**Table S1.** Proportion of the community compositional dissimilarity explained by each measured environmental and geospatial factors.

|   | Rare  | Abundant | Entire |
|---|-------|----------|--------|
| Total explained                                 | 41%   | 80%      | 60%    |
| Soil pH   | 0.3%  | 1.0%     | 1%     |
| TOC   | 0.5%  | 1.3%     | 2%     |
| Annual average temperature                      | 0.2%  | 0.4%     | 1%     |
| Annual precipitation                            | 0.3%  | 0.6%     | 1%     |
| Aridity   | 0.0%  | 0.0%     | 1%     |
| NH <sub>4</sub> <sup>+</sup>                    | 1.9%  | 3.0%     | 3%     |
| NO <sub>3</sub> <sup>-</sup>                    | 0.2%  | 0.3%     | 2%     |
| Plant above-ground biomass                      | 1.5%  | 1.3%     | 1%     |
| Plant Shannon diversity index                   | 0.1%  | 0.9%     | 2%     |
| Plant below-ground biomass                      | 0.0%  | 0.0%     | 1%     |
| Soil moisture                                   | 2.5%  | 2.6%     | 3%     |
| Geospatial factors                              | 8.7%  | 14.1%    | 12%    |
| Unresolved environmental and geospatial factors | 24.9% | 54%      | 28%    |
| Unexplained                                     | 59.0% | 20%      | 40%    |

Analyses are based on DistLM analysis. Rare: rare bacterial subcommunity, Abundant: abundant bacterial subcommunity, Entire: entire bacterial community.

**Table S2.** Correlation relationships between the community compositional dissimilarity and the measured local, climatic and geospatial factors by Mantel and partial Mantel tests.

|          |                | Local         |         | Climatic      |         | Geospatial    |         |
|----------|----------------|---------------|---------|---------------|---------|---------------|---------|
|          |                | <i>r</i>      | P-value | <i>r</i>      | P-value | <i>r</i>      | P-value |
| Rare     | Mantel         | <b>0.6617</b> | < 0.001 | <b>0.4263</b> | < 0.001 | <b>0.4258</b> | < 0.001 |
|          | Partial Mantel | <b>0.5551</b> | < 0.001 | 0.03025       | 0.133   | <b>0.2891</b> | < 0.001 |
| Abundant | Mantel         | <b>0.7028</b> | < 0.001 | <b>0.4214</b> | < 0.001 | <b>0.3538</b> | < 0.001 |
|          | Partial Mantel | <b>0.6196</b> | < 0.001 | 0.02329       | 0.327   | <b>0.1806</b> | < 0.004 |
| Entire   | Mantel         | <b>0.7029</b> | < 0.001 | <b>0.4174</b> | < 0.001 | <b>0.3742</b> | < 0.001 |
|          | Partial Mantel | <b>0.6173</b> | < 0.001 | 0.007546      | 0.422   | <b>0.2105</b> | 0.002   |

Local factors include soil pH, soil total organic carbon, NH<sub>4</sub><sup>+</sup> and NO<sub>3</sub><sup>-</sup> concentrations, soil moisture, plant Shannon diversity, plant above-ground biomass, and plant below-ground biomass; the climatic factors include mean annual temperature, mean annual precipitation, and aridity index. Significant correlations (at  $P < 0.05$ ) are in bold. Rare: rare bacterial subcommunity, Abundant: abundant bacterial subcommunity, Entire: entire bacterial community.

**Table S3.** Proportion of the community phylogenetic distance explained by the individual measured environmental and geospatial factors.

|   | Rare  | Abundant | Entire |
|---|-------|----------|--------|
| Total explained                                 | 36%   | 29%      | 44%    |
| Soil pH   | 0.4%  | 8.6%     | 4.5%   |
| TOC   | 0.4%  | 3.8%     | 0.9%   |
| Annual average temperature                      | -     | 3.1%     | 2.5%   |
| Annual precipitation                            | 0.4%  | 0.2%     | 3.0%   |
| Aridity   | 0.0%  | 4.5%     | -      |
| NH <sub>4</sub> <sup>+</sup>                    | -     | 7.0%     | 1.6%   |
| NO <sub>3</sub> <sup>-</sup>                    | 0.0%  | 1.7%     | 1.4%   |
| Plant above-ground biomass                      | 2.9%  | 4.9%     | 1.5%   |
| Plant Shannon diversity index                   | -     | 0.0%     | 2.5%   |
| Plant below-ground biomass                      | -     | 0.0%     | 0.0%   |
| Soil moisture                                   | 1.0%  | 4.7%     | 1.8%   |
| Geospatial factors                              | 11.9% | 22.1%    | 12.4%  |
| Unresolved environmental and geospatial factors | 21.8% | -        | 11.7%  |
| Unexplained                                     | 64%   | 71%      | 56%    |

Analyses are based on DistLM analysis. Rare: rare bacterial subcommunity, Abundant: abundant bacterial subcommunity, Entire: entire bacterial community.

