# REVIEW PROCESS

High level papers that are relevant to the conference theme as well as original and previously unpublished papers, were invited. These papers were subjected to independent peer review by at least two experts from industry and academia in a blind review process. Reviewers were asked to rate the originality, soundness, relevance, interest and clarity of the paper and to justify these scores in a detailed review of the paper. Authors had to revise their papers in response to reviewer comments and suggestions. Papers were accepted after the reviewer comments were sufficiently addressed. Not all submitted papers were accepted. Only a selected number of papers were finally accepted and will qualify for the SATC and SAICE awards. High calibre papers that are relevant to the conference theme on the following two levels are invited.
