's mother opposed such action as the applicant in this case. At the time when the case was heard there was no recognised right to a termination of a pregnancy on demand\(^{33}\). The court after examining the evidence and considering the relevant legislative provisions came to the conclusion that the termination of the pregnancy was legally permissible\(^{34}\). The post-constitutional legislation that allows abortion on demand has been attacked twice by the Christian Lawyer's Association and the latest decision of the High Court is the subject of an appeal\(^{35}\). Despite the fact that South African courts have recognised the right of the mother to terminate a pregnancy, and have

---

\(^{32}\) *G v Superintendent, Groote Schuur* 1993 (2) SA 255 (C).

\(^{33}\) The applicable legislation, the Abortion and Sterilisation Act 2 of 1975, allowed a woman to terminate her pregnancy only in certain narrow and specific circumstances. The Act provided *inter alia* that a pregnancy may be terminated: “when the foetus is alleged to have been conceived in consequence of unlawful carnal intercouse, and two other medical practitioners have certified in writing, after such interrogation of the woman concerned as they or any of them may have considered necessary, that in their opinion the pregnancy is due to the alleged unlawful carnal intercouse.” Other provisions, not in issue permitted abortion where the continued pregnancy endangers the life of the woman concerned, or constitutes a serious threat to her physical or mental health; where there exists a serious risk that the child to be born will suffer from a physical or mental defect of such a nature that he or she will be irreparably seriously handicapped; and where the pregnancy is a result of illegitimate carnal intercourse, and two other medical practitioners have certified in writing that the woman concerned suffers from a permanent mental handicap or defect resulting in an inability to comprehend the implications or to bear parental responsibility for the child. In *G v Superintendent Groote Schuur*, (fn 32 supra) the 14 year old mother claimed that she had been raped.

The court noted: “The Abortion Act does not deal expressly with the position of a minor in respect of whom a legal abortion is sought to be procured in terms of its provisions. In the normal course, under the common law, the consent of the minor’s guardian would nevertheless have been required before an abortion could be carried out on the child pursuant to the provisions of the Abortion Act. The common law position has, however, been altered in a significant respect by the provisions of s 39(4) of the Child Care Act, [Act No 74 of 1983] which provides as follows:

‘Notwithstanding any rule of law to the contrary —

(a) any person over the age of 18 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any operation upon himself; and

(b) any person over the age of 14 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any medical treatment of himself or his child.’

For the purposes of this application it was accepted by counsel for all the parties that the proposed abortion should be regarded as an operation, and not simply a form of medical treatment. This means that in the present case the consent of applicant as the minor’s guardian was required, N being only 14 years of age; but applicant in fact refused such consent.” Act No 2 of 1975 has been superseded by the Choice on Termination of Pregnancy Act No 92 of 1996.

\(^{34}\) Seligson AJ noted that counsel for the applicant “raised the question whether the reference in the Abortion Act to a woman (the Afrikaans version has ‘vrou’), and the absence of any reference to a child, excludes the application of the Abortion Act to females under the age of 18 years, the definition of ‘child’ in s 1 of the Child Care Act being any person under that age. He suggested, albeit somewhat faintly, that such a restrictive interpretation should be given to the term ‘woman’ in the Abortion Act. Seligson AJ held that: ‘Apart from the fact that the Afrikaans term ‘vrou’ used in the Act also connotes the feminine gender, it would have absurd results if the statute were interpreted to permit abortions in the case of females over the age of 18 years who have been the victims of rape and incest, but not in respect of females under that age. held that: ‘The Abortion Act was, in my view, intended to apply to any female who is carrying a live foetus. If she is a child for the purposes of the Child Care Act, then the provisions of a 39 of that Act govern insosfar as consent to the abortion procedure is concerned.’

The Choice on Termination of Pregnancy Act No 92 of 1996 was first attacked in *Christian Lawyers Association of South Africa and Others v Minister of Health* fn 21 supra on the basis of the right to life of an unborn child. The attack was unsuccessful. A second attack took place in *Christian Lawyers Association of South Africa and Others v Minister of Health* in the Transvaal Provincial Division of the High Court case no 7728/2000 somewhat ironically on the basis that the definition of “woman” in the Act does not differentiate between minors and adults. The Christian Lawyers Association has appealed against the decision of the court in the second application.
stated that the unborn child does not have legal personality which is a prerequisite for the capacity to be a rights holder, they still acknowledge the need to balance the interests of the mother and those of her unborn child. However the mother’s rights are taken very seriously as appears from the judgments of the High Court in the post-constitutional cases that are discussed in more detail in the pages that follow.

The right to bodily and psychological integrity carries the implication that a person may not be forced to receive medical treatment against his or her will. In *Minister of Safety and Security and Another v Xaba*\(^37\), the court refused to grant an order allowing a bullet to be forcibly surgical removed from a prisoner’s leg against his will on the basis that his section 12 rights would clearly be infringed if the proposed surgery were to take place without his consent in the absence of a law limiting these rights as contemplated in section 36 of the Constitution. In *Xaba*, The Durban and Coast Local Division of the high court criticised the decision of the Cape High Court in *Minister of Safety and Security and Another v Gaqa*\(^38\) in which the latter concluded that the relevant sections of the Criminal Procedure Act and of the Constitution permitted a police officer to use the necessary violence to obtain the surgical removal of a bullet in similar circumstances to those in *Xaba*. The decisions in these two cases revolved around interpretations of provisions of the Criminal Procedure Act and whether they constituted law of general application as contemplated in section 36 of the Constitution, capable of justifiably limiting a right in the Bill of Rights. It is submitted that the decision in *Xaba* is more consistent with the concept of both the right to bodily integrity.

---

36 *G v Superintendent, Groote Schuur* fn 32 *supra*. The court observed with regard to the rights of the unborn child that: “Mrs Steyn, [the unmarried mother’s curator ad litem] quite correctly, pointed out in her report that in the circumstances there is a conflict between the interests of N and the unborn foetus she is carrying. She contended, however, that the appointment of a curator ad litem to represent the unborn child was neither competent nor necessary. In this regard she relied on the decision in *Christian League of Southern Africa v Rall* 1981 (2) SA 821 (O) in which it was held that an unborn child is not clothed with legal personality, that there were no legal grounds for the appointment of a curator ad litem to represent the foetus in connection with the termination of the mother's pregnancy, and that there is no scope or need for the appointment of such a curator when the provisions of the Abortion Act are applied. I have certain doubts about the correctness of that decision insofar as it holds that there is no scope for the extension of the nascenturis doctrine so as to provide protection for an unborn foetus against an abortion. It seems to me that there is much to be said for recognising that an unborn child has a legal right to representation, or an interest capable of protection, in circumstances where its very existence is threatened. This issue is discussed in an interesting and thought-provoking article by Professor L M du Plessis entitled ‘Jurisprudential Reflections on the Status of Unborn Life’ in (1990) 1 Tydskrif vir die Suid-Afrikaanse Reg 44 at 51-4. The learned author criticises the decision in *Rall’s case supra* and contends that the law should provide what he calls ‘preventive protection’ for the unborn child. See also Barnard, Cronje and Olivier *The South African Law of Persons and Family Law* 2nd ed at 26 and *Wille’s Principles of South African Law* 8th ed at 68, footnote 1, and the authorities there cited. It is, in my judgment, however, unnecessary for me to enter into this complex question since, unlike the position in the *Rall’s case* supra, in the instant matter the interests of the foetus are in fact being actively represented and advanced by the applicant and her legal representatives who seek to stop the abortion.” See further the subsequent discussion in this chapter of the two *Christian Lawyers’ Association* cases.

37 *Xaba* 2003 (2) SA 703

38 *Gaqa* 2002 (1) SACR 654 (C)
and a right to health since health in its broader sense is based as much on psychological integrity as it is on bodily integrity and the power of a person to refuse a surgical invasion of his or her person is essential for both.

2.2.4 Privacy

The right to privacy, in terms of section 14 of the Constitution, includes the right not to have one’s person or home searched. The physical examination of a person in a health care context is very much an invasion of his privacy and such examination can only be lawfully conducted if that person waives his right to privacy for the purpose of examination. Information as to a person’s health status is also inextricably bound to issues of privacy. It is information that is personal and confidential and if disclosed without permission could adversely affect his psychological integrity. This is recognised in the Promotion of Access to Information Act, Act in which personal information is defined as including information relating to “pregnancy”, “physical or mental health, well-being, disability”, “medical, criminal or employment history of the individual” and “blood type”. In terms of sections 34 and 63 of the Promotion of Access to Information Act, unreasonable disclosure of personal information about a third party is prohibited. The right to bodily and psychological integrity, which implies a right to give or refuse informed consent, the right to privacy, the right to dignity and the right to life together imply a wider approach to questions of health than simply a right of access to health care services. The right to privacy may be breached by the wrongful disclosure of personal facts. Privacy in relation to the right to bodily

---

39 See for instance Sestal v Pravinho And Another No 1983 (3) SA 927 (D) “Yet a blood test on somebody without his consent is unquestionably an invasion of his privacy. And the invasion is no less such because on just about every occasion the test is otherwise innocuous.” The court also observed at p861 that: “In the end the debate about compulsory blood tests amounts, as I see it, to a showdown between the two ideas, these two ideas which cannot satisfactorily be reconciled, the idea that the truth should be discovered whenever possible and the idea that personal privacy should be respected. Both are important. Neither, however, is sacrosanct. Each, as it happens, gets sacrificed, the first on some occasions, the second on others. The clash between the two does not really lend itself as argument. How the conflict is resolved in this country when the law on the point is eventually settled will depend largely on the store the Court then sets by each idea, on its own sense of priority in that regard.”

40 Act No 2 of 2000

41 Section 1(a) (b) and (d) of Act 2 of 2000

42 Leary V ‘The Right To Health in International Human Rights Law’ Health and Human Rights Vol. 1, No. 1, Fall 1994 states that: “The concept of a right to health implies that fundamental principles of human rights, dignity, non-discrimination, participation, and justice are relevant to issues of health care and health status.”

43 In Bernstein And Others v Baxter And Others NNO 1996 (2) SA 751 (CC), the constitutional court observed at para 73 p791: “The difficulty that remains is the determination of the scope of “the provision as a whole” or, as it is commonly called, “the right to privacy”. Use of this term has not been unproblematic, since in terms of a resolution of the Consultative Assembly of the
integrity is also recognised in the Choice on Termination of Pregnancy Act\textsuperscript{44} in section 5(3) which acknowledges a pregnant minor's right to choose whether or not to consult with her parents, guardian, family members or friends before the pregnancy is terminated. The choice whether or not to disclose an intention to terminate a pregnancy is essentially based on principles of privacy. It does not relate to health care services directly but it does have an impact on the psychological and social well being of the pregnant minor.

2.2.5 Environment

In terms of section 24(1) of the Constitution everyone has the right to an environment that is not harmful to their health or well-being. This right is a key aspect of the international right to health as reflected in the ICESCR\textsuperscript{45}, the Constitution of the WHO\textsuperscript{46} and similar instruments. It implies a right to health rather than a right to health care services\textsuperscript{47}. The Council of Europe this right has been defined as follows: 'The right to privacy consists essentially in the right to live one's own life with a minimum of interference. It concerns private, family and home life, physical and moral integrity, honour and reputation, avoidance of being placed in a false light, non-revelation of irrelevant and embarrassing facts, unauthorised publication of private photographs, protection from disclosure of information given or received by the individual confidentially.'

And in the final conclusions of the Nordic Conference on the Right to Respect for Privacy of 1967 the following additional elements of the right to privacy are listed: "the prohibition to use a person's name, identity or photograph without his/her consent, the prohibition to spy on a person, respect for correspondence and the prohibition to disclose official information" and at para 73 p 795, "The German, European and American approach seems to accord with the analysis attempted above, namely that the nature of privacy implicated by the 'right to privacy' relates only to the most personal aspects of a person's existence, and not to every aspect within his/her personal knowledge and experience."

In S v Jordan And Others (See Workers Education And Advocacy Task Force And Others As Amici Curiae) 2002 (6) SA 642 (CC) the court stated at para 76 p673 "There can be no doubt that autonomy to make decisions in relation to intensely significant aspects of one's personal life are encompassed by the term. As Ackmann J held in the Gay and Lesbian Coalition (Sodomy) case: "Privacy recognizes that we all have a right to a sphere of private intimacy and autonomy which allows us to establish and nurture human relationships without interference from the outside community. The way in which we give expression to our sexuality is at the core of this area of private intimacy. If, in expressing our sexuality, we act consensually and without harming one another, invasion of that privacy will be a breach of our privacy" and at para 81 p 674 that: "One of the considerations is the nature of the relationship concerned: an invasion of the relationship between partners, or parent and child, or other intimate, meaningful and intensely personal relationships will be a strong indication of a violation close to the core of privacy. Another consideration is the extent to which the body of a person is invaded: physical searches or examinations are often invasive of privacy, as s 13 of the interim Constitution suggests. As we observed before, the constitutional commitment to human dignity invests a significant value in the inviolability and worth of the human body. The right to privacy, therefore, serves to protect and foster that dignity."

\textsuperscript{44}Choice on Termination of Pregnancy Act fn 35 supra

International Covenant on Economa, Social and Cultural Rights (art. 12); the Universal Declaration of Human Rights (art. 25); American Declaration on the Rights and Duties of Man (art. 33); European Social Charter (art. 11); African Charter on Human and Peoples' Rights (art. 16); The Constitution of the World Health Organization recognizes the right to health as "the enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition."

\textsuperscript{46}The World Health Organization developed and promulgated the understanding of health as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity." (Convention of the World Health Organization, Basic Documents, Official Document No. 240 (Washington, 1991)). The Constitution of WHO was adopted at the International Health Conference held in 1946 in New York, where it was signed by the representatives of sixty-one states.

\textsuperscript{47}Article 12(2)(b) of the ICESCR specifies the environment as one of the areas for state intervention in the realization of the right to health. This provision has traditionally been interpreted as relating simply to occupational health, but in state reporting to the
phrase “health and well-being” is very broad in its ambit and may well anticipate inter alia the considerable body of the law of nuisance which has developed in South Africa over a number of years. Air pollution, noise pollution and water pollution are just some of the issues which, even if they do not affect health per se, could certainly be said to affect the well-being of human beings. Occupational health issues also enter the equation in terms of this right since, it is submitted, the term environment is not confined only to a home or living environment but embraces also the working environment.

2.2.6 Emergency Medical Treatment

In terms of section 27(3): “No one may be refused emergency medical treatment.” The relevance of the prohibition of the refusal of emergency medical treatment to the right to life has already been discussed under the section dealing with the latter. A right not to be refused emergency medical treatment is a fundamental element of a right to health because it relates to the protection of life itself without which a right to health cannot be appreciated or enjoyed. A right of access to emergency medical treatment could in a sense be regarded as part of a minimum core of the right to health. The comforting knowledge that one will always receive medical assistance in an emergency is conducive to a state of psychological and social well-being. The nature of the right and its elements is discussed in more detail elsewhere in this chapter.

2.2.7 Access to Health Care Services, Food and Water Etc

Section 27 (1) stipulates that –

(1) Everyone has the right to have access to–
   (a) health care services, including reproductive health care;
   (b) sufficient food and water; and

---

CECSR, it is increasingly being considered as relating to all environmental issues that affect human health. Primary health care strategies include access to clean drinking water and sewage services, and preventive health programs should include control over human activities that may expose people to environmental hazards detrimental to their health. (Circle of Rights – Economic, Social and Cultural Rights Activism: A Training Resource. Module 14 University of Minnesota Human Rights Research Centre)
(c) social security, including, if they are unable to support themselves and their dependents, appropriate social assistance.48

The rights expressed in section 27(1) are fully supportive of a more general right to health since health is dependent upon not only access to health care services but also sufficient food and water.49 Adequate nutrition and sanitation and social security for those unable to support themselves are essential ingredients for physical, mental and even social well-being yet do not qualify as health services per se.

2.2.7 Relationship Between Rights to Health and Access to Health Services

The inter-relationship between the whole and its parts in the case of the right to health and the rights that comprise it can be complex. A right to health and a right of access to health care services could in certain circumstances even conflict, for example, in the case where treatment severely adversely affects a patient’s physical or mental well-being such as happens in the case of chemotherapy for cancer patients and some forms of radiation therapy. The spraying of dwellings with DDT to kill mosquitoes in order to protect the health of residents against malaria impacts on the right to an environment that is not harmful to health or well-being. DDT has been shown to be highly environmentally toxic. It is a persistent organic pollutant (POP) which can accumulate in the environment over many years and has been shown to be carcinogenic to humans and hazardous to the long-term survival of wildlife.50 At one level, the right to an environment that is not harmful to health or well-being could be said to be both adversely and positively affected by the DDT

48 This is entirely consistent with the provisions of article 25 of the UDHR which emphasizes recognition of the right of all persons to an adequate standard of living, including guarantees for health and well-being. It acknowledges the relationship between health and well-being and its link with other rights, such as the right to food and the right to housing, as well as medical and social services.

49 Thus for instance it has been observed with regard to reproductive health that: “Reproductive health is only a small component of reproductive rights. Further access to reproductive health services is only one part of the right to reproductive health, just as access to health services is only one aspect of the right to health. For women to have good reproductive health they have to have good general health and the physical, economic and social conditions that make possible good health overall. (Asian Forum for Human Rights and Development, Report of a Consultation on Reproductive Rights and Human Rights (Bangkok, 1997).)

spraying. This scenario constitutes, in logical terms, what a Möbius strip portrays spatially since it presents two apparently diametrically opposed situations that are in fact located upon a single boundary, i.e. the same right, and arise from the same external activity. If a court were faced with an action against the spraying of DDT to control malaria it would have to look at whether the short-term improvement in the environment caused by the elimination of the mosquitoes outweighed the long-term detriment to the environment caused by the DDT. It would have to ask itself, furthermore, whether the right of future generations to an environment that is not harmful to health or well-being is greater than the right of the present generation to life and human dignity which are adversely affected by malaria. In the examples given above, the composite right to health must be tempered with or balanced against the component rights to bodily and psychological integrity and the right to an environment that is not harmful to health or well-being. For instance, a person must be able to choose to exercise the right of access to health care services. It cannot be argued that because there is a right of access to health care services that there is no choice to be made by the holder of the right as to the nature or level of the services which are to be provided or by whom. The right to accept or refuse health care services is an aspect of the right to health since it impacts upon a person’s psychological well-being as much as his or her physical well-being.

2.2.8 In Summary

It is evident in view of the foregoing that a right to health, although not expressly provided for in the wording of the Constitution, can conceivably exist in the interfaces of the various constitutional rights referred to above. It is not so much an element of the Bill of Rights as an inevitable result of the matrix formed by the interaction of the various rights therein contained. One must thus be careful of overemphasising the right to health, which is only a result or effect of the various expressly stated constitutional rights, at the expense of those

Leary (fn 42 supra) notes that: “Human rights are interdependent. That is, particular rights may depend on other rights for their fulfilment. The right of freedom of association, for example, is closely related to that of freedom of expression. Many other examples could be cited. As has been frequently reiterated by human rights organizations, all human rights and fundamental freedoms are indivisible and interdependent. Therefore, the right to health cannot be effectively protected without respect for other recognized rights. These include, in particular, both prohibition of discrimination, and the right of persons to participate in decisions affecting them.”

128
rights. As Chaskalson P observed in *Soobramoney*\(^2\) with regard to the right to life: “Unlike the Indian Constitution ours deals specifically in the bill of rights with certain positive obligations imposed on the state and, where it does so, it is our duty to apply the obligations as formulated in the Constitution and not to draw inferences that would be inconsistent therewith”\(^5\).

The value of a consideration of a broader right to health is that it emphasizes the need, when dealing with rights involving health care services, not to lose sight of the other rights conferred by the Bill of Rights, especially those to life and dignity, which the courts have identified as fundamental to the other rights in the Bill. However, a right to health is the result of, rather than a prerequisite for, the interaction of the various rights that are expressly awarded in the Constitution. The outcome of any exercise in the application of a right in the Bill of Rights is of necessity the result of a balancing of various relevant rights in the circumstances of the individual case. Ultimately the concept of a right to health in South African law is thus likely to be of limited value since it is the interaction of the various rights in the Bill of Rights which will determine the outcome of a particular case involving health care services rather than a global consideration of a right to health *per se*. It must also be borne in mind that although there may be many similarities between a right to health implied within the Bill of Rights and the right to health as contemplated in various instruments of international law, the emphasis of the South African courts has been on local conditions and the historical background of South Africa\(^4\). Any right to health implied

---

\(^2\) *Soobramoney* fn 23 supra

\(^3\) *Soobramoney* fn 23 supra at p 772

\(^4\) "The historical background to the inclusion of the right to dignity in both the interim and final Constitutions is also of considerable importance in the interpretative enterprise. As pointed out by Du Plessis and Corder ... "(The history of systematic discrimination in South Africa, from segregation through apartheid, was premised on gross invasions of human dignity. The denial of this human right, protected in many international human rights instruments ... was so pervasive that its inclusion here [in s10 of the interim Constitution], immediately after the rights to equality and life, was completely uncontroversial."

The importance of this historical background was also emphasised by O’Regan J in the *Makwanyane* case at para [329] and by Ackermann J, O’Regan J and Sosa J, in *Prinsloo v Van der Linden and Another* 1997 (3) SA 1012 (CC) (1997 (6) BCLR 759) at para [31]. *Dawood and Another v Minister of Home Affairs and Others; Sholabi and Another v Minister of Home Affairs and Others; Thomas and Another v Minister of Home Affairs and Others 2000 (1) SA 997 (C)". In *Makwanyane*, fn 2 supra, the court said: "Undoubtedly, this conclusion does involve in some measure a value judgment, but it is a value judgment which requires objectively to be formulated, having regard to the ordinary meaning of the words used in s 11(2); its consistency with the other rights protected by the Constitution and the constitutional philosophy and humanism expressed both in the preamble and the post-amble to the Constitution; its harmony with the national ethos which the Constitution identifies; the historical background to the structures and objectives of the Constitution; the discipline of proportionality to which it must legitimately be subject; the effect of the death sentence on the right to life protected by the Constitution; its inherent arbitrariness in application; its impact on human dignity; and its consistency with constitutional perceptions evolving both within South Africa and the world outside with which our country shares emerging values central to the permissible limits and objectives of punishment in the civilised community."
within the Bill of Rights would in any event have to be construed in the uniquely South African context. This may lead to outcomes which would not be anticipated in an international human rights setting. In view of the fact that the constitutional court itself has deemed it inadvisable to deal with rights not expressly awarded by the Constitution, it is proposed that further discussion of a notional right to health be dispensed with in favour of a more concrete examination of the express rights within the Constitution that relate to the delivery of health care services.

2.3 Understanding The Right Of Access To Health Care Services

The right of access to health care services as expressed in the Constitution gives rise to many questions concerning its practical implementation. It is therefore important to clearly understand the various elements of the right of access to health care services and their practical significance. Examples of questions relating to its implementation are:

- What are the respective obligations of the state and the private health sector in relation to this right? The issue of the horizontal application of the right of access to health care services is of considerable importance to the private health sector in South Africa to the extent that it may require the utilisation of private resources to achieve public health goals.
- Does it mean that everyone has a right of access to all health care services no matter how expensive the technology involved?
- Is the rationing of health care services constitutional?
- To what extent may access to health care services be restricted at an individual level in order to ensure greater benefits to society as a whole?
- To what extent is utilitarianism an acceptable standard or basis upon which to ration access to health care services?

In *Park-Ross and Another v Director: Office For Serious Economic Offences* 1995 (2) SA 148 (C): "The South African Constitution must be interpreted within the context and historical background of the South African setting." See also *Qoseleni v Minister of Law and Order and Another* 1994 (3) SA 625 (T) at 633F.

In *S v Jordan And Others (Sex Workers Education And Advocacy Task Force And Others As Amici Curiae)* (63) 4349 at para 53 and 663 the court noted with regard to privacy that: "While we accept that there is manifest overlap between the rights to dignity, freedom and privacy, and each reinforces the other, we do not believe that it is useful for the purposes of constitutional analysis to posit an independent right to autonomy. There can be no doubt that the ambit of each of the protected rights is to be determined in part by the underlying purpose and values of the Bill of Rights as a whole and that the rights intersect and overlap one another. It does not follow from this however that it is appropriate to base our constitutional analysis on a right not expressly included within the Constitution."
• What is reproductive health care as opposed to "health care services"?

The manner in which the right to health care services can be limited must also be considered in some detail in order to arrive at a proper understanding of the right of access to health care services. In general terms, the state is required to take reasonable legislative and other measures, within its available resources, to achieve the progressive realization of each of the rights referred to in section 27(1). There is thus an acknowledgement within the Constitution that the socio-economic rights such as the right of access to food and water and health care services are limited by the available resources. Further discussion of the issue of available resources is to be found with reference to specific case discussions below. Possible answers to the questions posed above with regard to the right of access to health care services and its limitations are discussed in the rest of this chapter.

2.3.1 'Health Care Services'

The right of access to health care services expressed in section 27(1) is a socio-economic right. According to the constitutional court such rights are justiciable. In the Certification judgment the court observed that:

"(T)hese rights are, at least to some extent, justiciable. As we have stated in the previous paragraph, many of the civil and political rights entrenched in the [constitutional text before this Court for certification in that case] will give rise to similar budgetary implications without compromising their justiciability. The fact that socio-economic rights will almost inevitably give rise to such implications does not seem to us to be a bar to their justiciability. At the very minimum, socio-economic rights can be negatively protected from improper invasion."

Socio-economic rights must be considered as a suite of rights and not discretely when interpreting them. Court decisions involving socio-economic rights generally, and not

---

56 Section 27(2) of Act No 108 of 1996
57 Government of the Republic of South Africa and Others v Grootboom and Others fn 10 supra, Minister of Health and Others v Treatment Action Campaign and Others (No 2) 2002 (3) SA 721 (CC),
58 TAC, fn 57 supra
59 Ex parte Chairperson of the Constitutional Assembly: In re Certification of the Constitution of the Republic of South Africa, 1996 (4) SA 744 (CC) at para [78]
60 This was subsequently affirmed in Grootboom (fn 10 supra) at 60-61, where the court noted that: “While the justiciability of socio-economic rights has been the subject of considerable jurisprudential and political debate, the issue of whether socio-economic rights are justiciable at all in South Africa has been put beyond question by the text of our Constitution as contained in the Certification judgment. Socio-economic rights are expressly included in the Bill of Rights; they cannot be said to exist on paper only.” The court in the TAC case (fn 57 supra) at para [25] observed: “The question in the present case, therefore, is not whether socio-economic rights are justiciable. Clearly they are.”

131
only those directly concerned with the right of access to health care services are therefore of relevance to a consideration of the right of access to health care services. The court in the TAC case observed that in both of the previous cases involving the enforcement of socio-economic rights, these rights and the corresponding obligations of the state were interpreted in their social and historical context.

In Grootboom the court observed that:

"Rights also need to be interpreted and understood in their social and historical context. The right to be free from unfair discrimination, for example, must be understood against our legacy of deep social inequality. The context in which the Bill of Rights is to be interpreted was described by Chaskalson P in Soobramoney: "We live in a society in which there are great disparities in wealth. Millions of people are living in deplorable conditions and in great poverty. There is a high level of unemployment, inadequate social security, and many do not have access to clean water or to adequate health services. These conditions already existed when the Constitution was adopted and a commitment to address them, and to transform our society into one in which there will be human dignity, freedom and equality, lies at the heart of our new constitutional order. For as long as these conditions continue to exist that aspiration will have a hollow ring.""

The court in Grootboom pointed out that the question of how socio-economic rights are to be enforced is a difficult issue that must be carefully explored on a case-by-case basis considering the terms and context of the relevant constitutional provision and its application to the circumstances of the case.

The term ‘health care services’ is not defined in the Constitution. It is submitted that the scope of the health care services contemplated in the Constitution is very broad, including as it does ‘reproductive health care’. The express mention of reproductive health care is significant. It indicates that the contemplated health care services must not only address pathological or disease states but also healthy states. Health care services must, in other
words not only be curative but also preventive of disease states or protective of existing good health. A pregnant woman is not necessarily ill. There are nonetheless health services which she requires in order to successfully give birth to a living healthy baby. Reproductive health care may include advice on how to avoid the transmission of sexually transmitted illnesses, including HIV, or services involving the termination of a pregnancy. Similarly, a person with a terminal illness, although unable to benefit from curative care, may well have a right to palliative health care services if some of the other rights, such as the right to human dignity and the right to psychological integrity, in the constellation of rights that compose a right to health are taken into account. A holistic approach to health care services would be in keeping with the constitutionally imposed obligation to respect, protect, promote and fulfil the rights in the Bill of Rights. It is also supportive of the idea of a right to health if one considers the rights in the Bill of Rights as being different aspects of a central concept. The preservation of a person’s health is just as important as its promotion and restoration. In the context of health care services the obligation to respect, protect, promote and fulfil covers the full spectrum of the various purposes or objectives of health care activities which range through disease monitoring and prevention, health maintenance and promotion programs, to curative and palliative care.

Whilst it could be argued that such a wide interpretation of the meaning of “health care services” is impractical and that it poses an impossibly wide obligation upon the state, it is submitted that as long as the limitation of the right within available resources is maintained, such an interpretation is not only reasonable but appropriate to the underlying humanitarian approach of the Constitution, based on the right to human dignity, as

---

1002, note that: “Reproductive health is: ‘a condition in which the reproductive process is accomplished in a state of complete mental, physical and social well-being and is not merely the absence of disease or disorders of the reproductive process. Reproductive health therefore implies that people have the ability to practice and enjoy sexual relations. It further implies that reproduction is carried to a successful outcome through child and infant survival, growth and health development. It finally implies that women can go safely through pregnancy and childbirth and that fertility regulation can be achieved without health hazards and people are safe in having sex.’”

68 A fact recognised in both Grootboom (fn 10 supra) and Minister of Health and Others v Treatment Action Campaign and Others (fn 57 supra) in which the court, referring to Grootboom, said: “It is also made clear that ‘a 26 does not expect more of the state than is achievable within its available resources’ and does not confer an entitlement to ‘claim shelter or housing immediately upon demand’ and that as far as the rights of access to housing, health care, sufficient food and water, and social security for those unable to support themselves and their dependants are concerned, ‘the state is not obliged to go beyond available resources or to realise these rights immediately’. In Sodewamoney, fn 23 supra, the court held that: ‘The appellant’s demand to receive dialysis treatment at a state hospital must be determined in accordance with the provisions of s 27(1) and (2) and not s 27(3). These sections entitle everyone to have access to health care services provided by the State ‘within its available resources’.”
recognized by the constitutional court. One cannot escape such a broad approach because of the existence of other rights in the Bill of Rights such as the right to dignity, the right to bodily and psychological integrity and the right to life. By way of example, it could be argued that a person would be entitled to palliative care as much on the basis of the rights to psychological integrity and dignity as on the basis of a right of access to health care services. A person has a right to emergency medical treatment as much on the basis of the right to life as on the basis of the right to emergency medical treatment reflected in section 27(3) of the Constitution. The available resources limitation keeps the right within reasonable and practicable bounds.

2.3.2 Access

See for instance Khumalo and Others v Holomisa 2002 (3) SA 401 (CC) where O'Regan J observed at 409: "The value of human dignity in our Constitution is not only concerned with an individual's sense of self-worth, but constitutes an affirmation of the worth of human beings in our society. It includes the intrinsic worth of human beings shared by all people as well as the individual reputation of each person built upon his or her own individual achievements. The value of human dignity in our Constitution therefore values both the personal sense of self-worth as well as the public's estimation of the worth or value of an individual". In Dawood (fn 12 supra) at para [35] the court stated that "The value of dignity in our Constitutional framework cannot be doubted. The Constitution asserts dignity to contradict our past in which human dignity for black South Africans was routinely and cruelly denied. It asserts it too to inform the future, to invest in our democracy respect for the intrinsic worth of all human beings. Human dignity therefore informs constitutional adjudication and interpretation at a range of levels." Cited with approval in Khumalo fn 45 supra. Also in Dawood (fn 12 supra) the court noted that: "The value of dignity in our Constitutional framework cannot therefore be doubted. The Constitution asserts dignity to contradict our past in which human dignity for black South Africans was routinely and cruelly denied. It asserts it too to inform the future, to invest in our democracy respect for the intrinsic worth of all human beings. Human dignity therefore informs constitutional adjudication and interpretation at a range of levels. It is a value that informs the interpretation of many, possibly all, other rights." Cited with approval in Prince v President, Cape Law Society, and Others 2002 (2) SA 794 (CC). In S v Dadoo 2001 (3) SA 382 (CC): "Human beings are not commodities to which a price can be attached; they are creatures with inherent and infinite worth; they ought to be treated as ends in themselves, never merely as means to an end." See also Grootboom (fn 10 supra) in which the court said: "The proposition that rights are interrelated and are all equally important is not merely a theoretical postulate. The concept has immense human and practical significance in a society founded on human dignity, equality and freedom. It is fundamental to an evaluation of the reasonableness of state action that account be taken of the inherent dignity of human beings. The Constitution will be worth infinitely less than its paper if the reasonableness of state action concerned with housing is determined without regard to the fundamental constitutional value of human dignity. Section 26, read in the context of the Bill of Rights as a whole, must mean that the respondents have a right to reasonable action by the state in all circumstances and with particular regard to human dignity. In short, I emphasise that human beings are required to be treated as human beings." See the discussion in Chapter 1 on minimum core content. It is important to realise that, unlike international law, the South African Constitution uses a top-down approach in terms of which the rights are construed widely but limited to the extent of the available resources. This approach obviates the need for the minimum core concept because the latter suggests a bottom-up approach in terms of which the content of the right is slowly increased or built up with the minimum core content as a base. It is submitted that the South African approach is preferable as it allows for changing circumstances in which resources may grow or dwindle without detrement from the value of the right or losing sight of its key objectives. It is more realistic than the minimum core concept which seeks to impose upon States a duty to provide a particular set of benefits irrespective of whether or not the resources exist for them to do so. There is an unfortunate tendency amongst some human rights lawyers to see socio-economic rights in the abstract, divorced from the economic realities of existence in which the notion of unlimited resources is a fairytale. This approach, it is submitted undermines and devalues these rights, rather than reinforcing and adding weight to them in practical terms.
The fact that the Constitution makes provision for “access” to health care services must be taken into consideration in seeking to understand the nature of the right. It is not a direct right to health care services but a right of access. A right of access, it is submitted, is not as direct a right, as a right to health care services per se. The meaning and implications of a right of access should not be underestimated. It is submitted that this distinction allows for the possibility of payment for health care services by those who can afford to do so and also emphasizes the responsibility of the individual for his or her own health status. A direct right to health care services is likely to preclude the legitimacy of a payment requirement and also to preclude, to a significant extent, the responsibility of an individual for his or her own health status. A right that grants access implies that the holder of the right must also make some kind of an effort in order to obtain the services. A direct right to health care services tends to suggest rather that health care services must be brought to the right holder on whatever circumstances or situation he finds himself. The aspect of access suggests health care services must be placed within the reach, in terms of geographical, economic, sociological and physical factors, of people in South Africa. In this sense it could be much wider, in practical terms, than a direct right to health care services. For instance, a right of access can also imply that in a deep rural area, where it is not feasible to build a clinic and people do not have readily available transport, there is an obligation on the state to provide the necessary transport to the nearest health care facility, rather than building a health care facility in a location where it is not cost effective to do so. Similarly in a situation where for instance there is a natural disaster such as flooding, which is preventing people from accessing health services because they are stranded, a right of access means that the state must alter their circumstances so that they are able to freely exercise their right of access to health care services. A right of access also implies a greater degree of flexibility than a direct right to health care services in that the state could take a decision not to provide health care services at all but rather allow the private health sector to do so in a system in which the state is a funder of health care services rather than a supplier. “Access” widens the focus to include activities that may not themselves fall within the definition or scope of

71 Liebenberg in Chaskalson et al in supra at 41-26 states that: “The phrase ‘access to’ the rights in ss 26 and 27 (as opposed, for example, to a ‘right to adequate housing’) appears to have been used to resist an interpretation that the state is obliged to deliver the rights directly and without charge to everyone. Those with sufficient resources will have the means of access to adequate housing (for example through rental, purchase etc) and will not need state assistance to secure housing. It thus limits the state’s responsibility to those individuals and groups who encounter particular difficulties in gaining access to the various rights. In the South African context, these will generally be members of disadvantaged and vulnerable groups.”
the term "health care services" per se. It includes state activities in the maintenance and upgrading of public hospitals and ambulances, referral systems between municipal, provincial and national health facilities, the licensing of public and private health establishments, programmes for the education and retention of sufficient numbers of health professionals necessary to provide health care services and the creation of a non-discriminatory environment in the health sector.

2.3.2.1 Practical Implications

The right of access, in its practical outworking, can imply obligations upon government departments other than the departments of health. For example, if the road that leads to a hospital becomes inaccessible due to lack of maintenance or a natural disaster it may be the duty of the department of public works or its provincial or municipal equivalent to ensure that it is cleared. The inappropriate or over regulation of health care markets by the department of trade and industry or the Competition Commission could conflict directly with the right of access to health care services where for instance it results in loss of access to medicines because trade conditions in South Africa are so unfavourable that major drug manufacturers are no longer prepared to supply the medicines and there is no alternative source of supply. If the department of education, and tertiary education facilities, for example, do not make provision for the education and training of suitably qualified pharmacists, this will impact upon access to health care services. Even within the narrower context of health establishments, access to health care services is dependent upon effective and efficient management that ensures that electricity and water bills are paid timeously so that these utilities are not cut off, that relationships with external suppliers of food and telephone services are maintained, that human resources are managed in a responsible manner so that strikes and other disruptive labour action are avoided where reasonably possible.

Liebenberg\textsuperscript{72} points out that:

\textsuperscript{72} Chaikison et al fn 67 supra at 41-28 to 41-29.
“Deprivation of access arises when the state, through legislation or administrative conduct deprives people of the access they enjoy to socio-economic rights... Administrative conduct under a statute may amount to the deprivation of a substantive constitutional guarantee... In the absence of justification, administrative action that deprives people of their access to socio-economic rights is unconstitutional. Unreasonable administrative action and procedural unfairness also infringe the right to just administrative action and will require independent justification under the limitations clause. This illustrates the inter-relationship between socio-economic rights and the right to just administrative action.”

The relationship between administrative law and the rights involving health care services will be discussed in a subsequent chapter. The foregoing does not mean that the state is obliged to maintain all existing health facilities and programmes and may not shut any of these down, especially when they are shown to be inefficient and wasteful or resources could be better deployed elsewhere. Logically speaking the executive branch of government must have the flexibility to be able to reallocate resources in accordance with changing needs and circumstances. There may well be individuals who are adversely affected by such reallocation decisions and the debate is then likely to turn again to whether the interests of the individual must take preference over the interests of a larger group of people or even society as a whole. As noted elsewhere, whilst the constitutional court has acknowledged that there may be times when the interests of society as a whole must prevail over the interests of the individual it has tended in other cases to prefer the interests of smaller groupings. It is clear that there are qualifiers as to when the interests of the whole will prevail against those of the individual. These will be discussed at a later stage. It is submitted that as the South African legal system and government develop and mature beyond the binary questions of access and no access and have and have-not, issues of access will increasingly become questions of degree. In other words, instead of whether or not a drug should be available, it will be a question of which one out of a choice of several alternatives should be preferred and included in the essential drugs list and why or how far

73 Liebenberg (fn 67 supra) at 41-29 observes that: “In considering whether a person has been deprived of access to a socio-economic right, account must also be taken of the fact that access is not solely dependent on state provision. Not every scaling down or even abolition of a programme of state support will amount to a negative infringement of the rights in s26(1) and 27(1). The effects of a particular measure will require close scrutiny to ascertain whether it deprives the affected beneficiaries of effective access to the particular right. A violation will not arise if suitable alternative programmes exist or if the beneficiary can gain access to the right through his or her private resources. This interpretation preserves a reasonable measure of flexibility for the state in its policy and legislative choices. At the same time it requires the application of heightened scrutiny to measure depriving poor and disadvantaged groups to state assistance.”

74 In Soobramoney fn 23 supra

75 Such as Grootboom and TAC fn 10 and fn 57 supra
away the nearest accessible emergency unit or pharmacy is situated and whether it is close enough.

For the present, as the recent TAC case\textsuperscript{76} demonstrates, the early stages of development do require the resolution of such binary questions, and are still very much in evidence. That case was essentially about deprivation of public sector patients of a right of access to health care services, specifically a drug known as Nevirapine. It was not complete denial of access as the government had established a number of pilot sites which offered treatment using the drug to mothers and their newborn babies. However, the objection to the policy was that the drug was only available at a few pilot sites in each province and that it should be made available at all public sector health facilities. The drug was already available in the private sector as it had been registered with the Medicines Control Council as being indicated for the prevention of mother to child transmission of HIV. In that case the applicants, and subsequently the constitutional court, made much of the fact that the drug was available in the private sector but not in the public sector\textsuperscript{77}. The government’s administrative decision to gradually introduce a treatment regimen for pregnant mothers and their babies in the public sector was unconstitutional deprivation of access to health care services because the public sector caters for the poor and disadvantaged who have no alternative means of securing the drug themselves. The fact that the drug was available to the state free of charge and that the treatment was relatively short term did not help the state’s case.

\subsection*{2.3.2.2 Links to other rights}

\textsuperscript{76} TAC \textit{fn 57 supra.} See later for the facts of the case.

\textsuperscript{77} TAC \textit{fn 57 supra.} See the argument of the applicants at p 735 of the judgment where it is stated that: “There is no rational or lawful basis for allowing doctors in the private sector to exercise their professional judgment in deciding when to prescribe Nevirapine, but effectively prohibiting doctors in the public sector from doing so”, at p 746 where the court observes that: “The risk of Nevirapine causing harm to infants in the public health sector outside the research and training sites can be no greater than the risk that exists at such a site or where it is administered by medical practitioners in the private sector”, at p 733 “The core of the problem, however, lies elsewhere: what is to happen to those mothers and their babies who cannot afford access to private health care and do not have access to the research and training sites?” at p 748 “In dealing with these questions it must be kept in mind that this case concerns particularly those who cannot afford to pay for medical services. To the extent that government limits the supply of Nevirapine to its research sites, it is the poor outside the catchment areas of these sites who will suffer. There is a difference in the positions of those who can afford to pay for services and those who cannot. State policy must take account of these differences” and at p750 “Here we are concerned with children born in public hospitals and clinics to mothers who are for the most part indigent and unable to gain access to private medical treatment which is beyond their means. They and their children are in the main dependent upon the State to make health care services available to them.”
It is submitted that a right of access harks back to the fundamental constitutional value of and right to dignity and dignity in its turn is closely linked to equality. In the past, people were denied access to certain health facilities and health care services because the values of dignity and equality were not respected. A right of access to health care services reflects more accurately the break with the past intended by the Constitution than a mere right to health care services would have done. It implies that in the private and public health sectors alike, people of all races and cultures must have equal access to health care services. Access may not be denied in the private sector on the grounds of unfair discrimination such as happened in the past. This is not to say that people of all races and cultures must have free access to health care services in the private sector. It is arguing rather that criteria for access must be applicable to everyone regardless of their race, culture and other characteristics on the basis of which they were previously the victims of unfair discrimination. The right of access to health care services as stated in section 27(1) imposes no specific obligations upon the state as opposed to the private sector. It is important to make this distinction in order not to conflate the right with the corresponding obligation of the state alone as expressed in section 27(2). It is submitted that the right in section 27(1) does not only give rise to a corresponding obligation on the part of the state to give access to health care services although the obligations of the state, as expressed in section 27(3), with regard to promotion and fulfilment of the right are undoubtedly broader than those of private entities. Questions of the ability to pay aside, a private sector health establishment that denied a person access to its facilities for a reason which is not legally justifiable is as likely to be acting in violation of the constitutional right of access to health care services as it is to be guilty of unfair discrimination. This demonstrates the link between access on the one hand and dignity and equality on the other.

---

78 See for instance, Cowen S ‘Can ‘Dignity’ Guide South Africa’s Equality Jurisprudence?’ (17) SJHR 2001 p 34 at p 43 where she states that: “O’Regan J makes a useful distinction between a vision of dignity that is informed by the past and a vision for the future. Viewing dignity through the lens of history and humanity that was denied people in the past can provide a useful way to understand its meaning more fully. Such an historical approach is also evident in recent extra-oral statements by Ackerman J. In his Bram Fischer speech delivered in May 2000, Ackerman J suggested that: ‘it is permissible and indeed necessary to look at the ills of the past which [the Constitution] seeks to rectify and in this way to establish what equality and dignity mean...What lay at the heart of the apartheid philosophy was the extensive and sustained attempt to deny to the majority of the South African population the right of self-identification and self-determination...Who you were, where you could live, what schools and universities you could attend, what you could do and aspire to, and with whom you could form intimate personal relationships was determined for you by the state... The state did its best to deny blacks that which is definitional to being human, namely the ability to understand or at least define oneself through one’s own powers and to act freely as a moral agent pursuant to such understanding of self-definition. Blacks were treated as a means to an end and hardly ever as an end in themselves; and almost complete reversal of the Kantian imperative and concept of priceless inner worth and dignity.”
It is submitted that questions of access are fundamental to government’s obligation to respect, protect, promote and fulfil the rights in the Bill of Rights as envisaged in section 7(2) of the Constitution. It imposes both negative and positive obligations on the state. In a consideration of whether access has been unlawfully denied in a particular instance, an examination of the state’s obligation to respect, protect, promote and fulfil would have to be undertaken with regard to the specific circumstances of the case together with other limiting factors such as the availability of resources.

2.3.2.3 Rationing

A further question that is of importance in understanding the right of access to health care services is the question of the nature and level of care to which people are entitled. Whilst this question may be answered at one level on the basis of the limitation of available resources it does raise other issues which are not necessarily completely addressed by this argument. Take for example the situation of a terminally ill person or someone who is in a persistent vegetative state who can perhaps be kept alive by a particular health care intervention but with no improvement in quality of life or prospects of recovery. The treatment is of such a nature that it simply adds on a few more days or weeks of life but

79 De Vos P, ‘Grootboom, The Right of Access To Housing and Substantive Equality as Contextual Fairness’ 17 South African Journal of Human Rights 2001 p238 at p 271-2 points out that: “The judgement in Grootboom confirms that the right of access to housing creates both negative and positive obligations for the state...But the fact that s26 creates a right that can be enforced by individuals does not mean that individuals have a right to claim access to shelter or housing on demand. The individual has a right to demand that the state take action to begin to address the housing needs of those individuals who cannot provide for themselves or who need assistance from the state before they would be able to gain access to adequate housing. The positive component of the right of access to adequate housing thus places a duty upon the state to take steps to address the housing needs of society. Given the constitutional vision of a society in which all individuals will have access to adequate housing, the failure by the state to take adequate steps to achieve this goal would constitute a failure to engage meaningfully with the transformative vision of the Constitution. In enforcing this right, a court will be required to evaluate the state’s action, first, to determine whether any steps have been taken and second, whether appropriate steps have been taken. At the heart of the Grootboom judgment is the Court’s interpretation of what would constitute such appropriate steps and when the steps taken by the state would not be satisfactory from a constitutional point of view. Where courts are called upon to consider whether the state has fulfilled its positive obligations to take appropriate steps to realise the right of access to adequate housing, the question will revolve around the reasonableness or not of the state’s plan and the implementation of this plan.”
cannot necessarily do so indefinitely. It is expensive and its utilisation to prolong the life of the terminally ill person may entail an opportunity cost for saving the life of someone else who stands a better chance of recovery. Is a person entitled to such treatment? The question relates as much to the right to life as it does to the right to health care services. These questions are at the heart of the interface of the law and the profession of medicine. Medical personnel are faced with difficult decisions of this nature on a regular basis. At what point can and should the law interfere with such decisions? These questions were canvassed by the constitutional court in *Soobramoney v the Minister of Health (KwaZulu-Natal)*\(^{10}\).

### 2.3.2.4 *Soobramoney v the Minister of Health (KwaZulu-Natal)*\(^{11}\)

**Facts**

The applicant was a 41-year-old unemployed man, who was gravely ill. He was a diabetic, he suffered from an ischaemic heart disease and he had chronic renal failure. The province had refused to allow him access to provincial renal dialysis facilities and he could not afford to access these in the private sector because he was unemployed and was not a member of a medical scheme. The basis for the refusal of the province to dialyse the applicant was that he did not satisfy the criteria that had been laid down by the provincial health authorities in order to ensure that maximum benefit was derived from the limited number of renal dialysis machines available in the province. Patients suffering from irreversible chronic renal failure were not admitted automatically to the provincial renal dialysis programme but according to a set of guidelines in terms of which the primary requirement for admission was a patient's eligibility for a kidney transplant. A patient who was eligible for a transplant would be provided with dialysis treatment until an organ donor was found and a kidney transplant had been completed. According to the guidelines, patients were not eligible for kidney transplants unless they were free of significant vascular or cardiac disease. Since the appellant suffered from ischaemic heart disease and

---

\(^{10}\) *Soobramoney v Minister of Health, KwaZulu-Natal* fn 23 supra

\(^{11}\) *Soobramoney* fn 23 supra
cerebro-vascular disease he was not eligible for a kidney transplant and therefore did not qualify for the renal dialysis program. The High Court noted that in the applicant’s case, “[t]he word ‘chronic’ denotes a progressive deterioration and irreversible disease”.

**Judgment**

The constitutional court upheld the decision of the High Court in favour of the Minister of Health (KwaZulu-Natal). It took the view that that the obligations imposed on the state by sections 26 and 27 of the Constitution dealing with the right of access to housing, health care, food, water and social security were dependent upon the resources available for such purposes, and the corresponding rights themselves were limited by reason of the lack of resources. Given this lack of resources and the significant demands made on them by high levels of unemployment, inadequate social security and a widespread lack of access to clean water or to adequate health services, an unqualified obligation to meet these needs would not at the time of the case be capable of being fulfilled.

On the subject of the allocation of scarce resources Chaskalson P quoting with approval from *R v Cambridge Health Authority, ex parte B* in which the British court of appeals stated:

“I have no doubt that in a perfect world any treatment which a patient, or a patient’s family, sought would be provided if doctors were willing to give it, no matter how much it cost, particularly when a life was potentially at stake. It would however, in my view, be shutting one’s eyes to the real world if the Court were to proceed on the basis that we do live in such a world. It is common knowledge that health authorities of all kinds are constantly pressed to make ends meet. They cannot pay their nurses as much as they would like; they cannot provide all the treatments they would like; they cannot purchase all the extremely expensive medical equipment they would like; they cannot carry out all the research they would like; they cannot build all the hospitals and specialist units they would like. Difficult and agonising judgments have to be made as to how a limited budget is best allocated to the maximum advantage of the maximum number of patients. That is not a judgment which the court can make”

and then observed that:

“The provincial administration which is responsible for health services in KwaZulu-Natal has to make decisions about the funding that should be made available for health care and how such funds

---

82 *Sooobramoney v Minister of Health, KwaZulu-Natal* 1998 (1) SA 430 (D)
83 *Ex parte B [1994] All ER 129 CA*
should be spent. These choices involve difficult decisions to be taken at the political level in fixing the health budget, and at the functional level in deciding upon the priorities to be met. A court will be slow to interfere with rational decisions taken in good faith by the political organs and medical authorities whose responsibility it is to deal with such matters.\footnote{84}

The constitutional court rejected the argument that the applicant’s situation fell to be decided under section 27(3) which grants the right not to be refused emergency medical treatment. It held, given that the appellant suffered from chronic renal failure and that to be kept alive by dialysis he would require such treatment two to three times a week, that his condition was not an emergency calling for immediate remedial treatment. It was rather an ongoing state of affairs resulting from an incurable deterioration of the applicant’s renal function.

The court also rejected the right to life argument which claimed that on the basis of the right to life, everyone requiring life-saving treatment who was unable to pay for such treatment herself or himself was entitled to have the treatment provided at a state hospital without charge. Chaskalson P observed in this regard that:

“In our Constitution the right to medical treatment does not have to be inferred from the nature of the state established by the Constitution or from the right to life which it guarantees. It is dealt with directly in s 27. If s 27(3) were to be construed in accordance with the appellant’s contention it would make it substantially more difficult for the state to fulfil its primary obligations under ss 27(1) and (2) to provide health care services to ‘everyone’ within its available resources. It would also have the consequence of prioritising the treatment of terminal illnesses over other forms of medical care and would reduce the resources available to the state for purposes such as preventative health care and medical treatment for persons suffering from illnesses or bodily infirmities which are not life threatening. In my view, much clearer language than that used in s 27(3) would be required to justify such a conclusion.”\footnote{85}

Significantly, the court held that the state’s failure to provide renal dialysis to all persons suffering from chronic renal failure did not constitute a breach of its constitutional obligations as reflected in section 27(1).

Discussion

\footnote{84} Soobramoney, fn 23 supra, para 29 p776
\footnote{85} Soobramoney, fn 23 supra at para 19 p 773 - 774
It is submitted with respect that the constitutional court made a number of significant pronouncements on the right to life and health care services in this case and provided some fairly solid answers to the questions posed previously. *Soobramoney* \(^{86}\) is an extremely important decision in that it highlights the fact that there is justification in preferring the interests of the collective over those of the individual in certain circumstances. The individualistic approach must have limits if society is to function successfully as a whole. This principle applies as much with regard to constitutional rights as it does to criminal law. Chaskalson P recognised this in the *Soobramoney* judgment with the words:

> "The state has to manage its limited resources in order to address all these claims. There will be times when this requires it to adopt an holistic approach to the larger needs of society rather than to focus on the specific needs of particular individuals within society."

Another important point to emerge from the decision of the Court in *Soobramoney* \(^{87}\) is that rationing of access to health care services is a legitimate, and necessary activity and that a constitutional right of access to health care services cannot detract from the hard fact of limited resources. Sachs J observed that:

> "In all the open and democratic societies based upon dignity, freedom and equality with which I am familiar, the rationing of access to life-prolonging resources is regarded as integral to, rather than incompatible with, a human rights approach to health care," \(^{88}\) pointing out that:

> "Section 39(1)(a) of the Constitution requires us when interpreting the bill of rights to promote the values that underlie an open and democratic society based on human dignity, equality and freedom."

The concept of rationing is discussed in more depths elsewhere in this chapter. It is intricately linked to the issue of available resources and the progressive realisation of socio-economic rights which is essential to an understanding of the constitutional right of access to health care services.

---

\(^{86}\) See *Soobramoney* fn 23 supra

\(^{87}\) *Soobramoney* fn 23 supra, para 31

\(^{88}\) *Soobramoney* fn 23 supra

\(^{89}\) *Soobramoney* fn 23 supra para 52 p 782

\(^{90}\) See *Soobramoney* fn 23 supra, footnote in judgment
It is clear from the judgment of the court in *Soobramoney* that there are boundaries beyond which the law should not interfere in matters involving the allocation of resources. Even the right to life cannot found a right on demand to life-saving medical treatment in all cases. The criteria for the courts in deciding whether or not to interfere with a decision of the political organs and medical authorities responsible for such matters as stated by the court are rationality (it is submitted that in the light of the *Grootboom* and *TAC* decisions this is better described as 'reasonableness') and good faith. These criteria are in many respects simply a reflection of the administrative law principles of procedural fairness and administrative justice. After all, the decision by the KwaZulu-Natal health authorities to adopt the renal dialysis protocol which applied to Mr Soobramoney could be classified as an administrative decision although the court does not seem to have expressly regarded it as such. As with all administrative decisions, if one applies one's mind then one is likely to act rationally and take reasonable decisions. If one acts in good faith, there must be an absence of bias and the proper application of one's mind. It is submitted that these grounds are similar to the grounds of review that are often applied in order to judge the integrity and validity of administrative decisions. In the case of *Roman v Williams NO* the court held that an administrative decision was:

---

91 See Roux T "Legitimating Transformation: Political Resource Allocation in the South African Constitutional Court" [http://www.law.wits.ac.za/ofc/7cpublications/pdf/soorway_paper.pdf](http://www.law.wits.ac.za/ofc/7cpublications/pdf/soorway_paper.pdf) at p2 who observes that: “Judges, it is said, are neither mandated nor institutionally equipped to undertake the complex economic and interest balancing inquiries that inform the allocation of public resources. It is therefore unwise to give judges the power to review decisions taken by the political branches in this area and foolish for judges to assume this power when they are not compelled to do so. If these propositions are true for judges in established democracies, one would expect that they would apply with even greater force in new democracies where the judicial branch is by definition, still in the process of building the institutional legitimacy required to play a meaningful role in politics. It is therefore surprising that some of the most far-reaching decisions in this area have been handed down by constitutional courts in Hungary and South Africa – both countries democratised in the last fifteen years. It is even more surprising that, in the case of South Africa, the judicial review of political resource allocation has not as yet triggered any significant protest from the executive.”

92 *Grootboom* fn 10 and *TAC* fn 57 *supra*

93 See de Waal, Currie and Erasmus, fn 2 *supra* at p 439, where they observe that: “While there can be considerable disagreement about the best way to achieve these goals, the state has an obligation to justify its choice of means to the public. Put another way, the standard of reasonableness requires reason giving. But the court’s role does not end with requiring an explanation. The explanation can be evaluated for its reasonableness, its ability to convince a reasonable person of its coherence. The obligation of justification means the provision of reasons that would satisfy most people of the rationality of a policy on its own terms, even if they are not convinced about the wisdom of choosing such a policy in the first place.” See also Roux fn 91 *supra* at p 7 who states that: “It is therefore instructive to compare this review standard [as expressed in *Grootboom*] to the rational-basis and proportionality standards in South African and comparative constitutional law, which mark respectively the low and high ends of the continuum of review standards from which the court might have chosen. The reasonableness standard in *Grootboom* is clearly stricter than the rational-basis standard applied under section 9(1) of the 1996 Constitution.” He refers as authority for this observation to *Bel Porta School Governing Body and Others v Premier of the Province, Western Cape and Another* 2002 (9) BCLR 891 (CC) para 46 where it was held that the *Grootboom* reasonableness review standard was a “higher standard” than the review standard applied under section 9(1) of the Constitution.

94 *Roman* 1998 (1) SA 279 (C) at p 284 - 285
reviewable administrative action within the purview of s 33(1) and (2) of the Constitution Act 108 of 1996 (as these subsections are to be deemed to be read in terms of item 23(2)(b) of Schedule 6 of the Constitution) and such a decision must be justifiable, in relation to the reasons given for it. Justifiability as specified is to be objectively tested. The scope of this constitutional test is clearly much wider than that of the common-law test and it overrides the common-law review grounds as set out in Johannesburg Stock Exchange v Witwatersrand Nigel Ltd...

Administrative action, in order to prove justifiable in relation to the reasons given for it, must be objectively tested against the three requirements of suitability, necessity and proportionality which requirements involve a test of reasonableness. Gross unreasonableness is no longer a requirement for review.

The constitutional test embodies the requirement of proportionality between the means and the end. The role of the Courts in judicial reviews is no longer confined to the way in which an administrative decision was reached but extends to its substance and merits as well.”

The relevance of administrative law to health care delivery will be canvassed in more depths in a later chapter. On the question of the meaning of the right to life in the context of life prolonging health care services Sachs J observed that:

“However the right to life may come to be defined in South Africa, there is in reality no meaningful way in which it can constitutionally be extended to encompass the right indefinitely to evade death. As Stevens J put it: dying is part of life, its completion rather than its opposite. We can, however, influence the manner in which we come to terms with our mortality. It is precisely here, where scarce artificial life-prolonging resources have to be called upon, that tragic medical choices have to be made”95.

There are thus circumstances in which, even if the resources may, technically speaking, be available, there is no right to their use for the purpose merely of evading death. The right of a person in a persistent vegetative state to be maintained in that state indefinitely is thus questionable. However, this calls into the play the fact that in South Africa, the withdrawal of life support could in certain circumstances amount to criminal conduct due to the fact that euthanasia is not legally recognised96. One cannot avoid getting involved in discussions involving utilitarianism at this level. The hard question is that in a country in which there is a shortage of health care personnel to treat a patient, how can one justify keeping such a patient ‘alive’ when the nursing staff and possibly the bed may be required for the purpose of the delivery of health care services to other patients who have a good chance of

95 Soobramoney fn 23 supra, para 57 p 784, footnotes omitted.
96 S v Hartmann 1975 (3) SA 532 (C); S v De Bauloye 1975 (3) SA 538 (T). The South African courts have not, however, been entirely unsympathetic. In Clarke v Hurst No and Others (fn 29 supra) the court observed that: “There are no doubt many whose susceptibilities would be offended at the thought that it could ever be reasonable for those responsible for the care of the disabled patient not to take whatever steps it may be reasonably possible to take to keep the patient alive - regardless of the quality of the life which the patient would have to endure if kept alive. A moment’s reflection would however tell one that it happens regularly, especially in the case of the terminally ill, that decisions are taken to allow the patient to die rather than to prolong a life of suffering by taking life-support measures.”

146
recovery. At present it seems that an answer to the question of the legal acceptability of euthanasia lies somewhere between the fact that the right to life does not encompass the right to indefinitely evade death and the legal convictions of society upon which issues of wrongfulness depend.

There is a tendency in human rights law to favour the interests of the individual rather than those of society as a whole. This can create a considerable degree of tension for the policy makers in the executive and legislative branches of government who often have to make decisions and set policy at the level of society as a whole in order to obtain the most benefit for the greatest numbers of people. This approach is very likely to compromise the interests of particular individuals who fall on the borderlines of policy positions. The interests of an individual can at times seriously conflict with the broader interest of the collective and it becomes a question of achieving an acceptable balance between individual and group interests in setting policy. This is easier said than done.

2.3.2.5 The Individual v The Collective

It is necessary to examine the decisions of the constitutional court in *Government of the Republic of South Africa and Others v Grootboom and Others* and *Minister of Health and Others v Treatment Action Campaign and Others* in order to further explore the need to balance the interests of smaller groupings and individuals against those of society as a whole in resource allocation decisions and to understand how the constitutional court has

---

97 See discussion of wrongfulness and relevant case law in *Clarke v Hurst No and Others* 1992 (4) SA 630 (D) from 652 onwards.

98 This is possibly to some extent, in South Africa at least, a product of the perceived roles of the legislature and the judiciary. See for instance, the observations of Kenridge and Spitz, Chaskalson *et al.*, fn 60 supra, at 11-23 to 11-24 where, in a discussion of value-based interpretation, they state: "Like other interpretive approaches, value-based interpretation is also grounded upon a vision of the appropriate institutional role of the judiciary and reflects a particular response to the countermajoritarian dilemma. Its proponents acknowledge the countermajoritarian nature of constitutional review and argue that this role is most appropriate to the protection of individual rights. The majoritarian institutions of government possess different institutional competencies from those of the judiciary. The role of the courts is not to make social policy but rather to articulate principle. Consequently, the relative insulation and weaker mechanisms of democratic accountability characteristic of the judiciary provide the necessary space within which to perform the proper judicial function. If the role of the legislature is to give expression to the majority will, the role of the courts, at least in constitutional matters, is to protect the individual rights which may be countermajoritarian in nature. The courts are far more than clearing-houses for the products of the legislature. They protect certain spheres of personhood against intrusion by the majority. Meaningful enforcement of individual rights may have, as its consequence, large-scale social intervention. One of the functions of constitutional review is to determine when such intervention is justified by the duty to protect individual rights. Viewed in this light, insulation from the vagaries of the political process is an advantage. Instead of being a participant in majoritarian bargaining through the political process, the judiciary may consider questions of principle and political morality." (footnotes omitted). In practice this would seem to be the experience of the executive branch of government in the area of socio-economic rights.
dealt with socio-economic rights, of which the right of access to health care services is one, thus far.

2.3.2.6 Government of the Republic of South Africa v Grootboom

Facts

This case involved the right to housing of the respondents who had been evicted from their informal homes situated on private land earmarked for formal low-cost housing. They applied to a High Court for an order requiring the government to provide them with adequate basic shelter or housing until they obtained permanent accommodation. The High Court held that s 28(1)(c) of the Constitution obliged the state to provide rudimentary shelter to children and their parents on demand if the parents were unable to shelter their children, that this obligation existed independently of and in addition to the obligation to take reasonable legislative and other measures in terms of s 26 of the Constitution and that the state was bound to provide this rudimentary shelter irrespective of the availability of resources. The appellants were accordingly ordered by the High Court to provide the respondents who were children and their parents with shelter. The appellants appealed against this decision.

Judgment

The court held that the question of how socio-economic rights were to be enforced was a difficult issue which had to be carefully explored on a case-by-case basis considering the terms and context of the relevant constitutional provision and its application to the circumstances of the case. It said that that interpreting a right in its context required the consideration of two types of context. On the one hand, rights had to be understood in their textual setting, which required a consideration of chapter 2 and the Constitution as a whole. On the other hand, rights also had to be understood in their social and historical context.

99 Grootboom in 10 supra
The right to access to adequate housing could therefore not be seen in isolation but in the light of its close relationship with the other socio-economic rights, all read together in the setting of the Constitution as a whole. It observed that the interconnectedness of the rights and the Constitution as a whole had to be taken into account in interpreting the socio-economic rights and, in particular, in determining whether the state had met its obligations in terms of them. The court noted further that for a person to have access to adequate housing there had to be the provision of land, services (such as the provision of water, the removal of sewage and the financing of all these) and a dwelling. The right also suggested that it was not only the state who was responsible for the provision of houses but that other agents within society had to be enabled by legislative and other measures to provide housing. The state therefore had to create the conditions for access to adequate housing for people at all economic levels of society. With regard to the obligations of the state the court observed that s 26(2) made it clear that the obligation imposed upon the state was not an absolute or unqualified one. The extent of the state’s obligation was defined by three key elements which had to be considered separately: (a) the obligation to take reasonable legislative and other measures; (b) to achieve the progressive realisation of the right; and (c) within available resources.

It went on to point out that reasonable legislative and other measures such as policies and programs had to be determined in the light of the creation by the Constitution of different spheres of government and the allocation of powers and functions amongst these different spheres thus emphasising their obligation to co-operate with one another in carrying out their constitutional tasks. A reasonable housing program capable of facilitating the realisation of the right therefore had to clearly allocate responsibilities and tasks to the different spheres of government and ensure that the appropriate financial and human resources were available to implement it. The formation of a program was therefore only the first stage in meeting the state’s obligations. The program also had to be reasonably implemented as failure to do so would be a breach of the state’s obligations.

The court said that in order to be reasonable, a program had to be balanced and flexible and make appropriate provision of attention to housing crises and to short, medium and long
term needs. It commented that a program excluding a significant segment of society would not be reasonable and noted that reasonableness had to be understood in the context of the Bill of Rights as a whole, especially the constitutional requirement that everyone be treated with care and concern and the fundamental constitutional value of human dignity.

The court held that the term ‘progressive realisation’ showed that it was contemplated that the right contained in section 26 could not be realised immediately. The goal of the Constitution was that the basic needs of all in South African society must be effectively met and the requirement of progressive realisation meant that the state had to take steps to achieve this goal. This in turn meant that accessibility had to be progressively facilitated, involving the examination of legal, administrative, operational and financial hurdles which had to be lowered over time. It was thus a requirement that housing was not only to be made accessible to a larger number of people but also to a wider range of people over time. It observed that the third defining aspect of the obligation to take the requisite measures is that the obligation does not require the state to do more than its available resources permit. This means that both the content of the obligation in relation to the rate at which it is achieved as well as the reasonableness of the measures employed to achieve the result are governed by the availability of resources. There is a balance between goal and means. The measures must be calculated to attain the goal expeditiously and effectively but the availability of resources is an important factor in determining what is reasonable.

The court said that the national government bore the overall responsibility for ensuring that the state complied with the obligations imposed on it by section 26. It found in particular that the programs adopted by the state fell short of the requirements of section 26(2) in that no provision was made for relief to the categories of people in desperate need and held that the Constitution obliged the state to act positively to ameliorate these conditions. This obligation, said the court, was to devise and implement a coherent, co-ordinated program designed to provide access to housing, healthcare, sufficient food and water and social security to those unable to support themselves and their dependants. The state also had to foster conditions to enable citizens to gain access to land on an equitable basis. Those in need had a corresponding right to demand that this be done.
It emphasised, however, that section 26 (and also section 28) did not entitle the respondents to claim shelter or housing immediately upon demand. With regard to the rights of children in section 28 vis-à-vis the more general rights in section 27 and 28 the court observed that there was an overlap which was not consistent with the notion that section 28(1)(c) created separate and independent rights for children and their parents. The court ruled that subsections 1(b) and 1(c) of section 28 must be read together and that they ensure that children are properly cared for by their parents or families, and that they receive appropriate alternative care in the absence of parental or family care. The section encapsulates the conception of the scope of care that children should receive in South African society. The court observed that it followed from subsection 1(b) that the Constitution contemplates that a child has the right to parental or family care in the first place, and the right to alternative appropriate care only where that is lacking. Through legislation and the common law, the obligation to provide shelter in ss (1)(c) is imposed primarily on the parents or family and only alternatively on the state. The state thus incurs the obligation to provide shelter to those children, for example, who are removed from their families. It follows, said the court, that section 28(1)(c) does not create any primary state obligation to provide shelter on demand to parents and their children if children are being cared for by their parents or families. The court noted, however, that this does not mean that the state incurs no obligation in relation to children who are being cared for by their parents or families. In the first place, the state must provide the legal and administrative infrastructure necessary to ensure that children are accorded the protection contemplated by section 28. This obligation would normally be fulfilled by passing laws and creating enforcement mechanisms for the maintenance of children, their protection from maltreatment, abuse, neglect or degradation, and the prevention of other forms of abuse of children mentioned in section 28. In addition, the state is required to fulfil its obligations to provide families with access to land in terms of section 25, access to adequate housing in terms of section 26 as well as access to health care, food, water and social security in terms of section 27. The court held that it followed that sections 25 and 27 require the state to provide access on a programmatic and coordinated basis, subject to available resources. One of the ways in which the state would meet its section 27 obligations would be through
a social welfare program providing maintenance grants and other material assistance to families in need in defined circumstances. The court ruled that in the circumstances of the case, there was no obligation upon the state to provide shelter to those of the respondents who were children and, through them, their parents in terms of s 28(1)(c) and that the High Court therefore erred in making the order it did on the basis of this section.

In conclusion the constitutional court observed that this case showed the desperation of hundreds of thousands of people living in deplorable conditions throughout the country, that Constitution obliges the state to act positively to ameliorate these conditions and that the obligation is to provide access to housing, health-care, sufficient food and water, and social security to those unable to support themselves and their dependants. It said that the state must also foster conditions to enable citizens to gain access to land on an equitable basis. Those in need have a corresponding right to demand that this be done. The court acknowledged that it is an extremely difficult task for the state to meet these obligations in the conditions that prevail in South Africa and that this is also recognised by the Constitution which expressly provides that the state is not obliged to go beyond available resources or to realise these rights immediately. It stressed, however, that despite all these qualifications, it was a matter of rights, and that the Constitution obliges the state to give effect to them. Consequently the state’s obligation is one that courts can, and in appropriate circumstances, must enforce.

It made a declaratory order to the effect that the appeal was allowed in part, that the order of the Cape High Court was set aside and its own order substituted for it and that the state’s housing program in the Cape Metropolitan Council area fell short of its obligation to provide to provide relief for people who have no access to land, no roof over their heads, and who are living in intolerable conditions or crisis situations. It made no order as to costs.
Discussion

Grootboom\textsuperscript{100} was the first major constitutional court decision involving socio-economic rights. As such, it is respectfully submitted that it laid down some extremely important ground rules for similar situations involving such rights. It emphasised the plight of those in desperate need and pointed out that a state program that did not address the plight of such persons could not be considered reasonable no matter how considerable the advances in a socio-economic program might be. It is in this context that the court preferred, at a certain level, the interests of the individual over those of the collective. This aspect of the case is discussed in more detail below after the facts and judgment of the TAC\textsuperscript{101} case have also been canvassed since they are also of relevance to this tension between individual rights and collective interests. It must be pointed out at this stage that this aspect of the Grootboom decision has to be applied with care, and not in isolation but in the broader context of the Grootboom judgement as a whole, in the context of health services delivery because, as is clear from the case of Soobramoney described previously, in health care it is not always those whose needs are most urgent who must necessarily be given priority. Taken out of context, the logic of Grootboom and its emphasis on those in most desperate need could easily be misapplied at a policy level in the context of health care. By way of example take the government’s policy decision to boost health care services at primary care level with a view to improving the overall health of the general population. Since there are limited resources this means that funding for secondary and tertiary levels of care would have to be reduced in order to have sufficient funding for a successful primary health care programme unless one assumes that there were large additional injections of funding forthcoming from the fiscus. In the light of the judgment in Grootboom, how can the state justify its focus on primary health care which by definition tends to address the less desperate and less urgent health needs of the general population if it means a reduction in health facilities designed to address the more urgent and desperate health needs of those individuals who are served by the secondary and tertiary health care levels of the system? In medicine, primary health care does not generally address the health needs of so-called

\textsuperscript{100} Grootboom fn 10 supra
\textsuperscript{101} TAC fn 57 supra
‘acute’ cases. It can assist very much with the treatment of chronic cases and with prevention of disease. If a person has a heart attack or appendicitis or goes into a diabetic coma or renal failure these are not health conditions that can be addressed at primary health care level. Yet if Article VIII of the Declaration of Alma Ata states that all governments should formulate national policies, strategies and plans of action to launch and sustain primary health care as a part of a comprehensive national health system and in co-ordination with other sectors, how unreasonable is a program to ensure the rendering of primary health care services? It is clearly a question of balance between the desperate and most urgent health needs of individuals and the less urgent but equally important health needs of communities. It is submitted that in seeking to achieve such a balance equality considerations must form an important guide for policymakers as will become evident from the judgment of the court in the TAC case. In the Grootboom context this is evidence by the court’s cautionary observation that the question of how socio-economic rights are to be enforced is a difficult issue which must be carefully explored on a case-by-case basis taking into account the terms and context of the relevant constitutional provision and its application to the circumstances of the case as well as its rulings:

The Declaration of Alma Ata following on the International Conference in Primary Health Care, Alma Ata, USSR in 1978 states in Article VI that: "Primary health care is essential health care based on practical, scientifically sound and socially acceptable methods and technology made universally accessible to individuals and families in the community through their full participation and at a cost that that community and country can afford to maintain at every stage of their development in the spirit of self-reliance and self-determination. It forms an integral part of the country's health system of which it is the central feature and main focus, and of the overall social and economic development of the community. It is the first level of contact of individuals, the family and community with the national health system bringing health care as close as possible to where people live and work, and constitutes the first element of a continuing health care process" and in Article VII that: "Primary health care:

1. reflects and evolves from the economic conditions and socio-cultural and political characteristics of the country and its communities and is based on the application of the relevant results of social, biomedical and health services research and public health experience;
2. addressed the main health problems in the community, providing promotive, preventive, curative and rehabilitative services accordingly;
3. includes at least: education concerning prevailing health problems and the methods of preventing and controlling them; promotion of food supply and proper nutrition; an adequate supply of safe water and basic sanitation; maternal and child health care, including family planning; immunization against the major infectious diseases; prevention and control of locally endemic diseases; appropriate treatment of common diseases and injuries; and provision of essential drugs;
4. involves in addition to the health sector, all related sectors and aspects of national and community development, in particular agriculture, animal husbandry, food, industry, education, housing, public works, communications and other sectors; and demands the co-ordinated efforts of all these sectors;
5. requires and promotes maximum community and individual self-reliance and participation in the planning, organization, operation and control of primary health care, making fullest use of local, national and other available resources; and to this end develops through appropriate education the ability of communities to participate;
6. should be sustained by integrated, functional and mutually supportive referral systems, leading to the progressive improvement of comprehensive health care for all, and giving priority to those most in need;
7. relies, at local and referral levels, on health workers, including physicians, nurses, midwives, auxiliaries and community workers as applicable, as well as traditional practitioners as needed, suitably trained socially and technically to work as a health team and to respond to the expressed health needs of the community."

Declaration of Alma Ata in 102 supra

TAC in 57 supra
- the interconnectedness of the rights and the Constitution as a whole have to be taken into account in interpreting the socio-economic rights;
- the real question in terms of the Constitution is whether the measures taken by the state to realise the right afforded by the Constitution are reasonable;
- the obligation imposed upon the state is not an absolute or unqualified one and that regard must be had to the three key elements of (a) the obligation to take reasonable legislative and other measures; (b) to achieve the progressive realisation of the right; and (c) within available resources; and
- that the term ‘progressive realisation’ showed that it is contemplated in the Constitution that the rights cannot be realised immediately.

The court in Grootboom\(^\text{105}\) gives some critically important guidance for the executive with regard to the formulation of policy decisions. It asserts that the state’s duty to adopt reasonable legislative and other measures to achieve the progressive realization of socio-economic rights implies that the policy must be:

- Comprehensive – it must be inclusive of all significant segments of society\(^\text{106}\);
- Balanced and flexible – it must be able to adapt to changing needs and circumstances across interest groups\(^\text{107}\);
- Attentive to those whose need is most urgent and who have only the state to look to for assistance\(^\text{108}\).

---

\(^{105}\) Grootboom fn 10 supra

\(^{106}\) Grootboom fn 10 supra, para 36: “In this regard, there is a difference between the position of those who can afford to pay for housing, even if it is only basic though adequate housing, and those who cannot. For those who can afford to pay for adequate housing, the state’s primary obligation lies in unlocking the system, providing access to housing stock and a legislative framework to facilitate self-built houses through planning laws and access to finance. Issues of development and social welfare are raised in respect of those who cannot afford to provide themselves with housing. State policy needs to address both these groups.” And para 40: “Thus, a co-ordinated state housing program must be a comprehensive one determined by all three spheres of government in consultation with each other as contemplated by chap 3 of the Constitution.”

\(^{107}\) Grootboom fn 10 supra para 37: “The state’s obligation to provide access to adequate housing depends on context, and may differ from province to province, from city to city, from rural to urban areas and from person to person. Some may need access to land and no more; some may need access to land and building materials; some may need access to finance; some may need access to services such as water, sewage, electricity and roads. What might be appropriate in a rural area where people live together in communities engaging in subsistence farming may not be appropriate in an urban area where people are looking for employment and a place to live” and para 43: “The program must be balanced and flexible and make appropriate provision for attention to housing crises and to short, medium and long term needs. A program that excludes a significant segment of society cannot be said to be reasonable. Conditions do not remain static and therefore the program will require continuous review.”

\(^{108}\) Grootboom fn 10 supra para 36: “The poor are particularly vulnerable and their needs require special attention” and at para 44 “Those whose needs are the most urgent and whose ability to enjoy all rights therefore is most in peril, must not be ignored by the measures aimed at achieving realisation of the right.” Grootboom fn 10 supra at p 69 “Those whose needs are the most urgent and whose ability to enjoy all rights therefore is most in peril, must not be ignored by the measures aimed at achieving realisation of the right. It may not be sufficient to meet the test of reasonableness to show that the measures are capable of achieving a statistical advance in the realisation of the right.” TAC fn 57 supra at p749 referring to the language used in
Whilst there will always be the potential for constitutional challenge to state policy, this need not be seen as entirely pathological, especially if the political branches of government are able to learn from and implement the lessons expounded by the courts in such a way that such litigation is eventually no longer a viable proposition because it invariably ends in failure for the applicant. In this sense, frequent constitutional challenge can be seen as a feature of the developmental stages of the new legal order. Even at this stage, however, it is submitted that the determination and implementation of policy involving socio-economic rights by the executive could be legitimized in many instances by following a few simple guidelines based partly upon the principles of administrative law and partly upon the pronouncements of the constitutional court to date. These are:

1. The importance of objective decisions based upon scientifically obtained and credible information. The more comprehensive and reliable the factual information upon which the policy decision is based, the more reasonable the decision is likely to be. The kind of information and the nature of its source will depend upon the subject matter of the policy in question.

2. Related to the first principle above is the importance of interaction and communication with stakeholders. The court in TAC\textsuperscript{109} dealt with it under the heading of ‘transparency’\textsuperscript{110}. It is submitted that transparency is more than just the communication of the existence of a particular programme however. It includes a programme of openness to representation by stakeholders before during and after the policy has been formulated and implemented and relates therefore to the requirement of flexibility referred to earlier with reference to the judgment in Grootboom\textsuperscript{111}. Even the executive has to take a hard decision to prioritise some needs over others, this will

\textsuperscript{109} \textit{Grootboom} fn 57 supra

\textsuperscript{110} TAC fn 57 supra at p762: “Indeed, for a public programme such as this to meet the constitutional requirement of reasonableness, its contents must be made known appropriately.”

\textsuperscript{111} \textit{Grootboom} fn 10 supra
ensure that it does so on an informed basis and is more aware of the legal risks and arguments attendant upon making a particular decision.

3. Related to the second principle enunciated above, procedurally and substantively, within the processes for both formulation and implementation of the policy, there must be a back door through which the executive can escape accusations of inflexibility and administrative unfairness. Since the executive is not superhuman and omniscient, there is the possibility that it could overlook a particular need or segment of society in formulating or implementing the policy. A backdoor, for example a process of review or interaction with stakeholders, or which makes provision for hearing or taking account of hard cases is likely to go a considerable distance in improving the reasonableness of the policy whilst at the same time encouraging the disaffected to approach the executive rather than the courts for a remedy. In this way, if a hard case is turned down or cannot be accommodated, this can be rationalized and the risk of judicial disapproval reduced to a minimum. The administrative law principle of **audi alteram partem** particularly informs this third principle but the principles of administrative justice generally are of assistance in this instance. It is clearly implied in this principle that the basic tenets of the policy should ideally be documented and if at all possible published or at least publicized. The advantages of this are that publication invites dialogue with and comment from the significant segments of society which enhances flexibility but also promotes a clear understanding of the policy intention and the reasons for it.

4. The fourth and last principle is to ensure that the policy is informed by legal knowledge and expertise that relates specifically to the subject matter of the policy. This is necessary in order to deal with the specifics of the policy rather than the generalities which are covered in the first three principles given above. Sound legal exposition and analysis in this context has to be both retrospective, with reference to decisions and judgments of the courts that have already been handed down, and prospective with regard to the potential manner in which new ground is likely to be
broken by the courts in a situation where existing jurisprudence offers only limited guidance.

2.3.2.7  *Minister of Health and Others v Treatment Action Campaign*\textsuperscript{112}

**Facts**

The state instituted a policy whereby an antiretroviral drug, Nevirapine, was made available only in certain research sites within the public health sector for the purposes of testing the efficacy of a larger programme involving the drug for the prevention mother-to-child transmission of HIV. The respondents had applied for and obtained an order from the High Court obliging the state to make Nevirapine more widely available within the public health sector on the basis that the state programme was effectively denying access to Nevirapine to people who did not have access to the research sites. The state appealed against the order of the High Court on the basis, *inter alia*, that it did not have the capacity to make available the full package of treatment which included voluntary counselling and testing and the option of substitute feeding of which Nevirapine formed a part.

**Judgment**

The court held that although the concerns raised on behalf of the appellants were relevant to the ability of government to make a ‘full package’ available throughout the public health sector, they were not relevant to the question whether Nevirapine should be used to reduce mother-to-child transmission of HIV at those public hospitals and clinics outside the research sites where facilities in fact existed for testing and counselling. It said that the fact that the research and training sites would provide crucial data on which a comprehensive programme for mother-to-child transmission could be developed and, if financially feasible, implemented was clearly of importance to government and to the country. So, too, was ongoing research into safety, efficacy and resistance. This did not mean, however, that until the best programme had been formulated and the necessary funds and infrastructure

\textsuperscript{112} TAC fn 57 supra
provided for the implementation of that programme, Nevirapine had to be withheld from mothers and children who did not have access to the research and training sites. Nor could it reasonably be withheld until medical research had been completed. A programme for the realisation of socio-economic rights had to be balanced and flexible and make appropriate provision for attention to crises and to short, medium and long term needs. A programme that excluded a significant segment of society could not be said to be reasonable. The court held that that the provision of a single dose of Nevirapine to mother and child for the purpose of protecting the child against the transmission of HIV was, as far as the children were concerned, essential, that their needs were most urgent and their inability to have access to Nevirapine profoundly affected their ability to enjoy all of the other rights to which they were entitled. The court observed that the children's rights were most in peril as a result of the rigid and inflexible policy that had been adopted which excluded them from having access to Nevirapine. The state was obliged to ensure that children were accorded the protection contemplated by section 28 that arose when the implementation of the right to parental or family care was lacking. The policy prejudiced children born in public hospitals and clinics to mothers who were for the most part indigent and unable to gain access to private medical treatment which was beyond their means. They and their children were in the main dependent upon the state to make health care services available to them. The court held that a factor that needed to be kept in mind was that government policy was and should be flexible. It could be changed at any time and the Executive was always free to change policies where it considered it appropriate to do so. The only constraint was that policies had to be consistent with the Constitution and the law. Court orders concerning policy choices made by the Executive should therefore not be formulated in ways that precluded the Executive from making such legitimate choices. The court held further that the state's policy failed to meet constitutional standards because it excluded those who could reasonably be included where such treatment was medically indicated to combat mother-to-child transmission of HIV. That did not mean, however that everyone could immediately claim access to such treatment, although the ideal was to achieve that goal.

The court referred specifically to the cases of Soobramoney\textsuperscript{13} and Grootboom\textsuperscript{14} noting that:

\textsuperscript{13} Soobramoney fn 23 supra

\textsuperscript{14} Grootboom
"In both cases the socio-economic rights, and the corresponding obligations of the State, were interpreted in their social and historical context. The difficulty confronting the State in the light of our history in addressing issues concerned with the basic needs of people was stressed."

The constitutional court expressly rejected the argument that there was a minimum core obligation upon the state to provide a certain basic level of health care to everyone on demand saying that a purposive reading of sections 26 and 27 does not lead to any other conclusion. It is impossible to give everyone access even to a 'core' service immediately. All that is possible, and all that can be expected of the State, is that it act reasonably to provide access to the socio-economic rights identified in sections 26 and 27 on a progressive basis. It concluded that section 27(1) of the Constitution did not give rise to a self-standing and independent positive right enforceable irrespective of the considerations mentioned in s 27(2) but that sections 27(1) and 27(2) must be read together as defining the scope of the positive rights that everyone has and the corresponding obligations on the state to 'respect, protect, promote and fulfil' such rights. The court pointed to the fact that the rights conferred by ss 26(1) and 27(1) are to have 'access' to the services that the state is obliged to provide in terms of ss 26(2) and 27(2). The court made the important observation that in dealing with these questions it must be kept in mind that this case concerned particularly those who could not afford to pay for medical services. It said that to the extent that government limits the supply of Nevirapine to its research sites, it is the poor outside the catchment areas of these sites who will suffer. There is a difference in the positions of those who can afford to pay for services and those who cannot. State policy must take account of these differences. With regard to the powers of the courts in such matters, the constitutional court noted that the primary duty of Courts is to the Constitution and the law, 'which they must apply impartially and without fear, favour or prejudice'. The Constitution requires the state to 'respect, protect, promote, and fulfil the rights in the Bill of Rights'. Where state policy is challenged as inconsistent with the Constitution, Courts have to consider whether in formulating and implementing such policy the state has given effect to its constitutional obligations. If it should hold in any given case that the state has failed to do so, it is obliged by the Constitution to say so.

114 Groothoom fn 10 supra
Discussion

It is not meaningful to discuss the TAC case without constant reference to the judgment in Grootboom because of the number of references by the constitutional court in its judgment in the former to the latter. Consequently, the constitutional court decisions in both Grootboom\(^1\) and TAC\(^2\), whilst emphasising the fact that the Constitution mandates the ‘progressive’ realisation of rights within ‘available resources’, see for instance the discussion of Grootboom in the judgement of Chaskalson P in the TAC case\(^3\) where it is stated that:

“It is also made clear that ‘s 26 does not expect more of the state than is achievable within its available resources’ and does not confer an entitlement to ‘claim shelter or housing immediately upon demand’ and that as far as the rights of access to housing, health care, sufficient food and water, and social security for those unable to support themselves and their dependants are concerned, ‘the state is not obliged to go beyond available resources or to realise these rights immediately’”

and\(^4\) that

“It is impossible to give everyone access even to a ‘core’ service immediately”

have tended to uphold the interests of the individual, or at least certain minority groupings, as opposed to the majority\(^5\). Whilst it can most certainly be argued that in upholding the interests of the individual, the interests of the majority are served, this is not necessarily always the case - especially in situations which demand the allocation of resources. In Grootboom the court went so far as to say that:

“Those whose needs are the most urgent and whose ability to enjoy all rights therefore is most in peril, must not be ignored by the measures aimed at achieving realisation of the right. It may not be sufficient to meet the test of reasonableness to show that the measures are capable of achieving a statistical advance in the realisation of the right. Furthermore, the Constitution requires that

\(^1\) Grootboom fn 10 supra
\(^2\) TAC fn 57 supra
\(^3\) TAC fn 57 supra at para 32 p739
\(^4\) TAC fn 57 supra at para 35
\(^5\) The court in Grootboom, fn 10 supra, took the view that it is not reasonable for the state to “exclude” a “significant segment of society” in its policy (at para 43 page 69)
everyone must be treated with care and concern. If the measures, though statistically successful, fail to respond to the needs of those most desperate, they may not pass the test."

The point about statistics is that they are essentially concerned with the bigger picture - the whole rather than its parts, the average across the population rather than the position of the few individuals at either end of the Bell curve. Yacoob J is saying in *Grootboom* that the minorities, those at the lower end of the Bell curve, cannot be ignored and that it is insufficient for government to show that overall (statistically) it has achieved a great deal in the progressive realisation of the rights if the plight of those who are most in need has not been attended to. In statistical terms, the court’s view is that entire Bell curve may have to be shifted to the right, before the courts will find that government has acted reasonably. It may not be sufficient to simply increase the size of the middle (highest and largest part) of the curve relative to its lower end. Whilst this is a debate that goes far beyond the scope of this thesis, including as it does other disciplines such as health economics, statistics and sociology, it is important to make a few observations about the effect of this issue in law. It is not disputed that in the *Grootboom* and *TAC* cases, from at least one perspective, the interests of the majority may well have been served by the judgments handed down and it is submitted, with respect, that the judgments in both cases have contributed significantly to South African jurisprudence on socio-economic rights. However, the tendency of the judiciary to adopt the perspective of the individual or those groups at the extreme right of the Bell curve that usually describes the ‘have-nots’, is likely continue to further the tension between the executive and the judiciary unless the former can find a way to accommodate within its own perspective the narrower approach of the judiciary without compromising its own capacity to fulfil its constitutional obligations as a whole. By its own admission the

---

120 *Grootboom* fn 10 supra at para 44, p 69.
121 *Grootboom* fn 10 and *TAC* fn 57 supra
122 Roux fn 91 supra is of the view that the constitutional court has shown itself to be particularly adept at exploiting ambiguities in the normative structure governing its decisions and has thereby managed its relationships with the political branches of government to a considerable degree. He seems to think that it is this skill on the part of the constitutional court which is largely the reason why there has as yet been no significant constitutional crisis caused by the objection of the political branches of government to the court’s decisions. It is submitted, however, that interference by the court in issues of allocation of resources is highly likely to provoke a constitutional crisis with regard to all but the most blatantly unjust political decisions unless the court exercises considerable judicial circumspection in the manner in which it approaches cases involving socio-economic rights. The balance between the executive, which is faced with the almost impossible task of ensuring that the right of ‘everyone’ to have access to health care services and other socio-economic amenities, is realized, and the judiciary which comes under extreme pressure from political and other interest groups when it is faced with decisions involving socio-economic rights of individuals and relatively small groups as a result of the high emotional content of such debates, is delicate. The lack of a constitutional crisis in the South African legal order thus far is due in no small part to the commendable reluctance of the executive to provoke one, despite often sensationalistic adverse press coverage and at times emotionally charged negative criticism and comment from stakeholders and the judiciary. (See the comments of the court in *TAC*, fn 57 supra at para 20 p735 where it notes that: “Many of
judiciary is not equipped to deal with issues which are faced by the executive on a daily basis – issues such as the equitable allocation of scarce resources. In TAC the court noted:\(^\text{123}\):

“As this Court said in Grootboom, ‘(i)t is necessary to recognise that a wide range of possible measures could be adopted by the State to meet its obligations’. It should be borne in mind that in dealing with such matters the Courts are not institutionally equipped to make the wide-ranging factual and political enquiries necessary for determining what the minimum-core standards called for by the first and second amici should be, nor for deciding how public revenues should most effectively be spent. There are many pressing demands on the public purse. As was said in Soobramoney: ‘The state has to manage its limited resources in order to address all these claims. There will be times when this requires it to adopt a holistic approach to the larger needs of society rather than to focus on the specific needs of particular individuals within society.’ Courts are ill-suited to adjudicate upon issues where Court orders could have multiple social and economic consequences for the community. The Constitution contemplates rather a restrained and focused role for the Courts, namely, to require the state to take measures to meet its constitutional obligations and to subject the reasonableness of these measures to evaluation. Such determinations of reasonableness may in fact have budgetary implications, but are not in themselves directed at rearranging budgets.”

The fact is that judgments on socio-economic rights in particular do have the effect of compelling a reallocation of resources if one works from the premise that all resources are scarce and that they have all been specifically allocated\(^\text{124}\). In other words if the executive is doing its job properly and consciously applying its mind to resource allocation, then a judgment such as that in Grootboom requires that the executive must take resources from some other population group or programme in order to accommodate the one in whose

---

\(^\text{123}\) TAC, in 57 supra at p 740

\(^\text{124}\) Hayeom N at p 270 of Davis, Cheadle, Hayeom Fundamental Rights in the Constitution, Commentary and Cases, recognises this in his observation that: “The courts will need to determine whether the level of the services delivered meets the basic needs. While s 30(1)(e) allocates to the judiciary a most important role of diverting resources from one area of social security spending to another area of need, the correct approach to be adopted to such a provision is to recognise that notwithstanding the resources are allocated through the political process, this basic need must first be met. In conformity with international jurisprudence in regard to the adjudication and enforcement of socio-economic rights, the courts may make use of orders compelling state delivery of resources as would enable the state to satisfy such claims. Under this subsection such orders may allow the state a period of grace within which to divert resources or to establish the necessary institutional machinery, or they may afford the state an opportunity to establish the necessary legislative or policy framework to meet this demand.” He notes that “In this regard the wording of s28 (1)(e) must be taken to emphasise that the state has a duty to fulfil these obligations even if it means diverting funds from other social projects.” [Note: the reference to s 30(1)(e) is a reference to the interim Constitution which, as Hayeom point out on p 265, does not differ materially from the text of the final Constitution.]

163
favour the court has decided. In effect the judiciary is substituting its own rationing
decision for a rationing decision of the executive branch of government. This clearly has
the potential to create considerable problems for the executive if there is a proliferation of
cases involving various sectors of society all clamouring that their need is the most urgent.
The wealthy in most, if not all, countries tend to be in the minority by

125 Bollyky R "If C<P+B: A Paradigm for Judicial Remedies of Socio-Economic Rights Violations" SAJHR vol 18 2002 p 161
postulates in a lengthy article that socio-economic rights are subject to enforcement in the same manner as civil and political
rights and that if a remedy requires extensive – both in quantitative and qualitative terms - policy and budgetary choices, the court
will only make them for a constitutional violation which is proportionately extensive. The article was written before the
judgement of the constitutional court in the ZAC case (fn 50 supra) was handed down. Bollyky makes the point that the argument
that judicial redress for constitutional violations may depend on the degree to which the remedy considered necessitates
involvement in policy issues and has financial implications is not new. He suggests, however, that the paradigm proposed in the
article goes much further in that it describes the intuitive process by which judges assess their legitimacy to issue a particular
remedy within a constitutional democracy with separation of powers. He posits that judges intuitively weigh their mandate
against the "illegitimacy" of issuing the relief sought – as defined by the sum of the interference in policy and budgetary
decisions. He says that judges ultimately make an assessment of remedies based on the proportionality of competing values. He
admits, however, that the usefulness of the paradigm in predicting constitutional court decisions is limited by the difficulty of
assigning precise values to variables in light of the different social, historical, moral and political forces at work in particular
constitutional disputes. It is submitted that analyses that attempt to reduce the application of law to mathematical statements will
always be of limited value due to the fact that the application of law is not a mathematical exercise involving bald numerical
reasoning (no matter how abstract or algebraic) but rather an analytical exercise involving the richly textured values embedded in
the culture and history of the society that made the law in question. It may even be dangerous to inject into the popular
consciousness the idea that decisions involving the law can be reduced to a mere algebraic formula if there is a tendency to seize
on such postulates as a substitute for genuine thought. If one considers the arguments of De Vos P "Substantive Equality After
Grootboom: the emergence of social and economic content as a guiding value in equality jurisprudence" available at
http://www.wit.ac.za/depsta/leg/eqpaper/devos.pdf that at the heart of the constitutional court's approach to social and economic
rights lies a particular understanding of the role of the Bill of Rights as a transformative document aimed at addressing the deeply
entrenched structural inequality in South African society and that Soobramoney (fn 23 supra) and Groothoom (fn 10 supra) are
entirely consistent decisions and do not represent opposing views to socio-economic rights, it is submitted that this is a far more
elegant analytical base from which to work off than a dry formula whose object is to predict the court's future decisions in this
area. It is submitted that people confuse a perceived discrepancy in the outcomes of these two cases with a discrepancy in the
approach of the court to socio-economic rights. It is facile to assume that an applicant in a socio-economic rights action must win
every time in order to achieve consistency in the law on socio-economic rights and that the interests of the particular individual
who happens to be in court will always prevail over the interests of those who are not. De Vos argues that the constitutional
court's understanding of the scope and content of social and economic rights is inextricably linked with its conception of the
right to equality in section 9 of the Constitution. He says that the court sees the right to equality on the one hand and socio-
economic rights on the other as symbiotically linked – the one providing some of the context within which the other can be
understood. He observes that a very particular conception of the right to equality is required to give effect to the project of
transformative constitutionalism identified by Klare, (fn 8 supra) pointing out that it requires a rejection of the traditional liberal
conception of equality that is based on the notion of sameness and similar treatment. The court has adopted a contextual
approach to equality in which the actual impact of an alleged violation of the right to equality on the individual within and
outside the different socially relevant groups is to be examined in relation to the prevailing social, economic and political

164
avoided at all costs because it would represent a gross imbalance in the structures of
government as envisaged by the Constitution, the judiciary and the executive need to be
alive to these dangers and must within their respective fields of operation take the necessary
measures to avoid it. In the case of the executive, for instance, policy decisions concerning
the allocation of resources can be protected against judicial sanction in some respects by
following the principles of administrative law in taking them.\textsuperscript{126}

2.3.4 Progressive Realisation

An important factor to emerge from both the \textit{Grootboom} and \textit{TAC} cases\textsuperscript{127} is chronology. The timing of the activities of the executive in fulfilling its constitutional obligations relates implicitly to the term 'progressive' in section 27(2). In \textit{TAC} the issue, by the time it reached the constitutional court, could be said to have boiled down to the issue of timing of the roll-out of the state’s comprehensive package for the prevention of mother to child transmission of HIV as opposed to whether or not the drug should be made available at public health facilities in advance of the roll-out of the comprehensive programme.\textsuperscript{128} The difference was, in the end, a matter of months. It was not that the state had no intention of introducing a

\textsuperscript{126} Hugo when it stated that:

\textit{"We need to develop a concept of unfair discrimination which recognises that although our society which affords each human being equal treatment on the basis of equal worth and freedom is our goal, we cannot achieve that goal by insisting on identical treatment in all circumstances before the goal is achieved. If one considers the judgment of the court in \textit{TAC} (fn 50 supra) it was also very much about equality and transformative constitutionalism. It was about the fact that private sector doctors could prescribe the drug for their patients while public sector doctors could not. It was about the lives of wealthy private sector patients’ babies being saved and not the lives of the babies of poor people who had nowhere else to turn."

\textsuperscript{127} Kinney D ‘Administrative Law and the Public’s Health’, \textit{Journal of Law, Medicine \\& Ethics} 30 (2002) 212-223 at 213 observes that “Administrative law can be particularly helpful in addressing the major challenges facing public health...namely, the proper allocation of scarce resources to address essentially insurmountable demands on public health agencies.” She points out (at p215) that in the US administrative law and public health have had a long relationship with much of administrative law developing in a public health context and that state regulation of the professions has generated many important doctrines in state administrative law. Interestingly, she notes that the law of administrative inspections has also evolved almost entirely on the context of public health regulation.

\textsuperscript{128} In \textit{TAC}, fn 57 supra, the constitutional court observed at para 118 p760-761: “During the course of those proceedings the state’s policy has evolved and is no longer as rigid as it was when the proceedings commenced. By the time this appeal was argued, six hospitals and three community health care centres had already been added in Gauteng to the two research and training sites initially established and it was contemplated that during the course of this year Nevirpine would be available throughout the province for the treatment of mother-to-child transmission. Likewise, in KwaZulu-Natal there was a change of policy towards the supply of Nevirpine at public health institutions outside the test sites” and at para 132 p 764: “Government policy is now evolving. Additional sites where Nevirpine is provided with a ‘full package’ to combat mother-to-child transmission of HIV are being added. In the Western Cape, Gauteng and KwaZulu-Natal, programmes have been adopted to extend the supply of Nevirpine for such purpose throughout the province. What now remains is for the other provinces to follow suit.” The question of whether it was the commencement of litigation that lead to the acceleration of the programme or whether it would have happened regardless is a debate for politicians and civil society rather than lawyers.
programme for the prevention of mother to child transmission of HIV. By the end of the year in which the constitutional court handed down its judgment, a significant majority of public hospitals were offering the full package of care identified as appropriate by the State as opposed to just making Nevirapine available as contemplated in the court order. In *Grootboom* the court referred to those whose needs were ‘most urgent’. The margins of error, from the point of view of the executive, are narrow. They are distilled to the question of whether the state was fulfilling its duties quickly enough with respect to certain interest groups and whether, in doing so, it was paying particular attention to certain groupings whose circumstances were more desperate than those of others. Whilst there is no denying that the needs of those in the most desperate of circumstances should be prioritized, it is submitted that litigation against the state on the basis of the timing of the delivery of access is especially problematic because, in the case of health care services for example, it potentially requires an overview and a review of the entire programme of health services delivery over the next five to ten years. This is not a task which it is appropriate for the judiciary to undertake. Time is a resource. Unfortunately unlike other resources it is not one that can be increased. Children, for instance, grow up and pass the stage where their physical and mental development can be boosted through appropriate nutrition. Those who specialize in emergency medicine speak of a ‘golden hour’ within which to reach and treat a trauma patient before serious and irreversible physical damage or death ensues. Other resources such as human resources, availability of medicines etc can be expanded over time but time itself cannot. This is why prioritisation of health programmes is a form of rationing in its own right. In the context of health care, and specifically the urgent need for HIV and AIDS counsellors to help with pregnant patients who have been diagnosed as HIV positive, nurses in rural clinics whose duties would have included a walk to the neighbourhood school to attend to the health needs of the children there in connection with vaccinations and nutritional needs are now in certain instances no longer able to fulfil those duties. Whilst it would undoubtedly be argued that the interests of these children are not as urgent as those of mothers and their babies in the prevention of mother-to-child transmission of HIV, those babies will eventually grow up and attend that same school where, due to lack of adequate nutrition and immunisation programmes, they may die
anyway. A well-rounded public health programme is not necessarily aimed predominantly at the postponement of death. The point is that an unbalanced focus on a particular area of health service delivery, due to the fact that its protagonists have the loudest voices, or that their issue is more emotionally charged or that they have the most money for litigation, and a resulting inappropriate prioritisation of service delivery is not in the broader interests of public health. Prioritisation of health programmes and the allocation of available resources on emotional grounds is a path to chaos.

2.3.5 “Everyone”

A further significant aspect of the manner in which the right is expressed is the use of the word “everyone”. Everyone has the right to have access to health care services. There are few rights in the Bill of Rights that are accorded only to South African citizens. These relate primarily to political rights such as the right to vote, the right to form a political party etc. This raises questions as to the rights of non-citizens, especially foreign nationals in South Africa, to have access to health care services, particularly when they are not in a position to make payment for such services. In Larbi-Odam the constitutional court held that discrimination between permanent residents and citizens for employment purposes was not justified. It pointed out that:

“The government has made a commitment to permanent residents by permitting them to so enter, and discriminating against them in this manner is a detraction from that commitment.”

It is submitted that the same argument holds for permanent residents in respect of a right of access to health care services. But what of temporary residents and those who are illegally in the country?

130 Larbi-Odam and Others v Member of the Executive Council for Education (North-West Province) and Another 1998 (1) SA 745 (CC)
131 Larbi-Odam fn 130 supra at p759
132 Klaaren J ‘Non-citizens and Equality’ 1998 (14) S Afr JHR 286 at 293 observes that: “the implications of the principle announced in Larbi-Odam go beyond the employment field. The two most prominent examples concern two categories of welfare payments depended upon heavily in rural areas of the country. As a matter of present legislation, old age pensions are restricted to citizens. Permanent residents are thus excluded. Likewise s 3(c) of the Social Assistance Act 59 of 1992 which came into effect on 1 March 1996 restricts social grants such as welfare payments to South African citizens. Both these restrictions are vulnerable to attack in light of the Larbi-Odam reasoning. If permanent residents are able to reside and compete for employment on equal terms with citizens, there would seem no reason why they should not enjoy the same social safety net underpinning the
2.3.5.1 Temporary Residents

There is a wide variety of purposes why people enter South Africa from other countries on temporary residence permits ranging from vacation through attendance of international conferences through exploration of business opportunities to obtaining medical treatment. Many of them have health insurance but some do not. If they enter the country with a health condition what is the duty of the South African government towards them? It could be argued that the government, in permitting them to enter the country, even if only for a limited period, accepted certain obligations towards them such as those contained in the Bill of Rights. The national department of health often receives enquiries from temporary residents who have been in the country for periods of several months as to whether medication for chronic health conditions such as diabetes can be given to them free of charge by public hospitals because they receive it free of charge in their country of origin. The response of the department is usually that they are obliged to obtain the medication in the private sector and pay for it. However, if such a person presents in diabetic coma at a public hospital this poses a dilemma. Even if such a person presents at a public hospital in non-emergency circumstances requesting medication, if there are inadequate controls in place to ensure that foreign nationals are not treated at such facilities or if such a person says he has no money to buy insulin what are the choices? Ideally such people should not be permitted to enter the country without medical insurance but this does not necessarily

competition (at least beyond a reasonable initial restriction period to discourage unfounded applications for permanent residence). The line of argument that these restrictions are unconstitutional is directly supported by the text of the final Constitution. There is no constitutional restriction to citizens of the right of access to social security.”

In fact Klaaren, fn 132 supra, at 294 points out that in terms of the criteria announced in Larbi-Odum (fn 130 supra) with respect to non-citizens in the equality context, temporary residents bear some similarities to permanent residents. He observes that like permanent residents, temporary residents constitute a political and largely powerless minority and would also be subject to threats and intimidation demonstrating their vulnerability. He states that: “The differences comes perhaps in regard to the second rationale to which Mokgoro J referred, the extent to which the status of a non-citizen is a personal attribute that is difficult to change. If anything, for temporary residents, this argument is stronger than for permanent residents, some of whom have the option to naturalise but choose not to. Indeed Mokgoro J’s reasoning as to the immutability of the attribute did not depend on its longevity but rather on the individual’s ability to change the attribute… Before leaving the topic we should note that Larbi-Odum did not present a case of differentiation on the grounds of temporary residence. Whether that distinction is proscribed in some way by the equality clause remains an open question.” Klaaren goes on to ask the question whether discrimination against temporary residents on the ground of citizenship is unfair, noting that the court in Larbi-Odum drew a distinction between permanent and temporary residents. It based its conclusion that the discrimination against permanent residents was unfair on the fact that permanent residents needed job security in the context of potential indefinite employment; that they would be allowed to become citizens in a few years; that they had been selected into the community; and that they had made a conscious commitment towards South Africa. Temporary residents, observes Klaaren, by definition do not meet these standards. This does not, however, rule out the possibility of unfair discrimination against temporary residents in other circumstances.

They even try to cite non-existent international agreements between South Africa and their countries of origin as the basis for this boon!
always happen. It is submitted that a person who is a temporary resident and is in a diabetic coma would become the responsibility of the public health sector which then raises the question whether it would not be cheaper to supply such a person with the chronic medication, in this case insulin, and where possible charge him or her for it even in the public sector, rather than end up with a comatose and very expensive patient on one's hands. From a legal perspective, it is submitted that at least the bare minimum of health care services would have to be delivered sufficiently to enable the person to return to his country of origin but these issues are more difficult to control in the field without highly proactive management of the situation by government officials which in itself entails costs to the state. From a pragmatic perspective, such money could be better spent on treating South African citizens and permanent residents who have nowhere else to go and no other country to look to for health care services.

Klaaren\textsuperscript{135} discusses four types of citizenship. These are cultural citizenship, membership citizenship, post-national citizenship and lawful status citizenship. The first has as its principal tent an identification between a particular culture and citizenship. He notes that it is often ruled out of the analysis on first principles by many liberal democratic theorists of citizenship. In any event this kind of citizenship is likely to find scant support within the parameters of the Constitution. The second adopts a sharp distinction between citizens and non-citizens, the latter being defined as aliens. He notes that this is a vision of citizenship as a status. The third, post-national citizenship, has at its centre the simple notion that persons are entitled to human rights in their capacity as human beings. The conception of citizenship most reflected in the jurisprudence of the constitutional court is, however, lawful status citizenship. Klaaren describes its core nation as being that all persons who are lawfully and permanently residing within a country are entitled to be full members of the community of that country. He observes that in contract to membership citizenship, lawful status citizenship accepts gradations within the granting of privileges of membership. It is submitted that purely from an economic and practical point of view in the light of the limited availability of resources in a developing country such as South Africa, this is the most pragmatic and practically feasible view of citizenship. However, the Constitution's

\textsuperscript{135} Klaaren fn 132 supra at 296
use of the word ‘everyone’ in most instances, as opposed to the term ‘citizen’ renders such
discussions of the meaning of the term ‘citizen’ largely irrelevant unless one is prepared to
draw the illogical conclusion that the two terms are synonymous.

2.3.5.2 Illegal Immigrants

If this is the position of persons having temporary residence permits what then are the
obligations of the South African government to persons who are in the country illegally?
This question presents itself at a number of different levels within both the private and the
public health sectors. Many people illegally enter South Africa from neighbouring countries
with the express intention of obtaining medical treatment in the public health sector
because such services are not available in their own countries. Do they have a constitutional
right of access to health services as much as does any South African resident? If the answer
is “yes” then this could clearly lead to unsustainable demands on South African resources at
the expense of those who are legitimately living in the country. However, if the answer is
“no”, then this would not accord with international and constitutional law principles of
humanitarianism\(^{136}\). In practical terms can a rural, primary health care clinic near the
borders of South Africa legitimately turn away people who have illegally crossed into
South Africa to obtain services at the clinic? It is submitted that logically there would have
to be some kind of limitation imposed upon the delivery of health care services to such
people in order to protect the constitutional rights of South African residents.

One of the ways of addressing the problem in practical terms is to enter into international
agreements with neighbouring states in terms of which only limited numbers of their
nationals will be treated, and in controlled circumstances, for payment. This does not,
however, address the question of whether foreign nationals illegally present in South Africa
have a constitutional right to health care services. One may be able to argue that the
government has no legal duty to such persons because it has not permitted their entry into

\(^{136}\) Pieterse M “Foreigners and socio-economic rights: Legal entitlements or wishful thinking?” 2000 (63) THRHR p 51, points out
that “Migration is a feature of international reality which cannot be ignored, and which must not lead to violations of those rights
essential to humanity. We cannot make all fundamental rights dependent on geographic location, for if we do, then we run the
risk of replacing humanity with citizenship, a mere political category.”

170
the country and therefore has no legal obligations towards them. Section 36 of the Constitution allows for the justifiable limitation of rights but “only in terms of law of general application to the extent that the limitation is reasonable and justifiable in an open and democratic society based on human dignity, equality and freedom, taking into account all relevant factors”. Some of these factors are the importance of the purpose of the limitation, the relation between the limitation and its purpose and the nature of the right. It is submitted that possibly with the exception of emergency medical treatment, a public sector health care institution may have an argument for turning away persons who are illegally in the country. However, this would have to be in terms of a law of general application. The Immigration Act may be such legislation. One of its objects is to ensure that “immigration control is performed within the highest applicable standards of human rights protection”. The Immigration Act provides specifically for entry of foreign nationals into South Africa for medical treatment reasons in section 17. In terms of section 29 of

---

137 Jordan DW "The Open Society" 2001 (64) THHR p107 notes that “Since the dawn of our country's constitutional era the phrase open and democratic society has become well known.” He explores what is meant by the concept 'open society' with reference to the work of Henry Bergson in the early nineteen thirties and Karl Popper in the nineteen forties and observes that in his definition of open society Popper emphasizes the concepts of freedom, humanness and rationality. He suggests that since these three concepts are used as the basis for measuring openness, they can most suitably be described as principles of an open society. In examining more closely the principle of freedom, Jordan points out that Judge Ackermann, in his minority judgement in Ferreira v Levin NO; Vryenhoek; v Powell NO (1996 (1) SA 984 (CC)) contends that the right to freedom and security of the person is a residual freedom right in the sense that it encompasses all the aspects of freedom which have not been specifically named in the rest of Chapter 3 of the interim Constitution. He gives a broad and generous construction to this right differing from the majority of his colleagues on the bench. Jordan notes that the fact that the interim Constitution's limitation clause demanded that the limitation on the right to freedom and security of the person be not only reasonable, but also necessary influenced the majority's judgment to a considerable degree and that since the necessity requirement is not included in the 1996 Constitution, Judge Ackermann's interpretation of the right to freedom and security of the person "can very likely be followed in future constitutional cases." He distinguishes between an open society and a free society by saying that an open society encompasses a free society but is more than that. It embraces the principles of humanness and reasonableness, asserting that these two principles have specific meaning and purposes independent of freedom. He continued to observe that in S v Lawrence; S v Negal; S v Solberg (1997 (4) SA 1176 (CC)) Sachs J inescapably links the open society to diversity and typifies it as pluralistic - "one in which there is no official orthodoxy or faith": He refers to the words of Sachs J in National Coalition of Gay and Lesbian Equality v Minister of Justice (1991 (1) SA 6 (CC)) that: "What becomes normal in an open society, then, is not an imposed and standardised form of behaviour that refuses to acknowledge difference but the acceptance of the principle of difference itself, which accepts the variability of human behaviour" and goes on to observe that Sachs J states that the acceptance of the principle of difference does not imply an absence of a point of view or an absence of morality. In conclusion he proposes the following definition of an open society: "A society which rejects the absolute authority of merely established social arrangements, while trying to preserve and develop social arrangements based on the principles of freedom, humanness, rationality and diversity." In the health care context the principles of diversity, humanness and rationality are especially relevant as evidenced inter alia by the Hippocratic Oath and the International Code of Medical Ethics of the World Medical Association. (See www.pha.org/wabld/new/doctor/ethic_classical for the classical version of the Hippocratic Oath and www.jk.ede/intercepts/sep/act/World WMF/WMF/Code of Medical Ethics of the WMFA) A rational society might well be forced to limit the help it gives to persons who are not its members in keeping with limited availability of resources but would not act in a manner that was inhumane or unfairly discriminatory.

138 (1) A medical treatment permit may be issued to a foreigner intending to receive medical treatment in the Republic for longer than three months by-
(a) the Department, as prescribed; or
(b) the Department through the registers' office or a designated official of an institution where the foreigner intends to receive treatment, provided that such institution-
(i) has been approved by and is in good standing with the Department;
(ii) certifies that it has received guarantees to its satisfaction that such foreigner's treatment costs will be paid;
this same Act, foreigners who are infected with certain infectious diseases as prescribed from time to time are prohibited persons. As such they do not qualify for a temporary or permanent residence permit. Section 42 of this Act states that save for necessary humanitarian assistance, no person, shall aid, abet, assist, enable or in any manner help an illegal foreigner. It is not clear what exactly is encompassed by the phrase ‘necessary humanitarian assistance’ but it is submitted that, in the absence of an agreement or the status of the foreign nationals as refugees in terms of national law, it cannot reasonably include health care services that are not immediately necessary to save life. For purely pragmatic reasons, foreigners should not necessarily be entitled to socio-economic rights to the same extent and in the same circumstances as residents. This could change with time and the availability of resources but for the foreseeable future, it is submitted that the obligations of the state are primarily towards South African citizens and lawful residents. Some may argue that the temporary nature of the presence of foreigners in the country will itself limit the potential costs of affording them the benefit of the socio-economic rights enjoyed by South African residents. However, if there is a relatively large, albeit revolving population of foreigners constantly illegally present in the country the cost of fulfilling the full spectrum of socio-economic rights in their case is likely to be unaffordable, especially given the relatively low level of their contribution to the economy as a whole. Whilst it may be eminently sensible from a humanitarian perspective, from an economic perspective such

(iii) in the case of a minor, provides the name of a person present in South Africa who is, or has accepted to act, as such minor’s guardian while in the Republic or certifies that such minor will be accompanied by a parent or guardian to the Republic;

(iv) undertakes to provide a prescribed periodic certification that such foreigner is under treatment; and

(v) undertakes to notify the Department when such foreigner has completed his or her treatment.

(2) When so requested by, and after consultation with, the Department of Health, the Department shall determine an ad hoc fee for the issuance of medical treatment permits in respect of institutions publicly funded or subsidised.

(3) A medical treatment permit does not entitle the holder to conduct work.”

One wonders whether, from a constitutional point of view, this is a justifiable limitation of the right not to be unfairly discriminated against on the basis of disability.

Section 27 of the Refugees Act 130 of 1998 stipulates that: A refugee “enjoys full legal protection, which includes the rights set out in Chapter 2 of the Constitution and the right to remain in the Republic in accordance with the provisions of this Act”. More specifically subsection 27 (g) provides that a refugee “is entitled to the same basic health services and basic primary education which the inhabitants of the Republic receive from time to time”. It is curious that the legislature thought fit to include section 27(g) after stating in 27(b) that refugees are entitled to all of the rights in Chapter 2 of the Constitution which include the right to health care services and to education. One of the objects of this Act is to “To give effect within the Republic of South Africa to the relevant international legal instruments, principles and standards relating to refugees”. In terms of section 3 of the Act, “a person qualifies for refugee status for the purposes of this Act if that person-

(a) owing to a well-founded fear of being persecuted by reason of his or her race, tribe, religion, nationality, political opinion or membership of a particular social group, is outside the country of his or her nationality and is unable or unwilling to avail himself or herself of the protection of that country, or, not having a nationality and being outside the country of his or her former habitual residence is unable or, owing to such fear, unwilling to return to it; or

(b) owing to external aggression, occupation, foreign domination or events seriously disturbing or disrupting public order in either a part or the whole of his or her country of origin or nationality, is compelled to leave his or her place of habitual residence in order to seek refuge elsewhere; or

(c) is a dependant of a person contemplated in paragraph (a) or (b)."
a policy could be suicidal. For a developing country that cannot even afford to realize in full socio-economic rights for citizens, it is submitted that such an approach is inconceivable. Pieterse argues that though the Department of Home Affairs contends in its White paper on international migration that constitutional provisions relating to everyone cannot always apply equally to illegal aliens, legal residents and citizens alike, there is no constitutional indication why all aliens should not in principle be equally entitled to all constitutionally entrenched rights other than those reserved for citizens. He notes with regard to emergency medical treatment that: "Commendably the Department of Home Affairs acknowledged in its Green Paper on international migration that all aliens, legal or illegal, should be afforded the right to emergency medical treatment, although no detailed provisions to this effect are contained in the Department’s subsequent White Paper on the same issue." With particular regard to access rights such as those contemplated in section 26(1), 26(2) and 27(1) of the Constitution, Pieterse observes that the Department of Home Affairs apparently does not wish to extend any social welfare benefits (apart from emergency medical treatment and temporary schooling) to anyone other than citizens and

141 Pieterse fn 136 supra. He notes that: "Modern society is learning to accept that the benefits of citizenship are not limited to civil and political rights but include social and economic rights. Social resources like health and education are vital for the citizen’s economic efficiency and for furthering his and other citizens’ civil and political rights. It is argued that welfare rights are “conceived as a core element of citizenship in Western society” and are “integral to the modern sense of citizenship” Whether the entitlement to social and economic rights should extend to non-citizens is problematic. International human rights documents conferring such rights upon aliens are not widely ratified and many states are reluctant to include aliens in social assistance schemes. Because of the nature of socio-economic rights their availability is often dependent on the availability of state resources and they can therefore not always be guaranteed to the same extent as civil and political rights. Many countries are not in a position to provide adequately for the socio-economic needs of their citizens, let alone those of foreigners in their territory. Furthermore, aliens (especially those of the illegal variety) are often blamed for contributing to socio-economic hardship by taking away jobs and public facilities believed to be rightly due to citizens. South Africa’s Constitution differs significantly from that of the United States and most other countries of the world in that it expressly guarantees socio-economic rights. Both categories of socio-economic right are conferred on all people without any distinction between citizens and non-citizens...The extent to which aliens will succeed in relying on these rights is anything but clear."

142 Pieterse fn 136 supra at p 37. Interestingly the Immigration Act No 13 of 2003, which is not yet operational, makes no express mention of the rendering of emergency medical treatment or any other kind of health services to foreigners illegally in the country. Section 42 simply says that save for “necessary humanitarian assistance” no person, shall aid, assist, enable or in any manner help an illegal foreigner. The Promotion of Equality and Prevention of Unfair Discrimination Act No 2000, which is not yet operational, prohibits unfair discrimination per se. It defines ‘prohibited grounds’ of discrimination as:

- (a) race, gender, sex, pregnancy, marital status, ethnic or social origin, colour, sexual orientation, age, disability, religion, conscience, belief, culture, language and birth; or
- (b) any other ground where discrimination based on that other ground
  - (i) causes or perpetuates systemic disadvantage;
  - (ii) undermines human dignity; or
  - (iii) adversely affects the equal enjoyment of a person’s rights and freedoms in a serious manner that is comparable to discrimination on a ground in paragraph (a).

A person’s citizenship (i.e. of another country) is not listed expressly in the prohibited grounds but culture or birth could include citizenship by implication. In the Schedule, under section 3 it lists some unfair practices relating to health services and benefits as:

- 3 Health care services and benefits
  - (a) Subjecting persons to medical experiments without their informed consent.
  - (b) Unfairly denying or refusing any person access to health care facilities or failing to make health care facilities accessible to any person.
  - (c) Refusing to provide emergency medical treatment to persons of particular groups identified by one or more of the prohibited grounds.
  - (d) Refusing to provide reasonable health services to the elderly. “
permanent residents. He further observes that no authorities are cited for this stance and that it is doubtful whether this policy is in accordance with the Constitution. He does concede the possibility that the limitations clause in the Constitution may be used more vigorously against immigrants and that it is easily foreseeable that despite aliens' entitlement to socio-economic rights, the courts and the legislature will favour the socio-economic needs of citizens when deciding on policy in this regard, pointing to the dictum of Chaskalson P in *Soobramoney*¹⁴³ to the effect that:

"We live in a society in which there are great disparities in wealth. Millions of people are living in deplorable conditions and in great poverty. There is a high level of unemployment, inadequate social security and many do not have access to clean water or to adequate health services."

It is submitted that the restriction of socio-economic benefits to, or discrimination in the area of socio-economic rights against, illegal foreigners is neither unfair nor unreasonable as long as there are limited resources available to the state for the fulfilment of socio-economic rights. South Africa is surrounded by countries that are much poorer than itself with literally millions of people who are in need of adequate health services and other socio-economic benefits. If there were no lawful way to ration health care services to illegal aliens in South Africa, it is submitted that the state would be unable to fulfil its constitutional obligations to progressively realize the fulfilment of socio-economic rights to anyone. If as fast as one illegal alien is deported, another enters the country and demands and receives health care services from the state, there will be a constant, very large rotating population of illegal aliens depleting the limited resources available for the rendering of those health care services and South African citizens and residents, with nowhere else to go for such services, are likely, contrary to the intention of the Constitution, to be progressively deprived of them. There is significant scope for argument that the obligation to protect, respect, promote and fulfil the rights in the Bill of Rights works in more than one direction and that it may also require the state to take reasonable measures to ensure that its capacity to progressively realize the socio-economic rights in the Bill of Rights is not eroded to the point where it no longer exists. The fact that the Constitution refers to citizens

¹⁴³ *Soobramoney* En 23 supra
in some cases and "everyone" in others does not necessarily imply that "everyone" includes illegal aliens. There are two categories of persons on the spectrum between citizens and illegal aliens. These are temporary residents and permanent residents. It is conceivable that the 'everyone' referred to by the Constitution means everyone who is lawfully present in the country. There seems to be a logical disjunction in the argument that illegal aliens fall within the scope of the term 'everyone' used in the Constitution when they have defied the same legal system of which the Constitution is the grundnorm by their presence in the country. The Constitution does not award rights to persons in other countries- only to persons in South Africa. It could be argued that it does not contemplate or condone the illegal presence of citizens of other countries in South Africa since to do so would be to condone the violation of a part of the legal system of which it is the foundation. Illegal aliens are thus, for purposes of the South African legal system, in a sense not in South Africa since their entry took place without the sanction of the legal system. It thus seems incongruous to argue that they can claim rights in terms of that same legal system to all the benefits it confers upon those lawfully present. This is not to say that illegal aliens should not be accorded basic human rights in the process of their detention and deportation. Human rights are a concept of international law and therefore of much wider geographical application than the specific rights contained in the South African Constitution. It is of interest on this note, that Pieterse himself points out that international human-rights documents conferring social and economic rights upon aliens are not widely ratified. Furthermore, even the 1990 International Convention on the Protection of the Rights of All Migrant Workers and Members of their Families which he cites as arguably the most progressive human-rights instrument in this regard, guaranteeing amongst other things that migrant worker shall be afforded equal treatment to nationals with regard to social security, the right to emergency health care, access to educational institutions, vocational training and housing schemes does not apparently include a right to health care services apart from emergency medical treatment. The other international legal instrument cited, the United Nations Declaration on the Human Rights of Individuals Who Are Not Nationals of The Country in Which They Live, determines that aliens lawfully residing in a state should enjoy rights to safe and healthy working conditions, health protection, medical care, social
security, social services and education. This is logical because these people by following the legal procedures necessary to be lawfully present in the country have subjected themselves to the laws of that country and fall within the full scope of its legal system. The state in allowing them to enter has made a legal commitment to them. The court in Larbi Odam stressed not only the fact that the state had made a commitment to permanent residents by permitting them to enter the country but also that the permanent residents had made a commitment to the country.

2.3.5.3 Health Tourists

The other question is whether, from a policy perspective, if the State wished to discourage so-called ‘health tourism’, if would be able to do so. Although this is predominantly a private health sector issue, people entering the country in significant numbers with the express purpose of undergoing surgery or some other form of medical treatment are likely to inadvertently affect the access to health care services of South African residents. The Immigration Act, which is not yet operational at the time of writing, does envisage such a possibility and makes express provision for permits for the purpose of medical treatment but only where such treatment is likely to be for longer than three months. In reality there are very few medical interventions which require even one month’s stay in a hospital and generally speaking people who are treated for three months or longer are likely either to have a chronic health condition which cannot be cured by a single series of interventions or they have a terminal illness. The harsh economic reality is that either way, one would not want to see such patients in South Africa. If their medical insurance benefits run out or they suddenly take an unanticipated turn for the worse they may become a burden on the public health sector in which resources are already severely overstretched. Many health tourists come to South Africa for elective surgery in the private sector such as cosmetic surgery and

---

144 Pistorse fn 136 supra at p55 and footnote 28
145 Larbi Odam fn 130 supra at p759
146 See Larbi Odam fn 130 supra at p758-749 where Mokgoro J stated that: “Permanent residents are generally entitled to citizenship within a few years of gaining permanent residency, and can be said to have made a conscious commitment to South Africa. Moreover, permanent residents are entitled to compete with South Africans in the employment market. As emphasised by the appellants, it makes little sense to permit people to stay permanently in a country, but then to exclude them from a job they are qualified to perform.”
147 Immigration Act fn 142 supra
surgery for less pressing health needs. Such treatment nonetheless requires the utilisation of human and other resources such as operating theatres which could be used in the treatment of South African residents. Such treatment rarely takes even one month. There is apparently no obligation in terms of the Immigration Act on people entering South Africa for the express purpose of receiving medical treatment for less than three months, which is likely to be the majority, to apply for a medical treatment permit or even declare the real reason for their entering the country.

Whilst at present most health tourists target the private health sector in South Africa, the question of whether the health care services are delivered in the public or the private sectors is largely irrelevant. Even where there is spare bed capacity in private hospitals, for instance, there are significant shortages of other resources used in the delivery of health care in South Africa, particularly human resources, at various levels within the health care system. If the private sector is doing a roaring trade in health tourism and is able to attract human resources away from the public sector and into the private sector to render health care services to tourists, this constitutes a significant loss for the public health sector and could severely impact upon its capacity to deliver health services to citizens and permanent residents. There is an opportunity cost in terms of the treatment of a South African citizen or permanent resident, in servicing a health tourist. Whilst there are not the long waiting lists for treatment in South Africa that there are in the British National Health Service, the question is whether, if such long waiting lists did develop as the result of an influx of health tourists, would there be a constitutional obligation upon the South African government to ensure that this does not happen? It is submitted that there would be such a constitutional obligation in view of the injunction not only to promote and fulfil the rights in the Bill of Rights but also to respect and protect them.

The other possibility is that health tourism could lead to a situation where private hospital treatment becomes so expensive for South African residents, due to the fact that a private hospital would rather treat a foreign patient paying in a strong foreign currency than a South African resident who cannot compete with weak rands, that the private sector becomes largely inaccessible to South African patients. They will then be forced to fall
back on the already overburdened public health sector for their health needs. In this way, valuable health resources located in South Africa could effectively be diverted away from South African residents for the benefit of foreign nationals who contribute very little to the economy in comparison to a tax paying local resident. The issue of health care services to foreigners also has a bearing on the question of the horizontal application of the Bill of Rights. If private health institutions are constitutionally obliged to provide health care services to South African residents as opposed to foreign nationals, they will be restricted in their capacity to deliver those same services to non-residents. Liebenberg\textsuperscript{148} remarks with regard to the rights implicit in section 27(3) that this subsection is applicable horizontally and hence binds private hospitals, clinics, consulting rooms and ambulance services. Since emergency medical treatment is a specific, specialised subset of health care services it could be argued that the right to health care services contemplated in section 27(1) is not necessarily also horizontally applicable and that, in the present context, emergency medical services are in any event not the kind of services that are usually targeted by health tourists except unintentionally. The kind of health care services that health tourists are interested in are very often cosmetic surgery and other types of services that fall into the non-emergency category. Furthermore the private facility at which they are to undergo the treatment is likely to have made sure that they are in a financial position not only to pay for the contemplated treatment but also for other treatment in the event that something goes wrong. If private health facilities are not bound by a horizontal application of the rights in section 21(1) of the Constitution to deliver health care services to South African residents then from the current legal perspective they are under no obligation not to treat foreign patients. From a practical point of view, however, this may not be a desirable state of affairs given the potential indirect effects on the capacity of the health care system as a whole to deliver services to locals and, depending upon the magnitude of health tourism and its impact on the South African health system, it may have to be restricted in some way in order to protect the right of South African residents to access to health care services. The question of the horizontal application of the rights in the Bill of Rights is dealt with elsewhere in this chapter.

\textsuperscript{148} Davis, Chandle, Haycox (fn 124 supra) p 358
2.3.6 Available Resources

As discussed at length in chapter 1, the question of available resources is central, from a constitutional point of view, to the right of access to health care services. Liebenberg\(^{149}\) observes that the critical question that arises is whether the ‘available resources’ of the state refers to its existing budgetary allocations, or whether it is a broader concept, incorporating the totality of the resources available to the state. She points out that Alston and other international law scholars are of the view that the phrase ‘to the maximum of its available resources’ in art 2 of the ICESCR refers to the overall resources of the country and is not confined to budgetary appropriations\(^{150}\). Liebenberg notes further that the implication of the former interpretation is that the state would be in a position to determine the extent of its own obligations, by, for example, allocating minimal funds to the portfolios of housing, education, etc. The further question also arises whether the ‘available resources’ of a provincial government are to be determined only by reference to the budget of that provincial government or whether a court can enquire into the national government’s allocations to provincial levels in areas critical to the realisation of the rights. It is submitted that the views of Alston \textit{P et al} on the level of international law are not necessarily appropriate or applicable to constitutional questions involving the availability of resources for the following reasons:

International law, as stated in chapter one, is essentially involved with the obligations of nation states to observe the provisions of various instruments of international law as opposed to the obligations of states towards their citizens and of citizens towards each other. Whilst these latter types of obligations clearly have an impact on the state’s fulfilment of its obligations in terms of such instruments of international law, in terms of the South African Constitution, international law does not automatically form part of the South African legal system. This is entirely consistent with the rule of law in terms of

\(^{149}\) Chaskalson \textit{et al}, fn 67 supra at p41-41
\(^{150}\) Chaskalson \textit{et al} fn 67 supra at p41-41 footnote 3

179
which the Constitution has been designated as the supreme law of the country and therefore even international law which is inconsistent with the Constitution cannot legitimately be applied by the courts. The Constitution itself is in some ways a moving target as a result of its emphasis on the values that underlie an open and democratic society and the fact that the constitutional court has emphasised the process approach to the Constitution.\(^{151}\)

Due to the fact that international law is essentially involved with the obligations of nation states \textit{inter se} and to the international community of nation states as a whole, its perspective must, of necessity, because it stands outside systems of national law, be different to the perspectives of national law. The perspective of international law is one of being on the outside looking in whereas the perspective of South African constitutional law is one of being on the inside looking out. Consequently the approach of international law in measuring the extent to which a nation state as a whole has met its obligations with regard to the available resources must be that suggested by Alston \textit{et al}. It has to be a bird’s eye view. However, from the point of view of the constitutional order within South Africa, recognising the doctrine of separation of powers, a system of fiscal federalism and imposing a complex matrix of obligations on national, provincial and local governments, one cannot afford to take the bird’s eye view of international law if one wishes to preserve the supremacy of the Constitution within South Africa\(^{152}\). The weave of constitutional and

---

\(^{151}\) See for instance the words of Chaskalson P in \textit{Van Rooyen And Others v The State And Others (General Council Of The Bar Of South Africa Intervening)} 2002 (3) SA 246 (CC) at para 34, p 273: “Bearing in mind the diversity of our society this customary injunction is of particular importance in assuring institutional independence. The well-informed, thoughtful and objective observer must be sensitive to the country’s complex social realities, in touch with its evolving patterns of constitutional development, and guided by the Constitution, its values and the differentiation it makes between different levels of courts.” The court in \textit{Dawood, In 12 supra, at p 1043 comments: “Thus as this right has ‘been crucial to our constitutional project’, very compelling reasons would have to be advanced to justify its limitation.” (writer’s emphasis) See also Klar K “Legal culture and constitutionalism” (1998) 14 \textit{SAJHR} 146 who speaks of transformative constitutionalism and notes that the Constitution as a transformative document requires continual reinvention to make sense of the changing world. The constitutional project becomes a long term project of constitutional enactment, interpretation and enforcement.

\(^{152}\) This question of differences in perspective is quite nicely illustrated in the observations of the court in \textit{Mangope v Van Der Walt And Another NNO} 1994 (3) SA 850 (BG) where it said that: “I do not consider that the principles of international law, to which I was referred, are apposite to a case of the type now before me. I think it is a question of constitutional law. As Lord Reid observed in \textit{Madimabatso v Landen-Burke and Another} [1968] 3 All ER 561 (PC) at 573H-B: “With regard to the question whether the usurping government one now be regarded as a lawful government much was said about de facto and de jure governments. Those are concepts of international law and in their Lordships’ view they are quite inappropriate in dealing with the legal position of a usurper within the territory of which he has acquired control. As was explained in \textit{Carl-Zeiss-Stiftung v Royner and Keeler Ltd} (No 2) when a question arises as to the status of a new regime in a foreign country the court must ascertain the view of Her Majesty’s Government and act on it as correct. In practice the government has regard to certain rules, but those are not rules of law. And it happens not infrequently that the government recognises a usurper as the de facto government of a territory while continuing to recognise the ousted Sovereign as the de jure government. But the position is quite different where a court sitting in a particular territory has to determine the status of a new regime which has usurped power and acquired control of that territory. It must decide. And it is not possible to decide that there are two lawful governments at the same time while each is seeking to prevail over the other. It is a historical fact that in many countries - and indeed in many countries which are or have been under British sovereignty - there are new regimes which are universally recognised as lawful
national law is much more dense and intricate than that of international law and for the national system to be internally consistent, one has to look to the Constitution, as opposed to international law, as the grundnorm. Provision has been made in the Constitution for courts and other tribunals to consider international law with a view no doubt inter alia to observing South Africa’s international legal obligations but there is no obligation upon the courts to apply international law irrespective of whether or not it is consistent with the values enshrined in the Constitution. In Grootboom and TAC\textsuperscript{153}, for example, the constitutional court refused to apply the international law principle of minimum core obligations.

As pointed out in the previous chapter, taken to its logical extreme the question of a country’s available resources could extend to implied obligations upon the international community to ‘put its money where its mouth is’. If it seeks to impose obligations upon a country which require resources that country does not have and there are mechanisms for financial and other support at international level available to that country then those mechanisms must be mobilised to ensure that the resources are made available otherwise the pointing finger of accusation is simply turned back in the direction of the accusers. At a certain level international law seems inherently self-contradictory since on the one hand it seeks to deny national boundaries in terms of legal principles by insisting that international legal principles are applicable across national boundaries, regardless of the views of those nations on the subject, but on the other seeks to hold individual nations liable for their failure to observe those principles. It seems that the permeability of national boundaries for purposes of international law is, at times, unidirectional. If the courts themselves\textsuperscript{154} do not believe that they have the necessary resources to make decisions concerning the allocation

\textsuperscript{153} Grootboom fn 10 and \textit{TAC fn 57 supra}

\textsuperscript{154} \textit{TAC fn 57 supra} at para 37, p 740: “It should be borne in mind that in dealing with such matters the Courts are not institutionally equipped to make the wide-ranging factual and political enquiries necessary for determining what the minimum-core standards called for by the first and second amici should be, nor for deciding how public revenues should most effectively be spent” and para 38: “Courts are ill-suited to adjudicate upon issues where Court orders could have multiple social and economic consequences for the community.”

181
of resources at provincial level\textsuperscript{159}, the notion that they can even begin to contemplate the allocation of resources across provinces and take on the role of Parliament to provide for ‘the equitable division of revenue raised nationally among the national, provincial and local spheres of government’ is nothing short of mind boggling. It is submitted that the constitutional court has itself answered the question as to whether the court has the power to enquire into the national government’s allocations to provincial levels in areas critical to the realisation of the rights in \textit{TAC} where it noted that:

"The Constitution contemplates rather a restrained and focused role for the Courts, namely, to require the State to take measures to meet its constitutional obligations and to subject the reasonableness of these measures to evaluation. Such determinations of reasonableness may in fact have budgetary implications, but are not in themselves directed at rearranging budgets. In this way the judicial, legislative and executive functions achieve appropriate constitutional balance."\textsuperscript{156}

Viewed systemically, it is submitted that the role of the courts is not to rearrange the system in all its complex interrelationships but rather to exert acupressure at sensitive points within the system so as to encourage it to move or develop in a certain way.

