

Additional file 4. Phenotypic characterization of splenic APCs upon SE infection.

A-B The presence (%) and **C-D** numbers (cells/mg spleen) of FSC^{low} DCs and FSC^{high} DCs in uninfected (uninf) and SE-infected (SE-inf) chickens were assessed over time. Mean + SEM per treatment and time point is shown ($n = 5$), for uninfected chickens at 0 dpi $n = 3$ and at 7 dpi $n = 4$. Statistical significance is indicated as ** $p < 0.01$.
