Small carnivore ecosystem services data	Data from a camera trap survey and questionnaire survey on the ecosystem services provided by small carnivores in the Vhembe Biosphere Reserve	All data were collected in Ka-Ndengeza and Vyeboom in the Vhembe Biosphere Reserve, South Africa. In each village camera trap data and questionnaire data were collected. Camera trap data were collected in three land use types: settlement, crops and grazing areas. Analysis of small carnivore camera trap data was underpinned by an occupancy framework. Questionnaire data included the perceptions of respondents in both villages of small carnivores and their role as providers of ecosystem services.