Section 27(2) stipulates that the state must take reasonable legislative and other measures to achieve the progressive realisation of the right within available resources. In this regard, the constitutional court has pointed out that:

"The third defining aspect of the obligation to take the requisite measures is that the obligation does not require the State to do more than its available resources permit. This means that both the content of the obligation in relation to the rate at which it is achieved as well as the reasonableness of the measures employed to achieve the result are governed by the availability of resources. Section 26 does not expect more of the state than is achievable within its available resources. As Chaskalson P said in \textit{Soobramoney}:

‘What is apparent from these provisions is that the obligations imposed on the state by ss 26 and 27 in regard to access to housing, health care, food, water, and social security are dependent upon the resources available for such purposes, and that the corresponding rights themselves are limited by reason of the lack of resources. Given this lack of resources and the significant demands on them that have already been referred to, an unqualified obligation to meet these needs would not presently be capable of being fulfilled.’"

\textsuperscript{155} \textit{Soobramoney} fn 23 at p 776: "These choices involve difficult decisions to be taken at the political level in fixing the health budget, and at the functional level in deciding upon the priorities to be met. A court will be slow to interfere with rational decisions taken in good faith by the political organs and medical authorities whose responsibility it is to deal with such matters."

\textsuperscript{156} \textit{TAC} fn 57 \textit{supra} para 38 at p 740

182
There is a balance between goal and means. The measures must be calculated to attain the goal expeditiously and effectively but the availability of resources is an important factor in determining what is reasonable.157

Since the availability of resources is a variable which, by definition, is subject to fluctuation, and since what is reasonable in terms of the state’s efforts to fulfil its constitutional obligations must be seen in the context of the available resources, it follows that the state’s obligations can and do vary not only from one context to another but also across time. Admittedly, the Constitution requires “progressive” realisation which means that ideally the state’s obligations should not be permitted to regress in terms of its constitutional obligations but, in a situation where resources are greatly reduced from what they were previously and where the state finds itself in dire economic circumstances, it is submitted that in practical terms what it is constitutionally obliged to provide by way of access to health care services may well amount to less than what it was obliged to provide in more prosperous times. In a sense, the available resources limit or bound the right in a given set of circumstances. It is submitted that this is partly the reason that the court in Grootboom observed that deciding whether the state has fulfilled its obligations in a particular instance is very difficult and that every case has to be considered individually.158

In keeping with this line of reasoning, the constitutional court in both the Grootboom and the TAC159 cases rejected the argument that socio-economic rights have a minimum core to which every person in need is entitled. The concept of minimum core is discussed in considerable detail in chapter one and that discussion will therefore not be repeated here. However, it is important to point out that: “[t]his argument fails to have regard to the way ss (1) and (2) of both ss 26 and 27 are linked in the text of the Constitution itself, and to the way they have been interpreted by this court in Soobramoney and Grootboom.”160

157 Grootboom fn 10 supra p 70-71 para 46
158 See Grootboom fn 10 supra para 20 p 61 where the court observed that: “The question is therefore not whether socio-economic rights are justiciable under our Constitution, but how to enforce them in a given case. This is a very difficult issue which must be carefully explored on a case-by-case basis.” (footnotes omitted)
159 Grootboom fn 10 and TAC fn 57 supra
160 TAC fn 57 supra p738 para 29

183
The manner in which sections 26 and 27 of the Constitution have been constructed defeats the argument in favour of a minimum core obligation as espoused in international law. The court in the TAC case observed that:

"Section 26(1) refers to the ‘right’ to have access to housing. Section 26(2), dealing with the state’s obligation in that regard, requires it to ‘take reasonable legislative and other measures, within its available resources, to achieve the progressive realisation of this right’. The reference to ‘this right’ is clearly a reference to the s 26(1) right. Similar language is used in s 27, which deals with health care services, including reproductive health care, sufficient food and water, and social security, including, if persons are unable to support themselves and their dependants, appropriate social assistance. Subsection (1) refers to the right everyone has to have ‘access’ to these services; and ss (2) obliges the state to take ‘reasonable legislative and other measures, within its available resources, to achieve the progressive realisation of each of these rights’. The rights requiring progressive realisation are those referred to in ss 27(1)(a), (b) and (c). In Soobramoney it was said: ‘What is apparent from these provisions is that the obligations imposed on the state by ss 26 and 27 in regard to access to housing, health care, food, water and social security are dependent upon the resources available for such purposes, that the corresponding rights themselves are limited by reason of the lack of resources.’

The obligations referred to in this passage are clearly the obligations referred to in ss 26(2) and 27(2), and the ‘corresponding rights’ are the rights referred to in ss 26(1) and 27(1). This passage is cited in Grootboom. It is made clear in that judgment that ss 26(1) and 26(2) ‘are related and must be read together’. Yacoob J said: ‘The section has been carefully crafted. It contains three subsections. The first confers a general right of access to adequate housing. The second establishes and delimits the scope of the positive obligation imposed on the state. . . .’ It is also made clear that s 26 does not expect more of the state than is achievable within its available resources' and does not confer an entitlement to ‘claim shelter or housing immediately upon demand’ and that as far as the rights of access to housing, health care, sufficient food and water, and social security for those unable to support themselves and their dependants are concerned, ‘the state is not obliged to go beyond available resources or to realise these rights immediately’.

There is only a single obligation upon the state, dependent upon the availability of resources, to provide access to health care services and not two: one based on the minimum core concept and one on the available resources concept. The court rejected the idea that a minimum core obligation was enforceable against the state irrespective of the resources that are available to fulfil that minimum core. It is submitted that, far from being a weakness in the right of access to health care services, the element of the availability of resources is its saving grace. It provides the mechanism for the translation of the right from the paper on which it is written into something that has practical meaning. Moreover the flexibility that it allows renders it possible to adapt and realistically apply the right to every possible permutation that could arise in relation to the need for health care services.

TAC fn 57 supra, p738-739 para 30-32 (footnotes omitted)
2.4 The Right of Children To Basic Health Care Services

The Constitution makes specific reference to a right of children to basic health care services in section 28(1)(c). It is thus necessary to consider this provision and its implications in the context of the broader right of everyone to health care services as provided for in section 27(1). Does this mean that children have a greater or more specific right to health care services than adults? Is the right of children to health care services a separate right from the rights conferred in section 27(1)? In other words do children have ‘two’ rights to health care services, one in terms of section 27(1) which refers simply to “health care services” and the other in terms of section 28(1)(c) which speaks of ‘basic health care services’? The answer has a bearing on the broader question of whether the right to health care services is a single right with many facets or whether there is in reality only a number of discrete rights, within different contexts, having no underlying systemic consistency.

2.4.1 Section 28 Rights v Section 26 and 27 Rights

One of the major differences between section 27 and section 28 is that the former stipulates that the state must take reasonable legislative and other measures to achieve the progressive realisation of the rights referred to in section 27. There is no similar qualification in section 28. It would in theory be possible to argue that the reason for the provision for basic health care services in paragraph 28(1)(c) is to ensure a minimum core of health services to children, available resource considerations aside. However, the constitutional court in

162 Hayson N in the chapter on children in Davis et al, fn 124 supra, lends support to this view in his submission at p 269, that the term ‘basic’ implies a ‘minimum level necessary to prevent malnutrition or disease must be provided.’ He further states at p 270 that: “Unlike the formulation of the rights in s 26 and 27, where a greater discretion is allowed to the state, the courts do not have to refer to the question of availability of resources in determining whether the state has met its obligation to provide these basic necessities to children (See generally de Vos P “The Economic and Social Rights of Children and South Africa’s Transitional Constitution’ 1995 (10) South African Public Law 233).” Hayson appears not to be entirely consistent in this view however because in discussing the right of children to basic nutrition, shelter, health care services and social services at p 269 he says “This provision will be subject to reasonable limitations arising out of the available resources of the state.” It is interesting that Hayson sees the right of children to basic health services as being preventive as opposed to curative. It is not clear whether he intended to refer to the more formal classification of different types of health care or whether the term “prevent” as applied to “disease” is intended to include curative health care as well as preventive in the sense that a care prevents continuation in the diseased state. He states that the right conferred is intended to serve primarily as a safety net in cases of deprivation, neglect, starvation or abuse and observes that: “In comparison with the costs involved in the enforcement of civil rights (for example legal aid), the delivery of a minimum level of food and health services in areas enduring extreme deprivation should not be formidable.” It is submitted that unfortunately in health care terms, “the minimum necessary to prevent malnutrition and disease”
*Grootboom* and the *TAC* cases rejected the minimum core concept in principle, albeit primarily with reference to sections 26 and 27(1) which expressly require the state to take reasonable legislative and other measures to ensure the progressive realisation of this right within its available resources. In *Grootboom* the court specifically considered the right of children to shelter as contained in section 28(1)(c). It observed with regard to both sections 26 and 28(1)(c) that: "[i]nthese rights need to be considered in the context of the cluster of socio-economic rights enshrined in the Constitution.” The court in its judgement discussed the concept of minimum core obligations within the context of the obligations of the State in terms of section 26 and rejected that concept on the basis of the construction of the section in a manner which ties the rights therein contained to the issue of available resources. Some might be tempted to argue that the concept of minimum core could nonetheless be valid with regard to the rights of children expressed in section 28 which does not contain the same qualifications with regard to available resources as does section 26. However, in its discussion of the judgment of the high court as it pertained to section 28(1)(c), the constitutional court observed the following:

"The judgment of the High Court amounts to this: (a) s 28(1)(c) obliges the state to provide rudimentary shelter irrespective of the availability of resources. On this reasoning, parents with reasonable legislative and other measures to ensure the progressive realisation of this right in children does not necessarily mean that the funding of such health care services is as minimal as Hayson would have his readers believe. The prevention of disease in children is not necessarily either simple or straightforward and the phrase "minimum necessary to prevent" can in itself be the subject of some debate. For example, in the context of the *TAC* case, the argument of the State was in a sense that that the provision of the drug Nevirapine to pregnant mothers and their newborn babies was not sufficient. It was not the minimum necessary to prevent malnutrition and disease in children since studies had shown that if the mother breastfed the child there was still a considerable risk of transmission of HIV from the mother to the child and that feeding substitutes were an important part of a programme that sought to prevent mother to child transmission of HIV. Furthermore, the State had concerns about potential adverse effects on long term management of the disease such as the development of large scale drug resistance in the face of only marginal success in the prevention of HIV transmission at birth. The court, of course, took the view that it is better to live now and die later than not to live at all and that even if only a few hundred lives were saved initially, the potential loss of life of thousands in the long term due to drug resistance was no argument for the State's failure to provide the drug. In this case it is important to remember that the drug was available to the State free of charge but what if it had not been? What if there had been a significant price tag? Would the provision of Nevirapine still constitute basic health care services to children in the context of Hayson's submission that it is the minimum level necessary to prevent malnutrition or disease? The numbers of antiretroviral drugs on the market are few and alternatives are even scarcer. This greatly reduces the options for HIV and AIDS prevention strategies generally. It is comparatively easy to run a vaccination programme for measles or rubella or smallpox in terms of which children can be immunized against these diseases and the vaccines are not prohibitively expensive but what are "basic health services" for children in the context of HIV and AIDS, hepatitis C and similar health conditions where no vaccines exist or where they are expensive and carry significant adverse side effects that have cost implications for the health system in their own right?"

---

163 *Grootboom* fn 10 and TAC fn 57 *supra*

165 *Grootboom* fn 10 *supra*
anomalous result. People who have children have a direct and enforceable right to housing under s 28(1)(c), while others who have none or whose children are adult are not entitled to housing under that section, no matter how old, disabled or otherwise deserving they may be. The carefully constructed constitutional scheme for progressive realisation of socio-economic rights would make little sense if it could be trumped in every case by the rights of children to get shelter from the state on demand. Moreover, there is an obvious danger. Children could become stepping stones to housing for their parents instead of being valued for who they are.\(^{166}\)

This reasoning, although it is aimed at defeating the inference drawn by the high court to the effect that because children have a right to shelter, so do their parents and that this is a right on demand, also implies that the rights of children in section 28(1)(c) must be seen in the context of available resources and as argument for the fact that one cannot regard this particular socio-economic right of children to shelter outside of the context of the available resources when the broader socio-economic right to housing contained in section 26 is part of a ‘carefully constructed constitutional scheme’ for the progressive realisation of socio-economic rights in general. In other words the implication is that the right of children to shelter in terms of section 28(1)(c) is no more a right on demand than is the right to housing expressed in section 26. In *Grootboom*\(^{167}\), the respondents and the *amici* in supporting the judgment of the High Court drew a distinction between housing on the one hand and shelter on the other. They contended that shelter is an attenuated form of housing and that the state is obliged to provide shelter to all children on demand. The respondents and the *amici* emphasised that the right of children to shelter is unqualified and that, the ‘reasonable measures’ qualification embodied in ss 25(5) 26, 27 and 29 are markedly absent in relation to s 28(1)(c). The appellants disagreed and criticised the respondents’ definition of shelter on the basis that it conceives shelter in terms that limit it to a material object. They contended that shelter is more than just that, but defined it as an institution constructed by the state in which children are housed away from their parents.\(^{168}\)

The court did not accept the argument of the respondents that there is a distinction within the Constitution between housing on the one hand and shelter on the other. It argued that:

"Housing and shelter are related concepts and one of the aims of housing is to provide physical shelter. But shelter is not a commodity separate from housing. There is no doubt that all shelter

\(^{166}\) *Grootboom* fn 10 supra p 80 para 70-71

\(^{167}\) *Grootboom* fn 10 supra

\(^{168}\) *Grootboom* fn 10 supra p 80 para 72
represents protection from the elements and possibly even from danger. There are a range of ways in which shelter may be constituted: shelter may be ineffective or rudimentary at the one extreme and very effective and even ideal at the other. The concept of shelter in s 28(1)(c) is not qualified by any requirement that it should be ‘basic’ shelter. It follows that the Constitution does not limit the concept of shelter to basic shelter alone. The concept of shelter in s 28(1)(c) embraces shelter in all its manifestations. However, it does not follow that the Constitution obliges the state to provide shelter at the most effective or the most rudimentary level to children in the company of their parents.169

The differences in terminology between sections 26 and 28(1)(c) were not enough to convince the constitutional court that there were differences in the substance or content of the rights expressed in the two sections. The crux of the argument against seeing the rights of children to food, shelter and health care services as separate from those of other socio-economic rights, however, is contained in Grootboom where the constitutional court said:

"The obligation created by s 28(1)(c) can properly be ascertained only in the context of the rights and, in particular, the obligations created by ss 25(5), 26 and 27 of the Constitution. Each of these sections expressly obliges the State to take reasonable legislative and other measures, within its available resources, to achieve the rights with which they are concerned."170

Again in its summary and conclusion the constitutional court noted that:

"Neither s 26 nor s 28 entitles the respondents to claim shelter or housing immediately upon demand."171

It is submitted that these findings and observations of the constitutional court conclusively preclude the argument that whilst minimum core obligations may not be a feature of the rights contained in sections 26 and 27 of the constitution they are applicable to those of children as expressed in section 28(1)(c) on the ground that the latter are not expressly subject to the requirement of progressive realisation within available resources.

The court in Grootboom observed that there is an overlap between the rights contained in sections 26 and 27 and those in 28(1)(c) in that the rights in section 26 and 27 are bestowed upon everyone whereas the rights in section 28(1)(c) are those of children only. It pointed out that:

169 Grootboom fn 10 supra p 80-81
170 Grootboom fn 10 supra para 74 p 81
171 Grootboom fn 10 supra para 95 p 86
“Apart from this overlap, the s 26 and 27 rights are conferred on everyone including children while s 28, on its face, accords rights to children alone. This overlap is not consistent with the notion that s 28(1)(c) creates separate and independent rights for children and their parents.”172 [footnotes omitted]

The court went on to comment that s 28(1)(c) does not create any primary state obligation to provide shelter on demand to parents and their children if children are being cared for by their parents or families. It further observed that this does not mean that the state incurs no obligation in relation to children who are being cared for by their parents or families and that in the first place, the state must provide the legal and administrative infrastructure necessary to ensure that children are accorded the protection contemplated by s 28173.

From the foregoing it is thus clear that the right of children to basic health care services in terms of section 28(1)(c) is not a separate and independent right from that of their parents to access to health care services in terms of section 27(1) but rather a subset of the broader right. The right of children to health care services is primarily, but not exclusively, a right as against their parents or families174. However, the state does have a responsibility, as the constitutional court pointed out in the TAC judgment175 to create circumstances in which the

172 Grootboom fn 10 supra para 74 p 81
173 Grootboom fn 10 supra para 78 p 82
174 Grootboom fn 10 supra: The court said at p 81-82, para 76-77: "Section 28(1)(a) must be read in this context. Subsections 28(1)(a) and (b) provide: 'Every child has the right-
(a) ... (b) to family care or parental care, or to appropriate alternative care when removed from the family environment;
(c) to basic nutrition, shelter, basic health care services and social services.' They must be read together. They ensure that children are properly cared for by their parents or families, and that they receive appropriate alternative care in the absence of parental or family care. The section encapsulates the conception of the scope of care that children should receive in our society. Subsection (1)(b) defines those responsible for giving care while s 1(6) lists various aspects of the care entitlement. It follows from s 1(6) that the Constitution contemplates that a child has the right to parental or family care in the first place, and the right to alternative appropriate care only where that is lacking. Through legislation and the common law, the obligation to provide shelter in s 1(6) is imposed primarily on the parents or family and only alternatively on the State. The State thus incurs the obligation to provide shelter to those children, for example, who are removed from their families. It follows that s 28(1)(c) does not create any primary State obligation to provide shelter on demand to parents and their children if children are being cared for by their parents or families." See also TAC (fn 57 supra para 79 p 750) where the constitutional court observed that: "The state is obliged to ensure that children are accorded the protection contemplated by s 28 that arises when the implementation of the right to parental or family care is lacking." (Footnotes omitted)
175 TAC fn 57 supra, citing with approval Grootboom (fn 10 supra) in which the court said: "This does not mean, however, that the state incurs no obligation in relation to children who are being cared for by their parents or families. In the first place, the state must provide the legal and administrative infrastructure necessary to ensure that children are accorded the protection contemplated by s 28. This obligation would normally be fulfilled by passing laws and creating enforcement mechanisms for the maintenance of children, their protection from maltreatment, abuse, neglect or degradation, and the prevention of other forms of abuse of children mentioned in s 28. In addition, the state is required to fulfil its obligations to provide families with access to land in terms of s 25, access to adequate housing in terms of s 26 as well as access to health care, food, water and social security in terms of s 27. It follows from this judgment that ss 25 and 27 require the state to provide access on a programmatic and
right can be fulfilled. The right of children to basic health care services is therefore a facet of a single right of access to health care services rather than an additional and separate right to the one expressed in section 27(1) of the Constitution. In fact it would appear from the decision of the constitutional court in *Grootboom* that even a right to health care services is part of the larger bundle or system of socio-economic rights and as such, it should not be considered in isolation from these other rights. It remains to be explored whether the constitutional right of access to health care services is itself simply a facet of a larger right of access to such services or whether it in fact defines that single right in all of its facets as reflected in the various branches of South African law.

2.4.2 What is a child?

It is important to establish what is meant by the term ‘child’ for the purposes of the Constitution in order to establish who exactly holds the rights conferred on children in section 28 and how they may be exercised. A foetus is not a child for purposes of the Constitution. The Constitution provides that a child is a person under the age of 18 years but is silent on the subject of whether an unborn person is a child or not. Usually, in South African common law, personality is regarded as beginning at birth which means that a foetus or an unborn child cannot be the holder of legal rights except, in certain circumstances, by way of a fiction known as the nasciturus rule. In terms of this fiction, a...
foetus is deemed to have the rights of a child if it is subsequently born alive. Initially it was applied only in the law of succession but the _Santam_\textsuperscript{178} case extended it to the law of delict. The obvious question for anti-abortionists was whether the nasciturus rule could be applied to protect the life of an unborn child in a situation in which the mother desires to termination the pregnancy. Could it be argued that a foetus has the right to life by virtue of an application of the nasciturus rule? This argument was tested in the first _Christian Lawyers_ case discussed below\textsuperscript{179}.

2.4.2.1 _Christian Lawyers Association of South Africa v Minister of Health_\textsuperscript{180}

**Facts**

In _Christian Lawyers Association of South Africa and Others v Minister of Health and Others_\textsuperscript{181}, the court had to consider whether the Choice on Termination of Pregnancy Act, 1996 (Act No 92 of 1996) was unconstitutional and should be struck down in its entirety on the basis that it infringed the right to life of a foetus\textsuperscript{182}. The plaintiffs sought an order from the court declaring the Choice on Termination of Pregnancy Act\textsuperscript{183} to be unconstitutional and striking it down in its entirety on the basis that section 11 of the Constitution, which provides that ‘(e)veryone has the right to life’, applied also to unborn children from the

\textsuperscript{178} _Santam_ fn 177 supra

\textsuperscript{179} _Christian Lawyers (No1) fn 21 supra

\textsuperscript{180} _Christian Lawyers (No 1) fn 21 supra

\textsuperscript{181} _Christian Lawyers (No 1) fn 21 supra

\textsuperscript{182} _Christian Lawyers (No 1) fn 21 supra. The court observed at 1118 that: “The plaintiffs’ cause of action, founded, as it is, solely on s 11 of the Constitution, is therefore dependent for its validity on the question whether ‘everyone’ or ‘every person’ applies to an unborn child ‘from the moment of the child’s conception’. The answer hereto does not depend on medical or scientific evidence as to when the life of a human being commences and the subsequent development of the foetus up to date of birth. Nor is it the function of this Court to decide the issue on religious or philosophical grounds. The issue is a legal one to be decided on the proper legal interpretation to be given to s 11. I am in agreement with the dictum of the Canadian Supreme Court in _Tremblay v Duigle_ (1989) 62 DLR (4th) 634 (SC) at 630a–b, where the following is said: ‘The respondent’s argument is that a foetus is an “œre humain”, in English “human being”, and therefore has a right to life and a right to assistance when its life is in peril. In examining this argument it should be emphasised at the outset that the argument must be viewed in the context of the legislation in question. The Court is not required to enter the philosophical and theological debates about whether or not a foetus is a person but, rather, to answer the legal question of whether the Quebec Legislature has accorded the foetus personhood. Metaphysical arguments may be relevant but they are not the primary focus of enquiry. Nor are scientific arguments about the biological status of a foetus determinative in our enquiry. The task of properly classifying a foetus in law and in science are different pursuits. Ascribing personhood to a foetus in law is a fundamentally normative task. It results in the recognition of rights and duties - a matter which falls outside the concerns of scientific classification. In short, this Court’s task is a legal one.”

\textsuperscript{183} _Choice on Termination of Pregnancy Act fn 35 supra_
moment of conception. The defendants excepted to the plaintiffs' particulars of claim on the ground that they did not disclose a cause of action because section 11 conferred no rights on a foetus and did not preclude the termination of pregnancy in the circumstances and manner contemplated by the Act.

Judgment

With regard to the question of whether or not a foetus should be regarded as a person for the purposes of the Constitution, the court made some observations which are quoted below because they conveniently encapsulate some of the prior jurisprudence on the subject of the legal personality of a foetus in South African law:

"I turn to consider the question whether the word ‘everyone’ in s 11 includes the unborn child. It is desirable that some consideration be given to the common-law status of the foetus. A word of caution should perhaps first be sounded. In the particulars of claim the plaintiffs allege that the foetus qualifies for protection under s 11 because ‘the life of a human being starts at conception’ and by implication therefore that human beings are from conception a person as envisaged by the said section. This is a non sequitur. As pointed out by Professor Glanville Williams in an article entitled ‘The Foetus and the Right to Life’ (1994) 33 Cambridge Law Journal 71 at 78 ‘the question is not whether the conceptus is human but whether it should be given the same legal protection as you and me’. In Van Heerden and Another v Joubert NO and Others 1994 (4) SA 793 (A) the Appellate Division of the Supreme Court (as it then was) considered various dictionary meanings of the word ‘person’ (inter alia ‘an individual human being’) and concluded (at 796F) that there is no suggestion in any of these meanings that the word ‘person’ can also connote a stillborn child, an unborn child, a viable unborn child, an unborn human being or a living foetus."

The court came to the conclusion that if section 28 of the Constitution, the section specifically designed to protect the rights of the child, does not include the foetus within the ambit of its protection then it can hardly be said that the other provisions of the bill of

184 Christian Lawyers, (No 1) fn 21 supra at 1120 to 1121

185 Christian Lawyers, (No 1) fn 21 supra. The constitutional court observed that: “The Court went on, however (at 797H–798B) to point out that there are a growing number of jurists who hold the view that the application of the nasuittura pro tam nato habetur quotid sa commodo eius agitur rule of the Roman law amounts to predating the legal subjectivity of the foetus. Thus, P J J Olivier Legal Fictions: An Analysis and Evaluation (Doctoral Thesis Leiden) and L M du Pleissis ‘Jurisprudential reflections on the status of unborn life’ 1990 TSAR 44 maintain that the foetus is recognised as a legal persona and is protected as such. As pointed out by Professor Du Pleissis, the decision in Pinskin and Another NO v Santam Insurance Co Ltd 1963 (2) SA 254 (W), in which a person’s right to claim, after birth, compensation for injuries sustained in ventre mater, was recognised, makes sense only if it is assumed that that person was indeed in law a persona at the time when the injuries were sustained. The status of the foetus under our common law was left open in Van Heerden’s case supra. The Appellate Division decided that, even if it is to be assumed that a stage has been reached in our legal development where the law recognises the foetus as a legal persona, the Legislature had no such legal persona in mind when it used the word ‘persons’ in the legislation there under consideration, namely the Inquests Act 58 of 1959. There are South African decisions denying the foetus legal personality – see Christian League of Southern Africa v Rall 1981 (2) SA 821 (C) at 829 in fav; Friedman v Glickson 1996 (1) SA 1134 (W) at 1140G. It is not necessary for me to make any firm decision as to whether an unborn child is a legal persona under the common law. What is important for purposes of interpreting s 11 of the Constitution is that, at best for the plaintiff, the status of the foetus under the common law may, as at present, be somewhat uncertain.”
rights, including section 11, were intended to do so. This conclusion, said the court, finds
further support in the fact that in all the provisions of the Bill of Rights, other than those in
which a specific class of person is singled out for special protection, the rights are conferred
on ‘everyone’. Yet in many instances it is clear that the term ‘everyone’ could not have
been intended to include the foetus within the scope of its protection. Thus, the right not to
be deprived of one’s freedom (section 12(1)(a)), not to be detained without trial (section
12(1)(b)), to make decisions concerning reproduction and to security in and control over
one’s body (section 12(2)(a) and (b)), not to be subjected to slavery, servitude or forced
labour (section 13), rights relating to privacy and freedom of conscience, religion, thought,
belief, opinion, expression, assembly, association and movement (sections 14, 15(1), 16(1),
17, 18 and 21) and other rights in regard to language, cultural life, arrest and detention (ss
30 and 35) are all afforded to ‘everyone’ and clearly do not include a foetus.

The court held that to include the foetus in the meaning of that term in section 11 would
ascribe to it a meaning different from that which it bears everywhere else in the bill of
rights and that, in the court’s view was untenable186.

Discussion

The statement of the court concerning the status of the foetus under the common law is
being ‘somewhat uncertain’ is, it is submitted, somewhat unfortunate given the ruling in the
Santam187 case insofar as it may cast doubt upon the right of a child who is subsequently
born alive to take legal action for delictual harm caused to it whilst en ventre matris. It
appears, at least partly, to contradict the court’s earlier statement that it is desirable that
some consideration be given to the common-law status of the foetus and its observation that
there is a growing number of jurists who hold the view that the application of the
nasciturus pro iam nato habetur quotiens de commodo eius agitur rule of the Roman law
amounts to predating the legal subjectivity of the foetus. It is submitted that the positions of
the common law and the Constitution on the subject of rights attributable to a child whilst
still in its mother’s womb are reconcilable in logical terms and that the nasciturus fiction is

186 Christian Lawyers (No 1) fn 21 supra at p1122
187 Santam fn 177 supra
a valuable part of South African jurisprudence which should not be undermined. The important point about the arguments in the *Christian Lawyers* case was that the *nasciturus* rule did not and could not logically assist arguments regarding the constitutional right to life of a *conceptus* because it begged the question as to whether or not it would be born alive. The *nasciturus* rule, even if it does confer legal subjectivity on a foetus, contains a suspensive condition. The child must subsequently be born alive. If it is not born alive then no rights accrue. Questions of the termination of the pregnancy negative the possibility of fulfilment of this suspensive condition within the *nasciturus* rule. This does not mean that the *nasciturus* rule should be discarded or that the decision in the *San tam* case was wrong. This would be throwing the baby out with the bathwater. Whilst it may not be logically possible to apply the *nasciturus* fiction to the right to life, what about the other rights in the Constitution? If the bodily integrity of a child is breached *in utero* so that she is subsequently born disabled should she have a right of action? If a pregnant mother presents at a hospital with foetal distress and the unborn baby is denied emergency medical treatment with the result that he is born with cerebral palsy should there be no right of recourse for the child?

The court in *Christian Lawyers* observed that:

"There is no express provision affording the foetus (or embryo) legal personality or protection. It is improbable, in my view, that the drafters of the Constitution would not have made express provision therefor had they intended to enshrine the rights of the unborn child in the bill of rights, in order to cure any uncertainty in the common law and in the light of case law denying the foetus legal personality. One of the requirements of the protection afforded by the *nasciturus* rule is that the foetus be born alive. There is no provision in the Constitution to protect the foetus pending the fulfilment of that condition."

Does this mean then, that for purposes of any of the rights contained in the Bill of Rights, the *nasciturus* rule cannot be applied? It is submitted that this question stands at the interface of constitutional and common law. It provokes a further question. If the *nasciturus* rule is inapplicable to rights conferred by the Constitution then why should it remain applicable to rights conferred at common law? In *Van Heerden and Another v Joubert* NO

189 *San tam* fn 177 supra
190 *Christian Lawyers* (No 1) fn 21 supra at p1122
and Others\textsuperscript{191}, the Appellate Division had to consider the question of whether a stillborn baby was a person for the purpose of the Inquests Act, 1959 (Act No 58 of 1959). As the court pointed out in this case, the main objects of an inquest are to determine the cause of death, the circumstances surrounding the death, whether any person was responsible for such death, and whether the death can be attributed to the commission of any offence. It observed that:

"The State has an interest in the proper investigation of deaths due to other than natural causes. Even if nobody can be held responsible for a death in a particular case, it may still remain pertinent to determine the circumstances and cause of death in order that appropriate measures can be taken to prevent similar occurrences. There might therefore be reasons to proceed with an inquest in the present case. The question however remains whether the provisions of the Act are wide enough to confer jurisdiction upon the magistrate to do so. That in turn depends on the meaning of the word \textquoteleft person\textquoteright in the context of the Act."\textsuperscript{192}

The court after studying dictionary definitions of the term \textquoteleft person\textquoteright came to the conclusion that there was no suggestion in any of the dictionary meanings that the word \textquoteleft person\textquoteright can also connote a stillborn child, an unborn child, a viable unborn child, an unborn human being, or a living foetus. Significantly, the court then turned to the decision of the American Supreme Court in \textit{Roe v Wade}\textsuperscript{193}. It also referred to \textit{R v Tait}\textsuperscript{194} in which the Court of Appeal held that a threat to a pregnant woman to kill her foetus was not a threat to kill a person under the Offences Against a Person Act, 1861. On the strength of these decisions the court came to the conclusion that the word \textquoteleft person\textquoteright in the context of the Inquests Act does not include an unborn child.

Counsel for the respondents relied on \textit{Santam}\textsuperscript{195} and its application of the \textit{nasciturus} rule in the context of the law of delict. The court skirted the question of whether the application of the \textit{nasciturus} rule in terms of the law of delict supported its conclusion that a stillborn child was not a person for purposes of the Inquests Act by saying that the issue was not whether a foetus should be regarded as a legal \textit{persona} or to what extent life before birth should be protected, but whether the Act applies to the present case. It observed that had the

\bibitem{195} Santam \textit{at} 171
\end{thebibliography}
drafters of the Constitution wished to protect the foetus in the bill of rights at all, one would have expected this to have been done in section 28, which specifically protects the rights of the child. The right of every child to family or parental care (28(1)(b)), to basic nutrition, health care and social services (28(1)(c)), to protection against maltreatment, neglect, abuse or degradation (28(1)(d)), and to legal representation (28(1)(h)), as well as the provision in ss (2) that a child's best interests are of paramount importance in every matter concerning the child, would have been particularly apposite to protect the foetus as well. Yet, said the court, there are clear indications that the safeguards in section 28 do not extend to protect the foetus. A 'child' for purposes of the section is defined in subsection (3) as a person under the age of eighteen years. In the court's view, age commences at birth. The protection afforded by subsections (1)(f)(i) and (1)(g)(ii) is dependent on the 'child's age'. A foetus is therefore not a 'child' of any 'age'. It said that the rights afforded by section 28(1) are in respect of 'every child' - i.e. all children. Yet certain of the rights could not have been intended to protect a foetus; para (f) relates to work, para (g) to detention and (i) to armed conflict. The protection afforded in the other paragraphs of subsection (1) must accordingly also exclude the foetus.

The Constitution itself is forward looking. Section 24(b) states that everyone has the right to have the environment protected, for the benefit of present and future generations, through reasonable legislative and other measures. Future generations are persons not yet conceived let alone not yet born. The question, in the light of the foregoing discussions is whether the as yet unborn generations would have the right, when they are subsequently born to take legal action against a previous generation for damage to the environment? The answer, it is submitted, lies in the wording of section 24(b) which says 'everyone' has the right. In accordance with the arguments above, an unborn generation would only have the right to take legal action after it was born in which case it would then be included in the category of 'everyone'. It could take action for the benefit of its own and future generations to protect the environment. Whether or not it could take action, on the basis of the nasciturus rule, in terms of the law of delict for damage to the environment whilst it was in its mother's womb is a matter which has still to come before the courts and which is beyond the scope of this chapter. Presumably the notion of 'environment' would have to be
the immediate environment of the pregnant mother and the damage to the environment would have to be such that the unborn child sustained some harm. If it was the environment, as opposed to the foetus, that sustained the harm so that the foetus, when subsequently born could no longer enjoy it because it has been rendered dangerous to health or well-being, the issue becomes interesting from a constitutional law point of view. Should the matter be treated as a constitutional violation or a constitutional delict? If the latter then the nasciturus rule might apply, if the former then possibly not, depending upon how uncertain the constitutional court perceives the nasciturus rule to be.

At a general level, one cannot help but feel a certain measure of unease with the judgement in *Christian Lawyers*<sup>196</sup>. The logic seems devoid of the value considerations which are so central to constitutional issues generally and the rights in the Bill of Rights in particular. Human dignity, as noted before, is a not only a right but a constitutional value, and the court seems to have taken scant cognisance of this in its judgment. It is submitted that the question of whether or not a foetus is a person and therefore capable of being the holder of the right to life is only one aspect of abortion. Whilst it is not submitted that the court necessarily erred in its finding that a foetus cannot be the bearer of constitutional rights, its approach to the concept of balancing not only the rights of the mother and the foetus, but also the interests and values of an open and democratic society against those of the mother was possibly overly simplistic. The idea that because a foetus cannot logically hold some of the other rights in the Constitution which are conferred upon everyone, it cannot also hold the right to life does not bear scrutiny.<sup>197</sup> One cannot help but get the impression from the

---

<sup>196</sup> *Christian Lawyers* (No 1) in 21<sup>supra</sup>

<sup>197</sup> The decision in *Christian Lawyers* (in 21<sup>supra</sup>) has been criticised by Naudé T "The Value of Life: A Note on Christian Lawyers Association of SA v Minister of Health" (1999) 15 SAJHR 541. The writer comments that: "Surprisingly, McCreath J did not commence his enquiry into the meaning of the word 'everyone' by considering relevant constitutional provisions. Instead he investigated the common law status of the foetus. He also asked whether a foetus would fall under the definition of 'person' in the Inquests Act 58 of 1999. Such an approach turns the proper enquiry on its head. The Constitution should be a yardstick against which the common law and legislation must be measured. The Constitution cannot serve as a yardstick if the interpreter's point of departure is to establish the meaning of constitutional provisions by reference to the common law and ordinary legislation...But it may be noted that instead of also asking whether the common law deems foetal life worthy of protection, McCreath J only focused on the question of whether the foetus is a 'person'. His discussion centred on the nasciturus fiction which protects the foetus's patrimonial interests. Criminal law, which does regard foetal life as worthy of protection, was not considered." In the view of Naudé, the central shortcoming in McCreath J's approach "was that he though he could resolve the dispute by consideration of the word 'everyone'. This probably flows from his predominantly text-based or 'literalist' and 'intentionalist' approach to constitutional interpretation. The limitations of a purely text-based approach, especially in the context of constitutional interpretation, have often been pointed out... These limitations are illustrated by the startling results flowing from the court's uncritical application of the rule that the word 'everyone' should be given the same meaning wherever it appears in the legislative text." Commenting on McCreath J's reasoning that because 'everyone'in section 11 means the same as "everyone" elsewhere in the Constitution, the foetus must be the bearer of all the other fundamental rights and because it clearly cannot be such a bearer of all the other rights, it is therefore excluded from the term 'everyone' in s 11, Naudé states that this is a
judgment of McCreath J that there is no wrongdoing in harming a foetus – even outside of the context of abortion - and that this is entirely consistent with constitutional values. In terms of even the common law the unfeeling message is if one negligently or intentionally harms a foetus, one should hope that it does not survive to sue for damages consequent upon such harm. It was possibly a weakness of the case made by the applicants that they seem to have based it purely upon the right to life of the foetus as a person as opposed to the some of the arguments cited by Naudé in the article referred to in footnote 226. Whilst it is not disputed that the question before the court had to be decided on the grounds of legal logic and law rather than philosophical or religious questions and that the decision of the court may well be correct in terms of its ultimate result, i.e. the constitutional validity of the Choice on Termination of Pregnancy Act, the logic by which the court reached its decision could still prove problematic in the future.

2.4.2.2 Christian Lawyers Association vs Minister of Health (No 2)\(^{198}\)

Facts

The plaintiff instituted an action in which it sought an order declaring sections 5(2) and 5(3) read with the definition of “woman” in sections 1 and 5(1) of the Choice On
Termination of Pregnancy Act 92 of 1998 ("the Act") to be unconstitutional and an order striking down sections 5(2) and 5(3) and the definition of "woman" in section 1 of the Act.

The provisions of the Act against which the plaintiff's claim was directed are those that allow women under the age of 18 years to choose to have their pregnancies terminated without (a) the consent of the parents or guardians, (b) consulting the parents or guardians, (c) first undergoing counselling, and (d) reflecting on their decision or decisions for a prescribed period. The measures in (a) to (d) are collectively referred to as parental consent or control. In essence the plaintiff's case was that young women or girls below that age are not capable on their own — without parental consent or control — to take an informed decision as to whether or not to have a termination of pregnancy which serves their best interests. In order to succeed the plaintiffs had to establish that the relevant provisions of the Act were in conflict with those of the Constitution.

The plaintiffs argued that a pregnant girl requires special protection by the state *inter alia* by ensuring that when enacting legislation which affects her she is not deprived in any way of the support, guidance and care of her parents/guardian and/or counsellor. Essentially the plaintiffs attacked the provisions of the Act on the grounds that there were unconstitutional because they permit a woman under the age of 18 years to choose to have her pregnancy terminated without parental consent or control. The defendants filed an exception to the plaintiff's claims on the grounds that the conclusions in law with regard to the plaintiff's claims and the overall conclusions that flow therefrom are not supported by the facts on which they are based.

**Judgment**

Mojapelo J in giving judgment noted that it was necessary when considering the issues raised to bear in mind the statutory provisions that came under attack in this case. The relevant sections of the Act provide as follows:

In section 1 of the Act the word "woman" is defined thus:
“‘woman’ means any female person of any age”.

Subsections 5(1) and 5(3) provide that:

(1) Subject to the provisions of (4) and (5) the termination of a pregnancy may only take place with the informed consent of the pregnant woman.

(2) Notwithstanding any other law or the common law, but subject to the provisions of (4) and (5), no consent other than that of the pregnant woman shall be required for the termination of a pregnancy.

(3) In the case of a pregnant minor, a medical practitioner or a registered midwife, as the case may be, shall advise such minor to consult with her parents, guardian, family members or friends before the pregnancy is terminated: provided that the termination of the pregnancy shall not be denied because such minor chooses not to consult them.

Subsections (4) and (5) deal with exceptional cases and were irrelevant for the purposes of the judgment. They cover situations in which a woman is severely mentally disabled or in a state of continuous unconsciousness or where medical practitioners are of the opinion that continued pregnancy would pose the risk of injuries to the woman’s physical or mental health, where there exists a substantial risk that the foetus would suffer from severe physical or mental abnormality, where continued pregnancy would endanger the woman’s life, result in severe malformation of the foetus or pose a risk of serious injury to the foetus.

The court observed that the constitutional pegs on which the plaintiff hung its case were sections 28(1)(b), 28(1)(d) and 9(1) read with section 7(1) of the Constitution. Section 28(1) stipulates that -

“Every child has the right to family care or parent care”.
Section 28(1)(d) stipulates that -

“Every child has the right to be protected from maltreatment, neglect, abuse or degradation”.

Section 28(2) provides that “A child’s best interests are of paramount importance in every matter concerning the child.” Section 9 (1) provides that -

“Everyone is equal before the law and has the right to equal protection and benefit of the law.”

Section 7(1) reads “This Bill of Rights is a cornerstone of democracy in South Africa. It enshrines the rights of all people in our country and affirms the democratic values of human dignity, equality and freedom.”

Mojapelo J remarked that the Act regulates the termination of pregnancy of women and that the principal rules by which it does so are as follows:

(a) The termination of a pregnancy may only be done with the *informed consent* of the woman.

(b) If she gives her informed consent to the termination of her pregnancy, no other consent is required (section 5(1) and 5(2)).

(c) During the first twelve weeks of pregnancy, no more is required than the woman’s informed consent.

(d) Thereafter a pregnancy may only be terminated in certain circumstances (section 2).

(e) The termination may only be performed by a medical practitioner or, if it is performed during the first twelve weeks, by a registered midwife who has completed a prescribed training course (section 2(2)).

(f) The termination may only be performed at a facility designated by the Minister (section 3(1)).

(g) A pregnancy may not be terminated unless two medical practitioners or a medical practitioner and a registered midwife who has completed a prescribed course consent thereto (proviso to section 5)

The court pointed out that the Act also has the following ancillary provisions regulating the termination of the pregnancy: The state is obliged to promote the provision of counselling to women before and after the termination of the pregnancy. The counselling is, however, not mandatory or directive (section 4). Young women (below the age of 18 years) are
encouraged to consult with their parents, guardians, family members or friends before termination of their pregnancy. The medical practitioner or midwife who performs the termination must advise them to do so before their pregnancy is terminated. The actual final decision is, however, left to them as to whether or not to consult with their parents, guardians, family members and/or friends (section 5(3)). The medical practitioner or midwife who performs the termination must inform the woman of her rights under the Act (section 6). Mojapelo J stated that it is not therefore as if the legislature left the termination of pregnancy totally unregulated. He noted that the cornerstone of the regulation of termination of pregnancy of a girl and indeed any woman under the Act is the requirement of her “informed consent”. No woman, regardless of her age, may have her pregnancy terminated unless she is capable of giving her informed consent to the termination and in fact does so. The court therefore considered it necessary to consider the juridical meaning and effect of the requirement of informed consent.

After noting that the Act does not elaborate on what is meant by “informed consent” Mojapelo J pointed out that the concept is not alien to the common law. He stated that it forms the basis of the doctrine of volenti non fit injuria that justifies conduct that would otherwise have constituted a delict or crime. More particularly, he said, day to day invasive medical treatment, which would otherwise have constituted a violation of a patient’s right to privacy and personal integrity, is justified and lawful only because as a requirement of the law, it is performed with the patient’s informed consent. Mojapelo J stated that it has come to be settled in South African law in this context that the informed consent requirement rests on the three independents legs of knowledge, appreciation and consent.

He noted that the courts, in order to found a defence of consent, have often endorsed the statement by Innes CJ in Waring & Gillow v Sherbourne that:

“It must be clearly shown that the risk was known, that it was realised, that it was voluntarily undertaken. Knowledge, appreciation, consent – there are the essential elements; but knowledge does not invariably imply appreciation, and both together are not necessarily equivalent to consent.”

199 The court referred to Van Wyk v Lewis 1924 AD 438 at 451; Castell v de Greeff 1994 (4) SA 408 (C) at 425; C v Minister of Correctional Services 1996 (4) SA 292 (T) at 300; Noethling J, Fogtieter RM and Visser P: Law of Delict, 3rd ed p100-101; Noethling: Persoonlikeheidreg, 4th ed p 121-122.
200 Waring 1904 TS 340 at 344
The requirement of ‘knowledge’, said Mojapelo J, means that the woman who consents to the termination of a pregnancy must have full knowledge of the nature and extent of the harm or risk. The requirement of ‘appreciation’ implies more than mere knowledge. The woman who gives consent to the termination of her pregnancy “must also comprehend and understand the nature and extent of the harm or risk”. The last requirement of ‘consent’, said Mojapelo J, means that the woman must “in fact subjectively consent” to the harm or risk associated with the termination of her pregnancy and her consent “must be comprehensive” in that it must extend to the entire transaction inclusive of its consequences.

The court then turned to the question of the capacity to consent and noted that in this context, valid consent can only be given by someone with the intellectual and emotional capacity for the required knowledge, appreciation and consent. Because consent is a manifestation of will “capacity to consent depends on the ability to form an intelligent will on the basis of an appreciation of the nature and consequences of the act consented to”. Mojapelo J said that young and immature children do not have the capacity for real knowledge, appreciation and consent. Such young and immature children therefore would not qualify under the Act to access the rights to termination of pregnancy because they are incapable of complying with the important jurisdictional requirement of giving informed consent. If such children are to be considered for termination of pregnancy, then in such a case, the normal common law rules that require the consent to be given by or with the assistance of the guardian must necessarily kick in. He noted that what the Act does not do is to fix a rigid age or number of years for the kicking in of such rules. Instead of using age as a measure of control or regulation, the legislature resorted/opted to use capacity to give informed consent as a yardstick. Where such capacity exists, said Mojapelo J, the Act recognises it in spite of the youthfulness or age of the person. Where it does not exist, then no such recognition is given, again in spite of youthfulness or age of the candidate for termination of pregnancy.

---

201 The court referred to the case of Van Heerden and Others as cited in Boberg P Law of Persons and the Family, 2nd ed at p 849.
202 Mojapelo J referred to S v Marx 1962 (1) SA 848 (N) at p 854 in this regard.
A girl or any woman has the capacity to consent to the termination of her pregnancy and its concomitant invasion of her privacy and personal integrity only if she is "in fact mature enough to form an intelligent will" said the court. The court held that, within the context of the Act, actual capacity to give informed consent as determined in each and every case by the medical practitioner based on the emotional and intellectual maturity of the individual concerned and not on arbitrarily predetermined and inflexible age or fixed number of years is the distinguishing line between those who may access the option to terminate their pregnancies unassisted on the one hand and those who require assistance on the other. Following on from this conclusion, it found that it would be incorrect to approach the matter as if the Act is totally blind to the question of youth or minority. The court pointed out that the Act has specific provisions dealing with minors. In the case of a pregnancy minor, a medical practitioner or registered midwife is enjoined in peremptory language to advise the minor to consult with her parents, guardians, family members or friends before the pregnancy is terminated. The person performing the termination of pregnancy has no choice in this regard. This is a further regulatory measure of the Act but not a cornerstone of regulation under the Act said Mojapelo J. The injunction is thus subject to the proviso that the termination of pregnancy shall not be denied if such minor, having been duly advised, should choose not to consult with her parents, family members or friends. The court held that this was a useful provision that prevented frustration of a constitutional right when the minor is in fact emotionally and intellectually able to give informed consent to the procedure. A medical practitioner or registered midwife who is not satisfied that the pregnant minor has the capacity to give informed consent should therefore not perform the termination of pregnancy on such a minor. This of course applies equally to pregnancy minors and pregnancy adults, said Mojapelo J. If in such a case the medical practitioner or registered midwife performs the termination of pregnancy without the informed consent of his or her patient, his or her conduct will not be in accordance with the Act and will accordingly be unlawful. The court held that informed consent required by the Act is thus a consent that can be given by each and every person having the capacity to do so. It is a threshold with both intellectual and emotional attributes and those performing the termination of pregnancy operations have to satisfy themselves that it is met.
The court then went on to explore the ratio behind informed consent. It stated that an examination of the rationale behind the requirement of informed consent in medical procedures brings one to the very foundation principles of and from which the right to termination of pregnancy in itself arises. Referring to the case of Castell v De Greef,203 Mojaapeloo J stated that Ackerman J on behalf of the full bench of the CPD made it clear that the ratio for that requirement was to give effect to the patient's fundamental right to self-determination. He quoted from the judgment at 420J where the court said that it was: “clearly for the patient to decide whether he or she wishes to undergo the operation, in the exercise of the patient's fundamental right to self-determination” and at 426E where it stated that “it is in accord with the fundamental right of individual autonomy and self determination to which South African law is moving. This formulation also sets its face against paternalism, from many other species whereof South Africa is now turning away.” Mojaapeloo J pointed out that the Transvaal Provincial Division recently endorses the approach in Castell on the basis of the patient's right to exercise her “fundamental right to self determination” in C v Minister of Correctional Services.204 He held that the fundamental right to self determination itself lies as the very heart and base of the constitutional right to termination of pregnancy and pointed out that the recognition of the right of every individual to self determination has now become an imperative under the constitution and particularly in terms of the provisions of section 12(2), 27(1)(a), section 10 and section 14 of the Constitution. It is recognition of these rights, said Mojaapeloo J, that provides a foundation for the right to termination of pregnancy in South Africa. The Constitution recognises and protects the right to termination of pregnancy or abortion in two ways, firstly under section 12(2)(a), that is, the right to bodily and psychological integrity, and secondly, under section 12(2)(b), that is, the right to control over one's body. The court held that the closeness or commonality of the source of the right to termination of pregnancy with the ratio for informed consent make informed consent not only a viable and desirable principle for the regulation of the right but also the most

203 Castell fn 199 supra
204 C v Minister of Correctional Services fn 199 supra at p 300
205 Everyone has the right to bodily and psychological integrity which includes the right to make decisions concerning reproduction and the security and control over their body.
206 Everyone has the right to have access to reproductive health care.
207 Everyone has inherent dignity and the right to have their dignity respected and protected.
208 Everyone has the right to privacy
appropriate. It stated that the Constitution not only permits the Choice on Termination of Pregnancy Act to make a pregnant woman’s informed consent the cornerstone of its regulation of the termination of her pregnancy, it requires the Act to do so. To provide otherwise would itself be unconstitutional.

Mojapelo J observed that the plaintiff alleged that a girl below the age of 18 years is not capable of giving informed consent as required by the Act, i.e. to make the decision whether or not to have a termination of her pregnancy which serves her best interests without the assistance and/or guidance of her parents, guardian or counsellor. He noted that the plaintiff argued that it is because such a person is not in a position to appreciate the need for and value of parental care and support. Mojapelo J stated that if indeed this were so then the very incapacity to give informed consent would disqualify such a girl from accessing the right to terminate her pregnancy. He found that the plaintiff’s approach is a rigid approach to maturity which is blind to the fact of life that there will be women below the age of 18 years who are in fact mature, much as there will be those above that age (or any fixed age) who are in fact immature. He said that it failed to recognise and accommodate individual differences and that this was a major flaw or weak link in the plaintiff’s case.

Mojapelo J said that when considering the validity of an exception to the particulars of claim on the basis that such particulars of claim do not disclose a cause of action, the proper judicial approach is that the allegations in such particulars of claim must be accepted as true. The plaintiff, the defendant and the *amicus curiae* all agreed on this point. He noted that what had to be accepted as true in the present case includes the allegation in paragraph 20.2 of the plaintiff’s particulars of claim that a woman under the age of 18 “is not capable of giving informed consent” as required in section 5(1) of the Act. He stated that this approach is fatal to the plaintiff’s claim as formulated as the allegations in this paragraph of the plaintiff’s particulars of claim form part of the introductory portion of the particulars and therefore relate to the three claims which made up the entire claims of the plaintiff. He said that on the basis of the truth of the allegation in the plaintiff’s particulars of claim that a girl under the age of 18 is incapable of giving informed consent then on the proper
interpretation of informed consent, such a girl will for that reason be excluded from accessing the termination of pregnancy right under the Act because such consent is the cornerstone of the regulation and a prerequisite for the exercise of the right. He stated that it is in this regard that the offending paragraph was fatal to the plaintiff’s claim. The plaintiff and the amicus curiae, said the court, ostensibly did not agree with the generalised statement in the particulars of claim that a girl under the age of 19 is incapable of giving informed consent. However, as a matter of correct approach to the allegations in the particulars of claim they both argued that the allegations in the particulars of claim must be accepted as true. Save for that purpose, however, they expressly reserved for themselves the right to challenge the truth of the statement in paragraph 20.2 of the plaintiff’s particulars of claim. He stated that the particulars of claim were only being considered for the purposes of the exception and for no other purpose and that for that direct purpose of determination of the issue in the present judgment, the court must accept that girls under the age of 18 years are incapable of giving informed consent. He further noted that section 5(1) of the Act provides that the termination of pregnancy may only take place with the “informed consent of the pregnant woman”. The implications of paragraph 20.2 of the particulars of claim are therefore that girls who are less than 18 years old cannot (on their own) have their pregnancy terminated under the Act. For that reason they fall outside the ambit of section 5(1) of the Act which is under attack and have to be dealt with on some other basis since the subsection applies only to those who are capable of giving informed consent. Mojapelo J pointed out that the plaintiffs claims, A, B and C complain about the legislative failure to impose stricter or additional control on the termination of pregnancies of girls under 18. It should, however, never be permissible for a girl under 18 years to have her pregnancy terminated because, on the plaintiff’s case, she is never capable of meeting the threshold required for termination imposed by section 5(1) of the Act, namely informed consent. The court observed that the plaintiff therefore complains about the failure of the Act to impose stricter regulation on something which the Act does not permit at all. The Act cannot possibly impose stricter control on something it prohibits altogether. Mojapelo J stated that he expressly invited counsel for the plaintiffs to address him on paragraph 20.2 because in his view it posed difficulties for the plaintiff if one accepts its truth, albeit for present purposes (exception stage) only. He still maintained, said Mojapelo J, that one must accept
its truth. He even argued further that the allegations in the paragraph must be read and understood in the context of the preceding allegations and that in the content the paragraph meant that such a girl is not capable of giving informed consent as required in the section without the assistance and/or guidance of parents, guardians and/or counsellors. The court held that this argument did not help the plaintiff since, if people who, in terms of paragraph 20.2 of the particulars of claim, incapable of giving informed consent, are unassisted girls under 18 years, then that becomes the category of persons in respect of whom the patient complains. It said that they are by virtue of their incapacity to give informed consent, excluded in the category of people for whom it is permissible to terminate pregnancy.

Mojapelo J held that for the particulars of claim to disclose a cause of action the allegations contained in them must support the conclusion of fact reached by operation of law as well as the remedy sought. Because a category of persons to whom the plaintiff’s complaint relates are those excluded by incapacity to give informed consent, the allegations in the particulars of claim do not, said the court, support the conclusion. It pointed out that the claims of the plaintiff were excipiable because they assume that the Act permits girls under 18 years to have their pregnancies terminated when it in fact never permits them to do so (assuming the truth of paragraph 20.2). Thus said the court, on the basis that it is true that a girl under the age of 18 years is not capable of giving informed consent required by the Act, and if in practice the pregnancy of such girls is terminated on the basis of their purported consent, then the plaintiff’s remedy is not to attach the Act but to stop medical practitioners and midwives who terminate the pregnancies of girls under the age of 18 because they are doing so unlawfully in violation of section 5(1) of the Act. Mojapelo J held that the constitutionality of the attack could not be sustained on the particulars of claim. The exception was upheld.

Perhaps because this was the second attack on the Choice on Termination of Pregnancy Act by the same plaintiffs on the grounds of constitutionality, Mojapelo J then went on to make some remarks and examined the matter from the perspective of the basis in law of the right of a woman to determine the fate of her pregnancy, or the right to termination of

---

209 They have to be admired for their persistence if not the ingenuity of their legal arguments.
pregnancy as he called it in the judgment. He considered the American case of *Roe v Wade*\(^{210}\) in which the US Supreme Court founded the woman’s constitutional right to determine the fate of her own pregnancy on the constitutional right to liberty entrenched in the Fourteenth Amendment to the US Constitution. He noted that it did so as follows:

1. In a line of previous cases the court recognised an implied constitutional guarantee of personal privacy derived from a variety of express constitutional guarantees, principally the guarantee of ‘liberty’ in the Fourteenth Amendment. In some of those cases the court struck down state prohibitions on the sale of contraceptives. In one of them Brennan J articulated the point of those decisions as follows:

   “If the right of privacy means anything, it is the right of the individual, married or single, to be free from governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child”\(^{211}\)

2. This right of personal privacy is “broad enough to encompass a woman’s decision whether or not to terminate her pregnancy”. Blackmun J in *Roe v Wade*\(^{212}\) explained at 177:

   “The detriment that the state would impose upon the pregnant woman by denying this choice altogether, is apparent. Specific and direct harm medically diagnosable even in early pregnancy may be involved. Maternity or additional offspring, may force upon the woman a distressful life and future. Psychological harm may be imminent Mental and physical health may be taxed by child care. There is also the distress, for all concerned, associated with the unwanted child and there is the problem of bringing a child into a family already unable, psychologically and otherwise, to care for it. In other cases, as in this one, the additional difficulties and continuing stigma of unwed motherhood may be involved.”

3. The woman’s right of privacy and her concomitant right to reproductive self-determination are, however not absolute. The state has an important and legitimate interest in the preservation and protection of the health and welfare of the woman herself and of the potential life of the foetus. When its interest in doing so becomes sufficiently compelling it warrants state intrusion upon the woman’s privacy and self-determination\(^{213}\).

\(^{210}\) *Roe v Wade* (1972) 35 L ed 147
\(^{211}\) *Eisenstadt v Baird* (1972) 33 L ed 2ed 349 et 364
\(^{212}\) *Roe fn 210 supra*
\(^{213}\) *Roe fn 210 supra*
4. During the first twelve weeks of the woman’s pregnancy, the state’s interest is not sufficiently compelling to warrant intrusion.

5. During the second period of twelve weeks, however, the state’s interest in the protection of the health and welfare of the woman herself is sufficiently compelling to warrant regulation and control of that purpose. Its interest in the health and welfare of the foetus is however, not yet sufficiently compelling to warrant intrusion for its protection.

6. Only when the foetus becomes viable, which occurs more or less at the end of the second trimester, does the state’s interest in the protection of the health and welfare of the foetus become sufficiently compelling to warrant intrusion for that purpose. The state may then regulate and even prohibit abortion to protect the life of the foetus provided that it does not preclude an abortion when necessary to preserve the life and health of the woman herself.

Mojapelo J pointed out that Professor Dworkin defends the court’s conclusion that the Constitution protects the woman’s freedom to determine the fate of her own pregnancy. He noted that in the later case of *Thornburg v American College of Obstetricians and Gynaecologists* Blackmun J again explained the fundamental nature of the privacy of a woman’s decision to terminate her pregnancy:

---

214 He describes the impact of a prohibition on abortion as follows: “Laws that prohibit abortion or make it difficult or expensive to procure one, deprive a pregnant woman of a freedom or opportunity that is crucial to many of them. A woman who is forced to bear a child she does not want because she cannot have an early and safe abortion is no longer in charge of her own body: the law has imposed a kind of slavery on her. That is, however, only the beginning. For many women, bearing unwanted children means the destruction of their own lives, because they will no longer be able to work or study or live in ways important to them, or because they cannot support the children...Adoption even when it is available, does not remove the injury, for many women would suffer great emotional pain for many years if they turned a child over to others to raise and love.” (Dworkin R, Life’s Dominion). Mojapelo J notes that Dworkin concludes that once one accepts that the Constitution protects personal privacy then it follows that it also protects women’s right to determine the fate of their own pregnancy: He quotes Dworkin as follows: “But once one accepts (the dictum of Brennan J quoted above) as good law, then it follows that women do have a constitutional right to privacy that in principle includes the decision not only whether to beget children but whether to bear them. (The line of privacy decisions referred to above) can be justified only on the presumption that decisions affecting marriage and childbirth are so intimate and personal that people must in principle be allowed to make these decisions for themselves, consulting their own preferences and convictions, rather than having society impose its collective decision on them. A decision about abortion is at least as private in that sense as any other decision the court has protected. In one way it is more so, because it involves a woman’s control not just of her sexual relations but of changes within her own body, and the Supreme Court has recognized in various ways the importance of physical integrity.”

“Few decisions are more personal and intimate, more properly private, or more basic to individual dignity and autonomy, than a woman’s decision — with the guidance of her physician and within the limits specified in Roe — whether to end her pregnancy. A woman’s right to make that choice freely is fundamental. Any other result, in our view, would protect inadequately a central part of the sphere of liberty that our law guarantees equally to all.”

Mojapelo J also referred to dicta in *Casey v Planned Parenthood of Southeastern Pennsylvania*\(^\text{216}\), the Canadian case of *R v Morgentaler*\(^\text{217}\), *Rodriguez v British Columbia (Attorney General)*\(^\text{218}\), and *Bruggeman and Scheuten v Federal Republic of Germany*\(^\text{219}\).

---

\(^{216}\) *Casey* (1992) 120 L Ed 2d 674. Mojapelo J quoted the following dicta of O’Connor J in explanation of the conclusion of the US Supreme Court that women have a constitutional right to determine the fate of their own pregnancy: “It is settled now, as it was when the court heard arguments in *Roe v Wade*, that the Constitution places limits on a state’s right to interfere with personal most basic decisions about family and parenthood.” (at 696-697) “Some of us individuals find abortion offensive to our most basic principles of morality, but that cannot control our decision. Our obligation is to define the liberty of all, not to mandate our own moral code. The underlying constitutional issue is whether the state can resolve these philosophical questions in such a definitive way that a woman lacks all choice in the matter, except perhaps in those rare circumstances in which the pregnancy is itself a danger to her own life or health, or is the result of rape or incest.” (698-699) “Our law affords constitutional protection to those personal decisions relating to marriage, contraception, family relationships, child rearing and education. These matters involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one’s own concept of existence, of meaning, of the universe and the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion by the state.” (at 698) “Abortion is a unique act. It is fraught with consequences for others: for the woman who must live with the implications of her decision; for the persons who perform and assist in the procedure; for the spouse, family and society which must confront the knowledge that these procedures exist, procedures some deem nothing short of an act of violence against innocent human life; and, depending on one’s beliefs, it does not follow that the state is entitled to prescribe it in all instances. That is because the liberty of the woman is at stake in a sense unique to the human condition and so unique to the law. The mother who carries a child to full term is subject to anxieties, to physical constraints, to pain that only she must bear. That these sacrifices have from the beginning of the human race been endured by woman with a pride that enables her in the eyes of others and gives to the infant a bond of love, cannot alone be grounds for the state to insist that she makes the sacrifice. Her suffering is too intimate and personal for the state to insist, without more, upon its own vision of the woman’s role, however dominant that vision has been in the course of our history and our culture. The destiny of the woman must be shaped to a large extent on her own conception of her spiritual imperatives and her place in society.” (at p 698-699). Mojapelo J noted that the same considerations as applied in the US would compel one to conclude that the South African Constitution protects a woman’s right to choose under its guarantees of dignity in section 10 and privacy in section 14. He stated that it is however, not necessary to resort to those general guarantees because section 1(2)(a) specifically guarantees the woman’s right “to bodily and psychological integrity” including the right “to make decisions concerning reproduction” and “to security in and control over their body”. They were clearly designed, said Mojapelo J, specifically to protect the woman’s right to reproductive self-determination.

\(^{217}\) *Morgentaler* (2) (1988) DLR (4th) 385. Mojapelo J noted that in Canada, section 7 of the Canadian Charter also protects the right to “liberty” but goes further by providing express protection to the right to “security of the person”. In *Morgentaler* the Canadian Supreme Court held that the woman’s right to determine the fate of her own pregnancy is a basic human right. He observed that the majority of the court pointed to the guarantee of “security of the person” in section 7. Wilson J, who concurred with the majority, held that, the protection could also be found on the right to “liberty” in section 7 and the concomitant implied guarantee of human dignity. At issue before the court was the constitutionality of section 231 of the Canadian Criminal Code which placed severe procedural restrictions on a woman’s freedom to obtain an abortion. Mojapelo J quoted the dicta of Dickson CJ explaining his conclusion that it constitutes a “woman’s right to bodily integrity, both a physical and emotional sense. Forcing a woman, by threat of criminal sanction, to carry a foetus to term unless she meets certain criteria unrelated to her own priorities and aspirations. Not only does the removal of decision-making power threaten women in a physical sense, the indecision of knowing whether an abortion will be granted inflicts emotional stress. Section 251 clearly interferes with a woman’s bodily integrity in both a physical and emotional sense. Forcing a woman, by threat of criminal sanction, to carry a foetus to term unless she meets certain criteria unrelated to her own priorities and aspirations, is a profound interference with a woman’s body and thus a violation of security of the person.”

\(^{218}\) *Rodriguez* (1993) 17 CRR (2d) 193 at 203-204 and 107 DLR (4th) 342 at 391-b. Mojapelo J noted that in the case of *Rodriguez* concerning the constitutionality of a criminal prosecution of assisted suicide, Spixka J, who gave the judgment of the majority of the court, reviewed its jurisprudence on the right to security of the person and concluded as follows: “In my view then, the judgment of this court in *Morgentaler* fn 205 supra can be seen to encompass a notion of personal autonomy involving, at the very least, control over one’s bodily integrity free from state interference and freedom from state-imposed psychological and emotional stress...There is no question then, that personal autonomy, at least with respect to the right to make choices
Mojapelo J noted that section 12 (2)(a) and (b) of the Constitution provides that everyone has the right to bodily and psychological integrity which includes the right to make decisions concerning reproduction and to security in and over their body. He stated that compared to the foreign jurisdictions he had referred to previously, it is clear that the South African constitutional provisions are the most explicit concerning this right and that the provisions of section 12 guarantee the right of every woman to determine the fate of her pregnancy. A woman’s freedom of choice, said Mojapelo J, is further reinforced by the right to equality and protection against discrimination on the grounds of gender, sex and pregnancy (section 9 of the Constitution), the inherent right to dignity and to have her dignity respected and protected (section 10 of the Constitution), the right to life (section 11), the right to privacy (section 14 of the Constitution) and ‘more importantly’ the right to have access to reproductive health care (section 27(1)(a) of the Constitution). He noted that some of these rights were themselves developed in the foreign jurisdictions previously cited by courts through judicial interpretation to found the right to termination of pregnancy. Cumulatively, therefore, the more explicit rights in section 12(2)(a) and (b) and all the other reinforcing rights provide a strong constitutional base for the right to termination of pregnancy in South African law. Mojapelo J points out in the judgment that like other constitutional rights the right to the termination of pregnancy is not absolute and that the state has a legitimate role in the protection of pre-natal life as an important value in South

concerning one’s own body, control over one’s physical and psychological integrity, and basic human dignity, are encompassed within security of the person, at least to the extent of freedom from criminal prohibitions which interfere with these.” Mojapelo J stated that insofar as the South African Constitution also guarantees a right to “security of the person” in section 12(1) it could similarly find such constitutional protection of a woman’s right to determine the fate of her own pregnancy. He noted that it is, however, not necessary to refer to section 12(1) because section 12(2) (a) and (b) expressly guarantees a more specific right “to bodily and psychological integrity” including the right to make decisions concerning reproduction and to security in and control over one’s body.

Bruggemman (1977) 3 EHRR 244. Mojapelo J noted that the German constitutional court has held that the right to life extends to the protection of pre-natal life but that it has also recognised a countervailing constitutional right which protects the woman’s personal autonomy to determine the fate of her own pregnancy. He pointed out that the jurisprudence of the German constitutional court accordingly lends support to an alternative perspective that the right to freedom and security of the person affords constitutional protection to a woman’s right to determine the fate of her own pregnancy albeit subject to limitation to protect the life of the foetus. He also noted that in Europe article 8 of the European Convention on Human Rights provides that “everyone has the right to respect for his private and family life”. Mojapelo J quoted the following dicta of the European Commission in Bruggemman in holding that this right founded constitutional protection of a woman’s right to self-determination:

“The right to respect for private life is of such scope as to secure to the individual a sphere within which he can freely pursue the development and fulfilment of his personality. To this effect, he must also have the possibility of establishing relationships of various kinds, including sexual, with other persons. In principle, therefore, whenever the state sets up rules for the behaviour of the individual within this sphere, it interferes with the respect for private life...” (at 232 para 55). “However, pregnancy cannot be said to pertain uniquely, to the sphere of private life. Whenever a woman is pregnant, her private life becomes closely connected with the developing foetus.” Mojapelo J notes that the Commission accordingly concluded that although the woman has a right of self-determination, it was permissible for the state to regulate abortion because the right to privacy cannot be interpreted solely as meaning that pregnancy and its termination are as a principle solely a matter of the private life of the mother. He states that the jurisprudence of the European Union accordingly recognises the woman’s constitutional right to self-determination but also recognises that it is permissible for the state to regulate its exercise.
African society and may regulate and limit the woman’s right to choose in this regard. However, he said, because the right itself is derived from the Constitution the regulation thereof by the state may not amount to the denial of that right. He stated that the provisions of section 36(1) of the Constitution would apply to any limitation of the right of a woman to terminate her pregnancy – in other words such limitation would be valid only to the extent that it is reasonable and justifiable in an open and democratic society based on human dignity, equality and freedom.

Mojapelo J noted that South African courts, unlike the US courts, have never had to address the impact of any state-imposed interference with the autonomy of a woman to determine the fate of her own pregnancy but have in different contexts recognised the potential for catastrophic consequences that might flow from the unwanted, but state-enforced birth of a child. He referred by way of example to *Administrator Natal v Edouard*20. Mojapelo J observes that if the state were to prohibit termination, its prohibition would force pregnant women to bear, give birth to and nurture unwanted children at the risk of suffering such “catastrophes” and with the associated impairment of their physical and psychological wellbeing. The state’s interference would clearly constitute an impairment of women’s right “to bodily and psychological integrity” and more particularly their right “to make decisions concerning reproduction” and “to security in and control over their body” said the court. It noted that the plaintiff recognised and acknowledged that the right in issue is a constitutional one and that it complained about the way the legislature, through the Act, allows girls to access the right. The plaintiff wanted restriction or regulation of access to the right based on age.

The court observed that the Act allows all women who have the intellectual and emotional capacity for informed consent, to choose whether to terminate their pregnancies or not, that it does not distinguish between them on the ground of age and that this is what the plaintiff complains of as being unconstitutional. Mojapelo J stated that this complaint is inconsistent with the Constitution because:

---

20 *Edouard* 1990 (3) SA 581 (A) at 591G where Van Heerden JA stated that: “There is no justification for holding, as a matter of law, that the birth of an ‘unwanted’ child is ‘a blessing’. The birth of such a child may be a catastrophe, not only for the parents and the child itself but also for previously born siblings.”
1. The right of every woman to choose whether to terminate her pregnancy or not is enshrined in sections 12(2)(a) and (b), 27(1)(a), 10 and 14 of the Constitution. All of these rights are afforded to ‘everyone’ including girls under the age of 18. They are accordingly also entitled to respect for and protection of their right to self-determination.

2. Section 9(1) provides that everyone is equal before the law and has the right to equal protection and benefit of the law. Section 9(3) goes further to prevent unfair discrimination against ‘anyone’ inter alia on the ground of “age”. Any distinction between women on the ground of their age, would invade these rights.

3. It follows that any limitation upon the freedom of any woman, including any girl under the age of 18 years to have their pregnancy terminated constitutes a limitation of their fundamental rights. Such a limitation is valid only if justified in terms of section 36(1).

Mojapelo J stated that because the right is a constitutional one, one of the minimum requirements for justification is that the limitation must be rational. He said that the distinction made by the Act between those women who have the capacity for informed consent on the one hand and those who do not have the capacity on the other, is a rational distinction. It is for that reason capable of justification and is therefore constitutional. He noted that the argument that the provisions of the Act that were under attack are unconstitutional because they do not cater for the interest of the child is unsustainable. The legislative choice opted for in the Act, he said, serves the best interest of the pregnant girl child (section 28(2) of the Constitution) because it is flexible to recognised and accommodate the individual position of a girl child based on her intellectual, psychological and emotional make up and actual majority. It cannot be in the interest of the pregnant minor girl to adopt a rigid age based approach that take not account, little or inadequate account of her individual peculiarities. Mojapelo J stated that even if the plaintiff was to establish that the age based control or regulation was in the interest of the child, that would not be enough and that the plaintiff would have to go further and show that the legislative
choice adopted in the Act (based on informed consent) is in fact unjustifiable and unconstitutional.

The court observed that while the plaintiff had formulated its claim on the basis that girls or young women below the age of 18 are capable of giving informed consent, this is not necessarily so. The true position depends on the particular individual girl or woman and on her particular circumstances and must be determined for each and every woman in each case. In enacting the Act, the legislature assumed that there will be women below and above the age of 18 who will be incapable of giving informed consent and for this category the law requires parental or some other assistance in giving the informed consent. Mojapelo J pointed out that the legislature also recognised that there will be women above the age of 18 who are capable of giving informed consent and for this category the legislature requires no assistance when they give consent to termination of pregnancy. He said that as to whether a particular individual, irrespective of age, is capable of giving such consent, the legislature left the determination of the factual position to the medical professional or registered midwife who performs the act. Mojapelo J stated that he could not find that the exercise of this legislative choice was so unreasonable or otherwise flawed that judicial interference is called for in what is essentially a legislative function. Women or girls under the age of 18 are not unprotected for as long as they are incapable of giving informed consent. He noted that the legislature makes provision to ensure that all young women or girls below the age of 18 are encouraged to seek parental support and guidance when seeking to exercise the right to reproductive choice. The constitutional right, said the court, of a pregnant child to family or parental care (section 28(1)(b)) is therefore not denied. It is accommodated but not imposed. It is given effect under the Act in a manner that does not seek to negate other constitutional rights including the right to equality before the law, to equal protection and benefit of the law as well as the right to termination of pregnancy itself. Thus, said Mojapelo J, he could not find that the legislation is unconstitutional when it provides for what is constitutionally permissible and regulates it without affronting the Constitution. For this reason, he held, the plaintiff’s particulars of claim did not disclose a cause of action. The exception was upheld, the plaintiff’s claims were dismissed and no order was made in respect of costs.
Discussion

It is submitted with respect that the reasoning of the court in this case is a perfect example of the manner in which the logic within the Constitution itself must be applied to the determination of whether or not legislation is unconstitutional or not. The court interrogated the issue before it with regard not only to the most obvious and direct constitutional rights involved but also with regard to the rights that support and reinforce them. The judgment beautifully illustrates the interconnectedness and interrelatedness of the various rights in the Constitution and how they form part of a complex legal matrix that has to be considered as a whole that is more than the sum of its parts when adjudicating individual cases. The reasoning of the court also illustrates the wisdom of a bottom up approach to questions of human rights since the simple rights that are contained in the Bill of Rights can be used to construct other more complex rights that are no less constitutional. Just as the court was able to deduce a constitutional right to termination of pregnancy from the elemental rights contained in the Constitution, it is submitted, so can a constitutional right to health be deduced from the fundamental rights within the Bill of Rights. The need for such composite rights may or may not arise depending upon the facts of each case. The value of such a bottom up approach is that it is far more flexible and adaptable to the circumstances of each particular case than the top-down approach. The latter postulates composite rights which it then tries to populate with more detailed precepts. This is likely to lead to inconsistencies in practice since it requires that the basic legal principles (which may be indivisible unit rights) upon which the right rests are derived from the notion of the right itself rather than having those indivisible unit rights, or fundamental legal principles, describe and delineate the right. Unlike the situation in international law, in South African constitutional law, when dealing with rights issues one does not sit with the problem of trying to populate composite rights in terms of concepts such as minimum core and other subjective paradigms. The legal matrix of relevant rights is applied to the unique factual matrix in each case. It is submitted that the judgment of Mojapelo J neatly illustrates the logical elegance of this bottom-up approach.

At a more prosaic level, and from a different angle, it could be said that what is behind this case is an attempt by a group of religious fundamentalists to impose, by way of a court
judgment, their views concerning abortion on the rest of the population. In this sense, the case is once again a battle between a collective and the individual. It is seldom that an individual will be in any position to impose his or her religious views upon the collective and the balance of power, as history indicates, has generally not been in favour of the individual in such matters. The freedom of the individual to live his or her own life as he or she sees fit, the right to self-determination as it has sometimes been called, is fundamental to the South African constitutional system of law. In this case this principle, applied at a pragmatic, individual level trumped the abstract moralistic argument, cloaked as legal principle, of a particular religious grouping. The judgment of the court therefore supports not only the rights to bodily and psychological integrity, dignity and reproductive health care to which the court refers, but also the right to freedom of religion, thought, conscience, belief and opinion reflected in section 15 of the Constitution to which it does not expressly refer. The judgment itself is thus clearly consistent with, and integral to, a system of law that is larger than itself. At the most abstract level, sound court judgments will manifest such consistency and, due to the polycentricity of the Bill of Rights, will be justifiable at a number of different levels or from many different perspectives. The richness of such a system of law lies in its relevance to many different facets of life. It is multidimensional in its effect.

The decision of the court also emphasises the importance of flexibility in policy and legislation that impacts upon constitutional rights. It will be recalled that lack of flexibility was found to be a major failing in the government policy concerning access to Nevirapine for the purpose of the prevention of mother to child transmission of HIV. The age issue is one that often arises as a threshold in law. It is relevant as such in the health care context inter alia in terms of the Sterilisation Act which is currently in the process of amendment. Section 2 of the current Act provides somewhat awkwardly that -

(1) No person is prohibited from having sterilisation performed on him or her if he or she is-
   (a) capable of consenting; and

221 TAC v SA Republic
222 Sterilisation Act No 44 of 1998
223 The draft Sterilisation Amendment Bill was published for public comment on 04 September 2003 in Government Gazette No 25415, Notice No 2303 for public comment.
(b) 18 years or above.

(2) A person capable of consenting may not be sterilised without his or her consent.

(3) (a) Sterilisation may not be performed on a person who is under the age of 18 years except where failure to do so would jeopardize the person's life or seriously impair his or her physical health.

Subsection (2) is not entirely in keeping with subsection (1)(b) which, although it separates the capacity to consent from age, still imposes the age of 18 as a threshold. The peculiar phrasing of subsection (1) suggests that where a person is capable of consenting but is under the age of 18 years, sterilisation of that person is prohibited. However such prohibition must be inferred from section 2 (1) of the Act itself since there is no other legal prohibition or provision with regard to sterilisation either in the Act or outside of it. It is submitted that this subsection on its own could be in conflict with the constitutional right of a minor to bodily and psychological integrity given the arguments raised by the court in the second Christian Lawyers case\(^{224}\). According to the decision of the court in this case, it should be that where a person is capable of informed consent, this should be sufficient grounding for a right to be sterilised irrespective of the age of the person being sterilised. Sterilisation, like termination of pregnancy, is an exercise of a reproductive right and the right to security in and control over one's body in terms of section 12(2) of the Constitution. Subsection (2) of section 2 of the Act could be read as taking the principle in subsection (1) a step further in saying that a person capable of consenting may not be sterilised without his or her consent. Thus where a person is either over the age of 18 or under the age of 18, where he or she is capable of consenting, sterilisation may not take place without his or her consent. In this sense it is partially redemptive of subsection (1) because the latter gives everyone who is over 18 years of age and capable of consenting a right to be sterilised but does not address the converse which is the right of persons capable of consenting but under the age of 18 years not to be sterilised. It is only partially redemptive because the right to be sterilised in terms of subsection (1) is still age restricted even where a person is capable of consenting. It therefore limits the right to sterilisation for

\(^{224}\) *Christian Lawyers (2)* fn 199 supra
those persons who are under 18 years of age and capable of consenting. Since the right to make reproductive decisions and to security in and control over one’s body are constitutional rights, it remains to be seen whether this provision constitutes a limitation of a constitutional right falling within the ambit of section 36(1) of the Constitution. There is an argument that sterilisation from the point of view of the right holder—especially in the case of women—is generally of a more permanent nature than the termination of a pregnancy. A person who terminates one pregnancy can usually still decide to have another pregnancy but a person who is sterilised cannot always be sure that the procedure can be reversed should he or she have a change of heart later on. Children and young people have the whole of their reproductive lives ahead of them and the question is whether, as a matter of policy, they should be allowed to be sterilised where they are capable of consenting but younger than 18 years of age. Whilst the inclination of many is likely to be that this should not be permitted, the question is if the person is capable of informed consent why should he or she be denied this choice simply on the basis of age? What is the difference between a mature 17 year old who wants to be sterilised and is fully capable of informed consent and a highly immature 18 year old who is barely capable of informed consent? Perhaps the distinction is that in terms of section 28(3) of the Constitution, a child is defined as a person under the age of 18 years and section 28(2) stipulates that a child’s best interests are of paramount importance in every matter concerning the child. In such a situation it may possibly be argued that a person under the age of 18 is not capable of knowing what is in his or her best interests even if he or she is capable of giving informed consent. Informed consent involves knowledge and appreciation of the consequences as well as consent but does it necessarily encapsulate an understanding of the individual as to what is in his or her best interests? It is submitted, however, that this distinction between informed consent and what is in a person’s best interests could be equally applied to decisions on choice of termination of pregnancy. The court in the second Christian Lawyers case, although it did not discuss it directly, also did not identify it as a valid distinction. The problem with the concept of what is in a person’s best interests is that it is highly subjective. This is well demonstrated in legal issues involving end of life decisions. For example, to accept high doses of painkillers may hasten death but will alleviate suffering. Which option is in the

225 Christian Lawyers (2) in 199 supra
individual's best interests and who decides? Where a person is over the age of 21 the law is clear. Where a person is under the age of 21, or 18 for that matter, the law is not so clear. Section 39 of the Child Care Act states that a person who is over the age of 14 can consent to medical treatment of himself or his child, but it is silent on the subject of the refusal of medical treatment by such a person. Many people would argue that a child of 14 is not in a good position to know what is in his best interests and should not be allowed to refuse essential medical treatment. The same section allows a medical superintendent to give treatment in the absence of the consent of the parents in certain circumstances but does not address the situation where a child is over the age of 14 and is refusing the proposed treatment. Whose decision prevails? It is submitted that given the provisions of section 28 of the Constitution that the interests of the child are paramount, as long as the medical practitioner acts in the best interests of the child, the courts are unlikely to decide against such practitioner in a claim for violation of the rights of the child in section 12(2) of the Constitution. It is submitted, however, there must be clear evidence that the decision was taken in the best interests of the child because in the absence of such evidence, it is likely

226 In terms of section 1 of the Age of Majority Act No 52 of 1972 all persons, whether males or females, attain the age of majority when they attain the age of twenty-one years. In terms of section 2 of this Act any person who has attained the age of eighteen years may, subject to the provisions of this Act, apply to the provincial division of the Supreme Court of South Africa having jurisdiction in the area within which such person is ordinarily resident for an order declaring him to be a major. Despite the provisions of this Act many of the more recent statutes, possibly because they are following the Constitution, use the age of 18 as a threshold when it comes to taking certain decisions or performing certain actions. See for example the Explosives Act No 15 of 2003 which defines a "suitable person" as inter alia a person who is 18 years or older with regard to a licence which must be obtained by any person who wants to run a magazine for the storage of explosives; the Private Security Industry Regulation Act No 56 of 2001 which allows persons over the age of 18 years to be registered as a security service provider; the Electoral Act No 73 of 1998 which defines a voter as South African citizen who is 18 years old or older and whose name appears on the voters' roll; the Transport General Amendment Act 16 of 1995 which stipulates that a radio operator on a ship which is required by the International Convention for the Safety of Life at Sea, 1974, as amended, to have a radio installation, shall be not less than 18 years of age; the Basic Conditions Of Employment Act No 75 of 1997 which stipulates that "child" means a person who is under 18 years of age as does the Social Assistance Act 59 of 1992, the Refugees Act No 130 of 1998, the Child Care Act No 74 of 1983, the Correctional Services Act No 111 of 1998; the Recognition Of Customary Marriages Act No 120 of 1998 which stipulates that for a customary marriage entered into after the commencement of this Act to be valid the prospective spouses must both be above the age of 18 years; the Liquor Act No 27 of 1989 which stipulates that the holder of a liquor licence shall not employ any person who is under the age of 18 years; the Births And Deaths Registration Act No 51 of 1992 which provides that a "major" or "person of age" means any person who has attained the age of 18 years or who has under the provisions of section 2 of the Age of Majority Act, 1972 (Act No 57 of 1972), been declared to be a major, and includes a person under the age of 18 years, who has contracted a legal marriage as does the South African Citizenship Act No 88 of 1995. It would seem that there is a widely held view that a child and a minor are not necessarily the same thing and that for purposes of the former, the age of 18 years is the cut-off point whilst for the purposes of the latter, the cut-off point is the age of 21 years. However this is not always the case. See for example the Liquor Act which defines a minor as a person who has not attained the age of 18 years. From a pragmatic perspective what is happening is that persons over the age of 18 years are increasingly being given legal capacity for various specific purposes without the amendment of the general legislation, namely the Age of Majority Act. For health purposes, the Medicines and Related Substances Act No 101 of 1965 provides that Schedule 1, 2,3,4,5 or 6 substance shall not be sold to any person apparently under the age of 14 years except upon a prescription issued by an authorised prescriber and dispensed by a pharmacist, pharmacist intern or pharmacist's assistant or by a veterinarian or a person who is the holder of a licence as contemplated in section 22C (1) (a), or on a written order disallowing the purpose for which such substance is to be used and bears a signature known to the seller as the signature of a person known to such seller and who is apparently over the age of 14 years. Section 39(A) of the Child Care Act stipulates that notwithstanding any rule of law to the contrary any person over the age of 18 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any operation upon himself and any person over the age of 14 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any medical treatment of himself or his child.
that the action taken in consequence thereof could well be a violation of section 12(2) rights and the provisions of section 39 will not avail the medical practitioner if his actions prove to be unconstitutional with regard to section 12(2) and section 28.

The judgment of the court in *Christian Lawyers*\(^\text{227}\) is clearly to the effect that the right to self-determination cannot be age restricted. It also suggests that the rights of children provided for in section 28 of the Constitution should not be imposed on them, for instance, by way of legislation that denies them the right to bodily and psychological integrity on the ground that their section 28 rights override all others. The implication is that these section 28 rights must be capable of being exercised and balanced against other possibly conflicting rights. In other words, there is still an element of choice involved on the part of the right holder as to whether or not to enforce the right. If the right is imposed then there is no question of its being exercised by the right holder. Generally, as far as children are concerned this issue does provoke some circuitous debates since children are often not in a position to exercise or enforce a right independently of an adult parent, guardian or caregiver. The younger the child the more this statement holds true. If the very rights designed to protect the child against *inter alia* an adult parent, guardian or caregiver must first be exercised by the child with the assistance of that parent, guardian or caregiver, this effectively weakens the protection that the right affords the child. It is this dilemma that the Choice on Termination of Pregnancy Act has to address - particularly in situations of sexual molestation of a minor woman by her parent, guardian or caregiver. The point of the judgment of the court in the *Christian Lawyers* case\(^\text{228}\) is that where a minor is capable of giving informed consent, the opposing will of a parent, guardian or caregiver should not be imposed upon the minor under the guise of section 28 of the Constitution simply because the minor is of a certain age. The capacity to give informed consent counts for more in such matters than an arbitrary threshold imposed in the abstract without reference to the individual who is most affected.

\(^{227}\) *Christian Lawyers* (2) fn 199 supra

\(^{228}\) *Christian Lawyers* (No 2) fn 199 supra
It is submitted that it is also not in keeping with the concept of administrative justice that rigid criteria such as age limits should be imposed where a large number of factual permutations can occur and not every one of them can be anticipated by legislation. It is a well-established principle of administrative law that each case must be decided on its merits and there is no reason why this principle should not be incorporated into legislation involving minors and the giving of informed consent by them - especially where the right to bodily and psychological integrity is involved.

Subsection (3)(a) of the Sterilisation Act does not take into account the right to psychological integrity referred to in section 12(2) of the Constitution in that it refers only to physical health.

Section 3 of the Act stipulates as follows –

(1) Sterilisation may be performed on any person who is incapable of consenting or incompetent to consent-
   (a) upon a request to the person in charge of a hospital and with the consent of a-
      (i) parent;
      (ii) spouse;
      (iii) guardian; or
      (iv) curator;
   (b) if a panel contemplated in subsection (2) after considering all relevant information, including the fact that-
      (i) the person is 18 years of age, unless the physical health of the person is threatened; and
      (ii) there is no other safe and effective method of contraception except sterilisation, concurs that sterilisation may be performed; and
   (c) if the person is mentally disabled to such an extent that such a person is incapable of-
      (i) making his or her own decision about contraception or sterilisation;
      (ii) developing mentally to a sufficient degree to make an informed judgement about contraception or sterilisation; and
      (iii) fulfilling the parental responsibility associated with giving birth.

(2) The person in charge of a hospital contemplated in subsection (1) must upon request, as prescribed for sterilisation, convene a panel which will consist of-
   (a) a psychiatrist, or a medical practitioner if no psychiatrist is available;
   (b) a psychologist or a social worker; and
   (c) a nurse.

(3) Where a person to be sterilised is in custodial care, no member of the panel may be an employee of the custodial institution.
(4) If sterilisation is to be performed in a private health care facility, the members of the panel may not be employees of, or have a financial interest in, that facility.

(5) The person performing the sterilisation must ensure that the method of sterilisation used holds the least health risk to the person on whom sterilisation is performed.

(6) Sterilisation may not be performed in terms of subsection (1) unless the person suffers from a severe mental disability.

(7) For the purposes of this section, ‘severe mental disability’ means a range of functioning extending from partial self-maintenance under close supervision, together with limited self-protection skills in a controlled environment through limited self care and requiring constant aid and supervision, to severely restrained sensory and motor functioning and requiring nursing care.

In this section, once again the question of 18 years of age is to be used as a threshold. In this instance, it is even more problematic because the section is dealing expressly with persons who are incapable of consenting. This incapacity is not linked in the Act to mental disability or lack of consciousness due to physical injury or illness. It can therefore also be applied to children who lack capacity simply because of their age. However section 2(3) deals with the sterilisation of mentally healthy minors and it is therefore unnecessary to regard this section as relevant to them. Age is only one factor that is an indicator of mental capacity. In the case of mentally disabled persons it may not be relevant at all since persons who are mentally disabled may never achieve legal capacity irrespective of their age. Mental capacity is often indicated or measured in terms of mental or developmental age. Thus an eighteen year old mentally disabled patient's cognitive functions may be pegged at the level of those of a healthy twelve year old. While the mind may not achieve full maturity the body of a mentally disabled person may well reach puberty and be capable of procreation. Indeed one of the primary concerns of the Sterilisation Act when it was first passed was to ensure that unnecessary sterilisation of mentally disabled persons was prohibited since mentally disabled persons also have reproductive rights. It was much easier in the past for parents and caregivers of such persons to have them sterilised than to worry about sexual activity leading to the birth of an unwanted child. However on one possible interpretation of section 3, the Act went too far in the direction of preventing sterilisation of mentally disabled persons under the age of 18 years insofar as the provisions of this section can be interpreted to mean that disabled persons younger than 18 years of
age may not be sterilised at all\textsuperscript{229}. In the case of mentally disabled persons the age of 18 years is even more arbitrary for the purposes of sterilisation than it is for those who are not mentally disabled. In the context of sterilisation, the age of puberty is more relevant in the case of mentally disabled persons than the age of 18 years since the capacity of mentally disabled persons is unlikely to be related to their physical age. To apply the age of 18 years in this context as a reason for the refusal of sterilisation could have the effect of denying a mentally disabled person who is under the age of 18 years the right to dignity, to psychological integrity and to security in and control over his or her body. The proposed amendment to the Act seeks to preclude this.

The decision of the court in \textit{Christian Lawyers} (No 2) has far reaching implications for legal capacity in general and is more in keeping with the Roman Law on the subject which attributed at least partial capacity to children over the age of seven and a significant degree of capacity to those over the age of fourteen years\textsuperscript{230}. It is in keeping with more recent

\textsuperscript{229} It is submitted that it is possible to interpret section 3(1)(b) of the Act to mean that under certain circumstances a person may be sterilised even where he or she is under the age of 18 years and even though his or her physical health is not threatened because the section requires the panel to consider “all relevant information” of which the factors of age, physical health and availability of alternative methods of contraception are just a subset as indicated by the use of the word “including” in relation to those factors. However, practical experience has been that panels have been inclined to refuse sterilisations even in the face of very strong arguments in favour thereof where the person to be sterilised is under the age of 18 years and it was thus decided to amend the Sterilisation Act to ensure that the rights to dignity and psychological integrity of such persons are not compromised by such misinterpretation.

\textsuperscript{230} See Long G, \textit{Infans} Lacta Curtis Roman Law (Smith’s Dictionary, 1875). He notes that in the Roman law there were several distinctions of age which were made with reference to the capacity for doing legal acts:

1. The first period was from birth to the end of the seventh year during which time persons were called Infantes or Qui fari non possunt.
2. The second period was from the end of seven years to the end of fourteen or twelve years, according as the person was a male or a female, during which persons were defined as Qui fari possunt. The persons included in these first two classes were Impubes.
3. The third was from the end of the twelfth or fourteenth to the end of the twenty-fifth year, during which period persons were Adolescentes. Adulti. The persons included in these three classes were minores xv annorum or annorum, and were often for brevity’s sake, called minores only (CURATOR); and the persons included in the third and fourth class were Puberes.
4. The fourth period was from the age of twenty five during which persons were Matures.

He states: “The term Impubes comprehends Infans, as all Infans are Impubes; but all Impubes are not Infantes. Thus the Impubes were divided into two classes, Infantes or those under seven years of age, and those above seven, who are generally understood by the term Impubes. Papillus is a general name for all Impubes not under the power of a father (Dig.50 tit.15a 230).” See also Long G ‘Impubes’ Lacta Curtisa Roman Law (Smith’s Dictionary, 1875). “An infans was incapable of doing any legal act. An impubes, who had passed the limits of infans, could do any legal act with the auctoritas of his tutor; without such auctoritas he could only do those acts which were for his benefit. Accordingly such an impubes could stipulate (sponsuario) but not promise (promittere); in other words, as Gaius (iii.107) expresses it, a papillus could only be bound by the auctoritas of his tutor, but he could bind another without such auctoritas. But this remark as to papilli only applies to those who had understanding enough to what they were doing (qui iam aliquem intellectum habent), and not to those who were infans or infantini proximi, though in the case of the infantini proximi a liberal interpretation was given to the rule of law (beneficiis jure interpretato), by virtue of which a papillus, who was infantini proximus, was placed on the same footing as one who was patertati proximus, but this was done for their benefit only (propter utilitatem eorum), and therefore could not apply to a case where the papillus might be a lesser (of Inst.iii tit.19 s10 with Gaius, iii.108). An impubes was in the power of his father; for in the case of a papillus, the auctoritas of the tutor was only allowed, in respect of the papillus having property of his own, which a son in the power of his father could not have. In the case of obligations ex delicto, the notion of the auctoritas of a tutor was of course, excluded, as such auctoritas was only requisite for the purpose of giving effect to rightful acts. If the impubes was of sufficient
thinking on the subject of legal capacity and the medical treatment of children in particular.\(^\text{231}\) For the purpose of medical treatment the question of the consent of a minor
has proved problematic. The legal basis of the transaction is clearly of particular relevance in this context since minors do not usually have contractual capacity. If health services may only be rendered on the basis of the law of contract then a minor does not have the capacity to obtain such services without the assistance of his or her guardian. This is clearly, however, not in keeping with the provisions of section 39 of the Child Care Act discussed previously. The dicta of the court in Christian Lawyers (No 2) is in marked contrast to the legal position that prevailed even some five years ago. The question is whether the judgment of the court should be restricted to the provisions of the Choice on Termination of Pregnancy Act concerning informed consent only in relation to terminations of pregnancy or whether it should logically be extended to other kinds of health care services. In principle it is difficult to see why the logic used by Mojapelo J in this judgment cannot be applied to most, if not all, other health care services for minors.

---

They point out that the one notable exception to the expansion of minors’ decision-making authority on health care matters is abortion. Only two states – Connecticut and Maine – and the District of Columbia have laws that affirm a minor’s ability to obtain an abortion on her own. Thirty one states have laws in effect that require the involvement of at least one parent in their daughter’s abortion decision. In 16 of these states, a minor must have the consent of one or both parents; in the other 15 states, one or both parents must be notified prior to the abortion. They further note, however, that more than half of the states that require parental involvement for abortion permit a minor to make the decision to continue her pregnancy and to consent to prenatal care and delivery without consulting a parent. Furthermore states appear to consider a minor who is a parent to be fully competent to make major decisions affecting the health and future of his or her child even though many of these same states require a minor to involve her parents if she decides to terminate her pregnancy. In stark contrast to this restrictive approach to termination of pregnancy decisions, states allow minors to make other decisions that can have a lasting effect on their lives. For example, most states permit teenagers to drop out of high school without their parents’ approval and despite the documented adverse effects associated with the lack of a diploma. Although all states require young people to stay in school at least to age 16 or 17, except in very limited circumstances, once that age threshold has been reached, the states generally impose no barriers to minors’ decisions to leave. The most striking of all is that 34 states and the District of Columbia explicitly permit a minor mother to place her child for adoption without her own parents’ permission or knowledge. In addition, 11 states make no distinction between minor and adult parents; in these states, it appears, the decision to relinquish her child for adoption rests with the young mother.

232 Bocnstra and Nash in 231 supra state that: “Establishing rules for minor’s consent for medical care has been one of the more difficult issues to face policy makers. On the one hand it seems eminently reasonable that parents should have the right and responsibility to make healthcare decisions for their minor child. On the other it may be more important for a young person to have access to confidential medical services than it is to require that parents be informed of their child’s condition. Minors who are sexually active, pregnant, or infected with a sexually transmitted disease (STD) and those who abuse drugs or alcohol or suffer from emotional or psychological problems may avoid seeking care if they must involve their parents. Recognizing this reality, many states explicitly authorize a minor to make decisions about their own medical care but balancing the rights of parents and the rights of minors remains a topic of debate.”

233 Christian Lawyers (No 2) fn 199 supra

234 See for instance S v Chipinge Rural Council 1989 (2) SA 342 (ZS) the court stated that: “There is respectable authority for the proposition that majority is the criterion determining the existence of legal capacity in respect of consent or the voluntary assumption of risk. See Spiro Law of Parent and Child 4th ed at 192; Boberg Delist: Principles and Cases vol 1 at 731 - 2. But even if capacity to consent is not coextensive with capacity to contract, in the words of Professor Van der Walt in his work Delist: Principles and Cases para 34(6) at 54, the child must have ‘... the mental capability and maturity to evaluate reasonably the nature, and extent and implications of his consent or assumption of risk. The existence of legal capacity in this sense is therefore relative to the particular circumstances of the case and particularly to the nature of the interests involved and the seriousness of the harmful conduct involved. A child of 14 years may, eg, have the necessary legal capacity to consent to the destruction of her doll, but she would normally not have the necessary legal capacity to consent to medical treatment. Where the child does not have the necessary legal capacity, the guardian must act on behalf of the child.’ See also Snyman Criminal Law at 101; Burdell and Hunt South African Criminal Law and Procedure (General Principles) 2nd ed vol 1 at 378.
The decision in *Christian Lawyers* (No 2)235 illustrates the importance of not taking longstanding legal principles for granted and the need to constantly re-examine the statutory and common law in the context of the Constitution. The capacity of a minor to enter into a contract, at least for health care services, must be construed not only in terms of the common and statutory law on legal capacity but also with regard to the right of access of 'everyone' to health care services including reproductive health care. It may be unconstitutional to take the view that a minor lacks contractual capacity and therefore cannot have access to health care services without the assistance of his or her parents. This is putting the cart before the horse since contractual capacity is subject to the constitutional right of access to health care services. This is not to say that in every situation a minor's contract for health care services has to be upheld. Clearly issues of informed consent are highly relevant as is evident from the judgment of Mojapelo J in *Christian Lawyers* (No 2).

It may be necessary in some instances to avoid the idea of contract altogether as a legal basis for the rendering of health care services to an unassisted minor. Presently this is possible on the basis of the provisions of the Child Care Act and in the case of terminations of pregnancy, the Choice on Termination of Pregnancy Act. The Children's Bill does not seem to have similar provisions but the National Health Bill does make some provision for informed consent in the context of health care services for minors. Due regard must also be had to the constitutional rights of 'everyone' to bodily and psychological integrity and to freedom and security of the person when considering the rendering of health care services to minors. Furthermore, it is the circumstances and capacity of the individual minor concerned, as opposed to minors as an amorphous group, that must be considered by those rendering health care services. Broad generalisations when dealing with specific patients on the basis of factors such as age, gender and health status are not only inadvisable, they may also be unconstitutional in a number of different aspects not least of which is unfair discrimination. The constitutional rights to dignity, to bodily and psychological integrity, to freedom and security of the person are powerful rights that cannot be ignored in the context of health service delivery and minors are entitled to these rights to no less a degree than anyone else.

---

235 *Christian Lawyers* (No 2) fn 199 supra
2.5 The Right of Prisoners to Medical Treatment

The right of prisoners to medical treatment is reflected in section 35(2) of the Constitution which states that:

"Everyone who is detained, including every sentenced prisoner, has the right-

.....

(e) to conditions of detention that are consistent with human dignity, including at least exercis and the provision, at state expense, of adequate accommodation, nutrition, reading material and medical treatment;

(f) to communicate with, and be visited by, that person's-

.....

(iv) chosen medical practitioner".

The obvious question is whether this right of detained persons is yet another facet of the right of access to health care services or whether it is a discrete right which has no connection with the more general right expressed in section 27(1) of the Constitution. There are differences in the terminology used between the two sections. Section 35(2) refers to "medical treatment" whereas section 27(1) speaks of "health care services". Section 27 refers to the progressive realisation of the rights within available resources. Section 35 contains no such qualification. What is the difference between these two sections, if any, for practical purposes? Section 35(2) makes specific mention of a choice of medical practitioner whereas section 27(1) does not make any reference to providers of health care services.

The Cape High Court considered some of these questions of the case of *Van Biljon and Others v Minister of Correctional Services and Others* 236

2.5.1 *Van Biljon and Others v Minister of Correctional Services* 237

Facts

236 *Van Biljon* 1997 (4) SA 441 (C) (*B and Others v Minister of Correctional Services and Others* 1997 (6) BCLR 789)

237 *Van Biljon* fn 236 supra
The applicants were HIV positive prisoners who sought orders declaring, *inter alia*, that 'the right to adequate medical treatment of the applicants and the prisoners infected with HIV, who have reached the symptomatic stage of the disease and whose CD4 counts are less than 500/ml, entitles them to have prescribed and to receive at state expense appropriate anti-viral medication'. Anti-viral medication had been prescribed for the first and second applicants but had not been provided to them by the prison authorities.238

It was argued for the respondents that convicted prisoners are entitled to the same standard of medical treatment as is provided for persons attending state institutions and that since ordinary persons attending provincial hospitals were not entitled to antiretroviral drugs for the treatment of HIV/AIDS due to budgetary constraints, neither were the prisoners. At the time, patients in provincial hospitals who were in the same condition as the applicants were not provided with antiretrovirals at state expense. Counsel for the applicants contended that, since the right to adequate medical treatment is guaranteed to prisoners in terms of the Constitution, prison authorities can never be heard to say that they are unable to provide such treatment as a result of budgetary constraints or lack of funds.

*Judgment*

The high court observed that:

"Once it is established that anything less than a particular form of medical treatment would not be adequate, the prisoner has a constitutional right to that form of medical treatment and it would be no defence for the prison authorities that they cannot afford to provide that form of medical treatment. I do not, however, agree with the proposition that financial conditions or budgetary constraints are irrelevant in the present context. What is 'adequate medical treatment' cannot be determined in *vacuo*. In determining what is 'adequate', regard must be had to, *inter alia*, what the state can afford. If the prison authorities should, therefore, make out a case that as a result of budgetary constraints they cannot afford a particular form of medical treatment or that the provision of such medical treatment would place an unwarranted burden on the state, the Court may very well decide that the less effective medical treatment which is affordable to the State must in the circumstances be accepted as 'sufficient' or 'adequate medical treatment'. After all, as was pointed out by Mr Scholtz, s 35(2)(e) of the Constitution does not provide for 'optimal medical treatment' or 'the best available medical treatment', but only for 'adequate medical treatment'.'"
Counsel argued, however, that the state owes a higher duty of care to HIV positive prisoners than to citizens who suffer from the same infection, in general. The court agreed with this argument on the basis that with reference to, *inter alia*, accommodation, nutrition and medical care, the Constitution itself draws a distinction between prisoners and people outside prison.239

The court held that the declarator sought by the applicants would compel medical doctors to prescribe some form of anti-viral medication and refused to make such order because it was not the function of the Court to make an order of that nature. It held that because anti-viral medication had in fact been prescribed for the first and second applicants on medical grounds, the question whether they were entitled to receive such therapy at state expense became an issue. The court said that although, in principle, lack of funds could not be an answer to a prisoner’s constitutional claim to adequate medical treatment, and that therefore, once it was established that anything less than a particular form of medical treatment would not be adequate, the prisoner would have the constitutional right to that form of treatment, financial conditions and budgetary constraints were not irrelevant considerations: what amounted to ‘adequate medical treatment’ had to be determined with regard, *inter alia*, to what the state could afford. The court noted, with regard to the argument that the state owed a higher duty of care to HIV positive prisoners than to citizens outside prison suffering the same infection, that the Constitution itself drew a distinction between prisoners and those outside prison. It said that acceptance of the respondents’

---

239 See Van Biljon in 236 supra para33 p 457 onwards where the court observed that: "Unlike persons who are free, prisoners have no access to other resources to assist them in gaining access to medical treatment. It is true that some HIV positive prisoners will, upon release, be dependent on the state for medical treatment. On the other hand, there are prisoners, like first applicant, who may well be able, upon their release, to earn an income which will enable them to afford anti-viral treatment or who will receive charitable assistance from their employers. As far as the latter category of prisoners is concerned, an inroad would be made upon their personal liberties if they were to be refused access to anti-viral treatment. Since such inroad cannot be described as a necessary consequence of incarceration, I do not believe that the refusal to provide these prisoners with anti-viral medication is consistent with the principles of our common law. In saying that I obviously do not intend to suggest that the standard of medical treatment for any particular prisoner should be determined by what he or she could afford outside prison. What I am saying, is that the standard of medical treatment for prisoners in general cannot be determined by the lowest common denominator of the poorest prisoner on the basis that he or she could afford no better treatment outside. As far as HIV prisoners are concerned, there is another factor which should, in my view, be borne in mind, namely that they are more exposed to opportunistic viruses than HIV sufferers who are not in prison. It is applicants’ case that tuberculosis and pneumonia are prevalent in prison. Although respondents deny the prevalence of these particular opportunistic infections, they do admit that the overcrowded conditions in which prisoners are accommodated exacerbates the vulnerability of HIV prisoners to opportunistic infections. Even if it is, therefore, accepted as a general principle that prisoners are entitled to no better medical treatment than that which is provided by the state for patients outside, this principle can, in my view, not apply to HIV infected prisoners. Since the state is keeping these prisoners in conditions where they are more vulnerable to opportunistic infections than HIV patients outside, the adequate medical treatment with which the state must provide them must be treatment which is better able to improve the immune systems than that which the state provides for HIV patients outside. The conclusion that the standard of adequate medical treatment for HIV infected prisoners is not *par ad* determined by what the state provides outside for HIV patients is in effect a conclusive answer to respondents’ contention."
argument would mean, for example, that the fundamental right of prisoners to adequate accommodation, also provided for in s 35(2)(e), would entitle them to no better accommodation than that provided for people outside prisons, whereas it was a fact of life that there were many people in the country whose accommodation could not by any standard be described as adequate. The court found that to refuse prisoners, some of whom might upon their release be able to earn an income which would enable them to afford antiviral treatment, access to antiviral treatment would be an inroad on their personal liberties, which inroad could not be described as a necessary consequence of incarceration. It noted that the standard of medical treatment for prisoners in general could not be determined by the lowest common denominator of the poorest prisoner on the basis that he or she could afford no better treatment outside than that offered at state institutions and pointed out that due to prison conditions the state could even be said to be exposing prisoners to a greater risk of opportunistic infection than they would encounter outside of prison. On this basis it could be argued that the state was obliged to afford HIV positive prisoners medical treatment that was able to boost their immune systems and protect them from this risk. The court found that the applicants had established that antiviral therapy was the only prophylactic and that the benefits of such treatment, in the form of extended life expectancy and enhanced quality of life, were such that the treatment claimed by them had to be regarded as no more than the ‘adequate medical treatment’ to which they were entitled in terms of s 35(2)(e) of the Constitution. It ordered the first and second respondents to provide the first and second applicants with the anti-retroviral drugs that had been prescribed for them.

Discussion

At first glance it might appear that the finding of the court in Van Biljon is to the effect (a) that prisoners have greater rights to medical treatment than other persons in society and (b) that this right of prisoners does have a certain minimum core content. These conclusions might be founded (a) upon the fact that the court held that prisoners were entitled to antiretroviral medication for HIV whereas patients of provincial hospitals were not so entitled due to budgetary constraints and (b) upon the discussion in the judgment of what is meant by ‘adequate’ medical treatment. These conclusions might lead to the further
conclusion that the right of prisoners to medical treatment is separate from and different to the right of everyone to health care services in terms of section 27(1) of the Constitution. It is submitted, however, that such conclusions would be erroneously drawn for the following reasons.

The court in Van Biljon stated expressly that if the prison authorities had argued a lack of resources for the provision of antiretroviral medication, its finding may have been different.240 This was recognised by the high court in Soobramoney241 in a judgment which was subsequently upheld by the Constitutional Court, in the following terms:

"There remains for me to deal with one decision upon which the applicant’s counsel relied and that is the recent decision in Van Biljon and Others v Minister of Correctional Services and Others 1997 (4) SA 441 (C) (B and Others v Minister of Correctional Services and Others 1997 (6) BCLR 789). In that case Brandt J held that s 35(2)(e) of the Constitution obliged the state to provide prisoners suffering from HIV with certain very expensive drugs at state expense. If prisoners are entitled to enforce their right to adequate medical treatment the same should apply to the applicant who after all, is not a criminal (so counsel argued). A careful reading of the judgment, however, reveals that it does not provide support for the applicant’s case. It is clear that the question of budget constraints was argued - see 454C (SA) (801E (BCLR)) where the following is said: ‘If HIV patients in provincial hospitals are to receive the combination therapy claimed by applicants, Mr Scholtz submitted, it would involve a prioritisation of resources in their favour. In view of the budget restrictions on the hospital services, such prioritisation would necessarily be at the expense of other patients dependent upon the provision of health care by the state. Such patients may include persons suffering from acute heart disease, cancer sufferers, children, the elderly, pregnant women and so on.”

240 Van Biljon fn 236 supra. In fact what the court said at p 457 onwards was: [56] What respondents have shown through the affidavit of Dr Wood is that provincial hospitals cannot afford to provide all State patients who are HIV infected with the antiretroviral treatment claimed by applicants. Dr Wood's motivation of this statement is - at least as far as Somerset Hospital is concerned - not disputed by applicants and, in fact, appears to be unanswerable. It appears from respondents' papers that the Department of Correctional Services is also subject to budgetary constraints. I agree with the submission by Mr Seligson, however, that no case is made out by respondents that, as a result of budgetary constraints, the Department of Correctional Services cannot afford to provide such antiretroviral treatment for HIV positive prisoners who are eligible for this treatment. With regard to possible financial constraints, there is the further consideration of a cost-saving raised by applicants' experts to which respondents have, in my view, not given a conclusive answer. As appears from the foregoing, it is contended by applicants' experts, on the basis of international research, that the administration of anti-viral therapy at an early stage is cost-effective in that the treating of opportunistic infections is significantly reduced. It is true that respondents' medical expert, Dr Wood, does not agree with the results of the international research. It is also true, as was submitted by Mr Scholtz, that this dispute between medical experts cannot be determined on motion papers. It does, however, stand to reason that the postponement of the costly treatment for opportunistic infections must result in some cost-saving, even if such saving does not exceed the cost of prophylactic anti-viral treatment, as appears to be suggested by the results of international research. From respondents' papers, it appears that they have disregarded the possibility of any cost-saving through anti-viral treatment. In these circumstances, the polycentric issue referred to by Mr Scholtz does not arise. If a proper case was made out by respondents that, due to the constraints of its own budget, the Department of Correctional Services simply cannot afford the medical treatment claimed by applicants, I might have come to the same conclusion as the English Court of Appeal in R v Cambridge Health Authority (1995 2 All ER 129 (CA)) or I might have found that 'adequate medical treatment' for applicants is dictated by such budgetary constraints. From what I have already stated, it appears, however, that on the facts of this case it is not necessary for me to make a definite finding on these difficult issues.”

241 Soobramoney fn 23 supra
In dealing with this argument the learned Judge at 454C--D (SA) (802E (BCLR)) says the following:

"I do not, however, agree with the proposition that financial conditions or budgetary constraints are irrelevant in the present context. What is 'adequate medical treatment' cannot be determined in vacuo. In determining what is 'adequate', regard must be had to, inter alia, what the State can afford. If the prison authorities should, therefore, make out a case that as a result of budgetary constraints they cannot afford a particular form of medical treatment or that the provision of such medical treatment will place an unwarranted burden on the State, the Court may very well decide that the less effective medical treatment which is affordable to the State must in the circumstances be accepted as 'sufficient' or 'adequate medical treatment'."

The learned Judge then concludes that the prison authorities had not made out a case on the papers that as a result of budgetary constraints they could not afford to provide the anti­

The court in Van Biljon\textsuperscript{242} did not concede that the ambit of the right as it related to prisoners was greater than the right afforded to everyone else with regard to medical treatment. Rather it agreed that the state owed a higher duty of care to HIV positive prisoners and proceeded to give the reasons for this as being that the state itself, by incarcerating people, created a greater risk for them of exposure to opportunistic infections and at the same time nullified their ability or opportunity to work and earn enough money to obtain adequate treatment for their condition. Antiretroviral drugs are available in the private sector in which people can either belong to a medical scheme or can pay out of their own pockets for medical treatment. The approach of the court was that one could not say, in the absence of arguments around budgetary constraints, that prisoners must receive the same medical treatment as other people who are not incarcerated because other people who are not incarcerated are not necessarily exposed to the same risks of opportunistic infection and they have the further advantage of being free to work and pay for their medical treatment themselves. What the court was in effect saying is that the state cannot increase the risks to health of a certain sector of the population, whilst at the same time effectively restricting them in their ability to pay for their own medical treatment and then in the same breath argue that its obligations towards them are the same as for those members of the population to whom those risks and restrictions are inapplicable. It is not that the content of

\textsuperscript{242} Van Biljon fn 236 supra
the right of prisoners to access to health care services is substantially different to those of non-prisoners but rather that the fact of incarceration materially restricts their access to health care services and moreover exposes them to the risk of opportunistic infections which would not necessarily have been characteristic of their lifestyle outside of prison and which they could take steps to avoid outside of prison\[243\].

In view of the foregoing, it is submitted that it is not that the right of prisoners to adequate medical treatment that is materially different to the right of everyone to access to health care services. It is the context in which the right is exercised, or the circumstances in which the right holder finds himself, that results in a practical difference. *Van Biljon* highlights the fact that it is important to realise that the right to health care services is highly contextualised and always will be. Every judgment of the constitutional court on the subject of socio-economic rights and the wording of the rights in the Constitution itself points to this. In *Grootboom*\[244\], for instance, the court said these matters have to be decided on a case-by-case basis. If one considers the wording of section 27(1) in relation to the situation of prisoners, the judgment in *Van Biljon* is entirely consistent with the right of everyone to access to health care services. Incarceration carries an opportunity cost which affects a prisoner’s access to health care services. The state is required in some way to make good on that opportunity cost and if available resources permit it, this means affording to prisoners treatment which is reasonably necessary for their condition and which they would have been able to buy outside of prison. The court and the counsel for the applicants stressed in *Van Biljon* that the applicants were not entitled to optimal treatment or the best possible treatment — only adequate treatment\[245\]. If one looks at the judgment as whole, another description for “adequate” might be “…reasonable legislative and other measures within its available resources…” The right of the poor with regard to access to health care services, when expressed in practical terms may seem different to those of the rich who can afford to pay for health care services or who do not have the same disease profiles. The rights of

\[243\] *Van Biljon* fn 236 supra. The court observed at p 457 that: “Even if it is, therefore, accepted as a general principle that prisoners are entitled to no better medical treatment than that which is provided by the state for patients outside, this principle can, in my view, not apply to HIV infected prisoners. Since the state is keeping these prisoners in conditions where they are more vulnerable to opportunistic infections than HIV patients outside, the adequate medical treatment with which the state must provide them must be treatment which is better able to improve the immune system than that which the state provides for HIV patients outside.”

\[244\] *Grootboom* fn 10 supra

\[245\] *Van Biljon* fn 236 supra, p 455 para 49

234
those in desperate need, vulnerable groups such as old people, the disabled and children, may find expression in very different ways to those of healthy young adults. This does not, change the nature of the right. Everyone has the right of access to health care services and legally speaking, there can be no discrimination between different groups. However, the effects of the exercise of the right, its expression in differing circumstances, may well be different due to the different levels of risk and the nature of the specific need 246.

2.6 Conflicting Rights

The question of conflicting rights is a considerable subject in its own right and underpins many of the issues that have already been raised with regard to the unitary nature of the right of access to health care services and the interconnectedness of this right with other socio-economic rights. It is not proposed in this section to canvas the potential conflicts between various areas of the common law and the constitutional rights that relate to health care services but rather to examine more closely potential conflicts between other constitutional rights and the right of access to health care services inter se. A closer examination of the interface between the constitutional right of access to health care services and rights in other areas of law will be conducted at a later stage when these other areas of law as they relate to health care services are explored in more detail. The question for now is how does one reconcile conflicts between constitutional rights.

In *Van Zyl and Another v Jonathan Ball Publishers (Pty) Ltd and Others*, 247 the court observed that:

"There is no hierarchy of rights set out in the Constitution. There is no precise formula for dealing with a tension between opposing rights. One right in chap 2 of the Constitution does not automatically trump another. At 17 of Personality Rights (op cit) Burchell states the following in dealing with the importance of the right to freedom of expression: 'Self-esteem, respect and individual privacy are aspects of what makes up the totality of human dignity. Freedom of expression does not trump all other individual rights - it is, like these other rights, subject to reasonable and justifiable limits which, in turn, must also reflect the dictates of freedom, equality, democracy and dignity.'"

246 This is consistent with the doctrine of transformative constitutionalism referred to elsewhere in this chapter.
247 *Van Zyl* 1999 (4) SA 571 (W) p591-592
When competing rights are asserted, one must view the assertions and the clashes in context and against the circumstances of each case. See *Holomisa v Argus Newspapers Ltd* 1996 (2) SA 588 (W) at 607B et seq. Opposing parties in cases like the present will respectively assert equally emphatically and with great enthusiasm that either the right to dignity is a primary right or that the role of the media in a democratic society cannot be overstated. At 18 of Personality Rights (op cit) Burchell states the following: 'The balancing of rights and interests is the essence of the legal process and an adjudicator cannot avoid making difficult decisions. The appropriate balance between individual reputation, dignity and privacy and freedom of expression, for instance cannot be sidestepped.'

The constitutional court recognised that there would be a need for the courts to balance competing rights as early as the *Certification* judgment.\(^{248}\)

In the health arena there is considerable scope for conflict. One example that the constitutional court has already resolved appears from the case of *Soobramoney*. Sachs J observed with regard to the apparent conflict between the limitations imposed by the Constitution on the right to have access to health care services and the right to life that:

"However the right to life may come to be defined in South Africa, there is in reality no meaningful way in which it can constitutionally be extended to encompass the right indefinitely to evade death. As Stevens J put it: dying is part of life, its completion rather than its opposite. We can, however, influence the manner in which we come to terms with our mortality. It is precisely here, where scarce artificial life-prolonging resources have to be called upon, that tragic medical choices have to be made."\(^{250}\)

The constitutional right to life clearly does not imply an unqualified and unlimited right of access to health care services for the continued postponement of death.

**2.6.1 Children’s Rights**

Another highly emotive and controversial area is the interface between the right of children to have access to health care services and the child’s right to bodily and psychological

---

\(^{248}\) See *Ex Parte Chairperson Of The Constitutional Assembly: In Re Certification Of The Constitution Of The Republic Of South Africa*, 1996 (4) SA 744 (CC) p 792 para 55 where the court noted: "A further argument raised by the objection was that NT 8(2) would bestow upon Courts the task of balancing competing rights which, they argued, is not a proper judicial role. This argument once again fails to recognise that even where a bill of rights binds only organs of State, Courts are often required to balance competing rights. For example, in a case concerning a challenge to legislation regulating the publication and distribution of sexually explicit material, the Court may have to balance freedom of speech with the rights of dignity and equality. It cannot be gainsaid that this is a difficult task, but it is one fully within the competence of Courts and within the contemplation of CP IL."

---
integrity contained in section 12 (2) of the Constitution. In South Africa there are children who live without an adult caregiver often as a result of the HIV and AIDS pandemic to which their parents and families have lost their lives. Older children take care of the younger ones in informal groups in outlying areas where there are no formal institutions in which these children can be accommodated. The question is what happens when these children require medical treatment? In circumstances where emergency medical treatment is required issues of consent are not usually problematic because the law caters specifically for emergency situations but consent does become a problem for routine medical attention such as all children require from time to time. A child’s right to bodily and psychological integrity is no less than that of an adult and indeed children are more vulnerable to infringement of this right as evidenced by the high levels of child abuse in South Africa.

This right would ordinarily be protected by means of the informed consent to treatment of the child by a parent or guardian. Where there is no parent or guardian what is the legal position? How does one implement the right to basic health care services of children in this situation? The obvious solution would be either to apply for a court order as the high court is the upper guardian of all minor children in South Africa or to request permission from the Minister of Health in terms of section 39 of the Child Care Act. At the time of writing the Department of Social Development is busy with a draft Children’s Bill which deals more comprehensively with the subject of medical attention for children than does the current legislation. It remains to be seen whether its provisions will be more workable.

---

231 Child Care Act fn 33 supra. According to this section -

"(1) If any medical practitioner is of opinion that it is necessary to perform an operation upon a child or to submit him to any treatment which may not be applied without the consent of the parent or guardian of the child, and the parent or guardian refuses his consent to the operation or treatment, or cannot be found, or is by reason of mental illness unable to give that consent, or is deceased, that practitioner shall report the matter to the Minister, who may, if satisfied that the operation or treatment is necessary, consent thereto in lieu of the parent or guardian of the child.

(2) If the medical superintendent of a hospital or the medical practitioner acting on his or her behalf is of opinion that an operation or medical treatment is necessary to preserve the life of a child or to save him or her from serious and lasting physical injury or disability and that the need for the operation or medical treatment is so urgent that it ought not to be deferred for the purpose of consulting the person who is legally competent to consent to the operation or medical treatment, that superintendent or the medical practitioner acting on his or her behalf may give the necessary consent.

(3) The person whose duty it is to maintain the child concerned shall be liable for the cost of any treatment of, or operation upon, the child in terms of subsection (1) or (2) as if the treatment had been given or the operation had been performed on his instructions.

(4) Notwithstanding any rule of law to the contrary -

(a) any person over the age of 18 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any operation upon himself, and

(b) any person over the age of 14 years shall be competent to consent, without the assistance of his parent or guardian, to the performance of any medical treatment of himself or his child."

232 Section 135 of the Bill deals with consent to medical treatment and surgical operations in the following terms -

(1) A child may be submitted to medical treatment or surgical operation only if consent for such treatment or operation has been given in terms of either subsection (2), (3), (4) or (5).

(2) (a) A child may consent, subject to paragraph (b), to medical treatment or a surgical operation, provided the child –
that those of the current legislation in addressing the needs of children. The draft Bill has not yet reached the stage where public hearings have been conducted by the relevant parliamentary portfolio committee. It is therefore likely to be considerably refined before it is finally passed. Consequently a detailed discussion of the Bill is not appropriate for present purposes.

Another aspect of this problem of protecting the rights of children is the issue of child abuse and choice on termination of pregnancy. There is evidence that due to the high levels of sexual abuse of children, many teenage pregnancies are the result of incest or rape by a guardian, parent or other family member who would, in normal circumstances be called upon to give consent for the medical treatment of that child. If the child is in a situation where she is pregnant with the parent’s or guardian’s or family member’s child and wishes to terminate the pregnancy without the knowledge or involvement of that person, most people would argue that the child should have the right to do so – that the responsible person has demonstrated that he or she is not fit to take decisions concerning the welfare of the child. The Choice on Termination of Pregnancy Act does not define a woman as being of any particular age. This has been challenged at the time of writing by an interest group which maintains that the constitutional rights and interests of children are not being served by allowing them to undergo terminations of pregnancy in the absence of the support,

(i) is at least 12 years of age; and
(ii) is of sufficient maturity and has the mental capacity to understand the benefits, risks and social implications of the treatment or operation.
(b) A child may not consent to a surgical operation in terms of paragraph (a) without the assistance of –
(i) the parent of the child; or
(ii) the primary care-giver of the child.
(3) The parent or primary care-giver of a child may subject to section 43 consent to the medical treatment of or a surgical operation on the child if the child is –
(a) under the age of 12 years; or
(b) over that age but is of insufficient maturity or does not have the mental capacity to understand the benefits, risks and social implications of the treatment or operation.
(4) The superintendent of a hospital or the person in charge of the hospital in the absence of the superintendent, may consent to the medical treatment of or a surgical operation on a child if –
(a) the treatment or operation is necessary to preserve the life of the child or to save the child from serious or lasting physical injury or disability; and
(b) the need for the treatment or operation is so urgent that it cannot be deferred for the purpose of obtaining consent that would otherwise have been required.
(5) A child and family court may consent to the medical treatment of or a surgical operation on a child if –
(a) the child has been abandoned; or
(b) the parent or primary care-giver of the child –
(i) refuses to give consent or to assist the child in giving consent;
(ii) is physically or mentally incapable of giving consent or assisting the child in giving consent;
(iii) is deceased; or
(iv) cannot readily be traced.
(6) No parent or primary care-giver of a child may refuse to assist a child in terms of subsection (2) (b) or withhold consent in terms of subsection (3) by reason only of religious or other beliefs, unless that parent or primary care-giver can show that there is a medically accepted alternative choice.
guidance and advice of their parents, guardians or adult family members. The matter has not yet been heard by the court.

2.6.2 HIV Positive Patients and Sexual Offenders

Another area of conflict of rights is that of health workers who deal with patients who are possibly HIV positive. Some patients know of their HIV positive status but many do not. If a health worker is accidentally exposed to HIV infection in an occupational incident he or she is in a similar position to a person who has been sexually assaulted by a person who is HIV positive. They have both been involuntarily exposed to the virus. The Department of Justice is busy with a draft Bill at present which makes provision for the compulsory HIV testing of alleged sexual offenders. This is a further instance of the legislative balancing of rights in favour of the victims of sexual assault to bodily and psychological integrity against the rights of alleged sexual offenders to privacy and bodily and psychological integrity. There seems to be growing recognition for the need to balance the rights of health care workers and victims of sexual assault against those of persons with whom they have been involved and who may have infected them with HIV. In the case of children, section 136 of the draft Children’s Bill deals specifically with testing of children for HIV235. These

235 "(1) No child may be tested for HIV except when—
(a) this is in the best interest of the child and consent has been given in terms of subsection (2); or
(b) the test is necessary in order to establish whether—
(i) a health worker may have contracted HIV due to contact in the course of a medical procedure involving contact with any substance from the child’s body that may transmit HIV; or
(ii) any other person may have contracted HIV due to contact with any substance from the child’s body that may transmit HIV, provided the test has been authorised by a court.
(2) Consent for a HIV-test on a child may be given by—
(a) the child, if the child is—
(i) 12 years of age or older; or
(ii) under the age of 12 years and is of sufficient maturity to understand the benefits, risks and social implications of such a test;
(b) the parent or care-giver, if the child is under the age of 12 years and is not of sufficient maturity to understand the benefits, risks and social implications of such a test;
(c) a designated child protection organisation arranging the placement of the child, if the child is under the age of 12 years and is not of sufficient maturity to understand the benefits, risks and social implications of such a test;
(d) the head of a hospital, if—
(i) the child is under the age of 12 years and is not of sufficient maturity to understand the benefits, risks and social implications of such a test; and
(ii) the child has no parent or care-giver and there is no designated child protection organisation arranging the placement of the child; or
(e) a child and family court, if—
(i) consent in terms of paragraph (a), (b), (c) or (d) is unreasonably withheld; or
(ii) the child or the parent or care-giver of the child is incapable of giving consent."
provisions are likely to be controversial especially on the subject of testing in order to establish whether a health worker may have contracted HIV due to contact in the course of a medical procedure involving contact with any substance from the child’s body that may transmit HIV. In effect this section is seeking to balance the constitutional rights of health workers to bodily and psychological integrity against those of the child to privacy. Those opposed to involuntary or compulsory testing for HIV argue that if universal precautions against infection are routinely undertaken then it should not be necessary to force a patient to undergo an HIV test. They also point out that if a health professional is accidentally exposed to HIV infection in a work related incident, he or she is likely to opt for HIV prophylaxis even if the patient in question tests negative for HIV due to the existence of a window period for sero-conversion in which a patient can still infect someone else with HIV but does not test positive for the virus. However it is not the intention to discuss the draft Children’s Bill in this chapter but merely to highlight some of the issues concerning the balancing of the rights involved in the rendering health care services.

2.7 Rationing of Health Care Services and the Limitation of Rights

The rationing of health care services is a complex subject that embraces many more areas than just that of law. It is implicit in a world of limited resources and often explicit in decisions involving the allocation of resources. It involves questions not only of constitutional law but also of the law of contract, administrative law and even the law of delict. Since this chapter is dealing only with the constitutional law aspects of health services delivery, it is only in this context that the rationing of health care services will be discussed here. Rationing and access are two sides of the same coin. Rationing, properly applied, can improve access at a certain level since it can ensure more equitable distribution of resources so as to include people who previously had no access at all. However, it clearly has the potential to reduce access and whether or not this is a good thing depends a great deal upon the values and beliefs of the society in which it is effected. In the South African context, the term ‘values’ brings the discussion back to the Constitution. It is clear that

The Compulsory Testing of Alleged Sexual Offenders Bill (B10-2003) provides for the victim of an alleged sexual offence to apply to a magistrate for the compulsory testing for HIV of the alleged offender. If the offender is a minor, the Bill when it becomes law, will allow a magistrate to grant an order allowing him to be tested for HIV.
rationing decisions involving health will be judged against the rights in the Bill of Rights and the Constitution holds considerable potential for usefully informing rationing decisions. Since the Constitution awards a right of access to health care services, any limitation of this right would have to be in accordance with the provisions of the Constitution relating to the limitation of rights. Furthermore, because the right of access to health care services must be seen within the context of the other rights in the Bill of Rights, one must consider how the implementation of a right of access to health care services could restrict the other rights contemplated by the Constitution. It is necessary to establish whether there is any case law on this subject from which guidance may be obtained. It is also necessary to explore the entities which may either explicitly or implicitly ration access to health care services and on what basis. That rationing is implicit in the system itself is reflected by the observation of the court in *Soobramoney*254, subsequently quoted with approval in *Grootboom*255, that the content of the right is limited by the available resources. It is submitted, however, that this type of implicit rationing should rather be viewed in the context of the scope of a right rather than as a justifiable limitation of the right, i.e. rationing *per se*, since no right is absolute or unbounded256. They are all limited in their scope. It is submitted that the concept of the scope of a right is slightly different to the justifiable limitation of that right as contemplated in section 36 of the Constitution since 'scope' envisages an initial or original state of the right in a given set of circumstances whereas justifiable limitation implies a narrowing or restriction of the scope of the right so as to decrease the area included within

---

254 *Soobramoney* fn 23 supra para 11, p 771: "What is apparent from these provisions is that the obligations imposed on the state by as 26 and 27 in regard to access to housing, health care, food, water, and social security are dependent upon the resources available for such purposes, and that the corresponding rights themselves are limited by reason of the lack of resources. Given this lack of resources and the significant demands on them that have already been referred to, an unqualified obligation to meet these needs would not presently be capable of being fulfilled."

255 *Grootboom* fn 10 supra at para 46, p 70

256 In *Soobramoney v Minister Of Health, KwaZulu-Natal* fn 82 supra, Combrinck J noted that: "The case made out by the applicant mirrors what at present seems to be a popular conception that the rights created in the Bill of Rights are absolute and can be exercised and enjoyed without limitation. This is of course not so. The rights are by s 36(1) limited in terms of law of general application to the extent that the limitation is reasonable and justifiable in an open and democratic society. The rights are also limited by the rights of others. A right extends only so far as the point to where it does not infringe upon another person's right."

In *Quadient v Minister Of Law And Order And Another* 1994 (3) SA 625 (E), the court noted at p 640 that: "The fundamental rights protected by the chapter are enumerated (as 8-32), but they are not absolute rights. Apart from the possibility of these rights conflicting with each other in a given situation, they are all also subject to a general limitation clause (a 33) and may even in certain closely prescribed circumstances be suspended under a state of emergency (a 34). Any alleged breach of the fundamental rights set out in chap 3 therefore necessitates a two-pronged enquiry (leaving aside for the moment the possibility of suspension under a state of emergency), viz, firstly, whether there has been an infringement of the right, and, secondly, if so, whether that infringement of the right is justified in terms of the limitation clause (a 33)." See also *Rudolph And Another v Commissioner For Inland Revenue And Others* NNO 1994 (3) SA 771 (W) at p 74 in which Goldblatt J observed that: "Firstly, it must be recognised that the rights and freedoms guaranteed by the Constitution are not absolute. These rights and freedoms may be limited by laws which are not contrary to s 33(1) of the Constitution."
its original boundaries\textsuperscript{27}. This argument would seem to be supported by the observations of Woolman\textsuperscript{28} in his criticism of the language of Makwanyane\textsuperscript{29} and the final Constitution with regard to limitation of rights.

### 2.7.1 Constitutional Aspects

The Constitution makes provision for situations in which it is necessary to limit the rights in the Bill of Rights in section 36\textsuperscript{260}.

It has been observed that rights can be violated by administrative conduct on the part of the state and that legitimate reasons for depriving an individual or group of people access to a particular socio-economic right (for example non-compliance with a means test for social assistance) must be justified under the general limitation clause\textsuperscript{261}. It is important to note that the wording of section 36 stipulates that the rights may only be limited in terms of a law of general application. The question is whether administrative action itself can ever limit constitutional rights in terms of the wording of section 36. Although administrative action is taken in terms of a law of general application the question is whether the meaning of the phrase “in terms of” in section 36 encompass administrative action “in terms of” a law of general application or whether it was the intention that it could only be the “terms of” the law of general application that limit the right. It would seem that administrative

\begin{itemize}
\item \textsuperscript{257} This distinction has been recognised by the constitutional court in Bernstein And Others v Better And Others NNO (fn 43 supra) in which Ackermann J observed at p 792: “As will be seen in the following paragraphs, this echoes to some extent the approach of the United States Courts in determining the existence of a ‘reasonable expectation of privacy’, but it must of course be noted that the above comment was in regard to the limitation and not the scope of the right in question.”
\item \textsuperscript{258} See Woolman, fn 264 infra
\item \textsuperscript{259} Makwanyane fn 2 supra
\item \textsuperscript{260} Section 36 stipulates that:
   \begin{enumerate}
   \item The rights in the Bill of Rights may be limited only in terms of law of general application to the extent that the limitation is reasonable and justifiable in an open and democratic society based on human dignity, equality and freedom, taking into account all relevant factors, including -
   \begin{enumerate}
   \item the nature of the right;
   \item the importance of the purpose of the limitation;
   \item the nature and extent of the limitation;
   \item the relation between the limitation and its purpose; and
   \item less restrictive means to achieve the purpose.
   \end{enumerate}
   \item Except as provided in as (1) or in any other provision of the Constitution, no law may limit any right entrenched in the Bill of Rights.
   \end{enumerate}
\item \textsuperscript{261} Liebenberg in Chaskalson \textit{et al} in fn 67 supra at p41-29
\end{itemize}
action in terms of a law of general application is capable of limiting a right as contemplated in section 36 of the Constitution. The court in *Dawood* stated that:

“It is an important principle of the rule of law that rules be stated in a clear and accessible manner. It is because of this principle that s 36 requires that limitations of rights may be justifiable only if they are authorised by a law of general application. Moreover, if broad discretionary powers contain no express constraints, those who are affected by the exercise of the broad discretionary powers will not know what is relevant to the exercise of those powers or in what circumstances they are entitled to seek relief from an adverse decision. In the absence of any clear statement to that effect in the legislation, it would not be obvious to a potential applicant that the exercise of the discretion conferred upon the immigration officials and the DG by ss 26(3) and (6) is constrained by the provisions of the Bill of Rights and, in particular, what factors are relevant to the decision to refuse to grant or extend a temporary permit. If rights are to be infringed without redress, the very purposes of the Constitution are defeated.”

From the foregoing it is clear that while the court did not raise the question of whether or not administrative decisions were capable of limiting rights in terms of the wording section 36 it dealt with the matter of the exercise of discretionary powers authorised in terms of the law of general application stating that there should be express constraints in the legislation so that those exercising the power know what is relevant to its exercise. The argument is clearly that where legislation gives an official discretionary powers the scope of which includes the power of limitation of a right then the discretionary powers must be exercised in accordance with section 36. Presumably the power to limit the right can be either express or implied in the legislation.

In *S v Makwanyane* the constitutional court observed that:

“Our Constitution deals with the limitation of rights through a general limitation clause. As was pointed out by Kentridge AJ in Zuma’s case, this calls for a ‘two-stage’ approach, in which a broad

---

262 *Dawood* fn 12 supra
263 *Makwanyane* fn 2 supra at p435-436 (footnotes omitted)
264 Woolman S, ‘Out of Order? Out of Balance? The Limitation Clause of the Final Constitution’, (1997) 13 *SAHR* 102 is critical of the language in both *Makwanyane* and the final Constitution saying that it seems to confuse the steps of fundamental rights analysis and fail to understand that not every limitation question involves questions of proportionality. He notes that: “The first question the Makwanyane court says we should ask is what is the nature of the right that is limited, and its importance to an open and democratic society based upon freedom and equality? The final Constitution replaces this language with the more telegraphic instruction that we reflect upon the nature of the right. The problem is this. In two-stage fundamental rights analysis, the inquiry into the nature of the right limited and its importance in an open and democratic society based upon freedom and equality occurs at the first stage of analysis. The fundamental rights stage. Although I do not defend an absolutely rigid distinction between rights analysis and limitation analysis, the second distinction between rights analysis and limitation analysis — the limitation stage — directs our attention primarily, if not exclusively, to the reasonableness and justifiability of a limitation in an open and democratic society based upon human dignity, freedom and equality. Consideration of the nature and scope of the right is something that should already have taken place. To engage the question of a right’s nature a second time would seem to invite analytical confusion.”

