

Supplemental TABLE S2 Stage as a significant predictor of outcome in patients with MTs and ITs

| Stage | MTs and ITs (5 yr. survival (%)) | | Test for differences in survival distributions (p-value). | Hazard ratio estimates for overall survival (Multivariate Cox regression model)* |
|-------|-------------------------------------|------|--|--|
| | OS | EFS | | |
| 1 | 96.9 | 93.5 | p < 0.001 (MT) p = 0.013 (IT) | Stage II-III vs Stage I: HR = 19.32, P = 0.0031 |
| 2 | 100 | 100 | | |
| 3 | 38.9 | 25.9 | | |

- Adjusted for sex, age, socioeconomic status, tumour site, chemotherapy regimen
