The internationalization process of small-to-medium size enterprises (SMEs) in the African context: A comparative study.
CHAPTER ONE

INTRODUCTION

Page number
1.1 Background ...........................................................................................................1
1.2 Literature review....................................................................................................4
1.2.1 International trade theory ...............................................................................4
1.2.2 Internationalization theory .............................................................................7
1.3 Research justification ............................................................................................8
1.4 Definition of the research problem ......................................................................10
1.5 Method of study ....................................................................................................13
1.5.1 Data analysis ..................................................................................................14
1.6 Chapter summary ..................................................................................................17

CHAPTER TWO

SMALL BUSINESS THEORY

2.1 Definition of small business .................................................................................18
2.2 Characteristics of small businesses .....................................................................22
2.2.1 Differences between small business management and Entrepreneurship ..........24
2.3 Theory of small business formation .....................................................................30
2.3.1 General theoretical foundations of small business ........................................32
2.4 Small business growth ........................................................................................34
2.5 The economic and social benefits of small businesses………...41
2.6 Chapter summary……………………………………………………..44

CHAPTER THREE
INTERNATIONAL BUSINESS THEORY

3.1 Definition of international business………………………….45
3.2 International trade theory………………………………………46
3.3 Product life cycle theory………………………………………..53
3.4 Internalization theory…………………………………………56
3.5 Eclectic theory…………………………………………………60
3.6 Porter’s Diamond theory of competitive advantage………….62
3.7 International portfolio theory…………………………………..63
3.8 Internationalization theory…………………………………….66
3.9 Innovation related models………………………………………68
3.10 Discussion and criticisms of Uppsala and Innovation (U-I) related theories……………………………………68
3.3 Alternative paradigms…………………………………………74
3.5 Chapter summary………………………………………………...80

CHAPTER FOUR
THE SMALL FIRM INTERNATIONALIZATION PROCESS

4.1 Introduction………………………………………………………82
4.2 The entrepreneurial firm internationalization process………..90
4.3 Chapter summary………………………………………………102
CHAPTER FIVE

RESEARCH METHODOLOGY

5.1 Introduction.............................................................................................................103
5.2 Construct identification and operationalization............................................109
5.3 Sampling plan.............................................................................................................111
   5.3.1 Cross sectional data.............................................................................................114
   5.3.2 Internal consistency reliability..........................................................................114
   5.3.3 Content validity....................................................................................................114
5.4 Chapter summary........................................................................................................116

CHAPTER SIX

RESEARCH RESULTS

6.1 introduction..............................................................................................................117
6.2 Summary of results......................................................................................................154

CHAPTER SEVEN

THE INTERNATIONALIZATION MODEL

7.1 Export internationalization.......................................................................................155
   7.1.1 Intra-mode market development patterns.................................................. 167
   7.1.2 Results on internationalization process elements.................................173
7.2 Comparisons with other process models..............................................................185
7.3 Chapter summary........................................................................................................190
CHAPTER EIGHT

CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusion........................................................................192
8.2 Process drivers.................................................................193
8.3 Single mode internationalization......................................197
8.4 Intra-mode market development patterns..........................199
8.5 Geographic scope of initial internationalization...............200
8.6 Limitations and suggestions for future research.................202

This thesis is based on a cross-sectional survey design that employed the simple random sampling technique. From an original sample size of 1900 that was split between the South African market (1300) and the Zimbabwean market (600), a total of 494 usable responses were obtained representing a 26% response rate. Several statistical tools were applied to the results that included: cross tabulations, frequencies, correlations, factor analysis and discriminant analysis.

The results showed that in contrast to traditional internationalization theory that suggests that firms internationalize sequentially along an establishment chain, the vast majority of firms (86%) completed their entire internationalization cycle within one foreign market entry mode that was in this case exporting. The two major explanations for this behaviour are that firstly, exporting is preferred as a deliberate strategic option through which small firms can maintain optimum profit-risk levels. Secondly, rigorous exchange control regimes maintained by governments within the Southern African region have traditionally favoured the export-only method of internationalization and consequently many firms have since developed inertia in experimenting with other forms of internationalization.

Within that single mode of exporting, six stages and four developmental patterns were identified. In short, there are complex sub-processes at work within the export-only option and there are different levels of sophistication that offer a firm growth options that enable it to complete its entire internationalization through export. Similar observations were made in respect of other international market entry modes, such as licensing, foreign manufacture and integrated foreign manufacture on a worldwide basis. Mutual dependency among the stages could not be established for most firms in the survey implying that mode entry can be direct. Thus a firm can enter a foreign market via foreign production for example without necessity of having exported before.
Not only do small firms internationalize within a single mode, they do so relatively fast. 72% of the firms internationalized within the first 10 years of their existence and this was attributed to factors such as: the international experience of the key managers in the firm, the perception that domestic economic conditions present a risk to the firm’s future earnings, the total lack of a domestic market for the products that are made by some firms, for example certain kinds of software, the desire to take advantage of a product with a relatively short life cycle or a product that is cheap and or easy to market and finally a firm’s involvement in project work as a network partner. The results also show that managers in the 31-40 year age group are more likely to internationalize their firms faster than any other age group. The willingness to internationalize fast remains high until the age of 50, but from then on it drops appreciably, however it does not stop altogether.

Furthermore, the evidence presented shows that the internationalization process is pursued independently by small firms in the region in contrast to the European and New Zealand experience that suggests that small firms and in particular those that internationalize fast, do so with the assistance of other firms that are part of its formalized business network. Consistent with traditional internationalization theory, small firms in southern Africa were found to generally fan out from geographically close markets to geographically distant markets. However, unlike in traditional theory, this was not for reasons of psychic proximity but rather for practical economic reasons.

A new internationalization model that details the motivation domain as consisting of specific antecedents, enablers, information sources and precipitators, is presented in this thesis. The barriers, accelerators, selectors and market outcomes that shape the internationalization process are also given. The major limitation of the study was the use of the simple random sampling technique, while the main recommendation centred on the need for policy initiatives that focus on profiling managers and providing targeted assistance as well as formally networking firms for export through the creation of industrial clusters.
Behind every good work there is a host of faceless supporters who contribute in some way towards the production of that work. This thesis is the culmination of years of work, many cups of coffee and even more excitement from great ideas that had a habit of appearing at awkward hours of the night. I gratefully acknowledge the wonderful support I received from my beloved wife Nonsikelelo Jean and my daughter Kimberley who were patient as ever and like faithful team members were always spurring me on to greater heights even in those all too familiar but uncomfortable moments when all inspiration had departed and I hadn’t a clue how to proceed.

Then of course there is my supervisor professor Tienie Ehlers formerly of the University Of Pretoria and now at the University Of South Africa. The easy thing for him to do would have been to assign me to a different supervisor having moved from the university at which I was enrolled. However his dedication and commitment to the successful completion of this thesis was exemplary. I value the guidance he offered and his devotion to quality that has made this thesis what it is today. He discharged the duties of a supervisor with distinction and it was a real pleasure to work with him.

I am also grateful to my employer the National University of Science And Technology in Bulawayo, Zimbabwe, who provided the financial support and the time away from work when it was necessary. In the same breath I thank my colleagues at the university who supported my work and gave valuable input into making the work of a high standard as well as “covering” for me while I was away on study leave. And last but certainly not least, I would like to extend my heartfelt thanks to Mr Jacky Kola from Ntsika in Pretoria for his valuable support and at the same time I want to thank all the people who took the time to respond to my rather lengthy questionnaire. It required commitment. What a great team we all were.