243
rather than a narrow interpretation is given to the fundamental rights enshrined in chp 3, and limitations have to be justified through the application of s 33. In this it differs from the Constitution of the United States, which does not contain a limitation clause, as a result of which courts in that country have been obliged to find limits to constitutional rights through a narrow interpretation of the rights themselves. Although the ‘two-stage’ approach may often produce the same result as the ‘one-stage’ approach, this will not always be the case... It is not whether the decision of the State has been shown to be clearly wrong; it is whether the decision of the State is justifiable according to the criteria prescribed by s 33. It is not whether the infliction of death as a punishment for murder ‘is not without justification’, it is whether the infliction of death as a punishment for murder has been shown to be both reasonable and necessary, and to be consistent with the other requirements of s 33. It is for the Legislature, or the party relying on the legislation, to establish this justification, and not for the party challenging it to show that it was not justified.”

The court further observed concerning the criteria for limitation of the right that:

“The criteria prescribed by s 33(1) for any limitation of the rights contained in s 11(2) are that the limitation must be justifiable in an open and democratic society based on freedom and equality, it must be both reasonable and necessary and it must not negate the essential content of the right.”

It said that:

“the limitation of constitutional rights for a purpose that is reasonable and necessary in a democratic society involves the weighing up of competing values, and ultimately an assessment based on proportionality. This is implicit in the provisions of s 33(1). The fact that different rights have different implications for democracy and, in the case of our Constitution, for ‘an open and democratic society based on freedom and equality’, means that there is no absolute standard which can be laid down for determining reasonableness and necessity. Principles can be established, but the application of those principles to particular circumstances can only be done on a case-by-case basis. This is inherent in the requirement of proportionality, which calls for the balancing of different interests. In the balancing process the relevant considerations will include the nature of the right that is limited and its importance to such a society; the extent of the limitation, its efficacy and, particularly where the limitation has to be necessary, whether the desired ends could reasonably be achieved through other means less damaging to the right in question. In the process regard must be had to the provisions of s 33(1) and the underlying values of the Constitution, bearing in mind that, as a Canadian Judge has said, ‘the role of the Court is not to second-guess the wisdom of policy choices made by legislators.’

265 Makwanyane fn 2 supra at p 436
266 Makwanyane fn 2 supra p 436. The court proceeds to an examination of Canadian law and points out that: “In a frequently cited passage, Dickason CJIC described the components of proportionality as follows: ‘There are: in my view, three important components of a proportionality test. First, the measures adopted must be carefully designed to achieve the objective in question. They must not be arbitrary, unfair or based on irrational considerations. In short, they must be rationally connected to the objective. Secondly, the means, even if rationally connected to the objective in this first sense, should impair “as little as possible” the right or freedom in question: R v Big M Drug Mart Ltd at 352. Thirdly, there must be a proportionality between the ends of the measures which are responsible for limiting the Charter right or freedom, and the objective which has been identified as of “sufficient importance”. (R v Oakes 1986 19 CRR 308 ([1986] 1 SCR 103; 1986) 26 DLR (4th) 200 (SCC); [1987] LRC (Ccost) 477)). In S v Zuma 1995 (4) BCLR 401 (CC) at para 35 the court cautioned against the attachment of overmuch importance to the test in the Oakes case saying that the Oakes criteria may well be of assistance to our courts in cases where a delicate balancing of individual rights against social interests is required. “But s33(1) itself sets out the criteria which we have to apply and I see no reason, in this case at least, to attempt to fit it into analysis into the Canadian pattern.” The question of the role of the courts in altering or reviewing policy decisions of another branch of government arises in this context as well. Chaskalson P notes at p 437-438 that: “The second requirement of the Oakes test, that the limitation should impair the right ‘as little as possible’, raises a fundamental problem of judicial review. Can, and should, an elected court substitute its own opinion of what is reasonable or necessary for that of an elected legislature? Since the judgment in R v Oakes,
Woolman\textsuperscript{267} notes that the limitation clause has a fourfold purpose. He says that firstly it functions as a reminder that the rights enshrined in the Constitution are not absolute. The rights may be limited where the restrictions can satisfy the test laid out in the limitation clause. Secondly, he says, the limitation clause indicates that rights may only be limited where and when the stated objective behind the restriction is designed to reinforce the values which animate this constitutional project. Those values include openness, democracy, freedom and equality, as well as the more specific values reflected in the individual rights themselves. Thirdly, say Woolman, the test set out in the limitation clause allows for open and candid consideration of competing government, public, private and constitutional interests. That is the limitation clause should provide a mechanism for weighing or balancing competing fundamental values against one another. Fourthly, he says, the limitation clause represents an attempt to solve the problem of judicial review by establishing a test which determines the extent to which the democratically elected branches of government may limit constitutionally protected rights and the extent to which an unelected judiciary may override the general will and write the law of the land. He observed that by making the guidelines for judicial nullification of majoritarian decisions reasonably precise the drafters hoped to provide at least a partial solution to the problem of judicial review.

Woolman\textsuperscript{268} has commented that the limitations clause in the final Constitution differs in two important respects from that in the interim Constitution. Firstly, it removes the justificatory requirement that a limitation be necessary for certain classes of rights and freedoms. He notes that all limitations on the rights and freedoms enshrined in the new Bill of Rights must simply be reasonable and justifiable in an open and democratic society based upon human dignity, equality and freedom in order to pass constitutional muster.

\textsuperscript{267} See Chaskalson et al. fn 47 at p12-1 to p12-2

\textsuperscript{268} Woolman fn 264 supra
Secondly, it removes the "shall not negate the essential content of the right requirement". Woolman observes that this means that courts need no longer concern themselves with the apparently recondite determination of what constitutes the inviolable core of any given right.

In a discussion of the relevant factors in section 36(1) of the Constitution, Woolman complains that the order or these factors does not reflect accurately the proper order of factors for the purpose of limitation analysis. He says that the express ordering of the factors may lead the courts to ask the wrong questions at the wrong time and then observes that the first factors and second factors – the nature of the right which has been infringed and that importance of the purpose of the limitation – are both well placed. It is with the third factor, according to Woolman, that the problems begin. This factor is the nature and extent of the limitation. He asserts that this factor is misplaced and that it should be placed last, inviting as it does, cost-benefit analysis, arguing that the fourth factor – the relation between the limitation and its purpose – belongs after the second factor. Once the legitimacy of the objective is established, says Woolman, it makes sense to ask whether the means employed to achieve the objective are rationally related to achievement of the objective. Woolman alleges that it is not at all clear what the *Makwanyane* court or the drafters mean by the ‘nature...of the limitation’, saying that they seem to be concerned that an apparently justifiable limitation – one which serves a legitimate end, employs means rationally connected to that end and reflects one of the least restrictive means possible for achieving that end – does not impose costs or burdens upon the rights-holder(s) which far outweigh the benefits said to flow to other members of society. He says that this enquiry is the only one which compares directly the competing and often incommensurable values at stake and is also an enquiry bound to put the court under the greatest political pressure. It asks the court to revisit the compromise of social interests struck by the co-ordinate branches of government. It is submitted that this point is nicely illustrated by the situation facing the court in the *TAC* case although the question of justifiable limitation of rights was not expressly discussed in the judgement. Woolman observes that various constitutional goods are incommensurable with one another and that equality is not reducible to freedom and dignity is not the same thing as expression. He predicts that there will be situations in
which constitutional goods will urge independent and irreconcilable claims upon us: in such situations we will have to choose between incommensurable goods and then goes on to give some topical examples, illustrating that the balancing of rights and interests is very often a matter of personal preference depending upon one’s ideological point of view.

2.7.2 Limitations of rights in the health care context

In the context of health there is a considerable potential need to limit the rights of persons in order to preserve and protect health and to protect the users of health care services. Thus there is legislation which—

- regulates the practice of various health professions including the qualifications people must have in order to practice as health professionals, compulsory community service upon qualifying as professionals including where such community service must be carried out, questions of how they may advertise and the manner in which they must conduct their practices;^269
- regulates the donation, acquisition storage supply and use of human tissue for various purposes.\(^270\)

^269 Health Professions Act 1974 (Act No 56 of 1974), Nursing Act 1978 (Act No 50 of 1978), Pharmacy Act 1974 (Act No 53 of 1974), Allied Health Professions Act 1982 (Act No 63 of 1982), Dental Technicians Act 1979 (Act No 10 of 1979) There is soon to be a Traditional Health Practitioners Act as well. At the time of writing it is being processed through Parliament. It is clear from the dates of this legislation that it preceded the 1996 Constitution by many years and that its provisions have not been tested in terms of litigation against the Bill of Rights which illustrate the fact that the alignment of South African law with constitutional principles is an ongoing process. This legislation has been amended from time to time, in some cases after the Constitution came into effect but not all of these amendments have been substantially significant. The Pharmacy Act is probably a notable exception in that in 1997 certain amendments were proposed which would open up access to ownership of pharmacies by non-pharmacists. The other exception is the Health Professions Act which compels dispensing doctors to obtain a licence from the Director-General. Davide, Cheadle and Hayson (fn 124 supra) after pointing out at p305 that the limitation provisions of the South African Constitution were drawn from the Canadian Charter of Rights and Freedoms refer at p313 to a Canadian case Rocket v Royal College of Dental Surgeons of Ontario (1990) 71 DLR (4th) 68 in which regulations governing the dental profession prohibited dentists from advertising. They observe that the Canadian Supreme Court had no difficulty in asserting the ‘pressing and substantial’ interest in regulating the profession and preventing irresponsible and misleading advertising on matters not susceptible to verification but found that the complete ban on advertising was a disproportionate means to effect this objective. It said that dentists should be able to ‘advertise their hours of operation and the languages they speak, information which would be useful to the public and present no serious danger of misleading the public or underquoting professionalism...Moreover the value served by free expression in the case of professional advertising is not purely the enhancement of the advertiser’s opportunity to profit...[the public has an interest in obtaining information as to dentist’s office hours, the languages they speak and other objective facts relevant to their practice-information which [the law] prohibits dentists from conveying by advertising. Useful information is restricted without justification. The court held it was satisfied by these considerations that the adverse effect of infringement of the freedom of expression in this case outweighs the benefits conferred by the legislation.

^270 Human Tissues Act No 65 of 1983
restricts the freedom of people to smoke where they please and the ability of suppliers of tobacco products to sell tobacco products and advertise such products as they choose;\textsuperscript{271}

- restricts the location, nature and types of services of various kinds of health establishments;\textsuperscript{272}

- how and by whom medicines may be sold;\textsuperscript{273}

- who may own a pharmacy and under what conditions\textsuperscript{274}.

Much of this legislation highlights the points made by Woolman about choices in the balancing of constitutional rights and interests. In view of Woolman's observations, the concept of balancing of rights and interests is possibly overly simplistic. In its regulation of health professionals and health care goods the legislation offsets the restriction of supply against the need for public safety, academic and professional freedom and freedom of expression and commercial activity against public health and freedom and security of the person. These constitute value choices which may or may not be constitutional, depending upon a wide variety of circumstances. It is precisely due to the idea of the balancing of rights that a potentially boundless number of possibilities for constitutionally based litigation exists with regard to each of these statutes. The concept of balance implies a situation centred approach. What constitutes a balance in one situation may not necessarily

\textsuperscript{271} Tobacco Products Control Act No 83 of 1993

\textsuperscript{272} The National Health Act, at the time of writing has not yet been proclaimed effective by the President. It contains provisions for certificates of need in terms of which the Director-General has the power to decide where a health establishment may be constructed as well as whether any modifications to existing health establishments may be made. The Health Act No 63 of 1977 which is currently in force also makes limited provision in terms of regulations, for a certificate of need type process in the issuing of licences for private hospitals and some of the provinces, such as KwaZulu-Natal, which have enacted their own legislation also make provision for certificates of need to control health establishments.

\textsuperscript{273} The Medicines and Related Substances Control Act, 1965 (Act No 101 of 1965). An amendment to this Act in 1997 which becomes operational in May 2003 makes provision for the licensing of dispensing doctors and other health professionals who wish to sell medicines and restricts the power of such professionals to do so by compelling them to attend and pass a course to be established by the Pharmacy Council. Prior to this legislation dispensing doctors were able to dispense without such a licence. An amendment to the Health Professions Act which works in tandem with these provisions of Act 101 of 1965 and which compels dispensing doctors to obtain a licence to dispense medicines. The relevant section, 52 of the Health Professions Act, reads as follows:

"Dispensing of medicines

(1) A medical practitioner, dentist or other person registered in terms of this Act-

(a) may compound or dispense medicines only on the authority and subject to the conditions of a licence granted by the Director-General in terms of the Medicines and Related Substances Act, 1965 (Act 101 of 1965);

(b) shall not be entitled to keep an open shop or pharmacy.

(2) For the purposes of this section 'open shop' means a situation where the supply of medicines and scheduled substances to the public is not done by prescription by a person authorized to prescribe medicines." This is clearly a limitation of the right to pursue a trade, occupation or profession in terms of section 22 of the Constitution. The argument of the legislature is that it is justified. Whether or not it will be challenged on the basis of section 36 of the Constitution remains to be seen.

\textsuperscript{274} Pharmacy Act, 1974 (Act No 53 of 1974)
constitute a balance in another. The number of permutations of practical situations involving this legislation, the fact that cases of infringement of rights must usually be considered on their own merits and that generalisations are seldom possible, that one is often dealing with incommensurables, could lead to a situation in which, for a particular set of circumstances a particular law of general application does not constitute a justifiable limitation of rights but for another set of circumstances, it does. One cannot help but feel that within this paradigm, or lack thereof, the question of whether a limitation of rights is justifiable in terms of section 36 resembles a lottery. If the right combination of facts happens to proceed to litigation, the courts will decide that the limitation is unjustifiable despite numerous other factual combinations in which the limitation is uncontentious and justified. In other words, if constitutional validity of a particular provision or enactment is relative, one can never state with absolute certainty that such a provision or enactment is constitutional. It is a question of constitutionality of the effect or result of the limitation in each individual case rather than the constitutionality of the limitation itself.

2.7.3 Case Law

Interestingly there have been relatively few instances of significant litigation against the state, challenging the legislation mentioned above, since the 1996 Constitution came into effect. The most pertinent case is that of Minister of Health and Another v Maliszewski and Others discussed below.

2.7.3.1 Minister of Health and Another v Maliszewski and Others

Facts

In another case the Pharmaceutical Manufacturer’s Association sought to challenge a perceived limitation of rights imposed by Act 90 of 1997, the Medicines and Related Substances Control Amendment Act, was settled out of court in favour of the state. The legislative principle that was contested remains unchanged. Another case, involving the 1993 Constitution, was against the state and the registrar of medicines who operates in terms of the Medicines and Related Substances Control Act No 101 of 1965. This case, Reitir Pharmaceuticals (Pty) Ltd v Registrar Of Medicines And Another 1998 (4) SA 660 (T) is discussed further below.

Maliszewski 2000 (3) SA 1062 (SCA)
In this case, the Minister of Health appealed against a decision of the Transvaal division of the High Court in favour of 11 plaintiffs who had all obtained their medical qualifications outside South Africa and whose applications for full registration were denied on the ground that they had not written the Council's examination for full registration\(^{277}\). The plaintiffs argued that the Council’s decision was unfair and unreasonable. In terms of the Medical, Dental and Supplementary Health Service Professions Act\(^{278}\) as it read on 29 October 1997 (the date on which proceedings had been instituted) a medical doctor who had qualified overseas and whose qualifications were not accredited as being on a par with those of South Africa could be granted limited registration in terms of s 26. Those who had been granted such limited registration could qualify for full registration if, having met the requirements prescribed by s 28(1)(b) and (c), they passed the examination for full registration (EFR), a practical, clinical and oral examination similar to that set for South African medical students at the end of their final year of training. In order to facilitate the return of South African exiles and their spouses who had studied and qualified as medical practitioners while abroad, a special dispensation, under which the normal requirements for the recognition of foreign qualifications was eased, operated between April 1991 and the end of 1991. The special dispensation was a once-off concession to returning exiles, there being no intention of introducing a lasting change to the normal rules governing the recognition of a foreign qualification or of introducing a general practice. As the class of intended beneficiaries did not lend itself to simple definition, the dispensation also applied to foreigners who were not spouses of South African citizens but who had acquired South African citizenship by naturalisation before the cut-off date. Those who sought registration under the special dispensation had to qualify and apply for it before the end of 1991. The special dispensation departed from the normal rules governing the recognition of foreign qualifications in a number of respects, including the careful assistance and monitoring of candidates during their period of practice under limited registration, their qualifying for full registration after one year's practice under limited registration, and, if their heads of department certified them to be sufficiently competent for full registration, their not being required to do the EFR. The respondents, all medical doctors who had passed their primary

\(^{277}\) When the case initially began the 1993 Constitution was applicable. By the time it reached the supreme court of appeal, the 1996 Constitution had come into effect and the court had to decide under which constitutional dispensation the case should be decided.

\(^{278}\) Health Professions Act fn 269 supra
medical examinations at certain overseas universities before emigrating to South Africa, had been granted limited registration by the second appellant council, which form of registration permitted them to work only in the public service. All had since become permanent residents and had acquired South African citizenship after 31 December 1991. They sought an order in a Provincial Division compelling the appellants to register them as medical practitioners without restrictions, without their being required to do the EFR, as it was only with full registration that they would be able to enter private practice as general practitioners. They contended that, on the basis of their qualifications and experience, they were entitled to equal treatment with South African-born citizens or foreigners who had acquired South African citizenship and who had been able to benefit from the special dispensation.

Judgment

In its judgment the Supreme Court of Appeal began by acknowledging that: “The appellants are entrusted with the function of administering the health services in the Republic of South Africa.” It observed that in terms of section 28 of the Medical and Dental and Supplementary Health Professions Act (now called simply ‘the Health Professions Act’), doctors like the respondents who had only limited registration could qualify for full registration provided they met the following requirements:

1. In terms of s 28(1)(b) they must have held limited registration for at least two years.
2. In terms of s 28(1)(c)(i) they must, while so registered, have practised in South Africa for at least two years, of which at least one year must have been at a public health facility approved by the Council.
3. In terms of s 28(1)(c)(ii) they must submit a certificate by the head of the health facility at which they practised certifying that they are ‘competent and of good character’.
4. In terms of s 28(1) they could then apply to the Council to sit for the EFR. In terms of s 28(2) the EFR had to be an examination designed to ascertain whether the practitioner —

279 Mutsewane see fn 276 supra at p 1066

251
'(a) possesses professional knowledge and skill which is of a standard not lower than that prescribed in respect of medical practitioners . . . in the Republic;
(b) has sufficient knowledge of the laws of the Republic applying to medical . . . practice . . . ; and
(c) is proficient in at least one of the official languages of the Republic'.

The court noted further that the EFR could be taken at any South African medical school. Only after the practitioner passed the EFR and complied with all the other requirements was he or she entitled to full registration (s 28(4))280.

It acknowledged that in order to accommodate South African exiles returning home, the state and the council had introduced a temporary special dispensation for registration. Those who sought registration under the special dispensation had to qualify and apply for it before the end of 1991. The special dispensation was made subject to a cut-off date because it was intended to be a once-off concession to returning exiles. The court found that there was no intention to introduce a lasting change to the normal rules that govern the recognition of foreign qualifications, nor to introduce a policy to be followed in all future cases, nor to introduce a general practice281.

The respondents abandoned their initial attack on the invalidity or unconstitutionality of any provision of the Act or the regulations. On their behalf it was also conceded that they were not entitled to full registration (and to the relief sought) merely by relying on the provisions of the Act and the regulations282.

The court held283 that:

"There is no basis for extending the provisions of the special dispensation to the respondents. The special dispensation, by its very terms, is not applicable to them. They cannot rely on an extension of it because it created no entitlement on which to rely; it did not establish a policy or general practice binding the Council in respect of future cases, nor could it be said to have created a reasonable or legitimate expectation on the part of the respondents that they would be able to rely

280 Maliszewski in 276 supra at p 1068
281 Maliszewski in 276 supra at p 1070
282 Maliszewski in 276 supra at p 1072
283 Maliszewski in 276 supra at p 1073-1074
on it or benefit from it. The respondents always knew what the requirements for full registration, applicable to them, were. They had either to pass the EFR or to approach the Council under s 4(g) to recognise their qualifications as being equal, either wholly or in part, to any prescribed qualifications. For individuals in the position of the respondents these requirements are neither onerous nor unfair. It follows that the respondents have failed to prove a basis for the application of the equality principle and thus of compelling the Council to grant them full registration.”

It is important to note that the court commented that although the cut off date was somewhat arbitrarily chosen, as with all similar exemptions or exceptions or special dispensations, it was not done so unreasonably or unfairly and it was established and made known by the Council. When the special dispensation came to an end the full registration criteria became applicable. The court also observed\textsuperscript{284} that the special dispensation:

“did not establish a policy or general practice binding the Council in respect of future cases, nor could it be said to have created a reasonable or legitimate expectation on the part of the respondents that they would be able to rely on it or benefit from it. The respondents always knew what the requirements for full registration, applicable to them, were. They had either to pass the EFR or to approach the Council under s 4(g) to recognise their qualifications as being equal, either wholly or in part, to any prescribed qualifications. For individuals in the position of the respondents these requirements are neither onerous nor unfair.”

\textbf{Discussion}

In the last few observations of the court quoted above are some important guiding principles for setting policy, especially for once-off situations, in a way that avoids exploitation of the situation by the unscrupulous.

1. Arbitrariness does not necessarily equate to unfairness or unreasonableness where the circumstances are such that it is unavoidable to some degree.

2. Neither the dispensation nor the cut-off of the dispensation violated the principles of equality and there was no discrimination against the plaintiffs\textsuperscript{285}. During and after the dispensation the same rules applied to everyone.

\textsuperscript{284} Maliszewski \textit{in} 276 supra at p 1073 - 1074

\textsuperscript{285} In Maliszewski (ibid supra) at p 1073 the court noted at that: “Against the foregoing it needs to be stated, as far as the equality argument is concerned, that the respondents have been treated on the same basis as all the other foreign doctors immigrating to South Africa who have acquired citizenship after December 1991. Thus viewed, there is no discrimination against the respondents. Nor is there discrimination against them \textit{via}\textit{-via} South African citizens by birth who qualified elsewhere but sought registration after December 1991 in South Africa: they have to pass the prescribed examination (unless they qualified in certain countries whose standards of training were by regulation accredited as being on a par with those of South Africa - which
3. The dispensation was communicated and established in such a way that it did not establish policy or general practice binding on the Council in respect of future cases.

4. The nature and limits of the dispensation were clearly defined, thus ensuring that the intention of the Council to create a once-off situation for a limited period of time was established.

5. No legitimate expectations were created in the minds of the plaintiffs that they would or could benefit from the dispensation.

It is submitted that the golden thread in *Maliszewski*, and the reason for the state’s success, is the clarity of the Council’s intentions and the fact that they were obviously communicated to relevant persons coupled with an absence of unfairness or unreasonableness.

Another case, *Reitzer Pharmaceuticals* highlights the possibility that it is not only express, detailed and conscious limitations of rights that can be problematic but also the limitation of rights through the formulation of legislation that is either overbroad or too vague or both. The facts of the case are given below together with the main points of the judgment.

### 2.7.3.2 *Reitzer Pharmaceuticals (Pty) Ltd v Registrar Of Medicines*

**Facts**

---

286 The court in *Maliszewski* (fn 276 supra) at p 1073 pointed out that: “As explained above, the special dispensation was a relaxation of the normal requirements for full registration for a limited group of individuals and for a limited time with a clear cut-off date. It amounted to a clearly defined exemption from the EFR. For the very reason that the Council did not wish to establish the special exemption as a general rule of practice or to create expectations, the cut-off date was established and made known.”

287 *Reitzer* fn 275 supra

288 *Reitzer* fn 275 supra
In this case, the applicant pharmaceutical company sought an order referring to the Constitutional Court the question of whether the definition of ‘medicine’ in s 1 of the Medicines and Related Substances Control Act 101 of 1965 (the Act), read with sections 14 and 19 of that Act, was in conflict with the provisions of s 26(1) of the Constitution of the Republic of South Africa Act 200 of 1993 which deals with the right to freely engage in economic activity. It also sought an order, pending the decision of the Constitutional Court, interdicting the respondents from preventing it from manufacturing, selling and distributing one of its products called Florex. This was a dried yeast product prescribed by doctors and used by patients as an anti-diarrhoeal as an adjunct to antibiotic therapy, the (as yet unproven) theory being that it would restore the flora in the intestines destroyed by the use of antibiotics. The product was sold in pharmaceutical dosages in capsule form. All anti-diarrhoeals which were not available for sale immediately before 5 July 1968 were called up for registration in terms of a resolution of the Medicine Control Council, approved by the second respondent, the Minister of Health, and published in the Government Gazette of 5 July 1968. Florex had not been available for sale before that date and had therefore been called up for registration. Sales of medicines subject to registration but which have not been registered are prohibited by s 14 of the Act. The applicant’s case was that Florex was a dietary supplement, not a medicine, and would therefore not have been subject to registration under the Act save for the over-broad definition of ‘medicine’ in s 1. Although at the time of the application no medicinal claims were being made in the advertising and packaging material, at the time of its launch the Florex label had indicated that it was intended ‘for concurrent use with antibiotic therapy . . . or as prescribed by your doctor’. Further indications that the applicant regarded Florex as an anti-diarrhoeal were, *inter alia*, that it regarded Inteflora, a product manufactured, sold and used for a similar purpose, as a competitor and the manner in which Florex had been marketed on the applicant's behalf. The applicant’s attack on the definition of ‘medicine’ was primarily directed at the word ‘used’ in the introductory phrase on the grounds that, for example, even water would fall under the definition of ‘medicine’ if it were used to treat or cure thirst.289

289 From headnote Reitner in 275 supra
The respondents contended that the applicant itself conceded that the regulation and control of medicines, properly defined, is necessary and that its only complaint was that the definition of a medicine was too wide, so that the Act controls substances that are not really medicines. The respondents argued that Florex was so clearly and so obviously a medicine, whichever way one wished to define medicines, that it must and will fall within any reasonable definition of the word, and even the dictionary meaning thereof. Consequently, even if the Constitutional Court should declare the whole of the definition of medicine invalid Florex would still be a medicine - as understood in the ordinary grammatical sense of the word - and subject to registration, with the result that the declaratory order sought by the applicant would not be decisive of the real dispute between the applicant and the respondents, viz whether or not Florex should be registered as a medicine.

Judgment

The court did not accept the respondents’ contention. It observed that the objection raised by the respondents was squarely dealt with in Gooding v Wilson. That case concerned the constitutional validity of a Georgia statute making it a misdemeanor for any person, without provocation, to use to or of another, and in his presence, ‘opprobrious words or abusive language, tending to cause a breach of the peace’. The conviction was based on the defendant's remarks to police officers while the defendant was participating in a picketing protest against the war in Vietnam. It quoted Mr Justice Brennan, delivering the opinion of the US Court as follows:

“It matters not that the words appellee used might have been constitutionally prohibited under a narrowly and precisely drawn statute. At least when statutes regulate or proscribe speech and when no readily apparent construction suggests itself as a vehicle for rehabilitating the statutes in a single prosecution . . . the transcendentant (sic) value to all society of constitutionally protected expression is deemed to justify allowing “attacks on overly broad statutes with no requirement that the person making the attack demonstrate that his own conduct could not be regulated by a statute drawn with the requisite narrow specificity” . . . This is deemed necessary because persons whose expression is constitutionally protected may well refrain from exercising their rights for fear of criminal sanctions provided by a statute susceptible of application to protected expression.

‘Although a statute may be neither vague, overbroad, nor otherwise invalid as applied to the conduct charged against a particular defendant, he is permitted to raise its vagueness or

290 Gooding v Wilson 403 US 518; 31 L Ed (2d) 408
unconstitutional overbreadth as applied to others. And if the law is found deficient in one of these respects, it may not be applied to him either, until and unless a satisfactory limiting construction is placed on the statute. The statute, in effect, is stricken down on its face. The result is deemed justified since the otherwise continued existence of the statute in unnarrowed form would tend to suppress constitutionally protected rights. 'Coates v City of Cincinnati...'.

The court pointed out that the doctrine of over-breadth and vagueness are distinct but related concepts and quoted with approval from a judgement of the Canadian Supreme Court291 which said that:

"Overbreadth and vagueness are different concepts, but are sometimes related in particular cases. As the Ontario Court of Appeal observed in R v Zundel (1987) 29 CRR 349 ... cited with approval by Gonthier J in R v Nova Scotia Pharmaceutical Society ... the meaning of a law may be unambiguous and thus the law will not be vague; however, it may still be overly broad. Where a law is vague, it may also be overly broad, to the extent that the ambit of its application is difficult to define. Overbreadth and vagueness are related in that both are the result of a lack of sufficient precision by a Legislature in the means used to accomplish an objective. In the case of vagueness, the means are not clearly defined. In the case of overbreadth the means are too sweeping in relation to the objective. Overbreadth analysis looks at the means chosen by the State in relation to its purpose. In considering whether a legislative provision is over broad, a court must ask the question: are those means necessary to achieve the State objective? If the State, in pursuing a legitimate objective, uses means which are broader than is necessary to accomplish that objective, the principles of fundamental justice will be violated because the individual's rights will have been limited for no reason. The effect of overbreadth is that in some applications the law is arbitrary or disproportionate."

At 209 Cory J said the following:

"In determining whether s 179(1)(b) is overly broad and not in accordance with the principles of fundamental justice, it must be determined whether the means chosen to accomplish this objective are reasonably tailored to effect this purpose. In those situations where legislation limits the liberty of an individual in order to protect the public, that limitation should not go beyond what is necessary to accomplish that goal."

The court of appeal noted that a similar approach was adopted by the Constitutional Court in striking down the Indecent or Obscene Photographic Matter Act 37 of 1967 in which it was plainly recognised by the court that there were certain forms of obscenity which would justify a prohibition even on their possession. This did not prevent the Court from striking down the statute as a whole. The court quoted with approval the following words of Didcott J in Case and Another v Minister of Safety and Security and Others; Curtis v Minister of Safety and Security and Others:

291 R v Heywood 24 CRR (2d) 189 (SCC) at p 208
292 Case and Another 1996 (3) SA 617 (CC)
“Such questions do not arise at present and are best left unanswered until some future case confronts us with them. But the trouble one now has with s 2(1) is that it hits the possession of other material too, material less obnoxious and sometimes quite innocuous which we cannot remove from its range while it lasts because the parts of s 1 giving it that effect are not satisfactorily severable from the rest.”

It then proceeded to consider the prospects of success and looked *inter alia* at the purpose of the Medicines and Related Substances Control Act. In doing so it referred to the words of Kriegler AJA, as he then was, in *Administrator, Cape v Raats Röntgen and Vermeulen (Pty) Ltd*:

“It would be advisable to pause for reflection lest the wood become obscured by the trees. Manifestly the Act was put on the statute book to protect the citizenry at large. Substances for the treatment of human ailments are as old as mankind itself, so are poisons and quacks. The technological explosion of the twentieth century brought in its wake a flood of pharmaceuticals unknown before and incomprehensive to most. The man in the street - and indeed many medical practitioners - could not cope with the cornucopian outpourings of the worldwide network of inventors and manufacturers of medicines. Moreover, the marvels of advertising, marketing and distribution brought such fruits within the grasp of the general public. Hence an Act designed, as the long title emphasizes, to register and control medicines. The enactment created a tightly meshed screening mechanism whereby the public was to be safeguarded: in general any medicine supplied to any person is, first, subject to stringent certification by experts; then it has to be clearly, correctly and comprehensively packaged and labelled and may only be sold by certain classes of persons and with proper explanatory information; to round it out detailed mechanisms for enforcement are created and ancillary measures are authorised.”

The court ruled that the limitation does not negate the essential content of the right in question and that it was reasonable and justifiable for ‘medicine’ to be defined widely. On the strength of the foregoing, the temporary interdict sought by the applicant was refused.

**Discussion**

It is submitted that the interests of the public represented by the legislation and which were sought to be protected by the legislation were highly influential of the court’s decision not to grant the interdict and to tolerate an extremely broad definition of a medicine. Thus a provision which may be very broad in its scope, and might even be regarded as overbroad
in other circumstances, can be saved by the weight and nature of the public interest it seeks to protect. The rigorous nature of the court’s examination of both the definition of ‘medicine’ and the relevant constitutional principles is indicative, however, of the level of judicial caution that is applied to questions of over broadness and vagueness of legislative provisions that have an impact on constitutional rights. In this case the right in question was of freedom of economic activity because the definition of a medicine, when read in conjunction with another provision of the Medicines Control Act that prohibited the sale of medicines unless they were first registered in terms of the Act, had the effect of significantly restricting the freedom of economic activity in relation to medicines.

It is surprisingly difficult to define a medicine legislatively particularly when one starts looking at the question of whether a substance is a nutritional supplement and also given the fact that certain substances when applied or used in a certain way could constitute a medicine and at other times, not. For instance, common salt (sodium chloride) can be used as a medicine in certain circumstances. The natural element of the periodic table, iodine, is usually a solid and has many different applications only some of which are medicinal. It is when it is combined with certain other substances for use in the treatment of wounds, hyperthyroidism or medical diagnostics, that it becomes a medicine. In terms of the general regulations to the Medicines and Related Substances Act, a wound dressing is also a medicine despite the fact that when most people think of medicines they think of potions and pills. Certain chemicals that occur naturally within the human body are also classified as medicines for example, testosterone, oestrogens and prostaglandins since they are used as medicines in the treatment of illness. Vitamins can be either dietary supplements or medicines depending upon the purpose for which they are used and their dosage strengths. There is also the question of active pharmaceutical ingredients (APIs) and the ‘packaging’, in the form of the other inactive ingredients, with which they are sold for use by patients. A tablet for example consists of a combination of the API and the inactive ingredients. An API on its own, may or may not be a ‘medicine’ depending upon whether it is in a form that is suitable for use as such by a patient since a medicine is a substance that is “used or purporting to be suitable for use or manufactured or sold for use in-
(a) the diagnosis, treatment, mitigation, modification or prevention of disease, abnormal physical or mental state or the symptoms thereof in man; or  
(b) restoring, correcting or modifying any somatic or psychic or organic function in man” [writer’s italics]

It is clear from the foregoing that the concept of a medicine is highly complex and technical matter that depends on the circumstances of its use and the purpose for which it is sold. The Act refers to medicines and scheduled substances the latter being defined as “any medicine or other substance prescribed by the Minister under section 22A”.

It is submitted with respect that the decision of the court was constitutionally correct in this case because it weighed up the interests concerned and came to the conclusion that the balance was in favour of a wide definition of a medicine. The constitutional right to freedom of economic activity in the interim constitution has been replaced in the Constitution with a right to freely choose a trade, occupation or profession. It is significant that the drafters of the Constitution saw fit to make such a change. One can no longer speak of a constitutional right to freedom of economic activity in the broad sense as one could when the interim constitution was still in place. The Constitution expressly states that the practice of a trade, occupation or profession may be regulated by law. Furthermore, the right to freely choose one’s trade occupation or profession in the Constitution is limited to citizens. Since only natural persons can become citizens the right does not available to juristic persons. In any event, it is submitted that given the existence and regular application and enforcement of legislation such as the Competition Act296, the Consumer Affairs, (Unfair Business Practices) Act297 and the various pieces of provincial legislation concerning consumer affairs298, not to mention the common law of contract, it is submitted that a broad right to freedom of economic activity is notional at best.

296 Competition Act No 89 of 1998
297 Consumer Affairs Act No 71 of 1998. In Janse Van Rensburg No and Another v Minister Of Trade and Industry And Another NNO 2001 (1) SA 29 (CC) the constitutional court held that section 8(5)(a) of the Act was unconstitutional but it the Act itself still stands. The court in this case suspended its order of constitutional invalidity for twelve months in order to give the legislature an opportunity to rectify the defect in the section.
2.7.3.3  Affordable Medicines Trust and Others v Minister of Health

Facts

The relief sought by the applicants initially entailed an extensive challenge to various sections of the Medicines and Related Substance Act as amended and regulation 18 of the General Regulations to that Act on the basis of their constitutionality. At the core of the relief sought by the applicants was a ruling by the court that the legislative provisions that medical practitioners may not dispense medicines without a licence issued by the Director-General of Health was unconstitutional and thus invalid. At the hearing the relief sought by the Applicants was narrowed down to the following –

1. That section 22C(1)(a) of Act 101 of 1965 was unconstitutional and invalid inasmuch as it refers to “on the prescribed conditions”.

2. That Regulations 18(3)(b),(f),(g),(h) and (i), 18(4), 18(5), 18(6) and 20 of the General Regulations were unconstitutional and invalid.

Section 52 of the Health Professions Act was amended by the Health Professions Amendment Act to the effect that a medical practitioner could only dispense medicines on the authority and subject to the conditions of a licence granted by the Director-General in terms of the Medicines and Related Substances Act. The applicants objected to the fact a medical practitioner’s dispensing licence is coupled to a particular premises arguing that doctors has for centuries held the right to dispense medicines as part of their practice. This was subject in principle to regulation by the Health Professions Council but in practice only a register was kept by the Council with no further regulatory requirements imposed. The applicants argued that section 22C(1) of the Medicines Act was silent on the question of

261
premises associated with the licence and that the Minister of Health was effectively making law which adversely affected the rights of health professionals and their patients. The respondents argued that the provisions of the Health Professions Act did not sufficiently regulate the 11000 or so practitioners whose names were on the register as being dispensers of medicines. It argued that there were no standards, norms or guidelines to ensure that dispensing medical practitioners complied with or adhered to good dispensing and compounding practices and that a number of unacceptable practices, including bonussing, sampling of medicines and receipt of unacceptable incentives by dispensers of medicines occurred. This led to inappropriate prescribing, compounding and dispensing of medicines, increased costs of healthcare to the public and resulted in widespread bad dispensing practices. The applicants argued that if the legislature intended to limit a practitioner’s right to dispense medicines to particular premises it should have said so in the relevant statutes. They argued that the regulatory provisions as they stood offended against the rule of law and the principle of legality. The stated government purpose of the licensing process is to increase access to medicines that are safe for use by the public.

Judgment

Kruger AJ observed that it is trite that one of the pillars on which the South African democratic dispensation is based is the principle of separation of powers and that as a general point of departure courts will be loath to enter into the fray of legitimate government policy. He stated that it is not for a court to adjudicate upon or apply value judgments with regard to the contents of government policy. At the same time, the principles of transparency and accountability constitute values which underpin the entire fabric of the Constitution. Herein, he said, lies a marked difference between the old order and the current dispensation. In the latter the formulation of policy is subject to public scrutiny and input and the end product is susceptible to assessment by the public. Public officials whether politicians or civil servants must be held responsible for their policies by the public. Kruger AJ noted that accountability in this sense forms part of the political process and it is not for the courts to interfere with policy matters under the guise of accountability. He observed that the respondents in their answering papers provided ample detail regarding the process which was followed and which resulted in the government
policy at issue and that the constitutional requirements of transparency and accountability had been complied with. The merits or de-merits of the policy that ensued were therefore immaterial, said Kruger AJ, for purposes of the constitutional challenges to be adjudicated upon. He stated that the remaining question was whether it could be said that the existence of a legitimate government purpose had been proven. In a nutshell the stated government purpose was to increase access to medicines that are safe for use by the public. Kruger AJ observed that this constitutes a legitimate government purpose. The court noted that the applicants alleged in essence that the envisaged system of licensing with particular reference to the coupling of a licence to specific premises, is not rationally connected to the stated government purpose and that the licensing of premises was introduced for the first time by way of regulation 18, which the first respondent purportedly made in terms of section 22C(1). It noted further that the applicants alleged that regulations 18(3) and 18(4) where they refer to licensed premises are unconstitutional, that regulation 18 was unconstitutional inasmuch as the Minister had no power to make them and that substantial parts of the regulations are invalid on the grounds of vagueness or arbitrariness.

Kruger AJ pointed out that it was evident that the General Regulations were made in terms of the empowering section of the Medicines Act, namely section 35. The latter, inter alia makes provision for the making of regulations regarding storage, sale or use of medicines in respect of safety, quality and efficacy, the conditions under which medicines or scheduled substances may be sold and generally for the efficient carrying out of the objects and purposes of the Act. Hence, said the court, the Minister has comprehensive powers to make regulations on any aspect pertaining to the safety, quality and efficacy of medicines including their storage, keeping, use, sale, supply and the like. Kruger AJ stated that it is self-evidence that premises where medicines are kept or stored should adhere to certain minimum requirements and should be controllable as such. Even under the previous

---

304 Kruger AJ noted the reference by Chaskelison P in S v Solberg; S v Negal; S v Lawrence (fn 137 supra) where he referred with approval to a passage from Carmichael, Attorney General of Alabama v Southern Coal and Coke Co 310 US 495 [1937] at 510, at [43]: "A State legislature, in the enactment of laws, has a widest possible latitude within the limits of the Constitution. In the nature of the case it cannot record a complete catalogue of the considerations which move its members to enact laws. In the nature of the case it cannot record a complete catalogue of the considerations which move its members to enact laws. In the absence of such a record courts cannot assume that its action is capricious or, that, with its informed acquaintance with local conditions to which the legislation is to be applied, it was not aware of facts which afford reasonable basis for its action. Only by faithful adherence to this guiding principle of judicial review of legislation is it possible to preserve to the legislative branch its rightful independence and its ability to function."
regulatory regime which only registered dispensing medical practitioners, they were required in terms of section 52(1)(a) of the Health Professions Act to confirm the address from which they would dispense. In their replying affidavit the applicants had also confirmed that the register kept in terms of section 52(1)(a) of the Health Professions Act regulates “technical aspects such as appropriate premises, adherence to statutory requirements, the storage of medicines etc.” Kruger AJ observed that the fact that the applicants concede that dispensing practices should be properly controlled appears from the statement made in the replying affidavit where the deponent states that issues such as the appropriate premises, adherence to statutory requirements and the storage of medicines are matters of which a patient would have no knowledge “but which would need to be regulated and controlled in the public interest”. He noted further that the applicants elsewhere made mention of the need for adequate dispensing controls and conditions and that they support the governments’ goals to ensure that high quality and appropriate medicines are safely distributed from clean and suitably equipped dispensing premises by properly trained dispensers. They also supported the regular inspection of premises to ensure that good dispensing practice is maintained. The court concluded that the principle of a known and identifiable address where medicines are kept is thus not foreign or new, even to the old dispensing, neither did the applicants contest that regular inspection and proper control go hand in hand with the safe supply of medicines from clean and suitably equipped dispensing premises. Thus, said the court, requirements regarding “licensed premises” are fully compatible with these facts in the context of section 35 of the Act.

Kruger AJ noted that the applicants relied heavily on what they referred to as “as symbiosis between section 22C(1)(a) and the regulations”. This “symbiosis” was allegedly borne out by way of the express reference in Regulation 18(1) to section 22C(1). He observed that section 22C(1) in essence deals with the empowerment of the Director-General to issue a licence to compound and dispense medicines. Regulation 18(1) does no more than confirm that an application for a licence to dispense or compound medicines should be directed at the Director-General. It is in that sense, said the court, that the reference to section 22C(1) as it appears in regulation 18(1) should be understood. Consequently, Kruger AJ found that he could not agree with the submission on behalf of the applicants that the relevant
regulations were not made in terms of section 35 of Act 101 of 1965 but as per regulation 18(1) they were made in terms of section 22C(1) of the Act. The court held that the regulations in general and regulation 19 in particular were made by the Minister in terms of section 35 of the Medicines Act. Thus the proximate cause of the alleged infringement did not lie in section 22C(1)305.

The court noted that it is within the power of parliament to determine what scheme should be adopted to attain the stated government purpose. The core issue is where the impugned provisions (which include the “prescribed conditions”) are rationally related to the stated government purpose. The latter includes the provision of medicines that are safe for use by the public. That in turn, by necessary implication implies the regulation of premises from which medicines are dispensed. That indeed, said the court, is what the legislation and the scheme brought about by it intend to address and achieve. It held that there was a clear rational relationship between the stated government purpose and the impugned legislation to the extent that the scheme brought about by the latter is clearly aimed at the provision of medicines that are safe for use by the public, and which will inter alia only be provided from identified premises which are controllable. The court noted that in terms of section 1 of the Medicines Act, “prescribed” is defined as “prescribed by or under the Act”. The term “this Act” is defined to include “any regulation”. The latter means “a regulation made and enforced under this Act”. The term “on the prescribed conditions” therefore means conditions made or enforced under the Medicines Act. Thus, said the court, the fact that regulation 18(3)(b) provides for that the exact location of the premises where compounding and/or dispensing will be carried out must form part of the application at the utmost differs only in degree from the former position in terms of section 52(1)(a) of the Health Professions Act. In terms of the latter the medical practitioner has to confirm the address from which he or she will dispense. Whether providing such an address could or could not be regarded as a “condition” said that court, is a matter of degree. At the very least, stated Kruger AJ, the higher threshold brought about by the new dispensation did not render the impugned provisions irrational vis-à-vis the legitimate government purpose. On the contrary, not only was the condition that the exact location of the premises (where

305 The court referred in this regard to New National Party of South Africa v Government of the Republic of South Africa and Others 1999 (3) SA 191 (CC) at 205C-E paragraph [21].
compounding and/or dispensing will be carried out) rationally related to the stated government purpose, it did not differ materially from the old dispensation to the extent that it did not introduce a wholly new and foreign element. Read with regulation 18(7), said the court, it made perfect sense. The court held that the words in section 22C(1)(a) “on the prescribed conditions” read with the contents of regulation 18 are rationally related to the stated government policy.

Kruger AJ noted that the regulations were made in terms of section 35 of the Medicine Act and not in terms of section 22C(1)(a). This section, he said, provides ample scope for the Minister to make regulations. He stated that the purpose of regulations is to spell out detail which, should it have been included in empowering legislation would render the alter cumbersome or which, by the very nature of the legislation itself could conveniently be dealt with by way of regulations without attempting to empower the relevant Minister to supersede Parliament’s legislative function or to assume legislative powers which due to their very nature reside with Parliament. In the current instance the court found that the Minister did not assume Parliament’s residual legislative powers, nor did she exceed the powers bestowed on her by section 35 to make regulations; the impugned parts of the regulations fall squarely, said the court, within the parameters imposed by section 35 regarding issues on which the Minister is empowered to make regulations. The court observed that the legislature probably appreciated that the conditions to be imposed might be of a specialised nature which required certain skills and expertise which would be more appropriately dealt with by those possessed of such skills and expertise. It held that the conditions imposed by the Minister, in consultation with the specialist body (the Medicines Control Council) were foreseen by the legislature to be of a nature which would not, in the ordinary course of events be conveniently dealt with by the Legislature itself. For this reason said the court it took the view that the Minister did not exceed her powers in making the regulations which couple the doctors’ right to dispense medicines to licensed premises.

With regard to regulation 19 the court observed that it required very little imagination to envisage that circumstances prevailing at different proposed dispensing premises may differ considerably. The circumstances of a busy city practice would be substantially different to
those in some far off corner in the Karoo or the Limpopo Province. It may be easier, said the court, for the dispensing doctor in a remote rural area to provide particulars with regard to the existence of other licensed health facilities in the vicinity of the premises from where the compounding and dispensing of medicines is intended to be carried out; to give a description of the geographic area to be served by the applicant; or to provide demographic considerations including disease patterns and health status of the users to be served. On the other hand, the city practitioner would find it relatively simply to describe the geographic area to be served by herself by naming the suburb/s served by the practice, but may experience some difficulties in estimating the number of health care users in that geographical area. The court stated that circumstances would dictate the particularity with which the requested information could be provided. Kruger AJ held that it did not follow that the information requested was necessarily arbitrary or capricious in nature. He observed that it is trite that words and expressions used in an enactment must be interpreted according to their ordinary meaning as well as in the light of their context. The latter is not limited to the language of the rest of the enactment but extends to the subject matter thereof, its apparent scope and purpose and within limits, its background. Where the language itself appears to admit of more than one meaning, one may from the beginning consider the context and the language to be interpreted together. The court said that taking into consideration the wide variety of circumstances that may prevail between different applicants from different cities, towns or parts of the country, the regulations must of necessity be phrased in a way in which, when responded to by the different “categories” of dispensing doctors, will provide the relevant decision-maker with sufficient material in order to be able to come to an informed decision. Kruger AJ said he found it hard to conceive that information which is to be supplied for the purposes envisaged by the regulations and in particular, Regulation 18(4), could be phrased in a more specific or normative way taking into consideration that the factors relevant to the decision to be made are so numerous and varied. He said it would have been extremely difficult (if not impossible) for the legislature as well as for the executive to have been more specific. To have attempted to identify potentially extreme variables in terms of narrow and specific criteria would not only have been impractical but well nigh impossible. He noted that the

306 The court referred to Jago v Dönges N.O. and Another 1990 (4) SA 653 (A) at 662G-663A in this regard.
criteria in the regulations apply equally to all applicants and taking into consideration his or her prevailing circumstances each applicant could, to the best of his or her ability, provide the required information. The overarching objective is to increase access to medicines that are safe for use by the public. Kruger AJ then analysed in further detail the provisions of regulation 18(4)(a), 18(4)(b), 18(4)(c) and (d), 18(4)(e) and 18(4)(f), 18(5), 18(6) and 20. he observed with regard to the whole of Regulation 18(4) that it was evident that none of the factors referred to therein was decisive, of its own, of the decision to grant or refuse a licence and that clearly the objective was to attain an overall picture regarding the issues mentioned within the context of the overarching government purpose. He said that within the stated context the impugned provisions were clearly not intended to establish rigid norms or standards, nor to elicit rigid responses. They are phrased in a general way for reasons which are intended to elicit generalised responses with a view to enable the decision-maker to construe a general impression. Within that context, said the court, it did not regard any of the impugned provisions as arbitrary, vague or capricious or not objectively ascertainable with regard to the overall objective they were devised to attain. Kruger AJ said that it should further be borne in mind that should an applicant be aggrieved by the outcome of his or her application, the law provides for the means to address any alleged injustice. He said it was important to bear in mind that discretionary powers may be broad.

The court then went on to examine the alleged infringement of rights and noted that the constitutional challenge was narrowed down considerably compared to the initial attack on the licensing system en bloc. The main bone of contention was the coupling of a dispensing licence to particular premises. It noted that certain rights in the Bill of Rights had been relied upon by the applicants, namely the right to equality in terms of section 9, the right to practice their profession freely in terms of section 22, the right to dignity in terms of section 10, the right to freedom of movement in terms of section 21 and the right to property in

---

307 The court referred in this regard to Dowood and Others v Minister of Home Affairs fn 12 supra at 969 B-C para [53] where it was stated: "Discretion plays a crucial role in any legal system. It permits abstract and general rules to be applied to specific and particular circumstances in a fair manner. The scope of discretionary powers may vary. At times they will be broad, particularly when the factors relevant to a decision are so numerous and varied that it is inappropriate or impossible for the Legislature to identify them in advance. Discretionary powers may also be broadly formulated where the factors relevant to the exercise of the discretionary power are indisputably clear. A further situation may arise where the decision-maker is possessed of expertise relevant to the decisions to be made."
terms of section 25. The allegation was that the coupling of the licence to dis pense medicines to licensed premises unjustifiably interferes with these rights in a manner that cannot be justified having regard to the provisions of section 36 of the Constitution. In addition the applicants contended that the coupling of a practitioner's licence to dis pense to a particular premises constitutes and infringement of patients' rights, eg the right of choice from whom she wishes to receive medicine or will receive medicine in the future. The upshot was that the alleged infringement interfered with the patient's right to choose a particular practitioner and her right to enter into a private contractual relationship with such practitioner. The applicants alleged that this was an affront to the patient's dignity.

The court noted that section 22 of the Constitution provides that:

"Every citizen has the right to choose their trade, occupation or profession freely. The practice of a trade, occupation or profession may be regulated by law".

It stated that the content of the right in section 22 is the right to choose a trade, occupation or profession within the framework of any lawful regulation which controls its practice. Kruger AJ pointed out that the government may control the practice of a trade, occupation or profession provided that any restrictions on the practice must be rational. He noted that the fact that section 22C of the Medicines Act introduces a licensing system for the dispensing of medicine by medical practitioners was not challenged per se and that the applicants aver that there is a conceptual difference between regulating and limiting. They argued that the impugned legislation goes beyond mere regulation and that it limits under the guise of regulation. The respondents contended that the impugned provisions did no more than regulate and that it is legitimate to regulate the practice of a profession so as to prevent harm to the general public, that public health is an important community interest

---

308 The court referred to Van Rensburg v South African Post Office Ltd 1998 (10) BCLR 1307 (A) and S v Solberg; S v Negol; S v Lawrence (in 137 supra). In Solberg the court held that: "Certain occupations call for particular qualifications prescribed by law and one of the constraints of the economic sphere is that persons who lack such qualifications may not engage in such occupations. For instance nobody is entitled to practise as a doctor or a lawyer unless he or she holds the prescribed qualifications and the right to engage 'freely' in economic activities should not be construed as conferring such a right on unqualified persons. Nor should it be construed as conferring upon persons to ignore legislation regulating the manner in which particular activities have to be conducted, provided always that such regulations are not arbitrary." In Van Rensburg it was stated that: "The important point is that the Post Office Act does not place any absolute or unqualified barrier to the appellant's choice of a lawful trade, occupation or profession. It does not more than put reasonable controls into place on the conduct of the postal service, controls which have regard to the economic necessities of our times. This does not violate the appellant's section 22 right".
That calls for regulation and that the orderly dispensing of safe medicines is crucial for the health of those who receive and consume such medicines. The applicants contended that legal practitioners have a constitutionally protected right to dispense medicines, that such right had been historically established, that a medical practitioner has had a right to be registered as a dispensing doctor in terms of section 52(1)(a) since 1984, that the said section gave recognition to the right of medical practitioners to dispense (should they comply with the requirements for registration) so that the section merely gave that right a statutory context by requiring a name to be entered in the register. As such it merely constituted statutory confirmation of the right of doctors to dispense and the right of patients to receive medicine; none of the restrictions envisaged by the new system applied. The respondents argued that where the protection of public health is in issue, a more rigorous form of protection has been considered to be more appropriate by the legislature and given effect to by the executive. Although section 52(1)(a) of the Health Professions Act allowed a medical practitioner whose name was entered in a register to compound and dispense medicines such medical practitioners were not adequately regulated; there were no standards, norms or guidelines to ensure that they complied with or adhered to good dispensing and compounding practices. The coupling of the licence to dispense with a particular premises addresses those needs. The issue is not whether medical practitioners have a right to dispense for some or other reason but whether the impugned legislation in the first instance exceeds the boundaries of lawful regulation. Only if the answer to the latter question is in the affirmative, does the question regarding the possible curtailment of rights arise.

The court held that the issue was whether the impugned provisions limited the rights claimed by the applicants to the extent that they infringed any of these rights. In the view of the court the impugned provisions did no more than regulate the practice of dispensing and did not infringe the medical practitioner’s rights to choose to practise as a medical practitioner or to choose to dispense medicines as part of his or her practice, albeit at an identified premises. The court stated that medical practitioners were not barred from applying for and being granted a licence entitling them to do so. It found that the overarching consideration is one of a legitimate government purpose regarding which a
particular scheme was devised by the legislature and to which the executive has given effect within lawful and valid bounds. It was the view of the court that issues regarding possible limitation of rights need not be considered at all as none of the rights relied on had been infringed upon. Consequently, said the court, whether the stated government purpose could have been achieved by less intrusive means fell outside of the ambit of its judgment. It held that it was not for the court to express an opinion regarding the state’s preference for the scheme of licensing or to speculate with regard to better ways of attaining the stated government purpose.

The court found with regard to the alleged encroachment on patient’s rights that no such encroachment had occurred. The fact that some patients may suffer a certain degree of inconvenience as a result of the way in which medical practitioner's rights to dispense are regulated does not result in the conclusion that a patient’s dignity is being impaired on that his or her right to enter into a contractual relationship with a doctor of his or her choice is encroached upon to an extent which would render such encroachment unconstitutional. It said that to hold thus would be to extend the boundaries of patients’ rights to an unrealistic Utopia.

The court concluded that the application should be dismissed on all grounds relied on by the applicants.

Discussion

The appellants in this case lost sight of a number of well established points of law with regard to the manner in which legislative requirements can and must be construed and applied. The law does not require the impossible of people. Where it is objectively
impossible for an applicant for a dispensing licence to supply certain information he or she
cannot be expected to do so. Administrative officials are required to act reasonably in
taking administrative decisions\textsuperscript{310}. They are also required to act reasonably in interpreting
and implementing legislation. They are obliged to give reasons for their decisions both
generally in terms of the Promotion of Administrative Justice Act\textsuperscript{311} and in terms of the
Medicines And Related Substances Act\textsuperscript{312}. There appeared to be an assumption or belief on
the part of the applicants that the Director-General would act unreasonably in enforcing the
relevant provisions of the Act and the regulations and that the intention was to refuse as
many applications for dispensing licences as possible. The only alternative is that they were
simply trying to attack the relevant legislative provisions on every possible front.

The Constitution itself recognises the power of the state to regulate the practice of a trade,
occupation or profession. The argument of the appellant that regulation does not mean
limitation is specious since it is an inherent quality of regulation that it sets boundaries or

that which he cannot possibly perform.’ The word ‘law’ is used here in a general sense and is apparently not restricted to ‘a law’
in the sense of a statutory enactment. I do not believe that this is an accurate translation, since ‘law’ in a general sense would
usually be rendered as \textit{lex} rather than \textit{lex}. That \textit{lex} does in fact refer to a statute or a law appears from Broon’s (loc cit) equating
the said maxim with \textit{impotentia estract legem}, in the sense that the inability to perform or comply with an obligation imposed by
a legal provision excuses such failure to perform or non-compliance. This is the meaning accorded to \textit{impotentia estract legem}
in the English case of \textit{Eiger v Furnival} (1881) 17 ChD 115 at 121 (per Jessel MR). A better approach than that of Broon
may be found in \textit{Cranes on Statute Law} 7th ed (1971) at 268, where it is said: ‘Under certain circumstances compliance with
the provisions of statutes which prescribe how something is to be done will be excused. Thus, in accordance with the maxim of law,
\textit{lex non cogit ad impossibilium,} if it appears that the performance of the formalities prescribed by a statute has been rendered
impossible by circumstances over which the persons interested had no control, like the act of God or the King’s enemies, those
circumstances will be taken as a valid excuse.’ This approach appears to have been acceptable in English law and has been
applied in South African decisions from as early as 1880. I refer in this regard to \textit{Hay v The Divisional Council of King William’s
Town} (1880) 1 EDC 97 at 100, where Smith J says: ‘… [W]hen a duty is imposed upon anyone by law, there must always be an
implied condition that it is in his power to perform it. \textit{Lex non cogit ad impossibilium} and \textit{impotentia estract legem} (Coke on
Littleton), are very old maxims of law.’ The court noted further that: ‘In \textit{John Roderick’s Motors Ltd v Vlijm} 1958 (3) SA 575
(C) at 577H-578A the maxim is rendered as \textit{lex non cogit ad impossibilium aut impossiibilia}, the \textit{impossiibilia} presumably referring to
‘unreasonable things’ or, simply, ‘unreasonable things’. In this context \textit{impossiibilia} is certainly not synonymous with \textit{impossiibilia}
in that unreasonable things need not give rise to or even suggest impossibility. Smill ALP appears to have relied on Maxwell on \textit{The
Interpretation of Statutes} 8th ed (1937) at 322 as a source for this rendition of the maxim. Counsel for the applicant referred the
learned Judge to the ninth edition (1946) at 387. Neither of these editions was available to me but in the 12th edition by P St J
Langan (1969) at 326 the maxim is cited without the addition of the words \textit{aut impossiibilia}, in the context of intentions attributed to
the Legislature when some is expressed.’

See also \textit{Mntwinti v Minister Von Polloe} 1984 (1) SA 619 (A)
\textit{Ampofo And Others v MEC For Education, Arts, Culture, Sports And Recreation, Northern Province, and Another} 2002 (2) SA
215 (T) Ngeope JP, Hussain J and Basson J held that: ‘Reasonable administrative action in terms of s 33 of the Constitution has
also been held to mean that a functionary (such as the department) is obliged to make decisions that are rationally justifiable
(\textit{Pharmaceutical Manufacturers Association of SA and Another: In re Ex parte President of the Republic of South Africa and
Others} 2000 (2) SA 674 (CC) (2000 (3) BCLR 241)). The Department cannot therefore be obliged to exercise its discretion in a
particular manner merely because it has done so in the past. It is required to exercise its discretion in a rational and unprejudiced
fashion. As stated earlier, a legitimate expectation cannot be relied upon to force a functionary to act unlawfully or contrary to its
statutory duties.’

\textit{Act No 3 of 2000}

Section 22C(4) of \textit{Act No 101 of 1965} specifically states that: ‘When the Director-General or the council, as the case may be,
gives or refuses an application for a licence:
\begin{itemize}
\item[(a)] written notice shall be given of that fact to the applicant; and
\item[(b)] in the event of the refusal of an application, the applicant shall be furnished with the reasons for such refusal.’

272
parameters for the conduct or activity being regulated. A boundary is a limitation. Such boundaries may be set in a number of different ways, for instance by defining a particular term as inclusive of some aspects and exclusive of others, by outright prohibition of certain activities, by imposing conditions or defining the circumstances in which certain actions must or must not be taken. Regulations may not always limit constitutional rights as envisaged by section 36 of the Constitution since constitutional rights may not always be in issue. However, where the constitutional right itself includes a recognition that it may be regulated or controlled in some way, by implication this means that it is inherent to the right itself that its exercise can be limited and is subject to government control. If one wants to split hairs one can talk about the limitation of the power to exercise a right as opposed to the limitation of the right itself but such detailed analysis is seldom likely to take matters much further given that the courts have already said that the rights in the Bill of Rights are not absolute. One can have unlimited power to exercise a limited right or limited power to exercise a very broad right. To speak in such terms, is however to draw false distinctions as is illustrated when one takes the spectrum to its extremes – i.e. one can have so little power to exercise the widest possible right that it can seldom if ever be exercised or every power to exercise a right which is so devoid of content that it is meaningless. Either way one ends up with nothing. In any event section 36 of the Constitution refers to limitation of the rights in the Bill of rights while section 22 states that the practice of a trade occupation or profession may be regulated by law. If one looks at the wording of section 22 more closely the right is not to practice any trade, occupation or profession freely. This possibility is expressly excluded by the second sentence in section 22. The right is thus a right to choose the trade occupation or profession freely.
follow. A limitation of this right, it is submitted would be one that interferes with that freedom of choice and not necessarily with the manner, place, or time or any other conditions in or under which, once that choice has been made, the trade, occupation or profession is practised\(^{313}\). Interference with this right may be seen in the refusal of education authorities to allow a person to enrol for a particular course or an unreasonable provision of the Interim Constitution are replaced the specific provisions of the Constitution

\(^{313}\) In City Of Cape Town v Ad Outpost (Pty) Ltd And Others 2000 (2) SA 733 (C) the court noted: “Section 22 appears to be modelled on s 4(1) of the German Basle Law, which provides that all Germans have the right freely to choose their occupation and profession, their place of work, study or training. The practice of an occupation or profession may be regulated by law. See De Waal et al Bill of Rights Handbook at 368–74. The German Courts have interpreted s 12 to provide a considerable amount of constitutional protection for commercial activities. See Carrie D The Constitution of the Federal Republic of Germany at p 300 and Kommer D P Constitutional Jurisprudence of the Federal Republic of Germany (2nd ed) at 270 et seq. Thus in the Pharmacy Case 7 BVereGE 3771 (Kommer at 274) s 12 (1) was interpreted to empower a legislature to regulate the practice as well as the choice of an occupation. Regulations dealing with the latter are greatly circumscribed by the article. The practice of an occupation which is the relevant issue in the present case may be ‘restricted by reasonable regulations predicated on considerations of the common good’. Cited in Kommers at 277. See also the Chocolate Candy case s 3 B VerfGE 135…”

Davies J distinguished German article 12 from the South African section 22 in these words: “There is always a great danger in the unrational employment of foreign law in the process of domestic constitutional interpretation. Notwithstanding that s 12 and s 22 are similar in wording, the latter must be interpreted in the context of the South African constitutional text and its own pedigree. Thus, in my view, the interpretation of s 22 must take account of the difference of wording between s 22 of the Constitution and s 26 of the interim Constitution. The difference is manifest as follows:

(a) the right contained in s 22 is granted to citizens only;

(b) a more specific formulation of choice of trade, occupation, profession is replaced by a more general phrase, namely engagement in economic activity; [Writer's note: It is the other way around. In section 22 of the Constitution, the general provision of the Interim Constitution are replaced the specific provisions of the Constitution]

(c) the use of every citizen requires that the provision is aimed at the individual rather than at the juristic body.

The purpose of s 22 would thus appear to be to ensure that regulations which control a citizen's right to choose a trade and occupation or profession should be implemented in a rational manner. As Jones J said in J R 1013 Investments CC and Others v Minister of Safety and Security and Others 1997 (7) BCLR 925 (E) at 930B–E: ‘We have a history of repression in the choice of a trade, occupation or profession. This resulted in disadvantage to a large number of South Africans in earning their daily bread. In the pre-Constitution era the implementation of the policies of apartheid directly and indirectly impacted upon the free choice of a trade, occupation or profession: unequal education, the prevention of free movement of people throughout the country, restrictions on where and how long they could reside in particular areas, the practice of making available structures to develop skills and training in the employment sphere to selected sections of the population only, and the statutory reservation of jobs for members of particular races, are examples of past unfairness which caused hardship. The result was that all citizens in the country did not have a free choice of trade, occupation and profession. Section 22 is designed to prevent a perpetuation of this state of affairs.’ In my view s 22 introduces a constitutional protection to be enjoyed by individual citizens as opposed to juristic bodies. The right ensures that each citizen will have the right to choose how to employ his or her labour and skills without irrational governmental restriction. It is not a provision which should be extended to the regulation of economic intercourse as undertaken by enterprises owned by juristic bodies which might otherwise fall within the description of economic activity.” The important point to note is that section 22 cannot be construed as a right to freedom or economic activity - otherwise it could not have been restricted to private individuals as Davis J opined. It is a right to choose a trade, occupation or profession. Furthermore, Davis J held that it is a right to employ labour or skills without irrational governmental restriction.

See also Riteman v General Council Of The Bar Of South Africa 2004 (1) SA 908 (SCA) in which Strelly JA held: “Conseil submitted that the division of work between the professions was arbitrary and irrational and constituted an unreasonable limitation on his client’s right to practise his profession now enshrined in s 22 of the Constitution. But that begs the question. The appellant has the right to become an attorney or an advocate but he has no right to redefine the limits of either profession. He cannot complain that he is not being permitted the free exercise of his right if he is unwilling to practise within the acknowledged or accepted scope of the profession.” This case dealt with the issue of the so-called “split bar” in legal practice in South Africa. In the context of dispensing doctors, the limits of the profession with regard to the dispensing of medicines were reduced by section 22C(1) of the Medicines and Related Substances Act No 101 of 1965. The definition of the limits of a profession is clearly within the capacity of the legislature which may devolve certain of the details of this exercise to the executive or to a statutory professional body. The court referred in this case to the dicta of Cameron JA in De Freitas and Another v Society of Advocates of Natal and Another 2001 (3) SA 750 (SCA) at 763G where he said: ‘[I]f the public interest that there should be a vigorous and independent Bar serving the public, which, subject to judicial supervision, is self-regulated, whose members are in principle available to all, and who in general do not perform administrative and preparatory work in litigation but concentrate their skills on the craft of forensic practice. Strelly JA held: “There can, in my view, be no doubt that one of the objects of the referral practice is to ensure that administrative and preparatory work in litigation is handled by attorneys who are trained and organised to do so, thereby enabling advocates to concentrate their skills on the craft of forensic practice. It follows that a proper use of the referral practice serves the public interest. It follows, furthermore, on the other hand, that to allow advocates to accept instructions by attorneys to conduct litigation on behalf of a client from beginning to end, i.e. to do all the administrative and preparatory work in respect of litigation, would not serve the public interest and would constitute an abuse of the referral practice.”’
legislative or policy provision which restricts admission to a particular trade or profession—
for example purely to keep the numbers down or to avoid competition for existing practitioners. In the present context, it is significant that the courts have held that agreements in restraint of trade, which impose all kinds of restrictions in terms of where a person may practice a trade occupation or profession, are not per se unconstitutional. It is submitted that if the courts are prepared to uphold contractual arrangements in which section 22 rights are restricted it is difficult to see why in principle, they should not uphold legislative provisions which have the same effect, provided of course that the tests of reasonableness and rationality are satisfied. The Harmful Business Practices Act is a case in point. De Waal et al point out that in Janse van Rensburg NO v Minister van Handel en Nywerheid the applicants challenged the Act as a violation of the occupational freedom right. According to the court, the purpose of the Act was acceptable. The court held that: "It is a praiseworthy governmental objective to protect consumers from exploitation". According to the court, the definition of 'harmful business practice' was not vague. The Act permitted a Committee to propose guidelines for definition of the term

---

316 See Fidelity Guards Holdings (Pty) Ltd v Fidelity Guards v Pearmain 2001 (2) SA 853 (SE) in which Liebenberg J observed: "Whether a covenant in restraint of trade was unconstitutional in the light of the provisions of s 26 of the interim Constitution (the Constitution of the Republic of South Africa Act 200 of 1993) received the attention of the Courts. In Walters Stationery Co (Edms) Bpk v Fourie en 'n ander 1994 (4) SA 507 (O) it was held that covenants in restraint of trade were not excluded by s 26 and that the Magna Alloys case infra still reflected the positive law. The decision was subsequently followed in Koster en Genus (Edms) Bpk en 'n ander v Poggenlaan en Anders 1995 (3) SA 783 (C) and Knox D'Arcy Ltd and another v Shaw and another 1996 (2) SA 631 (W). The following remarks by Van Schalkwyk J in Knox D'Arcy Ltd and another v Shaw and another (supra at 660C - D) are, although he was then concerned with the provisions of s 26 of Act 200 of 1993, still apposite: 'The Constitution does not take such a meddlesome interest in the private affairs of individuals that it would seek, as a matter of policy, to protect them against their own foolishness or rash decisions. As long as there is no overriding principle of public policy which is isolated thereby, the freedom of the individual comprehends the freedom to pursu, as he chooses, his benefit or his disadvantage.' And at 660I - 661A: 'It is generally regarded as immoral and dishonourable for a promisor to breach his trust and, even if he does so to escape the consequences of a poorly considered bargain, there is no principle that inheres in an open and democratic society, based upon freedom and equality, which would justify his repudiation of his obligations. On the other hand, the enforcement of a bargain (even one which was ill-considered) gives recognition to the important constitutional principle of the autonomy of the individual. Insofar as a restraint is a limitation of the rights entrenched in s 22, the common law as developed by the Courts, in my view, complies with the requirements laid down in s 36(1). Any party to any agreement where a restraint clause is regarded as material is free to agree to include such a clause in the agreement and the common law in this regard is therefore of general application. In terms of the common law restraint clauses are only enforceable if they are not in conflict with public policy. In this regard the relevant principles were set out by Rabie CJ in Magna Alloys and Research (SA) (Pty) Ltd v Ellis 1984 (4) SA 874 (A) at 897I - 898A as follows: '(4) Dst is 'n besigheid van ons reg dat ooreenkoms wat teen die openbare belang is, nie afgegbaar kan word nie, en 'n massa sou dus kon sê dat 'n ooreenkoms wat teen die openbare belang en dus onafwringbaar is, indien die onomstendigheid van die betrokke geval sodanig is dat die Hof van oordeel is dat die afwinning van die ooreenkoms die openbare belang sou staan. (3) Dst is in die openbare belang dat ooreenkoms wat vrylik aangesegaan is, nagekom moet word. Dst is egter oor, in die algemene gelyk, in die openbare belang dat iedereen kon vir soveer moontlik vrylik in die handel- en beroepsverhouding moet laat laat. Dst kan aanvaar word dat in beperking van 'n persoon se handelvryheid wat onredelik is, waarskynlik ook die openbare belang sou staan indien die betrokke persoon daaraan gebonden gehou sou word.' From the foregoing it seems to me that if a restraint clause is found to be enforceable after application of the principles laid down by the Courts, the requirements of s 36(1) will have been met.

318 De Waal et al fn 2 supra

319 Janse van Rensburg NO v Minister van Handel en Nywerheid 1999 (2) BCLR 204 (T)
which would be published by the Minister. This helped to concretise the abstract concept of a harmful business practice. The parallels with Affordable Medicines Trust\textsuperscript{320} are obvious. It is submitted that the purpose of the Unfair Business Practices Act is very much akin to that of the governmental purpose in requiring health professionals other than pharmacists to obtain a licence to dispense medicines.

De Waal \textit{et al}\textsuperscript{21} note that it is arguable that the second sentence applies only to measures that regulate occupational freedom without denying choice or access to an occupation. On this argument, they state, section 22 is a right freely to choose a trade, occupation or profession. This right to choose a trade, occupation or profession cannot be limited except by law of general application that is justifiable in terms of the criteria laid down in section 36. They note that the second sentence then adds little to the scope of the right by prohibiting regulation of the practice of an occupation other than by law and state that choice and practice of an occupation are not conceptually distinct, but rather 'constitute poles of a continuum'. It is submitted that De Waal \textit{et al} do not accurately convey the content of the second sentence in interpreting it as prohibiting the regulation of the practice of an occupation other than by law. It is submitted that this is not the thrust of the second sentence. Prohibition does not feature in the second sentence. The object of the second sentence is to qualify the right that is awarded in the first. The first awards the right to freely choose and occupation, trade or profession. The second cautions that the practice of the occupation trade or profession chosen can be regulated by law. The first sentence should not therefore be interpreted to mean that people can choose to do anything they want by way of a trade, occupation or profession without limitation or reference to law. As it turns out the drafters of the Constitution were wise in inserting the second sentence because there is a large number of occupations that the law does not permit people to pursue at all – most notably those that fall within the realm of criminal activity. There are, however more subtle issues that manifest within the health service delivery context. It is submitted for instance that the right in section 22 cannot be exercised in the context of health service delivery without due regard for patient safety and wellbeing. They state that both are

\textsuperscript{320} Affordable Medicines Trust \textit{fn 299 supra}
\textsuperscript{321} De Waal \textit{et al} \textit{fn 2 supra}
afforded protection from arbitrary regulation by section 22. By the same token, this would mean, they say, that both choice and practice are subject to the internal qualification and observe that it is implausible to argue that the internal qualification will not apply when regulation of the practice of an occupation also impacts on access to or choice of that occupation. This will almost always be the case. The better interpretation is therefore that the internal qualification in principle applies to restrictions on entry, choice and practice of an occupation. De Waal et al state in interpreting the internal qualification, emphasis should be placed on the term ‘regulation’ which refers to a rational ordering or organising of a certain trade, occupation or profession. A measure which attempts to close down a certain profession or trade cannot qualify as a regulation, but many measures that restrict access to a profession may qualify on this basis. For example the practice of certain professions (lawyers, doctors) is routinely regulated in order to protect the interests of the general public. It is submitted that this goes to the heart of the regulation versus limitation argument submitted by the applicants in Affordable Medicines Trust. De Waal et al refer to the dicta of Chaskalson P in S v Lawrence; S v Negal; S v Solberg that:

"Certain occupations call for particular qualifications prescribed by law and one of the constraints of the economic sphere is that persons who lack such qualifications may not engage in such occupations. For instance, nobody is entitled to practise as a doctor or as a lawyer unless he or she holds the prescribed qualifications, and the right to engage ‘freely’ in economic activity should not be construed as conferring such a right on unqualified persons; nor should it be construed as entitling persons to ignore legislation regulating the manner in which particular activities have to be conducted."

They note that the meaning of ‘regulation’ may be illustrated with reference to the South African Post Office case in which the court accepted that section 7 of the Post Office Act prima facie violated the right to freedom of occupation but then concluded that the section merely regulated the ‘practice of the trade of running a postal service by law and therefore did not offend section 22. De Waal et al comment that the court was perhaps too eager to accept that the measure was a regulation in the true sense since protecting the Post Office against competition cannot qualify as regulation.

Affordable Medicines fn 299 supra
De Waal et al fn 2 supra
S v Lawrence fn 137 supra
SA Post Office fn 308 supra
The Affordable Medicines Trust case demonstrates a number of issues not least of which is the level of resistance by the health professions to change intended to benefit and protect the public. The fiduciary aspects of the provider-patient relationship have been demonstrated by the circumstances of this case, to be largely non-existent for many South Africa health professionals. They failed to do the necessary course and to apply for licences within the allotted time period in the full knowledge that this would be to the detriment of their patients, choosing instead to pinning their hopes on a court decision which they could not predict. The costs of compliance were not prohibitive, the course was available online in a self-study format and gave recognition to prior learning. Despite this many registered for the course too late to meet the deadline, even after extensions of time were effectively granted by the court. They found it convenient in their arguments in court to use patient interests to justify their failure to comply with the law, apparently refusing to appreciate that access to health care services is more than just mere availability and also entails safety and efficacy. They at first attempted to attack the government by way of a court action claiming that the Department of Health did not have the necessary infrastructure in place to implement the relevant legislative provisions. When it became apparent that this line of attack was not going to yield the desired results they produced a plethora of constitutional arguments that in the end boiled down to the very narrow issues outlined by Kruger AJ in his judgment. The legislation that imposed the dispensing licence requirement was passed by parliament in 1997 some six years before the initial litigation was instituted. It was only when government commenced with its implementation in 2003 that litigation commenced. The belatedness of the reaction by the applicants to legislative provisions which, in their view, were unconstitutional from inception is inexplicable. They also changed the direction of their arguments a few times during the course of the two sets of litigation, giving the distinct impression that what they wanted was a way out rather than confirmation of a point of legal principle. The arguments of the applicants as stated in the judgment of Kruger AJ were paper thin in the light of the other cases referred to in the discussion above. Pharmacists and pharmacy owners are subjected to similar regulations in terms of which they have to observe good pharmacy practice and the premises are inspected. In terms of

Affordable Medicines Trust case in 288 supra
section 22(1) of the Pharmacy Act\textsuperscript{327}, "A person authorised in terms of section 22A to own a pharmacy shall in the prescribed manner, specifying the prescribed particulars, apply to the Director-General for a licence for the premises wherein or from which such business shall be carried on and the Director-General may be entitled to issue or refuse such licence on such conditions as he or she may deem fit". Section 22(4) stipulates that: "A pharmacy shall, subject to such conditions as may be prescribed, be conducted under the continuous personal supervision of a pharmacist, in accordance with good pharmacy practice as determined in the rules made by the council". The Director-General issues the licence for the pharmacy which is tied to the premises. The competence of the pharmacist is established through training recognized by Pharmacy Council, the body within which the necessary expertise resides. The dispensing of medicines falls most specifically within the purview of the professional skill and knowledge of the pharmacy profession. It is for this reason that the course on dispensing for other health professionals in terms of the Medicines and Related Substances Act had to be approved by the Pharmacy Council. The licensing of dispensing doctors to dispense medicines is associated with the premises from which the medicine is to be dispensed for the same reasons that the licence to own a pharmacy is associated with the premises. The objection of the applicants to the licensing of dispensing medicines in association with particular premises given the stated government purpose to ensure safety ignores the fact that medicines must be kept under certain very specific conditions if they are to retain their efficacy and safety. The applicants were also apparently oblivious of the difference between \textit{bona fide} medical practitioners running established, hygienic medical practices and those itinerant purveyors of snake oil more commonly referred to as charlatans and mountebanks. Application for leave to appeal has been lodged in respect of both the constitutional court and the supreme court of appeal, the idea being that if the appeal is not heard in the former it will be heard in the latter. Whatever the appeal court decides, one thing is clear. The practice of medicine in South Africa appears to have lost its human face quite some time ago.

2.7.4 Rationing By Medical Schemes

\textsuperscript{327} Pharmacy Act No 53 of 1974
The Medical Schemes Act\textsuperscript{328} governs the manner in which medical schemes, which are not for profit entities, fund medical expenses. In the past, and to a large extent still currently, medical scheme expenditure is significantly concentrated within the private health sector although the situation is changing with certain relatively recent legislative and regulatory amendments which are designed to encourage explicit\textsuperscript{329} utilisation by medical scheme members of public health facilities. In terms of section 29 of the Act, medical schemes must provide in their rules for \textit{inter alia} –

"The terms and conditions applicable to the admission of a person as a member and his or her dependants, which terms and conditions shall provide for the determination of contributions on the basis of income or the number of dependants or both the income and the number of dependants, and shall not provide for any other grounds, including age, sex, past or present state of health, of the applicant or one or more of the applicant's dependants, the frequency of rendering of relevant health services to an applicant or one or more of the applicant's dependants other than for the provisions as prescribed.\textsuperscript{330}"

and

"the scope and level of minimum benefits that are to be available to beneficiaries as may be prescribed.\textsuperscript{331}"

Medical schemes may not ration prescribed minimum benefits that are obtained from a public hospital\textsuperscript{332}. They are required to pay the costs of such treatment in full and may not cancel or suspend a member's or his or her dependent's membership except on limited grounds that are unrelated to the health profile of the member or dependent.\textsuperscript{333} In terms of

\textsuperscript{328} Medical Schemes Act No 131 of 1998
\textsuperscript{329} The public health sector has operated for many years as a safety net for medical scheme members in the sense that when their benefits run out or the cost of a particular health care intervention is not covered by their medical scheme then they resort to the public health sector for treatment. This has resulted in adverse selection practices by medical schemes that has been referred to as "dumping" of private patients onto the public sector for the high cost levels of care such as are typically required by the chronically ill and the elderly. The regulations to the Medical Schemes Act (dated 20 October 1999, Regulation Gazette No 6632, Notice No R 1262) contain an explanatory note to the prescribed minimum benefits package which states that one of the objectives of the package is "to avoid incidents where individuals lose their medical scheme cover in the event of serious illness and the consequent risk of unfounded utilisation of public hospitals."
\textsuperscript{330} Section 29(1) (n) of Act No 131 of 1998
\textsuperscript{331} Section 29(1) (o) of Act No 131 of 1998
\textsuperscript{332} In terms of section 29(1)(p) of Act No 131 of 1998, "No limitation shall apply to the reimbursement of any relevant health service obtained by a member from a public hospital where this service complies with the general scope and level as contemplated in paragraph (n) and may not be different from the entitlement in terms of a service available to a public hospital patient."
\textsuperscript{333} "In terms of section 29(2) of Act No 131 of 1998, medical scheme shall not cancel or suspend a member's membership or that of any of his or her dependants, except on the grounds of:
(a) failure to pay, within the time allowed in the medical scheme's rules, the membership fees required in such rules;
(b) failure to repay any debt due to the medical scheme;
(c) submission of fraudulent claim;
(d) committing any fraudulent act; or
(e) the non-disclosure of material information."
the regulations\textsuperscript{334} any benefit option that is offered by a medical scheme must reimburse in full, without co-payment or the use of deductibles, the diagnostic, treatment and care costs of the prescribed minimum benefit conditions specified in Annexure A of the regulations in at least one provider or provider network which must at all times include the public hospital system. The power of medical schemes to ration access to health care services by capping the amounts of expenditure on certain types of service is therefore only with regard to those services falling outside of the prescribed minimum benefits package. If they select the public hospital system as a preferred provider they may be able indirectly to ration to a limited extent, access to services by means of that choice since services which are not available in the public hospital system cannot, by definition form part of the benefit package. An example of this is the fact that in public hospitals premature babies weighing under one kilogram are not usually ventilated because their prognosis is poor and there is the usual scarcity of resources. In the private sector no such restrictions apply. The question is whether a medical scheme is obliged to pay for the ventilation of a premature neonate in terms of the minimum benefits package and the answer that is generally given is in the negative since the minimum benefits package follows public health sector treatment protocols and norms. If a prescribed minimum benefit is unavailable in the public hospital system, however, schemes are obliged to pay for that service in the private health sector regardless of the cost.

2.7.4.1 Constitutional Issues

The question of whether the rationing by a medical scheme of access to health care services is constitutional is dependent upon whether the right of access to health care services as set out in section 27(1) applies as between private persons. This subject is discussed elsewhere under the question of the horizontal application of constitutional rights. However it should be noted here that the answer to this question must, in practice depend upon the circumstances prevailing within the health system generally. For instance if one assumes that the state takes a decision to completely privatise the provision of health services so that it becomes purely a funder of health services rather than a supplier and that all health

\textsuperscript{334} Fn 329 supra Regulation 8
services must therefore be delivered within the private sector, the constitutional right of access to health care services and the obligation of the private sector to provide those services changes the focus and the obligations of the private sector dramatically. Admittedly it could be argued that the obligations of the private sector in such a model may be primarily contractual in terms of an agreement between a state owned funder and the private sector or even legislative if the model was implemented in terms of some form of enacted social health insurance system and that the primary constitutional obligation to provide access to health care services would rest with the state. If one accepts the system itself as legitimate, however, then the state can effectively transfer to the private sector at least some of its constitutional responsibility to provide the services to the private sector to the extent that there is funding within state coffers for the services in question. This is not to suggest that the state can contract out of its ultimate constitutional obligations as stated in section 27(2) but it is submitted that the wording of section 27(2) is sufficiently broad as not to impose upon the state a particular method for the fulfilment of its obligations as contemplated therein. The state is simply obliged to take reasonable legislative and other measures to achieve the realisation of the right within its available resources.

In terms of a different scenario, assume that for some reason the public health sector dwindles away to an almost insignificant level due to factors outside of the control of the state – for instance an unwillingness on the part of health professionals to work in the public sector for reasons that relate to more than just remuneration e.g. professional independence etc. The state has the funding for health care services but does not have the capacity to deliver them. It is submitted that it would be difficult for the private sector to refuse to negotiate with the state for the provision of health care services to persons who would under other circumstances have been public sector patients. This difficulty would rest on the basis of the constitutional right of access to health care services. As stated previously a right of access does not mean 'free of charge to everyone'. It does not imply that the private sector has no right to charge for services rendered. In fact any other conclusion would make nonsense of the validity of the existence of the private sector. The private sector does not exist simply to be in business and to recover the costs of doing business. It exists to make profits. It competes for shareholding as much as it competes for
customers. If a private hospital group makes better profits than its competitors this is good for business because it is able to attract more interest in terms of shareholding. The value of its shares goes up which means it is attractive to investors and its survival in the longer term is assured.

2.7.5 Rationing By The State

Rationing by the state can take a number of different forms, not all of them obvious. In a system in which resources are limited there is always rationing of services whether implicit or explicit. The treatment protocols set and used by the state as considered in Soobramoney³³ are an example of explicit rationing. Certificate of need systems such as that contained in the National Health Act⁴⁶ and the restriction of the entry of foreign health professionals into South Africa in order to practice may constitute less obvious forms of rationing. Most decisions relating to rationing of health care services are likely to be controversial given the nature of the services. There is a worldwide shortage of organs for the purpose of organ transplantation. A policy that favours citizens and permanent residents on the list for organ transplantation is bound to come under the spotlight sooner or later as is a policy that favours HIV negative organ transplant candidates over HIV positive ones. The legally acceptable bases for rationing have been canvassed in the previous discussion of Soobramoney. However it is appropriate to consider some of the specific issues raised in the context of certificate of need and foreign health professionals since these two tropics involve the interface of the constitutional right of freedom to pursue a trade, occupation or profession as contained in section 22 of the Constitution and so take the rationing debate further.

2.7.5.1 Certificate of Need

---

³³ Soobramoney in 23 supra
³⁴ Act No 61 of 2003
The draft National Health Act\textsuperscript{337} makes provision for certificates of need to be issued to all health establishments. The considerations for the granting of a certificate of need, over and above the operational requirements and standards for a particular type of health establishment, relate to demographic issues such as the health needs of the population that is intended to be served by the proposed establishment, its geographical location, the proximity of existing health establishments offering the same services or services that are a substitute for the proposed service etc. Systems of certificate of need represent a form of rationing of health care services in the sense that they restrict the freedom of health care professionals and other persons in the business of the provision of health care services from setting up shop where they please. In South Africa there is a tendency for service providers to accumulate in heavily populated urban areas to the extent that there is maldistribution of health care services. This problem is not unique to South Africa as many countries which have large, relatively sparsely populated rural areas have to deal with the problem of ensuring the availability of health care services to people in these areas. Apart from inequitable distribution of health care services, an oversupply of service providers in urban areas creates its own problems in terms of overservicing of patients, perverse incentives and inappropriate provision of health care services, for example, based on the supplier’s need to sell a certain quantity of a certain type of medicine rather than what would be the best and most suitable treatment for the patient’s health condition.

In the sense that a certificate of need system attempts to redress problems relating to inequitable distribution of health care services it can be seen not as a system of rationing but rather an administrative tool to promote equitable distribution of health care services in order to ensure that people who may not previously have had access to certain health care services now do. From the foregoing it is clear that certificate of need issues cut across health economics at both macro and micro levels in that they require a balancing of the needs of a particular community with those of the larger population of a province or even the nation as a whole. The certificate of need concept comprises a form of health care market regulation in which the laws of supply and demand are only a part of the equation.

\textsuperscript{337} National Health Act fn 336 \textit{supra}
It also has the potential to create competition between the private and public health sectors. Consider a situation in which a large privately owned hospital group decides to build a hospital in a particular area with a limited market for the services it proposes to provide at that hospital. Suppose that in the same area there is a public sector hospital which, for various reasons is not providing adequate health care services to the local population of the kind proposed by the private hospital group. If the public sector hospital, which is operating on a fee retention system, is not operating at full capacity due to poor management but has the potential to render most if not all of the services proposed by the new private sector hospital, what should the decision be concerning the private hospital group’s application for a certificate of need for a new private hospital? The latter will be operating in direct competition with the existing public sector hospital which has for some years now enjoyed its own small monopoly in the delivery of these services. The issues raised by this question illustrate the potential impact of a system of certificate of need on competition within the health market generally whether between private and public sector or the private sector inter se. As such it may be argued that it constitutes unconstitutional interference in a person’s right to pursue his or her chosen profession or occupation.

Whether or a system of certificate of need is constitutional can be dealt with on two fronts namely, the question as to whether it constitutes a justifiable limitation of the rights contained in section 22 of the Constitution but also whether the regulation by way of a certificate of need system is within the ambit of the provision in section 22 which allows for a trade, occupation or profession to be regulated by law. They are both likely to canvass the legitimacy of the concept of certificate of need in general rather than the validity of a particular decision not to grant a certificate of need which is likely to be in the arena of administrative rather than constitutional law38. The certificate of need process as it is envisaged in the National Health Act will cover not only hospitals and other large facilities but the consulting rooms of individual doctors, physiotherapists, dentists, psychologists and other health professionals. Depending upon the criteria on which certificate of need decisions are based, a dentist could find himself unable to practice in the small town where he grew up because there are already sufficient dentists practise there. The certificate of

---

38 Section 36 states that the rights in the Bill of Rights may only be limited by a law of general application to the extent that the limitation is reasonable and justifiable in an open and democratic society.
need rationale is intended to encourage this dentist to set up practice in a town where there is a shortage of dentists in order to improve the access of the population to health care services.

The question therefore arises as to whether a certificate of need system is justifiable in light of the government’s obligation to ensure the progressive realisation of the right of access to health care services within available resources. The argument from the side of government would be that in order to ensure the progressive realisation of the right of access to health care services within available resources it cannot rely only on strategies to increase the available resources but must also look at methods for ensuring the more effective and efficient utilisation of the resources that are available. One can have sufficient numbers of general medical practitioners within the country but if they all set up practice in the major cities with the result that the rural towns and villages do not have access to their services, then it could be argued that the state is not fulfilling its constitutional obligations to ensure access to health care services within available resources. The tension is between the right of a private individual to practice his or her profession or occupation in the location of his or her choice and the obligation of government contained in section 27(2) of the Constitution.

As stated previously section 22 of the Constitution gives a right of freedom to choose a trade, occupation or profession but allows for the regulation of the practice of such trade, occupation or profession.

Section 26 of the interim Constitution provided as follows:

“(1) Every person shall have the right freely to engage in economic activity and to pursue a livelihood anywhere in the national territory.
(2) Subsection (1) shall not preclude measures designed to promote the protection or the improvement of the quality of life, economic growth, human development, social justice, basic conditions of employment, fair labour practices or equal opportunity for all provided such measures are justifiable in an open and democratic society based on freedom and equality.”
In considering these provisions Chaskalson P observed in *S v Lawrence; S v Negal; S v Solberg* that:

"The requirement that the measures be justifiable in an open democratic society based on freedom and equality means that there must be a rational connection between means and ends. Otherwise the measure is arbitrary and arbitrariness is incompatible with such a society."

(At para [41].) Chaskalson P then went on to say:

"Section 26 should not be construed as empowering a court to set aside legislation expressing social or economic policy as infringing "economic freedom" simply because it may consider the legislation to be ineffective or is of the opinion that there are other and better ways of dealing with the problems. If s 26(1) is given the broad meaning for which the appellants contend, of encompassing all forms of economic activity and all methods of pursuing a livelihood, then, if regard is had to the role of the courts in a democratic society, s 26(2) should also be given a broad meaning. To maintain the proper balance between the roles of the Legislature and the courts s 26(2) should be construed as requiring only that there be a rational connection between the legislation and the legislative purpose sanctioned by this section."

The differences between the Interim Constitution and the Constitution concerning the section 26 and section 22 rights have already been canvassed. The former refers more generally to economic freedom whereas the latter has been narrowed down to a right to freely choose a trade, occupation or profession.

The right contained in section 22 is a right only of natural persons. In the health care context this distinction is somewhat artificial given the fact that health care professionals can and in many cases do form juristic persons as a basis from which they pursue their professions. Pharmacy is a prime example. Many, if not most, pharmacists in South Africa practise under the umbrella of a close corporation or a company. In terms of the legislation on pharmacy, up until very recently, only pharmacists could have shares in a company that offers pharmacy services. Private hospitals invariably operate as companies. It is also open to other health professionals to create juristic persons from which to conduct their

---

339 *S v Lawrence* fn 137 supra
340 Quoted with approval in *City of Cape Town v Ad Outpost (Pty) Ltd and Others* (fn 315 supra)
341 Although Section 8(4) of the Constitution states that a juristic person is entitled to the rights in the Bill of Rights to the extent required by the nature of the rights and the nature of that juristic person, section 22 refers specifically to 'citizens'. Juristic persons are not usually embraced by the term 'citizen'.
342 Section 22A of the Pharmacy Act allows for the opening up of ownership of pharmacies to non-pharmacists. The regulations required to effect the principles in this section were promulgated in 2003.
practices. The upshot of the decision in *Ad Outpost* is apparently that if one wants to conduct a hospital business, which can most effectively be run as a company, then one must either forfeit the right to choose this trade or occupation freely as contained in section 22 or one must forfeit the benefits of operating as a juristic person rather than a sole trader. The alternative, if one is seeking to rely on the rights conferred by section 22, is to conduct the litigation in the name of the individual shareholders rather than in the name of the juristic person. A group of doctors wishing to own and run a hospital as a company cannot, in the name of the company, claim the right to freely choose this trade or occupation when, for instance, attacking a decision not to grant a certificate of need for the hospital, but these same *doctors* can, in their individual capacity, attack a decision not grant them a certificate of need for their consulting rooms on the basis of section 22. The only difference is the legal vehicle they have chosen for their business.

### 2.7.5.2 Foreign Health Professionals

It is worth noting that the section 22 right is accorded only to citizens and not to ‘everyone’ as are so many of the other rights in the Constitution. This has the implication in the present context that foreign health care professionals, theoretically, may be legitimately prohibited from practising medicine in South Africa by South African law or in terms of a certificate of need process. This aspect of section 22 was discussed by the constitutional court in the

---

343 *Ad Outpost* fn 315 *supra*

322 See however, De Waal, Currie and Erasmus, fn 2 *supra* in their discussion of the application of the Bill of Rights at p40-41: state that the constitutional court has rejected an all-or-nothing approach observing that it is prepared to extend the protection of fundamental rights such as the right to privacy, to juristic persons, but with a reduced level of protection on the basis that they are not capable of human dignity which forms the core of many of the fundamental rights. It would seem from their discussion of the issue that the test is the extent to which juristic persons are used by individuals for the collective exercise of their fundamental rights. They give the example that while it is difficult to see how some organs of state such as Parliament will ever be able to rely on the protection of the Bill of Rights, the South African Broadcasting Corporation or corporate entities such as universities which are set up by the State for the purpose of inter alia realizing fundamental rights should be in a different position with regard to rights such as freedom of speech. They suggest that in the case of privately owned juristic persons it is not the size or the activities of the juristic person that are decisive but the relationship between the activities of the juristic person and the fundamental rights of the natural persons who stand behind the juristic person. Juristic persons thus become worthy of protection, they say, when they are used by natural persons for the collective exercise of their fundamental rights.

Woolman in Chaskalson *et al* fn 67 *supra* at p 10-8 acknowledges that certain rights by their nature are simply inapplicable to juristic persons but at 10-9 states that: “Other rights must apply to corporations if their presence in the text is to be given effect all the same.” He comments that it is difficult to imagine the rights to property and economic activity belonging to natural persons and not to juristic persons and states that “Even in a regulated market economy, corporations must be able to form strong expectations about what kind of property they can hold and transfer.” This said he notes that giving equality rights to corporations so that they can pursue economic ends not only diminishes these values but could also lead to a weak equality jurisprudence and that the judicial deference paid to legislative restrictions on commercial concerns may “infect” the closer judicial scrutiny accorded other equality concerns. Woolman argues that this restrictive approach should be rejected because it artificially suppresses questions worth asking such as: are some corporations discriminated against in some circumstances? (at p10-10).

---

288
certification judgment. In subsequent judgments, however, the court has departed significantly from the more conservative position expressed in the certification judgment especially in respect of permanent residents.

345 Ex Parte Chairperson Of The Constitutional Assembly: In Re Certification Of The 1997 (2) SA 97 (CC) at para 17 onwards where it noted that: "An objection, made by the Black Sash Trust, that was not raised before relates to AT 22 (a verbatim repetition of AT 22), the relevant part of which provides: 'Every citizen has the right to choose their trade, occupation or profession freely.' The contention is that the right of occupational choice extended to citizens by AT 22 is a 'universally accepted fundamental right' which should be extended to everyone, i.e. irrespective of citizenship, in order to comply with CP II. The objection is foundational flawed and it serves little purpose to cite, as the objector does, examples in international human rights instruments of an occupational choice to citizens and non-citizens alike. We say 'ostensibly' because the instruments cited do not upon proper analysis bear such an unqualified meaning.

The European Convention for the Protection of Human Rights and Fundamental Freedoms embodies no such right to occupational choice. Nor does the International Covenant on Civil and Political Rights ("ICCPR"). Article 12.4 of the ICCPR provides that "(n)oe one shall be arbitrarily deprived of the right to enter his own country'. The right, in terms of the ICCPR, to enter a particular country is accordingly reserved for nationals only. This would reserve to States Parties the right to regulate nationality, citizenship or naturalisation. There does not appear to be anything in those instruments which would prohibit States Parties when regulating these matters from imposing suitable conditions, which would not otherwise conflict with the instruments, limiting the rights of non-nationals in respect of freedom of occupational choice.

Article 6.1 of the International Covenant on Economic, Social and Cultural Rights ("ICESCR") ostensibly recognises the right of 'everyone' to "the opportunity to gain his living by work which he freely chooses or accepts'. But this right would be subject to what has been said in the preceding paragraph. Even more important is the fact that Article 2.3 of ICESCR itself allows developing countries 'with due regard to human rights and their national economy' to 'determine to what extent they would guarantee the economic rights recognised in the present Covenant to non-nationals'. It is subject to even broader qualification in art 2.1 which makes it clear that the right in question is not fully enforceable immediately, each State Party only binding itself 'to the maximum of its available resources' to 'achieving progressively the full realisation of the rights recognised in the present Covenant'. In no way do we intend to denigrate the importance of advancing and securing such rights. We merely point out that their nature and enforceability differ materially from those of other rights.

The European Social Charter part I (1) which states that "(e)veryone shall have the opportunity to earn his living in an occupation free from unjust and degrading conditions, shall be evaluated in the same light. The introduction to part I makes clear that the obligations on Contracting Parties in respect of this right goes no further than "accept[ing] as the aim of their policy, to be pursued by all appropriate means, both national and international in character, the attainment of conditions in which the following rights and principles may be effectively realised'. The instruments discussed do not support the proposition that non-citizens are entitled to be treated on the same footing as citizens in regard to the freedom of occupational choice. [21] This distinction is in fact recognised in the United States of America and also in Canada. There are other acknowledged and exemplary constitutional democracies where the right to occupational choice is extended to citizens only, or is not guaranteed at all. One need do no more than refer to India, Ireland, Italy and Germany. CP II, as we made plain in the CJ, requires inclusion in a bill of rights of 'only those rights that have gained a wide measure of international acceptance as fundamental human rights'. The fact that a right, in the terms contended for by the objector, is not recognised in the international and regional instruments referred to and in a significant number of acknowledged constitutional democracies is fatal to any claim that its inclusion in the new South African Bill of Rights is demanded by CP II. It follows that the objection must be rejected." (Footnotes omitted)

346 See for instance Larbi-Odam And Others v Member Of The Executive Council For Education (North-West Province) And Another in 130 supra. Regulation 2(2) of the Regulations regarding the Terms and Conditions of Employment of Educators (GN R1743 of 13 November 1995) (the regulations) provide that no person shall be appointed as an educator in a State school in a permanent capacity, unless he or she is a South African citizen. The first respondent, as part of a rationalisation process, advertised posts held by foreign teachers temporarily employed in the North-West province, and issued such teachers with notices purporting to terminate their employment. The applicants (eight foreign teachers temporarily employed in the North-West Province, some of whom had permanent residence status) applied to the Bophuthatswana Provincial Division of the Supreme Court for an order declaring reg 2(2) invalid on the grounds that it constituted unfair discrimination in contravention of s 2(2) of the interim Constitution (the Constitution of the Republic of South Africa Act 2003 of 1993). The application was dismissed. The applicants appealed to the constitutional court which held that: 'Because citizenship is an unspecified ground, the first leg of the enquiry requires considering whether differentiation on that ground constitutes discrimination. This involves an inquiry as to whether, in the words of Harkness, " . . . objectively, the ground is based on attributes and characteristics which have the potential to impair the fundamental human dignity of persons as human beings or to affront them adversely in a comparatively serious manner'. I have no doubt that the ground of citizenship does. First, foreign citizens are a minority in all countries, and have little political muscle. In this respect, I associate myself with the views expressed by Wilson J in the Canadian Supreme Court in Andrews v Law Society of British Columbia that: 'Relative to citizens, non-citizens are a group lacking in political power and as such vulnerable to having their interests overlooked and their rights to equal concern and respect violated. They are among those groups in society to whom needs and wishes elected officials have no apparent interest in attending'. (Citation omitted.)

Second, citizenship is a personal attribute which is difficult to change. In that regard, I would like to note the following views of La Forest J, from the same case: "The characteristic of citizenship is one typically not within the control of the individual and, in
The effect of the decision of the constitutional court in *Larbi Odam*⁶⁷ is that permanent residents must be treated in the same way as citizens for purposes of employment opportunities. Since "employment opportunities" is simply another translation for "trade, occupation or profession", it would seem that the rights of permanent residents in this regard are the same as those ascribed to citizens in section 22 of the Constitution. Only temporary residents may not choose their trade, occupation or profession in South Africa and so presumably they might be capable of being legitimately excluded in terms of a certificate of need process from operating a health establishment. The problem with the present state of the law is that permanent residence status is relatively easier to obtain than citizenship but comes with most of the significant constitutional rights and benefits of citizenship. If there is little or no benefit in becoming a citizen (provided that one is not interested in a political career or in the right to vote) because most of the same rights can be enjoyed by permanent residents, and permanent residence status is relatively easy to come by, then it becomes very difficult to control or regulate an influx of foreigners all with an eye to making large amounts of money in an already crowded private health sector, often for transmission to their extended families in their countries of origin. At the same time, the public sector, where foreign doctors could be deployed to considerable advantage, must

---

This general lack of control over one's citizenship has particular resonance in the South African context, where individuals were deprived of rights or benefits, ostensibly on the basis of citizenship, but in reality in circumstances where citizenship was governed by race. Many became statutory foreigners in their own country under the Bantustan policy, and the Legislature even managed to create remarkable beings called 'foreign natives'. Such people were treated as instruments of cheap labour to be discarded at will, with scant regard for their rights, or the rights of their families. The constitutional court in *Larbi-Odam* does not seem to have considered the case before it in light of section 22 of the Constitution at all but rather decided it on the basis of unfair discrimination. Molgoro J stated: "I hold that reg 2(2) constitutes unfair discrimination against permanent residents, because they are excluded from employment opportunities even though they have been permitted to enter the country permanently. The government has made a commitment to permanent residents by permitting them to so enter, and discriminating against them in this manner is a detractor from that commitment. Denying permanent residents security of tenure, notwithstanding their qualifications, competence and commitment is a harsh measure." (at para 25 p 759) He also stated that: "Permanent residents should, in my view, be viewed no differently from South African citizens when it comes to reducing unemployment. In other words, the government's aim should be to reduce unemployment among South African citizens and permanent residents. As explained above, permanent residents have been invited to make their home in this country. After a few years, they become eligible for citizenship. In the interim, they merit the full concern of the government concerning the availability of employment opportunities. Unless posts require citizenship for some reason, for example due to the particular political sensitivity of such posts, employment should be available without discrimination between citizens and permanent residents. Thus it is simply illegitimate to attempt to reduce unemployment among South African citizens by increasing unemployment among permanent residents. Moreover, depriving permanent residents of posts they have held, in some cases for many years, is too high a price to pay in return for increasing jobs for citizens." (at para 31 p760-761; footnotes omitted). This judgment could be seen as nullifying to an extent the express reference in section 22 of the Constitution to 'citizens'. The constitutional court in *Larbi-Odam* (fn 130 supra), without reference to section 22 of the Constitution, seems itself to have taken the decision that it referred to in the certification judgment in its observation that Article 2.3 of ICESCR itself allows developing countries 'with due regard to human rights and their national economy' to 'determine to what extent they would guarantee the economic rights recognised in the present Covenant to non-nationals' and has paid scant attention to its comment that "The instruments discussed do not support the proposition that non-citizens are entitled to be treated on the same footing as citizens in regard to the freedom of occupational choice." See also *Dawood* fn 12 supra

---

*Larbi Odam* fn 130 supra

347
choose between employing health professionals who are temporary residents, and running the risk that they will often sooner rather than later attempt to obtain permanent residence status with a view to entering private practice, or not having sufficient numbers of health professionals to deliver services because many local health professionals do not wish to work in the public health sector at all. In reducing the already narrow legal gap between permanent residents and citizens the constitutional court has rendered South Africa a highly accessible and attractive location for the nationals of many less prosperous and less developed countries.

The *Dawood*\textsuperscript{48} case goes even a step further in that it essentially allows people who are temporary residents but who are married to South African permanent residents and citizens the right to apply for permanent residence from within South Africa on the understanding that such permanent resident status will be granted unless there is good reason not to. It is the experience of the national Department of Health that many foreign health professionals who enter the country marry South African permanent residents and citizens expressly with a view to obtaining permanent resident status. The result is that the public sector in employing foreign health professionals on a temporary basis is, in the long term creating a point of entry into the private health sector for these same professionals in an environment where in many instances there are already sufficient numbers of local professionals to render the services. With the introduction of certificate of need processes, South African citizens who are private sector health professionals will be competing with foreign health professionals for prime locations in which to pursue their chosen trade, occupation or profession.

### 2.8 Emergency Medical Treatment

The right not to be refused emergency medical treatment is specified in section 27(3) of the Constitution\textsuperscript{49}. The elements of the right require closer examination. Questions also arise as to the structuring of section 27. Does the available resources restriction contemplated in

\textsuperscript{48} *Dawood* fn 12 supra

\textsuperscript{49} "No-one may be refused emergency medical treatment."
section 27(2) of the Constitution necessarily apply to this provision? The structuring of section 27 as a whole is such that section 27(2) is sandwiched between section 27(2) which expressly uses the word “right” and section 27(3) which does not. Section 27(2) refers to “these rights” Which rights are “these rights”? If section 27(2) had been intended to refer to the provision concerning medical treatment then why was the order not reversed? Why was section 27(2) not placed as the final provision in the section rather than the penultimate one if the intention was that it should apply to both health care services and emergency medical treatment? If one has to consider the question from a pragmatic perspective, however, then surely emergency medical treatment must also be limited by the availability of resources? If there are no resources for emergency medical treatment then how can the position be different to a situation in which there are no resources for the provision of health care services generally? In fact is not emergency medical treatment a subset of “health care services” or must the phrase “health care service” be read as excluding emergency medical treatment altogether? These questions will be explored in more detail below and in the discussion of the Soobramoney case 350

2.8.1 No-one may be refused

The right is couched in the negative. The high court pointed out in Soobramoney 351 that section 27(3) was not so much creating a right to emergency medical treatment as a right not to be refused emergency medical treatment 352. This does not necessarily mean, however, that there must be no balancing of the rights of one emergency victim with those of another. Even if Soobramoney’s condition had classified as a medical emergency, if there were other patients who stood a better chance of survival due to a general health status superior to that of Soobramoney, and there were limits as to how many patients could be treated, it is possible that Soobramoney would still not have been eligible for treatment since he was

350 Soobramoney v Minister of Health, KwaZulu-Natal fn 23 supra
351 Soobramoney fn 23 supra
352 See Soobramoney fn 23 supra where the court noted that: “The applicant contends that the same limitation does not apply to emergency medical treatment. As pointed out by counsel for the respondent a 27(3) does not create a right to emergency medical treatment. It prohibits anyone from refusing emergency medical treatment.” The constitutional court in Soobramoney fn 23 supra, at p 774 also emphasised that the right is stated in the negative. It said: “Section 27(3) itself is couched in negative terms - it is a right not to be refused emergency treatment. The purpose of the right seems to be to ensure that treatment be given in an emergency, and is not frustrated by reason of bureaucratic requirements or other formalities.”
not a candidate for a kidney transplant which was the main criteria used by the provincial health authorities to prioritise patients with chronic renal failure for dialysis. The legal principle that 'no-one' may be refused emergency medical treatment is qualified and must remain qualified\(^{333}\). It is no more absolute than the other rights in the Bill of Rights and is apparently just as affected by the availability of resources as the right to health care services in section 27(3)\(^{334}\).

As medical doctors are wont to point out, in real life, many of them, especially those working in trauma or emergency units in major hospitals are faced with situations every day in which they must prefer the interests of one patient over the other. A scientific method of prioritising medical attention to multiple injured known as triage is used in emergency medical departments throughout the world. Triage, a sorting or classification of patients based on their levels of medical urgency was first developed as a military term and used in wartime. The French used “triage” in the early 19\(^{th}\) century to decide who would be taken from the battlefields to be treated and who would be left behind. Over the next century the practice was further developed in armies throughout the world and during World War 1 improved outcomes of some battle injuries were accredited to appropriate triage. It comprises a brief clinical assessment that determines the time and sequence in which patients should be seen in the emergency department or, if in the field, the speed of transport and choice of hospital destination. Triage in a disaster is neither perfect nor democratic. Patients who are severely injured and not expected to survive are the most difficult to categories\(^{335}\). The question as to where triage fits in the practice of South African medicine in the light of the constitutional directive that no one may be refused emergency medical treatment raises some interesting questions. Some practical examples of triage in emergency departments are:

---

\(^{333}\) See Soobramoney fn 23 supra where Chaskalson P observed at 777 that: "But the state's resources are limited and the appellant does not meet the criteria for admission to the renal dialysis programme. Unfortunately, this is true not only of the appellant but of many others who need access to renal dialysis units or to other health services" and "There will be times when this requires it to adopt an holistic approach to the larger needs of society rather than to focus on the specific needs of particular individuals within society."

\(^{334}\) See further discussion below.

\(^{335}\) See Doerlet RW “Triage" http://www.emedicine.com/emerg/topic670.htm. The cardinal question which no-one seems comfortable in articulating is whether one utilises valuable time and resources on a critically injured patient who has less than a 20% chance of survival when that same time and those resources could be used to save another patient who is also likely to die in the interim but who stands an 80% chance of survival if attended to immediately. If one attends to the first patient first the chances are that two people will die whereas if one attends to the second first the chances are that only one will die.
A 55 year old man presented to the emergency department complaining of abdominal pain. He stated that he thought his condition was secondary to eating too much greasy fast food too rapidly. As the emergency department was busy the patient was sent to the waiting room after his blood pressure, pulse, respiration rates and temperature had been taken. Two hours later, the patient’s friend complained that he looked pale and had increasing weakness. The patient’s friend was told that the emergency department was overcrowded. Three hours after triage, the patient collapsed in the emergency department waiting room. He was brought into the emergency department hypotensive and was taken to surgery where he died of a ruptured aortic aneurysm.

A 43 year old woman presented to the emergency department complaining of a headache. The patient had normal vital signs except for a temperature of 101.2°F. The emergency department was very busy and overcrowded. Since this patient seemed no worse than the others, and the triage nurse has seen many patients that day whose symptoms included headache, she sent the patient to the waiting room. Four hours later another patient came to the triage desk stating that the woman, who was still in the waiting room, was having a seizure. A repeat temperature 5 hours after the initial presentation was 104.5°F and she was admitted to hospital with a diagnosis of meningitis.

The above examples may not found a claim in terms of the law of delict as it is traditionally understood because it is quite possible that the triage nurse in each case did not act negligently. What about the patient’s constitutional right not to be refused emergency medical treatment? Is making a patient wait in a busy crowded waiting room tantamount to a denial of his constitutional right? The answer to this question, it is submitted, is to be found in the judgment of the Durban High Court in *Soobramoney* in which Combrinck J observed that:

“I consider that the section must be interpreted in such a way that it is implicit in the words ‘emergency medical treatment’ that such treatment is possible and available. It could surely not have been the intention of the Legislature that irrespective of the costs and whether or not funds were available and irrespective of whether the treatment was available the persons requiring emergency medical treatment had to receive such treatment. So, for instance, if a hospital had an intensive care unit which was full and an emergency patient arrived would it be obliged to move one of its patients out so as to accommodate the emergency patient? Alternatively, is the state obliged to build additional intensive care units, procure additional dialysis machines, ventilators, heart-lung machines and other life-saving equipment to enable it to cater for all the patients requiring emergency medical treatment? It could surely not have been the intention of the Legislature that the right to access to health care was subject to the constraints of the state’s resources and that a patient could be refused treatment but when his or her condition reached a critical stage and emergency treatment was required, the state then had to provide it irrespective of the cost.”

357 Derel fn 355 supra. These examples are from the United States.
358 *Soobramoney* fn 82 supra at p439-440
This said, perhaps there is scope for an argument that there could, in certain circumstances, be a responsibility on the hospital whose emergency unit is full to refer the patient to an alternative emergency facility and possibly even arrange for him to be transported there by ambulance if such transport is available.

2.8.2 Emergency

How does one define a situation as one of ‘emergency’? If it is defined too broadly then the emergency department simply becomes more crowded and its resources more thinly stretched in treating people who could possibly afford to wait. Who decides when the patient is suffering from a condition requiring ‘emergency’ medical treatment, as opposed to just ‘medical treatment’? Laypersons may perceive a situation as an emergency when in fact, from a medically trained person’s point of view it is not. In the US there has been considerable debate on this subject and even, in some cases, legislation in an attempt to resolve the issue. In South Africa, it is submitted, the test is likely to be objective rather than subjective for purposes of determining whether a health facility has in fact violated a person’s constitutional rights in turning him away when he came seeking treatment or in rendering health care services but not with the urgency dictated by an emergency. Since a health facility in the public sector is unlikely to turn a patient away unless it is full to capacity or does not have the resources to render the services required, and since in terms of *Soobramoney*fn 23 supra these are acceptable reasons for not rendering emergency medical treatment, the question is more likely to arise in the private health sector where a patient is turned away because he cannot demonstrate that he has the ability to pay.

2.8.2.1 Horizontal Application

It is submitted that in looking at whether a person’s constitutional rights were violated in this context, a court is likely first to consider the question of whether the right to emergency

\[\text{359} \quad *\text{Soobramoney} fn 23 supra\]
medical treatment is of horizontal application or not. Liebenberg\textsuperscript{360} contends that the right is horizontally applicable when read with section 8(2) of the Constitution\textsuperscript{361}. It follows that if a private facility does have the right to claim payment for emergency treatment after the event then the logic of turning someone away because they are unable to pay at the time of the emergency is likely to constitute a violation of the right. In practice, however, the right to demand payment is not always capable of fulfilment due to the circumstances of the patient. Private hospitals and health care professionals are often obliged to write off significant amounts of money due to non-payment by patients for any number of reasons. Sometimes the cost of pursuing the debt is more than the debt itself. Debts also prescribed after three years so there is limited time in which to track the debtor and interrupt prescription. In a situation where an indigent person arrives on the doorstep of a private hospital requiring emergency medical treatment, the power of the hospital to demand payment is not likely to be of much assistance in aiding the hospital to recoup the costs of treatment. The only viable strategy, from a cost containment perspective, is to render sufficient treatment necessary to stabilise the patient and then transfer him or her to a public health facility as soon as possible\textsuperscript{362}.

It is submitted that the manner in which section 27 of the Constitution has been structured is also conducive to an interpretation that the right is horizontally applicable as is the fact that the right has been couched in the negative in section 27(3). Section 27(2) is sandwiched between section 27(1) which deals with the right of access to health care services and section 27(3) dealing with the right not to be refused emergency medical

\textsuperscript{360} Davia \textit{et al} (fn 124 supra) at p 358. She states that “As health care services are not yet universally available and are subject to progressive realisation under section 27(2), the protection of this right extends only to situations in which a patient is ‘refused’ emergency medical treatment owing to a lack of money, race or other exclusionary practices. This subsection also does not confer a right to ‘free’ emergency medical treatment. Although a patient may not be turned away from a medical facility owing to a lack of funds, the costs of the treatment may be recovered later.”

\textsuperscript{361} Section 8(2) states that: “A provision of the Bill of Rights binds a natural or a juristic person if, and to the extent that, it is applicable, taking into account the nature of the right and the nature of any duty imposed by the right.” See also De Waal, Currie and Erasmus, fn 2 supra at 450 where they note that: “We have argued elsewhere that the right may be applied horizontally, entailing a duty for private hospitals. The right does not extend to routine medical treatment and it does not guarantee free services. Emergency treatment may not be refused because of lack of funds, but payment for treatment may be sought after the treatment has been provided.”

\textsuperscript{362} This does not always work well in practice as the public hospital in question argues that it does not have beds or some other resource necessary to treat the patient or simply refuses to take him or her for reasons that are not expressed at the time. It obviously pays private hospitals to have a healthy and co-operative relationship with the local public hospitals if they are to manage the problem of presented by a constitutional obligation to render what can amount to costly emergency medical treatment and still remain profitable. The other alternative is to negotiate with the state some kind of fee in respect of indigent patients which covers the costs of rendering the necessary services. It is only in an ideal world that private hospitals can survive on charity.
treatment. The reason for this was probably the intention on the part of the drafters that section 27(2) applies only to the rights contemplated in section 27(1) and not to those contemplated in section 27(3). If it had been intended that the phrase 'these rights' in section 27(2) must be applicable to section 27(3) rights then it would have been much more logical to place the wording contained in section 27(2) at the end of the section rather than in the middle. Liebenberg argues, presumably for this reason, that "Unlike the general right of access to health care services (sic) is not subject to the qualifications of progressive realisation and resource constraints." It is submitted, with respect, that whilst this may have been true on the wording and structure of section 27(2) alone, it is not correct in light of the judgment in Soobramoney.

In view of the judgment in Soobramoney, if a court concludes that the right is of horizontal application, it is likely to proceed to questions of reasonableness in deciding whether or not there was an infringement of the right by a private sector health care provider. Did the health care professional in turning the patient away do so because he could not pay? What kind of medical treatment would have been reasonably necessary under the circumstances? Could the patient have been stabilised at relatively low cost to the private provider before being transferred to a public health facility? Was the private provider already so busy that it could not cope with another patient? If the right is of horizontal application, it is submitted

---

363 Davis et al fn 124 supra at p 358
364 Soobramoney fn 23 supra at para 20, 774 Chaskalson P states that: "A person who suffers a sudden catastrophe which calls for immediate medical attention, such as the injured person in Paachim Banga Khet Mazdoor Samity v State of West Bengal (supra), should not be refused ambulance or other emergency services which are available and should not be turned away from a hospital which is able to provide the necessary treatment. * What the section requires is that remedial treatment that is necessary and available be given immediately to avert death." (writer's emphasis) See also the words of Combrinck J in the judgment of the court a quo where he comments at p 439 -440 that: "As pointed out by counsel for the respondent s 27(3) does not create a right to emergency medical treatment. It prohibits anyone from refusing emergency medical treatment. I consider that the section must be interpreted in such a way that it is implicit in the words 'emergency medical treatment' that such treatment is possible and available. It could surely not have been the intention of the Legislature that irrespective of the costs and whether or not funds were available and irrespective of whether the treatment was available the persons requiring emergency medical treatment had to receive such treatment. So, for instance, if a hospital had an intensive care unit which was full and an emergency patient arrived would it be obliged to move one of its patients out so as to accommodate the emergency patient? Alternatively, is the State obliged to build additional intensive care units, procure additional dialysis machines, ventilators, heart-lung machines and other life-saving equipment to enable it to cater for all the patients requiring emergency medical treatment? It could surely not have been the intention of the Legislature that the right to access to health care was subject to the constraints of the State's resources and that a patient could be refused treatment but when his or her condition reached a critical stage and emergency treatment was required, the State then had to provide it irrespective of the cost." See also the observations of De Waal, Currie and Ermens, fn 2 supra at p 449 to 450 where they state that: "The state's duty under s 27(3) is not [to] refuse ambulance or other emergency services which are available and not to turn a person away from a hospital which is able to provide the necessary treatment'. This available- and-able qualification makes it clear that s 27(3) does not create a positive constitutional obligation on the state to ensure that emergency medical facilities are made available so that no-one in an emergency situation can be turned away. Section 27(3) is therefore a right not to be arbitrarily excluded from that which already exists." In this context, they refer to Scott C & Alston P "Adjusting Constitutional Priorities in a Transnational Context: A Comment on Soobramoney's Legacy and Grootboom's Promise" (2000) 16 SAHR 206, at p 236.
that refusal to treat a patient on the grounds of his or her ability to pay is likely to constitute a violation of the patient’s constitutional rights. Given the fact that private providers are unlikely to want to pay for emergency medical treatment for the indigent out of their own pockets and profits, they are likely to try and recoup these costs in a number of ways, the most obvious being from private patients who can afford to pay for private facilities. They may also attempt to conclude agreements with the state in terms of which they are remunerated a basic fee for the treatment of such cases. Either way, the horizontal application of the right not to be refused emergency medical treatment probably has significant cost implications for the state and private consumers of health care services alike. The impact on the private health sector of the horizontal application of the right not to be refused emergency medical treatment depends largely upon the scope of the right. If the court in Soobramoney had found that urgent treatment for chronic illnesses falls within the scope of emergency medical treatment it could potentially have put the private health sector out of business even with its ability to charge patients for its services. Billing is something quite unrelated to a patient’s ability to pay. If the meaning of the phrase emergency medical treatment is too wide, it will impose an onerous burden on private providers of health care services such that they may not be able to remain in business.

2.8.2.2 Soobramoney

In the case of Soobramoney the constitutional court had reason to consider the nature of emergency medical treatment as opposed to health care services as contemplated in section 27(1) of the Constitution. The facts of Soobramoney have already been canvassed previously in this chapter. For present purposes it must be noted that the applicant argued that the renal dialysis treatment he required fell into the category of emergency medical treatment as envisaged in section 27(3) of the Constitution as opposed to health care services generally and that the respondent could therefore not refuse to give it to him. Chaskalson P stated that:

---

365  Soobramoney in 23 supra

298
"The words ‘emergency medical treatment’ may possibly be open to a broad construction which would include ongoing treatment of chronic illnesses for the purpose of prolonging life. But this is not their ordinary meaning, and if this had been the purpose which s 27(3) was intended to serve, one would have expected that to have been expressed in positive and specific terms”

pointing out\textsuperscript{366} that:

"The purposive approach will often be one which calls for a generous interpretation to be given to a right to ensure that individuals secure the full protection of the bill of rights, but this is not always the case, and the context may indicate that in order to give effect to the purpose of a particular provision a narrower or specific meaning should be given to it.”

The constitutional court, after considering foreign law with regard to the right to life in general and to emergency medical treatment in particular, made the important observation\textsuperscript{367} that:

"In our Constitution the right to medical treatment does not have to be inferred from the nature of the State established by the Constitution or from the right to life which it guarantees. It is dealt with directly in s 27. If s 27(3) were to be construed in accordance with the appellant's contention it would make it substantially more difficult for the state to fulfil its primary obligations under ss 27(1) and (2) to provide health care services to ‘everyone’ within its available resources. It would also have the consequence of prioritising the treatment of terminal illnesses over other forms of medical care and would reduce the resources available to the State for purposes such as preventative health care and medical treatment for persons suffering from illnesses or bodily infirmities which are not life threatening. In my view, much clearer language than that used in s 27(3) would be required to justify such a conclusion.”

It was the view of the constitutional court that section 27(3) requires that remedial treatment that is necessary and available be given immediately to avert that harm\textsuperscript{368} and that the purpose of the right seems to be to ensure that treatment be given in an emergency, and is not frustrated by reason of bureaucratic requirements or other formalities. The court found that the applicant’s situation did not fall within the scope of section 27(3) and that it therefore had to be considered in the light of the resources available to the state in terms of section 27(1).

\textsuperscript{366} Soobramoney on 23 supra at 772 -773
\textsuperscript{367} Soobramoney on 23 supra at 773-774
\textsuperscript{368} Soobramoney on 23 supra p 774
The constitutional court, it is respectfully submitted, correctly refused in *Soobramoney* to blur the lines between ordinary health care services and emergency medical treatment. Sachs 369 observed that:

"The special attention given by s 27(3) to non-refusal of emergency medical treatment relates to the particular sense of shock to our notions of human solidarity occasioned by the turning away from hospital of people battered and bleeding or of those who fall victim to sudden and unexpected collapse. It provides reassurance to all members of society that accident and emergency departments will be available to deal with the unforeseeable catastrophes which could befall any person, anywhere and at any time. The values protected by s 27(3) would, accordingly, be undermined rather than reinforced by any unwarranted conflation of emergency and non-emergency treatment such as that argued for by the appellant."

The court was of the view that an emergency involves some sudden or unexpected catastrophe which calls for immediate medical attention370.

Even though the treatment required by the applicant in *Soobramoney*, was necessary for his survival this did not necessarily mean that it constituted emergency medical treatment. The Durban High Court took the view that:

"In any event, the applicant, in my view on the facts, cannot rely on the provisions of s 27(3). He has been suffering from the diseases mentioned for some years. He has not contracted a sudden illness or sustained unexpected trauma. It is true that if he does not receive the treatment he will die. Unfortunately, that is the position with all persons who suffer from long term disease. So, for instance, a person who has cancer may suffer from the disease for a number of years, but will eventually reach the stage where within days he will die. It is then an emergency situation for him but it is not the emergency that, in my view, the Legislature had in mind in s 27(3)."371

There were really two issues in *Soobramoney*372. The first related to the question of what constitutes emergency medical treatment as contemplated in section 27(3) of the Constitution. The second related to whether the state can be compelled to provide health care services, as contemplated in section 27(1) of the Constitution, to the terminally ill, regardless of the availability of resources or perhaps on the basis that the available resources should first be used to treat the terminally ill first and thereafter, any resources that are left can be used to render health services to everyone else.

369 *Soobramoney* fn 23 *supra* at p 781-782
370 *Soobramoney* fn 23 *supra*. Chaskalson P at para 20 p 774
371 *Soobramoney* fn 82 *supra* at p 439-440
372 *Soobramoney* fn 23 *supra*
It is submitted that unlike many of its critics, the Constitutional court in a sound and highly rational judgment was able to take a clear sighted and unemotional approach to the harsh realities of the real world in which all resources are limited and come to a conclusion that difficult decisions regarding the allocation of resources are not always best made by the courts. It is submitted that if emergency medical treatment had been too widely construed by the constitutional court in this critically important judgment, not only would the obligations of the state have been skewed in favour of the treatment of terminal illness as suggested by Chaskalson P but the practical significant of the rights to both emergency medical treatment and health care services, as well as the distinction drawn in the Constitution between them, would have been undermined to the point where South Africa could have found itself in the same position as Venezuela — with court orders that impose upon the state impossible obligations and the content of the right to health care services has no meaning for those who need it most. In the words of Sachs J in Soobramoney, "The values protected by s 27(3) would, accordingly, be undermined rather than reinforced by any unwarranted conflation of emergency and non-emergency treatment such as that argued for by the appellant."

375 See for instance the comments of Burchill R in ‘Soobramoney v Minister of Health (Kwa-Zulu-Natal)’ at http://www.nottingham.ac.uk/law/hr/brnnew/march98/300BRAMLHTM who states that the constitutional court judges in Soobramoney “have failed to provide any insight as to the circumstances which will allow for a right to health care to be ‘most fairly and effectively enjoyed’ and then proceeds to the usual debate on government spending on defense versus health care and stating that “Have decisions been made rationally and in good faith in determining the allocation of resources necessary to have a healthy society? It would be interesting to see what Chaskalson P had in mind concerning a holistic approach to government spending” It would appear that Burchill feels that the South African constitutional court’s omniscient role should have undertaken a review of the entire budget of the South African government in deciding Soobramoney’s case and that perhaps it should have directed that some of the expenditure devoted to defence matters should have been redirected by the court to Soobramoney. De Waal, Currie and Erasmus, fn 2 supra at p139 refer to the constitutional court’s “most controversial use of contextual interpretation to date in Soobramoney v Minister of Health (KwaZulu-Natal)”. As Chaskalson P (fn 23 supra) observed at p776 onwards “Although the problem of scarce resources is particularly acute in South Africa this is not a peculiarly South African problem. It is a problem which hospital administrators and doctors have had to confront in other parts of the world, and in which they have had to take similar decisions. In his judgment in this case Combrinck J refers to decisions of the English Courts in which it has been held to be undesirable for a court to make an order as to how scarce medical resources should be applied, and to the danger of making any order that the resources be used for a particular patient, which might have the effect of denying those resources to other patients to whom they might more advantageously be devoted. The dilemma confronting health authorities faced with such cases was described by Sir Thomas Bingham MR in a passage cited by Combrinck J from the judgment in R v Cambridge Health Authority, ex partes B: ‘I have no doubt that in a perfect world any treatment which a patient, or a patient’s family, sought would be provided if doctors were willing to give it, no matter how much it cost, particularly when a life was potentially at stake. It would however, in my view, be shutting one’s eyes to the real world if the Court were to proceed on the basis that we do live in such a world. It is common knowledge that health authorities of all kinds are constantly pressed to make ends meet. They cannot pay their nurses as much as they would like; they cannot provide all the treatments they would like; they cannot purchase all the extremely expensive medical equipment they would like; they cannot carry out all the research they would like; they cannot build all the hospitals and specialist units they would like. Difficult and agonising judgments have to be made as to how a limited budget is best allocated to the maximum advantage of the maximum number of patients. That is not a judgment which the court can make.” (footnotes omitted)

376 See the discussion of the case of Cruz Bermudez, et al v Ministerio de Sanidad y Asistencia Social in chapter 1 of this thesis. Soobramoney fn 23 supra para 51 at p 782
Whilst it is not the intention within this thesis to conduct a comparative study of the law relating to emergency medical treatment of South African and foreign jurisdictions, it is worth reflecting on some of the issues concerning the concept of 'emergency' in relation to health care services that have arisen in the United States if only to anticipate some of the complications which may accompany questions concerning emergency medical treatment in South Africa. The Constitution moreover permits South African courts to consider foreign law in terms of section 39 (1)(c) when interpreting the Bill of Rights. The debate about what constitutes emergency medical treatment or an emergency medical condition is fraught with complexity if the American experience is anything to go by. Firstly there is the question of what is an emergency and who decides that it is and the nature of the treatment to be provided377. A further question is whether the provision of section 27(3) is in a sense not self-defeating because if left untreated for too long, many health conditions do become medical emergencies requiring emergency medical treatment? If the available resources limitation applies only to health care services and not to emergency medical treatment then

377 Combrinker J in Sobramoney (fn 82 supra) gave at least a partial answer to this question when he noted at p 437 onwards that: "Insofar as the present case is concerned however, I am of the view that it is not the function of the Court to decide who shall and who shall not receive the required medical treatment. It is for the medical practitioners to make those decisions. They are qualified, whereas I am not, to decide on clinical grounds which patient will benefit the most from the treatment. The Court will only interfere if the doctors involved have exercised their judgment unreasonably, arbitrarily or have discriminated against a patient. In this regard I am in complete accord with the remarks of Baloobin LJ in the case of Bo J (a minor) (wardship: medical treatment) a judgment of the Court of Appeal reported in [1993] 4 All ER 614 at 625g: 'I would also stress the absolute undesirability of the court making an order which may have the effect of compelling a doctor or health authority to make available scarce resources (both human and material) to a particular child, without knowing whether or not there are other patients to whom those resources might more advantageously be devoted. Lord Donaldson MR has set out in his reasons the condition of J and his very limited future prospects. The effect of the order of Waite J, had it not been immediately stayed by this court might have been to require the health authority to put J on a ventilator in an intensive care unit, and thereby possibly to deny the benefit of those limited resources to a child who is much more likely than J to benefit from them.' I find further support in the obiter remarks of Hoffmann LJ in Airedale NHS Trust v Bland a judgment of the Court of Appeal reported in [1993] 4 All ER 821 at 837c–d: 'I said that there were two distinctions between the prohibition on violating the person and the duty to provide care and assistance. So far I have mentioned only one. The second is that while the prohibition on violation is absolute, the duty to provide care is restricted to what one can reasonably provide. No-one is under a moral duty to do more than he can or to assist one patient at the cost of neglecting another. The resources of the national health service are not limitless and choices have to be made. This qualification on the moral duty to provide care did not enter into the argument in this case at all. The Airedale NHS Trust invited us to decide the case on the assumption that its resources were unlimited and we have to do so. But one is bound to observe that the cost of keeping a patient like Anthony Bland alive is very considerable and that in another case the health authorities might conclude that its resources were better devoted to other patients. We do not have to consider such a case, but in principle the allocation of resources between patients is a matter for the health authority and not for the courts.' In that case the patient was a victim of the Hillborough football ground disaster. He suffered a severe crushed chest injury which resulted in brain damage and left him in a persistent vegetative state. The issue was whether medical treatment could be withdrawn and the patient allowed to die." It is submitted that what the court was in effect saying was that even in emergency medical circumstances, the decision of medically trained staff to prioritise certain patients over others cannot be faulted except where they are acting unreasonably. It is submitted that a decision that a particular patient does not in fact require emergency medical treatment at all because the condition from which he or she is suffering is not an emergency is a similar one. It can only be faulted where the medical personnel in question acted unreasonably or arbitrarily or in a discriminatory fashion.
this is a way in which the available resources limitation can be circumvented? Another question is what is the bare minimum that should be done in the emergency? What is the nature of the emergency services that are required and is it the same irrespective of the nature of the facility involved in the situation?

The federal Emergency Medical Treatment and Active Labour Act, otherwise known as EMTALA, uses the term “emergency medical condition” and defines it as follows:

“Emergency medical condition” means –

A. a medical condition manifesting itself by acute symptoms of sufficient severity (including severe pain, psychiatric disturbances, and/or symptoms of substance abuse) such that the absence of immediate medical attention could reasonably be expected to result in:
   (i) Placing the health of the individual (or with respect to a pregnant woman, the health of a woman or her unborn child) in serious jeopardy;
   (ii) Serious impairment to bodily functions;
   (iii) Serious dysfunction of any bodily organ of part;
B. with respect to a pregnant woman who is having contractions:
   (i) that there is inadequate time to effect a safe transfer to another hospital before delivery; or
   (ii) that the transfer may pose a threat to the health or safety of the woman or the unborn child

---

378 The court pointed out in *Soobramoney* (In 82 supra), however that “The Constitution itself the Legislature recognises that the rights which it affords the citizen are not absolute and are limited by the funds available” and that “It could surely not have been the intention of the Legislature that the right to access to health care was subject to the constraints of the State’s resources and that a patient could be refused treatment but when his or her condition reached a critical stage and emergency treatment was required, the State then had to provide it irrespective of the cost.” It is further submitted that once the condition of a patient is stabilised and there is no longer an immediate threat to life or of serious impairment of bodily organs or functions, the medical treatment required can no longer be regarded as emergency medical treatment and that the person who has received the emergency treatment that was immediately necessary to save his life or health reverts to section 27(1) status in terms of his or her entitlement to health care services.

379 The definition seems to have changed relatively recently to include psychiatric disturbances and/or symptoms of substance abuse. Some sources still cite a previous wording which does not include those aspects – only severe pain.

380 In South African constitutional law the unborn child is not recognised as a person and therefore holds no constitutional rights (see discussion of what is a child elsewhere in this chapter).

EMTALA was enacted in 1986 as part of the Consolidated Omnibus Budget Reconciliation Act of 1985 primarily in response to concern that some emergency departments across the country refuse to treat indigent uninsured patients or inappropriately transferred them to other hospitals, a practice known as 'patient dumping'. The mischief it sought to address is thus similar in nature to the mischief that section 27(3) of the Constitution seeks to address. EMTALA requires hospitals that participate in Medicare to provide a medical screening examination to any person who comes to the emergency department, regardless of the individual's ability to pay. Unlike the right in section 27(3) it apparently applies only to hospitals but there is a similarity in that it is likely that in terms of the Constitution, emergency medical treatment will have to be rendered regardless of the ability to pay. In terms of EMTALA if the medical screening reveals that the patient has an emergency medical condition as defined, then the hospital must provide treatment to stabilize the condition or provide for an appropriate transfer to another facility. If the hospital is unable to stabilize the condition, it must provide for transfer to another medical facility. The delaying of the medical screening examination and the stabilization of the patient in order to enquire into his or her ability to pay is prohibited. EMTALA obliges a hospital to accept a patient from a transferring hospital if it can provide the specialized care the patient needs and to report any inappropriate transfers. The regional offices of the Department of Health and Human Services’ (HHS) Centers for Medicare and Medicaid Services (CMS) are responsible for investigating complaints of alleged EMTALA violations and forwarding confirmed violations to HHS' Office of Inspector General (OIG) for possible imposition of civil monetary fines. The GAO commented in its report that the overall impact of EMTALA is difficult to measure because there are no data on the incidence of patient dumping before its enactment and the only measure of current incidence – the number of confirmed violations - is imprecise. Hospital and physician representatives told the GAO that more people were coming to emergency departments with non-urgent conditions as a result of EMTALA. The provider representatives said that patients who face financial or other barriers to care used emergency departments as their primary health provider because

383 United States General Accounting Office Report fn 382 supra
they know they will receive care there. EMTALA requires that a medical screening examination must be conducted on every patient who requests examination or treatment for a medical condition. This illustrates one of the problems of mandatory emergency medical treatment. One first has to establish that it is an emergency medical condition and the only way of doing this is usually to examine the patient. If the majority of seriously ill patients present to the emergency room of a hospital and the law requires that they must all be examined before they can be reclassified as non-emergencies, this has the potential to severely interfere with the delivery of emergency medical treatment to those patients that are in a genuine emergency situation. Even if the patient presents with medical records it is not safe to assume that his condition is as reflected in the records since some time may have elapsed between the compilation of the record and the examination to establish whether it is an emergency situation or not. Some emergencies are fairly obvious but there are others that are not. What is the position where a hospital turns a patient away without even seeing him or her for example it refuses to take transfer of the patient from another health facility? Yet another question is the extent to which secondary risks associated with emergency medical conditions are included in the term emergency medical treatment.

