The "Press" may take courage from the fact, that the freest nations have ever been the most warlike, and the most sedulous and unremitting in the organization and maintenance of a competent armed force.—(*United Service Journal*)

AN EXTRACT FROM CAMPBELL'S LAST LAY.

——— We hold the Rights of Man too dear,
To bless ourselves, with lonely freedom blest;
But could we hope, with sole and selfish breast,
To breathe untroubled Freedom's atmosphere.
Suppose we wished it? England could not stand
A lone oasis in the desert ground
Of Europe's Slavery—from the waste around
Oppression's fiery blast and whirling sand
Would reach and scathe us! No; it may not be,
BRITANNIA and the WORLD, conjointly, must be free!

Laconism.—The martinet always values the soldier most for that dullness which classes him nearest the mere animal machine.

Decision of Character.—Sir Charles seems to quibble, and dally, and palliate, and temporize. It is better in politics to decide badly, but to decide, than to vacillate. The one course ensures the statesman the respect of mankind, the other its derision.

NATURAL HISTORY.

THE AMERICAN MOCKING BIRD.

THE Mocking bird (Turdus polyglótus) seems to be the prince of all song birds, being altogether unrivalled in the extent and variety of his vocal powers; and, besides the fullness and melody of his original notes, he has the faculty of imitating the notes of all other birds, from the humming-bird to the eagle. Pennant tells us that he heard a caged one, in England, imitate the mewing of a cat and the creaking of a sign in high winds. The Hon. Daines Barrington says, his pipe comes the nearest to our nightingale, of any bird he ever heard. The description, however, given by Wilson, in his own inimitable manner, as far excels Pennant and Barrington as the bird excels his fellow-songsters. Wilson tells that the ease, elegance, and rapidity of his movements, the animation of his eye, and the intelligence he displays in listening and laying up lessons, mark the peculiarity of his genius. His voice is full, strong, and musical, and capable of almost every modulation, from the clear mellow tone of the woodthrush, to the savage scream of the bald eagle. In measure and accents he faithfully follows his originals, while in force and sweetness of expression he greatly improves upon them. In his native woods, on a dewy morning, his song rises above every competitor, for the others seem merely as inferior accompaniments. His own notes are bold and full, and varied seemingly beyond all limits. They consist of short expressions of two, three, or at most five or six syllables, generally expressed with great emphasis and rapidity, and continued with undiminished ardour, for at an hour at a time. While singing, he expands his wings and his tail, glistening with white, keeping time to his own music, and the buoyant gaiety of his action is no less fascinating than his song. He sweeps round with enthusiastic ecstacy, he mounts and descends as his song swells or dies away; he bounds aloft, as Bartram says, with the celerity of an arrow, as if to recal his very soul, expired in the last elevated strain. A bystander might suppose that the whole feathered tribes had assembled together on a trial of skill; each striving to produce his utmost effect, so perfect are his imitations. He often deceives the sportsman, and even birds themselves are sometimes imposed upon by this admirable mimic. In confinement he loses little of the power or energy of his song. He whistles for the dog; Cæsar starts up, wags his tail, and runs to meet his master. He cries like a hurt chicken, and the hen hurries about, with feathers on end, to protect her injured brood. He repeats the tune taught him, though it be of considerable length, with great accuracy. He runs over the notes of the canary, and of the red bird, with such superior execution and effect, that the mortified songsters confess his triumph by their silence. His fondness for variety, some suppose to injure his song. His imitations of the brown thrush are often interrupted by the crowing of cocks; and his exquisite warblings after the blue bird, are mingled with the screaming of swallows, or the cackling of hens. During moonlight, both in the wild and tame state, he sings the whole night long. The hunters, in their night excursions, know that the moon is rising the instant they begin to hear his delightful solo.

Age of Sheep.—The age of sheep may be known by examining the front teeth. They are eight in number, and appear during the first year, all of a small size. In the second year, the two middle ones fall out, and their place is supplied by two new teeth, which are easily distinguished by being of a larger size. In the third year two other small teeth, one from each side, drop out and are replaced by two large ones; so that there are now four large teeth in the middle, and two pointed ones on each side. In the fourth year the large teeth are six in number, and only two small ones remain one at each end of the range. In the fifth year the remaining small teeth are lost, and the whole front teeth are large. In the sixth year the whole begin to be worn, and in the seventh, sometimes sooner, some fall out or are broken.

*** From the 'Mountain Shepherd's Manual,' a useful little tract on the nature, diseases, and management of sheep, being Number 24 of the 'Farmer's Series,' published under the Superintendence of the Society for the Diffusion of Useful Knowledge.

SELECT NOTICES.

Philanthropists.—The Morning Chronicle of the 11th of August last, states that the great penitence exhibited by Cook the murderer of Mr. Paas, has been brought about by the impressions made on his mind, by the religious visits of Miss Owston and Miss Payne.——*Dissolution of Partnership.*—The great *Novel* publishers, Colburn and Bentley, are about to separate. The former has taken most extensive and splendid premises in Regent-street.——*Cheap Literature.*—Upwards of one hundred and thirty thousand copies of the Penny Magazine find a ready circulation——*Mode of extirpating stumps of Trees*—For the method described by Sir John Jamison, and inserted in the Mechanics' Magazine, June 9th, the large gold medal of the Society of Arts has been awarded.——*Specific against Rats and Mice.*—It is a fact not generally known, that tar rubbed on the holes of these vermin, will immediately banish them. When it becomes dry it must be renewed.——*Streets of Sydney*—The Calcutta Literary Gazette of July says, that the streets of Sydney were in such woeful condition, that the authorities were obliged to receive the Governor on stilts.——*Poland.*—A monthly periodical entitled *Polonia*, is in the course of publication, by "The Literary Association of the Friends of Poland." Numbers one and two have appeared.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

——*Douville's Travels in Central Africa.*—The Foreign Quarterly for August, considers this publication to be a splendid imposition.——*Alledged Impiety.*—The Genevese, says the United Service Journal, do not uncover on entering, even their fine Cathedral of St. Peter's, the interior of which is sufficiently *grave and gothic* to create devotional feeling!——*The Press.*—The same Journal describes the Press as the Fourth Estate of the Realm.——*Cleopatra's Needle.*—Suggestions have been published for a mode of bringing to England the Obelisk at Alexandria, called Cleopatra's Needle.——*St. Simonism.*—Dr. Bretschneider, one of the most independent thinkers and celebrated divines in Germany, has recently published a new work, in which he regards the doctrines of St. Simonism, as a phantom that menaces alike, all liberty, civil, religious, and scientific——*Pompeii.*—Professor John has discovered another buried town near Pompeii. Seven human skeletons were found in one of the buildings.——*The Harvest.*—The late harvest in Britain, seems to have been of the most abundant description.——*Camphor.*—This drug in all its forms, is so much in request in Europe, that many druggists are selling it at an advauced profit of 200 per cent.——*Coffee.*—Strong coffee by its warm aromatic quality, is calculated to give tone and vigour to the stomach; while for occasional cramp or spasms in that organ, strong ginger is often found an effectual remedy.——*Ceylon.*—The natives of Ceylon as yet employ no paper; they write on thin leaves of the Ola, and are obliged to make use of an iron pen, which they support in a notch cut in the thumb nail of the left hand, allowed to grow for that purpose; a literary man is discovered by such a mark.——*Scriptural Illustrations.*—Capt. Skinner of the 31st Regt. informs us in his excursions in India, two interesting volumes just published, that almost every domestic custom of the country is a scriptural illustration.——*Physiology.*—The greatest physical strength of man is developed between the age of 30 and 35; and the greatest mental powers between the age of 45 and 50.——*Travels.*—After an interval of eleven years, the expedition by the Americans to explore the stony mountains, and the country to the west of that chain to the ocean, has returned. The party proceeded 20 miles up St. Peter's river, and discovered lead mines of great importance. They visited the Mississippi, the Missouri, the Frozen Ocean, and passed into Asia. In the vicinity of the Columbia they were overtaken by a storm, which confined them in huts nine months. The snow lay 14 feet deep, and want compelled them to kill 41 of their pack horses. Among the various discoveries which have been made, are extensive strata of salt, alum, iron, copper, gold, and silver. *Deaths of the last quarter, on the Continent.*—Baron Cuiver, Aamarque, Marron, (the celebrated Pastor of the Reformed Church, Paris,) Count Chaptal, Portal, (the physician,) Brué, Geographer, (of Cholera,) Champollion, *Goethe*, the far-famed Von Goethe, Westermeyer, Bishop of Magdeburg (a celebrated preacher) Koch, (another popular clergyman of the same city,) Von Weber Hegel (of Berlin,) the Duke of Reichstadt, (Napoleon's son,) Count Julias von Sodon, Shmaby, Wilmsen, Korner, Von Schmidt, Huber, of Geneva, (celebrated for his work on Bees and Ants,) Simond, (the traveller.)——*In Britain.*—Jeremy Bentham, Sir James Mackintosh, Rev. C. Colton, Dr. Walsh, Sir W. Grant, Chas. Butler, Earl of Scarborough, Clementini, John Bigland, Princess of Saxe Weimar, Lord Henniker, David Power, Anna Maria Porter, Lord Rendlesham, Earl of Donoughmore. Sir Jas. Macdonald, Duchess of Manchester, Lord Amesbury, Sir Jas. Hall, John Taylor, Sir John Carr, Sir John Tyrell, Lord Dillon, Lady Hannah Ellice, (sister to Earl Grey,) Dr. Curtis, of Cholera, (Catholic Primate of Ireland,) Admiral Pellew, and the Rev. Dr. Adam Clark, (of Cholera.)

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

THE SOUTH AFRICAN LITERARY AND SCIENTIFIC INSTITUTION.

As our readers readily enough know, the *Literary Society* is merged into that of the *Scientific Institution*, and bears the title at the heading of the present article. Formerly, we believe, the *Literary Society* did hold interesting and well attended meetings, and the papers read fully demonstrated the literary talent of many of its members. We suspect the *fall* of the *Literary Society* to have arisen from the suicidal nature of one of its own laws. A gentleman on one occasion, produced a spirited paper on *The Crusades;* in the course of his reading there was some allusion to the pretensions of the Church of Rome. He was called to order,—*Infallibility* carried the day, and the reader silenced. There was evidently in the Society the fear of free discussion. Wherever, and whenever, the freedom of criticism is not tolerated farewell to manly thought, and national improvement. It was amid general emotion and discussion, (let it be remembered,) that in the 16th century, its moral and intellectual movements converged into that great result, which we call the Reformation; a conventional term, by which we generalize and abbreviate those numerous and extensive changes and improvements which, in civil as well as in religious affairs, began then to interest the public thought, and to pervade human life. But let by-gones be by-gones, our present notice is, *The South African Literary and Scientific Institution.*

This distinctive appellation carries a swell with it, it must be confessed, for the Cape; hence we feel it our duty to make a few enquiries as to the doings of the Institution, so that its title may be completely borne out. We do so from the best motives, because mind, as well as body, has a certain *vis inertiæ*, and moves only as it is acted upon by impul-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ses from without. And we want the Institution to learn (as we do all our Societies at the Cape,) that "the soul's joy," as the poet observes, "lies in *doing*," not in being hushed and calmed down to tranquillity. As far as the *Museum* of the Institution is concerned, we believe nothing can be better managed. Who does not exclaim as he enters it, and on beholding the wonderful displays of Creative Goodness—Beautiful! Wonderful! Surprising! And then the taste and skill of Mr. Verreaux, the superintendant, how excellent! In the scientific departments of the Institution, its members may be fairly congratulated in the well-known ability of its Secretaries, the Doctors Adamson, Smith, and Dyce. Moreover, as a Benefactor of matchless and unwearied zeal, how much the Institution is indebted to Mr. Von Ludwig! Now come we to the *Literary* department. What has besn doing here for many a month past? In truth we know not. Among the Members we discover no less than *twenty* names to which *degrees* are attached. Now, as these are never given away, or bestowed, except in cases of decided merit, we are certain that talent and genius must dwell in the midst thereof. All that is required seemingly is, that it be no longer hid under a bushel, that it be put forth and be seen

"Like a city that is set on an hill."

We observe also among the *members of Council* many *natives* of the colony. Surely they will oblige us with some exhibitions of *native* talent. And here we have *a-by-the-bye*. How does it happen that we have no *native poets*, no *native philosophers*, no *native geologists*, no *native astronomers*, no *native travellers*, no *native botanists*, no *native schoolmasters*. Let the question stand over for discussion. Then again, what has become of the highly patronized *South African Quarterly Journal?* What are the Council about in this matter? It cannot be for want of supplies, for long ago the Committee of the Public Library liberally granted the use, the unrestricted use, of its books, and journals, for either extract or review. And we recommend, as local subject-matter, a catalogue *raisoneé* of all the birds, beasts, fishes, and geological specimens in the Museum. Let the *Council* or Committee of the Institution, resuscitate the Journal forthwith. Let a *sole Editor* be appointed, because in literary *publications* we dislike Committees of Management. These generally ruin the independence of a work. They cut, carve, add, delete, and transpose at their pleasure, till every feature of originality or individuality is expunged, and nothing remains but the most woeful common-place The illustrious third and fourth rate class of brains, succeed uniformly in reducing every thing to their own level.

THE POPULATION OF CAPE TOWN.

We suspect that we are a good deal in the dark as it regards the actual state of our population in Cape Town. We think it at all times considerably under-rated, and that a new Census would prove a desideratum of no small importance at the present moment. Some months since, a tall gentleman in black, did perform house visitations for the purpose of *summing up*, but we know in a great many instances, he was imposed upon; and that, too, in a most wanton manner. The work must be performed by several hands—an Argus-eyed troop. On the score of *public health*, we ought to know more of our growing population. We seldom discover any new dwellings for the poor—the coloured population; hence the present domiciles in the alleys and cellars of Cape Town must present an extremely crowded number of inmates.

In forming the late and interesting Census of Great Britain, we find it ordered by act of Parliament, that on the morning of a certain day, *all* the parish officers are to proceed to the various habitations in their districts with papers, on which questions are *printed*, for the purpose of being answered by the owners of the houses. There is a penalty either for a refusal to answer, or, for a false answer, of not less than 40*s.* and not more than £5.*

Again,—a Census of the people philosophically conducted, is a truly great and magnificent object of inquiry;—and who can tell the light its varied details will ultimately throw on the whole frame work of society? From its high and lofty places, downward through all its gradations, to the lowest shades of poverty and vice, what a singularly curious and interwoven fabric! Who at the present moment can form even a conjectural notion of the social edifice? What are its workings, and the springs which give it life; what the causes which makes its entire structure exhibit at one time all the fair and florid forms of health, and in another all the unhappy characteristics of vicissitude and decay;—which in one season beams with hope, while tranquillity and joy are found within its borders, but at another exhibits a feverish anxiety,—dark and unkindly suspicions rising angrily against its best benefactors, and destroying the very hand that is raised to comfort and support it? Such is human society; and to illustrate its nature completely, is the final object the political arithmetician has in view.

After these brief observations, we humbly move, that His Excellency the Governor in Council would be pleased to direct a new and complete census of the population of the Cape of Good Hope, and that the Civil Commissioners, or some other supernumeries, (provided such be not slave-holders,) be ordered to commence this important work without delay.

ARRIVALS DURING THE LAST MONTH.

THE *Musquito* family from Port Natal, Mosambique, and Rio de la Plata, arrived on the 10th, and took up their old quarters in the *Heeregracht*.† They seem in no sense to have become more civilized, but apply the *lancet* with as much savage dexterity as ever.

2.

The *Crickets*, "full of mirth," but in smaller numbers than before, made known their arrival as early as the 1st November.

3

The first grand serenade of the *Frogs* for the season, took place on the evening of the 14th ultimo, at the family seat *Frogmore*,—Castle ditch. The weather was on this occasion *piping hot*.

4.

The *Swallows*, a well-known family all over the world, alighted here at 3 o'clock on the 5th ultimo. Their late residence unknown.‡

5.

A good deal of sensation took place in *all the month* of November, by the unexpected arrival of an immense body of winged and other *Ants*.‡ In a great many instances they took possession of the best houses, and were greatly annoying to the proprietors. Various methods of ejectment were resorted to.

POETICAL APATHY AT THE CAPE.

We have often wondered at the absence of poetical talent at the Cape, and cannot account for it, that the *Press* never, or very seldom exhibits any talent in this department. Our surprise is naturally heightened, when we consider that a large part of the existence of a human being, consists in *thought* and *sentiment*. The truth is, all the delight of our being, lies in *imagination*. Now this faculty is described as empty, because it is supposed to be a shadow, and not a reality. It is not a reality, if the meaning of that word be confined to *matter;* but if whatever exists, if spirit and intellect can be reality, it *is* a reality. Now, as our readers know very well, we seldom attempt any thing in the shape of versification; but, as Col. Leach observes in the preface to the "Sketches of the Life of an Old Soldier,"—"as it is the fashion now-a-day for every body to write, I don't see why I may not try my hand at it, as well as the rest of them." Now, then, for three *Irregulars:*

THE DELUGE.

A wide-swelling ocean of waters once strove,
The tops of the Alps and the Andes above.
There are marks on the mountains, and proofs in the vale,
And in Sacred Books we have read the sad tale;
The deep-bosomed surge o'er the Table would roar,
When all o'er the Cape was a sea without shore

'Twas a wideswelling ocean of waters so rare,
To which our Atlantic we cannot compare;
Our modern Pacific is but a parched pool,
When we think of this ocean so broad and so full;
From East to far West was as one liquid motion,
And our planet wheeled round a vast globular ocean.

From out of itself, arose this ocean's shore,
When the day of its proud exaltation was o'er:
The hour when it conquer'd its neighbour, the earth;
The time when it brought cold death's sadness for mirth;
When its wide-sweeping surge was aspiring to heaven,
And each wave, like a sea, o'er the Himlayan's driven.

But these mountains majestic in form and sublime,
Are not the first boast of these waters of time;
The useful and grand of the animal world,
From their high-sought retreats by the deluge were hurled,
Nor bold soaring wing, nor fell courage could save,
The Eagle and Lion float dead on the wave.

The vegetive kingdom sunk under its power,
For the great forests yielded in that awful hour;
The strong rooted oak, like a sapling was cast,
And Lebanon's cedars came down with the blast;
The waves played the sweet bowers of Eden among,
And knowledge and life swept the tempest along.

---

* The comparative account of the late Census has just been published by Mr Rickman, price 10*s.* It embraces the four Returns of the Population of Great Britain in 1801, 1811, 1821, and 1831.

† The exertions of Baron Lorentz have contributed very considerably to lessen the Musquito evils of Cape Town, during the last three years.

‡ Naturalists do not appear, as yet, to have cleared up this mystery. A pair of swallows of the flock which arrived on the 5th ult. took up their old abode at the Public Library building. They were keen in their search for the fountain which last year played in the plot of ground, which is now occupied as Free Mason's Hall. Perhaps the most curious document in the Harleim Miscellany, vol II, page 578, is the ingenious attempt of a writer to prove that the swallow winters in the Moon.

‡ We should like to receive some information on the subject of Ants. We apprehend the reason for their appearance during the last month, after an absence of some 4 or 5 years, is, that finding their companies below the foundations of the buildings too numerous, they are attempting the relief of the communities to which they are attached, by throwing off their swarms.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The world e'en as now was then given in marriage,
But the flow of its mirth met a fatal *miscarriage;*
This its parties made sad, and its companies broke,
And old age and gay youth fell at once with the stroke;
For thousands on thousands—the greatest of slaughters—
Sunk mid blackness and darkness, and tumult of waters.
Yet a judgment more awful shall visit the world,
When the Sun from his throne in the firmament's hurled—
When the voice of Omnipotence darkens the heaven,
And the stars shall evanish by vast whirlwinds driven;
When this globe, all in flames, one volcano shall raise,
And earth with its oceans depart in the blaze.

Recollections of the late Miss O—, of Castle-street, Cape Town.

Oh! there was One—on earth awhile
She dwelt;—but transient as a smile
That turns into a tear,
Her beauteous image passed us by;
She came, like a splendour from the sky,
She seemed as dazzling to the eye—
As prompt to disappear.
Mild in her undissembling mien,
Were modest beauty,—meekness seen,
And lips that loved the truth;
The dimpled cheek, the glance sublime,
Which hailed Eternity through Time—
And shewed a mind disposed to climb
Above the joys of youth.
The loveliest star of evening's train,
Sets early in the western main,
And leaves the world in night:
The brightest star of morning's host,
Scarce risen—in brighter beams is lost;
Thus sank Her form on *ocean's coast*,
Thus sprang Her soul to light.

Thoughts suggested at the close of the Year.

Oh! Time is like a river, gliding
Away—away!
And its liquid bosom hiding
Joys bright as day;
And with its restless current wearing
Man's heart to clay;
And life's best hopes, like sea-weeds, bearin
Away—away!
And life is like a dew-drop, smiling
For one short hour;
With fair and glitt'ring show beguiling,
Yet sun and shower
O'er its frail essence each prevailing,
Shorten its stay;
Tremulous, restless, and exhaling,
Away—away!

THE ROYAL OBSERVATORY.

The following is copied from the Annual Report of the Astronomical Society of London:

'Mr. Henderson (a gentleman known to you all, as one of the most active and enlightened cultivators of Astronomy in this country, and one to whom this Society has, upon many occasions, thankfully acknowledged its obligations), has been appointed His Majesty's Astronomer at the Cape. That this gentleman, treading in his predecessor's path, and with better health, and under better auspices, may reap the rich harvest which Mr. Fallows could only commence, is the confident wish and hope of those by whom his merit, zeal, and modesty, are appreciated.'

The same Report concludes thus:

The Council cannot omit this opportunity of again * bringing before the Society the very able assistance which has been, from time to time, afforded them by the voluntary labours of this gentleman. Bound to the Society by no conventional engagement (for Mr. Henderson has but very recently become a Fellow of the Society,) he was always ready to aid and assist in any investigations that might be required. And although the Council cannot but lament, in common with the Society, the partial separation of so active a member, yet they are well aware that the powerful resources of his mind will be more efficiently called into action, and will reflect more honour on his name and nation in the new sphere in which he is about to engage.

Previous to his departure for the Cape, Mr. Henderson made arrangements for observing Mars at his opposition in November next: and requested Mr. Baily to select the stars proper to be observed with that planet. This has been done; and the Council have directed that the same shall be printed and circulated amongst different observers, in order that the greatest advantage may be taken of the favourable opportunities now afforded for determining the parallax of that planet. Arrangements had been previously made with Mr. Fallows for observing the parallax of the moon; and the stars proper for that purpose are now distinguished by an asterisk in the annual list of the moonculminating stars: and as, in all probability, a proper selection of stars will be made and published in future, for the subsequent oppositions of Mars, and the inferior conjunctions of of Venus, there is now every reason to hope that, with the co-operation of active astronomers, the parallaxes of these respective bodies will soon be determined with the greatest accuracy.

* At the anniversary in 1830, the Society presented Mr. Henderson with a copy of its Memoirs, as a small token of their sense of his services.

PUBLIC LECTURES.

Mr. Fairbairn is *up*, and we are heartily glad of it, for it would be unpardonable when all the world is RISING, to differ from the *mode*. Mr. F. has announced a Course of Lectures *on some curious branches of Natural Science*. Mr. Fairbairn is a *writer* of deserved reputation, yet there is something more searching and soul-stirring in the impulse of oral communication. We cannot shut our ears as we shut our books; we cannot escape from the appeal of him who addresses us with forcible speech and living conviction. It is thus, we are told, that when Cicero pleaded before Cæsar for Ligarius, the conqueror of the world was troubled, and changed colour again and again, till at length the scroll prepared for the condemnation of the patriot, fell from his hand. Sudden and irresistible conviction is chiefly the offspring of living speech. Hence the immense advantages of the pulpit. We may arm ourselves against the arguments of an author; but the strength of reasoning in him who addresses us takes us unawares. Besides, inestimable as books are, a book is, after all, an abstraction. It is but imperfectly that we feel that a real man addresses us in it, and that what he delivers is the entire and deep-wrought sentiment of a being of flesh and blood like ourselves, a being who claims our attention, and is entitled to our deference. The living human voice constrains us to weigh what is said, shoots through us like a stroke of electricity, will not away from our memory, and haunts our very dreams.

We apprehend from the Prospectus of Mr. Fairbairn, that his details will be in every sense curious and replete with novel information.

Whether Mr. F. will investigate the theory of apparitions we know not,—but it is next to impossible, we think, to illustrate the manner in which the affections of the mind act upon the body without some inquiry into the reality of spectral impressions—nay, into the world of unseen spirits around us.—

"Millions of spiritual creatures
Walk the earth, unseen, both when we sleep and when we wake." *(Milton.)*

We confess there is one department of natural phenomena we could wish discussed—the *mirage*. It was this illusion that led the *Arniston* transport, to destruction off our Cape *L'Agullas*, in 1815, when upwards of 340 of the crew and passengers perished. A spectre-ship led the captain to believe that a place of safe anchorage was at hand—hence the wreck and ruin which followed. We have witnessed this illusion ourselves more than once. It is said that some of the inhabitants of *Mauritius* can discern in the air the ships which are destined for Port Louis two or three days before their actual arrival! This may be accounted for on the principles of refraction. It is a fact at the present day, that when a ship is wrecked upon the shores of Wales and the North of Scotland, it is affirmed by the inhabitants that its *apparition* previously visiting the spot, has most commonly been seen. Numbers of these spectre-ships hover about the coasts in winter, their impassive sails shivering and straining in the tempest, and their decks manned with the spirits of those whom destiny is hurrying through the ocean to destruction. It would be vain to tell these superstitious people that planks, masts, iron bolts, and cordage can have no soul; they *believe*, but cannot analyze their notions; and therefore suppose that the word *ship* denotes a being which, while it continues whole, has some kind of spirit attached to it; and this they imagine goes before it to the place of shipwreck. In the same belief is also involved another impossibility—(unless it be a relic of that ancient Grecian opinion, which taught that man was a three-fold being—a spirit—the spirit's aërial vehicle—and the body;) for if the men's spirits were on board the spectre-ship, their bodies would be tenantless in the real wooden tenement. An opinion nearly a-kin to this was entertained by the learned Earl of Roscommon, and countenanced by Dr. Johnson. In fact, there is so much of mystery in our life's being, that the germs of *superstition*, (call it so if we will,) are indestructible. Where there are indefinable fears, and incomprehensible forebodings, as is the case with our mysterious natures, a multiplicity of illusions are naturally indigenous to the heart of man.

OUR FAREWELL FOR 1832.

With many thanks, and all manner of good wishes, we bid farewell to our Subscribers, Correspondents, and Friends in the language of Mrs. Hemans.

WRITTEN FOR ONE OF THE GERMAN MELODIES, SUNG BY THE HERMANNS.—Dec. 31.

Day is past!
Stars have set their watch at last;
Founts, that through the deep woods flow,
Make sweet sound, unheard till now;
Flowers have shut with fading light—
Good Night!

Go to rest!
Sleep sit dove-light on thy breast!
If within that secret cell
One dark form of memory dwell,
Be it mantled from thy sight!
Good Night!

Joy be thine!
Kind looks o'er thy slumber shine!
Go, and in the spirit-land
Meet thy home's long-parted band,
Be their eyes all love and light—
Good Night!

Peace to all!
Dreams of Heaven on mourners fall!
Exile, o'er thy couch may gleams
Pass from thine own mountain streams!
Bard, away to worlds more bright!
Good Night!

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE V.—BY ORLANDO.*

[INFERENCES FROM PRECEDING FACTS—NO SPONTANEOUS PRODUCTION OF PLANTS—THEIR RE-PRODUCTIVE SYSTEM—BRIEF REVIEW OF THE USES OF PLANTS IN THE SYSTEM OF CREATION—ACTIONS AND PHENOMENA OF THEIR LIVING PRINCIPLE.]

THE more fully we know, and the more justly we think on the Vegetable and Animal Kingdoms, we shall be better prepared to comprehend the principles and the history of Providential dealings with the human race. This world is manifestly not our world only. We are linked in it with innumerable fellow-beings of very varying kinds and qualities. They are co-tenants with us of our common Earth. We cannot live in it without their association and services. Do not, therefore, think me tedious if I particularize a few more facts on this curious subject, in addition to those of the last lecture.

From all the circumstances, thus far enumerated, we may infer, (and this is worthy the attention of our agriculturists,) that the vegetable classes have been created upon a system of improvability, and also of an indefinite productiveness, which can be increased to the utmost extent of any probable human demands upon it.

That the application of human skill, care, and diligence, to educe these beneficial results, has been made the *condition* of their appearing.

That human welfare and comfort have been a principal object of the Creator, in designing and producing His Vegetable World, though it has been also made subservient to animal subsistence; and these are peculiarly connected with the cultivation of it. Animal food tends to the *animal habits* of hunting and pasturage; both of which, though pleasing to many, as occasional employment, yet, when made the character and chief pursuits of a tribe, or nation, or district, tend to *animalize*, brutalize, and devilize our nature, and arrest our social progress. Ancient Scythia, the modern Tartars and Arabs, the North American Indians, the people of Port Natal, and our frontier Boers, those especially of Beaufort, (*a*) are commentaries on this principle. Agriculture and gardening, and their consequential occupations, accustom the human mind to the quiet, patient, contented, domestic, social, and civilizing habits, on which human happiness and improvement mainly depend. * * * It would be well for us in our daily intercourse with one another, to recollect that peculiar goodness, liberality and kindness in the Divine Mind towards His human race—that desire not only to bless and do us good, but the desire to please, to interest and amuse us with the most innocent, continual, accessible, and gratifying enjoyments. For plants peculiarly address themselves to three of our most acute senses—the taste, the smell, and the sight; while the ear is also soothed by the whispering of the branches, (*b*) and the touch by the softness of the verdant and floral foilage, and of most of the fruits. We see that the consolidated wood supplies us with numerous conveniences of private and public use; and from plants has arisen that most needful and comfortable of all things—the grateful warmth and use of our domestic fires. Even in this respect, we may perceive, that there has been a benevolent foresight, and provision especially exerted in order that this daily comfort might continue to accrue to us, after our diffusing populations should have levelled the forests which supplied the fuel. Buried in the earth just deep enough to remain *unknown* till *wanted*, that primeval vegetation, which was overwhelmed and uprooted by the deluge, has, during its long sepulture become converted into bituminous COAL, sufficient to yield us fire for all our purposes, though every wood should be consumed, and mankind last for more ages than they are likely to continue. (*c*) In this beneficial supply of a mineral so valuable, we have an instance of a great destruction, directed by a prospective benevolence, to prepare and produce for a future age, one of the kindness addition to human comfort. What a demonstration of the most deliberative goodness presiding amid the most awful displeasure!

Once more, in reference to the

* Delivered before the Members of the Poker Club.

(*a*) What a deplorable picture is before us of the state of the cattle Boers and their slaves in this district. The account is drawn up by the Boers themselves, and will be found in a paper, entitled *The Zuid Afrikaan*, No. 133, 1832. We think this document will cause some considerable interest in the Commons House of Parliament.

(*b*) Sweetly the whispering leaves and waving pine,
Melodious sound among the mountain rills.
(Idyll.)

(*c*) Coal has been hitherto found most extensively in the British islands: the next in importance is near Liege. It is also in Hungary, Silesia, Bohemia, Upper Syria, and France. It has also been discovered in America in various parts; and also in China, the Birman empire, Great Tartary, and New South Wales. "It is probable," says Dr. Macculloch, "that nothing is yet wanting in many other parts of the world, but knowledge, industry, wealth, and the stimulous of want, to prove that it is a far more common substance than it has hitherto appeared to be." Thus it is almost every where made and kept ready to come to human knowledge and use in each country, as soon as it shall be wanted.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

philanthrophy of the Divine Creator, if our mere subsistence had been alone His object, we find that grass, hay, straw, acorns, and saw-dust, would have answered that purpose. What the savage lives upon in full strength and activity, every child of man could subsist on; and be as happy as all the animated tribes *appear* to be. *(d)* But he has not so dealt with us. We never act towards each other, in our kindest moments, with that inventive, forseeing, and persevering benevolence, which has been exerted by our Maker in the formation of His Vegetable System; and His benefaction is still in all regions re-produced at every vernal and autumnal season.

The system established for the perpetuated existence of vegetation upon earth, is another surprising invention of Divine Intelligence. We have now got rid of the unfounded and unphilosophical supposition of spontaneous generation. This was one of the dreams of ignorant times, when any absurdity was welcomed by some, that they might not believe in a Creative Power. Malpighi and Redi, and others since, have satisfactorily proved that both plants and animals arise from organized parents. *(e)* Earth produces no plant whatever, in any country, unless a seed or some vegetable germ be first deposited within it. On this point, Nature is constant. But you may fairly ask, how, then, is vegetation found on places that are known to have originally had none, and that are not likely to have been visited, by what would bring them? How, for instance, could the frozen soil of New Shetland, amid the ice-rocks of the antarctic, obtain the lichens, the only vegetable formed, or perhaps growable upon it? How have the Coral Islands of the Pacific, formed in the bosom of the waves by the petty animalculæ that construct them, derived their fine cocoa-nut trees, and beautiful forests? How can the new Volcanic Islands *(f)* that have just emerged from the shallow bottom of the Sicilian Sea, ever acquire, as it will do, a productive vegetation? These questions are reasonable, and we can find some facts that will satisfactorily answer them.

The clouds ever floating above us, not only bring us occasionally meteoric stones, hail, and *epidemics*, but also vegetable seeds, and the very Lichens that would commence the new reign of vegetation on the black rocks of the South Polar Isles. A phenomena which occurred in Persia, would have had this result. *(g)* Dust and sands, heavier than many seeds, are borne by the winds and clouds for several hundred miles across the atmosphere, falling on the earth and seas as they pass along. *(h)* The Crypogamia and many other of the grass seeds, are not more weighty than matter of this sort, which the ærial movements thus transport. *(i)* The sea, and its tides and currents convey large bodies for even thousands of miles. *(j)* The winds carry over the seeds of large trees, *(k)* and disperse new vegetations with an extraordinary rapidity, and to an extent which, anterior to experience, we should not have expected. *(l)*

Birds also, largely diffuse them. Many of these tenants of the trees and air live on fruits and berries. They digest the pulp, but pass the seeds unimpaired; and thus heavy organizations of future trees, are planted in the most distant and unexpected situations. *(m)* The *Thrush*, that delightful British songster propagates the parasitical Mistletoe of the Druids. and our Evelyn of revered memory attributes the existence of England's oak forests, and the Navy of Britain to the labours of the *Squirrel*. Waves, winds, birds, &c. fully explain, the vegetations of every coral and volcanic island. *(n)*

The amazing muscular power, and vital energy of birds, to sustain their flights in their migrations, for distances that astonish us, will account for the plantations of the most distant isles and continents. *(o)* Even insects people inland ponds and streams with fish, *(p)* and are often themselves carried by the winds to great distances. From all these facts, no individual of right judgment can have any difficulty of perceiving how the most remote and unvisited regions have derived their varied vegetation.

But, Gentlemen! without detaining you much longer on these points, I shall conclude the present lecture by a brief review of the uses of Plants in the system of creation. Without vegetation, none of the animals we know, but those that live on water or air, could have continued in existence; for neither man or animal can subsist on any thing in the mineral kingdom, until vegetation, by first making it vegetable substance, has prepared it for a future conversion into their own. Hence the justness of the Mosaic account in placing the creation of plants before that of animals. Vegetation could have remained without

---

(d) A LAPLANDER will go 30 miles through swamps and rocks; take *a draught of milk*, sleep in his wet clothes, and rise the next morning *as fresh* as when he began his journey

(e) Malpighi's important remarks and reasoning, addressed to the Royal Society of London from Bologna, 1681, are on the anatomy of plants—the vegetation seeds—of plants that grow on others—on roots, and on gall nuts. He considers seeds as the eggs of plants, "e materno ovario delapsa. and requiring the fosterin, bosom of the Great Mother Earth"

(f) The Sandwich Islands of the Pacific, have thus originated. They are all volcanic emissions.

(g) In the beginning of 1828, a vegetable matter fell suddenly from the sky in Persia, and covered the ground to a great extent. Cattle, and particularly sheep, eat it; and some bread was made from it. It was submitted to the inspection of M. Desfontaines, who found it to be a species of Lichens, which the wind had transported from its native place.

(h) Mr. Forbes when 600 miles from the coast of Africa, found his sails covered with a brownish sand. The wind had blown all night N. E. The nearest land to the wind was the coast of Africa, between Cape Verd and the River Gambia.

(i) Capt. Beechey found volcanic dust that had descended copiously on his ship in the Atlantic, 700 miles from the spot where the irruption was afterwards ascertained to have happened. If one wind blow such things towards the sea, another would disperse them over deserts and continents.

(j) Dr. Walker says in his letter to Lord Kames, "I have found seeds drop accidently into the sea in the West Indies, cast ashore on the *Hebrides* The sea and rivers waft more seeds than sails."

(k) Some of the Ash and Plane have heavy seeds, but they are supplied with wings. *(Ib.)*

(l) "I have seen plantations of Holly, Yew, White Beam, Mountain Ash, Hawthorn, and Juniper, on inaccessible precipices, and impending cliffs, formed by the birds, which excelled in beauty the plantations of man!" *(Ib.)*

(m) The Erigeron Canadense was received from Canada about 100 years ago into the Paris Garden. It is *now spread* as a wild plant over France, Holland, Germany, and Italy, even to Sicily; and to such a degree in the South of England, that it is now enumerated in the English list of indigenous plants.—*Ib.*

(n) Mr. Ellis. in his admirable Poleynisian Researches, remarks, that all the coral islands of the Pacific, have an opening left in them by their wise and indefatigable insect masons. The constant current which passes the opening, deposits on the ends of the reef fragments of coral, seaweed, and drift-wood, till in time, they rise above the surface of the water. Seeds borne thither by the winds or waves, find a soil on which they can germinate. Decaying vegetation increases the mould, and by this process, these fairy islands are formed.

(o) The two pigeons which flew from London to Antwerp, in July, 1830, passed 186 miles in 5½ hours, which was nearly 34 miles an hour.—(*Brussels Pap. July 24th.*) Of two pigeons, that in January, 1831, flew from London to Liskeard in Cornwall, one went in 6 hours; the other 6¾. The quails whose wings are so small, cross the Mediterranean. Faber saw a little wagtail in the middle of its route over the Northern ocean, from Denmark to Iceland.

(p) The great river beetle, which lives habitually on eggs of fish, climbs sometimes in the evening on the reeds high enough for flight, and then takes wing. One was caught in its flight, and being put into water, it emitted the eggs with which it was gorged. These eggs produce fish of various sorts.—*Gill's Tech. Rep.*

animals, but these, unless their food had been ready for them, would, under their present economy of being, have soon disappeared. *(q)*

While most of our plants thus form the sustenance of the animal kingdom, other classes of them were made and meant to be its natural medicines and secret physicians. For this purpose, those which thus benefit, are universally dispersed. We may regard many of these as useless weeds, yet they are silently spread amid all vegetation, to be every where ready for the general benefit. Brutes often need them as much as ourselves, and are repeatedly seen at particular times to select and crop the herbs that they do not use for food, but, to which some recollected experience, or unexplainable perception, or instinct, leads them for their resulting efficiences. But to man, plants have been in all ages, the natural, and the earliest, and the most universal physicians. Vegetable medicines constituted the physic of our ancestors, as they still are of all nations, who do not make European science their predominating guide. *(r)*

When we consider that vegetation carpets all the surface of our Globe; and that its shrubs and forests still occupy the largest portions of its superficial extent; and when we find that it is universally, by day and night, streaming from its verdure—from every leaf, fruit, and flower—an aërial fluid of some sort or other, and in the lower regions of the atmosphere, immediately over our heads, and mixing in the gaseous strata of it which we breathe, we shall then perceive that it must be hourly causing the most important effects, additions, and changes in the air which we inhale, and must be a very essential and active agent on the vitality, functions, and powers, of our material frame. The atmosphere could not be what it is, in that portion of its expanse which rests immediately on our inhabited surface, unless vegetation was around us. The powerful effects of its presence we feel in various parts, in the diseases which it occasions; and from these we may form some notion of its extensive influence in a minor degree, both for good and for ill, in every other locality. *(s)* That it has constantly an exciting, and exhilirating and salubrious effect, we all experience when we pass from our pent-up town into a plant-abounding district. Strength and spirits arise within us, as we reach the abode and diffusion of the Vegetable Kingdom

Nor does vegetation exercise a less important influence on the great pabulum of life and mind—the beauteous and indispensable LIGHT, Here, again, the universality of the diffusion of the Botanical species attests the magnitude of the effect, to which the attention of Science has not been sufficiently drawn. But let us consider, that it has been a general law to all vegetable nature, that the colour of its leaves and blades shall be *green* all over the world. The consequence is, that for the months which elapse from the first opening of the vernal foliage until its autumnal decline, (I speak now more particularly of England,) half of every year, the plants and trees are absorbing all the light which falls on the surface of the earth which they occupy, and return only one-seventh part of it, and that consisting alone of one particular ray; of the seven colours or rays of light, the red, the blue, the yellow, the orange, the indigo, and the violet portions of it, six-sevenths of its whole component substance are subtracted from it, and from the air, and from our respiration of it; and we have, and use, and imbibe only the green particles of it, out of all that vegetables receive. Thus, during Spring and Summer, the green ray of light is that, amid which we are peculiarly living, when beyond the atmosphere of cities. For six months this predominates in nature; while the other and larger portion of all light that falls on plants, is buried in the vegetable mechanism that imbibe it; from them descending through their vessels into roots, and from these issuing into the earth, and being there disposed of in some manner which we have yet neither studied nor explored. *(t)*

In Autumn, a new action in light begins; the green ray is no longer transmitted by the trees. As the principle of life withdraws from their foliage into the vessels of the branches and stem, a different process ensues. The verdant light is then absorbed instead of being reflected; and those mixtures of the other rays, which constitutes the brown and yellow colours of the fading leaves, are emitted instead. When the leaves have all fallen, that effect ceases, and during all winter, the trees absorb none of that light which their foliage thus imbibed and modified; and ight must, therefore, have a very different action upon human kind at this season, compared with that which it exerts at every other.

The flowers, likewise, while they are blossoming, retain and emit other portions of the rays; and the fruits in their season effect for the time being, other changes also. *(u)*

Another very important action on the aërial fluids in our atmosphere, is that which plants exert in their leaves and flowers, on the Electricity which appears to be every where about us. Spines of herbs and shrubs attract it. *(v)* All plants are found to do so. *(w)*

In fact, every herb and tree are all day long effusing oxygen light; emitting the green ray, transmitting into the earth both the electric and luminous fluids which they have imbibed, and drawing up into themselves, from the earth, the diluted particles which respectively nourish them.

But, besides, these uses of vegetation, in the economy of our wonderful-

(q) The insects which live and have their being on the Oak, amount to hundreds of species. It nourishes ferns, lichens, mosses, &c. It furnishes its apples, gall nuts, leaves, and saw dust. Some are attacked by small fungi, which break their surface, admit moisture and facilitate decay. The leaves decomposing from a vegetable earth, and the worm seizes on them as his portion, and having fed upon part, draws the remainder into the earth.

(r) On this topic, Mr. Lindsay's Introduction to the Natural System of Botany, will be found very valuable. Under the head of the Properties of Plants, he gives ample, yet condensed notices of their medical uses. Decandolle's "Essai sur les Proprietes Medicales des Plantes," which he has much consulted, will be an useful companion Mr. Lindsay deserves great credit for so ably composing his Natural System of the Vegetable Creation. The Linnean classification and Nomenclature, are very ingenious and useful; but the Natural System will always be most philosophical.

(s) These are well known in our tropical countries amid their luxuriant vegetations; and in all marshy districts; and especially in the malaria produced by moisture occurring to decayed vegetation, which is more fatal, when sea and fresh water combine to overflow it.

(t) The effect of light in causing the green colour of plants, is evidenced by the whiteness of those which grow in darkness. Red and white tulips retain their floral colours also so reared; but in this case their leaves are not green but white.—*Smith.*

(u) The continual perspiration of plants is also adding increasing streams of vaporous fluids of some sort or other to the atmosphere. Hales found the great sun-flower to perspire 17 times as fast as the ordinary insensible perspiration of the human skin. The Cornelian Cherry evaporates from its leaves in 24 hours, nearly twice the weight of the whole shrub.—*Du Hamel.*

(v) We owe to Saussure the discovery, that thorns, and vegetable points, produce electricity.

(w) On approaching a small piece of black wax, after rubbing it to a red poppy, laid lightly on my table, each leaf of the corolla moved to it, and waved up and down as the wax passed over it. —*Turner.*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ly-constructed world as food and medicine, and as powerful agencies in our atmosphere and light, it is also every where contributing to the comfort and convenience of man in his domestic and social life, according as his skill and diligence discover its applicable uses, and invent the means of making them advantageous to himself Hence the innumerable improvements in all the arts and manufactures which human ingenuity has appropriated, and which are daily increasing. It will be sufficient here to notice only a few, as specimens of what thus abound. It is an exuberant topic, on which, your reading, or the information which you may derive from adapted conversation, will in time give you an enlarged and very gratifying knowledge.

Thus the *Sago Palm-tree*, on the Orinoco, supplies the Guanacas with all they need. They live in it, and upon it, with scarcely a possibility of exhausting its supplies. *(x)* The *Banana*, is as bountiful a friend to myriads of our fellow-beings in the East, both in its produce, and its power of rapid multiplication. *(y)* The *Canadian Birch Tree*, in its mere bark, is a valuable supply of conveniences to the Indian nation. *(z)* The *Bread Fruit Tree*, has a bark from which the Tahitians make several varieties of native cloth. Of the trunk, they build their canoes and houses, and their articles of furniture, and extract a valuable resin; and they live upon its abundant fruit. Their *Cocoa Nut Tree*, is still more serviceable for the conveniences as well as food, which it profusely yields. (1) The *hemp*, *flax*, and *cotton* plants are known to all.

Enumerations of this sort, might be made from all the regions of the globe; but a few more illustrations of the uses of the Vegetable Kingdom, will suffice. We have a familiar one in the Sunflower, presented by nature; (2) and a curious one, extractible from the Moss-crop plant, by human ingenuity. (3) * * * Nothing is useless in vegetable nature. Even the thistle we despise and eradicate; (4) the Dandelion, which we ridicule; (5) the Nettle, which we dislike; (6) and the Rush we undervalue; (7) are all convertible into beneficial uses. They have all, in some age or other, contributed to human comfort or convenience. The most intellectual of our arts, which gives to ideal beauty a visible form, is greatly indebted to botanical productions for some of those pleasing colours which embody its perceptions. From them also, many valuable dyes are obtained. (8) Even the vegetation of the marshes, though unfit for alimentary herbs, or for habitation, become serviceable by the *Turf* which it produces, and is always renewing, as it is removed, for domestic comfort. (9) The maratime also assists some portions of mankind with food and medicine, and materials for manufacture. (10) The Lichens, likewise, extend similar utilities to society. (11) The Fungi though deleterious when unwisely applied, yet have properties that are available to medical skill; (12) while Ferns are not less auxiliary to our use and comfort. (13) Such benefits and beauties have made Botany an interesting study, even to nations where we least expect to find any of the paths of science either esteemed or pursued. (14) * * It is another expressive indication of the forseeing and provident benevolence of the Great Originator, that He has made the most useful trees and plants transferable from one region to another. It is from this property in them, that we now produce many of our valued trees and flowers, and most gratifying luxuries of fruits and herbs. (15) What pleases in one climate, is transplanted into another, and successfully naturalized there

With all these facts in our recollection, let me just notice a few of the properties of that living principle which all vegetables appear to possess. Thus, as if the *living principle* of a plant knew its own nature, and what every part of the organic frame it animates, needs, it distributes and conveys daily and hourly to its stem, its bark, wood, leaves, roots, branches, flowers, and fruits, through their several vascularities, precisely that kind and portion of the fluids it imbibes or secretes, which each ought to receive. Accomplishing all these actions, the *living principle* remains with all these powers in its organized frame, during the period that has been prescribed to it: and leaves its temporary abode and all animal life, when that period has been fulfilled Beyond this departure, we cannot trace it. The plant is *forsaken* by *it*, and dissolves into its material atoms; but the *principle of life* was not there, and, therefore, must be disposed of, distinct from them according to those laws, which the Creator appointed to attend its earthly death, when He first fixed the laws and place of its living existence.

Besides these general actions, particular plants exert particular agencies. The stamina of the common Barberry, always contract if any insect or strange body touch them In dry soils, plants invariably shoot out towards those parts from which they can derive the most nourishment. Cucumbers and Melons stretch out in long branches. If any of these, in shooting out, approach near a stone, they do not go on and touch it, but they *stop short* before they reach it, and then wind round it. The Mimosas and other sensitive plants are well known to possess an exquisite susceptibility. Again, a great number of leaves follow the sun in its course. For instance, a clover-field. The stately annual Sun-flower, after following the sun all day returns after sunset to the East. The Daisy and the Tulip, close and open their flowers every evening and morning. The former, if the day be cold, remains closed. The nightly closing of leaves, is called by Linnæus, the Sleep of Plants. This phenomena is another analogy to the animal nature. Many

---

(x) Its quantity of nutritious food is prodigious. One tree in its fifteenth year furnishes 600 lbs. of sago. A single acre of land, will support 435 sago palms, which will produce every year 120,500 lbs. of sago.—*Crawford.*

(y) Humboldt calculates that 1000 square feet of Banana plants, will produce 4,000 of its nutritive food; while the same space would only grow 33 lbs of wheat, and 99 lbs. of Potatoes. Of the Banana tribe, the gigantic leaves of some species are applied to many domestic purposes. They thatch the Indian cottages; are a natural table cloth, and a material for basket making; and yield a most valuable flax, from which some of the finest muslins are made. The juice of one kind is made for dying.

(z) Their canoes are made by this bark, and all sorts of small cups and dishes. It burns like pitch. It splits into threads; will serve for twine, may be written upon in pencil. Stuck on a pole, it lights them while they fish of a night.—*Head.*

(1) Of its trunk their spears are made; the rafters, wall plates, and pillars, for their houses; their fences and various instruments. It is also their fuel. Of its leaves they form screens and several kinds of baskets, and plait for bonnets. Of its fibrous parts attached to the bark, they work jackets, coats, bags, and even shirts. Besides milk, and abundant edible food, it also supplies a copious oil. The larger shells of the nut, holding a quart, are used for bottles, and the smaller for cups and drinking vessels; and the fibres of its husk, are made into cordage.—*Ellis.*

(2) Its leaves are a pleasing fodder to cattle; its flowers assemble the bees; and its profuse seeds are invaluable food for pigs, sheep and poultry. It also produces an invaluable oil.

(3) Mr. Holliwell, near Todmeston, has manufactured a beautiful russet cloth, and also yarn for stockings, from the wool produced by the Moss Crop Plant, found on his Estate.

(4) Two kinds of this plant were formerly boiled and eaten as artichokes; its leaves as salad and greens. Its young stalks, peeled and soaked, are excellent.

(5) The leaves of the Dandelion, in early spring, afford a very good ingredient in salads.

(6) Its roots may be used with advantage in calculous complaints, scurvy, gout, and jaundice. The young shoots of spring are anti-scorbutic. It fattens hens. Ropes, paper, and cloth, have been made from it. A Treatise, by Francus and Dreschler, have been written on its virtues. The former recommends it as a wholesome and agreeable pot-herb: the latter, as a good substitute for hops in preserving beer.

(7) The common Rush furnishes seats for chairs, and pith for candle-wicks. In Japan, it forms floor mats, &c.

(8) Lichens furnish important dyes. Blue colour may be extracted from the straw of Buck Wheat. Myrtle Berries furnish a beautiful blue dye for cloth, while it affords food for sheep, and materials for tanning.

(9) M. Dau's valuable Essay on Turf, is recommended to the attention of the reader.

(10) The beautiful Alaria Esculenta, forms a part of the simple fair of the poorer classes of Ireland, Scotland, Iceland, Denmark, and the Faroe Islands But it is in the manufacture of Kelp for the glass-maker and soap-boiler, that the Algæ take their place among the most useful vegetables.

(11) For instance, the far-famed Iceland-Moss.

(12) Fungi salted, are eaten by the Russians without danger. Vinegar also, takes from some their ill effects. One variety is used in the N. E. parts of Asia for its intoxicating effects.

(13) Capillaire is prepared from ferns. Its leaves are a tonic in India. Two kinds have been employed in the manufacture of beer; and one as a substitute for tea.

(14) In no country out of Europe is Botany in such honour as China and Japan. It has been cultivated there above a thousand years. Siedbold, gives a list of 10 Japenese books on Botany, with coloured figures, one written in 1650; two in 1697; others in 1797, 1800, 1808. 1816, 1824.

(15) Thus the Horse Chesnut was a native of Mount Pindus, in Arcadia. The Peach has come from Persia. The Potatoe originated from South America. It grows wild in Chili and Peru. Rye and Wheat were first imported from Tartary and Siberia, where they are yet indigenous Asparagus, from Asia. Cresses, from Crete. Cauliflowers, from Cyprus. Chervil, from Italy. Cabbage and Lettuce, from Holland. Fennel, from the Canaries. Garlic, from the East. Gourds, from Astrachan. Horse-radish, from China. Kidney Beans, from the East Indies. Lentil, from France. Rice, from Ethiopia. Shalot, from Siberia Tobacco, from America. Sugar, from India and Arabia; brought from Egypt into Sicily and Spain; by Spain, planted in the Canary Islands and Madeiras; thence carried to St. Domingo, Hispaniola, the Brazils, and Mauritius. Elder Tree, from Persia.

So as to Flowers. The Jessamine, from the E. Indies. Tulip, from Cappadocia Lily, from Syria. Tube Rose, from Java and Ceylon. Carnation and Pink, from Italy.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

plants close their flowers and others droop their leaves when the light departs, as if to take their sleep; and expand them in the morning, at various hours according to their species. But this does not depend upon the sun; it is more like the roosting of fowls.

It is also one of the laws on which the Vegetable organization has been constructed, that its *living principle* shall be separable from it, and shall depart from it, just as in man and brute. Here again, specific ordainment visibly appears. Each has its *appointed* period of duration peculiar to its species, and dies when that has been reached. Thus, some are only annuals, and do not survive the year; others are biennials, or grow up in one year, and die in the next; while others, are perennials, or last for many years, reviving every spring.

Gentlemen! I have detained you this evening much longer than I had intended—but the subject is fascinating. Well is it said in the Reformed Confession of our Colonial Church, that creation is "a most beautiful Book." Happy they whose tastes are directed to study its pages. And happy were it, if more attention to the cultivation of gardens were more generally relished in this colony, than is the case.

A Garden to the virtuous, is a paradise still extant, a paradise unlost.—*Young.*

The name Eden, signifies pleasure; and the idea of pleasure is inseparable from that of a garden, where man still seeks after lost happiness; and where, perhaps, a good man finds the nearest resemblance of it, which this world affords.

(*Bishop Horne.*)

HOLIDAYS.

HAIL! all hail! the inspiring HOLIDAY!
The flight from all the strife and tumult of the world!
Let not the Cynic look with jaundiced eye
On those enlivening hours, which, like the bursts
Of sun-shine on the way worn pilgrim's head,
Dispel the mental gloom. They are the salt
Of this our short existence: they beguile
The rugged road of life: they often brace
Anew the slacken'd nerves, refresh the brain,
Rouse up the spirits, and revive the heart!
Let him not look with stern, reproving glance
On the snatch'd joys of those poor prisoners,
Whom the harsh gaoler, BUSINESS, in his gripe
Fastens but too securely. Man is bound
By artificial ties, where cities rear
Their large circumference; but how he longs
To quit them for a season; how he strives
Like some imprisoned bird that droops within
Its bars, to leave engirting ties behind,
And feel the breeze of heaven upon his cheek,
The uncontaminated breeze; and rove
In flowery fields and garden groves—
A joyous denizon of earth. To him
How grand the mountain's hoary brow,—how sweet!
How doubly sweet are sunny vales! how wave
The wanton woods, and charming bubbling brooks,
Responsive to the song of morn and eve.
He sees a million beauties, which the sons
Of LEISURE miss; for they, with heedless step,
And vacant eye, stroll oft among the works—
The miracles of God—unimpress'd
By all they see, and undelighted too
At the soft sounds that ever are abroad;—
The hum of bee, the whisp'ring of the breeze,
The rush of wings, the leap of sportive fish,
The wild-bird's plaint, the music of the leaf,
The sounds of rural Nature all abroad. **

In looking over a number of manuscript papers, sundry notes presented themselves—the

"Relics o' a friend that's gone."

The following have been put into shape from these stores, being an oral communication by the late Mr. JAMES HALLIDAY, Surgeon of the H. E I. C. Ship *Waterloo*, to the Editor of this Journal. He was to us an almost brother; our companionship was continued for a series of happy years. Frequent and pleasant were our journeyings together through many lands,—and as well by sea. These times are gone by, *but they have left a relish and a fragrance upon the mind, and the remembrance of them is mournfully sweet.* The memory of our friend is dear to very many in Annandale, Dumfriesshire. His remains lie buried in the church-yard of Johnston, the pastoral village of his birth. Our readers will, we feel convinced, excuse this humble tribute at the shrine of friendship.

As to the subject of the following article, although much has been written respecting Buonaparte, a vast deal remains to be said. Many ocular witnesses have not yet opened their *porte feuilles,* or taken up the pen to retrace their recollections. Before we can have a complete history of the extraordinary man who ruled France, it is necessary to amass those materials which are wanting, and fill up the existing vacua. As contributors to such in some humble degree, we proceed to publish

AN ADVENTURE AT ST. HELENA.

——— "Yesterday his name
Was mighty on the earth:—to-day—'tis what?"
H. K. WHITE.

IT was just on the eve of that season when the French emperor, with his numerous armed myrmidons, set out from his capital, in order to watch the movements of the allied armies, then occupying important posts in various parts of Flanders, that our ship weighed anchor: and a brisk wind carrying her out to sea, deprived us of an acquaintance with the particulars of the bloody strife at Waterloo till the following year. It was not, indeed, till we had arrived at Canton, that we *heard* that a war had actually been commenced; but of its results we could learn nothing—but were doomed to be tortured by a thousand reports, all equally absurd, but all testifying that a blow had been somewhere struck. The tale remained to be fully told, and the victorious issue of British valour and perseverence to be developed, till the lofty foe-man of our country should meet our wondering gaze, a captive on the island of St. Helena; and we there should learn the particulars of the battle of Waterloo, the capitulation of Paris, the *déchéance* of Napoleon, and the subsequent reinstatement of the Bourbons.

St. Helena, the refreshing place between one world and another, of which an old writer says, "placed in the crystalline centre of the hemisphere, lies a small isle of pearl of the sea," is situated in latitude 16° south of the line, and in 6 degrees west longitude. An immense sea rolls between it and every other land, except the small unpeopled island of Ascension, which lies 800 miles to the north of it. On making safe anchorage in the roads, we soon discovered the changes in an island hitherto open to every visitor. Cannon were placed around it, from whence some shots were fired at us, ere we understood the alteration which had taken place in its government, since we last touched there. Encamped bands of soldiers were everywhere seen; the shipping was more numerous than we had before witnessed, and an admiral's flag was flying at the mast of one of a larger description than was usual on this station. Several boats, from the shipping and the shore, soon hovered around us; whose crews communicated to us the wonderful news of the day, the state of the island, and the regulations then in force. These all appeared strange, and particularly those which ordained, that nothing but the most urgent necessity would be received as a plea for landing on the island, and this only to the superior officers. As we were likely to remain three or four days, to take in water, &c., I was so fortunate as to obtain permission to go ashore with our first officer, N——, in order to visit my friend, captain R——, of the 53d regiment. At the usual landing place, we effected a footing, and soon found ourselves in James' Town. It hardly deserves the name of a town, being rather a deep ravine, or ditch. At the mouth it is extremely narrow, scarcely 400 yards in breadth; it then becomes narrower, till it ends in a point, about a mile and a half from the sea, bounded on each side by almost perpendicular cliffs, called Rupert's and Ladder Hill. I slept at the house of captain R——, and when awoke in the morning, was alarmed at the singularly stupendous rocks which hung over my head, and seemed ready at each passing wind to form a cairn for my burying place. Cannon were placed in front of the town, and the soldiers who guarded them lived in little houses cut out of the solid rock. These, with the numerous forts, formed a singular appearance, and seemed to bid defiance to the most vigorous attacks from without. It appears to have been a generally received opinion in England, that it was impossible to effect a landing on the island by surprise, and that there are only one or two landing places. The fact, however, is, that although the coast on all sides is well fenced by rocks of immense magnitude, and cliffs rising to the height of from 500 to more than 1200 feet above the sea, the island can be entered by various inlets, as well as by many singular ravines, of which there are no less than twelve from whence Buonaparte might have escaped, unless particularly guarded; but as no vessel can approach in *any direction* without being descried at the distance of sixty miles, it would have been useless in him to attempt to escape, considering the shipping which were ever on the watch. Captain R—— furnished horses for N—— and myself, to take an excursion, without which it would have been impossible to have done so, from the heat of the weather, and the craggy nature of the country. We set off for the British camp, about five miles distant from James' Town, after taking an early dinner with our friend. We had literally to climb a steep zig-zag Ben Lomond kind of hill, which gave us no favourable idea of the fertility of the island, for nought is seen around but wild sterility. The road has been cut in the solid rock—a work of Herculean labour. To travel here on horseback would be dangerous, if not presumptuous, were not the sides of the road secured by a parapet wall. Even in its present condition it is a giddy height, and amply sufficient to terrify those who exercise too much of their gazing conceptions, in looking down upon the inhabitants of James' Town in their grave below. We found the appearance of things much changed, after having ascended for about a mile. Rural images presented themselves: nature peeped forth in gay luxuriance; and the scenery of pastoral life became everywhere visible. Many pleasant country-seats diversified the view, whilst our

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

toils were rewarded by the simple notes of many a passing herdsman. Every thing appeared uncommonly fruitful; the corn rich in prospect, and potatoes high in stem: most species of fruit are said to abound here, with vegetables of every description. The scenery is enlivened by a variety of fine springs and currents. We pushed on our steeds, and arrived at Hutt's Gate, the residence of general Bertrand, and were introduced to its master and his lady. Our reception was extremely flattering. A refreshment was immediately placed before us, with an invitation to make some stay. Madame Bertrand was extremely voluble, and is a most interesting little woman. Her son, Henry, she delighted to praise; showed us his picture set in diamonds, and declared it to be the "very image of the king of Rome." The conduct of general Bertrand is understood to have been extremely consistent since his residence in the island; most people spoke of him with respect. We left our kind Frenchman and his lady, and soon afterward reached the English camp, which is half a mile from Longwood, the residence of Buonaparte. The camp was in a most beautiful situation, which in it included a complete view of Longwood and the adjacent country. The officers at the camp were full of complaints, and appeared, as did the soldiers in general, to be extremely discontented with their situation. Nor is it surprising that they should be so, for unless the mind be enabled to retire within itself — to live on its own stores—to concentrate its hopes on an infinite good—to extend, by the aid of contemplation, the range of its ideas, retirement like this will become a *durance vile*, instead of a "blest seclusion from a jarring world." After gazing on Longwood, with the faint hope of seeing the captive at a distance, through the "loop-holes of retreat," we sauntered about the camp, and passed the sentinels. We were alone, and unobserved. A sudden thought arose in our minds, as to the possibility of gaining Buonaparte's mansion, and seeing his person. We hesitated not a moment—we resolved; and reckless of consequences, set off at full speed, each by a different route, to avoid suspicion. It was my lot to strike into an obscure, unfrequented, and, I believe, unknown path Hedges and ditches were trifling obstructions in the way—curiosity and zeal conquered these and others by which I was assailed. A large field of potatoes favoured my stolen visit, by obscuring the one half of my person. I gained Longwood, and rushed unheedingly into a door, which was open, at the back of the house. I found myself in a small uncomfortable looking room, and in the presence of a middle-aged man and a youth. I conceived the former to be the valet, or some other domestic in the family, his dress corresponding with that of persons of this description. I was mistaken; it was the count Las Cases and his son. Discovering my agitation, which had gained upon me by the heat of the weather, the race I had run, and the situation in which I then stood, he very politely handed me a chair; when, after a little breathing, I told him my tale, and that the professed object of my visit was to behold general Buonaparte. "Sir," said he, in correct English, "your object is good, and your curiosity is laudable. To see the *emperor*, of whom the whole world has heard, is, I repeat laudable, and I pledge myself to gratify you." Las Cases then requested me to wait till it should be the time of the "emperor's" evening ride, which, he added, would soon arrive. Whilst seated, I observed various English mechanics passing and re-passing, who eyed me with attention. I feared lest my abode within should be too daring, and induce a misconstruction of my views. I observed to the count, that I would walk out in search of my friend N——, and wait the appearance of the emperor. N—— was at the stables, in close conversation with captain Poppleton, whose tent was pitched adjoining them, and who saw Buonaparte every hour, reported him to the admiral, and was responsible for his person. The captain never dreamed but that we were in possession of a pass from the admiral, or he certainly would have questioned our object. He is an officer of pleasing manners, and treated us with much civility. We partook of the cheer his tent afforded. The story of Buonaparte's escape from his boundaries, and the firing of the guard, is an idle tale. The fact is, Napoleon being an expert cavalry rider, and captain P. only an infantry officer, and little accustomed to equestrian manœuvres, the latter had been left far behind his companion, in one of his airings. Buonaparte, it seems, enjoyed most heartily the triumph of galloping away from his keeper, who could only bear the jog-trot of his Rosinante. Buonaparte had really exceeded the length of his chain, made some romantic and chivalric leaps in his progress, and had climbed some dreadful steeps. Captain P. was highly incensed at his conduct, and made a report to the admiral. The unlucky evil-doer was not allowed to ride out with the captain for some time, and he was assured by a rough message from the admiral, that if he ever transgressed in such a way again, the sentinels had orders to level him to the earth. During our conversation with the captain, an Irishman at work very near us, was talking and muttering to himself in a very humorous manner; and cursing his hard fate, in being shut up in such a place. The green hills of his native isle, with all their soft and endearing associations, seemed to awaken in his breast the most lively emotions. He made it appear that he had been actually trepanned in the island. Longwood comprises 1500 acres of fine land, and is a beautiful plain, elevated 2000 feet above the sea. The wood has been long since cut down, and fields of corn and grass occupy its place. The view is extensive, and the sea prospect most enchanting. The whole presents a fine scope for contemplation.

The shadows of evening were creeping upon us, when Buonaparte's coachman appeared with his helpers, at the stables; put four horses to the carriage of his master, and drove up to the front of the house. Soon after Napoleon appeared himself, and was followed to the garden opposite, by a numerous train of living monstrosities. Having halted and formed a circle, we beheld Buonaparte and Las Cases in earnest conversation. The former bowed most politely to us, and Las Cases approached, and begged to introduce us to the Emperor. We were received with marked attention, placed on each side of his person, standing uncovered with the whole of his followers. Madame Montholon was the only female in the party. I confess I felt somewhat awed at the first interview with such a man, and I confess a degree of respect towards him gained upon me, especially as I viewed his countenance, and could not observe "the face of villany" in all the stern reality of life, nor mark the "living lineaments of hatred." My mind, too, was crowded with the most lively and powerful association of ideas, connected with the personage whose arm now touched mine. The shaking of empires to their foundations by a nod—the creation of kings out of nothing—the ruling the destiny of half the world—all these floated in my busy recollection. Buonaparte was in high good humour; and after our names and professions were duly announced by Las Cases, he directed his discourse with great ease, but majesty of deportment, to N——, as chief officer of the ——. The conversation, on the part of Buonaparte, was in French; Las Cases became our interpreter: the former needed none, for he comprehended our answers with much felicity. Some of his questions were doubtless very silly, but I think in the main they discovered him to be a man of very superior discernment. When any were asked of a trifling nature, it was easy to discover a decided absence of mind, and a total inattention as to the reply. Certainly there was a good deal of this in his conversation, and I think his volubility in many instances may be compared to the little bells the Chinese hang round their temples, which are under no direction but that of the wind, every breeze of which sets them in motion, and causes them to give forth rude, inarticulate, and unmeaning sounds. In spite, however, of all our antipathies to the man, he appeared to have many intellectual distinctions—to possess one original and supernatural faculty: the faculty of developing a subject by a single glance of the mind, and detecting at once the very point on which it depends. No matter what the question: though it were ten times more knotty than the "gnarled oak;" the lightning of heaven is scarcely more rapid, or more resistless, than was his astonishing penetration: nor did the exercise of it seem to cost him an effort. On the contrary, it was easy as vision. I am persuaded that his eye did not fly over a landscape, and take in its various objects with more promptitude and facility, than his mind embraced and analyzed the most complicated subjects. I regret my inability to record all the judicious observations which I heard him make. His mental operations were too rapid for the memory to retain. His judgment on men and things appeared to be instantaneously formed. The *coup d'ail* of the military engineer, or the quick and sure tact of the medical practitioner, in marking the diagnostics of disease, bear some analogy to the conclusions of a Buonaparte. Hence it has been said of him, that the first burst of his mind was always grand. It is impossible for me to notice one third of the infinite variety of topics which he entered into, and asked questions upon. Not that he needed instruction, or was a novice in human affairs, for he was evidently master of all the subjects brought under his view. O, that with all the advantages derived from the high pinnacle on which he was placed, he had learned the art *greatly how to live!* The following is a selection of the subjects which formed the conversation between Buonaparte and N——. What our cargo was; length of the voyage; what teas we had on boar , and what description of silk; the quantity of men necessary for the ship, and expenses of their maintenance; what guns, provision, and weight, she carried properties of the sea; ship building in its different classes; convoy and navigation; Chinese opinion of England, and her naval power; the Chinese character, customs, manners, laws, religion, and population; battle of Waterloo, and lord Wellington; sir John Moore, and the Spanish war, &c Questions in connexion with these subjects were demanded with great eagerness; but it was evident, that Buonaparte was well conversant with them, from the detection of several errors which had been unintentionally made. For instance in the following particular:—

Buonaparte. What number of Frenchmen reside at Canton?

N——. One.

Buonaparte. What is the occupation of Monsieur;

N——. Cook to the factory of the East India Company.

Buonaparte. Are there no others?

N——. Not any.

Buonaparte. What then has become of the two French missionaries, who long resided there?

N——. I beg your pardon, these persons still reside at Canton. I had forgotten them.

Buonaparte. So I thought.

Much anxiety was displayed in questions about the Chinese. He wondered at the policy of governments in fostering ignorance and monopoly; said he thought it would be proper to pull down the holds of prejudice, suspicion, and covetousness; but observed, "I only think so—the subject is new to me—it is worth attention." He asked what the Chinese thought of the British naval power? We replied, they thought very greatly of it. "Ah, indeed,"

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

said he, "and so do I!" Respecting teas we enjoyed a hearty laugh, Buonaparte excepted. "I have been informed," said he, "that there is much imposition practised on your Company, by the Chinese, in the article of tea. That they first of all derive for themselves the virtues of the tea, dry it up, and sell it to the Company. *You* may not think so; but what do you know about the secrets of their trade? your are strangers without, *not within the gates*." He inquired if we had heard of the battle of Waterloo, with as much *sang froid* as if he had not been involved in its ruin. He praised lord Wellington—commended the courage of the conflicting armies, and intimated very intelligibly, that Wellington was the only general equal to himself. "In prudence," said he, "he is my superior" He adverted to the war in Spain, in terms of regret. He declared sir John Moore to be the bravest general the English ever had; spoke of the immense difficulties he had encountered, and the glorious death he died. Buonaparte made many observations on the bravery and character of the British cavalry; ridiculed their many appendages, and assured us with great gravity, that they were by no means equal to the French. No censure was implied by this on the gallantry of the former, but against the bad management of their horses, and the generally bad constructed curb of their reins. After close questioning N——— on points connected with his profession as a sailor, during which he displayed a prodigious nautical science, he turned quickly round on his right heel, and addressed me, looking me full in the face at the same time. I hardly expected to escape a keen examination, after what I had heard pass between N——— and himself; yet I felt somewhat confident that there would be a falling off in his ability, when the study of the healing art should be discussed. Buonaparte commenced with inquiries (as he had done with N———) as to my name, country, education, and connexions. On learning that I was from Scotland, he paid a handsome tribute to the Scottish character, and observed to Las Cases, "*Ils s'élèvent au-dessus des hommes.*"

He asked the name of my native town or village, on hearing which, he said to Las Cases, "*C'est l'endroit où naquirent Rogerson et Halliday, fameux médecins à la cour Russe.*" He demanded the name of the University I attended. On telling him Edinburgh, he observed, "*Edinburgh est la pauvreté, Edinburgh est la pauvreté.*"* My age was also a subject of his inquiry, and being informed, he expressed great surprise at my youth, and at my being a practitioner at so early a period And yet I have understood, that the period of activity was always marked out by him at no great advance in life When he was asked to employ any one whom he did not sufficiently know, he was accustomed to say, "*Quel age avez-vous?*" If the age of the petitioner exceeded forty, Napoleon dismissed him with this remark, "*Son adolescence est passé*" Buonaparte was anxious to know, if I had heard of any anvances in the science of medicine and surgery. The performance of bleeding occupied most of his attention: he whished to know whether it was most advisable to bleed in his vein or the artery, and whether the circulating fluid was best lessened by the application of the lancet, cupping glasses, or the leech. He considered the instruments in use for opening a vein not quite suited to the purpose, and suggested hints for their improvement I was asked. how I should proceed in certain cases which he enumerated, and whether I thought well of vomits Blistering, plasters, and the pulse were next under review. The Chinese physicians were noticed by Buonaparte as remarkable in particular cases, and in tracing pulsation in every part of the human body. Throughout the whole of the conversation I had an opportunity of beholding his countenance, with which I was much prepossessed, and which I can never forget. His person was truly interesting, and he carried his figure to the best advantage. His manners were those of a gentleman, and extremely winning. Upon the whole, I think, I never saw his equal for natural shape, and perfectability of human countenance. I should conceive the latter a fine specimen of the Roman cast, and to be a perfect model of the plastic hand of nature. In vain I looked for the "murderer," the "monster," the "villain," the "wretch," the "assassin,"* in the place, which is generally said to be an index of the mind. This rule will not hold good with respect to Buonaparte. In the face of Buonaparte you saw nothing of the interior organization—nothing in the muscles from which the peculiar charater could be read: all without was interesting and engaging; but it is to be feared, all within was far from being correct. Perhaps it would hardly be fair to apply Montgomery's description of the Giant King to Buonaparte, when after speaking of the calm and awful grace of his countenance, he adds,

"But direst cruelty, by guile represt,
Lurk'd in the dark volcano of his breast;
In silence brooding, like the secret power
That springs the earthquake at the midnight hour"

I confess myself entirely ignorant of the physiognomical system of Drs. Gall and Spurzheim; therefore, I cannot determine if there were any propensity discoverable in the cranium of this singular man. I should imagine, however, that if the system be true, a little attention would have traced the organ of combativeness, as well as that of covetousness, but as I must be understood to place little reliance on external observation, by means of craniological science, I abandon this idea as superficial. During our interview with Napoleon, he took a prodigious quantity of snuff, from a box made of exquisite tortoise-shell, mounted with silver Medallions, with the heads of the king of Rome, Maria Louisa, and Julius Cæsar His dress was the same as he is usually described to have worn He had a singular aversion to red clothes Captain Poppleton indulged him on his first arrival in the island, by putting on a dress not *militaire* We began to fear, as the time drew on, that the gates of James' Town would be shut; we therefore showed symptoms of uneasiness; and had not long to experience this. Buonaparte, with his hawk's ey , understood our looks, politely wished us good evening, and retired The party followed him to the house: the ride was countermanded, and the carriage, which had been waiting above an hour, was driven back to the stable yard. We made great haste to the town, where we arrived in perfect safety; spent the evening with captain R——, and retired for the night. My mind was so completely absorbed in reviewing the occurrences of the day, and reflecting upon my interview with one of so rare a kind, that sleep never visited my pillow till morning. Nor were his generous followers in captivity less the object of my wonder and respect. I hope I shall be sufficiently understood: I am not about to defend the general conduct of such men; but I feel myself bound to separate the iron from the clay, and to admire that part of their conduct which displayed so much disinterested friendship, in becoming exiles from their homes and from polished society, to dwell in comparative solitude with a decayed and fallen master. The world has to boast of few examples of decided friendship, and the observation of the Roman poet is, alas! too just respecting human nature.

"Nulla fieldes unquam miseros eligit amicos."

Human friendship is precarious—the world is full of ingratitude; but here we behold men whom we have been taught to despise, exhibiting a nobleness of soul nearly equal to any instances of gratitude upon record. How often among us who rejoice that French principles are discarded, do we behold a contrary conduct; and when earthly comforts, grandeur, and glory, exhibit their fragility and become extinct, witness the flight of professed friends, who only followed in our train when prosperity was at its zenith. But without multiplying reflections, I have only to add to this plain narrative of facts, that we spent a Sunday in St. Helena, which was religiously observed by the people of the town. One thing I should notice as singular in the island:—servants, or rather slaves, are let out to hire, like horses: this remains to be explained. In the course of the following day, we were on board: by this time, the news of our visit to the state prisoner had reached the admiral. He was highly offended,—our captain having pledged himself that none of the crew should visit Longwood. No blame could, however, be attached to our worthy commander, except that he had forgotten to make us acquainted with the injunction. An arrest was at hand for N———and myself, when our ship weighed anchor, and bore us away to England's happy shores, which we reached on the 24th of April, 1816.

* In allusion, probably, to the number of public buildings in Edinburgh, then abandoned for want of funds.

* Terms applied to him by the *Times*.

THE DUKE OF SUSSEX.

THE London papers of September notice several interviews on the part of His Majesty, and his Royal Brother, the Duke of Sussex. The primary object of these meetings are understood to be the claims, the just claims, of His Royal Highness, in behalf of his son and daughter.

By the law of England, a descendant of George the Second, even after he has arrived at man's estate, is precluded from selecting a wife after his own heart: he must marry only whom the king, or the council in certain cases may approve; and hence he is, in fact, limited in his choice within the circle of those often very ugly, and generally very ill-educated princesses, who abound in the small states of Germany. The policy of the country has for some time required that the king should be a Protestant. Hence, a prince of our royal family should keep clear of any connexions, which might eventually place the crown upon the head of any of our own nobility—a policy dictated by the prudent desire of avoiding the renewal of those civil wars, which have stained with the best blood of England so many pages of our history. Hence he must marry not a Protestant, but a foreign Protestant, and in order to preserve the dignity of the throne, this foreign Protestant must be a princess.

Such is the rule. One of the results of it has been, that, ever since the accession of the House of Brunswick to the throne of England's realms, we have seen seated upon it, as the consorts of our kings, women generally of a mean order of intellect, and almost uniformly ignorant of the interests of the British empire—women inferior in every accomplishment of mind and person, to hundreds

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of our native nobility, anxious to enrich their foreign connexions.

But this is not all. The restriction imposed by law upon the descendants of the second George, with respect to their choice in marriage, has been openly avowed as their apology for courses of profligacy the most licentious, of debauchery the most shameless, that ever disgraced any family—even among those that have worn the crowns of nations.

But leaving these considerations for the present, let us turn to the Duke of Sussex. It was the fate—perhaps the misfortune of this illustrious person—to feel in a peculiar manner the severity of the law, by which he, as a descendant of George the Second, was precluded from choosing for his wife, the woman whom his heart preferred. He was nineteen years of age when, being on his travels, he happened to become acquainted, at Rome, with Lady Dunmore and her two daughters, one of whom, Lady Augusta Murray, from her brilliant beauty and accomplishments, attracted his particular attention. What does he do? Does he encompass her with panders to his appetite, and endeavour through their agency to seduce her from the protection of her parent? If he had adopted that line of conduct, it would not have been without precedents in his own family. Did he attempt to render the mother an accomplice in the ruin of her daughter? Had he done even that, he would not have been the first prince of his house to have perpetrated so iniquitous a crime. No; he knew well all the obstacles which the law placed between him and the woman to whom he surrendered his affections; those obstacles he deliberately reviewed, and he took, what undoubtedly must have appeared to him to be, the most conscientious means of overcoming them. Without communicating his intentions to Lady Dunmore, he, after an acquaintance of four months, which fully impressed his mind with the young lady's endearing qualities, offered her his hand with his heart, in the most honourable manner. Lady Augusta at first refused the alliance thus tendered, considering that it was one that might lower him in the estimation of the world, and deprive him of his royal privileges; but his entreaties overcame her resolution, and "we were married," he says, in a letter addressed to the late Lord Erskine, "at Rome, in the month of April, 1793, according to the rites of the English Church." The Duke was undoubtedly a minor, according to the rules of common law, when he contracted this marriage; and it is therefore material to observe, that in the letter which he acknowledges his marriage to Lord Erskine, and still calls Lady Augusta his wife, is dated the 30th of January, 1798, when he was upwards of twenty-five years of age. The ordinary rule is, that an act done during minority, if recognised after the minority expires, becomes binding on the party so recognising it. It is clear, at all events, that the Duke, when he had arrived at an age which, according to the ordinary and reasonable law of mankind, would have authorised him to incur obligations upon his own responsibility, did every thing in his power to confirm the marriage which took place while he was a minor. These are the words of the Prince himself:

"'In the month of December, 1792, being on my travels, I got acquainted at Rome with Lady Dunmore and her two daughters, who were just come from *Naples*. The well-known accomplishments of my WIFE (then Lady Augusta Murray) caught my peculiar attention. After *four months* intimacy, by which I got more particularly acquainted with all her endearing qualities, I *offered her my hand* unknown to her family, being certain beforehand of the *objections* Lady Dunmore would have made, had she been informed of my intentions. The *candour* and *generosity* my WIFE showed on this occasion, by *refusing* the proposal, and *showing* me the *personal disadvantage* I should draw upon *myself*, instead of checking my endeavours, served only to add new fuel to a passion, which no earthly power could ever have extinguished. At length, after having convinced Augusta of the impossibility of my living without her, *I* found an English clergyman, and we were *married* at *Rome*, in the month of April, 1793, according to the rites of the English church. Many people think Lady Dunmore was *privy* to this marriage, but of this I must *totally* exculpate her.'"

The only document connected with the transaction, which it is of importance here to notice, is the actual marriage contract, which was drawn up in the Duke's hand-writing, in the following very forcible terms:—

"'*On my knees, before God our Creator*, I, Augustus Frederick, promise thee, Augusta Murray, and SWEAR upon the BIBLE, as I hope for salvation in the world to come, that I will take thee, Augusta Murray, for my WIFE, for better, for worse, for richer or poorer, in sickness and in health, to love and to cherish, till death us do part, to love but thee only, and none other; and may GOD forget ME if ever I forget THEE. The Lord's name be praised; SO BLESS ME, SO BLESS US, O GOD; and with my hand-writing do I, Augustus Frederick, this sign, March 21, 1793, at *Rome*, and put my SEAL to it, and my NAME.

'(L. S.) (signed) "AUGUSTUS FREDERICK."'

A similar document was drawn up and signed by Lady Augusta, written on the same paper, and at the foot is a memorandum in the hand-writing of the Duke, as follows:—Completed at Rome, April 4, 1793." From the union thus formed, two children have sprung, the elder, now Sir Augustus D'Este, born on the 13th of January, 1794, the younger, his sister, born in 1800, the Duke and Lady Augusta having rejoined each other at Berlin, in the year 1799, where they cohabited as man and wife. The marriage, such as it was, was made void in 1794, by a proceeding in the Ecclesiastical Court here, without the consent of either the Duke or Lady Augusta, and contrary to the wishes of both.

Two eminent counsel, one of them a highly distinguished civilian, Dr. Lushington, have given a formal and solemn opinion on the subject, in the following terms: "We are of opinion, after great consideration, that the Royal Marriage Act (12 Geo. III. c. 11) does not extend to any marriages by any descendants of George the Second, contracted and solemnized *bonâ fide* out of Great Britain, and beyond the limits of British jurisdiction; and that the marriage of His Royal Highness, the Duke of Sussex, at Rome, was not a marriage impeachable under that statute." The learned counsel, it will have been observed, do not go to the extent of saying, that in their judgment the marriage was a valid one; they merely express their opinion that the Royal Marriage Act did not affect it, but leave it to be inferred that there are other grounds, upon which the marriage was impeachable.

Under the circumstances of this case, the reader will doubtless think that the children of the Duke of Sussex should be entitled to rank as a Duke's son and daughter. Undoubtedly they have infinitely stronger title to be treated as legitimate children, and to be elevated to the aristocracy, than the Fitzclarences. Such a proceeding would, in some measure, compensate for the violation of public morality in favour of that family, and would, we conceive, be particularly agreeable to the people of England, all of whom look up to the Duke of Sussex as the firm, tried and faithful friend of Civil and Religious Liberty. He is, moreover, at the head of most of the charitable institutions of the country, and he has given new lustre to the cultivation of the sciences and arts, by becoming the guardian of some of the first societies in the land. We are glad to find Sir John Dillon advocating the claims of His Royal Highness, in a juridicial exercitation on the subject.*

NOTES ON CHINA AND ITS COMMERCE, &c.

THE China trade must be viewed as a key-stone of that magnificent arch which connects the Anglo-Eastern and Western Realms, and affords a medium for the annual transmission of 4 millions sterling of tribute to a small island in the atlantic, from the territorial revenues of one of the most splendid empires that ever were sub-

* See Monthly Review, with extracts from the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

jected to the dominion of man,—as having yielded to the British Exchequer, at a mere nominal expense,* and without trouble, the immense sum of *sixty-seven millions sterling!* during the last 18 years,—derived from an innutritious leaf collected on the mountains of a distant continent; as procuring for the Indian Government an impost of more than *one million sterling*, which is levied on the Chinese consumer of opium; requiring *another million sterling* worth of cotton, and of British manufactures for the Canton market; employing from 30 to 4 thousand tons of the finest shipping in the world, giving profitable occupation to a respectable community of *seventy thousand* dealers in Great Britain.

2.

In the space of a 100 years, viz: from 1710 to 1810, there were sold at the East India Company's sales, 75[illegible],219,016 lbs. of tea, the value of which was £129,804,595.

3.

China presents the very remarkable spectacle of *a civilization entirely political*,† whose principal aim has constantly been to draw closer the bonds which unite society, and to merge by its laws the interest of the individual, in that of the public,- an empire possessing a skilful and active population of 150,000,000 souls, who are spread over 1,342,450 square miles of the fairest and probably earliest inhabited region of the earth; whose government maintains a standing army of 1,182,000 men, and levies a revenue of only £11,649,912 sterling; whose commercial policy it is to prohibit the importation of manufactures,‡ the exportation of the precious metals, and to encourage the introduction of food and raw materials;—a government that confines its whole foreign trade to a single port, and that at the farthest distance from the capital; that sanctions the loan of money at *three per cent. per mensem*, (!) in order to discourage luxury and prodigality, by hastening the ruin of those who borrow merely to spend; an empire that has preserved the records of its dominion and the integrity of its name from a period of three thousand years antecedent to our era, while the most powerful monarchies of remote or modern ages have dwindled into nothingness, or been borne towards the ocean of eternity by the swiftly destructive gulph of time, whose subjects have materially contributed to advance the civilization of Europe and America by the discovery of writing, astronomy, the compass, printing, gunpowder, silk, sugar, porcelain, weaving, lithography, the smelting and combination of metals, &c; whose Confucian maxim, is,—"to despise foreign commodities;"—and, in fine, to an empire enjoying within its own territories all the necessaries and conveniences, and most of the luxuries of life, standing, as it proudly asserts, in no need of intercourse with other countries, which it is its studied policy § to prohibit,¶ openly and arrogantly proclaims its total independence of every nation in the world.

4.

England does not stand in need of the manufactures of China, nor of the silks of France, nor of the cotton of America, nor of the hardware of Germany; but she requires the tea of the first, the wine of the second, the corn of the third, and the wool of the fourth, for all which she offers her staples in exchange.

A silken chain of commerce, stretching over fifteen thousand miles of ocean, has united one hundred and twenty million of subjects under the British sceptre. Can it be possible that, with the fearful examples of bye-gone kingdoms before their eyes, Parliament will sever a link which the wisdom and experience of ages has pronounced to be the safest promoter of the liberties and prosperity of a people? Whatever be the decision of the Senate, in it is involved the permanent connexion of the eastern and western empire.

5.

Of the *first* introduction of tea into Europe we know but little. In 1517, A. D., Emanuel, King of Portugal, sent a fleet of eight ships to China, and an ambassador to Pekin, who obtained permission to open a trade; but it was not until after the formation of the Dutch East India Company, in 1602, that the use of tea became known on the continent (1610;) and although the enterprizing Hollanders paid considerable attention to it, as an article of commerce, the consumption progressed but little, for in 1670 it was unknown in Dort. It is said that the Dutch in their second voyage to China, carried thither large quantities of *dried sage*, which they represented to the Chinese and Japanese as an herb possessed of the most extraordinary properties, for which they received a considerable portion of tea; they, however, bought a good deal at from 8d. to 10d. per lb., which, although of a middling quality, sold in Paris, for thirty livres a pound; and for some years the best Japanese tea, esteemed as much better than that of China, brought from one hundred to two hundred livres a pound in France, until the use of coffee and chocolate became fashionable and general. The first authentic notice which is to be found of tea in England, is an act of Parliament (12 Car. II. c. 23,) A. D. 1660, by which a duty of eightpence per gallon was laid on all tea made and sold in coffee-houses; and by an act framed in the same year, the duties of excise on malt liquor, cyder, perry, mead, spirits, or strong waters, coffee, *tea*, sherbet, and chocolate, were settled on the king for life. In the diary of Mr. Pepys, secretary to the Admiralty, there is found, under date September 25th, 1661, the following memorandum relative to tea: "*I sent for a cup of tea* (a Chinese drink,) *of which I had never drank before.*" In 1662, Charles the Second married the Princess Catherine of Portugal, who, it is said, was fond of tea, having been accustomed to it in her own country, hence it became fashionable in England.

For a long period it was a matter of astonishment what the Chinese required such large quantities of *Prussian blue* for; and it was at last discovered that the article was required for giving a bloom and freshness to old unsaleable teas, or to the leaves of various plants which are sold at Canton under the denomination of tea; and which it requires long experience to detect. So far as it regards *quality*, no means are left untried which the unparalleled cunning and ingenuity of a Chinaman can devise to impose on foreigners; and as to *weight*, the plentiful addition of *iron filings* is a ready resource, or peculiarly heavy and dark sand, which the application of the magnet will not detect.

---

* The cost collecting £67,0[illegible]0,00, was only £180,000

† Church and State are separated in China; the priests are without power or wealth.

LITERARY EXTRACTS.

COBBETT.

COBBETT has kept his word, and arrived in Edinburgh on the 10th October. He was well received, and delivered a course of lectures to numerous respectable companies every evening during a week. The subjects discussed by Cobbett were—1st, On the duty of electors demanding pledges from their representatives; 2d, On the total abolition of tithes; 3d, On the injustice of taxing the people for the benefit of those who are miscalled public creditors; 4th, On the evils of paper money of every description. &c. &c. Cobbett, on taking leave, assured the audience that he was astonished he had been received in Scotland with such marks of respect. He alluded to the attempts of the press to excite feelings against him. (The Edinburgh Evening Post had recommended that on his arrival he should be thrown into a ditch.) The same paper remarks of him—"On the whole, he appears to be getting what we in Scotland call 'frail.' But he still exhibits a bold front His locks are white, and thinly spread over a most magnificent forehead. His complexion exhibits all the florid signs of perfect health. The expression of his countenance is capable of considerable variety. It is something between the look of Liston and that of Mathews; and as a Droll, he is not inferior to either of these celebrated comedians. The prevailing expression of his countenance may be described as a mixture of simplicity and shrewdness. The rapid glance of his eye, and the subtle twirl of his upper lip, are very striking. As a speaker, he is free, fluent, and forcible. His sarcasm is full of bitterness and point. His ideas are clothed in the best home-spun English."

CHARLES THE X.

THE following is a copy of the speech of the Lord Provost of Edinburgh, on presenting an address to Charles the X. preparatory to his leaving the shores of Great Britain.*

"May it please your Majesty—We, the Lord Provost, and a deputation of the most respectable citizens of Edinburgh, beg leave most respectfully to wait upon your Majesty for the purpose of presenting an address expressive of the universal feeling of the inhabitants on the occasion of your Majesty's leaving this city. We can assure your Majesty that it is a feeling of deep regret at your departure, of heartfelt sympathy in your afflictions, and of hope that in the all-wise Providence of God your Majesty may yet be spared to see

* Our own ministers, as well as the cabinet of Louis Philippe, view this departure not without some secret misgivings. Metternich, as he has done all along, is playing a deep game.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

brighter days. We also beg to express our grateful sense of your many, your unnumbered acts of benevolence, kindness, and charity, which has made a deep and enduring impression upon all of us, and endeared the recollection of them and of your residence amongst us; and should your Majesty or any members of your family ever revisit our city, these recollections will always ensure you and them a grateful and cordial reception."

The following is a portion of the pedigree of the late ruler of France:

Charles X. who was late Monsieur and Count d'Artois, was born in 1757, married Maria Teresa, sister to the King of Sardinia, in 1773. She died in 1805. On the death of Louis XVIII., who was brother to King Charles, he succeeded him 16th September, 1824. His son Louis Antoine, Duc d'Angouleme, afterwards Dauphin of France, was born 1775. He married in 1799 Maria Teresa, his cousin (born 1778), daughter of Louis XVI. Charles' other son, Charles Duc de Berri, was born 1778, (he was killed by an assassin, 1820.) This Duc married in 1816, Caroline, the granddaughter of the late King of Naples, the present Duchess de Berri, by whom he had Henry Charles Ferdinand, Duke of Bordeaux, born 1820, and Louise Marie Teresa, born the year previous to her father's death, viz. 1819.

A STRAY LEAF IN THE LIFE OF A GREAT NOVELIST!

"The why—the where—what *boots* it now to tell?"—CORSAIR.

"My Majesty! this is mere diversion!"—WIDOW CHESHIRE.

"CONFOUND this gout!" pettishly exclaimed Mr. Walton, as he rose from his solitary dinner.

Now, Mr. Walton was a *bon vivant*, a humourist of the first fashion, a tale-writer (it must be owned) of the first talent, and one whose society was so constantly courted, in all dinner-giving and literary circles, that a lonely meal was a most unusual and unpleasant occurrence to him.

"Well," continued he, "I must, per force, content myself with another day of sofa and Quarterly;" for Mr. Walton ranked among the most devoted adherents to the Quarterly creed of politics.

Scarcely had he uttered these words, in a tone half peevish and half resigned, when a servant handed him a letter, bearing an official seal of stupendous dimensions, and marked in the corner, "private and confidential."

Walton eagerly opened the envelope, and to his no small dismay, learned that the great man on whose smiles he lived, and to whose fortunes and party he was attached (by a snug place), required immediate information on subjects connected with our naval establishments, into the expenditure of which, the great political economist, on the *opposite* side of the house, intended to make certain inquiries in the course of a night or two. Mr. Walton was requested, not to say commanded, to see the commissioner at Portsmouth as speedily as possible, to investigate facts, and to report progress on his return. It was at the same time delicately hinted, that the expenses of this important mission, would be defrayed by the writer from that convenient and ever-open source, the public purse.

"A journey of seventy-two miles when I'd resolved upon quiet: but in the service of one's country, when it costs one nothing! Well, I must forget the gout, or lose my ———. Hang it! I can't call on the commissioner in list slippers. Travers! step up to Hoby's, and tell him to send me a pair of boots, somewhat larger than my usual fit; and take a place in the Portsmouth coach for to-morrow morning; 'tis too late to night for the mail—but d'ye hear? not in my name, as I travel incog."

Walton made the few arrangements for so short an absence from town, retired earlier than usual to bed, was horrified at the imperative necessity of rising before the sun, found himself booked by his literal servant as "Mr. Incog," had the coach to himself, and at six o'clock in the evening, alighted at the George, in High-street.

Travelling without a servant, and with so scanty an allowance of baggage, he was ushered into the coffee-room, of which he found himself the sole occupant, asked for the bill of fare, and was served with the usual delicacies of a coffee-room dinner; cold soup, stale fish, oiled ranced anchovy, flabbe veal-cutlet, with mildewed mushroom sauce. Cape and brandy, doing duty for sherry, and a genuine bottle of Southampton port, so well known by the seducing appellation of "Black-strap." All these luxuries were brought him by a lout of a boy, who looked more like a *helper* than a waiter.

"Well," thought Walton, "the sooner I complete my mission the better. I could not bear this sort of thing long. How far is it to the Dock-yard, waiter?"

"I doin't know; master can tell'e: its no use your going there now, the gates be shut."

"But I wish to see Sir Henry Grayhurst, the commissioner."

"He be gone to the Isle of Wight with his family, so I heeard Master say."

"Is he expected back soon?"

"Why, Sir, how can I tell? if you ask master, he do know."

"Pleasant and intelligent youth!" sighed Walton, "I'll put him into my next sketch. Well, I've had the bore of this day's journey for nothing, since the man I came to see is absent, as if on purpose to oblige me. How extremely agreeable! I must 'ask master' then tell the landlord I want him."

"Master and missus be gone to the play; it's old Kelly's benefit, and they do go every year."

"The play! there's comfort in the name; any thing is preferable to this lonely, gloomy coffee-room. Send the chambermaid to me."

An old woman, with a flat tin-candlestick, led the way to a small inconvenient room up numerous flights of stairs, not evincing the slightest sympathy with the limp of our traveller, who, by the way, had nearly forgotten his gout in his annoyances. She assured him that all the best rooms were engaged.

What soothers of irritated feelings are soap and water! Walton washed his handsome face, and aristocratic hands, (novelist-ink had not spoiled them,) got rid of his dirty travelling suit, put on a capacious king's-stock with flowing black drapery, and a well-regulated and well-braided Stultz. His ready-made Hoby's he consigned to "boots," having assumed the *bas de soie* and easy pumps. Leaving word that he should require something for supper, he bent his steps to the theatre.

The acting was sufficiently bad to amuse him, and at a moment when the attention of the audience was directed to the closing scene of the tragedy, and the ladies of the Point were weeping at the distress of the lady *in* point, the door of an opposite box was opened by the identical lout who had waited on him at dinner. The lad, making his way through a box-full of overdressed and vulgar-looking people, whispered to a man in a blue coat and powdered head, singling out Walton as though *he* was the subject of this unexpected communication. The landlord of the "George," for it was no less a personage, started up, and instantly left the house, accompanied by the females of his party.

When the curtain fell, a whisper spread from box to box, and during the farce Walton could not help perceiving that he had become a greater attraction in the eyes of the audience than the performers were.

"What in the world does all this mean?" thought he; "have they found out *what I am?*" Perhaps they never saw a live author before. Let them stare. If they like to make a lion of me, I'll humour the joke."

On rising to leave the house, Walton found that the door was thronged with people, who, as he approached, respectfully made way for him, and he overheard sundry *sotto voce* remarks as he passed—"That's he."—"Arrived this evening."—"Incog."—"Staying at the George!"

Wondering at the extraordinary interest he had excited, congratulating himself on an evidence of fame that Sir Walter himself might have envied, and followed by a crowd, he reached the inn. Three or four spruce waiters in *their* full dress, received him at the gateway, with most obsequious homage. The landlord (his hair re-powdered for the occasion) carrying a silver branch of four wax lights, stepped up to him with a low bow.

"This way an' please your —, —, this way. Supper is ready for your ———."

Walton, indulging his love of comic adventure, followed his guide with a dignified air into the drawing-room. The splendid chandelier threw a flood of light over a table, covered "with every delicacy of the season." His host lamented that the champagne had not been longer in ice, and was distressed at having been absent from home when his illustrious guest arrived. Waiters flew about anticipating the asking eye, and, as Mrs. Malaprop would say, "all was alacrity and adulation." Walton could not help contrasting the indifference which he encountered at his afternoon meal with the courtesy which graced his evening repast. He made ample amends to his insulted appetite, and regretted that he had no friend to partake in the joke, for he began to find these mysterious attentions too vast for even his literary vanity to swallow. Remembering the purport of his visit, he inquired how soon the commissioner was expected to return?

"Sir Henry came back this evening, may i please—"

"I must see him to-morrow early: take care I am called at eight."

"A carriage shall be in attendance, your—"

"No, no; my visit is of a private nature."

"I understand, so please———and will caution my servants."

Walton, after having discussed some well-made *bishop*, and a segar or two, rang for a night-candle. The attentive landlord, like Monk Lewis's beautiful spirit, still bearing the silver branch, led the way to the best bed-room. Walton thought of the lofty-situated apartment first allotted to him, and smiled. Dismissing his officious attendant, he retired to rest.

The next morning, somewhat tired by the parade of the past night, he breakfasted in his bed-room, and was preparing for his visit to the dock-yard, when his persevering host entered, beseeching the honour of showing him the way. His offer was accepted; and finding that the champagne had renewed his gouty symptoms, Walton took advantage of his companion's supporting arm. The good man appeared overwhelmed with this condescension, and looked unutterable things, at the various acquaintance he encountered in his way. At the dock gate, Walton left his delighted cicerone, who intimated his ambition to remain there, to have the supreme felicity of showing him the way back.

Some hours rolled away, during which our traveller received the information he had sought, which appeared of so much import to the Right Honourable ———, on whose behalf he had made the inquiry, that he determined on leaving Portsmouth instantly. A footman of the commissioner's was despatched for a chaise and four, with directions that the bill should be brought at the same time. Down rattled the chaise, and down came waiters, chambermaids, boots, and all "the militia of the inn," to the dock-yard! Walton, without looking at the items, put the amount into the hands of his gratified host, distributed his favours liberally to the domestics, threw a crown-piece at the head of the lout, and stepped into

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

his chaise, amidst huzzas from the many idlers who had joined the *Georgians*.

"Long life to the Grand ——," were the only words the noise of the wheels permitted him to hear.

He reached London, without any farther adventure, in as short a time as four horses could get over the ground. Arrived at his home, he instantly forwarded the essential documents to his patron; and having disburthened himself of the more weighty affair, fell into a series of conjectures as to the possible motives for the reverential deference he had met with. Tired with conflicting speculations, between his fond wishes to attribute it all to his literary reputation, and his secret fears that the homage was somewhat too profound, even for a *litterateur* of his eminence to reckon upon, he kicked off *his boots!* Certain characters on the morocco lining attracted his attention. In a moment the mystery was solved. On decyphering them, he discovered no less a title than that of

"THE GRAND DUKE NICHOLAS!"

for whom the Hoby's had been originally designed—for whom they had proved either too large, or too small; and *for* whom also—our literary diplomatist had been mistaken, from the moment that he consigned them to the polishing hands of the wise waiter at the George!

"Fairly *hooked*," muttered Walton, as he went grumbling up to bed, and hoping the newspapers on the other side might never get hold of the story.

THE GREEK BARBER.

WHO has not longed to become a pilgrim in the beautiful land of Greece, to inhale the perfume of her orange groves, and to pay his adoration at her classic and immortal shrines? Who has not longed to behold the beautiful Parthenon; the fabled Scamander, and the glorious Thermopylæ,—the grave of heroes? Few comparatively of our British voyagers have journeyed so far: they have explored every part of Italy and France; but Greece—classic Greece, has no charms for them; to be sure, the roads and the inns are indifferently bad, and they would find it inconvenient to get their tea. I love the country and have some claim on the gratitude of its son; for I have fought side by side with them against their barbarian spoilers, and have participated in their victories and defeat. Well may the tory Turks love to linger there,—their Prophet has not promised them a brighter resting place.

