ACKNOWLEDGEMENTS

At the end of the writing of this script my gratitude goes to the following people:

My wife, Betty, who has been very supportive and encouraging to me.

Brother Solomon Mokonyane has played an important role in as far as typing and printing this work was concerned. He used to come to my rescue whenever I had problems in typing and printing this thesis.

Dr Piet Geysler did more than my words could express. On many occasions I found myself discouraged and de-motivated. He was the source of my strength. He motivated me and made me feel like carrying on from where I had ended.