384 In St Anthony Hospital v United States Department of Health and Human Services the US Court of Appeals (tenth circuit) had to consider such a situation. The judgment was handed down on 28 August 2002. St Anthony's Hospital had been fined for violation of EMTALA provisions against “reverse-dumping” i.e. refusal to accept an appropriate transfer of a patient or to treat a patient who does not have medical insurance. The fine was imposed by the Department of Health and Human Services and the Departmental Appeals Board upheld the violation finding whereas St Anthony's applied for review of the decision to the Court of Appeals. The facts were that a 65 year old male patient was involved in a motor vehicle accident on a highway outside of Oklahoma City in April 1995. He was taken that afternoon to the emergency room at Shawnee Regional Hospital, a small hospital about 35 miles outside of Oklahoma City that lacked the ability to perform many complex medical procedures. Almost two hours later, the patient was diagnosed with a neurologic injury and his transfer was arranged to University Hospital in Oklahoma City. As he was boarded onto an ambulance another doctor arrived at the emergency room and was briefly informed of the patient's injury and that he was being transferred to University Hospital because his back was broken. En route to the other hospital the patient's condition deteriorated and the ambulance was forced to return to Shawnee. In hindsight it was discovered that the patient had actually suffered from a life threatening traumatic injury to his abdominal aorta which shut off the flow of blood to his lower extremities. The doctor on duty examined the patient and immediately became concerned about his condition as he was extremely cyanotic from his umbilicus throughout his lower extremities and had no sensation from his umbilicus down. He had no pulse in his femoral arteries or feet. The doctor knew that the injury was life threatening and that the patient needed surgery. He also knew that Shawnee was not equipped to deal with that type of injury and so determined that he had to be transferred by airlifting him to University Hospital. He spoke to University Hospital over the telephone and was informed that it did not have the capacity to accommodate the patient because it already had two emergency surgeries to perform. A search for another hospital was conducted and the search included a call to St Anthony, a large modern hospital in Oklahoma City with state of the art surgical facilities. A thoracic and vascular surgeon working at St Anthony's refused to take the patient who was eventually transferred to Presbyterian Hospital in Oklahoma City. In an investigation, St Anthony was found to possess the specialized facilities, as well as the capacity, to treat the patient and that none of its operating rooms were in use that evening. St Anthony's was fined $25 000. The Appeal Board affirmed the finding and increased the penalty to $35 000. The court observed that given that the patient suffered from an unstabilized emergency medical condition and that Shawnee lacked the ability to perform the complex medical procedure needed, EMTALA imposed on Shawnee an obligation to effect an appropriate patient transfer to another medical facility. The court also said that it had considered the degree of culpability and found it to be substantial. St Anthony Hospital was aware of the critical condition of the patient and the need for his transfer. The hospital's on-call physician refused to come in to perform surgery on the multiple trauma patient despite the fact that the hospital had both the capacity and the capability to treat him and that the hospital appropriately permitted the on-call physician to make the final decision for the hospital as to whether or not the hospital would accept the patient. The Court denied St Anthony hospital's request to have the agency's determination modified or set aside. (available at http://www.kscourts.org.co10.cases/2002/08/00-
In terms of EMTALA a pregnant woman who is having contractions is considered to be in an “emergency medical condition” if there is not enough time to safely transfer the woman to a hospital.

9225.htm) In the South African context, the liability of a private hospital for refusal of emergency medical treatment in the circumstances of the present case would be limited due to the fact that the surgeon in question is unlikely to be an employee of the hospital. In the private sector, medical specialists that use private hospital facilities are seldom if ever, employed by the hospital. This would have the result that a private hospital is unable to compel any doctor to perform surgery, including the doctor who initially refused to do it. The question is whether there would be a duty on the private hospital to attempt to find a doctor who is prepared to do the surgery or whether it should try to arrange for transfer of the patient to a public hospital which does employ doctors and can render the required services. The private hospital could not be held liable for the resident surgeon’s refusal to operate on the grounds of vicarious liability because it is not his employer. It could not be held liable for failure to perform the surgery using other personnel because the personnel that private hospitals tend to employ in South Africa are nurses and administrative staff who are certainly not qualified to perform vascular surgery. In the public sector the situation would be considerably different because it does employ doctors and it can issue instructions to a doctor to perform an operation in appropriate circumstances if need be or locate another doctor who can do the surgery. As an employer it can be held vicariously liable for its employee’s refusal to provide emergency medical treatment. The question is whether the obligation to provide emergency medical treatment extends to a juristic person, in view of the fact that in terms of the decision in Ad Outport (fn 315 supra) did not preclude the non-mandatory nature of the constitutional right to provide an adequate medical condition to the state. There seems to be some kind of incongruity in a situation where they do not enjoy such a right but are at the same time constitutionally obliged to provide the exact same services that would be protected by the right to follow a trade, occupation or profession. A complicating factor is that in the private sector, the persons who can provide the specialised surgical or other medical treatment are not the juristic persons owning the hospitals but rather the health professionals who use the facilities. Indeed some private hospitals do not even run their own trauma units (emergency rooms) but let out the trauma facility within the hospital to medical doctors who specialise in emergency medicine.

In Reynolds and Another v MaineGeneral Health the United States Court of Appeals (First Circuit) had to interpret the scope of coverage under EMTALA for secondary risks associated with emergency medical conditions. In that case, the deceased, William D Reynolds was driving a car that collided head-on with another vehicle. As a result of the accident Reynolds suffered various injuries including several fractures of bones in his lower right leg and left foot. He was taken immediately by ambulance from the accident scene to the emergency room in Kemence Valley Medical Center (now known as the MaineGeneral Medical Center). After an emergency room nurse had triggered Reynolds’ exam he was examined by a doctor who took an oral medical history and ordered a series of laboratory tests, X-rays and an abdominal CT scan. After consideration this information the doctor determined that Reynolds suffered from multiple trauma to his lower right leg, including a probable open fracture of the right tibia and fibula and possible fracture of the left foot as well as a possible intra-abdominal injury. He requested consultations from a surgeon and an orthopaedic surgeon, the latter taking another oral medical history. Reynolds was transferred to the operating room where the orthopaedic surgeon performed a closed reduction and intramuscular nailing of the right tibia fracture and a closed reduction and percutaneous pinning of the left second, third and fourth metatarsal neck and head fractures. Following surgery Reynolds was admitted to the hospital floor where the hospital staff monitored his condition and he began receiving physical therapy. He was subsequently returned to the operating room for closure of his right lower leg wound and the next day he was discharged from hospital. Five days later he died of a massive pulmonary embolism that emanated from the deep venous thrombosis (DVT) at the fracture site of his right leg. A witness said that she had observed Reynolds inform an employee of the hospital that his family had a blood clotting problem on his father’s and brother’s side of the family whenever they had trauma. Several family members also said that they had told a MaineGeneral employee in the hospital room after Reynolds underwent surgery that he had a family history of hypercoagulability. His widow filed a complaint that MaineGeneral had failed to screen Reynolds appropriately for DVT and that they had failed to stabilise him for DVT before releasing him. The court had to determine the precise scope of the hospital’s duty to screen for risks or related conditions associated with or aggravated by an emergency medical condition. The appellants argued inter alia that the DVT was a ‘symptom’ as contemplated in the definition of ‘emergency medical condition’ in EMTALA but the court did not accept this argument saying that it was not supported by statutory text or case law. It noted that in another case, Correa v Hospital San Francisco 69 F. 3d 1184, 1192 (1st Cir.1995), symptoms of nausea and dizziness which are not normally associated with an emergency medical condition might well bar an action in view of the fact that the symptoms were not a pathological condition that was communicated to the staff of the emergency room whereas in Reynolds’s case he was not experiencing any symptoms of DVT that he expressed to anyone at MaineGeneral. The court seems to be relying on the use of the wording ‘manifesting’ in the definition of medical emergency condition in EMTALA and saying that Reynolds was not manifesting the symptoms of DVT when he was being examined. The appellants also argued that the duty to screen did not exist after an initial screening but ‘should be tolled, in effect, until after the traumatic injuries had been treated and clothing was more likely to have begun.’ The court noted that EMTALA is a limited anti-dumping statute and not a federal malpractice statute and that the avowed purpose of EMTALA was not to guarantee that all patients are properly diagnosed, or even to ensure that they receive adequate care but instead to provide an “adequate first response to a medical crisis for all patients and to send a clear signal to the hospital community that all Americans, regardless of wealth or status, should know that a hospital will provide what services it can when they are truly in physical distress. It is interesting to note that one of the key factors behind EMTALA is equality, a very prominent value in the South African Constitution and section 27(3) is aimed at supporting the principle of equality with regard to emergency medical treatment. Liebenberg in Davis et al fn 124 supra observes at p 358 that “As health care services are not yet universally available and are subject to progressive realisation under s 27(2), the protection of this right extends only to situations in which a patient is refused emergency medical treatment owing to a lack of money, race or other exclusionary practice.” Available at http://www.law.emory.edu/1circuit/3d2000/99-2153.01a.html
prior to delivery or a transfer would pose a threat to the woman or her unborn child. It is not clear at this point whether the same approach will be adopted with regard to the constitutional right to emergency medical treatment especially in view of the fact that in South Africa it is highly likely that hundreds of women still give birth outside of medical facilities in their cultural homes assisted by traditional birth attendants. It is likely that the circumstances of each case of a woman in labour will determine whether or not the situation does necessitate emergency medical treatment. It is submitted that even a woman living in an urban area attended to by a general practitioner or a gynaecologist and who always intended to have her baby in an urban hospital may not necessarily be considered to be a medical emergency simply because she goes into labour in a shopping mall and there are no anticipated or actual complications with the birth process. She might be in need of some assistance at the birth and a relatively quiet and private place to do so but the question of whether a normal birth is a condition which requires ‘emergency medical treatment’ as contemplated in the Constitution is a matter for debate. By the same token it seems illogical to treat a woman in labour in a rural village who is being attended to by a traditional birth attendant (midwife) as an emergency when it was planned that she would have the baby in this way and there are no complications. Onset of labour can be a sudden and unexpected event (although the extent to which it is unexpected is debatable) and some women do give birth after only short periods of labour but that it constitutes a medical emergency in every case is unlikely. Health care services of some kind may certainly be necessary but not necessarily emergency medical treatment. However, if a woman presents at a hospital and she is in labour and her medical records and attending doctor are not available, it may be wise to examine her in order to establish whether or not she is an emergency case because there can be complications which may well necessitate emergency medical treatment such as a Caesarean section. Giving birth is not always a life-threatening situation but it can be. The key question is whether the situation is in fact an emergency or simply requires health services that are available and necessary for the process to run smoothly and to watch for potential complications.

By contrast with EMTALA, the Constitution does not define ‘emergency medical treatment’ which does not make for a great deal of certainty for those who are obliged to provide it. The KwaZulu-Natal Health Act No 4 of 2000 does not define emergency medical treatment but defines emergency medical services as follows:

"emergency medical services" means emergency medical services prescribed by regulation and included in the package of basic essential health services;"

Section 29(3) of that Act states that: “A person employed by a public health care establishment or private health care establishment who turns away a person requiring emergency medical services in terms of subsection(1) is guilty of an offence.”

The use of the term ‘emergency medical services’, as opposed to ‘emergency medical treatment’, tends to get around the argument that any attempt to define emergency medical treatment as contemplated in the Constitution will end up being unconstitutional as the Constitution itself has left it open. The reference to the Constitutional concept of emergency medical treatment is oblique but nonetheless substantial as evidenced by the fact that failure to provide emergency medical services in KwaZulu-Natal is an offence. The approach to emergency medical treatment in the National Health Act is simply to restate the constitutional right. No regulations have yet been made on the subject of emergency medical treatment.

2.8.3 Medical Treatment

This phrase raises the question of who is liable to render the emergency medical treatment. For instance does it extend to first aid by persons who are not medically trained but have done a course in first aid? Does it extend to everyone in the crowd of people in the restaurant in which a patron is suffering a heart attack who know how to do cardio pulmonary resuscitation? Does it only apply to those who are medically trained and who are on duty at the time when the services are required? It thus also raises the question of an

---

387 Gazette KWN No 5560, Notice No 4, dated 13 September 2000
obligation to treat a person in an emergency irrespective of whether the medical professional concerned is on duty or not. The well-worn example is that of the general practitioner who is on his way to a concert one evening and who sees that a motor vehicle accident has just happened and emergency medical services are yet to arrive at the scene. Leibenberg argues that as the scope of the right is confined to ‘medical’ treatment it only binds those persons and institutions qualified to administer such treatment, including doctors, nurses and paramedics. A narrow interpretation is more in keeping with the traditional reluctance of the South African common law to impose upon the person in the street a positive duty to interfere in the affairs of another. It must not be forgotten, however, that the values that are enshrined in the Constitution must inform the common law and not the other way around. Considerations of public policy even at common law have lead to the imposition of liability for omissions in cases such as that of Ewels. The fact that the Constitution stipulates that no one may be refused emergency medical treatment as opposed to conferring a right to emergency medical treatment does suggest that a general obligation to rescue was not intended. Refusal implies that there is some kind of request for assistance. The question is whether, in the event that a person is unable to

388 Davis et al fn 124 supra at p358-359
389 Strauss SA Doctor, Patient and the Law p 90 observes that there is no legal duty upon a person to rescue another, even if it could be expected of him, on purely moral grounds, to act positively to prevent the damage (he refers in footnote 5 to Minister v Poliete v Ewels 1975 (2) SA 380 (A) 596D). He notes that a duty to come to the rescue of another may arise from contract (eg in the case of the man who joins a municipal fire department as fireman, or the man who joins a hospital as ambulance driver or paramedic) or from statute (eg the duty imposed upon doctors, dentists and nurses who attend a child who has apparently been ill-treated or abused). He does state that, quite apart from these situations a duty to rescue may by common law arise from circumstances in which the parties, i.e., the persons in distress and the would-be rescuer find themselves. He observes that in the case of Minister v Poliete v Ewels the Appellate Division gave recognition to this duty in the context of defining the limits of delictual liability for a non-fossaeor: in essence an omission is wrongful where the circumstances are such that the omission would not only evoke moral indignation but also that the convictions of society would require that the omission be regarded as wrongful. Applied to the medical situation, says Strauss, it is not difficult to conceive of circumstances in which there would clearly be a legal duty on the part of doctors, nurses and other medically qualified persons to come to the rescue of accident victims by means of medical aid. He submits that a duty to rescue someone by means of medical treatment will not arise where there is danger for the potential rescuer. However at p25 in a discussion of Ewels he points out that: "It is therefore clear that out law has evolved from its older, highly individualistic stance to a viewpoint reflecting a health social responsibility. A court may now well hold a doctor liable for harm suffered by an injured or ailing person, where the doctor was aware of his condition and unreasonably refused or failed to attend. The word ‘unreasonably’ must be emphasised." The facts of the case in Ewels were that the plaintiff was unwlawfully assaulted by an off-duty policeman in the presence of other policemen who were on duty and failed to take any action to assist the plaintiff. The question was whether the Minister of Police could be held vicariously liable for this omission. It is submitted that the arguments in favour of the vicarious liability finding in Ewels are extremely strong because of the nature of a policeman’s work – to protect the public and to prevent or stop crimes from being committed. The policeman who failed to act were on duty. They failed to perform an essential function of their work in failing to prevent an unlawful assault. Those employed for the purpose of protection of members of the public failed to protect a member of the public. In cases where medical practitioners, especially those in private practice, are on vacation or are attending a social function or recreational purposes the arguments that they should go to the assistance of a person who is ill or injured in their surroundings are not as strong as those in Ewels. This is not to say that no liability can be imposed on them for failing to assist – only that the chances of them being found liable for an omission are very much dependent upon the circumstances. If the same private medical practitioner is in his rooms on a lunch break before seeing the next patient and a person staggered in who has just been shot in a drive by shooting the chances are greater that such a medical practitioner would be held liable for an omission to assist the wounded person.

390 Ewels fn 389 supra
make that request because they are unconscious or so badly injured that they are unable to speak, means that a failure to give them emergency medical treatment does not constitute a refusal and is thus not a violation of section 27(3). Clearly this cannot be the case. A request for assistance in an emergency could be tacit or implied in certain circumstances and it is likely that a refusal to assist a person in such circumstances will constitute a violation of the section 27(3) right - particularly if the refusal is unreasonable. In the example given previously of the general practitioner on his way to an evening function who sees a motor vehicle accident on the other side of a highway there is still a probability that if he drives on without offering assistance this will not necessarily constitute a violation of the section 27(3) right. Such examples are, in reality of limited value, however in that the only principle they really serve to illustrate is the importance of the circumstances of each particular case. If one changes just one detail of the story – for instance that the doctor is employed by the provincial emergency medical services to assist motor vehicle accident victims on roads within the province – the initial conclusion may be significantly revised.

2.8.4 Intellectual Property Rights and Access To Technology

There is significant potential for conflict of rights in the arena of intellectual property where an inventor of a new drug or a medical device or a similar health care invention wishes to commercially exploit the intellectual property rights in that invention. The more vital the invention is for the saving of life or the curing of a disease and the relative availability of other treatments for the same condition can contribute greatly to the tension between a right of access to health care services on the one hand and the right of a patentee to exploit an invention on the other. Such tension can assume international significance as it did when the Pharmaceutical Manufacturers Association challenged the provisions of the Medicines and Related Substances Control Amendment Act No 90 of 1997 concerning parallel importation. The United States of America put South Africa on its so-called Watch List of countries against which it considered imposing sanctions. The case was eventually settled out of court but it attracted considerable global attention.
2.8.4.1 Patents on Medicines

The question of patents on medicines will be dealt with in this chapter only from the perspective of the constitutional right of access to health care services and what this implies with regard to intellectual property rights in medicines. Many of the international debates in this area have centred around access to HIV/AIDS drugs for obvious reasons but the principles and issues involved relate to many different medicines used to treat various health conditions. As stated previously there is a tension between the law on intellectual property and society's interest in promoting and protecting the development of intellectual property on the one hand and the law on access to health care services and society's interest in ensuring the general health and well-being of the population on the other.

The Patents Act\(^{391}\) is the relevant intellectual property legislation in South Africa insofar as the patenting of medicines is concerned. Section 4 of the Act stipulates that:

"A patent shall in all respects have the like effect against the State as it has against a person: Provided that a Minister of State may use an invention for public purposes on such conditions as may be agreed upon with the patentee, or in default of agreement on such conditions as are determined by the commissioner on application by or on behalf of such Minister and after hearing the patentee."

Section 25 of the Patents Act governs what the subject matter of a patent\(^{392}\). Generally speaking, a patent may be granted for any new invention which involves an inventive step and which is capable of being used or applied in trade or industry or agriculture.

Subsection (9) of section 25 affects patents for medicines in particular. It states that:

\(^{391}\) Patents Act No 57 of 1978

\(^{392}\) According to section 25 -

(1) A patent may, subject to the provisions of this section, be granted for any new invention which involves an inventive step and which is capable of being used or applied in trade or industry or agriculture.

(2) Anything which consists of—

(a) a discovery;
(b) a scientific theory;
(c) a mathematical method;
(d) a literary, dramatic, musical or artistic work or any other aesthetic creation;
(e) a scheme, rule or method for performing a mental act, playing a game or doing business;
(f) a program for a computer; or
(g) the presentation of information,

shall not be an invention for the purposes of this Act.
"In the case of an invention consisting of a substance or composition for use in a method of treatment of the human or animal body by surgery or therapy or of diagnosis practised on the human or animal body, the fact that the substance or composition forms part of the state of the art immediately before the priority date of the invention shall not prevent a patent being granted for the invention if the use of the substance or composition in any such method does not form part of the state of the art at that date."

Subsection (11) of section stipulates that an invention of a method of treatment of the human body by surgery or therapy or of diagnosis practised on the human or animal body shall be deemed not to be capable of being used or applied in trade or industry of agriculture.

The effect of these provisions is that medicines or therapeutic substances, which are capable of being used or applied in trade or industry or agriculture, are patentable but that methods of surgical, therapeutic or diagnostic treatment are not. The result is that a holder of patent rights in a medicine is entitled to exploit those rights for the duration of the period of the patent which is usually twenty years. In the case of a medicine, however, this period can be significantly reduced by the amount of time that it takes to have the registration of a medicine approved by the medicines regulatory authority which, in South Africa, is the Medicines Control Council (MCC) established in terms of the Medicines and Related Substances Act. In terms of this Act a medicine may not be sold in South Africa unless it has been approved and registered by the MCC.

The effect of a patent is described in section 45(1) of the Patents Act as follows:

"The effect of a patent shall be to grant to the patentee in the Republic, subject to the provisions of this Act, for the duration of the patent, the right to exclude other persons from making, using, exercising, disposing or offering to dispose of, or importing the invention, so that he or she shall have and enjoy the whole profit and advantage accruing by reason of the invention."

Section 56(1) of the Patents Act provides that any interested person who can show that the rights in a patent are being abused may apply to the commissioner in the prescribed manner.
for a compulsory licence under the patent. What constitutes abuse is set out in section 56(2) of that Act.395

The subject of compulsory licensing in the context of intellectual property rights is often a contentious one since it usually allows the state in certain circumstances to override the intellectual property rights in goods needed for instance to deal with national crises or states of emergency. Compulsory licensing provisions usually attempt to achieve by means of legislation, an acceptable balance between society’s real interest in encouraging inventors and its need for those inventions to be readily available to address matters of national interest. This subject will be canvassed in more detail in a subsequent chapter.

Questions as to the legitimacy of the interests of holders of intellectual property rights in medicines when weighed against the constitutional right of access to health care services will be discussed in more detail in another chapter as this is an area in which the interface between international law and international regulatory institutions on the one hand and national law and national regulatory institutions on the other is fairly extensive and needs to be explored in some depths. Intellectual property rights in medicines are very often a cost factor of the medicine since the patent holder is seeking to recover the costs of research and development on a particular drug within the limited lifespan of the patent while it still has the exclusive right to exploit its invention. Issues concerning the balancing396 of interests in

---

395 "(2) The rights in a patent shall be deemed to be abused if:

(a) the patented invention is not being worked in the Republic on a commercial scale or to an adequate extent, after the expiry of a period of four years subsequent to the date of the application for the patent or three years subsequent to the date of the application for the patent or three years subsequent to the date on which that patent was sealed, whichever period last expires, and there is in the opinion of the commissioner no satisfactory reason for such non-working;

(b) .......

(c) the demand for the patented article in the Republic is not being met to an adequate extent and on reasonable terms;

(d) by reason of the refusal of the patentee to grant a licence or licences upon reasonable terms, the trade or industry or agriculture of the Republic or the trade of any person or class of persons trading in the Republic, or the establishment of any new trade or industry in the Republic, is being prejudiced, and it is in the public interest that a licence or licences should be granted, or

(e) the demand in the Republic for the patented article is being met by importation and the price charged by the patentee, his licensee or agent for the patented article is excessive in relation to the price charged therefor in countries where the patented article is manufactured by or under licence from the patentee or his predecessor in title." 396

On the subject of balancing of constitutional rights, values or interests, Woolman "Out of Order? Out of Balance?" fn 235 supra points out somewhat pessimistically that balancing at its best often involves terminological confusion and its worst it is an impossible undertaking, pointing out that we value things in qualitatively different ways and each good is valued in our own and its own particular way. He says that we do not value things in quantitative terms: intensity or utility. Citing Walzer M, Spheres of Justice (1985) he observes that goods, like people, have shared meanings in a society, because goods, like people, are a product of social, political, economic, educational, religious and linguistic practices which generate meaning. It is the shared meaning or understanding of a good which determines or should determine, its movement and distribution. He says that according to Walzer, when the meanings of social goods are distinct, their distributions must be autonomous. That is, for each good there exists a set
this area can become acute, particularly with regard to lifesaving drugs that are effective in
dealing with large scale public health problems such as HIV/AIDS and there has been
extensive debate on a number of different levels at this place where public and private
international law collide. They will be canvassed in due course in the chapter dealing with
medicines regulation and control.

2.9 Reproductive Health Care

The phrase ‘reproductive health care’ is expressly included in the section 27(1) right of
access to health care services. It is therefore necessary to consciously consider what
implications it has for the rendering of health services and the constitutional obligations of
the state and others in this regard. It is clearly important in this context to explore the
subject of reproductive rights\(^{397}\) and the controversial issue of human cloning a topic upon
which just about everyone who surfs the internet has written their views. There are at least
two possible reasons for the express inclusion of reproductive health care in the section
27(1) right of access to health care services, depending on whether the reference to
reproductive health care was intended to widen the concept of health care services to
include services which would not ordinarily be regarded as such or whether it is a subset of
health care services that was intentionally highlighted to emphasise health care for women
in the area of reproduction. An example of the former is the artificial insemination of a
fertile healthy woman with the sperm of a donor because her husband is infertile. This
procedure is not designed to cure or remedy the husband’s infertility and it is not really a
health care service to the wife as there is nothing wrong with her. In human rights terms it
is a procedure which is assisting the couple to exercise their reproductive rights. It may at
first glance seem to be a highly contrived interpretation that the reference to reproductive
rights was included in order to emphasise the health of women but when one takes into
account the fact that as a concept, “reproductive rights was originally formulated by women
activists, or better say, women’s groups involved with health issues such as reproductive
health, and that it contains a radical critique of patriarchal society and the dominant

\(^{397}\) of criteria and procedures deemed to be appropriate for their distribution. Woolman says that Walzer’s view may need to be
qualified and that the demands of justice are in fact more complex than Walzer’s account allows.

On this topic see further Albertyn C ‘Reproductive health and the right to choose: Policy and law reform on abortion’ in
Engendering the Political Agenda: a South African Case Study C Albertyn et al (eds) CALBS 1998
development model (Vuola 1998, p. 11), such interpretation is not as contrived as it may sound. Women in male dominated societies, which includes just about all of the cultural groupings in South Africa, historically and even in many instances right up to the present day, have tended notoriously to get the short end of the stick when it comes to balancing the reproductive rights of men against theirs. Aitken points out that in its 1993 World Development Report, the World Bank estimated that 34% of the burden of disease of reproductive age women in developing countries is due to reproductive health problems and that reproductive health problems account for 60% of the burden of disease for women in Africa. He states that it is hardly surprising therefore that prenatal delivery care, treatment of STDs and family planning are all included in the minimum essential package of clinical services recommended in the World Development Report.

It is submitted that the second interpretation, i.e., that the reference to reproductive health care is in acknowledgement of the prejudice suffered by women in this area and constitutes an express undertaking to remedy the situation is the more likely of the two possible reasons for it. This does no, of course, mean to say that men are not entitled to reproductive health care the same as women. Their right of access to reproductive health care is no less than that of women.

2.9.1 Reproductive Rights

The Constitution does not expressly refer to reproductive rights. Section 27(1) says that everyone has the right to have access to health care services including reproductive health care. The right to bodily and psychological integrity also has a bearing on reproductive

---

398 Ollila J in 'Women Reproductive Rights': www.myluni.f.hiome/oollilas/www.htm notes that at least three types of reproductive rights can be distinguished: (1) the freedom to decide how many children to have and when to have them; (2) the right to have information and means to regulate one's fertility; and (3) the right to "control one's own body" (Dixon, Meuller, 1993, 12).

399 Ollila, fn 398 supra, notes that: "Male-gendered institutions of government, religion and the health professions have justified intervention in women's reproductive self-determination by invoking their own principles of public order, morality and public health. There are still laws against contraception and abortion in many countries; women lack control over their sexual and reproductive lives and the overall quality of reproductive health care is poor. Also the statistics show the interconnection between poverty, lack of reproductive rights and women's mortality."

400 Aitken IW 'Decentralization and Reproductive Health' Department of Population and International Health, Harvard School of Public Health, June 24 1998 www.reprohealth.org
issues since it is specifically recognised that this right includes the right to make decisions concerning reproduction\textsuperscript{401}. Significantly, there were objections to this section of the Bill of Rights on the grounds that it opens the way for abortion\textsuperscript{402}. The Choice on Termination of Pregnancy Act\textsuperscript{403} refers in its preamble to the promotion of reproductive rights. As with the right to health, reproductive rights are thus a derivative of other fundamental constitutional rights such as the right to privacy, the right to freedom and security of the person, and the rights to dignity, access to health care services and information\textsuperscript{404}. This section concentrates on reproductive rights in the narrow sense in order to more closely examine that aspect of the right of access to health care services dealing with reproductive health care. It must be stressed that although discussions of reproductive rights usually focus on the reproductive rights of women\textsuperscript{405} and related issues, reproductive rights are not gender specific and are of fundamental importance to both men and women.

2.9.2 Reproductive health care in relation to reproductive rights

\textsuperscript{401} According to section 12 (2) of the Constitution "Everyone has the right to bodily and psychological integrity, which includes the right-
(a) to make decisions concerning reproduction;"

\textsuperscript{402} See Ex Parte Chairperson of the Constitutional Assembly: In Re Certification of The Constitution of the Republic of South Africa, 1996 1996 (4) SA 744 (CC) at para [59] where it was observed that:
"NT 12(2) provides that:
"Everyone has the right to bodily and psychological integrity, which includes the right -
(a) to make decisions concerning reproduction;
(b) to security in and control over their body; and
(c) not to be subjected to medical or scientific experiments without their informed consent.'

Objection was taken to this provision in the NT on the grounds that it opens the way to abortion. The objector argued that the proper interpretation of CP II permits the CA to increase the rights contained in the IC, but prohibits it from reformulating rights in a way that would detract from the protection conferred by the IC. The objector further argued that there are two provisions in the NT which effectively reduce the protection afforded the foetus by the IC. The first is NT 12(2) and the second is the omission of a provision equivalent to IC 33(1)(b). IC 33(1)(b) provides that any limitation of a right contained in the IC "may not negate the essential content of the right'. The objector argued that the omission of this right may render it more probable that abortion will be held to be constitutional. It should be emphasised that this Court's current task is not to determine whether the NT permits abortion or not but to decide whether or not the NT complies with the CPs. The relevant CP in this case is CP II which requires the CA to include within the NT all 'universally accepted fundamental rights, freedoms and civil liberties'. Beyond that the CPs give the CA a wide discretion to determine which rights should be included in the NT and how they should be formulated."

\textsuperscript{403} Fn 35 supra

\textsuperscript{404} "In their narrowest sense reproductive rights demand respect for women's bodily integrity and decision-making in an environment that is free from abuse, violence and intimidation. They are also said to require access to voluntary, quality reproductive and sexual health information, education and services. Viewed more broadly reproductive rights may be linked to the provision of such social economic necessities as food shelter, childcare and education." O'Sullivan and Bailey in Chaskalson et al, fn 67 supra, p16-1 onwards.

\textsuperscript{405} Chaskalson et al (fn 67 supra) in discussing reproductive rights in Chapter 16 state at 16-1 that, "This chapter concentrates exclusively on abortion because it is at present the sole focus of the constitutional debate over reproductive rights. We would hope that as the rights interests and values underlying the debate are discussed in the context of women's lives in South Africa, the complex content of a right to reproductive health will not be overshadowed by the single issue of abortion."
It is submitted that the term “reproductive health care” refers to those health services connected with reproduction and the right to make decisions concerning reproduction. The term ‘health services’ not only means medical treatment but also relates to health education and information. This is nowhere more true than in the context of reproductive rights. Since the decision to reproduce implies the right to decide not to reproduce, reproductive health care must include services concerning contraception and termination of pregnancy as much as it includes services relating to fertility, conception and giving birth. If “reproductive health care” is taken as referring to health services connected with reproduction and the right to make decisions concerning reproduction then the right to reproductive health care embraces a wide range of health care services relating to contraception, conception, fertility, infertility, perinatal and postnatal care, gynaecological services, advice on and treatment of sexually transmitted diseases, artificial insemination and other methods of artificial conception and fertilisation, and the extraction, storage and utilisation of human reproductive tissue such as oocytes and spermatozoa, human gonads etc.

The question of the right of access to reproductive health care may be most obvious in issues of termination of pregnancy but there are other areas of law in South Africa in which it does arise although perhaps not as noticeably. The Prescribed Minimum Benefits Package in the regulations to the Medical Schemes Act makes provision for the treatment of infertility as part of the mandatory services that medical schemes are required to provide as part of their benefit plans. The Act defines a “relevant care service” as:

“any health care treatment of any person by a person registered in terms of any law, which treatment has as its object-

(a) the physical or mental examination of that person;

---

406 Chaskalson et al fn 60 supra at 16-16 point out that: “Article 10 (b) of the Women’s Convention states that women have the right to ‘specific educational information to help to ensure the health and well-being of families, including information and advice on family planning’. Lack of access to information about reproductive health will prevent women from exercising their right to reproductive decision-making, which includes making informed choices, and this will consequently limit the control that they have over their bodies.”

407 Fn 328 supra

408 Code 902M of the Package (Diagnosis: Infertility) provides for surgical and medical treatment. Due to the high costs of certain fertility treatments there is at the time of writing a proposed amendment to the regulation which has been published for public comment and which restricts such treatment to: “(a) hysterosalpingogram (b) the following blood tests: a. Day 3 FSH/LH b. Oestradiol c. Thyroid function (TSH) d. Progesterone e. Rubella f. HIV g. VDRL h. Chlamydia i. Day 21 Progesterone (c) laparoscopy (d) hysteroscopy (e) surgery (uterus and tubes) (f) manipulation of ovulation defects and deficiencies (g) semen analysis (volume, count, mobility, morphology, MAR-test) (h) basic counselling and advice on sexual behaviour, temperature charts etc. (i) treatment of local infections.” Gazette No 23379, Government Notice No 540, Regulation Gazette No 7344, 30/04/2002.
(b) the diagnosis, treatment or prevention of any physical or mental defect, illness or deficiency;
(c) the giving of advice in relation to any such defect, illness or deficiency;
(d) the giving of advice in relation to, or treatment of, any condition arising out of a pregnancy, including the termination thereof;
(e) the prescribing or supplying of any medicine, appliance or apparatus in relation to any such defect, illness or deficiency or a pregnancy, including the termination thereof; or
(f) nursing or midwifery,
and includes an ambulance service, and the supply of accommodation in an institution established or registered in terms of any law as a hospital, maternity home, nursing home or similar institution where nursing is practised, or any other institution where surgical or other medical activities are performed, and such accommodation is necessitated by any physical or mental defect, illness or deficiency or by a pregnancy;"

The term ‘relevant health service’ is used in the Act in the definition of the term “business of a medical scheme” and is central to this latter concept. This definition indicates that the giving of advice in relation to a pregnancy as well as termination of a pregnancy is regarded as health care treatment for the purpose of coverage by medical schemes. Infertility also fits into this definition as it is a physical defect as contemplated in subparagraph (b) of the definition. Medical schemes are entitled to limit their benefits to the extent that they fall outside of the prescribed minimum benefits package. As pointed out previously even the prescribed minimum benefits package imposes some limitation on the nature and extent of fertility treatment. What about the obligations of government in the public sector? Are they greater than those of medical schemes, the same or less? Would the public health sector be obliged to provide the same levels of fertility treatment as those which medical schemes must provide or can it legitimately provide fewer or less technologically advanced reproductive health care services due to resource constraints? One would have to examine the rationale behind the prescribed minimum benefits package in order to answer such questions. If the rationale is to ensure the same level and nature of health care services to patients in the private sector as to those in the public sector then the answer is clearly “yes”. A similar answer would be given if it were a question of ensuring that the purpose was to ensure that private health sector patients have access to a basic package of services that are considered fundamental to health. However, if the reason is

---

409 According to section 1 of Act No 131 of 1998, "business of a medical scheme" means the business of undertaking liability in return for a premium or contribution—
(a) to make provision for the obtaining of any relevant health service;
(b) to grant assistance in defraying expenditure incurred in connection with the rendering of any relevant health service; and
(c) where applicable, to render a relevant health service, either by the medical scheme itself, or by any supplier or group of suppliers of a relevant health service or by any person, in association with or in terms of an agreement with a medical scheme;"
rather to prevent the avoidance of liability for certain high risk conditions by medical schemes and to reduce the strain on public sector resources then the answer may not be as clear cut. Whilst equity arguments are strong it is a harsh economic reality that people who can afford to fund their own health care services are able to ‘buy’ more than those who cannot. These differentials are evident even within individual medical schemes which provide a range of options ranging from low cost offering the most basic health care benefits in the form of the prescribed minimum benefits package only to relatively high cost which includes a considerable number of benefits over and above those of the prescribed minimum benefits package. What is available in the private sector, especially in terms of advanced, and expensive health technology may not always be available in the public sector due to resource constraints. These issues serve to highlight interesting dichotomies within the public and private health sectors relating to rationing, the utilisation of available resources and equity in access to health care services.

2.9.3 The Ability to Reproduce

If reproductive rights are implicit in the constitutional Bill of Rights then the question arises as to what extent the inability to reproduce should be treated as a medical condition. This is an old question in a different context since it relates to the question of the rationing of access to health care services. Due to the fact, however, that infertility is usually not life-threatening and does not, except in extreme cases, affect an individual’s ability to function in and contribute to society, combined with the fact that treatment of infertility can be extremely expensive, there is a tendency to downplay the right of access to health care services for infertility in favour of the more life threatening and physically disabling health conditions. To put it differently, decisions relating to the rationing of health care resources are likely to place treatment for infertility somewhere at the bottom of the hierarchy of health care services that must be provided. For this reason, techniques such as artificial insemination and in vitro fertilization are not often considered part of the standard package of health care services in either the public or the private health sectors although they are probably more easily available in the latter.
Reproductive rights raise some highly controversial issues with regard to not only the question of the right to life but also human dignity, access to technology and the extent to which rationing or denial of such access is legitimate. Should HIV positive people receive medical treatment aimed at promoting conception for instance? What about people with scientifically identified genetic abnormalities which can be passed on to their children and which cause severe disease or disability? Marriage laws often prohibit marriages between people whose degrees of consanguinity are too close in order to avoid genetic disorders caused by inbreeding. This could be said to be a justifiable limitation of the right to reproduce. The subject of reproductive rights is also likely to come to the fore in discussions around human cloning and the genetic manipulation of human tissue. Human cloning in its reproductive sense can be regarded as a kind of fertility treatment since it offers the opportunity of reproducing to someone who cannot do so in the usual way. It is simply a further step at the end of the spectrum of methods of assisted reproduction.410

2.9.4 Assisted Reproduction

Fertility treatments which enhance the natural fertility of a person or cure their infertility is only one way of addressing difficulties with reproduction. There are other more extreme methods ranging from artificial insemination by husband (AIH), artificial insemination by donor (AID), in vitro fertilisation, freezing of human embryos and surrogate motherhood. Are these forms of treatment included in the right of access to health care services including reproductive health care? They are all relatively expensive procedures which very often have to be repeated a few times before being successful. Strauss411 points out that in South African law, of the two methods of artificial insemination (AID and AIH) the latter type particularly raises complex legal questions. It is not the intention to explore these legal questions in this chapter in any depths since it involves more than just constitutional law and the right to health care services, including as it does the question of contractual

410 Andrew LB in ‘Embryos Under the Knife’ points out that “Each step along the way, from sperm donation to in vitro fertilisation to surrogate mothers to embryo research, we have gradually yet inexorably moved closer and closer towards engineering human life to fulfill individual desire.” http://dir.selen.com//selen//feature/2000/08/21/stem_cell/index.html
411 Strauss, Doctor, Patient and the Law: A Selection of Practical Issues
arrangements, concepts of parenthood, the legal status of the child, the right of the child to support (which has already been previously discussed in relation to section 28 of the Constitution) and aspects of statutory law.

At present artificial insemination is regulated in South Africa by the Human Tissue Act. The donation of gametes is strictly controlled, the term 'gamete' being defined in the Human Tissue Act as meaning either of the two generative cells essential for human reproduction. No one except a medical practitioner or someone acting under his or her supervision may remove or withdraw a gamete from the body of a living person for the purposes of artificial insemination. This does not adversely affect the constitutional right of access to reproductive care any more than does any other legislation restricting certain activities to health care professionals and regulating the qualifications and standards of services of those professionals.

As a result of an investigation into the legal position of illegitimate children in 1985 by the South African Law Commission the Children's Status Act was enacted to provide inter alia for a situation in which children are the product of artificial fertilisation. Section 5 of that Act regulates the effect of artificial insemination. Artificial insemination has thus been a legally and morally acceptable means of assisted reproduction in South Africa for some time. A more relevant question from the perspective of constitutional law involving the right of access to reproductive care and reproductive rights is, whether a lesbian couple can insist on one partner being artificially inseminated so that they may have a child. This issue is complicated by the fact that the sperm donor must, in terms of the regulations to the

---

413 Fa 270 supra
414 Act No 92 of 1987
415 It provides as follows: (1)(a) Whenever the gamete or gametes of any person other than a married woman or her husband have been used with the consent of both that woman and her husband for the artificial insemination of that woman, any child born of that woman as a result of such artificial insemination shall for all purposes be deemed to be the legitimate child of that woman and her husband as if the gamete or gametes of that woman or her husband were used for such artificial insemination.
(a) means the introduction by other than natural means of a male gamete or gametes into the internal reproductive organs of that woman; or
(b) means the placing of the product of a union of a male and female gamete or gametes which have been brought together outside the human body in the womb of that woman, for the purposes of human reproduction.
Human Tissue Act⁴¹⁶ give a comprehensive written consent including consent to a physical examination and interview by a doctor; the taking of samples of gametes for the purpose of testing, analysing or processing; certain personal details (excluding his name, date of birth and ID number) being made available to the ultimate recipient; certain person details including his family history being made available to the doctor who will perform the artificial insemination; and certain confidential details regarding himself being made available to the Director-General, National Health and Population Development. The question is whether the donor must give consent to the use of his sperm in a situation in which the child will be raised by a same-sex couple. Is it necessary for him to know these details? In other words must the consent be specific and relate to use of the sperm by a named woman who is known to the sperm donor but who is not his wife? Strauss speaks of the “recipient and her husband” in his discussion of the provisions of the regulations to the Human Tissue Act. It is submitted that in the light of recent judgments in the constitutional court involving the constitutional rights of homosexual persons⁴¹⁷ a lesbian couple with a consenting sperm donor could not constitutionally speaking be refused artificial insemination on the basis of the homosexual nature of their relationship. Should the Human Tissue Act stipulate or imply otherwise then it will be necessary to amend that Act accordingly. Another potentially controversial area affecting reproductive rights is the right of a single woman to artificial insemination. Constitutionally speaking it is submitted that a single woman who wants to have a child without being involved in a sexual relationship, has a constitutional right to artificial insemination provided that she can afford the procedure and that the donation of the sperm is in conformity with legal provisions relating to the control of human tissue and gametes. The right to reproduce attaches to individuals and not only to pairs of individuals and is based on the constitutional right to freedom and security of the person - a very personal and private right in terms of its exercise.

The issue of surrogate motherhood and male homosexual couples is more problematic due to the legal complexities of surrogate motherhood per se. The South African Law
Commission produced a *Report on Surrogate Motherhood* in 1992\(^{418}\) which describes surrogate motherhood as:

> "an arrangement whereby one woman undertakes for financial or compassionate reasons to bear a child by means of artificial fertilisation for another person or persons with the intention of handing over the child born as a result thereof to such person or persons with the intention that the child become their legitimate child."

According to the report, the term "surrogate mother" refers to the woman who bears the child rather than the woman who rears the child. Surrogate motherhood in constitutional terms, amounts to the exercise of the right to freedom and security of the person for the benefit of a third party. If surrogate motherhood were to be restricted or prohibited by law it is submitted that it would therefore have to be in accordance with section 36 of the Constitution in order to be valid since it would constitute a limitation of the right to freedom and security of the person. The Law Commission Report notes that it can probably be safely assumed that many surrogacy arrangements have been concluded and fulfilled without problems and publicity. It points out that surrogacy agreements only cause a public outcry when something goes wrong and the parties involved come before a court, for example when the parties want to contest custody, determine guardianship or establish the parentage of the child. According to the Commission, surrogacy arrangements gives rise to questions such as who is the child’s real mother; what is the legal status of the surrogate, the commissioning mother, the natural father or any donor; who has custody of the child; must the commissioning parents adopt the child even if it is biologically their child; can the surrogate consent to adoption; must the maxims *mater semper certa est* (the identity of the mother is always certain) and *pater est quem nuptiae demonstrant* (the father is he whom the marriage points out) apply to the surrogate and her husband; whose consent is required for a surrogacy agreement; and should the surrogate mother receive compensation? Most importantly, will a surrogacy agreement be recognised as a valid agreement and, if so, how will it be enforced?

From a constitutional perspective, to the extent that surrogate motherhood constitutes a waiver of the surrogate mother’s right to freedom and security of the person (depending\(^{418}\) *Report on Surrogate Motherhood Project 65, 1992*
upon the terms of the surrogacy agreement, she may agree to give up some of her rights to make decisions concerning her pregnancy) is a surrogacy agreement valid? This is a general question which relates to the possibility of waiver of constitutional rights rather than being related specifically surrogate motherhood. It is submitted that the question of whether a person can agree to waive, or more appropriately, limit their constitutional rights and freedoms depends very much on the values espoused by the Constitution and public policy. It also depends on the nature and extent of the limitation and the nature of the right. In the context of health care services, a right of access to health care services may be temporarily waived by a person insisting on being discharged from a particular hospital where he or she has been receiving treatment. This could also be argued simply as a choice not to exercise a particular right but it is submitted that a waiver is in many instances exactly that. A clause in restraint of trade in an employment contract is a choice on the part of the employee, in signing the contract, not to exercise his or her right to freedom of movement and freedom to pursue a chosen profession or trade. A professional boxer who steps into a boxing ring for a fight must inevitably, by implication, be accepting certain restrictions or limitations of his right to bodily and psychological integrity.

The South African Law Commission proposed a Bill on Surrogate Motherhood to regulate the consequences of human reproduction by artificial fertilisation of women acting as surrogate mothers. It appears not to have made it to the statute books which could be explained by the fact that it apparently runs contrary to the constitutional reproductive rights of unmarried and homosexual persons and persons who have never been married. Section 4 stipulates that no person except a husband and wife who are lawfully married to each other and who act jointly as a couple shall be competent to conclude a surrogate motherhood agreement. Section 3 is contrary to the reproductive rights of persons who have never been married since only women who are married, divorced or widowed may act as surrogate mothers. Generally speaking the draft Bill is highly restrictive of the constitutional right to freedom and security of the person and may not pass muster in terms of section 36 of the Constitution. The report of the South African Law Commission predates even the interim Constitution and it is therefore not surprising that there was no

\[419\] Government Gazette No 16479 of 14 June 1995.
discussion of constitutional legal principles. However the rights to freedom and security of the person, bodily integrity, autonomous moral agency and self-determination, which predate the Constitution\(^\text{420}\) and do have an impact on surrogacy appear not to have been canvassed in any detail by the Commission.

In the final analysis surrogate motherhood is about the deployment of existing technologies in a manner which impacts upon social values and public policy rather than the utilisation of developing technologies to artificially create a human being. In the comments of the Israel Medical Association to the South African Law Commission\(^\text{421}\):

- Surrogacy is not a new science or technology. It merely entails the use of existing technology namely, gamete donation, in vitro fertilisation and embryo transplantation. Therefore the novelty of the method does not lie in the medical but in the legality and moral nature thereof.
- The ethical questions arising are –
  - The right of a woman over her own body;
  - The right of a couple to procreate;
  - The rights of the surrogate mother as though she may only be the hostess mother she has a right and responsibility to raise the child due to her greater biological and psychological involvement in the birth of the child;
  - The interests of a child who is not conceived in his own interests but to satisfy the needs of others; and
  - The potential exploitation of the woman

\(^{420}\) See for instance Maabo v Felix 1981 (3) SA 865 (A); Clark v Hurst No and Others 1992 (4) SA 630 (D); Castell v De Groot 1994 (4) SA 408 (C) at p 409 in which the court notes: "It is clearly for the patient, in the exercise of his or her fundamental right to self-determination, to decide whether he or she wishes to undergo an operation, and it is in principle wholly irrelevant that the patient's attitude is grossly unreasonable in the eyes of the medical profession: the patient's right to bodily integrity and autonomous moral agency entitles him or her to refuse medical treatment." Duncan v Minister of Law and Order 1986 (2) SA 805 (A) in which the court observed at p806 that: "Policy requires that the defendant in an arrest case should bear a full onus, for the reasons set out in Maabo's case at 873C - F and because the right to bodily integrity and liberty are the most fundamental of a person's absolute natural rights (see Maabo's case at 873D). See also Brand v Minister of Justice and Another 1959 (4) SA at 714G - H; Newman v Prinsloo and Another 1973 (1) SA at 126H - 127G and Maabo's case supra at 873H." In Mapungu And Another v Assistant Magistrate, Witbank, And Another 1977 (2) SA 359 (E) the court observed at p 362: "The liberty of the individual, I must stress, is an important aspect of our civilisation and of our society and is not lightly to be interfered with. Where a court has deliberately accorded official recognition to an accused's right to liberty by the granting of bail, it should be reluctant thereafter to interfere unless convincing facts are placed before it to make it alter its views" and in S v Barber 1979 (4) SA 218 (D) at p 219 "It is well known, of course, that, when a court is required to exercise the discretion which it has to allow a detained person on bail, the court in effect has to balance the detained's right to liberty against the interests of justice."

\(^{421}\) See the SALC Report fn 399 supra at p116 to 117 as summarised by the SALC
It is submitted that the use of the word ‘ethical’ to describe the questions in the second bullet point above is somewhat misleading since most of these questions relate as much to points of law as they do to ethics. If it is remains the view of the authorities that surrogate motherhood should be regulated, this will now have to be done with specific reference to the constitutional rights to freedom and security of the person. Whether surrogate motherhood falls into the category of reproductive care as envisaged in section 27(1) of the Constitution is irrelevant in the sense that surrogate motherhood per se is not about reproductive care but rather the extent of reproductive rights. In this sense it is located more appropriately in discussions around the constitutional right of freedom and security of the person contemplated in section 12 of the Constitution. As a legal topic, it falls largely outside of the scope of reproductive health care services since a pregnant mother whether she is a surrogate or not is entitled to reproductive care in terms of the Constitution. The techniques used in surrogate motherhood such as artificial insemination by donor and in vitro fertilisation are also it is submitted more suited to discussions of section 12 rights than section 27 rights since if they fall within the scope of section 12 rights – in other words they are based upon and supported by the rights in section 12 of the Constitution – no other logical conclusion can be reached but that they must in principle be included within the scope of the right of access to reproductive care bearing in mind the qualifications of section 27(2) of the Constitution with regard to progressive realisation and the availability of resources.

2.9.5 Sterilisation

The converse to the positive aspect of reproductive health care is contraception, sterilisation and ultimately abortion. The right to be sterilised like the right to be artificially inseminated is based rather more upon the right to freedom and security of the person as contemplated in section 12 of the Constitution than the section 27(1) right to reproductive care since if one accepts that a person has a right to security in and control over their own body as stated in section 12(2) (b) then the question of whether or not they have a right to medical
procedures for the purpose of sterilisation is in principle resolved and it becomes merely a question of the available resources of the state as to whether or not a person can undergo a sterilisation procedure. The right to human dignity can also have a bearing on the issue of sterilisation especially in the case of mentally disabled persons. The sterilisation of persons under the age of 18 years is a loaded topic and the issue of the sterilisation of the mentally disabled is even more so. When a mentally disabled person under the age of 18 years presents with a problem that can be resolved through sterilisation health professionals start to get uncomfortable. The Sterilisation Act, as stated previously is currently being amended so as to make it clear that while the reproductive rights of mentally disabled persons under the age of 28 years must be respected and protected, their other constitutional rights, such as the right to human dignity and psychological integrity must also be taken into consideration when the question of their sterilisation arises.

2.9.6 Human Cloning

Cloning is the controversial topic of the day for a number of reasons and the governments of many countries are at this stage opposed to it to a greater or lesser degree. It is much more of a reproductive rights and freedom and security of the person issue than a right to health services issue for the same reasons as in surrogate motherhood and artificial insemination. Unlike surrogate motherhood, however, it is a new technology that is developing at such speed that the law is unlikely to catch up for a while yet. It has the potential for the manipulation, utilisation and, ultimately, abuse of a person’s genetic material without his or her consent or even knowledge. Since genetic makeup is in many ways as unique as a fingerprint, it can be seen as relating in a fundamental way to the identity and personality of a specific human being. As such it impacts upon the constitutional rights of dignity, privacy, and freedom and security of the person and by definition therefore, their reproductive rights. Generally speaking cloning for therapeutic

422 Cloning is seen as diminishing the value of human individuality and as violating basic norms of respect for human life and the integrity of the human species. Voluntary Moratorium on New Reproductive and Genetic Technologies, pronounced by the Minister of Health at the National Press Theatre, Ottawa, July 27 1995, Government of Canada; Projet de loi fédérale sur la procréation médicalement assistée (LPMA) 1996, a. 2m and 36; Law No 94-653, 29 July 1994 on Respect for the Human Body, (1994) 45 (4) IDHL 498, a. 16-4
purposes is considered more acceptable than cloning for reproductive purposes. Article 1 of the Resolution on Reproductive Technologies and the Protection of the Human Person of the International Law Association states that "considering the dignity inherent in all human beings... any research or manipulation of human genetic material shall be for therapeutic purposes and shall be subject to the approval and control of an ethics committee." Therapeutic cloning relates to the right of access to health care services since its purpose is not to create another human being but to grow organs and other tissue for use in the treatment of disease and for similar therapeutic purposes.

There are many different scientific techniques which fall under the broad generic term of "cloning" and in order to explore the legal aspects of cloning as it relates to the right of access to health care services including reproductive health care, one must first consider what is meant by 'cloning' and in order to explore the legal aspects of cloning as it relates to the right of access to health care services including reproductive health care, one must first consider what is meant by 'cloning'. In the now famous case of Dolly the sheep a quiescent adult mammary cell was placed in the unfertilised ovum of a sheep in which the nucleus had been removed. The subsequent embryo was transferred into a surrogate mother sheep where it proceeded to divide as an embryo and was born genetically identical to the done sheep except for the mitochondrial DNA which came from the ovum of the donor. This is a different technique to that used in embryo twinning or splitting. Due to the fact that there are a number of different scientific techniques which can apparently lead to the reproductive cloning of a human being it is difficult to regulate the issue at present.

424 Jordan DW 'Human Reproductive Cloning: A Policy Framework for South Africa' 119 SALJ 2002 p 294 describes two techniques associated with human cloning as being "cell mass division" and "nuclear substitution" and explains the difference between them. He observes that two distinctions can be drawn: in the first place between inter- and intra-generational cloning and secondly between reproductive and non-reproductive cloning. "Intra-generational cloning is when the individuals who share the same genetic identity are born in the same generation, while inter-generational cloning refers to the situation where such individuals are born in different generations. Reproductive cloning is cloning that is aimed at the birth of an individual who is genetically identical to someone in her or her own or in a previous generation. Non-reproductive cloning is cloning that is limited to the in vitro phase - i.e. the cloned embryos are not implanted in uterus.
427 Knoppers (fn 426 supra) points out at G-7 that often countries with an explicit prohibition on human cloning cover embryo splitting or twinning but not the technique that was used to create Dolly. She gives as an example the 1995 Infertility Treatment Act of the State of Victoria in Australia. It bans cloning as well as the attempt to clone with penal sanctions but defines cloning as "to form, outside the human body, an embryo that is genetically identical to another embryo or person" (article 3). According to Knoppers, the German Embryo Protection Law prohibits artificially causing a human embryo to develop with the same genetic information as another embryo, fetus, living person or deceased person and attaches penal sanctions. Knoppers notes that depending on how the phrase "causes a human embryo to develop" is interpreted, this definition "may or may not cover "Dolly". On the other hand, she observes that the highly specific 1990 Human Fertilization and Embryology Act of the United Kingdom, which prohibits "replacing a nucleus of a cell of an embryo with a nucleus taken from a cell of any embryo, person
The antipathy of many nations towards reproductive cloning does not necessarily extend to individual citizens of those states. It has been observed that if the federal government of the United States chooses to regulate or even ban cloning, that action might be challenged on a number of constitutional grounds – as violating scientists’ First Amendment freedom of inquiry or as violating a couple’s or individual’s constitution right of privacy or liberty to make reproductive decisions. In the USA, the right to make decisions about whether to have children is constitutionally protected under the constitutional right to privacy and the constitutional right to liberty. This is a similar basis to the South African constitutional rights to privacy and freedom and security of the person. In *Eisenstadt v Baird* the US Supreme Court commented that “if the right to privacy means anything it is the right of the individual, married or single, to be free from unwarranted governmental intrusion into matters so fundamentally affecting a person as the decision whether to bear or beget a child.” The South African jurisprudence on the subject is not highly developed largely because the constitutional rights that found reproductive rights are relatively new but it is useful to consider the views of courts in other jurisdictions which recognise similar rights in order to get an idea of what the thinking is on the subject. Section 39 of the Constitution permits South African courts to consider foreign case law in interpreting the rights in the Bill of Rights and the constitutional court has referred to the decisions of

or subsequent development of an embryo” may also not be exclusive. The Canadian Bill on reproductive technologies seeks to make it a criminal offence to “manipulate an ovum, zygote or embryo for the purpose of producing a zygote or embryo that contains the same genetic information as a living or deceased human being, or, zygote, embryo or fetus”. Whilst this may cover the Dolly technique it does not allow for developments in technology that may render the use of embryos and reproductive tissue as a source of tissue unnecessary if adult cells can be used for the same purpose.

*Eisenstadt* 403 U.S. 438 (1972)

Quoted by Andrews (fn 428 supra) at F-6.

Joridan (fn 424 supra) explores the ethical and legal considerations of human reproductive cloning. He observes that the Bill of Rights explicitly guarantees the right to reproductive freedom in terms of section 12(2) of the Constitution and notes that reproduction is neither synonymous with, nor dependent on sexual intercourse. On this basis he argues that a prospective parent has a prima facie right to decide to use cloning as a means of reproduction but acknowledges that the right can be limited if sufficient cause is shown in accordance with the limitation clause of the Bill of Rights. He lists the main objections that could be raised as identity, genetic diversity, human dignity, freedom and safety and discusses each of them in turn. He concludes by saying that all of the objections that relate to a permanent aspect of human reproductive cloning have been indicated as false: “human reproductive cloning in the context of the family will not per se compromise human dignity, freedom or the child’s development of a personal identity and will have an infinitesimally small effect on genetic diversity and might even enrich social diversity”. In Joridan’s view the only valid objection to human reproductive cloning is the matter of safety which is not necessarily a permanent nature and the safety objection does provide sufficient ease to place a moratorium on human reproductive cloning. He qualifies this by saying that research may within the near future invalidate the safety objection and that such a moratorium must therefore be only temporary. The safety objection, according to Joridan, is based on the fact that human reproductive cloning is still untested and animal experiments are still in their infancy. In accordance with the bio-ethical principle of beneficence, human reproductive cloning should not be attempted unless it is certain that the risk of birth defects associated with human cloning would not be greater than that associated with sexually conceived children.
American courts in a number of instances. According to Andrews, a federal district court has indicated that the right to make procreative decisions encompasses the right of an infertile couple to undergo medically assisted reproduction, including in vitro fertilization and the use of a donated embryo. Some legal analysts have suggested that the constitutional right to make reproductive decisions free from unnecessary governmental intrusion covers the decision of a couple to undergo cloning. However other legal analysts have noted that the unprecedented step of creating a child with only one genetic progenitor would be such a fundamental change in the way humans "reproduce" that it would not be constitutionally protected. Andrews points out that even if a restriction on cloning were found to infringe upon an individual's or a couple's right to make reproductive decisions, the government could justify the restriction if it had a compelling state interest and the restriction is imposed in the least restrictive manner possible. She argues that the potential physical and psychological risks of cloning an entire individual are sufficiently compelling to justify the banning procedure and comments that certain uses of cloning – such as the creation of a clone as a source of spare organs – would likely be banned by the Thirteenth Amendment prohibition of slavery and involuntary servitude. In South African law, a clone created in order to provide spare organs would have the same constitutional rights as any other human being and therefore could not be exploited for this purpose. Section 36 of the Constitution allows the limitation of rights by law of general application to the extent that the limitation is reasonable and justifiable in an open and democratic society based on human dignity, equality and freedom, taking into account all relevant factors including inter alia the importance of the purpose of the limitation, the nature and extent of the limitation and less restrictive means to achieve the purpose. The legal position in South Africa with regard to cloning for reproductive purposes is thus potentially the same as that in the United States although the views on cloning itself may differ between the two countries.

432 In Christian Lawyers Association of SA and Others v Minister of Health and Others (fn 21 supra) for instance, the court applied the American decision of Roe v Wade (410 U.S. 113 (1973)). Examples of other cases in which the South African courts have made reference to American decisions are S v Mkhwayane and Another (fn 2 supra); Bernstein and Others v Baxter and Others NNO (fn 43 supra); Soobramoney v Minister of Health, KwaZulu-Natal (fn 23 supra); Minister of Health and Others v Treatment Action Campaign and Others (No 2) (fn 57 supra); Friedman v Glickman (fn 185 supra).

With regard to therapeutic cloning, particularly, the legal position in South Africa may be very different to that in the United States. Andrews observes that the use of cloned cells and tissue for research purposes other than the creation of a child would not be protected by the constitutional rights of privacy and liberty that protect reproductive decisions. Consequently a governmental regulation or ban of such research would not have to have such stringent justification. It would be constitutional so long as it was rationally related to an important governmental purpose. In South Africa, there is a constitutional right of access to health care services and this might well include aspects of cloning for therapeutic purposes, especially if it were the only treatment available and widely recognised as being appropriate for the purpose.

The view that therapeutic cloning *per se* is not necessarily a health care service any more than the activities around the research and development of a new drug constitute the drug itself could be of some relevance in constitutional questions involving cloning. It could, for instance, be argued that a health care service directly involves another human being as opposed to medical research activities which may or may not be of benefit to the health status of human beings. If one takes the view that unfettered medical research of all kinds must be permitted and encouraged by the state because medical research invariably carries the potential of improved access to health services or improved health services *per se*, this would not only lead to all kinds of human rights abuses in the field of medical research but would also present an unbalanced view of the rights and values contained in the Constitution. Cloning at this stage, as a collective term for the wide variety of scientific and laboratory activities that are involved in the artificial production of an embryo or embryonic cells or the scientifically forced evolution of stem cells into more specialised tissue, seems more of a precursor to health care services than a health service in its own right. It is a means to an end rather than an end in itself. Perhaps with time when cloning techniques are well established and the production of human tissue for various therapeutic purposes is the equivalent of having a dental technician make up a dental crown or bridge, one could regard therapeutic cloning as a health service with a greater degree of certainty.

---

In *van Biljon* (fn 228 supra) the court observed that “What has been established on the papers in this case is: (a) that although there is as yet no cure for the HIV virus, the internationally recognised ‘state of the art’ medical treatment for HIV infected patients is anti-viral medication.”
It is submitted that as far as a prohibition on cloning for reproductive purposes is concerned its legitimacy would have to be argued on the basis of a justifiable limitation of rights in terms of section 36 of the Constitution if cloning if cloning is within the scope of the right to reproduce. Whilst this may sound somewhat tautologous this is not necessarily the case since there may be scope for the argument that cloning process is so far removed from the process of human reproduction that it does not qualify as such in terms of any of the values of an open and democratic society. The central importance of the right to human dignity in the South African Constitution is also likely to have a strong bearing on any discussion of a prohibition on reproductive cloning since some of the objections to reproductive cloning referred to previously have been on the basis of the fact that it denies or adversely impacts upon human dignity.

It is submitted that with time questions of identity (or rather physical identification) would become of central importance in a society in which reproductive cloning took place on a significant and largely unregulated scale and that Jordaan’s dismissal of the identity objection to cloning is overly simplistic. It deals with only one aspect of the highly complex subject of identity in a civilised society. There is a real sense in which society is functionally dependent upon physical identity as a marker or trigger for all kinds of controls, sanctions, privileges and purposes ranging through competence to drive a motor vehicle to criminal investigation processes and proof of guilt to personal security and banking systems to proof of parenthood and familial relationships. It is submitted that if reproductive cloning were to be permitted it would necessitate the introduction of powerful controls over human tissue so as to avoid the cloning of someone without his or her knowledge or consent. The physical identity of film stars, famous sportsmen and women and musicians is a jealously guarded aspect of their personality rights and may even in some cases constitute intellectual property. This is an aspect of reproductive cloning for future consideration. A child that is unwittingly saddled with a genetic identity that is the same as that of international terrorist or serial killer could be severely prejudiced.

\[436\] Jordaan (fn 424 supra) argues apparently on the basis that monozygotic twins are a natural phenomenon that is no more and no less desirable that non-twins that there is no right to genetic uniqueness and that indeed the concept of such a right would be offensive to monozygotic twins. He argues that monozygotic twins, although they share the same genetic structure clearly demonstrate that while people who share the same genetic structure may be very similar in many respects, they nevertheless differ sufficiently to leave no doubt about their individual identity.
throughout his or her life. It is not inconceivable that in a society that freely practises human reproductive cloning over a significant period of time, a criminal justice system might become virtually impossible because the moment that evidence is introduced to show that the accused is a clone or there are insufficient controls over human tissue in society such that the chances are high that he could be a clone, especially within the same generation, proof of guilt beyond reasonable doubt could become problematic. Even systems of ownership of property are often dependent upon the capacity to physically identify the owner. Jordaan in his dismissal of the identity argument against reproductive cloning fails to take into account the frequency of the occurrence of monozygotic twins relative to the frequency of births of non-identical persons. Monozygotic twins are not less desirable than non-twins because they are a comparatively rare occurrence. Furthermore, they are seldom if ever inter-generational. The identity objection rests on questions of balance and of degree. If the balance in society shifts in favour of individuals who have a genetic replica of themselves concurrently in existence, questions of identity would become problematic in just about every facet of human social and commercial life. The foregoing discussion may read like something from a science fiction novel but the power to generate identical human beings should not be underestimated in terms of its potential impact. With the passage of time the potential impact of the exercise of such power increases exponentially if it is allowed to be exercised indiscriminately and on a large scale.

It is not necessarily a valid assumption that many people would prefer sexual intercourse as a means of procreation given the choice between sexual reproductive means and non-sexual reproductive means. After all, they can enjoy sexual relations without reproducing. There may be considerable numbers of people who ardently desire to raise what they consider to be perfect offspring based upon notions of perfection as suggested or even dictated by mass media and personal idolisation of prominent politicians, actors, musicians and sportspersons and who have the means to make their dreams a reality. There are many people, reproductive cloning aside, who even now would like their children to resemble a famous sportsperson or actor for financial reasons. The psychosocial implications of reproductive cloning alone have the potential to significantly alter the fabric of human society. It is submitted that human tissue is presently far too readily available in society as a whole to be
able to reassure individuals that they will not be reproductively cloned against their will or without their consent. Until such assurances can be given there is good reason for strict control, if not outright prohibition, of reproductive cloning. In principle cloning, whether for therapeutic or reproductive purposes, is simply a further step in the continual advancement of technology which will no doubt with time become a more acceptable concept to many people. In a controlled environment, which ensures that it is not abused, therapeutic cloning in particular has significant potential value for the health and wellbeing of humans generally.

2.10 National vs Provincial Government Obligations

The Constitution organises the responsibilities between the three spheres of government in terms of the Schedules and mandates co-operative government between them in section 41. The three spheres of government are referred to in section 40 subsection (1) of which states that:

"In the Republic, government is constituted as national, provincial and local spheres of government which are distinctive, interdependent and interrelated."
The national executive is given the power in section 100 to intervene when a province cannot or does not fulfil an executive obligation in terms of legislation or the Constitution, to ensure fulfilment of the obligation. It was perhaps in view of this section that the court observed in *Grootboom* that:

"The national government bears the overall responsibility for ensuring that the state complies with the obligations imposed upon it by s 26."

It is submitted that this statement is equally true in respect of the obligations of the state in terms of section 27. Section 146 of the Constitution provides for the event of a conflict between national and provincial legislation in a functional area listed in Schedule 4 as follows:

(2) National legislation that applies uniformly with regard to the country as a whole prevails over provincial legislation if any of the following conditions is met:

(a) The national legislation deals with a matter that cannot be regulated effectively by legislation enacted by the respective provinces individually.

(b) The national legislation deals with a matter that, to be dealt with effectively, requires uniformity across the nation, and the national legislation provides that uniformity by establishing-

(i) norms and standards;

and then leaves the details to be filled in by the provinces and the local governments to suit their own particular circumstances. They say that more often than not the sharing of responsibility translates into an arrangement in which framework laws and policies are made centrally and the laws are completed and executed at the provincial level. This arrangement has the advantage of securing uniformity across the country while allowing the provincial authorities to adapt the details to suit local implementation. The loss of the provinces own law making powers is then compensated for by providing them with opportunities to participate in the national legislative process. It is submitted that in the area of health services at least, although some provinces are more active and progressive than others, there is small doubt that they have not relinquished their legislative capacity.

"When a province cannot or does not fulfil an executive obligation in terms of legislation or the Constitution, the national executive may intervene by taking any appropriate steps to ensure fulfilment of that obligation, including-

(a) issuing a directive to the provincial executive, describing the extent of the failure to fulfil its obligations and stating any steps required to meet its obligations; and

(b) assuming responsibility for the relevant obligation in that province to the extent necessary to-

(i) maintain essential national standards or meet established minimum standards for the rendering of a service;

(ii) maintain economic unity;

(iii) maintain national security; or

(iv) prevent that province from taking unreasonable action that is prejudicial to the interests of another province or to the country as a whole."

*Cameron AJ* has pointed out in *Ex Parte President Of The Republic Of South Africa: In Re Constitutionality Of The Liquor Bill 2000* (1) SA 732 (CC) at para 48 p760 that: Whereas the Constitution makes provision for conflicts between national and provincial legislation falling within a functional area in Schedule 4, and between national legislation and a provincial constitution, the sole provision made for conflicts between national legislation and provincial legislation within the exclusive provincial terrain of Schedule 5 is in s 147(2), which provides that national legislation referred to in s 44(2) prevails over Schedule 5 provincial legislation. This suggests that the Constitution contemplates that Schedule 5 competencies must be interpreted so as to be distinct from Schedule 4 competencies and that conflict will ordinarily arise between Schedule 5 provincial legislation and national legislation only where the national legislature is entitled to intervene under s 44(2)." (Footnotes omitted)
(ii) frameworks; or
(iii) national policies.

(c) The national legislation is necessary for-
(i) the maintenance of national security;
(ii) the maintenance of economic unity;
(iii) the protection of the common market in respect of the mobility of goods, services, capital and labour;
(iv) the promotion of economic activities across provincial boundaries;
(v) the promotion of equal opportunity or equal access to government services; or
(vi) the protection of the environment.

(3) National legislation prevails over provincial legislation if the national legislation is aimed at preventing unreasonable action by a province that-
(a) is prejudicial to the economic, health or security interests of another province or the country as a whole; or
(b) impedes the implementation of national economic policy.

(4) When there is a dispute concerning whether national legislation is necessary for a purpose set out in subsection (2) (c) and that dispute comes before a court for resolution, the court must have due regard to the approval or the rejection of the legislation by the National Council of Provinces.

(5) Provincial legislation prevails over national legislation if subsection (2) or (3) does not apply.”

The Constitution does not define the term ‘health services’ and it does not define the term ‘municipal health services’ either. This creates something of a problem for the three spheres of government when it comes to budgeting. In order to be able to budget for health services, it is necessary to know where one’s responsibility begins and ends. In the case of municipal health services the national and provincial spheres of government have concurrent legislative competence to the extent set out in section 155(6)(a) and (7). These sections require that each province must establish municipalities in its province in a manner consistent with the legislation enacted in terms of subsections (2) and (3) and by legislative and other measures must –

(a) provide for the monitoring and support of local government in the province; and
(b) promote the development of local government capacity to enable municipalities to perform their functions and manage their own affairs.

They also state that the national government, subject to section 44 and the provincial governments have the legislative and executive authority to see to the effective performance by municipalities of their functions in respect of matters listed in schedules 4 and 5, by regulating the exercise by municipalities of their executive authority referred to in section 156(1).
The fact that municipal health services are mentioned separately in Part B of Schedule 4 and that the legislative power over them by the national and provincial spheres of government is restricted implies that they must be different from health service as listed in Part A of Schedule 4 in terms of which no restrictions are imposed. However the matter is not as simple as this Cameron AJ points out in the *Liquor Bill* case that:

"The Constitution-makers’ allocation of powers to the national and provincial spheres appears to have proceeded from a functional vision of what was appropriate to each sphere and, accordingly, the competences itemised in Schedules 4 and 5 are referred to as being in respect of ‘functional areas’. The ambit of the provinces’ exclusive powers must, in my view, be determined in the light of that vision. It is significant that s 104(1)(b) confers power on each province to pass legislation ‘for its province’ within a ‘functional area’. It is thus clear from the outset that the Schedule 5 competences must be interpreted as conferring power on each province to legislate in the exclusive domain only ‘for its province’. From the provisions of s 44(2) it is evident that the national government is entrusted with overriding powers where necessary to maintain national security, economic unity and essential national standards; to establish minimum standards required for the rendering of services; and to prevent unreasonable action by provinces which is prejudicial to the interests of another province or to the country as a whole. From s 146 it is evident that national legislation within the concurrent terrain of Schedule 4 that applies uniformly to the country takes precedence over provincial legislation in the circumstances contemplated in s 44(2), as well as when it:

(a) deals with a matter that cannot be regulated effectively by provincial legislation;
(b) provides necessary uniformity by establishing norms and standards, frameworks or national policy;
(c) is necessary for the protection of the common market in respect of the mobility of goods, services, capital and labour, for the promotion of economic activities across provincial boundaries, the promotion of equal opportunity or equal access to government services or the protection of the environment.

From this it is evident that where a matter requires regulation *inter-provincially*, as opposed to *intra-provincially*, the Constitution ensures that national government has been accorded the necessary power, whether exclusively or concurrently under Schedule 4, or through the powers of intervention accorded by s 44(2). The corollary is that where provinces are accorded exclusive powers these should be interpreted as applying primarily to matters which may appropriately be regulated *intra-provincially." (writer’s emphasis)

The trouble with health care services is that it can be extremely difficult to determine in practice which of them should be regulation *inter-provincially* as opposed to *intra-
provincially due to their often polycentric nature⁴⁴⁵ As explained by the court in *van Biljon’s case*:

"What is meant by polycentric decisions has also been described as follows with reference to the image of a spider’s web:

‘A pull on one strand will distribute tensions after a complicated pattern throughout the web as a whole. Doubling the original pull will, in all likelihood, not simply double each of the resulting tensions. This would certainly occur, for example, if the double pull caused one or more of the weaker strands to snap. This is a “polycentric” situation because it is “many centred” - each crossing of the strands is a distinct centre for distributing tensions.’⁴⁴⁶

On the subject of the power of the legislative competence of provinces in respect of local government matters the constitutional court observed in the *Certification judgment* at paras 375 to 377 that:

“There is another respect in which provincial powers and functions in respect of LG have been altered. In IC sch 6 there is listed a broad functional area of legislative competence termed ’Local Government, subject to the provisions of chap 10’. Within this broad sphere, and subject to national legislative overrides, provincial governments are free to legislate directly in relation to all LG matters. In the NT, however, specific functional areas of legislative competence in relation to LG are detailed in NT schs 4 and 5. Other legislative competences not dealt with in the NT may be assigned to the provinces by national legislation in terms of NT 104(1)(b)(iii). This restricted list-based provincial competence contained in the NT stands to be compared with the unenumerated potentially concurrent legislative powers afforded provinces under the IC. It is a difficult comparison to make. Notwithstanding that the lists of LG matters in parts B of NT schs 4 and 5, respectively, are extensive, it must be recognised that the enumerated list approach must, to some extent, be more restrictive than a loosely defined area of competence. This must mean that the NT attenuates the manner in which the legislative power is exercised. We conclude that to this extent provincial powers have been diminished in the NT. In respect of NT sch 5 matters, however, this diminution fails to be further gauged in the context of the measures safeguarding provincial power that are found in NT 76 read with NT 44(2). Under the latter, Parliament can intervene in NT sch 5 matters only when it is necessary to achieve the objectives set out in NT 44(2)(a)-(c). Such legislation is subject to the mechanism of NT 76(1), in terms of which the will of the NCOP, the institutional locus of provincial interests at national level, can be overborne only by a two-thirds majority of all the members of the NA. The greater constraint placed upon the national Legislature

⁴⁴⁵ Cameron AJ fn 442 *supra* highlights the nature of these difficulties in relation to Schedule 4 and Schedule 5 competences which are at least separated by a different Schedule whilst health care services appear in a single Schedule in terms of which provinces and national government have concurrent legislative competence: “That Schedule 4 legislation may impact on a Schedule 5 functional area finds recognition on one reading of s. 44(3). Whatever its true reading this provision was not designed to undermine the Schedule 5 competences. They retain their full meaning and effect, except where encroachment by national legislation would in fact be ‘reasonably necessary for, or incidental to’ the effective exercise of a Schedule 4 power. Since, however, no national legislative scheme can ever be entirely watertight in respecting the excluded provincial competences, and since the possibility of overlaps is inevitable, it will on occasion be necessary to determine the main substance of legislation and hence to ascertain in what field of competence its substance falls; and, this having been done, what it incidentally accomplishes. This entails that a Court determining compliance by a legislative scheme with the competences enumerated in Schedules 4 and 5 must at some stage determine the character of the legislation. It seems apparent that the substance of a particular piece of legislation may not be capable of a single characterisation only and that a single statute may have more than one substantial character. Different parts of the legislation may thus require different assessment in regard to a disputed question of legislative competence.” (Footnotes omitted)

⁴⁴⁶ *Van Biljon* fn 236 at p 454
by the NT in respect of NT sch 5 matters has to be weighed against the attenuation of competences brought about by the listing of functions. A further relevant factor in the weighing process is to be found in NT 164. Pursuant to this provision all matters not dealt with under the NT may be prescribed by national or provincial legislation, the latter within the framework of national legislation. This power to prescribe residual LG matters may well be significant. Not only are provincial legislatures competent to so prescribe but the function of national legislation is restricted to regulation. It is adequate for present purposes to state that the term 'regulate' connotes a broad managing or controlling rather than a direct authorisation function. Thus Parliament is entitled, in relation to provincial legislative power under NT 164, to establish the general framework within which such power is to be exercised. This leaves room for provinces to determine details of LG matters within that framework and to legislate for them.\textsuperscript{447}

It is worth noting that whilst Schedule 4 lists functional areas of concurrent national and provincial legislative competence, no mention is made of 'executive competence'. The court in \textit{Executive Council, Western Cape Legislature, And Others v President Of The Republic Of South Africa And Others}\textsuperscript{448} pointed out that:

"The provinces are given executive competence by s 144(2) over:

'. . . all matters in respect of which such province has exercised its legislative competence, matters assigned to it by or under s 235 or any law, and matters delegated to it by or under any law'."

The constitutional court in \textit{Ex Parte Chairperson Of The Constitutional Assembly: In Re Certification Of The Constitution}\textsuperscript{449} seems to regard executive competence as a concomitant of the legislative competence referred to in Schedule 4. It observed that:

"In the CJ we took into account that in terms of the IC the provinces have legislative and executive competence in respect of education" (writer’s emphasis). Chaskalson \textit{et al} point out that constitutionally, provincial executive authority is derived from three sources:

(1) exercised provincial legislative competence;
(2) powers delegated to the province by any law, and
(3) powers assigned to the province\textsuperscript{450}

The legislative competence of a province is only exercised when the province enacts legislation.

The legislative system for health care services as contemplated in the Constitution is itself polycentric in that municipalities have legislative and executive competence over municipal

\textsuperscript{447} Certification judgment fn 59 supra at p 882-883
\textsuperscript{448} Executive Council, Western Cape Legislature 1995 (4) SA 877 (CC)
\textsuperscript{449} Ex Parte Chairperson Of The Constitutional Assembly 1997 (2) SA 97 (CC) at para 170 p152
\textsuperscript{450} Chaskalson \textit{et al} fn 67 supra at p 4-4
health services\textsuperscript{431}. Municipal health services are not defined but their boundaries will influence the scope of health care services since presumably whatever is not a municipal health service is a health service as contemplated in Part A of Schedule 4. Provinces and national government have concurrent legislative competence over health services. However, a province only has executive competence over health services if it has exercised its legislative competence over health services or powers have been assigned to it or delegated to it in terms of any law. One cannot therefore assume that all of the provinces have executive competence over all areas of health services within the province. Some provinces have enacted health立法 whilst others have not.\textsuperscript{432} National government has a concurrent legislative competence with provinces over health services. The national government has not yet enacted framework legislation with respect to health services whereas quite a few of the provinces have done so intra-provincially. In terms of section 156(4) of the Constitution national and provincial governments must assign to a municipality "by agreement and subject to any conditions" the administration of a matter listed in Part A of Schedule 4 or Part A of Schedule 5 which necessarily relates to local government if that matter would be most effectively administered locally and the municipality has the capacity to administer it. So municipalities can actually be responsible, on a contractual basis for health services that are more than just municipal. The web becomes even more complicated when one considers that in terms of section 84(1)(i) of the Local Government: Municipal Structures Act\textsuperscript{433}, district municipalities (Category C municipalities in terms of section 155 of the Constitution) are responsible for municipal health services but local municipalities (Category B municipalities in terms of section 155 of the Constitution) are the ones that are currently providing health services although they

\textsuperscript{431} Section 151(2) of the Constitution states that the executive and legislative authority of a municipality is vested in its Municipal Council. Section 151(3) of the Constitution provides that a municipality has the right to govern, on its own initiative, the local government affairs of its community, subject to national and provincial legislation as provided for in the Constitution\textsuperscript{4}. Section 151(4) stipulates that the national or provincial government may not compromise or impede a municipality's ability or right to exercise its powers or perform its functions.

\textsuperscript{432} See for instance the KwaZulu Natal Health Act No 4 of 2000; the Free State Hospitals Act No 13 of 1996; the Free State Provincial Health Act No 8 of 1999; the Eastern Cape Health Act No 10 of 1999; the Western Cape Health Facilities Boards Act No 7 of 2001; the Western Cape Health Act Amendment Act No 6 of 2002; the Eastern Cape Provincial Health Act No 10 of 1999; the Northern Province Health Services Act No 9 of 1999; the Health Laws Rationalisation Act No 11 of 1995 of the North West Province. See also the Assignment to the Provinces of the Health Act, 1977 under section 225(8) of the Constitution of the Republic of South Africa 1993 in terms of which the President assigned the administration of the Health Act 1977 (Act No 63 of 1977) excluding those provisions (if any) of the said Act which falls outside the functional areas specified in Schedule 6 to the Constitution or which relate to matter referred to in paragraphs (a) to (e) of section 126 (3) of the Constitution, to a competent authority within the jurisdiction of the government of a province mentioned in section 124 (1) of the Constitution designated by the Premier of the province concerned.

\textsuperscript{433} Act No 117 of 1998
have to be specifically empowered to do so in terms of section 84(3)(a) of the Local Government: Municipal Structures Act. Thus although the national government is ultimately responsible for ensuring that the constitutional obligations of the state with regard to section 27 of the Constitution are fulfilled, the provincial and municipal spheres of government have their own unique and original powers and responsibilities with regard to health services and it is not simply a matter of national government being able to enact legislation or go in and take control of the delivery of health services that fall within the scope of the powers awarded by the Constitution to provinces and municipalities. This makes for a complex dynamic in the area of health services between national, provincial and local spheres of government which renders it inevitable that the national Minister of Health is likely to be cited as a respondent in all litigation involving health care services irrespective of the level of involvement of the national department of health in the circumstances of the case.

Although the national department of health does not presently regard the direct provision of health care services as its core function due to the fact that the provinces own the resources such as hospitals, clinics and pharmaceutical depots necessary to provide these services and that the provinces are providing them, it is submitted that if the national sphere of government is to be ultimately responsible for the fulfilment of the rights contemplated in section 27 of the Constitution, then it must, in the absence of a power to compel the provision of health care services by a province, retain the power to render those services at national level. Proclamation 152 of 1994 which assigned certain functions of the Health Act No 63 of 1977 to the provinces recognised this in its exclusion of section 14 of that Act from the assignment. In terms of section 14(1)(a) of the Health Act:

“(1) In addition to the functions entrusted to the Department of Health by any other law, the functions of the said Department shall, subject to the provisions of this Act, be-

(a) with due regard to health services rendered by provincial administrations and local authorities, to co-ordinate health services rendered by the said Department and to provide such additional services as may be necessary to establish a comprehensive health service for the population of the Republic of South Africa;”
There is a mirror provision in section 16(1) of the Act which deals with the functions of the provinces which requires them to take into consideration the services rendered by the national department and other provinces and local authorities.

The National Health Bill which is intended to repeal the Health Act of 1977 is being processed at the time of writing and a detailed discussion of its provisions is thus not presently possible.

It is important to note with regard to section 100 that it is the national executive that must invoke its provisions. The national department of health or even the Minister of Health does not have the power to intervene directly in terms of this section if a province is failing to provide health care services. The national executive may issue a directive detailing the shortcomings of the province and how they can be addressed and may assume the functions of the province on limited grounds. The manner if any in terms of which the directive contemplated in section 100 may be enforced is a delicate subject. The fact that the constitution provides for the assumption of responsibility for the relevant obligation in the province by the national executive tends to suggest that this is the constitutionally acceptable method of enforcement of the directive. Section 41 stipulates specifically that the spheres of government must avoid legal proceedings against one another. It also requires them to assist and support one another. The section provides that national legislation may regulate the process established by this section but to date no such legislation has been forthcoming.

2.11 Horizontal Application of The Right To Health Care Services

The question of the horizontal application of the right to health care services has been touched on many times in the course of this chapter. Since the horizontal application of rights is a recurring theme involving private individuals and other entities within the private sector, it will arise as a topic in other chapters that relate to obligations between such parties. Consequently an attempt will be made in this section to identify only some of the key principles leaving more detailed and case specific discussions for later. The question of
the extent to which the constitutional rights involving health care services are enforceable against health care service providers in the private sector is clearly of vital interest to those providers. Unlike public health facilities and providers they are not funded by the fiscus and they must make sufficient profit from health care delivery to make it worth their while, and in the case of juristic persons, their investors' and potential investors' while, to continue to do so. If the contribution of the private health sector in South Africa to health service delivery is regarded as valuable and worthy of preservation, then the horizontal application of the right to health care services must be seen against this backdrop and in the context of the need for a balancing of the right to 'trade' in health care services and the rights of consumers of health care services.

The question of the horizontal application of rights has been the subject of some debate in the context of both the interim Constitution and the final Constitution and the section in the interim Constitution was changed in order to make more explicit the idea that the rights in the Bill of Rights are capable of horizontal application in certain circumstances. Section 8(2) stipulates that a provision of the Bill of Rights binds a natural or a juristic person if, and to the extent that, it is applicable taking into account the nature of the right and the nature of any duty imposed by the right. In terms of section 8(3), when applying the provisions of the Bill of Rights to a natural or juristic person in terms of subsection (2) a court in order to give effect to a right in the Bill, must apply, or of necessary develop, the common law to the extent that legislation does not give effect to that right and may develop rules of the common law to limit the right, provided that the limitation is in accordance with section 36(1). De Waal et al. note that there are five general considerations regarding the interpretation of section 8(2) that must be kept in mind from the outset.

See the comments of Davis et al. (fn 124 supra) at p 30 where they state that: "In the earlier work we stated what we thought was the obvious — Chap 3 applied to all law. We thought it uncontroversial and accordingly did no more than briefly describe the background debate and explain the mechanics of section 7(2) [of the interim Constitution] and why it was that we thought the chapter applied to the common law and customary law. We were wrong on several counts. Our rendition of the debate was contested by Du Plessis LM and Corder H in Understanding South Africa's Traditional Bill of Rights, Juta & Co Ltd, Kenwyn 1994 at p 112 seq. The issue was hotly contested in the press and academic journals. The courts were evenly divided until the Constitutional Court decided the issue in Du Plessis & others v De Klerk and Another 1996(5) BCLR 658 (CC). The majority court took an opinion opposite the one advanced in this book" and at p 43 where they observe that: "The application provisions of the Chapter 2 of the Bill of Rights has been subjected to far more dramatic change that any other provision of Chapter 3 of the Interim Constitution. Whatever the interpretation placed on 45, it now will have some form of horizontal application." See also the observation of Liebenberg in Chakalasen et al. (fn 43 supra) at 41-45 where she states that: "One of the profound changes introduced by the final Constitution is in respect of the application of the Bill of Rights to private parties."
1. Section 8(2) states that a 'provision' may apply to private conduct. It does not say that a 'right' may apply to private conduct. It is therefore possible, and quite reasonable that some of the provisions of the Bill of Rights may apply to the conduct of a private person or juristic persons while other provisions in the same section (and pertaining to the same right) will not apply to such conduct. For example, the right of access to health care services s27 (1) and (2)) probably does not apply horizontally.[For the reason that the duty imposed by the right is too burdensome to impose on private individuals] However, the right not to be refused emergency medical treatment (s27(3)) probably does apply horizontally...

2. Questions concerning the horizontal application of the Bill of Rights cannot be determined a priori and in the abstract. Although this is not explicitly stated, whether a provision in the Bill of Rights applies horizontally also depends on the nature of the private conduct in question and the circumstances of a particular case. This explains why section 8(2) states that a provision in the Bill of Rights binds a natural or juristic person if, and to the extent that, it is applicable. The extent to which a provision is applicable can only be determined by reference to the context within which it is sought to be relied upon.... However, a resort to context or the circumstances of a particular case should not be used to frustrate the clear intention of the drafters of the 1996 Constitution to extend the direct operation of the provisions of the Bill of Rights to private conduct. It is not permissible to argue, for example, that it is only when private persons find themselves in a position comparable to the powerful state that s 8(2) binds them to the Bill of Rights. It may be that most private or juristic persons do not have the capacity to infringe human rights in a manner and on a scale comparable to the state. But any interpretation of s 8(2) must avoid relying on such gross generalizations. The subsection was after all included to overcome the conventional assumption that human rights need only be protected in vertical relationships.

3. The purpose of a provision is an important consideration in determining whether it is applicable to private conduct or not... [T]he purpose of the right to human dignity does not necessarily demand differentiation between the state and private conduct.

4. The nature of any duty imposed by the right must be taken into account. This recognises that private or juristic persons are often primarily driven by a concern for themselves. On the other hand the state is supposed to be motivated by a concern for the well-being of society as a whole. The application of the Bill of Rights to private conduct should not undermine private autonomy to the same extent that it places restrictions on the sovereignty of government. This consideration is of particular importance when it comes to the

---

456 Davis et al (In 124 supra) observe at p 47 that: "Based on the inclusion of the word ‘judiciary’ in s (8)(1), and the significance given to that word by the Constitutional Court in the judgment of Kevorstjde AJ in the Du Plessis case, [Du Plessis & Others v De Klerk & Another 1996 (3) SA 850 (CC)] it can be argued that the conclusion reached by Mohamed DP with regard to horizontality, namely, that the horizontal application will apply to all private relationships is correct, even if Kriegler J could find liberal philosophical support for the conclusion that there are a range of relationships which should fall outside of the law. If the notion of judiciary in s 8(1) now implies that the Chapter applies to all law, the addition of section 8(2) appears to extend the ambit beyond the law to the conduct of private persons. Section 8(2) now asks of a court that it investigate all private relationships to ascertain whether a constitutional right is applicable to such a relationship. A person who previously had no right against another, might now enjoy such a right as the Constitution alters the nature of the private relationship." This has far-reaching implications. In the case of the right of access to health care services for instance it might be possible to ground a constitutional claim of violation of this right in the absence of the negligence required to ground a claim in delict for the same omission or act and in the absence of the existence of a contract for those health services. The conduct of a private hospital in delivering health care services to a patient must not only be judged against the contract it has with that patient but must also be scrutinised to determine whether there was any violation of a constitutional right that came into play in the relationship. Davis et al comment that: In this way the relationship between a s 8(1) which applies to all law and a s 8(2) which applies to private relationships becomes coherent and consistent. There is a mandatory application of the Bill of Rights to all forms of law in terms of section 8(1) but a discretionary application to private relationships in terms of s 8(2), the discretion being bounded by the inquiry into the issue of suitability."
imposition of duties which entail the spending of money. Since the conduct of private persons has to funded from their own pockets, the same duties may not be imposed on them as can be imposed on an organ of state which relies on public funds. For example a private hospital cannot, unlike a state hospital, be saddled with the duty to provide every child with basic health care services (s 28(1)c).

5. In some instances indications are found in the Bill or Rights itself as to whether a particular right may be applied to private conduct or not. Also it can be said that the nature of the duties imposed by the right to have legislative and other measures taken to protect that environment (s24(b)), to realize the right to housing (s26), the right to health care, food, water and social security (s27) and the right to education (s29) would normally result in them not being applicable to private conduct...

The judgment of the constitutional court in *Du Plessis v De Klerk*, which will be considered in greater detail in a subsequent chapter caused quite a stir in legal academic circles when the court found that, for the purposes of the interim Constitution, the Bill or Rights applied only vertically. It set out some guidelines as follows:

- A private litigant may not invoke a right guaranteed in the Bill of Rights against another.
- A private litigant may, however, argue that a statute or executive act relied upon by the other private party is invalid because it is inconsistent with the Bill of Rights;
- Acts or omissions on the part of government may be attacked by a private litigant as being inconsistent with the Bill of Rights in any dispute with an organ of government due to the fact that the Bill of Rights also applies to common law.

The furor that this judgment caused in legal circles will be canvassed in a subsequent chapter when discussing the application of the Bill of Rights in the private sphere. It is

---

457 In the context of health services this is nowhere more apposite than in the situation of pharmaceutical research and development which is very much the domain of private enterprise. If it becomes apparent to pharmaceutical manufacturers that drugs for the treatment of HIV/AIDS are not profitable because of the pressure exerted by governments and activists or the application of the right of access to health care services to bring the prices down to the point where it is no longer feasible to research, develop or manufacture or supply such drugs, and they cease to do so the very aim that such activity seeks to achieve will be defeated at inconceivable cost to society. The private sector cannot be compelled to invest money in unprofitable enterprises for the greater good.

458 *Du Plessis fn 456 supra*

459 *Davis et al fn 124 supra* at p 30 observe that "The issue was hotly contested in the press and in academic journals. The courts were evenly divided until the Constitutional Court decided the issue in *Du Plessis and Others v De Klerk and Another* 1996(5) BCLR 658 (CC). The majority of the court took an opinion opposite the one advanced in this book."

See also Chadie H and Davis D "The Application of the 1996 Constitution In The Private Sphere" (1997) 5JHR 44 who canvases the debates in some detail.
sufficient to note at this point that the application provisions of the interim Constitution in this regard were subject to significant alteration in the final Constitution.\textsuperscript{460}

It is not inconceivable that in certain circumstances the right of access to health care services could be horizontally applicable. Previously, the picture was painted of a scenario in which the state decides that the best way to ensure access to health care services is to become a funder of health care services leaving the supply side to the private sector. In such a situation the patient has nowhere else to go but the private sector and even though this arrangement may have been established in terms of a contract between the state or relevant legislation, it is submitted that the patient’s constitutional right of access to health care services in such an environment may well be enforceable against health establishments and professionals within the private sector as much as against the state. As a further example, it is likely that in a situation where a certain highly specialised form of treatment which has been shown to be successful, i.e. it is not in the experimental stages, is in limited supply due to a shortage of doctors skilled in the technique and the only physician in the country who is capable of administering the treatment to a particular patient refuses to do so on the grounds that as a private practitioner he can choose which patients he sees, it may be possible to argue on behalf of the rejected patient, that the latter has a constitutional right to those services. This would be particularly so if one assumes that the patient is prepared to pay, that he is unable to travel obtain the treatment elsewhere, that the physician’s schedule is not such that he cannot accommodate another patient, and that his refusal is based purely on the fact that he does not have a good relationship with this particular patient. In the case of health services there is often an opportunity cost in choosing one particular health care provider over another because of time constraints in receiving a particular kind of treatment. It is also possible that certain types of treatment are only available in the private sector and that once a course of treatment has commenced it must be pursued to its full conclusion in order to avoid further jeopardy to the patient’s health. A patient could effectively find himself ‘locked in’ to a particular course of treatment which is only available from a particular provider In such situations, it is submitted that discontinuation of the treatment for no good reason could in certain circumstances ground a

\textsuperscript{460} See Davis \textit{et al in} 124 supra at p 43 where the authors observe that the application provisions of the Chapter 2 of the Bill of Rights has been subjected to far more dramatic change than any other provision of Chapter 3 of the Interim Constitution.
constitutional claim in terms of the right of access to health care services. It is further submitted that there is scope for argument that, in much the same way as is contemplated in terms of the law of delict\textsuperscript{461}, once a particular health care provider assumes the responsibility of providing health care services to a particular patient, that patient acquires a constitutional right of access to health care services against the provider concerned, especially in circumstances where transfer of the patient to another facility or medical practitioner is not feasible for some reason. For example where the only hospital, which is a private hospital, in a relatively isolated small town serving a rural community takes into its care a chronically ill patient who is too ill to be transferred to another facility, it is submitted that the patient concerned may well have a constitutional right of access to health care services against that facility. This does not mean that the patient is not obliged to pay for those services but rather that in taking him in the facility has forfeited its power as a private operator to refuse to provide him with the health care services he needs. In summary, it is submitted that it more likely that a private entity will incur a constitutional obligation consistent with the right of access to health care services as contemplated in section 27(1) of the Constitution in relation to situations involving respecting or protecting the right as opposed to promoting and fulfilling it\textsuperscript{462}.

If one considers the composite right to health as opposed to the simple right to health care services then the argument is even stronger that the right is applicable horizontally since the rights to dignity, equality and freedom are not only rights but also human values central to the Bill of Rights and the Constitution\textsuperscript{463}. As observed previously the right to dignity is

\textsuperscript{461} See \textit{Magware v Minister Of Health} NO 1981 (4) SA 472 (C) in which the court held at p 477 that: “It is clear that there was a moral and professional duty to act reasonably towards the plaintiff. It seems to me that, on the facts, once the defendant's employees had undertaken treatment and had engaged in applying the plaster of Paris cast, there was set up a special relationship between defendant's employees, the casualty medical staff, and the plaintiff, different from the relationship between the plaintiff and a disinterested stranger. The plaintiff was in the care of the defendant's medical staff.” Interestingly this was an application of the principles of \textit{Ewele} (fn 376 supra) which was based significantly on considerations of public policy. Since the relationship between public policy and constitutional values is symbiotic in the sense that constitutional values must inform considerations of public policy and that considerations of public policy will undoubtedly have some influence on the way that constitutional values are interpreted and applied, the decision in \textit{Magware} is of relevance in the South African legal context and within the new constitutional legal order despite the fact that it was decided in another country in terms of a different legal dispensation.

\textsuperscript{462} This is supported by the observations of De Waal \textit{et al} (fn 2 supra) at p 45 to the effect that the 1996 Bill of Rights recognises that private abuse of human rights may be as permissible as violations perpetrated by the state. For this reason the Bill of Rights is not confined to protecting individuals against the state. In certain circumstances the Bill of Rights protects individuals against abuses of their rights by other individuals.

\textsuperscript{463} See section 1(a) which states that the Republic of South Africa is founded on the values of human dignity, the achievement of equality and the advancement of human rights and freedoms and also Section 7(1) of the Constitution which states that the Bill of Rights is a cornerstone of democracy in South Africa. It enshrines the rights of all people in our country and affirms the democratic values of human dignity, equality and freedom.”

347
significant to a right to health and is one of the simple rights that contributes to the composite right to health. As de Waal et al point out the right to dignity protects an individual against assault on his or her dignity from any source, whether private or public. In similar vein the right to an environment that is not harmful to health or well-being in terms of section 24 of the Constitution and which is another of the simple rights that comprises the right to health cannot reasonably be said to be applicable only to the state. It would be senseless to prevent only the state from polluting the environment when the major sources of environmental pollution are likely to be located within private industry. The state in South Africa does not own a great many factories or industrial plants or mining operations in comparison to the private sector. Whilst it may be true that rights such as socio-economic rights, requiring legislative measures in order to realise them are likely to be primarily the responsibility of the state, as it is obvious that only the state can legislate, it is submitted that it would be a mistake to assume that this absolves the private sector from all responsibility in respect of those rights. The fact that section 24(b) encapsulates the right to have the environment protected through reasonable legislative and other measures does not detract from the fact that in section 24(a) everyone has the right to an environment that is not harmful to their health or well-being. Similarly, the right of everyone to have access to health care services in terms of section 27(1) sits in a separate subsection to the obligation of the state to realise the right through legislative and other measures within its available resources. It is submitted that obstruction by private persons of someone’s right of access to health care services could well constitute a violation of the right. The question as to what kinds of behaviour could be viewed as obstructive is a question of the facts and circumstances of each case but, it is submitted, could include deliberate misinformation such that a patient does not seek required health care services, illegal strike action by health personnel that results in the unavailability of health services, the failure on the part of a private medical practitioner to refer an illiterate and seriously ill patient to a public health facility at which the required health services are available, the wilful and malicious destruction of the only road that leads to a rural hospital or even the failure on the part of a private contractor to adequately repair the road, failure on the part of a private hospital to maintain backup power supplies in the case of a power failure such that the ventilators in

464 De Waal et al in 2 supra at p56
the intensive care unit suddenly fail etc. Although it is clear that in many cases the examples given above will found claims in terms of the law of delict or of contract it is submitted that the constitutional right of access adds another legal dimension to such claims. It remains to be seen how these and other situations will be dealt with by the courts and the litigants themselves in practice. It is submitted that, generally speaking, implicit in all rights of access is a freedom and that when that freedom is obstructed, curtailed or restricted in a material way there is usually the potential for recourse in terms of the law that granted that freedom. The Constitution, as the law that epitomises the protection of human rights and freedoms in South Africa, should be no different in this respect.

Liebenberg notes that “In determining whether a right is ‘applicable’ regard must be had to (1) explicit textual references…; (2) horizontal applicability as a ‘necessary implication’ of the right…; and (3) whether the nature of the right and the duty it imposes is ‘capable’ and ‘suitable’ for horizontal application…” In Holomisa v Khumalo And Others the court stated:

“However, I am of the view that s 8(2) does create space for an interpretation and a conclusion, at least in certain situations, that s 15 is horizontally applicable. When Kentridge AJ wrote the judgment in Du Plessis and De Klerk, there was nothing expressly stated in the interim Constitution about the direct horizontal application of rights. Therefore the general position had to be determined, and was found to be that chap 3 of the interim Constitution did not have a general direct horizontal application. Yet Kentridge AJ left the door open for an argument that certain provisions could be horizontally applicable. These would have to be in the nature of exceptions, however. Therefore the test is whether horizontal application is a necessary implication. Section 8(2) makes it quite clear that provisions of the Bill of Rights bind natural and juristic persons, as a general rule, if and to the extent that such a provision is applicable. Horizontal application is therefore wholly possible and plausible as far as the wording of the Constitution is concerned. …As indicated earlier, the indirect horizontal application of rights in the Bill of Rights, or the development of the common law in accordance with the spirit, etc of the Bill of Rights, occurs in both Constitutions (in terms of s 35 of the interim Constitution and s 39 of the final Constitution). I earlier indicated that I do not regard the differences between s 35 and s 39 as sufficiently relevant to warrant a radically different result as far as the issue in this case is concerned. The relevant question is how significant the distinction is between the indirect horizontality of s 35 or s 39 and the direct horizontality allowed for by s 8 of the final Constitution.”

465 Chakela et al fn 67 supra at p 41-45
466 Holomisa 2002 (3) SA 38 (T) at p 59 and p 67
Liebenberg makes the point that the wording of section 8(2) makes it clear that a particular right may be only partially applicable to a dispute between private parties and that some of the duties imposed by the particular right may thus be capable of binding private parties while others may not be stating that:

"Cheadle and Davis oversimplify the matter by arguing that the socio-economic rights in ss 26 and 27 will not apply to private parties given the textual signals and 'the potentially onerous nature of such a duty on private persons'. This argument may be persuasive to some extent in respect of the positive duties 'to protect, promote and fulfill' socio-economic rights. However, it does not persuade in respect of the negative duty 'to respect' socio-economic rights. It is eminently 'suitable' and indeed essential for the effective protection of socio-economic rights that private parties are bound to respect the negative duties flowing from the right." 467

She notes further that the possibility also exists that at least some of the positive duties imposed by the socio-economic rights may bind private parties.

"For example it may be argued that the recognition of children’s socio-economic rights in s28(1)(c) read with s28(1)(b) augments the common-law duty of support owed to children. Thus it could be extended, in appropriate circumstances, to parties that do not currently have this duty under the common law, for example the parents of the father of a child born out of wedlock...Section 27(3) requires that 'no-one' may be refused emergency medical treatment. This formulation strongly suggests a horizontal application. According to this interpretation private clinics, hospitals and ambulance services are under a duty to provide emergency medical treatment when this is requested from them. A failure to accord a horizontal interpretation to this right would undermine the substantive protection underpinning s28(3) and the right to life in s11."

The present writer is in respectful agreement with the views of Liebenberg. They accord with the eminently logical approach of transformational constitutionalism and with the wording of section 8(2) of the Constitution itself. They are also in keeping with the observations of the constitutional court in the Certification Judgment468 to the effect that at the very least, socio-economic rights are capable of negative protection from improper invasion. It has been observed previously that the law does not operate in a vacuum and only acquires meaning when it is grounded in the facts of particular circumstances. This is equally true of the Bill of Rights. When this is combined with the fact that a provision of the Bill of Rights can apply to private conduct and then not necessarily completely but also partially it opens up an infinity of permutations in terms of the ways in which the Bill can

467 Chaskalson et al fn 67 supra at p41-45 to p41-46
468 Certification judgment fn 59 supra
affect and impact upon the relationships between private entities. It would be a very intrepid lawyer indeed who asserts that a particular category of rights, such as socio-economic rights, can never be horizontally applicable.

In *Amod v Multilateral Motor Vehicle Accidents Fund* the constitutional court makes the very important point that:

“Section 8(2) makes the Bill of Rights binding on natural and juristic persons ‘if, and to the extent that, it is applicable, taking into account the nature of the right and the nature of any duty imposed by the right’. Section 8(3) requires Courts in giving effect to s 8(2) to ‘apply, or if necessary develop, the common law to the extent that legislation does not give effect to that right’ and also empowers the Courts to develop ‘rules of the common law to limit the right, provided that the limitation is in accordance with s 36(1)’. The development of a coherent system of law may call for the development of the common law under s 35(3) of the interim Constitution and s 39(2) of the 1996 Constitution to be done in a manner consistent with the way in which the law will be developed under s 8(2) and (3) of the 1996 Constitution.”

It is submitted with respect that the statement of the constitutional court quoted above is illustrative of the vastness of the potential for legal development and transformation within the South African legal system that has been opened up by the Constitution.

### 2.12 Summary and Conclusions

It is evident from the size and scope of this chapter that the impact of the Constitution on the delivery of health services is far reaching and profound. The question of the existence of a right to health *per se* was explored in some depths. Whilst it is clear that a right to health could be inferred from the interconnectedness of such constitutional rights the right to bodily and psychological integrity, equality, freedom and security of the person, environmental rights, life etc, the value of such a right in the South African context is limited given the fact that one is required in terms of the Constitution to consider its individual elements which are expressly stated therein. Considerations of the elements of the various rights that relate to health care services as contained for instance in sections 27, 28 and 35 of the Constitution demonstrate the complexity of these rights and the importance of analysing them in both their constitutional and factual contexts when

---

*Amod 1998 (4) SA 733 (CC) at paras 31, p 765*
applying them in practice. The jurisprudence on the subject of the right of access to health care services is still in its infancy but when viewed in the wider context of judgments on socio-economic rights still provides some extremely valuable and thoughtful guidelines and dicta that can be of assistance to policymakers and the executive branch of government in their attempts to fulfil their constitutional obligations with regard to such rights. The scope of this chapter emphasizes the fact that it is impossible not to take cognisance of the Constitution when making decisions involving the delivery of health care services whether in terms of rationing of health care, the nature and extent of the health care services to be provided, the rights of health care professionals to practice their professions or questions of intellectual property in health care goods. The manner in which the distinction between emergency medical treatment and health care services generally has been tentatively drawn by the constitutional court is encouraging and useful and whilst there will no doubt be further litigation involving questions of emergency medical treatment the foundations seem to be firmly in place for further constructive efforts on the part of the judiciary. All in all one gets the impression that South African constitutional law in the area of access to health care services is coming along nicely and that the project of transformative constitutionalism, although it still has a long way to go, is well under way. In the chapters that follow the importance and the significance of the Constitution to other areas of law involving the delivery of health care services will be an obvious leitmotif as is only fitting and proper for the foundation stone of a new legal order.

The discussions in the preceding chapters have covered the legal aspects of health service delivery from a largely theoretical perspective as opposed to that of the legal practicalities involved at the interface between the provider of health care services and the patient. The subsequent chapters will consider in more detail the latter aspect and the legal vehicles by means of which the delivery of health services takes place. Administrative law is a particularly important vehicle for the delivery of health services especially in the public health sector, given that administrative justice is a constitutional right. Consequently administrative law as it relates to health service delivery is the subject of the next chapter.
Chapter 3

Administrative Law and Health Service Delivery

Introduction

In the traditional view of the world the state holds all of the power and the individual must be protected from excesses in the exercise of that power. This is still evident in...
some of the older Constitutions, such as that of the United States of America, in terms of which human rights were essentially seen as the protection of private individuals against inappropriate or unacceptable displays or abuses of public power by the state. The world has changed substantially since then. It has become a great deal more complex. Concentrations of power have shifted significantly away from the state into the hands of private sector groupings. The influence of non-governmental organisations that join forces globally on certain issues can no longer be ignored. The power of large trade unions and religious movements has been an important socio-economic factor in many parts of the world for some decades. Multinational corporations and their domination of world trade arenas spanning the borders of many different countries are a force that many governments now have to reckon with. It is against the backdrop of such a world that the dynamics involving the delivery of health care services must be considered. Cockrell points out that the focal points of power in society have changed considerably since the days when it resided primarily with the state. The significance of increasing globalisation and the concentration of power in the hands of the private and non-governmental sectors cannot be overstated. Individuals may not be in a contractual relationship with many such organisations and yet they have the power to take decisions which can seriously adversely affect those individuals’ lives. In the context of health care services, for instance, a large multinational pharmaceutical manufacturer may decide not to sell a particular patented drug in a particular country or to price it in such a manner that renders it unaffordable to all but the extremely wealthy. A body such as the Medicines Control Council which is a juristic person in its own right can decide that a particular medicine is not effective for a particular indication and refuse to register it for that indication which means that it cannot lawfully be prescribed for such indication even

1 Tushnet, M “The Issue of State Action/Horizontal Effect in Comparative Constitutional Law” I.CON Vol 1 No 1, 2003 p 79-88 observes at p 79 that: “Liberal constitutions identify human rights that ought not to be violated. But by whom? An important strand in liberalism focuses on creating political structures that simultaneously empower and limit governments. Put crudely, this strand leads constitutionalists to pay primary attention to the threats to human rights that government poses. Another strand takes the human rights themselves as a focus. It notes that corporations and non-governmental actors can threaten human rights too.” He observes that governments and corporations can discriminate on the basis of race; governments and corporations can fire employees for speech with which the employer disagrees. The two strands come together when one observes that the people or corporations exercising “private” power are actually exercising power conferred on them by laws creating and regulating market behaviour. Thus government is always somehow implicated in private decisions. He then asks the crucial question: What are the constitutional implications of this? Is the way in which government is implicated in decisions by private employers to discriminate and the like sufficient to place some duties on either government or the private actors?

2 Cockrell A “Private Law and the Bill of Rights: A Threshold Issue of Horizontality” Private Law P3 A-4 states that: “Whereas once it was only the state which might be considered to have had at its disposal instruments of authority and oppression, modern society has witnessed the emergence of new fragmented centres of power such as voluntary associations, trade unions, corporations, multinationals, universities, churches etcetera. The emergence of large, private institutions, wielding massive power over the lives of citizens is an integral part of modern life.”
if it may be beneficial in certain circumstances. Health care services and products often fall into the same category as food and shelter. They are indispensable and essential to preserve life. Nevertheless they are economic goods, commercial commodities which are sold in multi billion dollar markets around the world. How does the man in the street engage them? In many ways the raison d'être for law is the existence of relationships and the need to define and regulate them. Some would no doubt argue that law is simply the external or societal manifestation and recognition of a relationship — whether it is between the individual and the executive, legislative or judicial branch of government, the national, provincial and municipal spheres of government, the minority and the majority, natural persons in the private capacity, juristic persons in their private capacity or the individual and society as a whole. The branch of law that is relevant depends upon the nature of the parties in relationship and the nature of the relationship.

The provider, in the provider-patient relationship, is not considered in this thesis only in the narrow sense of the doctor-patient relationship or hospital-patient relationship since providers of health care services come in many different forms and guises. Moreover, the distinction between funder and provider is often blurred. In the Medical Schemes Act, the definition of “business of a medical scheme” makes it clear that a medical scheme may itself render a ‘relevant health service’.

Most state hospitals classify patients into different categories in order to determine whether or not there should be a co-payment and if so, on what basis. For example, in the Western Cape the Regulations Relating to the Uniform Patient Fee Schedule For Health Services Rendered by the Department of Health: Western Cape For Externally Funded Patients (Provincial Gazette No 19977 Notice No 21 of 29 January 2003) apply only to “externally funded patients”. An externally funded patient is defined as "a patient whose health services are funded or partly funded in terms of - (a) the Compensation for Occupational Injuries and Diseases Act, 1993 (Act No 130 of 1993), or (b) by the Road Accident Fund created in terms of the Road Accident Fund Act, 1996 (Act 56 of 1996) or (c) a medical scheme registered in terms of the Medical Schemes Act (Act 131 of 1998), or (d) another state department, local authority or foreign government or any other employer, or who exceeds the generally accepted income means test as implemented by the Provincial Government: Western Cape". See for instance also the Regulations on Ambulance Fees in the Free State (Provincial Gazette No 64, Notice No 141 of 01
are, more often than not, employees rather than independent contractors as they are in the private sector. The employment relationship between the state and health professionals creates certain obligations for the health professionals that cast the provider-patient relationship in a different light to that in the private sector. The simple provider-patient relationship that is most often contemplated in many discussions of health law represents only a small percentage, in terms of volume of transactions, of the number of provider-patient relationships that exist in reality.

Since in South Africa a largely federal system of government prevails, especially in the arena of health services where, in terms of Schedule 4 of the Constitution, the national and provincial governments have concurrent legislative competence and since government as whole is in many respects different in legal terms to providers of health care services in the private sector, it is proposed to divide this chapter into two parts. The first will deal with the provider-patient relationship where the former is the state and the latter will deal with the relationship involving various types of private sector providers.

A PUBLIC SECTOR

3.1 Introduction

The government is a provider of health care services. In order to fulfil its role as such it is capable of exercising many different kinds of legal power. This fact renders an examination of the relationship between the patient and the state as provider of health care services fairly complex. For instance, is there ever a contractual relationship between them such as is most often inferred between the patient and the private sector provider or is this the exception rather than the norm? Are health service delivery decisions in the public sector based largely upon administrative law or are they ‘business decisions’ in terms of the law of contract? In the case of the former, a patient’s legal relationship and the remedies available to him or her would differ significantly in form to those in terms of the law of contract. There is also the

October 2002) which states that a patient conveyed per ambulance shall be liable for the payment of the following fees in respect of every 50 kilometres, or part thereof, travelled: (a) An H1 hospital patient R30,00; (b) An H2 hospital patient R60,00; (c) An H3 hospital patient.

5 The private sector does employ health professionals but they are mainly nurses. General practitioners, dentists, physiotherapists, medical specialists, pharmacists and dieticians in the private sector are more likely to be self-employed than they are to be employees.
question of the state’s constitutional obligations and the extent to which these must be seen as creating separate rights to those already contemplated in terms of the law of contract, delict and administrative law. It is proposed in this section to examine administrative law as it relates to the delivery of health care services within the public sector in order to establish the nature of the provider-patient relationships in various circumstances where the state is the provider.

3.2 The Nature of Administrative Law

According to Baxter, administrative law is:

“a set of common law principles which are designed to promote the effective use of administrative power, to protect individuals and organizations from its misuse, to preserve a balance of fairmess between public authorities and those with whom they interact, and to ensure the maintenance of the balance of public interest.”

It has been described by an American judge as including-

“the entire range of action by government with respect to citizen or by citizen with respect to the government, except for those matters dealt with by the criminal law, and those left to private civil litigation where the government’s only participation is in furnishing an impartial tribunal with the power of enforcement”.

It is not so easy in practice to define the concept of administrative action, despite the fact that this has been attempted in the Promotion of Access to Administrative Justice Act. Klaaren observes that the administrative justice provision introduced by section 24 of the Interim Constitution, and continued in section 33 of the final Constitution, has had far-reaching consequences for South African administrative law. He states that both the structure of the Interim Constitution and the decisions of the constitutional court have nevertheless made it clear that this section is not “the single fount of administrative justice” and that work performed in comparable constitutional instruments has been divided and allocated to several distinct sections of the Constitution namely:

- the limitations clause;

---

8 Act No 3 of 2000. See below for further discussion.
3.3 Classifications of Administrative Action

To add to the confusion, within administrative law, the courts at one stage used, and still today to some extent may have to use, a system of classification of administrative action that imitates the system of classification of different types of action of which administrative action itself forms a part. It is hardly surprising that this has the potential to cause considerable confusion for the courts and government officials alike. The classification divides administrative acts into legislative, quasi-

10 Baxter (in 6 supra) says at p 350: "The distinction between legislative and non-legislative administrative acts is often difficult or impossible to draw satisfactorily."

11 Thus in Premier, Eastern Cape, and Others v Cekeshe and Others 1999 (3) SA 56 (TK) the court observed: "To some extent the learned Judge must have been influenced by the then existing classification of administrative acts into 'quasi-judicial' and 'purely administrative'. At 263F - G the learned Judge states: 'In the absence of a provision prescribing a quasi-judicial enquiry as a pre-requisite to the exercise of a power of expropriation, the act of expropriation is a purely administrative act. (Cf Johnson & Co v Minister of Health [1974] 2 All ER 395 at 398 - 9 and Minister of the Interior and Another v Mariant 1961 (4) SA 740 (A) at 751.)'...This classification has since been dealt a final blow. In the oft-cited case of Administrator, Transvaal, and Others v Traub and Others 1989 (4) SA 731 (A) Corbett CJ held at 759A - C: "Another feature of the modern English administrative law which emerges from a study of the aforementioned cases, and others, is that the old classification of decisions into judicial, quasi-judicial and administrative no longer seems to have any relevance in this sphere. In R v Gaming Board for Great Britain; ex parte Benaim and Another [1970] 2 All ER 528 (CA) Lord Denning MR stated that "the "hersery" to the effect that the principles of natural justice apply only to judicial proceedings, and not to administrative proceedings, was "scotched" in Ridge v Baldwin. This was confirmed... by Lord Oliver in Leech's case supra at 505e where the latter stated that: '... the susceptibility of a decision to the supervisory jurisdiction of the Court does not rest on some fancied distinction between decisions which are "administrative" and decisions which are "judicial" or "quasi-judicial"'".

12 In Shoprite Checkers (Pty) Ltd v Ramdaw No And Others 2001 (4) SA 1038 (LAC) the court notes: "I agree with the above approach by the Constitutional Court. In para [18] of the judgment in Carephorne Froneman DJP does not seem to have appreciated that the administrative justice section could only apply if the action in question was an administrative action and that, because of this, a court would have no choice but to have to satisfy itself that such action was an administrative action before it could apply the provisions of the administrative justice section to it. This means that, however regrettable or even unpalatable it may be to have to classify actions according to whether they are administrative, judicial or quasi-judicial, courts have no choice but to classify actions according to such categories in certain circumstances under the new constitutional order in order to give effect to certain constitutional provisions."

13 The confusion is if anything compounded by the fact, for instance, that under the interim Constitution (and the 1996 Constitution) a local government is no longer a public body exercising delegated powers. Its council is a deliberative legislative assembly with legislative and executive powers recognised in the Constitution itself. Whilst it might not have served any useful purpose under the previous legal order to ask whether or not the action of a public authority was 'administrative', it is a question which must now be asked in order to give effect to s 24 of the interim Constitution and s 33 of the 1996 Constitution. One has a situation in which laws are made in terms of administrative action. See for instance Fedunre Life Assurance Ltd And Others v Greater Johannesburg Transitional Metropolitan Council And Others 1999 (1) SA 374 (CC) where it was held that: "In addressing this question it is important to distinguish between the different processes by which laws are made. Laws are frequently made by functionaries in whom the power to do so has been vested by a competent legislature. Although the result of the action taken in such circumstances may be 'legislation', the process by which the legislation is made is in substance 'administrative'. The process by which such legislation is made is different in character to the process by which laws are made by deliberative legislative bodies such as elected municipal councils. Laws made by functionaries may well be classified as administrative; laws made by deliberative legislative bodies can seldom be so described." The constitutional court in this case explains how things worked under the previous legal order as follows: "Prior to the enactment of the interim Constitution, Courts adopted a more deferential attitude to laws made by elected legislatures than they did to laws made by administrative functionaries. Judicial review was developed and applied by South African Courts against the background of a legal order which
judicial and purely administrative. One has administrative action, that is essentially a sub-set of executive action\textsuperscript{14}, which can be legislative, judicial or quasi-judicial in nature and which involves action neither the legislature nor the judiciary but by the executive. One thus has a hierarchy of classifications of different types of action in the diagram below using very similar nomenclature.

\textsuperscript{14} The court in \textit{President of the Republic of South Africa and Others v South African Rugby Football Union and Others} 2000 (1) SA 1 (CC) stated as follows at para [142]: "As we have seen, one of the constitutional responsibilities of the President and Cabinet Members in the national sphere (and premiers and members of executive councils in the provincial sphere) is to ensure the implementation of legislation. This responsibility is an administrative one, which is justiciable, and will ordinarily constitute 'administrative action' within the meaning of s 33. Cabinet Members have other constitutional responsibilities as well. In particular, they have constitutional responsibilities to develop policy and to initiate legislation. Action taken in carrying out these responsibilities cannot be construed as being administrative action for the purposes of s 33. It follows that some acts of members of the executive, in both the national and provincial spheres of government will constitute 'administrative action' as contemplated by s 33, 108 but not all acts by such members will do so.

In \textit{Premier, Eastern Cape, And Others v Cekeshe And Others} (fn 11 supra) the court observed that: "The general distinction between legislation and the execution of legislation is that legislation determines the content of the law as a rule of conduct, where executive authority applies the law in particular cases." The \textit{Commonwealth v Grunseit and Others} (1949) 67 CLR 38. The enactment of primary legislation is not an administrative act but the implementation of such legislation is. (See definition of 'administrative action' in the PAIA section 1). Subordinate legislation is administrative action and therefore subject to judicial review. See Wieders M Administrative Law who states: "Legislation does not appear out of the blue - first the authorised organ takes a decision to perform a legislative act, then the legislative measure goes through a process of consultation and drafting, then the measure is passed and finally promulgated. The initial decision to perform the administrative act will, in most cases, involve a legislative discretion and this discretion may be impaired on the same grounds as the exercise of a discretion in legislative acts. The legislative act may also be challenged on the ground of other defects in the course of legislative process and on the strength of the ultimate effect of the act . . . even though a proclamation by the State President may be immune to judicial review in terms of an \textit{Act of Parliament}, it remains subordinate legislation nevertheless and is subject to the rules relating to the creation, adoption, promulgation and interpretation of subordinate legislation."
Devenish et al\textsuperscript{15} note that there has in recent times been a strong inclination to avoid using the classification of administrative acts as legislative, quasi-judicial and purely administrative and that in Du Preez v Truth and Reconciliation Commission\textsuperscript{16}, the Appellate Division held that for the purpose of applying the rules of natural justice, the classification of decisions as quasi-judicial or administrative has in effect been abandoned. They express the view, however, that the classification can nevertheless be beneficial in some circumstances and proceed to discuss the three types of administrative action on this basis. They note that legislative acts of the administration give rise to delegated legislation and that they are the most easily recognised. They note with regard to Fedsure\textsuperscript{17} that the resolutions taken by the municipality could not be classified as administrative action because the municipal council was exercising a power that was exclusively exercised by legislative bodies and that on this interpretation, other non-exclusive legislative decisions, as opposed to

\textsuperscript{15} Devenish GE, Govender K and Hulme D *Administrative Law and Justice in South Africa* at p 91
\textsuperscript{16} Du Preez 1997 (3) SA 204 (A) 11A-C
\textsuperscript{17} Fedsure Life Assurance v Greater Johannesburg Transitional Metropolitan Council fn 13 supra
legislative enactments, may still be subject to scrutiny under section 33 of the Constitution. Devenish et al point out that section 156(2) of the Constitution provides that a municipality may make and administer by-laws for the effective administration of matters which it has a right to administer and that therefore the Constitution empowers municipalities to administer by-laws. They observe that the implementation and administration of a by-law requires the exercise of a discretion in that decisions have to be taken and choices made between alternative courses of action. Such decisions required the exercise of delegated power and the application of the by-laws to a given set of circumstances. They are therefore subject to section 33 scrutiny.

In terms of Part B of Schedule 4 of the Constitution, municipalities are responsible for municipal health services, although these are not defined. Municipalities now have the power to make original, or primary, legislation on the subject of municipal health services. This has to be interpreted, however, within the broader constitutional context, particularly the concurrent legislative (and therefore executive) competence of the national and provincial spheres of government in the filed of ‘health services’ as contemplated in Part A of Schedule 4 of the Constitution. In the National Health Act an attempt has been made to define municipal health services so as to be able to comply with and work within the fiscal federalism imposed by the Constitution and other legislation and avoid unfunded mandates as proscribed by the Public Finance Management Act\(^\text{18}\) for both municipalities and provinces with regard to the provision of health services. In order to know what funding must be made available to the three different spheres of government (national, provincial and executive) in respect of health services it is necessary to define for operational purposes the term “municipal health services”. Naturally such a definition is not without its challenges given the fact that any attempt to define a constitutional term, no matter how well intentioned, is subject to constitutional challenge on the basis that it constitutes an attempt to amend the Constitution by stealth. In light of the foregoing discussion, however, it must be noted that the passing of bye-laws by a municipality concerning municipal health services would be legislative as opposed to administrative action, in contrast to the position under the previous legal dispensation.

\(^{18}\) Act No 1 of 1999
Devenish et al note with regard to judicial acts that it is sometimes problematic to determine whether an administrative organ is carrying out purely judicial or curial functions and that there are only a few administrative authorities which perform judicial functions. Quoting Garner\textsuperscript{19}, they identify the essential characteristics of judicial functions as:

1. There must be a \textit{lis inter partes}, i.e. a dispute between two or more parties;
2. The proceedings in the disputed \textit{lis} must have been initiated by one or more of the parties to the dispute, but not by the tribunal itself or some other governmental body not being a party to the dispute; and
3. As a general rule, the presiding officer or judge, having found the facts and applied the appropriate principles of law thereto, has little discretion in coming to his or her decision, he or she may not be influenced by preconceived principles of policy, but must apply prescribed rules so as to reach a decision.\textsuperscript{20}

Decisions involving the delivery of health care are in the main unlikely to be judicial administrative decisions. Under the old system of classification of administrative decisions they are more likely to be quasi-judicial or purely administrative decisions since except in the case of a dispute mechanism in terms of which a department of health must adjudicate between the interests of two or more parties (which is very unlikely in the health care context and is only necessary rarely, if at all).

Quasi-judicial acts are administrative acts in which an administrative body exercises a discretion\textsuperscript{21}. A quasi-judicial function is an administrative function which the law requires to be exercised in certain respects as if it were judicial\textsuperscript{22}. In Hack v

\textsuperscript{19} Jones BL and Thompson K Garner’s \textit{Administrative Law} p 344

\textsuperscript{20} Devenish \textit{et al} fn 15 supra at p 98

\textsuperscript{21} In \textit{Administrator, Transvaal, And Others v Traub And Others} (fn 11 supra) the court held that whether the function be an ‘administrative’ function or whether it be ‘purely administrative’ or ‘quasi-judicial’ or ‘judicial’ the duty is to act ‘fairly’ and the \textit{audi alteram partem} rule is simply a species of such duty. The courts have held that a public statutory body entrusted with administrative or quasi-judicial functions can be cited \textit{ex nomine} in review proceedings, even if it is not a body corporate in the ordinary acceptance of that term (M G Holmes (Pty) Ltd v National Transport Commission And Another 1951 (4) SA 261 (T)). In \textit{The Administrator, Transvaal And The Firs Investments (Pty) Ltd v Johannesburg City Council 1971} (1) SA 56 (A), it was said that the court has jurisdiction under the common law to review a decision if an examination of the statute concerned reveals that the particular discretion or power involved is a quasi-judicial one. It is sufficient to show a “clear intention” of the legislature to negative and exclude the implication that the power so given is to be exercised in accordance with the fundamental principles of justice, rather than that this should be demonstrated as a "necessary implication". See \textit{Publication Control Board v Central News Agency}, 1970 (3) SA at p. 489B - D. The first requirement is that the decision should prejudicially affect the property or liberty or rights of that individual who takes action to upset the decision. See \textit{R. v Ngwenya}, 1954 (1) SA at p 127F; \textit{Minister of Interior v Bechler and Others}, 1948 (3) SA 409. The prerequisites for deciding whether the function of a person statutorily authorised is quasi-judicial where that official’s decision must be preceded by the recommendation of another body are dealt with in \textit{Cassem v Oos-Kaapse Komitee van die Groepsgebiederaad}, 1959 (3) SA at pp. 659A - H; 661H - 662C; \textit{South African Defence and Aid Fund v Minister of Justice}, 1967 (1) SA at pp. 270A - 271A.

\textsuperscript{22} Devenish \textit{et al} fn 15 supra

362
Venterpost Municipality And Others\textsuperscript{23} the court observed that as a general rule, a tribunal, or a body, even if administrative, must exercise its functions in a judicial or quasi-judicial way whenever it is empowered to make decisions, not in its own arbitrary discretion, but as a result of an enquiry into matters of fact, or of fact and law, and these decisions may affect the rights of, and involve civil consequences to, individuals. In the health-care context, quasi-judicial decisions are likely to consist primarily of licensing type decisions such as those contemplated in the National Health Bill in connection with the granting of certificates of need by the Director-General.

The Appellate Division in Sugar Industry Central Board And Another v Hermannsburg Mission And Another\textsuperscript{24} stated that for the purpose of determining whether the \textit{audi alteram partem} rule applies in relation to the exercise by the first appellant of the power, or duty, in terms of clause 37, depends on a determination of whether, in exercising such power or duty, the first appellant exercises a purely administrative function or acts in a quasi-judicial capacity. If the first appellant exercises a purely administrative function, the \textit{audi alteram partem} rule has no application. If it acts in a quasi-judicial capacity the \textit{audi alteram partem} rule applies unless it has been expressly or impliedly excluded. (South African Defence and Aid Fund and Another v Minister of Justice\textsuperscript{25}; Publications Control Board v Central News Agency Ltd\textsuperscript{26}; Roberts v Chairman, Local Road Transportation Board, and Others\textsuperscript{27}.)

As to the tests to be applied in determining whether a statutory function being performed is quasi-judicial in nature or purely administrative, are to be found in Hack v Venterpost Municipality and Others\textsuperscript{28}, Minister of the Interior and Another v Mariam\textsuperscript{29} and Roberts' case supra\textsuperscript{30}.

A professional act that is performed using professional skill and knowledge is apparently not an administrative act of any kind. In S v Dobson\textsuperscript{31} the court held that

\textsuperscript{31} Dobson 1993 (4) SA 55 (E)
the *audi alteram partem* rule is not applicable to the process of compiling of a report by a psychiatrist pursuant to an enquiry in terms of ss 77, 78 and 79 of the Criminal Procedure Act\(^2\): the psychiatrists do not perform an administrative, judicial or quasi-judicial function but conduct their own enquiry in their own way to enable them to furnish an opinion concerning the mental capacity of the accused.

As stated previously the courts are presently inclined not to ascribe much value to these distinctions one of the reasons being that they are not particularly clear of useful\(^3\).

Purely administrative acts are by definition neither judicial nor quasi-judicial. They are acts by which an administrative body creates, alters or terminates individual administrative law relationships. An administrative decision is one that is made according to administrative policy whereas a judicial one is made according to law\(^4\).

### 3.4 Administrative Agreements

In *Transnet Ltd v Goodman Brothers (Pty) Ltd*\(^5\), the court held that the reasoning employed in *Umfolozi Transport Bpk v Minister van Vervoer en Andere*\(^6\), where it was held that the State Tender Board’s handling of tenders for government transport services constituted administrative decision and that the steps that had preceded the conclusion of the contract were purely administrative actions and decisions by officials, and that public money had been spent by a public body in the public interest, applied also to Transnet. In *Cape Metropolitan Council v Metro Inspection Services*

---

32 Criminal Procedure Act No 51 of 1977

33 In *Knop v Johannesburg City Council* 1995 (2) SA 1 (A), the court stated that if the distinction between quasi-judicial and purely administrative decisions is of little use in solving problems in the context of the justiciability of a decision on the ground of failure to act fairly (see *Administrator, Transroad, and Others v Troub and Others* in 11 supra at 759A-C, 762F-H, 762H-763E, 763E-I and 763I-J), it is equally of little value in resolving the issue whether negligence in the making of the decision gives rise to liability for damages in delict. It found that in South African law there is no justification for treating the distinction between quasi-judicial and purely administrative functions as the touchstone for determining a public authority's liability for loss caused by the negligent exercise of statutory powers. It held that to determine the issue of wrongfulness, there was no point in straining to categorise the functions of the public authority as either quasi-judicial or purely administrative and quoted the remarks of the court in *Mutual Life & Citizens' Assurance Co Ltd and Another v Evatt* [1971] 1 All ER 130 (PC) as being particularly apposite: ‘In our judgment it is not possible to lay down rigid rules as to when a duty of care arises in this or in any other class of case where negligence is alleged. When in the past Judges have attempted to lay down rigid rules or classifications or categories they have later had to be abandoned’.

34 See Devenish *et al* in 15 supra at p 103 onwards.

35 *Transnet Ltd v Goodman Brothers* 2001 (1) SA 853 (SCA)

36 *Umfolozi Transport Bpk* [1997] 2 B All SA 548 (SCA)
(Western Cape) CC And Others\textsuperscript{37} the court found that different considerations applied where a contract between an organ of state and a private entity was preceded by purely administrative actions and decisions by officials in the sphere of the spending of public money by public bodies in the public interest. It held that these amounted to administrative actions because s 217(1) of the Constitution specifically provided that, when an organ of state in the national, provincial or local sphere of government contracted for goods or services, it had to do so in accordance with a system that was fair, equitable, transparent, competitive and cost-effective\textsuperscript{38}. The court in this case held that it served little purpose to classify the agreement between the first respondent and the appellant as an 'administrative agreement' as the question remained whether the cancellation of the contract amounted to 'administrative action'.

It stated that that section 33 of the Constitution was not concerned with every act of administration performed by an organ of state, but was designed to control the conduct of the public administration when it exercised a public power, and that it followed that whether or not conduct amounted to 'administrative action' depended on the nature of the power being exercised. Other relevant considerations, said the court, are the source of the power, the subject matter, whether it involved the exercise of a public duty, and how closely it was related to the implementation of legislation. The court found that that it could not be said that the appellant had exercised a public power when it purported to cancel the contract. Although it derived its power to enter into the contract with the first respondent from statute, it derived its power to cancel the contract from the terms of the contract and the common law; when it had concluded the contract it did not act from a position of superiority or authority, nor did it, when cancelling, find itself in a stronger position than the position it would have been in had it been a private institution. When it purported to cancel the contract, it did not perform a public duty or implement legislation, but purported to exercise a contractual right founded on the consensus of the parties in respect of a commercial contract\textsuperscript{39}.

\textsuperscript{37} Cape Metropolitan 2001 (3) SA 1013 (SCA)
\textsuperscript{38} Cape Metropolitan fn 36 supra paragraph [19] at 1024B/E-F.
\textsuperscript{39} Pretorius DM 'The Defence of the Realm: Contract and Natural Justice' 2002 South African Law Journal 119 374 has criticised this judgment saying that the question as to the true nature of public power is not addressed adequately by the judgment and that the court did not provide a satisfactory analysis of the relationship between public power and contractual rights. He states that in addition, insufficient consideration was given to the fact that the appellant had, by means of its contract with the respondent, outsourced the performance of its own statutory and public functions and that it had done so by virtue of specific statutory authorisation. In other words, the contract (the conclusion of which was
Burns\textsuperscript{40} notes that it has been said that although South African courts have recognised the administrative disposition and private law contract concluded by the state, they have not as yet, recognised the administrative law agreement\textsuperscript{41}. She observes that it has also been said that these administrative agreements (in which the state acts in its capacity as an organ of state and exercises a measure of state authority) fall somewhere between the boundary of public law and private law. Public authorities are not empowered to conclude contracts which are incompatible with the proper exercise of their powers and duties: such contracts or actions are void because the authority has exceeded its power and has acted \textit{ultra vires}. This is something that the general public and even members of the legal profession fail to understand when litigating or threatening litigation against organs of state and statutory bodies. The Medicines Control Council, for example, would be unable to conclude an out of court settlement agreement with a private company that is an importer of a medicinal product in respect of the seizure of those products which were being sold illegally because they were not registered. Such an agreement would be outside of the mandate of the Council whose primary task is to ensure the safety quality and efficacy of medicines sold in South Africa by means of a registration process.

Burns notes that the liability of the state for administrative agreements is anything but clear and that at this stage a delictual claim against the state for negligent action of independent contractors will in all probability also be unsuccessful. The state is usually unable to supervise or exercise control over the actions of a private agency while the latter is fulfilling its contractual obligations. Indeed one of the reasons for contracting in the first place is often the fact that the state lacks the resources to do the job itself. Burns comments that currently administrative agreements are governed in the main by rules of private law and courts are influence by private law contracts when determining the rules which apply to administrative agreements. Thus, she says,
the liability of the state for private law contracts and administrative agreements is governed by the State Liability Act. It is submitted that the conceptual difficulties which Burns encounters in the failure of the courts to recognise "the true nature and extent of the administrative agreement" are caused largely by her own insistence on the conceptual framework that seeks to distinguish public and private law. The problem lies largely in this distinction. If the distinction is unimportant then what does it matter whether or not the courts recognise administrative agreements as a concept? The law of contract and the law of delict have served quite well for a number of centuries in righting the wrongs between contracting parties and members of society. Burns seems to be of the view that the state should be held liable for the actions of a private contractor that has been tasked by the state with the performance of a public function purely because it is a public function. It is submitted that this view is neither logical nor equitable in all instances since it absolves the private contractor of just about all relevant responsibility for its own incompetence or incapacity. Burns suggests that the state should be held liable for contracting negligently with contractors who are unable to perform the required function. Her view also demonstrates a superficial understanding of the practical realities of state contracting procedures which are usually in the form of tender processes and are heavily regulated by legislation such as the State Tender Board Act, the Public Finance Management Act, the Preferential Procurement Policy Framework Act, the National Supplies Procurement Act, the Broad-Based Black Economic Empowerment Act of 2003 and last but not least the Constitution. The full scope of the concept of contractual freedom, it is submitted, is a privilege reserved to the private sector. Provided that public entities follow the rules and procedures contained in the legislation detailed above, it is submitted that the chances of success of a claim against the state for negligent contracting are negligible. She asks how the individual can be protected from the negligent acts of the contractor.
apparently on the understanding that the law of delict does not apply to private contractors who are performing public functions. It is submitted that the law of delict applies to private contractors performing public functions as much as it does to private contractors fulfilling private functions. It is not clear why, simply because it happens to be a public function that is performed, in Burns' view the rules of delictual liability should work differently. As the courts have rightly stated it is not so much a classification of the agreement that is important as the nature of the action taken and whether it was in consequence of an ordinary contractual arrangement or some statutory provision which conferred the power to do so. Essentially administrative law is about the exercise of power that is granted not by the person over whom that power is exercised, as would be the case in a contract, but by some other agency, for example the state in terms of legislation. If one is not obsessed with distinctions between public and private law it becomes obvious that administrative law should be capable of regulating private entities where they are granted power over the general public or groups within the general public by way of processes over which the regulated group had little or no control. It is submitted that the concern of administrative law is not the nature of the authority that wields the power but rather that of the power itself.