**Table S4.** Correlation relationships between the community phylogenetic distance and the measured local, climatic and geospatial factors by Mantel and partial Mantel tests.

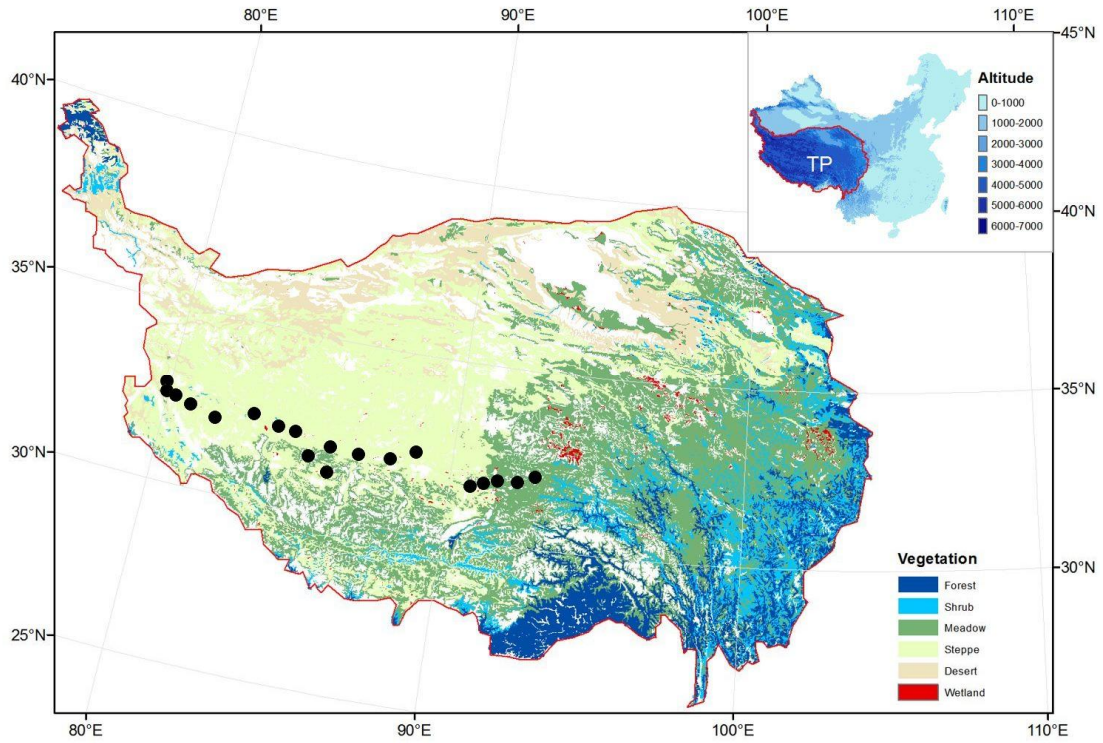

|          |                | Local         |         | Climatic      |         | Geospatial    |         |
|----------|----------------|---------------|---------|---------------|---------|---------------|---------|
|          |                | <i>r</i>      | P-value | <i>r</i>      | P-value | <i>r</i>      | P-value |
| Rare     | Mantel         | <b>0.5754</b> | 0.001   | <b>0.3249</b> | 0.001   | <b>0.3122</b> | 0.001   |
|          | Partial Mantel | <b>0.4841</b> | 0.001   | -0.02751      | 0.1333  | <b>0.1612</b> | 0.002   |
| Abundant | Mantel         | -0.4572       | 1       | -0.449        | 1       | -0.03027      | 0.713   |
|          | Partial Mantel | -0.3922       | 1       | -0.3041       | 1       | <b>0.1722</b> | 0.007   |
| Entire   | Mantel         | 0.004308      | 0.455   | 0.055         | 0.174   | -0.00655      | 0.54    |
|          | Partial Mantel | -0.0092       | 0.534   | 0.06811       | 0.18    | -0.01237      | 0.577   |

Local factors include soil pH, soil total organic carbon, NH<sub>4</sub><sup>+</sup> and NO<sub>3</sub><sup>-</sup> concentrations, soil moisture, plant Shannon diversity, plant above-ground biomass, and plant below-ground biomass; the climatic factors include mean annual temperature, mean annual precipitation, and aridity index. Significant correlations (at  $P < 0.05$ ) are in bold. Rare: rare bacterial subcommunity, Abundant: abundant bacterial subcommunity, Entire: entire bacterial community.