Thoughts of this nature were passing in my mind, as I reclined on a bank of soft turf, in the neighbourhood of Damala, canopied by the graceful and spreading branches of the lemon tree, smooking the fragrant weed of the Levant, and from time to time looking from the pages of the Arabian Nights, to the expanse before me, when I was roused by the notes of a bugle from our encampment. I started to my feet, and went to the parade. The route had at last arrived, and I found that we were to embark the same evening for Mithochi, a small farm in the neighbourhood of a heap of ruins, ancient and modern, marking the site of the famed Megara. Not wishing to participate in the bustle preparatory to an embarkation, and having no duty to perform, I crossed the ferry to Poros. Now the conveniencies for the indulgences of the toilet, situated as I then was, were exceedingly limited: and seeing the depôt of an artist, vulgarly recognised as a barber, abundantly stocked with clean towels, and keen looking razors, I entered, and intimated my wish to have my hair cut, and the performance of other little operations in his line, to the effect that I might be made *comfortable*. I seated myself complacently upon the bench which was extended round the room, and folded my legs under me with as much grace as the little practice I had had in that position enabled me. Seeing that I was a Frank—Franks generally pay better than natives—the master of the shop approached me with an air of considerable deference. He was a good-natured-looking Greek, particularly neat and trim in his attire. He wore his crimson Phesi jauntily on one side, discovering a great portion of his very clean-shorn temple. His eyebrows were reduced to a beautifully fine curved line, his moustaches, though very large and thick, were balanced to a hair,—in fact, it might be said of him, that he carried the best recommendation to his customer in his face.

From his waist hung a broad leathern strap, and his girdle was garnished with several razors of very peculiar construction, very narrow in the blade, and firmly fixed in straight wooden handles. He addressed me with an "Oriste Effendi, 'Ti theles,"—"Command me, Sir!—what is your wish?" I signified my intentions—"Efthese," said he, "speedily;" and with his left hand, streaching the strap that hung from right, and ended by giving it two or three smart slaps, that sounded like the sharp crack of a rifle. The art of making this noise is as peculiar to the barbers of the East, as cracking a whip is to a French postillion. Having strapped a razor, he removed my cap, and I then thought it high time to enter a remonstrance, saying: that I did not wish to have my head shaved, but simply my hair cut. "I under stood you so," said he, "and am going to do it." "But," interrupted I, "surely not with a razor,—have you not got a——" imitating the action of a pair of scissors with my fingers. "Do not be afraid," said he; and a smile of contempt passed over his features as he, without further parley, applied his razor to my devoted head, and scraped therefrom a quantity of hair. "There," said he, "if you are not content, I will send to my uncle Theodoree, the tailor, for his shears." I was obliged to submit, though in the full expectation of being scalped at every stroke of his accursed tool. When he pronounced the operation ended, I was not a little surprised to find my hair very decently cut, and myself unhurt.

He then proceeded to place under my chin a pewter bason, with rim cut out to fit the neck; and having washed my chin and cheeks with his fingers, and rubbed them with a piece of hard soap, he removed the basin, and putting his foot on the bench on which I sat, he laid my head gently upon his knee. He went on to shave me, not as our barbers do by drawing the razor towards himself, but by pushing it from him outwards, pinching the skin up into ridges, and taking only at a stroke just the crown of each ridge, making it not only a tedious, but to me an excruciating operation, although, on the other hand, a very perfect one, for the face will remain smooth and beardless for a day or two. They seem to cut about eight-and forty hours' growth beneath the skin. This ended, he put some question to me; to which I, having no idea of the consequences, but supposing some matter of course, nodded an assent. He then tucked several towels down my neck and back, and gave me another pewter basin, of the same construction as the first, but much larger. I had before observed a wooden bracket, like an old-fashioned gallows, projecting from the wall, over my head, though without suspecting its use. Upon this he suspended a pewter pail, having a stop-cock in the bottom. He then produced a large wooden bowl, containing a quantity of soap, and, with a piece of raw silk, made a lather sufficient to have washed the whole population of the island. I saw him deposit this on the bench by his side, and bare his arms to the elbow. I witnessed all this preparation with some little anxiety, and even apprehension; but encumbered as I was by my position, and his infernal paraphernalia, he had me completely in his power; and as to remonstrance, he took an effectual method of cutting short any solecisms I might have committed against the dignity of Greek, by turning the stop-cock of the bucket above me, and with the speed of thought down came a torrent of scalding water! I tried to scream; the power of utterance was gone. I would have thrown the basin at him, but then my whole body must have been parboiled: I had nothing left but to endure. At last the deluge ceased. Now, thought I,—now, thou perfidious barber (though thou wert even the progenitor of Sir Edward himself)!—now will I be revenged of thee: I will dip thee in thy own copper, and hang thee up to dry like a lathered napkin, as a warning to all thy detestable craft how they exercise their atrocities upon confiding Franks. But, alas! I opened my eyes, glistening with the fire of fury, but to be quenched with tears of torture. Oh, the lather! the lather! In an instant I was smothered—eyes, nose, ears, and mouth—with the very sublimated essence of soap-suds! The souls of the great-grand-fathers of all barbers, throughout all generations, must have concentrated their wickedness in this individual. He insinuated the accursed compound into my eyes, he blew it up my nostrils, he crammed it into my mouth, and thrust it into my ears—Soap-suds and hot water! soap-suds and hot water!! soap-suds and hot water!!! three times over.—I can no more; 'tis like Alonso's dagger,—

"It rouses horrid images, away with it!"

At last he took from a dome topped towel-horse, that stood in the centre of the room over a basin of burning charcoal, a hot napkin, which he folded, turban-like, upon my head, while, with another, he dried my sodden countenance as well as he could. I was completely subdued—my spirit was broken—he might have tweaked me by the nose, and I should scarce have known it; but yet I wondered why these latter kindnesses were vouchsafed me. Alas! it was only to prolong my existence till I had endured, to their full extent, the enormities the monster yet meditated against me. He took my hand in one of his, and placing the other upon my shoulder, suddenly extended my arm, making every joint crack. The other arm——. But I hasten over this part of my narrative; the remembrance is too painful to dwell upon. He took possession of my head, and causing it to perform a *roulade*, after the fashion of our harlequins, he gave it such a dexterous twist on one side, producing a report that sounded to my hearing (almost the only faculty I had left) like the crack of doom! I thought the whole vertebral column was dislocated. He then placed me upright, my back against the wall, retreated some three or four paces, and, raising his hands, rushed with outspread palms against my chest, with such force as to cause the involuntary ejaculation of ha! as loud as an Irish paviour. The measure of his iniquity now being full, he called for a tchibouque and a cup of coffee, and presenting them to me in the most obsequious manner, the most insidious perpetrator of all these atrocities had the impudence to wish me a good health and many ages. Mechanically I smoked my pipe and sipped my coffee, meanwhile all the soul I had left was occupied in devising vengeance.—Vituperation? No! Should I, as the metaphysical Hamlet hath it,—

"Like a-hem—unpack my heart with words"?

No, no. I had just hit upon an idea,—

"Vengeance from her dark covert stalked abroad,
With all her snakes erect upon her crest,"

and just as she had "fired me with her charms," in walked one who was

"Native there, and to the manner born,"

I saw him seat himself and bare his head; I saw the fatal bucket suspended over him by a Neophyte barber, with bare arms. Now, thought I,—

"When Greek meets Greek, then comes the tug of war."

This individual underwent exactly the same

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

series of operations as I had done, seeming even to court the playful cruelties of the wanton barber, by affording him every opportunity for their performance. I then became convinced of the necessity of doing as they do at Rome, and suffered my ire to cool. I signified my desire to pay, and was immediately approached by a mischievous looking young urchin, bearing in one hand a circular mirror, set in a frame of ebony inlaid with mother o' pearl, and in the other a bottle of perfumed water, with which he sprinkled my face and garments. After allowing me what he considered a sufficient time to contemplate the improvement his master had wrought in my appearance, he presented to me the back of the mirror, upon which I counted out twenty paras (two pence), and further presented him with some five or six for himself. Whereupon he seized my hand, and inflicted upon it a violent kiss. I was then bowed out by the barber with a profusion of thanks for my *liberality*, and arrived at Damala just in time to find the route changed for Methana.

Such is the force of habit, that, after a time, my chiefest luxury in Greece was a thorough head-washing; barring, however, the joint-cracking, against which I always continued to protest with the most exemplary indignation, though always much to the amazement of the Greek barber.—*Monthly Magazine.*

SLAVE TO A TEMPERANCE SOCIETY.

A respectable young man, son of a wealthy farmer, married and commenced the career of life for himself under very auspicious circumstances. He was industrious and prosperous, and his affectionate wife blessed him with several fine children; but, unfortunately for him, a man came into his neighbourhood, and opened a tavern. The farmer, from the power of social feelings at first, and then from habit, and finally from appetite, visited the tavern more and more frequently, till by imperceptible degrees he became intemperate—and consequently his property began to waste away, and in a few years he was a bankrupt and a miserable sot, and his wife and children were destitute. For several years he continued in this degraded condition, hanging about the tavern which had been the cause of his ruin, and performing the most menial offices for the sake of the liquor which he got. At length the news of the temperance movements reached the place, and the tavern keeper, of course, began to rail about them. The unfortunate farmer suffered the tavern keeper to think for him, and he too raised his voice against temperance societies. But by and by a movement was made in the place where the tavern was and a temperance society was formed. This caused the unhappy farmer to reflect; and he began to think for himself, and very soon abandoned totally the use of all intoxicating liquors, and became a sober man, and went and desired to become a member of the temperance society. The society, however, declined receiving him, and advised him to prove himself first, and see whether he could sustain his resolution. This he did so perfectly, for several months, that the society, on a second application, received him. Not long after this, two men came into the place to transact some business with him, and sent for him to come to the tavern. After the business was completed, they called for some liquor, and asked him to drink with them. He politely declined. They urged, but he refused. The tavern keeper, who stood looking on, now interrupted them with a most taunting and bitter reproach upon the farmer. "He dares not drink! he is not his own man! he is a slave to the temperance society! he is not capable of thinking and acting for himself, and so he has sunk into the base condition of a slave, and has got masters to take care of him, and to keep him from drinking." The unhappy man felt the reproach keenly, but it neither kindled his wrath, nor shook his resolution. With the tears of tender emotion moistening his eyes, he turned and fixed a steadfast look upon the tavern keeper, and, with a gentle but decided tone, thus replied to him: "Sir, if I am now a slave to the temperance society, remember that I was for many long years a slave to you. And you was a cruel master to me! You kept me in bitter bondage, and in most ignominious vassalage! You found me in prosperous circumstances, surrounded by competence, and all the tender charities of a domestic life—a happy husband, and father, and a contented man. But you robbed me of my possessions, and respectability, and peace! You blighted all my domestic endearments, and brought poverty, and disgrace, and wretchedness upon my family: and the property which would have sustained my wife, and fed, and clothed, and educated my children, you took away from me, for the poisonous means with which you enslaved me. Indeed, you was a cruel master! But, sir, I am your slave no longer! I am certain that the temperance society cannot hold me in severer bondage than you did. It cannot rob me of so much as you did; and, therefore, if I must be a slave, I will be a slave to the temperance society." I need not tell you, that the tavern keeper had no reply to make to this. The farmer soon recovered his respectability in society, gathered his family around him again, and, by industry and frugality was able to support them comfortably; and peace returned to that family, where adversity and suffering long had reigned.

(Glasgow Herald.)

MARRIAGE.

(From "the Wife's Advocate," by the Rev. W. Jay.)

It is not improper for you to think of a condition which Nature has ordained for us; and which the Scriptnre pronounces "honourable in all." Nor should you revolt from the state because there are husbands who "cover the altar of God with tears." All men are not liars. Nor should difficulties discourage you; these are found in every condition: and we are persuaded the state (of matrimony) if properly entered is the most happy in the vail of tears. How much of the relish of our comforts is lost in unsocial enjoyment! How much do we need a friend, and another self, to alleviate by sharing the cares and griefs of life! How many moments of langour, oppressiveness, and despondency are there, in which the heart beats for attention, sympathy, and kindness! How helpless is a solitary female! how many real dangers surround her; and how are these perils multiplied by solitariness! A single man has a thousand engagements abroad: a woman, if single, has little diversion from thought, and broods over real and imaginary evils. And inferior is she reckoned to the female who sustains the character of a wife and a parent, and is performing her duty to the world, and is the source of usefulness to the community!

THE TEMPLE IN RUINS.

(From Professor Wilson's Lectures on Moral Philosophy.)

May I be permitted to conclude this lecture by reading what appears to me most eloquent and beautiful language, in which the thoughts I have expressed are beautifully summed up. It is the view which a man of great powers of mind* takes of the condition of human nature. He says "The stately ruins are visible to every eye, that bear in their front, yet extant, this doleful inscription, HERE GOD ONCE DWELT. Enough appears of the admirable frame and structure of the soul of man, to show that the divine presence did sometime reside in it; more than enough of vicious deformity, to proclaim he is now retired and gone; the lamps are extinct; the altar overturned; the light and love are now vanished, which did, the one shine with such heavenly brightness, the other burn with such pious fervour. The golden candlestick is displaced, and thrown away as a useless thing, to make room for the throne of the prince of darkness. The sacred incense, which sent rolling up in clouds its rich perfumes, are exchanged for a poisonous hellish vapour; and here is, instead of a sweet savour, a stench. The comely order of this house is turned all into confusion; the beauties of holiness, into noisome impurities; the house of prayer, to a den of thieves, and that of the worst and most horrid kind, for every lust is a thief, and every theft a sacrilege: continual rapine and robbery are committed on holy things.

The noble powers which were designed and dedicated to divine contemplation and delight, are alienated to the service of the most despicable idols, and employed to vilest intuitions and embraces; to behold and admire lying vanities; to indulge and cherish lust and wickedness. What have not the enemies done wickedly in the sanctuary! How have they broken down the carved work thereof, and that too with axes and hammers! the noise whereof was not to be heard in the building, much less in the demolishing this sacred frame.

Look upon the fragments of that curious sculpture which once adorned the palace of that great king: the relics of common notions; the lively prints of some undefaced truth; the fair ideas of things; the yet legible precepts that relate to practice. Behold, with what accuracy the broken pieces show these to have been engraven by the finger of God, and how they now lie torn and scattered, one in this dark corner, another in that, buried in heaps of dirt and rubbish. There is not now a system, an entire table, of coherent truths to be found, or a frame of holiness, but some shivered parcels. And if any, with great toil and labour, apply themselves to draw out, here one piece, and there another, and set them together, they serve rather to shew how exquisite the divine workmanship was in the original composition, than for present use, to the excellent purposes for which the whole was first designed. Some pieces agree and own one another; but how soon are our inquiries and endeavours nonplussed and superseded!

How many attempts have been made since that fearful fall and ruin of this fabric, to compose again the truths of so many several kinds into their distinct orders, and make up frames of science, or useful knowledge; and, after so many ages, nothing is finished in any one kind. Sometimes truths are misplaced, and what belongs to one kind is transferred to another, where it will not fitly match. Sometimes falsehood is inserted, which shatters or disturbs the whole frame. And what is with much fruitless pains done by one hand, is dashed in pieces by another; and it is the work of a following age to sweep away the fine-spun cobwebs of a former. And those truths which are of greatest use, though not most out of sight, are least regarded: their tendency and design are overlooked; or they are so loosened and torn off, that they cannot be wrought in, so as to take hold of the soul, but hover as faint, ineffectual notions, that signify nothing. Its very fundamental powers are shaken and disjointed, and their order towards one another confounded and broken: so that what is judged considerable is not considered; what is recommended as eligible and lovely, is not loved and chosen; yea, the truth, which is after godliness, is not so much disbelieved as hated, held in unrighteousness, and shines as too feeble a light in that malignant darkness which comprehends it not.

You come, amidst all this confusion, as into the ruined palace of some great prince, in which you see here the fragments of a noble pillar, there the shattered pieces of some curious imagery, and all lying neglected and useless amongst heaps of dirt. He that invites you to take a view of the soul of man, gives you but such another prospect, and doth say to you, BEHOLD THE DESOLATION, all things rude and

* John Howe.

waste. So that should there be any pretence to the Divine presence, it might be said, 'If God be here, why is it thus?' The faded glory, the darkness, the disorder, the impurity, the decayed state in all respects of this temple, too plainly show that the great inhabitant is gone."

HEAR! HEAR! HEAR!

Slavery defined by the "Edinburgh Evening Post," i. e. *BLACKWOOD'S HERALD.*

SLAVERY, in its just definition, we take to be the *unjust* domination of the strong over the weak—the compelling a *free-born* man and a *citizen* to do that which he has no power to resist, and the pretended assertion of this power, without adequate fee or reward on the part of the rich man to the poor man for his services. Slavery we hold to be something similar to that feudal system which prevailed among our ancestors, when a father would seriously advise his son to be hanged, "just to please the Laird"—*Sept.* 1832.

THE VOICE OF HUMANITY.

We observe, with great pleasure, the completion of a second volume of this quarterly publication; regarding it as a proof that the benevolent and useful Association for Promoting Rational Humanity towards the Animal Creation, of which it is the organ, continues to thrive and flourish. Humanity to the brute tribes, and humanity to our fellow-creatures, are much more nearly akin than superficial thinkers are commonly willing to allow. They are twin-born fruits of civilization, and destined to prosper or perish with it. So all-persuasive is the influence of mild and humane sentiments, that it has been remarked, that as the characters of men become softened and improved, so do even the characters of the brute tribes domesticated with them. The English bull-dog offers a remarkable example. It is no longer the ferocious creature which it once was; still as lion-hearted as ever, but comparatively docile, social, and companionable,—presenting therein a very type of the change which has come over the spirit of John Bull himself, and verifying to a wonder the old proverb, "like master like man."—*(Mechanics' Magazine.)*

THE LANDING OF AN ELEPHANT.

THE following particulars describe the landing of an Elephant in America. They are extracted from the *Salem* Gazette, of last June.

A fine young elephant, belonging to Pickering Dodge, Esq. came passenger in the ship Rome, which arrived at Boston last week. We are informed that he has enjoyed uninterrupted health on the passage, always eating his allowance with a good appetite, although he suffered considerably from the cold, notwithstanding all the precautions taken by Captain Kennedy for his comfort. His daily rations were thirty pounds of hay, thirty pounds of straw, and twenty-five pounds of rice, moistened with twelve gallons of water. On several occasions during the passage, he displayed the sagacity and gratitude for attention, for which the species is so remarkable. Before he was put on board at Calcutta, a house was built for him in the strongest manner, covered with thick teak-planks, which were fastened to the frame by stout iron spikes, clenched on the inside. The elephant was swung into the ship by means of a crane and straps around the body, as oxen are prepared for shoeing. His mahout guided him into the domicil prepared for him, without any trouble; but in that hot climate he soon found the exclusion of fresh air disagreeable, and did not cast about long for a remedy. In a playful manner, he applied his trunk to the stout and firmly secured planks, wrenched them off as if they had been straws, and dashed them away. No attempt was made at that time to replace them; but when the ship approached our coast, the elephant began to suffer from the cold. To shelter him, Captain Kennedy resolved to make another endeavour to close up his house. This time there was no attempt made on the part of the elephant to obstruct the process. He appeared perfectly to understand the object, and feel grateful for it. Nothing but thin boards were used, fastened with common nails: the slightest blow of his trunk would have shivered them to atoms, but he cautiously abstained from touching them. The whole was made air-tight, as the seamen thought, by filling the crevices with straw, but the quick eye of the elephant discovered several small fisures, which he pointed out with his trunk, till they were successively filled. When the whole was completed, his satisfaction appeared to have no bounds.

Before the approach of cold weather, a coat had been made for him, composed of gunny-bags, stuffed with straw. He suffered this to be tied upon him and nicely fastened in every part: but no sooner was the fitting completed, than he stripped it off in a moment, and threw it aside. At length, however, the cold became extreme, and the elephant evidently suffered exceedingly. Captain Kennedy then had a new dress made for him, and placed it on him in the same manner as before. In this case, as with respect to the covering of the house, the elephant fully appreciated the kindness of the motive, and his gratitude and satisfaction were manifested in the most intelligible manner.

During the whole passage, he was completely under the control of his mahout, or keeper, and would lie or kneel down whenever ordered by him; but always slept standing. He would brace his head firmly against one end of the house, and his side against the wall, and whenever the ship shifted her course he altered his position to conform to it. He never left his enclosure during the whole passage of more than a hundred and sixty days.

Some difficulty was anticipated in landing him, but it was fortunately effected with ease and safety. A flooring of double plank was laid from the ship's deck to the wharf, and the elephant, with the mahout on his back, was released from his long imprisonment and conducted to the gangway. He surveyed minutely the platform prepared for his egress, and placed his foot upon it to test its strength. He was not entirely satisfied, however, of its capacity to endure his weight, and returned to his house. After a while he was coaxed out again, and lines were attached to each of his fore legs. Again he placed one of his feet upon the platform, and at that moment the men who were holding the line drew it tight and kept the leg stretched out. He then extended his other fore leg, and that was immediately drawn out in the same manner. Finding there was compulsion in the case, and that he must go, and judging, like a philosopher, that his weight was less likely to break through when spread over a large surface than when concentrated, he threw himself upon his belly, and by a muscular movement, worked his way from the ship to the wharf, to the great delight of thousands of people who covered the neighbouring wharfs, vessels, and stores.

SCIENCE.

American Substitute for Oil Paints.—Pour one gallon of boiling water upon one pound of quick lime and two ounces of sugar of lead. When the lime has become completely slaked, the mixture is to be stirred, and it is then fit for use. If required thicker, less water must be used. Colouring ingredients may be added at will. It is said, that the cost of this composition paint is about one-third as much that of oil-paint, and that it is nearly equal to it in beauty. When exposed to the weather, however, it requires one coat of oil to protect it. A patent has been taken out for this composition by a Mr. Klipstone, of New Baltimore, Virginia.

WHIMS AND ODDITIES.

An American paper says—"If the Scotch bagpipes be played occasionally for a few days in any place infested with rats, they will immediately quit the premises, and never return."

The Globe states, among the new crimes of Don Miguel, "that *a suspected blacksmith* has been summarily decapitated at Lisbon, and his head placed over his own door." We have heard the phrase, *suspected felon* before now, but suspicion of *blacksmithism*, is certainly a new species of crime.

The Glorious Uncertainty of the Law.—The following item appeared in a lawyer's bill lately furnished: "For calling on Mr ——, but *unfortunately* did not find him at home, 6s 8d."—[This is an old way of turning a *misfortune to account*.]

Petticoat Preacher.—The Derbyshire Courier states, that on Sunday Oct. 28th, sermons were preached in the newly-erected chapel at Longway bank, by Miss Brady, from Derby, in aid of the chapel.—[A reporter attempted to take down the discourse, but the lady's tongue left his *short hand* a *long* way behind.]

A Singular Fact.—It may be mentioned as an historical singularity, that all the English Kings who married French princesses, incurred the displeasure of their subjects, and suffered violent death—as Edward II., Richard II. Henry VI., and Charles I.

An Accommodating Stomach.—In Bowyer's Life of Beattie, p. 55, a curious anecdote is related of the late Professor Reid, viz. that he could take as much food, and immediately afterwards as much sleep, as were sufficient for two days!

Modest Assurance.—As to my having a seat in the first Reformed Parliament, that is *sure* with respect to the borough of Oldham, if I and the present electors be alive at the time; and with respect to Manchester, though I can not speak so positively, I have *no doubt* that I shall be chosen there also.—*Cobbett's Register.*

It is observed that the swallows, which had for some time disappeared from Brussels, have returned within these five or six days, just at the moment that the cholera was abating. The same observation has been made in some of the communes near Brussels.

An Editor at his Ease.—The York Courier (Upper Canada) of June 20, contains the following notice:—"In consequence of the absence of the editor from home, the editorial remark, &c. are unavoidably omitted."

Imaginary Cold.—The late Saville Carey, who imitated the whistling of the wind through a narrow chink, frequently practised this deception in the corner of a coffee-house; and he seldom failed to see some of the company rise to examine the tightness of the windows, while others, more intent on their new-papers, contented themselves with putting on their hats and buttoning their coats."

The celebrated John Hunter is said to have made but one pun in his life, and that was when lecturing in Windmill Street, on the jaw-bone, which he observed was known to abound in proportion to the want of brains. Some students at the time were talking, instead of attending, which made Mr. Hunter say, "Gentlemen, let us have more *intellect* and less *jaw*."—*The Doctor.*

"*Pity the Sorrows of a Poor Old Man!*"—"I am now," says Cobbett, "at the end of thirty years of calumnies, poured out incessantly upon me from the poisonous mouths and pens of three hundred mercenary villains, called Newspaper editors and reporters!"

During the canvas of Mr. Garnett among the electors of Salford, he and his friends called at

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a buckster's shop, in which was only a boy, who, having learned their busines, went to the foot of the stairs, and called to his mother, who was above, "Mother, here's a mon as wants yo't vote for him t' be a Parliament mon." "Well," shouted his mother, "tell him thy feyther's not in, but if he'll chalk his name on the counter, we'll inquire into his character."

Scott, in his "Christian Life," speaking of sinners going to heaven, quaintly says, "They would find themselves like pigs in a drawing-room."

The Plain Truth.—Sir John Trevor, cousin to Lord Chancellor Jefferies, was an able man, but as corrupt as he was able. He was twice speaker of the House of Commons, and officially had the mortification to put the question to the House, "whether himself ought to be expelled for bribery?" The answer was "Yes."

Physic for the Hindoos.—No less than £10,000 worth of one particular quack medicine has lately been shipped as a speculation to India.—*Morning Herald.*

NATURAL HISTORY.

RATTLESNAKES,

(From Mr. AUDUBON.)

Rattlesnakes hunt and secure for their prey, with ease, grey squirrels, that abound in our woods; therefore, they must be possessed of swiftness to obtain them. Having enjoyed the pleasure of beholding such a chase in full view, in the year 1831, I shall detail its circumstances. Whilst lying on the ground to watch the habits of a bird which was new to me, previous to shooting it, I heard a smart rustling not far from me—and, turning my head that way, saw, at the same moment, a grey squirrel, full grown, issuing from a thicket, and bouncing off in a straight direction, in leaps of several feet at a time; and not more than twenty feet behind, a rattlesnake, of ordinary size, pursuing, drawn apparently out to its full length, and sliding over the ground so rapidly that, as they both moved away from me, I was at no loss to observe the snake gain upon the squirrel. The squirrel made for a tree, and ascened to its topmost branches as nimbly as squirrels are known to do. The snake performed the task considerably more slowly, yet so fast, that the squirrel never raised its tail nor barked, but eyed the enemy attentively as it mounted and approached. When within a few yards, the squirrel leaped to another branch, and the snake followed, by stretching out full two-thirds of his body, whilst the remainder held it securely from falling. Passing thus from branch to branch, with a rapidity that astonished me, the squirrel went in and out of several holes, but remained in none, knowing well that wherever its head could enter, the body of his antagonist would follow; and at last, much exhausted and terrified, took a desperate leap, and came to the earth, with legs and tail spread to their utmost to ease the fall. That instant the snake dropt also, and was within a few yards of the squirrel before it began making off, &c.

SELECT NOTICES.

The Elephant.—Travellers tell us, that it is the custom in India to shoot quails on an elephant, and that the latter are so accustomed to the sport, that they almost stand at a bird!——*Memnon's Statue.*—The statue of Memnon, in Egypt, has puzzled many travellers, who have endeavoured to account for the sound that issues from it every morning at sun rise This sound, for centuries considered as the greatest mystery of Egyptian priestcraft, was recently heard by an English traveller, Sir Ed. Smith, who asserts that the sound does not proceed from the statue, but from the pedestal, and that it arises from the impulse of the air upon the stones of the pedestal, which are arranged so as to produce this striking effect.——*Emigration.*—The immense number of 5215 emigrants are stated on the Exchange books at Quebec, to have arrived there from England on the 2d of June.——*Catalogue.*—The first digested list of publications in the English language was compiled by a bookseller of ability towards the close of the 16th century.——*Medicine.*—The earliest medical work written in English, is supposed to have been Borde's "Breviarie of Health," which was published in 1547.——*Matrimonial Happiness.*—There is a custom at Dunmow, of giving a gammon of bacon to any couple who can swear that they have been married a year and a day without having offended each other "in deed or in word," or who wish themselves unmarried again.——*Duchess d'Abrantes.*—The Portuguese government anxious to redeem the famous Bible which Junot carried off from Portugal, offered the Marshall's widow 80,000 livres for it; but the Duchess refused it, saying, that from the respect in which she held the memory of her husband, she could not part with it for less than 150,000 livres!——*Change of Opinion.*—Among the Members of the Birmingham Union, are several of the leaders of the Church and King, mobs who burned the library of Priestly, and drove him from the town.——*The King's Family.*—In the Royal Household the strictest economy, almost amounting to parsimony, is observed.——*Bristol.*—The exhibition of the *three glorious days*, has cost that city £60,000.——*Place Hunters.*—The whole of Charles-street and Oxford-street was blocked up yesterday, (Oct. 5th.) for the situation of a footman to a lady, who had advertised for one, the day previous. (*London paper.*)——*Bakers.*—It is a singular fact, that nearly the whole of the London bakers are from Scotland.——*Knighthood.*—Mr. Polgrave, the author of the Constitutional History of England, has been knighted.——*Church Books.*—Entry in the Parish Register of Glammis, June, 1679.—"Nae preaching here this Lord's day, the minister being at Cortachy burning a witch!"——*Duke of Cumberland.*—It is not generally known, perhaps, that the Duke lost his eye in the Campaigne of 1795, when engagee at Tournay.——*Capt. Ross.*—It is at length determined to send out an expedition, for the purpose of ascertaining the fate of Capt. Ross and his enterprising crew, who left England three years ago, on a voyage of discovery to the arctic regions.——*Rail Road.*—Carriages are to perform the journey on the new rail road, from London bridge to Greenwich, (the distance nearly 4 miles,) in 10 or 12 minutes.——*Hint to Tea-makers.*—Put a small quantity of carbonate of soda into the pot along with the tea, and this by softening the water, will accelerate the infusion amazingly. Should the water be hard, it will increase the strength of your tea, at least, one-half.——*Lord Brougham.*—England's High Chancellor completed his 54th year at Brougham Hall, on the 14th Oct. His venerable mother, to whom his Lordship is greatly attached, is still in the enjoyment of health, faculties, and even "looks which speak of youth" (*Globe.*)——*The Earl of Munster.*—But for his appointment as Lieutenant of the Tower, he would be without the means of supporting his peerage; the only pecuniary assistance he receives from the King, is the interest of £10,000—*Paper*—The duty on paper, affects printers, type founders, manufacturers of machinery, engineers, ink makers, booksellers, stationers, bookbinders, copyists, authors, &c.——*China.*—There is *no paper currency* in China, not even the simple instrument of a bill of exchange being known among the Chinese merchants.——*Tea.*—The Parisians have just discovered that *tea* is a preventive against cholera, and they described the comparative moderation of that disease in England, to the extended use of this aromatic leaf. The delightful feeling produced by a good cup of tea, during the fatigues of a storm at sea, is well known to sailors; happy would it be for them, if it were entirely substituted for grog, as a *general* drink.——*Coffee Shops.*—There are 3,000 of these establishments in London, in which are daily consumed 2,000 lbs. of tea and 15,000 lbs of coffee.——*East India Company.*—£12,000 was expended by the Company in the publication of Dr. Morrison's Chinese Dictionary, which book is used by the Japenese as a medium for translation from the Chinese into their own language, the characters of which are alike, though the colloquial part is different.——*Emigration.*—It is said, there is at present a surplus of 100,000 females in Scotland, in consequence of the migrating spirit of the males.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

THE PLUMSTEAD VILLAGE.

THIS rising village, so named by H. Batt, Esq. its public spirited patron, lies on the left of Wynberg, and for salubrity of air is unequalled. It is quite delightful to discover the rising cottages in all directions.—the dwellings of the *free*, with their plantations and gardens, overcoming the hitherto supposed sterility of the soil. A resident philanthropist at Plumstead might greatly promote the interests of the people gathering in this village. A Lucilla Stanley or a Cœlebs, would prove of infinite benefit to their neighbours. The planting system might also be more greatly encouraged than is the case at present. The Agricultural Society, especially as its periodical Fairs decline in interest, might turn its attention to this subject—clothe the mountains and overshadow the vallies. We are poets—"let this hint suffice;" but if we were, we think the theme of a *Rising Village* would be a good one. Of course there must be an invocation; it might commence somehow in this way:

Come, thou dear spirit! whose harmonious lay
Didst lovely Auburn's piercing woes display,
Do thou to thine admirer now impart,
Some portion of thy sweet poetic art;
Like thine, oh! let my verse as gently flow,
While truth and virtue in my numbers glow;
And guide my pen with thy bewitching hand,
To paint the *Rising Village* of the land.

Then might follow some reference to the localities of the place. *Ex gratia:*

How chaste and splendid are the scenes that lie,
Beneath the circle of a *Plumstead* sky!
What charming prospects here arrest the view,
How bright, how varied—ocean-bounded* too!
Constantia's vineyards, spreading far and wide,
The merchant's glory, and the farmer's pride.
Surbarban villa's, where, remote from town,
The worthy *Civil Servant* sits him down;
As also, Mister—Civil Commission-*er*,
And the good-hearted Stamp-Distribut-*er*,
While the neat gardens and the settler's cot,
In peace and *freedom*, mark the peasant's lot:
Here nature's vernal bloom adorns the field,
And summer's fruits their rich luxuriance yield.
Compard with scenes like these, how dark and drear,
Did once our desert wastes and wilds appear,

* The great natural advantage of this Village is, that it enjoys both the sea breezes of Simon's Bay, as well as that of Table Bay, and is in sight of both

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Where wandering savages, and beasts of prey,
Display'd, by turns, the fury of their sway.

Then the poet would, as in duty bound, return to his immediate subject, and confine himself to the *Plumstead Village*. His review might be prospective, viz:

The arts of culture now extend their sway,
And many a charm of rural life display.
Where once the pine uprear'd its lofty head,
The settler's humble cottages are spread;
Where the broad firs, once sheltered from the storm,
By slow degrees* a neighbourhood they form;
And as its bounds, each circling year, increase
In social life, prosperity, and peace,
New prospects rise, new objects too appear,
To add more comfort to its lowly sphere.

And among these comforts, what on earth is there equal to the peace which is to be found at the altar of our God? It is true, in the village before us, the Wesleyans have by their unwearied zeal, been the promoters of great good by the establishment of their simple mode of worship,—and the Reformed Church has recently introduced its equally simple forms in the neighbourhood. Still contemplating the enlargement of Plumstead, the poet, who might be a churchman, would take care to introduce that interesting point in landscape—the *village spire* of Episcopacy. He would probably advert to the subject thus:

In some sweet spot of consecrated ground,
Whose silence spreads a holy gloom around;
The Village Church, in unadorn'd array,
Now lifts her turret to the op'ning day.
How sweet to see the villagers repair
In groups to pay their adoration there;
To view, in neat attire, each sacred morn,
Black, White, and Gray, her hallow'd seats adorn;
While grateful for each blessing God has given,
They wait, in pious strains, their thanks to Heaven.
Oh! heaven-born faith! sure solace of our woes,
How lost is he, who ne'er thy influence knows:
How cold the heart thy charity ne'er fires;
How dead the soul thy spirit ne'er inspires!

And then, as a matter of course, comes the School-house. The school master might be described from nature; i. e. according to the circumstances of a great *many* of our teachers at the Cape: for it is a lamentable fact that too much that is *broken-down* is connected with the important task of

"Teaching the young idea how to shoot."

No "man severe," with learning's bright display,
Here leads the op'ning blossoms into day;
No master here in ev'ry art refin'd,
Thro' fields of science guides th' aspiring mind;
But some poor exile of the human race,
Unequal to the task supplies his place;
Whose greater source of knowledge or of skill
Consists in reading and in writing ill;
Where efforts can no higher merits claim,
Than spreading Mavor's great scholastic fame.
No modest youths surround his awful chair,
His frowns to deprecate, or smiles to share;
But all the terrors of his lawful sway
The proud despise, the fearless disobey;
The unshod urchins spurn at all control,
Which cramp the movements of the Cape-boy's soul:
Till, in their own conceit so wise they've grown,
They think their knowledge far exceeds his own.

The Village must still *progress*, as Jonathan has it, and therefore it would be quite right to introduce a most important personage:

The M. D. Doctor next here settles down,
And hopes the village soon will prove a town:
A man he is "to all the country *dear*,"
With generous heart, and good abounding cheer;
Fam'd for his eloquence, and wit refin'd,
In deed and truth—a man of sterling *mind*.

But hold! the muse is becoming personal, and must be restrained.

Now comes the Inn—not the low licensed canteen of the Cape—the rendezvous of every thing that is base and dishonest. The great wonder is, that these pest-houses are tolerated to such an extent as they are. They cruelly vitiate our population, and disturb our neighbourhoods. They are generally kept by the profligate; whilst the real owner, who is very often the Deacon or Elder of a Church, *winks* at the iniquities of his establishment, and rejoices in the hope of his gains. At home, public houses are only licensed according to the actual wants of the inhabitants. In a hamlet there may exist *one*, in a village *two*. We propose that the *Plumstead* poet, whenever he shall rise up, shall introduce *one* respectable house for refreshment: for example,

The *Brougham's Head* its useful front displays,
(A name for many a future poet's lays;)
Here, oft the weary trav'ller, at the close
Of ev'ning, finds a snug and safe repose:
The passing stranger here, a welcome guest,
From all his toil enjoys a peaceful rest;
Unless the host, solicitous to please
With care officious mar his hope of ease,
With flippant questions, to no end confin'd,
Exhaust his patience, and perplex his mind.

CONCLUSION.

While now the Rising Village claims a name,
Its limits still increase and still its fame:
The chapman finds a market for his wares,
The source of all his hopes, and all his cares;
Establish'd here, a settled home maintains,
And soon a *Merchant's* higher *title* gains.
And thus the Village, each successive year,
Presents new prospects, and extends its sphere,
While all around its smiling charms expand,
And rural beauties decorate the land.

* The fir-tree, generally of so slow growth elsewhere than the Cape, makes here a very rapid progress. Witness the plantations at Rondebosch, Wynberg, and Plumstead.

COLONIAL GRUMBLERS.

It is quite amusing to read many of those fictitious tales of woe which the letter-writers in the public papers palm upon the public. These anonymous personages should take care that the shadowy calamities which they urge to have befallen the land, do not in reality overtake them. Thus it was with the Tulbagh farmers some few years since. They were induced to address a Memorial on an alleged *scarcity*. The Government sifted the matter, and found the whole to be a trick. Since this time, Tulbagh has been almost a blank in colonial history. Another writes about rust and horse sickness; and, because some plots of his ground bear sickly crops, and some two or three out of his fifty horses die, the country rings with the direful accounts, and the London and colonial papers tell the tale at the Cape expense, full 25 per cent. at least. We are led to these remarks by reading a letter in the *Zuid Afrikaan* the other day, in which the writer (from Hottentot Holland,) complains bitterly against the Authorities for not removing a Leper out of the village, and thinks this a great hardship upon the poor farmers, *groaning*, as they are stated to be, under the weight of taxation! Pshaw! Now mark the consistency of this writer. The Leper Institution is just at hand, and how much like the good Samaritan he would have appeared, if he had just put a pair of horses to his cart, and conducted the *leper* to the Hospital at *Hemel en Aarde*. The remedy is in his own hands, and those of the *rich people* around him; yet he, forsooth, must endeavour to make a *case* of this affair, which, like many other cases, all end in smoke.

THE TWO PARTIES.

There are a select few in this colony, who are extremely out of humour at the license which is given to the coloured population to breathe the fresh air of their native hills, without consulting the will of Mynheer or Mister. These people are continually bemoaning the existence of those laws of the colony which permit this liberty, and would supersede the orders of regular government, by a crude code of their own. On the other hand, we have heard it stoutly argued, that the Hottentots do not enjoy the perfection of liberty. In England, till the time of Henry the VIIIth, the Gypsies, (a very numerous class of bush-rangers, whose descendants still abound) were not only tolerated, but entitled to several privileges:—for instance, they could only be tried by a jury composed of one-half of their own tribe. The Scottish Government followed a different course—it thought there might be *prejudice* or *hardness of heart*, or a judge Jeffrey spirit, or a fondness for the hang-man, on the part of the Scotch Judge, and so the Gypsey Hottentot of Scotland was left to be punished by his leader or captain provided he committed wrong or outrage. This was perfectly in accordance with the laws of King Alfred, that glory of England in making each society answerable for its own members. Of this, we have a very remarkable proof in the following curious edict, issued by James the 1st, previous to his accession to the English Throne, charging all under him in authority, to give their aid and concurrence to Johnie Faw, "Lord and Erle of Little Egypt," in the execution of justice. We dare say, our Cape liberals will next plead for Hottentots and Malays to sit on Juries!

THE CAPE PRESS.

THE SOUTH AFRICAN ALMANACK AND DIRECTORY, FOR 1833.

We have not been disappointed in our expectations of this important portion of our Colonial Press. We can safely aver that it may challenge competition with any of our Colonies—nay, fairly eclipse them, as it completely does those publications of a similar nature which issue from the Press of British India. Moreover, it is equal to any of the Almanack emanations of England herself. This, we are fully aware, is saying much; but it is the truth, and we defy any prejudiced, envious, or disloyal person to gainsay it.

In turning over the numerous pages of "The Directory," we have been much gratified by the vast stock of statistical matter which it presents. The great wonder is, that amidst so

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

much that is inert and stunted in the country districts, Mr. Greig should have managed his *supplies* so well: and supplies, too, which we have no doubt would require a vast deal of trouble, labour, and fatigue to arrange, condense, re-write, and make intelligible. No disrespect is intended to the country authorities—"*the constituted authorities*," as our good friend the late Lord Charles Somerset used to pronounce with dignified emphasis. Although we think if these gentlemen, as well as the country school-masters, were more conversant with the Press, and took a greater interest in the success of the village libraries, and periodical publications, and the *English language*, than they do, things would prosper much better throughout the colony.

In conclusion, there are few undertakings which deserve so well of the public, as the one before us; and there are none which a conscientious critic can feel more pleasure in com mending. We think too, the publication likely to prove a considerable benefit to the Cape of Good Hope, by its circulation *abroad* as well as at *home*. It gives that proper stamp of importance to the colony which the stranger never contemplated. It tells of our glorious mountains and splendid vallies.—"the cattle upon a thousand hills,"—all the birds in the air, and all the fishes in the sea, all of which are like the atmosphere on all sides around us. It describes the salubrity of our climate, and the immense varieties of nature's productions. It moreover unfolds to public view the name and nature of our Schools, Colleges, Churches, Missionary Institutions, Libraries, Commercial relations, Settlers' Enterprise, and Public Charities. Nor is it less explicit in the affairs of Civil Government: and to those who are anxiously awaiting a *reduction* in this department, "The Directory." by simply recording the *magnificence* of the Cape *Civil Service Establishment*, may guide a *Reformed Parliament* in the application of the pruning knife, and send many an useless salaried one

"To plough, or hedge or ditch,
Some honest labour—no matter which."

In the chronology of remarkable occurrences, page 204. (o) we were a good deal amused with the following:

"June 3. Riots in the Mauritius, on the arrival of Mr. Jeremie. (Not the *first* storm in a puddle.")

Then immediately follows another notice, from which we suspect the waggish compiler, by using italics, intended to imply a *second* storm nearer hand.

"June 6th. Proclamations of His Excellency the Governor of the Cape, against seditious Meetings and publications."

We recommend, as parting words, that a little more care be taken in future, as to the names and occupations of the parties in the Town Register. Again, the Plan of Cape Town may be revised, and St Andrew's Church admitted within its pale. And lastly—all *compliment* intended to individuals should be dispensed with: such is not in unison with the characteristics of a Directory.

THE CAPE CALENDAR.

We have to acknowledge the receipt of a copy of this little compendium for the year, and return our best thanks to the editor for his Christmas present. We wish at the same time the Almanack had contained more information than it does: as it is, it is merely a pamphlet of dates and names—*hard names*, many of them, in all conscience. However, it may precisely suit the calibre of some minds to pore over—

"Where *ignorance* is bliss,
'Tis folly to be wise."

The Town Directory which accompanies the Almanack, deserves commendation. The editor and proprietor has proved himself a pains-taking man, and great must have been the labour, and unpleasant the task, to have ferreted all the crooks, crannies, holes, corners, closes, and winds of Cape Town, in order to seek out the who, and the what, of their *party-coloured* inhabitants.

In one respect, the Editor has very much confounded that beautiful *distinction of ranks* which has hitherto preserved *the decent order of things*. For it is not enough to make any one of the Cape *Squirearchy* fall into fits, to be classed with "Africa van de Kaap, Coolie," or "Dollie, a slave, *Coffee-steeg*," or "Griet, van de Kaap, Laundress," and a thousand others, with no pretensions to pure blood in their veins, or be denominated "Dear Countrymen!" In one respect, we have been greatly delighted with a view of Cape Industry. The following extract from the *Town List*, fully demonstrates the advantages of becoming all things to all men.

"Hoffmeyer, Willem, Hermanus Son, *Sworn Broker—Tobacconist—Shoemaker—Wood Engraver—Retail Shop—and Publican*."

TO THE READING PUBLIC.

On the commencement of our third year.

We are encouraged to pursue this Journal from the steady support of a respectable body of subscribers, which enables us to square accounts with our printer and publisher. It is true, some half-a-dozen have withdrawn their names from the subscription list, but this temporary drawback, has been counterbalanced by far greater, and probably, more respectable accessions. We wish it to be distinctly understood, that we have never purchased a single subscriber at the expense of our honest convictions, or those of truth and plain dealing.

Contemplating certain engagements connected with the new year, and which were calculated to press heavily on our time, we had hoped for some able successor who might have conducted the present publication, and rendered it more worthy in every way the marked countenance which it has obtained. But we have failed in our endeavours to acquire such assistance: our duty is, therefore, to persevere as heretofore, whatever else may obstruct our path; because we think it would argue very little for the rising intelligence and growing prosperity of the Cape, to abandon the only Journal in the English language which it possesses.

To the *neutrals* among our countrymen, who are unfortunately a class of persons every where conspicuous, and who regard with indifference their own language, and the press in general, we beg leave to submit an extract on the great moral influence and bond of union which a community of language effects. In a "Memoir" written by the present French ambassador at the court of America, are the following remarkable observations:—

"Identity of language is a fundamental relation on whose influence one cannot too deeply meditate. This identity places between the men of England and America *a common character which will make them always take to, and recognise each other*. But an insurmountable barrier is raised between people of a different language, who cannot utter a word without recollecting that they do not belong to the same country; betwixt whom every transmission of thought is an irksome labour, and not an enjoyment; who never come to understand each other thoroughly, and with whom the result of conversation, after the fatigue of unavailing efforts, is to find themselves mutually ridiculous."

After detailing some of the effects of the great influence of the use of the English language on the legislative and political institutions of the United States, M. de Talleyrand says, that "we must renounce all knowledge of the influence of laws upon man, and deny the modifications which he receives from all that surrounds him, if we do not concede the immense influence which the use of a common language has upon inter-national relations."

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE VI.—BY ORLANDO.*

(THE CREATION OF THE FISH AND WHALES —THE GENERAL PRINCIPLES OF THEIR FORMATION AND PECULIAR NATURE.)

IN the vegetable kingdom, Gentlemen! we have surveyed one grand division and display of organized matter, and of that living principle which is everywhere connected with organization. From the Creations which we have described, the Deity proceeded to a very different description of material organization, and with a living principle of qualities much superior to any which appear in plants. This other grand division of life is that which constitutes the Animal Kingdom. If we consider the mediums in which they reside, we should distinguish this order of beings into three general classes,—the animals of the waters, those of the air, and those which inhabit more immediately the land. But their respective forms and habits lead us to minuter divisions than these. Besides the Fish, Birds, and Quadrupeds, we also find Insects frequenting the air, and Reptiles and Worms the earth; and others, the amphibious class, which are alternately both on land and in water. But of each of these, I shall endeavour to select such facts as will indicate the Divine system and object in their production, as will contribute, perhaps, to throw some light on the nature and distinctions of that living principle which has been appointed to accompany both the kingdoms of organic being.

The new system of creation which is exemplified in the animal world, was began on the 5th day, in the production of the Fishes and the Birds. The order of their appearance is thus expressed:

> And ELOHIM said, 'Let the waters bring forth *abundantly* the moving creature that hath life, and fowl that may fly above the earth, in the firmament of Heaven.' (1)

Thus the two earliest classes of animated beings were those that were to inhabit the two fluid mediums on our globe, the water and the air; both compounded substances—specific *compositions* of oxygen, with different additions. Water is the combination of oxygen with hydrogen: the atmosphere is its union with azote. The two elements are therefore as chosen, appointed, and specific things, as the creatures are that inhabit them. Nothing can more strongly indicate a reasoned Creation.

FISHES, like Vegetables, are in several natural tribes, very distinguishable from each other, although all residing in the same watery element; but this element, so uniform in its general qualities, has yet several peculiar divisions; as in rivers, lakes, marshes, and seas. Its greatest distinction is that of salt water, in its oceanic diffusions, and fresh water in terrestrial distributions; and some of the fish are appropriated to each of these. It is however a prevailing opinion, that most, if not all of the fresh fish, originated in the sea; and it is certain that many which are inhabitants of the ocean, pass from it into the rivers of the land, to breed and deposit their young; and these shew themselves to be capable of living alternately in each.

By the Linnæan system, as revised by Gmelin, the whole Fish world has been arranged into six principal orders, sub-divided into several tribes. Four of these are marked by the position of their ventral fins, and two by their gills. This is an artificial classification, but it is a convenient one, and sufficiently answers its author's great end of establishing a precise and applicable nomenclature, that could be generally adopted, and easily referred and added to. * * * But besides all the tribes which Linnæus places under his order of Fish, the inhabitants of the waters include also all Crustaceous and Testaceous genera, and the Mollusca; as also the Seal and Morse tribes, and that of the Whales, or Cestaceous fishes. The latter are generally mentioned by Moses, in addition to his general notice of all that move in the waters:

> 'And ELOHIM created great Whales, and every living creature that moveth, which the waters brought forth abundantly after their kind: and *Elohim* saw that it was good.'

The Whales or Cestaceous fishes are so distinguished in nature from the rest, by their analogies to land animals; by suckling their young at the breast; by having warm red blood; and by a heart with two auricles and two ventricles to propel this essential fluid, and by other peculiar properties; that Linnæus has separated from his fish tribes, and classed among his Mammalia order, with Quadrupeds, Simia, and Man. It was therefore correct in Moses to give them a distinct specification.

Water differs from air in being 810 times heavier. But sea water containing in it a solution of chloride of sodium, has still greater gravity. Fish have, therefore, in all their motions, to force themselves through an element that is nearly 900 times heavier, and as such, more resisting and repellant to them than the air is to birds. This greater gravity assists their suspension, but impedes their motivity; just as the vastly superior lightness of air facilitates the flight of birds, but gives no

* Delivered before the Members of the Poker Club.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

aid to their floating in it. All swimming animals are sustained by the water; and the principle of their being so is, that they have been created to be rather lighter than this fluid, or not heavier. All fishes—all that inhabit the waters, except the Crustaceous and Testaceous animals, are of the same specific gravity as the fluid they live in; and hence they float in it, and are sustained by it. If we were to select one marking instance of the great exertion of intellect which must have accompanied Creation, a more impressive one could scarcely be adduced than the adapted formation of every fish's body to the gravity of its watery abode. If all fishes had been of one weight, one effort of thought and contrivance would have been sufficient to have enabled all to swim; but every species of fish—almost every individual of each species—differs in its weight and size from each other; all, from the little Tittlebat of our schoolboy walk and play-day, to the mighty and super-elephantic Whale. A minute calculation must, therefore, have been made, in the original construction of each particular fish that so varies, in order that the amount of its component particles, and the disposition and expansion of its figured dimensions, might in every one be exactly such as to have the same specific weight with that space of water which its bulk would occupy. Unless this space and bulk were in every instance precisely adapted to each other, not one fish would swim. Yet all but the flat fish are ever floating and moving as they please, always suspended and supported, when they chuse to be so. How surprisingly numerous must have been both the arithmetical and the mechanical computations! But the creative skill and providing care were not confined to this equalization of space and bulk. Something more was requisite, and has been formed. The water itself differs in its gravity and circumstances. The sea-water is heavier than the lake, and river, and pond; and varies in itself, in this respect, from many causes. Yet as Galileo remarked, the fish float and swim alike amid this diversity. He found that this is accomplished by their being universally provided with an organical function, by whose instrumentality they can and do, themselves, modify and adapt their own gravity to every temporary variation of the fluid they are in. This gift of their Maker's foresight is the little bladder in the middle of the body, which contains air, and which they can contract or expand as they please. If the water becomes lighter than their bodies, they distend this vesicle and their own bulk, by rarefying or increasing the air within it; and thus maintain their equilibrium with it. If the fluid be heavier, which would throw them out of it, they empty and contract this organ accordingly, and so keep within it, or sink lower if they desire a greater depth. That it is this air bladder which maintains and adapts their specific gravity, is proved by the facts that if this be burst, they sink; and that the soles and flat fish, which live at the bottom of the water, have not this vesicle. To be able to move through an element that resists their progress nearly 900 times more than the air obstructs our walking motions, their head has been so shaped as to divide the water with ease and safety. The body is made long and slender to increase the facility, and is covered with an unctuous skin or scales, which prevent all friction, and has that degree of sphericity which averts all its ill effects from the immense pressure of the waters that are about it. They likewise have a combined power and flexibility in their muscular tail, which, by striking backwards against the water, gives them whatever projectility they desire, and continues it as long as they move it to and fro. By this tail they impel themselves forward, as the bird does, by its wings; and that it may have the constitutional and habitual ability of doing so, it is made to have the largest muscle of a fish's body. Its necessary fulness and size for this purpose cause the animal's centre of gravity to be in its back, which would therefore always turn its belly upwards, but for the counteracting force of its ventral fins. Their mode of breathing, or of inspiring that air which is essential to them as to every land animal, is also, with an admirable ingenuity, suited to the watery fluid they live in. This has always some air intermingled with its particles; and the wind and storms are always supplying it with new additions. No portion of water is without air in its natural state; and fishes are so contrived as to require no more than it thus contains, and are provided with gills to extract from it, or with inferior functions to decompose from it, all that they require. This process has been made as easy to them as breathing to us. We merely expand and contract our chest by the action of a muscle, and they have only to take in water with their mouths, and to eject it by the gills. They have no eye-lids, neck, arms, legs, or external ear; but they have, like birds and cats, a membrane to draw over the eyes when necessary; and they have an internal mechanism for hearing, specifically fitted to the medium they dwell in. A very kind attention to their comfort appears in the circumstance, that their natural temperature is made to be a little above that of the fluid they inhabit, so that there is never a greater difference than two or three degrees. This benevolent provision secures them from the sensation of cold, which they would otherwise have suffered from. Fishes have been made to differ in size according to their species; and they are of all sizes and weights, from the Minnow to the Whale. After the latter, the Shark takes the lead in dimensions, as it is from one to 4,000 pounds in mass, and sometimes 30 feet long. Others are of great bulk, without much length. But in their general nature, the other kinds are under a 100 pounds.

The ocean pervades and surrounds the whole Globe, that the fishes have facilities for rambling as they like, which no other animals possess. But notwithstanding their native power, several prefer particular localities. Some wander to great distances; others are confined to inland seas and lakes. Their re-productive system, analagous to that of plants by seeds, is ovaparous almost in all; although some species, instead of eggs, bring forth their young alive. But the greater majority lay their oval spawn, and some with a fecundity of marvellous abundance. (2) It is the appointed law with many, that although among the general inhabitants of the sea, yet that they should be born in river water; and that for this purpose, their maternal parents should travel from the ocean to the flurial streams of the land; and forcing their way, in opposition to the descending currents, glide upwards to such places as they select to be proper beds for their future progeny. The Salmon (3) is a remarkable instance of this selecting instinct. The Salmon-trout, Smelt, and Shad, and several others, perform similar journeys. Others sail in vast shoals to the coasts of different countries for the same purpose of depositing their eggs along the suitable

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

banks and shores. (4) All are solicitous and careful to discharge them in the safest places, that will promote their future vivification; (5) but here their parental instinct ends. The young fry need no further attention. At the proper time, varying in each species, they emerge from their oval abode, (6) and immediately move about with great agility, and apparently in full possession of their appointed faculties. Their wants are so few, and the supply so immediate, that as soon as they come into sentient being, they have about them all that they require. Their food is that which the element contains, of which there is always an abundance. Some subsist wholly on plants of various sorts, which grow in the sea or on its shores. (7) Many more feed on worms and insects. Some also use a kind of soft and fat earth. (8) A larger number seek their sustenance from worms and insects, without the vegetable mixture. (9) Several live on Crabs and Shell Fish. And others of the Fish nation subsist on each other. A few make sea-birds a part of their nutriment and some will consume the animal dead bodies they find. (10)

There is something splenetic in many of our writers when they dissert on Fishes. Our pleasing poet and essayist, but too hasty and careless writer on Animated Nature, speaks of them with much ill humour and misconception; and with inattention to their general habits and nature, characterizes all their thousand species by the particular and *voracious* habits of a few.

The Fishes which are most abundant have pleasing forms. Some are more picturesque than beautiful. Occasionally we find grotesque ones; (11) and a few with that structure and look which are called deformity. (12) But what we deem ugliness in nature, is very often rather contrast and peculiarity, than absolute defect. We know nothing of beauty and elegance, but from the figures, colours, movements, arrangements, and appearances of created things. The truth is, we seem to know very little about the constitution of *true beauty*. If we look for it in *colour*, then the *Whites* have it; if we look for it in grace and dignity of form, then the *Blacks* in their native woods have it. Our commonest fish are often highly pleasing. (13) Several have a golden hue or spots, difficult to account for, and many a silvery gloss, as though particles of these two metals were diffused among their skin. Others display a fine tinge of blue; some, very pleasing tints of green. Delicate gradations or diffusions of other colours, make other species interesting to us. The effect of the whole is, that the general appearance of the Fish Creation, in their forms, colours, brilliancy, gliding movement, rapid and changeful activity, and universal animation and vigour, excites sentiments of pleasure and admiration in every fair and free mind that beholds them in their native element. To us —with the exception of a few, principally the Shark tribe—they are wholly inoffensive. as even Sharks are in some places. None of them leave their element to attack us. Not many, even in their own domain, would molest us; but all, even the most hostile, remain there, helpless and indefensible against our power, however great their magnitude may be. All are at our mercy. The fiercest cannot long resist our means of annoyance. (14) We kill and take what we please. * * * The general character of Fish contrary to the assertions of Goldsmith, Wood, and others, is not that of voracity and hostility. It is gentleness, harmlessness, sociality, and animation. They are peaceful animals; happy in themselves, and for the most part harmonizing together without any general display of savage cruelty or malignant passions. Such as are appointed to be the food of others, die in that way, and are sought and taken for that purpose when the appetite actuates, but no further. But they cannot justly be stigmatized as voracious for this habit, more than ourselves for taking and eating them, and cattle, sheep, fowls, game, and other living creatures. We are carnivorous, but not voracious. We kill and cook the animals we feed on, but we have no malice or ill-will, or hostility in such action or diet, any more than in plucking the apple, grinding the corn, or boiling the potatoe. It is, therefore, unjust to impute peculiar voracity and destructiveness to these tribes, because some feed on smaller fish, and others on the molluscæ, worms, and insects that they find. These latter animals appear to be as carefully provided for such as use them, as slugs and caterpillars are for birds, and grass for cattle; for at particular seasons the ocean is made to swarm with them, for no other visible purpose than that the Fish may derive nutriment from them.

The molluscæ which supply so many natives of the sea with their subsistence, are, therefore, endowed with a power of multiplication which, as in several other cases, astonishes us by its amount. It is the abundance of these petty animals of various species, so sedulously provided for the nourishment of fish, which constitutes that luminous appearance or phosphorescence of the sea, which so often surprises and delights the mariner on his watch in his nightly navigation. If some species of fish are always eating, which is not by any means an authenticated fact, they would but resemble the graminivorous quadrupeds who pass their day in browsing and in resting rumination; neither can be fitly branded as voracious in such perpetual mastication; for what animal is milder or more inoffensive than the tranquil, though ever-eating cow, who takes a 100 lbs. of grass a-day?

But there are some facts which indicate that the Fish have been much misconceived in this respect; and that however it may be with some particular classes, or at particular seasons, the far greater number take less food, and live with pleasure, and apparently from choice, longer without any ascertainable quantity of it, than any other tribes of animals that we know of. The Gold and Silver Fish in our vases seem never to want any food. Even the Pike, which has been so much branded as a devouring glutton, fattens on total abstinence. The Salmon, when opened, is never found to have any nutritive substance in its stomach. The Lamprey tribes are confessedly small, or no eaters. The Whale, although vast in bulk, feeds on little or nothing. A small insect which is seen floating on the seas, and which Linnæus terms the Medusa, is sufficient for the supply. But this supply can only be for that portion of the year when these little animals appear. For the other months, the Whale must be without this food; and this seems to be the fact—for the stomach and intestines of all these animals, when opened, seldom have any thing in them. The exuberant Mackrel tribe that seek in their shoaling, the sea plants on the English coasts, find that only in the beginning of summer. Many facts of this sort will be recollected by the intelligent Naturalist, which will lead him to inquire whether the great ma-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

jority of the finny world do not, for the larger part of their existence, content themselves with the nutrition they extract from *water* alone, without any additional substance. It is true, there are Fish of dissimilar habits, and that some consume others is certain. But the points to be ascertained are whether this appetite is not an impulse of particular seasons, for particular purposes for an appointed end which is accomplished. The harmless character of Fish (I am fully aware that I am taking a somewhat new view of the question,) is impressively exhibited by most of the larger tribes. The great Greenland Whale pursues no other animal, and leads an inoffensive life. The massy Sturgeon is of the same gentle nature. The formidable Narwhal, or Sea Unicorn, with all its size and powerful weapon of defence, displays the same disposition. The Oronooko Manati, which has been found so large that 27 men could not draw it out of the water, and the others of this tribe, of which some 28 feet long, and weigh 8,000 lbs. are likewise gentle and peaceful animals. * * * But the ocean contains some of a different humour, as the woods and mountains have the wolf and the tiger. A waring and vindictive temper appears at times in the Indian Sword Fish, with a strength which resembles the impulsion of an elephant. The Grampus, with its sword-like dorsal fin, will attack the passing Whale, and disturb the Seals. (15) The beautiful Dorado pursues the Flying Fish, which escapes by emerging into the air by its pinion-like fins: but the pleasure here is food, or the pleasure of the chase—not animosity.

The habits of Fishes are too little known for us to form sufficient ideas of the extent and degree of their *mental faculty*. Their organs of sense resemble ours in the principle of their construction. That they possess and exercise volition, many shew. The Whale endeavours to strike its assailant with its tail: of which one blow would destroy him. The Sword Fish, by great agility, avoids the descending ruin, and, bounding in the air, again falls upon the Whale. The Fish which climbs trees, displays an equal exertion of peculiar will, though its exact intentions is not known beyond the general idea that it is seeking for food, or something agreeable to its perception. (16) The Salmon exhibits a remarkable instance of determined effort to effect a rational purpose, in the extraordinary leaps which it makes to surmount cataracts or other obstacles which impedes its progress as it ascends a river. (17) This requires not only will, but correct perception and judgment. The periodical migration of so many tribes, for the purpose of depositing their eggs, display a mental instinct in rational, persevering, and efficacious operation. The same combination of action and judgment appears in the Fish that crawls on land in search of water; and in the night journeys of Eels for obtaining food. But when they move with a semblance of following a conductor, in a marshalled form, we cannot avoid inferring in them the same degree of reasoned intention and judgment which we ascribe to animals which exhibit such habits. A distinct action of judging mind, appears in the Fish that directs the projectile blow on the insects which it perceives and desires to make its food: for this requires a careful proportioning of the force to the distance, and to the amount of the water that is known. The Salmon, when storms come out, sinks to the bottom; as if with a right judgment to avoid what would injure it; while those to whom the agitation will be rather pleasurable than pernicious, become sensible of the impending change, and rise to the surface of its lake or stream as it approaches. The Gymnotis and others, benumb, by an electrical discharge, the intermeddler that disturbs it. The Whale displays not merely maternal regard, but even affection for its mate, and has shewn the deepest sorrow when deprived of him. (18) That they are attracted by light, and even distant light; that they should be affectible by colours, which is asserted of the Whale, imply a sensitivity which has a close relation with intellectual impressions, or with some feelings or associations in themselves that we have not yet discriminated. (19) Some, also, appear to distinguish musical sounds, and to be interested by them, and even to perceive the meaning of signs that affect their sensations. The Dolphins exhibit both social and parental attachment. Their brain has much approximation to our own. (20)

Nothing is a more striking indication of the possession of a mental faculty in an animal, than its susceptibility to that process which we call taming. It implies attention to the teacher, a comprehension of his meaning, a perception of the connection between the means he uses, and the effect he purposes, and a self-governing power to coerce its natural habits for the time, and to assume the others which its instructor or feeder imposes. Eels exhibit this teachability; (21) Carps have become familiar, and so have Trout. Even Pikes have acquired such habits; Seals likewise have become tractible like dogs. Some of the inhabitants of the water exhibit an extraordinary degree of memory, a faculty that is always connected with other powers of mind.

There must be some social feeling or gratification in being together, which induces so many of the Fish tribe to habits of association. Such voluntary society indicates that they derive pleasure from the aggregation. Then, again, we may advert to the vast shoals, emigrations, and adventurous voyages of a great many of the species. (33) The parental and filial sensibility and attachment of the Cetaceous Fishes, the Walrus and the Seal Tribes, are so like the same affections in many quadrupeds and the human race, that it would be an apparent inconsistency to give them any other denomination. All the actions we have thus alluded to, seem to display a thinking mind in varied operation, in addition to that living principle which every animal shares in common with the vegetable kingdom.

Such are Fish. It is our advantage above them, that we can add to their physical placidity the enjoyment of the moral principles; the mental sensibilities; occasional delights of exquisite joys; intellectual activities; the sublimer feelings of our highest destination; and all the gratifying pleasures of social communication. All these occupy and attract us, and furnish many a banquet in the succession of our revolving years. Yet, amid life's varied streams and sources of transport and pain, often mingled, and often alternating, we learn at last to prefer those milder and more certain or enduring pleasures which calmly sooth us, to the bustle, the labour, and the excitements that engage and animate our youth and maturer strength. Agitation and emotion at length lose their charm; they disturb more than they amuse us. As age advances to its sober evening, we perceive and appreciate the value of conscious life without pain; of sedate tranquillity; of reposing, yet not inactive thought; of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

sensibility without perturbation; of patient hope; of resting moveability; of sensations that please, but do not agitate; of intellectual rumination; and of those solemn aspirations of sacred foresight, of prospective gratitude, and of humble reliance on the great Mediatorial Benefactor, which close our mortal days, and make dissolution an inestimable blessing.

NOTES.

(1) Gen. chap. i. v. 20.

(2) Leuwenhoek states, that the eggs of a single Codfish, exceed nine millions.

(3) They ascend often above a 100 miles, forcing their way against the most rapid streams; and where an obstacle impedes them, they will spring to a height of 7 or 8 feet to pass over it.—*Linn.*

(4) Such as the Herring, the Sprat, the Anchovy, the Thunny, the Haddock, the Whiting, the Ling, the Coal-fish, the Pilchard, the Mackrel, the Stickleback, &c.

(5) The upper and shallow parts of rivers are chosen, where the eggs may receive the warming rays of the sun.

(6) The Salmon continues in the egg 4 months: the Carp only 3.

(7) Both Carp and Fench may be reared and fed like Capons, with brewing grains or grouud peas. The Mackrel are great eaters.

(8) The Carp and Bream swallow earth, so does the Cod Fish.

(9) As the Shad, Dace. Dab, and common Eel. The Herrings in their shoaling feed largely on insects.

(10) The Conger Eel, the Barbel, Gudgeon, Lamprey, Shark, and Pike.

(11) The Sea Bat of Edwards, and the Horned Fish of Willoghby, are of this sort.

(12) The Frog Fish, or Sea Devil—the Hammer headed Shark, and the Sea Porcupine.

(13) The Mackrel for instance.

(14) No fish seems fiercer or more dangerous than a Shark; yet a single Negro, with only a sharp knife, will some times voluntarily and successfully attack and kill it.

(15) See a paper, on Seal Hunting at the Cape, in the *South African Quarterly Journal*, page

(16) The Perca Scandens, which inhabit rivulets in Tranquebar.

(17) If they do not succeed in their first leap, they repeat it with the most scientific variations.

(18) The incident mentioned by Anderson is, that two Whales were sailing together, a male and a female, one was harpooned by the whalers. It made a long and a formidable resistence. Its companion gave every assistence, and when the wounded one expired, stretched itself with great bellowing sounds upon the dead fish, and voluntarily shared its fate.

(19) The Greenlanders say, the better they are dressed, the less the Whale avoids them.

(20) The Dolphin's brains, like that of the Orang Outang, is distinguished by its large size.

(21) In Otaheite, Eels are great favourites, and are tamed until they attain an enormous size. "And I have seen," says Ellis, "an enormous Eel come forth at the call of a shrill whistle."

THE WARNING VOICE.

Rejoicing as we sincerely do, in the prosperity of the Cape colony, in reference to its secular affairs, we nevertheless hesitate to acknowledge, that in the business of christian education, the largest measure of the greatest good has been attained, or even striven for. It is true, much has been done, and we are by no means destitute of workmen in the moral vineyard—Ecclesiastical, Missionary, and Lay; still, we think as it regards the slave and coloured population, we have been verily idlers, and have not paid due attention to the talent which has been committed to our trust, either as proprietors, masters, or neighbours. It is no part of our intention in the present instance, to suggest any particular plans, regulations, or instrumental expedients in promotion of any system of operations for raising these classes from their degradation. Our duty is simply to represent the inefficiency of the means at present in operation to countenance religious knowledge, and promote the best interests of the community at large.

In our Albany districts we believe there is considerable attention paid to the instruction of the people—in the Home counties the reverse is the case; the schools are in a miserable plight, and the slaves are in a much worse condition. We would ask if, amidst the thousands of our enslaved population in the country,* there have been during the last year 20 baptisms, or 5 marriages? And in Cape Town, amid all the blaze of light, church-going, and missionary enterprise, we propose a similar question. We know what the result of such inquiry would be—it would prove that

'Gross darkness covers the people.'

And how can it be otherwise? Out of a population exceeding twenty thousand souls, there are upwards of thirteen thousand of the people uninstructed, and without the means of religious worship. And here, unfortunately, we have no *Bishop Latimer* to trudge on foot, and tell of the world to come to the outcasts; no *John Knox* to *cry aloud and spare not;* no Whitfield or Wesley, of matchless zeal and holy fame, to go into the high-ways and become

'Ambassadors of Truth—Legates of the skies.'

Oh, no! christianity is to be honoured *here*, somewhat after the same manner as the Lama of Thibet. It is to stay in its *legitimate* temple, to have the properties of homage duly preserved within its precincts, but to be *exempted* (in reverence of its sanctity!) from all association with "the lower orders," "subordinate classes," "inferior portions of society." We can readily enough conceive, that these plain remarks will not be taken in good part by some of our readers. This we cannot help. So far from apprehending that our warning voice can require any apology, we think it high time for all the advocates of intellectual, moral, and religious improvement, to raise a protesting voice against that policy which keeps so many thousands of our inhabitants in a state of moral destitution. To hide these things from the light, would betray a judgment enslaved, or a time-serving dishonesty. We shall conclude these observations by introducing others of weightier importance. It will be seen that we have principally in our mind's eye the labouring population—our brethren in slavery.

The great, the good, and pious Lord Chief-Justice Hale has well said, that "the wise man is but a steward of his wisdom, and the rich man a steward of his riches; and that the best account each will be able to give of his stewardship will be, that he has applied his wisdom, or riches, to the reformation or benefit of his fellow-men." Nor can we resist adding what Lord Morpeth said so judiciously to the same purpose at a late public meeting in England.

"He considered that they would not be acting out of their place, nor transgressing the course of nature, or the will of Providence, by a patient and steady endeavour to give to the labouring portion of the community the means of bettering their condition, with opportunities for acquiring the wish for still further progress, and an interest in exertion, a taste for comfort, a sense of independence, some foresight for the future, some leisure for the concern of an immortal soul. He considered that the same means which are effectual for the well-being of the industrious poor, would also, in the long run, tend to augment the resources of their superiors. He did not wish to give to the benevolence the suspicion of being swayed by interested motives, except so far as that beautiful law of reaction goes, which seems to run through the whole scheme of Providence—'blessing him that gives, and him that takes.' Danger can only be encountered by a performance of duty; and in promoting the physical comfort, developing the moral and intellectual qualities, engaging the affections, and warming the piety of the largest class of the community, we shall adopt the likeliest course to augment the national prosperity, and to call down the blessings of Providence."

Nor if arguments such as these be potent to awaken and direct the attention of the interested part of our readers, is it possible, do we conceive, to bring

* Upwards of five and thirty thousand!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

forward, to enlist the Christian philanthropist in the cause, an appeal equally splendid in conception,—as affecting in detail—or more powerful to arouse and direct our moral sympathies, than what follows from the pen of the eloquent Professor of Moral Philosophy in the University of King James.* Speaking of the operative classes of society, and the privations of their condition, he proceeds to remark:

"I ask you, if it be not the most melancholy parts of all the speculation that is suggested to the moral inquirer by the condition of man, to observe what a wild and dense gloom is cast over the souls of this class by this severe necessity of continued labour? It is not suffering alone—that they may be inured to bear; but it is the darkness of the understanding, and it is the callousness of the heart, which comes on under the operation of the toil to which this human being, whose nature it is our province to explain, must be subjected; it is all that which is most miserable for us to behold. For if men, born with the same spirit as ourselves, are yet denied the common privileges of that spirit, they seem to bring certain faculties into the world that cannot be unfolded—certain powers of affection and desire, which, we might be inclined to say, the lot of their birth will pervert and degrade. There is a humiliation laid on human nature in the doom which appears thus to rest on a great portion of the species, which, while it requires our most considerate compassion for those who are so depressed, compels us to humble ourselves under a sense of our own participation in the mysterious nature from which it flows. Therefore, in estimating the worth or the virtue of our fellow-men, whom Providence has placed in a lot which yields to them the means, and little more than the means, of supporting life in themselves, and those born of them, what moral inquirer would ever, for a moment, forget, how intimate is the necessary union between the wants of the body and the thoughts of the soul? Let us remember, that over the great proportion of our humanity the soul is in constant struggle for its independence with the necessities of that nature in which we know it to have been enveloped. It has to support itself against irritating or maddening thoughts inspired by weariness, lassitude, and want, or the fear of want for itself, or those connected with it. It is chained down to the earth by the influence of one great and constant occupation—that of providing the means of its mortal existence for itself or others. When it shews itself shocked or agitated, or overcome in the struggle, what ought to be the thoughts and feelings in the consideration of the wisdom of poor humanity?"

Thus far in reference to our labouring population. The Professor now directs his attention to the poor industrious workman, who, amidst all his poverty and suffering, is still the *free man* How beautiful is the following picture of the mind's triumph over the body's privations.

"When, on the other hand, you see nature preserving itself more boldly amidst the perpetual threatenings, or unceasing assaults, of those evils from which it never can make its escape, and though pressed by its own many wants, forgetting them all in that love which ministers to the wants of others; when you see the brow wrinkled and drenched by incessant toil, the body bowed down to the dust, and the whole frame in which the immortal spirit abides marred (but surely not dishonoured) by its drudgery; and then, when, in the midst of all that depression and oppression, you see man still seeking and still finding joy, delight, and happiness, in all the finer affections and desires of his spiritual being, giving to the lips of those he loves that scanty morsel earned by his own hungry and thirsty toil—purchasing by sweat, sickness, and fever, the useful education, and religious instruction, of the young creatures who delight the heart of him who is striving for their sakes—resting with gratitude on that day which is like a fountain in the midst of the thirsty wilderness to his exhausted and wearied frame—and preserving a high sense of his own immortality amongst all the toils and struggles that would fain chain him to the dust; when, I say, you see all this, and think of all this, you will discover how rich may be the very poorest of the poor, and you will learn to respect the moral being of man in these its triumphs over the power of his physical nature. But you do not learn from this to doubt or to deny the wisdom of the Creator. You do not learn from all these struggles, and all these defeats, and all these glorious victories, and all these triumphs, that God sent his creatures into this state of existence to starve, or that the air, the earth, and the waters, have not wherewithal to fill the mouths that gape for food. Nor will you ever learn that want is a crime, or that poverty is a sin, or that they who would toil but cannot, or that they who would toil but have not work, are intruders at Nature's table, and must be driven to famine, starvation, and death."

* Extract from the Introductory Lecture delivered in the University of Edinburgh, on Tuesday, Nov. 8th, 1831, by Professor Wilson.

LITERARY EXTRACTS.

SINGULAR DEBATE ON THE NATURALIZATION OF THE SCOTS.

In the reign of queen Elizabeth, an order was issued to the lord mayor, aldermen, &c. of London, to make the strictest scrutiny throughout their several wards, and draw up an exact list of the names of all the foreigners residing therein, classed under their respective nations or provinces. From the return to this order, it appears that the number of Scots then residing in London, was only forty! When a Scottish king, however, succeeded Elizabeth on the throne, the number of Scotsmen who flocked hither, as to another land of promise, increased with amazing rapidity; and it became at length a question before parliament, about admitting them to the benefits of naturalization. The proposition, as may naturally be supposed, gave rise to much discussion in both houses of parliament, particularly in the House of Commons, before which it came on the 14th of February, 1606. Mr. Fuller began the debate. The principal grounds of his argument were. "That God had made people fit for every country; some for a cold, some for a hot climate; and those several countries he hath adapted to their several natures and qualities. All grounds are not fit for one kind of grain; but some for oats, some for wheat, &c. Suppose one man is owner of two pastures, with one hedge to divide them, the one pasture bare, the other fertile and good. A wise owner will not pull down the hedge, but make gates to let the cattle in and out at pleasure; otherwise they will rush in in multitudes, and much against their will return. That the union was no more than two arms of one body. But before they be admitted, it is proper to consider what place and room we have for them. Look into the Universities; there you will find many of our own very worthy men not preferred. Our English merchants adventure; they go to sea with great vessels, freighted at a great charge; the others with little vessels at a small charge. The Scotch carry their wares in other countries up and down in packs; and by these means have taken away all the trade from Dieppe already. Our traders are too many already, and there are impositions upon the English, from which the Scotch are discharged. The navy of Scotland is so weak as to be *in miserecordium* with the meanest force. The care of a sovereign prince is, that his subjects live under him '*honeste, iute, pacifice et jucunde.*' That country is miserable where the greatest men are exceeding rich, the poor men exceeding poor, and no mean, no proportion between both. Tenants of two manors; whereof the one hath woods, fisheries, liberties, commons of estorvers, &c. —the other, bare common, without profit; only a little turf or the like. The owner maketh a grant, that the tenants of this shall be participants of the profits, &c. of the former. This beareth some shew of equity, but is plain wrong, and the grant void. The king cannot make a single village in one, to be parcel of another country. He cannot make a parcel of one kingdom parcel of another, being distinct kingdoms. If king Philip of Spain had had a son by queen Mary, he would have been king of Spain, Sicily, &c. Was it proper to naturalize those subjects? It cannot be good to mingle two swarms of bees under one hive on the sudden. When the Jews were in captivity, and were moved to mirth, and sing songs, they could not forget Jerusalem. 'Let their right hand forget their left,' &c. And when Abraham and Lot were brethren, Abraham said, 'Go thou to the right hand, and I will go to the left,' &c. So they divided, and either took that part which was fittest for him."

Mr. Wentworth and Mr. Moore followed, and though they did not object entirely to the naturalization of the Scots, "yet" said they, "if we naturalize them, it is necessary to have many cautions; cautions for ecclesiastical promotions, cautions for our lands and for our trades"

Sir Francis (afterwards Lord). Bacon, spoke at great length and with great ability, in favour of the naturalization of the Scots, not so much on legal grounds, but as a matter of convenience; and as a "sign to all the world of our love towards them, and agreement with them."

In the course of the discussion of this subject, one member was committed to the tower for making some severe reflections on the Scots: this was Sir Christopher Piggott, one of the members for the county of Buckingham. Speaking of the naturalization, he said, "Let us not join murderers, thieves, and the roguish Scots, with the well-deserving Scots. There is as much difference between them as between a judge and a thief. He would speak his conscience, without flattery of any creature whatsoever. They have not suffered above two kings to die in their beds these two hundred years. Our king James hath hardly escaped them; they have attempted him. Now he is come from among them, let us free him from such attempts hereafter." Although this speech excited much surprise in the house, yet it passed without censure, until, in consequence of a message from the king, blaming the neglect of the house, Sir Christopher Piggott was expelled the house and committed to the tower, where he remained some time.

HOUSEHOLD OF HENRY THE EIGHTH.

The following extract from a curious old MS. contains some very singular directions for regulating the household of Henry the Eighth.

"His highness's baker shall not put alums in the bread, or mix rye, oaten, or bean flour with the same, and if detected, he shall be put in the stocks. His highness's attendants are not to steal any lock or keys, tables, forms, cupboards, or other furniture, out of noble man's or gentleman's houses, where they go to visit. Master cooks shall not employ such scullions as go about naked, or lie all night on the ground, before the kitchen fire. No dogs to be kept in the court, but only a few spaniels for the ladies. Dinners to be at ten, suppers at four. The officers of his privy chamber shall be loving together, no grudging nor grumbling, nor *talking* of the king's pastime. The king's

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

barber is enjoined to be cleanly, not to frequent the company of misguided women, for fear of danger to the king's royal person. There shall be no *romping* with *maids* on the staircase, by which dishes and other things are often broken!! Care shall be taken of the pewter spoons, and that the wooden ones used in the kitchen be not broken or stolen. The pages shall not interrupt the *kitchen maids!* The grooms shall not steal his highness's straw for beds, sufficient being allowed for them. Coal only to be allowed to the king's, queen's, and lady Mary's chambers. The brewers are not to put any brimstone in the ale" Among the fishes for the table, is mentioned the porpoise; if too big for a horse-load, an extra allowance to purveyor. Twenty-four loaves a-day allowed for his royal highness's greyhounds. "*Ordered*, That all *noblemen* and *gentlemen* at the end of the sessions of the parliament, depart to their *several counties*, on pain of the royal displeasure!!!"

PHILOLOGICAL LAW PLEA.

In a publication by the managers of the Infirmary of Aberdeen, they gave a translation into English of a Latin charter, by which they held the ground on which that building is erected. "Joannes Memis, Medicinæ Doctor," was here rendered "*John Memis, Doctor of Medicine*" Doctor John Memis, however, thought this a very erroneous translation: and that a slur upon his professional character was artfully and maliciously concealed under it. He expected to have seen himself designated *Doctor John Memis, Physician;* and the rather, because, elsewhere, in the same document, *Duo Medicinæ Doctorum in Aberdenia*, is translated "*Two of the Physicians in Aberdeen.*" The doctor complained to the managers of the injury thus done to his pretensions, and demanded that they should have the translation re-printed with his proper designation of *Physician*. This, however, they very irreverently declined; and the doctor felt it necessary, for the vindication of his *status* in society, to bring an action against them before the Court of Session, in which he sought not only for an order upon them (in the nature of a *mandamus*) to make the required alteration in their English version of the charter, but for damages in the premises. The managers went to great lengths in their defence. They gravely pretended that *Doctor of Medicine* was as exact a translation as could be of *Doctor Medicinæ*; that were they to substitute Doctor of *Physic Physician*, it would be as much to say, that medicine and physic are the same thing, though it be notorious, (for so they alleged,) that neither is all physic medicine, nor all medicine physic; that, besides, Doctor of Medicine was, for aught they knew, quite as dignified as Doctor of Physic; and that, at all events, they had no intention of depreciating the professional rank of the very learned plaintiff, by calling him by the one designation in preference to the other. "But, why then," rejoined the doctor, "not translate *Duo Medicinæ Doctorum* in the same way as you have done *Medicinæ Doctor*?"—"For the sake of variety of phrase merely."—"No, no: you have translated them differently, for no other purpose but to hold me out to ridicule, and injure me in my profession, as being only a *simple doctor*, in comparison with these gentlemen, whom you style *physicians*. It is a clear case: I demand the judgment of the court."

For several years was this unique question contested with all the obstinacy of legal ingenuity, and at length, in Nov. 1776, the court, to the doctor's great surprise, declared that his complaint was altogether frivolous, and found him liable in the whole costs of suit.

SHARP PRACTICE.

The following is an extract from the introductory remarks of a hot-spiced Review of "Observations on the Healthy and Diseased Properties of the Blood, by WM STEVENS, M. D." The critic is understood to be Dr. JAMES JOHNSON.

THIS is the most trumpery book, for its size, which it has ever fallen to our lot to review. Not but what it is prettily got up, clearly printed, cleanly pressed, accurately folded; manufactured, in short, in a style not disgraceful to Mr. Murray, that Leviathan of booksellers. The printer has done his part—the only fault is in the author. And, with all the intelligence of this century, can no means be found of converting twaddle into logic—false facts into true ones? can no solvent be discovered, which shall fuse the crude fæces of weak men's brains into some precious and goodly stuff? Alas, no! nonsense, with all its trappings, is nonsense still; and the art of all the houses of Paternoster Row and Albermarle Street cannot do more than dress the doll; cannot give resistance and durability to their thing of wax.

Some persons' minds are most felicitously constituted; they believe that they are born to enlighten mankind, and, Shiloh like, they look upon their stripes as the evidence of their mission. Happy fools! propound your schemes, concoct your theories—if the world laughs at you, laugh at it—if it beats you, defy it—if it for a moment credits you, gull it. The persons we have addressed are not the offspring of this age only, but have certainly adorned every century that has elapsed since man lost Paradise, and fools had the world before them;

——————— In vain decried and curst,
Still Dunce the second reigns like Dunce the first.

At the present day the race is undoubtedly numerous; and the mighty power of the press has tended to multiply them, as Hamlet tells us that the sun breeds maggots. It is often the reviewer's business to encounter these creatures, and it may be supposed that the task is a loathsome one. Who would not rather hunt the boar than the bug? Dulness, unopposed, is more dangerous to science than great, but intellectual error; for one debases and emasculates the mind, whilst the other only tyrannizes over it.

It is well for the human race that the numerous spawn of Dulness are short lived; generated with facility and dispatch, their existence is little more than ephemeral. But, if the power of the press is wielded with intrepidity and talent, if men of education and of honesty direct it, the sons of Dulness may be strangled in the birth, and the small amount of mischief they are capable of inflicting on the best energies of the species is rendered smaller still.

Our readers will perceive, as we go on, whether these observations can in any way be applicable to the work before us. Dr. Stevens dedicates his production to the King of Denmark, and we cannot but admire the transcendent style in which he sets forth the transcendent virtues of that Scandinavian potentate.* The following passage is rather too difficult of digestion, with all the seasoning of Dr. Stevens' salts:—"The heartfelt interest which you are *known* to take in whatever concerns the welfare of the *human race*, has secured respect and esteem to your Majesty *in every civilized country*." This is pretty well for a beginning, and must create a pleasing anticipation of the candour and judgment of the curer of yellow fever and cholera. Yes, of yellow fever *and* cholera; and that by the self-same slops. When a footman gets his patent for a paste, it is shewn to possess the power of curing all diseases of the rectum, however they may differ from each other. This is the orthodox course of quackery. When a weak enthusiast imagines that he has found a specific for one malady, he is gradually led from step to step, till at last he recommends his drug in all cases, and firmly believes that its powers are real. This is the ordinary course of folly. Let us see what Dr. Stevens has done. He came to England to tell his countrymen that at last yellow fever had lost its terrors, and was not only curable but had been cured by salts. No sooner did cholera appear than the salts were again in requisition, and the *newspaper* speedily informed us that the great Dr. Stevens was curing cholera, as no other man had cured it, by—salts. Now if reasoning is to guide us, there is no great resemblance between YELLOW FEVER and BLUE COLLAPSE, but then the blood is black in both, and salts turn blood in a porringer red, and keep the deep sea from stinking, therefore they are applicable to yellow fever and cholera, therefore they will cure yellow-fever and cholera, therefore Dr. Stevens can cure yellow fever and cholera, which no one else can—quod erat demonstrandum. Such, we assure our readers, is the essence of Dr. Stevens' theoretical basis of the splendid practical discoveries, which he tells us, fond man, "will be sure to last."

* The King of Denmark takes the title of the King of the Goths and Vandals; Dr. S. seems to chuckle mightily at having been a loyal subject of this King in his West India Islands a Vandal of the New World.

MEMOIR OF THE LAST ILLNESS AND DEATH OF BARON CUVIER.

The following account was drawn up by Dr. Rousseau who attended the deceased.

CUVIER was a man who had an astonishing aptitude for mental labour and exertion; his recreation indeed consisted in being busily employed; yet he was readily alarmed about any trifling indisposition, and although he put little trust in medical science, he used to consult every doctor he knew on the state of his health.

On Monday, the 7th of May, he experienced a little irregularity in his bowels, and was ordered to take an additional enema with 6 drops of laudanum in it. Next day he felt himself quite well; and delivered a lecture in the College of France, displaying unwonted energy and animation; and after lecture he walked home, a thing he seldom did. He dined as usual, and was present in the evening at the meeting of the professors of the museum. On the Wednesday he felt a pain in the right shoulder and arm; and some difficulty in closing the right hand; he attended however a state council, and on his return, was urgent for his dinner; but scarcely had he eaten some broth, before he experienced such a difficulty of swallowing any solid food, that he was obliged to make the attempt several times. His family became alarmed and sent for his physician, Dr. Allard, who prescribed 20 leeches to the anus. On the following morning he could not move his right arm, and was obliged to rest it in a sling The pulse was 80 to 85, the deglutition still difficult, and there was some headach. He was freely bled; had a mustard bath to the feet, and a blister to the nape of the neck; felt very weak, and his voice became sensibly changed; he was restless during the night; and as the pulse again rose in fullness and strength, a second bleeding from the arm was performed. From this time the muscular energies were much impaired; but the heat of the body, nervous sensibility, and intellectual powers were remarkably entire On the Friday an emetic was given, as the patient had not apparently derived benefit from the venesection: but it did not produce vomiting. At two o'clock M. Dupuytren introduced by means of an œsophageal tube and syringe 24 grains of ipecacuan mixed in a little warm water; still no vomiting followed. At five o'clock 48 grains were injected into the stomach, without caus-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ing even any nausea. At seven o'clock a saline enema was administered, which operated freely. The right arm was quite powerless; deglutition impossible. Two blisters were applied to the side of the neck in the evening, over the site of the cervical plexuses. The night was passed in an agitated and restless state. On Saturday morning, there was observed a palsy of the movements of the left leg, in addition to the previously mentioned symptoms; the hands became very cold, and the nails acquired a blue colour; the pulse was smaller and weaker than hitherto. Twenty leeches were applied over the mastoid process; in the night, the patient suffered great distress from not being able to move himself at all in bed—and on the Sunday, his appearance seemed as if he had become ten years older; his voice was more changed; still he was calm and complained but little. Cupping glasses were applied below the kidneys, and some orangeade was injected into the stomach; at eight o'clock in the evening he conversed with Dr. Allard; he was again cupped, and was extremely fatigued by the operation. At nine o'clock he said that the faculties of his mind were leaving him, and a quarter before ten he died sitting upright in his arm-chair.

The character of this great man has been thus portrayed by an eminent writer. Cuvier was gifted with a mighty and capacious mind, rather than with any striking genius. His intellectual powers, were rather of a critical than of a didactic character; and as is the case with most encyclopediacal heads, he had a leaning to scepticism. His mind was clear, rapid, rigorously exact, but not sufficiently bold; and perhaps we may account for this deficiency, by calling to mind that the requisite mental hardihood is generally intimately associated with a resolute firmness of character, which Cuvier to a certain extent did not possess. In his lectures, when conveying instruction, and elucidating any subject, there was a spirit of modest circumspection, and a fondness for demonstrative proof, which belonged as much to the original stamp of his character, as to the philosophical genius of the present age in France. An unwearied, and most keen observer, gifted with a prodigious memory, and a capacity for mental labour, rarely possessed. He has left behind him numerous important works. Of universal knowledge, Cuvier knew every subject sufficiently well, to render his description or illustration of individual examples more perfect and complete. As a writer, he has little grandeur, or originality; but his works bear the impress of great thought:—his style is perspicuous, elegant, and correct. He describes things, not as a painter, but as an anatomist; he argues with ability, but his reasonings are stiffly and coldly expounded; he narrates, as a chronicler, rather than as a philosophical historian. His mind wanted the *aid and influence of a mighty inward impulse, to inspire him* with that passionate enthusiasm for the study of Nature, which in other language, is merely the thirst after Truth; it was his exquisite taste, and a natural aptitude for the sciences which he especially cultivated, which led him on to that proud distinction above all his cotemporaries.

Cuvier was born on the 25th of August, 1769, at Montbeliard, and consequently at his death was 63 years old.—*Archiv. Génér.*

BOOKS—DIFFUSION OF KNOWLEDGE, *Spirit of the Age.*

It is a distinguishing and a gratifying feature of the extraordinary epoch in which we live, that men of great talent, great learning, and great reputation, are employed in writing for the instruction and entertainment of youth. In former ages great men wrote for the great, learned for the learned. Petrarch founded his hopes of immortality on his Latin compositions, yet those cherished works are mouldering in libraries, whilst his sonnets, composed in his despised native language, are the admiration of the world, and have obtained for him eternal renown. In those days, we say, the learned constituted a sort of separate fraternity, with masonic signs and a jargon of their own. They despised the mass of mankind, and esteemed it little short of desecration to labour for the enlightenment of the vulgar. Every period of existence, national and individual, has its peculiar wants. In the present state of civilization those wants are highly intellectual, the press has produced them, and the press only can satisfy them. In proportion as reading has become more general, it has also become more pure, and the class that in the year 1820 was delighted and contented with the trash of the Minerva Press, with ridiculous legends and supernatural romances, turns from them now with contempt and disgust, and seeks for productions fraught with more rational amusement and more wholesome information. When we look around and contemplate the progress of education in the world, we cannot but feel how true was the exclamation that a little knowledge is a dangerous thing! A little knowledge is indeed dangerous, but it is infinitely better than none, because it *must* stimulate its possessor to acquire more. Children walk before they run, and the human mind has had its stages of infancy and debility precursory to vigour.

It is a maxim of commercial polity that the supply will be regulated by the demand, and the same holds with the traffic of the mind. In the æra of novels and romances the persons who ministered to the public appetite were mostly such as were unfit for the higher walks of literature. But as soon as a better taste was become diffused in the community, a few men of character and reputation felt that they would lose neither by embarking in the production of popular works. The example once given by a few has been followed by many, and the community having good books and bad placed before them, have shewn that they possess the sense of discriminating worth and of patronizing merit. This improvement has not been slow and gradual, it has almost been made by a bound, and probably there are few persons who would have ventured to predict even ten years ago that Sir Walter Scott would be writing history for his grandchildren—Sir David Brewster letters on natural magic for young people—or that a great society, composed of men distinguished by rank, and, what is better, of others renowned for their attainments, should be publishing sixpenny pamphlets for artisans, and establishing a penny magazine for all classes. The great experiment of educating every man is commenced in England. What will be the result no one can say, but we do not doubt that it will be good. Knowledge is not only power, but in the gross it is virtue, enhances every good feeling, tends to moderate almost every bad. It is a wonderful sight to see the unwashed artificer speaking at public meetings, writing in periodical publications, acquainted with the policy of his own government, taking a deep interest in the situation of foreign nations, and discussing commercial and financial questions with as much good sense, in equal if not superior language, though not with quite so aristocratic a tone, as many a member of St. Stephen's chapel.

THE EDUCATION OF MEDICAL MEN.

If the intelligence of the age proceeds, the acquirements of medical men must correspond with it. The profession has always been considered learned, but the standard measure of learning is undergoing material alterations, and the kind and quantity that sufficed in former times will not be adapted to the future. We do not hesitate to say, that the profession has sunk in public estimation, that it is sinking, and that it promises to sink yet farther. The *Times* newspaper is a good index of public opinion, it is, algebraically speaking, the exponent of its value. What did that newspaper observe in reference to the late lunatic inquisition on Miss Bagster? It stated that every trial in which medical men were interrogated as witnesses put the friends of the profession to the blush, and exposed the miserable system of education which could lead to such disgraceful exhibitions of inconsequential reasoning and shallow information. The *Times* is right. It is too melancholy to look on the profession, and see how it lags in the march of knowledge. The education of medical men in the mass is decidedly bad both in principle and in detail. It would be mischievous had it no sin but this, that it is a heterogeneous, patch-work thing, a congeries of pieces scarcely stitched together, and not a consistent whole. There is a mode of education for the apothecary, and a mode of education for the licentiate apothecary, and one for the surgeon, and one for the fellow of the College of Physicians, or rather the College of Fellows, and one for the licentiate of that College, and one—no, there is none for the physician-accoucheur. The sages who devised this precious compound of the exuviæ and excrementitious remains of the ancient and reputable corporation of barbers, an institution of that enlightened liberal, the eigth Henry, appear to have exercised the little wits they had in devising the minimum of knowledge necessary for apothecary, surgeon, or doctor to receive a licence to practice their "mysterie and cunnynge"—an apothecary, surgeon, and doctor would seem to have seconded their laudable endeavour by ascertaining the minimum of study necessary to obtain that licence. What with the corporations on one hand and human nature on the other, the medical profession is as we see it, distracted in itself, weak in its head, weak in its tail, with no unity of interest, no consent of action, flouted by lawyers, laughed at, pitied, and consulted by the public, despised by the press.

Let it not be imagined then that the great intellectual pursuits of the community, are rather matters of curiosity than of immediate importance to the members of the profession. We essentially belong to the community, grow with its growth, and decline with its decline; our honour is its opinion, our rank is its award. That honour and rank are not supported by prescriptive rights, nor heraldic blazonry; and when the world has begun to think meanly of us we are in fact degraded. The means of recovering the position which we certainly have lost should form the subject of serious consideration, of a cautious and deliberate attempt to accommodate our own internal constitution to the wants and wishes of the age, and to shake from us the incubus which the barbarous ideas of former generations have planted on our bosoms. We say that this should be the subject of anxious investigation, and we do not doubt that it will be so. Men's minds have of late been absorbed in the general contest between civilization and despotism, varied in its characters in diffrent nations. In our own country the ideas of the age have obtained a signal triumph, and probably a new æra has dawned on our legislature. After such a mighty revolution achieved by the force of public opinion, it is idle to suppose that corporate bodies can successfully brave it. Sooner or later they will fall, consumed by the light of growing intelligence. If wisely disposed to suit themselves to circumstances, they may yet survive with an infusion of fresh and healthful vigour into their veins; but if not, they may be assured that we are no mendacious prophets when we foretel their inevitable destruction. The time is arriving when this discussion will be taken up, and when it is begun in earnest it will not be hastily abandoned.

For, alas! in the present day, and especially in this great metropolis, the name and character of a surgeon and physician are sadly degraded; too often are they associated with the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ideas of chicanery, and subserviency; and little wonder is it when we consider that such a large portion are on a level with petty traders, and sneaking shop-keepers. Medicine is not followed as a science, but as an occupation; and the hopes and wishes of its votaries are limited to the base and illiberal calculations of profit and of gain. As long as the present system of medical practice exists, we can hope for little improvement; and we are not of such Utopian extravagance, as to imagine that we can in any measure effect a change in the present old established generation of medical men, but we are anxious to contribute our support to the bringing in of a better state of things, when our profession will be studied and pursued as a branch of useful science, and as the channel of the choicest blessings of benevolence and sensibility. It must be divorced from all connexion of traffic and trade; its members, if they have any spark of gentlemanly feeling, must separate themselves from any such unions as that of compounding and dispensing, and retailing drugs; they must have a pride above such humble, and lowly occupations; and their thoughts must be directed to the acquisition of liberal knowledge, and to the diffusion of its blessings to those around them.

(*Medico Chir. Review.*)

MYSTIFICATION.

An Ower True Tale.

It was getting late in the afternoon of one of the most sultry dog-days of that most sultry of all sultry summers, 1827, that John Padds, the Croydon carrier, was preparing for his diurnal migration from the Nag's Head, in the Independent Borough of Southwark,—(as it is invariably designated by all candidates at all general elections,)—to his Surrey head-quarters at the Old Swan, when his attention was attracted by the arrival of a new customer. It was indeed, at almost the very moment when his vehicle being nearly loaded, and its owner was rejoicing himself with a rough calculation of the probable profits of his journey, that a porter bending under the weight of a huge hamper, entered the inn-yard, and, inquiring for Mr. P.'s errand cart, deposited in it what he called significantly, "two articles for old Slaughter of Croydon,—*he* knows *what*—which must be delivered that night, and he must cut them up directly."

"Aye, aye, he shall have 'em, never fear," responded Mister Padds; "I go by his house to the stable, so I'm sure not to forget *him*, at any rate."

The hamper-bearer having departed, the huge hamper being safely stowed, and all other preliminaries finally adjusted the, carrier now began seriously to address himself to his departure; and, as a note of final preparation, took a last look to see that his packages were all in the cart, and all secure. A single glance of his professional penetration served to convince Mister Padds that every thing was correct:—"Books for the parson;—tea and 'bacco for the Angel;—three cheeses for Muster Tadpole;—'potticary's stuff for Doctor Leech;—a new bridle for the 'squire's lady:—and summat mortal heavy for——eh!—what!—a outlandish great hamper for Surgeon Slaughter!—Eh! here's a go!—*to be cut up directly, too!*—why they must be a *couple of corpses!*" ejaculated the affrighted carrier, as his eyes opened to the real contents of the hamper which he had so unwittingly taken under his especial care: and from the slight examination which he was then enabled to make of the suspicious package, his worst fears were confirmed!

Though he professed to be a general carrier, yet Mister Padds had no notion of *such trunks* being packed up to go by his van; and still less did he like such passengers as those in the *basket*, to have places *inside*. To look for the porter, who had immediately absconded, or to ascertain from whence the hamper came, was now, of course, quite out of the question; to leave it behind was equally impossible; and in this dilemma, therefore, he very wisely resolved, *firstly*, to get rid of it as soon as he could; and *secondly*, not to expose himself, till he couldn't help it.

Strong in these virtuous resolutions, he was at last really on the point of starting, when a fresh annoyance presented itself, in a shape which his troubles had but too frequently assumed before,—that of his *wife;* who, having been to visit her cousins in Clerkenwell, had arranged to return home to Croydon, *per* cart, this identical afternoon. Here then was a new difficulty, for which the worthy carrier was perfectly unprepared. He had long since determined not to enter the cart in such company as he had been inveigled into taking with him; but how to manage with his better half, he knew not; Mistress P. not being *peculiarly manageable* at any time. Like many wiser men, therefore, her spouse sagaciously resolved to trust to circumstances, which might, perhaps, turn out better than he expected, and not to mention a subject which would infallibly lead to much vituperation, if not to a direct breach of the peace.

The lady, having taken her seat, was, however, very naturally inquisitive, as to why her husband did not mount also.

"Oh! I wants to stretch my legs a little, my dear, that's all; so I shall walk to Kennington, I think:" and though every one, who knew tall John Padds, likewise knew that his legs by no means wanted stretching, still this excuse, in default of a better, served him till their arrival at Kennington Common, when Peggy P. again solicited her spouse's company in the carriage.

"Noa, thank you, my love, noa; I may as well walk a little further, as I am out. It must be uncommon warm in the cart, I'm sure; and I wouldn't crowd you for the world."

Similar tender entreaties, and equally ingenious excuses, were made at Brixton, Streatham, and in fact, at every stoppage, as well as at every mile-stone, until their arrival at Croydon; the near appearance of which respectable market-town, in the clear and cloudless moonbeams of an August midnight, not a little cheered the drooping spirits of Mister Padds; whose thoughts, despite of his more than customary potations, had latterly been wandering amongst church-yards, Burkers, and resurrection men! Now, however, he was once more approaching the "haunts of men," paved streets, and inhabited houses; and though, as he said, he would still have gladly given his ears,—which it must be confessed would have been a *very long* price,—to have got rid of the mysterious hamper as easily as he procured it, yet his spirits now so far recovered their customary elasticity, that he actually beguiled the remainder of his weary way by perpetrating a song.