3.5 Private Law in The Public Health Sector

In the healthcare context, the question of whether a nation or provincial government or municipality is exercising a public power or performing a public function is central to the question of whether the provider-patient relationship can be governed purely by private law, such as the law of contract, or whether it will always have an additional element of administrative law. Powers derived from statute are generally regarded as public powers and functions derived from statute are usually public functions. Unfortunately, life, as usual, is never that simple since it is possible to derive the power to enter into a contract from a statute in which case the conclusion of the contractual relationship in question is an administrative act. In the context of health
care, the concepts of public powers and functions are not particularly helpful. The question remains, in the context of a purported ‘contract’ for health care services between a public provider and a private patient, what is the source of the power or the public provider to enter into the contract? If the contract is expressly mandated by statute then the source of the power to contract is clearly statutory. However, if the statute is silent on the subject of whether or not services must or may be rendered on the basis of a contract and there is the possibility that they may be rendered on the basis of contract or administrative law, is a power on the part of a public provider to enter into a contract statutory in origin or does it derive merely from the fact that as a juristic person it has the power to enter into contracts in the same way as any other legal persona. Would a decision by a public entity to enter into a contract for health care services amount to an exercise of public power under these circumstances? Is it not too simplistic to say that when a public entity acts in terms of legislation it always exercises public power and that such action must always be classified as administrative action? The principle of legality and the rule of law require that a public entity must not overstep the bounds of its authority as conferred by legislation. If this is the case then the authority for every legitimate act of a public entity is based upon one piece of legislation or another and every act in terms of legislation constitutes the exercise of a public power or the performance of a public function in which case every such act is administrative in nature. This cannot be the case however, if one considers the dicta of the courts in judgments such as in Cape Metropolitan Council v Metro Inspection Services (Western Cape) CC And Others which the court stated that:

---

343c; and 1998 (8) BCLR 1024 at 1031G) Blieden J expressed himself as follows: ‘In my view, this argument overlooks the true meaning of an administrative act. It means any act relating to the management of the affairs of the respondent.’ Applying this test, it could be said that the act of terminating the contract in terms of which the first applicant was carrying out the functions of the respondent in terms of the Regional Services Councils Act is an act relating to the management of the affairs of the respondent.”

49 In Minister Of Public Works and Others v Kyamani Ridge Environmental Association and Another (Mukwevho Intervening) 2001 (3) SA 1131 (CC) it was noted at p 1166 that: “In Fedsure Life Assurance Ltd and Others v Greater Johannesburg Transitional Metropolitan Council and Others [fn 13 supra] this Court held: ‘Q) is a fundamental principle of the rule of law, recognised widely, that the exercise of public power is only legitimate where lawful. The rule of law - to the extent at least that it expresses this principle of legality - is generally understood to be a fundamental principle of constitutional law.’ Later in the same judgment it is said that: ‘Q) seems central to the conception of our constitutional order that the Legislature and Executive in every sphere are constrained by the principle that they may exercise no power and perform no function beyond that conferred upon them by law. At least in this sense, then, the principle of legality is implied within the terms of the interim Constitution.’ The Constitution now states explicitly that the rule of law is a foundational value of our legal order.” See also Fedsure Life Assurance Ltd and Others v Greater Johannesburg Transitional Metropolitan Council And Others [fn 13 supra] where the court stated that: “It seems central to the conception of our constitutional order that the Legislature and Executive in every sphere are constrained by the principle that they may exercise no power and perform no function beyond that conferred upon them by law. At least in this sense, then, the principle of legality is implied within the terms of the interim Constitution.”

50 Cape Metropolitan Council fn 48 supra

---
“It follows that whether or not conduct is ‘administrative action’ would depend on the nature of the power being exercised. Other considerations which may be relevant are the source of the power, the subject-matter, whether it involves the exercise of a public duty and how closely related it is to the implementation of legislation.”

and in President of the Republic Of South Africa and Others v South African Rugby Football Union and Others\(^1\) where the court observed:

In s 33 the adjective ‘administrative’ not ‘executive’ is used to qualify ‘action’. This suggests that the test for determining whether conduct constitutes ‘administrative action’ is not the question whether the action concerned is performed by a member of the executive arm of government. What matters is not so much the functionary as the function. The question is whether the task itself is administrative or not. It may well be, as contemplated in Fedsure, that some acts of a legislature may constitute ‘administrative action’. Similarly, judicial officers may, from time to time, carry out administrative tasks. The focus of the enquiry as to whether conduct is ‘administrative action’ is not on the arm of government to which the relevant actor belongs, but on the nature of the power he or she is exercising.\(^2\)

The general rules to be derived from these dicta are:

1. It is not so much the nature of the power bearer or functionary as the nature of the power or function that is relevant;
2. The nature of the power is only one of the considerations to be taken into account. Others are the source of the power, the subject-matter, whether it involves the exercise of a public duty and how closely related it is to the implementation of legislation;
3. The list of considerations referred to in 2 above is not exhaustive;
4. The source of the power is not apparently an overriding consideration but must be balanced in relation to other factors such as the nature of the power, how closely it is related to the implementation of legislation etc.
5. The nature of the task to be performed is an important factor;
6. The assessment must be made in light of the provisions of the Constitution and the overall constitutional purpose of an efficient, equitable and ethical public administration.

---

\(^1\) South African Rugby Football Union 2000 (1) SA 1 (CC) at para 141

\(^2\) See also para 143 of the same judgment: “Determining whether an action should be characterised as the implementation of legislation or the formulation of policy may be difficult. It will, as we have said above, depend primarily upon the nature of the power. A series of considerations may be relevant to deciding on which side of the line a particular action falls. The source of the power, though not necessarily decisive, is a relevant factor. So, too, is the nature of the power, its subject-matter, whether it involves the exercise of a public duty and how closely it is related on the one hand to policy matters, which are not administrative, and on the other to the implementation of legislation, which is. While the subject-matter of a power is not relevant to determine whether constitutional review is appropriate, it is relevant to determine whether the exercise of the power constitutes administrative action for the purposes of s 33. Difficult boundaries may have to be drawn in deciding what should and what should not be characterised as administrative action for the purposes of s 33. These will need to be drawn carefully in the light of the provisions of the Constitution and the overall constitutional purpose of an efficient, equitable and ethical public administration. This can best be done on a case by case basis.”
The assessment must ultimately be done on a case-by-case basis. This implies taking into account all of the relevant factors in each particular set of circumstances.

If it follows that a statute may confer and impose powers and functions other than public powers and functions. Public entities may enter into contracts and conduct business of a nature which does not mean that the power exercised in doing so is a public power or function. National, local and provincial governments are juristic personae with power to contract separately and individually from each other. What happens where there is a broad statutory obligation, as opposed to a power, to provide health care services? In terms of section 16 of the Health Act

"(1) In addition to the functions entrusted to a provincial administration by any other law, the functions of a provincial administration with regard to health services in its province, shall, subject to the provisions of this Act, be-
(a) to provide hospital facilities and services;
(b) to provide ambulance services within its province and, with due regard to similar services provided by provincial administrations in adjacent provinces, to co-ordinate such services;
(c) to provide facilities for the treatment of patients suffering from acute mental illness;
(d) to provide facilities for the treatment of outpatients in hospitals or in other places where patients are treated for a period of less than twenty-four hours;
(e) to provide and maintain maternity homes and services;
(f) to provide personal health services, either on its own or in co-operation with any local authority;
(g) with a view to the establishment of a comprehensive health service within its province, to co-ordinate the services referred to in paragraphs (a) to (f), inclusive, with due regard to similar services rendered by the Department of Health and Welfare, other provincial administrations and by local authorities;

---

53 In Lombard v Minister van Verdediging 2002 (3) SA 242 (T) the court held: "Die Staat is 'n regspersoon maar sonder 'n geregistreerde kantoor of hoofbesigheidsplek en sonder 'n direkteur of beampte soos bedoel in die artikel." See also Minister Of Law and Order v Patterson 1984 (2) SA 739 (A) where the court stated that: "Before proceeding to discuss the appeal, I should say that it was common cause between counsel in this Court that the state was the real defendant in the action instituted by the respondent, and, also, that the state is a legal persona."

54 Act No 63 of 1977
(h) to promote family planning in the province concerned; and
(i) to perform any other function as may be assigned to it by the Minister.”

There is nothing in this section that precludes the possibility of a province’s entering into a contract with a patient for the rendering of health services in fulfilment of its legal obligations as described in section 16. The fact that a province does not have to contract with a patient in order to create a legal relationship between itself and that patient does not mean that it cannot do so. In the case of contract law, however, intention is everything and in the case of the state in particular, one is only likely to encounter the question as to whether or not the necessary intention existed in pathological circumstances where a case has come before the court. In this situation, the state is likely to argue its case in the manner best calculated to win its case which may result in an argument based on the law of delict rather than that of contract since the onus of proof in the case of the former is possibly a harder one for the plaintiff to discharge\(^55\). Thus in *Magware v Minister of Health No*\(^56\) the defendant in his plea denied any contractual relationship between the parties choosing rather to admit negligence as averred in the declaration but pleading that such negligence consisted only of acts of omission not giving rise to delictual liability on the part of the defendant\(^57\). In *Dube v Administrator, Transvaal*, *Buls and Another v Tsatsarolakis*\(^58\), *Mtetwa v Minister of Health*\(^59\), *Pringle v Administrator, Transvaal*, *Collins v Administrator, Cape*\(^60\) the basis of all of the claims was the law of delict and not the law of contract. The plaintiffs apparently did not even attempt to argue the existence of a contractual relationship between themselves and the public providers or that the terms thereof had been breached.

The fact that a contractual relationship is possible between a public provider of health care services and a patient is evidenced in *Shiels v Minister of Health*\(^61\). In that case

---

\(^{55}\) The onus of proving the intention of a complex and diffuse body such as the state which is comprised of many minds may possibly be even more difficult to discharge in the event that the state denies an intention to contract.

\(^{63}\) *Shiels* 1974 (3) SA 276 (RA)
the Minister of Health sued the appellant for the cost of manufacturing an artificial limb. The court quite clearly dealt with the relationship on the basis of the law of contract, stating at 279:

"Now clearly the principle established in those cases must apply to a contract such as this involving the highly technical task of constructing an artificial leg and making it fit, particularly in the case of the appellant who, on his own admission, is a difficult customer because, unfortunately, he has a very short stump."

The case of Administrator Natal v Edouard is a further example. In that case there was a contractual obligation to sterilise the respondent’s wife. The court refused to allow a claim for non-patrimonial loss on the ground that the South African law of contract does not allow a claim for intangible damages in the event of breach of contract.

Whilst there is strict and specific law relating to the situation in which the state is a purchaser of goods and services, the same does not hold true in a situation in which the state is the supplier of goods and services – in the health care context at least. The fact that there is a constitutional obligation upon the state to achieve the progressive realisation of the right of access to health care services within available resources also does not necessarily preclude the conclusion of a contract for the provision of these services. As stated in a previous chapter there is a significant difference between “a right of access to” and “a right to”, the former being less direct than the latter and creating the possibility that some action or effort is required on the part of the person exercising the right.

In practice, public providers differentiate between “externally funded patients” and others. They publish regulations, the promulgation of which is, in view of previous discussion, subject to administrative law, in terms of which fees are set for various categories of patients. For the most part the fees payable are determined on the basis of a means test. For instance in the “Regulations Relating To The Uniform Patient Fee Schedule For Health Care Services Rendered By The Department Of Health: Western Cape For Externally Funded Patients” it is stipulation that “these regulations apply

---

64 Edouard 1990 (3) SA 581 (A) the facts of the case and the judgement of the court are discussed in more detail in the section on the law of contract
65 Provincial Gazette No 5977 of 29 January 2003, Notice No 21
to externally funded patients only." The regulations define an externally funded patient as-

"a patient whose health services are funded or partly funded in terms of-
(a) the Compensation for Occupational Injuries and Diseases Act, 1993 (Act 130 of 1993), or
(b) by the Road Accident Fund created in terms of the Road Accident Fund Act, 1996 (Act 56 of 1996), or
(c) a medical scheme registered in terms of the Medical Schemes Act, 1998 (Act 131 of 1998), or
(d) another state department, local authority, foreign government or any other employer, or

who exceeds the generally accepted income means test as implemented by the Provincial Government: Western Cape."

The Regulations set out a Uniform Patient Fee Schedule for various health care services provided to externally funded patients by the Western Cape Provincial government. Regulation 3 states that: "An externally funded patient who receives any medical treatment or any medical service, listed and categorised in Schedule 2, from a DOH facility, must pay the applicable tariff for such medical treatment or medical service received in accordance with the tariff of fees and charges as set out in Schedule I". Technically speaking there is thus no need of a contract to create an obligation on the part of the patient to pay the applicable tariff.

Similarly in KwaZulu-Natal66, the Regulations Relating To The Administration, Management And Control Of Provincial Hospitals, Services And Institutions Established In Terms Of Section 4 Of The Provincial Hospitals Ordinance67 distinguish between “Private patients”, “full paying Hospital patients” and “part­paying hospital patients”.

The Regulations stipulate that -

66 Notice No. 405 of 24 October 2002
67 Ordinance No. 13 of 1961
“There shall be payable in respect of services rendered and supplies provided at, in or from provincial hospitals, community health centers and clinics the following charges which are defined by and subject to the 2002 KwaZulu-Natal Hospital Fees Manual which is available on request from any Provincial hospital in the Province:” and then give the schedule of fees.

In the Free State the Regulations entitled ‘Regulations On Fees For Health Services In The Free State’ provide for the classification of patients as follows—

(1) Upon admission to a hospital, a patient shall be classified by the chief executive officer or delegated officials as a foreign patient, hospital patient or private patient.

(2) A patient shall furnish such information and submit such proof as the chief executive officer or delegated officials may require of him or her, in order to be able to make a classification in terms of subregulation (1).

The regulations then go on to provide for a means test and methods of classification patients into the various categories.

The fact that the fees are prescribed by regulations means that they are not negotiable except within the scope of the regulations and as permitted by them. In practical terms, although they are subject to administrative law and therefore judicial review, unless they are excessive in the extreme, it would be difficult in practice to challenge them since the costs of operating a particular public hospital are not generally known either to the public at large or to the provincial government that owns it. Although the publication of tariffs of fees in regulations does not preclude a contractual relationship between the public provider and the patient it could be argued that the creation of a legal obligation by way of regulations to pay the fees and the specification and control of conditions of service by way of regulations is evidence of the absence of an intention to create a contractual obligation between the public provider and the private patient since it is difficult to conceive of a situation in which the state may wish to duplicate the terms of such relationship by way of a contract. In terms of the South African law of contract it is the intention of the parties to the transaction that is the

68 Notice No 140 of 2002
deciding factor. Lately there has been development of some of the larger public hospitals in order to attract so-called “private” or “medical scheme patients” – the externally funded patients referred to in the Western Cape Regulations quoted above. Differentiated amenities, with more of a private sector flavour such as carpets on the floors, curtains on the windows and television sets in the ceiling, have in some cases been created with a view to attracting such patients and in contractual relationships have been entered into or are contemplated with medical schemes. However, not all of these contractual relationships apply to differentiated amenities within public hospitals. Relationships between schemes and provincial governments are presently contemplated in terms of which the public hospital becomes a designated provider in terms of the regulations to the Medical Schemes Act and scheme beneficiaries are treated in the same facilities as other patients who are not beneficiaries of medical schemes. The mere fact that a contractual relationship exists between the medical scheme and the public provider does not necessarily mean that a contractual relationship is also created between the patient and the provider however. This topic will be discussed in more detail in the section on contracts with public providers. However it must be noted at this point that the type of contract is relevant in this context. These contracts are not necessarily for the benefit of a third party – which have the potential to make the patient a party to the contract – but more usually consist of arrangements between the scheme or scheme administrator and the provincial government in order to clarify payment methods and arrangements, to ensure treatment of the patient in accordance with the rules of the medical scheme and the exchange of information pertaining to the patient between the provider and the scheme, to balance the financial risks to which the scheme and the provider are both exposed between the parties, and to secure patient referrals to the provider by the medical scheme and its administrators and other contractors in order to ensure bed occupancy levels. It is submitted that despite what medical schemes and providers may claim to the contrary, contractual arrangements of this nature, especially where the scheme is represented by its administrator or a managed care contractor, are rarely intended for the exclusive or direct benefit of the patient. Although they are both likely to argue that the patient benefits in that public providers are cheaper and therefore he or she is less likely to exhaust medical scheme benefits, there are a

69 This aspect of the relationship will be discussed in more detail in the section dealing with the law of contract.
70 Medical Schemes Act fn 3 supra
number of fallacies behind this argument and it represents an oversimplification of the
market forces and mechanisms that operate within health funding in the private sector.
Further discussion of the medical schemes industry is not within the scope of this
chapter. However it is worth noting that in terms of the Medical Schemes Act and
Regulations regarding the mandatory package of minimum benefits which all schemes
must provide, schemes are obliged to pay the costs of all of the treatments
contemplated in that package in full regardless of in which sector treatment occurs
and without co-payment unless the beneficiary uses a non-designated provider
without good reason. Furthermore, due to differences in treatment protocols,
operational procedures and sometimes staffing levels between public and private
hospitals and the relative incapacity of the public sector to ‘manage’ inpatient stays in
public hospitals so as to keep them to the minimum duration that is absolutely
necessary, there is the distinct possibility that the costs of treatment in a public
hospital may not be that much lower than those within a private one. Many medical
schemes are battling for survival as they are too small, do not have significant market
power to bargain effectively with providers, are unable to benefit from the
legislatively mandated principles of community rating, their membership profiles are
unfavourably skewed or they need to increase their reserves to levels mandated by the
registrar without becoming so unaffordable to members that they start to leave for
other more competitive schemes. The result is increasing pressure to keep the costs of
the real, direct benefits to members as low as possible. Consequently arguments that
these contracts between schemes and providers are for the benefit of scheme
beneficiaries are overly simplistic. They are more often than not, arrangements of
expedience for the scheme and the public provider. As is evident from the regulations
referred to above, medical scheme members are in any event treated in public
hospitals on the basis of the regulations and in the absence of contractual relationships
between the provincial governments and the medical schemes concerned.

3.6 The Right to Lawful, Reasonable and Fair Administrative Action

In terms of section 33 of the Constitution:

“(1) Everyone has the right to administrative action that is lawful, reasonable and
procedurally fair.”
Everyone whose rights have been adversely affected by administrative action has the right to be given written reasons.

National legislation must be enacted to give effect to these rights, and must—

(a) provide for the review of administrative action by a court or, where appropriate, an independent and impartial tribunal;

(b) impose a duty on the state to give effect to the rights in subsections (1) and (2); and

(c) promote an efficient administration.”

The legislation referred to in subsection (3) above is the Promotion of Administrative Justice Act (PAJA). It is against this constitutional and legislative backdrop that one must examine administrative law in relation to the delivery of health care services. As with all other areas of law in South Africa, administrative law is informed by and based upon constitutional principles.

The implications of this for the state will be canvassed in more detail below. However it is important to note at this stage that the current status of administrative law as a branch of constitutional law as opposed to the common law, casts decisions by the state concerning the delivery of health care services in a whole new light. Decisions relating to the provision of health services based on administrative law are now subject to the provisions of the Constitution and the PAJA. The courts are no longer restricted, as they were when administrative law formed part of the common law, to trying the case only on the basis of principles of natural justice and rules of procedural fairness such as whether the official applied his or her mind, whether there was bias, whether the person affected by the decision was given an opportunity to be heard

---

71 Fn 8 supra

Chaskalson P has observed that: “Whilst there is no bright line between public and private law, administrative law, which forms the core of public law, occupies a special place in our jurisprudence. It is an incident of the separation of powers under which courts regulate and control the exercise of public powers by the other branches of government. It is built on constitutional principles which define the authority of each branch of government, their inter-relationship and the boundaries between them. Prior to the coming into force of the interim Constitution, the common law was ‘the main crucible’ for the development of these principles of constitutional law. The interim Constitution which came into force in April 1994 was a legal watershed. It shifted constitutionalism, and with it all aspects of public law, from the realm of common law to the prescripts of a written constitution which is the supreme law. That is not to say that the principles of common law have ceased to be material to the development of public law. These well-established principles will continue to inform the content of administrative law and other aspects of public law, and will contribute to their future development. But there has been a fundamental change. Courts no longer have to claim space and push boundaries to find means of controlling public power. That control is vested in them under the Constitution, which defines the role of the courts, their powers in relation to other arms of government and the constraints subject to which public power has to be exercised. Whereas previously constitutional law formed part of and was developed consistently with the common law, the roles have been reversed. The written Constitution articulates and gives effect to the governing principles of constitutional law.” (Pharmaceutical Manufacturers Association of SA and Another: In re Ex parte President of the Republic of South Africa and Others 2000 (2) SA 674 (CC))
etc etc. They can now look into the merits of the case to a much greater extent. For instance the courts can look as the rationality of the exercise of a public power. It has been held that administrative action must be justifiable in relation to the reasons given for it and that value judgements have to be made by the courts in assess whether administrative action is justifiable in relation to those reasons. This inevitably involves consideration of the merits in some way or another.

Three aspects of the right to administrative justice are identified in section 33(1) – lawfulness, procedural fairness and reasonableness. These three elements are designed to ensure accountability, responsiveness and transparency in government. In *Kolbatschenko v King NO and Another* the court held that as the requirement of accountable, responsive and transparent government was one of the founding values of constitutional democracy, it was only in highly exceptional cases that a court would adopt a hands-off approach where a discretion has been exercised or an executive or administrative decision made which directly affected the rights or interests of an individual applicant.

### 3.6.1 Lawfulness

---

73 In *Van der Merwe v Stobbert No and Others* 1999(3) SA 613 (N), the court observed that the rules of natural justice described as the *audis* principles, came into play whenever a statute empowers a public official or body to perform an act or give a decision prejudicially affecting an individual in his liberty or property or existing rights or whenever such an individual had a legitimate expectation entitling him to a hearing. However, said the court, the *audis* principles were but one facet of the general requirement of natural justice that in the circumstances postulated that the public official or body concerned had to act fairly. In *Commissioner of Customs and Excise v Contained Logistics (Pty) Ltd* 1999 (3) SA 771 (SCA) the court observed that judicial review under the Constitution and the common law are different concepts. In the field of administrative law constitutional review is concerned with the constitutional legality of administrative action, the question in each case being whether or not it is consistent with the Constitution and the only criterion being that Constitution itself. While judicial review under the common law is essentially also concerned with the legality of administrative action, the question in each case is whether the action under consideration is in accordance with the objects of the empowering statute and the requirements of natural justice. The court noted that grounds for common law review developed over the years can never be regarded as a *numerus clausus* for the simple reason that administrative law is not static, particularly given the requirement of s35 (3) of the interim Constitution that any law be interpreted and that the common law be applied with due regard to the spirit, purpose and objects of the Bill of Rights. It should be observed in this context that Chaskalson P rejected the idea that there were two separate systems of law saying that "I cannot accept this contention, which treats the common law as a body of law separate and distinct from the Constitution. There are not two systems of law, each dealing with the same subject-matter, each having similar requirements, each operating in its own field with its own highest Court. There is only one system of law. It is shaped by the Constitution which is the supreme law, and all law, including the common law, derives its force from the Constitution and is subject to constitutional control." (*Pharmaceutical Manufacturers Association of SA and Another: In Re Ex Parte President of the Republic of South Africa and Others* (fn 72 supra) para 44). It is submitted that with the further advent of the PAJA, any distinctions purists might wish between constitutional law and the common law as far as administrative law principles are concerned will become even more blurred. Chaskalson P’s assertion that there is only one system of law is reinforced by this Act. Section 6 of the Act provides for judicial review of administrative action on various grounds that are there listed including *ultra vires*, procedural unfairness, error of law, bad faith, bias etc.

74 *Pharmaceutical Manufacturers of SA and Another: In Re Ex Parte President of the Republic of South Africa and Others* fn 72 supra

75 *Kolbatschenko* 2001 (4) SA 336 (C) at 3551 – 356D
The constitutional court in *Fedsure Life Assurance v Greater Johannesburg Transitional Metropolitan Council*\(^6\) held that in relation to legislation and to executive acts that do not constitute ‘administrative action’, the principle of legality is necessarily implicit in the Constitution and that therefore the question whether local governments act *intra vires* in imposing rates and levies and paying subsidies remains a constitutional question. It held that it was fundamental to the principle of rule of law that local authorities act within the powers lawfully conferred upon them\(^7\). In *De Lille and Another v Speaker of the National Assembly*\(^8\) the court held that the rule of law did not countenance the administrative issue of a certificate to shield illegal and unconstitutional acts from judicial review. In *Minister of Correctional Services and Others v Kwakwa and Another*\(^9\) the Appellate Division pointed out that the doctrine of legality, an incident of the rule of law, was an implied provision of the Constitution and that it was central to the conception of South African constitutional order that the Legislature and the Executive in every sphere was constrained by the principle that they could exercise no power and fulfil no function beyond that conferred upon them by law. In the same manner, said the court, the Commissioner of Correctional Services, in exercising public power, had to comply with the Constitution and had to act within the parameters of his statutory powers. In that case the court found that it was clear that the Commissioner had fundamentally misconceived his powers in terms of the Act and that in implementing the new system he had acted beyond his powers. He had disregarded the provisions of the Constitution and had fashioned a privilege system, in terms of which privileges were granted on a differential basis to prisoners in specified categories, that was inconsistent with its core values and not countenanced by the statutory regime from which he assumed his powers. For that reason the privilege system designed by him could not be allowed to stand.

Devenish *et al* point out that an administrative act has a specific and recognisable form. They note by way of example that a licence or permit has a stipulated form and

\(^6\) *Fedsure* fn 13 supra

\(^7\) See also *Pharmaceutical Manufacturers Association of S4 and Another: In Re Ex Parte President of the Republic of South Africa and Others* (fn 72 supra) where the constitutional court held that the Court had previously held that the doctrine of legality, an incident of the rule of law, had been an implied provision of the Constitution of the Republic of South Africa Act 200 of 1993 (the interim Constitution) and that that decision was applicable to the exercise of a public power under the 1996 Constitution which, in s 1(1), specifically declared that the rule of law was one of the foundational values of the Constitution.

\(^8\) *De Lille* 1998 (3) SA 430 (C)

\(^9\) *Kwakwa* 2002 (4) SA 455 (SCA)
a letter by the licensing authority in question purporting to constitute a licence or permit will not constitute a valid certificate or permit because it does not comply with the stipulated form. The boundaries and requirements of an administrative act or decision are usually set out in the relevant statutes, regulations and proclamations. Administrative action which exceeds the limitations imposed by the empowering legislation or which does not meet the criteria set by that legislation is ultra vires and therefore unlawful.

At common law, lawfulness is determined on the basis of public policy. As such it is fundamental not only to administrative law and administrative justice as contemplated in section 33 of the Constitution but also to the law of contract and of delict. The link between public policy and the values expressed in the Constitution was elucidated by the court in *Ryland v Edros*. In this case the court held that if the spirit, purport and objects of Chapter 3 of the Constitution and the basic values underlying it were in conflict with the view as to public policy expressed and applied in the Ismail case then the values underlying chapter 3 had to prevail. The court said that the values of equality and tolerance of diversity and recognition of the plurality of South African society were among the values that underlie the Constitution and that those values “irradiate” the concepts of public policy and boni mores that the courts had to apply. The court held that courts should only brand a contract as offensive to public policy if it was offensive to those values which were shared by the community at large and not only by one section of it. In *Du Plessis and Others v De Klerk and Another*, Kriegler J stated that:

---

80 Thus in *National Police Service Union and Others v Minister of Safety and Security 2000 (3) SA 371 (SCA)* the court held that the character of the scheme had not been of the kind which would normally call for promulgation: it had not amounted to a “by-law, regulation, rule or order” within the purview of s 16 of the Interpretation Act and the proclamation itself had provided for the form of notification the administrative decision underlying the directive was to take, namely that members who might be affected thereby were to be informed, which had been done.

81 See for example *Munimed v Premier, Gauteng, en Andere 1999 (4) SA 351 (T)* in which the court said that inasmuch as no other enabling provision existed in terms of which the Administrator was authorised to establish a medical aid fund (i.e. apart from s 79bis(1)) the result of the Administrator’s ultra vires act was that the applicant was not a juristic person at all. By establishing a medical aid scheme contrary to the provisions of s 79bis(1) the Administrator had acted beyond the scope of his powers, as a result of which the act of incorporation was a nullity. The fact that the applicant had been registered in terms of the Medical Schemes Act did not legitimise the ultra vires act (from headnote). See also *Pharmaceutical Manufacturers Association of SA and Another: In Re Es Porta President of the Republic of South Africa and Others (in B 72 supra)* in which the constitutional court held that the exercise of all public power had to comply with the Constitution, which was the supreme law, and with the doctrine of legality, which was part of that law. The question whether the President had acted ultra vires or intra vires in bringing the 1998 Act into force when he had done so was, accordingly, a constitutional matter and the finding that he had acted ultra vires was a finding that he had acted in a manner inconsistent with the Constitution.

82 *Ryland 1997 (2) SA 690 (C)*

83 *Du Plessis 1996 (3) SA 830 (CC)* at p 906 Mahomed JP stated in the majority judgment that: “The common law is not to be trapped within the limitations of its past. It need not to be interpreted in conditions of social and constitutional ossification. It needs to be revisited and revitalised with the spirit of the constitutional values defined in chapter 3 of the
“What I am contending is that the law can deal effectively with these challenges through the very process envisaged by s 35(3), namely the indirect radiating effect of the chapter 3 rights on the post-constitutional development in the common law and statute law of concepts such as public policy, the boni mores, unlawfulness, reasonableness, fairness and the like, without any of the unsatisfactory consequences that direct application must inevitably cause. The common law of this country has, in the past, proved to be flexible and adaptable, and I am confident that it can also meet this new constitutional mandate.”

Mahomed JP referred with approval to the German legal system in which, he noted, the jurisprudence of the Federal Constitutional Court is consistently to the effect that the basic right norms contain not only defensive subjective rights for the individual but embody at the same time an objective value system which, as a fundamental constitutional value for all areas of the law, acts as a guiding principle and stimulus for the legislature, executive and judiciary.

This is reminiscent of the observations of Thirion J in Edouard v Administrator, Natal which predated the Constitution.

---

84 See also Brislley v Drotsky 2002 (4) SA 1 (SCA) in which Cameron AJ points out at para 91 p35 that: “The jurisprudence of this Court has already established that, in addition to the fraud exception, there may be circumstances in which an agreement, unobjectionable in itself, will not be enforced because the object it seeks to achieve is contrary to public policy. Public policy in any event nullifies agreements offensive in themselves - a doctrine of very considerable antiquity. In its modern guise, ‘public policy’ is now rooted in our Constitution and the fundamental values it enshrines. These include human dignity, the achievement of equality and the advancement of human rights and freedoms, non-racialism and non-sexism.” (footnotes omitted)

85 Edouard 1989 (2) SA 368 (D). Thirion J stated, despite the fact that the Constitution had not yet been written at that time, that “Certain moral values and policy considerations have become generally accepted in the community and some of these have in their turn hardened into rules of law. By reasoning from settled principles in related fields and by striking a balance between competing consideration the Court tries to arrive at a result which will be fair to the individual and the community. In the process the Court must consider what interests legitimately require to be protected for the sake of the collective welfare and it must evaluate the probable consequences of adopting a public policy rule. The Court will only apply community attitudes and values in deciding cases if such attitudes and values have gained general acceptance in the community and are clear and if their application is necessary in the interests of sound social policy and the welfare of the community. Certain moral values and policy considerations have become generally accepted in the community and some of these have in their turn hardened into rules of law. By reasoning from settled principles in related fields and by striking a balance between competing consideration the Court tries to arrive at a result which will be fair to the individual and the community. In the process the Court must consider what interests legitimately require to be protected for the sake of the collective welfare and it must evaluate the probable consequences of adopting a public policy rule. The Court will only apply community attitudes and values in deciding cases if such attitudes and values have gained general acceptance in the community and are clear and if their application is necessary in the interests of sound social policy and the welfare of the community.”
There is no better evidence of the general acceptance of a value by a community than its enshrinement within its Constitution.

Clearly public policy and Constitutional values are inextricably intertwined. A court will not be able to justify a decision in which public policy as it perceives it, runs counter to constitutional values. Contracts that are contrary to public policy are unenforceable and unlawful. Similarly, it is submitted that administrative action that is contrary to public policy and therefore the underlying constitutional values is unlawful and subject to challenge in terms of section 33 of the Constitution and the PAJA. Lawfulness, in the context of section 33 of the Constitution, means more than just intra vires. The concept of lawfulness is based in South African law on constitutional values and considerations of public policy throughout the legal system. It is only the context that varies.

In terms of the law of delict, unlawfulness is also determined with reference to public policy and therefore to the underlying values of the Constitution. In *Mpongwana v Minister of Safety and Security* the court held that the test for whether an omission could be viewed as wrongful related to the existence or otherwise of a duty of care

---

86 For instance in *Sasfin v Beukes* 1989 (1) SA 1 (A) the court held that agreements which are clearly inimical to the interests of the community, whether they are contrary to law or morality, or run counter to social or economic expediency will accordingly on grounds of public policy not be enforced. The court held that a further relevant and important consideration is that public policy should properly take into account the doing of 'simple justice between man and man'. It is submitted that the distinction between natural justice in the public law context and 'simple justice between man and man' in the private law context is merely contextual. The principle of the balancing of competing or conflicting interests is the same in both contexts. See the reference by Cameron J at p611-612 in *Holomisa v Argus Newspapers Ltd* 1996 (2) SA 588 (W) to balancing of fundamental rights as follows: "It is not clear, where a balance has to be struck between two fundamental values, why it should be done at a point which is so generous in its protection of the one and so meagre in its protection of the other." In *Holomisa*, the court states that: "The Constitution's structures and its values necessarily inform every aspect of legal reasoning and decision-making." In the same case Cameron J observes that: "A central consideration in South Africa is that the Constitution plants new values at the roots of our legal system. These include, as stated earlier, the values of equality, democracy, governmental openness and accountability."

87 Traverso J acknowledges this in *Contisse v Comitis And Others* 2001 (1) SA 1254 (C), stating: "We have moved from a very dark past into a democracy where the Constitution is the supreme law, and public policy should be considered against the background of the Constitution and the Bill of Rights." In *S v Lawrence; S v Negal; S v Solberg* 1997 (4) SA 1176 (CC), the constitutional court notes at para 33 that "Arbitrariness is inconsistent with 'values which underlie an open and democratic society based on freedom and equality', and arbitrary restrictions would not pass constitutional scrutiny." The fact that constitutional values underlie the entire legal system should not diminish the importance of context at a less abstract level. The court in *S v Lawrence supra* explained the need for context in the balancing of rights and values that: "The reason why context is so important in constitutional matters is well explained by Wilson J in *Edmonton Journal v Alberta AG*: '. . . (A) particular right or freedom may have a different value depending on the context. It may be, for example, that freedom of expression has greater value in a political context than it does in the context of disclosure of the details of a matrimonial dispute. The contextual approach attempts to bring into sharp relief the aspect of the right or freedom which is truly at stake in the case as well as the relevant aspects of any values in competition with it. It seems to be more sensitive to the reality of the dilemma posed by the particular facts and therefore more conducive to finding a fair and just compromise between the two competing values. . . .' It stated that "In deciding what is reasonable and necessary in the present case we should accordingly look to the actual dilemma triggered by its particular facts, and not deal with it in a formulaic way simply because s 14 has been infringed." (Footnotes omitted). The golden thread of public policy and constitutional values operates at a broadly systemic level throughout South African law. This does not exclude the case-by-case approach. One should not make the mistake of adopting a 'one-size-fits-all' reasoning because that in itself would be unconstitutional.
owed to the claimant being part of the enquiry into lawfulness. In deciding whether a
duty of care existed, the court said that, public policy played a role\textsuperscript{88}. In \textit{Motor Industry Fund Administrators (Pty) Ltd and Another v Janit and Another}\textsuperscript{89} the court
held that not all invasions of privacy or publications of private facts are unlawful. It
said that in demarcating the boundary between the lawfulness and unlawfulness of the
intrusion or publication the court must have regard to the particular facts of the case
and judge them in the light of contemporary \textit{boni mores} or the genuine sense of
justice of the community\textsuperscript{90}. Lawfulness is clearly a reflection of public policy and the
latter in turn is underpinned and irradiated by the values of the Constitution. As such
whether the concept occurs in administrative, delictual or contractual law, it is
fundamentally that same golden thread that unifies them.

3.6.2 Reasonableness

An aspect of reasonableness is rationality. In \textit{Durbsinvest (Pty) Ltd v Town and
Regional Planning Commission, Kwazulu-Natal, and Others}\textsuperscript{91} the court observed that
the principles of administrative law (as contemplated by the right to administrative
justice entrenched in s 33 of the Constitution of the Republic of South Africa Act 108
of 1996 which are to be derived from the decision of the Constitutional Court in
\textit{Pharmaceutical Manufacturers Association of SA and Another: In re Ex parte
President of the Republic of South Africa and Others}\textsuperscript{92} are:

(1) The review of an administrative decision of an organ of the Executive gives rise
to a constitutional enquiry.

\textsuperscript{88} Mpongwana 1999 (2) SA 794 (C). See also \textit{Aucamp and Others v University of Stellenbosh 2002 (4) SA 344 (C)} in
which Van Zyl J observed that: "It is trite that in order to succeed in a delictual claim for pure economic loss the plaintiff
has to show, \textit{inter alia}, that the conduct causing pure economic loss was wrongful in the sense that it infringed upon a
subjective right of the plaintiff or breached a legal duty owed to the plaintiff. The legal duty as such must be directed at
preventing reasonably foreseeable damage being caused to the plaintiff. In considering whether or not the conduct in
question is wrongful the Court is required to make a value judgment. In doing so it must weigh up the interests of the
parties and of the community at large against the background of the relevant facts and circumstances. In addition, it must
strive, impartially and objectively, to apply the values of justice, fairness and reasonableness, while taking into account
considerations of good faith (\textit{bona fides}) and good morals (\textit{boni mores}), otherwise known as public policy reflecting the
legal convictions of the community." There is a detailed discussion of the concept of lawfulness in \textit{Minister of Law and
Order v Kadir} 1995 (1) SA 303 (A)

\textsuperscript{89} \textit{Motor Industry Fund Administrators 1994(3) SA 56 (W)}

\textsuperscript{90} The court referred to \textit{Financial Mail (Pty) Ltd and Others v Sage Holdings Ltd and Another 1993 (2) SA 451 (A) at 462.

\textsuperscript{91} \textit{Durbsinvest 2001 (4) SA 103 (N)}

\textsuperscript{92} \textit{Pharmaceutical Manufacturers Association of SA (fn 72 supra)}
(2) In any such enquiry the first question to be asked is whether the decision complained of is, objectively speaking, rationally related to the purpose for which the power was given.

(3) If it was, and the decision was arrived at bona fide and within the authority and jurisdiction of the body whose decision is being enquired into, the Court cannot interfere with the decision merely because it disagrees with it.

In *Mafongosi And Others v United Democratic Movement And Others* the court held that an administrative decision could be justified only by the reasons underpinning it. It was those reasons which showed whether decision was rational or not. If it was not, the decision could not be allowed to stand and had to be set aside even if the decision was reached in a manner that was bona fides. It said that administrative decisions had to be rationally related to the purpose for which the power was given, otherwise they would in effect be arbitrary and that the question of whether a decision was rationally related to the purpose for which the power was given called for an objective enquiry. Were this not so, a decision that, viewed objectively, was in fact irrational, may pass muster simply because the person who took it mistakenly and in good faith believed it to be rational. Such a conclusion would place form above substance and undermine the important constitutional principle.

Justifiability is an important criteria in establishing both the lawfulness and reasonableness of a decision. In *Roman v Williams NO* the court held that justifiability as specified is to be objectively tested. It stated that the scope of this constitutional test is clearly much wider than that of the common-law test and it overrides the common-law review grounds as set out in *Johannesburg Stock Exchange v Witwatersrand Nigel Ltd*. The court held in *Roman* that administrative action, in order to prove justifiable in relation to the reasons given for it, must be objectively tested against the three requirements of suitability, necessity and proportionality which requirements involved a test of reasonableness. It said that gross unreasonableness is no longer a requirement for review. The constitutional test embodies the requirement of proportionality between the means and the end. The role

of the Courts in judicial reviews is no longer confined to the way in which an administrative decision was reached but extends to its substance and merits as well\textsuperscript{97}.

The concept of reasonableness permeates South African law. It is not unique or specific to administrative or constitutional law\textsuperscript{98}. The court in \textit{S v Manamela and Another (Director-General of Justice Intervening)}\textsuperscript{99} pointed out that:

"Reasonableness" is a legal commonplace in the courts which are required to apply it daily in determining the standard of care exacted of persons in ordinary life."

In \textit{Holomisa v Argus Newspapers Ltd}\textsuperscript{100} the court observed that:

"The reasonableness standard offers a powerful tool for resolving the difficulties inherent in protecting reputation while at the same time giving recognition to the role the Constitution accords free speech and expression. It will not be reasonable to publish most untrue statements of fact. Only due inquiry and the application of reasonable care will mark such conduct out for protection. A further valuable feature of the reasonableness standard is that, as

\textsuperscript{97}Roman fn 95 supra at p 284f/G - 285A.

\textsuperscript{98}In \textit{Mofongosti and Others v United Democratic Movement and Others} fn 94 supra the court pointed out at p 376 that: "The reasonableness required for administrative actions taken by such functionaries is the same as the reasonableness required for decisions by organs of State. In other words there is a single set of standards for administrative justice." In \textit{De Beer NO v North-Central Local Council and South-Central Local Council and Others (Umhlatuzana Civic Association Intervening)} 2002 (1) SA 429 (CC) the court noted: "It is undesirable if not impossible to try to determine the requirements of reasonableness in the abstract. The reasonableness of notice provisions in any law must in the case of such provision be assessed on its own merits." In \textit{South African Commercial Catering and Allied Workers Union And Others v Irvin & Johnson Ltd (Seafoods Division Fish Processing)} 2000 (3) SA 705 (CC), a case involving allegations of bias on the part of labour appeal court judges, the constitutional court observed that: "The legal standard of reasonableness is that expected of a person in the circumstances of the individual whose conduct is being judged." With regard to the test of reasonableness in the limitation of rights Sachs J noted in \textit{Coetzee v Government Of The Republic Of South Africa; Maitso And Others v Commanding Officer, Port Elizabeth Prison, And Others} 1993 (4) SA 631 (CC) that: "The requirement that limitation be reasonable presupposes more than the existence of a rational connection between the purpose to be served and the invasion of the right. Thus a limitation logically connected to its objective could be unreasonable if it undermined a long-established and now entrenched right; imposed a penalty that was arbitrary, unfair or irrational; or, as in this case, used means that were unreasonable." Referring to the judgement of Chaskalson P in \textit{Makwanyane} where the latter stated \textit{inter alia} that "The fact that different rights have different implications for democracy and, in the case of our Constitution, for 'an open and democratic society based on freedom and equality', means that there is no absolute standard which can be laid down for determining reasonableness and necessity. Principles can be established, but the application of those principles to particular circumstances can only be done on a case-by-case basis. This is inherent in the requirement of proportionality, which calls for the balancing of different interests" Sachs J added at p 635-656: "If I might put a personal gloss on these words, the actual manner in which they were applied in \textit{Makwanyane} (the Capital Punishment case) shows that the two phases are strongly interlinked in several respects: firstly, by overt proportionality with regard to means, secondly, by underlying philosophy relating to values, and, thirdly, by a general contextual sensitivity in respect of the circumstances in which the legal issues present themselves." Sachs J stated in \textit{Coetzee supra} that "The notion of an open and democratic society is thus not merely aspirational or decorative, it is normative, furnishing the matrix of ideals within which we work, the source from which we derive the principles and rules we apply, and the final measure we use for testing the legitimacy of impugned norms and conduct."

In \textit{Govender v Minister of Safety and Security} 2000 (1) SA 959 (D) the court noted that Section 49(1) of the Criminal Procedure Act is a law of general application. It said: "Subsection (1) at present deals with the use of force in general and subjects its legality to the reasonableness test of the common law. In terms of the present authoritative interpretation, this reasonableness includes both a form of proportionality as well as a subsidiarity principle. The amount and method of force used must therefore be in proportional balance to the aim that is to be achieved and must be the minimum force that would be reasonably effective and feasible in the circumstances. It furthermore includes the weighing up of the nature and seriousness of the specific crime in question, as committed, against the amount and method of force used. In my view, s 49(1) is both necessary and justifiable in an open and democratic society based upon freedom and equality."

\textsuperscript{99}In \textit{Mofongosti and Others v United Democratic Movement and Others} fn 94 supra the court pointed out at p 376 that: "The reasonableness required for administrative actions taken by such functionaries is the same as the reasonableness required for decisions by organs of State. In other words there is a single set of standards for administrative justice." In \textit{De Beer NO v North-Central Local Council and South-Central Local Council and Others (Umhlatuzana Civic Association Intervening)} 2002 (1) SA 429 (CC) the court noted: "It is undesirable if not impossible to try to determine the requirements of reasonableness in the abstract. The reasonableness of notice provisions in any law must in the case of such provision be assessed on its own merits." In \textit{South African Commercial Catering and Allied Workers Union And Others v Irvin & Johnson Ltd (Seafoods Division Fish Processing)} 2000 (3) SA 705 (CC), a case involving allegations of bias on the part of labour appeal court judges, the constitutional court observed that: "The legal standard of reasonableness is that expected of a person in the circumstances of the individual whose conduct is being judged." With regard to the test of reasonableness in the limitation of rights Sachs J noted in \textit{Coetzee v Government Of The Republic Of South Africa; Maitso And Others v Commanding Officer, Port Elizabeth Prison, And Others} 1993 (4) SA 631 (CC) that: "The requirement that limitation be reasonable presupposes more than the existence of a rational connection between the purpose to be served and the invasion of the right. Thus a limitation logically connected to its objective could be unreasonable if it undermined a long-established and now entrenched right; imposed a penalty that was arbitrary, unfair or irrational; or, as in this case, used means that were unreasonable." Referring to the judgement of Chaskalson P in \textit{Makwanyane} where the latter stated \textit{inter alia} that "The fact that different rights have different implications for democracy and, in the case of our Constitution, for 'an open and democratic society based on freedom and equality', means that there is no absolute standard which can be laid down for determining reasonableness and necessity. It furthermore includes the weighing up of the nature and seriousness of the specific crime in question, as committed, against the amount and method of force used. In my view, s 49(1) is both necessary and justifiable in an open and democratic society based upon freedom and equality."

\textsuperscript{100}Holomisa fn 86 supra at p 617
the plurality pointed out in *Theophanous’* case, ‘Reasonableness is a concept with which the law is familiar.’”

There is a strong link between lawfulness and reasonableness as evidenced by the observation of the appeal court in *National Media Ltd and Others v Bogoshi*\(^{101}\) that:

“In our law the lawfulness of a harmful act or omission is determined by the application of a general criterion of reasonableness based on considerations of fairness, morality, policy and the Court’s perception of the legal convictions of the community.”

The case involved a claim for defamation. It is of some significance that the court further observed in this case that proof of reasonableness will usually (if not inevitably) be proof of lack of negligence\(^{102}\). It is also much in evidence in the law of contract especially with regard to covenants in restraint of trade where public policy plays an important role in determining whether or not the covenant should be upheld\(^{103}\). Reasonableness is one of the conceptual pillars of the law of delict. In *Vogel v Crewe and Another*\(^{104}\) the court held that the test of reasonableness should be applied taking into account the general norms acceptable to the particular society and that the test of reasonableness is an objective one and must happen in the light of prevailing circumstances. The link between values and reasonableness is evident *inter alia*\(^{105}\) from *Botha And Another v Mthiyane And Another*\(^{106}\) in which Claassen J stated that

\(^{101}\) *Bogoshi* 1998 (4) SA 1196 (SCA)

\(^{102}\) *Bogoshi* fn 101 supra at p 1215

\(^{103}\) In *Roffey v Catterall, Edwards & Goudre* (Pty) Ltd 1977 (4) SA 494 (N) the court said that the reasonableness or unreasonableness of the covenant must be assessed with reference to all of the circumstances, and the essential inquiry is an objective one. *Leon, In S.A. Wire Co. (Pty) Ltd v Durban Wire & Plastics (Pty) Ltd* 1968 (2) SA 777 (D) said at p. 787G - H: “I am not... by any means certain that the South African cases have been right in adopting the English view relating to onus. If it is correct to say that the doctrine of restraint of trade is applied in our law because of public policy, then it becomes relevant to enquire what that public policy is. What I think is contrary to public policy is a contract in unreasonable restraint of trade. If such view be correct then, applying the ordinary principles of onus relating to pleadings, it would seem that the onus would lie upon the party alleging it to show that the contract in question is in unreasonable restraint of trade.” See also *National Chemsearch (SA) (Pty) Ltd v Borrowman And Another* 1979 (3) SA 1092 (A)

\(^{104}\) *Vogel* 2003 (4) SA 509 (T)

\(^{105}\) See also *Carmichele v Minister Of Safety And Security And Another* 2003 (2) SA 656 (C) in which Chetty J held as follows at p 671-672: “Reasonableness, on which the legal convictions of the community are based, is now to be found in the Constitution and not in some vague notion of public sentiment or opinion. In *Van Duivenboden v Minister of Safety And Security* [2001] 4 B All SA 127 (C), Davis J adopted this understanding where he stated at 132d: ‘[I]t would appear that the requirement of wrongfulness demands of the court that it determine whether society requires that the law classify the type of conduct concerned as impermissible, that is conduct of which a society disapproves. See *Van Aewegen* at 192 and *Neethling, Potgieter and Visser The Law of Delict* (1999) at 39 - 41. In turn the determination of “impermissibility” shaped by a society’s vision of itself is contained within its legal system. In terms of the ultimate law in this country, the Constitution, South African society predicated upon foundational values of human dignity, liberty and equality. The newly established constitutional community is to be built upon those “common values and norms” and the added principle that public authority must be transparent and accountable to the public it serves.” Consequently, in the enquiry whether the State owed the public in general, and women in particular, a duty at private law to exercise reasonable care in the prevention of violent crime, the proper application of the test requires one to attach primary significance to these constitutional imperatives. On the application of that test, Klein, Hugo and Louw owed the plaintiff a legal duty to protect her against the risk of sexual violence perpetrated by Coetzee. The negligent failure to do so was, therefore, unlawful.”

\(^{106}\) *Botha* 2002 (1) SA 289 (W)
"In applying the test of reasonableness, the court is exercising a value judgment about whether a defendant in the circumstances of any particular case should be accorded legal protection." See also *S v Manamela And Another (Director-General of Justice Intervening)* in which the court held that although s 36(1) differs in various respects from s 33 of the interim Constitution, its application continues to involve the weighing up of competing values on a case-by-case basis to reach an assessment founded on proportionality. Each particular infringement of a right has different implications in an open and democratic society based on dignity, equality and freedom. There can accordingly be no absolute standard for determining reasonableness. This is inherent in the requirement of proportionality, which calls for the balancing of different interests. The proportionality of a limitation must be assessed in the context of its legislative and social setting. Also in *S v Makwanyane and Another* Chaskalson P noted that "The limitation of constitutional rights for a purpose that is reasonable and necessary in a democratic society involves the weighing up of competing values, and ultimately an assessment based on proportionality. This is implicit in the provisions of s 33(1) [of the interim Constitution]. The fact that different rights have different implications for democracy and, in the case of our Constitution, for “an open and democratic society based on freedom and equality”, means that there is no absolute standard which can be laid down for determining reasonableness and necessity.”

3.6.3 Procedural Fairness

The constitutional court has observed with regard to the right to administrative justice contained in section 33 of the Constitution that it enumerates four aspects of just administrative action and that the theme of fairness must be seen as governing the manner in which the four enumerated sections must be interpreted. It is thus a

---

107 *S v Manamela* in *supra* at p 20
108 Makwanyane 1995 (3) SA 391 (CC)
109 In the minority judgment in *Bel Porto School Governing Body and Others v Premier, Western Cape, and Another* 2002 (3) SA 265 (CC). The court commented further at p309-310 that: "The words themselves have no fixed and self-evident meaning. Unless animated by a broad concept of fairness, their interpretation can result in a reversion to what has been criticised as the sterile, symptomatic and artificial classifications which bedevilled much of administrative law until recently. Undue technicality and artificiality should be kept out of interpretation as far as possible; the quality of fairness, like the quality of justice, should not be strained. There are at least three respects in which the concept of fairness should be seen as animating s 33. The first is to provide the link between the four enumerated aspects so that they are not viewed as separate elements to be dealt with mechanically and sequentially, but, rather, as part of a coherent, principled and interconnected scheme of administrative justice. Secondly, the interpretation of each of the individual subsections within the framework of the composite whole must be informed by the need to ensure basic fairness in
pervading principle of administrative justice rather than a single aspect of it. Conradie JA notes in *Modise and Others v Steve's Spar, Blackheath*¹¹⁰ that procedural fairness is a dominant theme in both administrative and labour law. Fairness is also relevant in the law of contract¹¹¹. Unconscionable contracts or contractual terms are fundamentally unfair¹¹². Although South African law has not yet progressed to the point where consumers are guaranteed protection from unfair or unconscionable terms as is the case in other jurisdictions such as the United States of America, Sweden, Germany, Israel, the Netherlands, Denmark and England¹¹³, South African courts will not uphold unconscionable terms or support unconscionable behaviour relating to a contract on the grounds that this would be *contra bonos mores*¹¹⁴.

¹¹⁰ *Modise 2001 (2) SA 406 (LAC) at p430*

¹¹¹ In *Standard Bank of SA Ltd v Essop 1997 (4) SA 569 (D) Maslin J stated: “In my opinion, the applicants conduct in having purported to stipulate for these rights was, and remains, unconscionable. It has purported to empower itself, in the event of any relevant default by the respondent, to deprive him of his status as a solvent person, and inevitably to subject him to all the onerous obligations and extensive restrictions which bind an insolvent in terms of the Act, without any notice to him and without his being able in any event to defend himself. This conduct offends my, and in my opinion it would offend any reasonable person's, sense of what is procedurally fair and it offends my, and in my opinion would offend any reasonable person's, sense of justice. In *Jansie Van Rensburg v Grive Trust CC 2000 (1) SA 315 (C) the court stated that “[I]n applying principles of logic and fairness in the *Waste* decision supra [*Waste v Security Motors (Pty) Ltd 1972 (2) SA 129 (C)*], Van Zijl J was, in my respectful view, doing just what the said Appellate Division decisions have been advocating over a long period of time. His concept of logic should, I believe, be understood to mean the reasonableness required by public policy to achieve justice and fairness between contracting parties. Together with the fundamental principle of good faith underlying the contractual relationship between such parties, public policy indeed requires a fine balance to be established between the relative rights, duties and interests of the parties, as held by Van Zijl J in his aforesaid judgment.*

¹¹² In *First National Bank of Southern Africa Ltd v Bophuthatswana Consumer Affairs Council 1995 (2) SA 833 (BG) the court observed that: “The word ‘unconscionable’ has been judicially defined in the category of ‘unconscionable bargain’. A bargain so one-sided and inequitable in its terms as to raise a presumption of fraud and oppression.’ See *Mooney and Whiteley’s Law Dictionary* 10th ed by Hardy Imany E R. In England the subject of unconscionable bargains is dealt with in *Hadley v Baxendale (1854) R 85*, and *Bolam v MibMedical Co (1957) 4 QB 220*. The need of the law to act as a barrier against any abuse of power is well epitomised in *Western REIT v Sasolmanns (Pty) Ltd 1982 (2) SA 785 (SAS) the court stated that *‘it is a cardinal principle of public policy that a person, or business, should not be able to take advantage of its financial position to prevent another person from enforcing his legal rights’.*

¹¹⁴ In *Mackay v Legal Aid Board 2003 (1) SA 271 (SE) the court said: “But taxation does not override an enforceable contract between the parties, unless the agreed fee is so unreasonable as to be unconscionable and hence contra bonos mores (in which event the contract is not enforceable).” The Supreme Court of Appeal in *Eerste Nasionale Bank Van Suidelike Afrika Bpk v Snyman No 1997 (4) SA 302 (SCA) noted that: “Die tendens word voortgezet in *Wat *v *van den Berghs* 1937 (2) SA 740 (SCA) and *Vandermerwe v De Poll* 1937 (2) SA 156 (SCA).*

Wessels AR verklaarp op 292: The commentators put it thus: “As a general proposition your claim may be supported by a strict interpretation of the law, but it cannot be supported in this particular case against your particular adversary, because to do so would be inequitable and unjust, for it would allow you, under the cloak of the law, to put forward a fraudulent claim . . . It is therefore clear that under the civil law the Court refused to allow a person to make an unconscionable claim even though his claim might be supported by a strict reading of the law. This inherent equitable jurisdiction of the Roman Courts (and of our Courts) to refuse to allow a particular plaintiff to enforce an unconscionable claim against a particular defendant where under the special circumstances it would be inequitable, dates back to remote antiquity and is embodied in the maxim ‘aumentum jus ab advente dissociatis juris non est.’ *Devis 1 (in an obiter dictum in *Mort NO v Henry Shields-Chair 2001 (1) SA 464 (C) op 4745-475F* declared: “Like the concept of boni mores in our law of delict, the concept of good faith is shaped by the legal convictions of the community. While Roman-Dutch law may well supply the conceptual apparatus for our law, the content with which concepts are filled depends on an examination of the legal conviction of the community - a far more difficult task. This task requires that careful account be taken of the existence of our constitutional community, based as it is upon principles of freedom, equality and dignity. The principle of freedom does, to an extent, support the view that the contractual autonomy of the parties should be respected and that failure to recognise such autonomy could cause
The principles of procedural fairness are equally applicable to decisions of organs of state and other functionaries. In *Mafongosi and Others v United Democratic Movement and Others* the court stated that there were no separate principles applicable to the exercise of power by functionaries other than organs of State where the rights entrenched in s 33 of the Constitution were involved. It held that the reasonableness required for administrative actions taken by such functionaries was the same as the reasonableness required for decisions by organs of state and that there was a single set of standards for administrative justice. It also held that the requirement for procedural fairness was directed at the manner in which the administrative decision was concluded. This requirement, said the court, placed a duty upon the person taking the administrative decision to act fairly. The principles of natural justice formed the core content of procedural fairness. The court found that what was required by procedural fairness differed from one case to the other and that it was the circumstances of the particular case which gave an indication of the procedural steps required for a proper decision.

 contractual litigation to mushroom and the expectations of contractual parties to be frustrated. See Glover O B [*'Good faith and procedural unfairness in contract' (1998) 61 THRHR 328 at p 334. But the principles of equality and dignity direct attention in another direction. Parties to a contract must adhere to a minimum threshold of mutual respect in which the “unreasonable and one-sided promotion of one’s own interest at the expense of the other infringes the principle of good faith to such a degree as to outweigh the public interest in the sanctity of contracts” Zimmermann (supra at 259 - 60). The task is not to disguise equity or principle but to develop contractual principles in the image of the Constitution. For an instructive insight into this approach, see van der Merwe D [*'The Roman-Dutch law: from virtual reality to constitutional resource’* 1998 TSAR 1. In short, the constitutional state which was introduced in 1994 mandates that all law should be congruent with the fundamental values of the Constitution. Oppressive, unreasonable or unconscionable contracts can fall foul of the values of the Constitution. In accordance with its constitutional mandate the courts of our constitutional community can employ the concept of *boni mores* to infuse our law of contract with this concept of *bona fides.* See in this regard Jansse van Rensburg v Grieve Trust CC 2000 (1) SA 315 (C) at 325 - 6.” Quoted with approval in *Brisley v Drotsky* 2002 (4) SA 1 (SCA). The court in this case also notes that: “Onk Hutchinson lever ‘a stark platitude dat die *bona fides*, geklaag deur die Grondwet, groter erkennings in ons kontrakstreëf verder. In ‘n hoofstuk getiteld ‘Good faith in the South African Law of Contract’ in Roger Brownword, Neema J Hird and Geraint Howells *Good Faith in Contract: Concept and Context* (1999) 213 op 230 - 1 skryf hy: ‘What emerges quite clearly from recent academic writings, and from some of the leading cases, is that good faith may be regarded as an ethical value or controlling principle, based on community standards of decency and fairness, that underlies and informs the substantive law of contract. It finds expression in various technical rules and doctrines, defines their form, content and field of application and provides them with a moral and theoretical foundation. Good faith thus has a creative, a controlling and a legitimating or explanatory function. It is not, however, the only value or principle that underlies the law of contract nor perhaps, even the most important one. In the words of Lubbe and Murray: “It does not dominate contract law but operates in conjunction (and competition) with notions of individual autonomy and responsibility, the protection of reasonable reliance in commerce, and views of economic efficiency in determining the contours of contract doctrine. However, it will ensure just results only if judges are alert to their task of testing existing doctrines and the operation of particular transactions against the constantly changing mix of values and policies of which *bona fides* is an expression.”* On this view of things, which seems to be correct, the influence of good faith in the law of contract is merely of an indirect nature, in that the concept is usually if not always mediated by some other, more technical doctrinal device. Thus, for example, while good faith does not empower a court directly to supplement the terms of a contract, or to limit their operation, it might in appropriate cases enable the court to achieve these same results indirectly, through the use of devices such as implied terms and the public policy rule.”

115 *Mafongosi fn 94 supra*
116 *Mafongosi fn 94 supra paragraph [17] at 576A/B - B/C*
117 *Mafongosi fn 94 supra paragraph [18] at 576G.*
In Du Preez and Another v Truth and Reconciliation Commission\textsuperscript{118} the court observed that it was vital to consider the context of the inquiry and the fact that it is not a civil or criminal trial, or inquest, or other judicial proceeding, but a statutory inquiry. The claim to procedural fairness had to be considered in that context. It noted that in Administrator, Transvaal v Traub\textsuperscript{119}, Corbett CJ - following Ridge v Baldwin\textsuperscript{20} and subsequent decisions - held that the duty to act fairly 'is simply another, and preferable, way of saying that the decision-maker must observe the principles of natural justice'.

The requirement of procedural fairness does not imply the need in every case for interested parties to be heard before a decision is taken. In Permanent Secretary, Department of Education and Welfare, Eastern Cape, and Another v Ed-U-College (PE) (Section 21) \textsuperscript{Inc\textsuperscript{21}} the court noted as to the nature of the requirements of procedural fairness and reasonableness that would arise in relation to the exercise of the particular power concerned, that a right of hearing would not accrue to all affected persons simply because a decision reducing the annual subsidy was to be taken. It said that schools and parents could not assume, in the absence of any undertaking by the Department of Education, that subsidies would always continue to be paid at the rate previously established or that they should be afforded a hearing should subsidies have to be reduced because the legislature had reduced the amount allocated for distribution.

With regard to the \textit{audi alteram partem} rule, an element of procedural fairness, the court of appeal in Nortje en 'n Ander v Minister van Korrektiewe Dienste en Andere\textsuperscript{122} observed that despite the changing constitutional dispensation brought about by the Constitution, the principles of the common law still afford guidance as to what will be procedurally fair in a specific case. It said that according to the common-law principles in this regard the \textit{audi alteram partem} rule is applicable where an administrative decision can prejudice a person to such extent that, in accordance with that person's legitimate expectation, the decision ought not to be taken unless he is

\begin{flushleft}
\textsuperscript{118} Du Preez 1997 (3) SA 204 (A)
\textsuperscript{119} Traub fn 11 supra
\textsuperscript{120} Ridge [1964] AC 40
\textsuperscript{121} Ed-U College 2001 (2) SA 1 (CC)
\textsuperscript{122} Nortje 2001 (3) SA 472 (SCA)
\end{flushleft}
The court held that there is no universally applicable set of requirements for compliance with the *audi alteram partem* rule and that because of the innumerable situations in which it may be applied, the rule is so flexible and adaptable that the requirements for compliance therewith cannot be separated from the context in which it is applied. The touchstone to be utilised in determining whether the rule was complied with in a specific case is intimately connected with the fundamental principle of the rule. The court found that the *audi alteram partem* principle is but one facet, albeit an important one, of the general requirement of natural justice that in the circumstances the public official or body concerned must act fairly. It noted that the duty to act fairly is concerned only with the manner in which the decisions are taken and does not relate to whether the decision itself is fair or not.

Accordingly, said the court, the question to be asked in every case in which the *audi alteram partem* rule is applicable is whether the person who is adversely affected by the decision had a just and fair opportunity to state his or her case. A closer definition of the requirements is neither feasible nor desirable, for the very reason that it would restrict the flexible application of the rule. It held that as a starting point for determining what constitutes a fair opportunity of being heard, the following guideline may be observed: Fairness will often require that a person who may be adversely affected by a decision should have an opportunity of making representations on his own behalf either before the decision is taken, with a view to producing a favourable result, or after it is taken, with a view to procuring its modification, or both. Since the person affected usually cannot make worthwhile representations without knowing what factors may weigh against his interests, fairness will often require that he is informed of the main points of the case which he has to answer.

The court said that depending on the circumstances, the *audi alteram partem* rule can also be complied with by allowing the affected person an opportunity of being heard after the decision has already been taken. It cautioned, however, that this should be the exception rather than the rule because a person who is heard only after a decision has been made is in a considerably weaker position than one who is given a hearing.

---

123 Nortje fn 122 supra, paragraph [14] at 479C - F
before the decision is taken. Therefore, as a rule, a hearing after the decision will suffice only if an earlier hearing was not possible.124

Retroactive administrative decisions are particularly problematic because they tend to be subversive of the requirement of procedural fairness. In Premier, Mpumalanga, and Another v Executive Committee, Association of State-Aided Schools, Eastern Transvaal125 the constitutional court held that though the courts should not as a rule impose obligations upon government that would inhibit its ability to make and implement policy effectively, the principle of procedural fairness was flouted where retroactive decisions were implemented without affording parties an effective opportunity to make representations.

3.7 Public Power and Judicial Review

Section 239 of the Constitution defines ‘organ of state’ as-

(a) any department of state or administration in the national, provincial or local sphere of government; or

(b) any other functionary or institution-

(i) exercising a power or performing a function in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation.’

The term ‘public power’ is central to the concept of administrative law as indicated by the definition of “administrative action” in the PAJA. Administrative law involves the control of the exercise of public power. The nature of public power is not always easy to define. However it is clear that the exercise of public power is subject to judicial review.

In Korf26 the court provided the following useful summary of jurisprudence concerning organs of state:

---

124 Nortje fn 122 supra, paragraph [19] at 480G - I.
125 Executive Committee, Association of State-Aided Schools 1999 (2) SA 91 (CC)
126 Korf v Health Professions Council of South Africa 2000 (1) SA 1171 (T)

393
"It must further be noted that the 'statutory body or functionary' which previously could have been a component of an organ of State has now been given a much more precise content. In *Directory Advertising Cost Cutters v Minister for Posts, Telecommunications and Broadcasting and Others* 1996 (3) SA 800 (T) it was pointed out that an organ of state is not an agent of the State, it is part of government (at any of its levels). Section 233(1) of the interim Constitution included in the term 'organ of state' a statutory body or functionary. In that case I applied a narrower definition of the concept organ of state than that applied in *Baloro and Others v University of Bophuthatswana and Others* 1995 (4) SA 197 (B). The test laid down was whether the State had control. This approach was followed in *Mistry v Interim National Medical and Dental Council of South Africa and Others* 1997 (7) BCLR 933 (D) at 947B – 948C and *Wittmann v Deutscher Schulverein, Pretoria and Others* 1998 (4) SA 423 (T) at 454B in respect of the interim Constitution. *Directory Advertising Costs Cutters (supra)* was also followed in respect of the new Constitution in *ABBM Printing and Publishing (Pty) Ltd v Transnet Ltd* 1998 (2) SA 109 (W) at 113A - G and *Goodman Brothers (Pty) Ltd v Transnet Ltd* 1998 (4) SA 989 (W). In all these cases therefore the test applied in order to determine whether a body or functionary is an organ of state is whether that body or functionary is directly or indirectly controlled by the state."

The court then considered whether the control test still applied to the meaning of the phrase "organ of state". It also considered whether the difference in wording between the interim Constitution and the final Constitution constituted a material difference and came to the conclusion that it did not. It asked whether the description set out in subparagraph (b) had extended the meaning of organ of state. Subparagraph (i) limits it to a power or function in terms of the national and provincial constitutions and decided that "this does not bring about a difference", noting that subsection (ii) limits it to a public power or public function in terms of any legislation but that it does not bring about a difference insofar as the reference to public power is concerned. It observed that the remaining question then is whether the reference to a public function in terms of legislation takes the concept 'organ of state' out of the control test and that the answer to this question depended on the meaning given to the words 'public function'. The court came to the conclusion that the control test still applied to the definition of 'organ of state' even under the final Constitution, noting that the more precise definition of 'organ of state' in section 239 of the final Constitution was not intended to differ materially from the definition in the 1993 Constitution.

With regard to the definition of "public function", the court observed127 that:

"The three pillars of the state, legislative, executive and judicial, are referred to in s 239. The latter is expressly excluded. The executive arm is expressly mentioned in subpara (a) and the legislative one falls under subpara (b)(i) which can also encompass, for example, the auditor-general, public protector, etc. They are all part of the machinery of state. So is a functionary.

---

127 Korff in 126 supra at p1177
(or institution) exercising a public power. There is no reason to give the word 'public' when used in conjunction with "function" in para (b)(ii) a meaning that would take it outside the context of 'engaged in the affairs or service of the public' and give it the meaning of 'open to or shared by all the people'. (Both these meanings are given in The Concise Oxford Dictionary for the word 'public'.)

The court in Korf decided on this basis that the Health Professions Council of South Africa was not an organ of state since the state did not control its activities.

In Pennington v Friedgood and Others the court noted that judicial review under the Constitution and under the common law are not different concepts. Prior to the new constitutional dispensation the control of public power by the Courts by judicial review was exercised through the application of common-law constitutional principles. Under the new constitutional dispensation such control is regulated by the Constitution. The common-law principles that previously provided the grounds for judicial review of public power have been subsumed under the Constitution and, insofar as they might continue to be relevant to judicial review, they gain their force from the Constitution. In the judicial review of public power, the two are intertwined and do not constitute separate concepts. It is clear that whether such conduct

---

128 See by way of contrast, however, Association of Chartered Certified Accountants v Chairman, Public Accountants' and Auditors' Board 2001 (2) SA 980 (W) in which the court held that the Public Accountants and Auditors Board which fulfils much the same role with regard to public accountants and auditors as does the Health Professions Council fulfils with regard to medical practitioners, dentists, psychologists and other health professionals, is an organ of state. The court then went on to consider whether the decision of the Board within the ambit of section 33 of the Constitution, constituting administrative action and came to the conclusion that it did and that it was therefore reviewable under the administrative justice provision in s 33 of the Constitution. In its judgment the court noted that: "The respondent argues that constitutional review is limited in its application to the review of legislative administrative acts or the exercise of legislative functions by public bodies" and then quoted from its heads of argument as follows: "It is vital to differentiate between two concepts - constitutional review and judicial review of administrative action. Judicial review of administrative action is a control mechanism applied by the High Court in the individual or concretised relationship between the State and the individual - the sphere of administrative law. For this purpose the validity of the enabling legislation is assumed. Constitutional review is similarly based on the need to limit and control governmental power, but challenges primarily legislation - it concerns constitutional law. Administrative review is exercised by the High Court on the basis of its inherent jurisdiction. In the sphere of public law it relates to irregularity or illegality in the performance of a statutory power or duty. Administrative review based upon formal legality puts limitations on the Executive, but does not restrain the Legislature. . . . It is the introduction of constitutional review of legislation which in essence distinguished the new legal dispensation from the old legal order. . . . It is submitted that the purpose of item 23 is to create criteria to be complied with by the Legislature and further to enrich the general body of legislation and the common law in terms of s39 of the Constitution. . . . Only if the legislative authority enabling the administrative action is challenged, would it be a matter for constitutional review..." The court went on to comment that the respondent's argument was contrary to the present case law, noting that the law relating to judicial review had undergone a fundamental change by reason of the introduction of the Constitution. It said that the ambit of constitutional review is now significantly broader than the narrow confines referred to in the case of South African Roads Board v Johannesburg City Council 1991 (4) SA 1 (A). It decided that the Board clearly exercised a public power, that it was a creation of statute and the source of its power was to be found in the Public Accountants' and Auditors' Act 80 of 1991. The court found that the Board also appeared to fulfil a public function in terms of the said legislation in that it is a regulatory body entrusted with the task of ensuring that proper standards are maintained in the accounting and auditing profession. As such, the Board functions in close cooperation with structures of state authority, its members are appointed by the Minister and include persons selected among the persons holding office as state functionaries, it is also dependent upon the State for infrastructural support. The court did note that there was a dispute on the authorities as to whether these criteria are sufficient to characterise the Board as an institution which exercises a public power, it was unnecessary to decide whether it was an organ of state on the basis that it also exercises a public function. The court does not seem to have referred to Korf at all.

Pennington 2002 (1) SA 251 (C)

---

129 Pennington v Friedgood and Others 1999 (3) SA 197 (B) and Directory Advertising Cost Cutters v Minister for Posts, Telecommunications and Broadcasting and Others 1996 (3) SA 800 (T). It said, however, that as the Board is an institution which exercises public power, it was unnecessary to decide whether it was an organ of state on the basis that it also exercises a public function. The court does not seem to have referred to Korf at all.
constitutes administrative action falls to be decided by reference to whether the action amounts to the exercise of public power or the performance of a public function. Whether that is so must be determined by reference, inter alia, to the source of the power exercised, the nature of such power, its subject-matter, whether it involves the exercise of a public duty and how closely it is related, on the one hand, to policy matters, which are not administrative, and, on the other, to the implementation of legislation, which is.

In *Metro Inspection Services (Western Cape) CC and Others v Cape Metropolitan Council*, the court held that that where the act of the state or organ of state complained of (in casu the termination of the agreement) was derived from a public power, it amounted to an administrative act. It found that the respondent had appointed the first applicant to fulfil certain of the respondent's functions and duties in terms of the Act. Consequently the terms of the agreement were inextricably bound up with the statute. The decision to terminate the agreement was of the same nature as that which conferred on the respondent the right to contract with the first applicant. The respondent, and decision-maker in regard to the decision to terminate the agreement, was a public authority and, since its authority to appoint the first applicant derived from a public power, it followed that its authority to terminate the agreement with the first applicant similarly derived from a public power. The court held that the principles of administrative law applied to the decision by the respondent to terminate its agreement with the first applicant and that the agreement was thus an administrative agreement in law and the first applicant was entitled to procedural fairness with all that that entailed. The fact that the first applicant had not been given any notice of the case against it or of the decision-making process and had not been afforded any opportunity to be heard was clearly a fatal irregularity and invalidated the administrative act taken by the respondent.

It is thus of particular significance to the relationship between public providers and the patient in the health care context is the fact that apparently where the contract is

---

130 See also *Cronje v United Cricket Board Of South Africa* 2001 (4) SA 1361 (T) in which the court observed with regard to the definition of administrative action in the PAJA that: “As I read this provision, read with the other provisions of the Act, a natural or juristic person will take administrative action only when exercising a public power or performing a public function in terms of an empowering provision. One may assume that this Act did not diminish the ambit of administrative action as it existed prior to its promulgation.”

131 *Metro Inspection Services* 1999 (4) SA 1184 (C)
formulated in the exercise of a public power, it can never be governed solely by the private law of contract. In such circumstances administrative law will always have a bearing on the contract in question. The court said in *Toerien en 'n Ander v De Villiers No en 'n Ander*[^12^], that it seemed clear that the administrative law principles of natural justice, including the *audi alteram partem* rule, should in South African law be applied in the termination of contracts of employment where the employer is a public authority whose decision to terminate the contract of employment amounts to the exercise of public power. Where these powers are conferred on the public authority by statute, and a decision is taken which affects the liberty, property or existing rights of another, then the *audi alteram partem* rule applies, unless the statute excludes it. A contract of employment which is partly governed by statute cannot therefore be regarded as merely civil. Similarly in *Van Der Merwe v Smith NO en 'n Ander*[^133^] the court held that the rules of natural justice were indeed applicable. The University was a creature of statute and the ‘Service Conditions and Rules’ were compiled in terms of s 13 of the Act. A contract of employment partly governed by a statute could not be treated as a contract governed merely by private law. Decisions of the employer in terms of such a contract of employment amounted to the exercise of public power and were necessarily subject to the principles of natural justice and subject to review by the Court. The decisions in these cases are apparently in keeping with the definition of administrative action in the PAJA. Sometimes it is as instructive to look at what is not there as it is to look at what is. In the case of the definition in the PAJA, the exclusions from what constitutes administrative action do not embrace section 82(2)(2) of the Constitution which reflects the power of the President to make any appointments that the Constitution or legislation requires the President to make other than as head of the national executive.

### 3.8 Value of Administrative Law in Health Service Decisions

In a previous chapter it was observed that administrative law can be of considerable benefit to the state in taking decisions involving the delivery of health care services. This is because it is a valuable guide to procedural fairness in many situations

[^12^]: *Toerien 1995 (2) SA 879 (C)*
[^133^]: *Van Der Merwe 1999 (1) SA 926 (C)*
requiring a decision to be taken. It is interesting that Baxter observes that the common law imposes much the same obligations as are imposed upon the state by administrative law upon private bodies who exercise power over individuals. This point will be explored in more detail at a later stage when examining the law relating to private bodies. This point to note at present is that Baxter's observation is even more apposite within the context of the new constitutional order due to the fact that

---

134 Hoexter C 'The Future of Judicial Review in Administrative Law' SALJ v117 2000 484 notes at p 485 "Administrative law on the other hand is a much bigger concept that encompasses various non-judicial safeguards against the abuse of administrative discretion, and is as much concerned with ways of generating good primary decisions as it is with detecting the abuse of power." She complains that in the South African context, the terms 'administrative law' and 'judicial review' have often been synonymous and that administrative law for many South Africans is and always has been about the judicial diagnosis of maladministration, about subjecting the actions of governmental bodies to judicial scrutiny and constraint. She observes that the reason is doubtless that South African law has never had much to offer except judicial review and that South Africans have never experienced an integrated system of administrative law in which judicial review is regarded as merely supplementary to the business of making good primary decisions and in which other forms of control and reconsideration – such as administrative adjudication – are taken seriously.

Baxter, Administrative Law p101: "Even if it is decided that an institution is private and not public the result might not be substantially different. As a general principle, any private institution which exercises powers over individuals is obliged to observe certain requirements which do not differ in principle from those applied to public bodies. Thus the courts have always been prepared to review the decisions of private or 'domestic' bodies such as the disciplinary tribunal of churches, trade unions or clubs and even the decisions of arbitrators. Although the basis upon which the powers of these bodies rest is contractual and not statutory, such bodies are often in a position to act just as coercively as public authorities and their decisions frequently have far reaching effects. Many of the principles of administrative law are designed to protect individuals from abuse of power. For this reason they are applied in almost identical form to private bodies and administrative law has itself drawn much from decisions involving 'domestic tribunals'. Cases involving the exercise of power by both public and private institutions are often cited interchangeably by the courts." In Transnet Ltd v Goodman Brothers (Pty) Ltd (fs 35 supra), the court held that the fact that Transnet, a state owned company, had recently been privatised and that it was no longer part of the state did not mean that it was not capable of administrative acts and that in providing a general service to the public it was performing a public function and exercising public powers. The state had ultimate control of the company and it was therefore subject to the law requiring lawful administrative action with regard to tender processes. See, however, Cronje v United Cricket Board of South Africa 2001 (4) SA 1361 (T) where Kirk-Cohen J observed at p 1374-1375 that: The rules of natural justice are, in the first place, rules of public law. They are part of the rules of administrative law that regulate the exercise of public power. That was so at common law and, in my view, remains so under the Constitution. Compare Rose-Innes Judicial Review of Administrative Tribunals in SA (1963) at 1, 89, 90, Bushbuck Ridge Border Committee v Government of the Northern Province 1999 (3) BCLR 193 (T) at 199F and Pharmacare SA 'alteram partem' President of the Republic of South Africa and Others (fs 72 supra) in paras [33], [37] - [40] and [45]. The audi alteram partem rule ordinarily applies only to public bodies in the exercise of their public powers. Thus in South African Roads Board v Johannesburg City Council 1991 (4) SA 1 (A) at 10G - I the Appellate Division stated: "(A) rule of natural justice . . . comes into play whenever a statute empowers a public official or body to do an act or give a decision prejudicially affecting an individual in his liberty or property or existing rights, or whenever such an individual has a legitimate expectation entitled him to a hearing, unless the statute expressly or by implication indicates to the contrary. . ." and: "In exceptional cases private bodies are vested with public powers by statute. They are then subject to the rules of public law in the exercise of those powers. Those rules may expressly or by necessary implication prescribe the manner in which those powers must be exercised. If the repository of the power does not exercise them in the prescribed way, its conduct is subject to judicial review under public law. But these consequences flow, not from the nature of the body or the impact of its conduct, but from the underlying statute. In Downland Beleggings (Gids) Bpk v Johannesburg Stock Exchange and Others 1983 (3) SA 344 (W) at p 363 et seq, Goldstone J held that certain conduct of the Johannesburg Stock Exchange was subject to judicial review under public law, despite the fact that it was a private body. The learned Judge made it clear that this was so only because its empowering statute required the Johannesburg Stock Exchange to exercise its power in the public interest" and at p 1376, "The rules of natural justice are thus in the first place rules of public law, but they do sometimes apply in the sphere of private law, but then only when they are incorporated by contract. Contracts between private individuals and bodies are ordinarily not governed by the rules of natural justice but may be incorporated expressly or by necessary implication, depending upon the terms of the contract. Such a right may even be granted to an outsider if a private body by contract extends such a right to an outsider. See, for example, Marlin v Durban Turf Club and Others 1942 AD 112 at 112 - 7, Anschutz v Jockey Club of South Africa 1953 (1) SA 77 (W) at p 80, Jockey Club of SA v Transvaal Racing Club 1959 (1) SA 441 (A) at p 450, Turner v Jockey Club of South Africa 1974 (3) SA 633 (A) at p 645 - 6, Theran en Andere v Ring van Wellington van die NZE Stendelwag in Zuid-Afrika en Andere 1976 (2) SA 1 (A) at p 21D, Carr v Jockey Club of South Africa 1976 (2) SA 717 (W) at p 721 - 2, Government of the Self-Governing Territory of KwaZulu v Mahlungu and Another 1994 (1) SA 626 (T) at p 634 - 5 and Lamprécht and Another v McVeillle 1994 (3) SA 665 (A) at p 668. It is only where the constitution of a voluntary association incorporates the rules of natural justice that they then apply between the association and its members or those with whom it has privity of contract. The rules do not apply to a non-member who is not a party to the contract. See the cases of Anschutz, Indices, Carr and Mahlungu (at 634D - 6331) supra."
underlying values of administrative law, as informed by the Constitution, must of necessity be the same underlying values underpinning the various areas of law that affect the provider-patient relationship in the private sector. One would expect to find few fundamental differences between the legal rules governing the transactions between public and private sector if the underlying values are the same. In the time at which Baxter wrote, prior to the 1996 Constitution, these underlying values would have been reflected, possibly to a lesser degree, in public policy - hence the similarities in the law relating to private bodies and the administrative law governing public bodies. Under the present dispensation, the PAJA expressly throws the net wider than just public bodies to include in its ambit those private bodies exercising a public function. Underpinning even all of this, however, are the fundamental principles set out in the Constitution generally and the Bill of Rights in particular.

It is clearly necessary to consider health care delivery decisions in the light of administrative law both because of its Constitutional importance and because there are certain well established rules in terms of which administrative power must be exercised. Such an examination is of assistance in understanding the provider-patient relationship where the provider is the state because administrative law is very much the law of public administration and public health services are one of the many types of services that fall within the purview of public administration. Administrative law is notoriously difficult to define. Baxter writing in 1984 states that the basic format and principles of administrative law have been centuries in the making, yet its recognition as a distinct branch of law is a comparatively recent development. He

136 Arguments about the horizontal application of the Constitution, especially the Bill of Rights, do have a bearing on this issue and will be canvassed at a later stage when looking at the provider-patient relationship in the private sector. However it is trite that the values of equality and human dignity, non-racialism and non-sectarian upon which the South African Constitution is based are equally applicable within the public and private sectors.

137 Stewart C "Tragic Choices and the Role of Administrative Law" British Medical Journal 2000 321 p 105-107 notes that: "The United Kingdom... is the only country in the Commonwealth where administrative law is having a major impact on medical decision making. The basic principles of administrative law are, however, shared by all common law jurisdictions and other countries (particularly Australia and New Zealand) are now seeing similar claims arise [in administrative law]. There is a pressing need for medical decision makers to familiarise themselves with the basic principles of administrative law." He comments further that "administrative law is having an increasingly important impact on medical decision making. There are two reasons for this: firstly the process of medical decision making is now indistinguishable from other types of bureaucratic administration. Treatments are dispensed according to clinical guidelines and policies. Decision-making is horizontally organised, from macrodecisions made by government departments through to misallocation by health authorities and ending with bedside decision making made collectively by groups of doctors. Secondly the question of whether particular patients should be treated is no longer solely about clinical factors specific to individual patients. The scarcity of resources means that treatment decisions concern questions of allocative efficiency, which include characteristics more properly described as "social". For example medical decision makers might take into account the sexual preference of a patient to determine whether infertility treatment should be provided. In such cases administrative law is able to examine the considerations of the decision maker to see if they have strayed into unlawful areas. Both factors mean that any disputes about treatment decisions are perfectly suited to administrative law and its focus on the legality of the decision making process."

138 Baxter, fn 3 supra at p45
notes that throughout the world, and especially in Anglo-Saxon countries, the disciplined study of the subject began late and, until recently, progressed slowly. Disagreement as to its definition and proper areas of concern still remain. He comments that a factor retarding the development of administrative law as a significant discipline has been the lack of agreement as to what ‘administrative law’ is. This dilemma is nowadays possibly easier to resolve in some respects given the existence of the PAJA and the various definitions contained therein. The PAJA cannot, however, amend the Constitution. To the extent that the provisions of the Constitution relating to administrative justice are not contemplated or covered by the PAJA recourse must still be had to the Constitution directly. The right to just administrative action is only one aspect of the Constitution which involves administrative law. The right to equality before the law expressed in section nine of the Constitution is an example of another legal principles which is generally regarded as highly relevant to administrative law as is the right of access to information expressed in terms of section 32 of the Constitution.

3.9 Administrative Law Theories

There are a number of administrative law theories that have tended to be ranged along the spectrum of permutations possible on a traffic light. Thus the “red-light” approach to administrative law advocates a strong role for the courts to review administrative decisions and holds that the function of this branch of law is to control the excesses of the state. It has been said of this theory of administrative law:

"Behind the formalist tradition, we can often discern a preference for a minimalist state. It is not surprising, therefore, to find that many authors believing that the primary function of administrative law should be to control any excess of state power and subject it to legal and

139 Baxter, fn 3 supra at p 49
140 In Schoonbee and Others v MEC for Education, Mpumalanga and Another 2002 (4) SA 877 (T) the court observed at p 882 that: "The Act contains in great part what one may regard as partial codification of administrative law with specific reference to administrative actions.” Hoexter, (fn 134 supra) however, is critical of the PAJA for its focus and emphasis, both directly and indirectly, on judicial review at the expense of other aspects of administrative law. She is of the view that the PAJA could have been used as an opportunity to develop a much more rounded and comprehensive body of administrative law in South Africa which, as a result of its history, has had an unfortunate tendency to regard judicial review as the central concept of administrative law.
141 Devenish, et al (fn 15 supra) p13 note that the extant protagonists of the ‘red-light’ theory are of the opinion that administrative power should be restricted to a limited range of social functions involving law and order, internal security and external defence. All the other activities that a community requires should be left to private initiative and the intrinsic forces of the market. The role, they observe, of administrative law is to provide effective legal controls over the exercise of state power and to confine it to its proper jurisdiction.
more especially judicial, control. It is this concept of administrative law that we have called 'red light theory'.\textsuperscript{142}

By contrast, the "green light" approach\textsuperscript{143} holds that the function of administrative law is to facilitate the operations of the state and is based on the rationale that bureaucrats will function most efficiently on the absence of intervention. In this regard it has been observed that:

"Because they see their own function as the resolution of disputes and because they see the administrative function from the outside, lawyers traditionally emphasise external control through adjudication. To the lawyer, law is the policeman; it operates as an external control, often retrospectively. But a main concern of green light writers is to minimise the influence of the courts. Courts with their legalistic values were seen as obstacles to progress, and the control which they exercise as unrepresentative and undemocratic. To emphasise this crucial point in green light theory, decision-making by an elite judiciary imbued with a legalistic, rights-based ideology and eccentric vision of the 'public interest'...was never a plausible counter to authoritarianism.\textsuperscript{144}

The "amber-light" theory as its name suggests lies between the red-light and green-light theories. Protagonists of this approach, while they favour the extensive use of state power for socio-economic purposes are not prepared to permit political institutions alone to control and monitor the exercise of such power. They maintain that a system of effective administrative law must be used to complement the political and parliamentary control of state power and to ensure accountability and transparency.

Whilst this somewhat linear spectrum of administrative law theory is likely in almost every instance to be an oversimplification, it would seem that the South African constitutional court\textsuperscript{145} and indeed the Constitution itself could generally be said to

\textsuperscript{142} Harlow C and Rawlings R *Law and Administration* as quoted by Parish K "Administrative Law Theories"  
http://www.ntu.edu.au/leacv/iba/schools/Law/eur/leacvhome/administrative_law_theories

\textsuperscript{143} Devenish et al fn 15 supra note that the 'green-light' theory is a far more positive and ambitious approach to state power and that protagonists of this theory regard state power as a means of giving effect to beneficial social policies. Quoting from Leyland P, Woods T and Harden J *Administrative Law* p 6 they observe that this theory introduces a political and socio-economic context into the law 'which in essence derives from the utilitarian tradition (usually associated with Bentham and Mill; and the Fabian Society founded in 1884, particularly with the ideas of Sidney Webb), the moral imperative being to promote the greatest good for the greatest number, in this case by means of ameliorative social reform.' They comment that this theory favours accountability and greater democratic and public control over the exercise of power, rather than placing faith exclusively in law as a mechanism of control and accountability.

\textsuperscript{144} Harlow and Rawlings fn 142 supra

\textsuperscript{145} Thus the constitutional court in *Ex Parte Chairperson of the Constitutional Assembly: In Re Certification of the Constitution of the Republic of South Africa*, 1996, 1996 (4) SA 744 (CC) held that the fundamental structures and premises of a new constitutional text contemplated by the CPs were the following: (a) a constitutional democracy based on the supremacy of the Constitution protected by an independent judiciary; (b) a democratic system of government founded on openness, accountability and equality, with universal adult suffrage and regular elections; (c) a separation of powers between the Legislature, Executive and Judiciary with appropriate checks and balances to ensure accountability, responsiveness and openness; (d) the need for other appropriate checks on governmental power; (e) enjoyment of all
favour the amber light approach - particularly with regard to the realisation of the right to access to health care services. The fact that section 27(2) requires the state to take reasonable legislative and other measures within its available resources to progressively achieve the realisation of the right is indicative of an interventionist approach to socio-economic rights with a view to effecting extensive socio-economic and other reforms. At the same time there is a significant emphasis on accountability. Rationality is an important aspect of accountability for decisions

universally accepted fundamental rights, freedoms and civil liberties protected by justiciable provisions in the new text; 
(f) one sovereign state structured at national, provincial and local levels, each of such levels being allocated appropriate and adequate powers to function effectively; (g) the recognition and protection of the status, institution and role of traditional leadership; (h) a legal system which ensured equality of all persons before the law, which included laws, programmes or activities that had as their objective the amelioration of the conditions of the disadvantaged, including those disadvantaged on grounds of race, colour or creed; (i) representative government embracing multi-party democracy, a common voters' roll and, in general, proportional representation; (j) the protection of the new text against amendment save through special processes; (k) adequate provision for fiscal and financial allocations to the provincial and local levels of government from revenue collected nationally; (l) the right of employers and employees to engage in collective bargaining and the right of every person to fair labour practices; (m) a non-partisan public service broadly representative of the South African community, serving all the members of the public in a fair, unbiased and impartial manner, and the public sector employees being required to perform their duties without furthering or prejudicing party political interests. Also in Ex Parte Chairperson of the Constitutional Assembly: In Re Certification of the Amended text of Constitution of the Republic of South Africa 1996, 1997 (2) SA 97 (CC) the court held that section 100, which permitted intervention by the national executive when a province could not or did not fulfil an executive obligation in terms of legislation or the Constitution, complied with CP VI (requiring a separation of powers between the Legislature, Executive and Judiciary, with appropriate checks and balances to ensure accountability, responsiveness and openness).

Sachs A, "The Constitution is Natural Justice Writ Large", Controlling Public Power: Administrative Justice Through The Law, p51 writing before the interim Constitution was finalised noted: "The texture of a constitution can in fact be measured by the richness of its systems of accountability". Mureinik, E "Reconsidering Review: Participation and Accountability", Controlling Public Power: Administrative Justice Through The Law p31-32 identifies accountability as a great principle of responsive democracy and states that in administrative law terms it means that the government must be able to justify its decisions. He says that this will also mean that decision-makers will be obliged to consider in advance, factors relevant to their decisions and that their decisions will as a result have better justifications and points out that the aspiration to better justified decisions translates into a demand for review for unreasonableness: "rationality review as we most commonly know it".

The Supreme Court of Appeal in Minister of Safety and Security v. Van Duivenboden 2002 (6) SA 431 (SCA) held that what is called for when determining whether the law should recognise the existence of a legal duty in any particular circumstances is a balancing against one another of identifiable norms. While private citizens might be entitled to remain passive when the constitutional rights of other citizens are threatened, the State has a positive constitutional duty, imposed by s 7 of the Constitution, to act in protection of the rights in the Bill of Rights. The existence of such duty necessarily implies accountability and s 41(1) expressly demands, inter alia, that all spheres of government and all organs of State provide effective, transparent, accountable . . . government. Where the State, as represented by the persons who perform functions on its behalf, acts in conflict with its constitutional duty to protect rights in the Bill of Rights, the norm of accountability must of necessity assume an important role in determining whether a legal duty ought to be recognised in any particular case. While the norm of accountability need not always translate constitutional duties into private law duties enforceable by an action for damages because there are other remedies available for holding the State to account, where the State's failure to fulfil its constitutional duties occurs in circumstances that offer no effective remedy other than an action for damages, the norm of accountability will ordinarily demand the recognition of a legal duty unless there are other considerations affecting the public interest outweighing that norm. (from headnote). The court held further that in this instance there was no effective way of holding the state accountable other than by way of an action for damages. In the absence of any norm or consideration of public policy outweighing it, the constitutional norm of accountability required that a legal duty be recognised.

Similarly in Fairscape Property Developers (Pty) Ltd v Premier, Western Cape 2000 (2) SA 54 (C), the Cape High Court held that the determination of the legal convictions of the community on which the test for wrongfulness was based had to take account of the spirit, purport and objects of the Constitution of the Republic of South Africa Act 108 of 1996. The Constitution, it said, embraced the principle of accountability in that a public authority was accountable to the public it served when it acted negligently. Such accountability recognised legal responsibility for the consequences of such action. It thus held, given the absence of a mechanism for holding an authority accountable in terms of the Act and given that the principle of accountability was intrinsic to the legal convictions of the community, that it followed that a remedy should be available to a person wishing to hold an authority accountable for actions which could be shown to have been negligent, to have caused damage and which satisfied the requirements of legal causation. (from headnote)

In Ngcasa and Others v Permanent Secretary: Department of Welfare, Eastern Cape, and Another 2001 (2) SA 609 (E) the court took the view that the Constitution specifically stated that the public administration had to be governed by democratic values and the principles of the Constitution and that it had to be accountable (s 195) and had appointed the Courts as the final instrument of ensuring the accountability of the exercise of public power. The court in this case
In *Pharmaceutical Manufacturers Association of SA and Another: In Re Ex Parte President of the Republic of South Africa and Others*¹⁴⁸, the constitutional court pointed out that that the setting of the rationality standard did not mean that the Courts could or should substitute their opinions as to what was appropriate for the opinions of those in whom the power had been vested. As long as the purpose sought to be achieved by the exercise of public power was within the authority of the functionary, and as long as the functionary’s decision, viewed objectively, was rational, a Court could not interfere with the decision simply because it disagreed with it or considered the power to have been inappropriately exercised. Thus while there is a constitutional mandate for the state to fulfil in terms of measures to be taken to achieve the realisation of the right of access to health care services, its power to do so will not go unchecked by the judiciary in the sense that it is accountable for its decisions on the basis of principles such as rationality identified by the judiciary.

A more recent theory of administrative law is known as ‘managerialism’ and is based on the notion that administrative authorities should conduct their affairs and take decisions along such corporate business lines as are commonly encountered within the private sector. It grew from the increasing emphasis on efficiency, productivity and market forces which emerged in the late 1970’s and eventually lead to the wholesale privatisation of traditional public sector functions. It has been described as “in many respects at odds with the traditional approach to administrative law”. Managerialism treats public sector activities as though they were business enterprises and subjects them to private sector disciplines. It regards efficiency and productivity as central

---

¹⁴⁷ Thus Murenik (fn 146 supra) notes that rationality review calls for far more specific scrutiny that the mere identification of gross error. It requires the reviewing body to ask whether:

(a) the decision-maker has considered all the serious objections to the decision taken and has answers which plausibly meet them;

(b) the decision-maker has considered all the serious alternatives to the decision taken and has discarded them for plausible reasons; and

(c) there is a rational connection between premises and conclusion: between the information (evidence and argument) before the decision-maker and the decision that it has reached.

¹⁴⁸ *Pharmaceutical Manufacturers Association of SA* (fn 72 supra)
goals of public administration and assumes that their achievement equates with public interest. The nature of the health sector in South Africa, as in many other countries, is problematic when viewed in the context of a 'privatised' or managerialistic approach to the conduct of its business. The delivery of health care services does not easily translate into the world of commerce despite the existence of a relatively high profile private health sector in this country. It is complicated by human rights and constitutional issues which do not sit comfortably in a profit-driven, business environment. The main reason for the emphasis in the private sector on efficiency and productivity is profit and its maximisation. Whilst this approach may be perfectly legitimate and workable in the nuts and bolts market, the health care services environment is a different arena. This is evidenced within many forums at both local and international level. At international level one only has to look as far as the increasing pressure on the World Trade Organisation, the holders of and the exercise of intellectual property rights in medicines and other commodities essential to health service delivery to revise international intellectual property conventions and interpretations of patent law to take cognisance of internationally recognised rights to health and health care services. At local level there are provisions in the Medicines

---

149 Parish K "Administrative Law Theories" Northern Territory University. But Parish questions the desirability of having the success of public entities with regard to service delivery measured by notions of efficiency and productivity. He observes that while many Australians would give an emphatic "No" to this question, the economist's balance of costs and benefits is "certainly not antithetical to traditional administrative law". He states that the pursuit of desirable ends ought not to be bought at a cost which exceeds their true benefit.

150 Burns Y 'Government Contracts and the Public/Private Law Divide' South African Public Law 1998 13 p 234 notes that the privatisation or sale of public assets has become a common occurrence in modern democratic states. She observes that South Africa is also moving in the direction of privatisation of certain services, notably electricity, transport and communication services. Burns also notes the increasing familiarity within South Africa of outsourcing and states: "If one accepts that an outsourcing contract, or service provision contract, is an administrative law agreement (in the sense that the administrative authority retains a measure of state authority with the result that the relationship between the state and the other party is one of inequality) it may be argued that the agreement should be subject to the principles of public law." She refers to the first National Performance Review published in the United States of America in September 1993, which outlined a plan to reinvent the government so that it might better serve its people and continue to lead the world in the new era of globalisation and notes that this new rhetoric involves significant changes in United States Administrative Law including:

- new blends of public and private sectors at all levels of government;
- a redefinition of what is public and what is private;
- greater reliance on bargaining and negotiation in the exercise of discretionary powers;
- increased reliance on privatisation and the delegation of public functions to private concerns;
- a market discourse which narrows the role of public interest values and replaces them with that of cost-benefit analysis.

151 See for instance Baker, 'The incredible shrinking Doha Declaration' Health GAP www.healthgap.org/press_releases/03/; Also Tayob R & Loewenson R 'Health Implications of the WTO 5th Ministerial Trade Talks' EQUINET September 2003 in Cancun, Mexico who explain as follows: "The Doha Ministerial Declaration from the 2001 WTO Ministerial Conference clarified the inherent rights countries enjoy under the Agreement on Trade-Related Aspects of Intellectual Property Rights, (TRIPs) to grant compulsory licenses that by-pass patents on medicines to secure public health. Compulsory licenses can be used for parallel importation or domestic production, Countries also enjoy the right under TRIPs to disregard patents on drugs for government use. As many developing countries have little or no drug production
and Related Substances Control Act152 which the allow the Minister of Health, patent rights notwithstanding, to authorise the parallel importation of medicines into South Africa in order to promote access to more affordable medicines. Whilst the utilisation of available resources contemplated in section 27(2) of the Constitution should undoubtedly not be fruitless, wasteful or irregular (in the sense in which these terms are used in the Public Finance Management Act No 1 of 1999), and public officials should be held accountable for efficient and effective use of those resources, it is submitted that policy decisions involving health care will always have to take into account far more than just productivity and efficiency factors. As stated previously, the private sector is profit-driven. This does not necessarily result in effective or even cost-effective health care delivery153 as demonstrated in the examples cited below.

152 Act No 101 of 1965
153 In “Market Forces Are Bad For Hospital’s Health” Kirchenbaum C and LeBow B note that: “We are told that the growth of for-profit hospitals will help contribute to the lower costs of health care and that competition is reducing excess administration. The standard market forces of supply and demand do not apply well to health care unless one gets sick. But free market advocates have repeatedly assured us that a market economy could reduce the spiralling cost of health care. Finally we have some strong data that indicate that the market at least as represented by for-profit hospitals is not so cost-effective as proponents have asserted.” (http://www.ibiblio.org/prism/Amr97/market.html). They go on to quote from an article in the New England Journal of Medicine (March 13) entitled “Costs of Care and Administration at For-Profit and Other Hospitals in the United States” by Woolhandler S and Himmelstein D in which the authors report inter alia that:

- For-profit hospitals spent 23% more on administration that private not-for-profit hospitals and 34% more than public hospitals.
- Administrative costs accounted for an average of 26% of total hospital costs in fiscal 1994 which was up 1.2 percentage points from 1990
- Comparative 1994 administrative costs were 34% for for-profit private hospitals, 24.5% for private, not-for-profit hospitals and 22.9% for public hospitals.
- There is a pattern of higher costs and reduced clinical staffing at for-profit hospitals.
- The percentage of costs devoted to administration increased between 1990 and 1994 for all three ownership categories resulting in less money for patient care.

South Africans in recent years have experienced a similar problem with regard to medical schemes administration. Although medical schemes are themselves not for profit entities they contract with companies who are for administration. The Registrar of Medical Schemes has expressed concern at the increasing costs of administration of medical schemes since this is invariably at the expense of funding that could be more effectively and efficiently employed in providing health care services to scheme beneficiaries. The funding cake is limited in size. The bigger the slice that scheme administrators can secure for themselves, the smaller the remainder that is available for payment for...
**Example 1**

The name of the United States of America is virtually synonymous with the phrase “free market”. It is regarded by many as the free market country of the world. The World Health Organisation has released an assessment of health systems throughout the world. Rankings are based on an overall index of performance. The US ranked 37th despite the fact that it ranks as number one in per capita health expenditure at $2700 on average, per person. Furthermore it ranks 25th in male life expectancy and 19th in female life expectancy compared with 29 other industrialized countries. The Americans claim nevertheless to have some of the finest doctors and hospitals in the world.\(^{154}\)

**Example 2**

Singapore, in the period from 1984 to 1993 did all it could to encourage market forces in health care in the hope of lowering costs including the promotion of medical savings accounts, catastrophic insurance and competition amongst hospitals. The government offered inducements to its for-profit hospitals and clinics, which were given favoured status. After ten years Singapore’s health care costs had soared and a government white paper concluded that “market forces alone will not suffice to hold medical costs to the minimum. The health care system is an example of market failure. The government has to intervene to structure and regulate the health system.”\(^{155}\) Robert G Evans, Professor of Economics at the University of British Columbia, writes that “The health status of an individual thus takes on a special importance to the community beyond that of her consumption in general, but similar to political or judicial status…Such special status derives from a general perception

that life, health and freedom are not ordinary commodities, but are prerequisites to the enjoyment of all others.\textsuperscript{156} 

Example 3

In New Zealand in 1993 the government implemented radical changes to the health services including splitting the “purchasing” role of the state from the “provision” of services. Under the new system, public money for health services was divided between four Regional Health Authorities (RHAs) whose job was to purchase health services for their populations. Having decided what services they would but they then entered into negotiations with potential providers. The RHAs were expected to encourage competition between public and private hospitals and other service providers. Public hospitals which were previously owned by Area Health Boards became part of new state-owned institutions known as Crown Health Enterprises (CHEs). These latter were required to act in a business-like manner which included earning a return on their capital. The reforms created a “quasi-market environment” which implied that CHEs would have to be efficient and keep costs down in order to beat off competition from private hospitals and with contracts with the RHAs. The reasons for the reforms were perceived weaknesses in the old system such as the inefficiency of public hospitals. There had been a number of reports suggesting that private hospitals could provide the same services as public ones for about 30\% less. Another weakness was that waiting lists for public hospital services were growing. Policy makers hoped that if public hospitals were forced to compete for their funding, public hospital management and efficiency would improve and savings from such efficiencies could be ploughed back into the system to shorten waiting lists and treat more people. After three years under the new system, waiting lists were higher than they had been to start with, 23 of the CHEs recorded persistent financial deficits and very few private hospitals won contracts off the RHAs since the latter mostly bought services from the CHEs closest to them with the result that there wasn’t even a great deal of competition between CHEs. The local CHEs ended up having a degree of monopoly power because the RHAs found that the only real option was to buy

\textsuperscript{156} Evans R G Strained Mercy: The Economics of Canadian Health Care
http://frisch.ecn.ulevel.ca.gov/11160/Manuel/Strained_Mercy/
services from CHEs closest to them. The costs of setting up the new system and writing and negotiating the purchaser-provider contracts were significant. As a result in 1996 the “experiment with competition” in the New Zealand health system came to an end. The word “competition” was replaced with “co-operation” “commercial profit objectives” became “principles of public service” and CHEs were renamed “hospitals”. Devlin, an economist specialising in health care at the University of Otago states that some would argue that this attempt to harness market forces in health care didn’t work because the competition was “too managed”. She says that the trick is to design a health care system with the right “mix” of “private” and “public” so that the result is a health care system that is both efficient and fair.157 This statement tends to run counter to the managerialist theory of administrative law which effectively tries to diminish the differences between the way in which services are rendered in the public and private sector by seeking to encourage a more private sector type of approach to activities in the public sector.

Administrative law theories are of assistance in identifying the underlying policy frameworks or principles as to how administrative law should work in practice. The point about the examples given above in relation to administrative law and policy-making is that they illustrate the importance of the underlying assumptions of the system that is formulated and in particular the many different approaches that are embodied in that simple phrase “public interest”. Policy cannot in terms of South African law, be made in a vacuum. It has to be done with reference to certain reasonable and logical assumptions, established facts, and constitutionally recognized values. To the extent that policy informs legislation, the same applies to legislation whether of the principal or subordinate variety.

3.9.1 Application in Case Law

From the judgments in the two leading South African cases on the subject of the right of access to health care, Soobramoney158 and Treatment Action Campaign159, is that policy decisions that are either unreasonable or that are unreasonably taken can be

---

157 Source of this example: Devlin N “The experiment with competition in health care: how come market forces didn’t work?” Econ@Otago July 1998 http://www.otago.ac.nz
158 Soobramoney v Minister of Health, KwaZulu-Natal 1998 (1) SA 765 (CC)
159 Minister of Health and Others v Treatment Action Campaign and Others (No 2) 2002 (5) SA 721 (CC)
challenged. These cases were not decided on the basis of administrative law no doubt because they involved policy decisions and policy implementation. The PAJA exempts development and implementation of national and provincial policy from its definition of administrative action. However, the reasons why the policy of the national government in the TAC case was declared unconstitutional and why the policy of the KwaZulu-Natal provincial government concerning renal dialysis was not, are remarkably similar to the principles of administrative law. In Soobramoney, because of the shortage of resources the hospital followed a set policy in regard to the use of the dialysis resources. Only patients who suffered from acute renal failure, which could be treated and remedied by renal dialysis were given automatic access to renal dialysis at the hospital. A set of guidelines had been drawn up and adopted to determine which applicants who have chronic renal failure will be given dialysis treatment. The court noted that due to the shortage of the available resources, notably dialysis machines, guidelines had to be developed to determine how best to use the existing ones. It observed that by using the available dialysis machines in accordance with the guidelines more patients are benefited than would be the case if they were used to keep alive persons with chronic renal failure, and the outcome of the treatment is also likely to be more beneficial because it is directed to curing patients, and not simply to maintaining them in a chronically ill condition. There was no suggestion that the guidelines were unreasonable or that they were not applied fairly and rationally when the decision was taken by the Addington Hospital that the appellant did not qualify for dialysis.

The court stated that the provincial administration which is responsible for health services in KwaZulu-Natal has to make decisions about the funding that should be made available for health care and how such funds should be spent. These choices involve difficult decisions to be taken at the political level in fixing the health budget, and at the functional level in deciding upon the priorities to be met. A court will be slow to interfere with rational decisions taken in good faith by the political organs and medical authorities whose responsibility it is to deal with such matters. The court here distinguished two different levels of decision making. The budgetary allocation decisions are not of an administrative nature but rather of a legislative or executive nature and therefore accountability is to the electorate rather than through a court of law by way of judicial review. The guidelines decision appears to have been
characterized as being at an operational level and therefore more appropriately taken by operational and other experts at that level. The only proviso appears to have been that such decisions were ‘rational’ and taken ‘in good faith’ by the political organs and medical authorities ‘whose responsibility it is to deal with such matters’. Thus the language used by the court to adjudicate a sequence of policy decisions which, technically speaking, fall outside the definition of ‘administrative action’ is clearly the language of administrative law. The lesson to be learned is that the same principles that underpin administrative decisions are applicable to other kinds of decisions - even if they are not administrative in nature. Put differently, whilst principles of reasonableness, fairness and good faith may be particular concerns of administrative law, they are not peculiar to the latter. It is submitted that the reason for this is that the basic values that underlie one area of a legal system cannot differ materially from those that support another if the system is to have any coherence and consistency at the macro-level. The Constitution as the grundnorm of the South African legal system, together with the values it espouses, is likely, if consistently applied, to lead to corresponding consistency across the boundaries of public and private law and the different legal disciplines within the broader legal system. Consequently one must adopt a system approach to law in which every part is seen as simply an element of the whole and must be interpreted consistently with it. In this view of law, the principles of administrative law in relation to the right of access to health care services must be regarded merely as a facet of a larger concept rather than as having an independent and isolated existence of its own.

The Soobramoney case illustrates the importance of seeing a particular decision as part of a system of decision-making rather than in isolation. Although this point is not highlighted in the judgment of the constitutional court, there were a number of different decisions that were taken which led up to the refusal to allow the plaintiff access to the provincial renal dialysis facilities. The first decision in the chain was a budgetary allocation decision in terms of which funding was allocated to KwaZulu-Natal province in terms of its equitable share. The second decision was by the provincial government of KwaZulu-Natal as to how much money should be allocated to expenditure on health care. The third decision was taken by the provincial health authorities as to how much of the funding allocated to health should be spent on the renal dialysis facilities and services provided by the province. The fourth decision to
be taken by the provincial health authorities was as to how best to use the renal
dialysis facilities, given the available resources, in order to obtain the most benefit
from them in terms of public health service delivery. The fifth decision was the
application of the guidelines to Mr Soobramoney’s particular and individual
circumstances. The guidelines that were developed were created on the basis of
current medical and scientific knowledge and practice. The sixth decision was not to
grant him renal dialysis treatment at Addington Hospital. This decision was a
combination of a professional medical decision as to the status of Mr Soobramoney’s
health and his prognosis, and a decision as to the applicability of the established
guidelines to his situation (strictly speaking there may be circumstances where
preconceived guidelines, no matter how well conceived, may not be applicable and
the administrative process should take cognizance of this possibility if it is to be
fair). The principles of rationality, good faith and reasonableness must run through all
of them if the judgment of the court in Soobramoney is taken at more than just face
value. The spectrum of the general to the specific, in terms of the impact of the policy
decision taken by the provincial health authorities in Soobramoney was not
specifically considered by the court in its judgment. However, it is implicit in the
judgment that the values of reasonableness, rationality, fairness and good faith are
applicable irrespective of the general or specific impact of the decision. Represented
diagrammatically the decision chain would be as in Figure 1 below.
Figure 1: Sequence Of Decisions Taken In Soobramoney vs The Minister Of Health (KwaZulu-Natal)

Decision 1
Budget allocation to provinces

Intergovernmental Fiscal Relations Act 97 of 1997
S9 (1) The Financial and Fiscal Commission must submit to both Houses of Parliament and the provincial legislatures recommendations for each financial year regarding an equitable division of revenue raised nationally, among the national, provincial and local spheres of government; the determination of each province's equitable share in the provincial share of that revenue; and any other allocations to provinces, local government or municipalities from the national government's share of that revenue, and any conditions on which those allocations should be made.
S10 (1) Each year when the Annual Budget is introduced, the Minister must introduce in the National Assembly a Division of Revenue Bill for the financial year to which that Budget relates.
(2) The Division of Revenue Bill must specify the share of each sphere of government of the revenue raised nationally for the relevant financial year; each province's share of the provincial share of that revenue; and any other allocations to the provinces, local government or municipalities from the national government's share of that revenue, and any conditions on which those allocations are or must be made.

Division of Revenue Act (DORA) s3(1) Revenue anticipated to be raised nationally in respect of the financial year is divided, provincial and local spheres of government for their equitable share as set out in Column among the national A of Schedule 1. Enacted every year in terms of s2(1) of the Constitution.

Decision 2
Budget allocation to health care

Public Finance Management Act No 1 of 1999
S26 Parliament and each provincial legislature must appropriate money for each financial year for the requirements of the state and the province respectively.

Decision 3
Budget allocation to dialysis services

KZN Department of Health on the basis of its departmental budget determines the revenue to be allocated to renal dialysis services. Provision of services under s16 Health Act 63 of 1977

Decision 5
Guidelines applied to Soobramoney

Clinical examination and testing of Soobramoney in order to determine whether or not in terms of the established guidelines he is a suitable candidate for renal dialysis

Decision 6
Refusal to dialyse Soobramoney

Medical decision taken that on the basis of the guidelines Soobramoney is not a suitable candidate for renal dialysis.

412
The court in refraining from interfering in both the political and operational decisions, and in recognizing the existence of these different levels and the fact that decisions were best left to persons working within those levels, effectively recognized the principle of subsidiarity which holds that decisions are best taken and powers best allocated to those levels of organisation which, by virtue of their nature, are most able and knowledgeable to take such decisions and exercise such powers and which are most directly affected by them. The principle of subsidiarity is of particular significance in the field of administrative law since it describes the rationale behind the doctrine of separation of powers. Like the concept of lawfulness, already discussed, subsidiarity implies the concept of a single, unified, underlying order for the distribution of power. Guerin describes it as about making sure that decisions are taken at the most appropriate level, for example by those most directly affected, by those best informed and those best placed to deal with the any consequences. In the context of separation of powers and the amber and green light theories of administrative law, the judiciary is the worst possible place to locate budgetary allocation decisions. By its own admission in Soobramoney and TAC, the constitutional court took the view that such decisions were best left to others. What would happen in a situation in which a budgetary allocation decision is challenged as being unconstitutional? How would the constitutional court achieve or maintain the

---

160 Subsidiarity has been described, but not mentioned by name, in a papal encyclical entitled “Quadragesimo Anno” (QA) of 1931 as a “weighty principle of social philosophy”. The QA reads: “Just as it is gravely wrong to take from individuals what they can accomplish by their own initiative and industry and give it to the community, so also it is an injustice and at the same time a grave evil and disturbance of right order to assign to a greater and higher association what lesser and subordinate organizations can do. For every activity ought, of its very nature to furnish help to the members of the body social, and never destroy and absorb them.” In the context of information systems, described in The Principia Cybernetica Web in its ‘Dictionary of Cybernetics and Systems’ as follows: “Problems are best solved in the subsystem where they arise. This is similar to the idea of management by exception. Subsystems are encouraged to resolve their conflicts themselves without referring them to higher authority. Whatever the solution is adopted, the subsystem will have to carry it out. Since their consent is essential, the optimum condition is for them to resolve their conflicts independently. If a solution is worked out by the subsystem, appeal to authority is not necessary. (Wheeler, 1970 p. 133)”.

162 In TAC, (fn 159 supra) the court observed that “it should be borne in mind that in dealing with such matters the courts are not institutionally equipped to make the wide-ranging factual and political enquiries necessary for determining what the maximum care standards called for by the first and second amici should be, nor for deciding how public revenues should most effectively be spent... Courts are ill-suited to adjudicate upon issues where court orders have multiple social and economic consequences for the community. The Constitution contemplates rather a restrained and focused role for the courts, namely to require the state to take measures to meet its constitutional obligations and to subject the reasonableness of these measures to evaluation. Such determinations of reasonableness may in fact have budgetary implications but are not in themselves directed at rearranging budgets. In this way the judicial, legislative and executive functions achieve appropriate constitutional balance.” In Soobramoney (fn 158 supra) the court said “The provincial administration which is responsible for health services in KwaZulu-Natal has to make decisions about the funding that should be made available for health care and how such funds should be spent. These choices involve difficult decisions to be taken at the political level in fixing the health budget, and at the functional level in deciding upon the priorities to be met. A court will be slow to interfere with rational decisions taken in good faith by the political organs and medical authorities whose responsibility it is to deal with such matters.”
appropriate constitutional balance between the 3 spheres of government – i.e. the legislature, the executive and the judiciary? It is submitted that the principle of subsidiary supplied the most workable solution. As the constitutional court itself points out, the courts are ill-suited to this kind of decision. In keeping with the idea that the role of the courts is to require the state to take measures to meet its obligations and to subject the reasonableness of these measures to evaluation, it is submitted that the judiciary, when faced with a claim that a budgetary allocation decision is unconstitutional should approach the matter in much the same way as it did in Soobramoney when faced with a complaint that essentially involved decisions taken on the basis of expert knowledge in the field of medicine and public administration. It did not interfere with the substance of those decisions. In fact it could not legitimately do so since judges are, by definition, not health economists, politicians, public health administrators or medical doctors. Instead the court looked at the circumstances of the decisions taken and the needs they sought to address. It considered the rationality of the decisions, their reasonableness and fairness and the purpose for which they were taken. It addressed the framework or substructure of the decision rather than directly scrutinising and critiquing its substance. An analogy can be drawn between this situation and one in which a court is required to decide a claim for medical negligence on the basis of expert medical evidence. In such a situation the court determination will involve the examination of expert opinions and the analysis of their essential reasoning preparatory to the court’s reaching its own decision on the issues raised. Carstens points out that the court is faced with a problem in assessing conflicting schools of thought in medical practice. It has no idea what the reasonable, medically qualified person would have done in the circumstances because on the basis of the expert evidence available, there is not one reasonable medical practitioner but two or even more. The court itself lacks the expertise necessary to decide on the most appropriate medical decision that should have been taken under the circumstances which is why there is a need for expert medical evidence in the first place. Carstens postulated that it is conceivable that expert medical opinion based on logic is not necessarily indicative of reasonableness or unreasonableness within the realm of accepted medical practice. He points out that logic refers to a process of

163 See for example Michael v Linksfleld Park Clinic (Pty) Ltd 2001 (3) SA 1188 (SCA). This case is discussed in detail in chapter 9 of this thesis dealing with cases in delict involving the private sector.

164 Carstens P “Setting the boundaries for expert evidence in support or defence of medical negligence – Michael v Linksfleld Park Clinic (Pty) Ltd” THRHR 2002 p 430
reasoning/rationality based on scientific or deductive cause and effect whereas reasonableness is a value judgement indicative of or based on an accepted standard or norm. He notes that whilst it is true that logic more often than not is an integral part of reasonableness, it does not necessarily follow that logic can equate to reasonableness. Carstens submits that the true test for expert medical opinion is that the opinion should objectively and clinically reflect the standard or norms of accepted medical practice in the particular circumstances. In the same way, in the case of a budgetary allocation decision, it is submitted that the decision should objectively and clinically reflect constitutional and administrative law standards or norms in the particular circumstances. Carstens states that in the event of conflicting expert opinion or different schools of thought even a conflicting and minority school of thought or opinion will be acceptable provided that such opinion accords with what is reasonable by that branch of the medical profession. The thrust of the argument is that one cannot directly question the expertise or the knowledge base used to make a decision but one can interrogate the conclusions drawn and the actions taken in the light of that expertise or knowledge base. The decisions taken must be in line with or rationally connected to the knowledge base. It must be clear from the particular knowledge base that was used, what the reasons for the decision were. In *Michael* the court outlined an approach to expert evidence which includes-

- the examination of the opinions and the analysis of their essential reasoning;
- the evaluation of expert evidence to determine whether and to what extent the opinions advanced are founded on logical reasoning
- the fact that the logical basis of the opinion must be evident to the court i.e. that the expert has considered the comparative risks and benefits and reached a defensible conclusion.

In much the same way that expert decisions can be meaningfully evaluated by a court of law unversed in the subject matter of the relevant area of expertise, so too budgetary allocation decisions can be meaningfully evaluated by a court on the basis of an examination of the substructure of the decision. Generic evaluation criteria include internal comparisons whereby one aspect of a decision and the logic behind it as given by the decisionmaker is tested against another aspect of the same decision to ascertain whether there is internal consistency, the nature of the logic structures upon
which the decision is based including the quality of their construction in terms of the density and spread of the data upon which conclusions have been reached, the reasons why alternative conclusions or decisions have been rejected, the relationship of the variables involved in the decision to constitutional values and principles, the balancing of any conflicting rights and interests and the method or reasoning by which the perception of balance by the decision maker was achieved. The courts have observed that they may not substitute their own decisions for those of other organs of state simply because they don’t like the decision that was taken\textsuperscript{165}. If the primary object is the preservation of the principle of separation of powers and recognition of the principle of subsidiarity then this is, with respect, correct. The courts may not usurp the powers of the legislature or the executive any more than the national, provincial and municipal spheres of government may encroach upon each other’s jurisdictions. This would be contrary to subsidiarity and the constitutional order upon which the South African legal system is based. The distinction between the power of the judiciary and the power of the other branches of government may seem to be a fine one in principle but it is nonetheless important in practice and must be observed. The courts cannot and should not take policy decisions reserved for executive government and the legislature especially in situations involving polycentric spider webs\textsuperscript{166} of cause and effect. They can and should pronounce on the constitutionality of the actions of the other branches of government at a level and in a manner which preserves and strengthens the credibility of all three branches.

3.9.2 Administrative “Action”

\textsuperscript{165} See the words of Chaskalson P in \textit{Pharmaceutical Manufacturers Association Of SA And Another: In Re Ex Parte President Of The Republic Of South Africa And Others} (In 72 supra) para 90 “Rationality in this sense is a minimum threshold requirement applicable to the exercise of all public power by members of the Executive and other functionaries. Action that fails to pass this threshold is inconsistent with the requirements of our Constitution and therefore unlawful. The setting of this standard does not mean that the Courts can or should substitute their opinions as to what is appropriate for the opinions of those in whom the power has been vested. As long as the purpose sought to be achieved by the exercise of public power is within the authority of the functionary, and as long as the functionary’s decision, viewed objectively, is rational, a Court cannot interfere with the decision simply because it disagrees with it or considers that the power was exercised inappropriately.”

\textsuperscript{166} Fuller, L ‘The Forms and Limits of Adjudication’ (1978-9) 92, \textit{Harvard Law Review} p 353. The concept of polycentricty as explained by Fuller has been incorporated into South African jurisprudence by way of the judgments in \textit{Bel Porto School Governing Body and Others v Premier, Western Cape, and Another} 2002 (3) SA 265 (CC); \textit{Van Biljon and Others v Minister of Correctional Services And Others} 1997 (4) SA 441 (C); \textit{Kolbatschenko v King No and Another} 2001 (4) SA 336 (C).
It has been said that “at the very least ‘administrative action’ includes all action of an administrative nature taken by bodies exercising public power”\(^{167}\). This begs the question: what is action of an administrative nature and is thus not particularly helpful. According to Klaaren, the exercise of a discretion is administrative action. The process of a government tender is administrative action and action taken by bodies such as parastatal corporations with the status of organs of state is administrative action. He observes that it should be interpreted to cover not only adjudicative administrative decisions but also delegated and subordinate legislation because to restrict the clause to adjudications only would be unthinkable, given the vast bulk of governmental administration undertaken by regulation\(^{168}\). In *Fed'sure Life Assurance Ltd and Others v Greater Johannesburg Transitional Metropolitan Council*\(^{169}\), the constitutional court held that the right to administrative justice contemplated in section 24 of the Interim Constitution did not apply to by-laws made by a municipal council. The court said that the proper form of accountability for this type of governmental action was political to the electorate rather than judicial through the courts. In *Cekeshe & Others v Premier of the Eastern Cape & Others*\(^{170}\) the court held that as a general rule ‘legislative action which has its source in the parliamentary process in the sense that there is a special opportunity for a motion and debate by a body with legislative powers will by definition not qualify as “administrative action”.

### 3.9.3 Summary

In summary, it must be noted that the grounds rules that are emerging from court decisions involving administrative law are-

---

\(^{167}\) Devenish et al (fn 13 supra) p 126. At footnote 71, they refer to *Jeeva v Receiver of Revenue, Port Elizabeth 1993(2) SA 433 (SE) 441* in this regard were the court held that “a Commission of inquiry authorized by the Master of the Supreme Court and held under the machinery of the Companies Act is administrative action”. They also refer to Klaaren J “Administrative Justice” in the *Constitutional Law of South Africa* (original service 1996) (eds) Chaskalson et al 25-2.

\(^{168}\) See Klaaren J (fn 9 supra). He notes that in *Fed'sure Life Assurance Ltd & Others v Greater Johannesburg Transitional Metropolitan Council & Others* (fn 13 supra) the constitutional court clearly supported coverage by the administrative justice clause beyond administrative adjudications. The court, notes Klaaren, was willing to go beyond the bounds of *South African Roads Board v Johannesburg City Council 1991 (4) SA 1 (A)* where Milne JA elaborated upon a distinction between those government decisions applying generally (termed ‘legislative’) and those applying in a particular situation. The court in *Fed'sure* commented that the cases referred to by Milne JA in exempting the impact of natural justice upon legislative decisions were of ‘little assistance’ in determining the content of administrative action in terms of the Constitution. Klaaren quotes from the judgment as follows: “Laws are frequently made by functionaries in whom the power to do so has been vested by a competent legislature. Although the result of the action taken in such circumstances may be ‘legislation’, the process by which the legislation is made is in substance ‘administrative’.” (para 27 of the judgment). He notes that the action of making delegated and subordinate legislation is thus administrative action. He notes further that “not only the decisions or rules promulgated under a statute but also the statutory regulatory framework itself falls within the substantive reach of section 33 of the Constitution. One does not only have a right to procedures laid down in legislation. Such procedures themselves will be scrutinized under s 33 (and s4).”

\(^{169}\) *Fed'sure Life* (fn 13 supra)

\(^{170}\) *Cekeshe* 1999 (3) SA 56 (TJ)
• The source of the power though not necessarily decisive, is a relevant factor;\textsuperscript{171}

• The nature of the holder of the power does not determine whether a decision is administrative or otherwise;\textsuperscript{172}

• The nature of the power is also an important factor;\textsuperscript{173}

• The subject-matter of the power is significant in determining whether the exercise of the power constitutes administrative action;\textsuperscript{174}

• whether it involves the exercise of a public duty; and

• how closely it is related on the one hand to policy matters, and on the other to the implementation of legislation.

In the sequence of decisions that led to \textit{Soobramoney}, it is clear that not all of them could be categorised as administrative. The enactment of the Division of Revenue Act that applied in the year that Mr Soobramoney applied for renal dialysis to the provincial authorities, for instance, is not administrative action. The decision within the province to allocate a certain amount of funding to health is not administrative action and neither is the decision as to how the amount so allocated should be utilised in order to best deliver all of the health services for which the provincial department of health is responsible\textsuperscript{175}.

\textsuperscript{171} President Of The Republic Of South Africa And Others v South African Rugby Football Union And Others fn 51 supra

\textsuperscript{172} The focus of the enquiry as to whether conduct is 'administrative action' is not on the arm of government to which the relevant actor belongs, but on the nature of the power he or she is exercising (President of the Republic of South Africa and Others v South African Rugby Football Union and Others 2000 (1) SA 1 (CC)). In \\
Hayes and Another v Minister Of Finance and Development Planning, Western Cape, And Others 2003 (4) SA 598 (C) the court said that what has to be taken into consideration is, inter alia, the source of the power, the nature of the power, its subject-matter, whether it involves the exercise of a public duty and "how closely it is related on the one hand to policy matters which are not administrative, and on the other hand to the implementation of legislation, which is."

\textsuperscript{173} Determining whether an action should be characterised as the implementation of legislation or the formulation of policy may be difficult. It will, as we have said above, depend primarily upon the nature of the power. See President Of The Republic Of South Africa And Others v South African Rugby Football Union And Others fn 51 supra. See also Pennington v Friedgood And Others (fn 129 supra) in which the court stated: "The question relevant to s 33 of the Constitution is not whether the action is performed by a member of the executive arm of Government, but whether the task itself is administrative or not and the answer to this is to be found by an analysis of the nature of the power being exercised."

\textsuperscript{174} "Determining whether an action should be characterised as the implementation of legislation or the formulation of policy may be difficult. It will, as we have said above, depend primarily upon the nature of the power. A series of considerations may be relevant to deciding on which side of the line a particular action falls.... While the subject-matter of a power is not relevant to determine whether constitutional review is appropriate, it is relevant to determine whether the exercise of the power constitutes administrative action for the purposes of s 33." President Of The Republic Of South Africa And Others v South African Rugby Football Union And Others fn 51 supra.

\textsuperscript{175} Section 1 of the PAJA exempts from the definition of administrative action the executive powers or functions of the Provincial Executive including the powers or functions referred to in section 125 (2) (d), (e) and (f) of the Constitution. This section states that the Premier exercises the executive authority together with the other members of the Executive Council, by (d) developing and implementing provincial policy; (e) co-ordinating the functions of the provincial administration and its departments; (f) preparing and initiating provincial legislation.
Each decision in the Soobramoney sequence, except the final one, has the potential effect of rendering Mr Soobramoney and others in his position eligible for renal dialysis. From a practical point of view, the underlying constitutional values and principles are the same irrespective of the level of the decision – the values of human dignity, equality, non-racialism and non-sexism and the constitutional rights to equality, life and access to health care services are relevant to every decision in the chain.

In Premier, Mpumalanga & Another v Executive Committee of the Association of Governing Bodies of State-Aided Schools: Eastern Transvaal176 O’Regan J held as follows:

“In determining what constitutes procedural fairness in a given case, a court should be slow to impose obligations upon government which will inhibit its ability to make and implement policy effectively (a principle well recognised in our common law and that of other countries). As a young democracy facing immense challenges of transformation, we cannot deny the importance of the need to ensure the ability of the executive to act efficiently and promptly. On the other hand, to permit the implementation of retroactive decisions without, for example, affording parties an effective opportunity to make representations would flout another important principle, that of procedural fairness.”

The fact that there is in many instances a fine line within the current constitutional order, between an “administrative” decision and a “policy” decision, makes it advisable from the perspective of the policymaker for the same considerations of lawfulness, rationality, fairness, transparency, reasonableness, and the absence of arbitrariness and bias to apply in health policy decisions.

3.10 Different Kinds of Power

The question as to when the state is exercising a public power and when it is exercising some other power, for instance contractual power or political power, is of considerable importance in a consideration of the nature of the relationship of the provider of public health care services to the patient. When the state is providing health care services is it providing those services in terms of a purely constitutional obligation or does the patient contract with the state for the relevant services? Is the

---

176 Premier, Mpumalanga & Another 1999 (2) SA 91 (CC)
state providing health services in fulfilment of a statutory obligation or in terms of the exercise of a function or power of government? If so does this preclude the existence of a contractual relationship between public provider and patient? Is the fact that in terms of section 27(1) people have a right of access to health care services rather than a right to health care services per se of significance in this context? The state has many different legal bases for its many and varied transactions and it is important to ascertain the nature of the legal basis upon which it provides health care services.

There is the possibility that the provision of health care services is based upon more than just one particular area of law for example constitutional law, and that it is a mixture of constitutional, administrative, contractual and statutory law depending upon the circumstances of each case. Not every act by the state constitutes an exercise of a function or power of government? If so does this preclude the existence of a right to health care services provided by the state in fulfilment of a statutory obligation or in terms of the Constitution and therefore its provisions of a constitutional order in order to give effect to certain constitutional provisions.

