Acknowledgements

This thesis is presented in memory of ‘Wakwanza’ and family – may your souls rest in eternal peace.

I would like to express my gratitude to the following people:

My research participants and mentees ‘Wakwanza’ and ‘Mchana’. You were such an integral part of this journey that without you this project could not have been possible. I believe that our mentoring journey enriched your lives as much as it did mine.

Dr. Hilary Geber, my promoter, based at the University of the Witwatersrand, without whose wisdom, direction, support and encouragement I would not have finished this thesis.

Prof. Yvonne du Plessis, my co-promoter at the University of Pretoria. Thank you for your advice and encouragement.

Prof. Joan Conolly, for your friendship and support, and for setting me off on a self discovery journey that has enriched my life.

Alice Neely, for your excellent editing services.

A very special thank you goes to my family. My husband, Michael, for your unwavering support and encouragement; and my two wonderful children, Tess and Biko for your love, understanding and patience.
The principles and practices of mentoring for educators in a technical college in Africa: A self-study enquiry

PHILOSOPHIAE DOCTOR with specialisation in Organisational Behaviour

Educators in higher education are expected by their institutions to enhance their learning and development in order to acquire the requisite knowledge and skills to keep up with the changes being presented by the external environment. Within this environment of change, educators are faced with challenges of professional development. Under certain circumstances, there are educators who will take the initiative to intervene in the learning and development of other educators in the absence of sufficient organisational support. A developmental mentoring approach is presented as a powerful intervention to enhance the learning and development of educators.

Action research, utilising a self study approach to enquiry, is used to explore how mentoring practice can, from a developmental perspective, assist in enhancing the individual learning and development of educators in one Vocational Education and Training (VET) educational institution in Botswana. In this study, one mentor and two mentees undertake an innovative mentoring journey to build personal and professional capacity. Action research cycles are used in the collection of data from face-to-face conversations, personal reflective journals and focus group interviews.
The findings indicate that the mentoring process contributed effectively to learning and development and enhanced the participants' capacity to cope with the challenges facing the organisation. The intervention assisted the mentor to improve her mentoring capacities. Overall, the behavioural change that the participants gained through the mentoring process resulted in improved practices that contributed to the learning of the organisation.

The value of this study lies in the fact that it provides insight into the learning and development of educators in VET educational institutions through an innovative mentoring experience and highlights how both the mentees and the mentor grew and were empowered by this experience. The individual learning of educators can influence the organisational behaviour of the VET educational institutions using mentoring.

The implication of these findings points to the fact that educators need to be proactive and pursue their own professional development by making use of mentoring as an avenue to individual learning and personal and professional development. Educators who engage with more experienced colleagues in mentoring relationships contribute to organisational learning. A recommendation to VET educational institutions in Africa is to embrace mentoring as an organisational development intervention for the continuous learning and development of educators in their institutions.