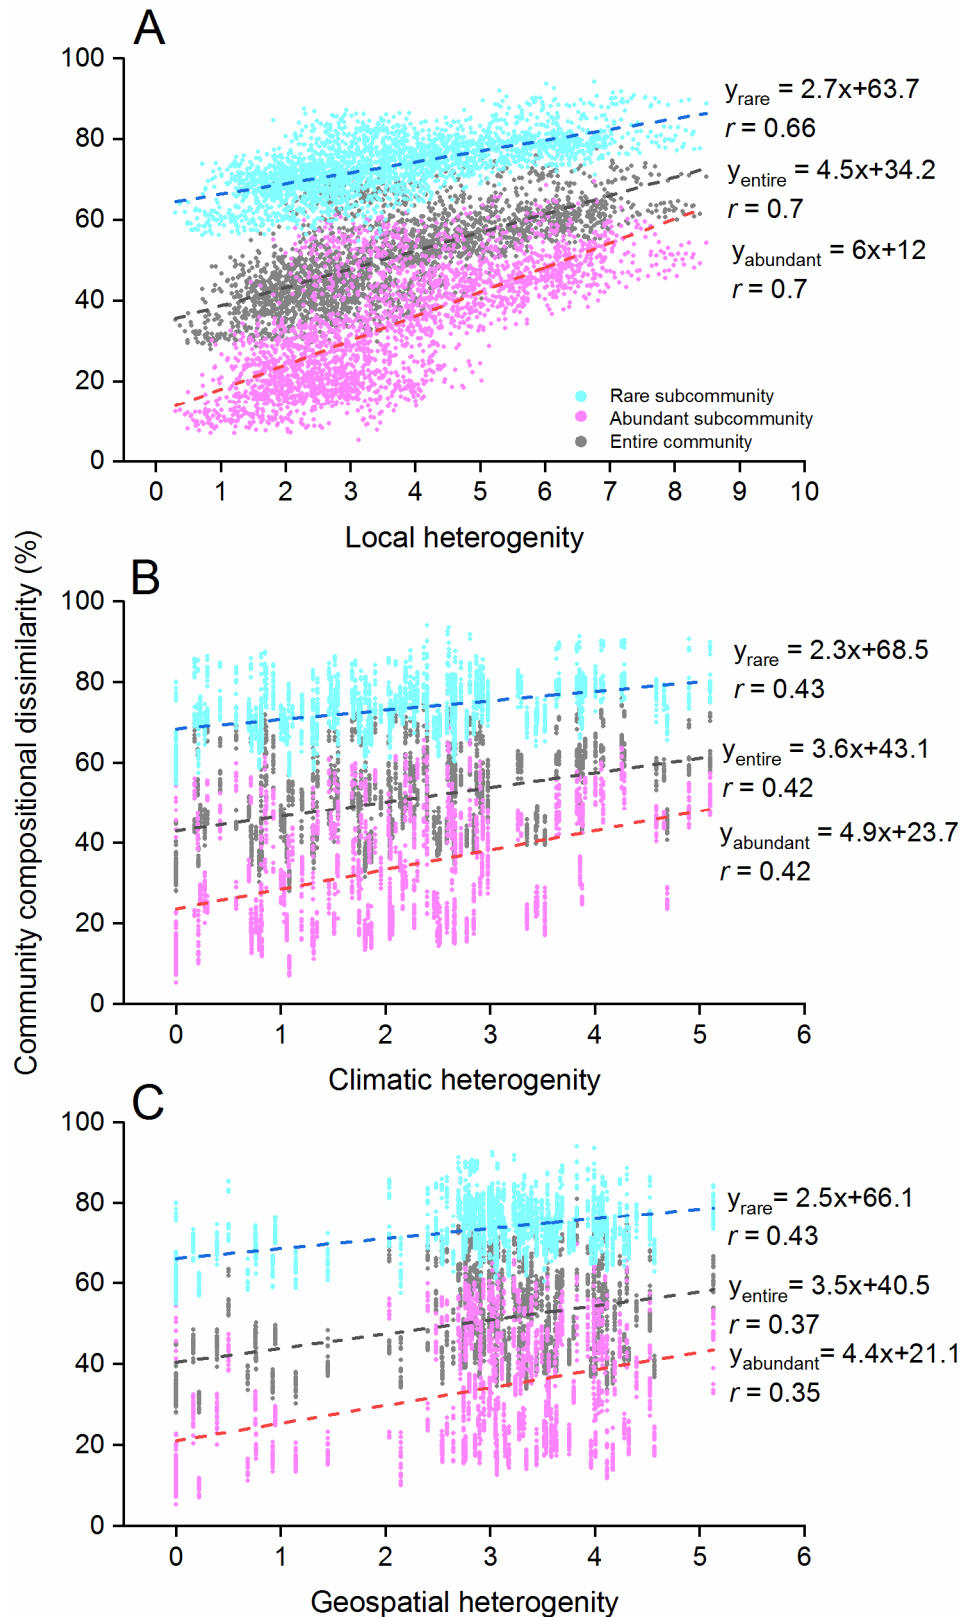

**Table S5.** Correlation relationships between the  $\square$ NTI index and the measured local, climatic and geospatial factors by Mantel and partial Mantel tests.