In Permanent Secretary, Department of Education and Welfare, Eastern Cape, and Another v Ed-U-College (PE) (Section 21) Inc 2001 (2) SA 1 (CC), the constitutional court noted that: "The applicants argued, in the alternative, that the exercise of the statutory power by the MEC involved a policy decision which either does not constitute administrative action or, if it does, was administrative action not subject to administrative review in this case. The applicants argued that the power conferred by s 49(2) of the Schools Act was political in nature and therefore its exercise does not constitute administrative action as contemplated by s 33 of the Constitution. In this regard, the applicants relied on the following dictum in the case of Premier, Mmamalanga, and Another v Executive Committee, Association of State-Aided Schools, Eastern Transvaal: 'In my view, the learned Judge did not consider sufficiently the fact that s 32 of the Act reserves the decision as to what grants should be made to state-aided schools to the second applicant, a duly elected politician, who is a member of the executive council of the province. By definition, therefore, the decision to be made by the second applicant was not a judicial decision but a political decision to be taken in the light of a range of considerations... (A) Court should generally be reluctant to assume the responsibility of exercising a discretion which the legislature has conferred expressly upon an elected member of the executive branch of government.' To the extent that the applicants relied upon this case to establish that a decision to allocate subsidies is not reviewable as administrative action in terms of the Constitution, they were mistaken. The case is authority for the contrary proposition. This dictum is concerned not with the question of the character of the power exercised by the official and whether it was administrative action or not but with the question of when it is appropriate for a court to substitute its decision for that of an administrative official." The constitutional court continued at para 18 to observe that: "In President of the Republic of South Africa and Others v South African Rugby Football Union and Others this Court held that, in order to determine whether a particular act constitutes administrative action, the focus of the enquiry should be the nature of the power exercised, not the identity of the actor. The Court noted that senior elected members of the Executive (such as the President, Cabinet Ministers in the national sphere and members of executive councils in the provincial sphere) exercise different functions according to the Constitution. For example, they implement legislation, they develop and implement policy and they prepare and initiate legislation. At times the exercise of their functions will involve administrative action and at other times it will not. In particular, the Court held that when such a senior member of the Executive is engaged upon the implementation of legislation, this will ordinarily constitute administrative action. However, senior members of the Executive also have constitutional responsibilities to develop policy and initiate legislation and the performance of these tasks will generally not constitute administrative action. The Court continued as follows: "Determining whether an action should be characterised as the implementation of legislation or the formulation of policy may be difficult. It will, as we have said above, depend primarily upon the nature of the power. A series of considerations may be relevant to deciding on which side of the line a particular action falls. The source of the power, though not necessarily decisive, is a relevant factor. So, too, is the nature of the power, its subject-matter, whether it involves the exercise of a public duty and how closely it is related on the one hand to policy matters, which are not administrative, and on the other to the implementation of legislation, which is. While the subject-matter of a power is not relevant to determine whether constitutional review is appropriate, it is relevant to determine whether the exercise of the power constitutes administrative action for the purposes of s 33. Difficult boundaries may have to be drawn in deciding what should and what should not be characterised as administrative action for the purposes of s 33. These will need to be drawn carefully in the light of the provisions of the Constitution and the overall constitutional purpose of an efficient, equitable and..."
by an organ of state was not an administrative act. Decisions which are made in fulfilment of statutory obligations have been held not to be administrative acts. A decision to issue summons for recovery of arrear payments for services rendered was held as not falling within ambit of administrative action as contemplated in s 33 of Constitution. The Supreme Court of Appeal has observed that:

"It is patently clear that the fundamental right created by s 33(1) and (2) of the Constitution is that of lawful and procedurally fair administrative action. I emphasise the words 'administrative action', because they emphasise the very first question to be asked and answered in any review proceeding: what is the administrative act which is sought to be reviewed and set aside? Absent such an act, the application for review is stillborn."
Only administrative action is subject to the Promotion of Administrative Justice Act\textsuperscript{183} and the remedies laid down in that Act are only available therefore, in respect of administrative action as defined therein. In terms of s 1 of the PAJA, the phrase ‘administrative action’ is defined as meaning:—

“any decision taken, or any failure to take a decision by—

(a) an organ of state, when—

(i) exercising a power in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation; or

(b) a natural or juristic person, other than an organ of state, when exercising a public power or performing a public function in terms of an empowering provision, which adversely affects the rights of any person and which has a direct, external legal effect, but does not include—

(aa) the executive powers or functions of the National Executive, including the powers or functions referred to in ss 79(1) and (4), 84(2)(a), (b), (c), (d), (f), (g), (h), (i) and (k), 85(2)(b), (c), (d) and (e), 91(2), (3), (4) and (5), 92(3), 93, 97, 98, 99, and 100 of the Constitution;”\textsuperscript{184}

\textsuperscript{183}Fn 8 supra

\textsuperscript{184}The intention behind some of these exclusions is not altogether clear. Closer analysis yields some anomalous results. In some of the sections of the Constitution referred to there are two basic types of powers and functions as opposed to just one. It is not clear whether the PAJA intends both types in every case. For example in terms of section 91(2) the President appoints the Deputy President and Ministers, assigning their powers and functions, and may dismiss them. The first type of power and function in this provision is the powers and functions that are assigned to the Deputy President and the Ministers by the President. The second type is the power and function of the President in this section to appoint the Deputy President and the Ministers and dismiss them and to assign to them their powers and functions. Which are the powers and functions “referred to” in section 91(2)? Is it only the former? Only the latter? Or both types? If the act of the President in assigning to the Deputy President and the Ministers their powers and functions is an administrative act then it falls within the definition of “administrative action” in the PAJA and the same rules apply to it. Section 84(2)(f) which relates to the appointment of ambassadors, plenipotentiaries, and diplomatic and consular representatives by the President is excluded from the definition of “administrative action” in the PAJA but section 84(1)(e) referring to the making of any appointments that the Constitution or legislation requires the President to make, other than as head of the national executive, is not. In view of the fact that section 91(3) and (4) are included in the PAJA’s list of exclusions it would seem that the President’s appointment of the Deputy President and the Ministers does not constitute administrative action in terms of the PAJA. The question then returns the focus to the first type of powers and functions in section 91(2), i.e. those assigned to the Deputy President and the Ministers by the President. Do they also fall outside of the definition of administrative action given in the PAJA or not? The fact that section 91(3) and (4) of the Constitution are part of the exclusions to the definition inclines one to the interpretation that they do not fall outside of the definition. This conclusion is strengthened by the fact that the PAJA excludes from the definition of administrative action those powers and functions referred to in section 92(2) of the Constitution but not sections 92(1) and 92(3). These subsections refer respectively to the responsibility of the Deputy President and the Ministers for the powers and functions of the executive assigned to them by the President and the requirement that members of Cabinet must act in accordance with the Constitution and provide Parliament with full and regular reports concerning matters under their control. However an obvious counterargument is that the reason the powers and functions in section 92(1) are not excluded from the definition of administrative action in the PAJA is simply that it would constitute unnecessary repetition of what was already excluded by way of the reference to section 91(2). The conclusion is further compounded by the fact that section 93 is excluded from the PAJA’s definition of administrative action. This section refers upon the President the power to appoint Deputy Ministers from among the members of the National Assembly. If the appointment of Deputy Ministers is not an administrative action in terms of the PAJA then how can the appointment of Ministers and the Deputy President be otherwise? Section 99 of the Constitution, also excluded by the PAJA definition of administrative action, is another section that refers to two kinds of powers and functions. It refers to the power of a Cabinet Minister to assign any power.
or function that is to be exercised or performed in terms of an Act of Parliament to a member of a provincial Executive Council or to a Municipal Council. It also refers to the powers and functions assigned. If one looks at section 100 of the Constitution, the national executive may intervene by taking any appropriate steps to ensure fulfilment of that obligation including assuming responsibility for the relevant obligation in that province to the extent necessary to "inter alia" maintain essential standards or meet established minimum standards for the rendering of a service. Must one come to the conclusion in the light of the PAJA definition of administrative action and the exclusion of section 100 that all executive action within or in terms of the Constitution or other legislation is not administrative action? If this is indeed the intention of the PAJA then the question becomes: how does one distinguish administrative action from executive action? Section 101 of the Constitution is headed "Executive Decisions." It refers to decisions taken by the President and requires them to be in writing if taken in terms of legislation or if they have "legal consequences." The section also requires that proclamations, regulations and other instruments of subordinate legislation must be accessible to the public. This discussion may seem overly technical but it is important to establish whether decisions of the state involving the provision of health care services are executive or administrative ones. The decision of the court in Steeles case (fn 13 supra) suggests that decisions taken in the course of the exercise of a constitutional or statutory obligation are not administrative decisions. If decisions involving public health care service delivery are not administrative decisions they cannot be challenged on the grounds of administrative law. Two concrete examples may help to illustrate the point. Cabinet takes a decision in principle that a programme involving the use of antiretroviral drugs in the treatment of AIDS must be developed and implemented. The decision is not taken in terms of any specific law except that it is within the parameters of the Constitution, more particularly section 27(2). The programme is duly developed by the National Department of Health, with the Minister of Health approving the various steps and aspects of the programme proposed by the Department. The provincial departments of health are tasked by Cabinet with implementing the programme in their respective provinces which means they will have to decide on human resources issues, at which facilities the programme can begin immediately as opposed to others to whom it must later be extended and how much funding to request from the central fund established for the purpose of the programme. In terms of the programme, doctors and medical superintendents of state hospitals employed by the provincial departments of health are empowered to take decisions concerning the stocks of the drugs they will maintain within their facility, the number of patients they will be able to treat effectively, whether or not a particular patient is eligible for the antiretroviral programme etc. Which of the various decisions taken at the different levels is executive and which, if any, are administrative? The decision by Cabinet is likely to be classified as an executive decision due to the nature of Cabinet itself but also due to the fact that Cabinet is acting in fulfilment of a constitutional obligation to achieve the progressive realisation of the right of access to health care services. The decisions by the Minister of Health in approving the various stages and aspects of the programme developed by the national Department of Health are likely to be executive for the same reason that those of Cabinet are executive. They are taken in the execution of the constitutional obligation expressed in section 27(2). In terms of section 8(2) of the Constitution the President exercises executive authority, together with other members of the Cabinet by inter alia developing and implementing national policy. The Cabinet decision to provide antiretroviral drugs is very much a national policy decision. What about the decisions taken by various officials of the provincial health departments, for instance in deciding how much funding to apply for, at which facilities the programme will be offered immediately and the redeployment of human resources for purposes of the programme? It is clear that at least some of these decisions will verge on administrative as opposed to executive ones. The decisions of the medical superintendents and medical doctors at each public health facility may be administrative where they involve questions of logistics but not necessarily where they are based on professional medical opinions or judgments in relation to individual patients. The irony is that were Cabinet to have legislated the programme into being rather than left it at the level of a policy decision, the implementation of the relevant national legislation is included under administrative action in terms of the PAJA definition since section 8(2)(a) is not one of the exclusions in the definition of administrative action in that Act. It would seem that the were the programme itself to be legislated, even though it was developed by the National Department of Health in exactly the same way, its implementation by the provinces would become administrative action on their part as might even the professional decisions of the medical practitioners attending the AIDS patients depending upon the level of detail to which the programme is legislated. The fact that the legislation itself is in terms of a constitutional obligation just as much as is the policy decision taken by Cabinet, does not, apparently, make a difference. Decisions taken in the implementation of legislation fall under the heading of administrative action while decisions taken in the implementation of a documented policy directive of Cabinet apparently do not necessarily. In the latter case one would have to examine the particular decision in question, the level at which it is taken, the nature of the knowledge base and circumstances informing it and its legal basis. The importance of the distinction between law and policy will further emerge in subsequent discussion.
the judicial functions of a judicial officer of a court referred to in s 166 of the Constitution or a Special Tribunal established under s 2 of the Special Investigation Units and Special Tribunals Act, and the judicial functions of a traditional leader under customary law or any other law;

(ff) decision to institute or continue a prosecution;

(gg) a decision relating to any aspect regarding the appointment of a judicial officer, by the Judicial Service Commission;

(hh) any decision taken, or failure to take a decision, in terms of any provision of the Promotion of Access to Information Act; or

(ii) any decision taken, or failure to take a decision, in terms of s 4(1).

It is clear from this definition that administrative action is not confined to the state but can also be taken by private bodies. It is also clear that not all action by organs of state constitute administrative action or the exercise of administrative power. The Constitution gives a very broad definition of the term ‘organ of state’. It is

---

185 Act No 74 of 1996

186 Act No 2 of 2000. It is somewhat ironic that decisions taken in terms of the Promotion of Access to Information Act are not administrative action as defined in the PAJA given that access to information – especially state held information – is one of the primary concerns of administrative law. (See for instance Hooster (fn 134 supra) at p 498 where in criticising the PAJA she observes that “the statute contains no duty on administrators to communicate their rules and standards in an appropriate manner to those likely to be affected by them.” It is, however, logical if one takes the view that the fulfilment of a statutory obligation does not amount to administrative action as the court did in Steels (fn 180 supra)

187 Devenish et al (fn 15 supra) observe at p 25 that: “Administrative action” is the conduct of public authorities and indeed private entities when they exercise public powers, perform public functions or are obliged to exercise authority in the public interest. This means that common law review no only applies in a very narrow field in relation to private entities that are required in their domestic arrangements to observe the common law principles of administrative law. This applies in relation to voluntary associations, such as sporting clubs and religious organisations.”

188 Devenish et al (fn 15 supra) note that administrative acts are neither legislative nor judicial. They state that an administrative decision is one made according to administrative policy whereas a judicial one is made according to the law.

189 Act 108 of 1996, section 239 states: “Organ of state” means-

(a) any department of state or administration in the national, provincial or local sphere of government; or

(b) any other functional or institutional-

(i) exercising a power or performing a function in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation, but does not include a court or a judicial officer.” In fact the vagueness of this language in the interim Constitution (Act 200 of 1993) has been criticised. See Woolman S, Chaskalson M, Kentridge J, Klaaren, Marcus G, Spitz D and Woolman S Constitutional Law of South Africa p10-33 who points out that: “The text also fails to make clear when the state is present in other guises. According to s7(1), the ‘Chapter binds all legislative or executive organs of state’. But what counts as organs of state? According to the definition in s 233(1)(d), organs of state are understood to include ‘any statutory body of functionary’. While this definition of an organ of state prevents too unduly narrow an interpretation of those state actors bound by the Chapter, it still begs two questions. First, what counts as a statutory body? Is it enough that the institution has been created by statute for it to be a statutory body? Or must it possess additional special properties to deserve subjection to constitutional scrutiny? Secondly, what counts as a functionary? Is it enough that such functionary exercise what are generally recognised as state powers and prerogatives without any further imprimatur of the state? Or must the state be present in some other tangible way?” In passing it must be noted that the courts seem to prefer the secondary view: in Nextcom (Pty) Ltd v Funde No And Others 2000 (4) SA 491 (T), Bertelemann J observed that: “In Directory Advertising Cost Cutters v Minister of Posts Telecommunications and Broadcasting and Others 1996 (3) SA 800 (T) ([1996] 2 All SA 83) Van Dijkhorst J investigated the circumstances which determine whether a body or functionary is an organ of State or not. In holding that Telkom, a statutory body, had to be qualified as such, he stated that an organ of State includes an institution which is ‘. . . an intrinsic part of government – i.e. part of the public service or consisting of government appointees at all levels of government - national, provincial, regional, and local - and those
important to note that it does not mean only public sector entities but includes other entities that exercise a public power or perform a public function. Other types of powers identified in the definition are judicial powers, legislative powers and executive powers. The decision of the Cape High Court in Steele's case\textsuperscript{190} to the effect that a decision of a municipality to remove speed bumps was not a legislative or an administrative act but rather the exercise of the municipal council’s constitutional authority and right to govern the local government affairs of its community and that the resolution was not an implementation of any law but rather fulfilment of council’s statutory obligation to see to traffic control and road safety would appear at first glance to be at odds with the definition of “administrative action” in the PAJA quoted above until one refers to paragraph (cc) of the exclusions section of the definition
which mentions the executive power or functions of a municipal council. The court in *Steele* apparently decided that the decision of the municipal council in question was not an administrative one because it constituted the exercise of the municipal council’s executive powers or functions. Where then does this leave decisions involving the delivery of health care services? The definition in the PAJA excludes the executive powers or functions of the National Executive, including the powers or functions referred to in various sections of the Constitution. Some of the powers and functions reflected in section 85(2) of the Constitution are excluded from the definition of “administrative action”. These are the exercise of executive authority by the President together with other members of the Cabinet by -

(b) developing and implementing national policy;
(c) co-ordinating the functions of state departments and administrations;
(d) preparing and initiating legislation; and
(e) performing any other executive function provided for in the Constitution or in national legislation.

Subparagraph (a) of section 85(2) refers to the implementation of national legislation except where the Constitution or an Act of Parliament provides otherwise. Significantly, the PAJA omits this section from its exclusion of what constitutes administrative action. This creates something of a problem in legal logic with regard to the provision of health care services. In terms of section 27(2) of the Constitution the state is required to take reasonable *legislative and other measures* to achieve the progressive realisation of the right of access to health care services within its available resources. Implementation of the legislative measures comprises administrative action whereas implementation of policy and other measures may or may not constitute administrative action depending upon the nature of the decision. It is important to note that it is only decisions taken by organs of state when exercising a *power* in terms of the Constitution or exercising a public *power* or performing a public *function* in terms of any legislation that fall within the definition of administrative action in the PAJA. Where the decision is taken in fulfilment of a constitutional *obligation* or in the fulfilment of an *obligation* in terms of legislation, it does not apparently constitute administrative action. The logic behind the fact that the fulfilment of a statutory obligation does not constitute an administrative action where the obligation in question is so specific that it leaves no room for discretion on the part of the official concerned is fairly obvious. One cannot subject to judicial review an act by a state
official which is done in the fulfilment of a clear and unambiguous instruction by the Legislature expressed in terms of law. Where, however there is room for discretion on the part of the official, for instance, as to the manner in which the obligation is fulfilled, it is submitted that there is scope for argument that the decision of the official in exercising that discretion could and in certain circumstances should be reviewable administrative action. For example a legislative obligation that a National Consultative Health Forum consisting of “relevant stakeholders” must be convened “at least once a year” in order to promote transparency and to involve the private sector and other interested parties in issues affecting health service delivery leaves a fair amount of discretion. Who are the relevant stakeholders? How are they identified and issued with invitations? When and in what circumstances should the minimum of one meeting a year be exceeded given the stated purpose of the Forum?

Since there is a constitutional obligation upon the state with regard to access to health care services in terms of section 27(2), it may well be argued that decisions taken in fulfilment of this obligation fall outside of the scope of the definition of administrative action and outside of the scope of the PAJA. A macroscopic consideration of the definition of administrative action in the PAJA reveals that it does not consist of the exercise of all types of power. It excludes certain types of power notably, executive, legislative and judicial in relation to the activities of the three spheres of government in exercising these types of power and functions. Thus the legislative functions and the executive powers or functions of a municipal council are excluded.

In terms of Part A of Schedule 4 of the Constitution, the national and provincial governments have concurrent legislative competence in the functional area of health services. Decisions taken in the exercise of this competence would therefore be excluded from the definition of administrative action. Since executive power follows legislative power it is logical that the executive powers of national and provincial governments are also excluded from the definition of administrative action. It is nevertheless not a simple matter to determine whether or not a particular action or decision amounts to an administrative rather than an executive action or decision. In the health context decisions are taken at many different levels and on many different bases. The injunction from the courts is not to look at the nature of the decision maker
but rather at the nature and impact of the decision itself in trying to decide whether or not it is an administrative decision. There is a further problem with the review of administrative decisions in the health context especially. Review tends to focus on irregularities in procedure albeit with a view at times to the substance of the case, depending on the circumstances. As long as the distinction between review and appeal remains, there will be an inevitable focus in review proceedings on procedural fairness. In the context of health care the setting aside of a decision on grounds of a procedural regularity can literally be hazardous to health. For example, the Medicines Control Council has the power to register medicines in South Africa in order for them to be sold here. The general rule is that unlicensed medicines may not be sold in South Africa. In deciding whether or not to register a medicine, the Council must look at the safety, efficacy and quality of the medicine. These criteria are scientific in nature. Should a decision of the Medicines Control Council not to register a medicine be set aside because although the Council acted incorrectly with regard to some procedural rule, the medicine is patently dangerous and it would not be in the public interest to have it registered here? Usually the court will refer the matter back to the decision making body when reviewing a decision of a public body. In this present example the outcome will inevitably be the same if the medicine is defective with regard to its safety, efficacy or quality. The only difference will be the procedural correctness in taking the decision. A court is not itself competent to decide on the safety, efficacy or quality of a medicine. For it to even attempt to interfere with the substance of a decision of the Medicines Control Council could be harmful to public health. In the case of a province deciding not to purchase a particular piece of expensive but highly effective emergency medical equipment for a major provincial hospital that deals regularly with road accident victims, the power of a court to refer the matter back to the provincial authorities once the victim has died is of little assistance to the victim. Is such a decision an administrative decision in any event given the Constitutional obligation to achieve the progressive realisation of the right of access to health care services?

A unilateral administrative act is referred to as a disposition.191 Wiechers192 defines a disposition as a unilateral act (other than a legislative or judicial act) whereby, in

191 Devenish et al (fn 15 supra) p 104.
given circumstances, an individual legal relationship is created, fixed, varied or terminated or whereby such creation, determination, variation or termination of a legal relationship is refused. It takes place by virtue of authoritative power vested in the administrative body. It is a rule of administrative law that an administrative organ may not regulate a general relationship by way of a disposition. An example of a unilateral administrative act is the grant or refusal of a licence. The granting of a licence does not constitute a contract between the administrative body and the applicant. A licensing decision must take into account broader issues than just the benefit of the licence to the applicant. The public interest and the constitutional rights and obligations of both the applicant and of those who will be affected by the licensing decision must be taken into account. The relationship between the applicant for a licence and the licensing body is one founded upon administrative law and bounded by the particular statute granting the administrator the power to grant licences.

Where an administrative body enters into a contractual relationship, the contract is governed by principles of the private law of contract. However, Devenish et al point out that apart from a private law contract, the state can contract with private persons using an “authoritative contract”, the distinction between this type of contract and a private law contract being that the former contains an element of authoritative power whereas the latter is based on the principle of equality between contracting parties. The consent of the private party determines the extent and scope of the authoritative power. They observe that a bilateral administrative contract arises in a situation where the state renders an essential service such as the provision of electricity. A further example of a bilateral agreement is that of a collective labour agreement concluded by organised employers and employees organisations and then approved by the administrative authority and published in the form of subordinate legislation. According to Devenish et al, Wiechers is of the view that this type of contract provides the state with one of the best and most democratic methods of entering into the trade, labour and social life of the individual and so provides clear evidence of the fact that the functions performed by the administration are not only regulatory. They point out that such agreements must not be prohibited whether expressly or by

192 Wiechers M Administrative Law p 122
193 Devenish et al (fn 15 supra) p 104
necessary implication by common law or statute. They must also not amount to an obstruction of the authoritative function since an administrative authority may not fetter its powers of discretion or restrict its authoritative function. Such contracts may also not conflict with general peremptory provisions of the empowering Act or any other statute and in the absence of statutory authority they may not automatically impose coercive duties on third parties. They can however, confer rights and privileges on third parties. Finally they must be concluded in the general interest for a public purpose.\textsuperscript{194}

The term "public interest" is commonly found in administrative law but its meaning is not always easily determined or ascertained\textsuperscript{195}.

3.11 Decisions Involving Rationing

Health care service delivery often requires decisions involving rationing. South African examples include a decision to implement a clinical protocol that prohibits the ventilation of neonates weighing less than one kilogram or a decision that HIV/AIDS positive persons are not suitable candidates for organ transplantation.

The case of \textit{Child B} in the United Kingdom is an example of an administrative decision involving the rationing of health care. In the United Kingdom the possibility of a contractual relationship between the patient and the provider of public health care is excluded\textsuperscript{196}. The National Health Service (NHS) introduced a full and

\textsuperscript{194} See generally Devenish \textit{et al} (fn 15 supra) at p105-106

\textsuperscript{195} The court in \textit{Ask Beleggings v Voorstterior Van Die Driemond Nu En Andere} 1997 (2) SA 57 (NC) held that the meaning of the term 'public interest' was a wide and uncertain term. The term 'public interest' in s 22(2)(d)(x)(e)(o) had to be interpreted in this case to mean that the granting of the licence had to be in the interest of the community. In \textit{Ex Portis North Central And South Central Metropolitan Substructure Councils Of The Durban Metropolitan Area And Another} 1998 (1) SA 78 (LC) the court held that that in deciding whether the agreement complied with ss (6) of s 34 it was necessary to investigate the concept of 'public interest'. It found that though the Courts had never defined the concept it was clear that in arriving at what was in the public interest they compared the deprivation of some private convenience with the benefit that was likely to result therefrom for the general public or part thereof. The constitutional court in \textit{President Of The Republic Of South Africa And Others v South African Rugby Football Union And Others} 2000 (1) SA 1 (CC) distinguished between "public concern" and "public interest". It held that a matter of public concern was, therefore, not a matter in which the public merely had an interest, it was a matter about which the public was also concerned. 'Public concern' in this context aid the court was therefore a more restricted notion than that of public interest.

\textsuperscript{196} Kennedy I and Grubb \textit{A Medical Law} p272 state that "The conventional understanding of the doctor-patient relationship within the NHS is that it is not contractual. However the orthodoxy has been challenged." They note that until the NHS was created in 1948, treatment was either provided privately or on a charitable basis."Within the NHS today it is generally accepted that there is no contractual relationship between a doctor (whether general practitioner or hospital doctor) and the patient \textit{(Pfizer Corp v Ministry of Health} [1965] AC 512 (HL). Equally, there is no contractual relationship between the patient and the hospital such as the NHS Trust, where the patient is cared for. Any claim for damages based upon a breach of duty lies only in tort and, in particular, in action for negligence." They observe that the basis for the orthodoxy is two-fold. First, medical services within the NHS are provided to the patient pursuant to a
comprehensive public service of healthcare provision free at the point of consumption.\textsuperscript{197} There is a legal duty upon every Health Authority in the NHS to arrange with regard to their area, personal medical services for all persons wishing to take advantage of the arrangements\textsuperscript{198}. The Health Authority contracts with general practitioners and other providers of health care services for the provision of services to patients. In terms of the British National Health Service Act every person is entitled to have a general practitioner as their doctor. The mechanism by which the relationship is created between a general practitioner and a patient is through an individual applying by delivery of his medical card or making an application for inclusion on the general practitioner’s list of patients\textsuperscript{199}. It is largely governed by statute and the obligations of the general practitioners towards their patients are themselves defined by statute or subordinate legislation\textsuperscript{200}. This means that the relationship between the patient and a public provider of health care services is based on administrative law as opposed to the law of contract which renders it of particular interest in the present context.

The case of \textit{Child B} illustrates the relatively unique issues involving administrative decisions in this field. Child B was diagnosed with non-Hodgkin’s lymphoma in 1990 for which she was treated at Addenbrooke’s Hospital in Cambridge. In 1993 she was diagnosed with a second cancer, acute myeloid leukaemia. She underwent treatment at the Royal Marsden Hospital in London. Nine months later she relapsed and the paediatricians treating her advised that she had a further six to eight weeks to live. They expressed the view that a child with her medical history was unlikely to benefit from further intensive treatment and should be placed on palliative care only. Her

\textsuperscript{198} British National Health Service Act 1977

\textsuperscript{199} Kennedy and Grubb, (fn 184 supra) p77.

\textsuperscript{200} E.g. National Health Service (General Medical Services) Regulations 1992 (SI 1992 No 635) and National Health Service (Pharmaceutical Services) Regulations 1992 (SI 1992 No 662)
father was not willing to accept this advice. He found two doctors in California who were willing to recommend that Child B should receive a second bone marrow transplant. The advice from the American doctors was far more optimistic than that of the British paediatricians and the latter were surprised by it. They did not accept the American view and reiterated their opinion that only palliative care should be given. The father then approached a leukaemia specialist at Hammersmith Hospital who also gave more positive advice than that of the paediatricians. The health authorities, when approached for permission for Child B to be treated at Hammersmith Hospital declined, arguing that the paediatricians caring for the child were in the best position to assess treatment options and that the authorities were not prepared to use resources on experimental procedures with only limited chances of success. The father consulted his solicitors who sought leave for judicial review to challenge the decision of the health authorities. This was granted. The High Court took the view that the health authority should reconsider its decision because the right to life was precious even though the chances of success were acknowledged to be low. The judgment was overturned on appeal. The judges in the Court of Appeals reaffirmed the reluctance of English courts to challenge health authority decisions on the funding of treatment and ruled that the authority had weighed the advice it had been given and there was no basis for its decision to be referred back for reconsideration. In response to the media coverage of the court case, an anonymous donor offered to provide funds for the treatment. The offer was accepted and treatment started in the private sector. The specialist who took over the treatment of the child decided not to undertake a second transplant but instead used an experimental form of treatment known as donor lymphocyte infusion. The treatment enabled the child to enjoy a few extra months of life. She eventually became ill again and died in May 1996. In discussing this case Ham notes that it demonstrates the tension between a concern to use resources for the benefit of the population as a whole and the urge to respond to the needs of individuals faced with the prospect of death.

In South African constitutional terms this case would be balancing the right to life of one individual against that of many others. The constitutional court in *Sookramoney v*
Minister Of Health, Kwazulu-Natal was faced with a similar issue. It was a question of allowing one man who was essentially terminally ill due to a number of reasons to have renal dialysis at the expense of others who were likely to recover. The facts of this case and the judgement of the court have already been discussed in a previous chapter and so will not be repeated here. However it is worth considering from an administrative law point of view the circumstances of Soobramoney’s case and that of Child B since in both cases the administrative authority successfully met the challenge to its decision. In both cases the ethical challenge was to meet the needs of all individuals within the available resources. As Ham points out, although health authorities have a particular responsibility to ensure justice in the allocation of these resources, they are also expected to respect each individual as a person in his or her own right. The Cambridge and Huntingdon Health Authority in the case of Child B was in a somewhat different position to the provincial health authority in KwaZulu-Natal in Soobramoney because in the former, the adult cancer specialists viewed the balance between the harm and benefit of the treatment differently from the paediatricians. In other words there was a dispute between the experts as to the efficacy of the treatment and the benefit Child B would derive from it. In Soobramoney there was no question that the patient would benefit from the renal dialysis. It was whether or not to give him preference over other patients who were undoubtedly likely to benefit more from it in terms of both quality of life and longevity. Ham makes reference to the “rule of rescue” which effectively states that when individuals are suffering from life-threatening conditions there is an obligation to intervene even when this may run counter to the concerns of the community as a whole. This is apparently not in direct alignment with the views of Sachs J in

---

202 Soobramoney fn 158 supra
203 Richardson J and McKie J “The Rule of Rescue” Centre for Health Program Evaluation Working Paper 112 express the rule of reason concept as follows: “Why do we mount expensive searches — for sailors lost at sea, for example — when the likelihood of finding those missing is slim?” (Creadon, 1997). Why do we offer critically ill patients intensive care, when the likelihood of it being effective is negligible? (Osborne and Evans 1994 p779). Why do some patients receive a second or third heart or liver transplant, when first-time recipients have a higher one-year survival rate? (Ubel et al, 1998 p 276-9). Is it possible to justify such practices when there are better uses for our resources? One consequence is that these practices manifest a psychological imperative that is hard to resist: namely, the urge to rescue identifiable individuals facing avoidable death, without giving too much thought to the opportunity cost of doing so. Jonsen dubbed this the ‘Rule of Rescue’ (Jonsen, 1986, pp172-4).” They explain that rule of rescue is not consistent with putting available resources to the best alternative use as follows “Whatever the explanation for the counter-intuitive ordering of Oregon’s initial list, the Rule of Rescue (RR) is clearly at odds with CEA as ordinarily understood, and in particular with that form of CEA which uses the quality-adjusted life year or QALY as the measure of effectiveness. In its simplest form the QALY represents a year that has been weighted, or discounted, by an index of the quality of life. By convention, full health has a weighting of 1 and death has a weighting of zero. So, for example, if a year of life on hospital dialysis is considered to be worth only 60 per cent as much as a year of normal health, other things being equal, then 20 years of life on dialysis would be equivalent to 20* 0.60 = 12 QALYs. In conventional CEA it is only the change in the length and quality of life that are of importance and QALYs combine these two dimensions of outcome. QALYs therefore provide a (conceptually) simple method for prioritizing health care: all else equal, the lower the cost of a
where he stated that health care rights by their very nature have to be considered not only in a traditional legal context structured around the ideas of human autonomy but in a new analytical framework based on the notion of human interdependence. Sachs J observed that a healthy life depends upon social interdependence: the quality of air, water and sanitation which the state maintains for the public good; the quality of one’s caring relationships which are highly correlated to health; as well as the quality of health care and support furnished officially by medical institutions and provided informally by family, friends and the community. He pointed out that “When rights by their very nature are shared and inter-dependent, striking appropriate balances between the equally valid entitlements of expectations of a multitude of claimants should not be seen as imposing limitations on those rights (which would then have to be justified in terms of section 36) but as defining the circumstances in which the rights may most fairly and effectively be enjoyed. The rule of rescue approach apparently favours the right to life of an individual above the broader rights and interests of the community but it seems overly simplistic in the light of Sachs J’s observations which suggest that one cannot entirely extricate the rights of an individual from the rights and interests of the community. A single individual’s right to life or health cannot be seen independently of that of others in the context of limited, shared resources produced by the community as a whole. The rule of rescue approach, by contrast, states that there comes a point at which the rights and interests of the individual must be considered in isolation from the community in which he or she lives and functions. It is unhelpful in situations where the right to life of one person must be balanced against the same right to life of another such as was the case in *Soobramoney*.

QALY the greater the value for money offered by a programme or treatment, and thus the higher a priority it should be. But the RR conflicts with this logic. Decisions influenced by the RR show a strong tendency to disregard CEA when this is necessary to save an identifiable individual facing avoidable death. Allocative efficiency - maximizing utility per unit cost - is simply not the only, or even the major, factor when someone’s life is visibly endangered.” This illustrates the complexity of health rationing decisions and the importance of the sometimes emotionally laden values of the community (in the case of South Africa community values are reflected to a significant extent in the Constitution) as well as the more utilitarian approaches of economics theory. They make an important point in observing that: “If the total social utility gained from the Rule of Rescue, including the utility gained from having reinforced within the community the belief that life is valuable and worth great effort to preserve, outweighs the utility sacrificed by not putting resources to the best alternative use, then the Rule of Rescue would be justifiable from a utilitarian point of view. On the other hand, fairness requires that we do not discriminate between individuals on morally irrelevant grounds, and being ‘identifiable’ - being in a context that evokes the ‘Rule of Rescue’ response in others - does not seem to be a morally relevant ground for discrimination. We conclude by observing that utilitarians can make their case stronger by distinguishing between cases where the societal demand for rescue measures is contrived by media coverage, and cases where it is not. Discrimination against anonymous individuals is more objectionable in the former cases than in the latter.”

*Soobramoney* fn 158 supra

204
In language reminiscent of the South African Constitution, Ham observes that decision-makers have to ensure "accountability for reasonableness" in taking decisions on healthcare coverage. He notes that Daniels and Sabin proposed four conditions that need to be met in order to ensure accountability for reasonableness:

(1) **Publicity condition**: decisions regarding coverage for new technologies (and other limit setting decisions) and their rationales must be publicly accessible;

(2) **Relevance condition**: these rationales must rest on evidence, reasons and principles that all fair minded parties (managers, clinicians, patients and consumers in general) can agree are relevant to deciding how to meet the diverse needs of a covered population under necessary resource constraints;

(3) **Appeals condition**: there is a mechanism for challenge and dispute resolution regarding limit setting decisions, including the opportunity for revising decisions in light of further evidence or arguments;

(4) **Enforcement condition**: there is either voluntary or public regulation of the process to ensure that the first three conditions are met.

With reference to the decision taken by the Cambridge and Huntingdon Health Authority in the case of Child B, Ham notes that not all of these conditions were met. For example, the application of a set of values to the Child B case met the relevance condition but the manner in which the authority's decision was communicated only partly fulfilled the publicity condition. He points out that more effort could have been made to explain the basis of the decision not to fund intensive treatment in advance of media attention. Similarly, he points out that the appeals condition was not met in that there was no mechanism for challenge and dispute resolution other than a request to the health authority to reconsider its decision. The absence of such a mechanism meant that legal action was the only formal recourse available to the family of Child B. The enforcement condition, says Ham, was met through judicial review of the health authority's decision but the restrictive scope of such reviews in the English legal system means that only some aspects of the process proposed by Daniels and Sabin were scrutinised by the courts. In particular, notes Ham, the courts looked only at the health authority's decision-making process and did not require an explanation.

205 Daniels N and Sabin J, "The ethics of accountability in managed care reform", *Health Affairs* 1998; 17 p 50-64 [Medline]
or justification of the decision or an assessment of the evidence on which it was based. According to Daniels and Sabin a commitment to transparency that case law requires improves the quality of decision-making. An organisation whose practice requires it to articulate explicit reasons for its decisions becomes focused in its decision-making.

Ham goes on to observe that Hadorn has drawn parallels between decision making processes in health care and in the legal system saying that “the need to make relatively consistent case-by-case decisions amidst profound complexity is clearly one of the forces that has driven the health care system to adopt quasi-judicial features.” He notes that Hadorn argues that consistent procedures need to be adopted in health care, and he contends that these procedures should be centred on the consideration of economic evidence concerning the outcomes of care and the formulation of judgements based on this evidence. Hadorn maintains that judgements should be based on a standard of proof that might be more or less stringent depending on the availability of resources and the views of policy makers. He makes the point that “in the selection of a standard of proof...the fundamental balance between individual claims of need (that is, pursuit of individual good) and the greater public good is achieved.

Many of the principles and points identified above are inherent in the South African constitutional order and have been re-enforced and expounded by the constitutional court and constitutionally mandated legislation. The PAJA requires reasons for decisions to be given in writing for instance. It takes a conscious and sustained effort, however, on the part of administrative entities such as government departments to maintain a body of knowledge relevant to the decisions that must be taken, to keep record of decisions in order to ensure consistency with previous decisions, to formulate rules for the setting of policy and for the taking of decisions in such as

---

207 See for instance the constitutional court’s emphasis on relevance (the court held that although the concerns raised on behalf of the appellants were relevant to the ability of government to make a ‘full package’ available throughout the public health sector, they were not relevant to the question whether Nevirapine should be used to reduce mother-to-child transmission of HIV at those public hospitals and clinics outside the research sites where facilities in fact existed for testing and counselling) and transparency in Minister of Health and Others v Treatment Action Campaign and Others fn 159 supra.
manner as to ensure consistency in the future and to foster a culture in which decisions are taken on the basis of and in accordance with all of the foregoing.

3.12 The Right to Fair Administrative Action vs the Right to Health

Should a decision by an inspector acting in terms of the Medicines and Related Substances Act to confiscate a shipment of hair product containing dangerously high quantities of lead be reversed by a court on the grounds that the decision was not taken in accordance with the prescribed procedures? This question essentially juxtaposes the constitutional right to fair administrative action and the constitutional rights to life, freedom and security of the person, including the right to bodily and psychological integrity, and to an environment that is not harmful to their health or well-being and requires a balancing of rights exercise. It seems fairly obvious which rights should win in this example. The problem arises in that the decision to confiscate the goods, even if it means that this constitutes a violation of the right to fair administrative action is not one that is initially made by a court of law the members of which are well trained and hopefully versed in these delicate balancing exercises. It must be taken by an administrative official often “on the spot”. An obvious solution to the problem is to give the administrative official sufficient power in subordinate or even principal legislation, containing the necessary guidelines and parameters for the exercise of that power, so as to protect the right and interests of both the public and the importer of the hair products. Unfortunately, even if such legislative provisions overcame all of the hurdles of lawmaking, it is not always possible to anticipate in law every permutation of practical life. Legislation is not necessarily an ideal remedy in every instance. The fact remains that “[C]omplex policy decisions should be made by accountable decision makers...Citizens must accept that the state should have the power to affect their interests, and that it makes decisions through rational processes.”

Is a decision taken by the provincial government of a province not to supply antiretroviral drugs to pregnant mothers and their children an administrative or an executive decision? Is a decision by a medical superintendent to allow a non-governmental organisation access to the premises of the public hospital he runs in

---

order to assist rape victims an administrative decision or is it a business decision based on the fact that they are leasing some of the space in the hospital? Is a decision by a National Blood Transfusion service to screen blood for diseases using a much more expensive but also much more reliable laboratory test an administrative decision?

To the extent that the Constitution itself protects and recognises the right to just administrative action, a legislative classification of certain decisions as falling outside of the definition of administrative action has the power to subvert the right. Furthermore, the exclusion from the definition of decisions involving the implementation of policy, while at the same time including in the definition decisions involving the implementation of legislation, is potentially an undesirable discouragement of legislative action on the part of government entrenching in law critical policy initiatives derogation from which should be actionable by affected persons and possible even criminalized in certain instances. The doctrine of legitimate expectation cannot fill such a gap. It is important to note that the Constitution itself does not define the term ‘administrative action’ either in section 33, which declares that everyone has the right to administrative action that is lawful, reasonable and procedurally fair, or elsewhere. While it is clearly not feasible that all forms of public action should be regarded as administrative action, there is inherent within any legislative attempt at definition of the term ‘administrative action’, the potential for legal challenge to that definition on constitutional grounds.

A decision by the state to give priority to certain health services or to shut down a particular public health establishment or to provide certain health services at the level of a rural clinic rather than a regional hospital could be seen as an administrative decision or exercise of public power. There is however, a significant difference between an administrative act and other acts on the part of the state.209 Not all acts of

---

209 In Cape Metropolitan Council v Metro Inspection Services (Western Cape) CC And Others (fn 48 supra), Streicher JA noted at p 1023 to 1024: “The section [33] is not concerned with every act of administration performed by an organ of State. It is designed to control the conduct of the public administration when it performs an act of public administration ie when it exercises public power (see President of the Republic of South Africa and Others v South African Rugby Football Union and Others 2000 (1) SA 1 (CC) (“SARFU”) at paras [136] and Pharmaceutical Manufacturers Association of SA and Another: In re Ex parte President of the Republic of South Africa and Others [fn 72 supra] at paras [20], [33], [38] - [40]). In paras [41] and [45] of the Pharmaceutical Manufacturers Association case Chaskalson P said: “[41] Powers that were previously regulated by common law under the prerogative and the principles developed by the courts to control the exercise of public power are now regulated by the Constitution. . . .” [45] Whilst there is no bright line between public and private law, administrative law, which forms the core of public law, occupies a special place in our jurisprudence. It is an incident of the separation of powers under which courts regulate and control the exercise of public power by the other branches of government. It is built on constitutional principles which define the authority of each branch of government, their interrelationship and the boundaries between them. . . . Courts no longer
administration constitute the exercise of public power. Consequently the circumstances of each decision in the chain must be carefully considered in order to establish whether or not the exercise of a public power was involved and also whether it was taken in the course of the implementation of legislation as opposed to government policy. A practical example is the legislative provisions with regard to certificate of need in the National Health Act. The policy objective behind this licensing system is to achieve a better distribution of health service providers and facilities throughout the country with a view to improving access to health care services in underserved areas. As such, is it directly aligned with the state’s section 27(2) obligations. The Act requires all providers and would be providers of health care services to apply to the Director-General for a certificate of need in order to be able to provide health care services. Persons not in possession of a certificate of need may not provide health care services. Few would argue that the decision of the Director-General as to whether or not to grant a certificate of need is an administrative decision. There is a considerable body of administrative law around the granting of various kinds of licenses. By contrast, a policy decision of the Minister of Health to establish a chain of community health clinics in deep rural areas where there are no other health facilities is unlikely to be a decision of an administrative nature.

It would seem that professionals or experts who are required to give an expert or professional opinion in terms of a statute may not be engaged in administrative action. If one looks more closely at the activities of a health professional employed...
by the state, one must ask in what way his or her functions differ from those of a
government official who is qualified as an accountant and must assess the tax payable
by a member of the public or whether someone qualifies for a welfare grant or a
Director-General who must bring his or her expertise in public health administration
to bear on a decision involving the granting of a certificate of need? The state
employs professionals of different kinds to perform its functions. These functions are
generally speaking public functions in terms of legislation as contemplated in the
definition of administrative action in section 1 of the PAJA. Why should health
professionals making treatment decisions in their capacity as public sector employees
be different to accountants, lawyers and public health administrators employed by the
state making decisions based on their professional skill and knowledge? The rationale
for granting a public official an administrative discretion and assigning to such person
the power and responsibility to make the relevant decision is tied up in the fact that
such official has or has access to the requisite expert knowledge and skill.

The rendering of health services by the state is mandated by legislation — not
necessarily the Constitution which only obliges the state to ensure the progressive
realisation of the right rather than to deliver health care services itself — but the Health
Act\textsuperscript{211} and the soon to be proclaimed National Health Act\textsuperscript{212} which is to be replace the
former. The question before the court in \textit{Dobson}\textsuperscript{213} was whether the psychiatrists
performing the evaluation were obliged to observe the \textit{audi alteram partem} rule and
there seems to be the underlying assumption that if the psychologists were engaged in
administrative action they would have to do so. It is not true, however, that every
administrative act must be subject to the \textit{audi alteram partem} rule and that someone is
always entitled to a hearing when an administrative power is exercised\textsuperscript{214}. When a

\footnotesize{administrative body about to take an administrative decision. To enable them to perform their functions it was necessary
that they obtain information from various sources and the information they could obtain from the prosecutor was
important to them. They did not then accept the information as being correct, and act upon it. It was information they put
to the accused to assess his reactions thereto, and they then had to form their own opinion regarding his mental
condition. In such a case what the psychiatrists are required to do is to form an opinion and to advise the Court of their
opinion and findings and, if their findings are disputed, the Act gives the accused the right to have the psychiatrists
subpoenaed and submitted to cross-examination. I do not believe that the \textit{audi alteram partem} principle, to be applied in
the manner submitted by Mr Bursey, is applicable in such a case.

\textsuperscript{211} Act No 63 of 1977

\textsuperscript{212} Act No 61 of 2003

\textsuperscript{213} Dobson fn 31 \textit{supra}

\textsuperscript{214} In \textit{Gardener v East London Transitional Local Council and Others} 1996 (3) SA 99 (E) the court held that: "Fairness is a
relative concept. The meaning to be attached to 'procedurally fair administrative action' must therefore be determined
within the particular framework of the act in question viewed in the light of the relevant circumstances. The procedure
must be fair not only to the holder of the right affected by the administrative act, but also to the executive or
administration acting in the public interest. I do not understand 24(b) to mean that the audi-principle is absolutely
applicable to every administrative act. Such an interpretation would make possible the misuse of the Constitution to hold

440}
person is exercising professional skill and judgment in taking a decision, it could, in certain circumstances, be argued that laypersons should not be included in the decision-making process because by definition they have nothing to add to the debate. Thus in *Dobson*\(^{215}\), it was not for the prisoner to state whether or not he was mentally unfit for trial as his opinion was neither of a professional nature nor objective. This said, in the case of the provision of health care services by a health professional, the patient would as a general rule in any event have to be consulted and his or her consent obtained to treatment that was proposed due to the requirements of informed consent and the constitutional right to bodily and psychological integrity. Admittedly in a situation where treatment is withheld, the informed consent requirement may not necessarily assist the patient unless treatment had already commenced\(^{216}\). It must be borne in mind, however, that this case pre-dates the Constitution. People now have a constitutional right of access to health care services. They also have a constitutional right to administrative justice. A decision not to administer medical treatment of a particular kind to a particular patient could well constitute a decision ‘which adversely affects the rights of any person and which has a direct, external legal effect’ in the words of the PAJA. In its definition of administrative action the PAJA includes any decision or failure to take a decision by a natural or juristic person, other than an organ of state, when exercising a public power or performing a public function in terms of an empowering provision’. Thus even where a health professional was not an employee by was contracted to the state to provide health care services, a decision to refuse treatment could constitute administrative action in terms of the PAJA.

\(^{215}\) It

\(^{216}\) It

up necessary social reform measures, or for that matter any executive or administrative act. In deciding whether the principle applies to an administrator acting in terms of s 7(2)(c) of the Act, one must have regard to the objects of the Act, as well as to the fact that application of the audi-alteram-partem principle to the administrator’s acts could delay the proclamation of the agreement and possibly frustrate the implementation of the transitional local council.” This is affirmed by section 3(2)(a) of the PAJA which states that “A fair administrative procedure depends on the circumstances of each case.” The Appellate Division has observed that: “There is a presumption that the audi alteram partem rule applies to the exercise of judicial and quasi-judicial power to affect prejudicially the interests of the individual. It will be held to have been implicitly excluded if that implication is ‘necessary’ or emerges from the ‘clear intention’ of Parliament. *Omar and Others v Minister of Law and Order and Others; Fani and Others v Minister Of Law and Order and Others; State President and Others v Bill 1987 (3) SA 859 (A). In *Cakeshe* the court said: “I accept, for present purposes, that in an appropriate case the audi alteram partem rule may not find application (see *Gardener v East London Transitional Local Council and Others* 1996 (3) SA 99 (E) at 116E - F. The fact that in that case Erasmus J was dealing with the position in terms of s 24(b) of the interim Constitution (the Constitution of the Republic of South Africa Act 200 of 1993) does not, in my view, affect the position: South African Roads Board v Johannesburg City Council (supra at 13D); Van Zyl J’s judgment in the Court a quo.” *Premier, Eastern Cape, and Others v Cakeshe and Others* 1999 (3) SA 56 (TK)

* Dobson (fn 31 supra)

215

216

Technically speaking the patient should, in the course of the process of being informed with a view to obtaining his or her consent, also be told of reasonable and treatment alternatives so that he or she is given the opportunity to question or even challenge the health professional recommendation of a particular method of treatment and opt for an alternative where this is reasonable and available. In the National Health Act provision is made in Chapter 2 for the user to be informed of “the range of diagnostic procedures and treatment options generally available to the user”.

441
The formulation of policy by an official is generally unlikely to constitute administrative action although the formulation of policy may in the narrower sense amount to administrative action if the policy is formulated within a legislative framework. There is a National Policy for Health Act which empowers the Minister to "determine the national policy to be applied in respect of any matter which in his opinion will promote the health of the inhabitants of the Republic". It is unlikely that this type of policymaking could be regarded as an administrative act due to the broad and general nature of the power that is conferred by the Act. The Act provides an example of a situation in which the implementation of legislation will not constitute administrative action under the PAJA because the legislation is in fact mandating the exercise of executive, rather than administrative, powers. This kind of legislation is generally speaking not only unnecessary because the executive powers of the state derive fundamentally from the Constitution and any attempt to further describe them in legislation could unintentionally but unconstitutionally result in a fettering of such powers, but also because of the confusion that can result from the power to set policy in terms of legislation. A case in point is that of Minister of Education v Harris. In that case the National Education Policy Act empowered the Minister of Education to determine national policy for education, including, in s 3(4)(i), national policy for 'the admission of students to education institutions which shall include the determination of the age of admission to schools'. Sections 6 and 7 of the Act make it clear that national legislation, as opposed to national policy, can be introduced only after a process of extensive consultation and publication has been completed. On 18 February 2000 the Minister of Education published a notice under s 3(4) of the National Education Policy Act (the National Policy Act) stating that a

---

217 Permanent Secretary, Department of Education and Welfare, Eastern Cape, and Another v Ed-U-College (PE) (Section 2) Inc 2001 (2) SA 1 (CC)
218 Act No 116 of 1990 to be repealed by the National Health Act. The Act in section 2 sets out guidelines for the policy to be made by the Minister in the following terms:
Provided that such policy shall be determined within the framework of the following guidelines:
(i) That an inhabitant of the Republic, if he is capable of doing so, shall primarily be responsible for his own and his family's physical, mental and social well-being, but that the state and local authorities shall share responsibility in this regard by providing an efficient and comprehensive health service;
(ii) that such inhabitant shall pay the costs incidental to his medical treatment, but that the financial circumstances of a patient shall not take precedence over the necessity for treatment, and that indigent persons shall be accommodated;
(iii) that the provision of a comprehensive health service by the state and local authorities shall be directed in a responsible manner at the needs of the individual and those of society, but that the available financing sources, natural resources and manpower of the Republic shall be taken into account;
(iv) that the private sector shall be encouraged to provide health services in the Republic, but that the provision of such services shall be in the public interest.
219 Minister Of Education v Harris 2001 (4) SA 1297 (CC)
220 Act No 27 of 1996
A learner may not be enrolled in grade one in an independent school if he or she does not reach the age of seven in the same calendar year. Talya Harris was part of a group of children who had enrolled at the age of three in the King David pre-primary school, and had spent three years being prepared for entry to the primary school in the year 2001. Her sixth birthday was due to fall on 11 January 2001, a short while before the school year would begin. Challenging the validity of the notice, her parents sought an order of court permitting her to be enrolled in grade one in the year she turned six.

The constitutional court noted that policy made by the Minister in terms of the National Policy Act does not create obligations of law that bind provinces, or for that matter parents or independent schools. It said that the effect of such policy on schools and teachers within the public sector is a different matter. For the purposes of present case, the court said it was necessary only to determine the extent to which policy formulated by the Minister may be binding upon independent schools. It then went on to point out that there was nothing in the Act which suggested that the power to determine policy in this regard conferred a power to impose binding obligations. The court observed that in the light of the division of powers contemplated by the Constitution and the relationship between the Schools Act and the National Policy Act, the Minister’s powers under s 3(4) are limited to making a policy determination and he has no power to issue an edict enforceable against schools and learners. It held that in issuing the notice the Minister exceeded the powers conferred upon him by s 3(4) of the National Policy Act and accordingly infringed the constitutional principle of legality. The appeal failed.

The distinction between policy and law seems to have escaped the notice of the Minister and officials of the Department of Education in this instance. It is submitted that the fact that legislation empowered the Minister to make policy had something to do with this. There is unfortunately no clear definition of what policy is. In Harris the court referred to the dicta of Harms JA in Akani Garden Route (Pty) Ltd v Pinnacle Point Casino (Pty) Ltd noting that the word ‘policy’ is inherently vague and may
bear different meanings. One thing is clear, however, and that is that policy is not law and as such is not applicable within or binding upon the private sector. The court in Harris did suggest that policy may be 'binding' upon public schools and teachers within the public sector but held that it could not bind the provinces or independent schools. If the same operational situation holds for schools as it does for hospitals however, then this suggestion is something of an illusion because in the health sector the provinces ‘own’ and run public hospitals and health facilities. The national Department of Health does not as a rule provide health care services although it does have the power to do so in terms of the Health Act\(^{222}\). Any policy decision that was not binding on the provinces would thus effectively not be implemented unless the provinces chose to do so. This further diminishes the need for and significance of legislation empowering a Minister to make policy especially in areas of concurrent legislative competence on Schedule 4 of the Constitution such as health services and education.

### 3.13 Manner of exercise of public power

There have been a number of important judicial pronouncements upon the manner in which public power must be exercised.\(^{223}\) The emphasis of the constitutional court context of the Act. I prefer to begin by stating the obvious, namely that laws, regulations and rules are legislative instruments whereas policy determinations are not. As a matter of sound government, in order to bind the public, policy should normally be reflected in such instruments. Policy determinations cannot override, amend or be in conflict with laws (including subordinate legislation). Otherwise the separation between Legislature and Executive will disappear. In this case, however, it seems that the provincial legislature intended to elevate policy determinations to the level of subordinate legislation, but leaving its position in the hierarchy unclear. . . .

\(^{222}\) Fn 211 supra

\(^{223}\) In Shoprite Checkers (Pty) Ltd v Ramdaw NO and Others 2001 (4) SA 1038 (LAC) at p1045-1047, Zondo JP made the following observations: "It is a requirement of the rule of law that the exercise of public power by the Executive and other functionaries should not be arbitrary. Decisions must be rationally related to the purpose for which the power was given, otherwise they are in effect arbitrary and inconsistent with this requirement. It follows that in order to pass constitutional scrutiny the exercise of public power by the Executive and other functionaries must, at least, comply with this requirement. If it does not, it falls short of the standards demanded by our Constitution for such action. The question whether a decision is rationally related to the purpose for which the power was given calls for an objective enquiry. Otherwise a decision that, viewed objectively, is in fact irrational, might pass muster simply because the person who took it mistakenly and in good faith believed it to be rational. Such a conclusion would place form above substance and undermine an important constitutional principle.‘ In the course of para [89] of his judgment [in Pharmaceutical Manufacturers of SA and Another: In re Ex parte President of the Republic of South Africa and Others [fn 72 supra] Chaskalson P also said: ‘What the Constitution requires is that public power vested in the Executive and other functionaries be exercised in an objectively rational manner.’ He continued thus in para [90]: ‘[90] Rationality in this sense is a minimum threshold requirement applicable to the exercise of all public power by members of the Executive and other functionaries. Action that fails to pass this threshold is inconsistent with the requirements of our Constitution and therefore unlawful. The setting of policy determinations, at least, will result in an objective enquiry. Language that is open to debate is a matter of course, but it is irrational for the courts to interfere with the decision simply because it disagrees with it or considers that the power was exercised inappropriately. A decision that is objectively irrational is likely to be made only rarely but, if this does occur, a Court has the power to intervene and set aside the irrational decision.’ What is clear from the judgment of the Constitutional Court is that:

1. as long as a particular decision is the result of an exercise of public power, such a decision can be set aside by a court if it is irrational;
referred to in the previous chapter on the reasonableness of decisions taken by the state is echoed strongly by the emphasis on rationality in the exercise of public power in cases such as *Pharmaceutical Manufacturers of SA and Another: In re Ex parte President of the Republic of South Africa and Others*.

It has been observed that -

"[T]he problem with subordinate legislation in a democracy is easy to state, but difficult to resolve... To date the key legal mechanism for the control of bureaucracy has been judicial review, but judicial review, even if well-developed, is not all that the law should do to structure and control bureaucracy."

O'Regan distinguishes between rule-making and decision-making by quoting Schwartz who observes that rule-making is normally general and looks only to the future; adjudication is particular and looks also to the past. She notes that administrative rule-making is not comprehensively regulated in South Africa but its extent cannot be understated and points out that bureaucratic power must not only be subject to the will of parliament but its exercise must also be fair, efficient and accountable. According to O'Regan, these are the three normative requirements which should guide the development of administrative law.

---

(2) the *bona fides* of the person who made the decision do not by themselves put such a person's decision beyond the scrutiny of the Court;

(3) the rationality of a decision made in the exercise of public power must be determined objectively;

(4) a court cannot interfere with a decision simply because it disagrees with it or it considers that the power was exercised inappropriately;

(5) a decision that is objectively irrational is likely to be made only rarely;

(6) decisions (of the Executive and other functionaries) must be rationally related to the purpose for which the power was given, otherwise they are in effect arbitrary and inconsistent with (the requirement of the rule of law that the exercise of public power by the Executive and other functionaries should not be arbitrary).

[20] Having set out above part of what was made clear by the Constitutional Court in the *Pharmaceutical Manufacturers* case about the reviewability of decisions made in the exercise of public power on grounds of irrationality, it seems to me that it would also be useful to have regard to what was made clear by this Court in *Carephone* about the reviewability of CCMA awards on grounds of unjustifiability. In this regard this Court made it clear that:

(a) the constitutional provision that administrative action must be justifiable in relation to the reasons given for it "introduces a requirement of rationality in the merit or outcome of the administrative decision... [which] goes beyond mere procedural impropriety as a ground for review, or irrationality only as evidence of procedural impropriety" (at para [31] at 1434);

(b) "it would be wrong to read into the administrative justice section an attempt to abolish the distinction between review and appeal" (at para [32] at 1434);

(c) "whether administrative action is justifiable in terms of the reasons given for it, value judgments will have to be made which will, almost inevitably, involve the consideration of the "merit" of the matter in some way or another but, as long as the Judge determining this issue is aware that he or she enters the "merit" not in order to substitute his or her own opinion on the correctness thereof, [but] to determine whether the outcome is rationally justifiable, the process will be in order" (at para [36]);

(d) the question to be asked in order to determine whether or not a decision is justifiable or rational is: "is there a rational objective basis justifying the connection made by the administrative decision-maker between the material properly available to him and the conclusion he or she eventually arrived at?"
Subsequently, the constitutional court, of which O'Regan was a member, decided in *Dawood and Another v Minister of Home Affairs and Others; Shalabi and Another v Minister of Home Affairs and Others; Thomas and Another v Minister of Home Affairs and Others*227 that there was a difference between requiring a court or tribunal in exercising a discretion to interpret legislation in a manner that was consistent with the Constitution and conferring a broad discretion upon an official, who may have been quite untrained in law and constitutional interpretation, and expecting that official, in the absence of direct guidance, to have exercised the discretion in a manner consistent with the provisions of the Bill of Rights. It observed that officials were often extremely busy and had to respond quickly and efficiently to many requests or applications. The nature of their work did not permit considered reflection on the scope of constitutional rights or the circumstances in which a limitation of such rights was justifiable. The court said that it was true that as employees of the state they bore a constitutional obligation to seek to promote the Bill of Rights as well but it was important to interpret that obligation within the context of the role that administrative officials played in the framework of government, which was different from that played by judicial officers. According to the judgment of the court, the fact that the exercise of a discretionary power might have been challenged subsequently and successfully on administrative grounds, for example, that it was not reasonable, did not relieve the Legislature of its constitutional obligation to promote, protect and fulfil the rights entrenched in the Bill of Rights. The court held that in a constitutional democracy the responsibility to protect constitutional rights in practice was imposed both on the Legislature and on the Executive and its officials. It said the Legislature had to take care when legislation was drafted to limit the risk of an unconstitutional exercise of the discretionary powers it conferred and that guidance would often be required to ensure that the Constitution took root in the daily practice of governance. Where necessary, said the court, such guidance had to be given. Guidance could be provided either in the legislation itself or, where appropriate, by a legislative requirement that delegated legislation be enacted properly by a competent authority. It was for the Legislature, in the first place, to identify the policy considerations that would render a refusal of a temporary permit justifiable.

227 *Dawood 2000 (3) SA 936 (CC)*
In *Schoonbee and Others v MEC for Education, Mpumalanga and Another*\(^{228}\) the court observed that an administrative action should not be taken on account of bias or a reasonable suspicion of bias. The action has to fall within the parameters of the law, in other words, where there is a material procedure or condition which the law prescribes, the wielder of power is obliged to have regard to that. Administrative action has to be procedurally fair and it should not be undermined by an error of law or, put otherwise, an error of understanding or application of the law. The official who takes the administrative action should not be persuaded by matters other than those which are relevant for purposes of the decision before it; he or she should not have regard to or be persuaded or moved by some ulterior purpose or motive or make considerations which are irrelevant. He or she must act honestly and rationally and not arbitrarily, or capriciously.

In *President of the Republic of South Africa and Others v South African Rugby Football Union and Others*\(^{229}\) the court observed that -

"The requirement of procedural fairness, which is an incident of natural justice, though relevant to hearings before tribunals, is not necessarily relevant to every exercise of public power. Du Preez's case is no authority for such a proposition, nor is it authority for the proposition that, whenever prejudice may be anticipated, a functionary exercising public power must give a hearing to the person or persons likely to be affected by the decision. What procedural fairness requires depends on the circumstances of each particular case."

### 3.14 Case Law

In the context of administrative law and access to health care services the case of *Applicant v Administrator, Transvaal, and Others*\(^{230}\) is of relevance although it predates the Constitution.

#### 3.14.1 *Applicant v Administrator, Transvaal, And Others*

**Facts**

The applicant was a patient at a provincial hospital ("the hospital") operated by the first, second and third respondents. The second respondent was the Director of

---

228 Schoombee 2002 (4) SA 877 (T) at 882  
229 President of the Republic of South Africa fn 51 supra at paras 219 p 97  
230 Applicant v Administrator, Transvaal, and Others 1993 (4) SA 733 (W)
Hospital Services, Transvaal, and the third respondent the Chief Medical Superintendent at the hospital. The applicant, who was a non-paying patient at the hospital's HIV clinic, had been diagnosed as having CMV-retinitis and given a prescription for a drug called Ganciclovir on 28 January 1992. After having been fitted with a special catheter to facilitate the administration of the drug, he was informed that the Provincial Administration had decided not to supply him with it. Ganciclovir was the only effective treatment for CMV-retinitis which, if untreated, inevitably results in blindness. Despite its not having been approved by the Medicines' Control Council and accordingly not registered in terms of the Medicines and Related Substances Control Act 101 of 1965, five other AIDS patients had been treated with Ganciclovir at the hospital’s HIV clinic. This treatment had subsequently been approved by the second respondent inter alia because the drug was at the time being supplied free of charge by the manufacturer. (An unregistered drug for which ad hoc approval from the Medicines' Control Council had been obtained could be administered at the hospital with the approval of the second or third respondent.) The free supply of the drug ended in October 1991 and in February 1992 the second respondent had taken a policy decision that Ganciclovir would no longer be supplied to AIDS patients. This decision led to the refusal to provide the applicant with the drug and had been motivated on the grounds, inter alia, that it (1) was not a registered drug; (2) was toxic and had severe side-effects; and (3) was expensive and the costs of supplying it to an increasing number of AIDS patients would drain available funds.

The applicant applied for an order (1) setting aside the decision of the respondents not to supply him with Ganciclovir, a drug used to treat CMV-retinitis, an eye disease relatively common in AIDS patients; and (2) directing the respondents to make the drug available to him as soon as reasonably possible.

**Judgment**

The court made the following observations as to the reasons for the decision taken by the respondents:

1. The fact that the drug was not registered was not per se decisive. Firstly, the drug was the first anti-viral drug to be licensed in the United States of America for the treatment of the disease caused by CMV infection. Ganciclovir therapy
has been approved by the Food and Drug Administration in the United States for the treatment of CMV-retinitis. Secondly, the drug, which was obtainable from Pharmatex Pharmaceuticals, was in the process of being registered. According to that company the drug was registered in most countries in the world, where it was available. Thirdly, the second respondent permitted the use of the drug on an *ad hoc* basis.

2. The fact that the drug was toxic and had severe side-effects was not per se decisive. The doctors who recommended it, Drs Miller and Spencer, were aware of the risk of using it, as was the applicant, who had been informed of that risk and those doctors and the applicant were willing to take the risk. While the drug was available to the TPA at no cost to the TPA, the second respondent permitted its use. The drug did not undergo a metamorphosis when a price was attached to it.

3. The cost of the drug was relevant, particularly if regard was had to the potential number of AIDS patients who would have to be treated in the years to come. The court said that it was proper that the second respondent weigh up that cost in relation inter alia to a budget, the drug’s efficacy and the needs of other patients. Yet, said the court, the cost of the drug could not be said to be unacceptable if it was to be administered only to the applicant.

The court considered the question as to whether, when the second respondent took the policy decision that the drug was not to be administered to AIDS patients, he should have taken into account factors peculiar to the applicant and the history of the use of the drug at the HIV clinic at the Johannesburg Hospital. It identified these factors as follows:

1. The applicant was terminally ill. He had a few months to live. While the drug might not prolong or save the life of the applicant, it would improve the quality of his life by retarding the progression of the CMV-retinitis.

2. The applicant had an expectation that he would be treated with the drug. Five other patients were so treated. That treatment was ratified by the second
respondent. The applicant was not to know that that treatment was administered at a time when the Transvaal Provincial Administration was not paying for the drug. It did not lie in the mouth of the respondents to say that the applicant's expectation was irrelevant. One of the considerations the second respondent took into account when he decided to ratify the use of the drug on the five patients was the expectation of the five patients.

3. The Hickman-line was surgically implanted into the applicant's left sub-clavian vein by a surgical registrar at the Johannesburg Hospital. The applicant remained in hospital for a week. The catheter was removed as it had become infected. Treatment of a particular kind - the administration of the drug - was commenced at a provincial hospital to a terminally ill patient, creating in his mind the expectation that the treatment would be continued until completion.

The court gave the order sought by the applicant.

Discussion

Even though this judgment predates the Constitution, it is still of considerable significance for a number of reasons. Although the court did not expressly say as much, the applicant seems to have succeeded at least partially on the basis of the doctrine of legitimate expectation. In practice the two forms of expectation may be interrelated and even tend to merge. Thus, the person concerned may have a legitimate expectation that the decision by the public authority will be favourable, or at least that before an adverse decision is taken he will be given a fair hearing. Corbett CJ went on to explain that the doctrine of legitimate expectation is an offshoot of the obligation on the part of a decision-maker to 'act fairly'.

This concept of a legitimate expectation is summed up by Corbett CJ at 758D as follows: "As these cases and the quoted extracts from the judgments indicate, the legitimate expectation doctrine is sometimes expressed in terms of some substantive benefit or advantage or privilege which the person concerned could reasonably expect to acquire or retain and which it would be unfair to deny such person without prior consultation or a prior hearing; and at other times in terms of a legitimate expectation to be accorded a hearing before some decision adverse to the interests of the person concerned is taken. As Prof Riggs put it in the article to which I have referred (at 404):'The doctrine of legitimate expectation is construed broadly to protect both substantive and procedural expectations.'" Administrator, Transvaal, and Others v Treub and Others fn 11 supra

At 758G-759A of Treub (fn 11 supra) Corbett CJ observed that: "A frequently recurring theme in these English cases concerning legitimate expectation is the duty on the part of the decision-maker to 'act fairly'. As has been pointed out, this is simply another, and preferable, way of saying that the decision-maker must observe the principles of natural justice (see O'Reilly's case supra at 1126-1127a; Attorney-General of Hong Kong case supra at 350g-h; Council of Civil Service Unions case supra at 954a-b). Furthermore, as Lord Roskill explained in the last quoted case, the phrase, "a
The fact that the medicine was not registered, the fact that the free supplies ended and the fact that the drug in question would not save the life of the patient were not relevant. This case contains a number of important lessons for those involved in health care delivery and illustrates the caution with which delivery of services should be approached. Donations of free drugs for a limited period, for instance in the context of HIV/AIDS, by drug companies wishing to establish a foothold in the market in circumstances where the treatment or the nature of the drug is such that it is lifelong and once commenced should not be withdrawn can be problematic for the public health sector since once it starts using the treatment or drug on patients, it cannot necessarily use the fact that the free supply has dried up as a basis for discontinuing the treatment. The creation in the minds of patients of an expectation that they will now receive antiretroviral drugs or other medication for a chronic health condition, eg asthma, diabetes, cardiovascular disease etc, is likely to preclude the possibility of suddenly discontinuing the treatment for those particular patients for funding reasons. The court in the Ganciclovir case took the view that for the particular patient in whose mind the expectation of receiving the drug had been created, there were different considerations than for other patients in whose minds no such expectation had been created. If one creates an expectation in the minds of a multitude of patients suffering from a particular condition that they will be treated for that condition in a certain way or using a particular intervention, for instance by way of media announcements and publicity campaigns, then from a public health point of view one could be obliged, on the basis of the doctrine of legitimate expectation, to put one’s money where one’s mouth is and ensure that the treatment is made available. Health administration is logistically speaking a complex and difficult task and it is conceivable that in isolated instances a patient may present at a health facility where stocks have run out. This kind of administrative glitch need not have legal

duty to act fairly", must not be misunderstood or misused. It is not for the Courts to judge whether a particular decision is fair. The Courts are only concerned with the manner in which the decisions were taken and the extent of the duty to act fairly will vary greatly from case to case. Many features will come into play including the nature of the decision and the relationship of those involved before the decision was taken (see at 954b-c); and a relevant factor might be the observance by the decision-maker in the past of some established procedure or practice. It is in this context that the existence of a legitimate expectation may impose on the decision-maker a duty to hear the person affected by his decision as part of his obligation to act fairly. (See at 954e; cf Lloyd and Others v McDabon [1987] 1 All ER 1118 (HL) at 1170f-g.)"

Applicant v Administrator, Transvaal, And Others fn 230 supra

The court said at p 741 fn 230 supra: "I must make it clear that I do not say that the policy decision was wrong, nor must this judgment be read to create a right for all AIDS sufferers with CMV-retinitis to receive the drug. My finding is that, on the facts of this case and this case only, the second respondent was obliged to continue with the treatment that had commenced with the insertion of the Hickman-line and which the applicant was led to believe he would continue to receive from the Johannesburg Hospital."
A further lesson to be learned from this case is that quality of life is as material an issue to the patient as length of life. The drug Ganciclovir would not have extended the patient’s life or cured his condition. However it was crucial to the quality of the remaining length of life left to him. The court regarded this factor as significant in its judgement. One cannot hide behind an argument that states because the treatment or medication does not serve a particular narrow purpose such as the preservation or prolongation of life, a purpose for which it was never in any event designed, that there is no obligation to provide the treatment. In the case of medication in particular, it is usually registered for each specific indication for which it may lawfully be used. Even if a medicine is registered in South Africa this does not mean that it can be used for the treatment of just any health condition. If one starts using the drug in the treatment of a patient for an indication for which it is registered and creates the expectation of further treatment with that drug in the mind of the patient health provider cannot argue that the patient must no longer be treated with the drug because

235 Applicant v Administrator, Transvaal, And Others fn 230 supra

236 For example, Misoprostol (Cytotec) is a synthetic prostaglandin analogue registered in many countries for the prevention of peptic ulceration in patients taking non-steroidal anti-inflammatories. According to Rees, ‘Misoprostol - Benefit or Caution’, IPPF Medical Bulletin p5 www.ippf.org, the medication has received much attention in recent years because of its widespread unregistered use in obstetrics and gynaecology for various conditions and interventions. She says that while the manufacturer (Searle) is uncomfortable about this aspect of its use, clinicians all over the world are researching the drug’s potential for revolutionizing the management of several common conditions in women and that it has many characteristics that make it an attractive prospect for use in obstetrics and gynaecology, particularly for developing countries. If it is not registered for terminations of pregnancy then prescribing and dispensing it for such purpose is illegal.
it does not serve a different purpose for which it was never registered as an indication. Ganciclovir would never have been registered for the treatment of HIV/AIDS because it was never developed for that purpose. The indication for which it would have been registered was CMV-retinitis, an opportunistic infection common in AIDS sufferers. In the Administrator Transvaal case\textsuperscript{237} the fact that it had not been registered with the Medicines Control Council was irrelevant because the law permitted its use upon \textit{ad hoc} approval by the Council.

An additional lesson to be learned is that although there is a general rule, in the words of Denning LJ, "\textit{(t)he hospital authorities are under a duty to take reasonable care of him. Whenever they accept a patient for treatment, they must use reasonable care and skill to cure him of his ailment.}"\textsuperscript{238} It did not follow, however, that if the court was of the view that it would be reasonable for the applicant to receive the drug, the respondents could be compelled to supply it to the applicant. The discretion to allow the use of a non-registered, non-coded, drug in a provincial hospital, said the court, rests on the second respondent, not on the court. It is submitted that in each case what constitutes 'reasonable care' will depend on the particular circumstances but that it is important to note that where an official has a discretionary power the court may not simply substitute its own decision for that made by the official in the exercise of that discretionary power.

\subsection*{3.15 Remedies}

The remedy for bilateral administrative acts may be based either on private law or administrative law depending upon the nature of the act\textsuperscript{239}. If the state is given the power to unilaterally alter the content of an agreement then the remedy becomes an administrative one rather than one based on contract. The authority or power of the state cannot be fettered by a contract and so a contractual term purporting to do so is unlikely to be upheld by a court.\textsuperscript{240} Administrative action may be challenged on the

\item Cassidy v Minister of Health [1951] 2 K.B. 343 (CA) at 360. See too Mtetwa v Minister of Health 1989 (3) SA 600 (N) at 606E.
\item Devenish et al (fn 15 supra) p 514
\item Thus in Southern Metropolitan Substructure v Thompson And Others 1997 (2) SA 799 (W) the court held that the Johannesburg City Council and its successors in title would not be empowered to bind themselves by contract to the moratorium alleged as such a contract would clearly be incompatible with the proper exercise of the applicant's statutory power to allocate housing to those who qualified or had already qualified for it: such a contract would be an unreasonable and incompetent fetter on its powers and duties. The constitutional court in President Of The Republic Of
\end{enumerate}
\end{footnotesize}
grounds of unreasonableness. Section 33 of the Constitution states that everyone has the right to administrative action that is, *inter alia*, reasonable. An action for damages flowing as a consequence of an administrative decision will not, however, always be permitted by the courts. In *Knop v Johannesburg City Council* the court held that the fact that the legislature had in section 139 of the Town-Planning and Townships Ordinance 15 of 1986 (T) prescribed a particular form of procedure by which an aggrieved applicant, in an application under s 92 of the ordinance for the subdivision of an erf in a township, could obtain relief against the refusal of his application showed by necessary implication that it did not intend a negligently incorrect refusal to give rise to an action for damages. As to the broader considerations of policy, it held that on the one hand an aggrieved applicant did not need an action for damages to protect his interests since he had readily at hand the appeal procedure provided within the legislative framework. On the other hand, said the court, considerations of convenience militated strongly against allowing an action for damages as the threat of such an action would unduly hamper the expeditious consideration and disposal of applications by the local authority in the first instance. It cautioned that this was not to say that the local authority need not exercise due care in dealing with applications. It had to exercise such care but the point was that it would be contrary to the objective criterion of reasonableness to hold the local authority liable for damages if it should turn out that it acted negligently in refusing an application, when the applicant had a convenient remedy at hand to obtain the approval he was seeking. It was the view of the court that to allow an action for damages in those circumstances would offend the legal convictions of the community. Consequently, it held that the refusal of an

---

241 *South Africa And Others v South African Rugby Football Union And Others* 2000 (1) SA 1 (CC) held that, although there was some uncertainty as to the precise ambit of the principle that a public authority could fetter, by contract, the exercise of its own discretion, there was little doubt that a public authority could not enter into a contract which was wholly incompatible with the discretion conferred upon it. More conclusively, one member of the Cabinet could not of her or his own accord enter into a contract with a third party which would have precluded or constrained the President from exercising powers conferred upon her or him directly by the Constitution.

242 In *Durban Add-Ventures Ltd v Premier, KwaZulu-Natal, And Others* (No 2) 2001 (1) SA 389 (N) the court held that, if the applicant enjoyed a legitimate expectation, at best this would have afforded it a right to be heard before the regulations were promulgated. The doctrine of legitimate expectation could not be employed so as to place substantive constraints on the power of a lawmaker to enact delegated legislation and, in particular, could not operate in the present circumstances so as to inhibit the formation of government policy. For good reasons the Courts were reluctant to fetter government from implementing changes to policy. The doctrine of legitimate expectation could not be applied to hinder the formation of government policy in circumstances where a change of direction was in the public interest. (from headnote)

The constitutional court in *Minister Of Health And Others v Treatment Action Campaign And Others* (No 2) (in 159 supra) observed that the Constitution contemplates rather a restrained and focused role for the Courts, namely to require the State to take measures to meet its constitutional obligations and to subject the reasonableness of those measures to evaluation. In *Governor v Minister Of Safety And Security* 2001 (4) SA 273 (SCA) the Supreme Court of Appeal held that it was the requirement of reasonableness that required interpretation in the light of constitutional values. It held that conduct unreasonable in the light of the Constitution could never be 'reasonably necessary' to achieve a statutory purpose.

242 *Knop fn 33 supra*
application for the subdivision of an erf in a township, through an error due to negligence, was not a wrongful act giving rise to a delictual claim for damages.

Judicial review is the most obvious remedy. In terms of section 6(1) of the PAJA any person may institute proceedings in a court or a tribunal for the judicial review of an administrative action. In terms of subsection (2) of section 6 –

A court or tribunal has the power to judicially review an administrative action if-

(a) the administrator who took it-

(i) was not authorised to do so by the empowering provision;

(ii) acted under a delegation of power which was not authorised by the empowering provision; or

(iii) was biased or reasonably suspected of bias;

(b) a mandatory and material procedure or condition prescribed by an empowering provision was not complied with;

(c) the action was procedurally unfair;

(d) the action was materially influenced by an error of law;

(e) the action was taken-

(i) for a reason not authorised by the empowering provision;

(ii) for an ulterior purpose or motive;

(iii) because irrelevant considerations were taken into account or relevant considerations were not considered;

(iv) because of the unauthorised or unwarranted dictates of another person or body;

(v) in bad faith; or

(vi) arbitrarily or capriciously;

(f) the action itself-

(i) contravenes a law or is not authorised by the empowering provision; or

243 See also Olitzki Property Holdings v State Tender Board and Another 2001 (3) SA 1247 (SCA) in which the court observed that where the legal duty to prevent loss sought to be invoked by a plaintiff derives from the breach of a statutory provision, the question whether the statute imposed such a duty must be assessed not on broad or even abstract questions of liability, but on a general criterion of reasonableness, based on considerations of morality and policy, and taking into account the legal convictions of the community and constitutional norms, values and principles. The focal question, said the court, remains one of statutory interpretation, since the statute may on a proper construction thereof itself confer a right of action, or alternatively provide the basis for inferring that a legal duty exists at common law. The process in either case requires the consideration of the statute as a whole, its objects and provisions, the circumstances in which it was enacted, and the kind of mischief it was designed to prevent. But where a common-law duty is at issue, the answer depends less on the application of formulaic approaches to statutory construction than on a broad assessment of whether it is 'just and reasonable' that a civil claim for damages should be granted. The determination of reasonableness here in turn depends on whether affording the plaintiff a remedy is congruent with the Court's appreciation of the sense of justice of the community (from headnote).
(ii) is not rationally connected to-

(aa) the purpose for which it was taken;

(bb) the purpose of the empowering provision;

(cc) the information before the administrator; or

(dd) the reasons given for it by the administrator;

(g) the action concerned consists of a failure to take a decision;

(h) the exercise of the power or the performance of the function authorised by the empowering provision, in pursuance of which the administrative action was purportedly taken, is so unreasonable that no reasonable person could have so exercised the power or performed the function; or

(i) the action is otherwise unconstitutional or unlawful.

Section 8 of the PAJA describes the remedies that are available under judicial review proceedings as follows –

(1) The court or tribunal, in proceedings for judicial review in terms of section 6(1), may grant any order that is just and equitable, including orders-

(a) directing the administrator-

(i) to give reasons; or

(ii) to act in the manner the court or tribunal requires;

(b) prohibiting the administrator from acting in a particular manner;

(c) setting aside the administrative action and-

(i) remitting the matter for reconsideration by the administrator, with or without directions; or

(ii) in exceptional cases-

(aa) substituting or varying the administrative action or correcting a defect resulting from the administrative action; or

(bb) directing the administrator or any other party to the proceedings to pay compensation;

(d) declaring the rights of the parties in respect of any matter to which the administrative action relates;

(e) granting a temporary interdict or other temporary relief; or

(f) as to costs.
(2) The court or tribunal, in proceedings for judicial review in terms of section 6 (3), may grant any order that is just and equitable, including orders-

(a) directing the taking of the decision;
(b) declaring the rights of the parties in relation to the taking of the decision;
(c) directing any of the parties to do, or to refrain from doing, any act or thing the doing, or the refraining from the doing, of which the court or tribunal considers necessary to do justice between the parties; or
(d) as to costs.

It is clear from this section that the remedy is dependent for its appropriateness on the context of the claim. Only in exceptional cases may the court substitute its own decision for that of the administrator. In view of the dicta of the courts on this subject discussed previously it is submitted that the courts will be extremely reluctant to use section 8(1)(c)(ii). It is questionable whether this provision is even constitutional in view of the doctrine of separation of powers. Even in TAC the court acknowledged that whilst it had the authority to pronounce upon the constitutionality of an executive decision and even make an order that would have a budgetary implication, the courts are ill-equipped to make decisions of an executive or administrative nature. It is also noteworthy that it is only in exceptional cases that the administrator or any other party to the proceedings can be ordered to pay compensation. In the context of the provision of health care services, this may mean that if a plaintiff chooses to base his or her claim on provider-patient relationship founded in administrative law, he or she should not be looking for compensation but rather an order of court instructing the administrator to revisit its decision, prohibiting the administrator from acting in a particular manner, eg closing down a hospital etc. In practice a claim is unlikely to be brought only on the basis of administrative law given the fact that access to health care services is a constitutional right.245

---

244 TAC in 159 supra

Liebenberg, in Chaskalson et al (eds) Constitutional Law of South Africa, points out at 41-28 to 41-29 that "administrative conduct under a statute may amount to the deprivation of a substantive constitutional guarantee and that legitimate reasons for depriving an individual to a particular socio-economic right must be justified under the general limitations clause. In the absence of justification, administrative action that deprives people of their access to socio-economic rights is unconstitutional." She notes further that unreasonable administrative action and procedural unfairness also infringes the right to just administrative action, and will require independent justification under the limitations clause. This illustrates the interrelationship between socio-economic rights and the right to just administrative action." She points out, however that not every scaling down or even abolition of a programme of state support will amount to a negative infringement of the rights in sections 26(1) and 27(1) of the Constitution and that a violation will not arise if
There may be remedies provided by statute in specific instances. Apart from this it seems that the administrative law relationship will in many instances give rise to a duty of care on the part of the public provider and that failure to observe such duty will ground a claim on the basis of the law of delict. This aspect will be discussed in more detail in the section on the law of delict.

3.16 Conclusions

A relationship between public providers of health care services and patients based on administrative law as opposed to the law of contract would therefore have the following elements:

At the general level—

It must be borne in mind that although policy decisions are not within the scope of administrative law, decisions involving the implementation of legislation are and so the nature of the decision taken would have to be ascertained before it could be challenged. It is important to remember, however, that in the context of health care access to health care services is a constitutional right. Even if the relationship between public provider and patient were only administrative one cannot see it in isolation from the Constitution which will always be present in and relevant to such a relationship. Constitutional principles suffuse every branch of law.

(1) An administrative decision to close down a public health care establishment, or to remove health care services from a particular area, especially when there is no reasonably accessible alternative, would have to be taken on the basis of the administrative law principles of procedural fairness, reasonableness and legality or lawfulness. This may mean that there will have to be adequate notice of the proposal to do so and also that a reasonable opportunity must be given to make representations. It will be subject to constitutional and administrative law review.

suitable alternative programmes exist or if the beneficiary can gain access to the right through his or her private resources.
(2) Reasons for an administrative decision to remove health care services or close down a health establishment would have to be given.

(3) Treatment protocols and guidelines must be developed in a manner that is lawful, procedurally fair and reasonable and that adequately takes into account the rights and interests of all patients.

(4) Where of necessity the interests of some patients must be preferred over those of others, the basis for the preference must be fair, rational and reasonable under the circumstances.

(5) Cognisance must be taken of any legitimate expectations that may have been created in the minds of the community when taking an administrative decision to provide or withdraw health care services.

(6) Treatment programmes should not be unfairly discriminatory either in terms of the nature of the treatment administered to patients or groups of patients or in terms of the procedure in which the treatment is administered.

(7) Where an administrative decision involves the granting of a licence to deliver health care services or sell health care goods, this must done with regard to the rules of administrative justice, the applicant must have an opportunity to make representations, the decision must be unbiased and all applicants must be treated equally. There may not be undue delays in the communication of the licensing decision.

At the specific level-

(1) Where treatment guidelines exist, these must be applied to each patient fairly and rationally.

(2) The constitutional rights of the patient to bodily and psychological integrity must be respected when treating him or her. This implies that the patient’s
informed consent will be obtained in every instance where this is reasonably possible.

(3) Payment may be claimed from the patient in accordance with regulations or other subordinate legislation determining such fees and their applicability to various categories of patient.

(4) Administrative procedures for the delivery of health care services must be efficient and avoid undue or unnecessary delays.

(5) Treatment may not suddenly and without sound medical reasons be withdrawn or discontinued once it has commenced especially where a legitimate expectation of continuing treatment has been created in the mind of the patient or where the treatment or health condition of the patient is itself of an ongoing or continuous nature.

(6) Deviation from recognised and accepted treatment guidelines and protocols must be lawful, procedurally fair and reasonable under the circumstances. Where a patient has already commenced a different course of treatment and has come to expect a certain kind of treatment, informed consent considerations aside, he or she must be informed of any decision to deviate from the accepted course of treatment and the reasons therefor.

Decisions of health professionals working in the public sector could constitute administrative action especially in circumstances where treatment standards, guidelines and protocols are promulgated in subordinate legislation. The implementation of legislation is one determining factor for administrative action. To the extent that the delivery of health services is mandated by legislation and public sector health professionals are implementing said legislation, their activities are likely to fall within the definition of administrative action. The fact that fees are determined by way of regulations, that the nature of the services to be rendered in respect of such fees is also determined by regulation, that the delivery of various kinds of health

---

246 Mahambekala v MEC For Welfare, Eastern Cape, And Another 2002 (1) SA 342 (SE)
services is mandated by legislation such as the Health Act No 63 of 1977 and that in the delivery of such services, a discretion is often exercised all strongly suggest that the relationship between public providers and patients are largely of an administrative nature. Even if it could be argued that in certain circumstances a contract existed between the provider and the patient, it is highly unlikely that administrative law considerations will ever be completely excluded from the relationship.
B PRIVATE SECTOR

3.17 Introduction

It has already been pointed out that the traditional divisions between public and private sector are no longer as well defined as they once were. Private entities in some cases have more power relative to the individual than do government agencies and their activities can have an equal or greater impact than those of government agencies on constitutional rights247.

The Public Finance Management Act and more specifically its regulations make provision for public private partnerships (PPPs) with a view to fulfilling public functions248. Although a private party may be contracted to perform a public function in terms of a public-private partnership, the regulations249 stipulate that a PPP agreement involving the performance of an institutional function does not divest the accounting officer or accounting authority of the institution concerned of the responsibility for ensuring that such institutional function is effectively and efficiently performed in the public interest or on behalf of the public service. In terms of the regulations, PPP agreements have to be approved by the relevant treasury with regard

---

247 Freeman J 'Private Parties, Public Functions and the New Administrative Law' http://srm.com notes: "In fact many private actors participate in governance in ways that are rarely recognized by the public, acknowledged by politicians or carefully analysed by legal scholars. The contributions of private individuals, private firms, financial institutions, public interest organisations, domestic and international standard-setting bodies, professional associations, labour unions, business networks, advisory boards, expert panels, self-regulating organizations and non-profit groups belie administrative law’s pre-occupation with agency discretion. Private individuals serve on influential government boards; “expert” private committees exercise important powers on accreditation; private producer groups may directly negotiate regulations together with other interested parties and the agency; non-profit and for-profit organizations contract to provide a variety of government services and perform public functions ranging from garbage collection to prison operation; individuals, private standard setting organizations generate health and safety standards that agencies automatically adopt. Contemporary governance might best be described as a regime of “mixed administration” in which private and public actors share responsibility for both regulation and service provision."

248 Act No 1 of 1999. The Treasury Regulations For Departments, Trading Entities, Constitutional Institutions And Public Entities as published in Government Notice R740 in Government Gazette No23463 of 25 May 2002 as amended by General Notice 37 in Government Gazette No 25915 of 16 January 2004 define ‘public-private partnership’ or ‘PPP’ means a commercial transaction between an institution and a private party in terms of which the private party—

(a) performs an institutional function on behalf of the institution; and/or

(b) acquires the use of state property for its own commercial purposes; and

(c) assumes substantial financial, technical and operational risks in connection with the performance of the institutional function and/or use of state property;

(d) receives a benefit for performing the institutional function or from utilising the state property, either by way of:

(i) consideration to be paid by the institution which derives from a revenue fund or, where the institution is a national government business enterprise or a provincial government business enterprise, from the revenues of such institution; or

(ii) charges or fees to be collected by the private party from users or customers of a service provided to them; or

(iii) a combination of such consideration and such charges or fees;

249 Treasury Regulations fn 233 supra, reg 16.7.2

462
to value for money, affordability and substantial technical, operational and financial risk transfer to the private party.\textsuperscript{250}

There is an increasing statutory emphasis on the activities of a particular entity or person in terms of the nature of their functions i.e. public functions as opposed to private functions, rather than their identity or the method of their origination. Thus a statutory body can enter into private contracts as can a government department while private companies can perform public functions.

In terms of section 28 (3) (a) of the Promotion of Equality and Prevention of Unfair Discrimination Act\textsuperscript{251} the state, institutions performing public functions and all persons have a duty and responsibility, in particular to-

- (i) eliminate discrimination on the grounds of race, gender and disability;
- (iii) promote equality in respect of race, gender and disability.

Section 239 of the Constitution defines an organ of state as –

(a) any department of state or administration in the national, provincial or local sphere of government; or

(b) any other functionary or institution-

(i) exercising a power or performing a function in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation,

In terms of the Promotion of Access to Information Act\textsuperscript{252} -

'public body' means-

(a) any department of state or administration in the national or provincial sphere of government or any municipality in the local sphere of government; or

(b) any other functionary or institution when-

\textsuperscript{250} Treasury Regulations in 248 supra

\textsuperscript{251} Promotion of Equality and Prevention of Unfair Discrimination Act No 4 of 2000

\textsuperscript{252} Promotion of Access to Information Act No 2 of 2000
(i) exercising a power or performing a duty in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation.

The Public Protector is competent *inter alia* to investigate, on his or her own initiative or on receipt of a complaint, any alleged -

- abuse or unjustifiable exercise of power or unfair, capricious, discourteous or other improper conduct or undue delay by a *person performing a public function*;

- improper or unlawful enrichment, or receipt of any improper advantage, or promise of such enrichment or advantage, by a person as a result of an act or omission in the public administration or in connection with the affairs of government at any level or of a *person performing a public function*;

- act or omission by a person in the employ of government at any level, or a *person performing a public function*, which results in unlawful or improper prejudice to any other person.253

In terms of the Promotion of Administrative Justice Act, ‘administrative action’ means any decision taken, or any failure to take a decision, by-

(a) an organ of state, when-

(i) exercising a power in terms of the Constitution or a provincial constitution; or

(ii) exercising a public power or performing a public function in terms of any legislation; or

(b) a natural or juristic person, other than an organ of state, when exercising a public power or performing a public function in terms of an empowering provision, which adversely affects the rights of any person and which has a direct, external legal effect.

---

253 Section 6 (4) of Act No 23 of 1994
3.18 Private Entities, Public Functions

It is submitted that whilst organs of state perform public functions this does not necessarily mean that if the function is a public one it is an organ of state that is performing it. The Promotion of Administrative Justice Act and the other legislation referred to above makes it clear that persons other than organs of state can also perform public functions. It must also be inferred from the Promotion of Administrative Justice Act that administrative action and public functions are not, at least for the purposes of this Act, mutually interchangeable concepts.

There are considerable legal concerns around the performance of public functions by entities and persons within the private sector not least of which is the problem of accountability and the threat posed by delegation to the doctrine of the separation of powers. There are also problems, however, with the creation of for profit public entities that have objectives more comparable to those of the private sector than those the public sector.

The creation of public entities such as the National Health Laboratory Service (NHLS), the Medical Research Council (MRC) and the Council for Medical Schemes (CFMS) has the effect of removing the areas in which they operate from direct state control in many instances. For example provided that the MRC remains within the boundaries of its statutory mandate, it is free to decide which business to take on and which to reject in terms of research projects. This is problematic for government because public health research has always been something of a Cinderella in the worlds of academic and, particularly, commercial medical research yet it is vital for informing policy making, health resources planning and the fulfilment of the state’s constitutional mandate to achieve the progressive realisation of the right to health care within available resources. In the implementation of an HIV and AIDS management and treatment programme a large and reliable laboratory facility is required in order to ensure that essential blood and other tests are conducted as part of the treatment regimen. The NHLS as an independent body over which the state has no direct control

Freeman J in fn 247 supra states that: “In legal theory this degree of private delegation raises concerns about both the accountability of private groups and the threat delegation poses to separation of powers principles.” She refers to Krent H J, ‘Legal Theory: Fragmenting the Unitary Executive: Congressional Delegations of Administrative Authority Outside the Federal Government’ (1980) 83 Nw U. L. Rev. 62.
is essential to the delivery of the programme countrywide yet it is technically free to take its own business decisions.

In South Africa there are shortages of health research personnel, trained laboratory technicians and other human resources that are necessary for medical research. Those resources that are available to the state for these activities should thus be carefully husbanded rather than given away.

It is submitted that delegations of public functions to private sector entities and the creation of public entities that are not under the control of the state to perform essential public functions could in some instances even be unconstitutional given the fact that section 27(2) of the Constitution requires the state to achieve the progressive realisation of socio-economic rights within its available resources. If it alienates its resources or fragments them to the extent that it has largely abdicated its powers and responsibilities in terms of section 27(2), it is submitted that this could be seen as a subversion of its constitutional role. The danger is that this subversion is likely to take place gradually and in a piecemeal fashion so that a government that is not alert to the bigger picture could one day find that it has castrated itself without realising it. The private sector is not as stable as the public sector in many respects. It is income driven, if not profit driven. It is subject to the whims and fancies of shareholders, fluctuations in foreign exchange rates, competition and other market forces.

Even certain non-governmental organisations (NGOs) are hungry for power and control over their area of interest. Whilst the needs of other groupings may be just as significant, the more powerful NGOs have the resources to make themselves heard and are thus likely to receive more attention for themselves and the interests they represent. Individuals within private entities seek personal power, aggrandisement and the furtherance of their personal interests and there are no guarantees that in five years time they will be answerable to their constituencies in a general election.\footnote{Freeman J fn 247 supra notes that: “Private actors remain relatively insulated from legislative, executive and judicial oversight. To the extent that private actors perform traditionally public functions unfettered by the scrutiny that normally accompanies the exercise of public power, private participation may indeed raise accountability concerns that dwarf the problem of unchecked agency discretion. In this view private actors do not raise a new democracy problem; they simply make the traditional one even worse because they are considerably more unaccountable than agencies. In addition private agencies threaten other public law values that are arguably as important as accountability. Their participation in governance may undermine features of decision making that administrative law demands of public actors, such as openness, fairness, participation, consistency, rationality and impartiality.”} It is
submitted that there is a fundamental and inescapable conflict of interest in the
delegation of public functions to private entities. Since funding must follow the
function such delegation means putting public money into private hands that are
seeking to make a profit and to serve, not the public interest, but self interest. Health
care services are a public good and access to them, a constitutional right. To place
responsibility for the delivery of health care services solely in the realm of the private
sector would be problematic unless, there was some assurance of funding for those
services. This is often the case in other countries with strong social or national health
insurance systems for example France and Australia. The state retains the financial
and purchasing power which assures access to health services sourced from the
private sector as well as state owned institutions. In South Africa at present no such
powerful state funding mechanism exists to balance the scales of power in a scenario
where health care is provided largely by the private sector. However if such a scenario
could come into play, it is submitted that the question of whether the delivery of
health care services was a public or a private function would become very real indeed.
Rationing and resource allocation decisions taken by providers in such a scenario
could not be dictated purely by private sector motives. They would either have to be
managed by way of contractual relationships between a state funder and the providers
or by administrative law principles. Health care goods and services are not ordinary
commodities the distribution of which can be adequately ensured and regulated by
commercial law and common market forces.

It would seem that the US offers significant opportunities for fruitful study of when
and how not to give away public power although it is submitted that the South

256 Merusk K argues in ‘Limitations to the transfer of public functions to persons in private law: aspects of constitutional
law and administrative law’ 2000 Juridica VIII 499-507 that on the basis of the Constitution of Estonia, the state must
perform its essential functions itself and that the transfer of public functions related to the exercise of authority to
persons in private law is only possible to a certain extent. However, Merusk states that social functions need not, as a
rule be performed by the state or local governments, who may transfer such functions to persons in private law although
they must ensure their performance. It is submitted that there are similar arguments that can be raised with the regard to
the South African Constitution and the outsourcing of public functions to the private sector in South Africa. The fact of
the matter is that the Constitution unequivocally imposes certain obligations on the state with regard to its powers and
functions and that the statutory assignment of such powers and functions to the private sector in an attempt to transfer the
risk or obligation imposed by the Constitution is likely to be unconstitutional. Furthermore contractual arrangements
which outsource public functions, whilst not necessarily unconstitutional, cannot succeed in absolving the state of its
ultimate responsibility, for instance in terms of section 27(2) to take reasonable legislative and other measures to
progressively achieve the realisation of the rights in section 27(1).

257 Freeman J, fn 247 supra observes: “Beyond the familiar literature on agency capture, one struggles to find careful
analyses of how traditional command and control regulation depends so heavily upon private self-reporting, negotiation
and industry co-operation in enforcement...while my illustrations are mostly federal or state, one can find public-private
arrangements functioning at every level of government. Indeed the blending of public-private actors is likely to be
especially complex at the state and local level.” Freeman points out that economists and policy makers usually justify
privatisation on the theory that private control will provide efficiency gains but that John D. Donahue in The
African Constitution is much stronger in terms of its potential for curbing this trend than is the older US Constitution.

3.19 Public Private Entities

There are a number of permutations that arise within the public-private interface. At one end of the spectrum one finds public entities that operate rather more in the private sector than they do in the public sector - what one might call, public private companies. These are entities that have usually been converted into private entities from their previous status as government entities. The State Information Technology Agency is an example of such an entity. At the other end of the spectrum one finds essentially private entities that are fulfilling mostly public functions. An example of these would be private waste disposal companies that are contracted to various municipalities to remove waste. The question arises what the position would be of a private provider of health care services that is contracted by the state to operate a state owned health establishment that is serving non-paying public sector patients. Conversely what would be the position of a state owned and operated facility that is contracted to a medical scheme to service its beneficiaries. Would administrative law apply to the former? Would it apply to the latter? If the answers are different in each instance then what is the reason for such difference?

Freeman observes that the most common example of public-private cooperation in governance takes the form of agencies contracting with private non-profit and for profit firms to provide social services or perform public functions. She states that in most cases public agencies engaged in contracting out believe that they are surrendering only policy implementation while retaining authority over policy making but that this distinction is tenuous at best. Freeman uses the example of private management of prisons but it is just as apposite in the context of public health service delivery by private contractors. She points out that private prison guards exercise discretion that affects prisoner’s most fundamental liberty interests (over meals, showers, exercise time, cell conditions, transportation, work assignments, visitation).

Privatization Decision argues that the presence of competition is more important that the public or private nature of the decision maker. She notes that privatization proponents also argue that the capital market and the company meeting provide more direct accountability than public agencies. She states that privatization does not guarantee accountability, however. It often enables secrecy.

Freeman fn 247 supra

258
Prison officials judge when infractions occur, impose punishments and make recommendations to parole boards. Even where an agency retains the authority to accept or reject rules by the private provider, the latter interprets and puts those rules into operation, giving them practical meaning and blurring the line between policy making and implementing functions. She notes that authority over day to day operation confers upon the private manager a "governmental" power to both legislate and adjudicate. Freeman states that a contractual system relies on judicial enforcement of the private law of contract rather than judicial enforcement of administrative law principles at the behest of private citizens. There is thus a possibility that a contractual regime might undermine public participation in decision making and impede public access to relief for injuries suffered by the intended beneficiaries of the contract. The private contractor may provide poor service, injure consumers or engage in anti-competitive behaviour, for example, with little fear of reprisal.

In the private health sector, which in South Africa, is largely profit driven, private contractors to the state may provide health care services that offer the highest returns rather than those that give the best health outcomes or that address the most urgent needs of the communities served. They would also have many different kinds of perverse incentives which revolve largely around the promotion of self-interest. In the absence of highly specific service level agreements that are closely managed by the public sector, public-private arrangements that, in the interests of the promotion of efficiency, provide for financial rewards that are directly related to under expenditure by the contractor are likely in the long run to end up short changing patients in terms of quality of care. Price fixing has been a feature of the private health sector for many years. It is a relic of a previous legal dispensation that actively promoted it in the form of gazetted tariffs for various health services but despite the change in legislation some years ago, the Competition Commissioner ruled as recently as last year that private hospitals, medical practitioners and medical schemes were guilty of anti-competitive practices and fined them substantial amounts of money. The Supreme Court has held that a private hospital could freely insert the most exclusionary indemnity clauses in patient admission documentation which constitutes a record of the contract between a patient and a hospital in order to avoid claims of even gross
negligence on the part of its staff. The court expressly upheld and preferred the principle of freedom of contract over the constitutional right of access to health care services and despite the obvious imbalance of bargaining power between the contracting parties. If the private sector is entitled to enter into such contracts why should a private contractor managing a government owned health establishment not do the same? If such a contractor refuses to provide a drug in circumstances similar to those in Applicant v Administrator, Transvaal, And Others what recourse does the patient have? Against the state he would be able to invoke the provisions of the Promotion of Administrative Justice Act. Against the private contractor he would only be able to do so if the provision of health care services was found to be a public function. Since the provision of health services within the public and private sectors is not materially different in terms of the needs served, the nature of the services provided and the circumstances in which they are provided, it is difficult to find justifications for distinctions between the one as being a public function and the other not. One could argue that private patients have a choice that public patients do not, but the realities of the situation of private patients indicate that such choices are often notional rather than real.

In the health care context patient choices are generally limited whether they are private or public sector patients. Many medical schemes restrict patient choice in the private sector when it comes to high cost health interventions such as hospitalisations and there are some that even indirectly compel their members to use public sector facilities. Schemes also restrict, directly or indirectly, the number of visits to medical and dental practitioners per year and access to medication in terms of benefit ceilings. The patient can go to a private provider if he or she is able and prepared to pay the difference in rates. Many medical scheme members cannot afford to do so. Many medical scheme contributions are based on earnings levels as are the fees payable to public hospitals by employed patients who have an income. Those who earn more pay more in both instances. The consumption of health care goods and services entails very little choice on the part of consumers whether they are public or private sector patients. They are not experts trained in the relative merits of the many different brands of medication on the market or the effective use of medical devices. They
cannot, in the majority of cases, assess for themselves whether they are being led up
the garden path or whether what they are being told about their health needs and the
management of their health condition is true. They are not in a position to know about
alternative therapies that may be just as effective but less costly unless they are told
by the provider of health care services. These are vulnerabilities of public and private
sector patients alike. Second opinions in the private sector are dependent on the
availability of funding and are not necessarily easily obtained. If one obtains
conflicting medical opinions then a second opinion can yield more questions than
answers for the unfortunate, and medically illiterate, patient.

A contractual regime in the health care context tends to the assumption that there is
equal bargaining power between the contracting parties when, particularly in this
context, this is the exception rather than the norm. The distinction between the largely
administrative law relationship between patients in the public sector and public sector
providers on the one hand, and the contractual relationships between private patients
and private providers on the other, in respect of services that are essentially the same,
throws into stark relief the dilemma created by classifying health services rendered in
the private sector as a private function rather than a public one. It is submitted that
there are useful analogies that can be drawn between waste disposal and health
service delivery. Waste disposal is essentially a public function in the sense that it is
necessary not only for the good of the individual who generates the waste but also for
the broader community that is likely to suffer the hazards that an accumulation of
such waste would create. Health services are also essentially a public function since
they are necessary not only for the good of the individual but also for the society in
which that individual functions. There are a variety of reasons apart from the obvious
ones that relate to contagious diseases. Sick parents cannot support their children.
Children in poor health cannot be properly educated. Adults in poor health cannot
attend at work or when they do cannot perform to the full capacity. The HIV and
AIDS pandemic has brought these truths to light in a way that few other health
conditions can. Like waste disposal, health care services are in many senses a
‘grudge’ purchase generated by a need for the opposite of one’s current situation. One
has to purchase health services because one is in poor health – an undesirable state of
affairs. In the case of both waste disposal and health care services, people are usually
not in a position to perform these services for themselves. They are dependant upon
broader societal structures for these arrangements. In short they are public goods. The idea of health care services as a public good is explored more fully in a subsequent chapter.

What then are the arguments for not regarding all health services as a public function regardless of where they are rendered? Why should administrative law, which is after all preoccupied with procedural fairness not apply equally in the public and private health sectors? This is a particularly relevant question in the light of the constitutional values of equality and freedom upon which the legal system must be structured.

Freeman states that an emerging literature in administrative law suggests that the pressing challenge for the field is to determine when and how to extend legal requirements to private actors performing public functions. She states that the trend away from government shifts the administrative law terrain so much that failure to constrain discretion is not the crucial problem in the field. Instead the challenge is ensuring that privatisation, contracting out and other measures designed to yield authority to private parties do not eviscerate the public law norms of accountability, procedural regularity and substantive rationality that administrative law has laboured so hard to provide. She states that although laudable for its focus on private actors and its bold assertion that discretion is no longer the central issue in the field, the emerging privatisation literature does not go far enough. According to Freeman the new privatisation literature in administrative law is marked by debates over whether judicial review will subside or intensify as the private role in administration increases. Some scholars argue, she says, that a proliferation of private activity will weaken the executive and legislative capacity to exert control over public decisions which will invite greater judicial oversight. Courts may then choose to regulate private actors either by expanding the state action doctrine or by infusing common law doctrines with public norms, such as good faith obligations in contract. Indeed, she says, there

261 Freeman fn 247 supra
262 Freeman observes that viewed in this light, a continued emphasis on constraining agency discretion is like shuffling the deck chairs on the Titanic and notes that it is not surprising that such concerns have arisen first and most forcefully in the United Kingdom, Australia and New Zealand, countries that already impose far fewer legal and procedural constraints on ministerial discretion, and which have witnessed very significant degrees of public sector re-structuring in the last two decades.
263 Freeman, fn 247 supra, refers to Mullan D 'Administrative Law at the Margins' in The Province of Administrative Law, M Taggart ed in this regard.
is ample precedent for imposing procedural requirements on private parties performing public functions when they act in derogation of the public interest.

Freeman points out that the task for administrative law is more complicated than delineating a threshold test to determine when a private actor is performing a sufficiently public function to justify the imposition of public law constraints. Other questions are –

- Do private actors have any obligation to be “public-regarding” in setting standards that are then incorporated by reference by a government agency or is the agency’s stamp of approval an adequate guarantee of accountability?

- Should courts review the exercise of enforcement discretion to approve voluntary self-regulation more carefully than when it is exercised for other purposes?

Significantly she observes that the necessary inquiry will require highly specific analyses of the dangers (self-dealing, conflicts of interest, secrecy, irrationality, lack of representation, and procedural irregularity, to name some) posed by different regulatory arrangements. Freeman states that before imposing traditional (administrative law) constraints on private actors one should look at whether other actors or different mechanisms might play a role in providing accountability and ensuring compliance with public law norms. In other words, she says, the impulse to respond to private activity by constraining private actors merely shifts the focus to the private side of the equation rather than re-orienting the administrative law enquiry to the public-private regime as a new entity. She points out that the public acceptability or legitimacy of a decision making regime turns in part upon the expectations of how the actors in that regime ought to behave when they play certain kinds of roles. For example when they function in an advisory capacity in which they purport to be neutral, one might rightly expected disinterested decision making. Freeman suggests that a mixed administrative regime might rely on numerous informal accountability mechanisms and non-governmental actors to control the dangers posed by public-private arrangements and that public-private arrangements can be more accountable because of the presence of powerful independent professionals within private
organizations or because the agency’s threat of regulation provides the necessary motivation for effective and credible self-regulation which involves non-government actors. She says that informal regulatory regimes can emerge in a context where there is no formal government participation. Freeman proposes a concept of mixed administration but points out that there are some significant obstacles not least of which is the fact that the public-private distinction is central to constitutional law. Whilst this may be true of the US Constitution it is submitted that it is less true of the South African Constitution which expressly acknowledges for instance the possibility of the horizontal application of the rights in the Bill of Rights. However the South African Constitution does make it clear that certain actions are the exclusive domain of government whose role, after all is to govern. Freeman does note that in a handful of cases both American and Commonwealth courts have imposed procedural requirements on public actors by reasoning that they are in effect behaving as private actors and points out that doctrinal mechanisms like “the source of power” or “public function” tests enable courts to characterize traditionally private actors as public whenever they exercise a sufficiently important and traditionally public regulatory function. She points out that such doctrinal innovations continue to rely heavily on the formalistic and conceptually dubious characterization of activity as essentially public or private and that this divide remains resilient in the face of withering attacks from critical legal studies, feminist legal theory, legal postmodernism and outsider legal scholarship. Freeman states that no matter how blurred the line between public and private and no matter how difficult to design an intellectually defensible test to distinguish them, most scholars agree that there ought to be a meaningful difference between the two and that constitutional constraints should apply only to the former. She observes that one finds a similar commitment to the public-private distinction in administrative law.

Freeman’s approach to the extent that it supports regulation by private entities is not supported in this thesis not only because of the problems that seem to accompany over privatisation given the American experience but because of the approach of the South African Constitution itself. Moreover, the imposition of specific obligations such as

---

264 Thus section 43 stipulates that -
In the Republic, the legislative authority-
(a) of the national sphere of government is vested in Parliament, as set out in section 44;
(b) of the provincial sphere of government is vested in the provincial legislatures, as set out in section 104; and
is contained in section 27(2) upon the state renders it unconstitutional for the state to privatise to the point where it is incapable of fulfilling those obligations because it has given away the mechanisms and resources necessary to do so. This is not to suggest that the state must provide all health care services itself. However, if the state gives away even the power to regulate health service delivery, the power to set standards for quality, safety and efficacy and to legislate mechanisms which can counteract the negative impact on access by market forces and other social factors then it is submitted that it will effectively have undermined its capacity to fulfil its constitutional obligations. What is interesting about Freeman’s views is that the line between public and private function is not as clear as might first appear and that she provides some useful arguments for the application of certain principles of administrative law in the health care sector. In South Africa, fairness is a constitutional and legislative preoccupation due to largely to its history. Fairness is also a preoccupation of administrative law. Equality is a constitutional value that supports and underlies fairness. In South Africa there is legislation such as the Promotion of Equality and Prevention of Unfair Discrimination Act\textsuperscript{265} for instance which states in section 24 that (1) The State has a duty and responsibility to promote and achieve equality and (2) All persons have a duty and responsibility to promote equality. In terms of this Act, limiting women’s access to social services or benefits, such as health, education and social security constitutes unfair discrimination on the ground of gender. It is submitted that where the activities of the private sector impact or have the potential to negatively impact upon constitutional values and the capacity of persons to realise their constitutional rights there are strong arguments in favour of the principles of administrative law in those situations. In fact this is one of the key identifiers of administrative action in terms of the Promotion of Administrative Justice Act\textsuperscript{266} which states in the definition of this term it is any decision taken, or any failure to take a decision... which adversely affects the rights of any person and which

---

\textsuperscript{265} Promotion of Equality Act fn 251 supra

\textsuperscript{266} Promotion of Administrative Justice Act fn 8 supra
has a direct, external legal effect. This section of the Act also introduces the public
function test as discussed previously.

In the Netherlands administrative law, as in South Africa, is applicable to any action
with regard to the execution of public law power. Public law power is defined in that
country as authority to decide on the behaviour of another person. In the
Netherlands privatised organisations are largely regulated by administrative law and
the process of conversion from a state organisation to a privatised company is
governed by administrative law in all stages.

What is interesting is that van der Vlies et al observe with regard to methods of
safeguarding public interest that the latter may be served by competition but only
under specific conditions. They state that even if the competition is real, the public
interest might need more guarantees, noting that if privatisation leads to competition
for the market only and not to competition in an open market, competition is in fact
void. It is widely acknowledged that in the health sector, competition does not work
very well due to the captive nature of the consumer and the high levels of necessary
regulation of health professionals and products. The Research Council for
Government Policies (WRR) in the Netherlands developed five main checkpoints for
good governance in privatisation namely democratic legitimisation; equity before the
law; legal certainty; efficiency and efficacy. Democratic legitimisation requires
democratic steering and democratic accountability. The authors note that competition
and equity before the law are not entirely compatible concepts and that competition
may cause companies to infringe the principle of equity before the law. Thus an
insurance company may exclude certain high risk groupings (as happened in the
South African medical schemes industry prior to the introduction of the Medical
Schemes Act in 1998) although such behaviour does not observe the principle of
equity before the law. Legal certainty, they state, is partly connected to predictability
of actions of the administration. However, they say, public law does not have the
monopoly on certainty and is itself limited in this regard in that rules are open to
interpretation and officials are awarded certain discretionary powers.

267 Van der Vlies IC, Stoter S W and Lubach DA ‘Application of Administrative Law to Privatization In The Netherlands’
European Journal of Comparative Law http://www.ejcl.org/64/art64-24.html
Van der Vlies et al\textsuperscript{268} comment that whether a public or a private organisation of a service is effective or efficient depends mainly on the character of the service. Thus electricity was traditionally traded in a monopoly market because the infrastructure required to provide it was too technically sophisticated to allow competition. Nowadays, infrastructure is less complex and allows competition without the risk of losing the availability of electricity to everyone. This observation is very interesting in the context of the South African health sector in which the infrastructure is not such that health care services are available to everyone. It seems that where there is a well established infrastructure that is readily accessible, competition is feasible but where the infrastructure is insufficient competition will have the effect of excluding from access to resources altogether those who are less able to compete for them. This usually means the poor. In other words, infrastructure needs to reach a certain critical mass before competition becomes a positive factor.

3.20 Case Law

3.20.1 Pennington v Friedgood And Others\textsuperscript{269}

\textit{Facts}

During 1999 Fedsure Health (Pty) Ltd (Fedsure) became the administrator of the Erica medical scheme; the board of trustees of the scheme (the board) became dissatisfied with the service that the scheme was receiving from Fedsure and in due course cancelled its administration agreement with Fedsure and transferred its administration to Old Mutual Healthcare (Pty) Ltd, the fifth respondent, although no formal administration agreement was concluded with the fifth respondent. The board was not satisfied with the manner in which the scheme was being administered under this arrangement and on 8 May 2001 it resolved to terminate its administration agreement with the fifth respondent with effect from 30 June 2001 and to appoint Bensure Management Services (Pty) Ltd, the sixth respondent, as administrator of the scheme with effect from 1 July 2001. The annual general meeting of the scheme was held on 29 June 2001; the first respondent chaired the meeting and the second, third and fourth respondents and representatives of the fifth and sixth respondents were also

\textsuperscript{268} Van der Vlies et al fn 267 supra
\textsuperscript{269} Pennington fn 129 supra
present, as was the applicant; the first to fourth respondents were elected as the trustees of the scheme at the meeting. The applicant was unhappy with the manner in which the annual general meeting was conducted on 29 June, and on 3 July 2001 he launched an application as a matter of urgency to be heard the next day, 4 July 2001.

He claimed the following relief:

"2 That a rule *nisi* be issued calling upon the first through the fourth respondents, in their capacity as trustees of the Erica Medical Aid Society (the scheme) and all interested parties, to appear at 10:00 on Tuesday, 31 July 2001, alternatively at a date to be determined by the above honourable Court, to show cause, if any, why the decision set out in para 2.1 through 2.10 herein below, exercised at the annual general meeting (the AGM) of the scheme, held on 29 June 2001, should not be reviewed and set aside and why an order should not be given in terms of para 2.11 and 2.12 herein below.

2.1 The refusal of the first respondent to stand the meeting down to allow arrangements to be made to electronically record the minutes of the meeting.

2.2 The refusal of the first respondent to stand the meeting down pending an application to the High Court for an order to compel the electronic recording of the minutes of the meeting.

2.3 The appointing of an agent or servant of the consulting firm Jacques Malan & Associates to take the minutes of the meeting.

2.4 The refusal of the first respondent to recuse himself as chairperson of the meeting.

2.5 The refusal of the first respondent to stand the meeting down pending an application to the High Court for an order to recuse himself from the meeting.

2.6 The refusal of the first and second respondents to recuse themselves from participating or voting at the meeting.

2.7 The ruling by the first respondent that the eight motions tabled by the applicant in terms of the scheme rules were out of order and therefore would not be dealt with at the meeting."
2.8 The stated action by the first respondent that he had disqualified two nominations for trustees because they had not been completed properly.

2.9 The refusal of the first respondent to call for a poll of the members present or by proxy for the election of trustees of the scheme.

2.10 The refusal of the first through fourth respondents to give an undertaking that the administration of the scheme would not be transferred from the fifth respondent to the sixth respondent pending the lodging of this application.

2.11 Why an order should not be given directing that the costs of this application be paid jointly and severally by the first through the fourth respondents in their personal capacity and by the fifth and sixth respondents only in the event that said respondents oppose this application.

2.12 Declaring that, because of the aforesaid irregularities, the continuation of the meeting and any decisions made and resolutions passed at the meeting are invalid.

3. That pending a decision of this honourable Court for the review and setting aside of the aforementioned decisions, the respondents be interdicted and restrained from transferring the administration of the scheme from the fifth respondent to the sixth respondent.

4. Ordering that any and all records of the members of the scheme in the possession of the sixth respondent be returned to the scheme immediately and that the sixth respondent be restrained and interdicted from contacting the members of the scheme or in any way interfering with the business of the scheme.”

The matter came before Van Zyl J on 4 July 2001. He granted no relief, but postponed the matter for hearing on the semi-urgent roll on 3 September 2001 and gave directions for the filing of answering and replying affidavits and heads of argument by all the parties bar the fifth respondent, and ordered that costs would stand over for later determination. He specifically stated that no order was made in respect of the fifth respondent. Van Zyl J did not grant the interim interdict sought in para 3 of the notice of motion.
The fifth respondent abided the decision of the Court. During the first morning of the hearing, the applicant and the sixth respondent, represented by Mr Sholto-Douglas, reached an agreement in terms of which the former withdrew his application against the sixth respondent and tendered to pay its costs. At a far later stage of the argument, it was also agreed between the applicant and the first to fourth respondents that the applicant would withdraw his claim for interdictory relief against the first to fourth respondents as contained in paragraph 3 of the notice of motion. The following issues accordingly arose for decision: whether the first respondent’s rulings and the other conduct referred to in paragraph 2 of the notice of motion fell to be reviewed, viz whether such conduct was indeed reviewable as a matter of law; whether on the facts a case was made out for the review and the setting aside of the conduct complained of; a striking out application; and the appropriate relief.

Judgment

The court referred to Pharmaceutical Manufacturers Association of SA and Another: In re Ex parte President of the Republic of South Africa and Others270 as being of great importance. It observed that since the advent of the Constitution and, pursuant thereto, the PAJA, a requisite jurisdictional fact for success on judicial review is that the impeached conduct must constitute administrative action and said that from the dicta from Pharmaceutical Manufacturers and from the PAJA, it was clear that whether such conduct constitutes administrative action falls to be decided by reference to whether such action amounts to the exercise of public power or the performance of a public function. Referring to the decision in Transnet Ltd v

270 Pharmaceutical Manufacturers Association of SA (in re Ex parte President of the Republic of South Africa and Others) in which Chaskalson P, speaking for the Full Constitutional Court, said: “I take a different view. The control of public power by the Court through judicial review is and always has been a constitutional matter. Prior to the adoption of the interim Constitution this control was exercised by the Courts through the application of common-law constitutional principles. Since the adoption of the interim Constitution such control has been regulated by the Constitution which contains express provisions dealing with these matters. The common-law principles that previously provided the grounds for judicial review of public power have been subsumed under the Constitution and, insofar as they might continue to be relevant to judicial review, they gain their force from the Constitution. In the judicial review of public power, the two are intertwined and do not constitute separate concepts” and “The exercise of public power was regulated by the Court through the judicial review of legislative and executive action. This was done by applying constitutional principles of the common law, including the supremacy of Parliament and the rule of law. The latter had a substantive as well as a procedural content that gave rise to what Courts referred to as fundamental rights, but because of the countervailing constitutional principle of the supremacy of Parliament, the fundamental rights could be, and frequently were, eroded or excluded by legislation. Judicial review served the purpose of enabling Courts, whilst recognising the supremacy of Parliament, to place constraints upon the exercise of public power.”
Goodman Brothers (Pty) Ltd 271 Hodes AJ noted that what falls to be considered is, *inter alia*, the source of the power exercised, the nature of such power, its subject-matter, whether it involves the exercise of a public duty, and how closely it is related on the one hand to policy matters which are not administrative, and on the other to the implementation of legislation, which is. The court also referred to the cases of *Dawnlaan Beleggings (Edms) Bpk v Johannesburg Stock Exchange and Others*272, *Johannesburg Stock Exchange and Another v Witwatersrand Nigel Ltd and Another*273, *Herbert Porter & Co Ltd and Another v Johannesburg Stock Exchange*274 and *Cape Metropolitan Council v Metro Inspection Services (Western Cape) CC and Others*275 and compared the first two decisions with the last two.

Hodes AJ observed that a medical scheme is a body corporate. In terms of the Medical Schemes Act it acquires such status upon registration. It is governed by the Act, the regulations and the scheme rules. Such rules constitute the contract between the scheme and its members.276 A meeting of the members of a scheme is thus similar to a meeting of the members of a company. Both acquire status in terms of an Act of Parliament. In this case, the Act and, in the case of a company, the Companies Act.

In the instant case, as in *Herbert Porter*, the relationship between the trustees (the first to fourth respondents) and the members of the scheme is governed by the Act, the regulations and the rules. In the case of a company the relationship between members and the company is governed by the Companies Act and the articles of association of that company. The court said that just as a meeting of shareholders of a company is not subject to the review of the High Court (*Dawnlaan Beleggings; R v Disciplinary Committee of the Jockey Club, ex parte Massingberd-Mundy*277), so too the proceedings of an annual general meeting of a medical scheme are also not subject to the review of the High Court, for they do not constitute administrative action. The court stated that judicial review is a remedy to curb improper or inappropriate exercise of public power.

277 *Ex parte Massingberd-Mundy* [1993] 2 All ER 207 (QB) at 221b - e
Hodes AJ noted that in *Transnet Ltd v Goodman Brothers (Pty) Ltd* 278 in a concurring judgment, Olivier JA gleaned the following from decisions of the Constitutional Court:

(a) Administrative law is an incident of the separation of powers under which courts regulate and control the exercise of public power by the other branches of Government.

(b) The question relevant to section 33 of the Constitution is not whether the action is performed by a member of the executive arm of Government, but whether the task itself is administrative or not and the answer to this is to be found by an analysis of the nature of the power being exercised.

(c) What falls to be considered is, *inter alia*, the source of the power exercised, the nature of such power, its subject-matter, whether it involves the exercise of a public duty, and how closely it is related on the one hand to policy matters which are not administrative, and on the other to the implementation of legislation, which is.

He quoted the following words of Devenish, Govender and Hulme 279:

"""Administrative action" is the conduct of public authorities and indeed private entities when they exercise public powers, perform public functions or are obliged to exercise authority in the public interest. This means that common-law review now only applies in a very narrow field in relation to private entities that are required in their domestic arrangements to observe the common-law principles of administrative law. This applies in relation to voluntary associations, such as sporting clubs and religious organisations.""

and stated that he was in agreement with them.

The court concluded that nothing contained in the Act, the regulations or the scheme rules imports a requirement by the trustees to observe the common-law principles of administrative law. Accordingly, it held that the conduct of the first to fourth respondents which the applicant sought to impeach by way of review was not in law susceptible to this Court’s review jurisdiction and that the application for review falls to be dismissed.

Discussion

Although the finding of the court in this particular case is, it is submitted, correct, it cannot necessarily be used as a precedent to show that medical schemes do not perform public functions and are thus not subject to considerations of administrative law. The court did recognise the possibility of the performance of a public function by a private entity.

With regard to medical schemes and their more day to day activities involving the funding of medical expenses and the enrolment of members the following should be born in mind-

(1) Medical schemes are creatures of statute in the sense that they have to be registered in terms of procedures required by the Medical Schemes Act\(^{280}\) and that only when registered are they lawfully able to conduct the business of a medical scheme as defined.

(2) The content of the rules of medical schemes are closely regulated. Not only are they largely dictated by section 29 of the Medical Schemes Act\(^ {281}\) but they are

\(^{280}\) Medical Schemes Act No 131 of 1998 section 22 and 24

\(^{281}\) According to section 29: (1) The Registrar shall not register a medical scheme under section 24, and no medical scheme shall carry on any business, unless provision is made in its rules for the following matters:

(a) The appointment or election of a board of trustees consisting of persons who are fit and proper to manage the business contemplated by the medical scheme.

(b) The appointment of a principal officer by the board of trustees who is a fit and proper person to hold such office.

(c) The appointment, removal from office, powers and remuneration of officers of a medical scheme.

(d) The manner in which contracts and other documents binding the medical scheme shall be executed.

(e) The custody of the securities, books, documents and other effects of the medical scheme.

(f) The appointment of the auditor of a medical scheme and the duration of such appointment.

(g) The power to invest funds.

(h) Subject to the provisions of this Act, the manner in which and the circumstances under which a medical scheme shall be terminated or dissolved.

(i) The appointment of a liquidator in the case of a voluntary dissolution.

(j) The settlement of any complaint or dispute.

(k) The amendment of the rules in accordance with the provisions of section 31.

(l) The giving of advance written notice to members of any change in contributions, membership fees or subscriptions and benefits or any other condition affecting their membership.

(m) The manner of calling the annual general meeting and special general meetings of members, the quorum necessary for the transaction of business at such meetings and the manner of voting thereat.

(n) The terms and conditions applicable to the admission of a person as a member and his or her dependants, which terms and conditions shall provide for the determination of contributions on the basis of income or the number of dependants or both the income and the number of dependants, and shall not provide for any other grounds, including age, sex, past or present state of health, of the applicant or one or more of the applicant's dependants, the frequency of rendering of relevant health services to an applicant or one or more of the applicant's dependants other than for the provisions as prescribed.

(o) The scope and level of minimum benefits that are to be available to beneficiaries as may be prescribed.
also subject to the approval of the Registrar of Medical Schemes and may not be amended without his sanction.

(3) The choices of a member of a medical scheme are to leave or to continue as a member under the rules made in accordance with the Act and as approved and registered by the Registrar. There is no scope for the negotiation of benefits on an individual basis. Members can, in terms of the rules of some schemes apply for so-called ex gratia benefits but the decision as to whether or not such benefits are granted or not lies with the trustees of the scheme.

(4) Generally speaking anyone who subscribes to a particular benefit option is entitled to exactly the same benefits as other subscribers. The Medical Schemes Act actively discourages the practice of risk rating individuals according to their health profiles and other individual risk related characteristics such as gender and age. The notion that these rules embody the terms of the contractual arrangement between the member and the scheme does not sit comfortably in the law of contract. One could almost see an argument here for the concept of an

(p) No limitation shall apply to the reimbursement of any relevant health service obtained by a member from a public hospital where this service complies with the general scope and level as contemplated in paragraph (o) and may not be different from the entitlement in terms of a service available to a public hospital patient.

(q) The payment of any benefits according to-
(i) a scale, tariff or recommended guide; or
(ii) specific directives prescribed in the rules of the medical scheme.

(r) The dependants of a member are entitled to participate in the same benefit option as the member.

(s) The continuation, subject to such conditions as may be prescribed, of the membership of a member, who retires from the service of his or her employer or whose employment is terminated by his or her employer on account of age, ill-health or other disability and his or her dependants.

(t) For continued membership of a member's dependants, subject to such conditions as may be prescribed, after the death of that member, until such dependant becomes a member of, or is admitted as a dependant of a member of another medical scheme.

(u) If the members of a medical scheme who are members of that medical scheme by virtue of their employment by a particular employer terminate their membership of the said medical scheme with the object of obtaining membership of another medical scheme or of establishing a new medical scheme, such other or new medical scheme shall admit to membership, without a waiting period or the imposition of new restrictions on account of the state of his or her health or the health of any of his or her dependants, any member or a dependant of such first mentioned medical scheme who-
(i) is a person or persons contemplated in paragraph (s); or
(ii) is a person or persons contemplated in paragraph (t).

(2) A medical scheme shall not cancel or suspend a member's membership or that of any of his or her dependants, except on the grounds of:
(a) failure to pay, within the time allowed in the medical scheme's rules, the membership fees required in such rules;
(b) failure to repay any debt due to the medical scheme;
(c) submission of fraudulent claims;
(d) committing any fraudulent act; or
(e) the non-disclosure of material information.

(3) A medical scheme shall not provide in its rules-
(a) for the exclusion of any applicant or a dependant of an applicant, subject to the conditions as may be prescribed, from membership except for a restricted membership scheme as provided for in this Act;
(b) for the exclusion of any applicant or a dependant of an applicant who would otherwise be eligible for membership to a restricted membership scheme; and
(c) for the imposition of waiting periods other than as provided for in section 29 (A).
administrative contract since the only variable subject to negotiation is whether or not a person wishes to become a member or resigns from membership. Membership of a medical scheme is presently voluntary. However social health insurance legislation in the not too distant future may render it mandatory to belong either to a private medical scheme or a public fund that serves essentially the same purpose.

(5) The Act requires at least 50% of the trustees to be elected from amongst scheme members. This means that the remaining 50% can be appointed by someone else. Power over the scheme is thus not necessarily exclusively in the hands of its members.

(6) Membership of closed or restricted membership schemes is often a condition of employment. With the current high levels of unemployment one could argue that membership of such schemes for employees of the relevant employer is thus mandatory. This is a further erosion of the contractual nature of the relationship between scheme and member.

(7) The duties of the trustees are set out in section 57 of the Act and the Council for Medical Schemes may, in terms of section 46, by notice in writing, remove from office a member of the board of trustees of a medical scheme if it has sufficient reason to believe that the person concerned is not a fit and proper person to hold the office concerned. Directors of companies are generally removed by way of a resolution of the relevant company in terms of section 22 of the Companies Act.282

(8) Provisions very similar to the principles of administrative law are imposed on trustees of medical schemes. In terms of section 57(6) of the Act the board of trustees shall-

(a) take all reasonable steps to ensure that the interests of beneficiaries in terms of the rules of the medical scheme and the provisions of this Act are protected at all times;

282 Companies Act No 61 of 1973
(b) act with due care, diligence, skill and good faith;
(c) take all reasonable steps to avoid conflicts of interest; and
(c) act with impartiality in respect of all beneficiaries.

It is submitted that in view of the foregoing it may be difficult to argue that a decision of a board of trustees is not subject to administrative review, especially where the complaint relates to a failure to act in good faith or with impartiality in respect of a beneficiary. When one considers the definition of ‘administrative action’ in the Promotion of Administrative Justice Act, it is submitted that in certain circumstances there may well be scope for argument that the business of a medical scheme as defined in the Medical Schemes Act is a public function. Medical schemes in South Africa are not for profit entities that exist solely for the benefit of their members. Procedural fairness, equality and reasonableness are extremely important factors in an environment in which the continued existence of a medical scheme is heavily dependent upon its credibility with its members. Access to health care services is a constitutional right that is very much dependent on the availability of funding. If a medical scheme unreasonably withholds funding for a health care intervention that is within the scope of the benefits provided by the scheme, it is unlikely, however that administrative review will be the weapon of choice for the member since the Act itself provides for a system for dealing with complaints and disputes which allows for appeals to the Council for Medical Schemes and an Appeal Board established under the Act.

The meaning of the expression “public function” will largely determine whether or not the activities of a private entity fall within the definition of “administrative action” in terms of the PAJA. It is submitted, however, that

(1) where the individual affected by the activity concerned is one out of a group of persons,
(2) the group has been selected or created by some agency external to itself, the individual in question did not actively or directly choose to be a part of that particular group and may not even be aware of the extent or nature of the group in question (in other words membership of the group was a result of external circumstances, default or the dictates of law),
(3) the activity concerned was not directed specifically at that particular individual but rather more generally at the group of which he forms a part, and
(4) the circumstances and parameters of the activity in question are defined, mandated or dictated by legislation.

Such factors would present a strong argument that the activity in question is a public function and where the rights are directly affected thereby (i.e. the definition of ‘administrative action’ in the PAJA is satisfied) this activity would also constitute administrative action.

3.21 Summary and Conclusions

Administrative law clearly has an important role to play in the delivery of health services by the public sector in particular. The delivery of health services is in fact more likely to take place in terms of a relationship between provider and patient that is governed by administrative law than one governed by the law of contract. This is due to a number of reasons not least of which is that the essentiala of what would ordinarily have been a contractual relationship are usually specified in legislation or regulations. The transaction within the public sector has little or no commercial value given that many patients are not required to pay for health care services as they are indigent. Those that do earn an income are charged for services on the basis of their income as opposed to the true cost of rendering those services and there is no profit motive involved. This position is changing to some degree within the public health sector with some of the larger hospitals trying to attract medical scheme patients to differentiated amenities in order to obtain a greater income for the establishment concerned. However, revenue retention by public health establishments is still a problematic area and the motive behind revenue retention is in any event not a profit one.

The principles of administrative law are in many ways better suited to regulate a relationship between patients and providers of health care services because of the emphasis on procedural fairness and the growing view that health services are a public good. If access to health care services should be based on criteria other than relative wealth or income and that the right to health should be enjoyed by everyone
irrespective of their socio-economic status then the provision of health care services starts to look much less of a commercial transaction as contemplated by the law of contract and much more of a resource allocation and distribution process the procedural aspects of which are governed by administrative law. The problem with the law of contract, as will be explained in a subsequent chapter, is that it is not only still very commercially oriented, an orientation which does not sit comfortably with the concept of health care services as a public good, but it is also in South Africa at least, rooted in the Victorian era where multinational corporations and similar legal entities did not exist and power rested very much in the hands of governments. The law of contract in South Africa has not yet absorbed the realities of the imbalances of power created by current global markets and organisations whose wealth exceeds the Gross Domestic Product of many countries.

Administrative law and its preoccupation with fairness is uniquely positioned to be of great assistance and benefit to both patients and providers of health care services in terms of regulating their relationships. It is therefore unfortunate that it is unlikely that South African courts will in the near future be prepared to construe the delivery of health care services as a transaction that should be governed by administrative law rather than the law of contract. There is too strong a predilection to take into account the needs of private sector health service providers from a commercial perspective as will be demonstrated in the discussion of the relevant cases in the chapter of this thesis that deals with the law of contract. Perhaps as South Africa moves towards a social health insurance system, more and more of health service delivery transactions, even in the private sector, will come to be governed by legislation to the point where administrative law will be able to play a meaningful role in the delivery of health services in both public and private sectors.
Chapter 4

Law of Contract: Health Service Delivery

4.1 Introduction

This chapter, together with chapters five and six, deals with the subject of the law of contract as it relates to health service delivery. The fundamental legal concepts relating to health service delivery in the law of contract are dealt with in this chapter four while chapter five deals with the case law involving contracts for health service delivery in the public sector and chapter six deals with the case law involving such contracts in the private sector. The material was too voluminous to include it all in a single chapter and in any even it was felt that it might be useful to structure the case law in this way so that the cases involving the two different sectors are grouped together for ease of reference and comparison.

The law of contract as it relates to the delivery of health care services is not very well informed in South Africa due largely to the fact that, of the few cases that have been decided with regard to health care services, most of the later ones have been decided on the basis of the law of delict even where the claim was couched in terms of the law of contract and only in the alternative, in terms of the law of delict. The public sector

is capable of entering into contractual relationships for the delivery of health care services, as evidenced by some of the cases discussed in this chapter, but whether or not it in fact does so as a matter of course is far from clear. *Administrator Natal v Edouard*¹, discussed below, a relatively recent case involving a contractual claim for health services against the state, was decided on the basis of the law of contract because it was not open to the plaintiffs to claim in delict rather than because the law of contract was the preferred basis of the claim. Furthermore, the contract was for a sterilisation – an elective procedure which centres around a highly specific result or outcome – and is therefore in many ways distinguishable from most other contracts for the delivery of health care services in terms of which a 'cure' or a particular outcome is seldom guaranteed. Some of the reasons for the lack of clarity as to whether health care services are delivered by public sector providers in terms of a contract as opposed to some other basis are:

- the fact that payment of fees is often required in terms of regulations which prescribe the terms and conditions of payment;
- that the state provides health services to the indigent from whom no payment is required;
- that there is a constitutional obligation upon the state to ensure the progressive realisation of the right of access to health care services that is not shared by private sector providers; and
- that the intention of a body such as the state to contract is often very difficult to establish in the absence of hard evidence to this effect.

The private sector, by contrast generally delivers health care services on a contractual basis as evidenced by the standard documentation that is used by medical practitioners and other health professionals and private hospitals. However even in the private sector, issues can become complicated by the fact that:

- many patients are funded by medical schemes which themselves may have entered into contracts with providers for the delivery of health care services to scheme members;

---

¹ *Administrator Natal v Edouard* 1990 (3) SA 581 (A) discussed below
- the fees charged by large providers such as private hospitals are usually negotiated between medical schemes and such hospitals as opposed to the hospitals and their individual patients;
- the patient often does not have much of a say in which private hospital he is treated if he desires to have the services of a particular medical specialist since the specialists tend to restrict their practices to one or two private hospitals;
- the medicines prescribed for patients by doctors are usually priced in terms of industry based standards such as Maximum Medical Aid Price (MMAP) which is the maximum price that medical schemes are generally prepared to pay for a particular medicine or the 'Blue Book Price' which is the maximum price that retail pharmacists are prepared to pay for medicines; and
- the patient generally has no say in the price or the nature of the medicines that are prescribed for him or her.

From the point of view of the patient in the private sector, the market for health services is anything but free. It is dominated in the hospital sector by three large hospital groups, it is dominated in the medical schemes sector by an industry association called the Board of Healthcare Funders, as well as a few large scheme administrators, and more and more medical practitioners are joining so-called independent practitioners associations which are collectives designed to even the balance of power between individual medical practitioners and their suppliers and also between medical practitioners and medical schemes. Late in 2003 and at the beginning of 2004, the Competition Commissioner conducted an investigation and found the South African Medical Association, the Hospital Association and the Board of Healthcare Funders guilty of restrictive horizontal practices. At the time of writing the former two have paid settlement orders whilst the latter wanted to contest the matter in the Competition Tribunal.

Historically, the law of contract developed in the context of commerce and trade. In such an environment, competition for goods and resources is the norm. Parties can capitalise on superior knowledge, inside information, expertise and skill and use these attributes to gain a competitive advantage over others with whom they contract and compete. Suppliers and their customers have competing interests. The former wishes
to sell their services and products for the highest possible prices whilst the latter wishes to purchase them at the lowest possible prices. In the course of the bargaining process, all other things being equal, they tend to meet somewhere in the middle. In the commercial environment, one party is generally not obliged to place the interests of the other party before its own. Although there are contracts in which the parties stand in fiduciary relationships to one another, such as contracts of insurance, these are the exception rather than the norm. All contracts in South Africa must be in good faith but this does not mean that the contractants always stand in a fiduciary relationship towards one another. The law of contract protects contracting parties against clauses which are contrary to public policy but it does not expect a party to give away any advantages he may have in terms of superior or more comprehensive knowledge about the circumstances or context in which the contract will operate. Business people are allowed to have trade secrets and a competitive edge. They are permitted to protect and claim exclusive rights to relevant trade and other knowledge especially to the exclusion of those with whom they contract and their competitors.

These broad principles, it is submitted, do not sit well in the health care context for a number of different reasons not least of which is that the market for health care services is widely recognised as economically abnormal in terms of the manner in which the laws of supply and demand operate. The health care provider is obliged, in

---

2 Christie RH The Law of Contract 4th ed observes at p 321 that in contracts of sale there is a duty on the seller to disclose latent defects of which he is aware, the extent of the duty having been settled by the Appellate Division in Von der Merwe v Meades 1991(2) SA 1 (A) but what little authority there is indicates that a buyer is entitled to remain silent when he, not the seller is aware of facts that substantially increase the value of the merc. After referring to the cases of Von Niekerk and Von der Wathutsen v Wega and Morris 1937 SWA 99 where a seller who knew that water on the farm was unwholesome but did not inform the buyers that the tests they carried out were insufficient to reveal its unwholesome nature was held liable and Josephi v Parker 1906 EDC 138 where a buyer of a farm knew there were diamonds on it was held entitled to remain silent, Christie states: “The reason for thus distinguishing between buyers and sellers may perhaps be that the seller’s silence in Von Niekerk caused the buyers to suffer a loss whereas the buyer’s silence in Josephi merely deprived the seller of the opportunity of making a fortuitous profit.”