A most emphatic "Woa, Smiler!" abruptly terminated the display of vocal melody, for the cart was now at Mr. Slaughter's door, the night bell of which Padds rung long and loudly, until, in anxious anticipation of a summons to some profitable patient, the surgeon, putting his bed-gowned body half out of an upper window, demanded the reason of being thus disturbed.

"Oh! you know well enough," replied our friend the Croydon carrier, in a suppressed tone; "I've brought you *them* as you expects!"

"Brought *what?*" exclaimed the professional gentleman.

"Why, the stiff-uns, I tell you; so make haste down, and take 'em in, will you, for I'm tired on 'em"

"You must be either drunk or deranged," responded the man of medicine; "What *do* you mean by stiff-ones, fellow?"

"Well! that *is* a good one! You does n't want me to tell all the neighbourhood, I suppose," replied Padds, his voice gradually swelling above *caution pitch.*

"You must tell *me*, if I'm to know myself," rejoined the surgeon. "What do you mean by stiff-ones? speak intelligibly, man!"

"Why, *subjects!*—Corpses! then; and I was to tell you *that they must be cut up directly.* So I suppose you knows *now*, doan't you, doctor?" screamed out John Padds, at the extreme pitch of a voice, which, loud as it proverbially ever was, he never before exerted half so effectually!

The result was as instantaneous as it was decisive; for not only did divers heads in night-caps of all forms and colours, suddenly appear at every-bed room window within hearing of this most extraordinary colloquy, but Mistress P., (whom the sudden stoppage of the cart had already wakened from the slumber induced by her husband's singing,) upon thus abruptly hearing who had been her fellow-passengers, screemed out still more clamorously than her spouse, and bundling out of the vehicle, she never could tell exactly *how*, joined him upon the pavement. "Confusion" now became yet "worse confounded:" the surgeon loudly vociferated that the articles in question were none of his; the carrier still more loudly contended that they were; whilst the carrier's lady, far more loudly than either, outscreamed them both, by alternately vilifying her husband, and abusing the doctor. Nearly half an hour had been pleasantly passed in this gentle war of words, when, in the hope of closing the discussion, the surgeon closed his window, leaving his assailants, their cart, and the "stiff-ones," all in *statu quo* below. So very manifest a breach of etiquette was, however, not to be borne patiently; and thereupon, Mister Padds pulling the night-bell handle, as if he would extract it by the roots, and Mistress P. at the same moment seizing the knocker, very speedily summoned the medical gentleman to another consultation. Vainly did he then threaten them with the assizes and the treadmill; the carrier and his wife were both immoveable; and as by this time, many of his neighbours had dressed themselves, and sallied forth to see the end of it, Mr. S. at length capitulated, and came down stairs to settle the business.

"There they are!" bellowed out Mister Padds' "and much good may they do ye; and if ever I ——"

"Stop, and see the baskets unpacked first, if you please, Padds," interrupted the surgeon. "If it be for me, its contents are not what you suppose, and I insist on your being satisfied."

"Oh! that's impossible! they can't be nothing else and I've had enough on 'em. I don't want nothing for bringing 'em."

Mr. Slaughter, the carrier, and the carrier*ess*, now once more commenced all talking together; yet though kindly assisted by several of the neighbours, it was very soon found that bawling would not supply the place of argument at Croydon, though it has been known to do so elsewhere. At length, however, whilst the principal disputants were vociferating with an exuberance of voice and language, that would have done honour to Billingsgate in the sprat season, the curiosity of a portion of the company so far overcame their politeness, as to induce the opening of the hamper; when, to the unutterable astonishment of all parties, the vituperated "stiff ones" were found to be two fine dead pigs!

"What a fool I must have been!" exclaimed Mister Padds,—"never once thought of Old Slaughter, the Pork butcher!"

THE SPECULATIONS OF A HUNGRY MAN.

Canada—the Swan River—South Africa—where shall a single gentleman, unembarrassed by an hereditary sixpence, plant himself in these days? Shall he look for a commission in the new police, or a puisnejudgeship in Greece, or a bishopric in Nova Zembla, or a majority in Don Pedro's service? What direction shall he give a mind unprejudiced by education or profession? 'Tis a hard matter!

At the present day, when starvation is the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

universal horizon of every one's prospects, it is rather amusing to observe what pains some people take to incur a gentlemanly sort of famine, and avoid a poor-house style of life, that they may perish with credit as members of a profession. The very word makes me laugh. I have tried, or at least I have reflected upon them all; and the result has been a firm conviction, that to undertake any is a sign of an unphilosophic and undisciplined character. Hunger, that now stares me in the face during all but six hours of the twenty-four, would probably extend its impertinent intrusion still further had I to save a moiety of the sum, which now purchases my single daily meal, in order to supply myself with that profligate object of expenditure, a yearly new coat. That which well-dressed men call society would, amongst other unnatural exactions, demand from me more than a weekly charge of linen; and were I compelled to talk delicate English, I should be compelled to make my chin pliable by means of a razor; whereas my present free-and easy discourse requires no relaxation of beard, no locomotion of muscle. I move as I please, and my toes are not pinched by any unkindness on the part of the side-leather.

But one cannot baffle long the great foe, the continual spectre, that stands so visibly in one's very front. Starvation is close by, and something must be done. Let it not be in mad England. I am quite perplexed whenever I think of this our country— with all its internal wealth and external resources--its pure government—its noble institutions—its generous sons—its valour—its religion—its beauty; and then to reflect upon the price of beef in London! Does it not turn one's patriotism into rebellion, as it substitutes appetite for digestion, to calculate that a single mutton-chop costs five pence! So much for the table—next the wardrobe. In what other country, it may be asked, would the year play such abominable pranks with a man of forethought? When, at any time, did the three months March, April, and May, shuffle and change places with each other in so unprincipled a manner as here? When I had suffered all my cloth to go into the country for the summer, and, through the kind negociation of a gentleman from Holywell-street, managed to obtain an adequate supply of merino from some unknown friend, for a consideration almost nominal; was it not hard, in the second week of May, to be accosted by a northerly frost, and to wander through a sea of mud, that gave my un talk-about-ables a resemblance to a pair of strange-shaped zebras? A man of small means has no chance in such a climate. I had formed a party to visit the Exhibition on the 12th; but, instead of going there, I was left home to scour up an old pair of gaiters for a ball that night. None of this would have happened in Greece. And then the taxes! Not that they much affect me individually—only one views these things on public grounds; and with this view I cannot but recommend a property-tax in lieu of all others; for I do think, when a man has not a farthing in the world, he should not be obliged to pay the horrid sums he now does—indirectly of course—for the attic-window and the small soap he may chance to employ. I must confess I like the post-office and stamps, and many other sources of national revenue; but when a man or a minister makes your landlord contribute to the land-tax, by which means your rent is raised one shilling per week, I do say, that these are crying grievances in this country, and no independent man, like myself, can be perfectly contented in it.

Well, then, with regard to foreign parts, what shall we say. Does not Algiers offer a glorious prospect?—and Greece and Turkey? Russia and Calabria? Who is there so helpless as to be shut out from a presidency of a South American republic, should he choose to "call one into exisience?" Who may not be Lord High Admiral or Master of the Rolls in the empire or kingdom of Prince Leopold? Why should not a sly fellow ingratiate himself with the sultan, and induce him to cut off the heads of all the dignitaries, according to the precedence and number of their tails, that stands between him and the office of grand-vizier? Or let him call himself Sir William Congreve, and whisper his vocation in the ear of the Pacha of Egypt; and might he not instantly be made generalissimo of 40,000 Bedouin Arabs, arch-defender of the harem, and the superintendent of their works? No, Don Pedro's service promises best. The notion is ecstatic. How fortunate was it that I found a sixpence the other day (on a shop-counter.) It enabled me to get a cup of what is called by a sort of poetical licence, coffee, for several successive mornings, and to see the paper. But then, again, how *un*fortunate was it, that the first I heard of the exploits of the Don's agents in beating up for recruits here, was their retreat from the Thames police officers, who had taken it into their heads to enlist *them*. So that my application was only just in time to be totally inapplicable. I would follow the expedition; but the credit of this country is so shaken, that I question whether any captain of a vessel would trust me to the amount of the passage-money, though a British-born subject; and till that national credit is restored, I know not that I have the means of putting any one of my plans in execution; for the shameful negligence of agriculturists in the payment of their rents, together with the over-speculation of the commercial people generally, or some cause at present not stated, deprives me of affluence, not to say competency. My purse has become the receptacle of two steel keys and a pen-knife; and if I dine to-day, it embarrasses me to ascertain what remuneration I can have to offer for the outlay incurred by the tavern-keeper in providing me with bread and cheese.

Now, as for home-appointments, it must be confessed that my friends are not very influential with the present ministry,—partly from ancestral prejudice, partly from a want of sympathy on other grounds. At any rate, I cannot expect any adequate advancement from them. Nor, indeed, would there be the slightest gratification in a mere gratuitous elevation. No man like myself can understand the pleasurable feelings of those favourite protegés who are lifted up without muscular effort into fat deaneries and snug secretaryships. The exertion of obtaining makes the object worth obtaining; and for this reason I am resolved to carve out my own fortunes by my own means, and having neither money nor friends, present employment or future prospects, my wit must supply their place; and thus follows its first exercise, in the shape of a humble appeal to the first, if not only, Mæcenas of the age—

Robert Warren, Esq., of No. 30, *Strand.*

To Mr. Warren, then, do I appeal as followeth:

"SIR,—I am a young man, particularly worthy your attention, either as operative shoe-black, manufacturer, distributor, or panegyrist of your easy shining and brilliant jet or japan blacking. Either or all of these offices I will undertake at a peculiarly low rate of compensation. Much as I admire the transcendant talents of your present household poets, I cannot but think I have a stock of double rhymes hitherto unknown to the English language. Greatly as I appreciate the elegance with which your portable placards are suspended from the neck of your peripatetic retainers, I may venture to hint that my shoulders would support a basket-load of your heaviest bottles for sixteen hours per diem, and this would lead to a notoriety which no vulgar advertisement could hope for. There is no man in London who has so perfect a knowledge of compounds as myself. In its simple state I am acquainted with nothing; as a medley of adulteration I am well versed in the secrets of all abominable filthiness, whether of sight, smell, taste, or touch. I was for some time employed as a person in the Cape-wine trade, and understand something of the principles of preparing genuine London porter; and this, I trust, will give me a claim to your notice as a subordinate manufacturer.

"Oh! Robert Warren, this is an opportunity not to be neglected. Write to me by return of post (taking care to pay it, or I shall not be able to take it in); or, as I have no particular direction, look for me, any time between sunrise and midnight, beneath the statue at Charing Cross—for that is my favourite resort. To make recognition easy, I shall leave off my shoes on that occasion, and, as a private token, I shall possibly be without a coat!" M. M.

HORSES, CARRIAGES, AND TRANSPORT OF GOODS

OR,

The Commercial, Political, and Moral Advantages of Rail-roads and Locomotive Vehicles.

At a crisis like the present, when England is labouring under pressure of a redundant and starving population, the subject which we are about to treat upon comes recommended with a peculiar emphasis. The substitution of an inanimate for an animate power, by which an increase of food equivalent to the comsumption of sixteen millions of mouths--which is equal to the addition of a territory double in extent to that of Ireland—possessing all its natural resources and fertility, without the drawbacks of an unmanageable population, is a project, which bears on its surface, not the interests of a handful of individuals—a class of society—or branch of trade—but of the whole nation. How fortunate then is it, that it further comes with the recommendation, of not presenting itself in the doubtful guise of an expedient speculative question—but as a plain, practical, demonstrable matter of fact, relizable in operation, and determinate in result. This will appear in obvious sequence from the unvarnished facts which we now, in detail, proceed to adduce as proofs and illustrations of the truth of our position. In a great complex question of this kind, involved, not in theory but in what is equally disadvantageous, the suspicion and doubtfulness of a novel project,—where all the results lie so far beyond the ken of a bird's-eye estimate,—which is to trench in so many respects upon the selfish relations of "slaughter-house" capitalists,—and is to equalize the permanent prosperity of the multitude to the temporary inconvenience of the few,—it must ever be borne in mind, that to whatever point of detail we direct our attention, we shall perceive but a very limited view of the benefit, as a whole, which is to arise from the introduction of this grand agent, when it shall be properly economised, and brought to bear in full operation upon the varied transactions of daily life. We shall therefore confine ourselves to a cursory estimate of a few of the leading *Commercial, Political,* and *Moral* advantages which will accrue to our country by the substitution of inanimate or steam-power for animate or horse-power, for locomotive purposes: leaving it to the enterprising and reflective to revolve the mighty amount of practical good which it may be made to subserve, if taken up, as it ought, as a national measure. In a great commercial country like that of England, extending its ramifications to every branch of natural and artifical produce, it is almost superfluous to remark that a vast capital is sunk annually in the mere transport of marketable commodities: and which is not only a loss to the seller as being an unproductive outlay, but entails a heavy increase of expense to the buyer also upon every article of daily consumption. Any means, therefore, that will accelerate the conveyance, and at the same time reduce materially the expense of carriage, bears upon its surface a great public gain.

Expeditious locomotion, to the commercial

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

world more particularly, in every mercantile transaction, is equivalent to capital: and such is the vast importance of economy of time here, that no extra expense is considered as too great to accomplish the utmost speeds. We have this practically illustrated in the preference which society gives to a complicated machinery but into motion at an enormous expense, to travelling by the wings of heaven which cost nothing. Nay, we have lately heard of the speed of eight miles increased to nine, though purchased at an addition of *one-third* of the original outlay; and that again accelerated to ten, though it could only be effected by *doubling* the whole cost! To the merchant, time gained is equal to money: for time occupied in travelling is just so much profitable employment lost. Time occupied in the transport of goods is equivalent to so much interest of capital spent: for a thousand pounds invested in merchandise is unproductive so many days as the transport is tedious. That part of the capital of an individual which is employed in the carrying of his goods to and from market, is so much abstracted from his means of producing more of the article in which he exerts his ingenuity and labour, whether it be in agriculture or manufacture. Easy communication lessens the time occupied in the transport; and a saving of time lessens the distance, or our notion of distance.* This effects a saving of money; and a saving of money permits of a greater employment of capital.

The substitution of inanimate for animate power, if not the panacea which is to cure all the evils of our condition, is at least one that comes recommended as a matter of fact—easy of operation, and effectual in its result. If want of food, or, in other words, redundancy of population, be the bane of the country, it does not propose to meet that evil by a visionary project tending in its operation to unhinge society—tedious in its process, and ending at length in bitter disappointment—but it meets the evil directly, substantially, and effectually, by the substitution of food. It does not raise a cry of *bread, bread*, and conclude by giving a *serpent*; but by the application of elementary for physical power, it creates an economic principle, such as philanthropists never dreamed of; which, if not the feigned philosopher's stone, to convert all that it touches into gold, is a power in nature equally beneficent, since, besides its being real, it can change poverty into comparative affluence—starvation into subsistence—disease into health—misery into comfort, and vice into virtue. And how are all these immense advantages to be effected?—By the substitution of inanimate for animate power. At present, the animate power employed in the commercial transportations of England, is estimated to mount to two millions of horses: each consumes as much food as is necessary for the support of eight men. Hence the conversion of its consumption to purposes of human existence would, if carried to this practical extent, amount to a quantity of food equal to support sixteen millions of people.

The suppression of the stage-horses upon the principal thoroughfares, and of the dray-horses in the great commercial towns, may be calculated to economise a saving of food equivalent to the supply of the above number of human beings. It is perhaps, not superfluous to remark, that the amount of food, equal to the supply of the said four millions, is not the produce of an extended agriculture and proportionate outlay, but is just *that part* of the annual produce of the country, subtracted from the whole, which is at present required for the mere purpose of *transportation*—i. e. to feed the animals used for draught,—and is consequently a dead loss as unproductive capital. In addition to the evil arising from such a consumption of unproductive food, is also to be considered the very great loss consequent upon the heavy capital sunk in *horse* purchase. Were this viewed, as properly it ought, as money withheld from other purposes of trade, and which might be more advantageously invested, our capitalists and men of science would not oppose the substitution of inanimate for animate power in the way they have done. Neither, did the landed interest maturely weigh the varied benefits it will produce in agriculture, would they view it in the light of an invasion upon their respective interests. They do not give a *quid* without receiving a *quo* every way as valuable. The reduction of farm consumption—the bugbear of the project—will be met and compensated by a steady and proportionate demand from other quarters. Whilst in England's United Kingdom, the 8,100,000 acres of land now required to feed the horses, together with the capital sunk in their purchase, will, when both applied to other and general purposes, amply compensate for the exchange. In order more readily to show one effect, let the horses be considered only 1000; a smaller number may not make the argument so difficult. Let us reduce *this* number,* and the farmer may then turn his oat-ground into wheat-ground; and instead of so much land being employed to furnish food for a thousand horses, the same land, when turned into tillage fit to sow wheat upon, will produce sufficient bread-corn to feed two thousand poor families. Again, if instead of 20,000 horses, we keep 30,000 fat oxen, butchers' meat will be always cheap to the operative classes, whilst the quantity of tallow will of course make candles cheap: and so many hides lower the price of leather, and of shoes and all other articles made of leather. Or the same quantity of land may then keep thirty thousand cows, the milk of which will make both butter and cheese cheaper to the poor, as well as the labouring manufacturer; all which articles are very considerable, and of material moment in the prices of our manufacturers, as they, in a great measure, work their trade to rise and fall in price, according to the cheapness of their materials and the necessaries of life. The same may be said in favour of more sheep and woollen cloths. We have said, a horse consumes, on an average, as much as eight human beings. England is burdened with poor (in want of food), so much so, that an evil is resorted to, to ease the burden; and the strongest and ablest of the peasantry are encouraged to emigrate. Her political strength is thus wasted, while the prospect that eventually these very men may meet us in battle array is avoided in the search for present ease. Whilst, therefore, there is a remedy really good and practicable unresorted to, it may in truth be said that the country depopulated for a "bestial herd."

In various departments of the revenue the saving of expenditure by the substitution of inanimate for animate power will also be immense. In the post-office alone, for instance, it will amount to upwards of half a million Whils', from the cheapness of food which the substitution will produce, the navy and army estimates will be most essentially reduced. The corn-laws are another evil which the adoption of this great measure will completely extinguish—not indeed by their repeal, but by what is much better, the necessity for their repeal no longer existing. Nor will corn alone become cheap and abundant, but all the necessaries of life will comparatively become equalized. No longer will local failures of crop expose remote districts to temporary visitations of famine and disease: but steam introduced will circulate the produce of the land in liberal profusion. Then the pilchards of the Channel will no longer be used to manure the bordering counties, when they can be eat *callar* throughout the North: nor will inexhaustless shoals of the herring depart untithed from Loch Fine, because no inland consumption holds out a bonus for their capture.

In conclusion. The actual casualties of stage-coaches, however, we may observe, bear no proportion to the loss of lives from consumption and other diseases occasioned by cold and wet, from exposure on the top of coaches. Let us consider also how far humanity is outraged by the present system of quick travelling. The short average life of stage-coach horses (three years only!) shows how dreadfully overwrought and *out-wrought* they are by the great speed now in practice. Driven for eight or ten miles, with an oppressive weight, they tremble in every nerve. With nostrils distended, and sides moving in breathless agony, they can scarce, when unyoked, crawl to the stable. 'Tis true they are well fed; the interest of their owners secures that. They are over-well fed, in order that a supernatural energy may be exerted. The morrow comes when their galled withers are again to be wrung by the ill-cushioned collar, and the lumbering of the wheels. But we do not witness all the misery of the noble and the generous steed. When the shades of night impend, the reproaches of the feeling, or the expostulations of the timid, traveller no longer protect him from the lash; and the dread of Mr. Martin's act ceases to effect for a time its beneficient purpose; when the stiffened joints—the cracked hoofs—the greasy legs—and stumbling gait of the worn-out animal, are all put into agonized motion by belabouring him *upon the raw!* The expression is Hibernian, but the brutality is English. A few ill-gained pounds reconcile the enormity to the owner—and the cheapness and expedition, of the conveyance give it public sanction: but humanity is outraged by the same: human sympathies are seared; and the noble precept that "the merciful man is merciful to his beast," is trampled under foot. Thus then, by substituting elementary for physical power, we have comfort for comparative inconvenience—the inside of an elegant apartment, where books amusement, or general conversation may occupy agreeably the time—for the outside of a hard, unsafe stage conveyance, and exposure to all changes or varieties of atmosphere. Nay we see no reason to prevent such improvement in steam-carriages as shall fit them up like steam-boats, the campaigning carriage of Napoleon, or the travelling long coach of the present Duke of Orleans, with beds, and a furnished table. We have besides safety for danger—accelerated speed without inhumanity—gain of time—of accommodation—of money—and over and above all, as a non-consumer of food, we have by the substitution what will remove the host of Malthusian ills to a period of almost indefinite duration.

SELECT NOTICES.

Public Charities.—A patriotic individual at Bristol, has, after great research, ascertained that the trustees of one of the charities in that city, are indebted to it in no less a sum than £40,000!—*Food and Poison.*—"Horses," says Mr. Barnett, (in a recent lecture delivered at King's College,) "will not touch cruciferous plants, but will feed on the reed grass, amidst

---

* The Liverpool and Manchester rail-road Co. has reported this result:—

Passengers entered in the Company's books during the half-year ending 30th June	188,726
Ditto, ditto, ending 31st December last..	256,321
Increase	67,595

Being upwards of 33 per cent. increase of the first six months of the year, and upwards of 135 per cent. increase on the travellers between the two towns during the corresponding months previously to opening the railway,

* It is worthy of remark, that when private carriages became common in Britain, an act was passed to prevent the too great adoption of these vehicles, *lest the horses should consume the food of the poor.*

abundance of which goats have been known to starve; and these latter again will eat and grow fat on the water hemlock, which is a rank poison to other cattle. In like manner, pigs will feed on henbane, while they are destroyed by common pepper; and the horse which avoids the bland turnip, will grow fat on rhubarb, and take a drachm of arsenic daily."——*James Watt.*—The public statue erected in Westminister Abbey, to the memory of the late Mr. Watt, has just been opened by the Committee.——*Sir S. Raffles.*—A statue in memory of Sir Thos. Stamford Raffles, has also been erected in Westminister Abbey.——*Dr. Adam Clarke.*—A Public Meeting has been held in London, under the patronage of the Duke of Sussex, for erecting a public monument as a memorial of the late Dr. Clarke.——*Indian Coffee.*—Dr. Strong has succeeded in raising a marketable coffee, about 5 miles from Calcutta. The secret of Dr. Strong's success is, in cultivating his plants *in the sun, not in the shade.* ——*Eggs.*—It appears from official statements, that the eggs imported from France amount to 60,000,000 a year; and supposing them to cost at an average, 4d. per dozen, it follows that the people of London and Brighton, pay the French above £83,000 a year for eggs; and supposing that the freight, importers, and retailer's profit, duty, &c. raise their price to the consumer to 10d per doz. their total cost will be £213,000.——*Ancient stature of Man.*—According to calculations made in 1718, by M. Henrion, a French Academician: Adam was 123 feet 9 inches in height; Noah, a little more than 100 feet; Abraham 28; Moses 30; Hercules 12; Alexander 6; and Julias Cæsar less than 5.

The East India Company's Ships.—Their safety is such, that since 1806, that about 500 of these superb vessels, which seem to

'Walk the waters like a thing of life,
And dare the very elements of strife;'

have been employed in bringing home tea from China, yet only *one* has been lost (the Ganges); she foundered in a dreadful gale off the Cape of Good Hope; had been built with scantling unequal to her size. and hastily and imperfectly repaired at Bombay, after springing a leak.—*R. M. Martin.*

Law Charges,—The following table will shew the enormous expense to which the late Warren Hastings was subjected by his trial:

Mr. Shawe, the solictor's, bill, and interest, - - -	£66,080
Mr. Smith's bill, - - -	3,500
Messrs. Law, Plumer, and Dallas, for drawing answers to the articles of impeachment, - -	1,500
	£71,080

A Conscientious Barrister.—Bishop Burnet describes the practice of Lord Chief Justice Hales, when a Barrister, thus:—'If he saw a cause was unjust, he, for a great while, would not meddle further in it, but to give his advice that it was so. If the parties, after that, would go on, they were to seek another counsellor, for he would not assist in acts of injustice.'

Best Kind of Clothing.—The only kind of dress that can afford the protection required by the changes of temperature to which this climate is liable, is woollen. Nor will it be of much avail that woollen be worn, unless *so much* of it be worn, and it be *so* worn as effectually to keep out the cold. Those who would receive the advantage which the wearing of woollen is capable of affording, must wear it next the skin; for it is in this situation only that its health-preserving power can be felt. The great advantages of *woollen cloth* are briefly these: the readiness with which it allows the escape of the matter of perspiration through its texture—its power of preserving the sensation of warmth to the skin under all circumstances—the difficulty there is in making it thoroughly wet—the slowness with which it conducts heat—the softness, lightness, and pliancy of its texture.

Cobbett on Egotism.—A stupid publication called the Westminster Review, set up about six or seven years ago, began, from its very start, to hold forth Jerry Bentham "as the greatest of law-givers and the greatest of men." It was, and has been, conducted principally by that Bowring who is called a doctor, and who is not half so legitimate a doctor as Dr. Black. Bowring was the editor at any rate and Jerry Bentham the hero of the work. The appellation commonly given to Bentham was, "The Great Bentham." Well, great as Jerry was, death smote the great at last. He made a will, which Bowring was stupid enough to publish, and, from that will, it appeared that Jerry was and always had been, the proprietor of this Westminster Review! Out then came the fact, that this miserable queer old coxcomb had either been calling himself the "Great Bentham" for seven years; or, which was worse, had been paying a base hireling for doing it!—That was "egotism," indeed; that would cover the name of Bentham with everlasting infamy if it were not screened from our recollection by the total insignificance of the incomprehensible conundrums that he was continually putting upon paper.—*Register of October the 6th.*

Eastern Coast of Africa.—It is a melancholy sight to visit the Portuguese settlements in Africa, Mosambique in particular; they are indeed Pandemoniums on earth. Wretched as the Portuguese offspring are in India, they are ten thousand times worse in Africa.—*R. M. Martin, of the Leven and Barracouta.*

Speed in Sailing.—In 1829, two of the E. I. Company's ships sailed from the Downs within *two hours of each other*, and in 86 days they both made the Sand-heads at Calcutta, within *four hours*, without having sighted each other during a voyage of 15,000 miles!

A Patent Medicine Man.—In a late batch of American patents, we observe one to a certain Joseph Baker, for "an improvement in medicine;" which shows, that in America as elsewhere, ignorance and quackery go hand in hand. The following are literal extracts from this mountebank's specification of his precious "improvement" A mode of *prepareing* and compounding medicine for an emetic, and *al so* to *cous* a free *pers piration* to be administered in diseases *coused* by cold and *ob structed per spiration*, such as *fevurs, rumatis,* dysentery, dropsy, *consumption, pleurisys,* boldheves (?) and all stagnated complaints, with some others." * * "When the violence the *diseas requiers* a speedy *remady,* and Nature calls for an emetic," &c. "give a dose of powders of the whole *compasition*" ("*sinaca* snake root," "*sulfer*" "*brim stone pul ferised,*" &c. &c.) "But, let it be well remembered that Nature is the *Grand Phesition,* and *wee* are only to assist her in *removeing* the *ob structions* that *is* found in her way as far as is in our power, and that *whe* should pay *petickler atention* to her *clames,* and try to supply her wants if *posable!!!*"

WHIMS AND ODDITIES.

What is wit?—Wit is a two-edged sword,—sharped and polished,—and of course of a good *temper.* It is not every *blade* that's a wit—for many even lack a *point,* who in their own opinion are particularly *sharp.*

CHARADE.

Oh! say *what is wit?* and express *in one line,*
What philosophers covet, but cannot define;
'Tis a *Letter in study,*—a letter *in motion,*—
A letter in *flames* will illustrate my notion;—
'Tis also a letter that *pours through the choir,*
In cadence, the hymns our devotions inspire!

ANSWER.

When wit with good-nature is strictly combin'd,
What charms it conveys to the elegant mind!
And thus *in one line* (without soaring or ranting,)
'Tis A *musing,*—B *coming,*—D *lighting,*—
N *chanting!*

Question.—Would a *sloth* become active if fed upon hasty pudding.

Ans.—Yes, if it moved him to the *quick!*

Ques. Can a *Negress* be "a blue?'

Ans. If she work in the Indigo plantations.

Ques. Does a ship in stays suffer from tight lacing?

Ans. Yes, if her *waist* be strained.

Ques. How well is—"as well as can be expected?"

Ans. Frequently much *better* than is wished.

LACONICS.

Matrimony is properly called a *tender* point, for a hand is not unfrequently awarded to the largest *tender.*

Those damsels who admire mustachios, must be insincere in saying, they dislike *hare-lips.*

When people have *red hands,* they should always play at *loo,* as every thing is gained at that game by a *palm flush.*

In classing birds, we should say weather cocks are meant for the *church;* but *hens* are decidedly the *lay* subjects of the state.

The baker who mixed saw-dust with his brown bread, meant that those who eat a great *deal* should use *plane* food; and to give them humility, they were forced to bite the *dust.*

It is ridiculous for a *Doctor of Divinity* to play the *violin,* because he thus becomes a "*fiddle D. D.*"

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

THE SOUTH AFRICAN COLLEGE.

I. ANNUAL EXAMINATION.

The annual examination of the pupils of this Institution, previous to the Christmas recess, took place in December. Sir John Wylde presided, and distributed the prizes. The progress of the scholars was as great as could be expected. The teachers appear to have performed their prescribed duties with zeal and fidelity. We wish we could say as much for many an over-indulgent parent who, consulting the whims and caprices of their boys, frequently take umbrage at that proper discipline which the masters are bound to enforce. Youth ought to have no choice but to obey the judicious commands of their seniors, which will always afford more *lasting* pleasure than following the 'devices and desires of their own hearts.' The practice of giving prizes, or bestowing rewards on the most deserving boys at school, is very old and very general, and when bestowed with judicious *impartiality* it becomes an excellent means of stimulating to industry and conquest. Without an impulse a boy would fall asleep at his desk, or become a mere machine without a motive force. In fact, a being without desire,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

is generally a very idle, sluggish, useless creature—a creature that is inferior to the Sloth in ability and activity. As to *impartiality* in giving prizes, we confess there is some difficulty in the case. It often happens that masters or principals have their favourites, and therefore suffer their regard towards some to prevent justice to others. It often happens that a school or college is badly arranged, the classes being ill sorted and too numerous—ill sorted in respect of too wide a diversity of talent and age, and too numerous in respect of the number of prizes. In any of these cases prizes, in the end, lose the chief part of their intended effect, where students not very far advanced have to contend with those whose studies have been more lengthened than their own. Where many contend and few are successful, emulation ceases in the hopelessness of a reward, and the mind becomes sluggish through multiplied disappointment. But a word of advice to the unsuccessful candidate. Prizes awarded are not always a proof of merit in the individual who may happen to procure one. There is a higher ambition more worthy the diligent youth, —and a nobler reward too. There are the glow of excellence, and an admiration of talent, that may be kindled in the youthful breast, that will expand into a love of virtue and knowledge for their own sakes, and they can neither be rewarded by, nor satisfied with, any tangible remuneration that man has in his limited power to confer.

II. *Report of the Council, Senate, and Ballot for new Members of Direction.*

The Report of the Council alludes to nearly 300*l.* of out-standing claims arising from shares and fees!! An additional fee of one guinea is to be charged in future to those who enter the classes in which astronomy and other branches of philosophy are taught. This is considered necessary in order to purchase a pair of globes, &c. We think this charge greatly too high. Cheap education is the professed object of the school, and the price of the globes could be disbursed from the collections which are made for what is called—a college library.

As it regards the Report of the *Senate*, we scarcely know what to say. It is evidently got up to prepare the shareholders for certain contemplated departures from the original Prospectus. This appears to us to be extremely unwise, and may lead to much confusion. Did the Council sanction this report?—we ask for information. The document of the Senate states, that "the progress and discipline of the junior classes have not been commensurate with those of the senior divisions." How is this?—when a junior boy begins with A, it is surely rational enough to expect that he will soon conquer B, C, and D, and all the family branches. There can be no standing still or retrograding, one would think. But we can furnish the reasons of this alledged deficiency on the part of the junior classes. The *changes*, the repeated changes in these classes, have produced the evils complained of. The novice, the refractory, and the stupid, have come in to these classes from time to time, whilst every bud of promise, every first fruit in these divisions, have been plucked and transplanted to the higher ones; and the truth is, the lower classes could never be matured into well ordered discipline under such a system. We think that any attempt to dispose of the assistants, will be detrimental to the prosperity of the Institution, at the same time, we may remark that a schoolmaster, be his rank or *order* in the school what it may, should be as intimately acquainted with the *mind* of a pupil, however juvenile, just in the same way as the medical practitioner studies the constitution of his patient from infancy to riper years. It is well to watch over the buddings of intellect—to foster the

'Dim dawn of reason's coming day.'

The Report alludes to the hardships of the "mere drudgery of elementary teaching." Now we have seen this work in the hands of the honorary teachers of village Sunday schools, become a "delightful task:" it is true, these schools have rewarded the teachers in their practical results, in a ten-fold degree beyond those diurnal ones of greater pretensions.

One thing respecting the College has given us concern. It is reported that it is to be supplied by an endowment from Government. We like endowments in themselves, but we are concerned for the *principles* and *consistency* of the friends and advocates of the Cape College. Its glory *was*, and it has been proclaimed from

'Indus to the Poles.'

that it was an institution wholly independent of Government—a foundation by *the people!* and which, like a certain plant would have

'Hung down its beautiful head'

had Government ventured to have touched its sensitive nature. In fact, its success was hailed by illuminations, sermons, orations, pamphlets, music, midnight orgies, and processions equal to the 'joy of harvest'—

"We have ploughed,
We have *sowed*,
We have reaped,
We have mowed,
N'er a load overthrown,
Har—vest— HOME!"
Was the burthen of the song.

Let the College beware of the *mammon* now offered by Government!—let Achan and the *wedge of gold* be in everlasting rememberance.

III. THE BALLOT.

"Peace be to the worst enemy I have in the world," said a good man who once held some prominent situation in life's busy scene. And so ought the individuals *professing* attachment to the College to have thought, when they entered the precincts of a building hallowed to the instruction of the coming age. It was not the place to exhibit fierce resentments and angry passions—the blind fury of unreflecting minds, engrossed by their own selfish sensations. In making these observations, we mean no indiscriminate censure. There were at the meeting a large majority of Cape worthies, as well as a goodly number of our own countrymen, to whom may be applied similar encomium. And these individuals did their duty—they beheld the savage fury of a factious coterie at work to dispossess a gentleman (the tried friend of the College,) from his seat in the direction, hence their counteracting and successful efforts in causing the enemy to *lick the dust.* And the why and the wherefore of this party opposition, is simply—that the object of its venom had dared to *think for himself,* and as a public writer, had administered even-handed justice to the whole of our polyglot Cape Family in contradistinction to the views of the men of *short-weight* principles.

We sincerely congratulate the College on the choice again made of Mr. Fairbairn, as one of its Directors—well had it been for certain other institutions had *purity of election* prevailed and a similar course adopted. Where is the intellectual, scientific, literary, and philanthropic *fitness* apparent in many of the persons elected to serve as office-bearers in our public institutions? The public mind is the creation of the public writer, an axiom as demonstrable as any in Euclid, and a principle as sure in its operation as any in mechanics. The writer in his study, has often created an epoch in the annals of mankind. While Britain retains her awful situation among the nations of the world, the "Sylva of Evelyn" will endure with her triumphant oaks.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

quire at the Admiralty how the fleets of England have been constructed, and they will tell you, that it was with the oaks which the genius of Evelyn planted!

CAPE GRATITUDE!

An Impromptu, on reading the following paragraph in the ZUID-AFRIKAAN of the 4th January, 1833.

"WE HAVE TRUDGED THROUGH A WRETCHED YEAR!!!"

(Zuid-Afrikaan, 4th Jan. 1833.)

1.
Our *vallies have stood thick with corn*,
Our orchards have teemed with fruit;
Cornucopia's plentiful horn
Hath blessed Man, fowl, and brute.
(We have trudged through a wretched year!)

2.
Our mountains exalted on high,
Each hill-side and pastoral vale,
Have rejoic'd in the lowing of *kie*,
And proclaimed prosperity's tale.
(We have trudged through a wretched year!)

3.
All around have the flocks in array,
Whether sheep-kind, or oxen, or *paard*,
Caus'd the prospect to laugh and look gay,
Bringing wealth to the Farmer and *Laird*.
(We have trudged through a wretched year!)

4.
New roads have adorned our land,
We can speed o'er the mountains untir'd,
Without dread of the ruffian's band,
Or the bush-ranger's dead weapon fir'd.
(We have trudged through a wretched year!)

5.
New dwellings of comfort around,
Have bespangl'd this highly blest land,
And the tiller's good work has been crown'd
By Success on the labour in hand.
(We have trudged through a wretched year!)

6.
No floods, nor tornadoes, nor blight,
No pestilence, famine, or war,
No plans to take *right* by a *might*,
Vide! *some folks* and *House of Nassau!*
(We have trudged through a wretched year!)

7.
O'er our sea-marts has Commerce unfurl'd
With all her extensive supplies,
The banners and flags of the World,
And the products of rich merchandize.
(We have trudged through a wretched year!)

8.
We have paid off a debt that was due,
We've unbondaged the poor ab'rigines,
And next, swarthy Slave, as for *you*,—
We hope in your unfetter'd chains.
(We have trudged through a wretched year!)

9.
Our churches and altars have stood,
And fresh institutions arise;
For *ane* and for *a'* their's a good,
Outlasting the earth, sea, and skies.
(We have trudged through a wretched year!)

10.
And ye, poor Caffer! poor child
Of the desert, the mountain, and *vley*,
Even *you*, so romantic and wild,
Hear the "good news" of Mercy's essay.
(We have trudged through a wretched year!)

11.
The chapel-bell call'd you awhile,
Away from your sluggish repose,
Now—behold the rude *desert to smile*,
And '*blossom and bloom as the rose*.'
(We have trudged through a wretched year!)

12.
Our Laws have been wholesome and just,
Our *Vines* and our *Fig-trees* to aid,
Under which we could sit in full trust—
'*None daring to make us afraid*.'
(We have trudged through a wretched year!)

13.
The Savings' Bank—pride of the land,
Philanthropic, and Infant School lays,
These steadily march *hand-in-hand*,
And prophecy e'en better days.
(We have trudged through a wretched year!)

MORE ABOUT THE HAMS!

At a late meeting of the Agricultural Society, a gentleman produced several Hams cured on his estate in the country. They were deemed super-excellent by the judges, but certain other *Great Unmentionables* overturned the tables, and voted in favour of one of the Cape Town Butchers. Mark the sequel. These Prize Hams, or such of the lot as have been tried, have proved uneatable! The individual to whom merit was *first* awarded but afterwards withdrawn, was not a *competitor* with the Butcher, and the *Press* has erred in taking it for granted, that he was such. The Agricultural Society should be fully sensible of the *motives* which induce gentlemen to support so laudable an Institution.

LICENSED HOUSES.

A Correspondent enjoins us to mark the signs of the times, and asks "if the regular government of the colony feels itself disposed to aid the Temperance Society, and thus advance the real interests of the people committed to its trust?" He, moreover, turns into ridicule our remarks on the Plumstead Village, assures us that there are "no less than seven canteens in the hamlet of Wynberg, new ones starting on every hand on the Rondebosch Road, and, moreover, at Plumstead and other places, under the fostering care [as he says,] of the Patron of the Plumstead Village itself." Surely this is scarcely correct, and, surely, Government will not grant indiscriminate licenses to such an alleged extent; If so, good people!—

"Drink and be mad then; 'tis your country bids!
Gloriously drunk obey th' important call!
Her cause demands the assistance of your throats;—
Ye all can swallow, and she asks no more."

The above quotation from our admired Cowper, reminds us of an odd affair some few years since. For inserting it in a colonial newspaper, WE were summoned before a Magistrate on the charge of libel against Government!!!

LITERATURE AND SCIENCE.

Dissertati Medica Inauguralis de Colica Saturnina, &c. &c.

WE were recently at a very pleasant meeting in St. George's-street, when the subject of our schools, colleges, and colonial system of education was started and freely discussed. Against the ridiculous assertion, that *now* we could procure as good an education at the Cape as in Britain, we happily formed an overwhelming majority and cut up the enemy root and rhind. Visiting the Public Library the next day, we were delighted on turning over its varied treasures of new supplies, to find a spirited pamphlet, (entitled as above,) written by an intelligent Cape youth—*Mr. Peter Chiappini*, on obtaining the degree of M. D. in the University of Edinburgh. So much said we, for *foreign travel!*—seeing the world! How much does a Cape youth improve by transplantation! How enlightened does he return after a while to his native country! What a world of prejudices has he lost! How liberal in sentiment! How disposed to hear both sides of a question! And, how prepared to criticise, and listen to criticism with all the freedom of the intellectual man! But to the little work before us.

Although medical subjects do not immediately comport with our province, and incompetent as we are, to decide on their merits, yet we are bound to observe in the present case, that this maiden treatise of Mr. Chiappini, has gratified us in no common degree.—1st, as being the scientific production of a highly respectable native of the colony; secondly, as savouring from the language in which it is written, of the lamp and classic lore, and, lastly, in respect of the intrinsic merits of the question which it so ably discusses.

However uninteresting such a publication may be to common readers, yet there are a few suggestions in it of general importance. For instance, after stating that the disease called *colic*, is frequently produced by inhaling the vapours of lead, and, therefore, most prevalent among painters, printers, and artificers, whose occupations oblige them occassionally to handle it, or its various preparations, the author proceeds to state, that many persons have been attacked by colic, *from incautiously sleeping in rooms newly painted*,—we quote his words as a salutary warning. (page 8.)

"Porro, vapor ortus in cubiculis quorum parietes nuper pigmentis explumbo confectis adornati fuerant, haud raro lethalum Colicam Saturninam excitavit in homiinibus qui ibi temere dormiverant."

Many examples are also cited of the disease being produced by the vegetable acids, and a reference is made to its influence in Devonshire, where the manufacture and consumption of cider is proportionably great.

After taking an able view of the Diagnosis, Prognosis, and other characteristic marks by which to appreciate the danger of the disease, Mr. Chiappini proceeds to prophylaxis or method of cure, in which, among all the usual means and remedies in use, we perceive that some new medicines under the authority of Roberts and Pemberton, as Iodine, and the Nitrate of Silver are

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

recommended, at the same time with precautionary admonition against their indiscriminate application.

In conclusion, we rejoice exceedingly, viewing as we do, a good deal of ignorance and quackery in some of our colonial medical arrangements, that in the instance before us and others in embryo, an intellectual day is about to supersede the *ignorance* to which we allude. These are not harsh sayings on our part: let the reader learn the state of medical attainments *in England* in our present Number; being an extract from a recently-published article in the Medico-Chirurgical Review. Let us clear as we go,—and let it not be understood for a single moment, that we undervalue that portion of pre-eminent medical talent which is happily conspicuous at the Cape.* What we mean is, that there is much counterfeit coin among the genuine metal; that there is a great deal that is paltry and *half-educated* among our professionals.

Lastly—this little work is very properly dedicated to kind and anxious parents. Young reader! mark this:

"Parentibus Optimus Carissimis,
Hanc Dissertationem
Summo Cum Amore Et Reverentia
Consecrat
Filius."

REFLECTIONS ON WITNESSING A LATE EXECUTION IN CAPE TOWN OF TWO BROTHERS.

Our law is the christian law; and if christianity by its precepts or spirit prohibits the punishment of death, it cannot be made right to christians by referring to a commandment which was given to Noah. There is in truth some inconsistency in the reasoning of those who urge the 4th, 5th, 6th of the 9th of Genesis, each containing a law delivered to Noah. Of these three laws, we habitually disregard two; how then can we with reason insist on the authority of the third.† The only end which is consulted in taking the life of an offender, is that of example to other men. His own *reformation* is put out of the question. And yet if we recur to the precepts and the spirit of christianity, we find that the one great pervading principle by which it requires us to regulate our conduct towards others, is that of operative, practical good will,—that good will which if they be in suffering, will prompt us to alleviate the misery; if they be vicious, will prompt us to reclaim them from vice. That the extreme wickedness of the individuals exempt us from the obligation to observe this rule, it would be futile to imagine. It is by them that the exercise of benevolence is particularly needed. If we adopt the spirit of the declaration, "I came not to call the righteous but sinners to repentance," we shall entertain no doubt that the reformation of offenders is the primary business of the christian magistrate or judge in devising punishments. Now, if reformation be the primiary object, and if the punishment of death precludes attention to that object, the punishment of death is wrong.

To take the life of a fellow-creature, is to exert the utmost possible power which man can possess over man. It is to perform an action the most serious and awful which a human being can perform. Respecting such an action then, can any truth be more manifest than that the dictates of christianity ought especially to be taken into account? If these dictates are rightly urged upon us in the minor concerns of life, can any man doubt whether they ought to influence us in the greatest? Yet, what is the fact? Why, that in defending capital punishments, these dictates are almost placed out of the question. We hear a great deal about security of property and life, a great deal about the necessity of making examples,—but almost nothing about the moral law. It might be imagined, that upon this subject our religion imposed no obligation; for nearly every argument is urged in favour of capital punishments, would be as valid and as appropriate in the mouth of a pagan, as in our own. *Can* this be right? Is it conceivable, that in the exercise of the most *tremendous* agency which is in the power of man, it can be right to exclude all reference to the expressed will of God?

Reader! (and remember you are now the Judge,) is not the exclusion of the christian law from the defences of the punishment, a conclusive argument that the punishment is wrong? No thing that is right can need such an exclusion. Where then is our pretension to a justification of our own practice? It is a satisfaction to the unshackled mind, that so many facts and arguments are before the public, which show the inefficacy of the punishment of death. "There are no practical despisers of death," observes the eloquent Edward Irvine, "like those whe touch, and taste, and handle death daily, by daily committing capital offences. They make a jest of death in all its forms; and all its terrors are in their mouths a scorn. Profligate criminals, such as common thieves and highwaymen, have always been accustomed to look upon the gibbet as a lot very likely to befall them. When it does fall to them, therefore, they consider themselves only as not quite so *lucky* as some of their companions, and submit to their fortune without any other uneasiness than what may arise from the fear of death." Again, as to the terror of example, it is very generally rendered abortive by the *fatalists'* notion, vulgarly prevalent among thieves, that, if they are to be hanged, they are to be hanged, and nothing can prevent it. But if capital punishments do little good, they do much harm. The frequent public destruction of life, has a fearfully hardening effect upon whom it is intended to intimidate. While it excites in them the spirit of revenge, it seldom fails to lower their estimate of the life of man, and render them less afraid of taking it away in their turn by acts of violence. This is just what a consideration of the principles of the human mind would teach us to expect. To familiarize men with the destruction of life, is to teach them not to abhor that destruction. It is the legitimate process of the mind in other things. He who blushes and trembles the first time he utters a lie, learns by repetition to do it with callous indifference.

There is much reason to believe, that our public executions have a direct and positive tendency to promote both murder and suicide. And how does it happen, that if a considerable time elapse between the trial and the execution, the severity of the public is changed into compassion? For the same reason that a master, if he do not beat his slave in the moment of resentment, often feels a repugnance to the beating him at all. Of a system which is thus unsound,—unsound, because it rejects some of the plainest dictates of the moral law,—and unsound, because so many of its effects are bad, we should be ready to conclude with no other evidence, that it was utterly inexpedient and impolitic,—that as it was bad in morals, it was bad in policy.

The argument then respecting the punishment of death, is distinct and short.

* The writer hopes he may be excused in making a distinct reference to the Drs. *Abercrombie* and *Laing*. In a concern of a broken body and crushed bones some few years since, he takes the present opportunity of acknowledging with gratitude those scientific means, which these gentlemen so assidiously devised, in effecting a perfect cure.

† Indeed it would almost appear, that even accidental homicide was thus to be punished with death; and if so, it is wholly disregarded in practice.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

It rejects, by its very nature, a regard to the first and greatest object of punishment.

It does not attain either of the other objects, so well as they may be attained by other means.

It is attended with numerous evils peculiarly its own.

THE SULTAN ABDALLAH AND FAMILY.

The following copy of a Letter from Prince Ali of *Joanna*, has been received by His Excellency the Governor of this colony; it unfortunately did not reach the Cape till very recently, having been forwarded in the first instance to England. The illustrious Sultan and suite mentioned in the letter, are at present in Cape Town, having arrived in the *Clairmont*. The persecutions which have befallen the worthy chief of the Comora islands, have arisen from his hatred and detestation of the infamous Slave Trade, and his faithful attachment to England. It is gratifying to learn that he has met with much countenance from the Colonial Government, and will shortly return to his people on board the *Isis*. Under these circumstances, permission has been obtained to give publicity to the present document.

TRANSLATION OF AN ARABIC LETTER ADDRESSED TO HIS EXCELLENCY THE GOVERNOR OF THIS COLONY, BY PRINCE ALI, AND THE PRINCIPAL MEN OF THE ISLAND OF JOANNA.

In the Name of the Most High God!

To the excellent, most worthy, noble, most noble, perfect Chief in God and his Prophet. May the peace of God and his help be with you, Amen.

And this is the beginning of our letter to you from the island of Hinzuan. Information and peaceful intelligence. And it informs you of an affair that has happened in the island of Hinzuan: we being witnesses.

A man of the name of Ramanatock, Vizier of Radama, Sultan of Madagascar, residing at Bembatooca, fled from the slaughter which ensued on the death of Radama, and with his wife, and a hundred armed men came to us, and told us, that, we being one with the English, with whom also he was in alliance, he had taken refuge to us, from his countrymen who sought to destroy him. Whereupon the Sultan Abdallah, Sultan of Hinzuan, received him, and gave him a house, and also land that he and his attendants might have provision to eat; but this kindness was shewn chiefly on your account. The Sultan Abdallah sent his Vizier to Bombay, to report on this affair of the Vizier of the Sultan Radama, and to solicit counsel, having in the mean time allowed Ramanatock to remain in our country. The Vizier of Sultan Abdallah returned from Bombay with letters, in which it was stated by the Governor, that intelligence of the settlement of the Vizier of Radama had already arrived from the Mauritius, but that we must wait for further information from thence. After this, the said Ramanatock purchased a vessel, before the arrival of intelligence from Mauritius, and begged of Sultan Abdallah to allow him to settle himself in the south part of the island, to which Sultan Abdallah consented, till he should receive intelligence from you. Ramanatock then took his vessel to that part of the island, and from thence sent it to the African coast, where he loaded it with slaves, without the consent of Sultan Abdallah and his people. And when the vessel returned to Hinzuan, the Sultan Abdallah asked him why he had purchased slaves, knowing that the English had prohibited the traffic, and that we were in their service, and subject to them? And Sultan Abdallah prohibited him from carrying on the slave-trade in our country; but this he did not regard; for he sent his vessel a second time to the African coast; and when the ship laden with slaves returned to Hinzuan, Sultan Abdallah commanded Ramanatock to leave the country of Hinzuan, because he refused obedience to the English and their allies: but he departed not, but endeavoured to disaffect the people who lived in the south side of the island, to whom he gave abundant riches, unknown to Sultan Abdallah and his chiefs. After this, a French ship came to the island of Hinzuan, and the French captain, and the above-named Ramanatock agreed together to attack Sultan Abdallah and kill him. but in this they did not succeed: all things are of God! Then the French captain and Ramanatock agreed together to drive Sultan Abdallah from the land of Hinzuan, and they resolved to bring a military force from Bourbon, their own country, in order to take the islands of Hinzuan and Mobillo by force. After this the Sultan seeing that the danger was becoming more and more imminent, called an assembly of all the people of the land, great and small; and they said unto him, be it resolved that thou leave the land of Hinzuan, and go to the English, and inform them of all that has happened here, and implore help of them, inasmuch as we are their subjects and allies. And therefore we implore of you that you would succour us with a military force to drive the above-named Ramanatock out of our country. Then with our universal consent Sultan Abdallah undertook a voyage, with the view of soliciting your aid. God decree that he may come to you, yea, that he may now be in some part of the British Dominions! For God's sake, for God's sake, leave us not without help in this state! May the affair be prosperous when Sultan Abdallah comes to you, for we are your subjects and allies. He is our desire; but should he not come to you, for God's sake, for God's sake, help us, and strengthen us with a military force to drive Ramanatock out of our country. Sultan Abdallah sailed in company with his four paternal brothers, his wife and his children, and he has left with us his youngest brother, Prince Ali, Son of the Sultan Alui, and we have constituted him successor to his brother, until our Sultan, the Sultan Abdallah, shall return to us. And we earnestly desire the help of the merciful God, and your help, to succour us, and to strengthen us, that we may regain our Sultan, our Sultan, the Sultan Abdallah, by the blessing of God, and also by your blessing. And we implore of God, and of you, to drive the above-mentioned man out of our country. You will certainly prevail against him if it be the will of the Most High, either by stratagem or by force, before he subdue us, oppress us, and take away our property. This we implore of you, because we are your subjects, and have been numbered with you from the earliest times even until now, and our alliance and obtained elevation would to you also be an acquisition. Verily in times past our fathers and ancestors experienced similar attacks and revolutions, yea, our fathers and ancestors from the wickedness of the Malagascees, and we also, your subjects, your friends, in like manner even as our fathers and ancestors. We inform you further, that the cannons, muskets, and ammunition, which have been given to us by the British for our defence have been taken away from us, so that we have but little remaining over. Surely we have been your allies, your subjects, your servants, and your friends, from former times to this day. And we implore that the object of our hope, may easily and soon be obtained from you, if Sultan Abdallah, who is our desire, come to you; but if he do not come to you, God, God grant that you may help and succour us, yea, readily and speedily, before injury and terror come over us. And we desire that you do not publish this affair, nor divulge it before you have assisted and succoured us, for if it be divulged, it would come to the ear of Ramanatock before you had succoured us and evil would come upon us from him: and if you do not help and strengthen us speedily, we ourselves, and our children, and our wives, and our property, shall be involved in destruction.

We lament exceedingly the absence of our Sultan, our Sultan, the Sultan Abdallah, son of Sultan Alui, the just and upright. To him be respect and provision, and honourable friends among all men!

This is what has happened to us. And this letter is from the hands of Prince Ali, son of Sultan Alui, together with his Vizier, and all the principal men of the land. Dated in the month of Raba Awal, in the year of the flight 1246, or corresponding with September, 1831.

MEMENTO MORI!

Thoughts suggested on finding a Grave in a solitary place at Kourboom, near Rondebosch, 20th Jan. 1833.

When in the thronged streets of cities gay,
Oft have I found a monitor, which seemed to say—
Amid' the passing-by of human glory
Mortal! ——— *Memento mori.*

E'en midst the noise and shout of revelry,
And all the *life* and circumstance of chivalry,
The *Church-yard* near, has told a *deadly* story,
Mortal! ———*Memento mori.*

And *where* the village scenes of peace and quiet,
Soothe the worn spirit far from boist'rous riot,
Or the world's boasted theme of *Whig* and *Tory*,
Behold! the warning voice ——*Memento mori.*

For *there*, the osier'd hillock, and the pompous tomb,
Tell in the *Church-yard* of one *common home*,
And "dust to dust" the sad history—
Mortal! O then, ———*Memento mori.*

And *here* amidst the haunts of solitude,
Away from cities, towns, and man's ingratitude;
Among the entangl'd wilds of nature's bowery,
The voice pursues ———*Memento mori.*

MATERIALS FOR THINKING.

They who have earnestly wished must have deeply doubted. There is no hope where there is no fear.—

"Come then a still small whisper in thine ear,
He never hoped who never had a fear."
(Cowper.)

The absence of fear or doubt leaves *certainty*. It is no paradox, though it may seem one, to say, that fear is an essential constituent of hope. Remove fear from the minds' workings, and what remains is something more than hope. Let in fear again, and the antagonist principle, which is called hope, comes at once to combat it. *They* have never panted after good, who have not feared evil.

LITERARY NOVELTIES.

There is at length a stir among the "dry bones." The *Christian Recorder* is again to pursue its "godly race." We hope it has "truly repented of its former sins." The *Quarterly Journal* is just awakened from a "good sound sleep." A new number may be daily expected. We can *readily enough* imagine the hustle this novelty is creating among the *literati* of "Lonyersplein." And, O! wonders upon wonders!—*A Half-penny Magazine* for the people is about to be started. We shall beat Lord Brougham and the *Diffusion* Society all to sticks!

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE VIII.—By ORLANDO.*

[THE FORMATION OF QUADRUPEDS—THEIR LINNEAN CLASSIFICATION INTO ORDERS AND GENERA—THEIR GENERAL QUALITIES—NUMBER—FOOD—ORGANS OF SENSE—VOICE AND FEELINGS.]

THE sixth stage or day of creation began with the formation of Quadrupeds, Insects, and Reptiles, which completed the animals which inhabit our globe. A natural division of Quadrupeds would be into the fierce and the gentle,—the wild and the tame,—the carnivorous, and those which feed on herbs and grass. Such a distinction exists in all the orders of animal life. Fish, Birds, Beasts, Insects, and Reptiles, have each a predatory and peaceful class; the latter always the most numerous—the former confined to particular objects of pursuit, but always now appearing as an inseparable part of the economy of our varied world in its present state. Yet, as geology teaches us that the present was not our earth's primeval state—as it has been confessedly altered in its planetary, rocky, animal, and vegetable relations and substances, and in its life-connected caloric—we have no right to affirm that the predatory tendency was the primitive law, or that either animals or man were, in their first condition, carnivorous. Their structure was prepared for this as their more lasting state; but we can live in other habits. Carnivorous animals, notwithstanding their adapted teeth, claws, and intestines, may be brought up on vegetable produce; as man can subsist wholly on plants, or wholly on flesh, as he chooses. The prophetic writers of the Old Testament indicate that this destructive anamoly is not to be perpetual. In the last ages of earthly being, when wars and vices, sin and evil, are to depart from human society, the predatory system is also to cease in all the animal kingdom. It may, therefore, have some connection with human immortality and its disturbing consequences, and with the new moral economy that was established after the Deluge. But putting aside for the present this curious subject of our more difficult contemplations, it is sufficient to know, that at least from the time of the diluvian catastrophe, to the age we live in, the quadrupeds of the earth have been in these two grand divisions, of the fierce or wild, who are all carnivorous—and of the gentler, the tame, and the domesticated, which are mostly graminivorous. Perhaps, originally, all of this class were so; for our Cat and Dog are rather two species of the wild, tamed into the gentle, than original natives of the pacific genera. The frame of each kind now corresponds with its present habits.

Linnæus has distinguished the quadrupeds of the earth into six orders, and added another for the cetaceous fishes; with the general term of mammalia for all, because they have all been created with the peculiar habit of nurturing their offspring in a manner similar to the human race. (1) These orders, subdivided into 48 genera, include above 800 species. The characters of the orders were taken by Linnæus from the number, situation, and structure of the teeth. (2) The mammalia are such animals as nourish their young by means of milky teats or paps. In their structure and various organs they resemble man. They are for the most part quadrupeds, or having four legs and feet. Along with us they inhabit the surface of the earth. The largest in size, though by far the smallest in number, are furnished with fins, and inhabit the ocean. The clothing of quadrupeds distinguishes them from the other orders of created beings. It is composed of soft, separate, flexible hair, little subject to injury, which is more plentifully bestowed on the inhabitants of cold regions, than on those which live in the warmer parts of the earth. This hair coalesces together on urchins and porcupines, to form spires or prickles. These are flattened on the manis into sharp pointed scales; and are united into a shelly coat on the armadillo. The fur is often divided by distinct ridges, as in the dog and horse; and these, on the horse and dog, are sometimes elongated into a mane. In aquatic quadrupeds the hair is altogether wanting, lest it should absorb the wet, except in such as are sometimes obliged to live on shore. The face of animals is frequently furnished with bristly warts; the lips with whiskers; the chin, as with man, apes, and goats, with a beard; the legs and breast, as in the hare and camel, are often provided with callosities. For the most part, their connubial association is transient, and often periodical. A very small number, as some apes, the macauco, the bat, and the urchin, pair together; a single male and female, entering into a monogamous society, and rearing their young ones by a joint concern.

The number of quadrupeds at all times on the earth is, as of the other kinds of animals, marvellously great, and exceeds the possibilities of human observation and enumeration. Of the 800 or 1,000 individual species which are now simulta-

* Delivered before the Members of the Poker Club.

(1) These orders are—1, Primates; 2, Bruta; 3, Feræ; 4, Glires; 5, Pecora; 6, Belluæ; 7, Cete.

(2) The genera of the mammalia are—

1, Man, ape, macauco, and bat.

2, The sloth, ant-eater, manis, armadillo, rhinoceros, sukotyro, elephant, walrus.

3, Seal, dog, cat, fitchet, weasel, otters, bear, opossum, mole, shrew, urchin.

4, Porcupine, cary, beaver, rats and mice, mermot, squirrel, dormouse, jerboa, hare, ashkoko.

5, Camel, musk, deer, giraffe, antelope, goat, sheep, ox.

6, Horse, hippopotamus, tapir, hog.

7, Narval, whale, cachalot, dolphin. Kerr's Linn. 31-33. Later Naturalists have made some additions and modifications.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

neously existing, many are very prolific; but in those which we domesticate, and which moderately multiply, the quantity is very large. (3) It will enlarge our conceptions of the general amount, if we advert to the number that in one province only of Europe were destroyed in a single year by one tribe of its predatory animals. (4) Similar inferences may be made from those which individual activity can obtain when stimulated to take them. (5) If the law of their serving for subsistence to others had not been placed in nature coincident with the law of reproduction, the power of the latter would have soon overwhelmed the globe with its astonishing exuberance.

The animals in the first Linnæan order usually feed on herbs, fruits, and roots; a few take insect's eggs and small birds; and the bats seek moths, gnats, and nocturnal insects. Some of the bruta consume insects and worms; but the great body, among which are the rhinoceros and elephant, live on vegetables.

The feræ are carnivorous. (6) The glires, or mice kind, generally subsist on vegetable food, though some add fish, and others birds and worms. The pecora use herbs and grasses. So the belluæ; though the swine tribe will eat anything. (7) The cetaceous fishes seek the insects and produce of the ocean. But the power which some quadrupeds shew of living without food, would lead us to inquire if, in a state of nature, the appetites of many are not more moderate in their general desires, with stronger urgency in particular seasons. (8) The pursuit in animals of prey, and the supply are so adjusted to each other, that the general harmony, course, and happiness of creation are never disturbed. Such is the fitted balance, that the husbandman frequently injures himself by destroying those which, on a partial view, he thinks injurious to him. (9) The consuming animals, the degree of their consumption, and the species consumed, are so precisely adapted to each other, that neither deficiency nor exuberance appear while the appointed operations of nature are unimpeded.

That animals have organs of sense corresponding with those of man, we all familiarly know. Both the dog and the wolf have an exquisite sense of smell. The cat and others can see in the dark. The racoon is peculiarly sensitive in both smell and touch. Others have a quickness of hearing superior to ourselves; (10) and some appear to be impressible by musical sounds. (11)

All the quadrupeds utter sounds of some sort or other, which they can vary into so many tones as are necessary to give vent to their feelings, to denote their wants, or to communicate with each other. Whoever attends to their poultry yard, will soon perceive that each species uses particular modifications of sound, to signify to their brood and fellows what they wish them to understand, and each seems perfectly to comprehend the meaning of the speaker. (12) Many animals have been remarked for their communication by utterance to each other. (13) The sloth, in the modifications of its plaintive cry, ascends and descends regularly through six musical notes. One monkey has been noticed to utter vocal syllables; and dogs have been taught to express human words, (14) even so large a number as thirty, distinctly intelligible. (15) The monkey tribe give strong indications of mutual communication and comprehension by their vocal utterance. (16)

(We regret the necessity of being obliged to furnish our readers with only half of Lecture VIII. It will be concluded in our next.)

(3) To instance only in the sheep. France feeds 34 millions of sheep; and Great Britain and Ireland 44 millions. Including the above with Prussia, Austria, Hungary, Spain, and Germany, the seven countries of Europe alone possess 141 millions of these animals.

(4) The wolves in Livonia devoured, in 1829, horses, 1,841; foals, 1,243; horned cattle, 1,807; calves, 733; sheep, 15,182; lambs, 726; goats, 2,545; swine, 4,190; sucking pigs, 312; dogs, 703; geese, 673.

(5) In three weeks Buffon caught on 16 acres, 1,300 moles; and a Dutch farmer, in 1792, between 5 and 6,000. In 1749, the State of Pennsylvania paid for the killing in it of 640,000 squirrels; and at Gotha, in one year, 80,000 rats were killed. At Mauritius, in 1826, His Excellency Sir G. L. Cole, offered a reward, by proclamation, for the destruction of rats and birds. In one month, eight arondissements of the island sent in 830,473 rat's tails, and 938,549 bird's heads to be paid for.

(6) But some of this genus eat also vegetables; as the dog. which feeds on farinaceous vegetables, but not greens, as well as flesh. So the jackal eats fruits as well as birds, and lesser animals.

(7) The common hog eats serpents without injury, and will even devour its own offspring.

(8) The hyæna, though it will tear up bodies from the burying grounds, yet lives long without food.

(9) Moles inconvenience us much by their excavations and mounds, yet, when destroyed worms, &c. so much increase, many a farmer has wished for the moles back again. Moles live on worms, insects, snails, frogs, and larva. Toads are found to keep down the ants. Mice have increased in barns, &c where owls have been shot. The blue jay was destroyed in America for eating the peas; but the pea grub, which it fed upon, became a curse to the farmer. A gentleman shot a magpie for eating his cherries, but found its craw as full as it could be crammed with the large blue-bottle flies that lay their eggs in meat. The fox, thief though he be, renders considerable service to man by the quantity of rats, field mice, frogs, toads, lizards, and snakes which he destroys.

(10) Cuvier remarks of the mole, that though its sight is weak, its hearing is remarkably fine; its touch delicate, and its sense of smelling most exquisite. The rhinoceros is remarkably acute in its hearing and smell. The common hare has exquisite hearing and sight.

(11) The wolf dreads the sound of a trumpet. *(Kerr's Linn.)* The hare is fond of the sound of a drum. The elephant is a lover of music. The dog howls at certain notes of music. The hippopotamus is affected by it. "As we passed along the borders of the lake at sun-rise, the hippopotamus followed the drums of the different chiefs the whole length of the water; sometimes approaching close to the shore. I counted 15 at once sporting on the surface." *(Finlayson's Siam.)*

(12) At their accustomed hour of being fed, if it be delayed, they are all clamorous. The cock repeatedly calls his hens to it, if they be absent; and these their chickens. Ray has remarked the different voice of the hen when she broods, all significant of the several passions of anger, grief, fear, or joy. Gilbert White, in his Selborne, makes some just remarks on the language of birds.

(13) The chamois, when alarmed, advertise each other of their feelings by a kind of whistle. Many of the ape species will sigh, groan, and weep like children, if scolded or beaten. The language of the seal is very remarkable. We have seen about fifteen hundred of seals assembled together. Their debates were most extraordinary—"suiting the action to the word and the word to the action." The question was—liberty or death!—*(Ed.)*

(14) The Dumfries Journal, in Jan. 1829, mentioned a dog, as then living in that city, which uttered distinctly the word "William:" the name of the young man to whom it was much attached.

(15) It is Leibnitz who has transmitted this fact to posterity.

(16) When they go in companies to a field of rice or sugar-canes, one stands sentinel on a tree, while the rest plunder. If the owners appear, he cries out Houp! houp! houp!—*(Goldsmith.)*—Marcgrave's account of the Ouarine monkey presents a curious picture: "I have," says he, "frequently been a witness to their assemblies and deliberations. Every day they assemble in the woods to receive instructions."

ON FAME.

'Twas night! sweet silence reigned around,
No breeze disturb'd the billows breast,
The chrystal dew-drop pearl'd the ground,
The sky in sparkling gems was drest;
When by the Isis' classic tide,
The young Eugenius musing came;
And oft with ardent wish he sigh'd,
To shine among the sons of Fame.

Enwrapp'd in thought, his lucid eye
He cast upon the heavenly blue;
When, swiftly thro' the yielding sky,
A meteor's short liv'd glories flew.
He paus'd;—and strove with laboring thought
To draw some Moral from its flight;
When lo! a voice with music fraught,
Broke through the silence of the night.

'Twas sweeter far than Handel's fire,
E'en when with rapture's voice he sings;
'Twas like the music of a lyre
When a bright seraph sweeps the strings;
"Eugenius!"— soft the minstrel cried,
"Beheld you not the Meteor's glare?
Did you not see its gaudy pride,
Which vanish'd soon in empty air?

From it learn this useful story,
(For your instruction know it came,)
All the warrior's boasted glory,—
The bard's renown,—the sage's fame,—
That fame to which your soul aspires,—
The proudest fame which earth displays,—

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Tho' it should live till time expires,
Is but at best a Meteor's blaze.

But seek to tread the paths of truth,
Then heavenly joys your hopes shall find,
For trust me,—heavenly joys, fond youth,
Are worthy an immortal mind."

ABDA.

LIBRARY FOR THE PEOPLE.

In common with all reflecting men, we know *gross ignorance and abject poverty* to be so destructive of man's moral energies, that they may be said almost to destroy them. When, therefore, we look around us upon the masses of our fellow creatures, depraved and rendered miserable by such ignorance and poverty,—religion, philosophy, conscience, reason, humanity, force us to wish above all things, that these prevailing sources of mischief may be, as far as possible, and as soon as possible, stopped.

With regard to *poverty* in this colony, there is no great *appearance* of actual want in the metropolis or the smiling villages in our suburbs—still that indigence and wretchedness do exist, we are sensible, and we learn this from those men in the country districts who have subscribed their names in testimony of their own privations, and the still more pitiable condition of their slaves. It is not our present intention to enquire into the causes of this poverty, although it were easy to suggest the means of averting the evil—but we cannot let another opportunity pass without once more calling the attention of our readers to those sources of information which are denied to a very large number of the Cape Town population. The truth is, the mechanics, the labourers, and apprentices, are in a state of moral and intellectual destitution. Now, in order to beguile the very many around us, who compose this body of the people, to habits of economy, *temperance*, and fore-thought, we require a *Lending Library*. It must be one conducted on a liberal plan, and wholly detached from those systems of exclusion which only tolerate one set of opinions. It need not be political, it need not be religious,—it need not be *party-coloured*,—at the same time, it may be the means of conveying sound instruction, virtue, knowledge, religion. At no period of the world's history do we find such abundant resources for the distribution of useful knowledge as the present—and it suggests itself that, whilst the whole world seems to be in motion towards the advancement of a better order of mind than has heretofore been presented, the people of the Cape of Good Hope will scarcely be *lookers on* in this great harvest-field, but will be conscientiously able to respond a suitable answer to the important scriptural question:

"Where hast *thou* gleaned to day, and where wroughtest *thou*?"

We have no objection to state, that we have been attracted more immediately to the consideration of this subject, by observing the disinterested readiness on the part of a respectable merchant in this town, to receive the names of a number of subscribers to the *Penny Magazine*. This work seems of a most unexceptionable tendency, and cannot fail to impart sound knowledge, and sow the seeds of benevolence and good will to mankind. But there are abundance of other works of similar design, and these, from their cheapness and variety, seem to demand that some interest on the part of the influential public be taken to make selections from such publications, and receive *presentation* works so as to form a complete *Library for the People*.*

A provisional committee could no doubt be immediately convened, Treasurer and Secretary appointed, and a place of deposit obtained. We apprehend no expense need be incurred by superintendance or rental, because we know well enough that their are zeal and disinterestedness abroad to provide the *altar and the sacrifice*. Such an institution as we have thus briefly alluded to, would prove a powerful auxiliary to that admirable establishment among us—the Savings' Bank. And not alone the Savings' Bank—the wife, the children, the family, the church, the school, and good neighbourhood—all would be gainers.

We have thought it our duty to make some distinct reference to many of the publications of the day, as recommending themselves to the notice of those concerned in promoting the knowledge of the people.

I. Chamber's Edinburgh Journal, price 1½d.—II. The Penny Magazine.—III. The Saturday Magazine.—IV. The Girl's and Boy's Penny Magazine.—V. Penny Lancet.—VI. Dibden's Penny Trumpet for the British Empire.—VII. The London Penny Journal.—VIII. The Half-penny Magazine, or The Witness.—IX. The Half-penny Library of Useful and Entertaining Knowledge.—X. The Literary Guardian, price 1½d.—XI. The Mirror, price 2d.—XII. The Farmer's Magazine, price 1½d.—XIII. The Casket, price 1d.—XIV. The Instructive Magazine, price 1d.—XV. The Guide to Knowledge, price, 1d.—XVI. The School-master at Home, price 1d.—XVII. The Entertaining Press and London Advertiser, price 1d.—XVIII. Scrap Book, price 2d.—XIX. The Magnet, price 1d.—XX. The Argus, price 1d.—XXI. The British Cyclopedia, price 2d.

The above is only a small enumeration of the penny and two-penny publications of the day. There are at least fifty of these little works issuing weekly from the London press. We have not recorded any of those exclusively political and religious. Amidst the whole infinite quantity there are doubtless many of a very questionable tendency, but it must be recollected that it is from the molasses that the *pure spirit* is to be distilled. The dregs are only in unison with the taste of the *lower animals*.

We do not, however, imagine that the penny literature of the day is doomed to outlive the pyramids—but their present tendency is decidedly to generate a taste for reading in the minds of the middling, the lower, and even the lowest orders. For awhile they will be satisfied with the imperfect glances which they are enabled, by these publications of the community, to obtain at most subjects of an interesting and useful character. But they will look eventually to higher works. As a more substantial nutriment in advanced quarters, we may recommend the following publications as well suited to a Library for the People.

Lardner's Encyclopedia,
Family Library, (selections from)
Constable's Miscellany, the last number—Guide to the Observation of Nature—is admirable.)
Library of Entertaining Knowledge, (selections from)
Edinburgh Cabinet Library.
Library of Useful Knowledge.
Mechanic's Magazine, Gardener's Magazine.
Magazine of Natural History, &c. &c.

* Of course we are well aware of the existence of the Public Library in Cape Town, and the many other sources of general information, but from these, the persons whose cause we feel bound to advocate are shut out. It is true we have books enough and of every description, but these are just as much out of the reach of the poor and the working classes, as Mrs. Elizabeth Brownrigge's quartern-loaves were of her starved apprentices!

FREDERICK,

AN HISTORICAL NARRATIVE OF THE COLONY.

The following Narrative, which has been suggested to the writer from a fact now on record, and which caused a judicial controversy in this colony, is one of so novel a kind, that we feel assured it will be considered an extraordinary circumstance, and one not less edifying to our colonial readers, than to those who favor our columns

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

with a perusal in climes where FREEDOM forbids the occurrence of such.

It was towards the close of an autumnal evening, when the young Widow of the late Farmer ——, was occupied in kraaling her cattle, and attending to those little domestic concerns which diurnally engage the attention of every industrious Cape farmer, or in his absence the good wife, whose particular province it becomes to be vigilant over the necessary duties so incumbent upon those who manage the interests of their own stock. She was now assiduously employed, only in seeing, in addition to her other labours, her cows milked; which, probably, engaged her more from habit than from actual necessity; for having been deprived of her husband, and not having any children, she felt herself bereft of all worldly consolation, save the occasional relief which she experienced in occupying her mind, or at this period of the day in contemplating the ethereal hemisphere as the declining twilight would introduce the luminous heavens to her observation. The widow was in truth of naturally an intellectual mind; and much trouble in having lost her husband, while yet very young, had induced those habits of serious reflection which we often find like "Flowers of golden hue in deserts dry." Her worldly possessions were not great, but they sufficed for her daily wants, which were not upon a magnified scale. Few knew her retired dwelling, but those who did were happy in the knowledge, and her distant neighbours consoled themselves in their solitude by occasionally visiting her farm. She was, besides, good looking, and of an excellent mien, and possessed a frank exterior, mingled with a sorrowful sadness which spoke departed and far happier days, and a good nature which gave the traveller a hearty welcome.

The widow, on the evening in question, had fallen into a listless reverie, from which she was alone aroused by the ambling noise produced from the feet of a traveller's horse, which, upon nearing, she observed to bear for his burthen an apparently well-proportioned young man, who, riding up to the widow as she yet leant against the stakes of the kraal, and whom he greeted as is the custom with us. As the short twilight was just closing, and the nearest neighbour's residence being some hours off, it was agreed that the stranger should share the hospitality which her roof afforded during that night, and then be at liberty to journey onward to the place to which he might be destined. That evening passed in discoursing about the widow's late loss, being that which generally prevailed in her mind, and to which the stranger lent an attentive ear, and seemed to listen to the recital with a feeling of unaffected sympathy. The next day produced the disagreeable thought of parting, and the dreary necessity of leaving; for the few hours which they had enjoyed in each other's company the preceding evening, had made them reciprocally interesting though pre-ordination destined that neither should be experienced, for a heavy fall of rain in the night, and which still partially continued, rendered it seemingly impossible for the stranger to proceed. This circumstance proved a finale to the widow's destitution: for the short delay which the rain had induced, occasioned a still greater procrastination, till night succeeded day, and day the dying night, and yet the visitor was there. He had, devoid of guile, and with an ingenious honesty, insinuated himself into the estimation of his hostess, and was now engaged in superintending the more laborious avocations appertaining to the farm. The ploughing season had already arrived, and his services had become more important and valuable by directing the people on the land, and by a discipline which he rigidly observed, had reduced them to a state of subordination from which they had for some time past been rapidly departing under the less authoritative tone of the mistress. The consequence of this acquaintance gradually assumed a kind of neutral ground, between the lesser passion and the greater, and eventually, as is mostly the case under such a state, terminated in the widow becoming once more a wife.

Fortune for a while beamed her radiancy on the contented couple, and all earthly things within their limited orbit, and in their imagination, conspired to make them happy. Agricultural pursuits seemed to prosper, and years and a family had somewhat exchanged the juvenile appearance of the late widow; who, nevertheless, felt blessed and happy in the society of her husband and a young family. He, on the other hand, as years increased, appeared less contented than formerly, and within the last few months an habitual melancholy hung o'er his brow, which, scarcely the pursuits of the farm, or his young family clinging around him on a winter's eve, could dispel, though the playful familiarity of the latter would sometimes remove the fixed gloom which had irremovably settled upon him. His two little boys would often follow him on to the land, and prattle their innocent remarks into his inattentive ear, though they too, often got rebuked for their untimely and unconscious interruption to his thoughts; yet natural feelings generally overcame unhabitual moroseness and severity, when the pouting lip and the moistened eye, would glisten with the tear which unexpected and unnecessary chiding had brought beneath their little eye-lashes, and which was alone prevented from gushing forth, from the timely interference of the relenting father, who would kiss away the tear which he had so unconsciously raised.

Many and oft had his wife tenderly, and with anxious solicitude, entreated to be made acquainted with the source of the internal grief which had for a long time so observedly preyed on his mind, in order that she might participate in his sorrows; but the request had at all times been evaded: and, like another Portia, would she think

> "Dwell I but in the suburbs of your good pleasure?"

Yet still he kept the cause of the turbulency within himself, and which she perceiving did not too strenuously insist upon pursuing, "and thus far acted most beside herself," in waving that anxiety and inherent curiosity which, like the clasping ivy to the sturdy oak, clingeth to woman from the hour which introduced her to terrestrial existence. However, one morning he advanced in his communication, for he told her that it was incumbent upon him to leave home for a while, and proposed that his departure should take place on the morrow—a proposition to which he begged she would not, from any sense of affection towards him, dissent from, as his absence might make him a happier man, and upon his return, he hoped to be at liberty to communicate to her the cause which had for a long time effected so great a reserve in his habits of life, but which it was now better to forbear disclosing. Nothing further ensued; for although she uttered the language of her timid terrors, which was, indeed

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the predominant passion that influenced her at that time, and which she seemingly permitted to subside while in the presence of her husband, who on the following morning departed from a home—to which, but a few years previous, he had arrived a perfect stranger.

The family of an old Boer residing upon the frontier border of the colony, had just seated themselves to partake of their mid-day repast, when a stranger rode up to the door, and upon being invited to alight and share the hospitable repast which overspread the table, entered. In this settlement, a hearty reception is the great characteristic amongst us, and happy should we be "who toil across the dreary waste," that it is so, for in the absence of such, travelling in most parts, especially within the frontier districts, would be rendered totally impracticable. Our traveller seated himself, and ate the humble meal that graced the simple board of our frontier Boer; and the usual interrogations having been solved of birth, age, and parentage, including the years of matrimonial bliss, and youthful progeny, the conversation assumed a more domestic hue, and lulled the farmer into the exposure of his domestic affairs. He commenced by remarking that he had only of late entered upon the cultivation of his farm, which had formerly belonged to his uncle, who, having died without issue, the whole of his property had devolved upon him, including a certain male slave, who had some yearsbefore deserted from his relative, but who had never been apprehended, though every exertion had been used for his recovery, but which had proved unsuccessful. Now he conceived him to be dead, though he was not certain of the fact; "but," added he, "were I so fortunate as to find him, his worth to me would be Rds. 5000. But his absence has been to my disadvantage; and, should I ever get him, he shall repay me for the loss which I have sustained through him." The stranger seemingly expressed his sympathy with the farmer, and with apparent sudden recollection, told him that in travelling through the country he had lately encountered an individual whom, from the description, he suspected to be the same person. In truth," he said, "so perfectly am I assured that he must be the same, from circumstances which the alluded made known to me, that I do not make a doubt about it; but, more especially as he mentioned that his utmost exertions had been used for years past in realizing wherewith to procure his freedom—a freedom which he conjectured not to be far distant, and which he had been deprived of to support some political measure originally instituted by the country to whom he was now a subject, and to which he was bound cheerfully to submit; though," added he, "the impracticability of such is incomprehensible to those, however philanthropic they may be disposed, nor can they sever the bonds asunder which, with adamantine strength, bind them together." The farmer, attentive to his own interest, and happy in the information which he had received, felt rejoiced at the prospect of acquisition to his worldly effects, and happy in the information which he had derived, was joyous at the prospect of retrieving the emigrant bondsman, and expressed, in enquiring tones, his intense anxiety to know where the stranger had seen him, but the latter was inexorable to his solicitations, and declined to afford the desired information; "for," said he "willing as I ought to be to satisfy your seemingly simple request, yet I must forbear from doing so, out of justice to another, in whose behalf I am now acting, and who is no less than your slave, who has deputed me to obtain his freedom for a price which I am about to offer you, and which is his indubitable value, according to the rate of manumissions compulsorily effected by the 'constituted authorities' from time to time." Such an assertion, and so suddenly made, completely stultified the astonished farmer, who declared that he would not grant his freedom upon any terms; though, after a short lapse, or interval of wondering silence, he yielded to the offer, and the morosity of his disposition succumbed to his better nature. In truth, the idea of getting a remuneration at all for his supposed lost property, decided in favor of the enthralled, and after some lengthened discussion, he consented to accept a bond payable at a future period, and the interest upon which was to be paid annually. The bond, which had been previously prepared, was no sooner given, than the stranger, with a somewhat majestic dignity in his deportment, such as FREEDOM envelops around the liberty which she enjoys, rose from the seat which he had just occupied, and said, "Know, sir, that he who has just given you that bond, and which is the price of a human life of terrestrial existence, is the individual whose perfect and unlimited emancipation is stated as the consideration of it, but who thanks his God for that freedom which he now enjoys for the first time in his life; for, while he was your property, though a stranger to your habitation, he felt the galling and debased badge of servitude around his neck. Yes, sir, I was as free as the roe, with the mountain thicket for my shelter, and exposed to the influence of earth's elements, yet possessing the timidity of the wildest of its kind, for I dared not come within view of the hunter. I have shared the thicket with the hyena, and like the prowling wolf, have watched, with lynx eyed caution, the prey which I was to ensnare for the sustenance of the morrow. Like the eaglet on the mountain's height, I have ascended to prepare my solitary meal unseen by man, fearful of detection, and unwilling that the gathering smoke from my little fire should betray me either to the vigilance of the neighbouring farmers, or the savage ferocity of their nocturnal watchers, who rush out upon the most remote approach of an intruder. What was such liberty to me? Could I enjoy it? My repose was ever haunted with the fearful delusion of imagining myself within your power—a power which, exercised with ever so much lenity and consideration, still clasped me with a clasp which fancy doomed me to eternal thraldom; and where is the human heart that can be happy while aiming at the completion of a something which is difficult of attainment? But farewell, sir, I am yours no more; and the *bonds* which affluence hath rent asunder, shall be fully satisfied by the punctual discharge of the *bond* which you now hold. I thank the goodness of the heart which has consented to accept *that*, because amidst the diurnal vicisitudes of human fortune, and the susceptibility of our condition to encounter a change, a chance of non-payment does exist, while *I* never can again become a slave; yet your assertion of the bond *shall be paid*, and by me, though it is signed by another." With these observations he left the dwelling of the old man, who, chagrined at the seeming deception which had been imposed upon him, did not suffer his late Villein to depart without a slight effusion of internal wrath and disappointment. In a few minutes a rising hill hid the departed from his sight.

How little are our future hopes to be depended on! hath not wisdom assumed her magnitude in decreeing it so? When we seem to have released ourselves from a sorrow that has for years suspended itself over us, either the hand of death obliviates our worldly elevation, or has been removed but to open a chasm for the endurance of more lasting adversity and affliction The stranger, who must have been recognized as the alienated in the first part of this narrative, found himself once more within the bosom of his family, of a different grade, and one who felt himself as eased of cares which formerly had worn him down: he was now a free man—contented, enjoying unbounded felicity in a doating wife, a healthful family, and a firm reliance on the scriptural promises which his large clasped Bible had unfolded to him on the faith of a Redeemer.

Time passed on, and some years had elapsed from the day on which the bond was given, but which yet remained unpaid. Frederic had, during the interval, met with some reverses of fortune, and that confirmed happiness which he had ensured to himself seemed the mere visionary hallucination of his own wish. The little capital which he had acquired by his marriage, had been for the last years gradually decreasing, from a succession of ill-luck which had attended him. Though his personal industry abated not, and his children united their assistance, which had now become valuable, and the utmost frugality and domestic discipline was evinced by his wife, fortune seemed to have left the land to smile on other scenes. One season his exer-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tions had been defeated by the rust; a second, by the great flights of locusts which, after the manner of the Egyptian plague, invested the country, and devoured the whole of his growing produce; a third, in the raising funds for the payment of certain securityships which had unexpectedly devolved upon his wife, as the sole executrix of her former husband, and he had now become unable to discharge his taxes, together with the interest accruing on the bond. The irregularity of government in collecting the first, would have afforded him a relapse, but the non-payment of the latter was immediately succeeded by a demand for the whole capital, which at once annihilated any future hopes of contending against such a series of opposition as had lately been his lot to encounter, and condemned him once more to a life of struggling servility. *Yet he was free,* and he enjoyed his condition.

I cannot avoid, though the digression may be deemed to savor of colonial polity, alluding to the oppressive system which has been introduced into the colony by almost all in every class of life—the becoming security whenever applied to, without a thought or consideration of the responsible consequence, which have of late years been too unexpectedly developed. Experience is a natural preceptor of wisdom, and most sorrowfully has she been engaged in disseminating her doctrine. How many families have been brought to penury through the failure of agricultural employ! but although these, however numerous, have anticipated their downfall. But has this been the case with the surety? Certainly not; and he has been, without the slightest forewarning, called upon to "acknowledge a signature," which he had thought, if ever he thought on the subject, obliviated for ever; and which poverty, in seeming smiles of sorrow, offers to his astonished sight, with all the fatal consequences for his unexpected ruin.

It was upon a morning when the air was replete with moisture, that Frederic left his home for the purpose of attending the following day the Circuit Court of Justice, to which he had been summoned, to plead to the debt owing upon the bond. It was his intention to acknowledge the validity of the same, and to pray the indulgence of the court to allow him to delay the payment till he could raise a sum sufficient to satisfy the demand. From some inconceivable cause which suggested itself, and being in the town before the time of appearance, he met, in walking through one of the streets, with a friend who was going to the Orphan Chamber to obtain a copy of the will of an ancestor, and finding in the course of conversation that such copies were procurable for a trifling remuneration, he thought he would obtain a copy of the testament which had afforded a right to his late master, the present holder of the bond, to withhold from him the sweetly savor of a life of freedom. Upon getting it, and perusing it attentively, he read to his unbounded surprize, that the completion of the year 182—, had ensured to him his emancipation. His eyes could scarcely rely upon the graphic symbols which he perused, and he hastened to an eminent lawyer for a correct elucidation; who, having read the document, and heard his case, gave him an opinion to defend the action on the plea of emancipation at the date of the bond, which he, the man of law, holding the prejudice of most upon his back, offered to do without remuneration. On the subsequent morning the case was called on, when the parties, by their respective counsel, agreed to adjourn it to a future day, for legal argument, both admitting the legality of the bond and the will, and settling the sole question in issue between them to be—whether a bond, stating a consideration, was not vititaed by the proof that no consideration existed at the time of its execution. The argument came on; and, after a laborious investigation with the court in arriving at the true merits, and much discussion, an unanimous judgment was given in favor of the defendant, who was thereby *once* more enabled to return to his family, to enjoy that felicitous earthly freedom which he is in the enjoyment and possession of at the present period.

A RECOLLECTION OF ANNAN WATER.

SWEETEST of waters,
Round which my youth-days strayed,
Deeming life's freshness,
Like thine, would never fade.
But manhood spreads before me,
Life romance closes o'er me,
And hope's bright sunny light
Is sinking from my sight.

Sweetest of echoes
My youthhood loved to wake,
Dreaming that thou wert
The naid of the lake.
No more when evening closes,
Heaven's western bow'rs of roses,
Shall I on thy sweet shore,
Awake thine echoes more.

FALLACIES OF THE HUMAN MIND, ETC.

Charitable Subscriptions—Miseries of being thought Rich.

Do not for a moment, sir, imagine, when I utter a complaint against the *temptations* which are daily thrown in my way to rid my pockets of their *charitable* contents, that I am opposed to *alms giving*. No; let the full tide of charity flow where it listeth; at the same time I do think there are some peculiar hardships in this colony, which occur nowhere else. In other countries there are endowments for the poor, and hospitals, and alms-houses, and institutions adapted to every existing case. Moreover, in the important affair of church-building, the Parliament wisely provides the means of supplying the people with church-room. Then, why should we be left to our own limited resources, and be denied a similar provision from the *mother* country? But perhaps 'tis our own fault. We may never have asked, that we might receive. A couple of good members in the House of Commons on our own account, would probably bring our claims to light. As it is at present, look at the almost daily begging cases for churches and chapels. Behold the difficulty of collecting the subscriptions, and the reference to the *lawyer* in cases of arrears. Again, how numerous are the other calls upon one's pocket! People, it is true, pay but comparatively small taxes here, yet how great is the taxation imposed by the voluntary contributions to the innumerable calls of humanity! I hope the pu[illegible] of [illegible] thoughts will not influ[illegible] single individual possessed of the means of doing good, to withhold his hand from cheerful giving. The wealthy are bound to assist the poor—and those especially who enjoy good incomes from the people; the civil servants should be the first to set a bright example. But, sir, I did not mean to generalize so much as I find I have done. I must particularize. Mine is an individual case—it relates to myself.

It has always been my misfortune through life to be *thought* rich—whereas I have been always a poor man. It matters not what I say on the subject to my neighbour, or friend, or servants, they contend *I am rich.* It is just the same whether I travel in the country, and ride on a miserable hack, in a bullock wagon, or in a smart cart or carriage—*I am rich* How to account for the suppositions on this score, I know not. All that I know is, that from this erroneous view of my financial circumstances, I am daily plagued with petitions and cases of distress—and whilst I often long for the means of deliverance to many poor creatures (especially he or she who comes seeking help to procure *freedom* from the *clutch* of the oppressor,) I am reduced to the necessity of sending the parties empty away.

But this general idea that *I am rich,* leads to many unpleasant results. To a mind disposed to humanity, and possessing by inheritance a good deal of the milk of human kindness, one is often led astray. There is often such an enthusiasm in some constitutions, that prudence and foresight are considered at best to be but "rascally virtues." I have really thought so,—and the thought put into play, has often proved of no inconsiderable price. Once more, this charge of being *rich,* has operated thus,—(I confess it was in more inexperienced days.) *What every body says must be true,* is an old saying, and hence, as I would not dare to act against the universal opinion of all who knew me,—I, very sillily, was carried away by the fallacy of the mind—that I was *rich.* Where my estates and resources existed, I knew not,—still, I *might* find them; *something* would turn out to prove my wealth; some rich Indian *might* leave me his heir; *some* secret spring in an old bureau *might* be discovered with a bag of gold; some rich lady *might*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

become my bride; the King *might* give me a handsome appointment. Now, these thoughts, and a thousand others, became my *ways and means* for conducting my affairs. I apprehend, sir, mine is not a common case, if men will really consult their own bosoms. I wish this enthusiasm of the mind was more attended to as a branch of education. What a world of thought and embryo, design and action, are cherished in the hourly imaginations of a school-boy!

The following circumstance came at one time to my knowledge. It serves to prove that we may, by imposition, lead a person to believe against the evidence of his senses—and it tends also to countenance the already mentioned popular error—*What every body says, &c.* Half-a-dozen young men met a countryman in a village fair, who had a pig for sale. They combined together, separated, and thus severally addressed him.

1st, "What's the price of the *calf*, my friend?" "Calf," said he, "why it's a pig."—"What's the price of the calf?" said the second. "It's no calf at all," said the countryman.—"Will you sell me that calf?" inquired the third. "Why, you stupid," rejoined the sale's-man, "don't you see that it's a pig?"—The joke proceeded, until the countryman observed to the sixth inquirer, looking steadfastly and seriously on his pig—"Yes; I have no objection to sell the *calf* for 1*l.* 10*s.*—only take notice that it was a pig when I left home at 5 o'clock this morning."

THE DIGNITY OF PUBLIC WORSHIP.

A Sermon, delivered at Wynberg, Cape of Good Hope, 5th Sept. 1832, *on occasion of Consecrating Grounds as sites for a Church and Church-yard at that Place. By* DANIEL, *Bishop of Calcutta. G. Greig, Cape Town.*

If well regulated zeal, sound scriptural views, piety without dissimulation, a tolerant spirit, public beneficence, and a blameless life are honorable to the officiating ministers of England's Episcopal Church, then may we congratulate its members, and the members of Christ's Church in general, on the appointment of Bishop Wilson to the see of Calcutta. But there have not been wanting trivial minds, as we learn from the Indian press, to mark this as a flaw in his character—hence we hear a great deal of cant about *taste*, and the love of the fine arts, &c. as connected with the late inestimable Bishop Heber. Now, we may apply to Bishop Wilson what a distinguished essayist observes of Howard.

'He had no leisure feeling which he could spare to be diverted among the innumerable varieties of the extensive scenes which he traversed; all his feelings lost their separate existence and operation by falling into the *grand one*. The invisible spirits, who fulfil the commission of philanthropy among mortals, do not care about pictures, statues, and sumptuous buildings; and no more did he, when the time in which he must have inspected and admired them, would have been taken from the work to which he had consecrated his life. The curiosity which he might feel, was reduced to wait till the hour should arrive when its gratification should be presented by conscience, which kept a scrupulous charge of all his time, as the most sacred duty of that hour. If he was still at every hour, when it came, fated to feel the attractions of the fine arts but the second claim, they might be sure of their revenge; for no other man will ever visit Rome under such a despotic consciousness of duty as to refuse himself time for surveying the magnificence of its ruins. Such a sin against taste is very far beyond the reach of common saintship to commit. It implied an inconceivable severity of conviction, that he had ONE THING TO DO, and that he who would do some great thing in a short life, must apply himself to the work with such a concentration of his forces, as, to idle spectators who live only to amuse themselves, looks like insanity.'

As a Theologian, (and it is in this light we are to view his supremacy,) Bishop Wilson seems to us to derive all his information from the christian scriptures—fresh from the spring, and untinctured by human refinement; and we consider his various writings as a most salutary antidote to the crude and shallow theology, the half-and-half views of the present day, and as a check to modern infidelity The Bishop's two pocket volumes on the evidences of christianity, are a rich legacy to the church, and have afforded much solace to those who have dreaded the overpowering of the infidel spirit. For our parts, we see nothing to alarm us in the spread of infidelity; it ought to be looked for. It is the unavoidable effect of that spread of knowledge which dispels the darkness of superstition, lays open to the day the refuge of lies, and, destroying false religions, leaves no alternative but either to embrace the Truth as taught by Christ, or openly to reject christianity. Infidelity is now swallowing up other errors; its office is that of the ichneuman, the vulture, and the crane. It is an objection frequently brought forward by infidels, that among so many pretences to revelation, it was difficult to discover the true one. But it might be proved, that all the ancient religions had their beginning concealed in the darkness of antiquity; that their votaries founded their belief solely on the previous belief of others. That, far from resting on any argument, they included in themselves the history of their origin, and could be traced without difficulty to the workings of imagination, gradually shaping out a visionary world, and adding the reveries of one generation to those of another. Further that the religions of Boudh and of Zoroaster, though of late origin, could not designate and ascertain their founders; and that Mahommedanism, which was borrowed entirely, in its leading doctrines, from the Jews, was ignorant of the sacred books of which it professed itself to be a supplement, and that Mahomet had no other pretension to inspiration (for argument it cannot be called) than the beauty of his style, and the sharpness of his sword. Hence christianity is without a rival, and the often reiterated infidel objection from the number of conflicting systems comes to nothing. It is not here, among the shields of Numa, where that which was said to be derived from heaven, was undistinguishable from those which were fabricated upon earth. Christianity *alone* is founded upon *argument;* it is the only rest for the mind; which alone can dispel its darkness, quiet its fears, and satisfy its longings. Nor is there any choice between it and the most absolute scepticism. All other creeds but the Koran, rest merely upon their antiquity; and the Koran, upon the purity of its Arabic, and the victories of its champions.

But we are to notice the Sermon before us. It was delivered at Wynberg, by Bishop Wilson, during his visit at the Cape in the month of September last. It was occasioned by the consecration of a piece of ground for the building of a Church, &c. The English Episcopal Churches are not numerous in the Colony, but in consequence of the accessions of English settlers, various places of worship connected with the episcopal denomination are either building or being built. These are attached to the following places: Cape Town, Rondebosch, Wynberg, Simon's Town, Graham's Town, Port Elizabeth, and Bathurst. The present Consecration Sermon is rich in Scriptural ore. It is one after the manner of the good old school of the Wellwood's, the Walker's, the Erskine's, the Thompson's, the Balfour's *of our own Church*. In reference to *it*, we confess we are frequently alarmed. We seriously fear that a very vitiated taste in composition is gaining ground among our northern divines. This comes of the study of metaphysics; it has enveloped the discourses on religion in the disguise of scholastic systems, and a technical dialect which is perfectly unintelligible. There is a golden sentence in Archbishop Usher's writings, which every candidate of the sacred profession would do well to transcribe on the first leaf of his common-place book:—"*How much learning and wisdom, my brethren, are necessary to make these things plain!*"

Now, Bishop Wilson's Sermon, which has been happily preached and published in this Colony, comes home to every capacity. It forms an interesting epitome of the christain religion—containing truths which are equally the concern of every individual, as the most needful to his guidance in the present life, as well as essential to his unearthly welfare.

As the profits arising from the sale of this Sermon are to be appropriated to the funds for building an English Church at Wynberg, we trust very many of our readers will benefit this rising

interest, and at the same time strengthen their own pious feelings by becoming possessors of one or more copies.

THE LIVES AND EXPLOITS OF BANDITTI AND ROBBERS.*

THESE public characters of olden time, are nearly out of date. The march of intellect has, at all events, got rid of our Turpin's, Jonathan Wilde's, Abershaw's; and the Blackheath's and Hounslow's of England, have become as tranquil and safe as a journey is from Cape Town to the Kat River. We are not quite sure that an author who studies the welfare of his species, should indulge in the talismanic art of consecrating guilt and clothing crime in a beautiful garb, by which so much corruption was introduced amongst the youthful spirits of the time. It was, we think, one of the false steps which the late author of Waverlyt made when he directed the pen of his genius to the lauding of that robber, the "bloody Claverhouse," in the *Tales of My Landlord,* as brave, accomplished, heroic, generous, and fascinating. However, out of the evil good was educed. Public indignation (at least in the best part of Scotland,) was visibly in favour of the "good old cause." Accurate engravings of Grahame of Clavers were brought forward. In opposition to the romantic paintings of the novelist, the harsh features of his iron face were revealed; and the *tout ensemble* exhibited an exterior in every respect befitting the gloomy and dark soul of a man whose hands were dipped in blood to the wrists! Another consequence of this excitement, was a holy zeal which put forth its activities in repairing the tombs and monuments over the bodies of the martyrs. Each sacred spot, on mountains, in vallies, and on moors where the patriots had fallen by the steel of the life-guards of the wicked Charles II., was sought out, and monuments erected, and tombstones repaired, and a host of "Old Mortalities" put in requisition to chissel deeper the names and the epitaphs of the Scottish Worthies. And now annual pilgrimages are made to the sacred spots, and the voice of prayer and praise is heard over the graves of the saviours of their country.

* By C. Mac Farlane, Esq. 2 vols. 8vo.

† In adverting to the Waverly novels, it is but fair to state that Sir Walter Scott deeply regretted the mistake which he committed in reference to the Scottish martyrs. He did atone for his fault in the new edition of Old Mortality. Those who wish to read a masterly review of the Tales of My Landlord, should consult Dr. McCrie's writings on the subject. They are scarce, but a copy is in possession of the Editor, and much at the service of any applicant.

But to return to Mr. McFarlane. His work we think perfectly harmless, it is also exceedingly amusing. Let the reader judge from the following extracts.

In the Lent of 1816, as a company of actors, some singers and some comedians, were on their way to one of the small provincial towns on the Adriatic, where they were engaged to play at Easter, their rambling old vettura was stopped by a formidable band. Obeying with all the alacrity their fears and nervousness would permit the command of the robbers to descend and be rifled, a prima donna and a second donna, two male tenors and a most masculine basso, came out of the body of the very primeval vehicle, at the same time that a tiranno domestico, a primo amoroso, and a fiddler, the leader of the orchestra, emerged from the head or coupé of the machine. They were almost dead with affright, but as they laid themselves down by the road-side previously to the operation of being rifled of what they had about them, they protested they were only poor virtuosi—that all their trunks contained were certain theatrical dresses of no value to the robbers, whilst their loss would be utter ruin to themselves.

"Cospetto di Bacco—Genti da teatro—theatrical people, bravo!" cried several of the band; "but we must see whether this be all true."

'On unlashing the baggage and opening the poor players' trunks, the robbers found a very satisfactory confirmation of their statement. The contents principally consisted of a few dirty dresses set off with tawdry and tinsel, an abundance of rouge pots, and a paucity of chemises, &c. sundry tragical wigs and sundry comic ditto, a Roman toga or so made out of an old red silk curtain, two or three pair of inexpressibles *à la Turque* and an *habit de gala à la Louis Quatorze,* to be worn by the lover. As for the fiddler, he had nothing but his fiddle-case wherein lay his mute instrument, flanked by a shirt or two—his wardrobe for the campaign. But in lugging out these valuable "*kists*" from the carriage, the robbers lugged out something that they thought might prove of more value—it was a little ruddy-faced Englishman, who had been in no hurry to follow the example of his fellow travellers, but lay *perdu* in one corner of the vettura.

"*Tutti gl' Inglesi son ricchi!*"* say the Italians, but in the absence of a few millions of Englishmen who might any day offer a melancholy proof to the contrary, the little red-faced man from the corner certainly was one striking exception to what the robbers thought the general rule—our wealth. He was a jolly son of Neptune, with nothing to live upon but a lieutenant's half-pay and his own good spirits, and, save a silver watch, had not many things of greater price about him than the players. He was as good-humoured a little fellow as ever trod quarter-deck or rode "for cheapness" through Italy with a vetturino, and as he only made a good joke in bad Italian when the robbers took his watch, they left him his purse, (which from what has been aforesaid, the reader will judge was not a heavy one,) and turned to the players, who still lay with their faces to the ground, telling them to rise and give them a song. The poor virtuosi rose, but they still showed an alarm for their personal safety and the integrity of their goods and chattels.

