PHILOSOPHIAE DOCTOR (BOTANY)

The aims of this study are to increase objectivity in stratification, sampling and classification of vegetation, thereby, improving repeatability, predictability and relevancy of vegetation classifications.

The aims are achieved by: relating stratification, sampling and classification to scale; improved small-scale vegetation mapping using, satellite imagery; improved plant cover estimations; and vegetation classification by minimum entropy. A comprehensive computer program package was developed to facilitate the aims of this study and reduce time spent on vegetation analyses. It is recommended that the vegetation resource be given the highest national priority because correct vegetation management can also ensure conservation of soil and soil water.

3.1.4 Stratification

3.1.4.1 Background

3.1.4.2 A method for vegetation stratification using scale-related, vegetation-enhanced satellite imagery

3.1.5 Stand location

3.1.5.1 Background

3.1.5.2 Methods applied

3.1.5.3 PHYTOLOC - A random number generator and sample-set location program for stratified random vegetation sampling

3.1.6 Sampling unit area

3.1.6.1 Background

3.1.6.2 Predictive species-area relations and determination of subsample size for vegetation sampling in the Transvaal Waterberg

3.2 FIELD SAMPLING

3.2.1 Sampling unit location

3.2.1.1 Background

3.2.1.2 Methods applied

3.2.2 Plant identification and verification

3.2.2.1 Background

3.2.2.2 A new identification aid combining the features of a polyclave and an analytical key

3.2.2.1 Improvements

3.2.3 Species cover
3.2.3.1 Background

3.2.3.2 The plant number scale - an improved method of cover estimation using variable-sized belt transects

3.2.3.2.1 Improvements

3.2.4 Floristic data recording

3.2.4.1 Background

3.2.4.2 Methods applied

3.2.4.3 PHYTOCAP. A field-data capture program for the PHYTOTAB program package

3.2.4.3.1 Improvements

3.2.5 Habitat data

3.2.5.1 Background

3.2.5.2 Methods applied

3.2.5.2 A) Field data

   a) Stand data

   b) Sampling unit data

3.2.5.2 B) Derived data

   a) Input

   b) Output

3.3 CLASSIFICATION

3.3.1 Background

3.3.2 Methods applied

   3.3.2.1 Relevé sequencing

   3.3.2.1 A) Commonality sequence

   3.3.2.1 B) Similarity sequence

   3.3.2.1 C) Separation unit sequence

   3.3.2.2 Relevé grouping