|          |                | Local         |         | Climatic      |         | Geospatial    |         |
|----------|----------------|---------------|---------|---------------|---------|---------------|---------|
|          |                | <i>r</i>      | P-value | <i>r</i>      | P-value | <i>r</i>      | P-value |
| Rare     | Mantel         | <b>0.6025</b> | <0.001  | <b>0.3049</b> | <0.001  | <b>0.3354</b> | <0.001  |
|          | Partial Mantel | <b>0.517</b>  | <0.001  | -0.1442       | 0.988   | -0.1917       | 1       |
| Abundant | Mantel         | <b>0.2358</b> | 0.004   | 0.02147       | 0.358   | 0.06624       | 0.14    |
|          | Partial Mantel | <b>0.2388</b> | 0.002   | -0.1461       | 0.967   | -0.1449       | 0.976   |
| Entire   | Mantel         | <b>0.6487</b> | <0.001  | <b>0.2867</b> | <0.001  | <b>0.3479</b> | <0.001  |
|          | Partial Mantel | <b>0.5747</b> | <0.001  | -0.2118       | 1       | -0.2365       | 1       |

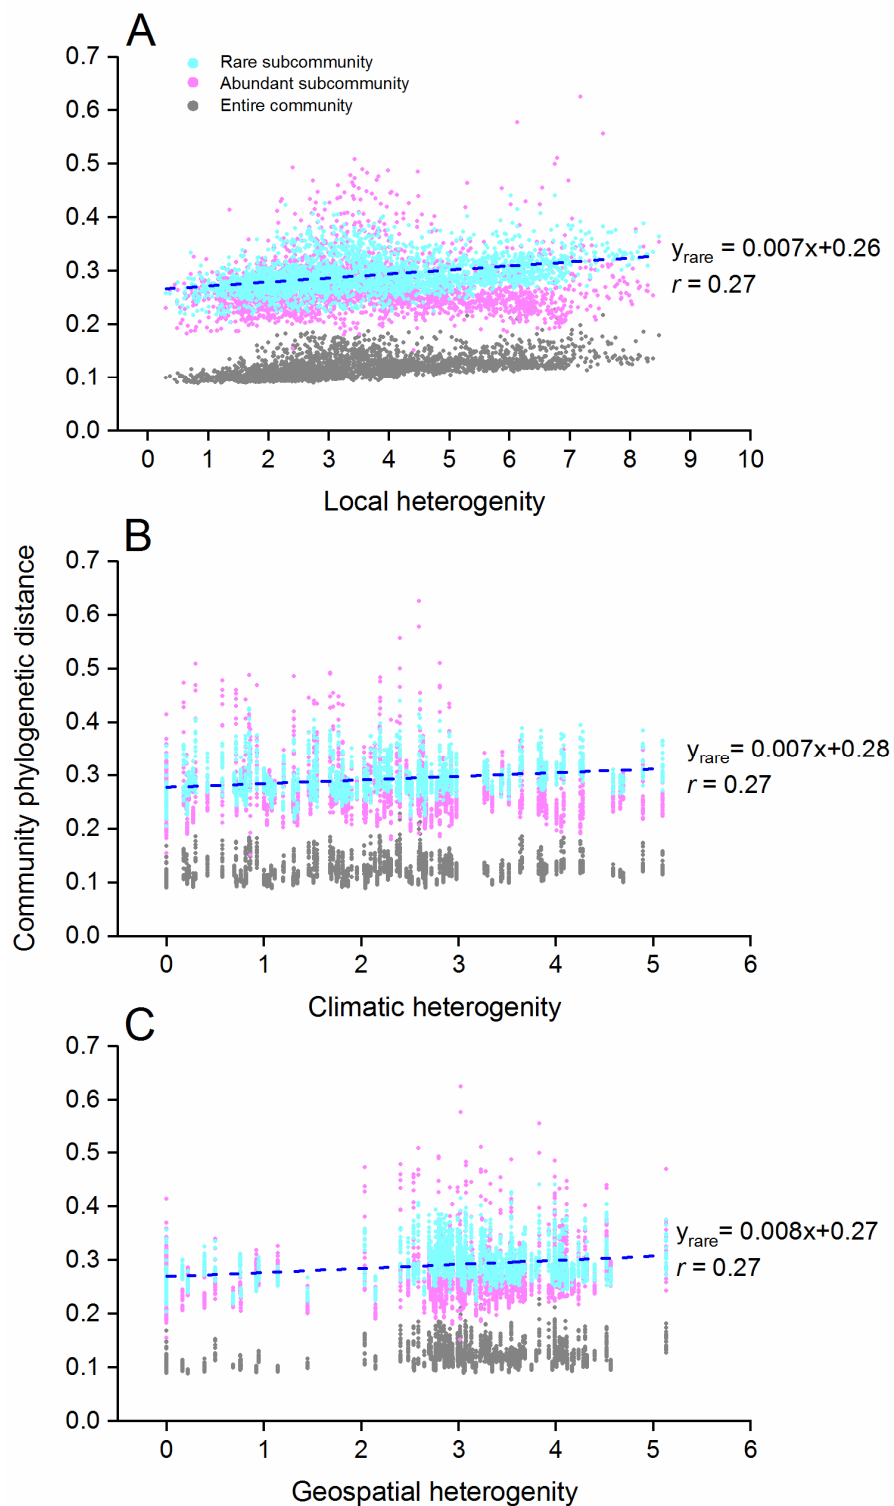

Local factors include soil pH, soil total organic carbon,  $\text{NH}_4^+$  and  $\text{NO}_3^-$  concentrations, soil moisture, plant Shannon diversity, plant above-ground biomass, and plant below-ground biomass; the climatic factors include mean annual temperature, mean annual precipitation, and aridity index. Significant correlations (at  $P < 0.05$ ) are in bold. Rare: rare bacterial subcommunity, Abundant: abundant bacterial subcommunity, Entire: entire bacterial community.

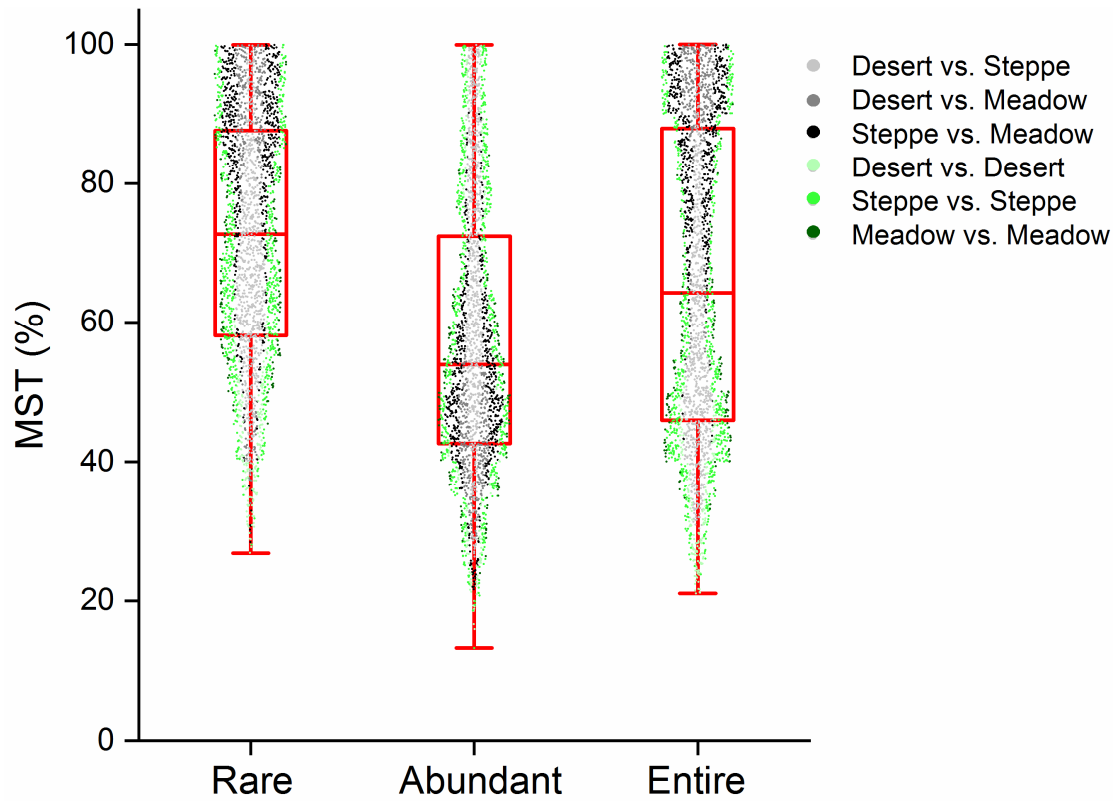

**Fig. S1.** Soil sampling sites across the Tibetan Plateau. Sampling sites are marked with black dots. Map is modified from the China vegetation map (National specimen information infrastructure, <http://www.nsii.org.cn/2017/tdb.php?id=chinavegetaion>). TP stands for the Tibetan Plateau.

