Table 1.1 - Definitions of Sustainable Development

<p>Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.</p>	<p>Sustainable development meets the needs of the present without compromising the ability of future generations to meet their own needs.</p>	<p>Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.</p>
<p>Sustainability is a vision of the world that provides us with a framework and helps us to make decisions as a set of values. It is a goal, not a fixed prescription. It is a process, not a destination. It is a way of thinking, not a set of rules.</p>	<p>Sustainable development should be a process which allows for the satisfaction of human needs, but without compromising the needs of future generations. It is a process, not a fixed prescription. It is a goal, not a destination. It is a way of thinking, not a set of rules.</p>	<p>The world's development process of the 1980s and 1990s was unsustainable. It was a process that allowed for the satisfaction of human needs, but without compromising the needs of future generations. It is a process, not a fixed prescription. It is a goal, not a destination. It is a way of thinking, not a set of rules.</p>