"*Non abbiate poura,*" (have no fear,) said the captain of the banditti, "You have nothing worth our taking; but it is long since we could recreate ourselves at an opera, so sing us a duetto and an aria or two!"

"Ay, sing us an aria—sing us an aria!" cried the robbers.

Accordingly, after a preliminary hem and spit, the prima donna sang a bravura aria, the close of which was heartily applauded by the banditti, who had beaten time during its progress with the butt end of their long guns.

* "All the English are rich."

Italians never encore. The robbers begged to be favoured with a duetto. One of the tenors joined the prima donna, and a duetto was executed equally to their satisfaction. The robbers had not enjoyed such a treat as this for a long time—they were delighted with it! At the conclusion of the duetto they begged for the grace of a terzetto

The basso joined, and as the fiddler had by this time got his instrument in order, he also struck in with an accompaniment, which tickled the ears of the robbers exceedingly. The audience was rather a curious one There were the ten or twelve robbers with their high conical hats, gaudy jackets, and sandalled feet—long guns, and knives and pistols in their girdles, and their wild features owning the gentle influence of sound; there were the vetturino and the postilion—the former risen from under the mules' bellies, the latter from before the mules' feet—for such are the posts the brigands assign these functionaries when an attack is made on a vettura—and there was the tough little Englishman with the seal-skin travelling-cap, trim blue frock-coat and Wellingtons—all after awhile forgetful of their situations, and occupied by the music and the fun of the moment; for, be it said, *sub rosa,* all the songs were not about *Bell Idol mics,* and *Caro per tes,* but seasoned with salt and smut—perhaps for the gratification of the more vulgar taste of the brigands, perhaps in accordance with that of the singers. When the terzetto was finished, the basso modestly proposed that the brigands should allow them to continue their journey.

"*Da quì ceat, anni!*" (a hundred years hence,) cried one or two of the brigand amateurs.

"Not yet—not yet!" said the captain; "here's a fine, opera-looking fellow, with a *faccia di musico,* who hasn't favoured us with a single note—we must first have your song!" and looked in the face of a second tenor, who thought him not a man to be refused.

This warbler, however, had not got beyond his first flourish, when one of the robbers, who had been stationed on the top of a hill near the road, like sister Anne on the tower in Bluebeard, to see if any body was coming, blew a shrill whistle, and presently ran down to tell them he had seen a number of travellers approaching. This intelligence drove the robbers away up the hills towards the woods. Their hurry, however, did not prevent them from thanking the vocalists, from whom they took not even so much as a bajocco. The players and the postilion soon put up the trunks—the Englishman's light *valise* had never been removed from under the coach-seat, and they were all ready, and drove off laughing at the adventure, before the travellers announced by the sentinel reached the spot. Whether these were wealthy, and well-guarded; whether they were plundered, or whether they were protected by poverty, equal to that of his own party, and got off with a song, the Englishman never learned. He was so much amused with his rencounter, that he used often to tell the story.'

The following narrative relates to a Sicilian Robber. The peculiarity of his case is that he did every thing single-handed—he commanded no bands, but *mannequins,* or large puppets the size of life, made up and dressed by himself, were his passive but effective satellites. He must have been an artist of considerable ingenuity, for his figures were perfect as far as brigand costume and ferocity of expression went. Their eyes were large and staring, their whiskers most tremendous, and their mouths, of course, were never seen to relax with a smile of good-nature.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

'His plan of operation was simply this. He set up his puppets against a rough bank or hillock by some rough road side, or among bushes or thickets hanging over the road; he contrived to make them hold long guns pointed down on the road, and their daggers and *couteaux de chasse* were visible in their bosoms or girdles. His position was always chosen where the road or mountain path (for there was nothing in the interior of the island deserving the name of road) was broken and tortuous, and where passengers would come suddenly in view of his troop and be covered by their musketry at the turn of a corner. While they remained more immovable even than Austrian sentinels at their post, he kept a sharp look-out from a point whence he could see the approaches by the road on both sides. If the travellers were numerous and well-armed, he withdrew his men, like a prudent commander, and hid them and himself in the thicket; but if those who approached were less formidable, he placed himself by the side of the steady troop, and when the timid wayfarers popped upon the appaling spectacle of their fierce faces, and murderous guns that seemed just going to be fired at them, he rushed upon them, well armed as he always was, and made them perform the "*faccia in terra*" evolution, which they readily did, under the impression that they would be shot by the figures on the road side if they disobeyed. He then made them give up their money or what moveable things of value they might have with them; and this also they did with promptitude, thinking a whole band of robbers kept guard over them. As soon as this agreeable operation was performed, he ordered them to rise and return the way they had come, swearing by the most tremendous oath, that he among them who should dare to look back, was a dead man!

'When the despoiled had departed, he relieved his guard, carried off and concealed his never murmuring adherents, until he should again think proper to take the field, and instead of dividing the spoils with gready comrades, he put them all into his own pocket.

'Numerous were the robberies committed by the solitary Sicilian in this ingenious manner, and as he was continually changing his scene of action, the whole island soon rang with the fame of his formidable band. Yet, do what they would, Government could never trace them. Even when, as at times it happened, a military force was in the neighbourhood of the place where the depredation was committed, and sent in pursuit with the greatest alacrity, they never could come up with the banditti. Nor could promises or threats, or actual violence and torture ever extract from the shepherds or the peasantry, scattered about spots supposed likely to be their haunts, a confession that they had ever supplied the dangerous band with food—had ever even seen them. It may well be conceived that the pardon of accomplices and rewards offered to such of the band as would return to society, and "turn king's evidence" (as our Newgate phrase goes), were all thrown away, and that none of the robber's gang would betray him.

'The trick, however, was detected at last. One day a considerable armed force came so suddenly upon the ingenious chief, who had not, perhaps, chosen his spot with his usual felicity, that he had not time to withdraw his faithful adherents before the *cacciatori*, or sharp-shooters, were in front of them, and within rifleshot, summoning them to surrender.

'"Lay down your arms and submit," cried the captain of the troop, "and no evil shall befal you from us—justice will deal with you, and our Government is merciful!"

'There was no answer returned, and as the officer saw the robbers' guns still levelled at him and his men, he gave the word of command.

'"Present arms!"

'The *cacciatori* levelled their rifles, but to their surprise the robbers neither spoke nor retreated, nor dipped behind the bushes, but stood there like targets to be shot at.

'"Fire," cried the captain.

'The soldiers discharged their pieces. One of the robbers fell, another staggered, and remained declining from the perpendicular, but the others were as fixed as before, and, to the no small surprise of the soldiers, did not even return their fire.

'The captain and his men thought they were entranced—fixed by a spell, or else planning some desperate manœuvre, nor did they fire again until they had well looked to their flanks and rear, expecting an ambushed attack by others of this Pythagorean band.

'At the second volley three more of the robbers fell, and then the soldiers boldly rushed forward to the thicket, when they had the satisfaction to find that they had been kept in awe by puppets, and had been firing at jackets and breeches stuffed with straw, two of which fierce figures, still alert, seemed to defy them to do their worst.

'The mover of the *marionette* bandits had meanwhile made good his escape, but he was caught, some time after the destruction of his band, in the commission of some paltry footpad robbery, and sent to the galleys, where he used afterwards to amuse his companions in captivity by relating his wonderful exploits as capo-bandito, or robber-chief.'—pp. 4—9.

COURTS OF JUSTICE IN FRANCE.

The number and constitution of the courts of justice in France, form a subject of considerable interest to England and her Colonies where there are yet so many improvements to introduce. Their names, and the nature of their respective jurisdictions, are accurately described by Mr. Goldsmith in his Statistics of France. The tribunals of first instance (tribunaux de premiere instance) are courts where minor criminal offences, called correctionnel, and civil causes are tried, but where no jury is employed. The number of judges of these courts is 1,626. From these tribunals, parties in all *correctionnel* causes may appeal, that is to say, if the cause has been tried in an arrondissement, the appeal lies to the tribunal of first instance in the chief town of the department; and if the trial has been first in the chief town, the appeal then lies to the cour royale. In all civil cases the appeal lies to the cour royale.

The cour royale is a court of appeal. There are twenty-seven of them in France, the jurisdiction of each including three or four departments. The courts of cassation was first constituted in 1790; it sits in Paris, is composed of a first president, at 40,000 francs a year, three other presidents at 20,000 francs a year each, and forty-five judges at 15,000 francs a year each, whilst there are also attached to the court an attorney-general and six advocates general:

'This is a court of appeal to decide disputed points of law *only*, both in civil and criminal causes. Until lately, if the judgments of the inferior courts were set aside, the court of cassation could designate the department where the cause should be tried again, so that it might go on *ad infinitum*. There have been instances where judgments have been set aside a dozen times, and tried again in as many different departments. But by a law enacted in 1828, when M. de Partalis was Minister of Justice, a cause can only be tried twice before the court of cassation, after which it is referred to a *cour royale* designated by the court, and is there definitively determined.

'The motives for revoking a *criminal* judgment are:—

'1. Illegal composition of the jury.

'2. The president of the court having voted as a member of the *chambre du conseil* or of the *chambre d' accusation* (whose jurisdiction will be presently explained) for the prisoner being sent to trial.

'3. The list of juryman notified to the prisoner as containing thirty names, and only twenty-nine jurymen being present.

'4. A juryman having acted as a witness against the prisoner on his being first apprehended.

'5. A judge not having permitted the counsel to explain any fact necessary for the defence of the prisoner.

'6. His refusing permission to read in court the report of a doctor on a charge of infanticide.

'7. His ordering the court to sit with closed doors without sufficient motives.

'8. Irregularity in the questions put in the course of the trial to the prisoner or to witnesses.

'9. The verdict of the jury being incomplete, contradictory, or illegal.

'10. The president having sent the jury to reconsider a verdict, which was at first clear and precise.

'11. False application of the penal law in correctional cases.'—pp. 200, 201.

There are in France no less than 213 tribunals of commerce; the presidents and judges are chosen from the most respectable merchants, but they have no salary. A *procureur general* is attached to the court of cassation and to each cour royale; he has a superior authority, and has under his controul all the juges d'instruction and advocats generaux; he signs the order for the execution or other punishment of criminals. A procureur du roi is attached to every tribunal of first instance. He is charged with the repression of crimes against the general safety, and is to receive all in criminal and correctional cases. The criminal courts are held every three months in the principal towns—they resemble our courts of assize. In criminal and correctional cases the proceedings are conducted in the following manner:—

'A prisoner is in the first instance brought before the *procureur du roi*, who examines him, and simply reports the case, without giving any legal opinion of his own, to the *juge d' instruction*, who examines the witnesses. The report is then sent back to the *procureur du roi*, who states his opinion in writing of the case in question, and returns it a second time to the *juge d' instruction*. This judge then lays the case before the *chambre du conseil du tribunal de première instance* (composed of three judges of that court); by these judges all charges are minutely investigated, and they decide whether there be grounds for further proceedings or for acquittal. The *procureur du roi*, however, may in the latter case oppose the liberation of the prisoner; and then he himself makes a report to the *chambre d' accusation*. If the *chambre du conseil*, however, decides for further proceedings, its decision is sent to the *chambre d' accusation* (composed of five

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

judges of the *cour royale*), who ultimately decide either commitment for trial or for acquittal. In 1827, the *chambre du conseil* discharged no less a number than 16,888 persons for want of sufficient evidence, and in the same year, 1,382 persons were dismissed by the *chambre d' accusation* for the same reasons.* Since the revolution of 1830, all cases of libels are tried in the courts of assize by a jury; but the forms previous to trial have not undergone any change. A writer accused of libel is dealt with in the same way as persons accused of a criminal or a correctional offence; but bail is taken in these cases.'—pp. 203, 204.

We regret that it is not in our power to notice the whole of the curious items which Mr. Goldsmith has collected. There is one, however, which, for its paramount interest, we cannot pass over; we mean the comparative rate of crime amongst the population of France. In 1830, 6,962 persons were tried in the courts of assize. Of these 3,910 were crimes against property, whilst 1,158 were crimes against the person. The latter crimes seem to be greatly on the decrease; they were 29 per cent. on the whole amount in 1825, but no more than 23 in 1830. The number of prisoners committed on criminal charges, as compared with the population, was in 1829, one in 4,321; and in 1830, one in 4,576. Of the 6,962 persons tried in 1830, 5,608 were males, the rest females; the latter being thus in the proportion of 19 to 100. Of these, 114 had not completed their 16th year, and 1,161 were of the age of from 16 to 21 years. The number amongst the persons just mentioned as having been tried, who could neither read or write, was 4,319; 1,826 could do both, but in an imperfect manner; 688 could do both well; and 129 had received a superior education. The state of education, as respected the nature of the crime, was as follows:

'The persons accused of parricide were, without exception, completely illiterate; of murder and assassination, 56 per cent.; poisoning, 51; infanticide, 88; wounding or striking parents or ascendants, 57; other wounds, 55; false witness and subornation of perjury, 66; rebellion, 52; fraudulent bankruptcy, 15; thefts of all kinds, 67; and arson, 69. The number of men who could neither read nor write was 58 per cent., and of women, 78; of persons under 21 years of age, 66; from 21 to 40, 62; and from 40 upwards, 60.

'Classed according to their residence in town or country, 3,945 of the accused had their domiciles in rural communes, and the remaining 2,778 in towns or urban communes.

'Of the individuals brought to trial, as appears by the subjoined table, 2,832 were acquitted, and 4,130 condemned as follows:—

Capitally	92
To the galleys for life	268
Ditto for a limited period	973
To long periods of imprisonment	1,005
To short ditto	1,740
To the pillory	8
To civil degradation	1
Children under sixteen years of age confined by way of correction	43
Total	4,130

LITERARY EXTRACTS.

OPPOSITION.

Opposition, is wont to be regarded as an evil of no ordinary magnitude by every will, every power, every authority, and yet it is to the constant operation of this principle, that every will, power, and authority, are indebted for their existence and preservation. Indeed, if ceasing to look at things with a hurried and superficial glance, we extend our sphere of observation, we shall find this great principle most universally predominant throughout the combinations of the natural and moral world, and most strongly identified with the laws which govern their being, and regulate their motions according to that stupendous rule of Providence which delights in drawing harmony and order, out of discord and confusion. By it the celestial bodies are held in their course, and the elements which surround us kept alive and invigorated. Light could not exist without shadow. It is the contrast which gives relief to objects. If fire encounter nothing but such a light material as straw, it is instantly extinguished, the resistance of a hard substance like wood, is necessary to strengthen and preserve it. If we look at the moral world, the recurrence of this principle is still more striking. Man seems born to struggle with difficulties, opposition is essential to the growth and developement of the powers of his body and mind. Every thing that surrounds him is rugged and untractable, and it is only by continual exertion, that he can succeed in overcoming the difficulties which stand between him and the gratification of his desires. His wants are perpetually impelling him to exertion, and by this continual exercise his faculties ripen to perfection, and are by the same means preserved in vigour. On the magnitude of the opposition depends the degree of honour to be awarded to its being surmounted. The joys of the husbandman, the glories of the conqueror, the happiness of the lover, all rise into importance, in proportion to the magnitude of the opposition which has been overcome in the attainment of their several objects. Again, let us consider education, what is its scope and object? Its chief merit seems to consist in the opposition of a strong and wise master, to the unsteadiness, caprice, and idleness of infancy. The man differs but little from the boy, men are but grown up children; the continual urgency of a powerful opposition is necessary to withhold him from blindly abandoning himself to the passions and selfishness of his nature; heedless of consequences, he would rush forward to snatch the pleasure which lies within his reach; and to keep him within bounds, to restrain and regulate his motions, the strong checks of religion and society are called in, and force all private interests to be merged in those of the community at large. On the other hand, the ministers of that religion, the organs of that law, the instruments of that authority, armed with religious, civil, and military power, would be liable to swerve from their appointed course, would lead the human race after them in their eccentricities, direct it according to their caprices, and thus reduce it to slavery; if the necessary and formidable opposition of virtue, and the cry of public opinion, did not enlighten their reason and regulate them in their course.

In this single principle, is comprehended the whole mystery of society. As long as a society possesses within itself the different contending elements in health and vigour—as long as virtuous government has strength to oppose the delirium of private passion—as long as public spirit, the vigour of institutions, and the courage of citizens, present an inseparable barrier to the passions of the multitude, so long those different societies flourish and increase; but when an alteration takes place in this state of balanced powers, when any one of those salutary checks is moved and its opposite becomes predominant, the government perishes by its own excesses. If the multitude be left without a guide, such anarchy is sure to ensue as caused the bloody troubles of Rome, the disasters of Athens, the sanguinary revolutions of modern times; when power finds no legal and courageous opposition in its way, it degenerates into tyranny, and by its own enormities precipitates its fall. It is then we behold the sight of mad men and weak men mounting the throne in quick succession, and disappearing as rapidly: such as Caligula, Claudius Negro, Heliogabulus, at first the tyrants, and then the victims of the enslaved populace. From these considerations it would appear, that, that opposition which governments are apt to regard as an obstruction, is in reality, essential to the continuance of their power. It forms their great source of light and support; left without its regulating and restraining force, they would diverge and go astray, and ultimately fall. The vast volume of history is overspread with examples of the justice of this doctrine. We meet with confirmation of it in the sacred colleges of Memphis, in the Magi in Persia, the Arcopagus at Athens, and the Ephori at Sparta.

Under a representative government, consisting of machinery complicated yet simple, a system of checks and counter-checks, mutually aiding and counteracting each other, opposition assumes a more than ordinary importance. To such a constitutional form of government, exercise, agitation, the struggle to overcome difficulties, is as necessary to keep alive its energies and invigorate its impulses, as it is to the individual man. In this state of ballanced powers, a suspicious watchfulness, a tendency to probe the legality of all acts of the executive, a legal and vigilant opposition to every thing erroneous, every thing arbitrary, every thing unjust becomes the surest safeguard of the liberties of the people, and the strongest arm of government. Such an opposition is nothing less than the representative of public opinion, unsuppressed by hatred, undisturbed by misrepresentation, undisguised by flattery, affection, or prejudice.

Even admitting that an opposition is deceived in its views, that it has taken up hasty and inconsiderate opinions of measures, and the conduct of an administration, still it is eminently useful; it instructs in the midst of its errors, it opens new views of subjects, and helps to place them in a proper light. If for instance, an opposition, even allowing it to make considerable deviations in its course, were to demonstrate to those in power that they had been betrayed into grave faults, that they have swerved from the principles of the constitution and of justice, that those entrusted with the execution of their decrees, had abused the power placed in their hands; would it not be incumbent on those in power, to pause and consider their conduct, to retrieve their errors if possible, to institute an inquiry into the conduct of their subordinates, to restrain and punish them if necessary; would not such an oppposition be as useful to a government based on sound and just principles, as to the nation at large, whose rights it watches with jealousy and suspicion; would it not be regarded in the light of a sage counsellor, instead of a factious adversary.

* From the flippant manner in which the most serious cases are frequently disposed of by magistrates and justices of the peace, we regret that in our own country there are not any tribunals similar to those we have just described. We have no objection to magistrates deciding in common police cases and trivial charges; but we think that in instances which may involve liberty, nay life, there should be some intermediate authority between a police magistrate or justice of the peace (many of whom are certainly not competent to decide upon knotty points) and a court of justice.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

But if it should come to pass that there should arise an opposition, which carried away by its political biases and passions, engendered through years of successful domination, which listening only to the voice of its own interests, and possessing few sympathies in common with the people, would affect a false zeal for the constitution in order to monopolize the power of government and religion, and force the national majority to yield to the will of a privileged class, what would be the fate of such an opposition? It would become a miserable faction repelled by public opinion; it would stand alone, nerveless and powerless, and would only strengthen in their opinion, the government which it had attacked and attempted to overthrow; each of its efforts to raise itself, would be attended by a fall more ignominious and disastrous than the last. Even in this last melancholy condition, it would still answer the purpose of being a strong confirmation to government of the justice and propriety of the course it had adopted, and thus serve to strengthen and consolidate its power. Opposition, in fine, is a light which guides a government or the cement which binds it together. It has been appropriately compared to the bile in the human body, a moderate quantity is essential for the preservation of health, too much is ruinous and destructive.

(Monthly Magazine.)

"PUTTING TO RIGHTS."

Is any one fond of variety? let him marry- I speak it oracularly, and in full defiance of the generally received opinion of the dull monotony of the marriage life. I affirm it to be neither dull nor monotonous: but on the contrary, a source of infinite variety, and as such, I can recommend it—though to say the truth, were I obliged to write my school-copies over again, it would go against my conscience to say, that "Variety is charming!"

The fact is I am a literary man, and get my living by my pen. I am a household drudge to editors of magazines, booksellers, and gentlemen who wish to have a literary reputation, without the trouble of writing books. You may therefore suppose, that quietude and domestic comfort is essential to my success. Now my wife does not think so, or at least her ideas of domestic comfort differ so materially from mine, as to render it much the same thing. She is never happy but when the house is a perfect chaos with scouring, dusting, and above all "putting to rights." She would be delighted if a troop of soldiers were quartered on her for the pleasure of putting things to "rights" afterwards. If she walked in her sleep, it would be with a duster in her hand. If she were ever tempted to purloin, it would be yellow soap. The very paint on my doors and wainscoat is giving way in picturesque streaks to the original deal by repeated scourings—and there is more bread consumed in rubbing the paper on my parlour walls than would keep my family. Thank God, it will be rubbed off soon I have not a chair or a table in my house but what is ricketty with continued polishing;—that is what my wife calls "*taking care* of the furniture." But oh! that "putting to rights" Paper, paint, chairs and tables, might all go, if I could be spared that horror. If I die, the verdict of the coroner's Jury will surely be—died of "putting to rights."

I have a good sized table to myself—a writing table—on this is spread my various notes and papers, whether preparing an article for the magazine, correcting a manuscript for a publisher, or writing a book for an author. To an ordinary eye every thing may appear in confusion there, but to me it is in perfect order. I can place my finger upon every thing I want. But no; that will not do for my wife. Things must be "put to rights." The moment my back is turned, therefore, the process commences. The table is rubbed and polished till the joints creak again—the drawers are all turned topsy-turvy, and the papers bundled up and crammed away in places where it will take me a month to find them again. When I return, I'm at my wit's end—I am like a man going to sleep with flowing curls, waking and finding himself in a trim crop wig!

Never shall I forget the hubbub we were in for a whole week, when the child exhibited symptoms of a flea-bite. The house was scrubbed from garret to cellar, blankets were scoured, carpets beat, windows and doors open day and night, until she caught—a violent cold, and I—the rheumatism. But in order that you may have a more vivid sense of my enjoyments, I will give you my diary for a day.

March 13—Rose at 8 o'clock—very cold, a little snow upon the ground—my wife rises an hour earlier, she careful creature, is determined the servant shall have no opportunity for making tea and toast for the policeman—got out of bed on to the cold bare floor—my wife says that carpets harbour dust, and not healthful in bed rooms—shave with cold water, my wife says cold water's bracing.—Come down at last, still as an icicle, and blue as the cholera—find windows and doors all wide open—my wife says, a well ventilated house, makes things sweet and wholesome, and keeps dust from settling!—find a little green smoke instead of fire, struggling through a host of cinders—walk briskly up and down the room blowing my fingers—no signs of breakfast, can't get the kettle to boil—servant employed in the interim whitening door steps, street door open, of course, a cutting north-east wind finding its way into one's very marrow.—Enter, at last, a bright tea-kettle, placed at a respectable distance from the green smoke—bit of bread singed here and there, and called toast—tea made with luke warm water, better that tea should be weak, than the bright tea-kettle be blacked, so my wife says—try in vain to get on my boots, find a scrubbing brush in one, and a duster in the other!

About 11 o'clock find my way out, and toil all day among publishers, editors, &c. without success, return hungry and dispirited, hoping though with some misgiving, to find comfort at home—turn the corner of the street where I live, and view with dismay a volume of dust, the downy residue of bed room sweepings, and tea leaves flying with the velocity of light, through the street door of my domicile—not my house on fire, and a dozen engines playing upon it, could convey to my senses a more appalling image—heard half a dozen miserable children in the street, squalling—"Home sweet home, *there is no place like home*," joined in the chorus.—My mind made up to the worst by the sight of the airing process, I rush onwards and knock at the door.—They know my knock inside, and therefore in no hurry to come—cutting north-east wind with sleet—the door open at last, and back door, being of course wide open, am saluted with a blast of wind, stormy enough to spring the fore topmast of a man of war—my hat flies into the middle of the street—striving to save it, my umbrella goes after it—and I, struggling for my footing, am covered in a twinkling with a cloud of feathers, dust, and tea leaves, the contents of a dust pan at the foot of the stairs!

Regain my equilibrium together with my beaver and umbrella, though with infinite difficulty—not so my temper.—Enter my parlour—good heaven! what am I doomed to behold—Is it an auction room, or a place of distress for rent?—Is it a marine store shop, or a Jew's exchange?—Chairs and tables piled up in the centre of the room—carpet turned up all round—the flooring just scoured—windows and doors all open, of course—fire raked out and grate black-leaded—hearthrug covering the chairs—fender and fire irons upon my writing table, and my papers—where? dusted and "put to rights!"—"put to rights,"—Oh! what retrospective agonies does not that most expressive of horrors conjure up! to those who have suffered under the discipline embraced in that detestable phrase it is needless to expatiate, to those who have not, no words can convey an adequate meaning.—To sum up—nothing in the house to eat, and no fire to cook anything, not a chair to rest myself upon—not a room fit to go into—hunger and ague staring me in the face.—Receive a note from the tax-gatherer demanding immediate payment—recollected having paid him, and having stuck the mem. behind the chimney glass, look for it, and find it gone! burnt or blown out of the window!—Boy waiting for article for magazine, faithfully promised by the 10th—papers all dusted and carefully "put to rights," consequently impossible to be found.—Wife scolding—child screaming—servant crying—and I protesting in an agony of rage, and mortification, rush out of the house intending to take a passage for the Swan River, and Cape of Good Hope, or New Zealand!—Think better of it, rather starve at home than be eaten up by the savages, so return to my yoke!

SUNDAY TRADING.

We have been tempted to make an extract on this head from one of the London periodicals; which, according to our judgment, has been most unfortunately induced to laugh at the attempts of the well-disposed, to further the better observance of the Sabbath. We record the present instance of right feeling on the part of the *Monthly* with pleasure.

Sunday trading has become one of the crying evils of this metropolis. It is the most fruitful source of debauchery, drunkenness, and all sorts of abomination. Every body has been aware of its evil influence on society, yet none have had sufficient philanthropy to urge its abolition. Complaints have been loud and long, yet none have endeavoured to effect a remedy. It is, therefore, with no slight feeling of satisfaction we have seen, that a numerous and most respectable meeting has been held at the London Coffee-House, to take measures for the formation of a society, to take these matters under their consideration. If it is considered necessary that the sabbath should be observed; if laws are made for its observance; then ought they, in common justice, to be enforced. If the conscientious trader, in obedience to such regulation, closes his store, why should he, who sets every thing at defiance for the love of mammon, be allowed a premium on his misdoings? We should be the last to advocate any infringement on the rights of the community, of which we form a part; yet, Sunday trading carries with it such an indecent disregard of the very best feelings of human nature, that common feeling would suggest the propriety, of at least an outward compliance with the wishes of the majority.

The seventh day, independently of religious consideration, has been always considered necessary as a day of rest; and the general morality of a country is always best ascertained by its observance. Our northern neighbours have been long celebrated for the decency and order with which the sabbath is observed; and no where within his Majesty's dominions, can be found a more industrious, better regulated, or better informed people. One great cause however, of the almost total disregard of this particular feeling, as regards the population of London and its vicinity, is the present time for paying workmen. At the latest hour on Saturday night they receive their wages. The first thing they think of, is the public-house and a pipe; the next is their wives and families. The consequence is, their Sunday's meal must needs be purchased on a Sunday morning. This

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

might certainly be altered, and with incalculable benefit to the individuals themselves, as well as to the rising generation, on whom example, be it good or evil, is never lost. To enforce *religion*, would be to violent the principles of the religious toleration: to enforce *decency*, is a duty we owe society.

We have been led to these remarks, by the perusal of a very respectable and intelligent weekly print (The Patriot), which we cannot, however, leave without our joke. Amongst its notices to correspondents, some benevolent individual is informed, that his donation has not been accepted by a certain individual, on the plea, that he declines assistance "from persons in his immediate neighbourhood." It is well for Mr. S. that bounty is so promptly and liberally administered, that he can pick and choose his customers. It reminds us of a certain farmer in Vermont,—where losses by fire are generally made up by contributions from neighbours,—who, when a friend had been at the pains of bringing him twenty bags of rye from some distance, as his share towards the alleviation of the misfortune, shook his head, and told him, "he was equally obliged, but that he had done taking in rye for some time past!"

INDICATIVE SIGNS OF DISPOSITION.

It has been the opinion of many philosophers, both ancient and modern, that the disposition and temper of individuals may be ascertained by various indications of external structure. Hence has arisen the physiognomical system of Lavater, and the more recent but complicated theory of phrenology by Gall and Spurzheim.

Of the first, or system of physiognomy, considerable probability exists, respecting accuracy of determination, and that from the following reasons:

1. The operation of the passions, when they are habitually indulged, and suffered to rule the conduct unsubdued by the restraining hand of reason, will be found, on investigation, to have a powerful influence on the muscular structure; and consequently on the features of the face, which will thus acquire a different expression at different periods of life. It has often been observed, for example, that drunkards have large and red noses. Now, this most probably arises from the accelerated circulation occasioned by the liquor, and the viscidity of the blood being thus forced through the small vessels which are plentifully distributed over this organ: yet it does not follow, that all those who have red noses are drunkards, as this peculiarity may arise from bodily constitution as well as intemperate habits; though the latter, from the above reason, is likely to occasion it.

Again, anger, and general irritability of temper, will induce a constriction of some of the muscles of the face, particulary those of the mouth and chin, which often cause a fixed expression to mark the countenance. Grief acting upon the mind will also have a similar effect. These are to be attributed to that mysterious union which exists between the soul and body during their co-operative action, since they are often much mitigated during sleep, and sometimes they entirely subside after death.

2. Habit also has a considerable effect on the muscular parts of the face, in which physiognomical character greatly consists. Deep thought and mental abstraction are apt to produce a wrinkled forehead, and constriction of the mouth; which is often far from the natural expression of the countenance, when the mind is engaged with light and pleasing thoughts; but if constantly employed in deep reflection, this character may become as much fixed by the mere force of habit, as that arising from anger or grief.

3. Hereditary disposition may have a powerful influence in producing physiognomical character, according to the opinion of some writers on this subject, though the problem is involved in too much mystery to admit of actual demonstration.

4. Though passion, habit, and hereditary disposition are thus allowed their full influence in producing indicative signs of disposition, as far as the operation of the mind on the muscular structure of the face is concerned, it becomes extremely doubtful whether the same causes can be allowed to produce the same effects on the ossific structure of the face; which constitutes, what Lavater terms, the facial angle, and gives a general character to the whole countenance; by which the disposition can be determined. Much less can we yield to the doctrine, that the organs of the medullary substance of the brain can, by their expansion through the influence of sentiment or passion operating at and after the age of puberty, when the bone is fully formed, impress its substance, and occasion those internal developments which form the foundation of the theory of Gall and Spurzheim.

Some persons have imagined, that indications of disposition may be collected from handwriting. This, however, admits of much doubt; for though there can be no question that the mind, acting upon the animal machine, has considerable influence over the motions of the hand in writing, through the medium of the nervous system, in moments of passion, excitement, or illness; yet these are transient in their effects, and cannot operate with certainty on the hand under a state of bodily health and mental composure. In considering the subject of hand writing we may observe—that it has been an art cultivated for its utility in all ages and countries. It is a perfectly imitative art, like drawing; and of its most ancient state, the Hebrew, Egyptian, Babylonian, Persian, Arabic, and other Oriental engraved and written characters now in existence, afford specimens. In later times, in our own country, court-hands prevailed; and though somewhat different in the various reigns, as may be seen in "Wright's Court-hand restored," they had all the same essential character of being an imitation of print.

The modern "join-hand," as it is sometimes called, appears to have arisen either in France or Italy, but most probably the latter, as the professors taught what they termed the Italian hand (if I mistake not) as early as the reign of Elizabeth; but previous to this period, the manuscripts are awkward attempts at modifying the old court-hands; and being filled with contractions, are scarcely legible.

From this period writing began to be more cultivated; but as all did not learn of a master, the writing was unequal, and the formation of the letters often regulated by the caprice of the writer. During the interval from the reign of James I. to George III., the hand-writing of individuals varied, according to their own taste; and in this case the temper and disposition, and general habit of thought, might, and probably did, have its effect; thus the literary student was either precise and round in his letters, or small and cramped; both which characteristics are to be found in the manuscripts of the 18th and 19th centuries. The middle and higher classes exhibit a careless running style, in which the pen seems to have moved over the paper in horizontal lines, mingled with dost and slanting strokes, in which little distinction of letters is to be detected. The poorer classes who could write, imitated a kind of round hand; which, though imperfect in formation and orthography, was much more legible than the scrawl of their betters.

About the latter end of the reign of George III., a new system was adopted by Butler, Lewis, and others of the same school; which was universally taught both to young and old, at their writing academies. This, which is now common, has had the effect of reducing most, if not all hands, to the same general character; so that though the disposition of the individual could be guessed at when the hand-writing depended upon his own ideas and habits, the case is materially altered, and the test rendered nugatory, when it depends, as at present, on a fixed and determined system.

The following very curious Theory of discerning Temper by the Tones of the Voice, is from an anonymous Manuscript, among the Birch and Sloane Manuscripts, No. 3080—The author, after speaking of the principles of speech, and general tones of the voice in different individuals, proceeds thus:

I know reason why many observables as pertinent, if not more, may not be deduced from ye musick of tones in ordiary speech." He then goes on to state the various characters of the moods among the Greeks; which he thus specifies:—

"The Doric . .	Gravity and sobriety.
The Lydian . .	Buxome freedome.
The Œolique .	Sweet stillnesse and quiet posednesse.
The Phrygian . .	Jollity and youthfull levity.
The Ionque . .	A stiller and allayer of stormes and disturbances arising from passion.

"Now why may not we conclude, yt such persons, whose speeche is accustomed to ye notes peculiar to either of these moodes, yt they ymselves are of such and such a nature? 'Tis true, none knowes particular thoughts of ye heart (if theire should be a serious composure of body) besides God; yet if thoughts are bred and nourished by any affection, or passion, ye meanest will, and may presume to guess att ym in generalls, by alterations of ye outward man."

As this will be sufficient for a specimen of the style and orthography of the original, I shall give the remainder of this curious manuscript in modern language.

He proceeds to argue thus:—

If, according to the testimony of scripture, "out of the abundance of the heart the mouth speaketh," we may, by the tone and manner of the delivery, form some judgment of the thoughts passing in the mind; and not only by the words themselves as significant of the ideas, but by the key, and other particulars, of the musical tones in which they are conveyed. For example:—

He that speaks in the key of C, is a man of ordinary capacity and good disposition: in G, peevish and effeminate, if not peevish, of a weak and timid disposition. He who has a voice that will in some measure agree with all keys, is of good parts, and suited to a variety of employments; but fickle and inconstant.

Then as to time: He who uses semibreves in his speech, may be judged to be heavy, dull, and phlegmatic. Minims denote gravity and seriousness. Crochets, wit and fancy. Quavers indicate passionate persons; as scolds use them. Sharps, bespeak a man effeminately sad. Flats, manly and melancholy sad. Semibreve rests, denote a man to be either full of more matter than he can utter, or to be troubled with a natural hesitation. Minim rests, shew thought and deliberation. Crochet, and lesser rests, passion.

Thus by the several musical marks, we may collect indications of disposition. But the effort of nature, in thus modulating the musical character of the nature in accordance with the feelings of the mind, is almost incorrigible; and though by custom and watchfulness we may in some degree remedy its influence, the method is to correct the mind, and there will then be no necessity for affected attempts to disguise the voice by artificial modulation.

THE SEIGE OF LONDONDERRY.

The most memorable feature in the history of Londonderry, arises from the siege which it sustained, under circumstances the most disastrous, but in the result most triumphant,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

against the army of James II. in 1688 and 1689. On this occasion, being pressed severely with all the horrors of famine, the military commander, thinking all further resistance useless, manifested a disposition to surrender to the forces of the invader. To this submission the inhabitants were, however, decidely hostile, and, headed by the Rev. George Walker, whom they chose for their Governor, they took the management and defence upon themselves, and in the issue gained immortal honours.

As the account of this ever-memorable siege is related in the form of a journal by the Rev. George Walker, D.D. we shall select from it some of the most remarkable passages.

"April 19th, 1689, Mr. Walker, a clergyman, and Major Baker, were chosen by the inhabitants of Londonderry to be their governors, during the siege. The garrison consisted of 7020 men, and 341 officers. The number of men, women, and children, in the town, was about 30000. Upon a declaration of the enemy to receive and protect all that would desert the town, and return to their dwellings, 10,000 left us; after that, many more grew weary of us, and 7000 died of disease.

"April 21st, the enemy placed a demiculver 180 perches distant from the town, E. by N., on the other side of the water; they played on the houses in the town, but did little or no mischief only to the market house. This day our men sallied out, as many as pleased, and what officers were at leisure, not in any commendable manner, yet they killed above 200 of the enemy's soldiers, besides Mamau, the French general, and several other officers.

"March 5th, this night the besiegers drew a trench across the windmill hill, from the bay to the river, and there began a battery; from which they endeavoured to annoy our walls, but they were too strong for the guns they used, and our men were not afraid to advise them 'to save all that trouble and expense, as they always kept the gates open, and they might use that passage if they pleased, which was wider than any breach they could make in the walls.'

"June 4th, the besiegers made an attack at the windmill works, with a body of foot and horse; the horse they divided into three squadrons, and assaulted us at the river-side, it being low water; the foot attacked the rest of our line. The front of the horse was composed of gentlemen who had bound themselves by an oath, that they would mount our lines; they were commanded by Captain Butler, second son to my Lord Montgarret. Our men placed themselves within our lines in three ranks, so advantageously, that one rank was always ready to march up and relieve the other, and discharge successively upon the enemy; which (though it is strange how they could think otherwise) greatly surprised and astonished them, for they could not fall in upon us. Their foot had faggots laid before them, for a defence against our shot. They and the horse began with a loud huzza, which was seconded from all parts of their camp with most dreadful shrieks and howlings of a numerous rabble that attended the besiegers. The faggot men, unable to stand before our shot, were however, soon forced to quit their new defence, and run for it, though Captain Butler topped our works, which was but a dry bank of seven feet high, at the water-side, and thirty of his own sworn party of horse followed him. Our men wondered to find, that, having spent so many shot, none of them fell: but Captain Crook, observing they had armour on, commanded them to fire at the horses, which turned to so good account, that but three of these bold men with much difficulty made their escape. We wondered also, that the foot did not (according to custom) run faster, till we noticed, that in their retreat, they took the dead on their backs, which, preserving their own bodies from the remainder of our shot, rendered them more service than they did when alive.

"The enemy, in this action, lost 400 of their fighting men; most of their officers were killed; Captain Butler was taken prisoner, and several others. We lost on our side, six private men, and one Captain Maxwell; two of the men were killed by a shot from a great gun from the other side of the water, opposite the windmill works.

"June 30th, at 10 o'clock at night, my Lord Clancarty, at the head of a regiment, and with some detachments, possessed himself of our lines, and some miners in a lower cellar, under the half-bastion. The noble Captain Dunbar, and several other gentlemen, on seeing this, sallied out at the Bishop's gate, and crept along the wall, till they came very near the enemy's guards. Our men received their firing quietly, till they got to a right distance; and then thundered upon them. Our case-shot from the bastion, and small-shot off the walls, seconded their firing so effectually, that his lordship was forced to quit his post, and hasten to the main body of the enemy, leaving his miners, and a hundred of his best men, dead upon the place, besides several officers and men, who were wounded, and who died of their wounds some days after the action, as we were informed. We were often told that some great thing was to to be performed by this lord, and they had a prophecy among them, 'that a Clancarty should knock at the gates of Derry.' The credulity and superstition of his countrymen, with the rarity of so brave an attempt, and some good liquor, easily warmed him to this bold undertaking; but we soon taught him that little value was to be put on the Irish prophecies, or confidence in courage so supported.

"On July 8, the garrison was reduced to 5520 men

13,	. . . .	5313
17,	. . . .	5114
22,	. . . .	4973
25,	. . . .	4891
27,	. . . .	4456;—

and under the greatest extremity for want of provision, which appears from the following account, taken by a gentleman in the garrison, of the price of our food:

	s.	d.
Horse-flesh, per pound, sold for . .	1	8
A quarter of a dog, fattened by eating the bodies of the slain Irish	5	6
A dog's head	2	6
A cat	4	6
A rat	1	0
A mouse	0	6
A small flook taken in the river, not to be bought for money, or purchased under the rate of a quantity of meal.		
A pound of greaves	1	0
A pound of tallow	4	0
A pound of salted hides	1	0
A quart of horse blood	1	0
A horse pudding	0	6
A handful of sea wrack	0	2
A handful of chickweed	0	1
A quart of meal, when found . . .	1	0

"We were under so great necessity, that we had nothing left, unless we could prey upon one another. A certain fat gentleman conceived himself in the greatest danger, and, fancying that several of the garrison looked upon him with a greedy eye, thought fit to hide himself for three days —Our drink was nothing but water; for which we paid very dear, and could not get it without great danger; we mixed in it ginger and aniseed, of which we had plenty. The tallow and starch, which we were compelled to eat, not only nourished and supported us, but this food was an infallible cure for the flux, and recovered a great many that were strangely reduced by this distemper, and preserved others from it. In the midst of this extremity, the spirit and courage of the men were so great, that they were often heard to discourse confidently, and with some anger contend, whether they should take their debentures in Ireland or in France; when, alas! they could not promise themselves twelve hours' life.

"July 30th, about an hour after sermon, being in the midst of our extremity, we saw some ships in the Lough, making towards us, and discovered they were those that Major-general Kirk had sent us, according to his promise, when we could hold out no longer; he being resolved to relieve us, at every hazard. These vessels consisted of the Mountjoy, of Derry, Captain Browning, commander; the Phœnix, of Colerain, Captain Douglas, master; being both laden with provisions, and convoyed by the Dartmough frigate.

"The enemy fired most desperately upon them from the fort of Culmore, and both sides of the river; and they made sufficient return, and with the greatest bravery. The Mountjoy made a little stop at the boom; occasioned by her rebound after striking and breaking it; so that she was run aground. Upon this, the enemy set up the loudest huzzas, and the most dreadful to the besieged, that ever we heard; fired all their guns upon her, and were preparing their boats to board her. Our trouble was not to be expressed at this dismal prospect; but, by great providence, on firing a broadside, the shock loosened her, so that she got clear, and passed their boom. Captain Douglas all this while was engaged, and gave them warm entertainment; at length, the ships got to us, to the inexpressible joy and transport of the garrison; for we only reckoned upon two days' life, having only nine lean horses left, and among us all, no more than one pint of meal to each man. Hunger, and the fatigue of war, had so prevailed among us, that of 7500 men regimented, we had now alive but about 4300: of whom one-fourth part were rendered unserviceable, having been close besieged for 105 days, by near 20,000, constantly supplied from Dublin. But God Almighty was pleased in the greatest extremity to send relief, to the admiration and joy of all good people, and to the great disappointment of so powerful and inveterate an enemy."

SCOTLAND AND IRELAND.

The miseries which Scotland once endured, as compared with her present condition, make us not despair of Ireland. Some two hundred years ago, the factious nobles kept that country in a constant state of turmoil, setting the prince at defiance, and trampling on the peasant. Agriculture and trade were neglected—smuggling, rapine, and clannish feuds were encouraged, and in their train came poverty, habitual disregard of law, and strife and murder. On the union of the two kingdoms under one sovereign, the Scottish chieftains mixed with their southern and more civilised neighbours, acquired the arts of peace, and communicated them to their vassals; and what with frequent residence among them, enforcing the laws, protecting and encouraging the good, and punishing the bad, the people, from being the most turbulent and restless of any kingdom in Europe, have become so quiet and orderly, that their political apathy is proverbial, and a single regiment is hardly now required to keep the few idle and discontented characters in subjection.

"Græca capta ferum victorum cepit, et arte
Intulit agristi Latio—"

was the boast of the ancient poet; but Scotland made a much better bargain than Greece. Greece lost her independence, and civilized Rome; Scotland gave England a race of kings, for whom she had little regard, and received civilization in turn. Let us trust that Ireland some day will experience a similar happy change, and that the landlords and priests, (and particularly the latter,) will use their powerful influence, not only to obtain the redress of national grievances, but to cherish sobriety, industry, and humane and brotherly love among the people under their charge.

"SOLDIERS' WIVES."

By the Rev. Charles Taylor.

One of the sweetest creatures I ever saw was a soldier's wife: indeed, whenever I hear the expression, "a soldier's wife," my imagination raises before me a very lovely vision. Some persons may tell me that the only idea they have of a soldier's wife is a bold, bad wanton, who can drink and swear like a trooper. I do not speak of such wives; for such are a disgrace to their sex and to their husbands. Nor would I say much of those *officers' ladies* who avail themselves of all the licence open to them, who go to the very verge of propriety—in short, as far as a woman can go without positively ruining her character. I do not speak of the bold, the forward, the unfeminine. A soldier's wife, such as she ought to be, is no rare character. She is usually gentle, modest, and feminine among women; just as her husband, if true to his profession and calling, is brave, bold, enterprising, and unboastful among men. How lovely an object is the woman, who, in the midst of the liberty necessarily attaching to her situation as a soldier's wife, creates around her a circle within which purity, and delicacy, and simplest modesty are always found; beyond which she has no wish to venture! There are few men who do not respect a really modest woman; and it is not the licence of opportunities, but the licence given in spite of opportunities by a woman herself, that makes a faithless or foolish wife.

"Let her fear loose looks to scatter,
And loose men will fear to flatter."

What makes a soldier's wife so peculiarly interesting is, that she is constantly placed in situations where her feelings are deeply and affectingly tried, and where she sees it is her duty to rise superior to those feelings. She is called upon to suffer many a sad surprise of sorrow: to part at a short notice from the being dearest to her on earth—to fear that their parting may be for ever on this side the grave—to weep over his departure—to think of him, in her unprotected loneliness, as probably exposed to hunger and fatigue, to dangers by sea and by land—perhaps to find his name, in the battle-return of the newspaper, among the dangerously wounded, among the prisoners, among the dead. Are not these trials for the soft heart of a gentle loving woman? And are they not the common every day trials of the soldier's wife in time of war? But does she not feel it her duty—and a sacred duty which she would not, aye, and does not fail to perform—not to unman her beloved husband by yielding to the force of anguish that presses so heavily upon her heart? to whisper hopes, instead of fears, at parting—and, if her tears cannot be restrained, to smile through them? not to be merely resigned, but cheerful—nay, the inspirer of cheerfulness? How finely Byron touches on the subject of the soldier's hour of parting! What force in that noble line, in the midst of his florid description of the beauty and chivalry of Brussels, all assembled in their gladsome revelry!—when soft eyes looked love to eyes which spake again:—

"But hush! hark! a deep sound strikes like a rising knell;"

and how soon after we hear of

"hurrying to and fro,
And gathering tears, and tremblings of distress,
And cheeks all pale, which but an hour ago
Blushed at the praise of their own loveliness.
And there were sudden partings, such as press
The life from out young hearts; and choaking sighs
Which ne'er might be repeated; who could guess
If ever more should meet those mutual eyes,
Since upon night so sweet such awful morn could rise!"

Reader! if you have made it a practice to pass over poetry, as if you found it in your way—if you have done so now, turn back to read those lines; fancy them a plain prose description, and read them for their truth; their natural but exquisite feeling will steal into your heart.

Many a soldier's gentle wife has proved herself a true heroine, and even fit to take her husband's place on a sudden emergency. The noble Constance de Barri was an instance of such heroism. Her husband, who was governor of a town in Languedoc, during the wars of the League, was treacherously taken prisoner; the party of the enemy that besieged the town, pretending they sought an interview with him, having seized his person. He contrived, however, to write a few words to his wife, desiring her to defend the town to the last extremity. Without a moment's delay, she obeyed him, and went forth to take his place on the ramparts. Seeing how brave and how resolved she was, and that the garrison still held out under her spirited command, the besiegers thought to subdue her by threatening to put her husband to death unless the gates were thrown open to them. Constance was rich, and she offered to give up all she possessed to ransom her beloved husband; but she knew that he would never submit to buy his life at the price of his fidelity and honour. She therefore refused their terms: they would not agree to her's. They then put the husband to the torture, that they might force him, if possible, to command his wife to open the gates to them. He was enabled to endure their cruelty without submitting to them; and, being at last obliged to give up the siege, they savagely strangled the brave officer in prison. In the midst of her grief, the proposition was made to the incensed widow that she should avenge her husband's death by destroying some gentlemen who were prisoners in the garrison; but Constance was a Christian heroine; she not only forbade their execution, but, wretched and disconsolate as she was, she exerted herself to save their lives and protect them.—Henry the Fourth rewarded this pious and heroic woman by giving to her the government of the town she had so bravely defended, and she held it for twenty-seven years.

In more than one instance a soldier's wife has been among the loveliest creations of the masters of song. The Andromache and Penelope of Homer, the Imogen and Desdemona of Shakspeare, were soldiers' wives; nay, what was it that won the gentle Desdemona, whom her father so exquisitely describes?—

'"A maiden never bold;
Of spirit so still and quiet, that her motion
Blushed at herself; and she,—in spite of nature,
Of years, of country, credit, every thing,—
To fall in love with what she feared to look on!"

'What was it that won her? What, in fact, but that "what she feared to look on" was a soldier, that he told of "battles, sieges, fortunes, that he had passed"—

'"Of most disastrous chances,
Of moving accidents by flood and field;
Of hair-breadth 'scapes in the imminent deadly breach,
Of being taken by the insolent foe."

'Spencer's fair and holy Una, that "lovely ladie," pure and innocent, was a soldier's bride, and by her husband's absence "left to mourne."

'What a fine subject for a picture would be the last parting of the heroic and even stoical Portia (who was also a soldier's wife) from her husband Brutus! I mean at that moment when, having accompanied him to the sea shore without betraying any emotion, she burst into tears on seeing a picture of the parting of Hector and Andromache. Far too dreadful a situation for a picture was that of the wife of Captain Lietirn, the Prussian officer, when she received her husband's last letter. Frederick II. intending to make in the night an important movement in his camp, which was in sight of the enemy, gave orders that by eight o'clock all the lights should be put out, on pain of death. The moment the time was past, he walked out himself to see whether all was dark. He found a light in the tent of Captain Lietirn, which he entered just as the officer was folding up a letter. Lietirn knew him, and instantly fell on his knees to entreat his mercy. The king asked to whom he had been writing; he said it was a letter to his wife, which he had retained the candle these few minutes beyond the time in order to finish. The king coolly ordered him to rise, and write one line more, which he should dictate. The line was to inform his wife, without any explanation, that, by such an hour the next day, he should be a dead man. The letter was then sealed and dispatched as it had been intended; and the next day the captain was executed.

'A touching description is given of a soldier's wife in an account I remember to have read of the battle of Waterloo. A young Irish officer had married a very young and very lovely Flemish lady. They were residing in cantonments at Rivelles, when he was suddenly and unexpectedly called off to the field of battle. All he could leave with his wife was his servant, one horse, and an ass to carry her baggage. Very soon after his departure, her husband sent her word that a retreat was ordered, and begged her to set off to Brussels with as little delay as possible. The servant, who was a foreigner, deserted his mistress like a villain, and went off with the horse. She did not hesitate to obey her husband's commands; but, forlorn and unprotected as she was, she set off alone with quiet resolution on her journey of five-and-twenty-miles: she set off on foot, leading the ass with her baggage. She passed along through the retreating British army, exposed at times to great danger from the firing of the artillery. When she reached the great road of Brussels, the army were falling into line for the terrible conflict. She had walked on through the dreadful storm which raged on that evening—the evening before the battle—the rain falling in torrents, and the lightning hurling its forked and deadly fires round her defenceless head. She had come up to the spot where perhaps all that would be soon left of her husband would be a cold and disfigured corpse, and he was then perhaps within a few hundred yards of the young and unprotected wife; but she did not seek him amongst that immense army of 80,000 men; nay, she did not wish to unman or distress him by her presence. Quietly and slowly she kept on her toilsome way during the whole of the Saturday night. The road from Waterloo, till within a few miles of Brussels, is through the forest of Soignèe, and hemmed in on both sides by the tall trees. Here the young wife met with many difficulties; the whole road was crowded with waggons and horses, and carriages of various sorts, by wounded soldiers, and by the terrified inhabitants of the country; and still the storm continued with unabated fury. Patiently, and with quiet perseverance, the gentle lady went on, still leading the ass, but now barefoot, and almost wearied out with fatigue and dismay. At length she entered Brussels on the Sunday morning. She had been mercifully protected by Him who is ever at the side of the destitute and the friendless. She was in safety and unhurt, and even the poor ass and the baggage had arrived uninjured. Her husband, too, was spared to thank God for his wife's safety and his own.

IMPRISONMENT FOR DEBT.

By Mrs. Sigourney, of Hartland, America.

Why do ye tear
Yon lingering tenant from his humble home?—
His children cling about him, and his wife
Regardless of the wint'ry blast, doth stand
Watching his last, far footsteps with the gaze
Of speechless misery.—What hath he done?—
In passion's madness did he raise the steel

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Against his neigbbour's breast,—or in the stealth
Of deep, deliberate malice, touch his roof
With wildly desolating flame?—No —No.—
His *crime is poverty.*— He hath no hoard
Of hidden wealth from whence to satisfy
His creditor's demand.—Sickness perchance
Did stay his arm,—or adverse skies deny
The promis'd harvest,—or the thousand ills
That throng the hard lot of the sons of toil,
Drink up his spirits.—Ye indeed may hold
His form incarcerate,—but will this repair
The trespass on your purse?—To take away
The *means* of labour, yet require its *fruits*
In strict amount, methinks do savour more
Of ancient Egypt's policy, than Christ's.
Themis, perchance, may sanction what the code
Of Him who came to teach the law of love,
Condemns.—*How readest thou?"*
There are who deem
The smallest portion of their drossy gold
Full counterpoise for liberty and health,—
And God's free air, and home's sweet charities.
'Mid the gay circle round their evening fire
They sit in luxury,—the warbled song,
The guest,—the wine-cup speed the flying hours,
Forgetful how the captive's head doth droop
Within his close barr'd cell,—or how the storm
Doth hoarsely round his distant dwelling sweep,
Where she, who in their lowly bed hath wrapp'd
Her famish'd babes, kneels shivering by their side,
And weeping mingles with her lonely prayer.—
—Revenge may draw upon these prison griefs
To pay her subsidy,—and sternly wring
An usury from helpless woman's woe,
And Infancy's distress: but is it well
For souls that hasten to a dread account
Of motive and of deed, at Heaven's high bar,
To *break their Saviour's law?*—
—Up,—cleanse yourselves
From this dark vestige of a barbarous age,
Sons of the Gospel's everlasting light!—
Nor let a brother of your sun-blest clime,
Rear'd in your very gates, participant
Of freedom and salvation's birthright, find
Less favour than the heathen. It would seem
That man, who for the fleeting breath he draws
Is still a debtor, and hath nought to pay,—
He who to cancel countless sins expects
Unbounded clemency,—'twould seem that he
Might to his fellow-man be pitiful,
And shew that mercy which himself implores.

ETYMOLOGIES.

Money, says Lord Coke, is derived from *mones*, (to admonish,) because it admonisheth its possessor to make a good use of it.

Gazette.—From Dr. Gazetta, the inventor of a newspaper; but the true reading should be Gaze-at, because people resort to it.

Hocus-pocus.—Is a strange word, which Tillotson says, in all probability, is nothing but a corruption of *hoc est corpus*, by way of ridiculous imitation of the priests of the Church of Rome, in their trick of transubstantiation. (Sermon 6th.)

Bumper.—From *au bon père;* for when the English were good catholics, and not as they now are, they usually drank the Pope's health in a full bumper every day after dinner,—*au bon père* to our good father.

A Horse Laugh.—Certainly a corruption from a *hoarse* laugh.

Isaac is nothing else but eyes-ache; because the Talmudists report that he had a pain in his eyes. *Vide* Ben Gorion and the Targom on Genesis.

Balam.—The man whom the Jews called Balam was a Shepherd: who, by often crying out *ba* to his *lambs*, was called Baalam or Balam.

Debtor Laws in England.—The fraud, impoverishment, and desolation, resulting from the administration of the debtor laws, are almost incredible. From returns of affidavits of debts, it appears, that in two years and a half, 70,000 persons have been arrested in and about London, the law expenses of which amount to no less than half a million sterling.

Imprisonment for Debt.—"In 1829 there were committed to Whitecross-street prison on process, out of the Court of Requests, for debts under 40s. 1563 persons, the amount of whose debts were £2071, and costs £746. To Horsemonger Lane, there were committed in the same year 932 persons, whose debts amounted to £1900, and costs to £474."—*The Legal Observer, February*, 1831.

PANTOMIME.

In the Christmas Pantomime at Drury Lane, 1832, the following were some of the characters and scenery which were introduced:

Cape Town, Cape of Good Hope, with the Table Land, Devil's Hill, &c.; an East Indiaman newly arrived from Calcutta; Mynheer Zwaar van Heupen, (a Dutch Bridegroom,) Mr. Heavystern; Col. Qui-Hi, Mr. Honner; Hookah Bearer, Mr. Carrypipe; Dutch Bride, Madame Neuville; Dutch Settlers, Bride's-maids, by a Cape Corps de Ballet. A real Flying Dutchman, a Settler's Hut, &c.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

THE DOWNFALL OF MONOPOLY.

The Press,—Currency,—Shipping—Printing,—Books,—Bread,—the Butchers,—Iron,—Coals,—Ironmongers,—Jewellery,—Silversmith's Work,—Cutlery, and Saddlery.

It is, perhaps, no part of our province to discourse on the principles and practices of the trade and commerce of Cape Town. But as the Press is generally silent on the subject, we may be justified in the present instance, by just glancing at what we call the *Downfall of Monopoly* in this colony.

From the foundation of the settlement, monopoly was the order of the day, and the system was handed down as an heir-loom from father to son. Thus the vices and the ignorance of mankind are hereditary and national, as well as personal; and the characters of men depend in no small degree upon their parents and their country. No individual stands separate: his character is moulded by that of the generation in which he lives. Down to about 1824, the old system seems to have been maintained with all its iron rigours. Money getting, and getting it *any how*, was the ruling principle among a certain class—the privileged class—the *lenders* and *usurers*. The first hope of deliverance was effected by the *Press*—the day dawned, and the shadows fled away. The changes in the *Currency* succeeded the Press, and the colony was happily rescued from the hands of the "Jews, Turks, and Infidels."

Even in the houses of business, (and a glance at these is the primary object of this article,) it was almost high-treason to think of buying elsewhere than at certain legitimate places. As for *Shipping*, one or two houses must do all the business, and it was vastly impolite in any other agent to pretend to do as well as the long-standing firm! And to do business cheaper—how dishonourable! Then as to *Printing*, it was in the hands of government at high tariff charges. Now, three Presses, distinct from that of government, are at work—perhaps a *fourth* would do the business cheaper.* Then, as to *Books*, where could we purchase a 2*d.* or 6*d.* Primer nine years ago?—Nay, it would seem that an interdict had been laid on pens, ink, and paper. Now let us visit the shops, and we everywhere behold the treasures for infantile and matured reading in large abundance. Step into Greig's, and there you behold, as a proof, a stock that would not disgrace a Murray, or a Smith & Elder. And then the advantages to us the purchasers, are, that *here*, of late, there has been a reduction of prices, and it is no longer dollars for shillings, but we can buy at London prices. But, perhaps, in the order of enumeration, we should begin with the *staff of life—Bread.* The *baking business* is now no longer in the hands of its *crusty* agents, the old Burgher Senators! Now we have a wholesome article, and sold in almost every street. It were well, however, if the dealers would throw larger handfulls into their scales than they sometimes do. They can well afford it. Next in order are the *Butchers.* If we may judge from the robust shapes of many of them, they deal in good mutton and beef, and there is happily a stir in the trade; in fact, a rivalry which is quite agreeable to the public. Many were the tricks of the *Rip-van Winkels* to keep up the monopoly of the last century—to shut out competition; but the vast accessions of John Bull's family to the colony, soon brought to light the advantages of a *fair field and no favour.* In respect of *Iron*, it is well known there was, for a series of years, just one circumscribed place of purchase. "If you don't like it, you may lump it." Now, what a difference in the state of things, and how diversified the stores, and fair-priced this important article! Then, again, as to *Coals*, there was only one house of supply; the price

* Will our good friend *Vivian* allow us to be sceptical on this head?—*(Ed.)*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

One Hundred Rix-dollars per chaldron. Nor in the articles of ironmongery, jewellery, silversmith's work, cutlery, and saddlery, were we till lately out of the fangs of the monopolist. Indeed, as it regards ironmongery, "locks, bars, and bolts," and cutlery, we have not witnessed fair and moderate prices until the present year. Many thanks to Mr. Farmer.

Thus much for the progress of society at the Cape. And that some new and improved features are everywhere apparent, we have only to walk abroad with our eyes open. Visitors who now land on our shores, and who have touched at the Cape during the bygone years, are greatly struck at the manifold improvements in the spirit of trade and enterprise. We heard a gentleman observe the other day, and one of considerable discernment, (Dr. Howison,) who visited the colony in 1831, that Cape Town appeared almost new to him in 1833; "there is," said he "such a new face in the aspect of things in general, that I imagine myself in a British Town."

We are quite aware that these hastily drawn-up remarks are only the outlines of a very important subject. It is one which is worthy the consideration of the political economist,—and to such we leave it for discussion.

THE WEATHER.

THE last four months of summer have proved of delightful salubrity, if not quite so much in town, yet within a few miles of it—the weather has been highly bracing to the constitution. At the same time we have been without rains, with the exception, perhaps, of a single day. But as a grand preservative to the freshness of the gardens, the process of vegetation, and the beautiful verdure of the mountain-sides, the temperature of the air has been most especially this summer brought down to the dew-point. Simple as the process of the formation of *dew* is, there have been some mistakes and disputes about it. Some have written and spoken about "rising" dew, and others about "falling" dew. But the dew as *dew*, that is, as visible drops of water, neither rises nor falls, but is formed on the surface. Every gardener knows that fact, and acts practically upon it, when he turns down a flower-pot over his piping of pinks or carnations, to make them *strike*, by nourishing them with the gentle dew, which their own cool leaves melt out of the warmer air. The dew forms into beautiful drops on those surfaces, between which and it there is a sort of repulsion. Vegetable leaves when in action have that quality, and hence the beauty of the morning dew on the grass. If those who are fond of looking at gems would get up in the morning, when the dew drops are large on the grass, and the sun's rays low and slanting, they would, by just sitting or standing a few minutes, with their back to the sun, get a gratis sight of a far finer casket than any monarch on earth can boast of possessing.

TABLE BAY.

This year has presented the most gladdening prospects in reference to Table Bay. Our mart has been visited by the ships of all nations, and, instead of contemplating the solitary two or three at anchor in former years, we have counted at one time no less than two-and-forty vessels within the last month. Such must prove highly influential to all the departments of trade.

NEW MARKET.

THE shares for the building of a market for the sale of garden vegetables, fruits, &c. are all taken. This, perhaps, next to the new Pier now commencing, is one of the most important undertakings of the last century at the Cape. Its utility is unquestionable, and as it regards the saving of human life—it has the patronage of humanity.

CAPE TOWN INFANT SCHOOL.

The last Anniversary Meeting at the Commercial Room,—His Excellency the Governor in the Chair, was decidedly the best as it regards the progress of the system. The children were much experter than before, and the drawling tones which used to accompany the repetitions of their interesting lessons, have been happily dispensed with.

"THE MARCH."

CAPE CYCLOPEDIA.

WE have just seen the first six numbers of the *Cape Half-penny Cyclopedia*, a publication which appears once a week There are we understand, upwards of six and seven hundred subscribers to this little work, and we heartily wish an increase. At the same time, we should like to see it published in the English as well as the Dutch Language. We are fully aware that the intention of its Conductors are praiseworthy, and they very properly contemplated a numerous body of people who only read the latter language, and who, from their circumstances in life, could not gain access to the higher sources of reading; yet, did it not occur to the Conductors that there are an equally destitute portion of English readers?

The numbers which have been published, appear to us of unequal merit. This arises probably from the diversified mental acquirements of the contributors. No. 3, "A Dialogue between a Student and his Sister," we think conveys much astronomical instruction in a popular shape. No. 6 should belong to the Tract Society—or perhaps the writer had forgotten the existence of such, and the loads of well-written Religious Tracts which find their way to the colony from London and Amsterdam. And very likely too, the writer had overlooked the clergy and the missionaries who labor among us. No. 5, "On National Conversion," is an interesting document, illustrative of that portion of our national history connected with the Anglo Saxons.

"THE PENNY MAGAZINE."

A subscription list is open in Cape Town for the regular supply of this popular journal, and its patronage, as we gather from the numerous names affixed, is well becoming the rising spirit of the Cape.

"THE SATURDAY MAGAZINE."

THE subscribers to this penny journal are at the head of the poll, as it appears by a numerously signed list of Cape patrons The "Saturday" appears to be excellently well managed, and its numerous embellishments are of the most gratifying description. Our country readers should be informed that both the above publications are published in London at a penny a number. The "Saturday," from No. 1 to No. 26, forming five monthly parts, may be obtained in Cape Town; a goodly number of sets having been imported by a mercantile house.

HERE AND THERE.

AN Australian paper mentions that, after a long draught, the country had been visited by copious rains; for which blessing, thanksgiving were offered up at the churches. Some 6 or 7 years ago in this colony, the inhabitants of the District of Graaff-Reinet, deeply impressed with gratitude on account of a most abundant harvest, resolved to celebrate the event by a public thanksgiving. But the day was not set apart for christian celebration—because the Colonial Office forbade the measure.

READINGS FROM THE AUSTRALIAN PAPERS.

IN the *Hobart Town Courier* of the 16th of Nov. Mr. Brennand offers for public sale "seven tons of Whiting!" *White-washing* must be greatly in vogue, we suspect, in Australia.

An extract from "*The Academian*," a journal published by the Boys of Mr. Thompson's school, Hobart Town.—"There is a great scarcity of Cape Wine,—it will sell at any price."

Colonial Prices. Hobart's Town.—Potatoes, 1½*d* per lb; eggs, 1*s*. 10*d*. per dozen; fowls, 5*s*. a couple; fresh butter, 1*s*. 9*d*. per lb.; mutton, at 6½*d*. to 7*d*. per lb (scarce); fed beef, at 10*d*.; lamb, 6½*d*; pork, 8*d*. (scarce); wheat, 5*s*. 6*d*. to 6*s*. per bushel, (scarce); hams and bacon, 1*s*. per lb. (excellent); salt £30 a ton!!!

Mercantile Arrivals from the Cape, per Alexander Robertson.—An extract from the *Sydney Herald.*—"Passengers from the Cape of Good Hope,—Mr. Charles Younger, merchant; Mr. Joseph Levick, merchant; Mr James Mills, merchant; Mr. William Mathew, merchant."

'The London Cries are becoming frequent in Hobart Town, for we have "fresh salmon," "fine mullet," and "muffins all hot," dinned into our ears before breakfast hour. We have also the noisy bell-man's clatter, "oysters," "mutton-pies," and "sheep's-head, all hot," &c. &c. vociferated by the professors of their several callings, till long after all steady people retire to rest.'—*(Hobart Town Courier.)*

Progress of Planting.—Some of the Banana Trees in the new Government Garden at Farm Cove, are now in bearing.—*Nov. 8th.*

Important.—From the same Journal we perceive a day advertised for bringing together the ordained ministers of the colony of the Church of Scotland. The objects are the division of the colony into Presbyteries, the appointment of lay elders, and, in cases of emergency, *to ordain* licentiates of the Church of Scotland, as may be duly called and found qualified to discharge the pastoral office.

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE VIII. CONCLUDED. BY ORLANDO.*

[THE FORMATION OF QUADRUPEDS—THEIR LINNEAN CLASSIFICATION INTO ORDERS AND GENERA—THEIR GENERAL QUALITIES—NUMBER—FOOD—ORGANS OF SENSE—VOICE AND FEELINGS—PHENOMENA AND CHARACTER OF THE QUADRUPED MIND.]

It is one of the great distinctions of the animal mind, and of its similarity within its prescribed scale and compass to our own, that it is both teachable to several intelligent actions, and also susceptive of moral docility. Thus far it is improvable, but not beyond. By this limitation, it is divided from the human soul, of which an *indefinite and unceasing* improvability is its universal property, though the largest part of mankind are little aware of the jewel which they possess. But that degree of moral ductility and capacity of education which taming exhibits, seems to be a general quality of the animal mind, as the fiercest have been subjected to it. Of the Feræ genera, which includes all the wild and ferocious, the largest have been found tameable. (1) Even the tiger, who may be considered as the fiercest of the fierce, has exhibited this improvability. (2) So has the savage and voracious hyæna. (3) Crocodiles have been made harmless and docile. (4) The leopard likewise. (5) The wolf has also shewn that it possesses what we may term affectionate docilities. (6) The baboons become vigilant guardians of their protector's property. (7) These facts prove that there is nothing in the nature of the wildest animals to make their future gentleness and sociability either impossible or improbable. (8) They are now wild and savage from *appointed* circumstances, amid which they are at present ordained to live; and when this state of the general world shall be altered, their moral transformation will become a natural appendage to the great social and intellectual revolution which the Hebrew Prophets attach to the ulterior ages. (9) It is in animals as in fish—the largest are the mildest. (10)

That animals have feelings and passions very analagous to our own, appears from many instances. Our rugged and oppressive conduct towards them, more usually puts their resentful emotions into action, than their better capabilities; and this has caused their angry humours to be most frequently noticed. (11) But many species show what must be called kind affections. Monkeys evince them to each other. (12) Cows will protect each other, and feel strongly for their young. Most animals evince pleasure

* Delivered before the Members of the Poker Club.

(1) The jackal when taken young, acquires the same affectionate manners as a dog. *(Linn.)* The lion has been repeatedly tamed. So has the fox. Reubens had a tame lion four weeks in his chamber to paint from. The ounce may be trained to hunt. The Egyptian ichneuman may be softened so as to be kept in a house like a cat. The otter may be taught to catch fish for its master. The ferret is domesticated and employed to catch rabbits. The bear is accustomed to dance in the public streets. The rhinoceros may be tamed in some degree. The hippotamus also. See *Linnæus.*

(2) The tiger, if taken young, may be domesticated. The Faquirs of Hindostan sometimes go about with their tame tigers.

(3) Bishop Heber mentions that Mr. Trail in India, had a hyæna for several years, which followed him like a dog, and fawned on his acquaintance.

(4) A tame crocodile, was, in 1828, kept at Chantilly. It was so mild that it was caressed by its keeper without danger.

(5) Mrs. Bowditch, widow of the Ashantee traveller, had a tame leopard. Mr. Barrow procured in this colony a young leopard, which became instantly tame, and as playful as the kitten.

(6) Cuvier describes a young wolf that was brought up like a young dog. It followed his master every where, and was docile and affectionate.

(7) Vaillant declares of the one he had, that it was more watchful than any of his dogs. Father Carli, in his history of Angola, mentions that he had taught monkeys to attend him, to guard him, while sleeping, against thieves and rats, to comb his head, and fetch his water. In the Cape colony, this animal is famous for its habit of throwing stones from elevated spots at persons below. In corroboration of the occasional usefulness of the baboon, Dr. Andrew Smith, the founder of our Cape Museum, mentions a baboon that was an excellent blacksmith, and could use the fore-hammer with singular dexterity. He could distinguish the several tools in the shop when asked for by their names, and would bring them to his master accordingly. When visitors arrived on horseback, he first saluted them, by taking off a small leathern cap which he wore on his head, and then offered them his hand; after which, he took the bridle reins, and led the horses to and fro in the style of a stable boy, until they were perfectly cold.

(8) Judicious and kind management in the rearing of animals is of importance. In educating the ox for the plough, Mr. Cobbet very sensibly recommends that "all violence and rough language should be avoided. If he be stubborn, there should be no blows and no loud scolding. Stop: pat him; pat the other ox; and he will presently move on again. If he lie down, let him lie till he is tired; and when he chooses to get up treat him very gently." On the same principle an experienced cavalry officer has declared, that he did not fear the most vicious horse, for by mild and gentle treatment and forbearing patience, he would effect a cure.

(9) Isaiah twice mentions this future condition of the Earth, ch. xi. 6—9, and ch. lxv. 25; and Hosea alludes to it, ch. ii. 18.

(10) A power of subduing the mind or spirit of animals, seem to be attainable by human ingenuity, though self-interest may conceal the practical means. The Rev. H. Townsend mentions a man in Ireland who would make any horse, however vicious or unruly, become, in half-an-hour, gentle and tractable, and durably so.

(11) A racoon having been one day lashed by a servant, would never forgive him. Neither eggs nor fish, of which he was very fond, would appease it.—*Bingley.* The patient camel retains the remembrance of an injury until he can avenge it. The elephant retaining his resentment, and his methods of revenge, are well known.

(12) The male and female are never tired of fondling their young one. In sickness they exhibit great sympathy.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

at being caressed. (13) Bears have exhibited strongly both connubial and maternal sensibilities. (14) And so have many others—the beaver, lions, elks, &c.

From the senses and sensibilities of quadrupeds, let us pass to the consideration of their indications of a perceiving, attending, and thinking mind. To collect provisions for their future use; to hoard them in safe places; and to use them gradually for their daily sustenance, are actions in the human race which display and require great prudence, foresight, just reasoning, well acting upon judgment, and much self-command. A very large portion of mankind will not exert either this forethought, or the self-government, that alone makes it effectual. The Scottish nation is eminently and honorably distinguished for this intellectual quality and power. The lower Irish are too often conspicous for the want of it. Yet this is strikingly exhibited in the Alpine hares, who literally make hay for their winter food; (15) in the active and provident squirrels; (16) in the ingenious beaver; (17) and by many of the glires genus. (18)

The tuition which quadrupeds are capable of receiving, discovers a lower degree of that improvability which distinguishes our superior race, which, as far as it extends, resembles ours, although at the same time it marks its specific difference by its annoying limitation. Apes have often amused their possessors by their imitative faculty. (19) Cats display this teachability. (20) Pigs have also repeatedly shewn that they can learn to do things not natural to them (21) A sow has been trained to the services of a pointer. (22) The quadruped animals, of their own will and nature, and from inborn instinct, do actions which require knowledge, reasoning, and judgment in mankind. Reindeer follow and obey leaders of their own species. (23) Elephants also make their journeys on this plan when they deem it necessary. (24) Baboons have been found to make defensive arrangements, like military tactics. (25) Mules and cats make signals to have a door opened. (26) Bisons place themselves in the best position for repelling an enemy. (27) So do the seals. (28) The black bear's mode of fishing is as dexterous as any school-boy's could be, and more patient than he would be. (29)

Deliberating, judging, and persevering mind, with real building skill, appears as much in the beaver's construction of his cabin, as in any human fabrication of a cottage. (30) Marmots place sentinels to watch and give alarm on danger. So do the baboons and monkeys of Africa. The wild asses likewise, and many other classes. The social mouse is a pleasing instance of good neighbourhood; these pair from families, and live together in harmony. The beavers unite from a distance into societies, for the express purpose of building their habitations in vicinity to each other, and co-operate in their labour, like Dido's followers in the Virgilian picture of their founding Carthage, or like English emigrants into the wilds of America, to build their log-houses and forest towns. (31) The marmots as assiduously join their skill and industry together, to form their social rooms, as any body of bricklayers and carpenters to raise the edifices they construct.

All the instances which occur in these classes of beings, of co-operating action for some common end, shew the intention and the desire to unite their efforts for that purpose, and, therefore, a mind, or a meaning and thinking power, that designs, perceives, comprehends, wills, and operates to produce it. (31) Individual instances of what in human beings we should call a contriving mind, have been remarked in animals. The squirrel's mode of passing a river; (32) the jerboa's provision for his escape, if attacked in his retreat; (33) the opossum's mode of obtaining crabs which his paws cannot reach; (34) the monkey's use of his tail as a hand or finger; (35) the Pe-

(13) We have tried this with cows and sheep. Many others, especially horses and elephants, manifest their gratification at being kindly noticed.

(14) Mr. Hearne describes the males of this species as so much attached to their mates at some times of the year, that he has often seen one of them advance when a female was killed, and put his paws over her, and in this position suffer himself to be shot rather than quit her.

(15) In August they begin to cut great quantities of soft tender grass and other herbs, which they spread out to dry. This hay, about autumn, they collect into large heaps, and place, either beneath the overhanging rocks, or between the chasms, or round the trunk of trees in conical heaps of various sizes, according to the number of the society that makes them. They select the best of vegetables, and crop them when in the fullest vigour.—*Penn. A. Zool.*

(16) The squirrel makes a nest of moss and dried leaves at the forks of a tree's branches, with two holes at opposite sides, and as the wind varies, shuts the whole towards it. It lays up magazines of nuts, acorns, fruit, and berries, for winter.—*(Kerr.)*

(17) The beavers build their houses together, like small villages. Each cabin has in its neighbourhood a magazine of bark and boughs of trees for winter provisions, kept constantly under water.—*(Kerr.)*

(18) Thus the field mouse collects large stores of grain, nuts, acorns, and beach mast, in its places under ground. The hogs by their exquisite smell, are often led to their hoards, and dig them up.

(19) Blumenbach's ape, which he kept for a year, would manage the wood for his stove, and put it in with as much judgment and economy as a cook-maid. He was often at the College, and used to examine the pupils' specimens with amusing imitation and grimace.

(20) In 1828, a cat from Tuscany was exhibited in London, that had been trained to beat a drum, strike on an anvil, draw water from a well, ring bells, and roast coffee.

(21) I have seen, says Sharon Turner, a large pig at Ross, which could pick out from an alphabet on the ground, on being ordered, and without mistake, the letters that were wanted for the name of any person present; and also the figures for the hour. It went round the dial, and placed its snout first on the hour, and then in another circuit on the minutes.

(22) A black sow was taught to find game, and to back and stand nearly as well as a pointer.—*(Bingley.)*

(23) Mr. Bullock brought a herd of 12 reindeer from Norway. They were completely under the command of a leader or captain, who gave orders.

(24) The bull elephants on our Cape frontier always march in the van, bursting through the jungle, treading down the thorny brushwood, and breaking off with their trunks the larger branches that obstruct the passage, while the females and younger part of the company follow them in single file.

(25) See Lieut. Shipp's account of Father Murphy, a famous Simon's Bay baboon, in the first volume of the Cape Literary Gazette.

(26) See Turner's Sacred History, page 366.

(27) When bisons scent the approach of a drove of wolves, the herd throws itself into the form of a circle, placing the weakest in the middle, and the strongest outside, and thus present an impenetrable forest of horns.

(28) *Vide* South African Quarterly Journal, page 286.

(29) See Capt. Franklin's Journal to the Polar Sea, p. 91.

(30) See Kerr's Linn. p. 249; Bingley, vol. 2, p. 32.

(31) Thus the four-fingered monkeys, to pass from one lofty tree to another which is too far off for a leap, will form a kind of chain by linking to each other with their tails; and then hanging down and swinging together with increasing momentum and sweep, till the lowest catches hold of the lower branches of the desired tree. As he fastens and ascends, he pulls others up, each in succession doing the same. Both wolves and foxes act with great co-operation; the former in their attacks, the latter in their depredations. Elephants also concur in making great efforts to raise a companion out of a pit or trench. A rat was seen at Oswestry, in 1829, to be leading a blind one to a stream of water, several yards off the building they frequented, by a piece of straw, which he put into his companion's mouth, and pulled by his own.—*(Shrewsb. Chron.)*

(32) When the migrating squirrels come to a lake or river, they draw a piece of pine or birch bark to the edge of the water, mount on it, and abandon themselves to the waves, raising their tails to catch the wind.—*(Bingley.)*

(33) See Kerr's Linn.

(34) The Cayenne opossum lives chiefly on crabs. When they cannot reach them in their holes with its paws, it introduces its long prehensile tail to hook them out.

(35) The four-fingered monkeys are peculiarly dexterous in the use of their tail. They can pick

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ruvian hare's two chambers for distinct uses; (36) the otter's providing against the rise of the tide or river; (37) the honey weasel's averting the glare of the sun; (38) the monkey's imitation of the astronomers who were measuring the length of a degree in Peru; (39) the bear himself, finding out a plant that will heal his wound, and making and applying a plaister from it; (40) the wolf's cautious reasoning amid his hunger and voracity, (41) are instances of this sort. The wolf, with artful judgment, will take the babe from the mother's bed so gently as not to disturb her. (42) They also resolutely co-operate in their fatal attacks. To know the names which have been given to them by their owners, and to come when these are pronounced, to those who so call them, imply in animals memory, a connection of sounds with ideas and actions, and an obeying will. (43) The attention of some to music, which has been already alluded to, has a claim to be called an intellectual sensibility. (44) So has the impression which some receive from the menacing features of the human face. (45) The actions of the elephant and the dog, which resemble those of thinking intellect, are very striking; but are so familiarly known, that I will only here recommend you to recollect them as very instructive testimonies of the nature and operations of the animal mind. The orang otangs likewise, which come nearest to us in form, at times evince some faculties and actions so analagous to our own, as to be only distinguished by the insurpassable limitation which appears always attached to them. But all the simia tribe are confined to their native inferiority to us, and to their discordances from us, inflexibly and unalterably, in their minds as in their bodies. What they are, they can be only for all succeeding ages in which they may exist. No brute animals of any kind, in any chronology of their being, have been found to possess the *expanding* and *unceasing* improvability of the human soul. It is this quality, never extinguished or extinguishable, though often dormant, which proclaims our spirit to be born for immortality; as the want of it makes it probable that their vital principle in all other material organizations, at least in their present forms and phenomena, is not intended to be perpetuated hereafter.

up with it, objects so small, as bits of wood or straw. With their tail they can carry hay to make their beds, and spread it about with much ease.

(36) In one of these it sleeps, (its bed room,) in the other which is *lower*, (its parlour,) it eats its provisions, which it collects in the night time. —*Kerr's Linn.*

(37) In forming his habitation (on the banks of a river,) he first burrows deep under ground, and then works upwards. Before he reaches the top, he provides several bolts or lodges, that, *in case of high floods*, he may have a retreat.

(38) Towards sun-set, he issues from his hole. Near this, he sits upright, and holds one of his paws before his eyes, in order to modify the rays of the sun, and to procure a distinct view of the bees he is looking for.

(39) Bingley, I. p. 252.

(40) When a bear is wounded by a ball, he gathers leaves and fills up the wound with them. The Kamtchadales derive their medical knowledge from observing what herbs the bears apply to their wounds, and what method they pursue for recovery, when languid and disordered.—*Bingley.*

(41) Bingley, p. 190.

(42) Ib. p. 250.

(43) Mr. Hartley, in the island of Egina, narrates that, 'passing by a flock of sheep, I asked the shepherd if he gave names to his sheep, and if they obeyed him when he called them by their names. I bade him call one; he did, and it instantly left its pasturage and its companions, and ran up to him with signs of pleasure.'—*Turner.*

(44) The lizard kind are great lovers of music. Greaves, in his observations on the Pyramids, observes, that the lizards in their vicinity are great lovers of the bag-pipe.

(45) It has been said, that the elephant and dog are the only animals that understand looks, and that the dog only dreams; but it is ascertained that cats, horses, and cattle, are impressible by the countenance that threatens them,

LITERATURE.

THE CONTINENT OF EUROPE.

A Visit to Germany and the Low Countries, in the Year 1830 *and* 1831. By Sir ARTHUR BROOKE FAULKNER. 2 vols. 8vo. 1833.

SIR ARTHUR, it appears, embarked for Rotterdam, in September, 1829, and duly arrived there, after a voyage which presented nothing worthy of record, save a German personage, one of the passengers, who, by his hostility to Englishmen, very naturally raised the indignation of the author. Proceeding to Cologne, and subsequently to Mayence, Sir Arthur declines the duty of describing the route he has taken, under apprehension that a task, in which some of our best poets have failed, could not be undertaken by him with any chance of success. He tells us, however, that in Mayence, the English are unpopular, and the leading cause of this misfortune, is stated to be the very awkward part they take in their ordinary contracts in the shops. British visitors to the continent, generally take it for granted that they are expressly marked out as the victims of the local shopkeepers' extortion; they affect, therefore, on all occasions, to become indignant at the announcement of the prices, and generally conclude by a tender of about a third of the sum required. The inculpation which is implied by this offer, neither gods nor Germans can bear, and our countrymen are therefore set down, for the most part, as barbarians, destitute of that cultivation which would entitle them to hold rank among the civilized nations of Europe. Nevertheless, the experience of the author is, that to some extent at least, the suspicion of German honesty, on the part of English visitors, is justified; for the tradesmen, he declares, are ready to impose on their customers whenever they can, and that too, not so much on account of their partiality for large profit, as for their inherent love of taking advantage of others. A lady, twenty years married to a German, repeated to the author, that the principle of the dealing of her husband's compatriots, was not kept a secret, it being comprised in this simple maxim—get as much as you can wheedle out of those who can afford it. Frankfort and Cassel are the cities to which the author next directs his inquiries. With the latter he is far from being well pleased, and, indeed, extends his displeasure to the whole electorate of Hessia, of which Cassel is the principal place. He renders justice, however, to Hessia, by observing, that it is creditably distinguished for the perfect practical toleration of all religious persuasions which exist amongst its population, and the charity of people of opposite persuasions towards each other. Catholic and Protestant live in the most perfect harmony, caring as little, remarks our author, for the preferences entertained by either for his religion, as for his particular view respecting the north-west passage. The clergy of Hessia, as may be at once concluded from the moral condition of their flock, are exemplary in their conduct, and yet the average stipend paid to each per annum, amounts to no more than forty dollars, with a house and garden. 'Each dollar,' adds Sir Arthur, 'is worth only three shillings British, and let the Archbishop of Canterbury calculate the amount.' At Halsdorf, in the same electorate, the traveller made a brief stay, having been particularly attracted by the mode of thrashing, which was then in full operation in the village. The labourers of Halsdorf thrash with a perfect regard to time, harmoniously joining each other in the same measure, and in the transitions from one sort of measure to another. He saw, sometimes, eight flails in concert; at other times four only; but under all variations of the amount of the workmen, they preserved the most severe regularity of succession in the strokes, as if they were directed to each movement by a musical score. When the piano sounds of the flails is to be particularly delicate, the tips of these instruments only are used! next comes the crescendo, the flails are gradually wielded with more power—the barn soon echoes to the loud notes.

Sir Arthur particularly noted that the flail, during the whole operation, is never raised higher than the head, and the ease and success with which the business is done in this manner, suggests to him the propriety of questioning the reasonableness of the English thrashers expending so large a share of their strength to so little purpose in the barn, by always carrying the flail above their heads.

The state of the population in this part of Germany is at a very low ebb indeed, the women being very little removed in civilization from the condition in which they are found to be placed amongst the barbarous Indians; the houses are built of mud, and the common food of the population is quite as low in the scale of nutriment as that of the Irish people.

At Marburg our traveller stopped at a hotel which was situated very near the house where Luther sojourned in the very height of his persecution. This residence is described by Sir Arthur as a corner house, about four stories high, with six windows in the front, and a china shop on the ground floor. Next to this again is the house where Zuinglius lived, and the ancient people of the town still point to the two windows out of which these celebrated men used to hold converse together. Here too is a university, in which degrees are conferred, and which is attended by a considerable number of students, who have excellent instruction upon amazingly cheap terms.

The relation which the professors of various religious doctrines maintained in this town, at the time of the Reformation, is best explained by the fact, that one part of the principal church was appropriated to the Protestants, the other to the Catholics; and a carpet for the floor of the edifice, which had been wrought at some former period by a margravine, was divided in two, that it might serve for the mem-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

bers of each of the two religions, who were necessarily obliged to solemnize their worship apart. The state of education, in this part of Germany, is on a footing so judicious, that some notice of it appears to us to be desirable, with the view of illustrating some of the erroneous principles of diffusing education which have been acted on in many countries. In Marburg there is an actual obligation imposed on parents to send their children to school. All heads of families are included in a tax for the support of institutions connected with education, and this duty is enforced, whether they take advantage of such institutions or not. The nomination of a schoolmaster is always preceded by a most rigorous, *bona fide* inquisition into the qualifications of the candidate; and as every body is interested in having a proper person to discharge the duties of teacher, it can scarcely ever happen that an incompetent person should be appointed. Independently of these fixed establishments for the purposes of education, there are also itinerant lecturers, who perform circuits round the country, carrying education, as it were, to the very door of those who will not go forth to seek it. These peripatetic instructors, however, are not recognized by the state, and depend altogether on the inclination of their scholars for a subsistence. The greatest attention is bestowed on the selection of books for the popular schools; the scholars are left, for the most part, to their own tastes, but abridgements in an attractive form and style, of some of the most useful books, are put into the children's hands, and these small productions are sold on terms which are just short of being absolutely gratuitous: a short publication, for example, containing a quantity of printed matter, which is equal to one hundred and fifty pages of our octavo volumes, may be had for 4½*d.* But the most important of all the principles which are incorporated with the system of education, in this part of Germany, is that which establishes, as a fundamental measure, the well grounding of the children of both sexes in the principles of religion. That parent has a terrible responsibility to answer for who neglects to give his child the opportunity of cultivating religion: the immense advantage of an early introduction to religion is that it secures the prepossession of the mind towards it during life. When a knowledge of divine truths only arrives at a time when the student is advanced to maturity, the probability is, that his impressions of its influence will be fleeting.

Though this system of extended education produces no unusually large proportion of intellectual lights amongst the Germans, yet its moral effects are strikingly manifest in the shrewdness and very orderly conduct of the people at large. They have no time to contract a taste for idleness or dissipation; they have been initiated into the enjoyment of mental pleasures; and many who, if they were to exchange climates with Englishmen, would abandon their leisure to gin and tobacco, are now much more contented to consume the *Waverley Novels*. These famous productions are in prodigious request in the interior of Germany; and, what cannot but be gratifying to hear, this extraordinary demand is never considered by the booksellers as a reason for raising the price of their commodities. Sir Arthur states, that a copy of the *Iliad* and *Odyssey*, on good paper, and in excellent type, perfectly new, may be had at Marburg, for 1*s.* 10*d.*! Another remarkable circumstance is the total exclusion of immoral and obscene books from circulation.

Proceeding from Marburg to Frankfort, and subsequently to Bonn, the site of a famous university, the author takes occasion to enter into some very interesting details on the more improved system of general education which prevails in this part of Germany. In every town and large village there is a school, chiefly supported by voluntary contributions, to which the children of all classes, ranks, and religion are admitted. This rustic establishment is called Freischule, and the system on which it is conducted is altogether admirable in its plan and in its effects, and furnishes an invincible proof of the facility and even usefulness of educating children of different religions in the same institution. The Lancasterian system is rejected in almost all the schools, whilst that of Pestalozzi is generally adopted. The regulations respecting prizes, vacations, and the health of the scholars, the absence of corporal punishments, and the system of seeking to stimulate industry by calling the moral feelings into play, are amongst the more striking features of the great plan of German education, which proves with what a profound attention to the genius of human nature the foundations of that plan have been laid. The whole subject is amply and accurately treated by the author of these volumes, and forms a theme for meditation, which should meet with the immediate attention of all who are interested in the moral improvement of this colony.

The principal establishments of Bonn, the gymnasium and the university, are likewise minutely and satisfactory described by the author. The practice of duelling, though prevalent at the universities, is yet, when it comes to be explained, divested of all those terrors which the word in this country implies. The slightest quarrel is generally settled by an appeal to the swords; but what with the encasement of strong wadding which completely invests every vulnerable point of the body of each combatant, and what with the law of honour which defines the least scratch as a legal termination of the contest, the practice of duelling in the German universities is in practice, perhaps, as innocent a method of expiating violations of honour as could well be devised.

The traveller met with many of the surviving acquaintances of Beethoven, who had been a native of Bonn. The impression in England respecting this great composer was, and we believe still is, that the Germans let him die of starvation, in imitation of the tenderness with which we treat most of our countrymen who sacrifice their private fortune to the public good. Sir Arthur B. Faulkner, however, heard a very different account of the matter from those who were entitled to know most about it. Up to the hour of his death, Beethoven was in the receipt of an annual income of eight hundred florins from the personal purse of Prince Rodolph, besides which, he had collected the profits of his compositions, and these having sold very extensively, produced a sum, which, with his annuity, must have secured to Beethoven something very little short of affluence. Any deficiency in his means, therefore, must have been attributable altogether to his own folly, for he kept no accounts, knew little or nothing of, and cared less about money matters, and had a permanent drain upon his coffers in the person of a profligate nephew, the extravagance of whose habits was only outdone by that of his uncle's indulgence.

The institutions of Prussia, national and social, seem to have received considerable attention from the author during his stay in the north of Europe. Litigation appears to prosper but very indifferently in that cold region, and what is consoling is, that this fortunate exemption from a vicious propensity cannot be explained by the existence of a despotic government alone. The education of the people is commensurate with the extent of the population, and further, there is a universal feeling of confidence in the monarch which induces the subject to place confidence in his servants, and thus he readily refers all disputes to the burgomaster. The education of females in Prussia appears to be conducted on the principle of preferring use to ornament, and whether or not there be any relation between the two circumstances, certain it is, that the women are so famed for their correctness of conduct, as that the most searching of inquirers was unable to detect a single case in which a young lady of Prussia has been engaged in any frolic analagous in its nature to our Gretna Green expeditions. Marriages in Prussia are wonderfully cheap; the utmost which it costs even the richest man to pass the confines of bachelorship is not more than a louis d'or, whilst a poor one is let off for a franc: The portions of the ladies are on the same moderate scale—forty pounds, English, being about the average which satisfies a man in ordinary life.

The taxes on articles of consumption are very heavy in Prussia; but still the condition of the labouring classes is much better in that kingdom than in England. There is ample provision besides for the sick and for the unemployed labourer, and the fuel (which consists of a manufactured article) is so cheap, as to be within reach of almost the poorest inhabitants. The common beverage of the peasantry is beer, which they obtain at the rate of about twopence of our money per quart. In this part of Prussia, (for we are still in the neighbourhood of Bonn) one of the rank of a gentleman may enjoy all the comforts, and not a few of the luxuries of life, for about one thousand Prussian dollars, being a sum equal to three hundred pounds English. The proportion of natural deaths in this quarter is exceedingly small, a circumstance which may be accounted for by the precautions taken by most Germans against cold, whereby they are saved from all the inconveniences and perils of catarrhs and coughs. Suicide is very rare amongst them, and this is deemed a proof by the author, that so unnatural a crime as self-destruction can neither be generated nor encouraged by the excessive use of animal food, otherwise the proportion would be amongst the Germans about Bonn at least ten for every one perpetrated throughout Europe.

Brussels is the next place to which the author directs his critical attention. Here the most interesting object to his mind appeared to be the famous Barrere, the friend and fellow-labourer of Robespierre, and the president who occupied the judgment seat at the trial of Louis Capet. Barrere is now poor and old; he lives in a small lodging, with only one servant, and is quite unhappy on the Belgian soil. The author proceeds from Brussels to Darmstadt, with the state of which he appears to be tolerably satisfied, although he is aware that his countrymen are unpopular in that state.

A whole season was spent by Sir A. B. Faulkner in Holland, a space of time for observation which he seems to have employed with his usual acuteness and diligence. His impression with respect to the Dutch is decidedly unfavourable; they are represented by him as being dull, proud, cunning, by no means hospitable, but pre-eminently selfish, seldom extending their entertainments for guests beyond those which the author implies by the phrase of 'tea and turn out.' There is no taste for social intercourse amongst them, and at the few soirées to which Sir Arthur was invited, he was struck with the complete intellectual famine which the assemblages presented. Notwithstanding the provisions which are made throughout Holland for the education of the servile class, there is yet a great deal of doubtful morality amongst its members. The Dutch servants are declared by Sir Arthur to be the greatest thieves in Christendom, and with respect to those in easy station, there is no passion that rages in their souls more fiercely than the pride of birth, always, however, excepting their avarice. The aristocracy carry their *hauteur* to a pitch which becomes disgusting by its excess, and they, as well as Dutchmen in general, are obnoxious to the same charge of being indifferent to the value of independence and freedom. 'A Dutchman's patriotism,' the author tells us, 'like his canal, never rises one inch above the dead flat of his selfishness,' and hence there is but little regret for the loss of Belgium, which to the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

King of Holland was really no more than an expensive dead weight.

Sir Arthur happened to be in Holland at the period when the desultory hostilities which succeeded Leopold's accession were going on between the Belgians and the Dutch. He was therefore a witness of the strange license which the Hague newspapers assumed in sending forth the grossest mis-statements which it was possible to invent. To calumniate and humiliate England seemed to be one of the grand objects of this infatuated press, and hence they inveighed against the Reform Bill with all their might. In contrast with the sentiments of the Dutch as to this particular measure, Sir Arthur places the opinions, as collected by his own senses, of the well informed of every part of Germany; and he believes himself fully warranted in declaring, that the defeat of the Reform Bill would have been regarded by the great majority of that people as an irreparable calamity, inasmuch as they must be convinced that England, in all those struggles for liberty, is but the pioneer that makes straight the way for the nations to follow her, and that any delay which may retard for a moment her advancement in the glorious course, will be propagated, as it were, along the vast procession behind her, and which is anxious to tread in her steps. In pursuing his tour through the different parts of Holland, the author only gathers fresh materials for confirming his hostility to the Dutch.

In the range of his inquiries during his travels on the continent, Sir Arthur Faulkner has very properly comprehended the political state of Germany. At the present moment it is peculiarly interesting to trace the progress which constitutional liberty is making in that country, and to speculate on the chances which are presented of success to that eternal cause. At present, the only states where the semblance of a government on constitutional principles exists, are Darmstadt, Bavaria, Wurtemburg, Grand Duchy of Baden, Saxe Weimar, Mecklenburg (both), Brunswick, together with Nassau. In Saxe Alterburg and Saxe Meinengen, and several other principalities, offers have been made of constitutions, and the people of Hanover and Saxony have now nearly succeeded in obtaining so desirable a blessing for themselves.

In those states, where there is a constitution in actual practice, the course of legislation is very extensively in the hands of the representative chambers. A bill is generally originated in the lower house, but there are peculiar rules of relation between the two which must prove very inconvenient to the progress of business. The sovereign in these states can create peers either hereditary, or merely for life. Lately the King of Bavaria had a creation for life, having been pushed by the old parliament in the matter of the supplies. The princes in the Protestant states unite the spiritual with the secular supremacy; in the Catholic states, the sectaries have the freest exercise of their religion, no distinction in political life being made on the score of religion. Clergymen, of all persuasions, may sit in the chambers; in Nassau and Darmstadt they are only admitted into the chamber of deputies, whilst in Bavaria and Wurtemberg they are eligible to both. In Austria alone is the philanthropist doomed to disappointment, in seeking throughout the German dominions the elements of moral amelioration, which are in almost every other of the states so happily abundant. Here the condition of the people is hopeless, for it has been one of the criminal devices of the immediate government to extirpate from the minds of the population every feeling almost that is worthy of our nature. From Germany the author makes a parenthetical visit in spirit to his native England, there to discuss the vices of the feudal domination, which are still connected with the pretensions of our aristocracy. Returning to his tour in Germany, he invites us to the state of Baden, and the peculiarities by which that division is physically and politically distinguished. The arrangements for paupers in Baden is quite on a par with those of the best states in Germany. The communes respectively support their own poor by voluntary subscription, beggars are, therefore, seldom seen, at least that description of them who are prevented by infirmity from supporting themselves. The practice which forms so objectionable a feature in the administration of the English poor laws, that of permitting a pauper to migrate from one parish to another, and in the latter to obtain a settlement, does not exist in Baden, or, we believe, in any part of Germany: ten years residence are necessary to qualify a pauper for partaking the parochial allowance.

The punishment of crime in Germany has been frequently adverted to, for the sound principles on which the penal code is adjusted. The policy of the state, in the first place, provides against the frequency of the crime, by extending the benefits of education as widely as the community to which it is afforded. Thus the numerous class amongst the lower orders of this country, whose age is from ten to fifteen years, are at present almost destitute of any security against the most corrupting temptations, while the analogous portion of the Baden community is engaged in improving their minds. Petty offences are punished with hard labour, and more serious crimes with the travail forcé. The extreme sentence of the law is decollation, which is executed by the sword. Capital punishments are rare, but the discipline established in the prisons secures the grand object of classification, and consequently the separation of those prisoners who might spread moral contamination amongst those less guilty than themselves.

We are unable to follow our author to the close of his journey, although from the commencement we have followed him pretty closely in his career.

The Buccaneer. 3 vols. 8vo. 1833.

In no other department, perhaps, is the literature of the day so fertile of talent as in the *fancy writers.* We by no means consider this complimentary to the understandings of the readers of such, for it cannot be denied that Colburn and Bentley have deluged the world with the most disgusting trash, far exceeding the former issues of the Minerva Press. But it is well when the works of fiction can be rendered subservient to useful instruction; but it is more safe to class them under the head of Amusement, since their efficiency, as instruments of mental or moral training, is very indirect and limited. Perhaps the Buccaneer, by Mrs. Hall, may, with a few exceptions, be safely recommended. There is a masculine vigour and breadth of style, a dramatic force of conception in her characters, and a range of imagination not displayed in any of her former writings. She ranks high among the illustrious British female writers of the present day. These are a goodly number, — Mrs. Hannah More, Miss Mitford, Miss Jewsbury, Mrs. Conder, Miss Martineau, (a most extraordinary woman,) Miss Lawrance, Mrs. Hemans, Miss Sheridan, Mrs. Norton, &c.

In reference to the Buccaneer, the fair Novelist ventures upon an historical essay on the Protector's character. In our humble opinion, she has done great justice to the memory of that wonderful man—Cromwell.

'His Court was a rare example of irreproachable conduct, from which all debauchery and immorality were banished; while, such was his deep and intimate, though mysterious acquaintance with every occurrence throughout the Commonwealth, its subjects had the certainty of knowing that, sooner or later, whatever crimes they committed would of a surety reach the ear of the Protector. His natural abilities must always have been of the highest order, though in the early part of his career he discovered none of those extraordinary talents that afterwards gained him so much applause, and worked so upon the affections of the hearers and standers by. His mind may be compared to one of those valuable manuscripts that had long been rolled up and kept hidden from vulgar eyes, but which exhibits some new proof of wisdom at each unfolding. It has been well said by a philosopher, whose equal the world has not known since his day, "that a place showeth the man." Of a certainty Cromwell had no sooner possessed the opportunity so to do, than he showed to the whole world that he was destined to govern. "Some men achieve greatness, some men are born to greatness, and some have greatness thrust upon them." With Cromwell, greatness was achieved. He was the architect of his own fortunes, owing little to what is called, "change," less to patronage, and still less to crime, if we except the one sad blot upon the page of his own history, as connected with that of his country. There appears in his character but a small portion of that which is evil, blended with much that is undoubtedly good. Although his public speeches were, for the most part, ambiguous—leaving others to pick out his meaning—or, more frequently still having no meaning to pick out—being words, words, words—strung of mouldy sentences, Scriptural phrases, foolish exclamations, and such like; yet, when necessary, he showed that he could sufficiently command his style, delivering himself with so much energy, pith, propriety, and strength of expression, that it was commonly said of him under such circumstances, "every word he spoke was a thing." But the strongest indication of his vast abilities was, the extraordinary tact with which he entered into, dissected, and scrutinized the nature of human kind. No man ever dived into the manners and minds of those around him with greater penetration, or more rapidly discovered their natural talents and tempers. If he chanced to hear of a person fit for his purpose, whether as a minister, a soldier, an artizan, a preacher, or a spy,—no matter how previously obscure, he sent for him forthwith and employed him in the way in which he could be made most useful, and answer best the purpose of his employer. Upon this most admirable system, (a system in which, unhappily, he has had but few imitators among modern statesmen,) depended in a great degree his success. His devotion has been sneered at; but it has never been proved to have been insincere. With how much more show of justice may we consider it to have been founded upon a solid and upright basis, when we recollect that his whole outward deportment spoke its truth. Those who decry him as a fanatic, ought to bethink themselves that religion was the chivalry of the age in which he lived. Had Cromwell been born a few centuries earlier, he would have headed the Crusades, with as much bravery, and far better results, than our noble-hearted, but wrong-headed "Cœur de Lion." It was no great compliment that was passed on him by the French minister, when he called the Protector "the first captain of the age."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

His courage and conduct in the field were undoubtedly admirable: he had a dignity of soul which the greatest dangers and difficulties rather animated than discouraged, and his discipline and government of the army, in all respects, was the wonder of the world. It was no diminution of this part of his character, that he was wary in his conduct, and that, after he was declared Protector, he wore a coat-of-mail concealed beneath his dress. Less caution than he made use of, in the place he held, and surrounded as he was by secret and open enemies, would have deserved the name of negligence. As to his political sincerity, which many think had nothing to do with his religious opinion, he was, to the full, as honest as the first or second Charles.