3 Clement D Beyond Supply and Demand: The reasons for increased health care costs go beyond simply supply and demand and solutions are tougher than they seem’ Fedgazette May 2002 notes that even the Economist magazine, a free market advocate if ever there was one, conceded that “there remain some genuine problems that limit the ability of unfettered markets to deal well with health care.” These problems, he says, stem from market imperfections or failures that result in a less than socially optimal allocation of resources. He noted that the problems fall into several categories: those inherent to insurance, those resulting from imperfect information, those due to too few players buying or selling health care services and those caused by unequal access to healthcare. It has been observed that: “Health care is replete with widespread, systematic market failure (Plain R, Professor of economics at the University of Alberta quoted by McMaster G in the article referred to below) and that: “The crucial distinction between health care and other markets is that the consumer is not adequately informed and must rely on professionals to diagnose problems and advise treatment, all the while acting ethically and with the patient’s best interests at heart.” McMaster G ‘Critics Warn of Health Care Recommendations’ ExpressNews January 9 2002. (http://www.expressnews.ualberta.ca)”
terms of the standards of disclosure for informed consent, to disclose the information
that the reasonable patient would require as opposed to what he or she thinks the
patient should know. This allows very limited scope for the existence of trade secrets
and other competitive information, as would usually be the case between two
contracting parties in the commercial context. Ethically and legally, the healthcare
provider is not permitted to exploit superior knowledge for its own advantage at the
patient’s expense. The reason why a patient consults a health care provider in the first
place is to gain access to the expertise of the latter in order to benefit therefrom.
Secondly in relation to competing health professionals there are limits imposed by
their ethical and professional rules as regards competitive behaviour4. The position is
somewhat different in the case of private hospitals and similar institutions. They do
tend to compete against each other both in terms of the ‘hotel’ services they provide
and in terms of the technology they use or make available to the medical specialists
operating within their facilities. However, they are still subject to the same standards
for informed consent as are medical practitioners and other health professionals. In
the private sector, the professional health services rendered by hospitals centre almost
exclusively around nursing care by nurse employees. In the public sector most if not

493
all health professionals are usually employees\textsuperscript{5}. However, the public sector is not nearly as competitive as the private sector as the former does not have the same profit motives as the latter and there are many other significant drivers for the delivery of health care in the public sector not least of which is the state’s constitutional obligation to ensure access to health services – particularly for the indigent. Although the Supreme Court of Appeal does seem to have allowed a private hospital to exploit its position of power relative to that of the patient in the \textit{Afrox} case\textsuperscript{6} discussed elsewhere in this chapter, it will be argued, however, that this decision was constitutionally, and for other reasons, incorrect. Patients are not ordinary consumers. They cannot be treated in the same manner, legally speaking, as other consumers. Health professionals may not use secret remedies\textsuperscript{7}. Treatment methods used by health professionals must have some level of general acceptance and recognition within their profession if they are to successfully defend claims of professional negligence. Furthermore in the health care context, innovation is a highly complex topic that raises a number of problems for ordinary health professionals and medical researchers alike. In other sectors, innovative products, methods of doing business and services often give a supplier a competitive edge. In many cases, secrecy is a critical factor since not every innovation can be the subject of legally recognised intellectual property rights. A health professional who is too innovative could fall foul of a number of legal, ethical and professional rules\textsuperscript{8}. Medicines have to be registered before they may be sold in South Africa. They have to be tested in clinical trials that follow accepted and recognised scientific and ethical methodologies before they can be registered. There is provision in the National Health Bill, currently awaiting signature by the President, for the regulation of health technology and equipment and

\item See the Ethical Rules made in terms of section 49(2) of the Health Professions Act which state in Rule 25 that disciplinary steps can be taken against a professional for making use in the conduct of his or her practice of (a) any form of treatment, apparatus or technical process which is secret or is claimed to be secret (b) any apparatus which proves upon investigation to be incapable of fulfilling the claims made in regard to it; and Rule (33) “Subject to the provisions of section 32 of the Act –
(a) participating in the manufacture for commercial purposes, or the sale, advertising or promotion of any medicine as defined in the Medicines and Related Substances Control Act, 1965 (Act No. 101 of 1965), or any other activity which amounts to trading in medicines;
(b) engaging in or advocating the preferential use or prescription of any medicine, if any valuable consideration is derived from such preferential use or prescription: Provided that the provisions of this subparagraph shall not prohibit a practitioner from owning shares in a listed public company manufacturing or marketing medicines, or, subject to the provisions of the Pharmacy Act, 1974, from being the owner or part-owner of a pharmacy, or, whilst employed by a pharmaceutical concern in any particular capacity, from performing such duties as are normally in accordance with such employment.”
(The rules are available on the Council’s website at \url{www.hncsa.co.za}) See also the Health Professions Council’s Policy Document on Undesirable Business Practices.
\item See footnote 7 supra
\end{footnotes}
there is also provision in the Medicines and Related Substances Control Act\(^9\) for the regulation of medical devices. A complete regulatory system for health technology is likely to be developed consistently with the implementation of the certificate of need provisions of the National Health Act\(^10\). Health professionals can patent medical devices of their own invention and use them on or in their patients but the regulatory authorities are taking an increasingly proactive stance against perverse incentives and, for example an orthopaedic surgeon who sells to colleagues an artificial hip of his own devising for use in their patients may run the risk of being called to account, if not legally then in terms of the professional and ethical rules\(^11\).

### 4.2 Fundamental Concepts

It is necessary to discuss in more detail certain concepts that impact directly on the law of contract as it relates to health care services. These concepts are cross cutting and have relevance in other areas of law such as the law of delict, constitutional law and administrative law as well as the law of contract. They illustrate the importance of a synergistic as well as an analytical approach to law and the importance of underlying commonalities that promote and create consistency and cogency within the legal system as a whole.

#### 4.2.1 Public Interest

The term ‘public interest’ takes on a new meaning for the state in the light of the obligation imposed upon the state by section 7 (2) of the Constitution which requires that the State must “respect, protect, promote and fulfil the rights in the Bill of Rights”. It is submitted that this provision brings within the scope of the phrase ‘public interest’ the Bill of Rights and its application in all of its diversity and complexity. In *Ex Parte North Central and South Central Metropolitan Substructure...*
Councils of the Durban Metropolitan Area and Another\textsuperscript{12} Moloto J canvassed the meaning of the phrase ‘public interest’ in some depths\textsuperscript{13} observing that “this is a very elusive concept which is used to mean many differing (and sometimes conflicting) things but is rarely the subject of any attempt at clear definition.” He said that in arriving at what is in the public interest, the courts compare the deprivation of some private convenience with the benefit that is likely to result therefrom for the general public or part thereof. It is submitted that the public interest is a concept that straddles the public/private law boundary\textsuperscript{14} as it is a feature of constitutional, administrative and

\textsuperscript{12} Ex parte North Central and South Central Metropolitan Substructure Councils 1998 (1) SA 78 (LCC)

\textsuperscript{13} The dicta of Moloto J in Ex Parte North Central (fn 12 supra) are quoted here in full as they canvass some of the jurisprudence on the subject as at that date. “In examining whether the settlement agreement complies with the requirements of s (6) of s 34, it is necessary to investigate the concept ‘public interest’. This is a very elusive concept which is used to mean many differing (and sometimes conflicting) things but is rarely the subject of any attempt at clear definition. It is assumed to be generally understood and is not defined in the Act. No argument was placed before the Court on the concept of public interest because the matter was settled. However, the Court conducted independent research into the meaning of the concept. A number of authorities, amongst which a few are mentioned hereunder: The New Shorter Oxford English Dictionary vol 2 (1993) defines ‘public interest’ simply as ‘the common welfare’, which phrase is itself just as wide and situational as the phrase ‘public interest’. The phrase is used in a number of cases in South African law without being defined. What is clear, however, is that in arriving at what is in the public interest, the Courts compare the deprivation of some private convenience with the benefit that is likely to result therefrom for the general public or part thereof. In this regard the Court said the following in the Clinical Centre case: ‘Looking at the subsection broadly, the intention seems to be that the Court shall consider the whole matter objectively, deciding in that way whether the requirements of the premises can be said to be “reasonably necessary in the interest of the public”, and then considering whether the private hardship which will be caused to the lessee is so severe as to outweigh the considerations of public interest.’ In a more recent case involving a review of the refusal by the liquor board to grant a liquor licence in a township of some 1939 inhabitants served by no other licensed bottle store, on the grounds, inter alia, that there were three bottle stores in the town centre 2–3 kilometres away, Nicholson J said the following about the meaning of ‘public interest’:

‘(e) It does not mean that the public whose interest is to be served is necessarily to be widely representative of the general public.

(b) It means that the public would be better served if the applicant were granted the licence than that the existing state of affairs was to continue.

(c) It is not the national interest that is intended but that of the inhabitants in the areas for which the licence is sought or visitors to that area.’

The learned author Du Plessis also refers to a weighing of interests in determining the public interest, and adds that there is an objective as well as a subjective side to the test. She then continues: ‘Die belange van die een individu word teenoor dié van ‘n ander afgeweg om te bepaal of enige regte aangetas is [subjektiewe sy]. Hiermee word oogmerk nie wat egter nie volstaan nie, want daar moet ook ’n objektiewe oordeel geval word om te bepaal of die skoning van die betrokke belange met die gemeenskap se oordeel strook of nie.’

The learned author then proceeds to state that it is not always possible to define the concept. She refers to Fliethman’s definition of ‘the public interest’ which is as follows: ‘a general commendatory concept used in selecting and justifying public policy. It has no general or descriptive meaning applicable to all policy decisions, but can be determined for particular cases.’ She then mentions some special aspects which she uses to define the concept. These aspects are (i) State security, (ii) economic interests; (iii) individual interests as collective interests; (iv) legal interests; (v) administrative interests and (vi) strategic interests. After discussing each of these aspects the learned author offers the following definition of the ‘public interest’: ‘Die versameling vir ’n aantal histories uitgekristalliseerde, beskermingswaardige Staatsveiligheids-, ekonomiese, strategiese, administratiewe, sosiale en regelrelanse wat op ’n gegewe moment subjektief en objektief bepaalbaar is en in ’n gemeenskap die balans tussen die botsende belange van individue onderling en individue in verhouding tot die Staat handhaaf’. .

While I was satisfied that the settlement in this matter was, in the particular circumstances, in the public interest, this judgment is not intended to be conclusive as to the meaning to be ascribed to the term.”

\textsuperscript{14} For examples in the law of contract see Afoxa Healthcare Bpk v Strydom (fn 6 supra). It was held that the elementary and basic general principle was that it was in the public interest that contracts that entered into freely and seriously by parties having the necessary capacity should be enforced. The respondent’s contention that a contractual term in terms of which a hospital could exclude liability for the negligent conduct of its nursing staff was not in the public interest could accordingly not be supported, Shoprite Checkers (Pty) Ltd v Bumpers Schwaarmann CC and Others 2002 (6) SA 202 (C): “An examination of the content of the consensus prompts a consideration of the concept of bona fides which underpins contractual relationships. The concept of bona fides has proved to be somewhat elusive with regard to its definition and scope. See in particular Lubbe GF ‘Bona Fides, Billikheid en die Openbare Belang in die Suid Afrikaanse Kontraktele Reëg’ 1990 Stellenbosch Law Review 7. Whatever the uncertainty, the principle of good faith must require that the parties act honestly in their commercial dealings. Where one party promotes its own interests at the expense of another in an unreasonable manner as to destroy the very basis of consensus between the two parties, the principle of good faith can
contract law as well as the law of delict. The public interest is a flexible concept that changes with changing conditions and circumstances. The question as to who is the final arbiter of what is in the public interest, e.g. the executive or the judiciary, is a matter of statutory interpretation and the application of administrative and constitutional law principles to the particular circumstances under discussion. In the broad sense, health legislation is public interest legislation. The many different statutes administered by the national department of health regulate:

- the manner in which various health professionals are trained and conduct their professions in order to protect the public interest;\(^\text{15}\)
- the manner in which foodstuffs, cosmetics and disinfectants are stored sold, handled and processed in order to protect the public interest;\(^\text{16}\)
- the importation, sale, storage, composition, efficacy and marketing of medicines in order to protect the public interest;\(^\text{17}\)
- the location and establishment of hospitals, clinics and other kinds of health establishment, the manner of their construction and their staffing requirements in order to protect the public interest;\(^\text{18}\)

be employed to trump the public interest inherent in the principle of the enforcement of a contract;" Oos-Transvalse Kooperasie Bpk v Heyns 1986 (4) SA 1059 (O): An agreement not to report a crime to the appropriate authorities in consideration for compensation is contrary to the public interest, irrespective of whether or not it is an offence to conclude such an agreement; Sibax Engineering Services (Pty) Ltd v Van Wyk and Another 1991 (2) SA 482 (T): In general it is contrary to public interest to enforce unreasonable restriction on person's freedom to trade; Bason v Childwan and Others 1993 (3) SA 742 (A): “The public interest must be the touchstone for deciding whether the Courts will enforce the restraint clause or not. ... Where public interest is the touchstone, and where public interest may change from time to time, there can be no numeros clausus of the circumstances in which a Court would consider a restraint on the freedom to trade as being unreasonable.”; See also Magna Alloys and Research (SA) (Pty) Ltd v Ellis 1984 (4) SA 874 (A); Joffrey v Catiearll, Edwards & Gouwre (Pty) Ltd 1977 (4) SA 494 (N); National Chemecareh (SA) (Pty) Ltd v Borrowson and Another 1979 (3) SA 1092 (T); Barnard v Barnard 2000 (3) SA 741 (C); Kleyenstuber v Bress and Another 2001 (3) SA 672 (W); Coin Saberheidsgroep (Edms) Bpk v Kruger en 'nander 1993 (3) SA 564 (T). For examples in the law of delict see Bason v Robinson & Co (Pty) Ltd and Another 1967 (1) SA 420 (A): The immunity accorded to the use of defamatory words on so-called privileged occasions, rests on a foundation of public interest; Neethling v Du Prest and Others; Neethling v The Weekly Mail and Others 1994 (1) SA 708 (A); ...reference may usefully be made at this stage to the observations to be found (albeit in a different context) in regard to the concept of 'the public interest' in the recent judgment of this Court in Financial Mail (Pty) Ltd and Others v Sage Holdings Ltd and Another 1993 (2) SA 451 (A). In delivering the majority judgment Corbett CJ said (at 464C-D): '(1) There is a wide difference between what is interesting to the public and what it is in the public interest to make known...The media have a private interest of their own in publishing what appeals to the public and may increase their circulation or the numbers of their viewers or listeners, and they are peculiarly vulnerable to the error of confusing the public interest with their own interest. ...'; See also Kemp and Another v Republican Press (Pty) Ltd 1994 (4) SA 261 (E); Financial Mail (Pty) Ltd and Others v Sage Holdings Ltd and Another 1992 (2) SA 451 (A). For examples in administrative law see Maharaj v Chairman, Liquor Board 1997 (1) SA 273 (N); Bulk Deals Sex CC and Another v Chairperson, Western Cape Liquor Board, and Others 2002 (2) CA 99 (C); Rettert Pharmaceuticals (Pty) Ltd v Registrar Of Medicines and Another 1998 (4) SA 660 (T): In all these circumstances any alleged harm the applicant may suffer as a result of the enforcement of the provisions of the Act is outweighed by the public interest and the interest of the respondents; Financial Services Board and Another v De Wet NO and Others 2002 (3) SA 525 (C): "I have little doubt that it was thought by the Legislature to be in the public interest that such supervisory powers and duties should be conferred on the Registrar. Many members of the public would belong at some stage or another to pension funds and the security of their pensions would be of vital importance to most of them. It is in the public interest that the administration of pension funds should ensure that members are fairly dealt with and that the receipt of their pensions is not placed in jeopardy." Health Professions Act No 56 of 1974, the Allied Health Professions Act No 63 of 1982, the Nursing Act No 50 of 1978, the Dental Technicians Act No 19 of 1979, the Pharmacy Act No 53 of 1974 The Foodstuffs, Cosmetics and Disinfectants Act No 54 of 1972 The Medicines and Related Substances Control Act fn 9 supra
the places in which tobacco products may be used in order to protect the public interest;\(^{19}\)
- the handling, storage and disposal of hazardous substances such as radioactive and biological materials in a manner that seeks to ensure the health and wellbeing of the general public;\(^{20}\)
- the payment of compensation for occupational diseases in mines and works\(^ {21}\).

It is submitted that acts performed in terms of this legislation must generally be done in a manner that best serves the public interest since this is the basis for the legislation itself.

Actions that are contrary to the interests of the community are contrary to public policy and an agreement is contrary to public policy if it is opposed to the interests of the state, or of justice, or of the public\(^ {22}\). Agreements which are clearly inimical to the interests of the community, whether they are contrary to law or morality or run counter to social or economic expedience, will accordingly on the grounds of public policy not be enforced\(^ {23}\). Christie\(^ {24}\) notes that since the Constitution came into

22. See generally Christie fn 2 supra p 398-417
23. See Magna Alloys and Research (SA) (Pty) Ltd v Ellis 1984 (4) SA 874; Sasfin v Deukes 1989 (1) SA 1 (A); Aquilus 1941 SALJ p 346 states: "A contract against public policy is one stipulating a performance which is not per se illegal or immoral but which the Courts, on grounds of expediency, will not enforce, because performance will detrimentally affect the interests of the community." Kerr AJ The Principles of the Law of Contract p 175. Lubbe QF and Murray C Forties & Hathaway Contract: Cases Materials & Commentary; Van der Merwe S, Van Heystens LF, Reinecke MFB, Lubbe QF and Lotz JG, Contract: General Principles, state at p 139 that: "Often agreements will be said to be illegal because they are contrary to good morals (contra bonos mores in the strict sense) or public interest or policy...Such an expression does not introduce an additional criterion which takes the notion of illegality outside the realm of the law; the boni mores, public interest and public policy are only relevant in this context in so far as they provide the basis upon which a decision on the question of illegality is made in law. The law does not enforce morals simply because they are moral, but it does to some extent absorb moral content into legal doctrine and even specific rules...The distinction between boni mores, public interest and public policy is not at all clear. In practice the expression boni mores as it is employed with regard to illegality is mostly reserved for agreements which relate to the everyday morals or standards of conduct set by society, such as the norms governing sexual morals and honest and proper conduct. On the other hand, agreements which are to the detriment of the state, which obstruct or defeat the administration of justice, or which restrict the freedom to act or to be economically active, are usually said to be contrary to public interest. In the final instance that which is in the public interest would include that which is in accordance with good morals, although an agreement which is not immoral as such may for reasons of economic or other expedience nevertheless be against the public interest. An appraisal of the public interest is not limited to the wider interest of society in general but may include the individual interests of the parties to a particular agreement. So, for instance, a contractual term which restricts freedom to trade may seem acceptable when only the general interest of society is considered but may be so unreasonable when the relative interests of the contractants are taken into account that it is against the public interest after all. Determining the public interest is particularly difficult in a heterogeneous society; should one have regard (only) to the interests and customs of a particular section of that society or (only) to the interests of the society as a whole? The guiding principle should be that sectional title interests must be evaluated within the context of the wider interests of the society as a whole: sections of a society have an interest in upholding the general interest of the society whilst society itself has an interest in maintaining sectional interests. In a given case it may therefore be in the public interest to place the main emphasis on specific section interests and customs before the interests and customs of the wider community. By the same token the public interest will often be determined by individual interests."
operation it has affected the enforceability of contracts. He states that the Bill of Rights defines the constitutional rights and that a contract that infringes any of these rights will generally be unenforceable. Christie uses the word ‘generally’ because the Constitution does not simply order the courts to condemn outright any act such as a contract which infringes a provision of the Bill of Rights. Instead it requires the courts to proceed with more care by first investigating whether the constitutional right is applicable to the situation, taking into account the nature of the right and the nature of any duty imposed by the right. Christie states that by accepting the Constitution as a reliable statement of public policy, a court would have no difficulty in declaring a contract which infringed a provision of the Bill of Rights to be contrary to public policy and therefore unenforceable26.

4.2.2 Bona Fides or Good Faith

Good faith is a central principle of the South African law of contract26. In Eerste Nasionale Bank van Suidelike Afrika Bpk v Saayman NO27, Olivier JA held in a

---

24 Christie fn 2 supra p 402-403
25 Christie fn 2 supra points out at p 411-412 that the law would be hopelessly self-contradictory if it treated a contract to commit an unlawful act as enforceable, as it would be approbating and reproving the same act, blowing hot and cold. He notes that contracts while not purporting to bind the parties to the commission of an unlawful act, might encourage them to do so, may also fall foul of the law on grounds of public policy but here it is very necessary to maintain a sense of balance. An unadorned rule that a contract tends to encourage the commission of an unlawful act is void, or any rule expressed in similar general terms, would lead to endless trouble because the tendency could not be discerned in many contracts that have been found in practice to be not only harmless but actively beneficial in the business world. The courts have therefore tended to look at a number of types of contract in which the tendency to encourage the commission of an unlawful act can be traced and when the tendency rises to a dangerous level say “Thus far and no further”. He points out that exemption clauses raise the same question of public policy as insurance contracts: knowledge of the protection given by an exemption clause may encourage the unlawful behaviour from liability for which it gives protection. A limit has therefore had to be place on the extent of such protection. At p 210-211 he explores the permissible limits of exemption clauses with reference to the dicta of the courts in Morrison v Anglo Deep Gold Mines Ltd 1905 TS 775, Wells v Alumenite Co 1927 AD 69; Goodman Brothers (Pty) Ltd v Rent House Group Ltd 1997 (4) SA 91 (W) and Republic of South Africa v Fibre Spinners & Weavers (Pty) Ltd 1978 (2) SA 794 (A). Christie observes that the basis on which the courts decide what is and is not permissible is public policy (Grootboom 3 1 42; Vast 2 14 16). Inner CJ stated in Morrison supra: “Now it is a general principle that a man contracting without duress, without fraud and understanding what he does, may freely waive any of his rights. There are certain exceptions to that rule and certainly the law will not recognise any arrangement which is contrary to public policy.” Mason J in the same case stated at 784-785: “Now in our law it is a principle that agreements contra bonos mores will not be enforced and that is in reality the same as the English maxim as to contracts against public policy. It is a wide reading and not well-defined principle, and the courts always recognize the difficulties and dangers of the doctrine. For this argument to succeed on the ground of public policy, it must be shown that the arrangement necessarily contravenes or tends to induce contravention of some fundamental principle of justice or of general statutory law, or that it is necessarily to the prejudice of the interests of the public.”

26 See for instance Shoprite Checkers (Pty) Ltd v Bumpers Schwarzwald CC and Others, fn 14 supra, where Davis J observed at p 215-216: “The concept of bona fides has proved to be somewhat elusive with regard to its definition and scope. See in particular Lubbe G ‘Bona Fides, Billikheid en die Openbare Belang in die Suid Afrikaanse Kontrakte Reëg’ 1990 Steilensbosch Law Review. Whatever the uncertainty, the principle of good faith must require that the parties act honestly in their commercial dealings. Where one party promotes its own interests at the expense of another in so unreasonable a manner as to destroy the very basis of consensus between the two parties, the principle of good faith can be employed to trump the public interest inherent in the principle of the enforcement of a contract. This concept of good faith is congruent with the underlying vision of our Constitution (the Constitution of the Republic of South Africa Act 108 of 1996) to the extent that our Constitution seeks to transform our society from its past, it is self-evident that apartheid represented the very opposite of good faith. Concepts which were employed during apartheid lacked any form of integrity. Our Constitution seeks to develop a community where each will have respect for the other and in which
minority judgment for the respondent that *bona fides* was an aspect of the broader principle of public interest. Christie states that there is every reason to hope that when the opportunity arises the Supreme Court of Appeal will apply Olivier JA's reasoning, harnessed to the concept of public policy in the context of the unfair enforcement of a contract. He notes that the foundation has long since been laid by the Appellate Division's recognition that in South African law the concept of good faith is applicable to all contracts and its acceptance of the principle that in deciding whether public policy forbids the enforcement of a contract the circumstances existing at the time enforcement is sought must be taken into account. In *Brisley v Drotsky* Olivier J referred with approval to an article by Hutchison D entitled 'Good faith in the South African Law of Contract' and then went on to lament the fact that the operation of the principle good faith has for a long time not been completely explored and given content and that it will take much time and many judgments before this is achieved. Christie expresses the hope that when this task is finally complete a new framework and thought pattern will exist in the law of contract. Davis J in *Mort No v Henry Shields-Chiat* observed that like the concept of *boni mores* in the South African law of delict, the concept of good faith is shaped by the legal convictions of the community. He noted that while Roman-Dutch law may well supply the conceptual apparatus for South African law, the content with which concepts are filled depends on an examination of the legal convictions of the community - a far more difficult task. He said that this task requires that careful account be taken of the in government as well as in the exercise of power will be of paramount concern. To rely on the strict written words of a contract and to ignore an underlying oral agreement which not only shaped the written agreement but which forms part of the essential consensus would be to enforce the very antithesis of integrity and good faith in contractual arrangements.”

27 Saayman 1997 (4) SA 302 (SCA)
28 See discussion under public policy below.
29 Christie fn 2 supra at p19
30 *Brisley* 2002 (4) SA 1 (SCA)
31 Brownword R, Hird NJ and Howell O, *Good Faith in Contract: Concept and Context* 213 p 230 – 1. The article states: "What emerges quite clearly from recent academic writings, and from some of the leading cases, is that good faith may be regarded as an ethical value or controlling principle, based on community standards of decency and fairness, that underlies and informs the substantive law of contract. It finds expression in various technical rules and doctrines, defines their form, content and field of application and provides them with a moral and theoretical foundation. Good faith thus has a creative, a controlling and a legitimating or explanatory function. It is not, however, the only value or principle that underlies the law of contract nor perhaps, even the most important one. In the words of Lubbe and Murray: ‘‘It does not dominate contract law but operates in conjunction (and competition) with notions of individual autonomy and responsibility, the protection of reasonable reliance in commerce, and views of economic efficiency in determining the contours of contract doctrine. However, it will ensure just results only if Judges are alert to their task of testing existing doctrines and the operation of particular transactions against the constantly changing mix of values and policies of which *bona fides* is an expression.’’ On this view of things, which seems to be correct, the influence of good faith in the law of contract is merely of an indirect nature, in that the concept is usually if not always mediated by some other, more technical doctrinal device. Thus, for example, while good faith does not empower a court directly to supplement the terms of a contract, or to limit their operation, it might in appropriate cases enable the court to achieve these same results indirectly, through the use of devices such as implied terms and the public policy rule.”
32 *Mort* 2001 (1) SA 464 (C) at p 474-475
existence of the constitutional community, based as it is upon principles of freedom, equality and dignity and that the principle of freedom does, to an extent, support the view that the contractual autonomy of the parties should be respected and that failure to recognise such autonomy could cause contractual litigation to mushroom and the expectations of contractual parties to be frustrated. Davis J comments, however that the principles of equality and dignity direct attention in another direction. Parties to a contract must adhere to a minimum threshold of mutual respect in which the unreasonable and one-sided promotion of one's own interest at the expense of the other infringes the principle of good faith to such a degree as to outweigh the public interest in the sanctity of contracts. He says that the task is not to disguise equity or principle but to develop contractual principles in the image of the Constitution and that the constitutional state introduced in 1994 mandates that all law should be congruent with the fundamental values of the Constitution. Consequently, says Davis J, oppressive, unreasonable or unconscionable contracts can fall foul of the values of the Constitution. In accordance with its constitutional mandate the courts of the South African constitutional community can employ the concept of *boni mores* to infuse the law of contract with this concept of *bona fides*\(^\text{33}\). In terms of the law of delict the principle of *bona fides* relates to the state of mind of the person who caused the harm\(^\text{34}\). It is related to the principle of reasonableness\(^\text{35}\). A reasonable person does not act in bad faith.

\(^{33}\) Davis J in *Mort (fn 32 supra)* referred to in this regard to *Janse van Rensburg v Grieser Trust CC* 2000 (1) SA 315 (C) at 325 - 6. Davis J notes at p 475 of the judgment: “It appears that the South African Law Commission, in its report dated April 1998, sought to solve this difficulty through legislation. Howsoever these developments are implemented it is clear that our highest Court has given the green light in the direction of the development of a concept of good faith in our law of contract which would render the body of contract law congruent with the values of our constitutional community. Nevertheless, an important development of our law must be grounded upon the appropriate factual matrix. To trump the principle of the enforceability of a contract, the offending clauses require more than a treatment which seeks ambiguity where none exists. The very content of the contract and the manner in which the parties created their contractual relationship and hence their legitimate expectations viewed within the context of the enforcement of the contractual provisions must be carefully scrutinised. From this inquiry the question of the unreasonable promotion can be evaluated and hence trumping the principle of enforceability can be appropriately considered.”

\(^{34}\) In *Frankel Pollak Pfinderine Inc v Stanton NO* 2000 (1) SA 425 (W), Wunsh J referred to the dicta of Ogilvie-Thompson JA in *Grant and Another v Stonestreet and Others* 1968 (4) SA 1 (A) in which he stated: “In general, the Act insists on the holder’s honesty. The measure of a holder’s good faith is therefore whether he had a certain subjective state of mind when he acquired the instrument. The question is not whether he should have had knowledge of a certain fact but whether he did in fact have such knowledge. The doctrine of constructive knowledge, which attributes knowledge of certain facts to a holder in circumstances where a reasonable man would have made enquiries, does not apply to negotiable instruments. This measure of good faith, it is said, would impair the rapid negotiation of bills and would be detrimental to commerce. Consequently, it is accepted that a holder who has acquired a bill through carelessness, negligence or ignorance cannot by reason only of his state of mind be disqualified as a holder in due course. A holder can be dishonest without having knowledge of specific defects of title. His acquisition might be in bad faith if he merely suspects that something is wrong. He would also be in bad faith should he suspect something untoward about the bill. It has been said: "Notice and knowledge" means not merely express notice, but knowledge, or the means of knowledge to which the party wilfully shuts his eyes - a suspicion in the mind of the party, and the means of knowledge in his power wilfully disregarded." The word "suspicion" is not entirely apt, because a suspicion may exist that is not based on specific facts. The distinction to be made here is between honest ignorance and a dishonest state of mind - a reluctance to ascertain the true facts. If the holder suspects that something is wrong but chooses to remain ignorant of the true state of affairs, he is not in good faith. To determine the holder’s state of mind one has to consider the facts known to him, and
Public entities are obliged to act in good faith\textsuperscript{36} and in some cases the relevant statute goes so far as to confer immunity upon them for acts done in good faith in the exercise of their statutory obligations\textsuperscript{37}.

\textbf{4.2.3 Public Policy (Doni Mores)}

Contracts that are contrary to public policy are generally not enforceable\textsuperscript{38}. In \textit{Friedman v Glickman}\textsuperscript{39}, the facts of which will be more fully canvassed below, the

\begin{quote}
evaluate those apparently suspicious circumstances that call for enquiry. These facts and circumstances help to determine whether the holder did, subjectively, act in good faith.”
\end{quote}

Wunsh J observed: “A person who is a \textit{bona fide} possessor or occupier because he or she believes that he or she is lawfully entitled to possession or occupation does not lose that status because there are not ‘reasonable or probable grounds’ for his or her belief (\textit{Bargie v Sangrow} (Pty) Ltd 1969 (1) SA 401 (N) at 406A - G). As pointed out by Milne JP in that case: ‘That an alleged belief is based on a mistaken view of the law may possibly, in certain circumstances, be a reason for doubting the existence of the belief, but that is, I suggest, another matter; and the absence, otherwise, of reasonable grounds for belief may, indeed, provide cogent evidence that the belief did not exist. \textit{Grant and Another v Stonestreet and Others} 1968 (4) SA 1 (A) at 21H. But the existence or otherwise of an honest belief remains a question of fact.’ A person who is doubtful as to his or her right to possess because of fear of an adverse claim is not a \textit{bona fide} possessor or occupier (\textit{George v Shimwell Bros 1910 TPD 890 at 894; BC v Commissioner of Taxeer 1958 (1) SA 172 (SR) at 179A - E; Grobler NO v Boikutzogo Business Undertaking (Pty) Ltd and Others 1987 (2) SA 547 (G) at 560G - H}). Schoetties says in this regard: ‘Actual knowledge will also be denied to exist when there are facts known to the possessor no reasonable man could continue to consider himself to be entitled to the thing.’ ((1958) 75 SALJ 282 at 291).”

\textsuperscript{35} Wunsh J noted in \textit{Frankel} (fn 34 supra): “If it looks to you that advice given to you could possibly be wrong, your professed belief that you are acting lawfully because it is on the strength thereof will not be \textit{bona fide} if you refrain from questioning it (\textit{S v Waggoner} (Pty) Ltd and Another 1986 (4) SA 1135 (N) at 1146F - G). But the question is one of the accused’s state of mind. In all the examples I have given, where knowledge is essential, there is a common thread. What is required is actual knowledge. Where a person has a real suspicion and deliberately refrains from making inquiries to determine whether it is groundless, where he or she sees red (or perhaps amber) lights flashing but chooses to ignore them, it cannot be said that there is an absence of knowledge of what is suspected or warned against. In the absence of direct evidence, a court has to determine the existence of knowledge as an inference from the established facts and circumstances. If a person’s professed ignorance is so unreasonable that it cannot be accepted that he or she laboured under it, evidence of the ignorance will not be believed in the absence of some acceptable explanation. But this amounts to a finding of a state of mind made when a person willfully precludes himself or herself from acquiring it.”

\textsuperscript{36} Premier, Eastern Cape, and Others v Ceksho and Others 1999 (3) SA 56 (TJ); \textit{Dews And Another v Simon’s Town Municipality} 1991 (4) SA 479 (C). See also the Promotion of Administrative Justice Act No 3 of 2000.

\textsuperscript{37} Thus section 25 of the Medicines and Related Substances Act, fn 9 supra, states: “The council or a committee appointed under section 9 (1), 220 (1) or 24 (1) or any member of the council or of any such committee shall not be liable in respect of anything done in good faith under this Act.” Section 62 of the Medical Schemes Act No 131 of 1998 states that: “The Minister, the Council, a member of the Council or of the Appeal Board, the Registrar, Deputy Registrar or other staff member of the Council shall not be liable in respect of any bona fide exercise of a discretion in the performance of any function under this Act. See also \textit{Inkatha Freedom Party and Another v Truth and Reconciliation Commission and Others} 2000 (3) SA 119 (C); In \textit{Soobramoney v Minister of Health, KwaZulu-Natal} 1998 (1) SA 765 (CC) the court said that “The provincial administration which is responsible for health services in KwaZulu-Natal has to make decisions about the funding that should be made available for health care and how such funds should be spent. These choices involve difficult decisions to be taken at the political level in fixing the health budget, and at the functional level in deciding upon the priorities to be met. A court will be slow to interfere with rational decisions taken in good faith by the political organs and medical authorities whose responsibility it is to deal with such matters.”

\textsuperscript{38} \textit{Administrator, Natal v Edouard} fn 1 supra; \textit{Ryland v Edwina} 1997 (2) SA 690 (C); \textit{Coetzee v Comitis And Others} 2001 (1) SA 1254 (C); \textit{ABSA Bank I/A Bankfin v Louw en Andere} 1997 (3) SA 1083 (C). An agreement whereby a party waives beforehand and in its entirety the protection of the Protection Act 68 of 1969 is contrary to public policy and thus invalid; \textit{Nuclear Fuel Corporation of SA (Pty) Ltd v Orda AG 1996 (4) SA 1190 (A); Miller and Another NNO v Dannecker 2001 (1) SA 928 (C); De Beer v Keyser and Others 2002 (1) SA 827 (SCA); Cittibank NA, South Africa Branch v Paul NO and Another 2003 (4) SA 180 (T); In Maseko v Maseko 1992 (3) SA 190 (W) the court held: “While there is no \textit{fraudem creditorum} without proof of actual prejudice (see \textit{Hockey v Roxam & Smith 1939 SR 107}), it is my view that an agreement designed to mislead creditors is immoral and against public policy even if it has not yet served its purpose (cf \textit{Schuster v Gueither 1933 SR 19}); \textit{De Klerk v Old Mutual Insurance Co Ltd} 1990 (3) SA 34 (R): The fact that the insurer did not have an existing right to limit the plaintiff’s commission by the date of termination of his employment where the latter was terminated before the plaintiff had completed five years’ continuous service, did not render the provisions of that clause plainly improper and unconscionable, or inimical to the interests of the community, and that it was therefore not contrary to public policy; See also \textit{Mufamadi v Dorbyl Finance}
court held that an agreement between a pregnant woman and a doctor that he would advise her whether there was a greater risk than normal that she might have a potentially abnormal or disabled child so that she might make an informed decision on whether or not to terminate the pregnancy is not contra bonos mores but sensible, moral and in accordance with modern medical practice.

The role of public policy and bona fides was canvassed by the court in Eerste Nasionale Bank van Suidelike Afrika Bpk v Saayman NO. The case is of particular relevance to the field of health care services not because it dealt directly with a contract for health care services but because of the question of the contractual capacity of one of the parties and the relevance of bona fides and the public interest to the law of contract. In that case, Mrs Malherbe had been 85 years old, hard of hearing and almost blind when she was asked to sign the documents in question. At the time she had often been confused and disoriented. The court founds that she had clearly been persuaded by her son to sign one utterly prejudicial document after the other in accordance with modem medical practice. The court observed at p 313 of the judgment: "Dr Von Delft het getuig dat, oor die 20 jaar wat by mev Malherbe was, daar 'n verswakking in begripsvermoe, oordeel en insig ingetree het. Na BY mening is dit 'n verswakking in begripsvermoe, oordeel en insig ingetree het. Na BY mening is dit 'n verswakking in begripsvermoe, oordeel en insig ingetree het. Na BY mening is dit 'n verswakking in begripsvermoe, oordeel en insig ingetree het. Na BY mening is dit 'n verswakking in be..."
the contractual capacity to enter into the contract at the time. In his minority judgment Olivier JA stated that he disagreed with the majority of the court that it had been shown that Mrs Malherbe had not had the capacity to contract at the relevant time. He then went on to consider the role of the public interest and bona fides in the law of contract and noted that:

“Die funksie van die bona fide-begrip (ook genoem die goeie trou) was eenvoudig om gemeenskaps opvattings ten aansien van behoorlikheid, redelikheid en billikheid in die kontrakterege te verwesenlik.”

Olivier JA then canvassed some of the history of the application of the *bona fides* concept and stated that the problem with the assertion of the court in McDuff’s case that equitable principles are only of force insofar as they have become authoritatively incorporated and recognised as rules of positive law was that it apparently originates from a static, closed system and so if fairness is not already a rule of positive law then *caedit questio*. Referring to the dictum of Innes J in *Blower v Van Noorden* where he said:

“There come times in the growth of every living system of law when old practice and ancient formulae must be modified in order to keep in touch with the expansion of legal ideas, and to keep pace with the requirements of changing conditions”

---

43 At p 319 of the judgment he noted: “Reeds vroeër in hierdie eeu het hierdie Hof die voortou geneem om die *bona fide*-beginsel te erk en te verwesenlik. *Neugebauer & Co Ltd v Herrmann* 1923 AD 564 is ‘n vroeë voorbeeld. Daar is beelde dat ‘n aanklager nie verplig is om ‘n bod, wat gemaak is deur een van ‘n groep biers wat saamgepan het om nie teem naam te stel nie, te aanvaar nie. Volgens die Engelse reg sou die aanklager die bod moet aanvaar het; volgens die Amerikaanse reg egter nie. *Innes HR verklar op 573: ‘Our law accords, in my opinion, more with the American than with the English view. It is not so much a question of public policy as of the requirements of good faith. The principle is fundamental that *bona fides* is required from both parties to a contract of sale.’ Net in die volgende jaar het hierdie Hof weer van die beginsel gebruik gemaak om ‘n grondslag vir die leerstuk van fiktiewe vervulling van ‘n kontrak te identifiseer en wel in *McDuff & Co Ltd (in Liquidation) v Johannesburg Consolidated Investment Co Ltd* 1924 AD 573. Beide *Innes HR* (op 589) en *Kotze AR* (op 610) beroep hulle op die *bona fide*-beginsel. Die tendens word voortgezet in 1925 in *Weinerlein v Goch Buildings Ltd* 1925 AD 282 waar rekifisie van ‘n *kontrak op die *bona fide*-beginsel gebaseer word. *Wessels AR* verklar op 292: ‘The commentators put it thus: As a general proposition your claim may be supported by a strict interpretation of the law, but it cannot be supported in this particular case against your particular adversary, because to do so would be inequitable and unjust, for it would allow you, under the cloak of the law, to put forward a fraudulent claim . . . It is therefore clear that under the civil law the Courts refused to allow a person to make an unconscionable claim even though his claim might be supported by a strict reading of the law. This inherent equitable jurisdiction of the Roman Courts (and of our Courts) to refuse to allow a particular plaintiff to enforce an unconscionable claim against a particular defendant where under the special circumstances it would be inequitable, dates back to remote antiquity and is embodied in the maxim “summum jus ab aequitate dixit, aequitates jus non est.” Die eerste klankte van ‘n enger aansien tref mans juist in bogenoemde uitspraak aan en wel by *Kotze AR*. Alhoewel dit ‘doctrine of equity’ in ons gemeenskap oner, verklar by op 293: ‘Our common law, based to a great extent on the civil law, contains many an equitable principle; but equity, as distinct from and opposed to the law, does not prevail with us. Equitable principles are only of force insofar as they have become authoritatively incorporated and recognised as rules of positive law.”

44 *Blower* 1909 TS 890 at p 905
Olivier JA noted that it was echoed in the judgment of the court in *Bank of Lisbon and South Africa Ltd v De Ornelas and Another*45. He also referred to the case of *Meskin NO v Anglo-American Corporation of SA Ltd and Another* 46 "where it was held that:

"It is now accepted that all contracts are bona fidei (some are even said to be *uberrima fidei*). This involves good faith (bona fides) as a criterion in interpreting a contract (Wessels (op cit para 1976)) and in evaluating the conduct of the parties both in respect of its performance (Wessels para 1997) and its antecedent negotiation. Where a contract is concluded the law expressly invokes the dictates of good faith, and conduct inconsistent with those dictates may in appropriate circumstances be considered to be fraud; . . . ."

and

"It may, perhaps be questioned whether these criteria do not go further in applying ethical considerations in contrahendo than our authorities recognise. On the other hand there can be no doubt that in contrahendo our law expressly requires bona fides, a concept of variable content in the light of changing mores and circumstances. On the assumption (without deciding) that the ultimate test suggested by Millner correctly reflects the present state of our law, there is a striking resemblance between that test and eg 'die algemene regsgevoel van die gemeenskap' mentioned above in regard to delict generally."

After considering a few other cases47, Olivier J went on to hold that in his opinion it could rightly be said that the **bona fides** concept is a part of the generally applicable

---

45 *Bank of Lisbon* 1988 (3) SA 580 (A)
46 *Meskin* 1968 (4) SA 793 (W)
47 See page 321-323 of Saxxum’s case (in 25 supra) in which Olivier observed: “In ander uitsprake van hierdie Hof is die grondliggende waardes van die goeie trou, billikheid en openbare belang in die kontraksterek ook beklemtoon; veral wat betreft die afdwing van kontrakte wanneer dit teen die regegevoel skierei. So, bv het Hefer AR in *Saxxum v SA Mutual Life Assurance Society* 1986 (1) SA 776 (A) gekonstateer dat 'n hof die diskresie het om nie spesifieke nakoming van 'n kontrak te gelaas nie. Hierdie diskresie, so is verklaar op 783C-E: ‘. . . is aimed at preventing an injustice - for cases do arise where justice demands that a plaintiff be denied his right to performance - and the basic principle thus is that the order which the Court makes should not produce an unjust result which will be the case, eg, if, in the particular circumstances, the order will operate unduly harshly on the defendant. Another principle is that the remedy of specific performance should always be granted or withheld in accordance with legal and public policy. . . .' In verband met die afdwing van ooreenkomste wat die handelsvrede betref, het die Howe self 'n vereenvoudiging van peperkinge op sodanige ooreenkomste te plaas, ontwikkel en wel op grond van openbare belang. In *Magno Alloys and Research (SA) (Pty) Ltd v Ellis* 1984 (4) SA 874 (A) het Rabie HR op 891H-I gesê: ‘Omdat opvattings oor wat in die openbare belang is, of wat die openbare belang vereis, nie ably dieselfde is nie en van tyd tot tyd kan verander, kan daar ook geen numerus clausus wees van soorte ooreenkomste wat so streng met die openbare belang beskou kan word nie. Dit son dus volgens die beginsels van ons reg moontlik wees om te sê dat 'n ooreenkomst wat iemand se handelsvrede inkort teen die openbare belang is indien die omstandighede van die betrokke geval sodanig is dat die Hof daarvan oortuig is dat die afdwing van die betrokke ooreenkomst die openbare belang sou skadel. ‘En op 893GO: ‘i.e. opvatting dat 'n persoon wat 'n beperking wil afdwing nie die las dus om te bewys dat dit redelik inter partes is nie, bring nie mee dat die betrokke ooreenkomst van die redelikheid of onredelikheid van 'n beperking nie van belang is of kan wees nie.' En op 839D:-E: ‘Die belangrike vraag is dus nie of 'n ooreenkomst van so 'n soud is dat dit ab initio ongeldig is nie, maar of dit 'n ooreenkomst is wat die Hof, gesien die vereistes van die openbare belang, nie behoeft af te dwing nie.'D is opvatting dat alle kontrakte in ons reg bonae fidei is, dwa deur die goeie trou beginsel behoert word, is ook deur hierdie Hof erken onder ander in *Paddock Motors (Pty) Ltd v Igesund* 1976 (3) SA 16 (A) op 28; *Magno Alloys and Research* (SA) (Pty) Ltd v *Ellis* (supra op 893C) e.v.; *Mutual and Federal Insurance Co Ltd v Outshoorn Municipality* 1982 (1) SA 419 (A) op 433B-C; *LTA Construction Bpk v Administrateur, Transvaal* 1992 (1) SA 473 (A) op 480D-E; *Safpin (Pty) Ltd v Beukes* 1989 (1) SA 1 (A) op 71 ev en weer SC-D; *Botha (now Griessel) and Another v Finanscredit* (Pty) Ltd 1983 (3) SA 773 (A) op 7832 ev. is *bona fides* wat weer gebaseer is op die redelikheidsopvattinge van die gemeenskap, speel dus 'n wyse en onmiskenbare rol in die kontraksterek. Zimmermann in sy hybride 'Good Faith and Equity' in Zimmermann en Visser (reda) *Southern Cross - Civil Law and Common Law in South Africa* (1996) op 217--260 toon oorheugtig aan dat gemelde beginselkompleks onderliggend is aan bekende reginsellings soos estoppel, rektifikasie, onkundige wievoorstelling, die kennisleer, onbehoorlike betevloedig en dat dit 's belangriek rol speel by die uitleg van kontrakte, die inlees van stilswyende en geïmpliseerde bedinge, die openbaringspelig by kontrakshutting, fiktiewe vervulling van 'n voorwaarde en die erkenning van repudiatie as 'n vorm van kontrakloosheid. Dit bylg ook dat daar 'n innige verband bestaan tussen die begrippe *bona fides*, openbare belang, openbare beleid en juiste caussa. Dit bylg uit die analise van *Smallberger AR in Safpin (Pty) Ltd v Beukes* (supra op 71--80); uit die woorde van *Hoester AR in Botha (now Griessel)*
public interest principle. The *bona fides* principle is applied, he said, because the public interest requires it and observed at page 326 of the judgment that:

"Ek hou dit as my oortuiging na dat die beginsels van die goeie trou, byvoorbeeld op openbare beleid, steeds in ons kontraktereg 'n belangrike rol speel en moet speel, soos in enige regstelsel wat gevoelig is vir die opvattinge van die gemeenskap, wat die uiteindelike skepper en gebruik van die reg is, met betrekking tot die morele en sedelike waardes van regverdigheid, billikheid en behoorlikheid."

The interconnections between public interest, *bona fides* (good faith), public policy, the *boni mores* and reasonableness, fairness and propriety or due process, are clear in this statement.

Despite such enlightened judgments such as those in *Sasfin* and *Saayman* in which the courts were prepared to apply the concepts of public policy and *bona fides* in such a way as to achieve a just result, it is unfortunate that this is not an approach which South African courts apparently universally adopt. Not all judges appear to be ready to embrace such a progressive approach to the development of the common law.

There are still some judges who apparently prefer to compartmentalize the law within concrete, leadlined pigeonholes that prevent any form of ‘contamination’ of one branch of law by the other. A case in point is that of *Afrox HealthCare Limited v Afrox HealthCare Limited* and *Another v Finanscredit (Pty) Ltd* (supra op 733A–B) that openbare belang gereg is on die noodsaaklikheid dat simple justice between man and man gedaan moet word, en uit wat gees is in *Magna Alloys and Research (SA) (Pty) Ltd v Ellis* (supra). (Sien ook Zimmermann Southern Cross op 239 voetnoot 326.)"

See *Saayman* fn 27 supra op p322. Olivier JA dismissed the idea that the court in *Bank of Lisbon and South Africa Ltd v De Ornelas and Another* intended that the *bona fides* principle, along with the exceptio doli generalis, no longer played a role in practical terms although acknowledging that the judgment in *Bank of Lisbon* could be read this way. He said it was apparent that the court itself, without always using the term *bona fides*, still applied the underlying principle. In view of this, Olivier JA observed: "Ek voel myself dus vry om die beginsels van openbare belang, wat die bona fide-beginsel inuit is, en die onderhavige feestelsel toe te pas net soos wat dit in *Sasfin* (Pty) Ltd v Beukes* (supra) en *Botha (now Griessel) v Finanscredit (Pty) Ltd* (supra) soos en die ander genoemde uitsprake gedaan is. Ek hou in gedagte die vermaning dat daardie beginsel oordeelkundig en versigtig toegepas moet word. Dit is belangrik om weer die woore van Smallberger AR in *Sasfin (Pty) Ltd v Beukes* (supra op 9B–C) te herhaal: ‘No court should therefore shrink from the duty of declaring a contract contrary to public policy when the occasion so demands. The power to declare contracts contrary to public policy should, however, be exercised sparingly and only in the clearest of cases, lest uncertainty as to the validity of contracts result from an arbitrary and indiscriminate use of the power. One must be careful not to conclude that a contract is contrary to public policy merely because its terms (or some of them) offend one's individual sense of propriety and fairness. In the words of Lord Atkin in *Fender v St John-Mildmay 1938 AC 1 (HL) at 12 ([1937] 3 All ER 402 at 407B–C), 'the doctrine should only be invoked in clear cases in which the harm to the public is substantially incontestable, and does not depend upon the idiosyncratic inferences of a few judicial minds'” (see also *Olsen v Standaflof 1983 (2) SA 668 (ZAS) 673G). Williston on Contracts 3rd ed para 1630 expresses the position thus: "Although the power of courts to invalidate bargains of parties on grounds of public policy is unquestioned and is clearly necessary, the impropriety of the transaction should be convincingly established in order to justify the exercise of the power. Dit sê iets van die instinktiewe gevoel van versigtigheid waarmee borgkontrakte bejeg word, dat die uitsprake wat in die meer moderne tye die bona fide-beginsel die sterkste beklemtoon en toegepas het, juist met borgkontrakte en die beweerde aansprake van borge handel.""

Pretorius DM ‘The Defence of the Realm: Contract and Natural Justice’ 2002 SALJ 119 p 374 notes that “...it is surprising that it is still asserted in some decisions that the rules of natural justice have no application in the field of contract. Oblivious to the subtle nuances of the principles set out above, and blinded by their single-minded and tenacious faith in the idea that pacta sunt servanda, come hell or high water, these decisions seek to defend the realm of contract against invasion by principles of judicial review and - heavens forbid- notions of fairness. It is gratifying to know that South African law is more sophisticated than these decisions suggest is the case.” (Footnotes omitted. See cases and articles cited in footnotes 45 and 46 on p 381)
Strydom\textsuperscript{50}, the facts of which are discussed in the section relating to the private sector. In that case the court refused to allow a patient to escape the consequences of a disclaimer he had signed absolving the hospital from all liability and indemnifying it from any claim instituted by any person (including a dependant of the patient) for damages or loss of whatever nature (including consequential damages or special damages of any nature) flowing directly or indirectly from any injury (including fatal injury) suffered by or damage caused to the patient or any illness (including terminal illness) contracted by the patient whatever the cause/causes, except only with the exclusion of intentional omission by the hospital, its employees or agents. The respondent contended that the relevant clause was contrary to the public interest, that it was in conflict with the principles of good faith or \textit{bona fides} and that the admission clerk had had a legal duty to draw his attention to the relevant clause, which he had not done. The grounds upon which the respondent based his reliance on the public interest were the alleged unequal bargaining positions of the parties at the conclusion of the contract, as well as the nature and ambit of the conduct of the hospital personnel for which liability on the part of the appellant was excluded and the fact that the appellant was the provider of medical services. The respondent alleged that, while it was the appellant’s duty as a hospital to provide medical treatment in a professional and caring manner, the relevant clause went so far as to protect the appellant from even gross negligence on the part of its nursing staff. He said that this was contrary to the public interest. The court refused to accept the respondent’s argument that s 39(2) of the Constitution obliged every court, when developing the common law, to promote the spirit, purport and object of the Bill of Rights and that the relevant clause conflicted with the spirit, purport and object of section 27(1)(a) of the Constitution, which guaranteed each person’s right to medical care, and as such was accordingly in conflict with the public interest. As an alternative, the respondent argued that, even if the clause did not conflict with the public interest, it was still unenforceable as it was unreasonable, unfair and in conflict with the principle of \textit{bona fides} or good faith. The court nonetheless ruled in favour of the applicant.

\textsuperscript{50} Afrax fn 6 supra
In BOE Bank Bpk v Van Zyl\(^{51}\) the court had to consider the question of proper consent to suretyship agreement concluded between a Bank and the father of a principal party to the main agreement whose husband, to whom she was married in community of property, had entered into the agreement. In giving judgment for the applicant the court held that an overarching ground of avoidance based on the absence of *bona fides* or the improper procurement of consensus was not recognised. It said that there was no authority for it in the decisions of the Supreme Court of Appeal, and that it was not for the court to depart from settled rules without proper direction from that source. It also stated that there was also no authority for the statement that the distinctions between duress, misrepresentation and undue influence as well as the recognised requirements for these concepts had to be dispensed with. The court held that, even if the existence of a single overarching ground for avoidance based on equity were to be accepted, it was nevertheless clear that the respondent’s invocation thereof had to fail. His pleadings did not leave room for it, and it was in any event not open to him, in circumstances in which he had ‘nailed an unsuccessful defence to the mast of duress’, to argue on the same pleadings that the requirements of that defence had to be altered on grounds of equity.

4.2.4 Reasonableness

The concept of reasonableness in South African law is deserving of a thesis of its own and only the basic elements will be canvassed here sufficiently for the purpose of showing that it is another core element of the legal system that is not confined to a particular branch or area of law.

Reasonableness is a key principle in the law of contract. It is used to assess the legality of restraint of trade agreements\(^{52}\), the time allowed for performance\(^{53}\) and evidence of misrepresentations inducing contract \(^{54}\).

---

51 BOE 2002 (5) SA 165 (C)
52 Nursing Services of South Africa (Pty) Ltd v Clarke 1954 (3) SA 394 (N); Savage and Pugh v Knox 1955 (3) SA 149 (N); Hermer v Fisher and Others 1960 (2) SA 630 (T); Super Safes (Pty) Ltd and Others v Voulgarides and Others 1975 (2) SA 783 (W); Roffey v Catterall, Edwards & Goudré (Pty) Ltd 1977 (4) SA 494 (N); National Chemsearch (SA) (Pty) Ltd v Borrowman and Another 1979 (3) SA 1092 (T); David Wuhl (Pty) Ltd and Others v Badler and Another 1984 (3) SA 457 (W); Drewtons (Pty) Ltd v Corle 1981 (4) SA 305 (C); Bonnet and Another v Schofield 1989 (2) SA 156 (D); Humphreys v Laser Transport Holdings Ltd and Another 1994 (4) SA 388 (C); CTP Ltd and Others v Independent Newspapers Holdings Ltd 1999 (1) SA 452 (W); Klayenstrüßer v Barr and Another 2001 (3) SA 672 (W)
53 Nel v Cloete 1972 (2) SA 150 (A)
It is also a concept that is central to the law of delict. The standard test for negligence is that of the reasonable person, what he or she would have done in the circumstances in which the defendant found him or herself and how the defendant’s actions measure up against this standard. The conduct of the reasonable man is in

\[54\]
Orville Investments (Pty) Ltd v Sandfontein Motors 2000 (2) SA 886 (T). The court held that even though the objective test need not have been applied in determining materiality where the misrepresentation had been made fraudulently, the test can be used even where the fraudulent intent was not full and evident. A further element to be established was inducement - had the misrepresentation induced the contract? This was a question of fact. But, in determining whether the plaintiff had been so induced to enter into the contract, a court would, at least to some extent, base its decision on what a reasonable person in the position of the misrepresentee would have done. Thus the reasonableness of the misrepresentee’s behaviour in relying on the misrepresentation was of evidential value.

\[55\]
In Zysset and Others v Santam Ltd 1996 (1) SA 273 (C) Scott J held that it was doubtful whether the distinction between benefits received by a plaintiff from a third party which must be deducted from the plaintiff’s damages for patrimonial loss and those which may not be on the grounds that they are res inter alias acta can be justified on the basis of a single jurisprudential principle. In the past the distinction has been determined by adopting an essentially casuistic approach. He noted that whatever the true rationale may be, if indeed there is one, the enquiry must inevitably involve, to some extent, at least, considerations of public policy, reasonableness and justice. In Van Wyk v Santam Bpk 1998 (4) SA 731 (C) the court held that the distinction between deductible and non-deductible benefits could not be justified on the basis of a single jurisprudential principle. The inquiry inevitably involved considerations of public policy, reasonableness and justice. In McNally v M & O Media (Pty) Ltd and Others 1997 (4) SA 267 (W) the court held, with regard to a second possibility in terms of which the exception sought to place the onus of proving unreasonableness on the plaintiff and that it entailed the acceptance of a general standard of reasonableness as the test for unreasonableness where the plaintiff was a public official and the published matter constituted ‘free and fair political activity’, that these propositions were contrary to what had been held in Neshting v Du Pont and Others; Neshting v The Weekly Mail and Others 1994 (1) SA 708 (A) and that the Court of Appeal in Road Accident Fund v Saul 2002 (2) SA 55 (SCA) the court said that there is no general ‘public policy’ limitation to the claim of a plaintiff for damages for the negligent causation of emotional shock and resultant detectable psychiatric injury, other than a correct and careful application of the well-known requirements of delictual liability and of the onus of proof. It is not justifiable to limit such a claim, as has been offered as one solution, to a defined relationship between the primary and secondary victims, such as parent and child, husband and wife, etc. In determining limitations a court will take into consideration the relationship between the primary and secondary victims. The question is one of legal policy, reasonableness, fairness and justice, i.e. was the relationship between the primary and secondary victims such that the claim should be allowed, taking all the facts into consideration. As regards the class of persons to whom a duty may be owed to take reasonable care to avoid inflicting psychiatric illness through nervous shock sustained by reason of physical injury or peril to another, it is sufficient that reasonable foreseeability should be the guide.

\[56\]
See Mcllurray v H L & H (Pty) Ltd 2000 (4) SA 887 (N) in which the court canvassed the characteristics of the reasonable man as follows: “What qualities and characteristics does the notionally reasonable man have? One knows that the reasonable man generally expects and is entitled to expect reasonableness rather than unreasonableness, legality rather than illegality, from others. (Solomon and Another v Mussel and Bright Ltd 1926 AD 427 at 433; Moore v Minister of Posts and Telegraphs 1949 (1) SA 815 (A) at 826.) The reasonable man certainly does not in general regard himself as obliged to take steps to guard against recklessness or the gross negligence of others. (South African Railways and Harbours v Rowell 1963 (3) SA 439 (A).) Obviously this also applies to the criminal conduct of others. It goes without saying that this notionally reasonable man generally complies with the law and always acts reasonably. We know that the reasonable man is not a timorous faintheart, always in trepidation lest he or others suffer some injury; on the contrary, he ventures out into the world, engages in affairs and takes reasonable chances. He takes reasonable precautions to protect his person and property and expects others to do likewise (par Van den Heever JA in Herschel v Mupe 1954 (3) SA 464 (A) at 490E). A further characteristic of the reasonable man is that he is conservative in his approach to a situation which Herschel v Mupe 1954 (3) SA 464 (A) could be described as res nova. He does not readily consider that he is in such a situation obliged to prevent harm to others and thus acts wrongfully if he does not. (Natal Fresh Produce Growers’ Association and Others v Agroserve (Pty) Ltd and Others 1990 (4) SA 749 (N) at 754B - C.) The reasonable man generally minds his own business. He does not in general regard it as his duty to behave as the good Samaritan or to be his brother’s keeper. (Minister for Police v Ewels 1975 (2) SA 590 (A) at 596H; Herschel v Mupe (supra at 490E).) Where the reasonable man owns property he, as a general rule, considers that he is entitled to use his property as he sees fit in the process of advancing his own reasonable interest (cf Vanston v Frost 1930 NPD 121; Neshting), Potgieter JM and Visser PL Law of Delict 3rd ed p 117). The reasonable man does not consider himself to be under a general duty to prevent loss to others by positive conduct, nor to prevent pure economic loss. He would consider that such duties would probably place too heavy a burden on the community. Law of Delict (op cit at 51). The reasonable man does, however, recognise that he is sometimes under a duty to prevent loss to others by positive conduct or to prevent pure economic loss. In deciding when such a duty arises, he is guided by the legal convictions of the community. Sometimes, for example, where the reasonable man happens to be a policeman who sees a person being assaulted, he would recognise that according to the legal convictions of the community he is under a legal duty to take reasonable steps to prevent the assault. (Ewels’ case supra at 597FL) The reasonable man would also realise that he is entitled to resist the prosecution the community has against him to resist the unreasonable economic loss which he foresees as a likely result of his conduct if he could reasonably do so. (Compare comparatively Brick (Pty) Ltd v Strachan Construction Co (Pty) Ltd 1982 (4) SA 371 (N).) Where the reasonable man is a landowner or occupier upon whom land a source of danger exists which is reasonably foreseeable could result in harm to his neighbour, he would
turn informed by the legal convictions of the community. The legal convictions of
the community, the *boni mores*, are informed by the Constitution and are a part of
public policy. This last is ultimately informed by the Constitution as previously stated.
Reasonableness is also a well-established principle of administrative law. In
*Mafongosi and Others v United Democratic Movement and Others* the court held
that the reasonableness required for administrative actions taken by such functionaries

recognise that there is a duty upon him to take reasonable steps to avoid the harm. *(Regel v African Superslate (Pty) Ltd 1963 (1) SA 102 (A) (cause waste); Mourby v Syfreer 1935 AD 109 at p 203 (ferocious animal); Minister of Forestry v Quatlambha (Pty) Ltd 1973 (3) SA 69 (A) at 82E - F (fire).)* Where the reasonable man has himself, either personally or
through employees, created the danger, for example lit a fire, he would accept that the duty to take reasonable steps to
prevent the fire from spreading to his neighbours is a high one. *(Van Wyk v Hermanus Municipality 1963 (4) SA 282 (C) at 330D; Steenberg v De Kaap Timber (Pty) Ltd 1992 (2) SA 169 (A) at 181A.)* Even where he is not responsible for
lighting the fire, the reasonable landowner would accept that he is obliged to take such steps once he becomes aware of
the fire. *(See Government of the Republic of South Africa v Basdeo And Another 1996 (1) SA 353 (A); Kritzinger v Steyn En Andere 1997 (3) SA 686 (C); Barnard v Sentale Bank Bpk 1997 (4) SA 1032 (T); Groothoom v Groaff-Reimet Municipality 2001 (3) SA 373 (E).)*

In *Machuray* fn 34 supra Booyen J observed: "As I have pointed out, the reasonable man is guided by the legal
convictions of the community. The learned authors of *Law of Delict* (op cit at 37 and 38) state: 'The general norm or
criterion to be employed in determining whether a particular infringement of interests is unlawful, is the legal
crivations of the community: the *boni mores*. The *boni mores* test is an objective test based on the criterion of
reasonable conduct. The basic question is whether, according to the legal convictions of the community and in light of all the
circumstances of the case, the defendant infringed the interests of the plaintiff in a reasonable or an unreasonable
manner.' *(Authors' emphasis.)* This statement is fully supported by the decisions quoted by the learned authors in support of it,
inter alia the Ewel's case supra at 597; *Universiteit van Pretoria v Tommy Meyer Films (Edms) Bpk 1977 (4) SA 376 (T) at 387; Coronation Brick case supra at 380; Natal Fresh Produce case supra at 753 - 4; Clarka v Hurst NO and Others 1992 (4) SA 630 (D) at 651 - 3; Administrateur, Transvaal v Van der Merwe 1994 (4) SA 347 (A) at 358 and
364. The learned authors of *Law of Delict* (op cit) state at 46: '... (The) general *boni mores* test is seldom applied
directly to establish wrongfulness because more precise methods have been developed to determine the legal convictions
of the community. In other words, the determination of wrongfulness - the investigation into the legal convictions of
the community - finds practical application or expression in specific legal norms and doctrines with the result that it
is necessary to investigate the legal convictions of the community directly only in exceptional cases. Two examples of the
practical application of the *boni mores* yardstick are to be found in the view that wrongfulness amounts to the
infringement of a subjective right or the non-compliance with a legal duty to act.' *(Authors' emphasis.)* The learned
authors of *Law of Delict* point out further that the *boni mores* test for wrongfulness functions 'at most at a supplementary
level, because the convictions of the community concerning what good conduct should be regarded as reasonable or
unreasonable for the purposes of the law of delict, have over time found expression in many common law and statutory
norms, grounds of justification and certain theoretical legal methods whereby wrongfulness may be established.
Consequently it is seldom necessary to apply the general *boni mores* test directly. 'They state further that there are two
main ways in which the general *boni mores* or reasonableness criterion is applied as a supplementary test for
wrongfulness: 'Firstly, the *boni mores* test is applied as a test for wrongfulness in cases where either the wrongfulness
of the defendant's conduct does not appear from the violation of an existing delictual norm, or the lawfulness thereof
does not appear from the presence of a recognised ground of justification' (at 47) and, secondly, 'recurso to the general
reasonableness test becomes imperative for purposes of refinement, especially in assessing wrongfulness in borderline
cases (at 49). This is a case in which the wrongfulness of the defendant's conduct does not appear from the violation of
an existing norm, or it is clear that the lawfulness of the conduct appears from the presence of a recognised ground of
justification. It is thus a case in which the *boni mores* criterion represented by the convictions or feelings of the
community has to be applied.'

*Minister Of Safety and Security v Van Dunvenbode 2002 (6) SA 431 (SCA) at p 444 where Nugent JA stated: "In
applying the test that was formulated in *Minister of Polisie v Ewel's the 'convictions of the community' must
necessarily now be informed by the norms and values of our society as they have been embodied in the 1996
Constitution. The Constitution is the supreme law, and no norms or values that are inconsistent with it can have legal
validity - which has the effect of making the Constitution a system of objective, normative values for legal purposes."*

*See Dersley v Minister van Veiligheid En Sakkurtiet 2001 (1) SA 1047 (T) where van Dyk J stated at p 1055 "Met die
deurlees van hierdie artikel en latere beslissings wat ek nagegaan het, het dit my getref dat die basiese toets verander het
dat dit vandag daarin geleë is dat 'n judikisie waardes-oordeel uitgespeel moet word of die eier se betrokke
aangetaste belang in die omstandighede en tipe situasie wat voor die hof op die feite sou dien, ooreenkomstig die *boni
mores* (dit wil sê die regopvatting van die gemeenskap) beskermingswaardig is al dan nie; en indien wel, is daar
anderdaad 'n regoplig op sodanige persoon wat hy nie mag nalaat nie. Andersins is daar geen regpelig op 'n verweerder
om die regte van die eier te beskerm nie. In 'n verdere uiteenetting het nu Havenga daarop gewys dat wanneer die
*boni mores* maatstaf aanvaar word dit bestaan uit die regopuuring van die gemeenskap en nie noodwendig 'n sodelik,
of 'n sosiale, of 'n moderne morele maatstaf is nie. Hy verwys na onder andere die saak van *Minister van Polisie v Ewel's 1975 (3) SA 390 (A)* op 596 waarmee nu Bol, wat namens die verweerder verskyn het, indelikdaad ook die Hof verwys het."*

*Mafongosi 2002 (5) SA 567 (T KH)*
is the same as the reasonableness required for decisions by organs of state. In other words there is a single set of standards for administrative justice. In terms of section 33 of the Constitution everyone has the right to administrative action that is lawful, reasonable and procedurally fair.

4.2.5 Fairness

The concept of fairness, like that of reasonableness, is too complex to explore fully in this thesis. It is sufficient for present purposes to note that it is a well-recognised principle of contract law, the law of delict and administrative law in South Africa. That fairness is a concern of the law of contract is evidenced by the decisions of the courts in cases such as Standard Bank of SA Ltd v Essop Lubbe v Volkskas Bpk Thompson v Scholtz and Bouygues Offshore and Another v Owner of the MT Tigr and Another. The courts in the context of the law of contract speak of “simple justice between man and man”. It is submitted that this phrase is just another way to express the need for fairness in contract. The phrase was used in Jajbhay v Cassim and

---

61 With regard to the concept of fairness in relation to section 33 of the Constitution Mokgoro J and Sachs J in their minority judgment commented in Bel Porto School Governing Body And Others v Premier, Western Cape, And Another 2002 (3) SA 265 (CC): “The theme of fairness must be seen as governing the manner in which the four enumerated sections must be interpreted. The words themselves have no fixed and self-evident meaning. Unless animated by a broad concept of fairness, their interpretation can result in a reversion to what has been criticised as the sterile, symptomatic and artificial classifications which bedevilled much of administrative law until recently. Undue technicality and artificiality should be kept out of interpretation as far as possible; the quality of fairness, like the quality of justice, should not be strained. There are at least three respects in which the concept of fairness should be seen as animating s 33. The first is to provide the link between the four enumerated aspects so that they are not viewed as separate elements to be dealt with mechanically and sequentially, but, rather, as part of a coherent, principled and interconnected scheme of administrative justice. Secondly, the interpretation of each of the individual subsections within the framework of the composite whole must be informed by the need to ensure basic fairness in dealings between the administration and members of the public. Thirdly, the appropriate remedy for infringement of the rights must itself be based on notions of fairness. [133] The jurisprudence of transition is not unproblematic. This Court has emphasised the need to eradicate patterns of racial discrimination and to address the consequences of past discrimination which persist in our society. This relates to substantive fairness, which focuses on the effect or impact of government action on people. This Court has also emphasised the obligation upon the government to exhibit procedural fairness in decision-making. A characteristic of our transition has been the common understanding that both need to be honoured. The present case highlights a particular aspect of that complex process, in which a Court may be called upon to examine both the procedural fairness of the decision and substantive fairness, or fairness of the effect or impact, and in that examination these two aspects may to some extent become intertwined. It is necessary to determine the circumstances in which a Court, looking at a scheme that as a whole passes the test of constitutional fairness, can and should detach a detail which, viewed on its own would be constitutionally unfair.” (Footnotes omitted)

62 Essop 1997 (4) SA 569 (D)
63 Lubbe 1991 (1) SA 398 (D)
64 Thompson 1999 (1) SA 232 (SCA)
65 Bouygues 1995 (4) SA 49 (C)
66 In Henry v Branfield 1996 (1) SA 244 (D), Levinson J observed: “For the purposes of this article the plaintiff accepts that the contract in question was illegal and unenforceable and therefore the rule in pari delicto potior est condicio defendendi applies. The strict application of this rule prevents a party from recovering any money or property delivered pursuant to such illegal contract. However, the plaintiff contends that the pari delictum rule ought to be relaxed in this case in accordance with the principles set forth in the leading case of Jajbhay v Cassim 1939 AD 537. Stratford CJ at 544 put it as follows: ‘Thus I reach my third conclusion, which is that Courts of law are free to reject or grant a prayer for restoration of something given under an illegal contract, being guided in each case by the principle which underlies and inspired the maxim. And in this last connection I think a Court should not disregard the various degrees of turpitude in delictual contracts. And when the delict falls within the category of crimes, a civil court can reasonably
subsequently in *Sasfin (Pty) Ltd v Beukes* and *Botha (Now Griessel) and Another v Finanscredit (Pty) Ltd* in which the court stated that, while public policy generally favours the utmost freedom of contract, it nevertheless properly takes into account the necessity for doing simple justice between man and man. The phrase ‘simple justice between man and man’ has also been used in the context of the law of delict.

The application of the principle of fairness in the law of delict is evidenced in the law of defamation in particular in which fair comment is a defence. Significantly, what is fair is in general ascertained by reference to the convictions of the community. In the case of *Brandt v Bergstedt* 1917 CPD 344 and said in relation to that case at 543: 'In the first the reasoning implies that the learned Judge considered himself bound by the authorities he quoted to refuse relief to the plaintiff, whereas I respectfully suggest that he should have approached the matter from the more fundamental point of view as to whether public policy was best served by granting or refusing the plaintiff's claim. If the learned Judge had so approached the case and had considered that as an equitable Judge he was free (as I think he was) to order the restoration of the cow, I cannot doubt that he would have granted the relief prayed. Indeed the facts of that case afford a typical example which called for a decision on which side public policy is best served. It may be said that contracts of that nature are more discouraged by leaving the bereft plaintiff unhelped and the doubly delinquent defendant in possession of his ill-gotten gains. I cannot agree with this view, which I think would not so much discourage such transactions but would tend to promote a more reprehensible form of trickery by scoundrels with such honour as even thieves are sometimes supposed to possess, and public policy should properly take into account the doing of simple justice between man and man.' In the same case, Watermeyer JA (as he then was) at 550 said: 'The principle underlying the general rule is that the Courts will discourage illegal transactions, but the exceptions show that where it is necessary to prevent injustice or to promote public policy, it will not rigidly enforce the general rule. The real difficulty lies in defining with any degree of certainty the exceptions to the general rule which it will recognise.'

Suppose that the criminal law has provided an adequate deterring punishment and therefore, ordinarily speaking, should not by its order increase the punishment of the one delinquent and lessen it of the other by enriching one to the detriment of the other. And it follows from what I have said above, in cases where public policy is not foreseeably affected by a grant or a refusal of the relief claimed, that a Court of law might well decide in favour of doing justice between the individuals concerned and so prevent unjust enrichment. Earlier in this judgment the learned Chief Justice dealt with the case of *Watermeyer* and said in relation to that case at 543: 'In the first the reasoning implies that the learned Judge considered himself bound by the authorities he quoted to refuse relief to the plaintiff, whereas I respectfully suggest that he should have approached the matter from the more fundamental point of view as to whether public policy was best served by granting or refusing the plaintiff's claim. If the learned Judge had so approached the case and had considered that as an equitable Judge he was free (as I think he was) to order the restoration of the cow, I cannot doubt that he would have granted the relief prayed. Indeed the facts of that case afford a typical example which called for a decision on which side public policy is best served. It may be said that contracts of that nature are more discouraged by leaving the bereft plaintiff unhelped and the doubly delinquent defendant in possession of his ill-gotten gains. I cannot agree with this view, which I think would not so much discourage such transactions but would tend to promote a more reprehensible form of trickery by scoundrels with such honour as even thieves are sometimes supposed to possess, and public policy should properly take into account the doing of simple justice between man and man.' In the same case, Watermeyer JA (as he then was) at 550 said: 'The principle underlying the general rule is that the Courts will discourage illegal transactions, but the exceptions show that where it is necessary to prevent injustice or to promote public policy, it will not rigidly enforce the general rule. The real difficulty lies in defining with any degree of certainty the exceptions to the general rule which it will recognise.'

If one would have to accede to the argument as presented by Mr Bergenthin that *ante omnia* the principles must apply irrespective of what the surrounding circumstances might indicate (as I understand his argument) then I am afraid it would be to sacrifice substance, common sense and simple justice between man and man on the altar of formalism. I believe I cannot ignore the surrounding circumstances of the case when considering whether there was a duty to communicate acceptance of the offer to the respondent or not.' In *Eerste Nasionale Bank Van Suideelke Afrika Bpk v Saayman No 1* the court stated that: "Dit blyk ook dat daar 'n imise verbond bestaan tussen die beginne bona fides, openbare belang, openbare beleid en justa causa. Dit blyk uit die analise van Smalberger AR in *Sasfin (Pty) Ltd v Beukes* (supra op 71-80); uit die woorde van Hoestert AR in *Botha (now Griessel) and Another v Finanscredit (Pty) Ltd* (supra op 783A-B) dat openbare belang genig is op die noodsaaklikheid dat simple justice between man and man gedaan moet word, en uit wat gene is in *Magnum Alloys and Research (SA) (Pty) Ltd v Ellis* (supra). (Sien ook D Zimmerman Southern Cross op 259 voetsoot 326.)"

70 In *Roussseau and Others NNO v Visser and Another* 1989 (2) SA 289 (C) the court held: "In the present case the parties are not in pari delicto but, even if they are, the principles enunciated in *Jagbey v Casim* 1939 AD 537 lead one to the conclusion that the requirements of justice and the interests of public policy demand that the question as to whether those who bought activators from the company have a valid claim for the refund of the purchase price the matter based on the *condictio ob turpim vel justam causam* be answered in their favour."

71 See Neethling, Potgieter Visser Law of Delict p 347. Also *Yabek v Seymour* 2001 (3) SA 695 (E); *Neethling v The Weekly Mail and Others 1994 (1) SA 708 (A)

of an award of general damages should be approached. It said that the accepted approach is the flexible one described in Sandler v Wholesale Coal Suppliers Ltd4, namely: “The amount to be awarded as compensation can only be determined by the broadest general considerations and the figure arrived at must necessarily be uncertain, depending upon the Judge's view of what is fair in all the circumstances of the case.” 75

Concerning administrative law, in Bel Porto76 the minority judgement held that there are circumstances where fairness in implementation must outtop policy and that fairness in dealings by the government with ordinary citizens is part and parcel of human dignity. Mokgoro J and Sachs J in their minority judgment observed that the objective of judicial intervention under section 33 of the Constitution is to secure compatibility with fundamental notions of fairness in relation to the exercise of administrative power. They said that in some circumstances fairness may require a setting aside of a whole scheme so as to enable a significant part to be revisited, in others the scheme can go ahead in general with a part being re-examined and necessary adaptations made and noted that if this were not so the interest of minority groups could always be overridden by invoking the principle that what matters is the greatest good for the greatest number. Alternatively and conversely, they said, it could mean that the majority could be made to suffer unfairly in order to accommodate the interest of the minority. It is particularly important when a proposed measure is likely to have a disproportionate impact on a certain group that such group be given a meaningful opportunity to intervene and have its interests considered in a balanced way. The majority of the court in this case held, however that substantive unfairness has never been a ground for judicial review. The unfairness has to be of such degree that an inference can be drawn from it that person who made decision erred in respect that would provide grounds for review. This inference, said the court, was not easily drawn.

4.2 Formation of a Contract

4 Sandler 1941 AD 194 at 199
75 Carstens NO v Southern Insurance Association Ltd 1985 (3) SA 1010 (C); Reymeka v Mutual and Federal Insurance Co Ltd 1991 (3) SA 412 (W); Von der Berg v Coopers & Lybrand Trust (Pty) Ltd and Others 2001 (2) SA 242 (SCA)
76 Bel Porto School Governing Body and Others fn 61 supra
If the relationship between a public provider and a patient is contractual in nature then it is necessary to establish the manner and grounds upon which such contract is formed. In the South African public health sector at present, although indigent patients, or patients who fulfil certain criteria in terms of a means test are treated free of charge in state owned health facilities, this does not apply to everyone. There are tariffs in place in terms of which people who do not meet the criteria set by the means test are obliged to make some payment for the health services they receive. Whilst this tariff may not necessarily cover the cost of the treatment, it constitutes some form payment for services rendered. In South African law, however, consideration is not in any event an essential requirement for the existence of a contract as it is in English law. It is the intention of the parties that is paramount. In the context of public health service delivery it is not easy to establish the nature of the parties’ intentions. If there is a constitutional or other legislative obligation to provide health care services, the existence of an intention to contract becomes questionable.

The fact that no-one may be refused emergency medical services in terms of section 27(3) of the Constitution by implication tends to suggest that other health care services may be refused. The ability to refuse to treat a patient could be evidence of the fact that the state has a choice as to whether or not to enter into a relationship with a patient which in its turn suggests that the relationship could be contractual in nature. However the apparent distinction in the Constitution between emergency health care services and other types of health care services seems not to be as broad as the structuring of section 27 might at first sight suggest. As the Durban High Court

---

\[77\] See for instance Regulations on Fees for Health Services in the Free State, Free State Provincial Gazette No 64 of 01 October 2002 Notice No 140 of 2002; Regulations on Ambulance Fees in the Free State, Free State Provincial Gazette No 64 of 01 October 2002, Notice No 141 of 2002; Regulations Relating To The Administration, Management and Control of Provincial Hospitals, Services and Institutions, Established in Terms of Section 4 of the Provincial Hospitals Ordinance, 1961 (Ordinance No 13 of 1961): Amendment KwaZulu-Natal Provincial Gazette No 6134, Notice No 405 of 24 October 2002; Hospitals Ordinance No 14 of 1958 :Amendment Regulations Relating To The Classification of And Fees Payable By Patients At Provincial Hospitals, 2003 Gauteng Provincial Gazette No 659 Notice No 659 of 05 March 2003; Regulations Relating To The Uniform Patient Fee Schedule For Health Care Services Rendered By The Department of Health: Western Cape For Externally Funded Patients, Western Cape Provincial Gazette No 5977 Notice No 21 of 29 January 2003.

\[78\] In Conradie v Roussouw 1919 AD 279 the Appellate Division unanimously rejected the idea that the English doctrine of consideration forms part of South African law. De Villiers, AJA, concluded at p320 that “According to our law, if two or more persons, of sound mind and capable of contracting enter into a lawful agreement, a valid contract arises between them enforceable by action. The agreement may be for the benefit of one or both (Grotius 3.6.2). The promise must have been made with the intention that it should be accepted (Grotius 3.1.48); according to Vost the agreement must have been entered into serio ac deliberato animo. And this is what is meant by saying that the only element that our law requires for a valid contract is consensus, naturally within proper limits – it should be in de re licita ac homesta.” See Christie 2 supra, p10 to12 for further discussion. Although the doctrine had subsequently been discussed in South African cases this position remains unchanged. See for instance Adams v SA Motor Industry Employers Association 1981(2) SA 1189 (A) where the court stated at p1198 “We are not encumbered by the technicalities of the doctrine of consideration and in our law a novation is not presumed: the intention of the parties is the decisive factor (cf Smit v Rondalia Verekeringskorporasie van SA Bpk (supra at 346H))."
pointed out in *Soobramoney* the state cannot be expected to provide even emergency medical services beyond its available resources. This would not be reasonable or feasible and the state, can only be required to do what is reasonable. The section 27(3) prohibition does not distinguish between the private and public sectors.

Christie states that the most common and normally helpful technique for ascertaining whether there has been agreement is to look for an offer and an acceptance of that offer. However, he immediately sounds a warning in the words of Caney J in *Godfrey v Parulk* that the phrase ‘offer and acceptance’ is not to be applied as a talisman revealing by a species of esoteric art, the presence of a contract. Contracts can be entered into without offer and acceptance. It is submitted that a statutory requirement, whether express or implied, to enter into a contract does not necessarily negate the contractual nature of a transaction or a relationship. It merely restricts or specifies the legal mechanism in terms of which that relationship arises or the transaction is effected. If an express statutory requirement that a contract is entered into does not alter the nature of the transaction as being contractual despite the fact that the intentions of the parties to contract are in such situations largely replaced by a legal requirement to contract then it is submitted that the absence of full freedom to contract also does not *per se* negate the possibility of a contract’s arising. Thus even if a public sector provider is constitutionally obliged to provide health care services to a

---

79 *Soobramoney v Minister of Health, KwaZulu-Natal* 1998 (1) SA 430 (D)

80 Christie, fn 2 supra at p31. He refers to *Reid Bros (SA) Ltd v Fischer Bearings Co Ltd* 1943 AD 232 where the court stated at p 241 that “a binding contract is as a rule constituted by the acceptance of an offer” and *Estate Brest v Port-Urban Areas Health Board* 1955 3 SA 523 (A) at 532E where it was stated that: “Consensus is normally evidenced by offer and acceptance. But a contract may be concluded without offer and acceptance other than pure fictions imported into the transaction for doctrinal reasons. Nor does every accepted offer constitute a contract.” At 88 Christie observes, however, that in exceptional cases offer and acceptance can either not be identified at all, or only with the most artificial reasoning and that the point is that it is not necessarily correct to argue that because there is no offer and acceptance, there is no contract. He gives a number of examples of circumstances in which a contract unquestionably comes into being without any offer and acceptance except ‘sheer fictions’. These include the imposition of territorial limits on distributors or ‘sole agents’, the restriction of tenants in a block of shops from carrying on businesses similar to those of other tenants; the imposition of restrictive covenants in a township. He notes that the common characteristics of all these situations are that a scheme is set up and a number of participants enter into contracts with the originator of the scheme and although not expressly contracting with each other, they participate in the expectation that all other participants will obey the rules of the scheme. He points out at p90 that another type of contract without offer and acceptance that should not be overlooked is a contract created by statute and its availability section 65(2) of the Companies Act 61 of 1973 as an example.

81 *Godfrey 1965 (2) SA 738 (D) at 743C*

82 For example section 20 of the State Information Technology Agency Act No 88 of 1998 requires that “A business agreement to regulate the relationship between individual participating departments or organs of state and the Agency must be concluded.” Section 42 (1)(b) of the National Heritage Resources Act No 25 of 1999 with reference to heritage agreements states: “Such a heritage agreement must be in the form of a binding contract.” National Student Financial Aid Scheme Act No 56 of 1999 section 19(3) states that: “A written agreement must be entered into between the NSFAS and every borrower or borrower.” It may also introduce an element of administrative law as stated in section 2 of this chapter.
patient, this does not preclude the possibility of a contractual relationship between them.

If health services are provided by way of a contractual relationship that is not restricted or specifically addressed by any other law then can a public provider refuse to treat a patient? If so, in what circumstances? It is submitted that the nature of the provider is relevant in determining how it must behave in this regard since the state is obliged in terms of the Constitution to respect, protect, promote and fulfil the rights in the Bill of Rights. A public provider will not be able to arbitrarily refuse to treat a patient. There will have to be a reason for such refusal which is in accordance with constitutional principles and values. Section 27 gives the answer as to what kinds of reasons for refusal might be acceptable. They relate largely to the availability of resources.

The private sector is in a somewhat different position to the public sector in that it does not share the obligation imposed upon the state by section 27(2) of the Constitution. It is, however, important to bear in mind that the right of access to health care services is specified in section 27(1) and there is no express indication in this subsection that the right of access to health care services is one that is enforceable only against the state. The question of the horizontal application of the Bill of Rights has proven to be a vexed one and is canvassed in more detail elsewhere. However it is important to note that in terms of sections 8(2) and 8(3) of the Constitution -

“A provision of the Bill of Rights binds a natural or a juristic person if, and to the extent that, it is applicable, taking into account the nature of the right and the nature of any duty imposed by the right.

When applying a provision of the Bill of Rights to a natural or juristic person in terms of subsection (2), a court-

(a) in order to give effect to a right in the Bill, must apply, or if necessary develop, the common law to the extent that legislation does not give effect to that right; and

(b) may develop rules of the common law to limit the right, provided that the limitation is in accordance with section 36 (1).”
In Jooste v Botha\textsuperscript{3} van Dijkhorst J stated that in determining whether a horizontal right is intended, one has to have regard to the nature of the proposed right, its enforceability, the practicalities of the human relationships involved and whether public policy or public *mores* require such moral obligation to be converted into a legal obligation. He said that it is important to bear in mind that the proposed horizontal right will not operate in a void. It will invariably infringe upon and curtail the rights of others. According to van Dijkhorst J, the horizontal application of the Bill of Rights is not mechanical or unqualified, but is to be done with circumspection. It is submitted that if one considers the right of access to health care services applied horizontally and juxtaposed against the right to refuse to provide those services, one must ask on what basis the latter should outweigh the former in the balancing exercise which would confront a court should this issue arise in litigation\textsuperscript{4}. The latter could be described as the right of free trade but not necessarily the right embodied in terms of section 22 on its own as this right is in the words of the Constitution: “the right to *choose* their trade, occupation or profession. The practice of a trade, occupation or profession may be regulated by law”[writer’s italics]. Thus the right is not to *practice* a trade, occupation or profession freely, because this can be regulated by law, but to freely *choose* such trade occupation or profession. The right to freedom of association is granted but not elaborated upon in section 18 in the Bill of Rights. The right to refuse to treat a patient could possibly be based on this right.

It is quite possible that in certain circumstances there is no contractual relationship between a patient and a provider of health care services because the provider has

\textsuperscript{3} Jooste 2000 (2) SA 199 (T)

\textsuperscript{4} Sachs J in Prince v President, Cape Law Society, And Others 2002 (2) SA 794 (CC) stated that: “In Christian Education [Christian Education South Africa v Minister of Education 2000 (4) SA 757 (CC)] and Prince [Prince v President, Cape Law Society, and Others 2000 (3) SA 843 (SCA)] this Court emphasized the importance of contextualising the balancing exercise required by s 36 of the Constitution. Such contextualisation reminds us that although notional and conceptual in character, the weighing of the respective interests at stake does not take place on weightless scales of pure logic pivoted on a friction-free fulcrum of abstract rationality. The balancing has always to be done in the context of a lived and experienced historical, sociological and imaginative reality. Even if for purposes of making its judgment the Court is obliged to classify issues in conceptual terms and abstract itself from such reality, it functions with materials drawn from that reality and has to take account of the impact of its judgments on persons living within that reality. Moreover, the Court itself is part of that reality and must engage in a complex process of simultaneously detaching itself from and engaging with it. I believe that in the present matter, history, imagination and mind-set play a particularly significant role, especially with regard to the weight to be given to the various factors in the scales.” The court in Van Zyl and Another v Jonathan Ball Publishers (Pty) Ltd and Others 1999 (4) SA 571 (W) quoted Burchell J Personality Rights: “The balancing of rights and interests is the essence of the legal process and an adjudicator cannot avoid making difficult decisions. The appropriate balance between individual reputation, dignity and privacy and freedom of expression, for instance cannot be sidestepped.”
contracted\textsuperscript{85} with a medical scheme or managed care organisation to treat the patient. Health maintenance organisations are not as common in South Africa as they are in the United States and the model in terms of which a private provider of health care services employs various kinds of health professionals to fulfill its contractual obligations to render services to the employees of a particular employer or some other collective does not feature significantly in the South African context. There are many different models of managed health care\textsuperscript{86} but those that seem to be the most common in South Africa are essentially an extension of medical schemes administration, often contracted out to specialised consultants\textsuperscript{87} who offer services relating to pharmacy benefit management, management of hospital services utilisation etc. Large providers such as private hospitals appoint their own case managers largely to deal with those medical schemes that are applying managed care principles to benefit utilisation by beneficiaries. Depending on the nature of the contract between the hospital and the scheme there is sometimes a contractual provision which precludes the service provider from recourse to the patient for payment for treatment rendered in terms of the contract. Chapter five of the regulations to the Medical Schemes Act\textsuperscript{88} deals expressly with the provision of managed health care. Managed health care tends to use generally accepted and highly specific treatment protocols\textsuperscript{89} not only so that

\begin{itemize}

\item \textsuperscript{85} One kind of agreement that can be entered into is a capitation agreement. This term is defined in the regulations to the Medical Schemes Act No 131 of 1998 as follows - "'capitation agreement' means an arrangement entered into between a medical scheme and a person whereby the medical scheme pays to such person a pre-negotiated fixed fee in return for the delivery or arrangement for the delivery of specified benefits to some or all of the members of the medical scheme"

\item \textsuperscript{86} The regulations to the Medical Schemes Act No 131 of 1998 define managed health care as follows - "managed health care" means clinical and financial risk assessment and management of health care, with a view to facilitating appropriateness and cost-effectiveness of relevant health services within the constraints of what is affordable, through the use of rules-based and clinical management-based programmes;

\item \textsuperscript{87} The regulations to the Medical Schemes Act No 131 of 1998 define a managed care organisation as follows - "managed health care organisation' means a person who has contracted with a medical scheme in terms of regulation 15A to provide a managed health care service;"

\item \textsuperscript{88} Fn 37 supra

\item \textsuperscript{89} The regulations to the Medical Schemes Act No 131 of 1998 define a protocol as follows – " protocol' means a set of guidelines in relation to the optimal sequence of diagnostic testing and treatments for specific conditions and includes, but is not limited to, clinical practice guidelines, standard treatment guidelines, disease management guidelines, treatment algorithms and clinical pathways;" Regulation 15D stipulates standards for managed health care as follows - "If any managed health care is undertaken by the medical scheme itself or by a managed health care organisation, the medical scheme must ensure that:

(a) a written protocol is in place (which forms part of any contract with a managed health care organisation) that describes all utilisation review activities, including a description of the following:

(i) procedures to evaluate the clinical necessity, appropriateness, efficiency and affordability of relevant health services, and to intervene where necessary, as well as the methods to inform beneficiaries and health care providers acting on their behalf, as well as the medical scheme trustees, of the outcome of these procedures;

(ii) data sources and clinical review criteria used in decision-making;

(iii) the process for conducting appeals of any decision which may adversely affect the entitlements of a beneficiary in terms of the rules of the medical scheme concerned;

(iv) mechanisms to ensure consistent application of clinical review criteria and compatible decisions;

(v) data collection processes and analytical methods used in assessing utilisation and price of health care services;

(vi) provisions for ensuring confidentiality of clinical and proprietary information;

\end{itemize}
funders can be sure that their beneficiaries are receiving treatment which is recognised within the health profession as being appropriate for a particular condition but more specifically so that they can predict the expenses associated with the treatment of that condition and manage the financial risks accordingly. Medical schemes who use a managed care regime will usually not fund treatment which deviates from the accepted and preset treatment protocols except in emergency situations.

4.3 Informed Consent in the Context of Contract

The role of informed consent in the formation and conclusion of a contract is of particular importance in the context of contracts for health care services. Informed consent can be a precursor to the contract for health care services in the same way as can a misrepresentation inducing a contract but it can also form a part of the terms of the contract itself. In the contractual context in particular, the role of the concept of therapeutic privilege, it is submitted, can be problematic. In order for a contract to arise there must be an intention to contract. The intention to contract must in its turn arise from the exercise of the free will of the parties in the circumstances in which the

---

(vii) the organisational structure (e.g. ethics committee, managed health care review committees, quality assurance or other committees) that periodically assesses managed health care activities and reports to the medical scheme; and

(viii) the staff position functionally responsible for day-to-day management of the relevant managed health care programmes;

(b) the managed health care programmes use documented clinical review criteria that are based upon evidence-based medicine, taking into account considerations of cost-effectiveness and affordability, and are evaluated periodically to ensure relevance for funding decisions;

---

Van der Merwe et al (fn 23 supra) state at p 74 that: "A representation which occurs during precontractual negotiations can be made a part of the consensus between the parties and as such becomes a term of the ensuing contract. For example, a representation may be warranted to be true. Should the representation then turn out to be false the contract will have been breached and the normal consequences of breach of contract by way of breach of warranty will follow. Whether a representation amounts to a contractual term of whether it merely causes an error in motive without becoming a part of the contract (although it may influence one party's decision to enter into the contract) must be decided according to the intention of the parties."

It is therefore all the more interesting that Claassen NJB and Verschoor Medical Negligence in South Africa at p 69 identify four exceptions to the physician's duty to inform, only one of which can be seen in a contractual context (in cases where the patient indicates that he does not wish to be informed of the nature of the proposed treatment, the risks involved or the probable consequences). The other three are situations in which the patient either specifically lacks contractual capacity - i.e. where the patient is brought into hospital in a critical, unconscious condition, or where the patient's state of mind is such that his capacity to contract (in the sense of being able to take rational decisions for his own benefit) could potentially be impaired or diminished by the disclosure i.e. where the disclosure of the full extent of his illness will influence him to such a degree that his recovery will be prejudiced or presents a threat to the patient's well-being or where the patient specifically does not consent to the treatment - i.e. in the event of an emergency where a patient's interests are sacrificed in favour of, e.g. the protection of society such as where the patient is suffering from a contagious disease or is inoculated to prevent its outbreak.

---

519
contract is to be concluded. They must therefore be aware of those circumstances in order to make a decision to be bound by a contract. Misrepresentations inducing a contract can vitiate the consent requirement and invalidate the contract. This is a fundamental and inherent conflict that arises within the law of contract in the context of health services delivery. It also serves to illustrate one aspect of the uncomfortable fit of the law of contract within this context. It is no small irony that the fact that non-disclosure of material facts on the basis of therapeutic privilege can be pleaded as a defence in the context of the law of delict while that same non-disclosure in the context of the law of the subsequent contract for health care services could vitiate the agreement between the parties. Welz explores the boundaries of medical therapeutic privilege by noting that decisions dealing with the therapeutic privilege defence are notably absent in South African law. He notes that in *SA Medical and Dental Council v McLoughlin* Watermeyer CJ commented that: “It may sometimes even be advisable for a medical man to keep secret from his patient the form of treatment which he is giving him and for a medical man to disclose to anyone, other than the patient, the form of treatment which he is carrying out, may amount to a gross breach of confidence between doctor and patient.” Welz observes that this statement is in no way conclusive, however. It alludes to the issue of confidentiality in the context of the doctor-patient relationship and hardly even contains the rudiments of the therapeutic privilege defence. He notes that what Watermeyer J had to say in *Richter & Another v Estate Hamman* when referring to the problems surrounding the so-called therapeutic privilege of the medical profession is more to the point. He described the doctor’s dilemma in a way that clearly contributed to the wider debate concerning the existence and the desirability or otherwise of this defence when he

---

92 Christie fn 2 supra notes at p 313 that: “In our modern law in which all contracts are *bona fide*, it is not necessary to prove that a misrepresentation was fraudulent in order to invalidate the contract and the innocent party is equally entitled to rescind whether the representation was fraudulent or innocent”. The reason is that, once it has been discovered that the representation was incorrect it is against good faith for the party who made it to continue to hold the innocent party to a contract so obtained. *Parke v Hamman* 1907 TH 47 p 52; *Lamb v Walters* 1926 AD 358 at p 364; *Samson v Union and Rhodesia Wholesale Ltd* 1929 AD 469 at p 480; *Harper v Webster* 1956 (2) SA 493 (FC) 501; *Pretoria v Natal South Sea Investment Trust Ltd* 1963 (3) SA 410 (W) 415H. It is submitted that in the case of the patient in the health services context, the power to rescind the contract may be cold comfort indeed.

94 McLoughlin 1948 (2) SA 355 (A) at p 366

95 Richter 1976 (3) SA 226 (C) at 232 G-H
explained: “If he fails to disclose the risks he may render himself liable to an action for assault whereas if he discloses them he might well frighten the patient into not having the operation when the doctor knows full well that it would be in the patient’s best interests to have it. In *Castell v De Greeff* Ackermann J expressly acknowledged the therapeutic privilege defence in South Africa law but left open the question what the ‘ambit of the so-called “privilege” may today still be’. Welz notes that while not rejecting the defence out of hand, Ackermann J appears to hold the view that it does not fully accord with the present day developments of South African law which clearly promote patient autonomy and self-determination. He adds that South African legal opinion, scant as it may be, appears to be unanimous in its acceptance in principle of the notion that in special circumstances the duty to disclose may be suspended. Welz states that this is an exception to the general rule that ordinarily a patient in a non-emergency case must be informed of the nature of the treatment and the substantial risks it holds for him or her. He notes that such a withholding of information must be in the best interests of the patient him- or herself but may also be justified where full disclosure may create a substantial danger to a third party. Welz observes that this common sense view is widely supported in medico-legal literature and may predictably be upheld in suitable cases brought before South African courts. He then states that in order to explore the limits of medical-therapeutic privilege, the wider debate concerning consent to medical treatment and whether emphasis should be placed on the autonomy and right of self-determination of the patient in the light of all the facts or on the right of the medical profession to

98 Welz, fn 93 supra, refers to Strauss SA *Doctor Patient and The Law* p10
99 Welz, fn 93 supra, refers to Giesen D *International Medical Malpractice Law* at p 382. See also Claassen and Verhoosel fn 91 supra p 69-71 who refer to the English case of *Sidaway v Board of Governors of the Bethlehem Royal Hospital and the Maudsley Hospital* [1985] 1 All ER 643 653 F in which the scope of therapeutic privilege is described as: “This exception enables a doctor to withhold from his patient information as to risk if it can be shown that a reasonable assessment of the patient would have indicated to the doctor that disclosure would have posed a serious threat of psychological detriment to the patient.” They also refer to the American case of *Canterbury v Spence* 464 F 2d 772 CA 3 1972 at 789 where the court stated: “The critical enquiry is whether the physician responded to a sound medical judgment that a communication of the risk information would present a threat to the patient’s well-being. The physician’s privilege to withhold information for therapeutic reasons must be carefully circumscribed, however, for otherwise it might devour the disclosure rule itself. The privilege does not accept the paternalistic notion that the physician may remain silent simply because divulgence might impair the patient to forego therapy the physicians feels the patient really needs. That attitude presumes instability or perversity for even the normal patient and runs counter to the foundation principle that the patient should and ordinarily can make the choice for himself.” Claassen and Verhoosel point out that in *Hatcher v Black* (*The Times*, July 2, 1954 as cited by Jackson RM and Powell JL 1982 *Proffessional Negligence* 1 ed at p 238) it was decided that not only may a practitioner withhold information from a patient, he is even entitled to tell a lie in connection with the proposed treatment if he is of the opinion that the patient’s chances of recovery will be improved thereby. It is hardly necessary to point out that the latter situation is anathema to the creation of a contract between the parties since it precludes consensus.
determine the meaning of reasonable disclosure\textsuperscript{100}. It is submitted that in the context of the traditional, common law of contract in particular, the concept of therapeutic privilege is a paternalistic and patronising view that gives the power to decide what is in the best interests of the one contracting party to the other contracting party and could constitute anathema rather than common-sense\textsuperscript{101} especially in the private sector environment in which health professionals and health institutions are out to make a profit from the delivery of health care services. Christie explores whether a general test can be propounded for deciding whether in any particular case silence amounts to a misrepresentation and notes that a big step in this direction was taken by Vieyra J in \textit{Pretorius v Natal South Sea Investment Trust Ltd}.\textsuperscript{102} Christie observes that the test of involuntary reliance here applied is in accordance with the principle underlying the requirement of disclosure of material facts in contracts of insurance. The insured must disclose all the material facts in contracts of insurance. The insured must disclose all such facts because the insurer involuntarily relies on him for information on such facts: it might theoretically be possible to ascertain these facts by other means but it

\textsuperscript{100} Welz fn 93 supra goes on to investigate in his paper the nature and scope of therapeutic privilege with reference to American, Canadian, Anglo-Australian and German law. He concludes that the duty to disclose is not absolute but relative and that various instances can be identified in which the duty of disclosure is restricted or does not exist at all. He notes that these exceptions to the general disclosure rule have been conveniently categorized in the form of instances where the defence of therapeutic privilege is applicable in certain jurisdictions. These are the following:

(1) Where disclosure would be detrimental to the patient’s health (physical or mental) or endanger his or her life.
(2) Where it might interfere with the patient’s rational decisionmaking.
(3) Where it might detrimentally affect the patient’s therapy.
(4) Where it would be inhuman.
(5) Where the risks attached to it are as grave as those attached to the treatment or even outweigh them.
(6) Where it will present a threat to a third party.

Christie (fn 2 supra) at p 320 notes that silence may amount to a misrepresentation in some cases. There is no general rule that all material fact must be disclosed and that non-disclosure therefore amounts to misrepresentation by silence but in certain circumstances this is undoubtedly the rule. (\textit{McCann v Goodall Group Operations (Pty) Ltd} 1995 (2) SA 718 (C) 723E-F). He notes that in \textit{Incor Pension Fund v Marine and General Trade Insurance Co Ltd} 1961 (1) SA 178 (T), Roberts AJ at p185 softened the previous hard line between contracts of insurance and other contracts in these words: “In some contracts parties are required to place their cards on the table to a greater extent than in others, but the determination of the extent of the disclosure does not depend on the label we choose to stick on a contract. The principles applicable to contracts of insurance do not differ in essence from those applicable to other kinds of contracts, but where one party has means of knowledge not accessible to the other party, and where from the nature of the contract the latter (as in the case of insurance) binds himself on the basis that all material facts have been communicated to him, the non-disclosure of any such fact is fatal... The contract is void because the risk run is in fact different from the risk understood and intended to be run at the time of the agreement (Carter v Boehm, 97 ER 1162). These principles apply to suretyship though there is no universal obligation to make disclosure but “very little said which ought not to have been said, and very little not said which ought to have been said would be sufficient to prevent the contract being valid” (\textit{Davies v London Provincial Marine Insurance Co} (1878) 8 Ch D 469 at p 473). Christie notes at p321 that other circumstances in which there can be no doubt that silence may amount to a misrepresentation are: where part of the truth has been told but the omission of the remainder gives a misleading impression (\textit{Marais v Edelman} 1934 CPD 212); where a true representation has been made but before the making of the contract the facts have changed (\textit{Viljoen v Hillier} 1904 TS 312 p 315-316; \textit{Clowse v Smithfield Hotel (Pty) Ltd} 1955 (2) SA 622 (O) p 626-627); where a party, not necessarily with a dishonest motive, has done something which has had the effect of concealing facts which would otherwise have been apparent to the other party (\textit{Diblev y Porter} 1951 (4) SA 73(C); \textit{Knight v Hamming} 1959 (1) SA 288 (FC); where a party presents for signature a standard form contract without drawing attention to an unusually onerous clause, in circumstances where he must have known that the signatory would not read the contract and discover the clause (\textit{Kempston Hire (Pty) Ltd v Snyman} 1998 (4) SA 371 (SE)).

\textsuperscript{101} Christie (fn 2 supra) at p 320 notes that silence may amount to a misrepresentation in some cases. There is no general rule that all material fact must be disclosed and that non-disclosure therefore amounts to misrepresentation by silence but in certain circumstances this is undoubtedly the rule. (\textit{McCann v Goodall Group Operations (Pty) Ltd} 1995 (2) SA 718 (C) 723E-F). He notes that in \textit{Incor Pension Fund v Marine and General Trade Insurance Co Ltd} 1961 (1) SA 178 (T), Roberts AJ at p185 softened the previous hard line between contracts of insurance and other contracts in these words: “In some contracts parties are required to place their cards on the table to a greater extent than in others, but the determination of the extent of the disclosure does not depend on the label we choose to stick on a contract. The principles applicable to contracts of insurance do not differ in essence from those applicable to other kinds of contracts, but where one party has means of knowledge not accessible to the other party, and where from the nature of the contract the latter (as in the case of insurance) binds himself on the basis that all material facts have been communicated to him, the non-disclosure of any such fact is fatal... The contract is void because the risk run is in fact different from the risk understood and intended to be run at the time of the agreement (Carter v Boehm, 97 ER 1162). These principles apply to suretyship though there is no universal obligation to make disclosure but “very little said which ought not to have been said, and very little not said which ought to have been said would be sufficient to prevent the contract being valid” (\textit{Davies v London Provincial Marine Insurance Co} (1878) 8 Ch D 469 at p 473). Christie notes at p321 that other circumstances in which there can be no doubt that silence may amount to a misrepresentation are: where part of the truth has been told but the omission of the remainder gives a misleading impression (\textit{Marais v Edelman} 1934 CPD 212); where a true representation has been made but before the making of the contract the facts have changed (\textit{Viljoen v Hillier} 1904 TS 312 p 315-316; \textit{Clowse v Smithfield Hotel (Pty) Ltd} 1955 (2) SA 622 (O) p 626-627); where a party, not necessarily with a dishonest motive, has done something which has had the effect of concealing facts which would otherwise have been apparent to the other party (\textit{Diblev y Porter} 1951 (4) SA 73(C); \textit{Knight v Hamming} 1959 (1) SA 288 (FC); where a party presents for signature a standard form contract without drawing attention to an unusually onerous clause, in circumstances where he must have known that the signatory would not read the contract and discover the clause (\textit{Kempston Hire (Pty) Ltd v Snyman} 1998 (4) SA 371 (SE)).

\textsuperscript{102} \textit{Pretorius} 1965 (3) SA 410 (W) in which the court said there was “an involuntary reliance of the one party on the frank disclosure of certain facts necessarily lying within the exclusive knowledge of the other such that in fair dealing the former’s right to have such information communicated to him would be mutually recognised by honest men in the circumstances.” Vieyra J based his judgment on an article by MA Millner (1957) ‘Fraudulent Non-Disclosure’ 74 SALJ 177.
would not be practical in the business sense. Christie states that it is difficult to imagine any other basis for the rule that partners and agents must make full disclosure than that their co-partners and principals are, by the very nature of their relationship, in a position of involuntary reliance on them - it would not be practical in the business sense for them to obtain information on material facts known to their partners or agents by making inquiries elsewhere. It is submitted that the same is true, if not more so, for the patient with regard to the information concerning his health and medical treatment in the possession of the health care provider. The patient is involuntarily reliant on the health care provider to disclose information which, practically speaking, it would be impractical to obtain elsewhere. Christie notes that -

"...we require disclosure of material facts in insurance and other contracts not because they are contracts uberrimae fidei but because they are contracts in which a situation of involuntary reliance necessarily exists, and we came to attach the uberrimae fides label to them as a reminder that, in them, this situation always exists." 103

It is submitted that Christie's reasoning is particularly apposite and elucidating in the context of contracts for health care services since the latter perfectly fit the paradigm he proposes with regard to duties of disclosure and so-called fiduciary relationships. It is submitted that much of the tension between the South African government and the private health sector in South Africa at present, ostensibly in relation to law reforms contained in the National Health Act 104 concerning certificate of need and in the Medicines and Related Substances Act 105 concerning the licensing of doctors to dispense medicines, essentially stems from the fact that the state perceives health care providers to have fiduciary responsibilities of an order close to which Birks identifies

103 Christie fn 2 supra at p 322. See also Kerr (fn 21 supra) who states at p 279 that a non-disclosure is similar in many respects to a misrepresentation. At p291 he points out that non-disclosure leaves the other party with an incomplete picture of the situation which leads to a different decision from that which would have been taken had the situation been fully understood. Kerr points out at p 295 that if each party to negotiations leading up to a contract had always to mention all he knew that might conceivably influence the other party most transactions would take an unreasonably long time and/or involve an unreasonable amount of paper work. He states: "Further, some facts are considered in law to be irrelevant to particular transactions. In addition to a certain extent each party is expected to inform himself of available facts." Kerr notes at p 75 that classes of misrepresentation are often distinguished by virtue of the presence or absence of fault or of a particular type of fault. Hence, he says, one encounters distinctions between misrepresentations which are accompanied by fault and those which are not so accompanied. He states that none of these distinctions is truly fundamental. They simply serve to indicate the presence or absence of (a particular type of) fault as but one of the elements of misrepresentation. He states that the distinctions do serve a practical purpose inasmuch as they affect the nature and scope of the applicable remedies and notes that an analysis and systematisation of the requirements of misrepresentation indicate that in the present context misrepresentation is regarded as nothing more than a particular delict. Kerr states that neither logic nor policy appears to necessitate such an approach. It is quite possible - and perhaps even preferable, to focus on the quality of the conduct involved as being improper (whether in the sense of being wrongful or even having a wider meaning) without resorting to a more technical concept such as delict.

104 National Health Act fn 10 supra
105 Medicines Act fn 9 supra
as the third degree of obligatory altruism\textsuperscript{106}, whilst the health professionals and providers themselves have come to perceive the relationship to be at most at the

\textsuperscript{106} Birks P "The content of fiduciary obligation" 2000 Israel Law Review 34 p 3 explores this subject in some detail and argues that the word ‘fiduciary’ fails to identify either the content or the causative event of the obligation of which we generally mean to speak. He notes that since Justice Paul Finn published his prize-winning book in 1977 (Finn PD Fiduciary Obligations) fiduciary obligations have moved into the common law world. "They have become, as the saying goes, all the rage. Breach of fiduciary duty leads to a new civil wrong which can be committed by a wide range of people who find themselves concerned with the welfare of others. Professional advisors, governmental agencies, even parents, have had to take account of this new kind of liability." Although Birks is not in favour of overuse of the fiduciary concept which seems to have been created by its rise to fashion, he continues to state that "Abuse of confidence is one genuine addition to the list. Abuse of confidence is now a well established civil wrong, despite the reluctance of 'tort' to welcome wrongs with no common law pedigree. Breach of fiduciary duty will turn out to be another, but much more closely confined than counsel have tried to make it. The name must change. The word 'fiduciary' signally fails to identify either the content or the causative event of which we generally mean to speak." Birks notes that: "All primary obligations recognised by law require some degree of altruism. In general it requires in the interest of others only that we inhibit our own conduct so that it does not cause harm to them. In special circumstances it requires us to take positive action to improve another's position. In even more special circumstances it requires us to take positive action to improve another's position disinterestedly — that is, uninfluenced by any competing interest of our own. The latter is the third degree of altruism." With regard to whether there are degrees of legal obligations it: "The second degree requires not only positive action in the interest of another but also disinterestedness, the elimination of the pursuit of any conflicting interest of the actor himself. The difference between the two degrees is easy to illustrate from contract cases. A contractor, say a builder, who is obliged to use skill and care to implement the client's wishes, is ex hypothesi constrained to act positively in the interest of the other, the client. He is not thereby obliged to forego discounts and commissions which he knows that he can get from particular suppliers. Similarly a shopkeeper who accepts the burden of advising a buyer as to the suitability of goods for a particular purpose is not bound to exclude from consideration a brand of his own making or in which he has a material interest. The limit of the obligation in these cases is to advance the other's interest according to an objective standard. If the contractor's concurrent pursuit of its own interest brings the performance below that standard it will be in breach, i.e. where materials on which he was able to obtain a discount prove unsatisfactory. But the mere fact that the contractor takes a secret commission or other collateral economic advantage is not in itself a wrong. Only the third degree of altruism requires self-denial of that kind. This line between the second and third degree of obligatory altruism was drawn in Hospital Products Ltd v US Surgical Corporation (1984) 156 CLR 41 (HCA). An American company which manufactured surgical equipment had sent a senior executive, Blackman, to Australia to develop its sales there. In Australia, Blackman, finding that his employers had no patent there, set about copying their products and marketing them through companies which he himself created, in this way he made huge profits in competition with his employers. There was no doubt that he had been under a contractual obligation to use his best endeavours in the interest of contract and he had therefore, in breach, not only taken but also been able to take the profits that he and his companies had made. They failed to establish any secondary obligation to pay over these profits. The majority of the High Court thought that the only way that the American company could establish an obligation to pay over the profits was for them to show that Blackman was their fiduciary (Deane J took the view that this was an unnecessary detour and preferred to ask directly whether this was such a breach of contract as made him liable for his profits). The breach had to be the second degree (profitable approach) they held, not the third. He thought that in such a case in which the lining of the defendant's own pocket was achieved through breach of contract, it was open to the courts to award by way of damages the profits which he had made, without any need to find that the defendant was in breach of a fiduciary obligation...For the purpose of the present exercise of differentiation, all we need to see that, rightly or wrongly, the High Court of Australia thought Mr Blackman was under an obligation to promote the interests of his employer but not under any obligation to promote those interests disinterestedly. That is, he was bound beneath of his own that might put him last to the detriment of his own interests but had to sacrifice the interests of those relying on him. His was, in their view, an obligation of altruism in the second degree. Professional advisors, governmental agencies, even parents, have had to take account of this new kind of liability. Whatever its measure should have been, could only be bad for management, not pursuing interests of his own."
second degree of obligatory altruism. Unfortunately, the Supreme Court of Appeal has recently reinforced this view in *Afrox Healthcare v Strydom*\(^\text{107}\), being unable to see private hospitals as anything different from suppliers of other goods and services. The former requires a certain level of disinterestedness on the part of health professionals and other providers of health care services while the latter only recognises primary duties to act positively for the benefit of another both in contract and, outside of a contract. Birks points out that under the latter head every tort is the breach of a primary duty imposed in the absence of contract. Sometimes the primary duty is to take positive action in the interests of another\(^\text{108}\). This could be seen as a point of fundamental difference between the delivery of health care services in the public sector and that in the private sector. The former is likely to have a higher degree of personal disinterestedness in the delivery of health care services than the latter due largely to the fact that the latter is profit driven unlike the former. It is submitted, however the public health sector is not entirely disinterested in the sense contemplated by Birks but rather that its interests are largely different to those of the private sector. The public health sector although not interested in making profits for profit’s sake does have a very real interest in increasing the scope and size of its income given the enormous financial pressures it faces to meet the ever increasing health care needs of the population in general. However it is interesting that Birks, comes close to using the language of the South African constitution in pointing out that the obligation of disinterestedness cannot be severed from the obligation to *promote and preserve*. He

---

*Afrox* fn 6 *supra* discussed in Chapter 6

Birks fn 106 *supra*. The first degree of obligatory altruism he identifies is framed in the negative and is illustrated by Birks with reference to the case of *Donoghue v Stevenson* ([1932] AC 562 (HL) 580) in which the plaintiff was made ill by the remains of a snail in a ginger beer bottle and in which Lord Atkin famously stated: “The liability for negligence, whether you style it such or treat it as in other systems as a species of ‘culpa’ is no doubt based upon a general public statement of moral wrongdoing for which the offender must pay. But acts or omissions which any moral code would censure cannot in a practical world be treated so as to give a right to every person injured by them to demand relief. In this way that rules of law arise which limit the range of complainants and the extent of their remedy. The rule that you are to love your neighbour becomes in law, you must not injure your neighbour, and the lawyer’s question, who is my neighbour? receives a restricted reply. You must take reasonable care to avoid acts or omissions which you can reasonably foresee would be likely to injure your neighbour. Who then in law is my neighbour? The answer seems to be — persons who are so closely and directly affected by my act that I ought reasonably to have them in contemplation as being so affected when I am directing my mind to the acts or omissions which are called in question*.
notes that an independent obligation to abstain from pursuing interests of one's own is unintelligible, certainly unworkable and states that the very formulation of the chief restatement of this obligation shows that it is an obligation of disinterestedness in the course of doing something: the trustee shall not pursue any interest of his own which might possibly conflict with his duty to the beneficiary, *scilicet* his duty to promote and preserve the interest of the beneficiary. So, says Birks, these two are bound together. The core obligation of the trustee is a compound obligation and it is indivisible at least in the sense that while the positive obligation of care can exist on its own, the obligation of disinterestedness cannot. The trustee, says Birks, must promote and preserve the interests of the beneficiary with the care and skill of a prudent person of business and to abstain from the pursuit of all interests which might conflict with that duty. In the constitutional context in South Africa, the beneficiary for the public health sector is the person who holds the right of access to health care services including reproductive health care in terms of section 27(1) of the Constitution and the state's obligation is to protect, respect, promote and fulfil that right. It is not too difficult to draw an analogy between the position of a trustee and that of the state. That there is an added dimension to contractual relationships between health service providers and patients is widely recognised

In fact a fiduciary relationship can even arise between providers of services to health practitioners in some instances due to the nature of the contractual relationship in terms of which support services are provided to the practitioner.

---

109 For instance in Report C: 'Fiduciary Duty of a MSO On Behalf of a Physicians Contractee' it is noted that in Black's Law Dictionary a contract is defined as an agreement between two or more persons which creates an obligation to do or not to do a particular thing. Black's defines a fiduciary as a person having duty, created by his undertaking, to act primarily for another's benefit in matters connected with such undertaking. A fiduciary invokes a higher level of trust that is born out of dependency. The Report notes that a fiduciary duty as defined by Black's is "a duty to act for someone else's benefit while subordinating one's personal interests to that of the other person. It is the highest standard of duty implied by law." The Report points out that patients generally depend upon and trust the knowledge, professionalism and skill of physicians for their health needs, thus creating a fiduciary responsibility on the part of physicians. Consequently patients are entitled to certain rights as the result of that relationship. AMA Policy 140.975 "Fundamental Elements of the Patient-Physician Relationship" states that these rights include the following: "From ancient times physicians have..." Thus, says the Report, it can be concluded that a fiduciary duty is more than a contract duty, and also that there are certain rights that of patients that physicians should respect. (http://www.ama-assn.org/ama1/pub/upload/mm/21/reporte_97.doc)

110 In Report C (St 109 supra) it is noted that at the 1997 Annual Meeting, the American Medical Association Organized Medical Staff Section (AMA-OMSS) adopted Substitute Resolution A12, "Fiduciary Duty of a MSO on Behalf of a Physician Contractee". The resolution asked that the AMA-OMSS study the legal duties and responsibilities that flow from management services contracts with individual physicians and physician groups. Testimony heard during the OMSS reference committee hearing reflected not only confusion in understanding the legal rights and responsibilities of
Informed consent from a contractual point of view is important to ensure consensus and that the parties are bound by the terms of their agreement.

4.4 Freedom of Contract

Freedom to contract and freedom of contract have been identified as principles that are fundamental to the law of contract in South Africa. This freedom is based on public policy. Since constitutional values and principles now infuse and inform public policy, the principle of freedom of contract must similarly acknowledge and be shaped in accordance with constitutional values and principles. Even before the Constitution came into being, the freedom of contract and the logically allied principle of pacta servanda sunt were defined and limited by considerations of public policy.

---

111 See Standard Bank of SA Lid v Wilkinson 1993 (3) SA 822 (C) in which the court stated: "Which brings us to the third aspect that must be borne in mind, viz that public policy favours the utmost freedom of contract and requires that commercial transactions should not be unduly tramelled by restrictions on that freedom (see Sasfin at 9E-F). As Innes CJ said in the Law Union Rock case supra at 598: 'Public policy demands in general full freedom of contract; the right of men freely to bind themselves in respect of all legitimate subject-matters.'

One is further reminded of the much-quoted aphorism of Jessel MR in Printing and Numerical Registering Co v Sampson (1875) LR 19 Eq 462 at 463: 'If there is one thing which more than another public policy requires, it is that men of full age and competent understanding shall have the utmost liberty of contracting and that their contracts, when entered into freely and voluntarily, shall be held sacred and shall be enforced by courts of justice.'

(See also Wells v South African Aluminate Company 1927 AD 69 at p 73) In SA Sentrale Ko-op Grammaatskoppie Bpk v Steffen en Anders 1964 (4) SA 760 (A) at 767A, Steyn CJ emphasised "die elementêre en grondliggende algemene beginsel dat kontrakte wet wrylik in en alle ens deur bevoegde partye aangegaan is, in die openbare belang afgedwing word." It is this freedom of contract and the voluntary acceptance by a surety of the burdens of suretyship that bring us to the conclusion that it is only when a suretyship agreement or some of its terms are clearly iminical to the interests of the community as a whole that it or they should be declared to be objectionable.

112 In Bank Of Lisbon and South Africa Lid v De Ornellas and Another fs 45 supra Jansen JA stated: Apart from statutory innovations, there are in any event a number of well-recognised instances in our law of contract where freedom of contract and the principle of pacta servanda sunt and the ideal of certainty give way to other considerations. A few examples may be mentioned. A creditor has a right to specific performance but a Court may in the exercise of its discretion refuse to make such an order. The discretion "is aimed at preventing an injustice - for cases do arise where
Strauss\textsuperscript{113} in discussing the doctor-patient relationship in the private sector context points out that a doctor is, with a few exceptions, at liberty to select or refuse patients at will. Continuing he observes that “There being no legal duty in general upon a doctor to accept a patient, it is also true that the doctor has no general right to treat any person”\textsuperscript{114}. At first glance, this statement does not seem to be true of a situation in which the state is constitutionally obliged to provide access to health care services as discussed in chapter two. If one assumes for the moment that there is an obligation on the state to provide health care services, this does not necessarily mean that the state has a general right to treat a person. It is a well-established principle that people cannot as a general rule\textsuperscript{115} be treated against their will even if there is an obligation to treat. The patient’s rights to bodily and psychological integrity in terms of section 12 of the Constitution cannot be taken lightly. As far as the state’s obligation to treat a patient, if any, is concerned, this must also be qualified by the fact that the Constitution itself recognises that the realisation of the right to health care services is limited by available resources and that it requires a series of progressive steps towards achievement of the right.\textsuperscript{116} In view of this there can only be at best a qualified obligation on a public provider to treat a patient. It is submitted, however that even so, the matter is not as simple as this for a number of reasons. Firstly, as has been

\textsuperscript{113} Strauss fn 98 supra at p3

\textsuperscript{114} Strauss fn 98 supra

\textsuperscript{115} Where there is a serious risk to public health or safety from highly contagious diseases or mental illness the position is somewhat different but these situations are exceptions to the general rule and are strictly controlled by legislation for example the Health Act No 63 of 1977 and Regulations thereto and the Mental Health Act No 18 of 1973 soon to be replaced by the Mental Health Care Act No 17 of 2002.

\textsuperscript{116} In reality, if one regards the right of access to health services in its purest form as being unrestricted access to health services of all types and levels necessary and appropriate for the treatment of any health condition then the right of access to health care is unlikely ever to be realised but will always consist of an endless progression towards it.
stated in chapter two of this thesis, section 27(1)(a) of the Constitution states simply that everyone has the right of access to health care services including reproductive health care. It does not suggest that the state alone bears the concomitant obligation of this right. Section 27(2) imposes an obligation upon the state to take reasonable legislative and other measures within its available resources to achieve the progressive realisation of the right. The wording of section 27(2) does not require the state to provide health care services. It imposes a much less direct obligation – to take reasonable legislative and other measures within its available resources to achieve the progressive realisation of the right. The obligation that is imposed upon the state by section 27(2) allows a fair degree of flexibility to the state in achieving the progressive realisation of the right. Furthermore, the right awarded in section 27(1)(a) is a right of access as has been pointed out in chapter two. It is submitted that the wording of section 27 of the Constitution allows sufficient latitude for the state not to provide health care services at all but rather to contract with private sector providers for the provision of those services. Such a step would still be fulfilling its constitutional obligation to take reasonable legislative and other measures to achieve the progressive realisation of the right within available resources. Strictly speaking there is thus no explicit constitutional obligation upon the state to provide health care services itself. Whether or not such an obligation exists would depend upon the circumstances governing the availability of health care services in South Africa. In a situation such as the present, the private sector does not have the capacity to provide health care services to the general population. As long as such a situation exists, it could probably successfully be argued that the state does have a constitutional obligation to provide health care services itself. However, if the state contracted out the management of public health care facilities to the private sector - in other words placed at its disposal the remaining health care facilities in the country - and entered into contractual arrangements with the private sector whereby the latter provided health care services to all residents of South Africa in fulfilment of the state's constitutional obligations, and the state became essentially a funder of health care services rather than a provider, it could not be argued that the state was legally obliged to treat anyone. In a situation in which the state had contracted out the delivery of health services to the private sector, the constitutional right of access to health care services would be enforceable against both the state and the private sector since while the state could never escape its constitutional obligation to achieve the
realisation of the right of access to health care services, the private sector would be contractually or even statutorily\textsuperscript{117} obliged to provide those services. The other qualifier is that even if the state is obliged to provide health care services itself, it does not necessarily follow that it must provide them to everyone. People who have access to health care services because they are able to pay for them would not necessarily be entitled to health care services from the state in the absence of express arrangements to the contrary.

The privatisation scenario painted above, although it is not, to the knowledge of the writer, currently contemplated by the South African government, is a useful illustration of the notion that a private sector provider's right to refuse to treat a patient may not be much different to that of a public sector provider and of the further logical step that the freedom to choose with whom to contract is not necessarily proof, or a \textit{sine qua non}, of the contractual nature of the provider-patient relationship. Even in the private sector, it is doubtful whether a private provider would have the right to refuse, without good reason, to treat anyone who came to him or her for health care services. Strauss observes that a doctor who arbitrarily and unreasonably refuses to attend a seriously ill or injured person may be held liable if the patient cannot manage to get another doctor and suffers harm\textsuperscript{118}. He refers to Voet who states that a doctor who refuses to attend a patient cannot be held liable under the Aquilian law (i.e. for damages), although, Voet adds that “it would suit the duty of a good man to come to help the imperilled fortunes of his neighbour, if he can do it without hurt to himself.”\textsuperscript{119} He notes that Voet hastens to add that a doctor who performs a good operation but then abandons the curative treatment will not escape liability. Strauss then discusses the question of liability for omissions with reference to the duty to rescue with reference to the case of \textit{Minister van Polisie v Ewelso}. Whilst this is straying into the area of the law of delict, which will be the subject of further discussion in another section of this chapter, it must be noted here, as it was noted in section 2 of this chapter dealing with administrative law, that questions of public policy, especially as identified in the values espoused by the Constitution, are

\textsuperscript{117} For instance in terms of a statute creating a social health insurance system in which private providers must provide certain health services if the state enters into a contract with them.
\textsuperscript{118} Strauss (fn 98 supra) is writing primarily in the context of the private sector but does not specify whether he regards this statement as applicable to both public and private sectors or only one of them.
\textsuperscript{119} Strauss fn 98 supra p 23 quoting at footnote 2, \textit{Commentarius ad Pandectas} 9.2.3 (Gene's translation).
common to the law of both delict and contract. Policy considerations in the law of delict which impose an obligation upon a health services provider to provide such services to a particular patient may be the same policy considerations that effectively compel a provider to contract with that patient for the provision of health care services.

If the power of the state to refuse to treat a patient is different from that of a public sector provider it is likely to be not so much as a result of the Constitutional obligations of the state to achieve the progressive realization of the right of access to health care services in section 27(2) but rather due to the fact that the state as a provider of health care services is regulated in terms of a number of statutes, for example the Health Act¹²⁰, and is bound by administrative law considerations. It could be that the state contracts with certain categories of patients for the rendering of health services and not others. In this scenario, the patients with whom the state contracts would be the so-called ‘externally funded’ patients, for example patients who are members of medical schemes or who are covered by the Road Accident Fund and who have a choice of whether or not to obtain health services in the public sector, whilst those who are not externally funded and who literally have no choice but to obtain health services in the public sector have a relationship with the state based on administrative law. The reasons for this distinction would be based on the different intentions of the two types of patients and the state with respect to each of them – provided that such intentions are in fact different. This might be indicated in different admission procedures for the two types of patient, procedures for instance in terms of which the externally funded patients are required to sign forms on admission that indicate a contractual intent such as an undertaking to pay for the services rendered in the event of the failure of their medical schemes to pay, the application of different rates and terms of payment to the externally funded patients, their utilisation of specific facilities within a health establishment reserved only for externally funded patients, consent to be bound by the undertaking in their personal capacity etc. In the case of patients who are not externally funded, the inherent nature of health care services is such that the intention of such patients in a contractual context would play a relatively minor role compared to the intention of the state. Whilst this may seem

¹²⁰ Health Act fn 18 supra
unpalatable it is the hard truth of the matter. Such patients have no bargaining power. They have no choice but to accept the services offered by the state or remain ill or injured, and possibly even die. They have no option but to use state facilities, no power to demand particular drugs or services in preference to others that achieve the same result, no real power to refuse to enter into a contractual relationship if the state decides that this is its preferred legal basis for the public provider relationship. The situation strikes at the heart of the general, free market contractual assumption that the parties are on a relatively equal footing. Where public policy recognises that they are not on an equal footing there is usually significant legislative or judicial ‘interference’ in the relationship such as happens, for instance in the case of employment contracts or restraint of trade agreements. In the health care sector contracts generally and in the public health care sector in particular contracts are very often not expressed in writing and are not even in express terms. If they exist, they are very often implied. They are inferred from the circumstances. As such they are often conceptual frameworks retrospectively superimposed upon a particular set of factual circumstances so as to come to a particular conclusion on the basis of a pre-selected process of logic. As such they are elegant, often ethereally grey, legal fictions after the fact as opposed to the present intentions of the parties baldly stated in black and white.

121 Diement J observed at p762-763 in Wohmann v Buron 1970 (2) SA 760 (C): “It is trite law that a distinction must be drawn between contracts entered into between masters and servants and contracts for the sale of a goodwill where the parties contract on an equal footing. This has been stated many times. I need refer only to the oft-cited judgment of Greenberg, J.A., in Van de Pol v Silbermann and Another, 1952 (2) SA 561 (AD) at p. 571. In that case the learned Judge said that in agreements in restraint of trade where the parties are contracting on an equal footing the fact that they have agreed on terms is not conclusive evidence that such terms are reasonable, nevertheless such agreement is weighty evidence pointing to the conclusion that the restraint imposed was no more than was necessary to protect the interests of the parties concerned.” The link between freedom of trade, sanctity of contract and the power balance between the parties is evident from Dredtons (Pty) Ltd v Carlis 1981 (4) SA 305 (C) in which Watermeyer JF stated: “In Crimmers Salon (Pty) Ltd v Thomas 1981 CPD unreported I had occasion to say: ‘I am also of the firm conviction that while there is, of course, the need for the Court to preserve the right of freedom of trade, it is equally necessary, if not more so, to maintain the sanctity of contract and the Court should be slow to decline to enforce the terms of an agreement, including those of a restraint clause, voluntarily entered into by adults of contractual capacity who contract on an equal footing.’” Claassen J observed in Filmer And Another v Von Straaten 1965 (2) SA 575 (W): “In the case of Hepworth Ltd v Snelling, 1962 (2) P.H. A48, 1, mentioned the well-known legal principles applicable in a case like the present. For the sake of convenience I repeat here substantially what was said on that occasion: ‘The law appertaining to a matter of this nature has been stated in many cases in this country and in England. The law could be considered from three aspects: A. The general rule applicable in all trade-restricting contracts. B. The general rule applicable where parties contract on equal terms - such as where two general dealers or two auctioneers enter into a trade restricting contract. C. The rules applicable where parties do not contract on equal terms, as, for example, in the cases of master and servant or teacher and pupil... As to ‘B’ it is the general tendency of the Court not to interfere between parties contracting on equal terms, provided the public interests are not affected detrimentally. The parties are considered the best judges of what is a reasonable contract between themselves. The doctrine pacta sunt servanda is applicable, and the Courts look with disfavour on a party attempting to escape from a contract into which he has entered with his eyes open, and then alleging afterwards that it was unreasonable. See New United Yeast Distributors (Pty) Limited v Brooks, 1935 W.L.D. 75 at p. 83. In Shacklock Philips-Pege (Pty) Ltd v Johnson 1977 (3) SA 85 (R), Goldin J commented at p89: ‘The Court will regard with more favour and abstain from interfering in contracts between parties contracting on equal terms than in disputes between persons of unequal bargaining power, because equal contracting parties may often be regarded as the best judges as to what protection is reasonable in their own interests (Spa Food Products Ltd., supra at p. 718; Ackermann-Gögglingen Aktiengesellschaft v Marshing, 1973 (4) SA 62 (C) at pp. 72 - 73; Esco’s Case, supra at p. 712).
In a situation where one party has no real choice but to enter into a contract, no choice in reality as to the terms and conditions thereof and no bargaining power with which to negotiate contractual terms and conditions with the other party, the inference of a contractual relationship between them would, it is submitted, be highly artificial to say the least.

At a constitutional level there is no prohibition on either the public or private sector either contracting or charging for health care services. The requirement is not ‘free’ health services but “access” to health services. As has been pointed out in a previous chapter, ‘access’ means different things to different people depending on their personal means and resources. In the case of the indigent, ‘access’ may well imply that health services must be rendered free of charge but in the case of patients who can afford to pay even if it is only a small amount, towards the costs of the health care services they receive, ‘access’ does not mean free of charge. The state has the power to legislate tariffs and fees for services it renders in order to cover the costs or partial costs thereof. In such circumstances, it has no need of a contractual relationship upon which to base its right to payment. This state of affairs may mitigate against the inference of a contractual relationship between provider and patient.

4.5 Emergency Medical Treatment

122 In J De Moor (Edms) Bpk v Beheerliggaam Van Oostenburg 75/80 1985 (3) SA 997 (T) the court observed: "In Roberts Construction Co Ltd v Dominion Earthworks (Pty) Ltd and Another 1968 (3) SA 255 (A) het die Appellhof besliss dat: "An implied contract cannot be pleaded baldly and left, as it were, in the air without any indication from what it is to be inferred. It is necessary to plead the circumstances giving rise to the implied contract." Op 261F in fine- 262A - C ş8 Jansen WN AR: 'The general principle would require a statement of the facts or circumstances constituting any implied contract relied upon, or, put in another way, the facts or circumstances from which such contract is inferred'. In Spes Bona Bank v Portals Water Treatment 1981 (1) SA 618 (W) Nestache pointed out: Wessels Law of Contract in South Africa 2nd ed vol 1 para 261, quoting an old English case, says that the only difference between an express and an implied contract is as to the mode of proof. An express contract is proved by direct evidence, an implied contract by circumstantial evidence. The nature of such evidence was referred to by Van Zyl J in Frame v Palmer 1930 (3) SA 340 (C) at 345 in the following terms: "... An implied or tacit contract differs from an express contract only in the manner in which the offer or acceptance is made, namely it is not expressed in words, gesture or writing but is implied from all the circumstances and the actions of the parties: Voot 2.14.15. From these circumstances and actions the Court, in order to establish such a contract, must come to the conclusion that there was an implied offer and implied acceptance and that the parties intended to contract with each other; in other words that from the circumstances and by their actions the parties in fact intended that a binding contract should come into being. With the exception that the contract is entered into tacitly or by implication all the other essentials which must be present when an ordinary express contract is entered into must also be present in an implied contract. (See too Fiat SA v Kolbe Motors 1975 (2) SA 129 (O); Wesse ela vol 2 par H 4426.) The person whom it is proposed to fix with a tacit contract must be fully aware of the circumstances referred to and his conduct must be unequivocal. (Blackie-Johnstone v Holliman 1971 (4) SA 108 (D) at 119; Big Deschenes (SA) (Pty) Ltd v Barclays National Bank Ltd 1979 (3) SA 267 (W) at 281; Wesse ela paras 259, 260) In the latter regard, Wesseela, quoting Masscomb, Institutions of SA Law vol 3 4th ed at 64, states (in para 255): "In order to constitute a valid tacit contract, the conduct of the parties must not only be such as to be consistent with consent, but such as will allow of no other interpretation according to the rule of common sense." This paragraph was referred to with approval in Britsow v Lycett 1971 (4) SA 233 (RA). The legal effect, therefore, of a person's conduct depends largely upon what a court of law thinks a reasonable man would consider his intention to have been. It the court has any doubt, the presumption will be against the person who asserts that there has been a tacit contract."
At the outset a distinction must be made between health care services generally and emergency medical treatment, given that the Constitution itself draws such a distinction. However, even the right not to be refused emergency medical treatment is not without its limitations. These limitations are essentially the available resources of the state. The KwaZulu-Natal Health Act refers to ‘emergency medical services’ rather than ‘emergency medical treatment’. It states at section 29(1) that a health care user is entitled, “as a matter of right, to emergency medical services for any life threatening condition at any public health care establishment or private health care establishment”. Subsection (3) of section 29 stipulates that a person employed in a public health care establishment or private health care establishment who turns away a person requiring emergency medical services in terms of subsection (1) commits an offence. This is an extreme view of the right of not to be refused emergency medical treatment since it criminalizes (at least in the province of KwaZulu-Natal) the act of turning away a person requiring emergency medical services. The other provinces do not share this view. The Mpumalanga Hospitals Bill of 1997 states in section 18 concerning admission and discharge of patients: “The head of clinical services of a provincial hospital shall, subject to any regulations, determine the order in which persons shall be admitted to such hospital having regard to the urgency of their need for treatment: provided that admission to a provincial hospital may not be denied in the case of an emergency. The Bill does not make this an offence. The Mpumalanga Health Facilities and Services Bill of 2000, which seems to have superseded the Mpumalanga Hospitals Bill of 1997, also makes no mention of a refusal of emergency treatment as being a criminal offence. Section 4 is the same as section 18 of the 1997 Bill. The Eastern Cape Provincial Health Act merely stipulates at section 12(b) with

123 Thus Combrinck J in Soobramoney v Minister Of Health, KwaZulu-Natal (fn 76 supra) observed as follows at 439-440: “As pointed out by counsel for the respondent a 27(3) does not create a right to emergency medical treatment. It prohibits anyone from refusing emergency medical treatment. I consider that the section must be interpreted in such a way that it is implicit in the words ‘emergency medical treatment’ that such treatment is possible and available. It could surely not have been the intention of the Legislature that irrespective of the costs and whether or not funds were available and irrespective of whether the treatment was available the persons requiring emergency medical treatment had to receive such treatment. So, for instance, if a hospital had an intensive care unit which was full and an emergency patient arrived would it be obliged to move one of its patients out so as to accommodate the emergency patient? Alternatively, is the State obliged to build additional intensive care units, procure additional dialysis machines, ventilators, heart-lung machines and other life-saving equipment to enable it to cater for all the patients requiring emergency medical treatment? It could surely not have been the intention of the Legislature that the right to access to health care was subject to the constraints of the State's resources and that a patient could be refused treatment but when his or her condition reached a critical stage and emergency treatment was required, the State then had to provide it irrespective of the cost.”

