University of Pretoria
Abstract

A grounded theory analysis of networking capabilities in virtual organizing

Candidate  J.F. Koekemoer
Promoter  Professor J.D. Roode
Department  Department of Informatics, School of Information Technology
Degree  Philosophiae Doctor (Information Technology)

The use of the Internet by web-based organizations impacts on all aspects of their business activities. The continuous evolution of e-commerce technologies enables web-based business (consisting of virtual supply chain partners) to integrate its manufacturing operations and to gain competitive advantage through entire virtual supply chains. Although the interplay of e-commerce and virtual supply chain cooperation is not clear when considering supply chain forecasting, planning, scheduling, execution and after-service, the potential for virtual coordination of business activities by means of e-commerce technologies is growing in importance.

In this regard, networking capabilities that enable virtual organizing activities in the virtual value chain network are of particular importance to web-based organizations. The research investigated this using a grounded theory approach.

The Grounded Theory analysis consisted of three phases. First, following a comprehensive review of the relevant literature, a set of particularly relevant articles was identified to provide the basic data from which to develop a first, preliminary framework or theory. This framework was subsequently refined to produce a concluding framework, using data collected during interviews with representatives of six different web-based businesses. Finally, the concluding framework or theory was validated by applying it to a particular case.

The concluding framework contains twelve networking capabilities, adding three to the nine identified in the preliminary framework. The conceptual
framework with theoretical description of relationships between identified networking capabilities clarify the use of networking capabilities with virtual organizing in a virtual value network of organizations.

An interpretation of the concluding framework, based on Actor-Network Theory, shows how the entrepreneur can leverage the inter-relationships between the networking capabilities to enable more effective and efficient virtual organizing. In particular, it shows how the entrepreneur can utilize knowledge and skills related to the identified networking capabilities to build and maintain a stable and eventually institutionalized network of partners. Finally, using the results of this interpretation of the grounded theory, the entrepreneurial process was defined in which the role of information technology as well as the role of the entrepreneur in establishing and maintaining the virtual value network was described.

### Detailed Contents

#### Chapter 1

**Introduction**

1. **Introduction**  
2. **Important impacts of globalization on business thinking**  
   1.2.1 **The new 'Knowledge Economy'**  
   1.2.2 **The importance of information technology in the global e-marketplace**  
   1.2.3 **The opportunities e-commerce presents to the entrepreneur**  
   1.2.4 **Virtual networks competing in e-commerce**  
3. **Virtual organizations and virtual organizing**  
4. **Motivation for this study**  
5. **Problem statement**  
6. **A road map to the thesis**  
7. **Chapter summary**

#### Chapter 2

**The literature review**

2. **Introduction**  
2.1. **Theoretical perspectives of organizational constructs**  
   2.2.1 **Defining the various organizational constructs**  
   2.2.2 **The network organizational construct and its application in**
the global marketplace

2.2.3 The need for virtual networks in the global marketplace

2.2.4 The concept of the virtual organisation

2.3 The role of information technology with web-based organizations implementing virtual networks

2.3.1 Virtual organizing in virtual networks

2.3.2 Resources-based and competencies-based theories and their relevance in virtual networks

2.3.3 Virtual value chain and its application to virtual networks

2.3.4 The impact of e-commerce on virtual organizing and the virtual value chain

2.4 The critical importance of entrepreneurship in virtual networks

2.4.1 The role of the entrepreneur in creating virtual networks

2.4.2 Competitive value creation in virtual networks

2.4.3 Information management supporting virtual organizing in e-commerce

2.4.4 Trust formation in virtual networks

2.5 The role of networking capabilities with virtual organizing

2.5.1 Internal capabilities in strategic business networks

2.5.2 The contribution of capabilities in a virtual supply network

2.5.3 Networking capabilities in inter-organizational relations

2.5.4 The literature review on networking capabilities

2.6 Summary
Chapter 3

The research objective and research approach

3.1 Introduction 105
3.2 The research objective 106
3.3 The research question 108
3.3.1 Use of the process-based approach 109
3.3.2 Categorization of research questions 111
3.3.3 The main research questions 115
3.3.4 The fundamental research question 116
3.4 Research approach 117
3.5 An overview of the Grounded Theory method 125
3.5.1 The ‘Glaserian’ and ‘Straussian’ approaches to the Grounded Theory 131
3.5.2 The use of Grounded Theory approach in information systems research 133
3.5.3 The data used 134
3.6 Summary 136

Chapter 4

Developing the preliminary framework

4.1 Background 139
4.2 Preamble to the development of a preliminary framework 141
4.3 Articles used in the literature case 142
Chapter 5

Developing the concluding framework

5.1 Introduction 180
5.2 The case studies 183
5.3 Theoretical sampling of case study data 192
5.4 Hierarchical process of coding of the case study data 196
5.4.1 Open coding of the empirical cases 196
5.4.2 Axial coding of the empirical cases 199
5.4.3 Selective coding of the empirical cases 206
5.5 The concluding framework 211
5.6 Implications of the concluding framework 212
5.7 Summary 214
Chapter 6

Defining the role of the entrepreneur in the virtual value chain of partners

6.1 Introduction 215
6.2 An ANT perspective of the Grounded Theory 217
6.2.1 Translation and Inscription in ANT 219
6.3 The formation of a virtual supply network of partners 221
6.3.1 The impact of the Grounded Theory on the formation of a virtual supply network of partners 223
6.4 The Due Process Model perspective 230
6.4.1 Implications of the Grounded Theory on partner selection and inclusion in virtual supply network 233
6.5 The formation of the virtual network of partners 236
6.6 The role of information technology in the virtual value network 242
6.7 Defining the role of the entrepreneur in the virtual value network 246

Chapter 7

Evaluation of the research

7.1 Introduction 250
7.2 Overview of the research study 251
7.2.1 Review of the research problem 251
7.2.2 How research objectives address the problem and contribute to the literature 252
7.2.3 The research design and how it was implemented 252
7.2.4 Research findings and contribution 254
7.2.5 Implications of the work for theory and practice 254
7.2.6 Limitations of the work 255
7.3 A set of principles for conducting and evaluating interpretive field studies in Information Systems 256
7.3.1 The principle of the hermeneutic circle 258
7.3.2 The principle of contextualization 259
7.3.3 The principle of interaction between the researchers and the subjects 260
7.3.4 The principle of abstraction and generalization 261
7.3.5 The principle of dialogical reasoning 261
7.3.6 The principle of multiple interpretations 262
7.3.7 The principle of suspicion 263
7.4 Evaluating the contribution of the research 264
7.4.1 What is new? Does the study make a significant value-added contribution to current thinking? 264
7.4.2 So what? Will the theory likely change the practice of Information System research? 265
7.4.3 Why so? Are the underlying logic and supporting evidence compelling? 266
7.4.4 Done well and well done? Is the thesis well written, does the thesis reflect seasoned thinking? 267
7.4.5 Why now? Is the topic of contemporary interest to scholars in this area? 268
7.5 Dell’s case study 269
7.6 Conclusion 281