'Of a truth, that same sincerity, it would appear, is no kingly virtue! Cromwell loved justice as he loved his own life, and wherever he was compelled to be arbitrary, it was only where his authority was controverted, which, as things then were, it was not only right to establish for his own sake, but for the peace and security of the country over whose proud destinies he had been called to govern. "The dignity of the crown," to quote his own words, "was upon the account of the nation, of which the king was only the representative head, and therefore, the nation being still the same, he would have the same respect paid to his ministers as if he had been a king." England ought to write the name of Cromwell in letters of gold, when she remembers that, within a space of four or five years, he avenged all the insults that had been lavishly flung upon her by every country in Europe throughout a long disastrous, and most perplexing civil war. Gloriously did he retrieve the credit that had been mouldering and decaying during two weak and discreditable reigns of nearly fifty years' continuance—gloriously did he establish and extend his country's authority and influence in remote nations—gloriously acquire the real mastery of the British Channel—gloriously send forth fleets that went and conquered, that never sullied the union-flag by an act of dishonour or dissimulation!

'Not a single Briton, during the Protectorate, but could demand and receive either reparation or revenge for injury, whether it came from France, from Spain, from any open foe or treacherous ally;—not an oppressed foreigner claimed his protection but it was immediately and effectually granted. Were things to be compared to this in the reign of either Charles?' Vol. III. pp. 19—24.

HISTORICAL SKETCH OF THE ORIGIN AND PROGRESS OF THE ASIATIC CHOLERA.

On the 28th August, 1817, this terrible disorder appeared at Jassore, a very considerable town, situated about 100 miles north-east of Calcutta. At Jassore it proved fatal to about one tenth of the inhabitants. In less than a month it travelled from thence to Calcutta, visiting village after village in its journey, and sweeping off thousands of the population. From Calcutta it spread in different directions. Following the course of the Ganges, it extended northward to Delhi, desolating Benares, Lucknow, Agra, and other cities. Benares lost 15,000 inhabitants. In an army of 18,000 men, under the command of the Marquis of Hastings, encamped at Mundelah, Gubblepore, and Saugor, on the southern branches of the Upper Ganges, more than half were swept off by the Cholera in twelve days.—Having passed the banks of the Nebuddah, it reached Bombay, to the westward, in September, 1818, (one year after its first appearance in Calcutta,) taking, in its course, among many other places, the famous cities of Aurungabad and Poonah.

To the south from Calcutta its travels were equally rapid and destructive. It reached Madras in October, 1818, and arrived soon after at the extremity of the peninsula, diffusing itself over the whole Coromandel coast. In the following January it passed over from the peninsula to Ceylon, and laid in the dust a large number of the inhabitants. In November, 1819, it broke out in the Isle of France, and in six weeks destroyed one-fourth of the population. It is supposed to have been brought to this island from Ceylon, a distance of nearly 1000 leagues, in the Topaz frigate, which arrived at Port Louis in October, 1819. Many of the crew died of the Cholera during the voyage; and, though there were no cases on board on her arrival, yet three weeks after the landing of the convalescents, the desolating disease began its work of destruction among the inhabitants. Soon after its appearance at Calcutta, it commenced a rapid journey of mortality to the eastward. It travelled along the coast of Bengal, to the kingdom of Arracan, where it arrived in the early part of 1819. It proceeded from Arracan to Siam, in the capital of which it destroyed 40,000 inhabitants. Having traversed the kingdom of Siam, it passed through the peninsula of Malacca, and visited in regular succession the islands of Sumatra, Java, and Borneo. It re-appeared in Java in 1822, when it removed 100,000 souls into eternity. In the same year (1822) it paid a terrific visit to Celebes, Amboyna, and several other islands of the Eastern Archipelago. It attacked Cochin-China and Tonquin in 1820; entered China, and began its ravages at Canton, and scattered its fatal poison over the Philippine and Spice Islands, towards the close of the same year. It arrived at Pekin in the early part of 1821, and proved so mortal to Pekin and Nankin during that and the two following years, in defiance of the strictest precautions, that the public treasury was obliged to furnish funds to bury the dead. In about one year the Cholera travelled over the whole Indian Peninsula, containing 600,000 square miles; and in less than two years it ravaged a territory in Asia of about 1,300 leagues in length, and 1,000 in breadth—nearly one hundred and twenty millions of square miles.

The Cholera re-attacked Bombay in 1821, and, taking the islands in its course, it proceeded westward towards Europe. It crossed the Arabian Sea, and made its appearance at Muscat, situated at the eastern extremity of Arabia. To the inhabitants of this commercial city, it proved very destructive Passing on both sides up the straits of Ormus and the Persian Gulf, it extended on the Persian side to Shiraz, Yezd, Ispahan, Tabereez, and into Armenia: and on the Arabian side, at the head of the Persian Gulf, it attacked Bassorah, an Ottoman town, with terrible mortality sweeping off one-fourth of the population in 14 days. To the northward it proceeded up the Euphrates and Tigris to Bagdad, and slew one-third of its inhabitants. From Bagdad it ascended to Astrachan, a populous town on the northern shore of the Caspian Sea, at the mouth of the Volga, where it arrived in September, 1823.—To the westward from Bassorah, it proceeded to the shores of the Mediterranean, ravaging Arabia, Mesopotamia, and Syria. In 1823 it appeared at two points on the frontier of Europe.

From 1823 to 1830 Asia has been annually subjected to the scourge of this terrible pestilence. It did not, however, pass over into the European territories until July, 1830, when, after severely re-attacking Astrachan, it passed along the Don, the Dnieper, and the Volga into Europe, traversing a space of 1,600 miles in less than three months It penetrated to the heart of the Russian empire; among the Don Cossacks its ravages were extensive; it made successive attacks upon the capitals of the several provinces south of Moscow; it entered Moscow three months after its re-appearance at Astrachan, and made a prey of above 5000 inhabitants. In 1831, the Cholera entered Poland, by the Russian armies, and visited most of the villages and towns of that unfortunate kingdom. It soon reached the shores of the Baltic, successively attacked Riga and Dantzic, and, in defiance of rigid quarantine regulations, and every possible precaution, entered St. Petersburg. It passed into Prussia, and made its appearance in Berlin, Hamburg, and other German cities. It passed from Syria into Asia Minor, and was very destructive in Smyrna. From Astrachan it directed its course westward to the Sea of Asoph, traversed the northern shores of the Black Sea to the mouth of the Danube, which it ascended, scourging Hungary in its march, and arrived at Vienna before the winter of 1831. On the approach of winter, its malignity appeared to subside upon the continent of Europe. The British nation, however, was soon paralyzed with a panic of alarm, by its sudden appearance at Sunderland, on the eastern coast of England. Soon after, it appeared in other places, visiting Edinburgh, Glasgow, and Ireland. It has since crossed the Atlantic, arrived upon the American shores, entered its towns, terminated the probationary state of several thousands of her people, and emptied many a habitation of its most needed inmates. It still exists, and prevails to a considerable extent in New York, and other places in the neighbouring states.

Whether the pestilence is yet destined to circumnavigate the whole inhabited globe, is only known to Him, who has in so fearful a manner poured his vial of wrath upon the air.

In conclusion, we beg to add a few general observations on this disease.

1. It is not generally admitted by physicians that Cholera is a disease peculiar to the present century. Physicians of India profess to have the best authority for believing that it carried off 30,000 inhabitants of Bengal in 1762, and revisited that region in 1781; that it appeared at Madras in 1744, in the Isle of France in 1775, and in Arcot in 1787. It is also affirmed by respectable authority, that the epidemic pestilence in England in 1669 and in 1676 was no other than the present spasmodic Cholera.

2. An alarming fact connected with the history of the Cholera is, that it establishes itself permanently in almost every place that it attacks, and breaks out at intervals in its dreadful ravages upon the inhabitants. It attacked Calcutta 14 times, or every year from 1817 to 1830; Madras, 9 times; Bombay, 12 times; the principal cities of India, frequently. Its frequent irruptions in China, Persia, and Syria, furnish abundant facts of the same kind; the same is likely to be the case in England; it will probably be the same in this country. It has been ascertained that, up to May, 1831, there have been *six hundred and fifty-six* IRRUPTIONS of the Cholera

3. The destructiveness of this disease exceeds the mortality of any plague or pestilence recorded in ancient or modern, sacred or profane, history. Its mortality in *India* for the last fourteen years has been estimated at *two millions five hundred thousand, annually*. At the lowest estimate, it has swept off *eighteen millions* of human beings in Hindostan, and *thirty-six millions* in Europe and the rest of Asia—about one in sixteen of the inhabitants of the globe!

4. The capriciousness of the disease is very extraordinary, and several facts connected with it appear to be unaccountable upon any ascertained principles of physiology. In some cases, not more than one half or one third of the infected parish; at other times, without any perceptible variation of circumstances, six out of seven of its victims perish. It is stated, that the disease has sometimes taken a complete circle round a town or village, passed on to another district, and then, after the lapse of several weeks, returned, passed by the places heretofore infected, and ravaged the places which had so recently escaped. In the very heart of a Cholera district have been found

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

neighbourhoods and patches of territory perfectly free from the infection of the disease. It is sometimes most fatal in filthy habitations, crowded neighbourhoods, low moist places, and the hot season; yet it originated in a country where ablutions are frequent, even as a religious ceremony—it was proportionably as destructive in the province of Caucasus, where there are but eight inhabitants to a square league, as in Hindostan, where there are 1200 in the same space—it malignantly ravaged the villages of the Himalaya mountains, 8000 feet above the level of the sea, and in unwatered Arabia—it attacked Moscow in the dead of winter, with the thermometer 16 degrees below zero, and spread with increasing rapidity as the weather grew colder. Who can explain these phenomena of this disease?

LITERARY EXTRACTS.

IRISH CHARACTERISTICS.

From Traits and Stories of the Irish Peasantry.

Benediction of an Irish Beggar.—"'God save the house!' exclaimed Darby, on entering—'God save the house, an' all that's in it! God save it to the north!' and he formed the sign of the cross in that direction; 'God save it to the south! ✝ to the aiste! ✝ and to the vaiste! ✝ Save it upwards! ✝ and save it downwards! ✝ Save it backwards! ✝ and save it forwards! ✝ Save it right! ✝ and save it left! ✝ Save it by night! ✝ save it by day! ✝ Save it here! ✝ save it there! ✝ Save it this way! ✝ an' save it that way! ✝ Save it atin! ✝✝✝ an' save it drinkin'! ✝✝✝✝✝✝✝ Oxis Doxis Glorioxis—Amin. An' now that I've blessed the place, in the name of the nine patriarchs, how are yees all, men, women, and child? An' a merry Christmas to yees, says Darby More!"

An Irish Oath against Liquor.—We must just observe, that the swearer believes his drunken habits prolong his wife's stay in purgatory.

"Oath against liquor, made by me, Cornelius O'Flaherty, Philomath, on behalf of Misther Pether O'Connell, of the Cross-roads, merchant, on one part, and of the soul of Mrs. Ellish O'Connell, now in purgatory, merchantess, on the other. I solemnly, and meritoriously, and soberly swear, that a single tumbler of whisky-punch shall not cross my lips, during the twenty-four hours of the day, barring *twelve*, the locality of which is as followeth:—

Imprimis—Two tumblers at home	2
Secundo—Two more ditto at my son Dan's	2
Tertio—two more ditto behind my own garden.	2
Quarto—One ditto at the Reverend Father Mulcahy's	1
Quinto—Two more ditto at Frank Carroll's, of Kilclay	2
Sexto—One ditto wid ould Bartle Gorman, of Nurchasy	1
Sedtimo—Two more ditto wid Michael Morris, of Cargah	2
	12

"N. B. I except in case any docthor of physic might think it right and medical to ordher me more for my health; or in case I could get Father Mulcahy to take the oath off me for a start, at a wedding, or a christening, or at any other meeting of friends where there's drink.

his
"PETHER X O'CONNELL.
mark.

"Witness present,
Cornelius O'Flaherty, Philomath,
June the 4th, 18—.

"☞ I certify that I have made and calculated this oath for Misther Pether O'Connell, merchant, and that it is strictly and arithmetically proper and correct.

"Cornelis O'Flaherty, Philomath.

"Dated this 4th day of June, 18—.

"'I think, Misther O'Flaherty, it's a dacent oath, as it stands. Plase God I'll swear to it some time to-morrow evenin'.' 'Dacent! Why I don't wish to become eulogistically addicted: but I'd back the same oath, for both grammar and arithmetic, against any that ever was drawn up by a lawyer—ay, by Counsellor O'Connell himself!—but faith, I'd not face him at vow, for all that; he's the greatest man at a vow in the three kingdoms.' 'I'll tell you what I'm thinkin', masther; as my hand's in, mightn't I as well take another wid an ould frind o' mine, Andy Cavanagh, of Lisbuy? He's a dacent ould residenther, an' likes it. It'll make the baker's, or the long dozen.' 'Why it's not a bad thought; but won't thirteen get into your head?' 'No, nor three more to the back o' thet. I only begin to get hearty about seventeen; so that the long dozen, afther all, is best; for God he knows I've regard for Andy Cavanagh this many a year, an' I wouldn't wish to lave him out.' 'Very well, I'll add it up to the other part of the oath.

Octavo—One ditto out of respect for dacent Andy Cavanagh of Lisbuy 1

Now I must make the total amount thirteen, an' all will be right.' 'Masther, have you a prayer-book widin? bekase if you have, I may as well swear it here, an' you can witness it.' 'Katty, hand over the *Spiritual* Exercises—a book aquil to the Bible itself for piety an' devotion.' 'Sure they say, masther, any book that the name o' God's in, is good for an oath. Now, wid the help o' goodness, repate the words afore me, an' I'll sware thim.'"

Unfortunately Peter's memory becomes confused, and he visits the schoolmaster to see if they can devise no sort of sober system of mnemonics.

"'Masther,' said he, 'we must thry an' make this oath somethin' plainer. You see, whin I get confused, I'm not able to remimber things as I ought. Sometimes, instid o' one tumbler, I take two at the wrong place; an' sarra bit o' me but called in an' had three wid ould Jack Rogers, that isn't in it at all. On another day I had a couple wid honest Barny Casy, an my way acrass to Bartle Gorman's I'm not what I was, masther, ahagur; so I'd thank you to dhraw it out more clearer; if you can, nor it was.'—'I see, Mr. Connell; I comprehend wid the greatest ase in life the very plan for it. We must reduce the oath to geography, for I'm at home there, bein' a surveyor myself. I'll lay down a map o' the parish, an' draw the houses of your friends at their proper places, so that you'll never be out o' your latitude at all.' 'Faix, I doubt that, masther! ha, ha, ha!' replied Peter; 'I'm afeard I will, of an odd time, for I'm not ably to carry what I used to do; but no matther: thry what you can do for me this time, ane how. I think I could bear the long dozen still, if I didn't make mistakes.' O'Flaherty accordingly set himself to work; and as his knowledge, not only of the parish, but of every person and house in it, was accurate, he soon had a tolerably correct skeleton map of it drawn for Peter's use. 'Now,' said he, 'lend me your ears.' 'Faix, I'll do no sich thing,' replied Peter; 'I know a trick worth two of it. Lend you my ears, inagh!—catch me at it! You have a bigger pair of your own nor I have—ha, ha, ha!' 'Well, in other words, pay attention. Now, see this dot—that's your own house.' Put a crass there,' said Peter, 'an' thin I'll know it's the Crass-roads.' 'Upon my reputation, you're right; an' that's what I call a good specimen of ingenuity. I'll take the hint from that, an' we'll make it a hieroglyphical as well as a geographical oath. Well, there's a crass wid two tumblers. Is that clear? 'It is, it is! Go an.' 'Now here we draw a line to your son Dan's. Let me see; he keeps a mill, an' sells cloth. Very good. I'll dhraw a mill-wheel an' a yard-wand. There's two tumblers. Will you know that?' 'I see it: go an, nothing can be clearer. So far I can't go astray.' 'Well, what next? Two behind your own garden. What metaphor for the garden? Let me see! let me cogitate! A dragon—the Hesperides! That's beyant you. A bit of a hedge will do, an' a gate.' 'Don't put a gate in, it's not lucky. You know when a man takes to dhrink, they say he's goin' a gray gate, or a black gate, or a bad gate. Put that out, an' make the hedge longer, an' it'll do—wid the two tumblers, though.' They're down. One at the Reverend Father Mulcahy's. How will we thranslate the priest? 'Faix, I doubt that will be a difficult business.' 'Upon my reputation, I agree wid you in that, especially whin he repates Latin. However, we'll see. He writes P. P. after his name;—pee-pee is what we call the turkeys wid. What 'ud you think o' two turkeys?' 'The priest would like them roasted, but I couldn't undherstand that. No; put down the sign o' the horse-whip, or cudgel; for he's handy, an' argues well wid both? 'Good! I'll put down the horsewhip first, an' the cudgel alongside of it; then the tumbler, an' there 'ill be the sign o' the priest' 'Ay, do, masther, an' faix the priest 'ill be complete; there can be no mistakin' him thin. Divil a one, but that's a good thought!' 'There it is, in black an' white. Who comes next? Frank Carroll. He's a farmer. I'll put down a spade an' a harrow. Well, that's done—two tumblers.' 'I won't mistake that aither. It's clear enough.' 'Bartle Gorman's of Nurchasy. Bartle's a little lame, an' uses a staff wid a cross on the end that he houlds in his hand. I'll put down a staff wid a cross on it.' 'Would there be no danger of me mistakin' that for the priest's cudgel?' 'Not the slightest. I'll pledge my knowledge of geography, they're two very different weapons.' 'Well, put it down; I'll know it.' 'Michael Morris of Cargah. What for him? Michael's a pig-driver. I'll put down a pig. You'll comprehend that?' 'I ought; for many a pig I sould him in my day. Put down the pig; an' if you could put two black spots upon his back, I'd know it to be one I sould him about four years agone—the fattest ever was in the country—it had to be brought home on a car, for it wasn't able to walk wid fat.' 'Very good; the spots are on it. The last is Andy Cavanagh of Lisbuy. Now, do you see that I've drawn a line from place to place, so that you have nothing to do only to keep to it as you go. What for Andy? 'Andy! Let me see; Andy! Pooh! What's come over me that I have nothing for Andy? Ay! I have it. He's a horse-jockey; put down a gray mare I sould him about five years agone'—'I'll put down a horse; but I can't make a gray mare wid black ink.' 'Well, make a mare of her, any way.' 'Faith, an' that same puzzles me. Stop, I have it; I'll put a foal along wid her.' 'As good as the bank. God bless you, Misther O'Flaherty. I think this'll keep me from mistakes. An' now, if you'll slip up to me afther dusk, I'll send you down a couple of bottles and a flitch. Sure you desarve more for the throuble you tuck.'"

HIGHLAND FIDELITY.

(From the Gaelic.)

ON the night of the battle of Culloden, while Donald Kennedy was sitting at the fire with his two sons, grown up boys, beside him, and his wife was busy dressing a wound he had received in the leg, in the heat of the engagement, a timid rap was heard at the door. 'Come in,' cried Donald, 'Come in,' said his wife and two sons at once.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Donald's wife, snatching a piece of fir in her hand, which burned on the cheek of the chimney, hastened to the door, to shew the unexpected visitor 'ben,' to the fire. Before she got the length of the door, it was partially opened, and the pale countenance of a tall figure muffled up in a coarse cloak presented itself. It looked eagerly towards the fire-side, as if afraid to enter, until it had got some idea of the character of the inmates.

'Come in, please your honour,' said Donald's wife, as she approached the door.

The figure, after having seemingly satisfied itself there was no particular danger, advanced towards the hearth, and sat down on a roughly-made chair, which Donald placed before the fire for the purpose.

Donald's two boys, who were at that time of life when the mind is most apt to give credence to the stories about apparitions, which were then so current in the Highlands, stood trembling beside their father, clearly under the impression that the figure was some supernatural visitant.

All this time the stranger had not uttered a word, but, after being seated, cast repeated looks to all corners of the house, as if uneasy lest there should be other inmates than it had yet seen. Donald broke the temporary silence which prevailed, after the mysterious visitant had taken a seat. 'It is a dark night, and not very pleasant travelling in so hilly a country as this,' said the Highland host to his guest.

'Well do I know that, for I have been travelling till I am quite exhausted,' said the stranger.

You looked very fatigued, indeed: Mary, lassie, get the worn-out gentleman a little of the 'creature' to refresh him, said Donald, turning from the stranger to his wife.

The words were hardly uttered, when the whiskey bottle was brought. 'Take a glass, Sir; it will do you good,' said Mary, as she held out a glass of whiskey to the stranger.

The latter took the glass from her hand. 'Your good health, my woman: yours, Sir, and all your friends,' said he, as he put the liquid to his mouth. 'Drink it out, Sir, it will do you good,' said Donald and his wife, simultaneously. The stranger emptied the glass, and thanked his host and his wife for their hospitality. Both the latter drank to the figure's good health.

'Yesterday was a sad day on Culloden Moor,' said the stranger, moving his chair somewhat nearer the fire.

'It was that, your honour, for friend and foe,' said Donald.

'You have been in the engagement, I presume, from the wound you have got,' observed the stranger.

Donald, who had from the first inferred from his guest's manner, that he was a person belonging to the higher ranks of life, now began to surmise, that he was one of the friends of the Duke of Cumberland. He, consequently, judged it most prudent to return an evasive answer to the question. 'A price is set upon the Pretender: it will be a wonder if he be not apprehended,' said the stranger. Donald, on hearing the word Pretender, cast a sinister look at his guest.

'Have you heard of the thirty thousand pounds offered for his head, dead or alive? That will be a chance to somebody,' resumed the stranger. 'They have been speaking about it, I believe,' answered the Highland-man drily.

There was now a coolness in Donald's manner, compared with what it was at first, which the stranger could not fail to remark. I know the place of Charles' concealment: it is not far off; if you will assist me in delivering him up to his enemies, we shall share the princely reward between us.'

Donald, wounded though he was, started that moment to his feet, and darting to a corner of the room for his sword, returned with the weapon is his hand 'Sir,' said he, his eye flashing with indignation, as he spoke, Sir, thou art a dead man, rather than that thou shouldst be the means of the Prince losing his life.' As he spoke, he drew his weapon, and was about to thrust it at the stranger, when Mary rushed in between them.

'Hold!' said the stranger, 'I am the Prince.' And so saying, he embraced Donald, and burst into a flood of tears. 'My friend,' said he, as soon as the fulness of his heart allowed him to speak; 'my friend, I only spoke thus, to see whether I was in the cottage of a friend or foe; such proofs of attachment, such noble-mindedness, are rarely to be met with in the world.'

Donald was confounded at the disclosure. For a time he could scarcely credit the presence, in his own house, of the Prince he so much loved and venerated. Charles threw aside his cloak, and entering into familiar conversation with Donald, soon satisfied him of his identity. 'Thy wound, then, my friend, has been got in my service,' said the Prince. 'It was,' said the other. 'Had I ten thousand lives, I would willingly have sacrificed them all for thee.' 'Friend, if I recover my rightful crown and dominions, thou shalt not be forgotten,' said Charles. 'I seek no such reward,' said the other. 'Donald and his wife, together with the Prince, then entered into conversation, as to the most effectual means of concealing the latter from his enemies. It was agreed that the best way would be to keep one of Donald's sons constantly stationed in the daytime on a neighbouring eminence, whence could be seen at a great distance any suspicious persons coming in the direction of the Highland-man's house; in which case the young lad was to give the alarm in time for the Prince to conceal himself in a hiding-place provided for the purpose. Donald had fewer fears for the safety of his illustrious ward during the night, as a large mastiff he kept, would keep any intruders at bay after he was unchained, which he regularly was, during the Prince's stay, immediately on its getting dark. While thus solicitously careful about Charles' personal safety, Donald and his wife were not forgetful of his comfort, in so far as it was in their power to administer it They daily sent their youngest son to Inverness, a distance of fourteen miles, to procure such conveniences for him as were within the reach of their humble means. After remaining for fifteen days in Donald's humble habitation, by which time his enemies relaxed the rigorousness of their search for him, the Prince parted with his tried friend, and by travelling in disguise escaped to some of the western islands, whence, after waiting his opportunity, he escaped to France.

In four years afterwards, news was received at Loch Ness Side, one cold winter's day, that a Highlandman belonging to that part of the country, was apprehended, and put into Inverness jail, charged with 'lifting a cow' belonging to a neighbouring laird. Who the person was, the Fort Augustus footpost could not tell. Next day, however, it was ascertained that the unfortunate Highlandman was Donald Kennedy. The sensation which the announcement of this fact created throughout the country, was most intense; for all had by this time heard of his courage in battle, as well as of the extraordinary fidelity he had shewn to Charles.

As the day of Donald's trial advanced, public interest in his fate grew deeper and deeper. Never was the sympathy of the community, in the case of any malefactor, so strongly expressed. All knew that the offence with which Donald was charged, could be substantiated by the clearest evidence; and the only hope of his escaping the sanguinary clutches of the law, was in the possibility of a flaw being detected in the indictment The day of Donald's trial arrived. Never before was Inverness so crowded on any similar occasion. Strangers poured in from all quarters. The court was opened, and Donald's trial proceeded. During the whole time it lasted, the stillness of death pervaded all present. The evidence was so clear, that the jury could not but convict, unless they chose to commit the most wilful perjury. The thing pained them beyond measure. A verdict of guilty was returned.

The counsel for the prisoner then rose, and addressed the Bench in mitigation of punishment. He dwelt most feelingly on the extraordinary display of noble-mindedness which the panel had given in protecting the life of the Pretender, when he knew that by delivering him up he would receive a reward of £30,000; and hoped that one who had displayed so much virtue and disinterestedness would not be severely punished for an offence unaccompanied with bloodshed or violence, and to which the unhappy man had been impelled dy dire necessity.

The judge proceeded to pass sentence. The tear that glistened in his lordship's eye, and the unusual solemnity of his appearance, told before the words were uttered, the sentence to be pronounced. His lordship then said, that during his whole official career he never met with a case of so affecting a nature; and had the prisoner stood convicted of any other offence, murder excepted, he should have been as lenient as the law would admit; but the crime of stealing cattle being unfortunately so prevalent in that part of the country, examples were urgently called for; and as, moreover, every late case of the kind had been visited with the extreme penalty, it was his duty, however agonizing to his feeling, to sentence the prisoner at the bar to be executed that day six weeks. Sentence was pronounced accordingly.

The passing of the sentence excited a thrill of the deepest sorrow among all present. There was scarcely a dry eye in the court.

The hour appointed for the execution arrived. Donald mounted the ladder with a firm step. He looked around on the assembled multitude, and after standing silent and motionless for a few minutes, as if his heart had been too full for utterance, he shortly addressed the spectators. He told them that he did not fear death, in so far as he himself was concerned; but he felt reluctant to quit the world, to leave his wife and two sons exposed to scorn. He expressed his satisfaction that it was not for taking away the life of a human creature, or any other crime which the voice of religion or conscience pronounced to be one of a deep die,—that he was about to suffer a disgraceful death. He concluded by making one request; and none of those who were present were likely ever to forget the emphasis with which he made it, or the supplicating looks which accompanied the words. That request was, that nobody would ever 'cast up' to his wife or sons, the ignominious fate to which he had been doomed, and which he was about to meet. 'If you do, said he, 'you will shorten Mary's days, and drive the fatherless lads to a country where no heather blooms.'

He would evidently have proceeded, but the heavings of his breast choked his utterance. He dropped the signal, and in a few seconds was in another world. A deep groan simultaneously bursting from the crowd, told how deeply they felt for the unfortunate Donald.

Such is the substance of the story which the old man we met in the Glen of Aultmore told my friend and me. It is nothing to read it, compared with hearing it drop from the lips of the old man. He had it all from his father who witnessed the execution, and who could never allude to his fate without dropping a tear. We felt deeply effected at the recital. And many a hundred times have I since thought of the illustrious fidelity of Donal l Kennedy, and denounced both the law and the judge, which, for so trivial an offence as Donald afterwards committed, could have doomed him to an ignominious end. *(A Tourist.)*

THE DESTRUCTION OF POMPEII.

The streets of Pompeii are paved with LAVA, although the eruption of Vesuvius, in 73, is mentioned as the first. This leads to conjectures, however fruitless, on the vicissitudes which the classic soil of Italy may have undergone! Other HERCULANEA and other POMPEII may lie deeply buried beneath those which restless curiosity is now resuscitating!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The THERMÆ or PUBLIC BATHS, are objects of no mean curiosity, since the uses of all their parts are quite unequivocal. We traverse, with no small surprise, the undressing room—the cold bath—the tepidarium, or warm-air bath—the CALIDARIUM, or VAPOUR-BATH, furnished at one end with a common liquid hot bath—at the other with a spouting hot-bath, &c. We see the place where the boilers were placed, not only for supplying hot water, but VAPOUR, which is conveyed by pipes into the interstices of the double walls, with small sieve-like or capillary apertures, to let the vapour into the CALIDARIUM. In short, invention was tortured to construct these public baths, in which hundreds bathed in common, with every thing that could minister to luxury. Considering the sultry atmosphere which the Pompeians breathed, we are not disposed to indulge in rigid censure on the enervating influence of these public Thermæ. Nor ought we to blame a people, who were shut out from all common or political feeling with the rest of the world, for indulging in the fictitious joys and sorrows of the stage. But when we proceed from the THEATRE to the AMPHITHEATRE, and survey the now empty benches where TWENTY THOUSAND spectators eyed, with rapturous delight, the mortal conflicts of men and animals on the ensanguined arena, a sense of horror at the cruelty, supersedes a sense of disgust at the licentiousness of a people, who united the wantonness of the goat with the ferocity of the hyæna! While pacing the lofty gallery that runs round this spacious amphitheatre, commanding an enchanting prospect of the Apennines and the ocean—of Vesuvius and the Bay of Napels, we are reminded by history that on this very spot, and on the 24th of August, 79, TWENTY THOUSAND Pompeians raised the shout of pleasure at the sight of blood and butchery on the arena beneath them—but, on casting their eyes towards the smoking mountain, had their joy suddenly turned into unutterable terror, when they beheld, rising from its crater "that terrific column of boiling water and volcanic substances which suddenly transformed this majestic amphitheatre, and the whole city, into a barren hill of pumice-stones and ashes!" The horror and dismay with which this immense multitude rushed towards the SARNO and the SEA, to escape the showers of fire and the torrents of mud that issued from Vesuvius, must have been a scene unparalleled in the annals of human disasters! If an over-ruling Providence ever deigns to manifest its displeasure through the instrumentality of such destructive operations of natural causes, this catastrophe may have been a judgment on manifold transgressions against the laws of Nature and of Nature's God! But although it would be presumptuous in man to pronounce on such awful events, it might be wisdom in him to look upon them as indications of offended justice, in times when vice prevails.—*(Dr. J. Johnson.)*

LITERARY CONDITION OF PORTUGAL.

THE political changes and civil commotions—the rebellions and insurrections—the alternate establishment of schemes of freedom too wild to suit the temper or secure the tranquillity of the nation, and of a despotism under which no national art or accomplishment could flourish—have been more fatal to the culture or progress of Portugueze literature, than even the uncontrouled sway of the Inquisition itself. During the war of independence, the whole energy which the inglorious tyranny and deadening superstition of the last three sovereigns had left the people or the nobility, was devoted to the field. The lecture-halls of Coimbra were deserted for the camp—and a few patriotic songs or other poems of no great merit constituted nearly all the literary harvest which could be reaped in the sight of the Gallic legions. On the return of peace the muses were not allowed to repose under the laurels of victory. The absence of the court and the great nobility in Brazil, the play of the factions at home, and the necessarily provisional state of affairs which thence resulted, kept the people in a ferment of political discontent or of political expectation, unfavourable to the secure leisure and quiet pursuits of literature. The insurrection of Oporto in 1820, and the consequent revolution which established the Cortes for nearly two years and a half at Lisbon, converted every man who could write into a political partizan, and totally withdrew the minds of the nation from the enjoyment or the cultivation of poetry and literature. It is needless to say that the combined powers of superstition and of absolutism, which were strong enough to overturn the inverted pyramid of constitutional freedom, (which had no basis in national institutions,) was more than enough to oppress any feeble commencement of literary independence, and to extinguish every spark of literary ambition. In a country where a little earthen image of two or three inches long, said to have been discovered by a dog in a rabbit hole, was proclaimed a miracle-worker, and escorted by the royal family and the civil and military authorities to the cathedral of Lisbon, where it wrought so many miracles as to give its guardians a power of overthrowing the constitution—in such a country, what could be expected from the renewed ascendency of the monks and priests? Where almost every man who had learned to read, or who professed a wish to read any thing more than his missal, was liable to be denounced as a free-mason, a revolutionist, or an atheist, what encouragement could there be for the cultivation of intellect in any liberal walk of exertion? A considerable number of the most enlightened men of the nation were driven to exile, and those who remained were obliged to conceal their literary acquisitions, or ther liberal tastes, under the penalties of something worse than banishment. The death of King John, the absence of Don Miguel, and the confinement of the intriguing old queen, gave another interval of unquiet freedom to Portugal under a constitutional charter. The hopes of the enlightened portion of the nation (embracing many of those who were most opposed to the Cortes of 1820, 1821, and 1822,) were unbounded, and as the political ferment, or the rage for political innovation, was less violent than at the former period, a better prospect was held out for the cultivation of science and letters. Some books of merit, previously prepared, were then published, literary criticism began to be indulged, and two or three of the poetical writers whose productions have been alluded to with praise in the preceding part of this article, distinguished themselves by the publication of their works. These (for instance, Mozinho de Albuquerque and Almeida Garrett) and many more, are now in exile, or in the ranks of civil conflict, having been driven from their homes and their pursuits by one of the most brutal and brutalizing despotisms that ever disgraced or degraded mankind. They may re-publish their collections of their works in the land of their exile, but poetry does not, like thistle-down, take root on every soil on which it may happen to be blown by a tempest.

The prospects of Portugueze literature at the present moment are dreary in the extreme. In whatever way the contest terminates, the genius of the people cannot be directed with energy to liberal pursuits for many years. If Don Miguel succeeds, unheard of horrors must be perpetrated to celebrate his triumph. Farewell then to every exertion of mind during his reign, but in the ravings of fanaticism or the justification of tyranny. The press will then remain, as it is now, the instrument for publishing the lies of the court, the tales of pretended miracles, and the sentences of arbitrary judges. Should, on the other hand, victory declare for the standard of the young queen, now upheld by the hand of her father, there must still be a long interval of poverty anxiety, and agitation, before the muses can be recalled. This, however, is incalculably the best alternative of the two, in this Thebaic contest—this unnatural war between the two brothers; and no lover of Portugueze literature can say, with the patriotic indifference of the mother of Polynices,

"——— Rex sit e vobis utter,
Manente regno."

(Foreign Quarterly.)

BRITISH INDIA.

The Brahmins—Hindoo Laws—Christianity—Bright Prospects—Duty of Christians.

It is the policy of the Brahmins to make their own caste the sole depository of knowledge. Aware that its diffusion is the communication of power and of freedom, they know that their despotism must cease, their influence, their honours, and their wealth evaporate, if once the avenues of science are open to the vulgar, if once they are permitted to inquire and to investigate. It is to be hoped, nevertheless, that a spirit is abroad with healing on its wings. At the seat of government a wonderful change is effecting; men of the higher orders are beginning to emancipate themselves from the triple fetters in which more than three thousand ages have found them. They are associated with Europeans, in literary and scientific societies, as well as in other undertakings. They publish a journal in their own language, and printing is likely to be as efficacious in abolishing their superstitions, as it has been universally proved the mightiest engine in the amelioration of the intellectual and social condition of the nations of the West. The throwing of a greater portion of wealth into the hands of other classes, which has been the effect of our intercourse with them, must also produce beneficial effects,—slow, perhaps, in their operation, but certain in their ultimate issue.

No political constitution ever was more adverse to the progress of intellect than that established by the Hindoo laws. Bound by them to follow the vocation of his father, however contrary to his genius, hostile to his feelings, or humiliating to his ambition, a son must remain for ever in the same sphere in which he was born, and from which, as neither heroism nor talent can elevate him, the stimulus to both is withdrawn. No aristocracy in Europe even approaches to that exclusive spirit which separates the Brahmin from the other orders, and places an eternal and impassable gulf between him and the unfortunate Paria; that race born to bear the curse, "aliens to the commonwealth" of heir brethren,—"hewers of wood and drawers of water,"—scorned and outcast—uncheered by hope—incapable of obtaining consideration from their kind—shut out from the social tie, as if foredoomed to vice, "hating and hateful." But, under the British government, they recover, in some degree, their privileges, and naturally become attached to rulers, under whom they are secure in the possession of the fruits of their industry; and, being a numerous body of the people, they are never despicable as adherents.

The respect entertained by the natives for our superior prowess, our acquirements, and our science, is doubtless a grand,—a principal security for the preservation of our influence here. Another powerful cause exists in the heirship of implacable enmity and hatred that exists between the Mussulman and Hindoo population, who seem never to lose, the first, the haughtiness and tyranny of conquerors, and the latter, the vindictive feelings of the conquered and oppressed. It would be difficult to find a motive sufficiently strong to unite them in enterprise, far less to ensure that unanimity amongst their leaders, that faith and that secrecy on which the success of every combination—especially of every conspiracy—must depend.

"To leave the natives," says Dow, "entirely to their own laws, would be to consign them to anarchy and confusion. The inhabitants of Bengal

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

are divided into two religious sects, the Mohammedan and Hindoo, almost equal in point of numbers. Averse beyond measure to one another, both on account of religion and the memory of mutual injuries, the one party will not now submit to the laws of the other; and the dissension which subsists between individuals would, without a pressure from another power, spread in a flame over the whole kingdom. It is, therefore, absolutely necessary to the peace and prosperity of the country, that the laws of England, in so far as they do not oppose prejudices and usages which cannot be relinquished by the natives, should prevail." The insinuation contained in this last sentence of Colonel Dow's, is daily proved to be an act of diminishing necessity. The abolition of a rite, to which the natives have adhered with extraordinary tenacity for ages, has been effected without the least symptom of commotion. Many of the most distinguished Hindoos have advocated this measure of the government warmly, and the slight opposition which was raised by the mercenary class of the priesthood, has evaporated in a few letters conveyed to the public by the medium of the press, and in the convening of a meeting which got up a remonstrance to government, that died a natural death, as the last cry of worn-out prejudices generally exhales itself.

One great obstruction to the redemption of the natives from their present abominable idolatry is, that it encourages and administers to all their most violent passions and most depraved appetites. Christianity is an arena of perpetual conflicts with self, inculcating the severest restraint on the first, and the strictest self-denial of the latter. Moreover, they are of perception so gross, as to be little susceptible of impressions from any objects but those which strike vividly on the senses; hence, probably, the policy of their priests adopted the expedient of those frequently recurring pageants, which flatter this appetite, and increase it by encouragement; almost every action of life has its appropriate ceremony, every domestic event, every change of season. The result of an attempt to *modify* Christianity to their apprehensions, is abundantly manifest in the Roman Catholicism of the native Portuguese, which is in nothing less absurd and idolatrous than Hindooism. Christianity, in its reformed mode, is a worship so purely spiritual, that nothing less than the Divine agency seems likely to be effective, in causing it to be adopted as the *real* belief of the natives of this climate, in their present mental darkness. Wedded to pomp and splendour, they despise a simplicity which they have not intellect enough to venerate; engrossed by the most determined sensuality, what to them is the hope that is spiritual? Dazzled by the voluntary tortures of their Yogees and Yanassees, they would discern nothing to compensate for the loss of this "will-worship" in the "sacrifice of a humble and contrite spirit." It is probable that the diffusion of knowledge will prepare the way for the reception of divine truth, by refining and purifying their minds, gradually, but surely; by elevating the human intellect above the brute-sense; by weakening, and eventually destroying their prejudices. Whether this immense improvement of their mental powers, this communication of the might of moral strength, be desirable in a political point of view, is not to enter into our consideration as *Christians*. As sovereigns, it is our duty to ameliorate the condition of our subjects; and in our other higher character, as the depositaries of sacred truth, we are never to forget, that to be a means of evangelizing the world, is part of the tenure by which we hold our privileges; and we ought, in feeling that "we have nothing which we did not receive," to acknowledge, in every action, our conviction that the light is given to us, not to be "hidden under a bushel," but to be poured forth by every possible avenue, on "every nation, and tongue, and kindred, and language" under heaven.—*(East India Sketch Book.)*

REFLECTIONS AMONG THE JUNGLES OF INDIA.

We are still buried in this mass of jungle, but it is not all unlovely. Ah, no!—Where is the spot of the Creator's world which furnishes not some tint of the beautiful, or some form of the grand, or some trait of the sublime and terrible?

Now we are encamped on the summit of a gentle acclivity, with a river running along one of our flanks, and a broad plain stretching around. About a mile in our rear there is a fortified town, and its gateways, with their Saxon-looking arches, and the fort with its bastions and parapet, are distinctly visible. The servants who visit the village, declare that fortress contains a guard of a hundred Arabs, but they carefully conceal themselves from the sight of Europeans, for they are in the pay of his Highness the Nizam, who would fain hold his neighbours of the Company's dominion in ignorance of the extent of his means of offence and defence. Our tent is under the shade of an immense banian tree, whose columnar branches are ranged so regularly that the eye regards them as the pillars of some vast hall. The sky is serenely bright above us; but on the verge of the horizon the hills are still "cloud-capt," threatening us with a repetition of the perils of "lightning and tempest" from which we have so recently been delivered. It is a fearful thing to the wayfarer in this land, to feel how various and multiplied are the poisons in which death may steep his arrows! How widely different are our views of things in sickness and in health! When the terror of death is upon us, when we look closely into the grave, whose brink our foot actually presses; when we watch the hour-glass, and think that the slow-oozing sand drops all too quickly, since, ere it is exhausted, we too probably shall have passed away; when we would gladly lay hold on Time, and shudder and faint beneath the overwhelming idea that, despite our efforts, he will but advance another pace, and we are plunged into eternity!—ah! what *then* profits the gold and the gem?—*Here* is the embroidered garment with its costly array, and *there* is the shroud; and we have no choice between, for a mightier than we has said, "*Take thou this!*" And again, when we linger days—weeks—months, and this terror is still upon us, for the danger is not passed, and we feel that the cord by which we cling to life becomes daily more attenuated—ah! *this* is the time, *this* is the place, when the hope of the Christian, precious as it is at *all* times and at *all* seasons, becomes dearer than all besides that is dearest! Then, indeed, we feel that "the peace of God" is of price "far above rubies," that HIS word is "better than gold, yea than much fine gold, sweeter also than honey and the honey-comb!" The bravest man cannot resist the influence of this protracted fear; *here*, as in the grave, the spirits of the proud and the meek meet on equal ground. Here we feel that, measured against the omnipotence of God, the most vaunted strength of man is frailer than the reed,—feebler than the breath of the infant,—puny of stature and immature of growth,—affording no power of resistance, helpless and hopeless as age or imbecility!

How awful is the voice of the storm along this unsafe shore! The gushing rain,—the rolling thunder,—the booming waves,—the hoarse surf,—and the struggling wind, as if in passionate conflict with some restraining power,—that tremendous orchestra of the elements, whose awful music seem to warn us of the might of God and the impotence of man, shall these too speak to the soul in vain? Here, where the scythe of the destroyer mows down so many victims, where its edge is always newly-whetted and always blood-stained, is it here that man, in his reckless desperation, regards his Maker least? Is it true that *this* soil, so fertile of evil to the bodies of man, is precisely the spot on earth where he least remembers that he *has* a soul, and that its worth is infinite? Is it here alone, where our grasp of time is least tenacious, that we are least anxious to prepare for eternity?

Whence is it that these things, true and obvious as they always are, press so heavily on my spirit *now*? Surely it is not matter of melancholy that eternity succeeds to time,—that this "mortal shall put on immortality, and this corruptible shall put on incorruption." Yea, it *is* matter of rejoicing, but "with trembling." The *world of spirits!*—the veil of the shrine is to be torn away, and the innermost secrets of the sanctuary to be disclosed!—the thoughts of the heart revealed!—that heart "deceitful above all things, and desperately wicked!" It *is* a revelation to be apprehended with awe.—*(Ib.)*

THE NEGOTIE WINKEL OF THE DUTCH KING.

THE Scheldt is this winkel, and there's not a smarter tradesman in Europe, if we except Joseph Hume, T. Baring, and all the other patriots who are deeply interested in the sale of blacks and sugar, than Koning Willem. Now for a little morsel of history which will account for the desire of William to retain Antwerp.

When the Duke of Parma reduced Antwerp, after an obstinate defence, he closed the Scheldt. Up to this period Antwerp might be considered the richest city in Europe. Ships of every nation crowded to her harbour; she was an *entrepôt* for the wealth of the world. When the source of their prosperity, the Scheldt, was closed, the wealthy and industrious classes sought other fields for their enterprise, and thus rose Amsterdam and the towns of Holland. Were the river free, the produce of the Dutch East Indies would find its way to Antwerp, and Amsterdam would gradually succumb to the superior advantage of the situation of her rival. It cannot be denied that the Dutch cities have been created by monopoly; and so perfectly well aware are the Dutch of this fact, that when the Emperor of Austria contemplated the freedom of the river for the benefit of his Brabant subjects, the Dutch averted the alleged evil by an enormous bribe.

THE SCHELDT.

The Scheldt derives its source in France, in the department of la Somme; it passes by Cambray, Bouchain, Valenciennes, and Conde, and then enters Belgium in a direction towards the north-west; it passes by Tournay in a direction below that town towards the north, inclining a little to the east, and in that line it passes on to Oudenard and Ghent, where it takes a well-defined direction from west to east. At Dendermonde it resumes its course towards the north, which it preserves very nearly to Antwerp. At this point it turns towards the north-west, and thus quits the Belgian limits. There it takes a well-defined direction from east to west, and throws itself into the sea.

The general belief that the Scheldt is to be the limit of Belgium and Holland is an error: both banks of the river belong to Belgium as far as Lillo, a small town five leagues below Antwerp, and from Lillo to Flushing and Breskers, which are the two extreme points of the two banks, are Dutch, separating into two parts the province of Zealand. One of these

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

two parts, that which is situate on the left bank of the Scheldt, forms the northern limit of the Belgium province of East Flanders, through the whole extent of the latter.

Antwerp is situate on the right bank of the Scheldt, which separates that city from the Tete de Flandre situated consequently on the left bank, very nearly the middle of that part of the river which passes by the city, in a rectilinear direction from south to north. Immediately above the cite the direction of the river is from west to east; it is from east to west immediately below it.

The principal point of the fortifications of Antwerp there, which are chiefly occupied, are the citadel, Fort Montebello, Fort du Nord, and the Tete de Flandre.

The citadel adjoins the city, from which it is only separated by the esplanade; it also adjoins the Scheldt, from which there is nothing to separate it. Like the city, it is situate on the right bank; it is to the south of the city, and consequently above it.

Quitting the citadel, and following the line of the fortifications, we find at a little distance, in front of the gates of the lines, Fort Montebello, situated consequently to the east of the citadel, and to the south of the city.

Fort du Nord is below the city, also on the right bank, and at a distance of about 400 toises; it is connected with the city by an *ensemble* of works recently executed, and which are protected by formidable batteries, where are arranged several pieces of cannon, *a la Paixhans*, pointing to the Scheldt in the course of the direction which it follows below the city, that is to say, from east to west.

Above and below the Tete de Flandre, still on the left bank, are two small forts of no importance, Fort Burgh and Fort St. Hilaire.

The Dutch were masters until the other day, of the whole portion of the left bank which has reference to the city; they are in possession consequently of the Tete de Flandre and of the small forts of which we have spoken; on the right bank they possess the citadel, and with that the lunette of Kiel, situate above the citadel, and of which it forms a dependency.

The ancient entrepot, so improperly burnt by the Dutch in September, 1830, and the military arsenal, was situated on the bank of the Scheldt, and the whole adjacent to the citadel: of these two establishments there remain only the ruins; the Dutch are thus deprived of the means of injuring those quarters, the nearest to the citadel, whatever good intentions they may have besides.

On the left bank of the Scheldt, in the rear of the Tete de Flandre, we find the Poulders, vast and fertile tracts, successively formed by alluviæ from the river, and which are protected against its inroads by a large and strong dyke, continued in its bed to the sea. In 1830, the Dutch broke through this dyke in two places, and since that time the Poulders have been covered by an immense quantity of water. There will be thus a conquest to make over the Scheldt after the deliverance of the city, but unfortunately nothing can indemnify the proprietors of the Poulders for the losses which they have already sustained, and which are incessantly increasing.

This cutting of the dyke the Dutch endeavour to justify by the alleged necessity of opening a way for their vessels, in such a manner that they might pass on to the citadel without being exposed to the fire of Fort du Nord.

A flotilla, consisting of several gun-boats, is stationed in the river; its line extends from the Tete de Flandre to the citadel; one of the gun-boats has been wrecked on the Poulders, in the rear of the Tete de Flandre.

SELECT NOTICES.

Snuff-taking.—This practice is recommended to students of the French language, as it facilitates the acquiring of the proper accent; and smoking is also advised to young gentlemen who wish to look sallow, unhappy, and Werter-like.

An Example for Youth.—A little boy, in destitute circumstances, was put out as an apprentice to a mechanic. For some time he was the youngest apprentice, and of course had to go upon errands for the other apprentices, and not unfrequently to procure for them ardent spirits, of which all except himself partook; because, as they said, it did them good. He, however, used none; and in consequence of it, was often the object of severe ridicule from the older apprentices; because, as they said, he had not sufficient manhood to drink rum. And, as they were revelling over the poison, he, under their insults and cruelty, often retired, and vented his grief in tears. But now, every one of the older apprentices, we are informed, is a drunkard, or in the drunkard's grave; and this youngest apprentice, at whom they used to scoff, is sober and respectable, worth a hundred thousand dollars. In his employment are about a hundred men who do not use ardent spirits; and he is exerting upon many thousands, an influence, in the highest degree salutary, which may be transmitted by them to future generations.—*Boston Recorder.*

Advantages of Mechanical Invention.—Sir David Brewster, in his letters on Natural Magic, observes, on the ultimate effect of inventions, which at first sight appear to have no really useful object, "that ingenious and beautiful as all these pieces of mechanism are, and surprising as their effects appear even to scientific spectators, the principal object of their inventors was to astonish and amuse the public. We should form an erroneous judgment, however, if we supposed that this was the only result of the ingenuity which they displayed. The passion for automatic exhibitions, which characterized the eighteenth century, gave rise to the most ingenious mechanical devices, and introduced among the higher order of artists, habits of nice and accurate execution in the formation of the most delicate pieces of machinery. The same combination of the mechanical powers which made the spider crawl, or which waved the tiny rod of the magician, contributed in future years to purposes of higher import. Those wheels and pinions, which almost eluded our senses by their minuteness, re-appeared in the stupendous mechanism of our spinning machines, and our steam-engines. The elements of the tumbling puppet were revived in the chronometer, which now conducts our navy through the ocean; and the shapeless wheel which directed the hand of the drawing automaton, has served in the present age to guide the movements of the tambourine engine. Those mechanical wonders which in one century enriched only the conjuror who used them, contributed in the other to augment the wealth of the nation; and those automaton toys which once amused the vulgar, are now employed in extending the power, and promoting the civilization, of our species. In whatever way, indeed, the power of genius may invent and combine, and to whatever low, or even ludicrous purposes that invention or combination may be originally applied, society receives a gift which it can never lose; and though the value of the seed may not be at once recognized, and though it may lie long unproductive in the ungenial soil of human knowledge, it will some time or other evolve its germs, and yield to mankind its natural and abundant harvest."

Early Rising.—Sir John Sinclair, in his 'Code of Health and Longevity,' has stated, that all of a great number of very old persons whom he questioned, were alike only in two particulars—they were descended from parents of good constitutions, and—(what perhaps they could better affirm,) they were early risers.

Motives for Patient Endurance.—There is a consolation, if not a complete remedy, for almost every thing; and by honourable means and manly exertions there are few difficulties which may not be surmounted.—*Captain Basil Hall.*

Egypt.—Deprived twenty-three centuries ago of her natural proprietors, Egypt has seen her fertile fields successively a prey to the Persians, the Macedonians, the Romans, the Greeks, the Arabs, the Georgians; and, at length, the race of Tartars, distinguished by the name of Ottoman Turks. The system of oppression in Egypt is methodical. Every thing which the traveller sees or hears, reminds him that he is in the country of slavery and tyranny. In Egypt there is no middle class: neither nobility, clergy, merchants, nor land-holders. Ignorance diffused through the whole population, extends its effects to every species of moral and physical knowledge. The fate of Egypt, as of Idumea and Judea, demonstrate the Bible to be no cunningly devised fable: but gives the most overpowering evidence, that the prophets who foretold these things, spake and wrote as they were moved by the Holy Ghost.—*Companion to the Bible.*

Heroism of Filial Affection.—In the course of last winter, five Dutch gentlemen set out from Rotterdam, to travel on skates to Amsterdam. They had passed over about twelve miles of the waste of inland waters which extends between the two cities, and were, with the exception of one of the party, who kept apart, skating with great velocity, in close files, and hands linked in the Dutch manner, and were striking out far from the shore, when at once, the whole file was precipitated through the ice, and two out of the four were hardly seen to rise again. The other two were father and son, both remarkably fine men, and the father an expert swimmer, which enabled him to support himself and his son too for a considerable time, during which he was so collected as to give directions to the only one of the party who had not fallen in, how he should conduct himself to afford assistance; but at length he gave utterance to the thought, that his son's continuing to hold him would be the death of both. The son immediately kissed the father, and, with the familiar and endearing expression he was accustomed to, bade him "good night," loosed his hold, and deliberately resigned himself to death. The father lives; and the name, at least, of Henry Hock, the son, must live also.—*Liverpool Courier.*

General Aspect of Palestine.—The hills stand round about Jerusalem as they stood in the days of David and Solomon. The dew falls on Hermon; the cedars grow on Lebanus; and Kishon, that ancient river, draws its stream from Tabor as in the times of old. The sea of Galilee still presents the same natural accompaniments. The fig-tree springs up by the wayside, the sycamore spreads its branches, and the vines and olives still climb the sides of the mountains. The desolation which covered the cities of the plain is not less striking at the present hour than when Moses, with an inspired pen, recorded the judgment of God; the swellings of Jordan are not less regular in their rise than when the Hebrews first approached its banks; and he who goes down from Jerusalem to Jericho, still incurs the greatest hazard of falling among thieves. There is, in fact, in the scenery and manners of Palestine, a perpetuity that accords with the everlasting import of its historical records, and which enables us to identify with the utmost readiness, the local imagery of every great transaction.—*Edinburgh Cabinet Library, No. IV.*

Genius, Talent, Cleverness.—Genius rushes like a whirlwind.—Talent marches like a cavalcade of heavy men and heavy horses.—Cleverness skims like a swallow in a summer evening, with a sharp shrill note and a sudden turning. The man of genius dwells with men and with nature; the man of talent in his study; but the clever man dances here, there, and every where, like a butterfly in a hurricane, striking every thing, and enjoying nothing, but too light to be dashed to pieces. The man of talent will attack

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

theories; the clever man assail the individual, and slander private character: but the man of genius despiseth both, he heeds none, he fears none, he lives in himself, shrouded in the consciousness of his own strength—he interferes with none, and walks forth an example, that, "eagles fly alone,—they are but sheep that herd together." It is true, that should a poisonous worm cross his path, he may tread it under foot; should a cur snarl at him, he may chastise it; but he will not, cannot attack the privacy of another. Clever men write verses; men of talent write prose; but the man of genius writes poetry.—*Wilson's Lectures on Poetry.*

Ruins of the Capital of Ancient Edom, or Idumea.—Its capital city, now without an inhabitant, except the wild animals foretold by the prophets a thousand years before it ceased to be tenanted by men, presents one of the most wonderful scenes that can possibly be conceived. In the vicinity of mount Seir are the extensive ruins of a large city, heaps of hewn stones, foundations of buildings, fragments of columns, and vestiges of paved streets, spread over a valley which is enclosed on each side by perpendicular cliffs, varying four hundred feet in height, which are hollowed out into innumerable chambers of different dimensions, rising in the cliffs, till it seems impossible to approach the uppermost. Columns also rise above columns, and adorn the front of the dwellings; horizontal grooves for the conveyance of water also run along the face of the cliffs; flights of steps formed the means of ascent, and the summits of the heights, in various places, are covered with pyramids cut out of the solid rock. The identity of the scene is described by the prophet Jeremiah, chap. xlix. verse 16, in all terribleness of the human power which pertaineth to it, and is depicted in the desolate aspect it now exhibits, is such as cannot be mistaken. The mausoleums and sepulchres are very numerous and magnificent. They are of various periods and orders of architecture. One of them, in particular, is described as a work of immense labour and colossal dimensions, containing a chamber sixteen paces square, and about twenty-five feet high, crowned with a pediment highly ornamented, and all cut out of the solid rock.—By these splendid monuments, dedicated to the memory of its rulers, the opulence of the city is demonstrated. The enemies of the gospel might be admonished by the fate of the enemies of the ancient church, who have been cut off according to the word of the Lord; and whose very land, that especially of the Edomites, for their violence against their brethren of Israel, has been wasted with a curse which shall cleave to it for ever.—*Companion to the Bible*, p. 48.

How to know a good Book.—That book does not deserve to be read, which does not impose upon us the duty of frequent pauses, much reflecting, and inward debate, or require that we should often go back, compare one observation and statement with another, and does not call upon us to combine and knit together the *disjecta membra*. It is an observation which has often been repeated, that, when we come to read an excellent author a second and a third time, we find in him, a multitude of things, that we did not in the slightest degree perceive in a first reading. A careful first reading would have a tendency, in a considerable degree, to anticipate the following crop.

Cost of the Polish Campaign.—It results, from official data, that the losses of the Russian army, either on the field of battle, or in lazarettos and hospitals, have amounted in 180,000 men. In this enumeration, the capture of Warsaw alone appears to have cost 30,640 lives.

The Oldest Sunday Scholar.—At the coronation of his present Majesty William the Fourth, twenty thousand Sunday-school children graced the celebration. Among the banners, in the procession at Manchester, one bore the inscription, "The man who follows this banner, was one of Mr. Raikes' scholars, in the first Sunday-schools ever established." The man above referred to was a fine-looking old man, above seventy years of age. He was greeted by the populace, had the pleasure of shaking hands with many highly respectable individuals, and greatly enjoyed the proceedings of the day.

More Cats than Mice.—At the late Exeter sessions, there were six prisoners, four cases; during the forenoon fifteen barristers dropped in!

A Curious Watch.—There is at this time in the possession of Mr. Thackwell, watch-maker, of this town, a very curious antique watch, which is said to have belonged to Lady Jane Grey. The case is of crystal, very curiously cut and set in gold, with a gold dial. It was made long before the invention of fusee chains, a piece of fine cat gut being used instead. It has no pendulum spring, or minute hand; and, though near three hundred years old, is in as perfect a state as when it came from the maker, and is even now a very elegant article and a great curiosity. It is enclosed in a black leather case, lined with red velvet, and studded with gold.—*Monmouthshire Merlin.*

Ancient Practice in Churches.—The following extract from Bishop Grindall's episcopal injunction, will show, at least, what had been the practice in churches. "That no pedlar should be permitted to sell his wares in the church porch in time of service. That parish clerks should be able to read. That no lords of misrule, or summer lords and ladies, or any disguised persons, morrice-dancers, or others, should come irreverently into the church, or play any unseemly parts with scoffs, jests, or ribald talk, in time of divine service."

Pyramids of Egypt.—The pyramids of Egypt always ranked among the wonders of the world. Three of them still remain, at the distance of a few leagues from Grand Cairo; where the ancient Memphis stood. It has been calculated by a French engineer, that the stone in the largest of the three, called the great pyramid, is six millions of tons; and would be sufficient to build a wall round the whole of France (about eighteen hundred miles,) ten feet high and one foot broad. It forms a square, each side of whose base is seven hundred and forty-six feet, and covers nearly fourteen acres of land. The perpendicular height is about five hundred and sixty feet. The summit, which when viewed from below appears a point, is found to be a platform, each side of which is eighteen feet long. The stones with which this enormous edifice is built, are thirty-feet long. These stupendous works of man were originally designed as tombs for their kings: from which we may infer the grandeur and resources of the nation.—*Companion to the Bible*, b. 86.

Hydrostatic Bed for Invalids.—Dr. Arnot, in the fifth edition of his Elements of Physic, describes a hydrostatic bed, which consists of a trough of convenient length and breadth, a foot deep, and lined with metal to make it water-tight. This trough is half filled with water, and a sheet of water-proof India-rubber cloth, as large as would be a complete lining to the trough when empty, is thrown over. The edges of this sheet are touched with varnish, to prevent the water creeping round by capillary attraction, and afterwards secured in a water-tight manner all round, to the upper border or top of the trough, shutting in the water as closely as if it had been in bottles. Upon this expanded dry sheet, a suitable mattress is laid, which constitutes a bed ready to receive its pillow and clothes; this is not distinguishable from a common bed, but by its most surpassing softness or yielding. This bed has been introduced into St. Bartholomew's and St. George's Hospitals, with considerable success; and the author considers that with it the fatal termination called sloughing, now so common, of fevers and other diseases, need never occur again; and that it is particularly applicable to all patients whose diseases, or injuries, require that they should continue in constrained positions.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

WATER, &c.

The study of hydraulics is not an unimportant one to those of tropical residence. And it forms a happy circumstance in the lot of individuals when they are placed in situations in which the skill of the government is at work to deal out with an *even-hand*, the precious stores of nature's unadulterated liquid. But the good intentions and the ardent wishes of government for the general good, are often thwarted by the blind obstinacy, self-will, or ignorance of those who may have been unfortunately selected to occupy the place of

"The intellectual man."

The truth is, (and we mean to be very plain in our remarks.) that many men have too many irons in the fire, and we sincerely think, contemplating the growth of our population, the increase of our breweries, steam engines, and other public works, that an undivided attention to the supply of water to the inhabitants of Cape Town and its vicinity, is absolutely indispensable. We mean an attention totally distinct from the trades of carpentering, wheel-wrighting, bricklayering, painting, plumber's work, steaming, or shop-keeping in all its diversified forms. As good and loyal subjects to government, we heartily wish that the trafficking of its servants, whether it be connected with any of the above-mentioned avocations, or is in union with the sale of wines, or groceries, or vegetables, grinding corn, and boating, would completely cease. We also wish that the servants in question would get rid of those drag-chains to the exercise of their required duties—their agencyships, their Q. Q. appointments, their 10 per cent. commissions, and their *touting* anxieties towards the support and encouragement of disloyal and anti-British objects.

But observes some noviciate in South African affairs, have you any want of water in the colony? We answer certainly not, if the direction of the supply be in qualified hands. There is water in all directions—but we want the *wisdom* to draw it up from its sources, the *courage* to execute the design, and the *perseverance* to extend the supply. Besides these, we want the *honesty* to "do as we would be done by." We mean by this that there is a great deal of artful concealment of the supplies which nature provides. Men, to serve the dirty family of selfishness, would (if in their

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

power,) obscure the glories of the noon-tide sun, veil the moon beams, and shroud all creation in darkness, excepting the patch to which their own dwellings are circumscribed. We do not venture these observations haphazard: we have heard men holding, unfortunately, very extensive lands from the profligate grants of olden time, lament their hard fate and the want of water for the purposes of irrigation—and yet we have known the fact to be, that there has been on the same estate water, whose supplies would suffice for the wants of twenty families. All along the line of coast to the eastward of Hanglip it is a delightful but unpopulated country. How is this? O, says Van *this*, or De *that*,—"there's no water!" Nonsense, there is water,—bountiful supplies of glorious abundance. Even with a spade in your hand, nay, by taking your stick and penetrating the sands for a few minutes, you open the sluices of nature's previously concealed stores; and you may, by taking the trouble, assuage your thirst to any extent you like. We recollect a body of sailors from Dyer's Island, a few years since, who filled their water casks from a source created by themselves, somewhat after the above manner.

Again, as to our colonial agricultural improvements, what an indifference there is on the part of some of the old occupants of land towards promoting any change! The poverty of very many of these may be traced to this circumstance alone. Do these men consider that *cultivation* itself will deteriorate, and in time destroy races, if the same race, and the same mode of culture be pursued amid general change? Our own times are times of very rapid change, and we trust upon the whole, of improvement; we dare not, without the certainty of falling off, continue the same *stock*, and the same seed corn, season after season, age after age, as was done by our forefathers. The general change of the country, must have change, and not mere succession, in that which we cultivate; and thus must the breeds of animals be crossed, and the seeds and plants of vegetables be removed from district to district. The obstinacy of many of our colonial farmers on the subject of change, the introduction of Merino flocks, and the indifference to the district fairs is proverbial. Still we must live in the hope of better things among them, and if they will only take the trouble to open the eyes of their understanding by *reading*,—and by reading the two sides of the question, and exercising their own judgments, we may be sure of great practical results.

We are fully aware that it is hard work to part with darling prejudices, and how strangely opposed men of all countries are to the introduction of improvement. We recollect our own in particular, hence the hue and cry against planting and gardening, and the perpetual utterance —

"It will do weel enough,"

in reference to recommendations for a change in domestic affairs. And as to England, her prejudices have arisen mountains high. Witness her remonstrances and appeals against rail roads, steam engines, and coaches. And so indifferent were her people to the resources all around them, that it is not very long since that England depended mainly upon the Dutch for supplies of the very fish, which are most plentiful on her own shores. As a triumph over ignorance and prejudice, there are some beautiful illustrations in a recently published work, well worth the reader's attention, entitled "A Memoir of Felix Neff, Pastor of the High Alps," by W. S. Gilly, M. A. Prebendary of Durham. &c. The life of Neff, as Pastor of the Appenines, is one uninterrupted testimony to the profound sincerity of his heart, in desiring the temporal and eternal happiness of his fellow creatures. So utterly stupid were the people aronnd him, that when Neff proposed some measures for carrying currents of water through the uncultivated fields, and explained the simple principles on which water might be made to rise or fall, they shewed an obstinate incredulity, and absolutely refused to commence the labour which would have been so useful to them in its results. But this was not all. Neff himself tells us that the portion of his flock just alluded to participated in the general corruption of human nature, and that they gambled, quarrelled, and swore, &c. In the spring of 1825, the mildness of the season offered many opportunities to the villagers to bring their land into a better state of cultivation than was usual amongst them. Neff applied all his energies to the promotion of a system of industry for this purpose, but the opposition which he met with from the people appears to arise from a spirit of the meanest and most paltry selfishness, such as places these mountaineers in a scale considerably inferior to the savage tribes of India. When urged to adopt his method of irrigation, they shewed the same reluctance as before, and dealt out the same cunning excuses. What a fine picture is the following, of a society over which the mild and charitable spirit of pure and primitive Christianity had been so long breathing:

'If the canals and aqueducts were made, they would soon get out of order: if one proprietor adopted them, another would not: the next neighbour would not permit them to cross his land, and one opponent of the measure might stop the whole proceeding: but if all should agree, and the work were to be brought to a happy conclusion, an avalanche, or a crumbling mass of granite would soon crush or interrupt the constructions, and reduce them to their old condition. In vain did the pastor endeavour to convince them of the weakness of these arguments, particularly of the last: they might as well refuse to plant and sow or to build houses, for nothing was safe from avalanches. Finding that he could not prevail, when he addressed them into a body, he took them separately, and asked, "Will you consent if your neighbour will? Will you put your shoulder to the work, if the occupiers of the next property will join you?" They were ashamed to refuse, when they were thus personally appealed to, and an unwilling acquiescence was thus gradually obtained. But then arose another and more formidable objection. "Suppose the aqueducts are completed, and the water flows, will the distribution be equal? Will not my neighbour get more of the water than I shall? How do I know that he will not exhaust the supply, before my land has had a drop?" Neff was too ready at expedients to be easily foiled. He proposed that there should be a committee, and an arbiter, to determine what share of the public benefit each occupier should enjoy, and how long, and on what days, and at what hours, the steam should be permitted to pour its waters into the different sections and branches of its courses.

'At length all preliminaries were settled, and the work was to be done. The line was marked out, and the proprietors consented that the main channel should cross and re-cross their lands accordingly as it should be required. But again there was some demur. The people would only labour at that part of the construction which was to irrigate their own ground. "Be it so," said Neff. "only let us make a beginning." He saw that he could easily bring them to good humour and compliance, if he could only once set them on.'—pp. 226, 237.

Men are so wedded to custom, that they will refuse to examine the productions of their own lands, because grandfather and father got on very well without the trouble of inquiry. And hereby hangs a tale. The greenstone rocks, which form a considerable portion of the lower valley of the Tay, contain vast numbers of veined agates or Scotch pebbles, and in some places the rock has, to a considerable depth, crumbled into mould, well fitted for agricultural purposes; but the pebbles, containing less clay than the stone in which they have been formed, and being of a close texture do not decompose so readily. In consequence, there are whole fields and farms where, every stone that can be picked up, is an agate; just as in the chalk districts of England, every stone that can be picked up is a flint. It so happened that the proprietor of one of these estates, on which there is really nothing but pebbles, was in London on busi

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ness; and as he did not often visit the metropolis, he resolved to purchase some trinket for his wife, as a memorial of his journey. He went to a jeweller's, and was shewn all the varieties of jems and pastes, but he rejected most of them on account of their smallness, and made his selection of a necklace, &c. of large and strongly-marked Scotch pebbles. So much did he admire these, that he began to question the jeweller, (who was also a lapidary,) what part of the world was so rich as to furnish jewels so splendid. With utter astonishment he heard the name of his own estate, as the place where in one day, each season, a sufficient supply had been collected, during the time that the stones had been in fashion. This is a homely anecdote, but it is a useful one, as it points out one of the reasons why those whom we would, without reflection, think should study natural substance the most, yet actually study them the least. But as we wish to instruct our youthful readers, we shall conclude this somewhat rambling article, by a reference to the sources of water.

The atmosphere is usually and justly styled "the breath" of every living thing; but it is something more extensive, and anterior to that; and were it to suspend its general evaporative power for even a brief period of time, the very beginnings of life would be cut off, and its fountains dried up. All the water which the rivers of the world roll to the sea, all that slumbers in ponds and expands in lakes, all that is caught in fountains, drawn from wells, or in any way appropriated to the processes of the arts or the purposes of life, all that supplies drink to the whole animal race, and is breath, and life, and clothing, and habitation to innumerable tribes; all that waters the fields, and sustains the existence of every vegetable from the moss on the wall to the monarch of the forest; all that enters into the structure of plants and of animals, or which bears their more immediate nourishment on its tide, or cleanses, softens, and comforts them by its ablution; nay, all that enters into those stones or gems, which glitter so much,—is brought on the wings of the wind, mounts up through the viewless air; and the more vigorously that the countless thousands of active powers, natural or artificial, are working, the more abundantly does the air supply them with nature's most abundant, most refreshing, and most valuable production. Let those who complain of our S. E. winds at the Cape, and the overhanging clouds of table mountain, contemplate the desertion of the city whenever these mighty processes for securing our supplies of water shall cease to act for the public good.

Lastly, let not *partial* interests stand in the way of the general good. Let it be recollected that the pestilence has in former times arisen wholly from an ignorance in managing the supplies of water to the people, that fires have ravaged whole cities, which a timely supply of water might have saved, and that Kings and Governors have almost received divine honors for constructing aqueducts to lead the pure streams from the mountains into the peopled towns.

And finally—sympathising as we do with the ill-used inhabitants of Greenpoint and their late summer privations, in respect of water, we trust the day is not far distant, when talent and diligence shall co-operate in their behalf towards a perpetuity of "good measure, pressed down, and running over."

MATRIMONY AND BURIAL.

We are induced to make a few observations preparatory to an extract on the above subjects, from an interesting little work entitled—"America and the Americans." We think much would be gained to religion and morality in this colony, by some change in the marriage laws. At present, the laws compel respectable individuals to be exposed to the glare, prying curiosity, and interrogatories of what is called a *Matrimonial Court*. Not only these, the very circumstances of the parties being obliged to make personal application at the Police Office, where the Court sits, is exceedingly degrading, if we take into consideraton the various offensive groups which daily congregate within and without the walls of the Police Office in Cape Town. The marriage laws should, in our humble opinion, provide that the union of parties be effected in a very simple and facile manner, and at the same time at a very cheap rate. This was happily the case when Sir D. Baird arrived in the colony. His biographer asserts that Sir David "found so much to admire" at the Cape of Good Hope, that change was unnecessary. Yet one of his first acts was to impede the progress of matrimony, by changing the act from a civil to that of a religious one. Another great evil respecting the celebration of marriage here is, that the parties attached to the Reformed Church are taxed by this Church if they marry on any day except that of Sunday. The Synod of this Church should set about Reform on this head. It is obvious that a family union is a day of more than ordinary gaiety and pleasure to the parties concerned, and it is well enough known, that it is the custom here, that in all the country districts the music and the dance should accompany a wedding—but it must not be forgotten that such, with scenes less innocent, invariably present themselves on the Christian Sabbath! We are quite sure that many of the village pastors lament the existence of the Church-tax, which gives licence to the above-mentioned evil.

Again, were the marriage laws exceedingly simplified, and no difficulties or impediments thrown in the way of the parties desirous of uniting themselves in matrimonial bonds, we believe great good would arise. It should be recollected that the colony has little of national character about it—that it embraces men of all colours and all climes, and that a less simpler provision for the encouragement of wedded life is required here than at *home*. Our readers will discover that we are friends of good order;—Yes: because we think with the late Sir Walter Scott, as recorded by him in his Life of Napoleon, that "Religion cannot exist where immorality prevails, any more than light can burn where the air is corrupted," and because we think,

1st, That Marriage is the source of all the natural relations of mankind;

2d, That Marriage is the source of all the gentle and useful natural affections;

3d, That Marriage is the source of all industry and economy;

4th, That Marriage is the source of all education, useful knowledge, and civility, and sweetness of manners;

5th, That Marriage is the source of all subordination and government; consequently of all order, peace, and safety in the world.

We proceed to the extract:

'The rite of marriage, by the American laws, is a civil, not a religious contract; and is equally binding, whether performed by a clergyman or a magistrate.

'Persons about to be united in the bonds, usually employ the minister of the denomination or congregation to which they belong, to tie the sacred knot, although many choose the mayor of the city in which they reside.

'In either case, in genteel, or even middle life, the ceremony is performed at the residence of the lady, generally in the afternoon or evening, and is followed by a gay party, in which the happy couple are the principal personages.

'The marriage service of the Episcopal Church exhibits judicious curtailment, and the husband is not enjoined to worship his better half, although the latter has to pronounce the awful word "obey." That little matrimonial badge, the ring, is only used by the Episcopalians, and with them it is generally of an ornamental description, the simple but significant English gold circle being unknown. No licence from surrogate, or even parent or guardian's permission, is required for the lovers to join fortunes; and the union of young couples whose united ages scarcely exceed thirty, or at

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

most thirty-five years, is an every day occurrence.

'The system of living so generally in boarding-houses may be said to afford additional facilities to these early marriages, as no outlay or establishment of any kind is requisite in the first instance.

'By a late sanitory law, interments are now only permitted in the older or more crowded parts of the city of New York, upon payment of a fine of £50 sterling; consequently the new burial grounds, which are neither picturesque, nor in general neatly kept, are situated in the environs, or at least in those parts which at present may be so designated. One of these humiliating receptacles of humanity is wholly devoted to vaults for the wealthier classes, by whom the design was completed. These silent mansions are built in rows, a few feet below the surface of the ground, and are entered by strong stone doors, the approaches to which are covered with flags; and upon these is the grass-green turf. The names of the families and numbers of the vaults appear on white marble slabs fixed in the surrounding wall; which, however, together with the entrance, are quite unworthy of this well-planned patrician cemetry. Coffins are invariably made of mahogany, and are finished in the true French style of polish, but without any tinsel, angels, crowns of glory, or gew-gaw ornaments. These useful articles are kept ready made of all dimensions; and large assortments of them are constantly exposed for sale in coffin-shops, as commonly as any article of furniture at the cabinet-makers.

'The English superstitious custom of burying the body with the feet to the east, is not always observed.

'The wearing of mourning is fast growing into disuse; the Americans arguing, that, independent of the folly of such outward demonstrations of grief, it forces unnecessary expense upon many who are perhaps ill qualified to bear it; "the trappings and the suits of woe" are therefore almost confined to the Episcopalians, who, in this and other particulars, show a reluctance to abandon the rules of the old country, England. Palls, scarfs, and other funeral badges, are seldom, if ever, seen; escutcheons or hatchments, never; all these, from their aristocratic origin, find no favour in the eyes of the people.

'Interments for the most part take place the day after the decease. The announcement to the relatives and friends of the hour of the funeral is given generally, not individually, through the medium of the newspapers, and in the same paragraph which states the death. Black coaches are not used; but hackney coaches, which in New York are all elegant, and drawn by beautiful horses, are provided by the friends or family of the deceased, if they are in a station of life to afford the expense. These remain at the various stands, agreeably to the advertisement; and as they are filled by persons wishing to attend the obsequies of their departed friend, they are driven to the residence, where they remain in line, sometimes to the number of thirty or forty, and filled with individuals of both sexes, in their ordinary habits, until the arrangements are complete, and the hearse moves forward. The last vehicle is open, devoid of ornament, shabby, and drawn by one horse, which is not uncommonly a white one, and the driver often attired in coloured jacket and trowsers. The pace is usually a quick walk. After the body is deposited in the ground,—which ceremony is not always performed with that solemn decorum distinguishable in England,—the followers disperse to their respective houses or places of business.'—pp. 64—69.

A WEEK AT THE CAPE.

Under the above designation, a letter has appeared in one of the Calcutta papers, containing, among other general remarks, some rather severe strictures on the selfish *trading* methods of the Cape inhabitants. In a well written critique by the *Advertiser*, the merits of the "Week" is canvassed, but in our humble judgment, too much is conceded to the Indian writer on this score—the plea of *guilty* being recorded.

We think, in reference to High Constantia and its kind-hearted and British like proprietor Mr. Van Renen, the writer has discovered much good taste and discrimination. And we heartily wish that our present Indian visitors may, with judgments of their own, afford that patronage to the wines of High Constantia which their pure merits deserve.

The following are a few extracts from "A WEEK AT THE CAPE."

VISIT TO HIGH CONSTANTIA.

The object of our ride was to visit High Constantia where a Mr. Van Renen has an extensive estate appropriated to the cultivation of the vine, and to such other productions as will render him and his immediate establishment independent of the butcher, the baker, the green grocer, and the milkman. Mr. Van Renen is an extremely civil person and bears no inconsiderable resemblance to a hale English farmer. He took us into his cellar (where we tasted his wines) and kindly explained the whole process of wine making. He had a large stock on hand, but complained that it was difficult to get a fair market for it, inasmuch as the brokers resident in Cape Town gave their patronage to the two other wine growers, and invariably recommended strangers to visit those persons' estates in preference to Mr. V's. although their wines, as I can declare from experience of all, are not a whit superior to his. Under such circumstances it may not be amiss to recommend all residents in India, who may be desirous of importing Cape wines, and at the same time of encouraging an extremely civil and intelligent person, to send their orders direct to Mr. Van Renen, at High Constantia, without employing any intermediate agent.

THE PUBLIC LIBRARY.

I have alluded to the Public Library—but it merits more than a mere allusion. This institution is deservedly the glory of the colony. It was established on its *present* scale about five years since, and has continued to encrease in books and subscribers, until it has attained to a degree of prosperity unrivalled in the history of the colonies. Its shelves present a brilliant display of the best works on all subjects and in divers languages. Silence reigns throughout the apartments, while the idler and the student respectively imbibe the essence of the literary stores.

MENAGERIE AND MUSEUM.

At the termination of a long allée of dwarfish oaks which commence at the top of the *Heeregracht*, there was formerly a garden belonging to the Dutch Company, and attached to this garden was a respectable menagerie of wild beasts, which constituted one of the objects of attraction to strangers The repository of savage quadrupeds has now "fall'n into the sear"—and but for the presence of one lion and one lioness (whose *accouchement* took place during our stay) and two sickly looking foxes, would be a perfect desert. To atone, however, for the absence of living animals, the Cape community have established a museum which is really rich in specimens of natural history, especially in those branches of it which are so numerous in Southern Africa. Of Indian productions there is no great abundance, of which fact I hope your readers will make a memorandum, in order that if their leisure and means will permit, they may contribute to the value of an institution which will afford to so many of them the means of passing away an hour usefully and agreeably, when sickness may send them to the Cape of Good Hope.

INFANT SCHOOL.

We paid a visit to the *Infant School*—I should say the *Upper* Infant School, for there are now two at the Cape, and we saw but one. It appeared to be conducted on excellent principles, and meets apparently with very general support. I know not if this mighty instrument of the improvement of man has yet been introduced in India, but, if not, I would urge upon the clergy and the public press the great importance of encouraging its early adoption The Press and the Steam Engine have done much for the happiness and prosperity of the human race, but here is a machine of transcendant power, the effects of whose exercise will be incalculable. seeing that it strikes at once at early inclinations, and assumes an overpowering influence over our passions and our tempers.

PAMPHLETEERING.

During the last month, there has been some sharp-shooting among the members of the Roman Catholic Chapel. What! a difference in the midst of a body of people who generally triumph over Protestant diversities of opinion, and point to themselves as remarkable for *oneness*, and close adherence to whatever Pope or Priest declare to be the truth? As it regards Pamplet the first, which issued from the Press as a *secret* not to be told to any but a *select few*, it is remarkably specious, and *professes* to be greatly concerned for uniting the members of the Catholic congregation in the *bonds of faith*. The second Pamphlet—"Further Papers, &c." (distinct from *ambush,*) appears in a bold, manly, substantial shape, and the compilers have admitted the public to a full and generous view of the administration of Catholic affairs at the Cape. This pamphlet being replete with incontestible documentary evidence, a reply would seem out of the question,—nor has this been done, with the exception of a placard, which we hear was attached to the Catholic Chapel-door. This was unfortunate,—as it puts the authors of the first pamphlet in a worse dilemma than before.

Now, to be very serious, and having much regard for a good many very worthy people of the Catholic persuasion, and great respect towards the memory of the immortal *Pascal*, we wish that the temple of *Janus* were shut, and the olive-branch of peace were held out on both sides. The same means would do the business which occupies so much of the thoughts of His most gracious Majesty of Holland respecting the Belgians—*Money*. Yes! —the Catholic administrators, or church-wardens, or ministers, or whatever else they may be called, must *owe no man any thing*, but set themselves honestly to work in discharging those obligations which are so justly due to the securities of the Chapel But if peace cannot be obtained by such means, then we say to the Roman members—come over to our simpler mode of worship, we promise to forgive your alleged predilections towards *Babylon* and the *scarlet mother*. We will rejoice over you as returning prodigals, and say—"this my son was dead and is alive again; was lost, and is found."*

* The following is so exquisitely amusing, which appears in the first pamphlet, that we furnish

THE SCOTTISH PATRIOTS' SONG.

Commemorative of the Heroism of the Covenanters, and the Battle of Drumclog, 1st June, A.D. 1679.

TWINE ye the wreath of victory,
And weep not for the slain;
Glorious is the sleep of death,
On yonder gory plain.

2.

Loud let the hymn of triumph swell,
Upon the breathing gale;
Lament not for the gallant dead,
With sorrow's frantic wail.

3.

High let the Cypress and the Palm
Wave o'er the Hero's tomb;
And Beauty's hand the chaplet strew,
Of flowers that ever bloom.

4.

No fell Ambition fired their breasts,
To blend in mortal strife,—
Nor civil feud—where, panting thirsts,
Brother, for brother's life.

5.

It was the call of Liberty,
That nerv'd each willing hand;
The shout of "Liberty or death,"
That bare'd each flaming brand.

6.

No dastard soul was found to quail
Before the Tyrant's might;
No sword that shrunk from foeman's blood,
In Freedom's *sacred* fight.

7.

Peace to the spirits of the brave!
The cause in which they bled,
Shall ever round their memory
A dimless lustre shed.

8.

Let sire to son their glory tell,
Embalm'd in deathless song,—
Circling the earth—as mighty wave,
Majestic roll'd along.

23*d April*, 1833. S.

ORIGINAL CORRESPONDENCE.

THE following are literal copies of an amusing Correspondence of a recent date. The originals are with the Printer.

MR. JONES,

SIR,—There are Five empty Pipes *laying* at the Cooperage which Mr. King does not want. If you will *send* for them, or *send* word where I shall *send* them *too*,

You will oblige,
SIR,
Your obt. Servt.
JON. CALF.

30th | 4 | 33.

SIR,—I am glad to hear that our pipes are *laying*,—to so poor a concern it is of no small consequence that the pipes are so *prolific*: perhaps, by allowing them to *lay* a little longer, we may send them to the Paarl, with a certificate from Dr. A. of the Museum, that "the like was never seen before."

I am, SIR,
Your obdt. Servt.
R. P. JONES.

May 1*st*, 1833.

ONE OF THE TRUE CHURCH.

THE following coloquy, as it regards a questioned witness before the Supreme Court, in Cape Town, is very characteristic of the English. The witness in question was a good portly-looking person, and is understood to be the possessor of much worldly substance.

Counsel.—My Lord, before the witness is sworn, I wish to ask him a few questions.

Judge.—Certainly, sir.

Counsel, (addressing witness.)—Pray, sir, do you profess any religion?

Witness—Why, if I doesn't, I'se worse na a heathen.

Counsel.—Pray, then, what religion do you profess?

Witness—Vhy, the *reglar* religion—Church of England, to be sure.

Counsel.—Do you ever go to church?

Here the learned counsel was interrupted by the bench, while the witness muttered, in a half-aside voice, "If I doesn't go into the church, I'se got my name stuck upon a seat, at any rate."

SIR ARTHUR BROOKE FAULKNER'S VISIT TO GERMANY, &c.

In another part of the *Literary Gazette* we perceive a synopsis of Faulkner's Visit to the Continent of Europe. It is so interesting, that we recommend it to the attention of the reader. There is about the two volumes of Sir Arthur, no colouring of the craft of authorship; he is both blunt and brief; but he is not, we suspect, without his prejudices towards the Dutch. At Haarlem, for instance, the famous organ appeared little in his eyes; both in tone and compass it was surpassed by an instrument of the same kind which he had seen at Minorca. But the Dutch, as well as the Germans, must submit to the ordeal of national criticism, as well as other nations. The world can no longer be deceived by idle compliments and smooth speeches. South has some admirable discourses upon "the fatal *imposture* and force of words."

THE PUBLIC LIBRARY.

THE Annual Meeting of the Subscribers was very numerously attended on the 29th ult.

The Hon. Sir JOHN WYLDE, LL.D.
in the Chair.

The Report, state of the Funds, and prosperous condition of the Library, seem to afford general satisfaction. The former was the production of the venerable Mr. W. WILBERFORCE BIRD. The following is an extract:

"It cannot be considered intrusive for your Committee finally to conclude with some allusion to a recent much-to-be-lamented occurrence. Many events of importance to society have lately taken place in the literary world—many affecting a large portion of mankind—but *the death* of Sir Walter Scott is one of an overwhelming nature. It may be considered as an irreparable public loss, and must greatly influence the literary enjoyments and feelings of the Subscribers to this Library. That pen which for so many years afforded instruction and amusement to the world is for ever silent. The northern harp which was wont to respond to his masterly hand, is now, alas! for ever unstrung. Let the Subscribers to this Library call to mind the many vacant hours which have been amused and instructed by the numerous volumes of Sir Walter Scott, which appear before them on those shelves. Let them reflect upon what they have now lost, and let them never cease to hallow the name of the author of Waverly.

"Your Committee thinks it cannot better close this Report than by an application of the words of Dr. Johnson.—'But what are the hopes of man? I am disappointed by that stroke of death which has eclipsed the gaiety of nations, and impoverished the public stock of harmless pleasure.'"

Votes of Thanks were passed in favor of the Committee for the last year, Mr. Sanford, as Treasurer, and the Trustees of the Dessinian Collection. Towards the conclusion of the Meeting, a ballot was taken for a new Committee; previous to which, Messrs. Collison, Watt, and Cooper, Office-bearers of former years, requested that their names might not be included in the present nomination. The following gentlemen were then declared to be duly elected. It is our duty to state the order in which the names stood on the ballot, in order to *correct* the Press on this subject.

GEO. SANFORD, Esq.
Hon. Sir JOHN WYLDE, LL.D.
W. WILBERFORCE BIRD, Esq.
JOHN MURRAY, Esq. M.D.
Mr. Advocate CLOETE, LL.D.
JOHN MARSHALL, Esq.
W. HAWKINS, Esq. H.E.I.C.A.
Rev. GEORGE HOUGH, A.M.
Rev. Dr. ADAMSON.

Moral Solidity.—Evelyn truly remarked, that all is vanity which is not honest, and there is no solid wisdom but in real piety.

Gas in London.—The Gas which lights London, is calculated to consume 38,000 chaldrons of coal per annum; lighting 62,000 lamps in shops, houses, &c., and 7,500 street lamps. In 1830 the gas pipes in and round London were above 1,000 miles in length. Gas lights of half an inch in diameter supply a light equal to 20 candles; of one inch in diameter, equal to 100; two inches, 420: three inches, to 1,000.

our readers with a copy, It is an extract of a letter from no less a personage than the celebrated Catholic Bishop Ruspa, of Mauritius, to the Church-wardens of the Catholic Chapel, Cape Town:

"By what right have persons, who have no concern but with the temporalties, presumed to examine into and discuss the Spiritual duties of their Minister? What! shall the Priest not be allowed to administer the Sacraments, but after the Churchwardens shall have permitted him? In the name of our holy Religion you carry discord into its very temple, and in total ignorance of the Canons of the Church, you pretend to dictate to the Pastor, whose duty it is to point out to you the road to Heaven.

"If your Pastor insists upon being considered Master in the Church, he is in the right;—I shall unquestionably exhort him to attend strictly to his duties; but I shall advise you to desist from those very novel pretensions which you have put forth; the end of your Pastor's exertions is the general good, in which your duties call upon you to assist him, not to make yourselves his masters."

MASTERS AND SERVANTS.

Much has been written, and much is every day saying on the all-important subject of servants. Many, taking a one-eyed view of the question, are perpetually exclaiming against the profligacy and ingratitude of their domestics. The Turks have a proverb, that "the corruption of a fish begins at the *head;*" meaning, that bad masters make bad servants. On the other hand, the good conduct of the servant stamps a character on the master. On this subordinate class, how much happiness, and even the welfare of the master may rest. Let none, in the plenitude of pride and egotism, imagine that they exist independent of the virtue of their domestics. Feelingly observes Sir Walter Scott, "In a free country, an individual's happiness is more immediately connected with the personal character of his valet, than with that of the monarch himself." Those who desire to see the subject handled in a masterly manner, should take up the New Monthly for February. "Domesticity; or a Dissertation on Servants," by *Atticus,* is worthy of general perusal. We think, however, that he is unduly severe in his censures on servants in England. He says, that masters have remained wholly unprotected from their menials. No punishment is reserved for their ruinous negligence; reckless of the waste committed, the servant may injure the property as much as if he robbed it; and how many serious cases must be passed by, unregarded and unpunished. Then, again, there is the cold civility, bordering on insolence; the brutal sullenness of the malignant; and often the voluble blustering of a bullying servant;—these tyranize over the timidity or love of quiet in the superior, and are often tolerated from that aversion to continual change in the masters, whose experience yields but little hope of bettering their condition. The extreme case of a *domesticophobia* has occurred where the plague and torment of servants have induced some to break up *house-keeping.* A singular inscription on a Roman tomb records the fate of its sad tenant. She was a matron who, for the instruction of posterity, testified that "she rejoiced to die, that so she might be delivered from the slavery of her slaves."

Atticus observes, that servants are not slaves, as many imagine themselves to be, and as ponderous juris-consults seem to opine on the rights of man. Slavery is a perfect and absolute servitude, where the master's voice is *law,* while his arm inflicts the penalty. This feudal principle, unalleviated by the just sympathies of domesticity, deprives authority of its grace, and service of its zeal. To be served well, we should be loved a little; the command of an excellent master is even grateful, for the good servant delights to be useful. The slave repines, and such is the domestic destitute of any personal attachment to his master He listens but to the loss of his freedom, in the sound of the "iron tyrant," as once a servant called the summoning bell. Who ever loved the being they feared?

It is in small communities only that we perceive how the affections of the master and the domestic may take root. Look in a retired family, whose servants often have been born under the roof they inhabit, and where the son is serving where the father still serves, and sometimes call the sacred spot of their cradle and their grave, by the proud and endearing term of "Our House."

Atticus tells an interesting anecdote on the passion of domesticity in a slave:—In that inglorious attack on Buenos Ayres, where our brave English soldiers were disgraced by a recreant general, the negroes, slaves as they were, joined the inhabitants to expel their invaders. On this signal occasion, the city decreed a public expression of its gratitude to the negroes in a sort of triumph, and at the same time awarded the freedom of eighty of their leaders. One of them having shown his claims to the boon, declaring that to obtain his freedom had all his days formed the proud object of his wishes, his claim was indisputable; yet now, however, to the amazement of the judges, he refused his proferred freedom! The reason he alleged was a singular refinement of heart-felt sensibility:—"My kind mistress," said the negro, "once wealthy, has fallen into misfortune in her old age. I work to support her, and at intervals of leisure she leans on my arm to take the evening air. I will not be tempted to abandon her, and I renounce the hope of freedom, that she may know that she possesses a slave who will never quit her side."

For our own parts, we must declare, as a summing up, that the servants in England and Scotland are, (distinct from the great cities,) a remarkably worthy portion of the community. We have known hundreds of such, most amiable in disposition, honest in their dealings, faithful to their employers, an example to those around them, and possessing many accomplishments. Nay, more—we have witnessed the introduction of pure and undefiled religion into families, and its sacred influence imparted to the children, through the pious means of the house-keeper, the lady's maid, and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

even she of the nursery. And it is related by a woman, in her infamous memoirs, which were unfortunately published to the world, that she knew of no check to her career of vice, but the "scowling eye of the old Bible-reading Butler."* "That eye," said she, "used to awe my very soul. It penetrated my bosom's inmost recesses, whilst I knew that the good heart of this religious, and true and faithful creature, sighed for my condition, and uttered many a prayer for my salvation."

Atticus acknowledges that many tributes have been offered to the memory of faithful servants. Pope, and Shenstone, and Young, and Gifford, are enumerated as having raised monuments in grateful remembrance of good domestics. But we recollect an octavo volume, which appeared some few years since, commemorative of an immense number of servant worthies. It was compiled by an excellent individual, who was termed—*The Servant's Friend.* He travelled the country like another old Mortality. He visited every church-yard in England and Wales, and copied every inscription dedicated to the memories of faithful domestics. In St. George's Chapel, Windsor, there is a mural monument erected by order of George III. The inscription is a tribute of domestic affection in the royal bosom, where an attached servant became a cherished inmate:—

KING GEORGE III.
Caused to be interred near this place,
The Body of MARY GASCOIGNE,
SERVANT TO THE PRINCESS AMELIA;
AND THIS STONE
To be inscribed in testimony of His
grateful sense of the faithful
Services and Attachment of an amiable
YOUNG WOMAN,
to
HIS BELOVED DAUGHTER.

THE POST.

MARCH OF LETTERS AT THE CAPE, ETC.

THE age we live in may be termed the *Critical Age,* or the *Age of Censure,*—just as the reader pleases. But if we look into the party Magazines and Reviews of the day, the Blackwoods, the Frasers, the Taits, &c. we may, from the unholy strife kept up in these periodicals, be inclined to denominate it the *Satanic Age.* Many of the censures on public men and bodies are most justly due: but for such, they would become the mere *sleeping partners* in that particular concern which the public pays them to watch over with becoming vigilance. Hence, in reference to our Town water-supplies, there can be but one opinion abroad as to the inefficacy of the past measures for a keeping up a just and true *running account* in favour of the "whole body of the people." At the same time, it must be confessed, that *indiscriminate* censure is too much the *order of the day.* This arises, in a great measure, from the vitiated taste of the age, produced probably by forming our opinions according to the views of such Reviews, Magazines, or Newspapers, as we may be induced to patronize. There are Reviews on all sides, and partizans on all sides; and flat contradistinctions are as much the result, as that two and two make four. This is demonstration, that the taste of many people is guided by something distinct from intrinsic merit. *Piquancy* is a main charm with the public. Every thing *now* must be *clever,* that is, piquant, pointed, epigrammatic. The article must be well dressed up; terse, lively, and striking. No matter,—whether just or unjust, it must be smart; if witty, it will be still better. But after all, it is the MATTER which is the test of genius; its originality, force, grandeur, grace, tenderness, and above all, its truth. MANNER is, for the most part, artifice and ingenious labour. They with whom manner prevails over matter, are a race of heartless pedants—empty-headed fellows. These men belong to the fourteenth class of brains.

But we are diverging from our subject: all we intended to remark as introductory to our present subject was, that in the prevailing love of indiscriminate censure, we are too apt to include in our freedoms many sweeping condemnations against certain institutions, which convey positive national advantages.

For instance, the *Post* at the Cape of Good Hope.

Next to the *Hemel en Aarde,* the Leper Institution at Caledon, we consider the business of our Post Office to be an extraordinary performance: and yet these are men who have eyes, and see not; ears, and hear not; they undervalue their own blessings. Contemplating as we do, the necessarily circuitous route of our Post, the dispersed situation of the towns and villages of the colony, the sand barriers, ravines, and almost inaccessible mountain heights which it must overcome ere it reaches its place of destination, we frequently wonder at its prevailing clock-work regularity. Then let us take into the account the varieties of weather it has to encounter—its some six-and-thirty rivers it has to ford on this side of Graham's Town, and all the casualties it has to grapple with in the shape of horse-and-man sickness, &c. on the way, and we set down the *working* of the Frontier Post as almost next to miraculous. It is only they who have undertaken the over-land journey to the frontier, that can appreciate the herculean task of the mail performances at the Cape of Good Hope. Now, in awarding our *degrees of merit,* let us do things in order.

1. The Hottentots. Yes; our worthy aborigines, are, after all the hard, crude, ill-natured, ungrateful sayings against them, the true *men of letters.* Slaves are also employed in the conveyance of the mails, and they are equally faithful. So much for the coloured races. Another word for the Hottentot, *en passant.* Can any other of the human family so well supply his place in this respect, and many others that might be mentioned? Can they hazard the fierce oppressions of our summer's suns, and the unceasing changes of the winter's sky? Can they swim the rivers like the deer pursued by the enemy, and endure the privations of the solitary mountain traveller — houseless, hungry, and thirsty, and in want of raiment? Have they *eyes* of equally discriminating penetration? Can they behold, like the Hottentot, "paths" which "no fowl" of the best flight "has yet known," and which the vulture's most piercing eye has not seen; and which lions of the strongest resolution have never passed? hence learn the moral. If there be an inequality in the intellectual qualities of a certain portion of the human species—it is made up in the possession of certain other unimbiguous distinctions in which they conspicuously excel. "Hottentots excel?"

* It was said of Scotland's Mary, that she was more afraid of the prayers of John Knox, than an army of men!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

exclaims the sceptic! Yes; and in a far greater degree than your Highland drover, or your Welsh drover, or your English drover, or your Irish pig-driver; and consider, ye lovers of beef and mutton at the Cape, what *living-skeletons* ye were, without the arduous exertions of the Hottentot who, of all men, is alone *constituted* to lead down the cattle from our "thousand hills," for your special benefit!

2d. The seat of letters itself, the Post Office in Cape Town. Here we believe, there is an *almost* perfect state of things which a small modicum of the essence of *reform* would render complete in the office.* There is also a general desire to accommodate the public, and as it regards the despatch of periodical literature, there is very considerable exertions put forth for its regular circulation. It is true, we have heard the clerks in the office charged with being slow in their movements. But all men are not *racers*, like the complainants in the case; besides, what is done in a hurry, is generally done badly. There is in the consideration of the Post Office, a rich fund for contemplative gratulation.

In 1805 (the colony then possessed by the Dutch,) the annual receipts of the Post were Rds. 265,—£19 : 17 : 6. The march of letters followed its capitulation to the English. Witness the growing triumphs:

1806, ...	£187	14	6
1812, ...	472	0	0
1818, ...	915	0	0
1820, (arrival of the British Settlers,)	1350	0	0
1826, ...	1884	0	0
1829, ...	3577	0	0
1831, ...	3704	0	0
1832, ...	3920	10	0†

But there is a *third* and most important party in the question, it is—Government. There is on its part every anxiety to watch and protect the public interests at the Post Office: and we are well aware that in its service, as well as many other concerns affecting the public good at the Cape, His Excellency the Governor will, after his departure from this colony, and his arrival in England, devote his attention. One thing we know is, that His Excellency will promote inquiry as to conveying the mails by the *best existing* means of *water-proof* bags. Once more,—what an immense benefit is conferred by Government on the colony, its distant dwellers and readers cut off from our Cape Town abundance of intellectual resources. To them, what hours of idleness, what provocatives to temptation, were it not for the transmission of periodical literature through the channel of the Government Post! Think, ye mountain men, servants to Government, and others, of your present enjoyments, and be exceedingly thankful. Just let us consider for a moment, those ponderous affairs—the Edinburgh, the Quarterly, the Westminster, the Foreign Quarterly, &c. travelling some five, and upwards of six hundred miles, at the price of a penny-postage for each, and we must say that ours is a literal Government.

But we must close our remarks with some very steady reflections. Suppose for a moment the Post of a country closed, and an end to the transmission of letters; this is the question.

THERE is, perhaps, no possible event that would cause so great a revolution in the state of modern society, as the cessation of the post. A comet coming in collision with the earth could alone cause a greater shock to its inhabitants; it would shake nations to their centre. It would be a sort of imprisonment of the universal mind—a severing of the affections, and a congelation of thought. It would be building up a wall of partition between the hearts of mother and child, and husband and wife, and brother and sister. It would raise Alps between the breasts of friend and friend; and quench, as with an ocean, the love that is now breathed out in all its glowing fervour, despite of time or place. What would be all the treasures of the world, or all its praise, to a feeling heart, if it could no longer pour out its fulness to its chosen friend, whom circumstances had removed afar off? What could solace the husband or the father, during his indispensable absence from the wife of his affections, or the child of his love, if he had no means of assuring them of his welfare and his unalterable love; and what could console him, could he not be informed of theirs? Life, in such circumstances, would be worse than a blank; it would be death to the soul, but death without its forgetfulness. Write soon—pray do write soon and often—are among the last words we breathe into the ear of those we love, while we grasp the hand, and look into the eye that will soon be far from us. What other consolation or hope is left us, when the rumbling wheel, or the swelling sail, is bearing that beloved being far from us, while we stand fixed to the spot where that object uttered its last adieu.