124 KwaZulu-Natal Health Act No 4 of 2000

125 Provincial Gazette No 282 of 25 October 1997, Notice No 356 of 1997. As far as the writer has been able to ascertain, this Bill has not yet been passed into law in Mpumalanga

126 Eastern Cape Provincial Health Act No 10 of 1999
regard to emergency medical treatment for any life threatening condition that users are entitled to it “through ambulance services and at any public or private health care establishment.” The National Health Act\textsuperscript{127} does not criminalize a refusal to render emergency medical treatment. This discrepancy between the law of KwaZulu-Natal and the other provinces illustrates the need for framework legislation such as the National Health Act. The KwaZulu-Natal Health Act\textsuperscript{128}, in criminalizing the constitutional prohibition of a refusal to render emergency medical services does not specify any exceptions to the rule. No matter how busy or incapable a health facility may be of attending to a particular patient, no matter how many other emergency patients it may also have to attend to, no matter how few health professionals may be physically available to give the patient immediate attention, it is a criminal offence, in KwaZulu-Natal, to turn away someone requiring emergency medical services. It could even be argued that the criminalizing of such a provision is counterproductive since instead of quickly referring a person requiring emergency medical treatment to another facility where he or she can be attended to immediately, such person may have to wait for a while at the facility he or she first went to for assistance because the personnel there might be afraid of committing a criminal offence in sending him or her to another health care institution. In genuine circumstances of emergency such delays can be fatal. Whilst it could be argued that emergency medical services could be seen as including the act of sending a person to another health care facility that is better equipped to render the emergency services required, this is not at all clear from the definition in the KwaZulu-Natal Health Act\textsuperscript{129}.

If a person is entitled to emergency medical services ‘as of right’ this does not necessarily mean that a contractual relationship cannot arise between the patient and the provider. However, the reasons for inferring such a relationship may be thin on the ground. The fact that a person is entitled to emergency medical services also does not preclude the provider from subsequently seeking payment from the patient or other responsible person for the emergency medical treatment that was rendered.

The terms ‘emergency medical services’ and ‘emergency medical treatment’ are not necessarily synonyms. Firstly the term ‘emergency medical services’ in the health

\textsuperscript{127} National Health Act fn 10 supra
\textsuperscript{128} KwaZulu-Natal Health Act fn 124 supra
\textsuperscript{129} KwaZulu-Natal Health Act fn 124 supra
care environment tends to focus attention on health care service infrastructure such as trauma units and the manner in which such units are equipped, ambulance services and who may operate them, other specialised forms of transportation of critically ill or injured persons, and disaster management and containment systems. The term ‘emergency medical treatment’, on the other hand is rather more indicative of the direct and immediate application of recognised medical techniques to the person of one requiring such treatment. It is more personalised and less diffuse than the term “emergency medical services” and conveys a sense of application of medical skill and knowledge to an individual who is seriously ill or injured. It is the term used by the Constitution in section 27(3).

Attempts to define the term ‘emergency medical treatment’ are problematic from the point of view of constitutional law since there is no definition of the term in the Constitution itself. An attempt to define it in other legislation for the purpose of giving effect to the right embodied in section 27(3) of the Constitution could be regarded as an attempt to indirectly amend the Constitution. At the same time, the Constitution is what might be called framework legislation par excellence in the sense that the detailed mechanics relating to the Bill of Rights are not contained therein. The question of what constitutes an emergency has apparently plagued other jurisdictions to the extent that they have seen fit to define it fairly specifically. Although the constitutional court has very usefully given an idea of the nature of emergency medical treatment in Soobramoney, it too did not give a precise definition but rather expressed a general sense of what emergency medical treatment does not include — notably chronic conditions in respect of which ongoing, long-term medical treatment is required and designed to indefinitely postpone death rather than to immediately save a life. This creates something of a certainty problem for people generally and the law relating to the delivery of health care services in particular. Whilst the court in Soobramoney seems to have ruled out the possibility of a subjective interpretation

---

130 See discussions of emergency medical treatment in Chapter Two — especially with regard to the American Emergency Medical Treatment and Labor Act.
131 Soobramoney v Minister of Health, KwaZulu-Natal (fn 37 supra)
132 Soobramoney fn 79 supra. Combrinck J observed in Soobramoney at p 440: “In any event, the applicant, in my view on the facts, cannot rely on the provisions of s 27(3). He has been suffering from the diseases mentioned for some years. He has not contracted a sudden illness or sustained unexpected trauma. It is true that if he does not receive the treatment he will die. Unfortunately, that is the position with all persons who suffer from long term disease. So, for instance, a person who has cancer may suffer from the disease for a number of years, but will eventually reach the stage where within days he will die. It is then an emergency situation for him but it is not the emergency that, in my view, the Legislature had in mind in s 27(3).” (writer’s italics).
of the term ‘emergency’ so that the patient’s perceptions of his or her health status are not the material factor in ascertaining whether or not a particular situation does constitute an emergency, one is still left with the possibility of a large number of grey areas which will presumably ultimately have to be decided by the courts. For instance is it only situations in which a person’s life is materially threatened that are envisaged by section 27(3) of the Constitution or does it include situations in which a person’s health, as opposed to life, is threatened? Take for instance a situation where a worker loses a finger in an industrial accident and is rushed to the nearest health facility where he urgently requires surgery to have the finger re-attached to his hand if he is to regain full use of it or the situation of a person who sustains a chemical injury to her eyes which, if treated immediately will save her sight although her life is not in any danger. What about a woman who is in labour and about to give birth? Does her situation constitute a medical emergency or does it only become an emergency when it becomes necessary for her to have a Caesarian section because the child is positioned incorrectly and becomes stuck in the birth canal? As stated previously the question of what constitutes emergency medical treatment as opposed to ordinary health care services has considerable financial implications given the Constitutional prohibition on refusal of medical treatment. It is logical, given this state of legal affairs, that the nature of emergency medical treatment will have to be determined with regard to each particular case and possibly, in terms of the principle of subsidiarity, the decision as to whether or not treatment does constitute emergency medical treatment is ultimately a medical decision rather than a legal one. This does not, however, solve the potential problem of variations in practice due to the subjectivity of the health professionals involved. It is conceivable that one health professional may quite reasonably classify certain medical treatment as ordinary health care services whilst another could justifiably argue that the same treatment

133 In Soobramoney fn 79 supra Combrinck J observed: “Where there is a conflict such as this, the Court would normally weigh up the interests of the respective parties and based on equity decide which party's right should take precedence over the other. Insofar as the present case is concerned however, I am of the view that it is not the function of the Court to decide who shall and who shall not receive the required medical treatment. It is for the medical practitioners to make these decisions. They are qualified, whereas I am not, to decide on clinical grounds which patient will benefit the most from the treatment. The Court will only interfere if the doctors involved have exercised their judgment unreasonably, arbitrarily or have discriminated against a patient. In this regard I am in complete accord with the remarks of Balcombe LJ in the case of Re J (a minor) (wardship: medical treatment) a judgment of the Court of Appeal reported in [1993] 4 All ER 614 at 625g: 'I would also stress the absolute undesirability of the court making an order which may have the effect of compelling a doctor or health authority to make available scarce resources (both human and material) to a particular child, without knowing whether or not there are other patients to whom those resources might more advantageously be devoted. Lord Donaldson MR has set out in his reasons the condition of J and his very limited future prospects. The effect of the order of Waite J, had it not been immediately stayed by this court might have been to require the health authority to put J on a ventilator in an intensive care unit, and thereby possibly to deny the benefit of those limited resources to a child who is much more likely than J to benefit from them."
constitutes emergency medical treatment. The reason for this is that there is usually an element of subjectivity in any expert opinion whether of a legal or medical or other technical nature. As stated previously, attempts to define the term ‘emergency medical treatment’ in legislation, are constitutionally problematic because the Constitution itself does not define the term. There is also a practical difficulty which runs alongside the legal one. Attempts at definition of this kind of term are complicated by the fact that a definition is a generic description of a concept based upon an appreciation of most, if not all of the foreseen or anticipated variations that can occur within such a concept whilst emergency situations are often difficult to foresee or anticipate (adjectives such as ‘sudden’ and ‘unexpected’ are often used in relation to the word ‘emergency’\(^{134}\) and the number of possible permutations is considerable and unpredictable. What constitutes an emergency with regard to one set of facts may not constitute and emergency in respect of another. A case in point is that of a person stung by a bee. The bee sting itself may or may not be an emergency depending on whether or not the person stung is allergic to bee stings. An allergy to bee stings can be life threatening for a person who is allergic since he or she may suffer from anaphylactic shock brought on by the venom but such a sting would be a completely minor event for someone who is not allergic.

The question is where does emergency medical treatment begin and end. From the point of view of the provider patient relationship, this distinction may depend upon whether the relationship has a basis in contract or not. It may be that emergency medical treatment is not based upon the law of contract but other health services are.

It could be argued that the rendering of emergency medical treatment is a public function - because in terms of the Constitution, no-one may be refused emergency medical treatment – whereas the rendering of other health services may or may not be a public function depending upon whether it is a public or private provider that is rendering the services. This point will be explored in more detail in the section on the private sector. In practical terms one must ask for example, whether the emergency

\(^{134}\) In Soobramoney (fn 37 supra) the court noted with regard to the experience of the patient in *Paschim Banga Khet Mazdoor Samity and Others v State of West Bengal and Another* that “the occurrence was sudden, the patient had no opportunity of making arrangements in advance for the treatment that was required, and there was urgency in securing the treatment in order to stabilise his condition.” See for example also *Samson v Winn 1977 (1) SA 761 (C) in which the court held: “This is, to my mind, almost a classical case of a sudden or unexpected emergency; and the conduct of the defendant must be judged according to the standards of a reasonable man placed in similar circumstances” and *Epol (Pty) Ltd v Bensidenbouw 1980 (3) SA 624 (T) where the court observed that: “He drove a vehicle in such a manner so as to place the said Moloi in a position of imminent danger and thereby caused the said Moloi to be faced with a sudden and unexpected emergency.”
transportation of a patient to the nearest facility constitute emergency medical treatment (a) if it is not in an ambulance and (b) if it is? When a patient has been attended to within a hospital’s trauma unit and is then transferred to the intensive care unit, does the treatment in intensive care remain emergency medical treatment or does it become a critical health care service? As stated previously, question such as these are important because of the constitutional distinction between emergency medical treatment and health services of a more general nature. The obligations of the provider to the patient may be different depending upon whether or not it is emergency medical treatment. Whilst a provider may in certain circumstances have no option but to refuse a patient emergency medical treatment, the provider may be obliged to refer the patient to another provider who can. The same is not necessarily true in the case of ordinary health services.

In Soobramoney the question was whether the required treatment constituted emergency medical treatment at all. The courts have not yet addressed the question of when medical treatment ceases to be emergency medical treatment for purposes of the Constitution. In practical terms it is likely that this question will have to be resolved on a case-by-case basis. However, for operational and financial reasons, there is a need for health legislation to define the nature of emergency medical care or emergency medical services.

The draft regulations\(^{135}\) to the KwaZulu-Natal Health Act define “emergency medical care” as “the on-site evaluation, treatment and care of an ill or injured public health care user by an emergency care practitioner in an emergency medical incident and the continuation of evaluation, treatment and care of the public health care user during the transportation of the public health care user to or between public health care establishments”. What is meant by “on-site” is not clear. Does it include the treatment of the user in a trauma unit by a medical practitioner who specialises in emergency medical treatment or does it mean only treatment by a paramedic at the site where a person first succumbs to the illness or sustains the injury or does it include both?

\(^{135}\) Notice No 23 of 2002 in Gazette No 6120 of 15 August 2002 (published for public comment)
The Free State regulations define “emergency medical care” as “the evaluation, treatment and care of an ill or injured person in an emergency care situation and the continuation of treatment and care during the transportation of such person to or between medical facilities. The care begins at the site where the emergency occurred, until the patient is discharged/ transferred out of an emergency care facility.” These regulations are for the purpose of controlling and regulating the delivery of emergency medical services in the Free State rather than fleshing out the rights of users to emergency medical treatment. However they at least specify when the emergency situation ends – i.e. when a person is transferred out of the emergency care facility.

The Gauteng Ambulance Services Bill defines “emergency medical care” as “the rescue, evaluation, treatment and care of an ill or injured person in an emergency care situation and the continuation of treatment and care during the transportation of such patients to or between medical facilities in order to prevent loss of life aggravation of illness or injury.” This definition envisages only rescue and evacuation type situations as opposed to treatment once the patient has reached an emergency care facility but then the Bill is primarily concerned with ambulance services as opposed to health services of a broader nature.

A finding of a contractual relationship between a patient and a provider in an emergency situation is likely to be fairly synthetic given the nature of the circumstances in which emergency medical treatment is usually required. The patient is sometimes not even conscious and even if he is, he is usually in no fit state to formulate an intention to contract. The constitutional right to life and the constitutional prohibition on the refusal of emergency medical treatment are consistent. The basis of the relationship is more likely to be in constitutional law than in the law of contract as far as emergency medical treatment is concerned. The fact

136 Provincial Notice No. 63 of 2003 'Regulations Governing Emergency Medical Services In The Free State Province', Provincial Gazette No 22 of 28 March 2003. The regulations define: “Emergency Medical Care Incident” as “an event threatening or causing acute injury and/or illness, which requires immediate preventative and/or remedial medical intervention” and “Emergency Medical Service” as “a private or state organization operating on a twenty-four hour basis, which is solely dedicated, staffed and equipped to offer:

(i) pre-hospital medical treatment and the transport of the ill and/or injured;
(ii) inter-hospital emergency medical treatment and transport of referred patients;
(iii) where appropriate, the medical rescue of patients from a medical rescue situation detrimental to the health of an individual or community”

137 Gauteng Ambulance Services Bill Notice No 2229 in Provincial Gazette No 124 of 08 May 2002
that payment may be required of a person who has received emergency medical treatment does not necessarily render the relationship contractual. South African law recognises a number of possibilities for the recovery of expenses or fees such as actions on the basis of unjust enrichment or *negotiorum gestio*\(^{38}\) where a person has acted for the benefit of another at his own expense. The relationship of in the case of *negotiorum gestio* has been described as quasi-contractual\(^{39}\).

It is submitted that the constitutional stipulation that no one may be refused emergency medical treatment is not confined to the public health sector. It applies to the private health sector as well. A private provider may charge for services with respect to emergency medical treatment but this does not detract from the fact that such treatment may not be refused. In such circumstances, the constitutional basis of any contract that may arise between the provider and the patient for such services is

---

138 In *Martitime Motors (Pty) Ltd v Von Steiger And Another* 2001 (2) SA 584 (SE) the concept of *negotiorum gestio* was explained by Jasset J as follows: “It appears from the same work that the term *negotiorum gestio* was originally used to describe the person who acts on behalf of another and solely for the latter’s benefit in circumstances of urgency, knowing that he had no such authority to act. There was and could be no question of any relationship arising between the parties by consent. It was further emphasised by the learned authors that the *negotiorum gestio* plays a constantly shrinking role in the world of ever-improving communications because it is quite clear that an unauthorised person should not interfere in another’s affairs if it is possible to get in touch with that other.” In *Standard Bank Financial Services v Taylor* 1979 (2) SA 383 (C) at 387 fin - 388C Van Zijl JP set out the law in regard to *negotiorum gestorum* as follows: “Our law in regard to *negotiorum gestorum* is based firmly, with but minor divergencies, upon the Roman law. In Roman law the payment of the debt of another without a mandate to do so gives rise to the *actio negotiorum gestorum contraria* and the gestor could recover the amount of such payment together with the interest thereon unless the debtor had some interest in the payment not being made. (See *Diggest* 3.5.43 and 221.3.57.) This quasi-contractual relationship was brought about where the gestor, acting without a mandate, rendered a service to the dominus - in this instance the debtor - and in doing so acted reasonably and in the interest of the *dominus* with the intention not only of administering the affairs of the *dominus* but also of being compensated for such administration. This action fell away if the gestor did not intend to serve the *dominus*, i.e. the gestor mistakenly thought he was administering his own affairs or made payment of a *debt ad lucrum caussa.* There is a basic difference between the gestures in these two instances. In the first the gestor acted *bona fide,* but in the mistaken belief that he was serving the dominus. In the latter instance he acted *mala fide* in his own interest. These two classes of gesture can be described respectively as the *bona fide gestor* and the *mala fide gestor.* Neither of them could sue as *negotiorum gestorit* as neither had the intention to serve the dominus. If, however, the dominus had been enriched at their expense they were each given the right to recover from the dominus on the grounds of unjust enrichment.” The distinction between *negotiorum gestio* and unjust enrichment was explored by the court in *Cousins v Jester Pools (Pty) Ltd* 1968 (3) SA 563 (T) where it noted that “Rubin, *Unauthorised Administration in South Africa,* pp. 72 - 73, also emphasises the distinction between the true action based on *negotiorum gestio* and an action based on enrichment: ‘There can be little doubt that in most cases a *negotiorum gestio* results in actual enrichment of the *dominus.* The destruction of the beneficial service rendered by the gestor before the dominus could enjoy it may easily be regarded as a rare occurrence. It is clear, also, that in some cases the same result would be achieved whether the person rendering the service claimed as a gestor or relied on the principle of unjust enrichment; furthermore, that in such cases, the latter course must be recommended because the intention of the *plaintiff* would be irrelevant, and to that extent the proceedings would be simplified. It must be borne in mind, however, that in the one case the claim is for all the useful and necessary expenses incurred; in the other, it is based upon an entirely different criterion, namely, the extent to which the dominus has been enriched. In the first case the question is whether they are expenses which the dominus would, in his own right, have incurred, whether the amount thereof represents his actual enrichment or not; in the second case all considerations other than the actual enrichment of the dominus fall away. It follows, therefore, that there are circumstances in which a plaintiff who, able to base his claim on *negotiorum gestio,* nevertheless chose to rely on the principle of unjust enrichment, would, thereby, deprive himself of the right to recover part of the amount which he had expended in the course of the gestio. In fact, such a plaintiff would be ill advised to base his claim on the principle of unjust enrichment, unless he had first satisfied himself that he would be entitled to recover no less on that basis than on the basis of *negotiorum gestio.*" See also *Abo Bank Ltd t/A Bankfin v Stander t/A Caw Panalelpoepers* 1998 (1) SA 939 (C) at p944 where van Zyl J observed: “Hence the basic prerequisite for an action arising from *negotiorum gestio,* namely the intention to manage the affairs of another (*animus negotia aliena gerendi*), was absent. I have dealt fully with this prerequisite in my study on *Negotiorum Gestio in South African Law* (1985) at 31-40, where the relevant authorities are set forth.”

139 *Standard Bank Financial Services Ltd v Taylam (Pty) Ltd* 1979 (2) SA 383 (C)
very much apparent. It is submitted that the private provider does not have a choice as to whether or not to render emergency medical treatment. There may be objectively ascertainable circumstances in which such provider is unable to render the required services, for instance because of lack of capacity due to the demands of other patients in a similar situation, or because the technology required to perform certain procedures is unavailable etc but these are objective circumstances that exist irrespective of the inclination, or lack thereof, of the provider to render the emergency medical treatment. If the relationship between a provider of emergency medical services and a person requiring them is contractual, then, it is submitted, it is a contract mandated by the Constitution. The usual rules of freedom to contract do not apply in the sense of that the provider has the power to choose with whom to contract.

4.6 Damages

The damages payable for breach of contract, unlike those in respect of a delict, are usually calculated to place the plaintiff in the position in which he or she would have been but for the breach. A plaintiff who wishes to claim damages must prove –

(a) Breach of contract committed by the other contractant;
(b) Damage;
(c) A factual causal connection between the breach and the damage;
(d) That for the purposes of the law the damage is close enough to the breach in that it was reasonably foreseeable or agreed to by the contractants.\(^{140}\)

There are clearly many areas of commonality between the factors listed above and those required to succeed in a claim in delict.

Christie\(^ {141}\) notes that any the investigation of damages for breach of contract must logically start with an inquiry into whether the damages were caused by breach. It so happens, he says, that this inquiry has engaged the courts more frequently in the law of delict than in the law of contract but in both types of case the inquiry is basically the same and Corbett CJ’s restatement of the relevant principles in *International*
Shipping Co (Pty) Ltd v Bentley\textsuperscript{142} is as authoritative in contract as in delict. Christie points out that these principles call for a two-stage inquiry first into factual causation and then into legal causation. To establish factual causation it must be shown that the breach was the *causa sine qua non* of the loss. This is the same test that is most often applied to establish factual causation in delict and is discussed in more detail in the chapter on the law of delict\textsuperscript{143}.

A contractant who claims damages must prove that he actually suffered damage or loss as a result of the breach of contract. South African courts are not prepared to award nominal damages where actual damage cannot be proven.\textsuperscript{144} In the health care context, the harm suffered in respect breach of contract is in effect very similar to that in terms of the law of delict given the nature of the services that are rendered. There is often pain and suffering, loss of amenities of life, loss of expectation of life and disfigurement as well as patrimonial loss. The law of contract, however, only

\textsuperscript{142} Bentley 1990 (1) SA 680 (A) 700E-701A.

\textsuperscript{143} See also Kerr, fn 21 supra 648, who states that normally a number of factors, each of which is a *conditio sine qua non*, contribute to bringing about the loss. He quotes the dicta of Corbett CJ in *Bentley* (fn 131 supra) to which Christie also refers. At 700E of the judgment Corbett CJ stated: As has previously been pointed out by this Court, in the law of delict causation involves two distinct enquiries. The first is a factual one and relates to the question as to whether the defendant's wrongful act was a cause of the plaintiff's loss. This has been referred to as 'factual causation'. The enquiry as to factual causation is generally conducted by applying the so-called 'but-for' test, which is designed to determine whether a postulated cause can be identified as a *causa sine qua non* of the loss in question. In order to apply this test one must make a hypothetical enquiry as to what probably would have happened but for the wrongful conduct of the defendant. This enquiry may involve the mental elimination of the wrongful conduct and the substitution of a hypothetical course of lawful conduct and the posing of the question as to whether upon such an hypothesis plaintiff's loss would have ensued or not. If it would in any event have ensued, then the wrongful conduct was not a cause of the plaintiff's loss; *aliter*, if it would not so have ensued. If the wrongful act is shown in this way not to be a *causa sine qua non* of the loss suffered, then no legal liability can arise. On the other hand, demonstration that the wrongful act was a *causa sine qua non* of the loss does not necessarily result in legal liability. The second enquiry then arises, viz whether the wrongful act is linked sufficiently closely or directly to the loss for legal liability to ensue or whether, as it is said, the loss is too remote. This is basically a juridical problem in the solution of which considerations of policy may play a part. This is sometimes called 'legal causation'. (See generally *Minister of Police v Strokos* 1977 (1) SA 31 (A) at 34E - 35A, 43E - 44B; *Standard Bank of South Africa Ltd v Costese* 1981 (1) SA 1131 (A) at 1139F - 1139C; *S v Daminis en 'n Ander* 1983 (3) SA 275 (A) at 331B - 332A; *J Simons & Co (Pty) Ltd v Barclays National Bank Ltd* 1984 (2) SA 888 (A) at 914F - 9151E; *S v Mokgethi en 'n Ander* [1990 (1) SA 32 (A)] a recent and hitherto unreported judgment of this Court, at pp 18 - 24.) Fleming JG *The Law of Torts* 7th ed at 173 sums up this second enquiry as follows: 'The second problem involves the question whether, or to what extent, the defendant should have to answer for the consequences which his conduct has actually helped to produce. As a matter of practical politics, some limitation must be placed upon legal responsibility, because the consequences of an act theoretically stretch into infinity. There must be a reasonable connection between the harm threatened and the harm done. This inquiry, unlike the first, presents a much larger area of choice in which legal policy and accepted value judgments must be the final arbiter of what balance to strike between the claim to full reparation for the loss suffered by an innocent victim of another's culpable conduct and the excessive burden that would be imposed on human activity if a wrongdoer were held to answer for all the consequences of his default.' In *Mokgethi's case supra*, Van Heerden JA referred to the various criteria stated in judicial decisions and legal literature for the determination of legal causation, such as the absence of a new actus interveniens, proximate cause, direct cause, foreseeability and sufficient causation ("adequate foreseeing"). He concluded, however, as follows: 'Wat die onderskeie kriteria betref, kom dit my ook nie voor dat buite veel meer eskak is as 'n maatstaf (die soepel maatstaf) waarvolgens aan die hand van beleidsoorwegings beoordeel word of 'n genoegsame noue verband tussen handelinge en gevolg bestaan nie. Daarmee gee ek nie ek nie in konse van of een of meer van die kriteria nie by die toepassing van die soepel maatstaf op 'n bepaalde soort feitkompleks subsidiêr nuttig aangewend kan word nie; maar slegs dat geen van die kriteria by alle soorte feitkomplekses, en vir die doeleinde van die koppeling van enige vorm van regeaanspreeklikheid, as 'n meer konkrete afgrensingsmaatstaf gebruik kan word nie.' It must further be borne in mind that the delictual wrong of negligent misstatement is relatively novel in our law and that in the case in which it affects the claim in question it will be important to consider the extent to which the alleged breach of the duty by the defendant is a cause of the loss suffered by the plaintiff. This is the same test that is most often applied to establish factual causation in delict and is discussed in more detail in the chapter on the law of delict.

\textsuperscript{143} See generally *Minister of Police v Strokos* 1977 (1) SA 31 (A) at 34E - 35A, 43E - 44B; *Standard Bank of South Africa Ltd v Costese* 1981 (1) SA 1131 (A) at 1139F - 1139C; *S v Daminis en 'n Ander* 1983 (3) SA 275 (A) at 331B - 332A; *J Simons & Co (Pty) Ltd v Barclays National Bank Ltd* 1984 (2) SA 888 (A) at 914F - 9151E; *S v Mokgethi en 'n Ander*, [1990 (1) SA 32 (A)] a recent and hitherto unreported judgment of this Court, at pp 18 - 24.) Fleming JG *The Law of Torts* 7th ed at 173 sums up this second enquiry as follows: 'The second problem involves the question whether, or to what extent, the defendant should have to answer for the consequences which his conduct has actually helped to produce. As a matter of practical politics, some limitation must be placed upon legal responsibility, because the consequences of an act theoretically stretch into infinity. There must be a reasonable connection between the harm threatened and the harm done. This inquiry, unlike the first, presents a much larger area of choice in which legal policy and accepted value judgments must be the final arbiter of what balance to strike between the claim to full reparation for the loss suffered by an innocent victim of another's culpable conduct and the excessive burden that would be imposed on human activity if a wrongdoer were held to answer for all the consequences of his default.' In *Mokgethi's case supra*, Van Heerden JA referred to the various criteria stated in judicial decisions and legal literature for the determination of legal causation, such as the absence of a new actus interveniens, proximate cause, direct cause, foreseeability and sufficient causation ("adequate foreseeing"). It must further be borne in mind that the delictual wrong of negligent misstatement is relatively novel in our law and that in the case in which it affects the claim in question it will be important to consider the extent to which the alleged breach of the duty by the defendant is a cause of the loss suffered by the plaintiff. This is the same test that is most often applied to establish factual causation in delict and is discussed in more detail in the chapter on the law of delict.

\textsuperscript{144} 7 LAWSA 'Damages para 12 and Van der Merwe* et* al* fn* 21* supra*
recognises patrimonial damages. In *Edouard v Administrator, Natal*\(^{45}\) the court observed that it may be that the needs of modern society require that damages should be recoverable on contract for non-pecuniary loss for injured feelings, pain and suffering etc but that if there is a need to extend the rules of our law relating to the recoverability of non-pecuniary loss flowing from breach of contract, such need best be accommodated in the law of delict where the concepts of wrongfulness and fault (in the form of *culpa* and *dolus*) and the defences germane to delict can be used to define the limits of the relief. This reluctance of the courts to depart from the compartmentalisation of law at the expense of justice is unfortunate. The courts use the same considerations to limit liability for damages in contract as they do in the law of delict. To say then, that such forms of damages are best confined to delictual claims is illogical and irrational. Public policy considerations play as strong a role in the law of contract as they do in the law of delict when questions of the limitation of damages arise. The consequences ‘wrong’ that is done to the plaintiff upon breach of contract in the health care context is no different in effect to that same wrong when couched in delictual terms. The pain and suffering is the same, the loss of expectation of life etc are all the same irrespective of the nature of the cause – i.e. breach of contract or breach of a duty in delict. The failure of the courts to appreciate the difference between contracts for the supply of health care services and those for the supply of other services leads to decisions in this specific context that are difficult to justify on rational grounds and without the use of legal sophistries such as the need to define the limits of relief. Legal causation is used to avoid awards of damages based on causes that are too remote. Christie points out that damages for breach of certain types of contract, such as sales, leases and contracts of employment are frequently assessed according to principles that have been evolved to meet the special requirements of those contracts\(^{146}\). It is a great pity that they show no inclination to do the same in respect of contracts for health services when there are so many policy reasons for doing so notably that health services are increasingly being regarded as a public rather than a private good, that they are the subject of constitutional rights and that the provider patient relationship is and should remain, fiduciary in nature despite the fact that health professionals in this country seem to have lost sight of this fact.

\(^{145}\) *Edouard* 1989 (2) SA 368 (D)

\(^{146}\) Christie fn 2 supra at p 630
some time ago. It is submitted that these factors present powerful arguments for regarding contracts for health services differently to those for other goods and services.

The courts' refusal in South Africa to award non-pecuniary damages for breach of contract on the ground that such claims should be restricted to the law of delict starts to encounter logical difficulties when one enters the realm of damages for mental distress or psychological harm, as opposed to physical harm, for breach of contract unless one asserts, as did the court in Clinton-Parker v Administrator, Transvaal Dawkins v Administrator, Transvaal that the mind and the body do not exist in two separate dimensions but that both exist in the physical dimension and that the nervous system is just as much a part of the body as any other physical structure. Even this argument does not help to justify the failure to recognise the possibility of damages for non-pecuniary loss in the law of contract – especially in the context of contracts for health care services. Pain and suffering, like psychological harm, are experienced through the nervous system – a physical structure. The loss of amenities of life is experienced through the physical organism. There is no other way to experience the realities of the physical world including loss, pain and suffering, except via the physical structures of the body. Mental or psychological stress is accompanied by well-recognised and documented physical reactions and strains on the body.

147 The fierce resistance by dispensing doctors in South Africa to the legislative introduction of a system of licensing of dispensing doctors and other health professionals who wish to dispense medicine in a series of litigation against the government is a case in point. Judge President Ngoepe, in the Transvaal Provincial Division, recently accused the doctors of using their patients as a human shield against the state to assist their attempts to circumvent the legislation. At the time of writing, the litigation is still ongoing. The licensing system is designed to ensure that health professionals are properly qualified to dispense medicine in a manner that is not prejudicial to patients. The dispensing doctors have a conflict of interest in the dispensing of medicine that has been internationally recognised inter alia by the World Health Organisation since no other 'market' environment is it possible for a vendor to instruct a customer to purchase an item with such persuasive force and from such a position of power relative to the customer. The chances of a patient refusing to purchase medicine prescribed for him or her by a doctor are very low.

148 Clinton-Parker 1996 (2) SA 37 (W). In that case at p54 the court stated that: "The Appellate Division in Bester's case [Bester v Commercial Union Versicherungsversorgungsverband von SA Byk 1973 (1) SA 769 (A)] made it clear that general principles of delict apply to cases where nervous shock or psychiatric damage are the consequence of a negligent act. The crucial question to be asked, according to Bester's case, is whether the consequence was in all the circumstances of a specific case reasonably foreseeable. Jonathan Burchell in Principles of Delict at 59 points out that the Courts "here and in other countries have been cautious about extending liability for negligently caused nervous shock". The learned author deals with developments in South Africa law in this regard. He reminds us that in the early cases in South Africa liability for negligently inflicted nervous shock was restricted by two factors, viz the nervous shock had to result in physical injury and the plaintiff must have feared for his or her own safety. Burchell states: 'The first of these restrictions was based on the outdated distinction between mind and matter and based on the view that injury to the physical body was the subject of Aquilian liability and that damage to the individual's nervous system on its own was not sufficient for such liability. The second factor was a way of limiting the scope of potential liability to someone who in fact ran the risk of being physically injured. 'With reference to Bester's case, Burchell correctly concludes that the above approach has now been regarded as too restrictive. He points out that Bester's case held that the brain and the nervous system is just as much part of the physical body as an arm or a leg. The learned author states at 60: 'The Appellate Division in this case looked at certain limiting factors. The nervous shock in order to give rise to a claim for damages under the Aquilian action must be substantial and not of short duration and such shock must be reasonably foreseeable before the defendant can be held liable for causing such injury."
Therefore to state that damages for loss of a ‘physical’ kind are recognised while damages that are not of a ‘physical’ kind are not is to make a specious distinction. Why should a plaintiff suing for breach of contract have to prove that one kind of loss, (non-pecuniary) was caused through the fault of the defendant whilst there is no similar restriction with regard to pecuniary loss? In the context of a breach of contract for health care services why should different legal standards apply to different types of damages flowing from the same series of events? The argument that non-pecuniary damages are best decided in terms of the law of delict because this is more likely to limit claims in damages for non-pecuniary loss is not valid if the observations of Christie referred to earlier with regard to International Shipping Co (Pty) Ltd v Bentley are correct. It is submitted that the problem with contract law in certain contexts is that it is essentially commerce based and commercially driven. In light of such a backdrop it is easy to see why damages for non-pecuniary loss do not form part of this area of the law. The law of contract when seen in this light is about business transactions between two or more parties in a situation that involves trade or a bargain of some sort. It is about the creation of wealth for the parties or the improvement in some way of their worldly estates and is therefore concerned with issues of patrimony. The world has changed subtly and in many ways, however, since this view of the law of contract was first conceived. We have public utilities such as

---

149 In European contractual law, Article 9:501: Right to Damages provides that:

(1) The aggrieved party is entitled to damages for loss caused by the other party's non-performance which is not excused under Article 8:108.

(2) The loss for which damages are recoverable includes:

(a) non-pecuniary loss; and

(b) future loss which is reasonably likely to occur.

In terms of Article 9:502: General Measure of Damages -

The general measure of damages is such sum as will put the aggrieved party as nearly as possible into the position in which it would have been if the contract had been duly performed. Such damages cover the loss which the aggrieved party has suffered and the gain of which it has been deprived.

While Article 9:503: Forseeability provides that -

The non-performing party is liable only for loss which it foresaw or could reasonably have foreseen at the time of conclusion of the contract as a likely result of its non-performance, unless the non-performance was intentional or grossly negligent. http://www.cisglaw.pace.edu/cisgltext/textef.html#9:501. The increasing standardisation of commercial law and the ability to ignore for much longer. In South Africa, in the health care context, health tourism is a growing industry and it is only a matter of time before a foreign national uses a South African health care institution for breach of a contract for health care services. Legal principles that are more prejudicial to the locals than their foreign counterparts are likely to be subjected to considerable criticism and review as globalisation continues. By way of example of the potential for an area of law to take on different contexts and purposes, in accordance with the changing needs of society one need look no further than the law of delict. It has been observed by Gallo P 'Punitive Damages in Italy?', that in ancient Roman Law the main function of tort law was punishment and deterrence. In the field of tortious liability Roman law was characterised by a plurality of remedies, such as actio furti, rapina, injuries, damnum injuria datum whose main function was punishment and deterence rather than compensation. The wrongdoer was compelled to pay up to four times as much compensatory damages. The penalties were paid directly to the victim of the tort. Roman law also knew public penal action especially in the field of tortious conduct against the state, the public order, the king's peace etc. Subsequently law started to develop and expanded its field of application to that of protection of the person, theft, robbery, injury to the person etc. In this way the main function of the penal law became punishment and deterence while the main function of tort law became compensation. Gallo observes that in modern times civil lawyers usually say that the only function of tort law is compensation. Punishment and deterence can only be achieved by means of penal law. Also in common law countries, he states, one can notice a similar evolution and a growing tendency to differentiate the main functions of tort law and
electricity supplies, public transport systems, telecommunication systems and postal systems that until recently were state run and owned and without which it was difficult if not impossible to conduct business, and water and sewerage systems.

penal law. Having said this however it is important to note that in Anglo-American law, the function of punishment and deterrence has never been completely eliminated from the field of tort law. Gallo notes that in England, starting from the 13th century, private penalties and subsequently punitive damages were also contemplated by case law. More recently the House of Lords limited the applicability of exemplary damages to three situations:

(1) Where the public administration deprives a citizen of his fundamental rights;
(2) Whenever someone aims at obtaining enrichment as a consequence of his wrongful conduct;
(3) When punitive damages are especially provided by statute.

He points out that punitive damages have greatly expanded their field of application in the United States and in the field of product liability. Gallo states that in Italy and more generally in Europe, there are no applications of private sanctions comparable to the American ones especially in the field of product liability but that starting from the eighties, Italian case law is showing a growing tendency to rediscover exemplary damages as a consequence of the expansion of tort law in the field of the protection of the person, his reputation, honour and privacy.

http://www.jus.unimi.it/cardoso/Review/Tort/Gallo-1997/gallo.htm

It is submitted that the significant point to note here is that rigid compartmentalisation of principles of common law into particular areas is not only artificial but can also lead to a situation in which a branch of the common law no longer meets the needs of the society it is supposed to serve and fails to fulfil its perceptions of justice. Such areas of law are likely to find themselves in danger of extinction (often by way of legislative intervention) when such a situation prevails.

It is hardly insignificant that the South African law Commission was called upon some time ago to consider the question of unconscionable contracts and that it lamented the unsatisfactory demise of the exception *doli* from the common law in no uncertain terms.

In the Netherlands, the main source of the law of damages which governs personal injury cases is to be found in legislation, mainly the Dutch Civil Code. Articles 6:95-6:110 lay down specific provisions on damages. They provide rules in relation to the heads of loss and the method of assessment of the amount of damages to be awarded. Significantly the articles apply, in principle, whether the cause of action is in tort or for breach of contract. In accordance with articles 6:95 and 6:96, all pecuniary losses caused by a tort or breach of contract must be compensated, irrespective of whether such losses for instance arise from harm to the person, to goods or to other interests. The right to compensation for non-pecuniary damage is limited to certain categories. Article 6:95 states: "The damage which must be repaired pursuant to a legal obligation to make repair consists of patrimonial damage and other damage, the latter to the extent that the law grants a right to reparation thereof". Dutch law provides a limited right to non-pecuniary damages in personal injury cases. Article 6:106 states: "(1) The victim has the right to an equitably determined reparation of damage other than patrimonial damage: (a) if the person liable had the intention to inflict such harm; (b) if the victim has suffered physical injury, injury to honour or reputation or if his person has been otherwise afflicted; (c) if the harm consists of injury to the memory of a deceased person inflicted upon the non-separated spouse, upon the registered partner or upon a blood relative up to the second degree, provided that the injury took place in a fashion which would have given the deceased, had he still been alive, the right to reparation of injury to honour or reputation. (2) The right to reparation in the preceding paragraph cannot be transferred or seized, unless agreed upon by contract or unless an action for such reparation has been instituted. For transfer by general title it is sufficient that the title-holder has notified the other party that he claims reparation." The phrase in paragraph (b) which refers to a person who has been otherwise afflicted ("of op andere wijze in zijn persoon is aangedaan") is open to judicial interpretation, allowing for further development in this field. The amount of non-pecuniary damages is determined according to equity ('naar billijkheid').

Source: Lindenbergh S D and Verburg R 'Personal Injury Compensation in the Netherlands'

In the United Kingdom Lord Bingham stated in *Watts v Morrow* [1991] 4 All ER 597 CA that: "A contract breaker is not in general liable for distress, frustration, anxiety, displeasure, vexation, tension or aggravation which his breach of contract may cause to the innocent party. This rule is not, I think, founded on the assumption that such results are unforeseeable, which they surely are or may be, but on considerations of policy. But the rule is not absolute...." Lord Bingham went on to note the exceptions to the ‘mental distress’ rule: "Where the very object of the contract is to provide pleasure, relaxation, peace of mind or freedom from molestation, damages will be awarded if the fruit of the contract is not provided or if the contrary result is procured instead.

Palfreyman D notes that this exceptional class of cases is not the product of Victorian contract theory but the result of evolutionary developments in case law from the 1970s, and that in practice in real life in the lower courts non-pecuniary damages are regularly awarded on the basis that the defendant’s breach of contract deprived the plaintiff of the very object of the contract, viz, pleasure, relaxation and peace of mind.

In *Farley v Skinner* [2001] 3 WLR 899 the House of Lords allowed an amount of £10 000 for non-pecuniary damages for the diminished enjoyment of a property due to aircraft noise. The house that Mr Farley had bought was not far from a navigation beacon and the impact of aircraft noise on the property was marked. Mr Farley had specifically asked about aircraft noise and told the agent that he did not want a property on a flight path. He was a successful businessman who wanted to retire to the country. When he moved in to the property he discovered the noise problem but decided not to sell. He sued Mr Skinner for damages for non-pecuniary loss in the form of diminished enjoyment of the property. See also Lawler Rochester of Glaholt and Associates "Cases Comment: Non-Pecuniary Damages for Breach of a Construction Contract [1986] 13 C.L.R. 53" and the Canadian cases of *Pilon v Peugeot Canada Ltd* (1980), 29 O.R. (2d) 711, 114 D.L.R. (3d) 378, 12 B.L.R. 227; *A.G. Ont. v Tiberius Productions Inc* (1984) 46 O.R. (2d) 152, 44 C.P.C. 14, 8 D.L.R.(4th) 479, 25 A.C.W.S. (2d) 163 (Ont. H. C.); *Perris v Ins. Corp. of B.C. (1984), 53 B.C.L.R. 63, 4 C.C.E.L. 237, 9 D.L.R.(4th) 43, 26 A.C.W.S. (2d) 111 (B.C. C. http://www.glaholt.com/Articles/Non-Pecuniary.htm
without which urban and suburban life would be intolerable. At the risk of sounding repetitive, it must be acknowledged that access to health care services is now a constitutional right and therefore much more than just the subject matter of a commercial contract in the ordinary context of trade. The Constitution does not distinguish between the rights to bodily and psychological integrity. They are, if anything, interrelated and largely inseparable. A contract for health care services is by and large not concerned with the patrimony of the patient and any claim that a patient is patrimonially "enriched" by health care services is likely to end up in tautologous and meaningless arguments to the effect that the extent to which he or she is enriched is measurable in terms the cost of those services. To put it another way, good health is not something to which a price tag can be readily attached. It is submitted that if public goods such as health services are to be dealt with in terms of the law of contract then the backdrop against which the law of contract has traditionally been considered and construed must take on a richer and more meaningful texture if it is to remain a credible and rational tool for the resolution of disputes in this area. Contracts can be useful vehicles for securing a wide variety of goods and services that have many different social values both for the individual consumer and for society as a collective. It is clear from the socio-economic rights reflected in the Bill of Rights that the interests of society in the access of individuals to some kinds of goods and services is much greater than in the case of others. It is to be hoped in future, at least with respect to contracts for health care services, that South African courts will use such considerations to justify a move away from the dicta in cases such as Edouard v Administrator, Natal in which the court observed with regard to Jockie v Meyer that this case was clear authority that, even where the loss flows from a breach of contract, damages are only recoverable for non-pecuniary loss suffered as a result of contumelia, if the pleadings allege and the evidence proves the essentials of the actio

150 The Romans, it is true also had municipal water systems but it is doubtful that these were a central focus of their law of contract and in any event the legal system in South Africa is not Roman in origin but Roman-Dutch with a strong British flavour in some areas.

151 Edouard fn 145 supra

152 Jockie 1945 AD 354. See the discussion of this case in Christie (fn 2 supra) at p 633-634 where he notes that: "The non-patrimonial damages claimed in Edouard could have been refused without going so far as this, and the result is not a happy one as legislation is unlikely and would be difficult to draft. Our law will therefore remain incapable of awarding realistic damages against a party who is in breach of a contractual undertaking to provide convenience, comfort, entertainment or enjoyment unless the Supreme Court of Appeal can be persuaded to step out of the corner into which the Appellate Division painted itself." It is submitted that contracts for health care services are a case in point. Their objective is generally the alleviation of pain and suffering and loss of amenities. Where the actions or omissions of the provider effectively cause more of same it is difficult to see why damages for breach of contract should not be awarded. A rigid logic whose main aim seems to be to promote some notion of legal conceptual elegance and compartmentalisation of legal principles is cold comfort for the suffering patient.
injuriarum, i.e. the claim has to be laid in delict and more particularly under the actio injuriarum and that in South Africa law damages for injured feelings are not as a general rule recoverable in a claim on contract.

4.7 Statutory Considerations

The Consumer Affairs (Unfair Business Practices) Act\textsuperscript{153} states that -

"unfair business practice’ means any business practice which, directly or indirectly, has or is likely to have the effect of-

(a) harming the relations between businesses and consumers;
(b) unreasonably prejudicing any consumer;
(c) deceiving any consumer; or
(e) unfairly affecting any consumer.\textsuperscript{154}

It seems that the facts of the Afrox case fall squarely within the unfair business practice jurisdiction of the Consumer Affairs Act.

The Act provides for the establishment of a Consumer Affairs Committee whose functions are to-

(a) from time to time make known information on current policy in relation to business practices in general and unfair business practices in particular, to serve as general guidelines for persons affected thereby;
(b) receive and dispose of representations in relation to any matter with which it may deal in terms of the Act;
(c) receive and dispose of particulars of the result of any investigation made by a competent authority in relation to any matter with which the committee may deal in terms of the Act;
(d) may make such preliminary investigation as it may consider necessary into, or confer with any interested party in connection with, any unfair business practice which allegedly exists or may come into existence;

\textsuperscript{153} Consumer Affairs Act No 71 of 1988
\textsuperscript{154} In the Consumer Affairs Act, “business practice includes-
(a) any agreement, accord, arrangement, understanding or undertaking, whether legally enforceable or not, between two or more persons;
(b) any scheme, practice or method of trading, including any method of marketing or distribution;
(c) any advertising, type of advertising or any other manner of soliciting business;
(d) any act or omission on the part of any person, whether acting independently or in concert with any other person;
(e) any situation arising out of the activities of any person or class or group of persons, but does not include a practice regulated by competition law;” The Act defines a consumer as follows—

"consumer’ means -
(a) any natural person to whom any commodity is offered, supplied or made available;
(b) any natural person from whom any investment is solicited or who supplies or makes available any investment;
(c) any other person who the Minister with the concurrence of the committee declares to be a consumer by notice in the Gazette;
(d) any person who is a consumer for the purposes of this Act in terms of any other law;”

549
(e) perform any other function assigned to it by the Act.

(f) if it chooses assign any preliminary investigation or investigation in terms of the Act to a competent authority.

Consumers are defined in the Free State legislation as natural persons to whom any commodity is offered, supplied or made available where that person does not intend to apply the commodity for the purposes of resale, lease, the provision of services or the manufacture of goods for gain, any natural person from whom is solicited or who supplies or makes available any investment and any other person whom the responsible Member of the Executive Council declares to be a consumer.

Consumer Affairs Courts exist in the various provinces. Their powers are extensive. Generally speaking, they have the power to hear, consider and make a decision on any matter before the court, award costs on a prescribed scale against any person found to have conducted the unfair business practice concerned and who is found to have acted fraudulently or grossly unreasonably. The Free State legislation makes provision for the appointment of a consumer protector to receive and investigate complaints of alleged harmful business practices. They can issue urgent temporary orders including attachment orders, prohibitory interdicts and authorising an investigating officer to take any action that may be necessary to prevent the unfair business practice in question. They can also make orders such as may be necessary to ensure the discontinuance or prevention of an unfair business practice and may direct the dissolution of any body or the severance of any connection or form of association between two or more persons or bodies. They can make orders relating to advertising, business schemes, practices or methods of trading, marketing and distribution and business interests. They can appoint curators inter alia to realize the assets of the person involved in an unfair business practice and distribute them among the consumers concerned.

---

It is of interest to note that in European Contract Law\textsuperscript{156}, Article 4:110 entitled 'Unfair Terms not Individually Negotiated' provides that -

(1) A party may avoid a term which has not been individually negotiated if, contrary to the requirements of good faith and fair dealing, it causes a significant imbalance in the parties' rights and obligations arising under the contract to the detriment of that party, taking into account the nature of the performance to be rendered under the contract, all the other terms of the contract and the circumstances at the time the contract was concluded.

(2) This Article does not apply to:

(a) a term which defines the main subject matter of the contract, provided the term is in plain and intelligible language; or to

(b) the adequacy in value of one party's obligations compared to the value of the obligations of the other party.

Perhaps one solution for patients wishing to claim in terms of the law of contract in respect of unsatisfactory contracts for health care services is to approach, not the ordinary courts which seem incapable of moving away from antiquated ideas about the 'market' for such services, but the Consumer Affairs Courts instead. They may be more likely to have an understanding of the need to protect consumers and of the nature and extent of the imbalances in bargaining power between consumers and suppliers that in reality pervade the health services sector.

4.8 Tacit Contracts

The courts appear to differ on the test to be used in order to determine the existence of an implied or tacit contract\textsuperscript{157}. The one test has been dubbed the "no other reasonable

\textsuperscript{157} The Appellate Division in Joel Melamed and Hurwitz v Cleveland Estates (Pty) Ltd; Joel Melamed and Hurwitz v Former Investments (Pty) Ltd 1984 (3) SA 155 (A) observed: "As to tacit contracts in general, in Standard Bank of South Africa Ltd and Another v Ocean Commodities Inc and Others 1983 (1) SA 276 (A) it was stated (at p 292B - C): "In order to establish a tacit contract it is necessary to show, by a preponderance of probabilities, unequivocal conduct which is capable of no other reasonable interpretation than that the parties intended to, and did in fact, contract on the terms alleged. It must be proved that there was in fact consensus ad idem. (See generally Festus v Worcester Municipality 1945 CPD 186 at p 192 - 3; City of Cape Town v Abelson's Estate 1947 (3) SA 315 (C) at p 327 - 8; Parsons v Langemann and Others 1948 (4) SA 258 (C) at p 265; Bremer Meulens (Edms) Bpk v Floros and Another, a decision of this Court
interpretation test” and the other the “preponderance of probabilities test”.

Christie points out that on the face of it these two tests are irreconcilable and the courts are in some difficulty choosing which to employ. He suggests that it is not necessary to abandon each test entirely as it is possible to synthesise them into a test which incorporates the best of both and states that the best approach to a synthesis seems to be to recognise that in deciding whether a tacit contract or tacit term has been proved the court is undertaking an inquiry that involves three stages instead of the usual two. Christie states that the first stage is to decide on the preponderance of probabilities, what facts have been established. The second stage is to decide, also on a preponderance of probabilities, what conclusion consistent with those facts is most likely to be correct. However, when deciding whether a tacit contract has been proved a third stage must be interposed. This, says Christie, is to decide how the proved facts, i.e. the conduct of each party and the surrounding circumstances, must have been interpreted by the other.

He continues to state that his analysis is no more than an explanation of the words ‘unequivocal conduct’ that are included in most if not all formulations of the no other reasonable interpretation test. The one party’s conduct must be unequivocal in the sense that the other party could have no reasonable doubt of his intention to contract but in deciding whether agreement is the proper inference to draw from such conduct the court, suggests Christie may be satisfied on the preponderance of probabilities.

He restates his proposed synthesis of the two tests as follows:

reported only in Prentice Hall, 1966 (1) A36; Blakie-Johnstone v Holliman 1971 (4) SA 108 (D) at p 119B - E; Big Dutchman (South Africa) (Pty) Ltd v Barclays National Bank Ltd 1979 (3) SA 267 (W) at p 281B - F; Muhlmann v Muhlmann 1981 (4) SA 632 (W) at p 635B - D.)

This is the traditional statement of the principle, as is borne out by the cases cited; and it was accepted as being correct by appellant’s counsel. The correctness of this general formulation has nevertheless been questioned on the ground that it would appear to indicate a higher standard of proof than that of preponderance of probability as regards the drawing of inferences from proven facts (see Christie The Law of Contract in South Africa at p 58 - 61; cf also Plat SA v Kolbe Motors 1975 (2) SA 129 (C) at p 140; Plum v Matidia 1981 (3) SA 152 (A) at p 163 - 4; Spea Roso Bank Ltd v Portals Water Treatment South Africa (Pty) Ltd 1983 (1) SA 978 (A) at p 981A - D). In this connection it is stated that a court may hold that a tacit contract has been established where, by a process of inference, it concludes that the most plausible probable conclusion from all the relevant proved facts and circumstances is that a contract came into existence (see Plum’s case supra at p 163 - 4). It may be that in the light of this the principle as quoted above from Standard Bank of SA Ltd v Ocean Commodities Inc (supra) requires reformulation. In this regard, however, there is this point to be borne in mind. While it is perfectly true that in finding facts or making inferences of fact in a civil case the court may, by balancing probabilities, select a conclusion which seems to be the more natural or plausible one from several conceivable ones, even though that conclusion is not the only reasonable one, nevertheless it may be argued that the inference as to the conclusion of a tacit contract is partly, at any rate, a matter of law, involving questions of legal policy.

It appears to be generally accepted that a term may not be tacitly imported into a contract unless the implication is a necessary one in the business sense to give efficacy to the contract (see Van den Berg v Tanner 1975 (2) SA 268 (A) at p 276H - 277B and the cases there cited). By analogy it could be said that a tacit contract should not be inferred unless there was proved unequivocal conduct capable of no other reasonable interpretation than that the parties intended to, and did in fact, contract on the terms alleged.

158 Christie fn 2 p 93.
159 Christie fn 2 supra p 94-95

552
"In order to establish a tacit contract it is necessary to prove, by the preponderance of probabilities, conduct and circumstances which are so unequivocal that the parties must have been satisfied beyond reasonable doubt that they were in agreement. If the court is satisfied on the preponderance of probabilities that the parties reached agreement in that manner it may find the tacit contract established."160

Christie’s proposed synthesis of the two tests has not met with universal approval.161

In Edouard62 the plaintiffs did not need to prove a tacit contract because the court a quo took the written consent form as being part of the contract. Furthermore the parties had in any event agreed in advance upon the facts, including the existence of the contract between them, and the matters upon which the court should decide. The existence of a tacit contract between them was thus not one of them.

In the context of health care services many contracts are not in express terms either written or verbal. The patient presents at a health facility and is treated. In the case of a public-provider the patient undergoes a means test in order to establish into which financial category he or she falls and to determine what if any fee is payable as determined by the provincial government by way of fee regulations. The documentation may at most consist of a consent form but in some cases this is not even available as consent can be obtained verbally from the patient. If a contractual relationship is to be found to exist between the public provider and the patient it will often have to be inferred from the circumstances. It is therefore if importance to ascertain under what circumstances the courts are likely to infer a contract between the parties. In Joel Melamed and Hurwitz v Cleveland Estates (Pty) Ltd; Joel Melamed and Hurwitz v Vorner Investments (Pty) Ltd63 Corbett JA noted that in the cases concerning tacit contracts which had previously come before the courts, there had always been at least two persons involved. He said that in order to decide whether

160 Christie fn 2 supra p 96. The test proposed by Christie was apparently cited with approval in Landmark Real Estate (Pty) Ltd v Brand 1992 (3) SA 983 (W)
161 See Muller v Pamp Snyman Eiendomskonsultante (Pty) Ltd 2001 (1) SA 313 (C) in which the court discussed the two tests and stated a preference for the 'no other reasonable interpretation test'. Conrie J said: "It seems to me, with respect, that proof of the primary facts on a balance of probabilities is required by either test, and that the main difference between them lies in the strength of the inferences to be drawn from the facts so proven. As Corbett JA observed, that would at least in part be influenced by considerations of legal policy. My own preference, writing as a single Judge of first instance, is for the so-called traditional test, the only reasonable interpretation test, provided that the test is applied in a common sense and businesslike way. I respectfully disagree with the 'synthesis' solution proposed by Christie (loc cit). I fear that to borrow notions from the criminal law will tend to obfuscate rather than clarify the position. The idea of a compelling inference appeals to me: a compelling inference derived from proof on a balance of probabilities of unequivocal conduct usually in a business setting. Perhaps it is the word 'plausible' which disturbs me."
162 Edouard fn 1 supra
163 Joel Melamed see fn 157 supra
a tacit contract arose the courts have had regard to the conduct of both parties and the circumstances of the case generally and that the general approach was an objective one. He observed that the subjective views of one or other of the persons involved as to the effect of his actions would not normally be relevant. Corbett JA said that where there is only one person involved a tacit contract may be inferred from conduct and the general circumstances, but in such a case the court should carefully scrutinize the evidence in order to distinguish between statements of fact capable of objective assessment and subjective views as to the matter in issue.

4.9 Implied Terms

The doctrine of legitimate expectation is one that is traditionally regarded as applicable to public entities rather than private persons. Pretorius\textsuperscript{164} notes that the twin pillars that buttress natural justice are statute and contract and that the statutory pillar of natural justice has been renovated and fortified as a result of the introduction of the legitimate expectation. He then asks whether this doctrine also reinforces the contractual pillar of natural justice in other words whether the doctrine of legitimate expectation finds application outside of the field of administrative law. This question will be explored in more detail in the section on the private sector later in this chapter with regard to private provider-patient relationships but it is also relevant to an exploration of the public provider-patient relationship and will be discussed here from this latter perspective.

It may seem strange at first to start a discussion of implied terms in contracts with an consideration of the administrative law doctrine of legitimate expectation but, as will be seen from what follows, and in support of the central theme of this thesis, the various branches of law are simply facets of a larger, internally consistent, whole. The relationship between administrative law and the law of contract in the context of health services delivery is an important one both from an underlying public policy perspective and because at least one of the parties to the contractual relationship presently under consideration cannot escape the dictates of administrative justice as enshrined in the Constitution. The question to be answered with regard to public provider-patient contracts must always be whether such contracts must be seen purely

\textsuperscript{164} Pretorius D M "Letting the Unruly Horse Gallop In the Field of private Law: The Doctrine of Legitimate Expectation in ‘Purely Contractual’ Relations" 2001 SALJ 118 p 473
in the light of the law of contract or whether they must always be regarded against a backdrop of relevant administrative law principles? In other words can the approach to the public provider-patient relationship ever be based on just one legal 'layer' or will it always be multi-layered? This question is of considerable significant for courts backdrops of relevant administrative law principles? In other words can the approach in the light of the law of contract or whether they must always be regarded against a backdrop of relevant administrative law principles? I consider this approach of the law to be correct. There can be but one test for wrongfulness, based as it is ultimately on considerations of public policy, and whether the claim is brought in contract or delict. It is well recognised today that a contract between a patient and a doctor imposes on the latter a duty to exercise due care and skill; but even in the absence of a contract between them there is a duty of care on the doctor (see the remarks in Lillicrap, Wassenaar and Partners v Pilkington Brothers [supra at 499A-I]). The duty of care in either case seems inevitably to be measurable by the same yardstick, and I am of the view that the same policy considerations that underlie the Edouard judgment are applicable in the appeal now under consideration. These considerations do not stand in the way of allowing the Raath's action." See also for examples of alternative causes of action Pinshow v Naxus Securities (Pty) Ltd and Another 2002 (2) SA 510 (C); Rens v Colman 1996 (1) SA 452 (A); Esterhuyzen v Administrator, Transvaal 1957 (3) SA 710 (T); Van Der Walt Business Brokers (Pty) Ltd v Budget Kilometers CC and Another 1999 (3) SA 1149 (W) A

165 See for instance Martin v Martin 1997 (1) SA 491 (N) in which the court held: "And, in any event, if the respondent had a choice of remedies she was perfectly entitled to choose the one which she considered the more efficacious, regardless of any supposed advantages which the other may have had for the appellant."

166 See Friedman v Glicksman 1996 (1) SA 1134 (W) and Muckhehele v Raath and Another 1999 (3) SA 1065 (SCA) in which the court observed: "In Edouard Van Heerden JA (at 590P), in dealing with the nature of the wrong complained of, indicated that the wrong consists of the prior breach of contract or delict which led to the birth of the child and the consequent financial loss. I consider this approach of the law to be correct. There can be but one test for wrongfulness, based as it is ultimately on considerations of public policy, and whether the claim is brought in contract or delict. It is well recognised today that a contract between a patient and a doctor imposes on the latter a duty to exercise due care and skill; but even in the absence of a contract between them there is a duty of care on the doctor (see the remarks in Lillicrap, Wassenaar and Partners v Pilkington Brothers [supra at 499A-I]). The duty of care in either case seems inevitably to be measurable by the same yardstick, and I am of the view that the same policy considerations that underlie the Edouard judgment are applicable in the appeal now under consideration. These considerations do not stand in the way of allowing the Raath's action." See also for examples of alternative causes of action Pinshow v Naxus Securities (Pty) Ltd and Another 2002 (2) SA 510 (C); Rens v Colman 1996 (1) SA 452 (A); Esterhuyzen v Administrator, Transvaal 1957 (3) SA 710 (T); Van Der Walt Business Brokers (Pty) Ltd v Budget Kilometers CC and Another 1999 (3) SA 1149 (W) A

167 Bobeck PQR The Law of Delict Vol I: Aquilin Liability in his discussion of Lillicrap lists the many criticisms of the judgment in a footnote.

In Lillicrap, Wassenaar and Partners v Pilkington Brothers (Sa) (Pty) Ltd 1985 (1) SA 475 (A) the court noted: "There is clear authority that in certain situations negligence in performing a contractual obligation may give rise to liability in both contract and delict. The case of the negligent surgeon is the clearest example. Van Wyk v Lewis 1924 AD 443 - 444. But this was a case of physical injury and of a duty which, while co-existent with the contractual duty, was not dependent on the existence of the contract. There is no general rule in our law (as there may be in England - see Exso Petroleum Co Ltd v Mardon [1976] 1 QB 820) that a professional man's breach of his contractual duty, causing economic loss, is per se a delict. On the contrary, the weight of South African authority is against that approach. In the first place, there is the strong dictum in Hannam v Moolman 1968 (4) SA at 348E - G which indicates that it is unnecessary and undesirable to extend delictual liability for negligent statements where well-established contractual remedies exist. Cf the Administratuer, Natal case supra at 834F. The Cape Provincial Division has not followed this dictum: Kem Trust (Edmonton) Bpk v Hurter 1981 (3) SA at 607. But it has, correctly, been adopted in the Transvaal. Latham v Sher 1974 (4) SA at 695H - 696A; Du Plessis v Sammelink 1976 (2) SA at 503A - F. More particularly, where a professional man is negligent in carrying out his contractual duty (absent physical damage), there is much authority that only an action in contract lies. This was for many years accepted law in England. Steljes v Ingram [1903] 19 TLR 354 (architect); Groom v Crocker [1939] 1 KB 194 (solicitor). This view of the law survived the decision in Hadley Byrne & Co Ltd v Haller & Partners Ltd 1964 AC 465. See Bagot v Stevens Scammell & Co [1966] 1 QB 197 (architect); Clark v Kirby-Smith 1964 Ch 506 (solicitor); Cock v Swinfen [1967] 1 WLR 457 (solicitor). However, tortuous liability for negligent statements in England has now been extended holus-bolus into the field of contract. Exso Petroleum Co Ltd v Mardon [1976] 1 QB 801; Midland Bank Trust Co v Hett, Stubs & Kemp 1979 Ch 384. Natal has followed suit - Rumpol (Pty) Ltd and Another v Brett, Wills & Partners 1981 (4) SA at 365E - 366E. In the Transvaal, however, there is Full Bench authority that the action lies only in contract. Bruce NO v Bereman 1963 (3) SA at 23F - H. See also Honey & Blomkerberg v Law 1966 (2) SA at 46; Mouton v Die Meywerkaarnete 1977 (1) SA at 142H. (In Tontswene Sawmill Co
within the public sector, does this range of options become extended to include administrative and constitutional law? It is the nature of the parties that complicates matters when dealing with a private law relationship between two parties where at least one of them is an organ of state\textsuperscript{69}. Put another way, the question with regard to

...
public provider-patient relationships in the contractual setting is whether the state can ever escape its nature and, like the prince in the fairy-tale, assume the role of a pauper so as to be able to contract on an equal footing with the patient. If the answer to this question is in the negative, then the further question arises as to the applicability of the doctrine of legitimate expectation to the contractual relationship between the public provider and the patient. As indeed the question also arises as to whether there would be certain terms implied by law within this contractual relationship that are grounded in administrative law. The question of the applicability of the doctrine of legitimate expectation in a contractual context is not on quite the same footing as other terms implied in the contract on the basis of administrative law because a legitimate expectation, in the context of administrative law stands outside of the concept of a right conferred by law. In administrative law, a legitimate expectation is an interest as opposed to a right. The objection to the importation of a legitimate expectation into a contract as an implied or tacit term is that it would confer upon it

170 This question of the distinction between private law and public law relationships, which is in essence what is under discussion here, lies in to an even more complex and yet relevant constitutional debate concerning the vertical as opposed to horizontal application of the rights in the Bill of Rights in the Constitution. There are four basic permutations that are relevant within this chapter dealing with the relationships between provider and patient. They are as follows: public entity vs private entity under public law; public entity vs private entity under private law; private entity vs private entity under public law and private entity vs private entity under private law. The validity of the distinctions between public and private law lies at the heart of the debate. In De Plessis And Others v De Klerk And Another 1996 (3) SA 850 (CC) Kriegler J observed as follows in this regard: "My reading of chapter 3 gives to the Constitution a simple integrity. It says what it means and means what it says. There is no room for the subtleties and nice distinction so dear to the hearts of medieval theologians and modern constitutional lawyers. The Constitution promises an 'open and democratic society based on freedom and equality', a radical break with the 'ustold suffering and injustices' of the past. It then lists and judicially safeguards the fundamental rights and freedoms necessary to render those benefits attainable by all. No one familiar with the stark reality of South Africa and the power relationships in its society can believe that protection of the individual only against the State can possibly bring those benefits. The fine line drawn by the Canadian Supreme Court in the Dolphin Delivery case and by the US Supreme Court in Shelley v Kraemer between private relationships involving organs of State and those which do not have no place in our constitutional jurisprudence. Nor are we consigned to the hypocrisy so trenchantly excoriated by the authors of the two Canadian articles quoted in Baloro and Others v University of Bophuthatswana and Others. What is more, my reading of the Constitution avoids jurisprudential and practical conundrums inherent in the vertical-but-indirectly-horizontally-irradiating interpretation. One does not need to ascertain whether a question is one of public or private law (wherever the boundary may lie in our legal system); one is not confronted with knotty problems where a private relationship is, wholly or partially, governed by statute; nor where an organ of State is a party to a manifestly private law dispute, for example flowing from contract or delict. There are no anomalies where one uses a policeman and his Minister in delict or when an organ of State and a private person are co-plaintiffs or co-defendants. Nor is it of any consequence that a rule of the common law derives from an ancient statute of a former government or from the writings of a legal sage of old. The law is the law, where the chapter fits, it is applied; where it does not, its spirit, purport and objects are duly regarded." (footnotes omitted).

171 The PAJA distinguishes between a right and a legitimate expectation by using them in the alternative in section 3(1) "Administrative action which materially and adversely affects the rights or legitimate expectations of any person must be procedurally fair." Devenish GE, Govender K and Hulme D Administrative Law and Justice in South Africa note at p 53 11 "Obviously where existing rights are affected there is no need to rely on the doctrine" (of legitimate expectation). However a degree of overlapping may occur;"
the status of a right as opposed to an interest. The question is whether in the context of the law of contract, this objection is a valid one. The answer hinges upon the peculiar nature of a legitimate expectation. In terms of the law of contract a tacit term can be implied from the facts, from trade usage or by law. Legitimate expectation according to Devenish et al may arise either from an express promise given on behalf of a public authority or from the existence of a regular practice which the claimant can reasonably expect to continue. It is submitted that there are significant similarities between tacit terms in the law of contract and legitimate expectations in administrative law. Like a tacit term in contract law, a legitimate expectation, in its preliminary form, generally sits outside of the formally recognised boundaries of the relationship between the parties. In the case of contract it sits outside of the written document in which the parties have described their agreement. In the case of administrative law it sits outside of the statutorily defined relationship of a public entity to ordinary citizens. Like a tacit term, a legitimate expectation may arise from the facts or from ‘trade usage’ in the sense of a longstanding practice of a public authority, or by law. In the case of the last mentioned, the existence of a right, could give rise to a legitimate expectation that a power to take a decision affecting the ability to freely exercise that right would require that those affected are given an opportunity to be heard. Devenish et al note that the application of the doctrine of legitimate expectation usually but not necessarily requires a promise or the existence of a regular practice and that in at least one case the court refused to extend the doctrine by finding a legitimate expectation in their absence. Although they cite two cases in which the courts have been prepared to recognise a legitimate expectation in the absence of a promise or practice they state that it is problematic whether mere considerations of fairness in the absence of a promise or the existence of a regular practice should give rise to application of the doctrine of legitimate expectation. The moral of the story is that there must be an objective, rational basis and legal for a

172 Devenish et al fn 171 supra at p308-309
173 Thus in Public Servants Association of SA v Minister of Justice 1997(3) SA 925 (T) the court found that the applicants not only had a right to be considered for the posts concerned but they had a legitimate expectation to be appointed to such posts. They therefore had a right to be heard in relation to the formulation of the affirmative action policy. In this case the applicants were all white male state attorneys who contended that they had not even been interviewed for positions for which they were well qualified, on the grounds of their race and gender. The Department of Justice had introduced an affirmative action policy to the effect that no white males would be considered eligible for certain posts.
174 Devenish et al fn 171 supra at p315
175 Ngema v Minister of Justice, KwaZulu 1992(4) SA 349 (N)
legitimate expectation. One cannot have a legitimate expectation contrary to a law, or, it is submitted, public policy, which stipulates differently. The same is true of tacit or implied terms in a contract. In order to decide whether a tacit term is to be imported into a contract one must first examine the express terms of the contract. The express terms, as Christie points out, may deliberately exclude the possibility of importing tacit terms of a particular type. The same is true for a legitimate expectation. It may be excluded by the terms of a statute or subordinate legislation. No tacit term may be imported in contradiction of an express term. A legitimate expectation may not be entertained in the face of contrary statutory provisions. The express terms may also exclude the possibility of importing tacit terms even when the express terms do not expressly cover the question but give rise to the inference that the parties do not wish to include the term in question. It is submitted that the same is true with regard to statutory interpretation and the doctrine of legitimate expectation.

176 The court said in Administrator, Transvaal, and Others v Traub and Others 1989 (4) SA 731 (A): "It is clear from these cases that in this context legitimate expectations are capable of including expectations which go beyond enforceable legal rights, provided they have some reasonable basis."

177 The doctrine of legitimate expectation is recognised on the grounds of public policy. It would not therefore make sense to permit a legitimate expectation to fly in the face of the basis for its acceptance into law. The court in Traub (fn 164 supra) noted that: "A useful and comprehensive overview and analysis of the relevant decisions is to be found in an article by Prof Robert E Riggs, published in (1988) 36 American Journal of Comparative Law at 393ff. In an epistemical first paragraph to his article Prof Riggs states: 'Since the landmark decision of Ridge v Baldwin, handed down by the House of Lords in 1963, English Courts have been in the process of imposing upon administrative decision-makers a general duty to act fairly. One result of this process is a body of case law holding that private interests of a status less than legal rights may be accorded procedural protections against administrative abuse and unfairness. As these cases teach, a person whose claim falls short of legal right may nevertheless be entitled to some kind of hearing if the interest at stake rises to the level of a "legitimate expectation". The emerging doctrine of legitimate expectation is but one aspect of the "duty to act fairly", but its origin and development reflect many of the concerns and difficulties accompanying the broader judicial effort to promote administrative fairness. As such, it provides a useful window through which to view judicial attempts to mediate between individual interests and collective demands in the modern administrative state.' Devenish et al (fn 159 supra) state at p 318 that "Legitimate expectation is intrinsically merely a manifestation of the seminal principle of fairness which is so fundamental to the manner in which the courts must interpret and apply the norms and principles of contemporary administrative law." This appears to be a fair summation of the situation."

178 In University Of The Western Cape and Others v Member of Executive Committee for Health and Social Services and Others 1998 (3) SA 124 (C) the court held: "Without dwelling much on the doctrine of legitimate expectation, it should be pointed out that no one can have a legitimate expectation of doing something contrary to the law, or of preventing a functionary from discharging his statutory duty. See Attorney-General of Hong Kong v Ng Tuen Shiu, above at 351. See also R v Ministry of Agriculture, Fisheries and Food, ex parte Hamble (Offshore) Fisheries Ltd [1995] 2 All ER 714 (QB) at 723-4; Union of Teachers' Associations of South Africa and Another v Minister of Education and Culture, House of Representatives, and Another, Issacs and Others v Minister of Education and Culture, House of Representatives, and Another 1993 (2) SA 828 (C) at 841H-I. In my view it is in the interests of good administration that a public body should act fairly and should implement whatever promise it may have made so long as the implementation thereof does not interfere with its statutory duty. In the case of the first respondent it is under a statutory duty in terms of s 11 of the Act to make appointments to the public service. Therefore any promise or undertaking which conflicts with its statutory duty to make appointments cannot be enforced by the courts. The contrary is clearly untenable. It would lead to an absurd situation whereby public bodies could simply ignore their statutory duties by making promises which conflict with them. Surely it would be unfair to enforce promises which fly in the face of statutory duties. Thus whatever the source of a 'legitimate expectation' might have been in case, I am satisfied that it was not legitimate because the applicants knew that the first respondent was under a statutory duty to make appointments to posts which had to be advertised."

179 See Christie fn 2 supra p 191. He refers to the words of Rumpff IA in Pan American World Airways Inc v SA Firms and Accident Insurance Co Ltd 1965 3 SA 150 (A) 175C: "When dealing with the problem of an implied term the first enquiry is, of course, whether, regard being had to the express terms of the agreement, there is any room for importing the alleged implied term."

180 Authorities cited by Christie (fn 2 supra) in this regard at p 191 are FJ Hawkins & Co Ltd v Negel 1957 (3) SA 126(W) 132 C; Springvale Ltd v Edwards 1969 1 SA 464 (RA) 472C; Neuboff v York Timber Ltd 1981(4) SA 666 (T) 679; Robin v Guarantee Life Assurance Co Ltd 1984(4) SA 558 (A) 567A-F.
An implied term that is not derived from trade usage or law is derived not only from the common intention of the parties but also their imputed intention. In the law of contract, terms can be implied by trade usage just as a legitimate expectation can arise from a regular practice on the part of an administrator. With regard to terms imposed by law Corbett AJA pointed out in *Alfred McAlpine* such that terms are imposed by law from without. He observes that in a sense ‘implied term’ is, in this context a misnomer in that in content it simply represents a legal duty (giving rise to a correlative right) imposed by law, unless excluded by the parties, in the case of certain contracts. Christie notes that this observation of Corbett AJA raises ‘the vexed question’ of nomenclature. He says that the point is that a contract is an agreement and one would therefore expect all its terms to be agreed between the parties. Like a tacit term, somewhat paradoxically, a legitimate expectation in fact takes on the flavour of a right once it has been recognised by a court of law in the sense that legal consequences flow from it. The distinction between a tacit term and a legitimate expectation on the basis that the one effectively confers rights and obligations once it is recognised and the other does not is thus largely notional rather than practical.

---

181 In *Alfred McAlpine & Son (Pty) Ltd v Transvaal Provincial Administration* 1974 (3) SA 506 (A), Corbett AJA observed: “In the second place, ‘implied term’ is used to denote an unexpressed provision of the contract which derives from the common intention of the parties, as inferred by the Court from the express terms of the contract and the surrounding circumstances. In supplying such an implied term the Court, in truth, declares the whole contract entered into by the parties. In this connection the concept, common intention of the parties, comprehends, it would seem, not only the actual intention but also an imputed intention. In other words, the Court implies not only terms which the parties must actually have had in mind but did not trouble to express but also terms which the parties, whether or not they actually had them in mind, would have expressed if the question, or the situation requiring the term, had been drawn to their attention (see *Dahl v Nelson, Donkin and Co.* (1981) 6 App. Ca. 38 at p. 59; *Techni-Pak Sales (Pty.) Ltd v Hall*, 1968 (3) SA 231 (W) at pp. 236 - 7; *Chitty, Contracts*, 23rd ed, p. 313; *B Weeramantry, The Law of Contracts*, p. 573; but cf. *Trollope & Colls v N.W. Hospital Board*, (1973) 2 All E.R. 260 at pp. 267 - 8).”

182 See the discussion in Christie (fn 2 supra) from p184-190. See also Kerr AJ fn 21 supra at p 355 who states “Where a usage is actually known to the contracting parties, and the court can feel confident that they intended to adopt it, it is probable that the requirement of reasonableness means little more than that the usage must not be so opposed to public policy that if the parties had expressly stated it as part of their contract, the law would not have enforced it.”

183 *Alfred McAlpine* fn 181 supra

184 In legal parlance the expression “implied term” is an ambiguous one in that it is often used, without discrimination, to denote two, possibly three, distinct concepts. In the first place, it is used to describe an unexpressed provision of the contract which the law imports therein, generally as a matter of course, without reference to the actual intention of the parties. The intention of the parties is not totally ignored. Such a term is not normally implied if it is in conflict with the express provisions of the contract. On the other hand, it does not originate in the contractual consensus: it is imposed by the law from without. Indeed, terms are often implied by law in cases where it is by no means clear that the parties would have agreed to incorporate them in their contract. Ready examples of such terms implied by law are to be found in the law of sale, e.g. the seller’s implied guarantee or warranty against defects; in the law of lease the similar implied undertakings by the lessor as to quiet enjoyment and absence of defects; and in the law of negotiable instruments the engagements of drawer, acceptor and endorser, as imported by secs 52 and 53 of the Bills of Exchange Act, 34 of 1964. Such implied terms may derive from the common law, trade usage or custom, or from statute. In a sense “implied term” is, in this context, a misnomer in that in content it simply represents a legal duty (giving rise to a correlative right) imposed by law, unless excluded by the parties, in the case of certain classes of contracts. It is a naturalism of the contract in question.
The debates around non-variation clauses in the law of contract highlight the question of legitimate expectation in the field of administrative law. In *Brisley v Drotsky*, Olivier JA conceded that Hutchison was correct where he said the following concerning *SA Sentrale Ko-op A Graammaatskappy Bpk v Shifren en Andere*:

"The principle in Shifren's case has consistently been reaffirmed, albeit with the rider in a recent case that non-variation clauses are to be restrictively interpreted since they curtail freedom of contract. It is therefore still good law, despite the fact that the courts have frequently felt uncomfortable about applying the principle, and have resorted to all sorts of ingenious stratagems to avoid doing so. The reason is quite simply that, no matter how logical its theoretical justification, in practice the principle would be productive of injustice if applied without a good deal of discretion and qualification. For, on the face of it, Shifren appears to allow a party to go back on his or her word, even when another has in good faith relied thereon. Take the all too common situation represented by Shifren itself: a contract of lease containing a non-variation clause requires the written consent of the landlord for any cession by the tenant of its rights under the contract; the landlord orally consents to such a cession but later, after the cession has taken place, purports to cancel for breach, averring that the oral agreement is of no force or effect in view of the non-variation clause. To permit the landlord to cancel the contract in such circumstances seems not merely unjust but a violation of the principle that parties to a contract are expected to behave in accordance with the dictates of good faith."

In the context of legitimate expectation there is a similar feeling that an administrator should not be allowed to go back on his or her word when another has in good faith relied thereon at least without observing some form of procedural fairness. The debate concerning substantive as opposed to procedural fairness in the context of the doctrine of legitimate expectation as canvassed in *Meyer v Iscor Pension Fund* is unnecessary for the purposes of this discussion since the intention here is simply to demonstrate the commonalities between the law of contract and administrative law without going too far into the complexities of either of them.

It is submitted that the question of whether the state can exclude the principles of administrative justice by way of contractual terms from its relationship with a patient...
must be answered on a similar basis to the approach of the courts to non-variation clauses in the law of contract. Non-variation clauses are inimical to the concept of contract since they effectively restrict the rights or powers of the parties to contract. They undermine their own foundations in law. As such they represent something of a legal paradox. In the same way, purported waivers of constitutional rights undermine the founding principles of the legal system. As such they should not, as a general rule, be permitted. This view is supported by the judgment in ABBM Printing & Publishing (Pty) Ltd v Transnet Ltd, the applicant had for a number of years published and printed an in-flight magazine for the respondent which was wholly controlled and owned by the state. The respondent called for new tenders for the printing and production of the magazine and awarded the tender to someone else. The applicant asked for reasons for its decision from the respondent which referred the applicant to clause 10.1 of the conditions of tender, which provided that the respondent would not ‘bind itself to accept the lowest or any tender, nor . . . assign any reason for the rejection of a tender’. The applicant responded that it was nevertheless entitled to establish that the tender process did not infringe its right to just administrative action guaranteed by s 33 of the Constitution of the Republic of South Africa Act 108 of 1996. The court found on the facts that there was no evidence of that the applicant had waived its constitutional right to administrative justice and said that it did not therefore have to look at the ‘considerable weight of authority that doubts that a person can be held to a statutory or constitutional waiver of his constitutional rights’. The court did say that if it had not been able to find on the facts as it had done, however, then it would that there was no estoppel and no waiver of the applicant’s

---

199 See Miller and Another NNO v Donnecker 2001 (1) SA 928 (C) where the court observed: “Finally, good faith or bona fides has deep roots in South Africa’s mixed legal system. In Eerste Nasionale Bank van Suideiske Afrika Bpk v Saayman NO, fn 25 supra at 321 - 2 ([1997] 3 All SA 391 at 406) Olivier JA held that there is a close link between the concepts of good faith, public policy and the public interest in contracting. This is because the function of good faith has always been to give expression in the law of contract to the community's sense of what is fair, just and reasonable. The principle of good faith is then a wider notion of public policy; the courts invoke and apply the principle because the public interest so demands. Good faith accordingly has a dynamic role to play in ensuring that the law remains sensitive to and in tune with the views of the community. (See generally Dale Hitchison Good Faith in the South African Law of Contract and such a duty has always been a duty upon a person to act in good faith lay at the root of the oral agreement constituting the pactum. The plaintiffs would thus hardly be heard to seek to rely on strict compliance with the provisions of clauses 15.1 and 15.2 of the franchise agreement if, indeed, there had been a pactum as alleged by the defendant. The dictates of public policy and the views of the community would never be served by a slavish adherence to a non-variation clause in the face of an agreement in the form of the pactum. It is my view, that if nothing else, the defendant in casu would successfully hold the plaintiff to the pactum on the grounds that the agreement must be taken to have been entered into in good faith. The good faith basis of contract, after all, imposes an obligation on contractors not to exercise powers in ways which run counter to the concept of bona fides. Jensen JA put it in Tuckera Land and Development Corporation (Pty) Ltd v Hovis 1980 (1) SA 645 (A) as follows (at 625D - F): "It could be said that it is now, and has been for some time, felt . . . that in all fairness, there should be a duty upon a promisor, not to commit an anticipatory breach of contract, and such a duty has always been enforced by our Courts . . . It should therefore be accepted that in our law an anticipatory breach is constituted by the violation of an obligation ex lege, flowing from the requirement of bona fides which underlies our law of contract."”

192 ABBM Printing 1998 (2) SA 109 (W)
constitutional right to reasons for the respondent’s decision. In *Transnet Ltd v Goodman Brothers (Pty) Ltd* the court succinctly held that:

“In my view, the correct approach to the question of waiver of fundamental rights is to adhere strictly to the provisions of s 36(1) of the Constitution. It provides that: ‘The rights in the Bill of Rights may be limited only in terms of law of general application to the extent…’ A waiver of a right is a limitation thereof. One must be careful not to allow all forms of waiver, estoppel, acquiescence, etc to undermine the fundamental rights guaranteed in the Bill of Rights. In my view, a strict interpretation of s 36(1) is indicated. Transnet has not made out a case that the waiver it relies upon is warranted by a law of general application.”

It is submitted that the concerns of administrative law and principles of administrative justice are not so far removed from the concerns of the law of contract under the South African constitutional order as the conceptual distinctions between them as

---

193 See p118 of the *ABCd* judgment (fn 192 supra) where the court stated: “The respondent bears the onus of proving the applicant’s waiver of its constitutional rights. Although para 10.1 of the respondent’s invitation to tender records that it will not assign any reasons for rejecting a tender, there is on the affidavits before a tender, there is on the affidavits before a tender, which indicates that at the time it submitted its tender the applicant was aware of its constitutional rights and that it either expressly or implicitly waived its constitutional rights. On the facts before me I can find no basis on which it could be found that there is an estoppel. By reason of these findings it is unnecessary to deal with the considerable weight of authority which doubts that a person can be held to a statutory or constitutional waiver of his constitutional rights. In this regard I refer to *Community Development Board v Retirecice Court, Durban Central, and Another* (1971) (SA) 557 (N) at 563B; *Tellier and Others v Bombay Municipal Corporation and Others*; *Kuppllsami and Others v State of Maharashtra and Others* 1987 L2C (Con) 351 (SC), a decision of the Supreme Court of India at 366E–I; *S v Pramas (Cape Town) (Pty) Ltd* 1995 (8) BCLR 981 (C) at 989E–J; *Maharaj v Chairman, Liquor Board* 1997 (1) SA 273 (N) at 276J–277B; *Hogg Constitutional Law of Canada* (Carswell, 1991) at 54–1. Had I been unable to decide the issue of waiver and estoppel on the facts I would, on the above authorities have found that there was no estoppel and that there had been no waiver by the applicant of its constitutional rights and that the respondent cannot rely on clause 10.1 of the conditions of tender to frustrate the applicant’s constitutional right to reasons for the respondent’s decision.”

194 *Transnet* 2001 (1) SA 853 (SCA)

195 In *Brisley v Drotsky* fn 186 supra the court noted: “Osuk Hutchison lever ‘n sterk pleidooi dat die bona fides, geksrag deur die Grondwet, groter erkenning in ons kontraktereg verdien. In ‘n hoofstuk getiteld ‘Good faith in the South African Law of Contract’ in Roger Brownsworde, Norma J Hird and Germain Howells *Good Faith in Contract: Concept and Context* (1999) 213 op 230 - 1 skryf hy: ‘What emerges quite clearly from recent academic writings, and from some of the leading cases, is that good faith may be regarded as an ethical value or controlling principle, based on community standards of decency and fairness, that underlies and informs the substantive law of contract. It finds expression in various technical rules and doctrines, defines their form, content and field of application and provides them with a moral and theoretical foundation. Good faith thus has a creative, a controlling and a legitimating or explanatory function. It is not, however, the only value or principle that underlies the law of contract nor perhaps, even the most important one. In the words of Lubbe and Murray: ‘It does not dominate contract law but operates in conjunction (and competition) with notions of autonomy and responsibility, the protection of reasonable reliance in commerce, and views of economic efficiency in determining the contours of contract doctrine. However, it will ensure just results only if Judges are alert to their task of testing existing doctrines and the operation of particular transactions against the constantly changing mix of values and policies of which bona fides is an expression.’” On this view of things, which seems to be correct, the influence of good faith in the law of contract is merely of an indirect nature, in that the concept is usually if not always mediated by some other, more technical doctrinal device. Thus, for example, while good faith does not empower a court directly to supplement the terms of a contract, or to limit their operation, it might in appropriate cases enable the court to achieve these same results indirectly, through the use of devices such as implied terms and the public policy rule.” Terwyl beganeinde perspektiewe onderskryf moet word, is die moeilike vraag hoe die bona fides op kontrakuele gronde gelyke betekenis moet word. Die werklikheid van die bona fides in ons kontraktereg is nog lank nie volledig verken en inhoudsgegee nie. Dit sal oor jare en aan die hand van balse niesprake moet gesei word. Uiteindelik sal, hopelik, ‘n nuwe raamwerk en denkgematig in ons kontakreteg ontstaan. Toen 1988 het die meerderheid van hierdie HoF by monde van Joobert AR nie genuiwier oor ‘n graafrede oor die exceptie doli generalis uit te spree nie, soos byk uit *Bank of Lisbon and South Africa Ltd v De Oregleu and Another* 1988 (3) SA 580 (A). Die exceptie was ‘n belangrike argument wat aan die redelikheid en billikelikheid ‘n sterk derogereende werking verleen het, dus dit is gebruik om die gestrange reg in bepaalde gevalle te versag. Maar slegs ‘n jaar later het hierdie HoF nie teruggegene om kontrakteerreg en regerskeer op te weeg nie teon ‘the doing of simple justice between man and man’ - *Sasfin (Pty) Ltd v Bunker* 1989 (1) SA 1 (A) op 9A - C). Sederetens, soos reeds genoem, het die redelikheid en billikelikheid in die vorm van die bona fides al hoe meer op die voorgrond getre. Dit is dus duidelik dat ons reg in ‘n ontwikkelingsfasie is waar kontaktelike geregtigheid meer as ooit tevore as ‘n morele en juridiese norm van groot belang op die voorgrond tree. Hierdie tendens sal na alle waarkrylikheid, soos academici soos Neels terugsien, deur grootlykwaarde waardes versterk word. (Sien Jan Neels ‘Regeringskeer en die Korrigereende Werking van Redelikheid en Billikelikheid’ (deel 3) in (1999) 3 TSAR 477 op
public and private law at first glance suggest. In *Brisley v Drotsky* the Supreme Court of Appeal noted the importance of the constitutional values in the law of contract and the increased significance of concepts such as *bona fides* as one expression of the values and policies underlying the South African legal system. The concept of *bona fides* is common to both the law of contract and administrative law. In *Eerste Nasionale Bank Van Suidelike Afrika Bpk v Saayman No* the court reviewed the long history of *bona fides* or good faith in the South African law of contract. It is a

489; zien ook A van Aswegen ‘The Future of South African Contract Law’ in *Die Toekoms van die Suid-Afrikaanse Privaatreëg*, (1994) 44 op 46 - 51; A van Aswegen ‘The Implications of a Bill of Rights for the Law of Contract and Delict’ 1995 SALTJHR op 30 evr. Daar kan veral gewys word op hoofstuk 2 van die Grundwet wat waardes soos vyred, gelykheid en waardigheid beskaw; art 39(2) wat versek dat die hoeu die goeie by ons wettig. word, en op art 172 wat bepaal dat die hoeu Hoeu die inherente bevoegdheid het om die gemensereg te ontwikkel met inagening van die belang van geregelykheid. Dit word ook al hoe meer duidelik dat kontempore re gemeenskapsbeheerexists, onder ander die bekenmerking van swakkere kontraktes, van die hoeu vereis om meer aktief op te tree. Ek vereenemag my dus met Prof C F C van der Walt se pleidooi in *Beheer oor Ontbilklike Kontrakbeding - Quo Vadis vanaf 15 Mei 1999* 2000 TSAR 33 op 41). ’Bykans jaar na die uitspraak in *Nesgehouer & Co Ltd v Harman* en ten spye van die “lyn van bestasings” wat daarop gevolg het, moet gekenmerk word dat die hoeu ‘n egale bereik waar buite relevante waardes regellik die kontrakbedings sal toepas nie. Vir sove die hoeu aan hulle elle en die presedentetekst oorgelaat word om te ondersoek tussen bedings wat afwesig sal word of nie, en tussen bedings wat nie is nie, sal hulle nie daarby uitkom nie. Intussen sal die hoeu waarskynlik steeds voortgaan om “grondliggende waardes” van goeie trou omvragstukke, agter die hoeu van allearlei ander regfigure, remediens en diskrise om te see. Laasgenoemde werkwyse moet uit die oogpunt van judikade optrede teen onbillike kontraktuele situasies uit. ’n Uiteraard nie geringgeskat word nie. Tensy daar agter en wondering met die regstreekse benadering kome, sal ‘n aanvaarbare ewew.ig van rege en verpligtinge op die kontraktereëre (dit wat as billik en regverdig bestempel word) deur die hoeu bereik kan word nie.”

196 Saayman fn 27 supra

197 The court in *Saayman* fn 27 supra stated: “In *Maskin NO v Anglo-American Corporation of SA Ltd and Another* 1968 (4) SA 793 (W) het Jansen R, toe nog ‘n Regter van ‘n Provinsiale Afsleë van die Hoogeregshof, sterk na vore gerek as kampvregter vir die praktiese verwoesliking van die bona fide-beginsel in ons kontrakterep. Op 802A het hy verklaar: ‘It is now accepted that all contracts are bonae fidei (some are even said to be uberrimae fidei). This involves good faith (bona fides) as a criterion in interpreting a contract (Wessels (op cit para 1976) and in evaluating the parties both in respect of its performance (Wessels para 1997) and its antecedent negotiation. Where a contract is concluded the law expressly invokes the dictates of good faith, and conduct inconsistent with those dictates may in appropriate circumstances be considered to be fraud…” En weer, na aanleiding van die plig om intiligte te openbaar by die kontrakshutting, het hy geneel op 804D: “It may, perhaps be questioned whether these criteria do not go further in applying ethical considerations in contravention than our authorities recognise. On the one hand there can be no doubt that in contravening our law expressly requires bonas fides, a concept of variable content in the light of changing mores and circumstances. On the assumption (without deciding) that the ultimate test suggested by Millner correctly reflects the present state of our law, there is a striking resemblance between that test and eg “die algemene reggevoel van die gemeenskap” mentioned above in regard to delict generally.” Toe Jansen R na hierdie Bank verhek is, het hy dieselfde benadering konsesie gehad, veral in *Tuckers Land and Development Corporation (Pty) Ltd v Hovis* 1980 (1) SA 645 (A) op 651B-652D en *Bank of Lisbon and South Africa Ltd v De Ornelas and Another* (supra) op 611G-611H, in “n mindesteinsprak. (Sien ook Jansen AR se bydrae, Carole Lewis in (1991) 108 SALJ op 249-64.) En ander uitsprake van hierdie Hof is die grondliggende waardes van die goeie trou, billikheid en openbare belang in die kontrakterep ook bekleemt; veral wat betrek die afdwing van kontrakte wanneer dit teen die reggevoel skrei. So, by die Hefer AR in *Benson v SA Mutual Life Assurance Society* 1986 (1) SA 776 (A) gekonstateer dat “n ‘hof die diskrise het om nie spesifieke nakomend van ‘n kontrak te gelas nie. Hierdie diskrise, so is verklaar op 783C-E: ‘…is aimed at preventing an injustice - for cases to arise where justice demands that a plaintiff be denied his right to performance - and the basic principle thus is that the order which the court may produce should not produce an unjust result which will be the case, eg if, in the particular circumstances, the order will operate unduly harshly on the defendant. Another principle is that the remedy of specific performance should always be granted or withheld in accordance with legal and public policy. ’…” En verder met die afdwing van ooreenkoms wat die handelswye van die hoeu verrukkende bevoegdheid om beperkinge op sodanige ooreenkoms te plaas, ontwikkel en wel op grond van openbare belang. In *Mathews v Ellis* 1984 (A) 897 (A) (Pty) Ltd in 897H en 898D stel: “Ons moet opvattings oor wat in die openbare belang is, of wat die openbare belang vereis, nie altyd dieselfde is nie en van tyd tot tyd kan verander, kan daar ook geen numerus clausus wees van soorte ooreenkoms wat as styding met die openbare belang beskou kan word nie. Dit sou dus volgens die beginsels van ons reg moontlik wees om te se dat ‘n ooreenkoms wat iemand se handelswye inkort teen die openbare belang is indien die onbestredige van die betrokke goeie geval nodig is dat die Hof die afgawing van die betrokke ooreenkoms die openbare belang beheer skak.” En op 893D: ‘Die opvatting dat ‘n persoon wat ‘n beperking wil afdwing nie die las dra om te bewys dat dit redelik inter partes is nie, bring nie mee dat oorewagings van die redelikheid of onredelikheid van ‘n beperking nie van belang is of kan wees nie.’ En op 895D-E: ‘Die belangrike vraag is dus nie van ‘n ooreenkoms van so ‘n aard is dat dit ab initio ongeldig is nie, maar of dit ‘n ooreenkoms is wat die Hof, geens iets van die openbare belang, nie beheer eit of deeg nie.’ Die opvatting dat alle kontrakte in ons reg bonae fideis is, dus deur die hoeu trou beginsel beheer word, is ook deur hierdie Hof erken onder andere in *Paddock Motors (Pty) Ltd v Igesund* 1976 (3) SA 16 (A) op 28;
similarly recurring theme in administrative law. Unfortunately the courts do not always express themselves in language that acknowledges the legal reality that the values and public policy principles underlying different branches of law are fundamentally the same or where different constitutional principles and values are applicable, that they are internally consistent with each other. This is due in part to a persistent distinction drawn by the courts between different branches of law, such as contract and delict, in a manner that implies that there is no fundamental relationship between them. Thus for instance in Wagener v Pharmacare Ltd; Cuttings v Pharmacare Ltd the court observed:

“It is nevertheless necessary to say that the submission advanced on the appellants' behalf that the principle in the Kroonstad case should be extended to encompass strict product liability is untenable. That matter was concerned with a warranty imposed on a seller by the law of sale which can be excluded by contract. Contract and delict, being quite separate branches of the law, have their own principles, remedies and defences. One cannot, because of the absence of contractual privity between the injured party and the manufacturer, simply graft warranty liability onto a situation patently governed by the law of delict.”

(writer’s italics).
It is submitted with respect that it is not so much the decision of the court that is problematic as it is the manner of its justification. The existence of two separate branches of law should not be used in itself as justification for the refusal or granting of a particular remedy for a number of reasons. The most obvious reason is that the Constitution requires the courts to develop the common law in accordance with constitutional values and principles. These are common to all law in South Africa. One cannot therefore take the view that the one particular branch of law is totally separate to another and that on this basis alone a particular remedy should not be extended in the one, because it might constitute an intrusion into the other branch of law.\footnote{200} A less obvious, but no less important and related, reason is that such an approach has the potential to lead the courts into the trap of using pre-constitutional legal reasoning to arrive at post-constitutional decisions without questioning or examining the basis for such pre-constitutional reasoning to establish whether or not it is consistent with constitutional principles and values\footnote{201}. This in turn leads to a failure on the part of the courts to develop the common law as they are constitutionally mandated to do\footnote{202}. Another reason not to be too insistent upon drawing clear distinctions between the different branches of law as an end in itself is exemplified by...

\begin{footnotesize}
\begin{enumerate}
\item The real question is whether the extension of the remedy is constitutionally required or justified.
\item Thus in Carmichele v Minister Of Safety And Security And Another (Centre For Applied Legal Studies Intervening) 2001 (4) SA 938 (CC) the constitutional court observed: "The proceedings in the High Court and the SCA took place after 4 February 1997 when the Constitution became operative. It follows that both the High Court and the SCA were obliged to have regard to the provisions of s 39(2) of the Constitution when developing the common law. However, both Courts assumed that the pre-constitutional test for determining the wrongfulness of omissions in delictual actions of this kind should be applied. In our respectful opinion, they overlooked the demands of s 39(2). In the High Court and the SCA the applicant relied only on the common-law understanding of wrongfulness which has been developed by our Courts over many years. Save in one respect referred to in the applicant's heads of argument in the SCA, no reliance was placed on the provisions of the IC or the Constitution as having in any way affected the common-law duty to act owed by police officers or prosecutors to members of the public. With regard to the 'interests of the community' imposing a legal liability on the authorities, it was submitted by the applicant's counsel that it would 'encourage the police and prosecuting authorities to act positively to prevent violent attacks on women'. In support of that submission counsel referred to authorities in this Court and the SCA devoted to patterns of discrimination against women. It does not appear to have been suggested that there was no obligation to the High Court or the SCA to develop the common law of delict in terms of s 39(2) of the Constitution." (Footnotes omitted)
\item Thus in Carmichele (fn 201 supra) the court noted: "It needs to be stressed that the obligation of Courts to develop the common law, in the context of the s 39(2) objectives, is not purely discretionary. On the contrary, it is implicit in s 39(2) read with s 173 that where the common law as it stands is deficient in promoting the s 39(2) objectives, the Courts are under a general obligation to develop it appropriately. We say a 'general obligation' because we do not mean to suggest that a court must, in each and every case where the common law is involved, embark on an independent exercise as to whether the common law is in need of development and, if so, how it is to be developed under s 39(2). At the same time there might be circumstances where a court is obliged to raise the matter on its own and require full argument from the parties. It was implicit in the applicant's case that the common law had to be developed beyond existing precedent. In such a situation there are two stages to the inquiry a court is obliged to undertake. They cannot be hermetically separated from one another. The first stage is to consider whether the existing common law, having regard to the s 39(2) objectives, requires development in accordance with these objectives. This inquiry requires a reconsideration of the common law in the light of s 39(2). If this inquiry leads to a positive answer, the second stage concerns itself with how such development is to take place in order to meet the s 39(2) objectives. Possibly because of the way the case was argued before them, neither the High Court nor the SCA embarked on either stage of the above inquiry.
\end{enumerate}
\end{footnotesize}
the words of the Supreme Court of Appeal in *Transnet Ltd v Goodman Brothers (Pty) Ltd*:

"The identification of an administrative action, in contrast to an act regulated by private law, has become more difficult with the increasing use by the State of private law institutions, notably contract, to perform its duties. This takes place by privatisation, delegation, outsourcing, etc (see A Cockrell 'Can you Paradigm? - Another Perspective on the Public Law/Private Law Divide' 1993 *Acta Juridica* 227; Yvonne Burns 'Government Contracts and the Public/Private Law Divide' (1998) 13 SA Public Law at 234 et seq)."

It seems that a number of conclusions can be drawn from the foregoing discussions with regard to contractual relationships between public providers and patients:

1. It is unlikely that a contractual term will be interpreted as constituting a waiver of a constitutional right or as estopping a patient from enforcing his or her constitutional rights. The right of access to health care services is a constitutional right as is the right to administrative justice;

2. A public provider-patient contractual relationship is rarely likely to be one dimensional due to the fact that the public provider will be subject, in addition to purely contractual obligations, to the relevant provisions of administrative law. Since public providers derive their powers largely from legislation and since the implementation of legislation is regarded as administrative action, to the extent that the delivery of health care services constitutes the implementation of legislation, administrative law will be a factor in any contractual public provider-patient relationship.

---

203 *Transnet* fn 194 supra

204 See in which Cameron JA observed: "Even if the conditions constituted a contract (a finding not in issue before us, and on which I express no opinion), its provisions did not exhaust the province's duties toward the tenderers. Principles of administrative justice continued to govern that relationship, and the province in exercising its contractual rights in the tender process was obliged to act lawfully, procedurally and fairly. In consequence, some of its contractual rights - such as the entitlement to give no reasons - would necessarily yield before its public duties under the Constitution and any applicable legislation. This is not to say that the conditions for which the province stipulated in putting out the tender were irrelevant to its subsequent powers. As will appear, such stipulations might bear on the exact ambit of the ever-flexible duty to act fairly that rested on the province. The principles of administrative justice nevertheless framed the parties' contractual relationship, and continued in particular to govern the province's exercise of the rights it derived from the contract. Counsel's invocation of the *Cape Metropolitan* case as authority to the contrary is mistaken. There it was held that a local authority's cancellation of an agreement was not "administrative action" under the Constitution entitling the other contractant to procedural fairness before termination. Although the public authority derived its power to conclude the contract from statute, it was held that the same could not necessarily be said about its power to cancel. But the *Cape Metropolitan* case turned on its own facts, and this Court was careful to delineate them. In the first place, the tender cases were expressly distinguished. Second, the employment cases (where a public authority's express statutory power to dismiss public sector workers was held bound by public duties of fairness notwithstanding that a corresponding right existed at common law or that such a right might also have been contained in a contract) were also distinguished. Third and most importantly, the Court in *Cape Metropolitan* did not purport to provide a general answer to the question whether a public authority in exercising powers derived from a contract is in all circumstances subject to a public duty to act fairly. That question was left open. Instead, the Court's judgment makes it plain that the answer depends on all the circumstances. The critical passage in the reasoning of Streicher JA is this: 'Those terms [ie entitling the public authority to cancel the contract] were not prescribed by statute and could not be dictated by the [public authority] by virtue of its
3. The considerations of public policy that underlie the law of contract must be interpreted as consistent with, if not the same as those that underlie administrative law since both are founded upon the principles and values established by the Constitution;

4. Due to the apparent restriction of the administrative law doctrine of legitimate expectation by the courts to procedural relief only, the doctrine of legitimate expectation does not at present provide an alternative remedy for substantive relief equivalent to that which can potentially be provided by an implied term in the context of the law of contract. It is thus likely that in practice there will still be separate causes of action cited for procedural relief as opposed to substantive relief on the basis of administrative law and the law of contract respectively;

5. The fact that the provider is a public body is likely to impact upon its contractual relationships in the sense that a number of terms may be implied by law that would not necessarily be implied had the provider been a private body. Such implied terms may, depending upon the context, include a duty to act reasonably, a duty to act fairly in terms of procedures envisaged under the contract, a duty to give written reasons for decisions and actions taken under the contract and a duty to give adequate notice of intended actions under the contract. The implied terms may be by virtue of section 3 of the PAJA which relates to procedurally fair administrative action affecting any person.205

This conclusion may meet with objections on the basis that the incorporation of implied terms of this nature in contracts with public providers is unnecessary because such providers cannot in any event escape the provisions of administrative law. The

205 Such implied terms may derive from the common law, trade usage or custom, or from statute.” (Alfred McAlpine & Son fin 181 supra)
purists would argue that there may be separate and specific remedies for violations of statutory provisions that exclude other remedies and that the provisions of administrative law and the law of contract are separate branches of law with their own principles, remedies and defences. It is submitted that it is precisely for this reason that in certain circumstances it may be appropriate to allow terms implied by administrative law in a contract. When a person contracts with the government there is seldom a question as to in whose favour the power balance usually lies. In the context of health services, the patient is particularly vulnerable. He or she is in the majority of cases totally dependent upon the public provider for the services required and does not have the choice of obtaining them elsewhere. The consequences of a breach of contract for health services are often irreversible and sometimes fatal in which case purely procedural remedies may well amount to no remedy at all. The expectations of a patient contracting with the state may be quite different from those of a person contracting with a private provider and may even in some circumstances predispose the patient to being less careful in dealing with the public provider than the private provider – for example the same levels of self-interest would not be expected of a public provider as of a private provider, a certain respect and regard for public policy considerations and the interests of the community would feature higher on a patient’s list of expectations of a public provider than of a private provider, the accountability of the public provider to the patient is not only in its capacity as provider of health care services but in its capacity as the state, the executive branch of government of the country, the custodian of the public interest, the respecter, protector, promoter, and fulfilter of the rights in the Bill of Rights.

Where the state dishonours such expectations in the context of health care services, the harm to the patient has the potential to be considerable. Moreover the harm flowing from a violation of such an implied term is likely to be quantifiable in much the same way that contractual damages arising from private provider-patient contracts are quantifiable. It is difficult to see a reason why, in the absence of any statutory provisions to the contrary and where appropriate in the circumstances, certain terms based in administrative law should not be implied in the public provider-patient contract where such a contract is found to exist.
4.10 Tacit or Implied Terms in Health Care Contracts

If one looks at the case law dealing with the delivery of health care services and those involving other forms of expert skill and advice, it is submitted that there are a number of terms which may be inferred in a health care contract on the grounds of public policy, fairness and reasonableness. It is submitted that the following terms are relevant in the context of contracts for health care the public health sector and the courts should be prepared to read them into contracts for health care services between public providers and patients in the appropriate circumstances. The terms are derived on the basis of the legal principles listed below, not necessarily in order of appearance and not necessarily only one principle at a time:

1. A term which is sought to be implied in a contract must be capable of clear and precise formulation;206

2. The terms below would in most instances satisfy the ‘officious bystander test’207

3. The court in Standard Bank of SA Ltd v Durban Security Glazing (Pty) Ltd and Another208 identified the following principles and guidelines for tacit terms. It is submitted that the tacit terms proposed below satisfy these requirements –

(a) A Court is slow to import a tacit term in a written agreement209. It is submitted that the public provider-patient contract is rarely if ever written;

(b) The Court has no power to supplement the bargain between the parties by adding a term which they would have been wise to agree upon, although they did not. The fact that the suggested term would have been a reasonable one for

206 Rapp and Malster v Aronovsky 1943 WLD 68 at 75; Desai and Others v Greyridge Investments (Pty) Ltd 1974 (1) SA 509 (A) at 522H - 523A; Hamilton-Browning v Denis Barker Trust 2001 (4) SA 1131 (N) at 1137
207 Reigate v Union Manufacturing Co (Ramsbottom) [1918] 1 KB 592 (1918) 118 LT 483 referred to in Hamilton-Browning v Dennis Barker Trust 2001 (4) SA 1131 (N); In The MV Prosperous: Aegean Petroleum (UK) Ltd v Pan Bulk Shipping Ltd Cobam NV Intervention; Cobam NV v Pacific Northern Oil Corporation and Others 1995 (3) SA 595 (D)
208 Standard Bank of SA Ltd v Durban Security Glazing (Pty) Ltd and Another 2000 (1) SA 146 (D)
209 Sweets from Heaven (Pty) Ltd and Another v Ster Kinekor Films (Pty) Ltd and Another 1999 (1) SA 796 (W)

570
them to adopt or that its incorporation would avoid an inequity or a hardship to one of the parties, is not enough. The suggested term must, in the first place, be one which was necessary as opposed to merely desirable, to give business efficacy to the contract; and, what is more, the Court must be satisfied that it is a term which the parties themselves intended to operate if the occasion for such operation arose, although they did not express it. . . . That does not mean, in my view, that the parties must consciously have visualised the situation in which the term would come into operation. . . . It does not matter, therefore, if the negotiating parties fail to think of the situation in which the term would be required, provided that their common intention was such that a reference to such a possible situation would have evoked from them a prompt and unanimous assertion of the terms which was to govern it 210.

(c) The question to be asked is based always upon an hypothesis: what would the parties have done if confronted with the situation that has arisen? The situation must, of course, be one necessarily and obviously arising out of the contract which the contract in express terms has not provided for211.

(d) In order to determine whether a tacit term has been proved on a balance of probabilities regard must be had to the evidence, the conduct of the parties and the surrounding circumstances212.

(e) The Court is to determine from all the circumstances what a reasonable and honest person who enters into such a transaction would have done, not what a crafty person might have done who had an arrière pensée to trick the other party into an omission of the term. The transaction must be regarded as a normal business transaction between two parties both acting as reasonable businessmen213.

210 Per Colman J in Techni Pak Sales (Pty) Ltd v Hall 1968 (3) SA 231 (W) at 236E - 237A (emphasis supplied).
211 Per Stratford JA in Administrator (Transvaal) v Industrial & Commercial Timber & Supply Co Ltd 1932 AD 25 at p 38 (emphasis supplied).
212 Minister van Landbou-Tegnieke Dienste v Scholtz 1971 (3) SA 188 (A) at 196H-197A
213 Per Wessels ACJ in Administrator (Transvaal) v Industrial & Commercial Timber & Supply Co Ltd 1932 AD 25 at p 33
The tacit terms suggested below are derived as much from the law of delict and constitutional and administrative law as from the law of contract. Purists may object to such cross-pollination of the law of contract by these other areas of law. It is submitted, however, that given that the judgments of the courts are public knowledge and that public policy does not in principle distinguish between areas of law but is concerned in the main with constitutional values and principles, the public interest, fairness and reasonableness, there is no reason why principles from the law of delict, constitutional and administrative law should not inform the law of contract.

The public provider must take all reasonable steps to ensure that the health professional, eg the nurse, doctor or physiotherapist, in the employ of the public provider is qualified to perform the services the patient is receiving and such professional meets with the licensing requirements of any law with respect to his or her profession.214

The patient will be treated with a reasonable degree of professional skill and care and to a standard required by the professional and ethical rules of the profession to which the relevant health practitioner belongs.215

Decisions concerning the patient’s treatment will be taken by the public provider in a manner that is lawful, reasonable and procedurally fair.216 In practice this

---

214 See Mhlewa v Minister of Health 1989 (3) SA 600 (D) in which the court said “The two Transvaal cases, as well as Buls and Another v Tsatsarolakis 1976 (2) SA 891 (T), neither mention nor support the distinction, which is pivotal to the decision in the Lower Umfolozi case, between professional work over which the hospital is said to have no control and for which it is accordingly not liable, and managerial or administrative duties performed by an employee, for which it is responsible. In the Transvaal cases the issue was simply whether the particular member of staff was negligent in the exercise of his duties, regardless of whether he was part of a professional team or not.” See also Buls and Another v Tsatsarolakis 1976 (2) SA 891 (T); Minister van Polisie en 'n Ander v Gamble en 'n Ander 1979 (4) SA 759 (A); Minister of Police v Robie 1986 (1) SA 117 (A).

215 In Van Wyk v Lewis 1924 AD 438 at p 444 and p 448 it was held that “in deciding what is reasonable the Court will have regard to the general level of skill and diligence possessed and exercised at the time by the members of the branch of the profession to which the practitioner belongs”. See also Blyth v Van Den Heever 1980 (1) SA 191 (A) and Durr v Absa Bank Ltd And Another 1997 (3) SA 448 (SCA) in which the court observed: “Not only did the Judge below adopt the typical broker’s test, but he held that Mrs Durr tendered no evidence as to the duties and functions of bankers under circumstances such as exist in this case. That is not entirely correct. Mr Goldhawk had said: ‘If a person holds himself out as an expert and there is support, such as a financial institution confirming that he’s an expert, then any person dealing with him should be entitled to expert advice. There’s the analogy of if you get into a taxi and the taxi driver is a bad driver, does that remove any negligence claim you may have against him?’ Mr Goldhawk is a chartered accountant and a specialist investigating accountant. He was appointed as such by the liquidators of ‘Supreme’ and gained a deep insight into the group and its penumbra. In Jansen Van Vuuren and Another NNO v Kruger 1993 (4) SA 842 (A) the court said “The duty of a physician to respect the confidentiality of his patient is not merely ethical but is also a legal duty recognised by the common law.” See also Dube v Administrator, Transvaal 1963 (4) SA 260 (W); Janse Van Rensburg NO and Another v Minister Of Trade and Industry and Another NNO 2001 (1) SA 29 (CC); Winckler and Others v Minister of Correctional Services and Others 2001 (2) SA 747 (C) Section 33(1) guarantees everyone the right to administrative action that is lawful, reasonable and procedurally fair. See also South African Veterinary Council and Another v Veterinary Defence Association 2003 (4) SA 546 (SCA)
means that the patient will be consulted before such decisions are taken and that he or she will be informed of the decision before it is taken.

4 The patient’s consent will be obtained with regard to treatment that is administered to him or her prior to the administration of such treatment\(^{217}\).

5 The provider undertakes to render the health services in accordance with the patient’s consent and on the basis of the information supplied to the patient in order to obtain that consent\(^{218}\).

6 The patient will be informed of the fact that treatment is of an experimental nature or is being conducted in the course of research and will be given the opportunity to refuse such treatment before it is administered\(^{219}\).

7 The patient’s health information will be kept confidential and will not be used in a way that will cause harm to the patient. It will not be disclosed to anyone without the patient’s prior consent\(^{220}\).

8 The patient is entitled to rely on and act in accordance with the advice of the health professionals treating him or her in their capacity as experts\(^{221}\).

9 Unless specifically stated otherwise in express and unambiguous terms the provider does not undertake to cure the patient\(^{222}\).

\(^{218}\) Esterhuizen v Administrator, Transvaal 1957 (3) SA 710 (T).

\(^{219}\) Section 12(2)(c) of the Constitution.

\(^{220}\) Jansen Van Vuuren And Another NNO v Kruger 1993 (4) SA 842 (A).

\(^{221}\) In Pinshaw v Nexus Securities (Pty) Ltd And Another 2002 (2) SA 510 (C) the court said that “Clients are wont to place their trust not just in the company, but also in the individuals within the company with whom they deal. Clients tend to expect, and in my view are entitled to expect, the exercise of skill and care from the individual advisers and managers. A failure to exercise appropriate skill and care can have devastating consequences, as Durr’s case supra illustrated. Furthermore, financial advisers and managers can vis-à-vis their immediate clients contract out of or limit liability, and as I see the position, they can for delictual purposes do the same for their employees. To fix Van Zyl with a duty to Mrs Pinshaw, in the circumstances pleaded, strikes me as being fair and in accord with the legal convictions of the community. It seems to me, therefore, that policy considerations favour upholding the duty rather than negating it.” See Strauss fn 98 supra at p 40-41 at which he respectfully submits that where a patient consults a doctor who undertakes to treat him, the doctor assumes no greater duty than to treat the...
10 The provider will always act in the best interests of the patient and will only administer treatment that is medically necessary. 

11 The patient will not be abandoned by the provider. Alternative health services will be provided where the provider can no longer provide the health care services previously supplied to the patient. The provider ensure that where a course of treatment has commenced it will be completed.

12 The provider is entitled to payment for health care services where this is provided for by law and the patient or other person responsible for the patient is liable to pay the costs of such services.

13 In the absence of provisions in law to the contrary, the patient will not be detained against his or her will by the public provider.

14 The provider will take reasonable measures to ensure the health and safety of the patient while he or she is receiving health services at its premises.

15 The goods supplied to the patient in the course of medical treatment are fit for the purpose for which they were supplied and are free of latent defects.

223 See *The State v Sikunyana and Others* 1961 (3) SA 549 (E) in which the court stated: "The medical practitioner who performs a dangerous operation with his patient's consent incurs no criminal responsibility if just cause for the operation exists, for the law does not regard his conduct as improper: but if "there is no just cause or excuse for an operation, it is unlawful even though the man consents to it" - vide *Browery v Browery*, 1954 (3) A.B.R. 59 at p. 67, per Denning, L.J.

224 *Applicant v Administrator, Transvaal, and Others* 1993 (4) SA 733 (W)

225 See the previous discussions of the legislation in the different provinces and their fee regulations.

226 Section 12(1) of the Constitution

227 *Beaven v Lansdown Hotel (Pty) Ltd* 1961 (4) SA 8 (N) Regal v *African Superslate (Pty) Ltd* 1963 (1) SA 102 (AD); *Quathlamba (Pty) Ltd v Minister Of Forestry* 1972 (2) SA 783 (N); *Bronnt Hotel (Pty) Ltd v Low* 1974 (2) SA 333 (R); *Kritzinger v Steyn En Andere* 1997 (3) SA 686 (C). See also section 9(1) of the Occupational Health and Safety Act No 85 of 1993 which states that "Every employer shall conduct his undertaking in such a manner as to ensure, as far as is reasonably practicable, that persons other than those in his employment who may be directly affected by his activities are not thereby exposed to hazards to their health or safety." The definition of 'employer' in the Act is wide enough to include the state.

228 In *Curtaincrafts (Pty) Ltd v Wilson* 1969 (4) SA 221 (E), the court said that a purchaser of an article is entitled to expect that the article shall be free from such latent defects as are not to be expected in an article of that quality, price and type, unless he obtains a warranty in expressly wider terms. *Kroonstad Westelike Boere-Ko-Operatiewe Vereniging Bpk v Botha and Another* 1964 (3) SA 561 (A) Liability for consequential damage caused by latent defect attaches to a merchant seller, who was unaware of the defect, where he publicly professes to have attributes of skill and expert knowledge in relation to the kind of goods sold.
16 The patient's constitutional rights to life, bodily and psychological integrity, human dignity, privacy, freedom and security of the person, freedom of religion, belief and opinion, and access to health care services will be respected, protected, promoted and upheld by the public provider.

It is submitted that most of these terms would be the same for private sector providers.

4.11 Issues Involving Contracts for Health Care Services

If the question of whether or not the provision of ordinary health care services is based on the law of contract is rather murky, it is submitted that the same question when applied to emergency medical treatment is murkier still. Provinces do charge for emergency medical services, including ambulance services, and they also charge for various kinds of emergency medical treatment rendered at health establishments. As stated previously the English law doctrine of consideration forms no part of the South African law of contract and the fact that a payment for services is required does not automatically imply the existence of a contact either. The fact of the matter is that even in the private sector, the inference of a contractual relationship between provider and patient tends to take place after the event at a time when a need arises to scrutinise the nature of the relationship more closely. It is submitted that there is a different dimension to 'trade' in health services compared to other non-essential or more commercial commodities, access to which is not so strictly regulated or controlled by law both in terms of who may supply them and the conditions for

See also Crawley v Frank Pepper (Pty) Ltd 1970 (1) SA 29 (N) A seller is obliged to disclose all material latent defects which unfit or partially unfit the res vendita for the purpose for which it was intended to be used. By operation of the Aedilitian Edicts, as expounded and adopted in our law, into every contract of sale there is imported a warranty by the seller against such latent defects. Although a seller may contract out of his obligations to disclose and out of the statutorily imported warranty against latent defects, the existence of which he does not know at the time of the sale, if he purports to contract out of his obligation to disclose and of the implied warranty against material latent defects unfitting, or partially unfitting, the res vendita for the purpose for which it is sold, and those defects are present to his mind at the time of the sale, but he remains silent about them although he must know that to disclose their existence would cause a prospective buyer either not to purchase at all or to insist on a lower price than he otherwise would pay, he will be given the 'replication of fraud' (de dolo replicationem).

See also Holmdene Brickworks (Pty) Ltd v Roberts Construction Co Ltd 1977 (3) SA 670 (A) where it was held that a merchant who sells goods of his own manufacture or goods in relation to which he publicly professes to have attributes of skill and expert knowledge is liable to the purchaser for consequential damages caused to the latter by reason of any latent defect in the goods. Ignorance of the defect does not excuse the seller. Once it is established that he falls into one of the above-mentioned categories, the law irresistibly attaches this liability to him, unless he has expressly or impliedly contracted out of it. The liability is additional to, and different from, the liability to redhibitorian relief which is incurred by any seller of goods found to contain a latent defect. Broadly speaking, a defect may be described as an abnormal quality or attribute which destroys or substantially impairs the utility or effectiveness of the res vendita for the purpose for which it has been sold or for which it is commonly used. Such a defect is latent when it is one which is not visible or discoverable upon an inspection of the res vendita.

This is an obligation imposed upon the state by section 7(2) of the Constitution.
supply, which are not so immediately necessary for the continued or improved health or wellbeing of the person requiring them.

In the case or an emergency, it would not usually be feasible to argue a contractual intention on the part of the patient or the provinces sufficient for the establishment of a contractual relationship because even the patient is very often incapable of forming such an intention before the services are rendered. *Ex post facto* ratification and consent to a contractual relationship is a possibility but even in the private health context it is not a comfortable fit. The nature of the services rendered and the goods supplied in health care services are for the most part such that they cannot be returned should a patient decide after the event, not to accept them or ratify the relationship with the provider. It could be argued that a contract could arise in a situation where the patient is not the contracting party but is for instance a child or an old person for whom the contracting party is responsible, but there is the possibility of a counterarguments of duress or even undue influence, which may have a fair chance of success in emergency situations. Even in non-emergency situations providers of health care services are often in a position of considerable power relative to the consumer. A person who requires surgery for instance usually does feel strong and well and could in many instances not be in a position to act as rationally or reasonably as would a healthy person. He or she is quite often literally at the mercy of the health care provider who is attending to them and may, depending upon the circumstances, be mentally and physically incapacitated to a considerable extent.

---

230 Many of the goods used in the delivery of healthcare services are consumables such as medicines and disinfectants, swabs, dressings and bandages, sutures, needles and syringes, X-Ray film etc.

231 The court in *Paragon Business Forms (Pty) Ltd v Du Preez* 1994 (1) SA 434 (SE) noted that "In *Arend and Another v Astra Parnishers (Pty) Ltd* 1974 (1) SA 298 (C) at 305 in *Re 306 Corbett J* (as he then was) dealt with the requirements of duress as follows: 'Reverting to the defence raised by first defendant, it is clear that a contract may be vitiated by duress (matur), the raison d'être of the rule apparently being that intimidation or improper pressure renders the consent of the parties subject to duress no true consent... Duress may take the form of inflicting physical violence upon the person of a contracting party or of inducing in him a fear by means of threats. Where a person seeks to set aside a contract, or resist the enforcement of a contract, on the ground of duress based upon fear, the following elements must be established:

(i) The fear must be a reasonable one.

(ii) It must be caused by the threat of some considerable evil to the person concerned or his family.

(iii) It must be the threat of an imminent or inevitable evil.

(iv) The threat or intimidation must be unlawful or contra bonos mores.

(v) The moral pressure used must have caused damage.'

has been pointed out by, amongst others, Christie in his work *The Law of Contract* 2nd ed at 368, it is impossible to produce a precise and exact formula to be applied to determine when a contract will be set aside or not enforced on grounds of duress (compare, for example, the requirements of duress set out in *Joubert (ed) Law of South Africa* vol 3 para 138 with those as laid down in the *Arend's case supra* and quoted above)."

232 One of the earliest cases involving undue influence in South African law is *Preller And Others v Jordaan* 1956 (1) SA 483 (A) in which an elderly farmer in his declaration against his former medical practitioner and the latter's son and daughter averred that at a time when he was old and sick and bodily, spiritually and mentally weak and exhausted, he had been influenced in an improper and unlawful manner by his doctor, who was also his adviser, to give and transfer to him four farms to be administered by him for the benefit of the farmer's wife and the labourers on the farm, and that he
BOE Bank Bpk v Van Zyl\(^{233}\) the court discussed the difference between duress and undue influence\(^{234}\) and commented that although there was no absolute boundary between these concepts, South African law had not yet developed to the extent that a single overarching defence such as ‘misuse of circumstances’ was generally recognised.

Another aspect of contracts for health services is that the consumer is not in a position to evaluate the quality of the services he or she receives or the correctness or accuracy of the health advice given. Health economists call it information asymmetry\(^{235}\). By far
the majority of patients are given no choice as to the medication prescribed for them or the nature of the health services that are rendered to them even in the private sector. They are in any event not always in a position to make informed choices in a rational and objective manner. They are not therefore by any means on an equal footing with the expert provider of health care services in the negotiation of a contract. Yet South African law, unlike many other jurisdictions, is curiously slow to regulate any aspect of the relationship so as to ensure a better balance between the parties.

It may be argued that contract is not the best legal mechanism for the delivery of public health services in any event and that particularly in the context of public health services, contractual relationships should not generally be inferred in the absence of clear evidence to the contrary. A sound reason for this might be that contract is essentially a mechanism of the free market which promotes competition and operates on the principle that suppliers who deliver bad or substandard service will not last long because consumers will vote with their feet. In the context of health care services, due to information asymmetry and the vulnerability of consumers of health care services, the markets do not operate in the same way as they do in respect of other goods and services. Unfortunately this logic is not in keeping with the case-by-case approach to contracts used in our law. The courts are unlikely to make a general inference about contracts for health services in the public sector but are more likely to prefer to consider only the particular facts of the case before them although obviously a similar case in the same province and governed by the same statutory terms and conditions is likely in practice to yield the same result.

A third issue is that contracts for health services do not generally undertake to cure the patient or even relieve symptoms except where this is stated expressly in clear and unambiguous terms but the expectation or belief of the patient in receiving or consenting to the services is likely to be some kind or relief of even a cure – otherwise

---

Bureau of Economic Research observe in a paper entitled ‘Can Consumers Detect Lemons? Information Asymmetry in the Market for Child Care’: “In his seminal paper, Akerlof (1970) shows that in a market with asymmetric information between buyers and sellers, adverse selection is likely to result. If it is difficult for buyers to assess the quality of the product, and if quality is costly to produce, sellers of high quality products will not be able to command higher prices for higher quality. As a result, high quality products will withdraw from the market, leaving the ‘lemons’ behind.”

Courts in any event are unlikely to infer a contractual relationship unless there is some fairly firm evidence to the contrary. Furthermore if there is clear evidence to the contrary then contract is by definition not to be implied. It is express. Implied contracts must therefore exist in the absence of firm evidence of the existence of a contract. They are apparently creatures of public policy as perceived by the courts in combination with their assessment of the evidence on a balance of probabilities.
why would he bother?237 The South African law of contract espouses the principle of the 'reasonable man' in much the same way as does the English law238. Despite this

237 Steyn J 'Contract Law: Fulfilling the Reasonable Expectations of Honest Men' 113 (1997) The Law Quarterly Review p 433 notes that a thread runs through English contract law that effect must be given to the reasonable expectations of honest men. He observes that while it is a defensible position for a legal system to give predominance to the subjective intentions of the parties, this is not the English way. English law adopts the external standard which is that of the reasonable man. He notes that the proposition can be restated so as to say that the law must respect the reasonable expectations of contracting parties. In considering what will be protected are those that are, in an objective sense common to both parties and that the law of contract is generally not concerned with the subjective expectations of a party. In the case of a contract for health services it would seem from the case law that the reasonable expectations of the patient do not usually include the promise of a cure on the part of the provider. Strauss (fn 94 supra) discusses this question at p 40 and refers to the English case of Thake and Another v Maurice [1986] 1 All ER 497 (CA) in which the English Court of Appeal refused to come to the conclusion that there had been a guarantee of success where a doctor had performed an unsuccessful vasectomy on a married man. It must be noted, however, that the husband and wife in this case succeeded in contract and in tort because the defendant surgeon had failed to warn of the slight risk that the husband's vasectomy might not leave him permanently sterile. The facts in this case were that the first plaintiff signed a form stating that he consent to undergo a vasectomy operation which was duly carried out. The second plaintiff subsequently became pregnant and gave birth to a baby girl. The plaintiffs brought an action against the defendant claiming that their contract was to sterilize the first plaintiff and that the contract had been breached when he became fertile again, alternatively that they were induced to enter into the contract by a false warranty or innocent misrepresentation that the operation would render the first plaintiff permanently sterile or in the further and crucial question whether a reasonable man in theory of contractual liability, while subjective intention cannot in itself or necessarily result in contractual liability. Nor is it in itself decisive that the offeror accepted the offer in reliance upon the offeror's implicit representation that the offer correctly reflected his intention. Remaining for consideration is the further and crucial question whether a reasonable man in the position of the offeror would have accepted the offer in

238 In Riddon v Van der Spuy and Partners (Wes-Kopp) Inc 2002 (2) SA 121 (C) the court held as follows at p138-139: "... even in the absence of subjective consensus, the so-called reliance theory (the theory of quasi-mutual assent) may in appropriate circumstances form an alternative basis for contractual liability. In the case of Sonap Petroleum (SA) (Pty) Ltd formerly known as Sonarqg (SA) (Pty) Ltd v Pappodisangozi 1992 (3) SA 234 (A), Harms AJA considered the leading cases and the opinions of academic writers on the reliance theory (at 2381 - 241D) and came to the following conclusion (at 2391 - J): 'in my view, therefore, the decisive question in a case like the present is this: did the party who's actual intention did not conform to the common intention expressed, lead the other party, as a reasonable man, to believe that his declared intention represented his actual intention?... To answer this question, a three-fold enquiry is usually necessary, namely, firstly, was there a misrepresentation as to one party's intention; secondly, who made that misrepresentation; and thirdly, was the other party misled thereby?' In Steyn v LSA Motors Ltd 1994 (1) SA 49 (A), the Appellate Division again confirmed its adherence to the reliance theory of constructive contract, while at the same time emphasizing that, consistent with the subjective intention cannot be ignorance: 'Where it is shown that the offeror's true intention differed from his expressed intention, the outward appearance of agreement flowing from the offeror's acceptance of the offer as it stands does not in itself necessarily result in contractual liability. Nor is it in itself decisive that the offeror accepted the offer in reliance upon the offeror's implicit representation that the offer correctly reflected his intention. Remaining for consideration is the further and crucial question whether a reasonable man in the position of the offeror would have accepted the offer in
discrepancy between the expectations of the patient and the undertaking of the provider, the patient usually has little or no choice in seeking the services of the provider. In the public sector, patients classified as 'public patients' in terms of the various regulations cited above do not even have a choice as to which particular provider renders the services. In many instances, their opportunities to 'shop around' if they are dissatisfied with the advice or treatment they have been given are significantly restricted if they exist at all. Since the nature of the services rendered at a public health establishment are predetermined and there are often clinical protocols and guidelines which are uniformly implemented across all public health establishments, the power of the patient to 'negotiate' the terms of a contract for services falling outside of the predetermined services and clinical guidelines and protocols is virtually non-existent. The position is: these are the services on offer - take them or leave them. In reality in most cases involving health care services, the element of choice reflected in the second half of this statement is no choice at all. The constitutional court in TAC reflected these sentiments in the following words:

"Here we are concerned with children born in public hospitals and clinics to mothers who are for the most part indigent and unable to gain access to private medical treatment which is beyond their means. They and their children are in the main dependent upon the State to make health care services available to them."

It is submitted that the tendency of the English courts to interpret contracts for health services as not including guarantees of a cure or the achievement of the object of the treatment is not always reconcilable with either South African public policy or the law of contract as it applies to other suppliers of goods and services. In *Edouard v Administrator Natal* Thirion J observed:

the belief that it represented the true intention of the offeror, in accordance with the objective criterion formulated long ago in the classic dictum of Blackburn J in *Smith v Hughes* (1871) LR 6 QB 597 at 607. Only if this test is satisfied can the offeror be held contractually liable" (per Botha JA at 61 C - E). (See further the discussion of the Steyn case by Lewis in 1994 Annual Survey of South African Law at 127 - 9, and cf Lewis in 1999 Annual Survey of South African Law at p 176 - 9.)" See also *Sonap Petroleum (SA) (Pty) Ltd (formerly known as Sonarup (SA) (Pty) Ltd) v Pappadogiants 1992 (3) SA 234 (A); Fourie NO v Hansen and Another 2001 (2) SA 823 (W); Nationale Beheiligingskommissie v Greyling 1986 (4) SA 917 (T); Multilateral Motor Vehicle Accidents Fund v Meyerowitz 1993 (1) SA 23 (C); Road Accident Fund v Motshabi 2000 (4) SA 38 (SCA); Maritime Motors (Pty) Ltd v Von Stiegen and Another 2001 (2) SA 584 (SE); Steyn v LSA Motors Ltd 1994 (1) SA 49 (A); Harty Investments (Pty) Ltd v Interior Acoustics (Pty) Ltd 1994 (3) SA 337 (W); Distillers Corp Ltd v Modise 2001 (4) SA 1071 (O).
"Where sterilisation was sought to prevent the birth of a handicapped child and a normal and healthy child is born, the parents' claim for damages in respect of the maintenance of the child might fail on the ground that such loss was not in contemplation of the contracting parties. Considering the ease with which doctors would be able to protect themselves against liability by warning the woman of the danger that the operation might not result in sterility, there seems to be no reason why the Court should extend to them a special protection against their own negligence; be it in a delictual or contractual context. Pharmacists or manufacturers who make extravagant claims as to the effectiveness of the products they sell would have only themselves to blame."(writer's italics).

There seems to be a degree of logical dissonance about the fact that where the sterilisation operation was not performed the person upon whom it should have been performed has a legally recognisable claim but where it was performed on the understanding that it is 'irreversible' only to fail one or two years later there can be no such claim because in 'rare cases' the sterilisation has been known to fail. From a layperson's, i.e. the patient's point of view, the reason for a healthy person seeking to be sterilised is so that he or she can no longer participate in the conception of a child. There are, however, other ways of contraception which may be generally regarded as less reliable than sterilisation. Presumably one of the considerations in the mind of someone who has opted to be sterilised is not only that he or she no longer wants to be able to conceive a child but also that he or she no longer wants to have to use other forms of contraception. A person who has undergone surgery for sterilisation would not be expecting to have to continue to use other forms of contraception – otherwise there would be little point in being sterilised. The patient who is under anaesthetic in an operating theatre is in no position to appreciate what is happening or see to it that a particular procedure has been done or done correctly. Even when he or she regains consciousness very often the only evidence available is a surgical wound and the information supplied by the surgeon as to what was done.

and therefore not too remote, it is immaterial that the magnitude or extent of the loss is such that it was not within the reasonable contemplation of the parties. Wroth and Another v C Tyler [1973] 1 All ER 897 (Ch) at 922. For the position in delict see Botes v Van Deventer 1966 (3) SA 182 (A)...
The argument that liability in wrongful birth actions might have an adverse influence on professional standards or might limit the number of practitioners willing to undertake sterilisation operations is nothing but a make-weight. The sterilisation operation is a fairly simple surgical procedure and it would be a simple matter for the doctor to explain to the patient that there is, despite the operation, a possibility that she might still fall pregnant. It would be easy for the doctor to contract out of liability. Fears that recognition of wrongful birth claims lead to an unmanageable extension of liability or difficulties in the field of assessment of damages have not witheld the Courts in England from recognising such claims. See Thake and Another v Maurice [1986] 2 WLR 337 (CA) (1986) 1 All ER 497; Emeh v Kensington and Chelsea and Westminster Health Authority [1984] 3 All ER 1044 (CA).

Edouard fn 145 supra at p382-383
The question of whether or not a person should be liable for damages whether in contract or in delict is often a question of public policy as to where the risk should lie. In the case of a sterilisation operation the question is whether it should lie with the patient or the surgeon. The English court in *Thake* in refusing to accept that the surgeon would have guaranteed a successful outcome effectively concluded that the risk should lie with the patient. Neill LJ in that case observed that —

"it is the common experience of mankind that the results of medical treatment are to some extent unpredictable and that any kind of treatment may be affected by the special characteristics of the particular patient."

Neill LJ seemed to be drawing a very fine distinction in observing that while both plaintiffs and the defendant expected that sterility would be the result of the operation and the defendant appreciated that that was the plaintiffs' expectation, this did not mean that a reasonable person would have understood the defendant to be giving a binding promise that the operation would achieve its purpose or that the defendant was going further than to give an assurance that he expected and believed it would have the desired result. If the nature of the contractual undertaking is sterilisation it is difficult to see how this differs in principle from a guarantee of sterilisation. The court seems to be saying that the nature of the undertaking was not sterilisation *per se* but a surgical operation designed to effect sterilisation which seems to be splitting hairs in favour of the surgeon. Neill LJ did find for the plaintiffs in the end but the arguments in his judgment concerning the court's construction of the contractual relationship between a provider and patient unduly favour the provider. The fact that in rare cases the effect of a vasectomy could be reversed naturally should not be a

---

242 The dissenting judgment of Kerr LJ seems to pick up on this point in the following observations: "On this appeal it was common ground that the court's task was to determine objectively the terms of the contract whereby the defendant offered and agreed to operate on the male plaintiff. What would a reasonable person in the position of Mr and Mrs Thake have concluded in that regard? Was it merely that the defendant would perform a vasectomy operation subject to the duty implied by law that would do so with reasonable skill and care? Or was it that the defendant would perform this operation so as to render Mr Thake permanently sterile? Counsel for the defendant submitted that, even if the latter was the correct objective construction of the terms of the offer made by the defendant, it was nevertheless not so understood by Mr and Mrs Thake. He said that this was merely what they believed would be the result of the operation, not what they believed the defendant had undertaken to do...But in my view no such further question arises here, since it is plain on the evidence that Mr and Mrs Thake intended that Mr Thake should be rendered permanently sterile and believed that this is what the defendant had agreed to do." (As quoted in Kennedy and Grubb *Medical Law 3rd ed*). Kerr LJ also found in favour of the plaintiffs. Kerr LJ distinguished between different kinds of medical treatment as follows: "The considerations which lead me to this conclusion can be summarised as follows. First, we are here dealing with something in the nature of an amputation, not treatment of an injury or disease with inevitably uncertain results. The nature of the operation was the removal of parts of the channels through which sperm had to pass to the outside in such a way that the channels could not reunite... On the evidence in this case the position is quite different, in my view, from what was in the mind of Lord Denning MR in *Greaves & Co (Contractors) Ltd v Boyham Makins & Partners* ([1975] 3 All ER 99, at 103-104, [1975] 1 WLR 1095) when he said: 'The surgeon does not warrant that he will cure the patient.' That was said in the context of treatment or an operation designed to cure, not in the context of anything in the nature of an amputation."
