

LOCAL GOVERNMENT

SUSTAINABLE DESIGN

- Sensitive integration between natural environment
- Use of raw material
- Materials sourced locally
- Minimum reliance on non renewable resources
- Design of energy efficient buildings
- Creation of humane and healthy environments
- Responsible use of financial resources (and future costs)

MEYER PIENFAA T

- Double curves: circular curve horizontally, parabolic curve vertically
- Hung onto ribs with steel cleats
- Each panel is allowed to move independently on its fixing brackets to absorb thermal shrinkage and expansion.
- Once hung in position, joints between panels were sealed with a three tiered waterproofing system.

- The waterproofing system combines mechanical means of water discharge, as in fish scales, with a membrane installation and the use of sealing compound.