If ever mortal deserved a monument to perpetuate his memory, it was the inventor of writing; (what are the claims of kings and conquerors in the comparison?) it is the next best gift to life itself, and, deprived of it, life would hardly be worth the possessing: it is truly like the air we breathe; if we have it not we die. The best enjoyments of being emanate from this divine art: it pours the brightest sunshine that illumines the desolate path of life; without it, the gift of genius would be bestowed in vain, and talent would expire unseen and unenjoyed, like the bright flowers of an uninhabited region. And without the medium of communication by the post, even this would be divested of half its advantages; with a cheapness that no other mode can compete with, a swiftness that none else can rival, and a certainty and dependence that no other can offer, it presents the finest instance of communication between men that the world has ever witnessed. Crowned heads, Governors and the rich only might, indeed, send their communications by messengers or couriers, but these would hardly be available for the merchant, and not at all for the tradesman or artizan. But now we can receive the most needful intelligence, or the kindest effusions of regard, from a distance of hundreds of miles, for a mere trifle.

The post is the most perfect system of intercourse that has ever been devised—it scatters wealth and happiness in a thousand directions. No place is too distant for it to reach—no village too insignificant for it to visit. Like the sun, dispensing delight, it goes its daily journey. The heats of summer, and the cold of winter, are not allowed to intercept or retard it. In spite of Malthus, our abominable Marriage Laws at the Cape, and all the economists, it carries on the important business of courtship, and leads to matrimony, whether for better or worse. It solaces the lover's sorrow, and transmits hope through many a cruel league. The bashful bachelor, who has not the courage to make a personal declaration, may do it through the medium of the post; nay, if he prefer it, he may even put the last question itself into the hands of the postman. It assists to bind society in one common union, for who would emigrate to a region where it could not reach? It is better than the gold mines of Peru; and, like the Nile in Egypt, it scatters blessings along its track; and deserves to be considered as one of the most happy and distinguishing features of modern times.

THE CAPE DOWNS.

PROPOSAL FOR A NEW LINE OF ROAD TO SIR LOWRY'S PASS, AND THE PLANTING OF TREES.

WE know of no department in colonial improvements so necessary for investigation, and important to the general interests of the colony, as the *Economy of Planting*. The planter has been characterized as the most disinterested of mortals, because he labours for posterity; but his claim to this distinction in South Africa may well be questioned. The little tree *here*, put into the earth *with proper care*, very quickly becomes a feature in the rural landscape, and thus the taste is gratified as soon as the labour is done. Not only this, a *profit* speedily ensues to the planter, which is, perhaps, the best part of the business in a colony like this, where most men are *secular*, and rural *taste* is considered too expensive to consult. But our immediate purpose is to call the attention of Government, or the Agricultural Society, or some other body, to the present state of the *Cape Downs*. That colonial benefit conferred with so much public spirit by our present Governor, the new road at Hottentot's Holland

* All we require is, that the Office should not be closed for a single moment on Friday, the grand Post-day. Much trouble is frequently occasioned thereby, from the marching and counter-marching of servants who cannot gain admittance; and, although the hour of recess is notified, yet the servants here are sad calculators of time. But to the Strangers who are generally very numerous in Cape Town, the disappointment occasioned by the closing of the Office is very great.

† Let it not be forgotten that, with all the obstacles to be encountered, over, perhaps, the most extraordinary mountains in the world, the Post travels upwards of six hundred miles of road, in less than five days.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

must ever endear his memory to the grateful recollections of the country. Still there are additional requirements which call for some immediate attention. Daily and hourly are the Cape Downs or Flats plundered (for the purposes of sale,) of such of the bushes or stumps of trees as have remained for years. These devastations have extended far and wide, and now the sand barriers have accumulated in all their impeding heaps. To the traveller, and more especially the transport of goods, these things present immense difficulties—still they are not insurmountable, if suitable remedies be applied, and the evil already pointed out be immediately checked. We consider a safe and commodious access to our mountain passes—leading to the towns and villages of the country, and the Downs in particular, to be of even greater importance, than a new Pier or Break-water. It is more than probable, that Major Michell will grant his attention to the present subject with his accustomed skill and ability. In the mean time, a respected Correspondent, whose botanical researches are only equalled by his knowledge of planting, has favoured us with the subjoined paper.

In answer to your question, respecting the best method of forming an efficient road, &c. across the Cape Flats, towards Hottentot Holland, I submit the following hints for your consideration:

First,—A new line of road, to be marked out in the most convenient direction, but not in a direct line. A perfectly straight road for miles not being beautiful, and fatiguing the mind by its constant sameness; carrying with it the optical delusion of being endless. This line to be protected by law, and forbidden to be used by travellers until the surveyor deems it sufficient to bear traffic.

Second,—The breadth of this road not to be less than one hundred feet, which will allow thirty feet on each side for plantation, thirty feet horse and carriage way, and, on each side of this last, a breadth of five feet, being sufficient to keep off carriages from damaging the young plantation in the first instance, and afterwards form shaded foot paths.

Third,—In planting, a breadth of ten feet, next the paths to be thickly set with young trees, or truncheons of the evergreen and decidious poplar, the roots of which, spread far and wide, and very near the surface, will, in a very short period, form a firm foundation to the road, and that, in an imperceptible manner. The second breadth of ten feet, to be planted with young oaks, one or two years old, and at four or five feet apart, this distance, will allow for casualties, and leave a greater choice of trees to be left at various thinnings; the roots of the oak in sandy soil, will also extend themselves on the surface, and become, eventually, the strongest, and most lasting road; the branches will also meet in the course of years and form a grateful shade to the traveller. The outer breadths of ten feet to be thickly sown with seeds of the Cluster and Stone Pines. The bands of these evergreen trees, will in an especial manner protect and nurse the oaks until they no longer require shelter; and will also arrest the moving sand and prevent its encroaching upon the inner plantation and the road.

Observ. 1. The above may appear to many, impracticable, expensive, or visionary. It is neither of these, and in the short space of seven years will become profitable, from the thinnings and loppings being formed into faggots for firing, and at more advanced periods, billet or other description of timber.

Observ. 2. The wanton destruction of the plantations, should be made, a criminal offence, and the damaging by cattle, sheep, or goats, visited by a heavy fine. The goat, the type of sinners, would do the most injury, as their bite is actual poison to young trees and shrubs.

Observ. 3. I have only named the above five species of wood, and these European, because I consider them fully adapted to the purpose, readily procured, and quicker in growth than many native trees, although several of these are fit for the purpose, and the Oak, Pine, and Poplar may be seen of large size on sandy grounds.

Observ. 4. The next generation of Bakers, will not be supplied with bushes for their ovens, and must therefore be under the necessity of using billet wood, at an advanced price, this will not be an hardship, though it may cause grumbling, their profits are large enough to cover all expenses.

Observ. 5. Landholders would do well to plant timber trees on their Estates as a sure and certain property, and the Agricultural Society might encourage planting by honorary rewards. What would many proprietors in the Cape District do, if their grounds were without the European timber as mentioned above?

Observ. 6. I have only csnsidered in the above the practicability of forming a good and permanent road over a sandy flat. The practical knowledge and abilities of Major Michell have already been proved to the public, and he only can be the best judge of the new line, varying from a direct one, to such points as may furnish better material than pure sand, the necessary cross roads will, under proper restrictions, cause few interruptions to the main road, but these branches may be extended for short distances, and upon the same scale.

VIA NOVA.

THE SETTLER'S LOG.

[The following are details of a Voyage to the Cape of Good Hope, by a passenger on board an unfortunate vessel which left England in July, 1832, and arrived here towards the end of March, 1833. The Journal is printed from the original MS. *verbatim et literatim*. A smile may be created at the writer's simplicity—but his subsequent decease at the Cape, places him beyond the reach of criticism.]

July 4, 1832 —Dear Father and Mother and kindred all it was on this day of the month when I last saw you and you was all in good health for any thing I know and so was I the same I wrote to you on the 7th saying that we was bound to sea on that date but instead of that we did not go untill the 19th of that month and then we whent to river and cast ancor untill the 20th oposite to Livenpool then we did almost go to the Black rock and then we did cast ancor again and then we had a misfortune for as the sailors was oisting the small boat in the ship one of the ropes broke and one of the sailors fell into the sea and got drownd for the tide was so strong that he could not be saved and it took him away and we never saw him more and we stayed thear untill the 21st and then we did set of again and when we ad got about a mile paste the black rock we got fast upon a sand bed which stoped us 8 hours and then we got of again this was on the 22nd and it was very pleasent all that day 23rd this was the day that I first became sea sick for it was very rough all that day but I was only sick now and then 24 this was a very pleasent day for sailing for we whent at the rate of 8 knots and a half per hour and this day we began to have sirmons and prayers on board onst a day for we had a prespetarion minister with us and his family going to the coast of africa 25th, this day we entired the cove of cork in Ierland for some fresh Stores and we cast ancor thear and we had tow fiddlers on board and we had a very merrey day and a great part of the night but during the night thear was a misfortune happened close unto the sea shore for theare are a great many thatched houses and a fiar broak out and barned three of the roffs in but no more michief acared throught it 26 this was a day of great merryment for it appered that thear whear 5 74 Gun ships and 2 Small brigs in the cove and it being a day that daniel Oconnell came into cork with a steam packet from parliment and thear was a very great deal of fiar works lit of and a very joyfull day and a great apart of the night we had and the two fidlers we had on board made use of thear instruments and all the passengers Danced and sung to the same for thear are in number 48 stearage passengers and 17 Cabin passengers a Doctor a Captain a Captains mait a Carpenter a Cook and 5 sailors which maks in Number all to gether 65 and at present all in good health and agreeable our alowanses are very well for we have to every adult ¾ lb. of beeff 4 days in the week and 3 days in the week pork for our dinners 3 days we have peas soup 1 pint each 4 days we have 5 ounces and ½ of flour each and ½ lb. of raisins to 12 of us, and ½ lb. to 12 of us, this belongs to our dinners too preckfast we have one pint of coffee each to baggain we have 1 pint of cocoa each and 3 pints of water 4 days 3 gills 3 days and 1 Noggin of excellant wiskey a day and 1 lb of buiscuit per day each which realy is more than most men can get through 27th we drew up our ancor afore 5 Oclock this morning and set out to sea again and a pleasent morning it was this day passed well at about 5 nots per hour 28 all is well this morning about 10 Oclock we passed a ship bound to Liverpool she came from rio ganaro in south america and we tould them to report us that all was well this day I was onst sick 29 this being Sunday we washed and cleaned ourselves but we was all most becalmed so that we whent little if any all that day this day we got amongst a great quantity of fishes the called them pauposes theas fish when the swim turns head over heals right plain to be seen for sometimes the come right out of the water the run in size about 30 lb or 40 lb each 30th this day we passed on whell untill toards eavening then we entered the bay of buiscuy which made me with the ship rouling so that I was scarcely able to wright Speed at the rate of about 7 nots per hour 31 this morning was very windey so that the ship roulled so that we could hardly ley in our beds without sticking fast to something this day passed on with a very Brisk brees we whent at about 6 nots per hour, and we whent through the bay of biscuy in about 50 hours and I was only sick onst in going throught August 1 this was a very pleasent day for Sailing for we whent at the rate of 8 nots per hour and very fine and warm it was 2nd this day we passed on but not at Such a speed as the day before perhaps at about 4 nots per per hour 3rd A most contrary wind we had to day which was very troublesom to us all this day 4th the wind kept still in this maner which made us that we almost came as far backward as forward and continued so all this day and all the night and very rough it was this day was a birth day of a gentlemans child that was on board and he gave us three bottles of rum which made us all very merry during the day 5th this day was sunday

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and washing and cleaning ourselve took its regular cource but our minister being sickly we had no prayers to day the wind changed its cource this morning which cheered up our hearts to think that we was on the right way 6th this day we became becarlmed so that we did little if any thing all this day and the night following as well 7th this day we kept the same manner untill about 11 OClock this night * * *

beast but the sailor lost is hould and all the host was spoiled 4th this day thear was a great calm about us and what small wind thear was was mostly foul for us peaple on board a ship are very much similar to peaple on shore when liquor is in thear heads for this day a battle tooke place betwixt one of our stearage passengers and our surgeon and our stearage passenger was defeited but if I must speak about it I will say that it was as I have oftimes seen it when at home for it was not the men as was fighting but the liquor 5th this all well on board but a very foul wind for us so that we did little if any thing all this day 6th this day was as it as been before oftimes a brisk breez but a foul one for we may state it often the same maner as going up unto mozley out of Ashton for to go to duckinfield and our ships crew cannot forget them old tricks for this afternoon one of the Sailors and the captain brought them matters unto fighting and the captain abused him very bad but a very Brisk and favourable breez struck up for us. 7th this breez kept up for us at the rate of about 7 knots per hour this night about 5 Oclock an iland made its apearance which was one of the canary ilands and the called Palmer island about 12 Oclock we passed the peack of tenareeff which is in perpendicular heaght 2½ miles theas three ilands are what the call the canary ilands 8th a breze as before stated and all well on board this day we passed another iland called the Ferro iland which is one of the canary ilands which is three in number 9th this day being sunday and a minister on board he would not let us forget it for he requsted prayers which he had it granted a brisk and pleasant breez still continuse for us which gives great pleasure to all on board which is at a rate of 7 or 8 knots per hour we let of the trades winds to day 10th this was a pleasent morning and all well on board and a pleasent breez at about 9 knots per hour the docktor and one of the cabin passengers had words together and the cabin passenger struck the docktor with a musket 3 different times on the face and head and after the doctor brought up a bottle of vitrol and threatened to through it in is face but the captain flew at him and took it from him and livered it to the minister and no further harm done 11th this day passed on well and a few flying fish was seen at a distance *

* * * * * *

12th this day we passed on the tropick of cancer and it is a practice amongst sailers that if thear is any person on board who as not crossed the torred zone the take and make them ether give a bottle of spirits or otherwise paint thear face with tar and scrape it of with a old knife and the tumble them over head in water but as I have said before men are on board a ship as the are on land for the could not stop until we came unto the torred zone which was the proper place for the operation to take place but nothing would fit them but the would put it in force at the temperate zone for which the Operation caused great sterings amongst us and the collected 24 bottles of wine and spirits together eight they took with them that night and 16 they left with the minister for to have at other times but theas 8 bottles that they took with them put them out of order for thear duty and which made all that night very noisey and troublesome but a very brisk breeze as before stated * * * * * *

13th this day the effects of the grogg was on them which made them very merry all this day and very redy to be set at any thing for this evening the mate of the ship and the cook had words and the mate struck him several times lickwise the captain pushed him about as well but all became quiet again 14th this was a pleasent morning and all in a prosperous state for quietness and a prosperous breez as before stated at a rate of 7 and 8 knots per hour this Evening about 11 Oclock the captain came on deck and ordered two of the cabin passengers down below and threatened to shoot the first person that dared not obey him and he took a musket and loaded it with shot and ball for that purpose and gave another to one of the sailors for the same purpose I was ordered of the quarter deck this morning when aplying for medcine 15th this morning we came to Cape verds ilands which they called it the antonia for which we was within ten minuets of being on it before we saw it but no harm by it padmore had to pull the captain up by the lug when we just on the rock 16th this was sunday and not forgotton and all well and a brisk breez for us as before Stated 17th this day I saw Mr. wright liver up the log in the half deck and that as was made before we came to giberalter he gave unto Mr. Whells and the other unto Mark the mate thear is freaquently flying fish seen to rise out of the water but only a few as comed on board and those as comed in the night time but the are very fine eating this afternoon the captain went unto Mr welsh and demanded the log which contained the demnification for the crew and passengers and was livered into his hands by Mr. Huges wright for safty of them and because Mr wesh would not liver them up the captain run unto the cooks gally and fetched an axe and he whent down into the half deck whear Mr welshes boxes are and swore that he would break open all the he had got if he would not give up the log but damage them he did not whent six OClock this evening a squal made its apearance and jack the boy whent down into the captain and tould him of it and he swore thats just right and I hope that it will take the masts over board but thear was no harm by it 18th this day thear being a musket hung up by one of the beams in the half deck whear Mr welshes births is for the protecktion of himself and is famaly and he having tokeen one of his children to correct him and the boy doing is endeavour to get from is parents he accedently put his hand on the triger and of it whent and the ball lodged in to the beam of the ship which made some of the passengers think that it was intended for the captain and caused great tumult amongst them a foul wind for us and little if any thing done and rain began to come in torrents upon us which is what we have had very little of before except now and then a shower one of the stearage Passengers was taken with an inflamation of the bowels 19th calm and foul wind as before stated and rain as well and all well on board except the man before stated and he is better than he was 20th a calm as before stated and a bad report was ishued out that was that the sugar was all done which will deprive us of the same comfort of breackfast and baggain as before this was the first time mised this evening a small shirk made its apearance about 3 feet in lenth and soposed to be about 1½ year old this we caut and thear was two sucking fishes on it about the size of a herring and thear was 9 Pilot fishes seen with it but theas we could not lay hold of theas it is said that theas pilot fishes are the shirks provider the same as a jackall is for the lion 21st a calm as before but all well on board we had the shirk cooked for dinner this day which was a treat for us 22nd a calm as before but no further reasons to complain but a breez sprung this evening but not fair for us and we got plenty of rain this day the sailors grogg being done we began this evening to let them have thear grogg as ushall and to stop it of the passengers and we agreed to have 1 days alowance per week stopt for this purpose.

(To be concluded in our next.)

CHURCH AND KING.

THE following copy of an address of the Clergy in CONVOCATION, to His Majesty, is highly honourable to the temper and christian spirit of the Clergy of the Church of England, at the present moment of trial. We think it will be read with interest by most of our readers. And whatever may be *our* modes of protestant worship in this Colony, we think England's venerable Church in these times, is well deserving our united sympathies. To her faithful sons, more especially for many reasons—

——By records that refresh the eye
In the rich page of memory—
By blessings at her altar given—
By scenes which lift the soul to heav'n—
By monuments which proudly rise
The trophies of the good and wise—
By graves for ever sad and dear,
Still calling forth the silent tear,
Where those in honoured slumber lie,
Whose deaths have taught to live and die.

TO THE KING'S MOST EXCELLENT MAJESTY.

Most Gracious Sovereign,

WE, your Majesty's dutiful servants, the Archbishops, Bishops, and Clergy, of the province of Canterbury, in convocation assembled, most humbly desire permission to express to your Majesty our sentiments of loyal and respectful attachment to your Majesty's throne and person.

Since last we had the honour of addressing your Majesty, the disposition to violence, which, in some parts of the island had shewn itself in tumults and outrages of a highly criminal character, has given way to better feelings, and the cessation of those alarming enormities affords reason to hope that, through the blessing of Divine Providence on the paternal cares of your Majesty, progressive relief may be obtained from the evils which still continue to act with injurious influence on the peace and morals of the community.

But, sire, we cannot dissemble that, whether from the peculiar complexion of the times, or from some fault in our social economy, the country does not reap all the advantages which might be expected from the purity of our national religion, and the zeal and ability of its members.

Among the various causes which disappoint the hopes of the pastor, and counteract the effect of his example and precepts, we venture to specify the intemperate use of intoxicating liquors, the assiduous distribution of immoral and impious writings, and the neglect and profanation of the Lord's day. The distresses of the poor are thus greatly increased, their passions inflamed, and their feelings embittered; while the day, set apart by the commandment for the public worship of God, and instruction in his holy word, affords more unlimited scope for the indulgence of vicious pleasures, and the propagation of wicked principles.

In making these representations to your Majesty, we are actuated not so much by the desire of vindicating ourselves from unmerited censures, as by a sense of our duty to your Majesty, as the supreme governor under Christ of our Church. We do not imagine that for evils so great and extensive, an immediate cure can be found in mere legal provisions, since laws will have little effect if they are not in accordance with the prevailing sentiments of the community. Yet we humbly conceive that much might be done for the protection of the ignorant from error and vice, and for the encouragement of piety and virtue by discreet legislation, advisedly directed to the improvement of the public morals, more especially if seconded by that reverence for religion, and regard to propriety of conduct on the part of the higher orders, which are prescribed alike by duty and interest to men of all classes in society.

The obligations peculiarly incumbent on us, to lead the way in all that is good, in all that is holy, not confining ourselves to the bare discharge of our professional duty, but assiduously seeking opportunities of fulfilling the will of our Lord, we feel, and willingly acknowledge, and we venture

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to assure your Majesty, that we shall be anxious, at all times, to concur and assist in any state and effectual measures, which, on mature consideration, shall appear to be calculated to advance the great work for which the church was established, by removing whatever impediments may be found to obstruct the free course of our ministry, and by enlarging the channels through which the benefits of our pure and holy religion are distributed to the several portions of the community.

By our conduct we desire to be tried; if we shrink from the performance of our duties, we give up our title to the character of faithful ministers of Christ, or useful servants to the state; if, in spite of discouragements, we labour in our calling with zeal and fidelity, we humbly venture to hope for the continuance of that protection and countenance which we have hitherto so largely received from your Majesty's favour, and which at present are more than ever required for the preservation of the Church.

We avail ourselves of this opportunity of respectfully offering our grateful acknowledgments for the concern which has been evinced by your Majesty for the distresses of our brethren in Ireland, who, from no fault of their own, are exposed to the most grievous calamities. Your Majesty's goodness to these exemplary ministers of our united church will not only contribute to the relief of their sufferings, but will operate as a cordial to their sorrows.

That your Majesty's councils my be directed at all times by the spirit of wisdom which cometh from above, and that your Majesty may be long preserved in the full and uninterrupted enjoyment of every blessing, is, Sire, our earnest prayer.

To this address his Majesty was pleased to make the following most gracious reply:—

I repose entire confidence in your expression of attachment to my throne and person.

I deeply lament that any principles or practices which tend to counteract the effect and example of your ministry should prevail amongst any portion of my people; but no effort shall be wanting upon my part to redress and discountenance licentiousness and immorality, and to promote throughout my dominions the true spirit of piety and the observance of the precepts of the Holy Gospel.

I rely, securely, upon the fidelity and zeal with which you exercise the duties of your sacred calling. In the fulfilment of those duties, you will always experience from me every protection and encouragement, and it is with great satisfaction that I receive upon this occasion the assurance of your anxiety to concur and assist in any safe and effectual measures, which, on mature consideration, shall appear to be calculated to advance *the great work for which the church was established, by removing whatever impediments may be* found to obstruct the course of your ministry, and by enlarging the channels through which the benefits of our pure and holy religion are distributed to the several portions of the community.

THE MODERN BIBLE—UNIVERSITY OF OXFORD, &c.

In April, 1832, a memorial was addressed on the subject to the Vice-Chancellors of the Universities of Cambridge and Oxford, and the other delegates of the Clarendon Press. It was signed by the following gentlemen:

J. Bennett, D.D.
J. Blackburn.
George Collison.
F. A. Cox, LL.D.
Thomas Curtis.
J. Fletcher, D.D.
E. Henderson.
J. Pye Smith, D.D.
J. Townley, D.D.
R. Winter, D.D.

The document set forth, that the modern Bibles issued from the press of the University of Oxford, abounded with deviations from the authorized version of King James the 1st—that though some of these errors were merely typographical, yet of those that were intentional, the number was of a serious amount—that in the Book of Genesis there were upwards of 800 errors, in the Psalms 600, in the Gospel of St Mathew 416, and in about the fourth part of the Bible an aggregate of 2,931. The memorialists being anxious that the Universities should return to the only legal standard recognized, requested to be informed if any steps were about to be undertaken for that purpose.

On the 23d of the same month (April, 1832,) the Vice-Chancellor of Cambridge returned an answer to Dr. Bennett, one of the gentlemen who had signed the memorial, in which he states that the Syndics of the University had considered the memorial, and that they begged leave to observe as follows:—that the early editions of King James's Bible contain numerous typographical errors, together with many discrepancies from each other, so that no one of them could be regarded as an unobjectionable standard; that after several attempts had been made from time to time up to the year 1767, to correct such errors; and that at the period just mentioned, the delegates of the Oxford press commissioned Dr. Blayney, who was assisted by distinguished members of the University, to exhibit the text in an improved form, and that he performed his task in a manner to excite general approbation, and to justify the delegates of the Cambridge press in making that edition the standard of their copies. The Vice-Chancellor therefore concludes, by telling the memorialists that the Syndics of the University deem the edition of Dr. Blayney to be the best possible standard; that the confidence reposed in it should not be disturbed on light grounds; that they believe themselves warranted in sharing that general confidence, and that they will be always ready to correct errors, when such are pointed out.

A reply, nearly in the identical terms of that transmttted from Cambridge, was sent to Dr. Bennett from Oxford, not by the Vice-Chancellor, but by the printers.

In a week after the receipt of these letters, the gentlemen who signed the memorial met, and resolved themselves into a permanent committee, to do all in their power to obtain a restoration of the legal version of King James, after having protested against the conduct of the Syndics of the two Universities. A sub-committee of these gentlemen was afterwards chosen, for the purpose of verifying the various collations which had been made by Mr. Curtis, and drew up a report, dated Juue, 1832, of which the following is a copy:—

"Present—Dr. Bennett, Dr. Cox, and Dr. Henderson, a Sub-Committee appointed to verify and report upon a collation of various editions of the Holy Bible, made by the Secretary.—Dr. Smith, though not of the Sub-Committee, kindly assisting in the investigation, it was

"*Resolved*,—1. That this Committee are perfectly satisfied that an extensive alteration has been introduced into the text of our Authorised Version, by changing into Italics innumerable words and phrases, which are not thus expressed in the original editions of King James' Bible, printed in 1611.

"2. That these alterations so far from being an improvement of our Vernacular Translation, greatly deteriorate it; inasmuch, as in most instances, they convey to the reader the idea, that whatever any words are printed in Italics, there is nothing corresponding to them in the original text; whereas it must at once be obvious to every person who is competent to judge on the question, that what has been supplied in these instances, was absolutely necessary in order to give the full force of the Hebrew and Greek idioms; and consequently should have been printed in the same characters as the rest of the text.

"3. That those who have made these alterations, have discovered a great want of critical taste, unnecessarily exposed the sacred text to the scoff of infidels, and thrown such stumbling-blocks in the way of the unlearned, as are greatly calculated to perplex their minds, and unsettle their confidence in the text of Scripture.

"4. That it be recommended to the general Committee, to take such meausures as they shall deem most likely to effect a speedy return to the Standard text, which has thus wantonly been abandoned; but that it is expedient to wait till the reprint of the edition of 1611, now printed at Oxford, be before the public, ere any further correspondence be entered upon with the Universities.

"(Signed,) E. Henderson.
F. A. Cox, L.L.D.
J. Bennett, D.D."

LITERARY EXTRACTS,

THE IRISH PIG-DRIVER.

(From Traits of the Irish Peasantry, 3 vols. 8vo. 1833.)

Phil Purcel had been bred to "the profession," as the author calls it, of "pig-driving," which he raised by his talents to the most exalted pitch of consideration. In one of his commercial excursions to England, Purcel had the good luck to overreach a Yorkshireman; in fact, he induced the latter to become a purchaser of nearly the whole of his stock of pigs, at a price three times greater than that which he would have received for them in Ireland. One of the animals only remained on hand, and the way in which he effected the sale of it is well worth describing:

"A gentleman was one evening standing with some labourers by the way side when a tattered

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Irishman, equipped in a pair of white dusty brogues, stockings without feet, old patched breeches, a bag slung across his shoulder, his coarse shirt lying open about a neck tanned by the sun into a reddish yellow, a hat nearly the colour of the shoes, and a hay rope tied for comfort about his waist; in one hand he also held a straw rope, that depended from the hind leg of a pig which he drove before him; in the other was a cudgel, by the assistance of which he contrived to limp on after it, his two shoulder blades rising and falling alternately with a shrugging motion that indicated great fatigue.

"When he came opposite where the gentleman stood he checked the pig, which instinctively commenced feeding upon the grass by the edge of the road.

"'Och,' said he, wiping his brow with the cuff of his coat, *mavrone orth a amuck*,* but I'm kilt wit you. Mush, Gad bless yer haner, an' maybe ye'd buy a slip of a pig fwhrom me, that has my heart bruck, so she has, if ever any body's heart was bruck wit the likes of her: an' sure so there was, no doubt, or I wouldn't be as I am with her. I'll give her a dead bargain, Sir; for it's only to get her aff av my hands I'm wantin, plase yer haner—*hust amuck—hust, a vehonee!*† Be asy, an' me in conwersation with his haner here!'

"'You are an Irishman?' the gentleman inquired.

"'I am, Sir, from Cannaught, yer haner, an' 'ill sell the crathur dag cheap, all out. Asy, you thief!'

"'I don't want the pig, my good fellow,' replied the Englishman, without evincing curiosity enough to inquire how he came to have such a commodity for sale.

"She'd be the darlint in no time wit you, Sir; the run o' your kitchen 'ud make her up a beauty, your haner, along wit no thrauble to the sarwints about sweepin' or any thing. You'd only have to lay down the *scrahag* on the flure, or the misthress, Gad bliss her, could do it, an' not lave a crumblin' behind her, besides sleepin', your haner, in the carner beyant, if she'd take the throuble.'" —pp. 235–237.

Notwithstanding the repeated refusals of the gentleman to bargain for the pig, Purcel drove her to his house, affecting, in his pretended simplicity, to believe that the denials which were given him were in reality so many expressions of readiness on the part of the Englishman to take the live article on any terms. When the pig arrived at the place where Purcel had destined it to be driven, the ladies of the family came out to see the Irish monster and his four-footed companion. They surveyed the scene with astonishment, and condescended so far as to enter into conversation with the barbarian, whom they expected to have found endowed with the usual appendages of a wild creature. The author arranges the scene with admirable art. The ladies, young and old, looking on the spectacle presented before them, are inclined to show contempt and dislike, when the oily-tongued Connaughtman commences with a burst of admiration of their beauty, and by and by they all seem mightily struck with the unexpected civilization which they found in the Patlander. After the pig-driver received payment for the pig, he looked at the money with a delight which soon subsided into a sigh, when he said, "Arrah, may be yer haner 'ud give me the price o' my bed an' a bit to ate, Sir, an' keep me from brakin in upon this, Sir, God bless the money, I'm thinkin' o' the poor wife an' childher, Sir, strivin', so I am, to do fwhor the darlins." The audience were all in tears at the tenderness of the Irishman, and a shilling was handed to him to pay for his lodging. He was not, however, to be put off in this way, and a second appeal for a wisp of straw in the outhouse was readily granted, together with a plentiful meal:

"Phil then proceeded to the house, was sent to the kitchen by the young lady, and furnished through the steward with an abundant supply of cold meat, bread, and beer, of which he contrived to make a meal that somewhat astonished the servants. Having satisfied his hunger, he deliberately, but with the greatest simplicity of countenance, filled the wallet which he carried slung across his back, with whatever he had left, observing as he did it,—

"'Fhy, thin, 'tis sthrange it tis that the same custom is wit us in Ireland beyant, that is here; fwhor whinever a traveller is axed in, he always brings fwhat he doesn't ate along wit him. An sure enough it's the same here amongst yees,' he added, packing up the bread and beef as he spoke, 'but Gad bliss the custom, any how, for its a good one!'

"When he had secured the provender, and was ready to resume his journey, he began to yawn, and to exhibit the most unequivocal symptoms of fatigue:

"'Arrah, Sir,' said he to the steward, 'you wouldn't have e'er an ould barn that I'd throw myself in fwhor the night? The sara leg I have to put undher me, now that I've got stiff wit the sittin' so lang;* that, an' a wisp o' sthraw, Sir, to sleep an' an' Gad bliss you!'

"'Paddy, I cannot say,' replied the steward; 'but I shall ask my master, and if he orders it, you shall have the comfort of a hard floor and clean straw, Paddy, that you shall.'

"'Many thanks to you, Sir; it's in your face, in thrath, the same gudness an' ginerosity.'

"The gentleman, on hearing Phil's request to be permitted a sleeping place in the barn, was rather surprised at his wretched notion of comfort than at the request itself.

"'Certainly, Timmins, let him sleep there,' he replied; 'give him sacks and straw enough. I dare say he will feel the privilege a luxury, poor devil, after his fatigue. Give him his breakfast in the morning, Timmins. Good heavens,' he added, 'what a singular people! What an amazing progress civilization must make before these Irish can be brought at all near the commonest standard of humanity!'

"At this moment Phil, who was determined to back the steward's request, approached them.

"'Paddy,' said the gentleman, anticipating him, 'I have ordered you sacks and straw in the barn, and your breakfast in the morning before you set out.'

"'Thrath,' said Phil, 'if there's e'er a sthray blessin' goin', depind an it, Sir, you'll get, fwhor your hanerable ginerosity to the sthranger. But about the 'slip,' Sir, if the misthress herself 'ud shake the whisp o' sthraw fwhor her in the far carner o' the kitchen below, an' see her gettin' her supper, the crathur, before she'd put her to bed, she'd be thrivin' like a salmon, Sir, in less than no time; an' to ardher the sarwints, Sir, if you plase, not to be defraudin' the crathur of the big piatees. Fwhor in regard it cannot spake fwhor itself, Sir, it frets as wise as a Christyeen, when it's not honestly thrated.'

"'Never fear, Paddy; we shall take good care of it.'

"'Thank you, Sir. But I after heerd, Sir, that you dunna how to feed pigs in this counthry in ardher to mix the fwhat an' lane, lair (layer) about.'

"'And how do you manage that in Ireland, Paddy?'

"'Fwhy, Sir, I'll tell you how the misthress, Gad bliss her, will manage it fwhor you. Take the crathur, Sir, an' feed it to-morrow till it's as full as a tick—that's fwhor the fwhat, Sir; thin let her give it nothin' at all the next day, but keep it black fwhastin'—that's for the lane (lean). Let her stick to that, Sir, keepin' it atin one day an' fasting' anodher, for six months, thin put a knife in it, an' if you don't have the fwhat and lane, lair about, beautiful all out, fwhy niver bl'eve Phadrumshagh Corfuffle agin. Ay, indeed!'

"The Englishman looked keenly at Phil, but could only read in his countenance a thorough and implicit belief in his own recipe for mixing the fat and lean. It is impossible to express his contempt for the sense and intellect of Phil; nothing could surpass it but the contempt which Phil entertained for him.

"'Well,' said he to his servant, 'I have often heard of the barbarous habits of the Irish, but I must say that the incidents of this evening have set my mind at rest upon the subject. Good heavens! when will ever this besotted country rise in the scale of nations! Did ever a human being hear of a method of feeding swine! I should have thought it incredible had I heard it from any but an Irishman!'"

INDIA.

THE LIFE OF AN INDIAN OFFICER.

From the East India Sketch Book, 2 *vols.* 8*vo.*

"The life of an Indian officer is that of a gentleman, and is sufficiently aristocratic to gratify the most fastidious pride. He has servants, horses, a house, a plentiful table, fine wines, constant hope of an augmentation of income; and, above all, for I speak to the proud, he has *consideration*—a place and a right to mingle with the highest. He is at ease in the society of his superiors, because at no *very* distant day, if he is tolerably fortunate, he is to occupy the same position. He has a place at their tables, a seat in their carriages, and is on that easy footing of familiarity which implies essential equality."—Vol. I, pp. 10, 11.

"Othello's occupation" is no longer productive, it is true, of those harvests of gold which were reaped from it so speedily in "days gone by;" but it still offers a provision and a chance of wealth to the young and the adventurous. They often meet, we admit, with disappointments; but disappointments, as most of us know, are not peculiar to India.

"——————— All, when life is new
Commence with feelings warm and prospects high:
But time strips our illusions of their hue;
And one by one, in turn, some grand mistake
Peels off it's bright skin yearly, like the snake."

NO FABLE, BUT AN UNDOUBTED FACT.

UNDER the above head, in a very old Treatise on Testaments and last Wills, printed nearly two hundred years since, the following is found. The article in question has been the origin of many new versions of this old story. The Book from which the extract is taken

"* My sorrow on you for a pig!"
"† Silence pig! Silence, you vagabond!

"* This is pronounced as in the first syllable of 'Langolee,'—not like the Scotch 'lang.'"

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

is quite a curiosity, and was obligingly introduced to our notice by a gentleman in Cape Town.

„ At Paris one morning a hungry poore man „ begging his almes from doore to doore, did „ at the last espie very good cheere at a Cookes „ house; whereat by and by his teeth began to „ water, and the spurre of his emptie and „ eager stomacke pricking him forwards, hee „ made as much hast towards the place as his „ feeble feete would giue him leaue: where „ hee was no sooner come, but the pleasant „ smell, partly of the meat, partly of the „ sauce, did catch such sure holde of the „ poore mans nose, that (as if hee had beene „ fast holden with a paire of pinsers) hee had „ no power to passe from thence, vntil hee had „ (to stay the furie of his raging appetite) „ eaten a peece of bread, which he had of „ charity gotten in another place. In the „ eating whereof, his sense was so delighted „ with the fresh smell of the Cookes cares, that „ albeit he did not lay his lippes to any morsell „ thereof, yet in the end his stomacke was so „ well satisfied with the onely smell thereof, „ that he plainely acknowledged himselfe „ thereby to haue gotten as good a breakfast, „ as if he had indeed there eaten his belly full „ of the best cheere. Which when the Cooke „ had heard, being an egregious wrangler and „ an impudent companion, what doth hee but „ all hastily steppes forth to the poore fellow, „ layes fast hand vpon him, and in a hot „ cholericke moode, bids him pay for his „ breakefast. The honest poore man halfe „ amazed at this strange demand, wist not „ well what to say: but the Cooke was so much „ the more fierce and earnest, by how much „ hee perceiued the good man to bee abashed „ at his boldnesse; and did so cunningly cloke „ the matter, that in the end the poore man „ was contented to referre the deciding of the „ controuersie to whatsoeuer person should „ next passe by that way, and without any „ more adoe, to abide his judgment. Which „ thing was no sooner concluded, but by and „ by commeth vnto the place, a very naturall „ foole, and such a notorious ldiot, as in all „ Paris his like was not to be found. All the „ better for me, thought the Cooke, for more „ hee doubted the sentence of a wise man then „ of a foole. Well sir, to this foresaid Judge „ they rehearsed the whole fact, the Cooke „ cruelly complayning, and the other patiently „ confessing as before: A great multitude of „ people were gathered about them, no lesse „ desirous to know what would follow, then „ wondering at that which had gone before. „ To conclude, this naturall perceiuing what „ money the Cooke exacted, caused the poore „ man to put so much money betwixt two „ Basons, and to shake it vp and downe in the „ Cookes hearing, which done he did arbitrate „ and award, that as the poore man was satis- „ fied with the onely smell of the Cookes „ meate, so the Cooke should be recompenced „ with the onely noyse of the poore mans „ money. Which judgment was so com- „ mended, that who so heard the same, „ thought, if *Cato* or *Salomon* had beene there „ to decide the Controuersie, they could not „ haue giuen a more indifferent or just sen- „ tence.

SEEING WITH THE MIND.

This seeing with the mind—this light of the understanding, is far more valuable to us than the common light of day. It is our own—a light within us—nothing can cloud it; darkness itself cannot hide it, if it is once kindled in the proper manner, and to the proper extent. But though its illuminating influence be within, we must at first light it up from without; and though it be the candle of the mind, it can only be lighted by knowledge obtained through the medium of those senses with which our all-bountiful Creator has furnished us. The exercise of those senses is OBSERVATION; and that is the fountain of all knowledge, and the original source of all pleasure, whether that which we immediately know or enjoy, be or be not present to the senses. What we thus obtain, is unalienably vested in us for the whole period of our lives. That which we have in our coffers, may decay through time, or be destroyed by accident; or it may be taken from us, or we from it; and that which is told to us by others may be false, or we may forget it because of the weakness of the impression that it made; but that which we see with our own eyes, or otherwise perceive with our own senses, is proof against accidents, against time, and against forgetfulness.—*Mudie.*

YOUTH IN AGE.

In the case of old people, even after their powers of observation are decayed, and when themselves are, as we would say, in their dotage, we find that they enjoy themselves and are happy, in the memory of their young years. Not only so; but when, insensible as it were to the present, they glance back for pleasure to the days that they have lived, the earlier in life the occurrence is, they remember it the better. And past events, and past objects, get more shadowy, not as they are more remote, as is the case with views in space, but as they are nearer to the present time. The man of fourscore may forget that he was a man of threescore and ten; but he never forgets that he was a boy; and one of the reasons why very old people are so fond of the society of children is, that the recollections of age, and even manhood, are comparatively faint on their memories, and they actually remember, and think, and enjoy themselves as children, after they cease to find pleasure as men.

We call those years of extreme age—those lingerings by the grave's brink, "a second childhood;" and the thoughtless among us, regard the appellation as one of pity, if not of derision. But it partakes of that sound philosophy and perfect wisdom which are contained in all proverbs and by-words, which pass current among men, and are sanctioned by the general voice. Why, indeed, is it, that any expression becomes a proverb or by-word? Is it not just because the truth of it is so plain and so striking, that every body, learned or unlearned, assents to it at once; and that it cleaves to the memory, as if it were a fact of which our own senses have been the immediate evidence.

There is something very delightful, as well as something very instructive, in this revival of the memory of youth in the very extreme of old age. It is delightful to think that the mind is independent of time, and not effected by that decay which wastes the body, and in the end brings it to the dust. Were there no other proof of the mind's immortality—no other hope of a life beyond the grave, that alone would be a demonstration of it, as clear and satisfactory as we can obtain of any truth whatever.—*Ib.*

GOOD WIVES AND GOOD HUSBANDS.

Good wives and good husbands are essential to social happiness and public morals. From them infancy derives its first impressions, youth its morals, and society the character of his members. On them rest in a very high degree the pillars of human happiness. Moral or social delinquencies in them invariably exert, to a greater or less extent, a pernicious influence upon others, and not unfrequently give the hue of impiety to the moral complexion of succeeding generations But if our views are bounded by present considerations alone, as there is no relation so intimate as that of husband and wife, so there is none on which the best interests of mankind are so much depending.

A Good Wife.—The good wife is one who, ever mindful of the solemn contract she has entered into, is strictly and conscientiously virtuous, constant, and faithful to her husband; chaste, pure, and unblemished in every thought, word, or deed: she is humble and modest from reason and from conviction, submissive from choice, and obedient from inclination; what she acquires by love and tenderness, she preserves by prudence and discretion: she makes it her business to serve, and her pleasure to oblige her husband, as conscious that every thing which promotes his happiness must in the end contribute to her own: her tenderness relieves his cares; her affection softens his distress; her good humour and complacency lessens and subdues his afflictions; "She openeth her mouth," as Solomon says, "with wisdom, and her tongue is the law of kindness: she looketh well to the ways of her household, and eateth not the bread of idleness: her children rise up, and call her blessed; her husband also, and he praiseth her." Lastly, as a good pious Christian, she looks up with an eye af gratitude to the great Dispenser and Disposer of all things, to the Husband of the widow, and Father of the fatherless, entreating his divine favour and assistance in this and every other moral and religious duty.

A Good Husband.—The good husband is one who, wedded not by interest but by choice, is constant as well from inclination as from principle: he treats his wife with delicacy as a woman, with tenderness as a friend: he attributes her folly to her weakness, her imprudence to her inadvertency; he passes them over therefore with good nature, and pardons them with indulgence: all his care and industry are employed for her welfare; all his strength and power are exerted for her support and protection; he is more anxious to preserve his own character and reputation, because her's is blended with it; lastly, the good husband is pious and religious, that he may animate her faith by practice, and enforce the precepts of Christianity by his own example.

MERE MEMORY.

But the lesson is more to our present purpose: Why is it that, when we come near to the end of life, and look back upon it, the events of our young years are more fresh to our memory? It is not the mere youth; for there is a period younger still, of which we can remember nothing. Nobody remembers being born, and there are few that remember being carried in the nurse's arms. But if it is not the mere fact of our being younger, that makes us remember better, so neither is it that our minds have more power. The power of the mind has nothing at all to do with goodness or badness of memory, or with the simple fact of remembering. Persons of *weak judgment have often the best memories*; and have them just because their judgment is weak. Those who have been much employed in educating young people, and have attended to the subject, and been capable of understanding it, know very well that those pupils who can, without effort, learn every thing by rote, are with difficulty made to understand any thing: and grown-up persons, that can quote "day and date" for every trifling occurrence, can seldom give a sound or valuable opinion upon any matter of importance. I knew a fool, who was placed under the charge of a clergyman in the country, as being utterly incapable of conducting himself in ordinary matters, (he was a young man of fortune, and did not need to work, except for his amusement,) and yet he could repeat every word of the clergyman's sermon, tell how many people were in the church, how any one that sat in a pew named to him was dressed, or who did or did not contribute to the poor. He could do that for any Sunday, if you gave him any hint of it; last week, or last year, was all the same to him. His memory was, in short, as perfect as memory could be; but then he had no judgment in the using of it; and so, when in company, it

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

often made him seem, and not unfrequently made other people feel, very ridiculous.

It would not be fair to mention names on such a subject; but the fact is beyond question, and it bears so closely and forcibly upon the object of this section, and indeed upon the whole purpose of this little volume, that I shall mention one other instance. Some time ago, there was employed, as a reporter to one of the morning newspapers, a gentleman of the most amiable character and the most upright conduct; but one who never made a profound or even an original observation in his life, unless the uncouth juxta-position of two matters of memory, between which there is no congruity or connexion, can be regarded as a sort of ludicrous originality. He had been long a faithful labourer on the establishment, and so he attended the Upper House, where the every-day duty was then easier than that in the Commons. He took no notes whatever, and yet, if an unexpected debate sprung up, and he was left for hours before any one went to relieve him, he could write out the whole verbatim. While listening, he was literally "held by the ear," so as not only to be incapable of thought, but almost of the use of all his other senses. In the office, too, he was the oracle of facts and dates; and, as he had read the newspapers diligently for many years, he knew almost every parliamentary sentence, and could tell by whom it was spoken, on what evening, what was the subject of the debate, and who were the principal speakers. His memory was chiefly a memory of sounds, and probably that was the reason, at least one of the reasons, why his judgment, weak as it was for the opportunities he had had, was so very much superior to that of the young man previously mentioned.

(Mudie.)

NEW DISTRIBUTION OF WEALTH.

Cities now covering a circumference of miles will die away—dispossessed of their peculiar advantages, from the vicinity of harbours, rivers, coal, and the useful metals; the most inland districts will enjoy the advantages of sea-port towns; and property will become equalized in value, to the most distant portions of the kingdom. The rail-road projected from London to Dover will alone overturn the grandeur, and even the very foundations of the modern Babylon—for it will assign to Dover the entire shipping business of London, and finally close the Thames. The expensive and circuitous navigation of the Downs and the river will be avoided—millions per annum, now paid for pilotage, dock dues, and the innumerable charges of the Thames, will be saved to the commerce of the kingdom—the sea-faring population will be drawn off from the pestilential haunts of the port of London—and the plough will soon pass over the ancient and filthy towns upon the Thames; the banks of which will exhibit a beautiful, still, and natural scene—a most desirable view, although anticipated by Volney with great regret. For London is one immense monopoly—engrossing through the court, the East India Company, the Bank of England, and the various departments of the government, the expenditure of almost all the revenue of the country; draining and weakening the provinces.—*Hall.*

LACONICS.

By Professor SMYTHE, *of Oxford.*

Courtiers.—Men who are singularly careless auditors of public accounts, and by no means uneasy in the possession of sinecures.

Eloquence should attempt one great object, and entirely succeed, or entirely fail. Eloquence and wisdom are very different things. They are sometimes united, but seldom. A command of language, retentive memory, and glowing conception will make an orator, but not a wise man. Enthusiasm is the soul of the one; deliberating calmness the governing principle of the other.

Servility is not loyalty; nor attachment to liberal sentiments, republicanism.

Practicability should always be considered by him who contemplates reformation. He who proposes a change which can never be carried into execution, does nothing—does worse than nothing; because he makes the very idea of improvement ridiculous.

Toleration is the respecting of a fellow-creature's religious opinions, be they what they may, merely because they are his religious opinions.

Civil Liberty is the first of national blessings. It may sometimes be endangered, not by the strength, but by the very weakness of the executive power. Civil liberty is, of all things, the most frail and perishable: arbitrary rule, the most hardy and indestructible.

Members of Parliament.—There are many who are mere debaters in Parliament, not statesmen.

Parties.—You must have parties, or there will be no freedom of thought—as in Turkey and Persia, where no parties exist.

WILSON AND ANNESLEY.

[IT is a remark of some philosopher, that when people of opposite sentiment candidly compare their opinions, they find the difference between them much less than they had apprehended. The *unknown,* or the *partially known,* is always a field for the imagination. We are peculiarly apt to exaggerate both the good and the bad qualities of those with whom we are acquainted only by report. When two individuals who have been growling and scowling at each other for a series of years, are by necessity brought together, how astonished are they to find one another human beings! They are surprised by kind feelings, where they expected austere dispositions; they meet with generous instead of proud thoughts, suavity instead of harshness of manner. In reference to this subject, the author of *Letters for the Press,* (a book we are glad to find in the colony,) tells the following story.]

Wilson and Annesley are men of property, and in every sense highly respectable; the former is an independent gentleman of an ancient family—the latter an eminent merchant, opulent and liberal. They live at too great a distance from each other to be considered as neighbours, but as their houses lie in the same direction from the nearest town, they frequently meet each other on the road. The magical ceremony of an introduction, however, had never enabled them on these occasions to relax the stiffness of an upright attitude. Something of the repulsive feeling already described had grown up between them, and it had been recently fomented by a dispute between a tenant of the one and a clerk of the other; the tenant asserting with great positiveness that he had paid some money to the clerk in discharge of a debt due to Annesley, and the clerk affirming, with equal confidence and pertinacity, that he had never received it. No acknowledgment or receipt for the money could be produced.

Wilson being a kind landlord, not averse to extend his assistance and protection to all dependent on him, took up the cause of his tenant, whom he esteemed an honest man, and wrote a letter to Annesley in his favour, in which he evidently considered the clerk as taking advantage of the loss of the receipt, and expressed himself as somewhat personally aggrieved. Annesley had a high opinion of the punctuality and integrity of his clerk, and felt inclined to consider the tenant as little better than a rogue who wished to escape from a just obligation under the shelter of his landlord's good word. He saw, however, that it was useless to reply to the letter in kind; that they might correspond for ever without coming to a satisfactory conclusion; and that some other method must be pursued, to terminate an affair beginning to grow excessively disagreeable. One morning, at breakfast, he talked the matter over with his only daughter, his darling and confident, whom, since the loss of her mother, he had installed in the pleasant office of supplying him with inducements for doing as he liked, and of returning to him his own reasons, softened by the gentleness and embellished with the graces of the female mind.

It happened Miss Annesley had received some recent attentions, by no means displeasing, from the heir of the Wilson estate, while she was visiting in the neighbourhood; and whether it was from a tender recollection of these, or from that disinterested kindness of heart which leads the gentler sex at all times to prevent and compose feuds and enmities—certain it is, that she urged her father to seek an immediate personal interview with his correspondent; and, after exerting all the force of her eloquence till an unusual colour bloomed on her beautiful cheeks, she succeeded in persuading him to a step on which he had already determined.

His reception at Wilson Hall was stiff and formal. He saw at a glance that his visit was unwelcome, and that he had to do with a man strongly prepossessed against him. At first he felt inclined to conduct himself in the same ungracious spirit; but, being a man of the world, accustomed to control his first impulses, he checked the nascent disposition, and addressed his neighbour with a manly frankness and sincere desire to clear up mistakes and compose differences.

"Mr. Wilson," he began, "the object of my present visit is to adjust the unpleasant affair which occasioned the letter you did me the honour to address to me a few days ago. A personal interview appeared to me the readiest mode of attaining the end. We have both, I am persuaded, the same simple purpose in view—to ascertain what is right, and to act accordingly. After examining my clerk with all the acuteness and impartiality of which I am master, I am convinced he has never received the money: you, on the other hand, are equally convinced that your tenant has paid it. There appear, then, to be only three modes of proceeding: one, to let the matter rest, with a sense of injustice remaining on the mind of one of the parties; another to have recourse to a court of law, at a great expense of money and peace of mind; the third, to refer the matter to arbitration. A man really desirous of justice can scarcely fail to prefer the last; and, if your tenant acquiesce in the proposal, we will take that course on the present occasion. You yourself shall be the arbitrator, and whatever decision you may come to, after hearing both sides, shall be final and unquestioned."

At the commencement of this address, Wilson had positively determined to remain fixed in his opinion; he had assumed a deliberate sternness of both feeling and expression, and had resolved not to relax a muscle of either mind or body. What was said, however, was uttered with so much candour, in so gentlemanly a tone, and with such evident fairness of purpose, that all his notable resolutions were put to flight: the scowl left his brow, the austerity vanished from his heart, and a pithy retort which he had prepared to emit at the conclusion of his neighbour's sophistical or offensive harangue (for one of these he had in his own mind predetermined it should be) never saw the light. He met the proposal with perfect frankness and good will, and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

objected at the outset only to that part of it which referred the decision of the case to himself—an objection afterwards abandoned. It ultimately turned out that the tenant, a man of no great quickness of intellect, had inclosed the money in a letter, which he had forgotten to send to its address, and, on a sudden recollection, he discovered that he had carefully stowed it away in an old pocket-book.

From this auspicious moment Wilson and Annesley became fast friends. They found in each other a congeniality of spirit at which they were utterly surprised—integrity, urbanity, delicacy, cultivation of mind; in fact, no two men in the whole country were more exactly suited to confer mutual pleasure by personal intercourse, and yet for years they had been kept asunder, although almost neighbours, by the absurd reserve and sullen coldness of English etiquette or English manners.

WHOLESOME QUALITIES OF GOOD ALE.

THE following extracts, from the works of Dr. Paris, may tend to remove the prejudices entertained by some persons against that excellent beverage of an Englishman—beer; and may also convince the unscientific brewer, that no substitute which ingenuity can devise, can serve the purpose of hops, as a valuable ingredient in malt liquor.

Extract from Dr. Paris's work on Malt Liquor:—

"Malt liquors differ from wines in several essential points: they contain a much larger proportion of nutritive matter, and a less proportion of spirit; while they contain a peculiar bitter and narcotic principle derived from the hop. It would appear that the extractive matter furnished by the malt is highly nutritive; and we accordingly find those persons addicted to such potations are generally fat. The addition of the hop increases the value of ale, by the grateful stimulus which it imparts, and in some measure redeems it from those vices with which it might otherwise be charged. To those, therefore, whose diet is not very nutritive, ale may be considered not only as an innocent but as a salubrious article; and happy is that country whose labouring classes prefer such a beverage to the mischievous potations of ardent spirit!

These remarks, however, cannot apply to those classes of the community who "fare sumptuously every day." They will not require a nutritive potation of such a character: and light wines have, accordingly, in these days of luxury, very properly superseded its use: but I am not disposed to extend this remark to its more humble companion, *table beer*. I regard its dismissal from the tables of the great as a matter of regret; its slight but invigorating bitter is much better adapted to promote digestion than its more costly substitutes. Sydenham always took a glass of small beer at his meals, and he considered it a preservative against gravel. There existed for a long time, a strong prejudice against hops, which were considered as "pernicious weeds;" but it is now generally admitted that they constitute the most valuable ingredient in malt liquors. Independent of the flavour and tonic virtues which they communicate, they precipitate, by means of their astringent principle, the vegetable mucilage, and thus remove from the beer the active principle of its fermentation. Without hops, therefore, we must either drink our malt liquors new and ropy, or old and sour."

The following is extracted from the "Pharmacologia," by the same physician:—

"The great superiority of the hop, as an ingredient in our malt liquors, depends upon the fact of its containing within itself several distinct and independent elements of activity, which the other bitter herbs that have at different times been employed as its substitute, do not possess. The philosophy of its operation may be adduced as a striking illustration of the present subject; first, then, it contains a *bitter* principle, which imparts to the beverage a tonic quality and an agreeable flavour; while at the same time an *aromatic* ingredient adds a warm and stimulant property, and modifies the bitterness. The hop, moreover, contains an *astringent* ingredient (*tannin and gallic acid,*) the effects of which are to precipitate the vegetable mucilage, and thus to remove from the beer the active principle of its fermentation; every attempt therefore to substitute an ordinary bitter for that of the hop, must necessarily fail, unless a compound can be so artfully constructed as to contain, in due proportions, the principles of bitterness, astringency, and aroma. *Quassia* must therefore necessarily prove but a sorry substitute; it will impart bitterness enough, but it will not modify by agreeable aroma; and, as it contains no astringent principle, it will in precipitating the vegetable mucilage or gluten; in consequence of which, the beer so manufactured will be in a perpetual state of fermentation until it is entirely spoiled."

THE LATE DR ADAM CLARKE.

IT was to the ardour which was manifested in early life by this distinguished Wesleyan Minister, that we are to trace the celebrity which attended his mature age as a Hebrew scholar. Indeed, the principal claims which the memory of Dr. Clarke possesses to public consideration, (hence the intended Public Monument for which a subscription is opened,) arise from his extraordinary literary productions. From his knowledge of ancient Records, he was nominated one of the sub-commissioners of the Public Records, and was authorized to report on the best method of forming a continuation of Rymer's Fædra. In all his immense literary engagements—publication of the Bible with a Commentary, Connection of Sacred Literature, &c &c. he had no assistant—nor enjoyed not a single week's help from an amanuensis. We believe that his Life, just published, has not yet reached the Cape colony, but the following anecdote of the Doctor, when a school-boy, will, we apprehend, be found in it, when it does arrive. We recommend every Cape youth, every school-boy in particular, to read it with attention. It relates to Dr. Clarke's remarkable transition from dulness to sudden aptitude for learning while at school. The task allotted to him was to learn a certain portion of Lilly's Latin Grammar, to which he found himself wholly incompetent. His distress was indescribable, and he shed tears on his book; at last he laid it by with a broken heart, and in utter despair of ever being able to make any progress.

He took up an English Testament, sneaked into an English class, and rose with them to say a lesson. The master perceiving it, said in a terrific tone, 'Sir, what brought you here? where is your Latin Grammar?' He burst into tears, and said, with a piteous tone, *I cannot learn it.* He had now reason to expect all the severity of the rod: but the master, getting a little moderate, perhaps moved by his tears, contented himself with saying, 'Go, Sirrah, and take up your grammar: if you do not speedily get that lesson, I shall pull your ears as long as *Jowler's*, (a great dog belonging to the premises,) and you shall be a *beggar* to the day of your death.' These were terrible words, and seemed to express the sentence of a ruthless and unavoidable destiny. He retired, and sat down by the side of a young gentleman with whom he had been in class, but who, unable to lag behind with his dulness, requested to be separated, that he might advance by himself. Here he was received with the most bitter taunts, and poignant insults. 'What! have you not learned that lesson yet? *O what a stupid ass?* You and I began together: you are now only in *As in præsenti*, and I am in Syntax!' and then, with cruel mockings, began to repeat the last lesson he had learned. The effect of this was astonishing—young Clarke was roused as from a lethargy; he felt, as he expressed himself, *as if something had broken within him*: his mind in a moment was all light. Though he felt indescribably mortified, he did not feel indignant: *what*, said he in himself, *shall I ever be a dunce*, and the butt of those fellows' insults! He snatched up his book, in a few moments committed the lesson to memory, got his construction speedily; went up and said it, without missing a word!—took up another lesson, acquired it almost immediately, said this also without a blemish, and in the course of that day wearied the master with his so often repeated returns to say lessons; and committed to memory all the Latin verses with their English construction, in which heavy and tedious *Lilly* has described the *four conjugations*, with their rules, exceptions, &c. &c. Nothing like this had ever appeared in the school before—the boys were astonished—admiration took the place of mockings and insult; and from that hour, it may be said from that *moment*, he found his memory at least capable of embracing every subject that was brought before it, and his own long sorrow was turned into instant joy.

SELECT NOTICES.

Suicides.—Of a great many suicides in Paris, a late report states that there were occasioned by

Jealousy, ...	92
Grief, ...	120
Remorse for misdeeds, ...	49
Gambling, ...	155
General bad conduct, ...	1287!
Blighted ambition, ...	122, &c.

But suicide is declining all over the world. Under the dogmas of *heathenism*, suicide was of constant occurrence; was, in fact, a national characteristic, and ranked with Roman virtues!——*Chair of Natural Philosophy, Edinburgh*—The chair is to be filled by Mr. Forbes, an almost beardless youth of 23, to the exclusion of the profoundly-capable and scientific Sir David Brewster!——*A new arrival in London.*—The medical profession in London have been lionizing in all the month of January this year, the Chevalier Clot Bey, Doctor-in-Chief of His Highness the Viceroy of Egypt. A few days before his departure from Paris, the Faculty of Medicine presented him with 160 volumes of medical works in quarto. England will at the same time do her duty.——*Laconism*,—It is with nations as with individuals; if animated with industry, every function is healthy, and fulfils its office; but when employment ceases or diminishes, the frame is paralysed, and falls into a state of debility or decay. *Employment is prosperity*,——*March of Literature in Ireland*,—Wonder upon wonders! Ireland has established a Magazine in the shape of the *Dublin Penny Journal!* In its size and general arrangement it closely resembles the Useful Knowledge Society's *Penny Magazine*, which it rivals in the number and quality of its embellishments, and far

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

exceeds it in the elegance of its typography. To add to the interest of the work, the drawings are for the most part made by a Mr. Armstrong, a journey-man painter of Drogheda!——*Wages.*—It is on record that, in the reign of Edward III. the wages of a master mason or carpenter in England were four-pence per day; and of his journey-men two-pence or three-pence, according to merit——*Emigration.*—The Governors of the Refuge for the Destitute, in the Hackney Road, London, have announced that it is their intention to send out a ship to New South Wales this year, with 500 unmarried women or widows, between the ages of 18 and 30 years.——*Jews.*—A Jewish family left Woolwich a few weeks back for Jerusalem. There are now about 25,000 Jews in the Holy Land.

United States.—The population of the United States, according to the last census, is over twelve millions; and the increase in 1831, including the negroes and the emigrants, exceeded 500,000 souls; so that at the same rate the country might have, in twenty-five years, a population of twenty-five millions.

Thirst for Novelty.—There is no tomb so vast as London, which swallows up the most illustrious names for ever; it has an omnivorous maw. The celebrity of a man in London blazes and vanishes away like a firework; there is a great noise, numberless invitations, endless flattery and exaggeration, for a few days, and then an eternal silence. Paoli and Dumourier, after having at there first appearance made a crash like thunder, when they died excited no more attention than a falling leaf. General Mina, when he landed at Portsmouth, was carried to his hotel in triumph, and deafened with applause for a month together at the theatre in London. He was more famous than the Nemean lion. What then? He fell very soon into oblivion, and the grave closed over his name. The English people are greedy of novelty; childish in this alone, it makes no great distinction between good and bad, they want only what is new. They pay for the magic lantern, and pay well, but they always want fresh figures. To feed this insatiable whale, that always pants with open jaws—

'And after meals is hungrier than before,'

toil incessantly journalists, engravers, historians, travellers, philosophers, lawyers, men of letters, poets—ministers with schemes for new enactments, the king with schemes for new palaces and buildings, and the liberals with schemes for parliamentary reform.—*Observations of an Italian Exile.*

Antipathies.—What an unaccountable medley of strength and weakness is man! Lord Bacon, it is said, fell back inanimate at the occurrence of an eclipse. The acute and erudite Erasmus was alarmed at the sight of an apple. Bayle, the great lexicographer, swooned at the noise made by some water as it escaped, drop by drop, from a cock. Henry of France, the third of that name, though he had driven his enemies before him at Jarnic, trembled, from head to foot, at the sight of a cat. When a hare crossed the celebrated Duke d'Eperon's path, his blood stagnated in his veins. The masculine minded Mary of Medicis, fainted away whenever a nosegay was in sight. A shudder overcame the learned Scaliger, on perceiving cresses. Iven the Second, Czar of Muscovy, would faint away on seeing a woman; and Albert, a brave Field Marshal of France, fell insensible to the ground, on discovering a sucking pig served up at his own table!—*Athenæum.*

Writing Sermons when asleep—Morrison, in his "Medicine no Mystery," speaks of a clergyman who used to get up in the night, light his candle, write sermons, correct them with interlineations, and retire to bed again, being all the time fast asleep.

Ten Rules to be observed in Practical Life.—The following rules were given by the late Mr. Jefferson, in a letter of advice to his namesake, Thomas Jefferson Smith, in 1825. 1. Never put off till to-morrow what you can do to-day. 2. Never trouble others for what you can do yourself. 3. Never spend your money before you have it. 4. Never buy what you do not want, because it is cheap. 5. Pride costs us more than hunger, thirst, and cold. 6. We never repent of having eaten too little. 7. Nothing is troublesome that we do willingly. 8. How much pains have those evils cost us which never happened! 9. Take things always by their smooth handle. 10. When angry, count ten' before you speak; if very angry, a hundred.—*Penny Mag.*

Patriarch.—The St. Petersburgh Gazette states, that there is living near Polosk, on the frontiers of Lithuania, an old man named Demetrius Crabowski, who is now 168 years old. This Russian Methusaleh has always led the humble but tranquil life of a shepherd, assisted by his two sons, the elder of whom, Paul, is 120, and the younger, Anatole, 97 years old.

Judea.—Judea, the country of the Jews, of which Jerusalem was the capital, was so exceedingly fertile, that it was ranked by the Greeks and Romans amongst the finest of their provinces. The land has long since been brought into desolation. The country is overrun by rebel tribes; the Arabs pasture their flocks at freedom. The most fertile plains lie untilled. The art of cultivation is in the most deplorable state, and the countryman sows with the musket in his hands.—*Companion to the Bible.*

A Fairy Land, or New El Dorado.—The streams in the Huron country, says the Rochester Advertiser, glide over pebbles of cornelian, topaz, jaspar, agate, and quartz, and are as pure as crystal. They are cool enough for drinking in the hottest day in August. The great lead mines are in the southern part of this district. They have been wrought but three years, by comparatively few persons, and under every possible disadvantage; yet nearly thirty million pounds of lead have been made there. Only about a mile square of surface has yet been opened, and from this thirty million pounds more might be extracted without opening a new mine. The whole of the lead district occupies a surface one hundred miles square, including, however, a district of copper ore, about twenty miles long, four or five broad. The climate is fine and pure, and the soil of the prairies is admirable for grain. Among the curiosities is a sort of vegetable compass, the "rosin weed," from the position of whose leaves it is said that the North and South points can be ascertained.

Living in France.—A gentleman who is just arrived from France has informed us that near Brest, a good cottage for a small family, consisting of several rooms, and a garden, can be rented for 100 livres, or £4. 3s. 4d. per annum; a couple fowls and ducks may be bought at 6d; good beef, 2½d; veal, 1½d. per pound; eggs, 1½d. per dozen; common wine, white and red, 25s. per hogshead, and every other article at proportionately low prices.—*Jersey Patriot.*

Angry Controversy; a Fable—A certain crab, cast upon the shore by the tide, and eager to regain its native element, was walking, as was his custom, side-ways to the water's edge. By the way, he met with an eel in the same predicament; but he, like most other people, travelled with his head foremost. 'I do not see, sir,' said the eel, 'why you should refuse to conform to the customs of the world and the habits of society, therefore, I will thank you to turn about and walk as other people.' The crab maintained the right to walk as he pleased, more especially as it was the only way he could walk. The eel persisted. A quarrel ensued: meantime the tide went out, and neither party, backward or forward, being able to reach the water, they were left to die of thirst upon the sand.

NATURAL HISTORY and SCIENCE

One of the most extraordinary signs of the times, is the great and still increasing popularity of almost every branch of Natural History. A few years ago, Zoology was a word almost unknown to "ears polite;" very few works on the subject were published, and those only found purchasers among the scientific. Most people had read Buffon "in their younger days," and deemed it pure waste of time to pore over any other book about "birds and beasts;" Buffon being deemed all wise and infallible. It was supposed that he had "garnered, yea, even unto the gleaning," every fact worth knowing as to Natural History; that he had taken a true and philosophical view of the creation, which appearing, according to his accounts and arguments, although exquisite in parts, a sad, disjoined, bungling affair on the whole, the subject was voted a dead bore by the thoughtless, and proved a stumbling-block to the thinking, who were amazed—staggered, to find that numerous living things were apparently created for no other purpose than to endure a life of physical misery. The study of Natural History was even condemned by some as tending to cause infidelity; and the science slumbered in odium, so far as regards the public, for a number of years. Meantime the most ludicrous errors were accepted as standard truths—in short, every body believed in Buffon.

Lately, however, a new spirit hath sprung up. Natural History has ceased to be the study of a few, and has become the enthusiastic pursuit of many. Thousands and tens of thousands of men, women, and children, of all nations, and all grades in society, and in all parts of the globe, are daily labouring with delight, to increase our stock of knowledge on this important subject; so that with a rapidity that is truly astonishing, the distorted phantasmagoria of ignorance and presumption are being rapidly dispelled, and man begins to see "in its true form and colour, the beauty, grandeur, almighty wisdom, and beneficence of the creation."—*Monthly Magazine.*

The Magpie.—Wherever it be, wild or tame, this is the monkey of birds, full of mischief and mimicry. A gentlemam told Mr. Howitt, that one he kept having stolen various articles, was watched by him narrowly, and was at length seen very busy in the garden gathering pebbles, and with much solemnity and a studied air dropping them into a hole about eighteen inches deep, made to receive a line-post. After dropping each stone it cried "carack" triumphantly, and set off for another. Making himself sure that he had found the objects of his search, the gentleman went to the place, and found in the hole a poor toad, which the magpie was stoning for his amusement.

Furs—The uses of the zoological creation to man may to some extent be imagined, when we state that the Hudson's Bay Company imported in one year 3,000 skins of the black bear, 60,000 ditto of the pine marten, 1,800 of the fisher (a species of sable), 4,600 of the mink, 7,300 of the otter, 8,000 of the fox, 9,000 of the Canadian lynx, 60,000 of the beaver, and 150,000 of the musk rat. Independently of those, there were imported a great many skins of badgers, wolves, and racoons.

The Dog.—At the late fire, corner of Courtand and West streets, says the New York Gazette, the following incident occurred, which tends, in a striking degree, to illustrate the sagacity and fidelity of that most excellent animal, the dog. A young man slept in the third story of the building in which the fire originated. His dog, lying by his bedside, scented the fire which had broken out below. He immediately endeavoured to awake his master by laying his fore-paws on his breast, and drawing them gently over his body. The young man aroused himself, but not suspecting the object of the animal, fell again to sleep. The dog then seized the bed clothes, and stripped them off his master, who a second time covered himself up, and went to sleep. The dog, aware that no more time was to be lost, took hold of the young man's shirt with

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

his teeth, and tore it from his arm. At this moment the flames were bursting into his chamber, and he saved his life by descending the tackle fall, which he threw out of the window, hand over hand. The worst of the story remains to be told. In his hurry to escape destruction, the young man forgot that his keeper had no means of descent, and burst into a flood of tears on finding that he could not return to save him. The faithful creature perished!

Cotton.—Of cotton, the Standard says, The first cost of a year's cotton manufactured in England is estimated at £6,000,000 sterling; the wages paid to 833,000 persons employed in its manufacture in various ways, is £20,000,000, sterling; the profit of the manufactures may be estimated at 6,000,000, at least. This give a clear profit of £20,000,000, from the manufacture of not quite one-third of the amount, or the increased value of the manufactured over that of the unwrought material, is 3-1-3 to 1; and nearly a million of persons besides get from it constant employment.

British Insects.—The total amount of known British insects (according to the last census) is 10,012, which is equal to nearly twice the number of ascertained birds, and to more than ten times the number of ascertained quadrupeds throughout the world.—*Quarterly Review.*

American Rail Roads.—There are now finished, in progress, or projected, in the United States, two thousand nine hundred and thirty-eight miles of rail-roads.

Wool.—The following statistical accounts, as relate to wool and cotton, are curious and interesting:—England and Wales feed 36,000,000 sheep, each of which yield a fleece of four pounds weight, or one hundred and forty-four millions of pounds, which, at 1s. per pound, is worth £7,400,000. These, manufactured, produce £20,000,000, leaving a profit of £12,000,000 per annum to the various manufacturers.—*Ince's Outline of General Knowledge.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

Great demand for Servants—The Society for the Suppression of Juvenile Vagrancy, &c.

The great demand for servants, and labourers, and mechanics in this colony, is daily increasing; not only are the present charges for servants enormous, but there is no adequate supply for the demand *at any price.* The country is impoverished for want of field labourers, the enterprise of the British settlers is sadly crippled on this score, and we submit that those living in Cape Town and its neighbourhood, suffer very considerable privations from the scarcity of household servants, and next to this, you have almost to go down on your knees to procure the hire of a carpenter or bricklayer.

This Journal, as well as others, have often discussed the subject, still no remedial measures have been taken for the public relief. It is true, several plans have been proposed, but nothing we believe has as yet taken root. We must make another appeal, and we do so, because the question at this moment, demands an imperative and immediate attention.

Than ourselves, none more rejoiced on the arrival of the long-looked for *Charles Kerr*, which report had long declared, was to bring out a cargo of English servants. The arrival is thus noticed by one of the Cape papers: "By the ship Charles Kerr, twenty *youths,** from *twelve* to seventeen years of age, being the first division of "*Juvenile Emigrants,*" destined for this colony, arrived in Table Bay last Saturday, &c."

"Emigrants!" This is a vibrating word to the chords of sensibility. It is connected with all that regards *independence,* home, and love, and friendship. This probably arises from certain ideas of *association*—our recollection, perhaps, of Montgomery's Emigrant, the Wanderer of Switzerland—Murray's Swiss Emigrant,—Pringle's Emigrant's Farewell—

> "Our native Land, our native Vale,
> A long and last adieu!
> Farewell to bonny Lynden-dale,
> And Cheviot mountains blue! &c.

But more especially, from reading in Warton, that in certain expeditions "the northern emigrants were attended by their *poets.*"† Well then, to obtain one of these interesting "Emigrants" by the *Charles Kerr*, how desirable! In this respect, every body seemed to be on the *qui vive*, and made their bows to a committee of gentlemen, *appointed in London,* to receive the twenty youths on their arrival at the Cape. The following, as far as we can collect, are nominated as the Committee:

Rev. Dr. Philip.
Rev. Jno. Pears.
Rev. — Cameron.
Rev. Jas Beck.
Rev. B. Shaw.
Doctor Murray.
Doctor Bailey.
Doctor Fairbridge.
John Fairbairn, Esq.
Jas. R. Innes, Esq.
J H Tredgold, Esq.
E. Christian, Esq.

The Committee thus constituted, could do no less than shew a proper "courtesy to strangers," at the same time we consider it a peculiar hardship that professional men, whose other avocations are so numerous, should be thus called upon to undertake a secular work, that they should be mixed up with servant hire, and indenturers, and rix-dollars, and rations. The London nominators had surely forgotten that we had a chamber of commerce at the Cape, in which the business of *import* is well conducted, and well understood. But leaving these things for an after discussion, we proceed to state, that the applications for the "Youths" were, as far as we understand, very considerable—that there was even a rivalry in the market. So much so, that when the "Youths" were landed and conducted to the comfortable quarters, formerly connected with the *shews* of natural curiosities at the end of the Government gardens,—it was found necessary to interdict any other visitors to the "Youths," than the gentlemen of the committee—and even these must receive a ticket from the secretaries. Moreover, such was the presumed anxiety of the public to obtain a look at the "emigrants," that the interposition of the military was demanded, so that all abduction was out of the question.

But now for the bursting of the bubble. Emigrants! "Juvenile Emigrants!" the "twenty youths!"—why it turns out that they are a lot of juvenile vagrants, forming the "first division" of the "15,000" vagrants of the city of London, "who live in the practice of every vice, in the commission of every crime, and gain a livelihood only by plundering the public." At all events, they have been sent out by the Society of Juvenile *Vagrancy;* this is quite enough; and as "there are now in the prisons of the metropolis of London, between 6 and 700 children and young persons," we are led to understand, that the Cape is to become the country residence of many a batch of these hopeful gentry.

Now we have reason to believe, that the committee appointed to take charge of the "youths" at the Cape, are very worthy, good men—still, they are as liable to err as other people; and, if we cannot be frank, ingenuous, and fearless, as it respects this body, or any other body of men,—perish this Journal! We have no narrow self-interested prudence to consult, no sinister or by-ends to serve, and therefore, from respect to the sacred Divinity of Truth, and the love of our neighbour, we are bound to state to the gentlemen of the committee, that it is *public opinion* that they have greatly erred in affixing a new designation to the name of the London "Society for the Suppression of Juvenile Vagrancy," inasmuch as there is a *refinement,* an *embellishment* attempted, or a gloss thrown over the concern which does not accord with the plain matter of fact. Hence, on

* We are responsible for the italics.
† Warton's Hist. E. Poets. I. Diss. i.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the first notification of the "Committee for apprenticing Juvenile Emigrants," there was a very general desire to procure from one, to two and three of the youths which had arrived in the *Charles Kerr*. But when, *apart* from the advertisement of the Committee, the public began to read the objects of the London Society from its own circulars, then commenced that shyness on the part of the Cape public, to deal with the Cape Committee on any terms. The applications which have been made are trifles in comparison with those which were ready for presentation.

And we think all this is a good sign. It would be deplorable, should the tide of emigration flow in upon us from the contagion of a great metropolis, from those graduated and initiated in early depravity. Let us recollect, that the lessons of childhood are seldom forgotten, and without the early precepts of christian instruction, what is there to supply reflection, and form the character in after life; in a word, what is there to expect from the beggary, wretchedness, profligacy, sloth, and squalidness of a London-tutored vagrant? It is all very well to set on foot the means of rescue, to stem the evil, but of all countries in the world, we think the Cape of Good Hope can least afford to offer the colony as a place of refuge for delinquents—to inoculate the corruptions of London on our Cape population, to make bad worse, to enlarge the prisons, and increase the police. We recommend the reader to consult the *Advertiser* of last year. With his usual display of talent, the Editor exposes in the most triumphant manner, the folly of those who have suggested that this should become a penal colony. If we are to increase and multiply, let us have emigrants of well-selected character. Mr. Nourse, in his Prospectus of a scheme for the supply of labour for the Cape, published in 1831, thinks aright on this head.

"The character and the success of the Institution," he says, "will greatly depend upon the judicious selection of proper persons. It is the respectable class of country people that are required, and not the idlers of the towns."

But let this subject be turned to good account. The inhabitants are ripe for a good and virtuous scheme of emigration, which shall be blessed and made a blessing. All that is required is, a public meeting for which a provisional Committee should make arrangements. We know full well, that very many gentlemen would come forward and co-operate with spirit—heart, hand, and purse. The business of supply must not be left to the London Society for distributing Juvenile Vagrants. We demand something less impure and sickly than the objects of its charity. The *graft* we want, is neither the *crab*-stick, nor the *wild* plum, which never bear fruit. We require a moral and intelligent people, habituated to industrious habits, imbued with a taste for the respectabilities of life, and mixing prudence and foresight with every great practical step in the history of their doings. And such are attainable if we apply to the proper authorities. Let the families, the crowded families, and parishes of England be consulted, and from thence let us obtain wholesome supplies. And let the emigrant bring in his pocket the attestation of *parochial character*. In abundant instances we are quite sure the certificate will describe the peasant as the "country's pride," and the descendant of a virtuous parentage; and, O! there is much in the circumstance of honest birth, much, very much, in the purity of the *ros vitalis*. But if there be a womanish clinging to home on the part of our peasant—let us look to Scotland. Here, perhaps, are the best resources after all, and from the population returns, emigration *must* take place in that country.* Perthshire and Dumfrieshire are interesting counties, in both of which there is a considerable anxiety to *cast off the swarms*.

Finally, if we have taken an erroneous view of this subject, we shall be happy to have our mental organs purified. We are not of those who regard the prodigal or wanderer's return to his *father's house* with indifference. We believe that christian education, if put forth, will make head against mendicity, and vice, and misery; but we are inclined to think, that this is not the country where so much is to be done in our *own vineyards*, where christian education among the coloured population is only feebly commenced, to take in hand additional reformatory work in behalf of the city of London.

But that we have *not* mistaken the subject, we think will be pretty clear to the impartial reader, because *he who runs may read*. It has just been suggested, that the twenty newly-arrived youths are very different from others of the Society's objects—that they are lads of admirable conduct. Indeed! Has the Society for the Suppression of Juvenile Vagrancy in London broken its *fundamental* "Regulations" for our benefit at the Cape? How kind and disinterested! But let us read for ourselves. The objects which the Society unequivocally professes to have in view, are—

"1st. To collect the *most destitute* and forlorn of the *Vagrant Boys*, who are wandering about the streets of the Metropolis, without a home, or means of subsistence, but from begging and *thieving*.

"2d. To assist parishes to *manage* (!!) and to *dispose* (!!!) of their *refractory* (!!!!) boys, who are *alternately* the inmates of *goals* (!!!!!) and workhouses.

"3d. To afford aid to the industrious, small tradesmen, &c. to *reclaim* and *dispose* of such of their children as have been *entrapped* by the receivers of stolen goods, and *seduced* by some of the numerous gangs of *young depredators*, of which there are frequent examples at the different Police Offices of the Metropolis." This is quite enough. Friends to the success of the British Settlers and *Emigrants*, (in the true sense of the word,) do your duty!

* How important to advise with some of the influential men in Scotland on this subject. Only this year, according to an Edinburgh paper, 300 emigrants returned in the ship in which they had embarked for America, for want of employment.

AN APPEAL TO MOTHERS!

AN unfortunate maniac some years since escaped from the walls of Bethlem Hospital, and only halted until he had reached the fields near Islington. Here he gazed on a fine healthy-looking old gentleman, and thus addressed him: "Sir, have you thanked God for your reasonable faculties this day?" "Indeed," replied the other, "I have not, but the question is a good one, I never thought of it before—I shall do so forthwith;" and Dr. Munro, who mentioned this anecdote to US, states, that the old gentleman, who was a rich patient of his, most religiously kept his word, and left by will a considerable sum of money to the Hospital, and the family of the maniac.

Christian Mothers of the Cape of Good Hope! read the following advertisement published in Cape Town, in one of the Newspapers, 19th April, 1833,* and then ask yourselves "have

* *De Zuid-Afrikaan.*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

we thanked God this day for our own personal *freedom*, and that of our beloved offspring, and have we encouraged, in any degree, that *Philanthropic Society* which has for its object the ransom of the children of Slaves?" And remember

"OH, WOMAN, WHATEVER BE THE COLOUR OF YOUR SKIN, YOUR HEART IS ONE ONLY!"

"On Wednesday next, will be sold, at Mr. R. J. Jones' Auction, at eleven o'Clock, a young African Slave Woman, in a state of pregnancy. The purchase money may remain at interest."*

MEETING OF THE CLUBS.

Intercourse of Society—Monoply of Personal Distinction—On Rank—Wholesale and Retail Dealers—Government House, &c.

SOME of the Clubs have, we understand, opened the winters campaign. The *head one*, which assembled at George's last week, is said to have been of the most intellectual kind. It is considerably improved this season in its liberal spirit, it has cast away the old *black-balling* system of the dark ages. Any gentleman may *openly* introduce a new member. *Black-balling* is all of a piece with the proposed *Ballot* in Parliamentary returns. If men cannot be honest in the face of day-light, we are much inclined to think that they will yield to the temptations of secrecy and darkness. *Black-balling* encourages revenge and malevolence, and becomes a screen for the coward to hide his poor pitiful spite. *Secrecy*, in general, is the paltry resourse of a narrow mind to give itself consequence; men of noble minds are open and unreserved.†

In reference to the *intercourse of society*, the benevolent mind cannot but perceive with pain the frequent prevalence of a spirit of haughty exclusion and assuming superiority, which separates those, amongst whom it should seem expediency, and mutual interest would establish unanimity and concord. Never, perhaps, was this world so much a world of *appearances* as at present;—the "specious glitter" presses like the atmosphere on all sides around us. Artificial as are the sub-divisions of our Cape society, never, perhaps, were the assumptions of pretended rank urged with less intermission, more *undeserved*, and, as might thence be expected, any slight the less patiently suffered. "Yes, yes," says one of our friends, "I see what you would be at—Death and you are both alike. D'ye give it up?"—Yes, "Because you are *levellers*." No such thing. We honour hereditary rank when vested in individuals who support, as many whom we could mention do, with propriety and dignity. It has a dominion founded on our prejudices it is true, but on prejudices of a venerable nature—which picture to us an hereditary gentry, the protectors of the people, and the guardians and defenders of their liberties and rights. But those who claim the place and the observance due to the rank of the *noblesse* are supported by no such lingering associations; besides, they have no claims which *intrinsic merits*, distinct from birth, entitle them to consideration—nay, their merits are inconsiderable. Therefore, they are regarded as upstarts, and looked upon with contempt. Always remember, that individuals of the highest grade never feel that oppressive anxiety about enforcing their claims to public notice,—no, it is the little gentry and the small squires who insist on being of a different race from the *bourgeois*, by whom they are surrounded; it is they who fear that an association with those whom they deem their inferiors will expose them to contamination. But again it is inquired, "what proof have you that we can find good manners elsewhere than at *court*, and how can we meet men who, not having been *there*, have no title to the rank of gentlemen?" Let Swift answer the question if it be worth a reply. "Good manners are not a plant of the court growth; if they were, those people, who have understandings directly of a level for such acquirements, who have served such long apprenticeships to nothing else, would certainly have picked them up."

No reflection is here intended on those distinguished individuals who preside at the helm of Government in this colony. Happily their hospitable doors are thrown open to every one, qualified by his *caste* in society, "*or* by gentlemanly manners and character to receive attentions,"* and if the guests do not exhibit an equal forbearance towards each other, *i. e.* towards the various *sorts and conditions of men* among us, 'tis the fault of the invited, and the sin lies at their own door. "But, Sir!" observes another objector, "do you mean to say, that a retailer in this colony is as good as a *wholesale* dealer, that a gentleman who sells five-and-twenty gridirons, or five-and-twenty 'parritch pots,' or five-and-twenty general kitchen and *other utensils*, is as worthy of consideration as the *man* who retails the same articles singly?" Why not?—we think the advantages that are deducible, are greatly in favour of the individual, whose honest and unpretending exertions scatter the supplies, and are the main support of the wholesale gentlemen. Look at the great Representation of the people of England, and then say who are disqualified to sit in the grand council of the nation. Every trade and profession is there represented. And in like manner take up our Cape of Good Hope *Government House List*, and you will find no *partial interests* especially consulted, but you will read as objects of worthy invitation to feasts and festivals.

William Marrow-bone,—"Butcher.",
Jonathan Stackhouse,—"Farmer."
Abraham Grinder,—"Miller."
Jacobus Swipes,—"Brewer."
Andries Jonquil,—"Clerk."

And hundreds of others of high renown and honest fame.* But if we are to condemn the retailers with a sweeping clause, let us do it with an even and consistent hand. All men are *dealers* at the Cape. High and low, rich and poor. From members of council to mad Moses the money scrivener. Whether it be *fish* or flesh, (animal or human,) cabbages, and every other description of garden vegetable,—fire-wood, milk, and butter, eggs, ducks, chickens, and sucking pigs—all men are for turning an honest penny. Even the Honorable East India Company sell a *single* case of tea, two pots of ginger, and five pieces of calico, and other goods. Lastly, it may serve to check that overweening pride which is frequently uplifting its head, if we close these plain and faithful remarks by an extract from the work of no mean observer of men and things at the Cape. It is entitled "State of the Cape of Good Hope in 1822." It is severe enough, we confess, but it will so much the more serve as a corrosive to proud-flesh—whether English or Dutch.

"Buying and selling, which, on the most enlarged scale, are in some parts of Europe considered to degrade a gentleman, are held highly honourable by the Cape Dutch. On the address of a letter to an Englishman, after the word esquire, they sometimes add, by way of compliment, the appellation koopman (or merchant) as the superlative distinction. *Smoucking*, which here is an appropriate word, meaning buying an article, and selling it again at a profit, is practised by all the Cape-Dutch, except a few of the highest class; and not by them forborne from any idea of degradation, but from being fully engaged in other pursuits; and it is not bad policy to account that to be honourable, which all are in the habit of doing. Female slaves parade the town, the neighbouring

* We must remind our readers that the respectable auctioneer whose name is attached to this advertisement, is wholly faultless in the matter.

† The gentlemen of the Commercial Room have long since got rid of the black-balling system.

* Civil Servant.

* *Fact*—Let the list be consulted in which designations are attached to each man's name.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

villages, and country houses, carrying upon their heads, and in the baskets of an attendant man slave, an assortment of every article of dress worn by females, with which they supply the purchasers at nearly the same rate as in Cape Town. The lady owner of the slave girl, when she returns home at night from a *party* or a *ball*, compares the unsold goods and the rix-dollars she receives from her pedler, with what was sent for sale in the morning, and gives out the merchandize for the next day's perambulation. There have been instances of chastisement inflicted on the slave, if every thing is brought back unsold, on the presumption, that following her own pursuits, she has neglected the interests of her mistress. By this, and by buying an article, when cheap, at one vendue sale, and acquiring a profit by a resale at another vendue, many families, if not wholly maintained, are greatly assisted."

THE PICTURE.

A considerable number of the most respectable individuals at the Cape have commenced a subscription, in order to obtain a Picture of His Excellency the Governor—His Excellency having kindly consented to sit for the same, after his arrival in England. A certain individual, *in secret, and through the Zuid-Afrikaan*, has thought proper to recommend some grouping in the back-ground of the intended Picture, in reference to the firmness of His Excellency in executing the laws of his Sovereign. We strongly suspect the designer to be the man whose beautiful *taste* was in exercise when an attempt was made some years since to resist the 19th Ordinance, and when an old Burgher Senator was rewarded with a Silver Cup! Beneath the handles of this cup, the Devil is *tastefully* represented with a three-pronged fork, poking the 19th Ordinance out of the jaws of Hell!!!

MUSICAL CONCERTS—FROG-CONCERTS.

THE inquiry pretty generally is—how shall we pass our time during the long winter evenings? Shall we read, shall we hold discussions, shall we meet in social party, shall we go to church? Yes, you can occupy your attentions to all these more or less serious matters, and moreover, you may indulge in the performance of music, or listen to the skill of others. And we may here ask what are all our professional musicians doing? Are they not equal in their various ranks, or are there any of them whose coats are less becoming than others of the profession, who possess a sprucer cut. Something is out of tune, no doubt, for now music is not associated, and the concert is forgotten. We were led to this subject by hearing, for the first time after a residence in Cape Town of some years, a *frog-concert* in the Heeregracht. We always knew these animals to possess remarkably vociferous lungs in the vicinity of the Castle, but their approach so near the pursuits of man, and at *winter*-time, seems to us rather singular, and should provoke the inquiry of the naturalist.

But *frog-concerts* are not novel. Hear what Mr. Priest says, himself a musician, in his Travels in America.

"Prepared as I was to hear something extraordinary from these animals, I confess, the first *frog-concert* I heard in America was so much beyond any thing I could conceive of the powers of these musicians, that I was truly astonished. This performance was *al fresco*, and took place on the 18th of April, in a large swamp, where there were at least ten thousand performers; and I really believe not two exactly in the same pitch, if the octave can possibly admit of so many divisions, or shades of semi-tones." We have read of a Russian princess, whose ear was so attuned to the melody of Dutch nightingales, as to have a froggery made under her chamber-window: the colony soon increased, and these philomelas testified, in full chorus, their gratitude to one who had so sublime, though hyperborean, a taste. Another anecdote or two, on music and we have done.

Dr. Burney informs us, in his History of Music, "that Queen Elizabeth used to be regaled at dinner with twelve trumpets and two kettle-drums; which, together with fifes, cornets, and side-drums, made the hall ring for half-an-hour together." The drums of the royal ears must, surely, have been made of better leather than is sold in the Cape market. And this reminds us of an incident, mentioned in the accounts of the Olympic games, which may serve to mark the character of music at the time it happened. Lucian relates, that a young flute-player, named Harmonides, at his first public appearance at these games, began a solo with so violent a blast, on purpose to surprise and elevate the audience, that he breathed his last breath into his flute, and died on the spot. When to this anecdote is added, that the trumpet-players at these exhibitions expressed an excess of joy, when they found their exertions had neither rent their cheeks nor burst their blood-vessels, some idea may be formed of the noisy and vociferous style of music which then pleased.

ROYAL OBSERVATORY.

THE last year, 1832, was distingnished in Europe by the predicted appearance of two comets, the most remarkable which have yet fallen under the notice of astronomers. These are what are commonly called the comets *Encke* and *Biela*. Many persons in England considered that neither of these comets had been observed in 1832, but it is a fact, that Sir John Herschel saw that of Biela, and Mr. Henderson, of the Cape Observatory observed Encke's comet. Neither body, it must be remarked, is visible to the naked eye.

TRISTAN D'ACUNHA.

On the 10th December, the ship *Franklin*, of Rochester, was spoken with, having on board 300 barrels of oil, out 5 months. The master (Brock), and a boat's crew had been lost off Tristan D'Acunha.—N.B. Captain Clark, of the *John Adams*, from a severe sickness on his passage, was obliged last voyage on 17th September, 1831, to land at the Island of Tristan D'Acunha, where he remained 3 months, after sending his ship away in charge of the mate. On the Island at that time, were several head of Bullocks, with about 160 fine Sheep, also Pigs, Poultry, and Potatoes in abundance, plenty of Fish; they grew Cabbages, Turnips, Apples and Peaches, and Wheat of superior quality also grows luxuriantly; there was plenty of Milk and fresh Butter of excellent flavor. The Island was remarkably healthy, and the Islanders fed themselves principally on Milk and Potatoes. The Island is 32 miles in circumference, its greatest height being 9,500 feet above the level of the sea, abounding in water and wood, and a number of sea Elephants frequent it, with abundance of Albatross; but the anchorage is bad, and the most prevailing winds are Southerly and South-Westerly. There are plenty of Rabbits, with many wild Goats. No sickness has ever been known among the Inhabitants. Of dwellings, the number is 5 or 6, being built of Stone, which are covered with a grass called Tussock. There is a deep bay on one side of the Island extending from 1½ to 2 miles, and a sandy beach. They cultivate wholly with the spade, and supplies of Clothing, Flour, Tobacco, Biscuit, Sugar, &c., are usually obtained from the East India and the whaling ships that frequently call there. N. B. Captain Clark states to have received during his illness there, from the Governor (Glass), his family, and the Inhabitants, the most soothing and friendly treatment, and for such, expresses his deepest sense of gratitude and thanks.—*St. Helena news.*

THE EMIGRANT'S LAMENT.

WHEN bound for distant, unknown lands,
To sail upon the morrow,
The heart is sad, and weak the hands—
The night is full of sorrow.
The *saddest hour* of time that flies
Is the hour of friendship's parting;
The *saddest look* is of those eyes
Long loved—with sorrow smarting;
The *saddest sound* of all that's past
Is the half-discovered sobbing;
The *saddest touch*, the shake—the last
When hand in hand is throbbing.
The *saddest step*—at fate's command—
We take with sore emotion,
Is the *last* upon our native land—
The *first* upon the ocean.

Hottentot's Holland. E.

Sewing on glazed Calico.—By passing a cake of white soap a few times over a piece of glazed calico, or any other stiffened material, the needle will penetrate with as much facility as it will through any other kind of work. The Patronesses of the School of Industry pronounce this to be a fact worth knowing, the destruction of needles in the ordinary way occasioning both loss of time and expense.

An easy Recipe.—In moist or rainy weather we feel oppressed and drowsy, because all moisture greedily absorbs our electricity, which is the buoyant cordial of the body. To remedy this inconvenience, we have only to discover a good non-conductor of electricty to prevent its escape from the body, and this we have in silk, which is so excellent a non-conductor, that the thunder-bolt or the forked lightning itself could not pass through the thinnest silk handkerchief, provided always that it is quite dry. Those, therefore, who are apt to become low-spirited, and listless in damp weather, will find silk waistcoats, drawers, and stockings, the most powerful of all cordials.

CORRESPONDENCE.

A. B. C. is informed, that the *Right of Common* in this Journal, belongs exclusively to *Vivian*, and without pledging ourselves to acquiesce in his judgment in all things, we submit that no trespass can be allowed on the privileges of a *Lord of the Manor*.

A Constant Reader is assured, that not the slightest reflection was intended on a respectable house of business in reference to *Monopoly* in our last Number. The comments were of a *retrospective* and general character, and those *good-natured friends* who tortured them to modern application are highly reprehensible—to such, and such alone, we verily believe the *cap is very likely to fit*.

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE IX. BY ORLANDO.*

[THE OVIPAROUS AND AMPHIBIUS QUADRUPEDS—THE TORTOISE, CROCODILE, AND LIZARD TRIBES—THEIR NATURE, QUALITIES, AND MENTAL PRINCIPLE.]

THE Class of Animals which is very peculiarly connected with those relics of their primeval races which our rocks and subterraneous strata have discharged, is that which contains the Oviparous Quadrupeds—the Tortoise, Crocodile, and Lizard tribes—and those without tails. These spring from eggs without parental brooding, like fish and insects; and as they have left for our present knowledge of their ancient nature, amid the destructions they underwent, some important fossil remains of their bones and figure, they ought not to be omitted in our general review of the orders and economy of the Primitive Creation.

The Oviparous Quadrupeds present to us material investments of the animal mind and living principle, very distinct from the figures, limbs and functions of the other quadrupeds and kingdoms of nature, yet associated with them by several analogies. They have a heart, though it has only one ventricle. They have blood; yet it is not the red warm fluid, but a cold and pale one. They breathe, but with frequent and long suspensions, which no land or air animal could endure. (1) They have the same senses, but in feebler action and sensibility, except that of sight. Their brain is proportionally smaller. Their muscular motion, in some, is far less vigorous, though active in others. They require less food, and can remain a long time without any. (2) Their manners are gentler; they exhibit no ferocity, and appear to enjoy a much longer and more tranquil life. (3) They usually inhabit the sea or its shores, rivers and their banks, marshes, pools, and other wet and moist places. They live or herd together, are generally inoffensive, and can be tamed, and become tractable and amusing. The young never know their mothers, nor receive any nourishment from them. Hence they are what they uniformly show themselves to be, from the impulses of their assumed principle of life and provided organization; and independent of all tuition. La Cepede divides them into three general classes. They form the amphibia of Linnæus, who distinguished them into two orders.

The first order of the Tortoise Genera are the most immediately serviceable to man. The flesh of the Sea Turtle is both a valued delicacy and an useful medicine; (4) and the shell of one of the species furnishes society with that rich and beautiful material which forms our Tortoise-shell ornaments and conveniences. (5) Its protecting shell forms both its house and its armour, and enables it to defend itself by a patient and passive resistance, without disturbing its natural mildness of temper. It takes for its *occasional* subsistence grass, sea-weeds, and shell-fish; but in general it requires little food, as it can subsist many months without any. The Green Sea Turtles like to be together, and therefore assemble in numbers in the same locality, content with their mutual vicinity, and seeking no further association. (6) They can remain long under water, and sleep upon it. (7) They are periodically travellers, for the sake of depositing their eggs in convenient places. The Land Tortoise has the same gentle and peaceful manners. It can live without food, (8) and probably does so, like many, if not most of the fish, except at certain periods. It enjoys a great length of life, (9) and has the living principle so essentially within its body, that it can subsist and move without either brain or head. (10) This class of animals were thus made to be in the waters, what the sheep are on the hills and plains. The Lizard division of the Amphibia presents to us

* Delivered before the Members of the Poker Club.

(1) This class of animals is distinguished by a body cold and naked; a countenance stern and expressive, and harsh voice. All have cartilaginous bones; slow circulation; they are deficient in diaphragm; do not transpire; are tenacious of life.—*Linn.*

(2) Crocodiles and Tortoises have been known to live a whole year, though deprived of all sustenance.

(3) The sea Tortoise lives more than a century; the mud Tortoise lives 80 years. From these great length of life, the Japenese adopt the Tortoise as an emblem of hieroglyphic happiness.

(4) The shell of the Green Tortoise contains a softening diaphoretic, and highly nourishing juice, the good effects of which has been often experienced. It makes an excellent soup, which is considered a sovereign remedy for scurvy and pulmonary disorders.

(5) It is the Hawksbill Tortoise, *Testudo Imbricata,* which furnishes that beautiful substance with which, even from the most remote antiquity, the sumptuous palaces of the great have been adorned, though it has now given place to the brilliancy of gold, and confined to elegant toys.

(6) Being able to live, even for more than a year, entirely without food, they flock peaceably together. Drawn together by the same necessities and similarity of habits, they live amicably in the same place, without forming any kind of society.—(*Linn.*)

(7) The Midas species is the largest of its tribe. It inhabits the South Seas; and is so strong as to be able to run with a load of 600 lbs. weight, and to move with as many men as can sit upon its back. It lays numerous membranaceous eggs, which it deposits in the sand, and sits upon by night.

(8) Dr. Garden kept one, weighing 25 lbs. near 3 months, in his house, during which time he could never perceive that it took any nourishment.

(9) M. Cetti saw one in Sardinia, which had lived 61 years,—harmless, gentle, patient, and useful; one of the most pleasing forms of character of all animated being; the truest representative, and surest producer of personal and social happiness.

(10) Redi. Obs. Anim. Viv. p. 126.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

as its leading class, the formidable Crocodiles—a name to which dread and aversion are, by the hasty prejudices of our defective knowledge, almost inseparably attached; for, although this class of creatures is the largest of all known animals, except the Elephant, the Hippopotamus, and the Whale, and a few enormous Serpents, yet, it is neither a fierce nor a cruel animal. nor ever purposely or unnecessarily injures. It seeks its appointed prey when hunger urges it; but destroys only for food, and has no passion or malignity. (11) In its general form, it is extremely similar to the other Lizards, but with distinctive characters peculiar to itself. The mouth is enormously large, opening, even beyond its ears, with jaws that are sometimes several feet long. Its teeth, about 30 in each jaw, pass between each other when the mouth is shut, and have others of a very small size, in their socket, to place their first ones. The lower jaw is alone moveable; and having no lateral motion, they mostly swallow what they take without mastication. They have a larger proportion of bile and gastic juice than any other animals; a proof that these fluids are or may be innocent of the imputed charge of producing passion, irrability, cruelty, and ferocity—as the Crocodile, with such a superabundance of the hepatic stimulants, have not these moral perturbations. They are sometimes 30 feet long. Their whole body is covered by strong hard scales, except the top of the head, and can be only wounded between the rows of these, which are impenetrable by a musket ball, unless it be fired very near, or the piece be strongly charged. Having no lips, their teeth are always bare; and from this peculiarity, though they be walking or swimming with the utmost tranquility, the aspect seems animated with rage. Another circumstance that contributes to increase the terrific nature of its countenance, is the fiery appearance of its eyes, which, being placed obliquely and very near each other, have a malignant aspect. Over its hard and much wrinkled eyelids is an indented rim, resembling an eyebrow drawn into a menacing frown. Its brain is extremely small. Its tail and its webbed hind toes, acting like fins, assist its swimming. Its figure being flattened laterally, with some resemblance to an oar, enables it to cut the waters with great swiftness, and with astonishing velocity when about to seize its prey. On land, it can overtake a man in direct running; but if he turn quickly round into a circle, he escapes with ease, as the animal cannot so rapidly wheel round its great length of body. Its longevity rather exceeds that of the Tortoise genus. When pressed with hunger, it devours mankind; and the large ones even attempt to leap or scramble into boats during the night, and in some places use their tails to overturn small skiffs, and then seize on the men or animals within them. It has not been discriminated at what times or from what causes Crocodiles acquire this verocity; for they often subsist a long time without any sustenance; here we are left in the dark respecting those cravings that are inconsistent with such natural power and exercise of abstinence. In cold climates they are torpid in the winter, and bellow like a bull when they wake into sensitivity from this state. They abound chiefly between the Tropics; but are met several degrees to the north of the one, and to the south of the other. They are smaller, however, as more distant from the Equator.