**Fig. S2.** Linear correlation relationships between community compositional dissimilarity and the measured local (A), climatic (B) and geospatial factors (C). Local, climatic, and geospatial heterogeneity are based on the corresponding Euclidean distance between samples.

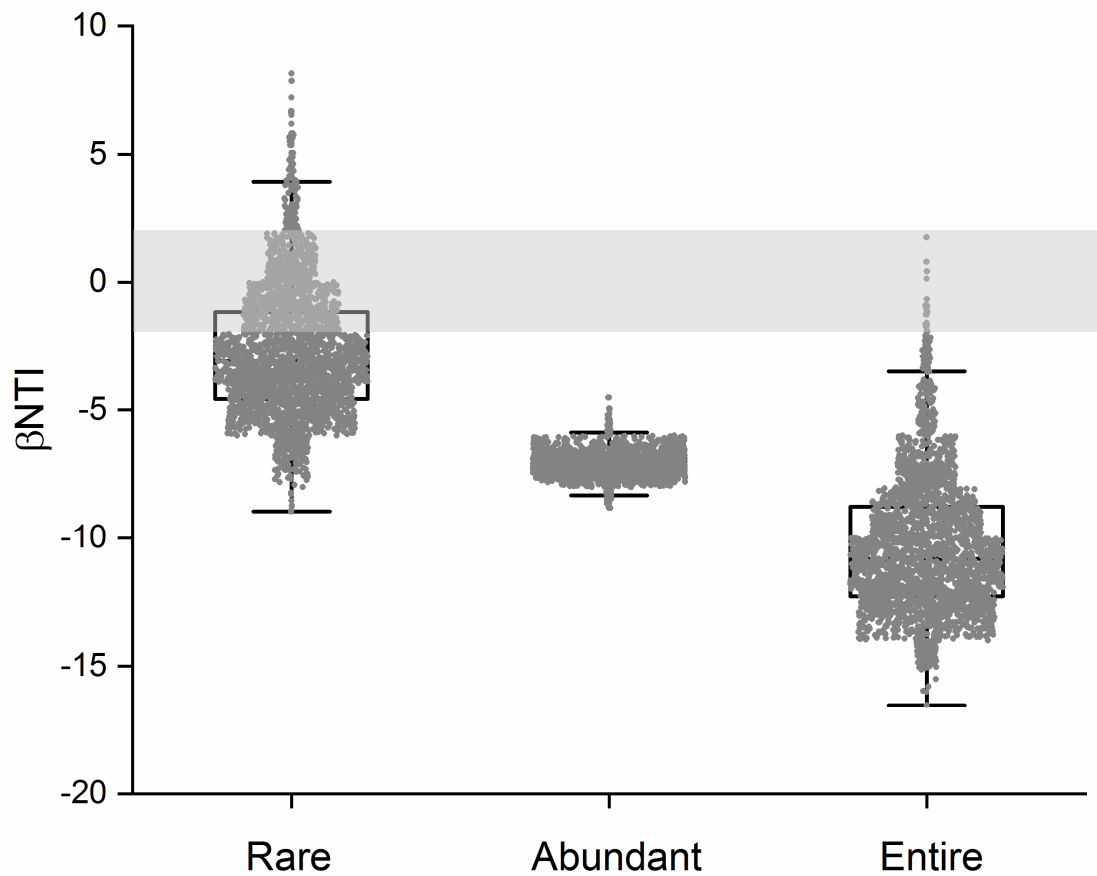

**Fig. S3.** Linear correlation relationships between the community phylogenetic distance and the measured local (A), climatic (B) and geospatial factors (C). Local, climatic, and geospatial heterogeneity are based on Euclidean distance between samples. Local, climatic, and geospatial heterogeneity are based on the corresponding Euclidean distance between samples. Only significant correlations (Mantel test at  $P < 0.05$ ) are shown.

