

## ACKNOWLEDGEMENTS

This year would not have been possible without the help and support of my family and friends. The commitment from my beautiful wife for her support during my postgraduate studies. Thank you so much for the role you had during this difficult year, filled with joy as well as the loss of a great man in our lives.

The support from my parents, both emotionally and financially, I can not thank you enough for allowing me the opportunity to realise a boyhood dream.

Then for my friends and family that helped with all the late night model building tasks and in general all the input that I received from friends, whether they were in Pretoria or on the opposite side of the globe. My gratitude can not be expressed in words. My late grandfather had a way of saying thank you that was heartfelt and I would like to thank all of my friends in this fashion:

‘Dankbaar ou maat’.

My brother, Johannes Mentz, for his model building input even though he had his own work related responsibilities to attend to. Johan Bohmer, for his input from a post master point of view, thank you Joe. Matthys Barnard and Charne Niewoudt for helping me with the final model building, every second you guys helped made me more relaxed in actually finishing in time for my final exam.

Then my Jewish connections, you guys were rather critical of my work, but in the end it was all for the better of the project as a whole, Daniel Komen and Mark de Veredicis, you two are a blessing in my life and I thank you from the bottom of my heart for the help that you gave me during this year.

The last person that had a profound input in my years work is my study leader, Mr Nico Botes. Thank you for the role you played during the course of the year, your ‘high-fives’ means more than you could ever think. Without your support this year could have been rather different.