The other Lizard tribes are small and pleasing animals. Some are beautiful in their colours. The Guana species is highly interesting. The Green Lizard excites the admirer into the poetry of feeling description. Its varieties are most striking. The Gilded Lizard is not less attractive and gratifying. All are gentle, good tempered, and peaceful. They also have the property of living without food; and that of reproducing a limb or tail that has been mutilated. The Chameleon is distinguished from all animals by an ocular peculiarity which no other creature possesses. Each eye has a separate motion. It is also remarkable for its viscous tongue and changeability of colour. All its motions are extremely slow. Two species emit a liquor which inflames, or has venomous effects. Another has the singularity of being an occasional duellist, or combatant. (12) The most remarkable of the other Lizard genera, are, the Flying Lizard and the Salamander. The Flying Lizard is the nearest resemblance to the fabled dragons of antiquity, and of our old romance that nature contains; but it defeats the identity with these celebrated monsters, by its smallness and harmlessness. It seldom exceeds a foot in length, and it is a weak animal, perfectly innocent and peaceful. It flies from branch to branch of its tree, feeding on the Ants, Flies, Butterflies, and other insects that it can take; and can flutter from one tree to another, within thirty paces.

The Salamander has long lived in popular fame as much as the fictitious Dragon; but has a real entity, though it does not verify the many fables that have been attached to it. Instead of living in fire, it delights in cold damp places. It retires sometimes (in Germany, and on the Alps) into caverns or the hollows of old trees, and under the roots of hedges. When touched, it covers itself all over with a milky fluid, which is acrid to the skin; and it does so the instant it touches fire. Frogs and Toads are too well known to need much remark. The Musical Toad of Surinam, is deserving of notice—it makes a musical kind of croaking. Another is termed the Laughing Toad, because it emits a clear sound like a man laughing, in the fenny places of Germany and Helvetia. A species near the rivers of the Caspian, as evening advances, also utters a voice like a human being in some visible humour. The Beaver, Otter, and Badger, are amphibious creatures, but not oviparous. They bring forth their young alive. On contemplating creatures of a different form and habit from the rest, we are led to inquire, if they display an animal mind and feelings like the others. To this question Nature gives a distinct and satisfactory answer. The Turtle or Sea Tortoise, seeks to lay her eggs in the proper place, and at the fittest depth, and with every appearance of *foresight*. She quits the fluctuating waves for a steady and sandy shore, and perseveres this determining will and judgment for a voyage, often of some hundred miles, until she can reach the spot, where her oval embryos may be placed. (13)

The Land Tortoise gives a sufficient indication of mental sensibility. It makes for itself a winter retreat from the cold. It perceives the approach of

(11) The French soldiers in Egypt set the Crocodile at defiance, and were not once attacked by them.

(12) The Lizard Strumosa of Mexico and South America. It is very familiar with mankind, climbs on the tables, and runs over those sitting at them. When two of the species meet they sometimes attack each other with great fury.

(13) She *prefers* fine gravel and loose sand, not mixed with marine productions, where the heat of the sun may more easily hatch them. In this, *out of the reach* of the highest floods, she *digs*, by her fore paws, one or more holes, a foot wide and two feet deep, in which she deposits 100 eggs. To conceal them, she covers them with a layer of sand, sufficient to prevent them being seen by any animal, but so thin as to permit the full influence of the sun's heat. She lays three times a year.—(*La Cep*, 93-6.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

wet weather before we discern it. It distinguishes the persons who do acts of kindness to it. (14) It knows, like rational beings, how to refuse the evil; (15) and it attains, by its own observation, to perceive how it can remove what it dislikes, and do the action accordingly. (16) The numerous gregations of these animals which our navigators have remarked, indicate a natural gratification from such associations; from being together, and their general conduct has the appearance of prudence, regularity, and perseverance. (17)

The kind and submitting habits and tractibility of the formidable looking Crocodile, and its self-adaptation to the sportive humours of the child, are indications of mental volition, of self-government, and of acquired self-coercion of former habits and dispositions. (18) To see the Crocodile as docile as the Elephant, and gentle and harmless like a Cow, is a fine specimen of terrible power, becoming, by intellectual regulation, a good humoured and tractible playmate. (19) The general mildness of all the *Lizard* tribe; the domesticity of some; (20) their universal combination of great activity, with perpetual gentleness; the visible attachment of many to mankind; and the same ability in all, display feelings and dispositions which approach the highest degree of moral character, than animal nature can attain. It wants the wisdom of the human race to guide its greater energies; but the mild, and peaceable, and pleasing regulations of its diversified powers, for its own comfort, and for harmlessness to others, is an attainment of which all its classes seem capable. Every species of creatures has been found tameable to this important proportion of self-government; with such exceptions only, as rather prove that we have not yet discovered the right means of their tuition, than their actual intractibility. Early training, sufficient food, kind treatment, and the absence of all provocations and excitement, appear to be the moral spells that mitigate and transform them. These give them the knowledge, and the experience of which, in their wild state, are destitute. In that, they are surrounded with enemies, or with danger; with want; with inconvenience; with irritations; and with frequent suffering. These alarm, excite, and exasperate, till the savage emotions become the habit of their bodily frame, and ferocity or fear their daily character. But human training, judiciouly conducted, places them under the care, the friendship, the assistance, and the protection of man. Want, danger, and hostility, then agitate them no longer. Their former stimulants operate no more. They find food, and peace and comfort from their human owner, and within his own domain. Then the same animal reason which in its first natural operations made them wild and fierce, by the same natural operations, under new circumstances, and with new knowledge, causes them to be gentle, tranquil, and obedient. It is the same mind, acting on the same principles and with the same judgment; but in a very different position, and upon its more recent and additional sensation. I may add, that the wild beast and the tame are but the counterpart of the savage and the civilized division of the human population. The early Tiger, Saxon, and the accomplished Englishman, the ruthless Pict, and the intelligent Scotchman, are the two similar contrasts of such altered character, which our own improved and yet improveable country presents to our contemplation. Thus, the New Zealand cannibal, now the rival of the Wolf, the Leopard, and the Shark, may yet become polished, scientific, moral,—christian. Otaheite and Owyhee have already begun this consoling melioration.

The Frog genus discover sagacities and feelings like those of other animals. When the young ones quit their native water, to join the older ones in the woods and meadows, they use every reasonable precaution. They begin their journey in the evening, travelling all night, on purpose to avoid becoming the prey of rapacious birds; always concealing themselves during the day under stones or other recesses, and only resume their journey when night begins. The Pearly Frog of Brazil is distinguished for its beauty. So is the common Tree Frog, which lives like Birds, on the branches of the forest, and in seeking insects is almost as light and nimble as they are. The Red Tree Frog is used by the Indians of South America, to give a fine red or yellow colour to the feathers of their Paroquets. The most extraordinary property of Frogs, is that of being able to swallow fire.

The Toad has been tamed and domesticated. One became familiar in a house for 36 years, and welcomed that light which, in its natural state, is offensive to it. (21) It often displayed as much original mind as any other Quadruped, and was never offensive. This fact is sufficient to shew that the living principle of the Toad race has the same susceptibility, memory, will, perception, suitable judgment, and limited improvability, as every class of animated nature seems to exhibit. The Beavers have been proverbial for their intelligence, ever since North America, their chief seat, has become known; and the Otters display the same maternal sensibilities which other orders of animals so strikingly exhibit. The Badger exhibits the domestic feeling of living with its mate, and is susceptible of tuition.

Thus all Quadrupeds seem to have been created to possess one analogous mind, uniform in its essential qualities; but acting variously, according to the diversities of its bodily investments.

(Subject of the next Lecture—The Serpent Tribe,—Their Peculiarities and Mind,—The alleged Sea Serpent, &c.)

(14) So the Peterborough Tortoise. The Gardener, who generally fed it, told me that he knew him well, and would watch him attentively at the gooseberry bush, where it was sure to take its station while he plucked the fruit.—(*G. White.*)

(15) The Peterborough Tortoise would eat endive peas, and even the leek; whilst it positively *rejected* asparagus, parsley, and spinach.

(16) When a leaf was moist, *it would shake it,* to expel the adhering wet.

(17) Possessing more patience than activity, it is never affected by violent passion. Having more prudence than courage, it seldom attempts defence when attacked.

(18) In the Rio San Domingo, likewise on the West Coast of Africa, M. Brue was astonished to find the Crocodiles perfectly harmless; insomuch that children played with them, mounted on their backs, and even beat them, without danger or any appearance of resentment.

(19) The Crocodile of the Nile, 18 to 25 feet long, is of amazing swiftness, voracity, and strength; smells of musk, roars hideously, devours men and other large animals; swallows stones to prevent hunger; overturns boats when taken in nets; is not to be killed by a musket-ball, unless struck on the belly; *is destroyed by tobacco;* seldom moves but in a straight line, by which means it is easily avoided.—(*Linn.* p. 659.)

(20) We were accustomed to visit an amiable family in Cape Town, a few years since, in which various Lizards were the companions and playmates of the children.

LINES

COMPOSED IN A GARDEN,

On observing a Bee sheltering itself in a Rose on a cold wet Morning.

Why, little insect! hast thou fled
For refuge to that fading flow'r,
Amid its leaves to hide thy head,
And shield thee from the chilling shower?

Poor little dripping, shivering bee!
A tottering shelter hast thou found;
For every blast that shakes the tree,
Its falling leaves bestrew the ground.

For 'tis not now the summer hour;
That fleeting summer hour has fled;
When in each blooming fragrant flow'r
The honied sweets for thee were spread.

Then take once more thy airy flight;
Expand once more thy little wing;
A warmer shelter ere 'tis night,
Thy varied course perchance may bring.

Thou, Great Supreme! whose wond'rous power
Hath made the rose, hath formed the bee,
And taught me, in this silent hour,
To place my hopes in nought but Thee.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

While earthly pleasures, like the rose,
Their varied sweets to me impart,
I'll taste the gifts Thy hand bestows,
Nor murmur when those gifts depart.

But when Thy wisdom sees it best,
These transient joys to take again,
I'll turn to Thee alone for rest;
For all beside on earth is vain.

Since fleeting as the summer day,
My little span on earth will be,
Oh! teach me now to take that way,
And find *my home, my heaven, in Thee.*
Cape Town, June, 1833. M. B.

St. Mary's Chapel.

A Narrative of the Seventeenth Century.

BY A VISITOR AT THE CAPE OF GOOD HOPE.

PART I.

On the left bank of the Darra, a deep and rapid mountain stream, in the central Highlands of Scotland, stand the ruins of a Chapel once dedicated to "Our Ladye and St. Peter." Before the Reformation, it was regarded as a spot peculiarly holy. At stated seasons crowds of pilgrims were wont to resort from the most distant parts of the surrounding country, to pay their devotions at the shrine of the Virgin—grateful for benefits imputed to the efficacy of her intercession, or hoping to propitiate her favour by extraordinary acts of devotion. On the other hand, the infirm and diseased quaffed the waters of St. Peter's Well as an infallible antidote against all the ills which afflict humanity. On these occasions it was customary to leave some offering by the side of the fountain; no matter of what sort,—a pin, a lock of hair, any thing worn about the person,—the place was consequently thickly strewed with these oblations, and woe to the luckless individual to whom, in departing, any of them might be found to adhere; the infirmity of the offerer was as sure to cleave to him as did the leprosy of Naaman, the Syrian, to Gehazi, the servant of Elisha. Many and well authenticated were the cures attributed to the virtues of the healing stream. These were duly descanted on by the ghostly guardians of the shrine, whose personal labours in the confessional were highly celebrated for easing the heavy laden consciences of their numerous penitents, and proportionally productive in pious donations to the honor of the Patron Saints,—the sacrifice of a portion of the earthly mammon being regarded, if not altogether as an atonement for spiritual delinquencies, at least, as the most unequivocal mark of a sincere repentance. If there is a spot on earth, independent of devotional associations, powerful to unlock all the avenues of the heart—to call forth each softer feeling—to awe, subdue, and soften each ruder emotion, it is that of which we now speak. About a quarter of a mile above the chapel, the river makes a turn at right angles, suddenly checked in its southward progress by the base of the lofty Benmore, which rises almost perpendicular from the water's edge. It then flows due east for about three miles, along a level and richly-cultivated plain, till, sweeping the base of another mountain equally rugged and precipitous, it is compelled to resume its original course; this plain, which extends in breadth about a mile from either bank, is bounded by two parallel chains of low and thickly-wooded hills. The course of the stream higher up may be traced by the eye for several miles, winding in a zig-zag direction between two similar chains of hills, at each point of repulsion forming a deep and eddying pool, the chosen retreats of the sealy monarch of the flood. The most remarkable of these pools is formed by the turn of the stream just above the Chapel, known by the name of Roy's Crook; a vast basin, the centre of which is marked by a large rock, whose water-worn surface has become smooth and polished from the attrition of ages. The fall, immediately above, is considerable, and the impetuous dash of the waters breaking against the rock, is heard in the distance like the roar of a cataract. Just below the pool the channel is much narrowed, and intersected by a barrier of huge rocks, between and over which the stream is urged in sheets of foam, forming innumerable eddying pools of a great depth, and tenanted by trout and grilse of the largest size. The banks on both sides are here thickly studded with tall trees, to avoid which the angler is compelled to seek the middle of the stream, an expedient, though practicable, extremely hazardous, as a single false step would entail certain destruction. The entire seclusion of the spot, the rude majesty of the surrounding mountains, and the deafening roar of the waters, especially when the river is in flood, combine to render the scene truly magnificent; but it is by moon-light that it is seen in all its glory—the Queen of Night rising full orbed over the surrounding cliffs; her silver beams through the thick foliage flitting and quivering on the foamy tide; the rocks casting their lengthened shadows across the raging eddies which lash their base; the whole valley seems then doubly deep and extended; the mountains, half illuminated and half in shade, rise doubly high and frowning, and it needs but a trifling stretch of fancy to magnify their grey and serried peaks into so many fragments of a shattered world. On a little knoll, opposite to where the stream quits the rock for a smooth and pebbly bed,—stands St. Mary's Chapel. It is surrounded by an extensive burying ground, within whose consecrated precincts slumbers the dust of countless generations. By many at this day the prospect of reposing under the shadow of the mouldering ruins, is regarded as no uncertain pledge of a blessed resurrection. The building was in form of Latin Cross; the pointed arches and trefoil mouldings of the windows, indicate a structure of the 14th century. It was also furnished with the usual standing guard of Saints, rudely sculptured in stone, and disposed in niches within and without, for the pious veneration of the faithful. No protection, alas! against the sacriligious Iconoclasts of the Reformation; who, deeming themselves duly enlisted in the service of the second Commandment, spared nothing in the shape of a graven image, however ancient or honourable. Whether the building itself had suffered in the overthrow of its hapless protectors, it is impossible to ascertain; but latterly, it became necessary to substitute a covering of thatch for the original and more ponderous canopy of grey slate: this circumstance is remarkable as the immediate cause of the destruction of the edifice.

The Druid's Oak.

More remarkable still, and for the same reason, was a huge oak-tree; which, rising from the north-east angle of the transept, flung its gnarled and almost sapless boughs across the roof. Connected with this tree were many strange traditions,—its antiquity was carried back even to the times of the Druids, whose infernal rites had often watered its roots with the blood of human victims. In more modern times, the elders and chiefs of the district had been wont to assemble in wardmote under its wide-spreading arms, which in many instances had been made to assist in carrying the sentence of the court into execution, when that sentence condemned the criminal to be hung instead of drowned,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

in which latter case the place of execution was a fearful whirlpool among the rocks hard by. From these associations, no less than from its position and majestic form. St. Mary's Oak was viewed with the most superstitious veneration. Its branches, plucked by the sparing hand of religious awe, were even wont to be placed over the doors of the houses as a charm against the entrance of evil spirits, or the malignant intentions of visitors clothed in flesh and blood. For the same reason a couple of ravens, that for many long years had been accustomed to make their nest in the oak, enjoyed the most perfect freedom from molestation. Infatuated the urchin who would have ventured to climb to their airy abode to plunder their eggs or carry off their young; the sportsman who should have directed his deadly missiles against these birds of omen, would have been generally execrated as a monster of impiety and daring. As if aware of their privilege, the ravens themselves confidently fed with the poultry of the neighbourhood, and even sometimes would enter the doors of the cottages, helping themselves to whatever they might fancy in the way of eatables,—the inmates were rewarded for their hospitality by an occasional croak which never failed to inspire an awful dread of coming evil; no misfortune, in short, ever happened in their favored vicinity, that these obliging creatures had not the credit of duly and timeously foretelling,—and they were honoured accordingly.

The Witch.

There was one old woman inhabiting a cottage about half a mile from the Chapel, with whom their converse was considered as in no ordinary degree frequent and mysterious. Janet Livingstone enjoyed the no very enviable reputation of being a witch. Her husband had been a servant in the family of a nobleman to whom the lands in that part of the country pertained. While in attendance on his master during a journey to the south, he had met with Janet and had carried her back to the Highlands with him as his lawful wife. On his death, his widow, in consideration of his long and faithful services, had been allowed a free cottage and garden, and a sum of money, annually, sufficient to keep her above want. Janet, therefore, had seen more of the world, and was much superior in understanding and information to most of her immediate neighbours. The odious suspicion of witchcraft had been attached to her for several grave reasons;—in the first place she was a stranger, and strangers, though hospitably entertained in the Highlands as passing visitors, are viewed with the deepest dislike as permanent settlers; again, all her neighbours were devoted Romans, while she was a Protestant, and, in the spirit of the times, could rail most eloquently against the Pope and Popery—the Mummery of the Mass—Holy-water, and five of the seven Sacraments—the Chapel, the very *sanctum* of the craft, she unceremoniously styled Babylon. Nothing but the high protection which she was known to enjoy could have saved her from being torn in pieces by the outraged devotees, to whom she was never backward to read a lecture on the errors of their creed. Janet, therefore, for the most part lived the life of a recluse, because she had few or none of her own persuasion with whom to associate. In her earlier days she was said to have possessed some pretensions to beauty, but the charms of youth had gradually given place to the decrepitude of declining age; and, unless sadly belied by tradition, Janet Livingstone, the Witch, was gifted with a set of features which the Old Lady of Endor herself might have coveted. Having, as we have said, few associates of her own species, she endeavoured to supply the deficiency by keeping a multitude of cats, which she reared and nourished with great care. These animals, more particularly a large black one, were regarded as so many incarnate imps of darkness, ever ready to do their mistress bidding. To all this mass of presumptive evidence, other of a more circumstantial nature was added. Roy's Crook was the fixed rendezvous of all the witches in the country, where they assembled on stated nights to hold their revels, and concert their plans of devilry. A person of unimpeachable veracity happening to pass about midnight on one of those occasions, and hearing music, had the courage to peep through an opening in the trees,—and, to his infinite terror and amazement, saw Satan himself, seated on the great stone in the middle of the pool—with horns, hoofs, and a long tail—playing with all his might on the bag-pipes; while a numerous troop of witches, with Janet Livingstone at their head, were tripping it so lightly round and round, that "the light fantastic toe" scarce burst the air bubbles on the surface of the water: this was *one* damning fact. Then the great black cat—this was *another;* the black cat and one of the ravens had been frequently seen dancing a *pas de deux* on the green before Janet's door. For many miles round if any one was taken suddenly ill without an apparent cause, if the farmer's cattle did not thrive, if the cows did not give the expected quantity of milk, if the oxen became unmanageable in the team, or if they broke the pen-fold of a night and took a scamper over the country,—Janet, or one of her imps, had been at work; countless were the execrations with which they were loaded, and bitter the revenge threatened against them. Stung to the quick by the stigma so injuriously affixed to her name, the old woman, latterly, took a malicious pleasure in seeming to deserve it. Her malison, she used to boast, "never fell feekless," the secret of which seems to have been that it was never pronounced aloud, or not at all. On one occasion, however, it was pronounced loudly and bitterly, and the event seemed to confirm its fatal efficacy.

Burning of the Chapel.

Janet's whole time was bestowed between the care of her cats and her little garden; here, besides a flourishing crop of cabbages and other pot herbs, it was her delight to tend a few favourite flowers, and also large beds of thyme, mint, and hyssop, a decoction of which was then used instead of tea. It happened one night that some cattle belonging to the Priests, having broke loose, stimulated doubtless by hunger, or tempted by the irresistible display of vegetables, to trespass on dangerous ground, contrived to throw down the wicket, and, entering the garden, trampled down or devoured the whole of the early spring crop. It is easier to conceive than to describe the old Lay's consternation on discovering the havock made among her beloved cabbages—her rage knew no bounds—all the sins in the decalogue scarcely summed up the measure of the poor priest's demerits—the doom of Babylon was hardly hot enough for them—Janet's heaviest maledictions were denounced, it *would* fall, in this instance, soon and sure. All who heard trembled; the words of terror flew like wild fire—they were never alluded to, but the utterer lowered the voice, looked fearfully round

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and invoked the protection of some patron saint: all were persuaded that something terrible was about to happen. We have said that the adventure of the cabbages fell out in the beginning of spring; at the time, it was, when the ravens were building their nests, which was immediately suspended over the thatched roof of the Chapel. One Sunday morning when the congregation were assembled at mass, the unlucky birds, collecting their materials, chanced to pick up an ignited piece of stick from some ash pit in the vicinity. The nest being partly composed of leaves and dried grass was soon on fire, and the falling sparks speedily communicated the flames to the thatch below. Alarmed by the smoke, and the crackling noise over head, the worshippers rushed out of the Chapel just in time to discover the cause of the conflagration, but without the means of checking its progress; a high wind blowing, the whole building was soon enveloped in flames, and in one hour all that remained of St. Mary's Chapel was a mass of smoking ruins; the oak was so much injured that it never again put forth leaves, and gradually rotted away: from that day forward the ravens were never more seen in the neighbourhood—a fact which tended not a little to confirm the prevailing superstitions concerning their unearthly character. The Chapel was never afterwards repaired; instead of the stately oak, the treacherous ivy overtops its mouldering walls, which each succeeding winter is fast reducing to a shapeless mass of ruins. We have been thus precise in describing it, because at a period long anterior to its destruction it was the scene of a tragedy—the well-authenticated traces of which are still to be seen, and to which we may be tempted to revert on some future occasion. Meantime, one word in "softer verse," to the memory of a spot endeared by many early and indelible recollections.

ST. MARY'S CHAPEL.

1.
Hoar the towers in yon church-yard,
Where mantling ivy's cling;
Smooth and soft is its grassy sward,
Whence fragrant wild flowers spring.

2.
No yew funereal there is seen,
Nor weeds with poison'd breath;
But tangled willows ever green,
Wave o'er the bed of death.

3.
No busy crowd with reckless tread
Profanes the holy ground;
But silence o'er the shrouded dead,
Reigns solemn and profound.

4.
There silence reigns—but nought of gloom;
'Tis solemn, but not sad;
And all that marks the cold dark tomb,
In cheerfulness is clad.

5.
There brighter falls the moon's pale beam,
Softer the breezes blow;
And gentler murmurs Darra's stream,
Though rapid be its flow.

6.
Sweetly they sleep in yon church-yard
In death's embrace who lie,
Beneath the flower-enamell'd sward,
Where Darra murmurs nigh.

RONDEBOSCH AND ITS VICINITY.

In one of the late Numbers of the *Literary Gazette*, we celebrated the rising Village of Plumstead. Like the Judge on Circuit, as Blackwood mentions, to travel in his circuit about 3000 miles, or like Jack-the-Giant-Killer in his Seven League Boots. Both are equable, for as the rapidity of the one defies even the lengthy strides of the ostrich in the Karoo, while the other the pigmy editions in the Nursery Tale, we sometimes extend our perigrinations far north. Our present purpose, however, is to approach nearer the civic scenes of this right-angled town, and dwell for a while in the neighbourhood of that most domestic-looking Village Alehouse, yclept the Three Cups. We do not mean the three dissimilar Silver Goblets which lately, by "swift of limb," belonged to him who* feeds his hounds and spreads afar his fame, but we allude to the Golden Machines that some Bacchanalian wight, in the meridian of pot-valiant glory, had reduced from their perpendicular height, to an horizontal state of prostration with the soil which before had gazed upon their elevation. It was assuredly a degradation; but mine Host, who had tried in vain to find out the admirers of equalization, used but his endeavors to discover that chimerical and ridiculous being who razeth all that he can, which he dignifieth with the epidemic appellation of—Reform! The present delinquent, however, was shrewdly suspected to have been a Member of the Grand-Junction-Temperance-Association, but he failed in converting that goodly sign of the Three Cups into a Meeting-House, save and except for the avowed purpose of continuing the jovial regulation so long known within its walls to those amphibious sons of Triton, *vulgo* vocatur— middies. The Three Cups is, most *gentle* Reader, —for even reading is voted a bore in such a temperature as this,—or the native-born of Afric clime, if such an one turns his dark eye on our infant page,—a most eligibly situated thatched dwelling, with antiquated wooden railings before the entrance, and a more ancient sign-post without. 'Tis true, we differ in some degrees in our Anglicisms, for we cannot boast of those—

"Village statesmen, who talked with looks profound,
While news much older than their ale went round."

Yet every thing within is comfortable, and besides a glass of genuine Barclay's Entire, a goodly platter of Eggs and Bacon is always hatched without any considerable delay, or more considerable effusion of feminine volubility, too often most superabundantly diffused, while the annihilating operation of egg-breaking and bacon-slicing is progressing. The way-side "Traveller's Joy," which these pages purpose to commemorate, is one out of three, amidst the enormous concatenation and assemblage of about ten buildings, and in consequence we may say, "par nobile fratrum," that liquor prevaileth, but we must extenuate as the climate is very nearly tropical, and people are rapidly bringing their constitutions into the vulgar passion of malting, or discussing that very comfortable beverage usually cognomened "swipes." The Village of Rondebosch is agreeably situated on the top of an eminence or vale, though it looks most presumptuously, and with seeming effrontery, upon some tall nodding pines in triangular conformation, which grace the purling rivulet of the Liesbeek beneath—a *river* in which may diurnally be perceived the graceful anclet and the fair-formed foot of a Callyphyrgion Venus, pulverizing one's nether commodities against the adamantine solidity of some granite lump; and the ebon wedges of their fellow "*ivory blacks*," the Mozambique, who unite their *savors* with the other women and the clothes: while, reposing in luxurious somnambulency, may be distinguished the well-disciplined and *un*happy convict, who wiles away the hours of existence, and his condemnation for felony, in breathing his sweetest effusions into the ears of some hazel dulcinea.

Our convicts are, probably, the best supported and most independent men upon the Government Establishment, and really seem to enjoy life in all its variegated novelty and splendour;

* Mr. J. van Reenen at one time held all the Cups which are run for on the Turf in this District. The Cradock Cup, the Town Cup, and the Maunde Cup.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

while silently repairing the summer devastations committed on our public roads by the violence of the intermitting and outrageous south-easters. Were we faithfully to depict the ease of these "Civil Servants," there would, I am afraid, seem a desideratum in the execution of public justice. As it is, however, the roads are fairly kept by men sentenced to undergo a period of privation termed "hard labor;" but who, nevertheless, laugh their cares away by working a little, eating more, and sleeping most. The morning dawn finds them scarcely risen from their pallets; the mid-day discovers them partaking the society of their "*fair* ones," or enjoying in fellowship the luxuries of a *siesta* beneath the umbrage of the spreading bough, or the shady sides of the Town Carts; and the retiring sun listens to the unharmonious clank of the glistening steel which secures their legs, like a brace of grey-hounds in training; such is the state of these spoilt children of indulgence, who lead a happy and a merry life, despite of polished iron, which, by-the-bye, festoons around their legs in far handsomer fashion than the hay-bands of our English jerveys; or, as far as our recollection serves us, the bags which our mother contrived with ingenuity to construct out of an old-fashioned white dimity petticoat for our first breeching.

The entrance to our principal road, and which leads to Rondebosch, (and consequently to the Three Cups,) is a neat crescent bridge, bounded on the east by the Castle of Good Hope, and on the south-west by the Castle of Bloemhof, with all its Gothic battlements and modern architecture. With regard to the taste which has been displayed in the rearing these pondrous lumps of clay and cement on the east, we cannot decidedly avow our delight. The superiority, however, of the one, seems to have stimulated the vis-a-vis to patch up many a fallen part, but the periodical rains have retarded the labor. Of late, we perceive that brick-work has supplanted the rude old economical taste, which has undoubtedly a much cleaner appearance, though we doubt (laboring under the supposition that the Cape Castle was made to be fired at, sooner or later,) the sagacity of the emendators; for no sooner will the proud turrets of Bloemhof point their destructive caronades at the newly-erected batteries, than the potent brick-work will perform all the wonderful and annihilating confusion caused by a good round of grape-shot, or the more terrific bursting of a shell. So much for this Babel-building of Reform. The old mud structure would have tightly held the offending ammunitory attacks, and have entombed it for ever, but now the repulsive front nurtures the intention of its foe; and the Lord of the Upper Fort, from his Empyrean height, looks down with exulting pleasure, though, no doubt, he exclaims:

"While I behold the little need of praise,
For this ye tax your people, and reform their ways."

Beyond the Castle but a few hundred yards, the oddly ugly, and the ugly odd wall, with a building somewhere about the middle, for displaying prices and receiving dues, is our *New-market*. Nothing can be a more perfect antipode to *the New-market* than ours, both in its use and building, and we cannot but express our satisfaction of the embryo project for building one upon a correct style, and a plan that will ensure to us our nice trussed fowl, with gizzard, wings, and liver legs, an egg just laid, and a pound of fresh churned, secured in a nice damp cloth, for our consumption. A wretched wall, displaying the circular, oval, octagon, et cetera, with every shape which architectural design could conceive, and masonic execution invent. We would advise those who have never witnessed the national "turn out," to turn out a little before gun-fire, and behold the motley groups of African Boers, with their sun-burnt features, in juxta position to the town-folk's visage. Buying and selling here wear two faces, as every one can tell who has a horse or other commodity to dispose of. The man who adds a stiver to his Bill Tongue, and he who takes it off, mark the practical difference which once, in theory, led Lavater to mistake the calm, contemplating features of a certain philosopher, for well-matured villainy; while he expatiated upon the true philosophic penetration of the eye, and the reflecting forehead of a highwayman who had been racked to death. To add to the delectability of the place of "morning dues" on a dewy morning, the gentle decline of the midnight blast wafts up your olfactory nerve the agreeables produced from the preparation of hides from a neighbouring reservoir of pelts; when, if you turn your head to ascertain the cause, you behold — "like toads who feed upon the vapours of a dungeon," some horrid beasts of pelicans, which clap their monstrous wings, and gloat upon the refuse of the ablutioned morsels, which they digest at leisure by the road side, to the terror and affright of our native beasts; who, with distended nostril, and a protruding eye, go off like a "Lucifer," to escape, as it were, the obscene and drooping maw. It really is a hideous sight to place such horrors in our fairest way, and which remind us that—

"Church-yards and charnel-houses are their haunts,
The cleansing yards their sumptuous places;
And when they would be merry they might choose
The silent chamber of a dying man."

We will pass over the mid-way scenes till we come to where the sign-post stands jutting out to invite the traveller who is passing, on his road to Cape Town, to

That Thatched-House where nut brown draught inspired,
Where Hottentot and Mozambique retired.

Despite of such company, the Cups is certainly a sober-looking house, and we have every reason to believe a creditable public convenience; though, by the way, through the meddling interference of the police, we remember thumping at the door in the pelting torrent one evening, a little after nine o'clock, and the "de'il a drop" could we get to comfort our poor internals, for love or money. We remember, too, the dimpled cheek, with its roseate hue, which used to venture a smile at us as passing homeward; but, alas! the substance hath departed. Actually and *bona fide* three times asked, and now a wedded woman. But this is not all; we want to see the crate of sweetly savored hay, with the nasal conformation of the hungry jackass well applied to select *such* oats as may happen to be there; the bar to hook a bridle on, and then we could think of other days, and remember the Country "Bubbley-house" at home, where we used, in the days of our youth, with Isaac Walton for our companion, and the *agonizing* rod on our back, to stop for a Welch rabbit, or some sublunary morsel, which tired nature and a long walk before the usually feeding hour, had combined to render most necessary.

Rondebosch, however, is far from being what it ought. It should be a clean, comfortable, little village, with one ale-house, and some neat shops. At present, it is more an emporium for Hottentots and idlers than for any other purpose. Above all, there should be a school; only think of a village without a school: a tree without leaves! It is to be regretted that the police are not more vigilant in going their rounds before they "turn in," instead of using all their sagacity in trying to catch the honest, though unwary licensed dealer into a snare, from which he cannot easily extricate himself. We allude to the practice of informing; a practice which, if encouraged, would ruin many hospitable boers, by having informations laid against them for their hospitality. We remember a complaint to have been lodged against an innkeeper residing a short distance from town, for not closing his doors at 9 o'clock; yes, 9,—and that 9 which the big evening gun makes at any time the big Castle-clock choses to make it convenient to toll the hour. The case was dismissed, as the evidence adduced proved that the vigilants had fancied that sound travels as rapidly as light, and upon seeing the flash, rushed in, and subsequently deposed that the wine was drank after the town ignis, though

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

they had heard no report. Mine host, and a host of witnesses è contra, swore to the *report;* they had seen no *flash*, but all they knew was that the delinquent glass of wine had been rendered invisible before they heard a report of some gun, which might have been a gun from a vessel in the Bay. The Magistrate was peculiarly non-plus-ed, as any Magistrate would be under similar circumstances. It was assuredly sharp work to decide a complaint, the alleged ground of which happened between the flash and the report of a gun; but, as the equity of our law is just opposite to the judicial maxim of the Turks, who hang ninety-nine men for fear the hundredth should escape, the defendant was allowed the benefit of the information

But we are digressing. The police regulations are certainly defective, though, we believe, unavoidably so. On some future occasion, it will be our duty, in a very *grave* way, to point out the possibility of a remedy. For the present, to that grave which every scribbler consigns his wares—the Capulets. We will merely give an instance of that which frequently occurs. I remember one evening being engaged with some others in the family in contemplating the transcendant brilliancy of the inconstant moon, as she was majestically, in the height of her plenitude, appearing above the horizon. Our view was through a distant window, the lattice of which had been thrown open, which added to the appearance, and we really seemed lulled into listless silence, scarcely observing upon the thoughts which seemed to have been engendered in the bosom of us all A dead pause ensued, which was just in the midst of its solitude when we were suddenly disturbed by the intrusion of a domestic who came in breathless haste, protruding eyes, and an uttering tongue, to tell us that some people were busily despatching a daughter of Eve in the contiguous suburbs. The rapid elevation of our corporeal matter overturned a chair or two in the exit, and the emissary had scarce time to add the information of exact locality, before a scramble to the kitchen ensured to us our weapons of offence. One seized a toasting-fork, another the stock of a broom, while another armed himself with at once a weapon and a shield—the frying-pan. Come on, ye Volcii! No time was lost in an unlucky stumble into a moat, but as we were going, like huntsmen in full cry, when no man stops to pick his fallen neighbour up—*professionally* we should not have been elevated from our "being humbled to the dust," had not the warning noise produced by a precipitate shot from our hand of the aforesaid frying-pan retarded the charging troop. The war-whoop being unintentionally sounded, which seemed the signal for a charge, and caused the enemy to call aloud for quarter, when we suddenly halted, and found that our fears and undoubted valor had to contend against two inoffensive guardians of *Mr. Locke's Establishment for Adults*, who were conducting a demoiselle of fundamental proportions to her rooms for the night. With one accord we wheeled round, and returned to replace our instruments of magnanimous encounter on their destined hooks, from which they had been so unceremoniously removed. This is a particular instance of alacrity on the part of the red waistcoats, who should be most active in repressing such scenes as these, which frequently occur to disturb the serenity of the village: though for awhile we must bid it adieu, yet we hope to see it bloom into another "sweet auburn." It cannot be left at a better time than now, when the surrounding country smiles with the greenest hue, and wears a feature which cannot fail to charm at once the lover of the picturesque, the agriculturist, and the merchant.

1*st May*, 1833. ***

THE CRUCIFIXION.

Lo! the sun is veil'd in heaven,
Dimm'd at high noon his ray;
Ancient night resumes her reign
Over the realms of day;
No star appears,
The tuneful spheres
Have stay'd their melody;
By the fork'd lightning's lurid train,
The sable canopy,
In vengeful ire is riven.

The world's deep foundations quake,
As if the mighty plan,
To which creation owed its birth,
Had lived its utmost span;
Rocks are rending,
Mountains bending;
Woe, woe to helpless man!
Oh! never did the lab'ring earth,
Since time at first began,
With such convulsion shake.

Ocean bursts her rocky bound,
Prescrib'd by fate's decree,
Confusion dire and wild uproar
Reign on the troubled sea;
Along the deep,
Dark tempests sweep,
In wrath unchain'd and free;
Nature quivering to her core,
Seeks from herself to flee,
And ope's the abyss profound.

Why thus maddens the lightning's ire?
Lowers that sick'ning gloom
Over nature's dissolving strife,
Her cerement for the tomb?
Why rend the rocks,
Ye earthquake shocks?
Come, is this the hour of doom?
Can self-existed Being's life,
Age-stricken in its bloom—
Can nature's great God expire?

The bless'd eternal Son of God
Expires—His parting knell
Echoes back from the gates of light
Down the abyss of hell;
In the dread hour
Of darkness power,
Demons triumphant yell;
Fiercely exulting in their might,
Their deeds of prowess tell,
And heaven daring stalk abroad.

Dismay'd and trembling at the sight,
Angels recoil amain,
And none—if blessed spirits weep—
Their weeping may restrain;
Each golden lute,
A moment mute,
Takes up a wailing strain;
While round the Throne, in phalanx deep,
The fiery seraph strain
Closer draw their squadrons bright.

Thus suff'ring dies th' Incarnate Son;—
Justice demands the blow;
And oh! must He who knew no stain,
Alone no mercy know!
O! sacrifice
Of matchless price,
In heaven or here below!
The Prince of Life for sinners slain,
Disarming every foe,
Vict'ry over Death hath won.

Oh! love divine—beyond all ken
Unspeakably intense—
Higher than heav'n, stronger than death
Surpassing man's offence—
Glory to Thee,
Eternally—
Thou knowest no suspense;
To men, of endless life, the breath,
Quick'ning each sin steeped-sense—
All glory to Thee, AMEN.

Cape of Good Hope, May, 1833. S.

THE SETTLER'S LOG.

(Concluded from our last.)

23d a very wet and rainy morning a strong wind but a foul one for us as before stated but it being sunday thow we did not forget it a young woman taken very bad in the night time but all the rest whell on board 24th a little breez and foul for us this evening one of the sailors got tipsey and wanted to fight with another sailor in name of smith but smith tould him that he would not have any thing to do with him but all to no purpose so this man struck smith several times so smith run to the captain for protection but the captain would not enterfear with them but let the man beat smith in a shamefull manner and one of the stearage passengers said it was a shame for any man to be used in that manner and the sailor after he had done with smith as long as he thought proper he then wanted to fight with the stearage passenger for saing that it was a shame and he further challenged any man on board that said any thing against what he had done but no man enterfeared with him and all became quiet again 25th becalmd has before and all well this day haveing little if anything to do we found ourselves imployment with catching somethings as the call portugal man of war and the put them in a bucket and some of them got severly stung with them the have a very beautyfull apearance haveing so many couloring in them as the rainbow but the seem to have no substance in them but only blubber except at the bottom thear is a great many string anging down 2 or 3 feet from them and the resemble a tortouse schell when on water but beautyfully varigated 26th this morning as before stated is very calm and as usell in the courcе of the day a bit of a breez sprung up which helped us on a little but it did not last long this afternoon somthing ocurred between one Mr small a cabin passengers son and the cabin boy and the captain stood up for the cabin boy and Mr small son came upon deck for safety but the captain came up and made the cabin boy stricke smalls son which made him bleed very much and then the captain struck Mr small as well and then the mate name of conoley came on quarter deck and struck the surgeon several times and indeavoured to through him overboard and the got a musket and swore that he would shoot him and whent in search of him through the ship but could not find him and the surgeon durst not go to bed that night but stade betwixt deck all night 27th a small breez but foul and all well but a very deal of rain 28th a calm as before this day we Saw a ship at a distance and we satisfied ourselfs that she was wrecked and we let our boat down and six of our men whent too them and she had lost the top of both masts and one man and another wounded and considerable other damage too numerous to mention but plenty of vituals and all other norishments on board and she had been in this state for a 3 week and she as been becalmd eversince the same as ourselves she was at the time it happened N latitude 8 longetude W 16 we are at this time N latitude 5 longetude 25 and went on board of her and thear captain came on board of us and gave us some hams and some pickels of vareous sorts and she came from america from a place calld salem near boston and the wear going to the coast of afirica a gathering gold and ivry and from thear to hoberd town in van demans land but the are at present bound to bahia in south america to be repaird 29th this morning becalmd as ushall and a shirk made its apearance about 10 feet in lenth and we set out to work after her and catcht her and divided her amongst us which made us two or three very good meals 30th this sunday and the vessel that we was with yesterday kept with us to day and our captain and surgeon and some of the sailors whent on board of her again and the gave our captain some more vituals with him such as pickles and sauces and some powder October 1st this morning was a fine morning

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and but it ended lick a great many other days nothing ealce but squalls with a deal of rain this evening about 6 Oclock a squall came on and break down our mast to the second sail and left us with only two sails remaining but sails was saved and no father harm done than breaking the mases and on this posetion we remained all night 2nd this morning we set on to replace our mastes but we could only contrive one so the to galland mast was throught on one side and in this we proceeded on our jorney with a calm except when theas squalls overtakes us which seldom lases at the most above a half an houre but always with a deal of rain which makes our jorney very troblesome and at a very slow speed but all of us well this day we cautch another shirk which is 5 feet long 3rd this morning as before nothing much but squalls about us a breez sprung up this day but a foul one 4th this as yesterday a strong wind but foul and all well 5th this day as before and all well 6th this day as before and all well 7th this day was sunday and we fel of a duch brig bound to the cape of good hope some of our men whent on board of her and got some nesassarys which was wanting for themselves this day we caut a dolphin about 15 inches long 8th this day as before and all well 9th this day a breez rather more favorable than before at about 5 knots per hour 10th this day a pleasent breez but foul but all whell on board 11th this day as before 12th this day we caucht another shirk about 9 feet 6 in lenth 13th this day as before stated Strong wind but foul and all well 14th this was sunday but a breez as before 15th this as before 16th the same as yesterday 17th this day the same as before 18th this day we came in sight of a ship and we made signal unto her but she would not take any notice of us this day we took our cource for anbon 19th this day as before a strong breez but foul 20th this as before stated and all whell 21st this was sunday but all things as before 22nd this day all the same 23rd this as before and all well 24th this the same 25th this as before 26th the Same as before stated 27th no alteration 28th this being sunday we did clean ourselves as ushall 29th the same as before 30th the same still 31st all the same as before this day we passed the torred zone and all well Nov. 1st all well this day and the breez rather more favourable than before 2nd this day the same 3rd this day we came to place called cape lepoz which is on the coast of africa instead of anbon so we had to turn again in scearch of anbon 4th this being sunday we prepared ourselves as ushall but about 5 Oclock this morning land made its apearance again which surprized our rulers very much for the did not expect it and it proved to be st thomas as iland which lies in latitude 0 and in longitude 7 so we found ourselves to be about 90 miles from anabon which was whear we wanted to go 5th we beat about all night to get to the before mentioned place but all was vane for we made no way at all 6th the same as before but all well 7th all the same as before stated 8th they Same as before 9th this day we put into St thomas iland for water and most of us whent on shore and we met with plenty of coca nuts and limes which are a speaches of lemon this day one of the sailors made is escape in st thomas iland 10th we found plenty of wild fowl and pigs and monkeys cocks and hens and pigeons which we took a considerable quantity of them 11th this being sunday and not forgotton some of us whent on shore and we took a quantity of pigs and fowl 12th this day the whent on shore again and brought two more pigs with them which made in the whole that we had got 7 pigs 5 hens 2 cocks and pigeons and monkeys unknown and this evening we took of for anbon but a foul wind as before 13th the same as before stated 14th all the same 15th the same still 16th all the same 17th all the same 18th this being sunday we prepared as ushall but nothing but foul winds about us 19th this the same as before 20th no alteration 21st all the same 22nd the same 23rd the same 24th the same 25th this being sunday thou foul as before 26th the same 27th the same 28th Do 29th the same 30th the same. Dec. 1st the same 2nd this being sunday but a faire breez 3rd a faire breez still 4th this day the captain and maite made threats to knock ducker and me down if we went to looke at the composs any more but the breez as before a great quantity of fish was seen about us but none could be taken but the sea was all alive with them so that they fairly scented the are 5th this day we became becalmd and a boat whent out and proved the current which was a knot and a half per houre to the North west 6th this day we came to the coast of africa to a place called Langa in south latitude 5½ and west longitude 12 7th this we cast ancor and our captain and one of our cabin passengers went on Shore to see if thear was any provisions to be got for us but thear was very little to be had so he told the passengers as the might go on shore in the morning and procure wat the could for themselfs as he was not able to do it for them 8th this day a quantity of us whent on shore and took Some cloths and other things for to barter from the inhabitants the town was about 5 miles from shore and some whent to the town and some only to the shore and some staid on board and bartered with them the surf was so rough that about twenty of us was forced to stay on shore all night so the went unto the factory and Stayd thear until morning 9th this morning when the boat came on shore for us the captain took is shot belt and struck two of the sailors with it several times so that one was bound to lay in bed all that day through it and the sailors gave over working throug it 10th this day the sailors agreed with the captain again and so begun to work in geting water on board for us a dissturbance arose on board with the captain and some of the stearage passengers so that he struck some of them which caused great disturbance amongst us 11th this day the captain backed up is things cloths quadrants charts and all that did belong unto him and whent on shore with them with and intent to leave us but as soon as he had got on shore he sent word that if we would sign a paper that we would not speak to him he would come back again but we would not do it so he sent is things on board again and he came in the afternoon again in a state of liquor and as soon as he came to the ship he presented the gun at some of the blacks because the was with a canoe along side with one of the cabin passengers that was bartering some blankets for provisions for the passengers and he drove the canoe away but the cabin passengers followed it and as soon as that was over he saw one of the cabin passengers children dresing a bird in the cabin and he whent down in a fury and begun to strick them with is shot belt and swore that he would not have them any more thear but the cabin passenger in the bustle stabd the captain several times with a knife in the breast loins and arms but the surgeon sewed it up again and the passenger made prisoner about a hour after this the long boat came that was gone for water with two sailors in it and said that the inhabitants had killed all on shore which was nine in number and they had given slip and the was bound to come on board and killed all them but we got the ancor up and set of without any further harm and we set out for a place called Fernandipo whear thear was some men of war laying intending to bring them and fly upon the natives thear was a moderate breez all night which enabled us to get a distance from them 12th we became very much becalmd and almost stationery this evening about 7 Oclock a canoe came with 6 men in her unto us and wanted to come on board but we would not let them for we thought that the might be some that comd up the beech after us so they whent away again and we saw them no more 13th becalmd as before and almost still 14th the same almost but rather more favourable for us 15th A Breez sprung up favourable for us at about 5 or 6 knots per hour 16th this being sunday but we was in expectation of seeing some land 17th the breez as before stated 18th this morning about 6 Oclock we come in sight of prince Edwds iland and we expected to make Fernandipo this night and all our biscuit was done this day we lay too this night about 12 oclock expecting we was near land 19th no sight of land as we expected which made us very down through us having no biscuit but we had some by us so we was able to let them have some of it 20th this morning we came to Fernandi po put on the wrong side of it thear was some of our passengers and two sailors taken with the Feaver 21st about 12 Oclock to day we came to 2 palm oilers which lay getting loading but this was not the place we whanted but our captain reported our circumstances to him and sent us some beef Peas and buiscuit and the Feaver as bad as ever amonst us this Evening about ½ before 7 thear did come a captain belonging to the brig that belonged to the huskisson of liverpool and he brought a pistol with him and his men was armed with cutlashes &c he came on board with our captain and the doctor and as soon as the got on board our captain whent to the cabin and the brig captain and our doctor was together and the brig captain called his men out of the boat and told them to bring thear cutlashes with them and he told them to strick the first person and he would shoot the first person as he had a pistol loaded with two balls and the must have it if the rejected the captains athority as he was given to understand that thear had been mutiny on board and we might think ourselves well of if we got of by imprisonment and he called for a light but none came then the doctor and him whent to the cabin and the captain of the brig whent to his own place and shortly after our doctor came again to us in his shirt and came out with a very great deal of foul expressions to us and in about ½ hour he weent away and all became quiet again 22nd our captain and the captain of the brig called the swiftsure of Liverpool whent a shooting about 5½ hours when thear was a good breez for us we set out this Evening for fortwilliam about 4 Oclock we got in fortwilliam on the 24th and our captain doctor and minister whent on shore and reported our case we left this place on the 8th of January 1833 for st thomas in Scearch of smith which was left thear 5 of our passengers died while laying at fortwilliam 13th we beat about for 5 days with a foul wind and was forced to the iland of fernandipo again we beat round it and left it on the 14th and on the 16th we came across a ship and the made signal to us and we boare up to them and after the had boarn company with our captain about one hour the left us for fernandipo as soon as the had left us we saw another ship which proved to be a man of war and the came on board of us and the was going to fernandipo to breack up the iland for the was bound to leave it but a foul wind as before 22nd we made the iland of st thomas but did not make the town till the 23rd—25th we set out to a place to fill our emty barrels with water and to replace some of our rigging which was in bad order 26th we made this place this morning 27th this being sunday and a woman died this evening 28th the corps was cast into the sea in the customary manner 29th this day a small boy died of the same disorder belonging the minister 30th this day he got his watery grave the same as the other and a few fresh caces this day we left st thomas for Loango in scearch of the men that was left 31st the Same February 3rd this being sunday and one of the Sailors died about 9 oclock this Evenging 4th he was put into is watery grave as ushall 5th a daughter of the ministers was bad of the African feaver but it turned into the putred fever and she died this night and she was forced to be put in her watury grave as soon as she died for it was infectious 6th this Evenging we had a miscarage with one of the mens wifes that died at Fernandipo 10th this being sunday

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

which I keep for remembrance only 12th on this date we maide Loango and four of our men as living but all in a very bad state and thear was one of them that had gone to liverpool and the other had dided through starvation and Feaver together and the all came on board that was living theare was one that was left that made of to Liverpool in a ship so that thear was ounly four died 15th we left Loango and all well 27th we passed st Helena this evening March 3rd this being sunday and not forgotten 4th this day we passed the Tropic of capricorn.

OBSERVATIONS

On the Weather,—the Barometer,—the Thermometer,—the Hygrometer,—Influence of the Moon,—the Tides,—Climate of the Cape,—Marine Barometer.— Letter from MERCURIUS, *—Storms at Sea,—Shipwrecks, &c.*

AT the particular suggestion of many of our Indian subscribers, and other respectable visitors from the East, we beg leave to introduce a few subjects with which many of our readers are partially acquainted. We make no apology for the re-publication of the letter of *Mercurius,* in sequel, or the notices on the Cape Climate, &c. from Mr Greig's invaluable "Directory" of Southern Africa, seeing the former was published through our own medium in 1824, and the latter was supplied by ourselves in 1830, and both the documents containing the different subjects in review being out of print, and no copies to be obtained at any price.* The letter of *Mercurius* will be read with the deepest interest, and our thanks are justly due to the author for taking upon himself a complete revision of his communication of former years. To individuals proceeding to sea, or those connected with the service, we conceive the particulars on the Marine Barometer to be of no small importance.

There is perhaps no subject of more universal interest in the whole of Natural Science than that of the unceasing fluctuations which take place in the atmosphere in which we are immersed. Not that our climate is pregnant with plague or pestilence; on the contrary, it is one of singular salubrity: and if it has been recommended by a certain writer, in order to enjoy the gifts of nature to the fullest advantages all the year, to spend January in Portugal,—February in the Madeiras,—March in Spain,—April in Sicily,—May in Lapland,—June in Italy,—July in Switzerland,—August in France,—September in England,—October among the variegated forests of America,—November in Crete,—and December in the Islands of the Cape de Verd,—we may fairly add, and the Cape of Good Hope,—*all the year round.* It is true that we have contrasts during the seasons of the year. But these are the springs of happiness. Without a knowledge of the muriatic, we should be ignorant of the sweet; without the sweet we should be ignorant of the pungent. Had morning no excess, we should never enjoy the temperature of the evening.

It cannot be concealed, that on the subject of our atmospheric phenomena, our remarks must be necessarily incomplete. This arises from the want of correct observations on our meteorology, and the few public means in exercise to extend its useful application. Some valuable references will however enable us to bring the subject under the more immediate attention of the readers of the *Literary Gazette,* and may serve to promote a more general inquiry into the nature of those things in which we are all more or less individually concerned. As a first step to inquiry, a few notices may be useful.

* "The Directory" of subsequent years has materially abridged or omitted a considerable portion of the matter in question.

ON THE BAROMETER.

There are but few persons who pretend not to be *weather-wise,* and this knowledge, imperfect as it may be, is assisted by the more frequent use of Barometers in these days than at former periods. People in general however pay too much attention to the words fair, rain, stormy, &c., which are engraven upon the scale; and it is a common error to imagine, that as long as the mercury, or the index which marks its course, points to those expressions, the weather will be in accordance with them. The most important fact, however, to be ascertained in making an observation is, whether the mercury is in the act of rising or falling; as, if it ascends, although the index points to the word *rain,* it is a much surer indication of fine weather than when the index points to *fair,* and the metal descends. The attention should also be directed to the number of inches, and parts of an inch engraven upon the scale, with which the level of the mercury or the index coincides; these denote the length of the column of metal which a column of the air, of equal base, at the moment is capable of supporting; and consequently the weight of the latter. The average height of this column for the month is recorded in the register; as well as its range, from which the two extreme points of its course may be calculated, to which it rarely reached. Rain is most plentiful, and thunder most frequent, when the quicksilver fluctuates a little below the average. If it descend rapidly and considerably below the point, storms of wind are indicated, while in proportion as it rises above the same point, the probability of fair weather increases. Settled weather must not be expected while the column of mercury is below its mean height for the month; sudden and considerable changes in either direction are commonly followed by fair or foul weather equally transient; while a steady rise from day to day of about a 10th of an inch in 24 hours, or a prolonged fall in the same proportion, (either of them passing the mean point,) may generally be trusted as prognostics of continued fair weather or rain.

THE THERMOMETER.

The Thermometer, by which the variations of heat are ascertained, is pretty generally understood. To a class of readers a few casual observations may nevertheless be acceptable The temperature registered, is that of the air in the shade: but besides this, the power of the sun's rays is recorded, and the force of terrestrial radiation, which may be described as the cold produced at night upon a plat of short grass exposed to the fullest aspect of the sky, and which in clear and calm weather is always considerably below the temperature of sheltered situations.

The mean temperature of the month recorded in the register, is calculated from the daily highest and lowest of two register thermometers, placed in a situation screened from the sun and the aspect of the sky. The best thermometers for the purpose are of Rutherford's construction; one of which, formed of mercury, pushes a small piece iron wire before it, which it leaves at the highest point; and the other, of spirit, draws after it a small index of glass, which remains at the lowest. In addition to the main temperature, and the highest and lowest points, or range of the thermometer in the shade, the indications are given of a register thermometer, covered with black wood, and placed in the sun, and of another placed at night upon a plat of short grass, and exposed to the full aspect of heavens.

It is well known to the agriculturist and gardener, that without the direct influence of the sun, whatever may be the temperature of the air, the fruits of the earth seldom come to perfection. It is therefore of importance to know the force of this valuable agent, and the modifications to which it is exposed. The black thermometers register this effect, and the almanac shows both the mean and extreme difference between such a thermometer and another placed in the shade. Of no less consequence is it to know the cold produced at nights from the radiation of heat from the surface of the earth, in situations where its passage is uninterrupted to the clear sky. This, in calm, unclouded weather, always reduces the temperature of filamentous substances, such as grass, considerably below that of the air. It is this depression of temperature which the cause is of dew. The surfaces of vegetables become cooled by this radiation of heat into space, below the dew-point, and the vapour of the atmosphere is deposited upon them. Dew is never formed upon grass on cloudy nights, or in sheltered situations.

THE HYGROMETER.

This instrument is a contrivance by which the degree of temperature is readily noted at which moisture begins to be deposited upon a cold body, as we see in summer, in the familiar instances of a bottle of wine brought from a cellar, or a decanter of fresh water filled from a well. This degree is called the dew point, as it is also the temperature of grass upon which the dew first begins to form in a clear evening.

When consulted as a weather-glass, with a view of predicting the greater or less probability of rain or other atmospheric changes, two things are to be principally attended to,—the difference between the dew-point and the temperature of the air, and which is denoted in the register by the term *degree of dryness,* and the variations of the dew-point. In general, the change of rain or other precipitation of moisture from the air may be regarded as in inverse proportion to the degree of dryness: but in making this estimate regard must be had to the time of day at which the observation is made. In settled weather the dryness of the air increases with the diurnal heat, and diminishes with its decline, for the dew point remains nearly stationary, consequently a less difference at morning or evening is equivalent to a greater in the middle of the day.

But to render the observation most completely prospective, regard must be had to the movement of the dew-point, and its accordance with the *mean* of the month, or rather with the *mean* of the prevailing wind. As the elasticity of the vapour rises above or falls below the mean, so does the probability of the formation and continuation of rain increase or diminish. An increasing difference, therefore, between the temperature of the air and the temperature of the point of condensation, accompanied by a fall of the latter, is a sure prognostic of fine weather, while diminished heat and a rising dew-point infallibly portend a rainy season.

Experience has amply proved that the hygrometer, properly applied, is more to be depended upon than any instrument that has yet been contrived.

INFLUENCE OF THE MOON.

That the different phases of the moon have some connection with changes in the atmosphere is an opinion so universal and popular as to be, on that account alone, entitled to attention. No observation is more general, and on no occasion perhaps in the Almanac so frequently consulted, as in forming conjectures upon the state of the weather. The common remark goes no further than the fact, that changes from wet to dry generally happen at the changes of the moon. When to this result of universal experience we add the philosophical reasons for the existence of tides in the aërial ocean, we cannot doubt that such a connexion exists, and that the moon exerts a considerable influence upon the currents of the atmosphere, according to her position. The subject,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

however, is involved in great obscurity, and is one which can only be elucidated by long and careful observation.

THE TIDES.

Those swellings and subsidings of the waters of the ocean, by which a portion of the shore is alternately flooded and left dry, and to which we give the name of *tides*, are to the inhabitants of coasts the most inexplicable of the every-day occurrences of nature. Instead, however, of there being any thing mysterious in the matter, it is the most simple that can be; and depends upon that universal law of gravitation, in consequence of which a stone falls to the ground, or water runs down a slope

1. The real motion of the earth from west to east every 24 hours, causes the high and low water of the solar tide to perform a complete revolution from east to west in 24 hours also.

2. The same motion of the earth, with the moon's motion round the earth, from west to east, also, in about 29½ days, causes a complete revolution of the lunar tides from east to west in one solar day and two-fifty-ninth's, or in about 24 hours 48½ minutes: as the action of the luminary takes some time to produce its effect, the high water at any point does not take place till an hour or two after the luminary has been vertical.

3. Whether the sun and moon are on the same points of the compass, or on opposite points, then if they be so situated with regard to north and south, as that a straight line passing through their centres, would pass through the centre of the water, the high waters will fall on the same points, and the low waters on the same circumference, midway between those points

In these cases the high water will be the sum of the elevations, and the low water the sum of the depressions. These are called *Spring* Tides It is evident that they must happen at every *new* moon, by the coincidence of the upper tide of each luminary, with the under tide of the other; and that they can happen at no other times.

4 As time is reckoned by the apparent motion of the sun, the solar high water always happens at the same hour at the same place; but as the lunar high water, which is greater, and gives a character to the whole, happens about 48½ minutes later every day, it must separate eastward from the solar high water at that rate, and gradually become lower and lower, till at the end of the first and third quarters of the moon, it fall on the same place with the low water of the solar tide The elevation of the high water, and the depression of the low, will be both only the difference of the solar and lunar tides, and the tides will be *neap*.

5. Lastly, the motion of the tide is not accompanied by an actual transfer of the whole water; for that would produce, at the equator, a current of about 1,000 an hour. The wave of tide is sometimes moved in one direction, while the great mass of the water is moved in the other by an under curent; just as one may often see the ripple which the wind causes, blown against the current of a river.

ON THE CLIMATE OF THE CAPE.

The mean temperature of Cape Town, inferred from a meteorological journal kept here for several years, is 67½ Fahrenheit.* The mean temperature of the coldest month is, perhaps, 57°; hottest 79°; mean of three recent winters, 58°; of three summer months, 77°; least heat during summer, 63°.

The temperature of the district of *Stellenbosch*, deduced from the observations of a single twelvemonth, is 66½°; extremes, 87° and 50°. The temperature of *Zwartland*, appears to be 66½°, extremes, 89° and 54°. The exposure of the thermometers is at neither place external; they are suspended in spacious well-aired halls.

At Tulbagh, situated in a valley of the great chain of mountains which divides the western from the eastern provinces of the colony, the mean temperature of the year is 66⅔°, that of the coldest month 55½° of the hottest 80½°; extremes, 95° and 52°; mean of the three winter months, 56½°; of three summer months, 79°; least heat in summer, 61°.

In this colony, as in the south of Europe, and most of the warm climates of a temperate zone, wind commonly blows cold in summer, at the same time that the sun shines powerfully. It is this circumstance which distinguishes a warm from a hot climate. Parched wind and frequent summer calms equally make a hot climate. In a cool one, or merely warm, the temperature of the air, in the shade, and in ventilated sunshine several feet from the ground, does not much vary; but in a screened situation, or at the surface of the ground, the heat of a sunny exposure, at noontide of a summer's day, becomes intense. That intensity of heat, is in strictness, superficial, scarcely penetrating an inch beneath the surface, nor reaching more than a foot or two above it. In calm weather, the range of reflected heat is somewhat greater.

At the foot of our mountains, and within the verge of their influence, the heat of the atmosphere over the valleys and the plain is mitigated by a cool wind descending from the mountain's side, and the coldness of the blast is tempered by the reflected heat of the earth's surface. Hence a moderate temperature, where the wind has free passage, is the result in summer at the Cape.

Respecting the hggrometric condition of the atmosphere, the following are desultory observations on the summer months. Dryness, in the morning before sunrise, is ordinarily from 6 to 7 deg., the utmost 12 deg, the least 3 deg., which for a mean temperature of 77 deg., answer to about 17 to 20 centecimals, 30, and 90, respectively. The atmospheric dryness usually augments as the day advances; for, while the temperature rises towards noon, the point at which the hygrometric thermometer becomes stationary, remains more nearly uniform. Mean dryness in the morning, 7 deg., at noon, 14 deg. These observations were made at inland situations, and the minimum of humidity actually noticed, has probably not amounted to a fourth of the atmosphere's actual capacity for moisture.*

During the warm season, although the south-east monsoon predominates, westerly are not unfrequent; they are always moist. When south-easterly winds blow, they bring from the shallow sea over bank La Guillas humidity, which is condensed npon the summits of the mountains. It is seen rolling down the western cliffs in volumes of thick vapor; and the elevation at which this is dissipated as it descends, answers precisely to the hygrometric state of the air.

Were marks noted npon the precipitous sides of Table Mountain, at intervals of 90 yards in perpendicular height from the base, the number of such divisions below the cloud, familiarly termed the *Table cloth*, would correspond with the degrees of dryness exhibited by the hygrometer; for temperature decreases with ascent of heights, about 1° of Fahrenheit's scale, for every 90 yards of elevation. This will be made plain by citing an instance. Thus, on the 11th of January at Cape Town; temperature, 71° hyg. therm. 58°; a cloud hanging over Table Mountain, not touching it, but just elevated above the summit: the height of Table Mountain trigometrically measured, is 1,194 yards; difference of temperature according to theory 13¼°, degrees of dryness observed, 13°.

"So on the 15th of January, at the foot of Table Mountain, temperature in the shade during the whole day (6 A.M. to 4½ P.M.) 70 to 71 deg, hyg. therm. 59 deg.; and south-east, strong breeze, cloud on Table Mountain.

"Noon, at an elevated station, upon the acclivity, above the highest inhabited spot, temperature in wind and sunshine 69 deg.; hyg. therm., 58 deg. At a station still more elevated, above the highest plantations of the silver tree, (*protea argentea*) temperature, in ventilated sunshine, 68 deg.; hyg. therm. 58½ degrees.

"The wind blowing in puffs and gusts, the temperature is depressed 2 deg. to 1 deg., when strong gusts blow.

"A dense white cloud on the back of the mountain, receiving evidently continued accession. The vapor passing over the summit, and scarcely descending a little down the cliff, seeming to curl laterally and vertically, and pause while vanishing as it quits the mountain. Sometimes a very small fleece; often more considerable and dense.

"A small detached cloud shows itself here and there, remains a while, and then gradually vanishes; one, over the signal-post on the Lion, another in front of Camp's Bay, another again in the distance over Tygerberg, all apparently upon the same level with the cloud hanging on Table Mountain."

A mountain being colder than the plain below, condenses and renders visible the passing vapor, whenever the dryness of the wind is less than the difference of temperature between its summit and base. Owing to radiation, the influence of the mountain's summit extends to a column of air over it, and a cloud at rest, is accordingly often seen suppended high above.

The heat of the plain has a like influence on the atmosphere over it, and affects the temperature immediately above. The vapor then, as it quits the mountain, passes into a warmer region, where it is dissolved, and which thus it traverses, transparent and invisible, to be again condensed, and made apparent on approaching another mountain.

This is the simple explanation of the appearances which are so conspicuous during the continuance of a south-east wind at the Cape. Volumes of vapor are seen rolling over the summits and down the sides of Hanglip, Hottentot's Holland, and the rest of the chain of high mountains. Above the valleys, and over the isthmus, scarcely a passing cloud is seen. But the vapor is thickly condensed on the peninsular group of mountains, rolls over their summits, descends to a certain distance down the cliffs, and is dissipated and becomes transparent as it passes onwards.

The wind fed by cold and damp, descending from the mountains, blows with great violence, approaching to tempestuous force. But it is partial, and extends to no distance from the shore. It is the boisterous rush of colder air, to replace warmer in a fervent atmosphere, over an intensely heated land. On the windward brow of a mountain the breeze is moderate; on the lee side the blast is strong; at sea, a mile from the shore, there is calm.

In fact, both south-east and westerly winds are, to the promontory terminating South Africa, sea breezes, and the south-east wind has not parted with that character in a short and rapid passage across that promontory. The parched earth cannot but be refreshed by the passage of such humid air over it. Its heat is mitigated, or that of the atmosphere above it is so by cool breezes, which descend from high mountains, bringing humidity recently drawn off the sea.

Clouds at rest, while the wind is blowing with violence, are frequently to be seen over *False Bay*, and likewise over the *Cape-downs*, precisely similar to clouds suspended over peaks. Generally during a south-east wind, the sky is

* It is necessary to mention that the observations on this subject are by no means intended to convey the idea of *perfection*. The meteorological diaries, formerly kept at the principal stations in the colony, do not extend to a sufficiently long period, for deducing from them positive conclusions. But the subject is now for the first time glanced at in South Africa, chiefly in the hope of stimulating observation and inquiry on this interesting topic.

* "I use by way of hygrometer, a common thermometer, of which the scale is detached from the bulb, upon wetting the bulb with water, and exposing it wet to the air, the consequent evaporation of moisture from its surface lowers the temperature more or less, according to the dryness of the air."—(H. T. Colebrooke, Esq.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

clear between Hanglip and Table Mountain. But now and then a small silvery cloud suddenly appears above the sea, or the shore, grows, changes shape, without change of place, (although the wind, mean time, continues to blow violently,) wastes and vanishes. Dr. Arnott, in his highly interesting work, entitled, "Elements of Physics, or Natural Philosophy," thus accounts for the singular beauty and density of the clouds which frequently envelop Table Mountain. "The reason of the phenomenon is, that the air constituting the wind from the south-east having passed over the vast southern ocean, comes charged with as much invisible moisture as the temperature can sustain, In rising up the side of the mountain it is rising in the atmosphere, and is therefore gradually escaping from a part of the former pressure; and on attaining the summit, it has dilated so much, and has consequently become so much colder, that it lets go part of its moisture. And it no sooner falls over the edge of the mountain, and again descends in the atmosphere to where it is pressed, and condensed and heated as before, than it is re-dissolved and disappears: the magnificent apparation dwelling only on the mountain top."

Of the advantages of the Marine Barometer, sailors are at present able to speak with certainty. They are now acquainted with the use of this instrument, and to its timely warnings many a valuable ship is acknowledged to owe its preservation. We now proceed with the Communication of *Mercurius* on the utility of this invaluable instrument. They derive additional interest from the *experience* of the writer* in navigating these seas, forming the chain of communication between Great Britain, the Cape, and our possessions in India.

CORRESPONDENCE.

MARINE BAROMETER,—THEORY OF STORMS, ETC.

To the Editor of the Literary Gazette.

Newlands, 18th June, 1833.

SIR,—I should on no account have acceded to your request of me to sanction the re-publication of a letter which appeared in the *South African Chronicle* nearly nine years ago, for I have not the vanity to think that any production of my pen can be worth a second perusal, had I not been influenced by the following considerations which you have so particularly brought under my notice;—first, that there are many gentlemen from India now in this colony for whose character and acquirements I have a high respect, who have expressed a desire to this effect,—secondly, that some of the arguments and facts it contains have been deemed of sufficient importance to require a more extended promulgation. Under these circumstances, I have the pleasure to send the letter referred to, *revised,* and very much at your service.

Without, therefore, any further preface, I shall proceed to my remarks on the *Marine Barometer.*

* John Marshall, Esq.

I am, myself, apt to set so high a value on this instrument, from its affording an infallible indication of those dreadful hurricanes, which are so prevalent in the West Indies, the China Seas, the Bay of Bengal, and other parts of the Indian ocean, especially in that part comprised within the islands of Java, Sumatra, and the Isle of France, that I think, any information tending to elucidate its advantages, cannot be too widely promulgated.

Every one at all acquainted with the mechanism of a Barometer, is aware that its construction originated in a discovery, that the mean density of the atmosphere is capable of supporting a column of mercury equal to about thirty inches in length, hence it follows that every deviation of the quicksilver from this height, is the result of a correspondent change, in the actual gravity of the surrounding atmosphere, the trifling effect of the cohesive properties of the tube being duly allowed for. But although this may be sufficiently evident to a common observer, it is certain that these changes depend upon so many hidden causes, and are generally so minute that they are scarcely perceptible to the eye, and are frequently unaccompanied by any visible change of the weather. It is a well established fact, that the Barometer undergoes but little or no variation throughout the region of the tropics, unless when it happens to be under the influence of an approaching hurricane, and then it is no less certain that the quicksilver falls rapidly and considerably, a natural consequence it would seem, of the origin of these storms, which exceed in violence those of the more boisterous climates of Europe, as much as the situations in which they are generated, at other times exceed them in mildness. An infinite scope still remains for a philosophical inquiry into the theory of winds, nor have I yet met with any satisfactory explanation of the course of these awful phenomena in the heavens. If I may presume to venture an opinion on so abstruse a subject, I should say that a tropical hurricane is produced by the rays of a vertical sun acting upon some portion of the atmosphere that happens to be unusually loaded with the electric matter so abundantly generated within a few degrees of the equator, whereby a rapid rarefaction of the circumjacent atmosphere takes place, repelling in its escape the surrounding air, until the existing cause has exhausted its influence, when a reaction commences, by the condensed air rushing towards the centre of the atmospheric rarefaction until the equilibrium is restored.

If this theory should prove to be well founded, it would, perhaps, sufficiently account for the great and sudden falling of the quicksilver on such extraordinary occasions; but, as Dr. Franklin very justly observes, in his Treatise on Electricity, "it is not of much importance to know the manner in which nature executes her laws; it is enough if we know the laws themselves;" so it may be said, that on all these occasions, whatever may be the immediate cause of the fall, provided we are aware of what is to follow, we are furnished with all the requisite information to guard us against the consequences. A thorough knowledge of these consequences is only to be acquired in the school of experience, and it is perhaps for that reason that I feel anxious to impart the benefits of my own, knowing that the warnings of this infallible monitor, have been but too often fatally slighted. Because, forsooth, that part of the ocean to which these remarks have reference, is frequently sailed over without the occurrence of any thing approaching to a storm, and because the Barometer may, and does frequently remain nearly stationary throughout the whole of this large portion of the voyage to and from India; is it therefore reasonable to infer that its utility ceases? on the contrary, the fact of the Barometer not being affected by any change in the atmosphere except when under the influence of an approaching storm, is the very circumstance which, in my opinion, more particularly enhances its value. In high latitudes, the eye of an experienced seaman will prove a tolerably correct substitute for a Barometer, but the tropical hurricane, unlike the storms of higher latitudes, but seldom gives any warning of its approach, and consequently the index of the Barometer affords the only indication to be relied on. The practical inference which I think myself at liberty to draw from these premises is, that whenever, or wherever within the tropics, or rather when in the more immediate neighbourhood of the Equator, a rapid and considerable fall of the quicksilver is observed to take place, it may be taken for granted that an extraordinary degree of rarefaction of the surrounding air is in progress, and that it will speedily be followed by a violent reaction From that moment the ship may be considered to have perforated the confines of a circle, the centre of which will shortly become the focus of a tornado, which, like the centre of a whirlpool in a different element, cannot be approached but at the hazard of her destruction, a lot which may befal her in spite of any exertions, however inde fatigable, of the most skilful and able-bodied crew. I am aware, however, that instances are to be adduced of ships having encountered hurricanes without sustaining any serious injury, but I have reason to believe that, in most of these instances, if not in all, it would be found, were it possible to ascertain the fact, that the brunt of the storm was in reality not encountered at all, that these ships were throughout far nearer the verge of the circle of rarefaction than its centre, that having been warned of its approach by the Barometer, they had sufficient good sense and foresight not to neglect it. But however this may be, no prudent man in command of a ship, knowing as he must that the lives of all under his command depend upon the promptness as well as the wisdom of his decision, will allow himself to be influenced by any such precedents to brave the storm, in order to evince his courage, or through any fastidious fear of committing a blunder, but that, taking the Barometer for his safest, if not his only guide, he will, from the moment of any extraordinary fall, bring his ship to the wind, and make every possible preparation to meet it. Nor will he be diverted from his purpose by any flattering appearances in the heavens.

Even if, at the moment, the sky should be cloudless, the atmosphere motionless, and no other indication of a storm throughout the whole visible horizon, than that which this invaluable instrument affords him, still he will take his measures with the same degree of promptitude and energy, as though the danger had already commenced; and when the flattering gale springs up to favor his course, he will not be tempted to pursue it through any fallacious notion of shortening the period of his voyage; for if my theory be correct, he may rest assured that, the farther he advances, the greater will be the fury of the tempest; that it is a principle of every hurricane, to narrow its sphere in proportion to its duration; and that wherever the storm commences, there will it soonest terminate; and consequently that his easiest way to escape from its fury is to remain as stationary as possible. I should not have dwelt on some of these points, had I not been aware that a notion is but too prevalent among seamen, that scudding before the gale is the shortest way to get out of it, an error which is attended with this additional evil, that those precious moments which intervene between the fall of the quicksilver and the rising of the storm, are expended (perhaps never to be retrieved,) in a proceeding which, in my opinion, is fraught with nothing but mischief.

Neither should I have ventured thus boldly to advance a theory of so much importance to the interests of navigation, were I not prepared to support it by the result of many years experience, while traversing those seas to which it is more immediately applicable.

The following particulars of one of those awful hurricanes which are known to prevail in certain parts of the Indian Ocean at particular seasons of the year, and which it was on this occasion my lot to encounter, will be found to embrace all the most material points on which I have ventured to ground this theory of storms, and I trust that the relation of them will not excite needless apprehensions in the breasts of those, among the fair sex in

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

particular, whose destiny it may be to follow in the tract of my adventures, but rather that they will yield their consolation from the reflection that the greater the danger, and the more awful the consequences, the more essential it is that all such particulars should be faithfully recorded as a beacon for the guidance of others under similar trials; knowing, too, as they must, that in traversing the wide expanse of ocean comprised between England and India, ships will be safe in proportion as the dangers they may have to encounter are accurately described. Under such circumstances, then, to withhold from publication a narrative of facts, however painful its perusal, the object of which is to prevent a recurrence of the misfortunes it details, would be no less inconsistent than to hurl the Barometer into the sea as a useless appendage to a ship, merely because, through idleness or folly, it may sometimes fail to point out the danger, or at other times prove a source of needless alarm.

It was in October of the year 1808, that I left Madras on board one of the East India Company's ships, with eight others, under the convoy of a seventy-four gun-ship. On reaching the latitude of 10° south, and the longitude of 78° east, we unfortunately encountered one of the most tremendous hurricanes that was, perhaps, ever experienced by a ship that did not actually founder. It is impossible to convey to the minds of those who have never witnessed such a storm, any adequate idea of the fury with which it blew during the three days and nights of its continuance, the sound resembling more a succession of peals of thunder, or the roaring of cannon, than of wind; whilst the sea formed one continued breach over the ship, sweeping every thing moveable before it. During nearly the whole of this period, the passengers, officers, and crew were, without distinction of persons, employed in pumping or bailing, cutting away masts, securing guns, or in other work essential to the safety of the ship; whilst, owing to the impracticability of getting into the hold through the body of water always lodged on the gun-deck, the chief part of the period was passed without food, or even a drop of water to allay the thirst of the men at the pumps, who were with difficulty, and occasionally could not be prevented from swallowing the bilge water as it ascended from the well. And had it not been for the fortunate circumstance of a quantity of this precious beverage being found in the lockers of the great cabin, which had been bottled and placed there by one of the cabin passengers, which was latterly served out at the pumps in wine-glasses, the probability is that we should have literally perished through the want of a liquid, of which there was an abundance in the hold. Our distress, too, was not a little aggravated by two of the twelve-pounders being adrift at once on the gun-deck, causing the greatest consternation lest some port should be stove by their means. Notwithstanding the fore-mast, mizen-mast, main-top-mast, and bowsprit were, at the peril of our lives, alternately cut away, at the close of the third day, we were left with seven feet of water in the hold, and four feet in parts of the gun-deck, frequently with three out of the four pumps choked at a time, and without the slightest prospect of any abatement of the storm. Heaven only knows whether the wonderful alteration which soon took place after the close of this day in our desperate situation, was owing to an especial interference of Providence; but if the elements by which this globe is governed, in its course, are ever for a moment turned aside for the benefit of frail mortality, a scene was now exhibited which might have been deemed sufficiently appalling by an All-merciful Being, to call forth such an interposition.

I have been a witness to many a distressing scene on the ocean in the course of my practice, the recollection of which may in some degree account for these serious reflections, and form some apology for their intrusion here. I have seen a ninety-gun ship take fire, burn nearly to the water's edge, and blow up. This noble ship, which had twelve hundred people on board at the time, many of whom perished in her, notwithstanding every possible exertion was made, with the assistance of the engines of thirty sail of the line and frigates to extinguish the flames, and to rescue the men from destruction. I was once awoke out of my sleep by an explosion which proved to arise from the blowing up of an Indiaman at no great distance from the ship I was in, owing, as it was supposed from the state of the weather, to a flash of lightning having entered the magazine, where five hundred barrels of gunpowder were stowed, destined for the Cape. I need scarcely add that the crew, one hundred in number, were blown into the air, and that not a soul survived to explain the cause, or to record the fact. I was once myself in a ship that was struck by lightning, when some of the masts were shivered into a thousand pieces; and, had not the lightning taken a diagonal direction at the critical moment of its entrance into the body of the ship, the probability is that her destruction would have followed. On another occasion I was in a ship which took fire, when such a formidable volume of flame rushed from the deck beneath, as to render every chance of quenching it apparently hopeless; it was, however, eventually got under by an extraordinary display of skill on the part of an individual, backed by the exertions of the crew. I have been in a storm off the Cape, when, after a sudden shift of wind, the commodore of the fleet, in one of the strongest ships ever built, on her first voyage to sea, crowded with passengers from Calcutta, suddenly disappeared, and was never seen or heard of more; the natural inference was, that she had gone down stern foremost, and that every soul on board had perished. I have experienced the shock of an earthquake at sea, several hundred miles from any land, and consequently beyond the reach of any soundings; the fact having subsequently been proved by accounts from Manilla, the nearest land, where an earthquake on the same day, and nearly at the same moment, had occasioned considerable devastation. So violent was the shock we experienced, that one of the ships of the fleet leaked considerably in consequence. It is the only instance of the kind I ever heard of at such a distance from land; I should like, therefore, to see this extraordinary phenomena philosophically accounted for. The water was not unusually agitated, the wind was moderate, the sky serene, and no one indication of such an event throughout the horizon. Was it, allow me to ask, the effect of electricity? If so, I should wish to be informed how the electric fluid came in contact with the ship, for, if the sea became its only conductor, for as the fleet was spread over several miles of space, and every ship more or less sustained the shock, the whole of that part of the ocean must have been impregnated with it. I once landed from a ship in Table Bay, when, within a few hours of my reaching the shore, she parted from her anchors in a sudden north-wester, and became a wreck. My family were all on board at the time, who, after a night of infinite peril, expecting every moment to be their last, the rudder beaten off, and the ship nearly filled with water, were with difficulty rescued from a watery grave. These and many other distressing scenes of a minor description have I witnessed, but never, in the course of my practice, have I been present at one half so distressing, at least to my own feelings, as the one which I have now more immediately under consideration. Those which I have just taken a cursory review of were, it is true, in some instances, infinitely more fatal in their consequences, and in one case, the momentary pang of affliction could not, I admit, have been surpassed; but the scene I have already given an outline of, and am now drawing to a close, was one of peculiar excitement, painful feelings, and of heavy responsibility. Well may the Psalmist say, "These men see the works of the Lord, and his wonders in the deep." But, to return from this digression. At the close of the third day of this awful hurricane, the cabins below being no longer habitable, the passengers were crowded into one side of the round-house, as being the only cabin from which the water could be effectually excluded. Here, then, a scene of woe was exhibited which baffles description, and was sufficiently appalling to rend the stoutest heart in twain, more especially of his on whom all eyes were turned for consolation or assistance, neither of which was it in his power to offer, even to her who had the strongest of all claims on him for both, and whose peculiarly interesting situation demanded the utmost stretch of his sympathy. The ship, if not absolutely water-logged, was now observed to be settling fast forward. Every countenance exhibited a picture of despair; when, at this critical moment, the wind rapidly began to subside, which was no sooner announced to the people at the pumps, than their labours, which, from a feeling of despondency, had previously languished, were resumed with renewed vigor; and such was the rapidity of the change in our favor, that one of the most dreadful of all storms was speedily lulled into a perfect calm, the ship once more rose freely to the sea, and by day-light on the following morning all the water was discharged from her.

The scene which now presented itself was of a very different description, but still it was not without its alloy, and under any other circumstances might have excited feelings of despondency, instead of excess of joy. The ship lay a helpless wreck on the water, exposed to every surge of the sea, which had not subsided so rapidly as the wind, and which occasioned her to roll most awfully; and now, as she rose on the mountainous billow, every eye eagerly swept the horizon in search of the fleet, but all in vain, for not a ship could be seen; we therefore trembled for their fate. The bowsprit, fore-mast, mizen-mast, and main-top-mast, as before intimated, were all gone by the board, the whole of the live stock, (with a trifling exception,) consisting of 150 sheep, 30 pigs, 4 cows, 3 calves, 8 goats, and many hundred head of poultry, were washed over-board, or otherwise destroyed; nearly all the captain's stores, the medicine chest, and the seamens' chests, with their contents, were in the same predicament. After an anxious scrutiny of the charts, no friendly port was found to be within reach of us; the nearest towards the east was Bencoolen, which, on account of the season of the year, was difficult of approach, and incapable of affording the relief we stood in need of. Towards the west was the Isle of France, then in possession of the French. To proceed direct to the Cape was an undertaking which, at the first blush of our situation, nobody conceived to be practicable. Still, upon a closer inspection of our resources, many difficulties were obviated, and our situation appeared to be far less desperate than we had at first imagined. Our stock of water and salt provisions, which was considerable, was happily found to be uninjured: we had rice and spirits in abundance. Our spare stock of spars, which was also considerable, and well secured before the storm commenced, was safe; we had spare sails, canvass, and cordage sufficient, and we knew our situation to be on the verge of the south-east trade-wind, which blew direct towards the Cape, and the season for entering Table Bay was favorable. After due deliberation at a meeting of the officers of the ship, and the principal passengers, it was unanimously resolved to undertake the voyage to the Cape; and, as an encouragement to the crew to give their spontaneous exertions in favor of this great undertaking, a subscription was immediately entered into, with a view to replace their chests, clothes, &c. which were lost in the storm. Seven hundred pounds were raised for this purpose in the course of a few minutes, (perhaps an unprecedented act of liberality,) which was no sooner communicated to the crew, than they gave three hearty cheers, and declared their readiness to perform every duty required of them; and never was a promise more strictly fulfilled; however, in spite of these but seldom-paralleled exertions, we were eleven weeks in reaching the destined port, after suffering many privations. Still I consider this as one of the happiest periods of my life; and judging from the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

number of cheerful countenances, and the unanimity which reigned throughout the ship, I much doubt whether it were not the lot of every soul on board.

I cannot account for the fact, unless it was owing to the peculiar frame of mind which we had imbibed from our recent deliverance,—a frame of mind which philosophy would spurn at, but which religion might have hailed as the precursor of the only solid happiness destined for man.

The day of our arrival in Table Bay was one of intense excitement, anxious as we naturally were, to ascertain the fate of a fleet from which we had separated eleven weeks before under such unpropitious circumstances. This suspense, however, was of short duration; our worthy Commodore, with five of his convoy, were soon discovered to be safe at anchor in the Bay, the remaining three ships were missing, and, sad to tell, have never since been heard of. Of those which were safe, four, including the seventy-four gun-ship, had been in more or less danger of foundering in the storm, whilst two escaped without injury; owing, as it appeared from a comparison of journals, to their having escaped the brunt of the storm by being considerably to windward of the others; thus corroborating the theory with which I commenced, in my endeavours to prove that where the storm begins there will it soonest end; a great part of the third day, which was by far the most tempestuous with us, these two ships lay perfectly becalmed.

Such were the disastrous effects of this memorable hurricane, from a summary of which I think myself entitled to draw the following practical inference; namely, that had we instantly attended to the timely warning of the Barometer, by bringing the ship to the wind, and making preparations for the storm, instead of scudding before it, until we could scud no longer, we should have escaped with as little injury as the two ships I have just alluded to, and that had the three unfortunate ships which foundered in the storm pursued a similar course, which it may be fairly presumed they did not, a very different fate might have befallen them too.

But, lest the fatal catastrophe of this hurricane should not be deemed sufficiently conclusive, I shall mention the result of another, no less fatal in its consequences, which was encountered in the following season by another fleet of Indiamen, nearly in the same latitude and longitude, whilst under convoy of the late Lord Exmouth. On this occasion four of the finest ships of the fleet, crowded with passengers from Calcutta, were supposed to have foundered, as they were missing immediately after the storm, and were never heard of more. The last time they were seen was by Lord Exmouth himself, when they were observed to be scudding before the gale, whilst the rest of the fleet were lying-to.

Here, then, we have another melancholy instance in point, which, coupled with the preceding, ought to satisfy the mind of the most sceptical seaman, as to the infallibility of the Barometer in indicating the approach of hurricanes, within the tropics more particularly, and consequently of the inestimable value of this instrument to every commander of a ship, and more especially to those whose destination is India.

I am, Sir, your obedient Servant,
MERCURIUS.

LITERATURE.

THE LATE ROBERT HALL, A. M.

THE Works of Robert Hall, A. M. are now completed by Dr. Olinthus Gregory, in six volumes, and these we are glad to find in the South African Public Library collection. But there is another volume from the press relative to Mr. Hall. The Rev. Mr. Balmer has Boswellized many of his conversations with Hall. We copy some of the passages:

"It was interesting and amusing to observe how Mr. Hall's exquisite sensibility to literary beauty, intermingled with, and qualified the operation of his principles and leanings, both as a Christian and Dissenter. Of this, I recollect various instances; but shall give only one. While conversing respecting Archbishop Magee, his talents, sentiments, conduct, &c, I quoted, as a proof of his high-church principles, a remark from a charge then newly published: it was to this effect: That the Roman Catholics have a church without a religion; the Dissenters have a religion without a church; but the Establishment has both a church and a religion. Mr. Hall had not heard the remark before, and was exceedingly struck with it. 'That, sir,' he exclaimed, smiling, 'is a beautiful saying. I have not heard so fine an observation for a long time. It is admirable, sir.' You admire it, I presume, for its point, not for its truth. *H.* 'I admire it, sir, for its plausibility and cleverness. It is false, and yet it seems to contain a mass of truth. It is an excellent stone for a churchman to pelt with.

"*Balmer.* May I ask, sir, what writers you would most recommend to a young minister? *H.* 'Why, sir, I feel very incompetent to give directions on that head; I can only say that I have learned far more from John Howe, than from any other author I ever read. There is an astonishing magnificence in his conceptions. He had not the same perception of the beautiful, as of the sublime; and hence his endless subdivisions.' *B.* That was the fault of his age. *H.* 'In part, sir; but he has more of it than many of the writers of that period, than Barrow, for example, who was somewhat earlier. There was, I think, an innate inaptitude in Howe's mind for discerning minute graces and proprieties, and hence his sentences are often long and cumbersome. Still he was unquestionably the greatest of the Puritan divines.'

'After adverting to several of Howe's works, Mr. H. said, in reference to his 'Blessedness of the Righteous:' "Perhaps, Baxter's 'Saint's Rest' is fitted to make a deeper impression on the majority of readers. Baxter enforces a particular idea with extraordinary clearness, force, and earnestness. His appeals to the conscience are irresistible. Howe, again, is distinguished by calmness, self-possession, majesty, and comprehensiveness; and for my own part, I decidedly prefer him to Baxter. I admire, exceedingly, his 'Living Temple,' his sermon on the 'Redeemer's Tears,' &c.; but, in my opinion, the best thing he ever wrote, is his defence of the sincerity of the Gospel offer. I refer to the treatise, called, the 'Reconcilableness of God's Prescience of the Sins of Men, with his Counsels, Exhortations, and whatever other Means he used to prevent them.' This I regard as the most profound, the most philosophical, and the most valuable of all Howe's writings."

"*B.* 'Do you think highly of Dr. Owen?' *H.* 'No, sir, by no means. Have *you* read much of Owen, sir; do you admire him? *B.* 'I have read his Preliminary Exercitations to his great work on the Hebrews; his exposition of particular verses here and there; his book on church government; and some of his smaller treatises. I do not greatly admire him, nor have I learned much from him.' *H* 'You astonish me, sir, by your patience You have accomplished a Herculean undertaking in reading Owen's Preliminary Exercitations. To me he is intolerably heavy and prolix.'"

"'Pray, sir,' I said, 'do you admire Macknight as a commentator?' 'Yes, sir,' he replied, 'I do, very much; I think it would be exceedingly difficult indeed to come after him in expounding the Apostolic Epistles. I admit, at the same time, that he has grievous deficiencies: there is a lamentable want of spirituality and elevation about him. He never sets his foot in the other world if he can get a hole to step into in this; and he never gives a passage a meaning which would render it applicable and useful in all ages, if he can find in it any local or temporary allusion. He makes fearful havoc, sir, of the text on which you preached to-day. His exposition of it is inimitably absurd.' The text referred to was Ephesians i. 8

"Mr. Hall repeatedly referred to Dr. ——," (query, Chalmers?) "and always in high admiration of his general character. The following are some remarks respecting that extraordinary individual. 'Pray, sir, did you ever know any man who had that singular faculty of repetition possessed by Dr. ——? Why, sir, he often reiterates the same thing ten or twelve times in the course of a few pages. Even Burke himself had not so much of that peculiarity. His mind resembles that optical instrument lately invented: what do you call it?' *B.* 'You mean, I presume, the kaleidoscope.' *H.* 'Yes, sir, it is just as if thrown into a kaleidoscope. Every turn presents the object in a new and beautiful form; but the object presented is still the same. Have you not been struck, sir, with the degree in which Dr —— possesses this faculty?' 'Do you not think, sir,' I replied, 'that he has either far too much of this faculty, or that he indulges it to a faulty excess?' *H.* 'Yes, sir, certainly: his mind seems to move on hinges, not on wheels. There is incessant motion, but no progress. When he was at Leicester, he preached a most admirable sermon, on the necessity of immediate repentance; but there were only two ideas in it, and on these his mind revolved as on a pivot.'"

"On the return of the Bourbons to France, in 1814, a gentleman called upon Mr. Hall, in the expectation that he would express himself in terms of the utmost delight on account of that signal event. Mr. Hall said, 'I am sorry for it, sir. The cause of knowledge, science, freedom, and pure religion, on the Continent, will be thrown back half a century; the intrigues of the Jusuits will be revived; and Popery will be resumed in France with all its mummery, but with no power, except the power of persecution.' This opinion was expressed about six weeks before the issuing of the Pope's bull for the revival of the order of Jesuits in Europe, 7th August, 1814.

"A few years afterwards, Mr. Hall, on an allusion being made to the battle of Waterloo, remarked, 'I have scarcely thought of the unfilled prophecies, since that event. It overturned all the interpretations which had been previously advanced by those who had been thought sound theologians, and gave new energy to the Pope and the Jesuits both of whom seemed rapidly coming to nothing, as the predictions seemed to teach. That battle, and its results, seemed to me to put back the clock of the world six degrees.'"

"On being asked if he had read the Life of Bishop Watson, then (in 1818) recently published, he replied that he had, and regretted it, as it had lowered his estimate of the bishop's character. Being asked, why? he expressed his reluctance to enlarge upon the subject; but added, 'Poor man, I pity him! He married public virtue in his early days, but seemed for ever afterwards to be quarrelling with his wife.'

"He did not like Dr. Gill as an author. When Mr. Christmas Evans was in Bristol, he was talking to Mr. Hall about the Welch language, which he said was very copious and expressive. 'How I wish, Mr. Hall, that Dr. Gill's works had been written in Welch—I wish they had, sir; I wish they had, with all my heart, for then I should never have read them. They are a continent of mud, sir.'

"John Wesley having been mentioned, he said, 'The most extraordinary thing about him was, that while he set all in motion, he was himself perfectly calm and phlegmatic: he was the quiescence of turbulence.'

"He spoke of Whitfield as presenting a contrast in the mediocrity of his writings to the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

wonderful power of his preaching; of the latter there could be no doubt, however; but it was of a kind not to be represented in writing; 'it is impossible to paint eloquence.'"

NATURAL HISTORY & SCIENCE.

INFERIORITY OF MODERN OAK TIMBER—THE ROT—DRY ROT, &c.

COMPLAINTS are every day made of the badness of the oak timber now, as compared with what it was formerly; and these complaints are well founded. What with dry rots in confined air, and rots in water, and slow decomposition in the atmosphere, modern oak, which is, generally speaking, planted oak, is absolutely less durable than even some of the inferior species of pine, and far inferior to the native pine of the mountains. A piece of heart of oak, chosen by the king's builder for royal purposes, had been seasoned and prepared in the most careful manner; and after that, it had been kept dry in the centre of a trussed beam for more than twenty years. It is not easy to imagine how a more desirable specimen of oak timber could be procured; and it certainly looked well. The colour was good the grain close, and the texture very hard and firm to the tool. Well, a piece of this same oak was let into the ground, in a dry soil, and so situated that no drip fell upon it, or trickled down it; and it remained between three and four years. Upon its being taken up, all that portion of it which had been in the ground was in the same condition as the alburnum, or sap-wood, of very old oak piles when they are taken out of the water,—more like compact clay than timber; and when dried, it "broke short," and crumbled into powder. In colour it was more like rotten pear-tree than rotten oak, for there was no blackening, and yet the soil contained a good deal of iron, so that the timber must have been deficient both in tannin and gallic acid.

It was not, as has been said, the sap-wood, but the very best part of the tree, and from inspection of the cross-cut, the tree had not grown with any very extraordinary rapidity. As little was the injury done at the "weather line," just by the surface of the earth, where the durability of timber is put to the severest test; for the decay extended not only to the entire portion of the part that was in the ground, but also to a cross piece, which was nearly two feet below the surface, and which, of course, had no weather-line, from which its decay could originate. Some pieces of American white pine, which is considered to be the worst timber of the whole pine tribe, were put down for the purpose of keeping the durable "heart of oak" steady, till the earth should be consolidated about it. When taken up, these were entire and merely wet, while the said heart of oak was completely gone!

But that was not the case with oak of former growth: those oak posts and beams, in the earth and out of it, in all sorts of situations with regard to damp, confined air, and all other circumstances which are usually charged as being the causes of rot in the modern oaks. There are old piles drawn out of foundations in the water, where they must have been for upwards of five hundred years; and though the sap-wood of them is in a state of decomposition, and the heart champs when too suddenly exposed to the drought, yet the heart of those, properly treated, is as sound as when it was put down. In the peat-bogs, and other submerged forests, too, there is abundance of oak; and if care be taken in the drying of it, that oak is as hard and durable, at the same time that it is as black, as ebony.

But our modern oak will not last as many years, in some instances not as many months, as the old oak lasted centuries. The specimen, upon which the above experiment was made, was of chosen oak, picked in the royal forest, and, therefore, presumable to have been the very best that could be procured, and yet, had it not been protected by the pine beam in which it had been cased up, the probability is, that it would not have lasted any longer in its first situation than it did in its last. To build houses of such oak is mockery, to build ships of it is cruel; for while they have the external appearance of soundness, they may go to pieces with the least strain, and bury all on board in the deep. Only that the fungi are not of the right species, such timber would answer the purpose of the mushroom-grower far better than that of the builder or the ship-carpenter; for the timbers go into their places loaded with mushroom spawn, and, in fact, progress to the state in which that generates; and so, in as far as oak is concerned in their structure, we have mushroom houses and mushroom ships.

What is the cause? Why should it be that when navigation is every day increasing in extent and value, the grand engine of navigation should be deteriorating every day? "The dry rot," is the answer. Well, be it so: what is the dry rot?

DRY ROT. (*Xylostroma Giganteum.*)

"*Xylostroma giganteum*, which grows in the timber, like a thick broad patch of dull yellow leather, or *serpula distruens* in other instances, which is smaller, redder in the colour, and whitish at the edge; but that last is as often found upon other timber as upon oak." Well, that is not a point worthy of much dispute; the timber is destroyed, and generally speaking these are fungi; but it is just about as sensible to call those fungi "dry rot," as it would be to call flowing blood "a wound," or the worms that consume the body "death." Why come the fungi there? There was a time when dry rot was unknown; and as long as the beams of houses were of good oak, or chesnut, or red pine from the north of Europe, there was no information laid against serpula. Besides, there never appeared a single fungus of any species upon or near the piece of oak in the experiment, and yet it passed from what may be regarded as the best state that it could be in for duration, to absolute uselessness, in so short a time, that if a ship were to decay as fast, the whole freight that could be obtained would not pay for the trenails. How is the same dry rot to be got rid of? "Oh, wash the timbers with sulphate of iron, and other saline solutions, and let the ship, or the house, as it may be, be well ventilated." The old story. "Call in the doctor, apply a lotion, and exhibit a bolus," under which the diseased have continued to die ever since medicine was a science. Are ships kept less clean now, than they were before the dry rot was heard of? or are they or houses worse ventilated? Truly not. If there be any difference, the ships must be kept sweeter, else the chlorides, and other powerful fumigations have been invented and applied to little purpose. The crews certainly keep their health better than they did formerly; and it would be somewhat wonderful, if air which were more wholesome for human beings, should be more deadly for oak timber! As for the houses again; there are certainly more under-ground apartments than there were once, and possibly more than it is wise to have. It may happen, too, that the tax upon windows has impaired the ventilation by those apertures; but in many of the modern houses, and those especially where the rot appears, the loss of ventilation by windows has been more than made up in ventilation by walls, many of which are so thin, and of materials so infirm, that, in as far as air is concerned, the fabric is ventilator all over.

But fungi, by what name soever they may be called, are not locomotive destroyers; they do not, full grown, career over the land and the waters, to prey upon sound timber, as hawks do to prey upon birds, or wolves to prey upon sheep. The *sporæ*, or whatever else the small, and generally invisible germs of the fungus may be called, are perfectly passive, and of themselves can do no more harm to an oak beam, then could be done by a mustard seed. The soil, in which alone it can germinate, or *begin* its action, is rotted wood. If it meet with that, it will germinate; if not, it will remain inactive. There is no doubt that the increasing quantity of rotted timber has increased the number of those plants; but that has in no way altered the law of their nature, which is to grow in rotten wood, but not in wood which is sound. The only rational view of the case, therefore, is that the timber must be rotten before the fungus can act even in the slightest degree: and that, consequently, the fungus is produced by the rot, and not the rot by the fungus; and though the fungus is destroyed, the rot will go on probably as fast as if the fungus were not there; only as the fungus has a great attraction for moisture, and as moisture, though not the cause, is an instrument in producing the rot, the fungus may, when it appears, hasten the destruction.—(*Mudie.*)

WOOL OF THE INDIAN DESERT.

The wool of the sheep pastured in the desert is the staple commodity both of manufacture and trade in this region. It is worked into every article of dress, both male and female, and worn by all, rich and poor. It is produced from the loom, of every texture and quality, from the coarse *looie* or 'blanket,' at three rupees per pair (six shillings), to thirty rupees. The quality of these last is very fine, of an intermediate texture between the shawl and camlet, and without any nap: it is always bordered with a stripe of chocolate brown or red. Of this quality are the *do-patis* or 'scarfs' for the ladies. Turbans are also manufactured of it, and though frequently from forty to sixty-one feet in length, such is the fineness of the web, that they are not bulky on the head. (*Tod's India.*)

INDIAN METHOD OF CULTIVATING THE POPPY.

When the crops of Indian corn (*mukhi*) or of hemp (*sunn*) are gathered in, the stalks are rooted up and burned; the field is then flooded, and, when sufficiently saturated, ploughed up. It is then copiously manured with cow-dung, which is deemed the best for the purpose; but even this has undergone a preparatory operation, or chimical decomposition, being kept in a hollow ground during the rainy season, and often agitated with long poles, to allow the heat to evaporate. In this state it is spread over the fields and ploughed in. Those who do not keep kine, and cannot afford to purchase manure, procure flocks of goats and sheep, and pay so much a night for having them penned in the fields. The land being ploughed and harrowed at least six or seven times, until the soil is almost pulverized, it is divided into beds, and slight embankments are formed to facilitate irrigation. The seed is then thrown in, the fields are again inundated; and the *seventh* day following this is repeated to saturation. On the *seventh* or *ninth*, but occasionally not until the *eleventh* day, the plant springs up; and on the *twenty fifth*, when it has put forth a few leaves, and begins to look withered, they water it once more. As soon as this moisture dries, women and children are turned into the fields to thin the plants, leaving them about eight inches asunder, and loosening the earth around them with iron spuds. The plant is at this stage about three inches high. A month later, it is watered moderately, and when dry, the earth is again turned up and loosened. The fifth water is given in about ten days more; two days after which, a flower appears here and there. This is the signal for another watering, called 'flower-watering;' after which, in twenty-four or thirty-six hours, all the flowers burst their cells. When about half the petals have fallen, they irrigate the plants sufficiently to moisten the earth, and soon the rest of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the flowers drop off, leaving the bare capsule, which rapidly increases in bulk. In a short period, when scarcely a flower remains, a whitish powder collects outside the capsule, which is the signal for immediate application of the lancet.

The field is now divided into three parts, in one of which operations commence. The cutting-instrument consists of three prongs, with delicate points, around which cotton thread is bound to prevent its making too deep an incision, and thus causing the liquid to flow into the interior of the capsule. The wound is made from the base upwards, and the milky juice which exudes coagulates outside. Each plant is thrice pierced, on three successive days, the operation commencing as soon as the sun begins to warm. In cold mornings, when it congeals rapidly, the coagulation is taken off with a scraper. The fourth morning, each plant is once more pierced, to ascertain that no juice remains. On each morning this extract is immersed in a vessel of linseed oil, to prevent it from drying up. The juice being all collected, there remains only the seed. The capsules are therefore broken off and carried to the barn, where they are spread out upon the ground; a little water is sprinkled over them, and being covered with a cloth, they remain till the morning, when the cattle tread out the seed, which is sent to the oil-men, and the refuse is burnt, lest the cattle should eat them, as even in this stage they are poisonous. Poppy oil is more used for the *cherag'h* (lamp) than any other in Méwar. They calculate a maund (of forty seers, or about seventy-five pounds weight) of seed for every two seers of milk. The price of seed is now twenty rupees per *mani* of one hundred and twelve *(cutcha)* maunds.—(*Ib.*)

THE CAMEL OF THE DESERT.