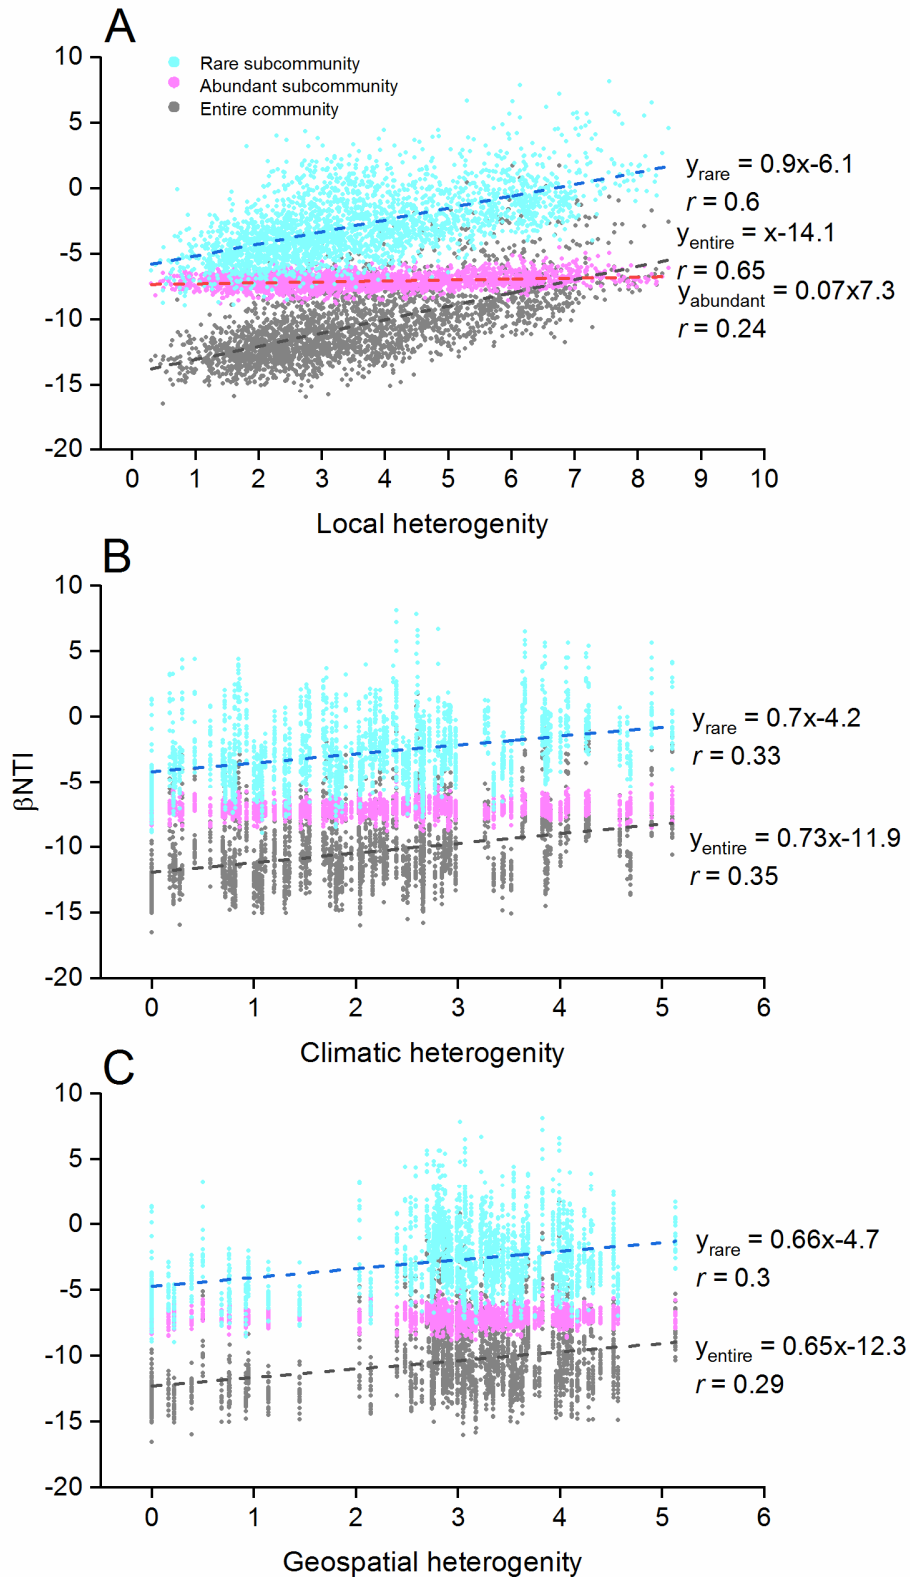

**Fig. S4.** Modified stochasticity ratio (MST) of rare, abundant and entire bacterial communities ( $n = 2628$ ). The box signifies the upper and lower quartiles, and the median is represented by a short line within the box. Desert vs. Steppe, Desert vs. Meadow, Steppe vs. Meadow, Desert vs. Desert, Steppe vs. Steppe, and Meadow vs. Meadow represent between ecosystem variations, whereas Desert vs. Desert, Steppe vs. Steppe, and Meadow vs. Meadow represent within ecosystem variations.

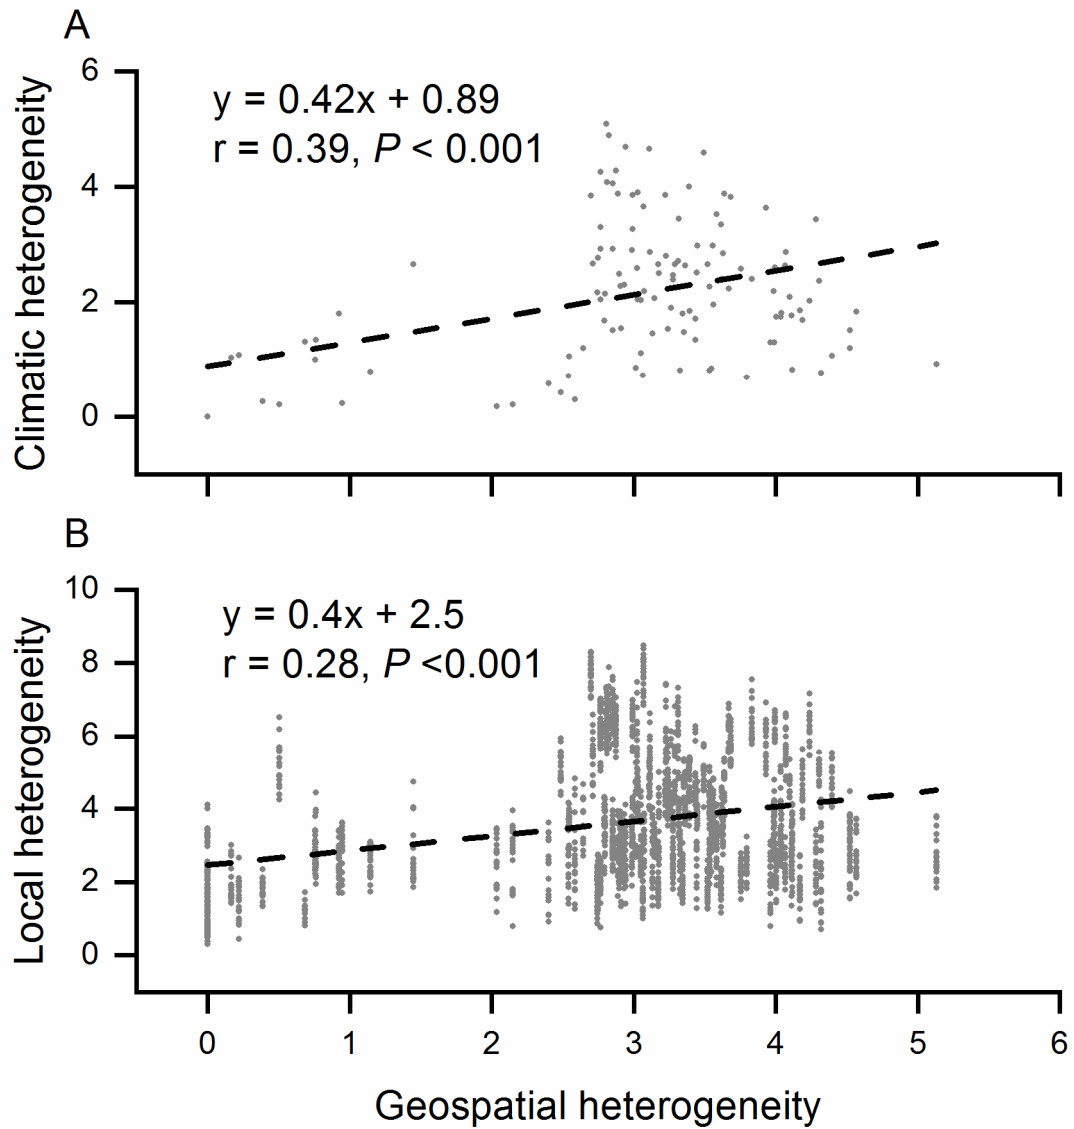

**Fig. S5.**  $\beta$ NTI distribution of rare, abundant and entire bacterial communities.  $\beta$ NTI values  $< -2$  indicate significantly less than expected phylogenetic dissimilarity (homogeneous selection);  $\beta$ NTI values  $> 2$  indicate significantly more than expected phylogenetic dissimilarity (variable selection);  $\beta$ NTI values between -2 and 2 indicate the influence of stochastic processes. Grey box indicates the influence of stochasticity.

**Fig. S6.** Linear correlation relationships between the community  $\beta$ NTI and the measured local (A), climatic (B) and geospatial factors (C). Local, climatic, and geospatial heterogeneity are based on the corresponding Euclidean distance between samples. Only significant correlations (Mantel test at  $P < 0.05$ ) are shown.

**Fig. S7.** Linear correlation relationships between geospatial heterogeneity and the measured climatic (A) and local (B) factors. Local, climatic, and geospatial heterogeneity are based on the corresponding Euclidean distance between samples. The significance was tested with Mantel tests.