The camel, 'the ship of the desert,' deserves the first mention. There he is indispensable; he is yoked to the plough, draws water from the well, bears it for his lordly master in *mesheks*, or 'skins,' in the passage of the desert, and can dispense with it himself altogether during several days. This quality, the formation of his hoof, which has the property of contracting and expanding according to the soil, and the induration of his mouth, into which he draws by his tongue the branches of the *babool*, the *khér*, and *jowás*, with their long thorns, sharp and hard as needles, attest the beneficence of the Supreme Artist. It is singular that the Arabian patriarch, who so accurately describes the habits of various animals, domestic and ferocious, and who was himself lord of three thousand camels, should not have mentioned the peculiar properties of the camel, though in alluding to the incapacity of the unicorn (rhinoceros) for the plough, he seems indirectly to insinuate the use of others besides the ox for this purpose. The camels of the desert are far superior to those of the plains, and those bred in the *t'huls* of Dhât and Barmair are the best of all. The Rajas of Jessulmér and Bikanér have corps of camels trained for war. That of the former state is two hundred strong, eighty of which belong to the prince; the rest are the quotas of his chiefs; but how they are rated, or in what ratio to the horsemen of the other principalities, I never thought of enquiring. Two men are mounted on each camel, one facing the head, the other the rear, and they are famous in a retreating action: but when compelled to come to close quarters, they make the camel kneel knows, tie his legs, and retiring behind, make a breastwork of his body, resting the matchlock over the pack-saddle. There is not a shrub in the desert that does not serve the camel for fodder.—(*Ib.*)

A USEFUL VEGETABLE PRODUCTION OF THE EAST INDIES.

The *khureel*, or *khyr* (the *capparis*, or caper-bush), is well-known both in Hindust'han and the desert: there they use it as a pickle, but here it is stored up as a culinary article of importance. The bush is from ten to fifteen feet in height, spreading very wide; there are no leaves on its ever-green twig-like branches, which bear a red flower, and the fruit is about the size of a large black currant. When gathered, it is steeped for twenty-four hours in water, which is then poured off, and it undergoes, afterwards, two similar operations, when the deleterious properties are carried off; they are then boiled and eaten with a little salt, or by those who can afford it, dressed in ghee and eaten with bread. Many families possess a stock of twenty maunds.—(*Ib.*)

Method of finding the Course of the Air when the Wind is still.—Place a basin of water in a free exposure, throw a red hot cinder into it, and observe how the smoke which it produces inclines. Sailors throw a piece of live coal into the sea for the same purpose; and also wet a finger, hold it up in the air, and then by feeling which part becomes (by evaporation) cool, they judge of the direction of the current of air. An instrument on the last principle has been invented by Dr. B. M. M. Forster.—*Mec. Mag.*

Method of preserving Seeds fit for Vegetation.—Fill an old cask half full of earth, put the seeds as near as possible to the middle of the cask, then fill the latter entirely with moist earth, pressing it down, and finally closing the cask so that neither air nor water may enter it. Keep it from contact of sea water. In this manner seeds may be brought from the East Indies or New Holland in a state of perfect preservation and fit to vegetate.—*Gardener's Mag.*

Colour of the Eyes.—In a scarce treatise, "De Coloribus Oculorum," by Portius, it is remarked, that in blue eyes the interior membranes are less abundantly provided with black mucus, and are thence more sensible to the action of light. That sort of eyes suits the inhabitants of the north during their long twilights; while the deep black of the negroes serves to support the vivacity of the light. The blue of the Laplander's eyes, however, but ill supports the light reflected from the snow, and renders them subject to cataract.

The Sun a Body of Ice.—Many opinions have been formed concerning the sun, which philosophers have sometimes ridiculed, and sometimes seriously refuted. But of all the paradoxical assertions respecting that luminary, none equal to Mr. Palmer's, for that gentleman positively asserts it to be a body of ice! The following is the title of Mr. Palmer's book: "A Treatise on the Sublime Science of Heliography, satisfactorily demontrating (!) our great orb of light, the Sun, to be absolutely no other than a body of ice, by Charles Palmer, Gent."—8vo. 1799.

Sponge Fishery.—In the bottom of the sea which washes the shores of the Cyclades, the common sponge is found in abundance, and farms the principal source whence the inhabitants derive their maintenance, trafficking it with the Turks, among whom it is in great request for cleansing their baths. Sponge-diving is consequently the principal employment of the population of the Cyclades, and it is said no young man of the island is permitted to marry, till he can descend with facility to a depth of twenty fathoms. The sea is at all times extremely clear, and the experienced divers are capable of distinguishing from the surface the points to which the animal has attached itself below, when an unpractised eye could but dimly discern the bottom. Each boat is furnished with a large stone attached to a rope, which the diver seizes in his hands on plunging head-foremost from the stern, in order to increase the velocity of his descent through the water, thereby saving an expenditure of breath, as well as to expedite his ascent, being hauled up quickly by his companions when exhausted at the bottom. I have seen but one man who could remain below more than about two minutes, and the process of detaching the sponge was of course very tedious: three, and sometimes four divers descending successively to secure a peculiarly fine specimen.—*Emerson's Letters from the Ægean.*

Coffee of Acorns.—Coffee made of acorns is less stimulating than the cinchona; hence it possesses the advantages without the inconveniencies of the astringents—the stomach bears it better. In fact it is an excellent stomachic, and its effects are not limited merely to increase of tone in the digestive organs and obstructions kept up by debility. The acorn coffee has also the property of being nutritious, as shown by the *embonpoint*, of those who take it. The infusion of acorns is one of my favourite remedies in asthma, cough, incipient rachitis, mesenteric atrophy. Continued for a long period, it is one of the most powerful means in our reach for destroying even the deepest rooted scrofulous disposition. I have often caused it to be taken six months in succession, with a success so complete, that by it alone, I have dissipated mesenteric obstructions of the worst character.—*Huflande.*

LITERARY EXTRACTS.

EARLY ENGLISH NAVY—STRUGGLES WITH THE DUTCH.

In the early wars between the English and the Dutch, it cannot be denied that the English fought promiscuously and under no controuling regulation that could give harmony to their manœuvres. Hence the successes of the brave Van Tromp. The old Tory Clarendon was highly pleased with these victories, and thanked God "that the Hollanders had so thoroughly banged the devilish English rebels!" But the fate of Holland was decided in 1653. She never recovered her losses. In one year and eleven months the English captured no less than 1,700 prizes, valued by the Dutch themselves at a sum nearly equal to six millions sterling of English money. The concession to England of the flag, by the States of Holland, was formerly made in the treaty which was concluded at Westminster, 5th April, 1654. In Cromwell's victorious days, the Press was just beginning to find its level, "The Laughing Mercury" was a paper then started. The following is a specimen of the sort of commodity which in the middle of the 17th century, passed for newspaper wit;

"Now Neptune binds his curled brow,
His rolling billows tumble;
The Dutch to sink, the Lord knows how;
Tarpaulins curse and grumble.

"Our navy brave, stout men-of-war,
That in the channel ride,
Will make those sons of pitch and tar
Full dearly rue their pride.

"The devil sure, intends a feast,
For to invite all rich-men,
Having provided at the least
A shoal of pickled Dutch-men.

"Avant, ye sponges, sowes in ruffes,
Ambyna we'll revenge!
When we have made the sea your tomb,
We'll squeeze out your Orênge."

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.
(By Vivian.)

The Press,— The Advertiser,—Standard of Right and Wrong,—Political Economy,—Religious Establishments,— Litigation or Law,—The "Juvenile Emigrants," &c.

Enough, we imagine, has been said "line upon line" in this Journal, indicative of our respect for the Press, and that portion of it in particular, which now calls forth our serious notice That the commendations which we have thought proper to bestow on the *Advertiser*, have been sincere, and without hypocrisy, is best proven by the pecuniary sacrifices which it has cost us in the maintenance of our opinions in its favour. For be it known unto you, men and brethren, that the sale of the *Literary Gazette* might have been extended three-fold, had we succumbed to the one-eyed monster the mob, and joined in the clamour against certain philanthropic principles, of which the paper in question has been the steady and uncompromising advocate. There is something extremely perverse in human destiny—how seldom does it happen that our desires are attained, or that even in the best of causes the victory and the triumph are of long continuance. At one time, the *Advertiser* directed, and had an uncontrollable influence over the public mind. But how capricious, hollow, transient, and provoking is the huzza of the *vox populi!* The same voice that cries out *Hosannah!* exclaims *Crucify! crucify!* A man must be made of no common materials who can, as does the *Advertiser*, continue an undeviating course, in defiance of daily impediments and *unappeasable* opposition: and without a single *cheer* in this colony, (except from ourselves,) to comfort and animate. Happy should we be that this enemy to all monopolies, were more disposed to *permit* others to form their opinions of men and things, and less inclined to denounce them as fools and heretics who differ from his *mode*. Under such circumstances, we should take great pleasure in adding *one cheer more*. But at present we have a public duty to perform, and any forbearance on our parts would be criminal.

Our points of difference with the *Advertiser* are not, we conceive, of trifling import;—they connect themselves with four distinct subjects.

1st, The principles of Morality, *i.e.* the Standard of Right and Wrong.
2dly, Religious Establishments.
3dly, Political Economy.
4thly, Juvenile Emigrants.
5thly, Litigation or Law.

On the first head, as connected with *ethics*, we shall simply advert to the criticisms of the *Bengal Hurkaru*. This paper has been extremely free in its remarks on the *Advertiser*, for an alleged inconsistency on the part of the latter in defending a certain Ordinance promulgated during the last year in this colony. We can give no opinion as to the *intrinsic* merits of this Order in Council. We thought, at the time it was passed, something of the kind seemed desirable. But the question is, was it in accordance with the *avowed principles* of the *Advertiser* to defend it? Its best friends have decided—*Certainly not*. Hence the charges of inconsistency have never been refuted. How much do men err who advocate the unscriptural doctrine of *Expediency*. "Whatever is *expedient* is right," is the high language of Dr. Paley, and from the doctor, we suspect, the *Advertiser* has borrowed his notions of moral philosophy. Whatever is expedient is right, soliloquizes the moon light adventurer into the poultry yard: "It will tend more to the sum of human happiness that my wife and I should dine on a capon, than that the farmer should feel the satisfaction of possessing it;" and so he mounts the henroost. We do not say that this hungry moralist would reason soundly, but we think he would not listen to the true philosophy which replied, 'Oh, your reasoning is incomplete: you must take into account all consequences, collateral and remote; and then you will find that it is more expedient, upon the whole, and at the long run, that you and your wife should be hungry, than that hen-roosts should be insecure." Whenever a public writer is drawn aside to advocate the doctrine in question, we shall always discover a continual fluctuation and uncertainty, both in principles and in practical rules; a continual endeavour to "serve two masters"

2dly. *Religious Establishments*. We always dislike tempers inclined to suspicion, still we confess we could not help, at times, from certain opinions half expressed by himself, to suspect the *Advertiser* as *unsound in the faith*. The thing is now too true to be doubted; hence in his Paper, June 8th, we find that a "Church established by law" is considered worthy a sneer! "a *monopoly* of state favour in behalf of one *sect*." So, then, religion is a mere *noun of multitude*, or nomen collectivum, and poor England's views are to be directed by the *thousand and one* diversities of shifting opinions which assail her. The National Church was deemed in the *dark age* of Queen Elizabeth, in the *unenlightened* times of Burleigh, Hooker, Spenser, Shakspeare, and Lord Bacon, a great venerable estate of the Realm; but now, by the intellect of the Cape, it has been determined to be merely a *monopoly of state favour*. Farewell to England's truest happiness and greatest glory, when the moderns lay violent hands on the ark of the national faith. Farewell to Scotland's brightest gem, when the levellers shall prostrate the Church of that far-famed land. No *voluntary association*, the boast of these days, can be substitute for a *permanent* nationalized order,—the essential element of a rightly constituted nation. It is a national church with a national clergy, in their *pastoral* and *parochial* character—forming a grand estate of the realm, that is the especial and constitutional organ for dispensing sound and wholesome truth to the people. The established clergy have long been the principal bulwark against barbarism, and the link which unites the sequestered peasantry with the intellectual advancement of the age; and what, in landscape, is comparable with that of the Village Church? It is the visible centre of a community of the living and the dead; a point, to which are referred the nearest concerns of both. But, then, the abuses which attach to establishments. O, aye! these had nearly escaped our notice. Respecting such, we have great pleasure in adopting a reply in the language of no less a writer than Dr. McCrie, the historian of Knox and Melville. 'Persons,' says the Doctor, 'by fixing their attention immoveably upon certain evil abuses which attach to, or result from the establishments with which they are acquainted, are in danger of overlooking the more general and extensive good which they are calculated to produce, or may be rendered subservient unto; and, instead of seeking the correction of abuses, and the redress of grievances, they are ready to look forward with big expectations to a total revolution in such matters, without taking into view, or being aware of the infinitely greater evils which would arise from a new order of things. The system which would *equalize all kinds of religion in the eye of the law*, which proclaims an universal right and liberty in such matters and deprives religion and its institutions of the countenance and support of human laws; though it has a specious and inviting appearance, contains in its bowels, like the Trojan horse, an host of evils, which, issuing forth, would spread devastation around, and soon lay the bulwarks and palaces of christianity in the dust.'

Proceed we now from the church to the world.

III *Political Economy*.—This is rather a favourite subject with the *Advertiser*, and it is most probable that people slide into his opinions without the trouble of inquiring as to the accuracy of many of his statements. That he writes with *cleverness* nobody doubts—but this is not the time for compliment. The *Advertiser*, (May 11th,) has taken up the fashionable theme *East India Monopoly*, i.e. the China Trade. Now, we do not consider this any monopoly at all. A monopoly includes the power to sell or hold back, to lower or to raise prices. That the East India Company possess a *privilege*, we do not deny; but this is very distinct from monopoly The Company cannot chuse their own time for sale; they are *compelled* to make certain periodical sales in the year, of offering at each sale a quantity at least *equal* to the last preceding demand; they are obliged to put up their tea at *prime cost*, and to sell at an advantage of *one penny* (they do at *one farthing*,) on the upset price; they are necessitated to have always on hand a stock of tea amounting to at least *one year's* consumption, estimated by the quantity consumed in the previous year; their ships are under legislative enactments, being equipped for the *defence of the country*, as well as for commerce; their profits derivable from the tea trade are disposed of by the command of the Legislature, beyond the control of the Company. In fact it does not appear, on taking a strictly impartial view of the subject, that the Company hold simply a political, as well as a commercial *trust*, which, tested by long-tried experience, has been proved not only eminently serviceable to the British nation at large, but of infinite advantage to the eastern empire, and all its dependencies. It is truly ridiculous in the *Advertiser* to talk about the small private account which the inhabitants of this colony have to settle with the Company in respect of high prices. How did it happen that for so many years past the *free-traders* forced upon us *one* exorbitant price in the article of coals; and how is it that the *free-traders* so frequently cause a scarcity, and just charge what they please in the articles of coffee and sugar? Let the tea-trade come into similar hands, and we will venture to assert that, next to an indifferent commodity, we shall either have none at all, or be compelled to pay that price which the one, two, or three holders of stock may happen to demand. The question of the tea-trade is really worth more than a mere cursory glance. Let us consider for a moment that, from the sale of vegetable leaves, collected on the mountains of a distant continent, the immense sum of *sixty-seven millions sterling* has been collected at a mere nominal expense, and without trouble.*

The *Advertiser* expatiates with seeming satisfaction on the falling off of what he terms the "favoured trade," and exults on the prosperity of what he is pleased to designate the "free." But how are the facts in this case? Precisely the reverse of his statements. Every attempt to force a consumption of tea by the boasted *free trade* has been attended with a diminution in demand, a decrease in revenue, and a deterioration in quality, as in the United States and other countries. And as to cheapness, *all circumstances considered*, the price of tea is comparatively as low in England as in America, or on the continent of Europe. And instead of a decline in the trade, and as far as the government taxation admitted, tea has augmented more than other articles of general demand, notwithstanding there being either greater stimulants, such as wine, coffee, tobacco, sugar, &c. The real state of the case is, that the Company have, by a judicious proportioning of the supply to the demand, raised the consumption of tea (an immense gain to morals and *temperate* habits) to its present enormous amount of *thirty millions of pounds*;† since the last renewal of the Charter, their supply of cheaper tea has been increased more than one thousand per

* The cost of collecting 67,000,000 sterling, was only £180,000.

† In the space of 100 years, viz: from 1710 to 1810, there were sold at the East India Company's sales 750,219,015 lbs. of tea, the value of which was £127,804,595 sterling!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cent.* while the price has been lessened nearly 50 per cent. The *Advertiser* now directs us to those wondrous gentry, the free-traders of Hamburgh, and New York, in America, and contemplates with much apparent satisfaction, the better order of things in those places than in England. The truth is, the Americans, with others, imagined that nothing was more requisite as a proof of their *free institutions*, than to deluge the country with tea. The result of this mistaken policy has been severely felt by the government of the United States, in a defalcation of the revenue on tea to the amount of several millions; and the bankruptcy of many ship-owners engaged in the American China-trade, especially Mr. E. Thompson, who paid to his government a greater amount of duties than any individual ever did, *(fourteen millions Spanish dollars,)* will best illustrate the advantages of a system which is eagerly desired by a few persons to introduce into England. With regard to the Hamburgh prices, it has been proven before Parliament that teas were selling in that city for *ruinous* prices,† and therefore a comparison of home and foreign prices is rendered fallacious. The British nation is indebted to the East India Company for the origin of the tea-trade, "one of the most extraordinary phenomena in the history of commerce;" and by destroying which, we may, as was said to be the case with the Sybilline *leaves*, have to pay a higher price for a diminished value.

The next scene in our moral kaleidiscope, is act the fourth in the farce of the *Charles Kerr*, and the twenty juvenile *emigrants!!!* Without boasting, we trust we commiserate the unfortunate, and are as well-wishers to the youths in question as our neighbours, and we do not mean to yield to any one of them in our hearty desires that they may do well. But after the perusal of Capt. Brenton's circular, we considered it right freely to extract from the same, and warn the public against the new *vagrancy* act which was attempted at the Cape. For this part of our public duty, some illiberal and unjust sayings and denunciations have been uttered against us by the *Advertiser*. We considered in the first place that the Cape Committee had unwarrantably applied a *fanciful* designation to a *vagrant* subject. And secondly, we commented on Capt. Brenton's text with all possible faithfulness and freedom. It is a sad misfortune with our friends, the Whigs, that whenever they are out of temper, or cannot find words enough to knock you down, or fail in setting the mob at you, to turn litigants, and, like Bluster in the play, talk about the Law of Libel, and boast that the "glorious uncertainty" affords a remedy for "all kinds of wrong."

But the sequel of the business is curious enough. In adverting to it, we do most unaffectedly declare, that we desire no triumph over a public writer who has, like the *Advertiser*, been led astray by the impetuosity of his zeal. All that we said or supposed of the youths, has been confirmed by Capt. Brenton himself, in a letter to H. Maynard, Esq. which has been published in the *Graham's Town Journal*.‡ In reference to the *Law*, we thank the *Advertiser*, as it affords us an opportunity of stating our differences with him on this head; hence we shall move a special court on the subject. In these days of more than ordinary abuse of the Press, or the gift of speech, an appeal to the Law is too frequently the ill-judged result. We shall examine the question somewhat seriously.

V. We shall take high ground, and contend that the boundaries of freedom and falsehood cannot be defined by jurisprudence. That the publishers or utterers of wicked statements frequently act criminally is certain: but still it is to be inquired whether they can be efficiently punished so as to produce reformation, example, and redress? And here we are presented at the out-set with a great impediment, resulting from the nature of fixed law. For if a libeller is to be legally punished, the law must give some definition of what libel is. Now, it is actually impossible to frame any definition which shall not either on the one hand give license to injurious sayings or writings, by its laxity, or on the other prohibit a just publication of the truth by its rigour. The *Advertiser*, in his recent zeal for litigation as it regards ourselves, should recollect that the statutes which prevent men from publishing libels, prevent them also from publishing truths—truths which all men ought to hear. We really wish the *Whigs* could be brought to consistency of principle. But this is a political allusion, and politics we must avoid; and, by-the-bye, we may as well observe, that in the present discussion, we mean no reference to political libel; *i. e.* publications to the discredit of the Government. We only notice, *en-passant*, Charles James Fox, who considered the law of libel in a two-fold sense. He remarked that *private* libels, some of the true as well as the false, might rightly be punished by the state; but in questions relating to "public men," says he, "*verity*, in respect of public measures, ought to be regarded as a complete *justification* of a libel." Whether truth be a justification of a political libel is one question,—whether such ought to be punished by law, is another. There are good reasons why falsehoods should *not* be punished by the law,—(the *Advertiser* is quite welcome to the other side of the question.) If the statement be true, it is commonly right that the truth should be publicly known; if it be false, the mischief is better remedied by publicly *shewing* the falsehood, than by other means. Surely, to repel the aspersions upon public men by shewing that it is unfounded, is more consistent with the dignity of a government, than to pursue the vituperator with fines and imprisonment. Besides, a prosecution often loses its end—*party* often recompenses the alleged victim for his sufferings or his losses. In the days of Mr. Pitt, a person published a libel which that celebrated statesman declared in the House of Commons to be "the most infamous collection of sedition and treason ever published." The man was prosecuted, found guilty, and sentenced to some fine. What was the result? Why *the party* made a subscription to the amount of *four thousand pounds*. What bad man would not publish a libel to be paid? What discreet government would prosecute a libel to be so defeated? We are inclined to pursue the *general* question a little further, because if notarial and similar appointments in the colony be proof of the march of litigation, then, it must be confessed, that we are in a fair way of becoming wranglers *en masse*.

A statement injurious to persons or a private individual is published to the world. The latter prosecutes the aggressor, under the most favourable circumstances. He can prove that it is legally a libel, and he can prove also that it is false. What, then, does he gain by proceeding to law? Nothing individually, but that he proves the falsehood; and this he may do more satisfactorily, more cheaply, and more efficiently without a court of law than within it. If there are documents, or if there is testimony by which he can prove the falsehood, they can be adduced before the public without the least reference to courts, and juries, and pleaders. It was simply because the *Advertiser* had no grounds to defend his case respecting the *Twenty Juvenile Emigrants*, that he recommended the *chances* of the law's interference. But if Truth is to tell for anything, what a figure he or his friends would have cut in court with our animadversions, and Capt. Brenton's subsequent confirmation!

Again, the verdict of law in certain cases which bears on the present question, is habitually received with a sort of suspicion and want of confidence in its foundation; because we know that verdicts are frequently given against the publishers of libels, *although the libel is true*. But suppose a statement, however, is injurious, is not legally a libel. Then whatever evidence the plaintiff produces is against him, and the public, who do not trouble themselves with nice distinctions, perhaps think that the imputation upon his character is deserved. Here the prosecutor not only obtains no redress, but suffers by coming into court. But further:—Many public statements are libellous, and are cruelly injurious to the sufferer, which, nevertheless, are true. To prosecute these statements is worse than merely vain. You only extend farther and wider the reproach which was confined within narrower limits before. You make the evil to yourself more intense, as well as more extended; for the prosecuted party will no doubt take care to bring proof of the *truth* of his statements. What is to be done? Are we to be at the mercy of every malignant spirit who shall be at liberty to say with impunity just what he pleases. Not with impunity, but with *impunity from the law*. That this legal impunity may be productive of some evils is undoubtedly true. But the question is—not whether evils exist, but whether they can be remedied. Suppose for a moment there was no such thing as libel law. Then the press, which is the engine of evil as well as good, would in all probability inundate the public with torrents of vilification and slander. The malignity of bad men would for a while prevent them from perceiving the alteration which awaited the public habits. They would think that an aspersion would continue to have the same effect in practically injuring and blackening the character of others, as it has now that it is comparatively unfrequent from the restraints of the law. But what would be the result? Inevitably this; that the public would very quickly regard libels as they regard all other common things—with heedless indifference. They would not seize upon them as they now do, with a *vicious avidity*. Slander would become to the public what the abuse of Hottentots is to Hottentots, or what the language of fishwomen at home, is to the inhabitants of Billingsgate,—a thing which they do not regard,—a thing about which they do not trouble themselves to consider whether the mutual vilifications be true or false, and for which they scarcely think either the worse or the better of the quarrellers. With respect to published slander, such a state of things could not last. Private malignity would die for want of food. It would not publish the aspersion which, when published, no one would regard, and the flood of vituperation would soon subside.

Further, there is so much *uncertainty* in law decisions, that right thinking men are becoming indifferent as to legal issues. But there is a bar of far more weight. If an innocent person, whose fair fame had been injured and publicly aspersed, should ask what we would advise him to do? We would say, think nothing of law: go to those persons who have the means of testifying the falsehood of the aspersion; procure their explicit and attested allegations; or if by any other means your innocence can be shewn, avail yourself of them, and forthwith lay your exculpation before the public. Here the great end is attained. Your character is not injured; *false witnesses* are discarded; and as to the slanderer, he is punished by being made the subject of public reprobation

---

* Bohea sold in 1815,—397,909 lbs. at 2*s*.10*d*. p. lb.
Ditto 1830,—4,845,826 lbs. at 1*s*.6*d*. p. lb.
And, in the year 1831, there were 6,096,153 lbs. of Bohea sold. (See Parliamentary Returns.)

† Holland has given up her China-trade,—it was carried on not only without profit, but with considerable loss.

‡ *Extracts from the Letter.*—"I cannot help *regretting* that our *first sample* of Boys should have been consigned to Cape Town, and I shall still use my utmost endeavour that they may be forwarded to the Eastward. I dread the contagion of a metropolis for boys just snatched from ruin. Our plan was agricultural employment, whether at home or in the Colonies, and I can neither *recommend or answer for the children in a domestic establishment*.

"If the Committee will agree with me, we shall send out by the *Maria*, Capt. Burton, between 20 and 30 boys, younger, and, *in general*, less *matured in vice* than some of the *Charles Kerr*, freight."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and disgust. Let us ever remember that Truth is an overmatch for falsehood. Where they are allowed fairly to contend, truth is sure of the victory. Would you, then, *Mr. Advertiser*, rob her of the victory by silencing falsehood by force? On every impartial view of the question thus examined in a plain way, we think the judgment of our court of inquiry is,—

That the *Advertiser* be directed to read and study Dr. Evans's Discourses on the *Christian Temper*, 2 vols. 8vo ; and the Rev. John Mason on *Self Knowledge*, 8vo.

THE MINOR INSTITUTE.

We have often remarked on the rise and sudden fall of many of our Institutions at the Cape. Some, however, like plants of a certain genera, merely fall asleep, and, possessing indestructible stamina, rise up again like "Sir John Barleycorn," and "sore surprise them all." This is the case with the Minor Institute, which was quietly established amidst the din of political strife, *Fiscal* and old Dutch Law enactments, and *Press* opposition in 1824. Many of the old members of the Institute are now scattered up and down the earth—not a few have bade farewell to time, a handful remain in the colony, and three only, we believe, in Cape Town. The meeting of resuscitation took place on the 14th ultimo. The attendance was highly respectable, and altogether the meeting was one of considerable interest.

As we love reminiscences, we cannot withhold a few lines of these recollections of the Minor Institute of 1824. The late David Still, Esq. was President. A great deal of eloquence was not expected from him, but he was famous for sage expressions and judicious remarks. His opening speech did, however, astonish us. Said he, with dignity and emphasis.

"*Gentlemen*,—At the commencement of proceedings, it is well to express our several opinions respecting the principles upon which this Society ought to be conducted. Let us commence with moderate hopes, and endeavour to combine amusement with instruction, but let us not idly pretend to set the Town in a blaze by our minor sparks of genius.

At the Cape, something has long been wanting to relieve the insipid uniformity which prevails, and to excite the mind to action. Common conversation is continually apt to be diverted from its proper course, and discussion is rarely conducted in such a manner, as to afford the hearers a just conception of both sides of a question. Mankind have ever been convinced of the impossibility to establish a reform in conversation; and, therefore, in all ages, and in all countries, men who had a distinct object in view, were obliged to form themselves into distinct Bodies or Institutions. Thes usually flourish while unanimity prevails, an while their members are limited, rather than injudiciously increased. A few united are equal to a thousand discordant voices. It was the "sp t of the corps" which led the Jesuits to pov , the French armies to victory, and ourselves to the formation of this little Society. I trust the same spirit will support us.

It now becomes my duty, Gentlemen, to thank you for the honor you have conferred upon me, in appointing me to my present important office. I wish that my knowledge and acquirements were sufficiently extensive to enable me effectually to discharge my duties. I stand in need of your support, to which the weaker of our members are entitled.

Our object is to encourage improvement in whatever shape it may appear, and each of us should contribute his share. Although any question, not excluded by fundamental rules, is to be discussed, yet essays, poems, scientific information, and judicious extracts, should ever be received with a welcome; nay, half formed schemes or ideas should be eligible, if only for the purpose of maturing them."

Of course this address was received with loud cries of hear, hear! But of all our members poor Palin was the most amusing. His love of paradox was proverbial, and he possessed the art of keeping the house in a roar, whilst his own countenance was calm, undisturbed, and serious. He once upset the generally good temper of Mr. Secretary James Gray. Palin commenced an address to the Chair, and in reply to the Secretary, looked at him with steadfast eye. "Sir," said he, "when twilight *grey* had in *his* sober stillness all things clad." Order! order! was now re-echoed on all sides, and poor Palin* was considered personal by the chair, and rebuked accordingly. Deacon Robertson was a cautious speaker, but his remarks were the result of solid thinking. Little Jarvis was bold and uncompromising. Alex. Gray was famous for his dry, smart remarks, and the little he used to say was a good sample of a mind well stored. But the most celebrated event in the early history of the Minor, was the reading of an essay entitled "On Happiness." It came from a country member, and was read by the secretary. One present considered the article so defective, that he seized pen, ink, and paper, and wrote an answer. By the time the treatise was finished reading the reply was ready. On proposing "that the Essay do lie on the table," the opponent started up and said "Mr. Chairman, I rise to move an objection—I consider the Essay to be unphilosophical, and utterly at variance with good sense, right reason, pure morality, and sound religion, and I submit that at this bar my proofs be heard." The reply was heard; it carried victory with it, and the Essay was banished.

But our readers will be more amused with the following anecdote on public speaking by the late Mr Edgeworth. It is extracted from his own Memoirs.

"Do you think," said Mr. Bicknel, walking with Mr Edgeworth in London, "that you could get up, without previous preparation, on any given common subject, and speak before a great number of people?" I answered in the affirmative: and I said, that, supposing it was a subject with which I was tolerably well acquainted I would undertake to make the audience laugh at me, hiss me, and applaud me.

"You may try now," said Mr. Bicknel, "for we are within fifty yards of Coachmakers' hall, where a debating society is at this moment in full assembly." I determined to make the trial. We found the room extremely crowded, not indeed with a very brilliant assembly; but still a crowd is a crowd. The subject under consideration was the influence of female manners upon society. The moment that the speaker on his legs had finished, I rose, and, catching the president's eye, I began, as soon as silence permitted me, to address him thus, stammering at every syllable, "Mr. Pr—— Pr—— Pr—— Mr. Pre—— Pre—— Pres—— President,"—stuttering with prodigious violence. Voices on every side expressed wonder at the folly of a man's attempting to speak in public, who must be, or ought to be, conscious, that he could not speak articulately in private. After a few moments of compassion, the ridicule of the spectacle which I afforded struck the assembly with one common consent, and a universal laugh shook the hall. When it began to subside, I appeared to recover myself by degrees, and then, in fluent language, I descanted upon the follies of fashion, and upon the sacrifices made to its despotick power by the fair sex. I observed, that my audience was principally composed of ordinary mechanicks, shoemakers and staymakers in particular. The gallery was full of females, and before such an audience my second understanding was not very difficult to be accomplished. I inveighed with great vehemence against the indecency, with which ladies sometimes submitted their persons to the familiar touch of rude mechanicks: I described a delicate lady holding out her leg and foot to a shoemaker: I marked the contrast between his black hands and leathern smell, and the white silken foot and perfumed odour of a modern belle: I described, perhaps, too accurately, the operations of an Italian staymaker. This was at a time when stays of a peculiar kind were in fashion. My audience began to murmur, and as I proceeded, their feelings broke out into the strongest marks of indignation. I was hissed, and neatly put down. I however kept my countenance, and gradually receding from the tone I had taken, I pronounced a panegyric upon women, on their beauty, modesty, prudence, and unlimited sway over our sex. The ladies in the gallery got up, leaned over the railing, and shewed by their attention and their smiles, that I had obtained their approbation. The president's hammer stood suspended, whilst I proceeded in this strain, till by abusing all foreigners, and praising every thing that was English, I obtained unbounded applause from the whole audience. I never returned to this nursery of eloquence: but I am satisfied, that this trial of myself gave me confidence, when I had occasion, many years afterwards, to address a public assembly."

* He died at Sierra Leone.

MR. JEREMIE AND THE USHER.

The extract in the *Zuid-Afrikaan* from the Mauritius paper, is evidently the production of some wag in the island. Only think of the poor Usher of the Court! When desired to be *courteous*, he, "with tears in his eyes"—only think of tears in his *eyes*, reader, "throws his cloak on the ground," and exclaims, "No! I will never submit to be treated in this manner." Really, the gentlemen ushers are men of exquisite refinement! We recollect one in this colony, a few years since, who was sent by high authority to bring to the court a volume of *Coke on Littleton*. On the folio volume being presented to him he looked amazed, and exclaimed "No! I'm blowed if I carry that are big book:—I'd a sooner resign my gownd."

ANECDOTE OF COURT.

A learned Advocate of the Supreme Court during the present Term, in praying for an Attachment upon a neighbour to make him

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

abate a plan which he had practised of obstructing his neighbour's day-light, by hoisting a piece of canvass before a window: and also to fill up a saw-pit which had been excavated by him at the side of the said neighbour's dwelling; observed, that he wanted the Court, in conformity with the practice of the "good old times," to take a view of the nuisance; and that, if their Lordships, or one or other of them did, they would perceive from the contiguity of the said saw-pit, that the foundation of the building had already taken a start, and that if any attempt were made to deepen the pit, the house was likely to fall in, and though the bottom sawyer would probably share the fate of Marcus Curtius, yet that would not be *body* enough to support the edifice. The Court remarked, that it could not interfere till some such homicide had been perpetrated; but, as the present seemed a case of "sinkings" only, adjudged that they had no jurisdiction to interfere, and that the motion should rather have been made to the Medical Board, who, no doubt, would have been a more apposite, Tribunal for a complaint so universally known and dreaded in this Colony. For our part, we differ from the Bench, and would suggest to our friend, Dr. Carter, the propriety of considering the sinking course in all its ramifications when he shall publish his Principles of Dental Surgery, and his exhibition of disease from "sympathetic irritation"—yclept sinkens.—Vide Authority—South African Directory.

ADVANTAGES OF A GOOD ROAD TO STELLENBOSCH.

We consider the very next thing to be done in the order of colonial improvements, is a new road to Stellenbosch. Most wretched is the present state of things in our approach to this extensive district and its Town; a district which is at once the garden and vineyard of the Cape. Incalculably great would the advantages be to Cape Town, could we command a good road to Stellenbosch. With a population greatly increased during the last seven years, and growing daily in extent, as Cape Town does, the market supplies of various articles are just confined to a mere handful of establishments in its vicinity. Hence the frequent scarcity and the high prices. Only open a good path to Stellenbosch, and then contemplate the daily abundance, cheapness, and quality of

Butter,	Poultry,
Eggs,	Vegetables,
Milk,	Fruits, and especially
	Potatoes.

A good road would also revive the drooping spirit of the district, and afford some off-set to the Wine Farmer's losses. He would work his farm with mules, and exchange his oxen for cows. The milk would make cheese and butter for the market, and a portion of it fatten pigs. And with a cart and a couple of mules the supplier of the farm and garden could reach Cape Town, leaving Stellenbosch on the first evening, and being at home again on the second. Eight mules would be necessary as a span, to be used in alternate pairs. This is no visionary scheme,—give the inhabitants of Stellenbosch *a fair field and no favour*, i e. let the Government either take the business of road-making in its own hand, or sanction a *Joint Stock Company*, as it does in Church Building, to accomplish the new road, and we feel assured that a burst of joy will be heard in the vales, making "the mountain tops shout to each other."

EXPEDITION TO CENTRAL AFRICA FROM THE CAPE OF GOOD HOPE.

We are not acquainted with any circumstance in the history of our times, either in Europe or in this Colony, similar to the created excitement of this intended Expedition; which, to the honour of the Cape, has emanated from the "South African Literary and Scientific Institution." We take some degree of credit to ourselves in this affair; our suggestions have been often repeated, and that *enthusiasm* which was the term applied to us for the articles, pages 38 and 134, Vol. I. of this Journal, is about to be embodied in "stern deed and reality." We have been true friends of the *Institution*, because we have always spoken of it as it deserved. Of its importance we never for a moment doubted, provided the wisdom to plan, the courage to execute, and the perseverance *to go forward* were inscribed on its banners. Perhaps these were its inscriptions, but time may have obliterated the impressions from the view of its members. Thanks, therefore, for the return of Dr. Andrew Smith from his highly-successful Journey to Port Natal, and other interesting portions of the great unknown of Africa. All partiality and flattery aside, we are bold enough to declare that Dr. Smith's return to Cape Town, has been the means of reviving the Institution, and of enkindling in it that flame, which we trust, "by God's grace, will never be extinguished." It is singular enough, that in all the works of ancient geography, the importance of a discovery into this least hopeful division of the world—Africa, emanating *from the Cape of Good Hope*, has been suggested as most likely to terminate in the happiest results. All that we can suggest further on the subject (referring the reader to the Advertisement on the subject,) is that we trust, in the first place, that the Expedition will not be too precipitate in its movements; 2d, that it be conducted, not on a limited, but on a scale commensurate with the greatness of the object in prospect; 3d, that the promoters of Science and Discovery in Europe, and especially England, be permitted to join our standard by the means of pecuniary assistance, as well as the surrender of that *mind* which is essential to the well-being of a design similar to the present. In truth, with the exception of Dr. Smith, as a far-famed Zoologist and Ornithologist, and our excellent friend, *James Bowie*, as a *practical* and highly-gifted Botanist, (*provided* he were to join the party,) the Expedition would scarcely dare adventure on the field of discovery with such slender means, however important these are in their distinct orders. The Expedition to succeed, and to meet the views of the expectant world, must be complete *in all its appointments*, and these, we feel confident, will be sufficiently appreciated by the individuals nominated to carry into effect the objects of the Shareholders of "An Expedition," &c. at the Cape of Good Hope.

We noticed at the head of this Article the Cape *excitement* in this affair, and we repeat it, that this contemplated Expedition seems to have produced a new tone in the reading habitudes of the Cape public. We have visited the Public Library, and have beheld with astonishment the geographical inquiries of the visitants. We have seen *a run* upon the departments of science formerly untouched, and the old but invaluable treasures of the Dessinian Collection turned over, as if the wealth of Potosi were the result of such research. This argues well, and a few geographical lectures would, we think, take amazingly with the public at this moment. There is one thing which we regret; the number of shares is too limited: it should be extended,—for the sum subscribed, however handsome and complimentary to the good sense of the Cape residents and others, is by no means adequate to supply that additional scientific assistance which the Expedition will require.

Again:—Let a *One Pound* and a *Ten Shilling* Subscription be opened, to be attached as a *rider* to the List of Shares, and we think the Colonists in general would soon furnish the ways and means for the anticipated grand march to the scenes of Afric's hitherto unimpenetrable mysteries.

[We scarcely think our rhyming Contributor fair, in supposing that the subject of his verse "would in all probability find no place in the *Cape Literary Gazette*." We are not conscious of ever excluding opinions distinct from our own, and we have no objection to insert in our present Number the following Lines, (savouring much of Fraser, as they do) which we trust are merely a broad caricature of the events of the day;—however much we may be startled at the spirit of change and agitation which is going forth, not only in Great Britain, but in all parts of the great globe.]

THE PROPHECY OF PLENTY FOR THE YEAR 1833.

Listen, good reader! I sing unto thee,
The plenty we'll have in the year thirty-three!

Plenty of changes, and all for the worse,
Plenty of blessings exchanged for one curse,
Plenty of nostrums that never were tried,
Plenty of liberty, all on one side.
Plenty to overturn, few to uphold,
Plenty of poverty, great lack of gold!
Plenty of promise, and nothing in hand,
Plenty of paupers all gaping for land.
Plenty of dupes to a handful of knaves,
Plenty of freemen fast verging to slaves,
Plenty of Atheists scoffing at God,
Plenty of faction at home and abroad.
Plenty of Colonies cutting a drift,
Plenty of demagogues lending a lift,
Plenty of *Newspapers* springing the mine,
Plenty of readers to think it all fine.
Plenty of projects with misery fraught,
Plenty of fools by no precedent taught,
Plenty of Quixoting—still in the wrong,
Plenty of humbug that cannot last long.
Plenty of lawgivers tattered and torn,
Plenty of delegates fettered and sworn,
Plenty of noblemen swamping the Peers,
Plenty of conservatives all by the ears.
Plenty of gentlemen cutting their throats,
Plenty of waverers turning their coats,
Plenty of rogues with it all their own way,
Plenty of honest men skulking away.
Plenty of Whigs to send England to ruin,
Plenty of Tories to let them be doing,
Plenty of meddling without a pretence,
Plenty of war that is all for "*offence*."
Plenty of mitres that tottering sit,
Plenty of churches with notice to quit,
Plenty of ancestry, just to disown,
Plenty of rats under-mining the throne,
Plenty of day to work mischief and sorrow,
Plenty to vote a *Republic to-morrow*.
Such is the plenty I promise will be,
In the land of old England, once merry and free,
In the year of eighteen hundred and thirty and three.

A. A.

CORRESPONDENCE.

The respectful and candid view which Sir Charles Malcolm takes in the *Juvenile Vagrant* question, distinct from those of *Vivian*, is entitled to our consideration and thanks. Sir Charles states, that the *Marine Society* pretty generally derive their objects from sources not dissimilar to those of the West Ham Society—and from early and long-tried experience as a Captain of His Majesty's Navy, Sir Charles declares that he has seldom seen a bad turn out of the boys of the Marine Society, when ripened to manhood. We are very glad to hear this: good discipline will do much. Sir Charles admits, however, that such characters are generally of stunted growth, and "sicklied o'er with a pale cast."

LITERATURE.—SLAVERY.

I. *An Inquiry into the State of Slavery amongst the Romans, &c.* By Wm. Blair, Esq. 12mo. pp xii. 301. Price 6*s*. Edinburgh, 1833.

II. *The Daily and Weekly London Press for May*, 1833.

All hail!—the age of crime and suffering ends. (*J. Montgomery.*)

Come quickly, O King of Mercy! and Thou, His Glorious Spirit.—The spirit of o'er-wearied Nature crieth out, Amen!—(*Milton.*)

We desire unfeignedly to express our gratitude to Almighty God for His great Goodness, inasmuch as He hath been pleased to direct the people of the British Isles to a true sense of the baneful nature and wickedness of Colonial Slavery. Here we are led to observe, that the reign of injustice is not eternal, and our thanks are renewed by the consideration that no avenging angel has descended to terminate the course of iniquity, but that by the holy efforts of the people of England, *and its own violence,* the monster Slavery is on its dying bed.

Never, never, in the annals of Britain, did our countrymen stand on a loftier eminence than in the month of May, 1833. We will place the holy war in which they were engaged as a counterbalance to the infidelity, irreligion, and disloyalty of a portion of the nation. The spirit of which we speak as having actuated the sons and daughters of Albion, was an inspiration beyond heroism, or patriotism, or chivalry, or any natural principle that has animated different generations of men, and marked a noble era in our world. What was it, then, that actuated the British people during the present year, and which was but a more vigorous continuation of former unwearied exertions? We answer—it was the spirit of the Gospel of Christ influencing their minds to deeds of Christian Philanthropy. A Philanthropy which was described by the eloquent Chalmers in 1822, (in reference to the Christian people,) "as carries abroad their wishes and their endeavours to the very outskirts of human population—a philanthropy, of which, if you asked the extent or the boundary of its field, we should answer in the language of inspiration, that the field is the *world* — a philanthropy which *overlooks all the distinctions of cast and of colour, and spreads its ample regard over the whole brotherhood of the species—a philanthropy which attaches itself to man in the general; to man throughout all his varieties; to man as the partaker of one common nature, and who, in whatever clime or latitude you may meet with him, is found to breathe the same sympathies, and to possess the same high capabilities of bliss and of improvement.*

But we shall proceed to the historical part of our subject. At an early period of the present Session of Parliament, a Minister of the Crown declared it to be the intention of His Majesty's Government, to propose a measure for the settlement of the Slavery question, that should be "safe and satisfactory." This announcement, for a time, contented the public; but shortly before the recess (Easter), rumours were afloat that the measure contemplated by Government was of a partial or protracted nature. This was the signal for one general burst of the public mind. Every stage coach and every vehicle was in requisition to convey the people to the public protesting meetings of the city, town, or village; all ranks joined in the crusade—and labour suspended its operations—the plough was laid up in the head-lands—and the saw of the carpenter, and the anvil of the blacksmith, were mute. Even the poor miner ascended from his entombed abode, and traversed "o'er moor and heather" to join in the universal appeal to the British Parliament for the *uncrippled, entire, and immediate* abolition of Colonial Slavery.* In some instances, the people were summoned together by the town-crier, or the call of the church-bell. In several places of worship the Most High was invoked to counsel aright the heads of the nation. On the other hand, the best portion of the Press set to work in right earnest, and the British Ladies, of all denominations, joined in the march of *universal emancipation.*

* In the glorious triumphs of the Anti-Slavery Cause, many splendid instances are before the public of the intense interest in its behalf on the part of *poor people.* The following are deserving memorial:

In the course of his canvass, a member of the present House of Commons had wandered to a sequestered hamlet, far away from the rest of the world, cut off by surrounding hills from almost all communication with the rest of mankind; so innocent were the inhabitants of that hamlet, and so destitute of political knowledge, that in their simplicity they inquired of the candidate for a seat in Parliament—"Whether he wished a seat in the House of Commons or the House of Lords?" He replied, that his ambition did not extend beyond the lower House. They then said—we are plain people, and our only question is "Will you vote for the downfall of Slavery?—We will not vote for you unless you do."

In a Westmoreland paper it is thus written:—"Died, on the 21st of April, Sarah Broughton, a poor woman in the neighbourhood of Kendal, who supported herself for upwards of half a century by the cultivation of *penny-royal*, in a small garden which she rented at £3 per annum. This mint she distilled, hence she was called the—"'Still Water Woman." Sarah Broughton was remarkable for her kind but humble assistance towards all the charities of her neighbourhood, and the payment of her little debts. Her whole fortune, at her death, consisted of twenty pounds sterling, which she directed to be thus applied:—£10 to the County Infirmary; £5 to Missions for the Propagation of the Gospel in Foreign Parts; and £5 towards a fund for the emancipation of the Blacks from Slavery."

In a Shepherd's cottage near Salisbury Plain, a traveller, in the course of the present year, discovered a tin box, on which was written:—"The Free will *doenations* of all *them* who call here—for giving a helping hand *toe-ward* making slave-folk free men."—(*Bath Paper.*)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

In a word, public meetings were held in all parts of the United Kingdom—not *hole-and-corner meetings*—but meetings in the face of day, attended by hundreds and thousands of persons in all the great cities and towns of the United Kingdom. The result of these meetings was the determination to form a deputation of persons of intelligence and respectability, to represent to His Majesty's Ministers, personally, in the character of Deputies, the feelings and opinions of their constituents—the people resident in their several districts. They, to the number of 339, arrived in London after four days notice *only*, and having obtained an interview with the Secretary of State, presented to Lord Grey certain resolutions and a memorial, upon which they had agreed. The following are extracts from the said Address:

My Lord,

We are deputed by the friends to the immediate and entire abolition of British Colonial Slavery residing in all parts of Great Britain and Ireland, to lay before your Lordship and the Government, the decided feeling of the country on this most critical and interesting subject.

We assure your Lordship that so far from there being any re-action in the public mind in regard to this great question, a sense of the folly and wickedness of Colonial Slavery, and of the necessity of its immediate extinction, is spreading on every side, and is firmly rooted in the conscientious feelings of a Christian nation. Colonial Slavery is no longer a subject enveloped in doubt. Evidence the most conclusive and the most appalling, has been poured upon the public mind, and the nation has formed its judgment, not from any questionable reports, but from official documents, proceeding from the colonists themselves, and published by the order of Parliament.

We have only to remind your Lordship of some of the leading features of the evidence in question. The population returns show an enormous decrease in the number of slaves in the British colonies, under a climate suited to their nature, and in which, when freed from slavery, the same race is found to increase with astonishing rapidity. This result affords an unanswerable proof that the system of slavery in our sugar colonies, is one of hard oppression and of *daily murder*.

Equally desperate is the moral condition both of the black and white population of our slave colonies. A condition which arises out of slavery is, as a natural consequence, one of unbridled licentiousness, utterly opposed not only to Christian purity, but to the most common and familiar dictates of order and decency. For such a state of society we are firmly convinced that there is only one remedy,—we mean the immediate extinction of slavery.

By the total abolition of slavery, we mean the absolute and final abandonment of the motion, that any man can possess a property in his fellow man—*can* have any right to buy, sell, or mortgage him, or to compel him to work, without remunerating him for his labour.

We entreat his Majesty's Ministers not to contemplate any imperfect measure of emancipation; we are deeply convinced that the negro must be fully restored to his rights, and that no scheme of emancipation which would leave him half a slave and half a freeman, would tend materially either to his own benefit, or to the tranquillity of the colonies.

We respectfully insist on the necessity of a full and absolute change from the irresponsible rule of the slave-holder, to the responsible authority of a lawful government,—from a state of society in which labour is compelled by the whip, to one in which it shall have its appropriate stimulus of adequate wages.

With regard to the period when this change shall take place, it is the settled conviction of the friends of abolition, that it ought to be *immediate*. The utter vanity of all attempts to ameliorate the system in order to its final extinction, has been clearly proved by the history of the question during the last ten years; we assert that the system is, in its nature, incapable of amelioration. The root of it is iniquity, and its fruit can never fail to be bitterness.

A British public, forming its decision on the eternal principles of justice and religion, is unalterably fixed in its judgment, that the slaves in our colonies have an indefeasible right to their freedom without delay, and that this is the only "safe and satisfactory" ground of legislation on the subject.

Your lordship may rest assured that a British public will be prepared to defray those inevitable expenses which these regulations will entail. With the prospect before us of being speedily relieved from that weight of taxation which slavery now imposes upon us, both directly and indirectly, the country will not complain of that far lighter and merely temporary burthen which must arise from its abolition.

To the care of his Majesty's Ministers we commit this righteous cause; fully persuaded that your lordship, and the Government over which you preside, will not disappoint the just expectations of an united and enlightened nation.

We now feel that the subject involves not only the interests and the safety of the community, but the great question of religious liberty, and the progress of Christianity, in the colonies. Slavery and Christianity cannot co-exist.

It is therefore that we feel bound, publicly and emphatically to declare, that while slavery obtains under any form, however modified or however sanctioned, we will never relax from our efforts, nor swerve from our purpose, to exert that influence which we may collectively or individually possess, to effect by all legitimate means its immediate and entire abolition.

We have noticed the British Ladies, and well do they deserve the marked respect of every true British heart. We are quite aware that the loveliest and most honorable elevation in which an English lady can be seen, is as the prudent mistress and the nursing mother, full of the cares and joys of home, the moon of her own little world, filling her horn from the Great Dispenser of light, and creating a cheerful, happy, and holy scene around her. But, in the Slavery Question of May, 1833, a special interference was the call of duty, and the interests of *woman-kind all over the world* was the cry of the British female worthies. On such a theme 'twas "impious to be cold," —hence, in a space of time of marvellous brevity, Eight Hundred Thousand British Ladies petitioned Parliament for the complete and immediate emancipation of the enslaved in all the British Colonies.

The most imposing meeting in its pearance was the assemblage in London, which admitted of only five days previous announcement. Lord Althorp had pledged himself that the proposed measure for the abolition of Slavery should be "safe and satisfactory." But no sooner did the change take place in the Secretaryship of the Colonies, than the *Courier* newspaper made some official statement that, on the representations of the West India interests, Ministers had determined on proceedings "greatly modified." Hence, the great meeting at Exeter Hall in the month of April. Multitudes pressed for admission on this occasion, and thousands were disappointed from the crowded state of the Hall at an early hour of the day. The streets in the neighbourhood were blocked up, and the abolition of Slavery was the grand leading question in the metropolis of the British empire. The persons assembled in the Hall were those most eminent for their political station, for their public character or personal talent, that was ever recollected on any occasion of a similar character.

But what we are anxious to notice to our readers, is a somewhat new feature in the proceedings of this extraordinary meeting, and which has extended itself to all parts of the country, is the determination of the British philanthropists to lay their "gifts at the altar" of that sacrifice which is about to take place. Say they—it is of importance to discriminate between the principles of *relief* to Slave-holders and *compensation*. It must not be, that we *purchase* Slaves to make them free;—no, we cannot purchase human flesh, nor become the mortgagees of the cart-whip or cat-o'-nine-tails. The Slaves of the Colonies have an undoubted and indefeasible right to their freedom without delay, and without condition. At the same time, we will consent, whenever the debt of public justice has been fully paid to the real sufferer in the case, the Slave, to assist with such fair measures of *relief* as may be deemed necessary by Parliament. Let us not be suspected of a want of due tenderness to the circumstances of embarrassment and distress which have involved a great many Slave proprietors;—no: we are quite ready to come forward with our purses in order to pay those expenses necessarily attendant on the measure for the complete destruction of negro slavery! And "for this purpose," said Mr Jos. Gurney, at a public meeting, "there is my £500;" "and my £100," said Major Keppel; "and one thousand pounds from a Quaker lady," said an elderly gentleman. But such instances are innumerable, all tending to shew that the people of England are not indifferent to the interests of all parties in this mighty question. And this is further proven by the petitions to Parliament in the month of May, in which the memorialists declare that they are ready to bear their share in a pecuniary way, to such provision as may be required by Parliament to assist the persons who are so unfortunate as to hold their brethren in slavery.

We are now brought to the interesting event in the House of Commons—the Ministerial measure for the downfall of the foul system of the 14th of May.* Preparatory to the commencement of the debate, 300 extraordinary petitions were presented against Slavery, and many of the Members of the House were exhausted under the burden with

* On this occasion, thousands of people were congregated near the House of Commons. All the avenues were crowded to excess.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

which they were laden in bringing before Parliament the declarative opinions of the British people. Mr. Stanley's splendid speech on the question is before the public—we hail this scion of the House of Derby to the Anti-Slavery Cause. The further discussion of the subject was proposed to be resumed on the 30th of May.

There is another important feature in the present history of the question. The Slave Proprietors of the West Indies are now convinced that an early and complete emancipation of the Slave *is not a matter of choice, but strict necessity.* They even make an objection to Mr. Stanley's first proposition, that a portion of the negroes should be freed on arriving at a certain age. Say they—"we have no desire to perpetuate Slavery—and so long as there is Slavery on the one hand, and free persons on the other, of the same manners and habits, invidious comparisons will always be made: excitement and discontent will prevail amongst the Slaves, which must tend greatly to destroy the happiness, and retard the general advancement of the community." *

In conclusion:—a few considerations by way of reflection present themselves. At a future day it will become a subject of wonder, how it could have happened that upon such a subject as Slavery, men could have inquired, and examined, and debated, year after year. We say subject of wonder; because the question is so simple, that he who simply applies the requisitions of the moral law, finds no time for reasoning or for doubt. The question, as soon as it is proposed, is decided. The question has been kept back by the incessant argumentations on the subject. One talks of the rights of property—one of the interests of merchants—one of safety—one of policy;—all of which are valid and proper considerations; but they are not the primary considerations. The first question is—Is Slavery right? Is it consistent with the Moral Law? This question has been, in practice, postponed to others, even by some who have theoretically acknowledged its primary claim. ——— Who would now, we ask, be willing that biography should record of him—*This man defended the Slave-trade?* And the time is just at hand, when the record—*This man opposed the abolition of Slavery*—will occasion a great deduction from the public estimate of the worth of character.

It has been observed by a portion of the Press of this Colony, that the aggregate of the Petitions to Parliament has proceeded from "Methodists, Dissenters, and Wesleyans." This is not correct: the people of the United Kingdom, of all ranks, degrees, and persuasions, have subscribed to these important documents. And as it regards the Wesleyans, their *short-comings* in the question was proverbial, until the West India persecutions against the Wesleyan Missionaries taught them the path of duty. We accept their zeal, although at the *ninth hour*, and throw the mantle of forgiveness over every act of previous indifference, or reluctant or half-timid advances towards public justice. Respecting the Humes, Cobbetts, Burdetts, and such like, we entertain no similar courtesy. As for the former, we find him one day proposing the apotheosis of Tom Paine, and the next declaring his readiness to become a martyr for christianity.

* Mr. W. H. Burnley has protested against these liberal views of the West India body. Who is Mr. Burnley? Why, a great West India Slaveholder, and father-in-law to Mr. Joseph Hume, M.P. The *Advertiser*, of May 29th, congratulates Mr. Hume on his success in defending his character against the imputations thrown out that he was a Slave-dealer. Mr. Hume says, through the *Times*, "I have *not*, nor ever *had*, the value of one farthing's interest in the West India property whatever." Excellent Mr. Hume! What say you in the *future* tense? Will you tell us the amount of your reversionary interests in the Burnley estates?—in Slaves?

'Each hour a different face he wears,
Now in a fury, now in tears,
Now laughing, now in sorrow;
Now he'll command, and now obey,
Bellows for liberty to day,
And roars for power to-morrow.'

And it is easy enough to shew, of all of his kidney, that there is one principle which gives uniformity to all their aberrations, and consistency to all their discrepancies, that is, intense selfishness,—the true key to the conduct of every brawler that has kept a country in a state of agitation since the world was created.

If it be true that the religious portion of the British people have been the chief instruments in the fall of Slavery—then do we rejoice that the disciples of Christ have acted up to the spirit of their Divine Master. "*Slavery was the ruin of all the States of antiquity.*"* All the efforts of Charlemagne, for the improvement of the people, were thwarted by the *limited number* of the free inhabitants of his government. A few thousand freemen were to be found scattered among as many millions of slaves, and he had the misfortune of beholding the progress of corruption even among the troops which he had led to victory. The same cause blasted all the beneficent institutions of Alfred; and the same cause has *prevented* all the endeavours of religion to promote order, peace, purity, integrity, and prosperity in all the colonies of the British empire. It was the influence of religion that destroyed the slavery for former ages. The influence of a religion which proclaimed the universal equality of mankind in the sight of Heaven, and addressed its revelations to the poor, soon destroyed all ruinous distinctions. Not only that, the Bible does not sanction slavery, (for the law of Moses only sanctions its mitigations and restrictions, tending thereby to temper it and terminate it,) but the enthusiasm which religion awakened, from the universal interests which it addressed, the people were roused into the activity of general improvement. And so in the question of modern slavery—religious zeal has been foremost in heading *universal emancipation.* Into its ranks have been infused, not the transient ebullitions of popular excitement, but the stern valour of christian principle, and that lasting support—the fervour of the cottage, has been at length added to the ardour of the city, and the independence of the desert. "The discoveries of science, the charms of genius may attract a few in every age, but it is by religious emotion that the great body of mankind are chiefly to be moved."†

We may just observe in reference to Mr. Blair's work at the head of this article, that it is the production of a gentleman connected with a respectable family in this Colony. He is the son of the late Lord President Blair, of the Court of Session in Scotland, and was one of our Commissioners of Inquiry in 1825 or 26. In this volume he does not attempt to institute any comparison between modern colonial and ancient slavery. He says, however, that wherever the "bitter draught" is mingled, "many of the ingredients must ever be the same." Mr. Blair concludes his erudite inquiry by observing that, "if we consider that several of those corruptions by which Rome was undermined, had their chief source in the institution of Slavery, we must necessarily look upon it as one of the main causes of the decay of her empire."

THE RAINBOW.

The rainbow! the rainbow illumines the scene!
'Twas away when the sky was all clear and serene;
But now, when dark hail-storms the welkin enshroud,
It shines, with a promise of peace, on the cloud.

So the light that first beam'd on my soul from above,
And reveal'd me a Saviour to know and to love,
Broke forth, though unknown, in my happier years,
Like the bow in the cloud, amid sorrow and tears.

All praise be to Him, by whose grace it is giv'n,
That e'en sorrows are angels to guide us to heav'n:
He looks on the rain-cloud,—'tis beauteous and bright;
He smiles on our tears,—they are glory and light!

St. Mary's Chapel.

(A Narrative of the Seventeenth Century.)

PART II.

THE events which we are now about to record, carry us back to the summer of the year 1644—the period from which may be dated the commencement of the "Troubles of Scotland." In an evil hour the Estates of Parliament had withdrawn their confidence from the Marquis of Montrose to bestow it on Argyle—a nobleman whose zeal for religion would have secured his attachment to the royal cause—whose love of intrigue would have commanded his co-operation in the cabinet—but whom a cautious timidity totally unfitted, under existing circumstances, for acting as a leader in the field. The haughty spirit of Montrose could not brook the preference. He remembered that in the service of the Estates he had been the first to ford the Tweed, wading middle-deep at the head of his men to attack the Royal forces; he had heartily embraced the solemn league and covenant, and with characteristic ardor scrupled not to impose it on others, even at the sword's point,—the elevation of his rival produced an entire revolution in his sentiments. He therein saw his services overlooked,—his pretensions slighted—his ambition crushed in its lawful aspirings—and he who, from whatever principle, had once stood foremost among the zealous assertors of his country's freedom, was now transformed into its most active and relentless enemy. Indefatigable, resolute, and daring,—inexhaustible in expedients, restrained by no principle, more powerful than his devotion to the cause which he had embraced—the fabled hero of Romance was realized in Montrose. He was now in the height of his reputation,—his name alone was a tower of strength—potent to rally round him all whose bosoms glowed with the least spark of attachment to the falling Monarch, or the love of military fame.—At his word an army composed of the most discordant materials became animated by one spirit. Old feuds were consigned to oblivion, inveterate prejudices renounced, and when all had been emulous to command, all were anxious to obey. After defeating the Army of the Estates at the passage of the Dee, and sacking the town of Aberdeen, where the most inhuman excesses were committed by his followers,—Montrose, at the head of more than 2000 Highlanders and Irish, retired northward, in the hope of inducing the Gordons to arm in the royal cause to which he knew their Chief was well affected. With this view he directed his march through their country upon Badenoch and Lochaber, closely pursued by the advanced guard of Argyle's army, which was strong in cavalry, and of itself almost a match for his whole force. The Darra presented a favourable line of defence, and here Montrose resolved for a season to check the progress of his pursuers. His head quarters were established in the romantic neighbourhood of the chapel. A breastwork thrown across the road on the opposite bank, from the river to the overhanging cliff, and strongly guarded, prevented all approach to the ford above Roy's Crook, while the main body of the army being encamped opposite the only other ford, which is below the pool, barred all risk of surprise from that quarter; further down, the stream was not deemed practicable for cavalry. Thus,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

deeming himself perfectly secure for a little time, Montrose, attended by a slight body guard, quitted his men to hold interviews with various persons of influence in the country, whom he hoped to be able to win over and to swell his ranks by their accession. Aware of the strength of this position, the pursuing force had also made a halt on the banks of the Essie, a tributary stream, and near its confluence with the Darra—the distance of the two camps in a straight line was not more than 3 miles, but following the windings of the river, at least three times that distance. The scene at the Chapel must now altogether have been worthy the pencil of Salvator Rosa: the region and the beings by which it was peopled were in the most perfect keeping. Fancy could perceive no spectacle more striking, than a bivouac of so many hardy athletic mountaineers reclined nightly round their watch-fires in such a spot—here, perhaps, a group listening to the particulars of some successful foray—rendered famous not more by the richness of the booty, than the desperate valour and hair-breadth escapes of the adventurous captors:—there, at the recital of a tale of superstition, hearts quaked, and brows were clouded, and looks were cowed and timorous—which no fear of man in the hour of mortal strife ever daunted or appalled; in one place the fatigues of war were forgotten in the mazy dance, or in listening to the voice of song—while in another, the reversed picture presented a scene of drunkenness and strife—rage and defiance swelling in the countenances of the brawlers—and drawn dirks and claymores gleaming in the red glare of the blazing faggots. The Irish, more savage still in their manners and appearance than the Highlanders, and under separate leaders, were permitted to mingle as seldom as possible with their companions in arms—their convivial meetings generally ending in a fray, in which, not unfrequently, mortal wounds were given and received. Matters remained in this state for several days—both parties had need of repose: and the only feats in which either engaged was to plunder the defenceless country people of whatever they possessed in the shape of eatables, or to extort contributions in money as the price of forbearance or protection. The cause of the Monarch was in a manner identified with that of the church of Rome. Sentence of excommunication had been passed upon Montrose, and he and all his followers were denounced as "the popish, prelatical, and malignant faction," by the General Assembly of the Kirk. The priests, therefore, of St. Mary's, naturally took a warm interest in his success—they used all their endeavours to secure a regular supply of provisions for his host, and from their intimate knowledge of the country, and their influence over the minds of their flock, they were able to procure immediate and correct intelligence of the smallest movement of the hostile party. Acting, or getting the credit of acting a part so conspicuous, it is not to be wondered that they were marked men. And as they were farther suspected of being in the secret of all the Royalist movements and resources, the leader of the hostile army determined that they should be put to the question the first favourable occasion. Knowing that the main body was fast approaching, this officer resolved on an attempt to dislodge the enemy before a superior should arrive to share with him in the credit of the enterprise, if it should be successful. With this view he detached large parties, both horse and foot, in different directions along the Essie, as on a foraging expedition. Some with orders to return to the main body after nightfall; but by far the larger number had secret instructions to rendezvous at a point on the river several miles below, to attempt a passage by means of rafts, or by swimming; and then to move as rapidly as possible along the left bank, with a view to turn the position of the enemy—the main body were to advance and attack in front as soon as it should be known that the detachment had succeeded in crossing the river. All that Montrose's men knew of what was going forward, was, that large parties had been detached in various directions from the enemies' camp; but as the commander was still there, not the slightest suspicion was entertained of what was meditated against them. On the contrary, the Chiefs, after holding a council, resolved to avail themselves of the circumstance, and by a sudden and unexpected assault, to crush their now weakened opponents. Accordingly, leaving a slender guard to take care of the baggage, before dawn they crossed the right bank in a body, and marched silently and rapidly towards the hostile encampment. There, however, all were on the alert—under arms, and prepared to pay the visit in which they had been so obligingly anticipated. The approach of the enemy was timeously descried, and reported by the out-posts. The exigence of the moment left no time for deliberation, and though their numbers were much superior, it was resolved to await their attack without a change of position. All was silent as the grave, and for a moment the Highlanders flattered themselves that their approach was unnoticed, and the foe unprepared; but on nearing the Essie, they were greeted by a smart fire of musquetry from behind the low brushwood on the opposite bank, which told fearfully in their ranks, and for a moment threw them into some confusion. After a momentary pause, however, firing their muskets and casting them on the ground, the Highlanders, armed with broad sword and target, rushed into the water and engaged hand to hand with their opponents—the conflict was sharp and bloody; and it was doubtful whether the impetuous valour of the assailants would have overcome the difficulties of the ground, and the unflinching resolution with which their encounter was met—when the Irish, who had been trained to the new discipline, and were armed only with muskets, continued to cross the river higher up. To avoid being taken in flank, the Parliamentarians now threw back their left wing, retiring down the stream till their line extended from the bank of the river on the right, to a deep morass on the left. The Highlanders instantly crossed over, drew up in line, and furiously charged their enemy. Once, and again, they were repulsed with great loss—they had to do with the flower of Argyle's army—hardy old veterans, who, under Lesly in the English wars, had been trained to strict discipline, and were commanded by officers of skill and experience. Disheartened at these repeated checks, the assailants shewed symptoms of wavering. The Parliamentary General saw his opportunity, and ordered his cavalry, which the nature of the ground had rendered almost useless, to advance and charge—this decided the fortune of the day. Montrose's men retreated, covered by the Irish auxiliaries, and having regained the opposite bank, prepared in their turn to stand on the defensive. But their opponents were too prudent to molest them. Hour after hour passed away in fruitless deliberation; well would it have been for the vanquished, had they instantly sought their former secure position. By means of a boat and rafts, the detachment already mentioned, had made good their passage of the Darra. They were in full march along the left bank, each horseman having a foot soldier mounted behind him; when a messenger dispatched from the camp overtook them, bearing the tidings of the attack we have just described, and an order to halt and await the issue of the combat. In half an hour after the retreat of the Highlanders, they had orders to advance, and if possible, seize the position these had so recently abandoned. A thick haze which hung over the valley till a late hour in the morning, effectually concealed their progress, and an hour before noon, the dispersing vapours disclosed the steeples of St. Mary's in the distance, and the expected scene of conflict. It was the feast of the Ascension—a high day in the Church of Rome. Mass was being celebrated in the Chapel, and considering the troubled state of the country, the attendance was numerous—augmented, too, by the camp followers and many of Montrose's host, who should have been on the alert, and guarding the baggage. The service was nearly concluded—the sacred emblem had been lifted up to the adoration of the kneeling multitude, and the officiating priest was preparing to enclose it in its little niche or sanctuary, when a straggler entered in breathless haste, with the startling intelligence, that a large body of soldiers was advancing upon the Chapel. The Highlanders flew to their arms—the more peaceful worshippers rushed out in terror to save themselves by flight if that were possible. The priest, quitting the altar, hurried to a window in the transept, which commanded a full view of the sourrounding plain—a body of cavalry was advancing at full gallop. He had too often heard their dress and appearance described, to doubt to which party they belonged. Hastily returning to the altar, he snatched up the sacred vessels, and arrayed in his priest's vestments as he was, and attended by his clerk, he rushed out of the Chapel—their object was to gain some marshy ground covered with brushwood, and extending to an adjacent forest, in a direction at right angles to that in which the dragoons were approaching, but the dispersing congregation brought to mind their pastor's deserts, and a party headed by an officer, had orders to make the circuit of the Chapel, and to cut off all chance of retreat on the morass and wood; they had scarce turned the little knoll on which it stands, when the ill-fated priest and his attendant were descried in full retreat about 200 yards in advance. Their dress left no doubt as to who they were. The dragoons now urged forward their horses at full speed, calling out to the fugitives to stop and surrender, and that their lives should be spared—that otherwise they would be fired upon—but all in vain—they had now entered the morass—a few paces more, and a friendly bush would hide them from their pursuers. The foremost horses had sunk to the saddle girths—others were plunging and refused to advance over the treacherous sward. At this moment the fatal word "down with them" was given in a voice of thunder by the commanding officer, enraged at seeing his prey about to elude his grasp; two of the foremost dragoons sprung from their saddles, and deliberately levelling their long carabines,—fired—the priest and his companion fell mortally wounded. They were afterwards interred on the spot—their graves, either accidentally or designedly, being dug lengthwise, north and south, instead of east and west, the usual mode in consecrated ground. By those of their own persuasion, they were revered as Martyrs; and it is even rumoured that their bones have been gradually abstracted and distributed as precious relics among the faithful. Be that as it may, their graves are still distinctly visible, and surrounded by a rude fence, as a protection from all profane violation. While this bloody tragedy was acting in the morass, the rest of the detachment possessed themselves of the fords of the Darra and the enemy's baggage. Of the feeble guard, the greater number were made prisoners—others escaped in the direction of the Essie, and gave notice to the main body of the disaster which had befallen them, and of the danger which threatened their rear. Nothing now remained but to pursue their retreat toward the mountains; their leader, however, was not apprized of what had happened, till so late that he had nearly fallen into the hands of his pursuers, before he could rejoin his men. For this and former defeats he amply revenged himself; when, during the winter that ensued, he burst into Argyle's country, and laid it waste with fire and sword. Thus terminated the battle of Essie. Short but bloody—it seems not to have met with the notice which its importance deserves, in the annals of the period. The field of conflict is still marked by a double row of grassy mounds, where the hostile slain are interred apart, as if the feud which rankled in their breasts when living, forbade their ashes to mingle even in death. SONNET,

Written at night, during a heavy gale off the Cape of Good Hope.

BY COLONEL G. SWINEY.

Amidst these howling winds and foaming waves,
Whose rude collision strikes the heart with fear,
What frail machines the stoutest ships appear!
How rash the mortal who their peril braves!
What pity deep his situation craves!
A billow that no human skill may check,
At ev'ry instant threats his bark with wreck:
And all around him yawn dark ocean's caves.
Yet Christian faith no danger e'er appals—
He trusts in Him who sits enthroned above,
Without whose leave not e'en a sparrow falls,
Whose reign is mercy, whose decrees are love:
And whether we by land or ocean roam
Our Maker's bosom is our only home!

THE SEA—SHIPS—AND SAILORS.

PLACE yourself at a convenient situation on the side of a vessel going at the rate of ten miles an hour, and observe how she moves on the surface of the waters. Her motion is so swift, that she seems merely to kiss gently the waves as she passes. At the same time, the wind woos the sails with such passing importunity, that the utmost yielding of rope and canvass seems scarcely to satisfy its eager embrace. The waters rise and roar around the vessel at one time, as if they rejoiced at her presence, and saluted her with their powerful voice; and at another, as if they were troubled, and rose in mountains to devour her. If the weather is fine, and the day bright and full of sun-shine, there is often great beauty in the manly waves playing about the sides of the gallant ship. The foam rising in rapid succession, as the vessel is ever making new encroachments upon the dark element, assumes a variety of colours. There is the dark sea green which surrounds it,—there is the extreme white of the foam in one place,—and there is to be observed a dark green, and a light green, and frequently, a beautiful light blue. There is yet another appearance, distinct from all these, where the white wave is brightest, and rises with a crest that is every moment varying in its form and symmetry, with millions of drops of water dancing upon its summit. Some of these rise a few inches, and others a few feet; but in such elegance and variety, and connected with the crest of the wave, as to give great finishing of ornament to the laughing waters. These drops are different from all the colours mentioned, being clear as crystal. So much with regard to colour. The figures of the waves are also various. There is the pyramid—hill and dale—and a most interesting looking part very near the side of the ship, which reminds one of a threshing floor strewed slightly over with grain—if it might not with more propriety be compared to the surface of a vast boiling caldron, the foam on the bosom of both being similar to each other. As to sound, there is in one part, the whisper of a thousand little waves; and in another, toward the stern, a composition of noise resembling a waterfall. The whole scene around is grand, consisting of vast phalanxes of waves behind one another, as far as the eye can reach. The alternating vallies seem moveable as well as the ridges, which, when a vessel is going at this rate, are always crowned with white crests, that have a striking contrast to the dark waters around. The whole tops of the waves appear like so many wild flowers along the dreariness of the waste of waters. In the mean while the vessel is careering along, descending into the hollow and rising again, as she cleaves with her prow the top of the wave. The waters behind hasten to obliterate the path-way which she has faintly drawn upon their surface, and beyond a few yards all has assimilated to the likeness of the general mass. When she is considered in relation to the immensity of the whole scene, she is but as a speck on the surface of the ocean—a toy which the waters have got to play with—and her being swallowed up by the agitated element, would be a thing so insignificant, viewing her merely as a bit of matter absorbed, as scarcely to merit attention. But immortal existences walk her deck. The power and skill that enable her to brave the fury of the elements, and which render them subservient to her progress to the destined port, are contained within herself. The individuals who compose a ship's company, are, in the eye of reflection, an interesting group. Let us consider them in a moral point of view. They have many excellent qualities, which, through a series of years, have made them favourites with the nation. When on shore, they are open, frank, and generous. They are essential to the safety of the nation in time of war, and to its prosperity in time of peace. Without them there could be no maritime commerce; and, therefore, a great trading nation ought to give every encouragement to their profession, and make every possible provision for their comfort and happiness. Nothwithstanding this, a person long on board ship, feels that its moral atmosphere is by no means of an elevated description. He finds it especially low with regard to the first table of the law which relates to our duty towards God. The third and fourth commandments would seem not to be in the sailor's decalogue; and with regard to the first, though his Maker's existence and agency are written before his eyes in characters so large, as to extend from heaven to earth on the majestic elements with which he is daily conversant, yet the Greatest and Best sits not enthroned in the heart of the poor sailor, though He rule every thing else above, around, and beneath him. This is certainly much owing to the total inadequacy of the provision which is made for the religious instruction of this most important class of men. There is not one of them who would not spill his blood in defence of his country, and without whose defence his country would not be of more consequence than one of the undistinguished islands in the Pacific; and yet that country has done very little for his best interests. While Government and Societies have made provision for instructing people of all descriptions on shore, how little has been done for British Seamen!

Hottentot's Holland. E.

THE LOVED AND LOST.

'Tis past, 'tis past!—My bursting heart, be still,
And bow submissive to thy Maker's will;
Check these vain throbs, and curb th' impassion'd sighs,
That, 'spite of reason, in rebellion rise.
And yet 'tis hard, amid the spirit's gloom,
When all we love has pass'd into the tomb;
When all on earth we deem'd our peace and stay,
Our joy and hope, is rent at once away;—
The soul will sicken, howsoe'er resigned,
And struggles sweep, like tempests, o'er the mind.

'Tis past, 'tis past!—Not all that upright sense,
That truth, that goodness, and intelligence,—
Not all that generous warmth, devoid of art,
That manly form, that purity of heart;—
Not all that once its admiration wrung,
From every eye, its praise from every tongue,
Could ought avail, to avert or to delay
Th' imperious Pow'r, that call'd thee hence away.

Alas, 'tis past!—'Tis not for man below,
Unmix'd delight, or lasting bliss to know;
All is but brief and fleeting: all that here
The wisest value, and the best revere,—
All that is gentle, or sublime, or strong,—
All that is dear to science or to song,—
All that is noble, graceful, or refin'd;
The charms of virtue, or the pow'rs of mind,—
The good, the great, the beautiful, the brave,
Form but a brighter wreath to deck the grave.

* * * *

And is there nought can dry th' impassion'd tear,
No thought to soothe it, and no hope to cheer?
Is there no balm in Gilead?—Oh! the pow'r
Of a true faith in sorrow's darkest hour!
The sacred peace! The calm and hallow'd glow,
It passeth all this world contains, to know!
Rise, thou that weepest!—Life may yet be bright:
Wake, thou that sleepest!—Christ shall give thee light!
Or say,—*in vain* did Mercy's self array
Th' eternal Godhead in our mortal clay,
For man to invade the realms of death and gloom,
For man to burst the portals of the tomb,
For man to wrest, (Oh! mighty love to save!)
The sting from death, the victory from the grave?

Ah, no!—Self-humbled faith his life reviews,
Shares in his triumphs, and his steps pursues,
Survey *his* sorrows,—lists *his* dying groan,
And cannot, dares not murmer at her own;
But stretches forward to that glorious day,
When earth, and earthly woes shall pass away:
And all who lov'd their great Redeemer here,
Shall rise to join him in that blessed sphere,
Where never pang again shall rend the heart,
No foe shall enter, and no friend depart;
Where the dominion of the grave is o'er,
And sin, and death, and trouble, are no more.

Cape Town, July, 1833. J. E.

LITERATURE.

DEGRADING EFFECTS OF A CONVERSION TO ISLAMISM.

Before we remark upon the habits of the Indian tribes, we may state one prominent trait which characterises the *Nyâd*, or convert to Islâm, who, on parting with his original faith, divested himself of its chief moral attribute, toleration, and imbibed a double portion of the bigotry of the creed he has adopted. Whether it is to the intrinsic quality of the Mahomedan faith that we are to trace this moral metamorphosis, or to a sense of degradation (which we can hardly suppose) consequent on his apostacy, there is not a more ferocious, or intolerant being on the earth than the Rajpoot convert to Islamism. In Sinde, and the desert, we find the same tribes, bearing the same name, one still Hindu, the other Mahomedan; the first retaining his primitive manners, while the convert is cruel, intolerant, cowardly, and inhospitable. Escape, with life at least, perhaps a portion of property, is possible from the hands of the Maldote, the Larkhani, the Bhutti, or even the Tawuries, distinctively called "the sons of the devil;" but from the Khossas, the Sehrâés, or Bhuttis, there would be no hope of salvation. Such are their ignorance and brutality, that should a stranger make use of the words *russah*, or *rustah* (rope, and road), he will be fortunate if he escape with bastinado from these beings, who discover therein an analogy to *rusool*, or 'the prophet:' he must for the former use the words *kilbur*, *rundori*, and for the latter, *duggra*, or *dugg*. It will not fail to strike those who have perused the heart-thrilling adventures of Park, Denham, and Clapperton—names which will live for ever in the annals of discovery—how completely the inoffensive, kind, and hospitable negro, resembles in these qualities the Rajpoot, who is transformed into a wild-beast the moment he can repeat "La-állah, il-állah, Mahomed Rusool álla," 'there is but one God, and Mahomed is the prophet of God:' while a remarkable change has taken place amongst the Tartar tribes, since the antidestructive doctrines of Bûdha (or Hunduism purified of polytheism) have been introduced into the regions of Central Asia.—(*Col. Tod's India.*)

ZALIM THE INDIAN RAJAH.

So rigid was his system of taxation, that nothing escaped it. There was a heavy tax on widows who re-married. Even the *gourd* of the mendicant paid a tithe, and the ascetic in his cell had a domiciliary visit to ascertain the gains of mendicity, in order that a portion should go to the exigencies of the state. The *toomba burrár*, or

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

'gourd-tax,' was abolished after forming for a twelvemonth part of the fiscal code of Harouti, and then not through any scruples of the Regent, but to satisfy his friends. Akin to this, and even of a lower grade, was the *jahroo-burrár*, or 'broom-tax,' which continued for ten years; but the many lampoons it provoked from the satirical *Bhat* operated on the more sensitive feelings of his son, Madhu Sing, who obtained its repeal.

Zalim was no favourite with the bards; and that he had little claim to their consideration may be inferred from the following anecdote. A celebrated rhymer was reciting some laudatory stanzas, which the Regent received rather coldly, observing with a sneer, that "they told nothing but lies, though he should be happy to listen to their effusions when truth was the foundation." The poet replied, that "he found truth a most unmarketable commodity; nevertheless, he had some of that at his service;" and stipulating for forgiveness if they offended, he gave the protector his picture in a string of *improvised* stanzas, so full of *vis* (poison), that the lands of the whole fraternity were resumed, and none of the order have ever since been admitted to his presence. (*Ib.*)

TRIAL BY ORDEAL.

On the borders of Little Sadrí, where the quotas are posted, is a mountainous tract covered with deep forest, the abode of the half-savage Meenas and Bhils. Mixed with them are the estates of some vassal chiefs, whose duty it is to repress their excesses; but, in such times as we have described, they more frequently instigated them to plunder, receiving a share of the spoils. Amongst the foremost in this association was the steward of Kalákote. At the foot of a pass leading into the wilds of Chuppun was the hamlet of Beelo, occupied by a Rahtore Rajpoort, who had snatched from the mountain-side a few beegas of land, and dug some wells to irrigate the arable patches about his cot. With severe toil he raised a subsistence for himself, his wife, and an only son, who was to inherit this patrimony. Returning homewards one day, after his usual labour, he was met by his wailing help-mate; she said the savage Bhil had rifled his cot, and with the cattle carried off their prop, their only child, and at the same time a young Jogí, his playmate. The afflicted father spake not a word, but loading his matchlock, took the road to Kalákote. What was his horror when, at the entrance of the village, he stumbled over the headless bodies of his boy and his young companion! He learned that the savages belonged to the lordship of Kalákote; that having conveyed the children from their home upon the cattle they had stolen, they were entering the place, when the young Rahtore, recognizing the steward, called out, "Save me, uncle, and my father will ransom me at your own price!" This was the object for which he had been abducted; but these words proved that the steward was known to be the author of the outrage, and they were the last the child spoke. With this intelligence, the wretched father entered the 'black-castle' (Kalákote), in quest of the steward. He denied all participation in the abduction or the murder; and commiserating the Rahtore's misfortune, offered him four times the number of cattle he had lost, twice the amount of all his other losses, and to pay double the sum of *mirhhéá*, or money expended in the search. "Can you give me back my son?" was the only reply: "I want justice and vengeance, not money. I could have taken it in part," continued he; "for what is life now? but let it fall on all."

No attempt at consolation could diminish the father's grief; but in promising my aid to realize his vengeance, I gave him hope to cling to; and on handing him over to Maun Sing, saying his own suit would be best promoted by the imprisonment of all concerned in this outrage, he quitted me with some mitigation of his grief. But before he left my camp, tidings arrived that the chief culprit was beyond the reach of man; that the Great Avenger had summoned to his own tribunal the iniquitous steward of Kalákote! Even in this region of rapine, where the blood of man and of goats is held in almost equal estimation, there was something in the wild grief of the Rahtore that sunk into the hearts of the vassals of Kalákote: they upbraided the steward, and urged him to confess the share he had in the deed. But he swore 'by his God' he had none, and offered to ratify the oath of purgation in his temple. Nothing less would satisfy them, and they proceeded to the ordeal. The temple was but a few hundred yards distant. The steward mounted his horse, and had just reached the shrine, when he dropped dead at the threshold! It caused a deep sensation; and to the vengeance of an offended divinity was ascribed the signal expiation of the triple crime of theft, murder, and sacrilege. (*Ib.*)

SLEEPING.

ALL agree in the value and necessity of sleep.—"Sleep, that knits up the ravell'd sleeve of care; The birth of each day's life, sore labour's bath, Balm of hurt minds, great nature's second course, Chief nourisher in life's feast,"—

as Shakspeare has it—all of which is confirmed by philosophers and poets, as well as by Sancho's homely opinion, that "it wraps round the heart like a blanket," for which he very emphatically exclaims, "blessed is the man who invented it."

With some, going to bed, and going to sleep, are synonymous terms; these persons, in nursery language, are said to "sleep like a top;" whilst others "sleep like a watch-dog, and count the clock from midnight till morn:" amongst the most profound adepts of the former class, may be reckoned the guardians of the night.

Though the necessity of sleep for the refreshment of the body be admitted, yet it is possible for a person to sleep a long night through, and be none the better for it, as is the case with those who are troubled with that most horrid of horrors, the nightmare. A ticket porter, who has been all the day with a heavy load on his shoulders, does not feel half so much fatigued, as the person who has been carrying an imaginary chest of drawers on his ternum all night. Thus—

"When man o'er-laboured with his being's strife Shrinks not to sweet forgetfulness of life,"

but *dreams*—he owns, with Hamlet, "there's the rub."

A question has been raised, how much sleep is required, and how long is it necessary to be in bed, for the purpose of rest and refreshment. Eight hours have been allotted for the labourer, and six for the scholar and gentleman.

Very few gentlemen, however, are satisfied with this scale; and a capacity for sleeping makes the greater part of this class of the community inclined to double the period. The capacity for sleeping, like the capacity for eating and drinking, is to be increased by indulgence. Much depends upon habit. Some people can sleep when they will, and wake when they will; and are as much refreshed with a short nap as a long one. Sea-faring people have this property from education. I have known persons who have never indulged in a second sleep. One gentleman, who entertained a notion that a second nap was injurious, invariably got up as soon as he awoke, no matter how early the hour—winter or summer.

Others, again, will sleep for four-and-twenty hours. The celebrated Quin had this faculty. "What sort of a morning is it, John?" "Very wet, Sir." "Any mullet in the market?" "No, Sir." "Then, John, you may call me this time to-morrow." So saying, he composed himself to sleep, and got rid of the ennui of a dull day in the arms of Morpheus.

One gentleman, in the Spectator, used to sleep by weight. "I allow myself, one night with another, a quarter of a pound of sleep, within a few grains, more or less; and if, upon rising, I find I have not consumed my whole quantity, I take out the rest in my chair."—No. 25.

A lazy old woman used to apologise for lying in bed, by saying that "she lay in bed to contrive." Strange as this old woman's excuse was, it was an example followed by one of the most extraordinary geniuses of this country, viz: Brindley, of whom it is recorded, that when any great difficulty occurred in the execution of his works, having little or no assistance from books, or the labours of other men, his resources lay within himself. In order, therefore, to be quiet, and uninterrupted, whilst he was in search of the necessary expedients, he generally retired to his bed; and he has been known to lie there one, two, or three days, till he had obtained the object in view. He would then get up and execute his design without any drawing or model.

There are different kind of sleepers, as well as different kinds of sleep: some cannot sleep *from* home—others cannot sleep *at* home; some can sleep on a board, and snore on a carpet; while others tumble and toss on a soft bed, as if the down disconcerted them.

Some again cannot sleep in a noise; others cannot sleep out of it. A miller awakens the moment the mill stops; and a tradesman from Cheapside cannot sleep in the country, because "it is so plaguy quiet."

Somnambulists, or sleep-walkers, usually sleep with their eyes open, but without vision. Shakspeare, who may be considered very good medical authority, makes Lady Macbeth a somnambulist with her eyes open—"but their sense is shut." This is not always the case, however; and there is a singular exception, in the instance of Johannes Oporinus, a printer, who, being employed one night in correcting the copy of a Greek book, fell asleep as he read, and yet ceased not to read, till he had finished not less than a whole page, of which, when he awoke, he retained no recollection.

There are many curious histories of sleeping prodigies on record The *Philosophical Transactions* have several: in one, a man slept from August till January. There is a case, read before a society of physicians in 1756, of Elizabeth Orvin, who began her sleeping fit in 1738, by a four days' nap, and for 10 years afterwards never slept less than seventeen hours out of the four-and-twenty. Dr. Brady relates, that some strange methods were resorted to to rouse her—such as rubbing her back with honey, and in a hot day exposing her to a hive of bees, till her back was full of bumps;—making a pincushion of her, and performing acu-puncturation with pins and needles; flagellation, and "other odd experiments," which the doctor informs us he thinks better "to pass over in silence," all of which might as well have been spared, for she was very sulky, and good-for nothing, when she was awake. This sulkiness, however, should be noticed, as being connected with the complaint. Previously to this somnolent disease, many of the persons have become uneasy, sullen, and surly. In all, the mind has evidently been affected; and in some, where there has been extreme abstinence, their waking hours have been characterised by decided mental aberration. * *

RECOLLECTIONS OF A VISIT TO BETHLEHEM HOSPITAL.

BLAKE, THE VISION SEER, AND MARTIN, THE YORK MINSTER INCENDIARY.

BLAKE was an embodied sublimity. He held converse with Michael Angelo, yea, with Moses; not in dreams, but in the placid still hours of night—alone—awake—with such powers as he possessed in their full vigour. Semiramis was often bodily before him; he chatted with Cleopatra, and the Black Prince sate to him for a portrait. He revelled in the past; the gates of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the spiritual world were unbarred at his behest, and the great ones of bygone ages, clothed in the flesh they wore on earth, visited his studio. He painted from spectres. I have seen several of his pictures—of men who died "many anno-dominis ago," taken from their ghosts. The shadow of a flea once appeared to him, and he drew it.

His may be deemed the most extraordinary case of spectral illusion that has hitherto occurred. Is it possible that neither Sir Walter Scott, nor Sir David Brewster, the authors of "Demonology and Witchcraft," and "Natural Magic," ever heard of Blake? Allan Cunningham, unless I am grossly mistaken, had, even prior to the appearance of the former work, introduced the Vision-seer to the public—in which of his productions, however, I cannot recollect; so that, being unable to refer to what he has narrated on the subject, I am in danger "of repeating upon him." But this shall not daunt me.

Blake was not the victim of a mere optical delusion. He firmly believed in what he seemed to see. He had no doubt but that the spectre of Edward the Third frequently visited him. He painted the monarch, in oil, at three sittings. Bruce would now and then call to converse with him. He recognized at a glance the ghost of any great personage the moment it appeared. He had no doubt of its identity. His friend Marc Antony had not sent in his card: no one had announced him: yet he knew the Roman, and named him at first sight

About midnight the illustrious dead used to drop in upon him: sometimes their visits were short, but, frequently, as protracted as he could wish. I have been present on these occasions. One night, while we were engaged in criticising his own extravagant, yet occasionally sublime illustrations of the Book of Job, engraved by himself, he suddenly exclaimed, "Good God! here's Edward the Third!" "Where?" "On the other side of the table: *you* can't see him, but I see him: this is his first visit." "How do you know him?" "My spirit knows him—how I cannot tell." "How does he look?" "Stern, calm, immutable; yet still happy. I have hitherto seen his profile only, he now turns his pale face towards me. What rude grandeur in those lineaments!" "Can you ask him a question?" "Of course I can; we have been talking all this time, not with our tongues, but with some more subtle, some undefined, some telegraphic organ; we look and we are understood. Language to spirits is useless." "Tell him you should like to know what he thinks of the butcheries of which he was guilty while in the flesh." "I have, while you have been speaking." "What says his majesty?" "Briefly this: that what you and I call *carnage* is a trifle unworthy of notice; that destroying five thousand men is doing them no real injury; that, their important part being immortal, it is merely removing them from one state of existence to another; that mortality is a frail tenement, of which the sooner they get quit the better, and that he who helps them out of it is entitled to their gratitude. For, what is being hewn down to the chine to be compared with the felicity of getting released from a dreary and frail frame?" "His doctrines are detestable, and I abhor him." "He bends the battlement of his brow upon you; and if you say another word, will vanish. Be quiet, while I take a sketch of him."

His widow, an estimable woman, saw Blake frequently after his decease: he used to come and sit with her two or three hours every day. These hallowed visitations were her only comforts. He took his chair and talked to her, just as he would have done had he been alive: he advised with her as to the best mode of selling his engravings. She knew that he was in the grave; but she felt satisfied that his spirit visited, condoled, and directed her. When he had been dead a twelvemonth, the devoted and affectionate relict would acquiesce in nothing "until she had had an opportunity of consulting Mr. Blake."

After his trial, Martin, the York Minster Incendiary, became an inmate of Bethlehem Hospital, St. George's Fields. On learning this I gave him a call. He had an apartment on the first floor. I followed the keeper up the stone staircase, and a little way along the granite gallery. He took out his bunch of keys, ran over them, and soon found out the right one. We were opposite a repulsive, austere-looking door. He opened it. I glode in, and the next moment found myself locked up with a madman. The keeper, treating me *en famille*, had gone away, leaving me and my visitant perfectly safe, if "fast bind, fast find," be incontrovertible. High in the opposite wall of the bleak and well whitewashed apartment, aloof from all human access by the inmate, was a grated window. Assurance had been made doubly sure. If Martin could have grown a pair of wings on his shoulders, it was impossible to get out. The aspect of the room told the inhabitant at a glance that he was imprisoned for life; that the four naked walls constituted his future world. On my left there was a plain comfortable bed; on the right stood a table and *one chair*. Every thing was painfully clean and orderly; the furniture was evidently under the inspection of a committee; there was not the slightest appearance of that sort of temporary *litter* which evinces that a man is in his own house, and can do as he likes: the inanimate articles were in quiet subjection—in perfect keeping.

But where was the lion of this solitary den?—On the chair, close to the table, drawing a bishop with seven heads—under the influence of absolute fatalism—undaunted by its bituminous breath, rushing into the open jaws of a colossal crocodile! The artist disappointed me: he had none of the sublimity of his great brother, the painter of Belshazzar's feast; he was crude, ignorant, impotent. His sketch was a mere exaggerated matter of fact, madly conceived, and contemptibly executed. It made me pity him. He stood up, and never in my life had I beheld a human being in appearance so perfectly harmless. Passion never seemed to have ploughed his forehead with its adamantine keel: the surface was smooth and unruffled as that of a villager's babe. I dived into the depths of his eye, but brought up neither monster nor pearl: it was barren—it was common-place—there was nothing in it. It *grinned*, not sardonically—but because it seemed to have nothing better to do. The mouth was feeble, almost inane. I sought earnestly for some lurking expression, but could find none—not even the ghost of an idea flitted over his features.

Still he looked like any thing but a bedlamite: there was no fearful aberration of intellect visible. Had I met him on the highway I should have concluded from his lineaments that he was one of the most gentle of God's creatures: apparently he would not injure a worm. With an unsheathed poignard in his hand, I could have slept calmly—contentedly—under his wardenship Smiling simplicity was the prevailing character of his countenance. It required an effort to make me feel that I was talking to the incendiary of York Minster.

His manners were modest and rustic: he conversed like a good-humoured cottager, not over-burthened with sense, or made sulky by circumstances. He was not merely resigned, but perfectly satisfied: he wanted nothing but lots of Indian ink, and Brookman's black-lead pencils. Although in his way a reformer of the church, he knew nothing of Wickliffe—he had never heard of Luther or Calvin. He was, upon principle, an antagonist to episcopacy, and he thought the best way of pulling down the priests of Baal, was to burn them out of their high places. I had made him out in my mind's eyes a Prometheus. I expected to find him sublime; but he was quite insignificant.

On one topic he approached to rude eloquence: it was relative to the kindness of his brother, who had taken the poor fellow's son under his wing, and meant, if possible, to make an eagle of him. In treating this subject, he became slightly figurative; but his metaphors were not made out; he could not manage them; they were faintly—timidly bitten in upon the surface of a mist. There was no seeing them clearly; they melted when attempted to be understood. His imagination was not merely muddy, it was mean. He grovelled in the puddles of common-place. Of his orthography, this is a specimen, written under one of his most favourite pictorial subjects: — "Thay hould Harmett (the old hermit) hinn is fir-skeen Kap haud Klooaak (in his fir-skin cap and cloak.")

His advent to Bethlehem deeply chagrined Hatfield. The latter, since Peg Nicholson's death, had been the principal character within the walls, but since Martin's arrival he had ceased to be supremely attractive: the York Minster incendiary, by his more recent atrocity, had monopolized the visiting interest, and no man more deeply deplored the popularity of another than Hatfield did that of Martin.

M. M.

SCIENCE, &c.

ARTS AND MANUFACTURES IN FRANCE.

If it be true that the mathematical and physical sciences are the conquests made by man's understanding over the *secrets* of nature, it is no less so that *industry* is the fruit of the victory gained by man's exerting will over the *forces* of nature. In one of the numbers of the *Revue Encylopedique*, there is a copy of an excellent speech of Professor Blanqui, delivered before a numerous meeting of the patrons of the school established in Paris for the instruction of youth in the principles of commerce, in commercial law, political economy, and the several auxiliary sciences. We gather from the Professors address the following few particulars.

SILK.

The value of the silk annually worked up in France may now be taken at about six millions sterling: and its increase may be in some measure estimated by that of the population of Lyons, which before the Revolution was only 100,000, and is at present upwards of 150,000. Great exertions have been made to naturalize the worms in France, and more than half the raw material consumed is of native production. The China worm, which spins the silk so well, known for its peculiar and beautiful whiteness, has been introduced, and the French crapes of this colour are rivalling those of the East.

"Let us not, however," says M. Blanqui, "forget how sharply the English are contesting with us this queen of our industries. We must not overlook the fact, that since they have allowed the importation of silks at a duty of 30 per cent, the British manufacturers have taken a surprising start; so much so, that at this moment numerous factories are springing up in Scotland, and threatening to become formidable to us."

FURNITURE, &c.

French furniture is in general cheaper than ours. Its form of course varies with the fashion, but it is always elegant and tasteful.

Glass and porcelain are articles in which France is really unrivalled. This has not however been long the case, for in 1807, her exportations were only about 150,000 francs' worth of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

...ss, and 10,000 francs of crystal; while in 1826, the value of the exportation of those two articles was about five million francs. The glass manufacture has been regularly improving for a series of years, and the specimens of last year's exhibition are almost perfect of their kind. The large size of the pier glasses has created a demand for them throughout Europe; their price is within the reach of the most moderate incomes, and there is scarcely a family in France which does not possess one or two, while, as we all know, they are rarely to be met with in England, except in expensively furnished houses. The glass manufacture—that is the art of blowing—was introduced into France by Colbert; but the method of melting was invented by Abraham Thevart, a Frenchman, in 1668, so that France may justly boast of the honour of the discovery of the art in which she has since attained such excellence.

The crystals and cut glass of Mont Cenis, in the department of Sôane et Loire, and of Baccarat, in the department of the Meurthe, are the most celebrated. The establishments are on a large scale, and are worked both by steam and water. The last novelty from Baccarat is its wine glasses of all sorts and sizes, among which are Champaigne glasses two feet long, called *à la giraffe*, the only advantage of which appears to be to give people an opportunity of exercising their ingenuity in trying to drink out of them without coughing. The crystal manufactories in and near Paris are very numerous; that of Choisy-le Roi, which makes to the value of 40,000*l.* a year, is well worthy of inspection.

Connected with this subject, though more in the department of the fine arts, is the painting or staining of glass, which great pains have lately been taken to revive in France, and a manufactory of which is at work near Paris, under the especial patronage of the king. The Count de Noé (a peer whose talents and ingenuity are an ornament to the French nobility, and who is a striking instance of the improvement that has taken place among them under the new régime) has been chiefly instrumental in directing the progress of this beautiful art, and has himself constructed a painted window which many of our readers must have seen in the palace of the Luxembourg. The vivid colours of this specimen are a proof of the correctness of Walpole's opinion, "that the colours of the ancients exceed those of the moderns, not so much because the secret of making them is entirely lost, as that the moderns will not go to the charge of them, nor be at the necessary pains, by reason that this sort of painting is not so much in esteem as formerly." We are surprised M. Blanqui has not noticed the revival of this elegant branch of art.

INSTRUMENTS, &c.

The French are known to be clever in the construction of surgical and mathematical instruments and clock-work. Several new scarifying and bleeding instruments have lately been invented, among which the hdellomètre of Dr. Sarlandière has been much approved. M. Cloquet's siphon for urinary disorders; Dr. Deleau's apparatus for curing deafness; Dr. Montazeau's machine for relieving pulmonary complaints, sore throats, and what is called *phthisie:* Dr. Jalade-Lafand's invalid bedstead for deviations of the spine; Colonel Amorós's instruments for gymnastic exercises; M. Nuellen's elastic mattresses, and M. Greiling's lithotritic knives, occupy a prominent rank among the late inventions for the relief of human sufferings. In optical instruments the achromatic microscope of M. Selligue has been made to magnify 1200 times; the telescopes of M. Chevallier, it was well said, only want the advice *sic itur ad astra;* and that of M. Couchoix, 24 feet long, and including a flint glass of 12½ inches, and a crown glass of 13 inches in diameter, has a greater objective force than any hitherto used in Europe, none having been made in England of more than 7 inches in diameter, and the largest at Munich being only 9 inches. The meridian circle for observing the right ascension of the heavenly bodies, and the time of their passing the meridian, has reflected well-merited honour on its scientific inventor, M. Gambey. Clocks and watches are become extremely cheap of late years; good watches are selling at 200 francs a dozen, and very superior ones may be bought for 80 francs each. The elegance of the pendules makes them an ornamental as well as useful article of furniture; they are to be found even in cottages in France, and their superiority over our own clocks accounts for the extent to which they are imported into England. Chronometers have been brought to a great degree of precision.

CHEMISTRY—TANNING.

Chemical productionss are no where better or cheaper than in France. The reputation of her operative chemists is as well established as that of her men of science, and the result is as honourable to them as it is beneficial to the public.

"Chemistry," says M. Blanqui, "is a science entirely French; it has risen amidst the storms of the republic; it has furnished us with the first fires for the defence of our territory. At this day, restored to happier destinies, it has become one of the most powerful elements of our national industry; it is cultivated in our manufactories, and as there was always merit in being acquainted with it, there will soon be shame in being ignorant of it." The progress of chemistry has had its share of influence on the art of tanning and dressing skins, and on the leather manufactures in general. The smooth calf-skin of Clermont, of excellent quality, was sold at the exhibition at two francs sixty centimes the kilogram. Thirty years ago a prejudice prevailed in France against the use of horse-hides, but they are now prepared with as much ease as cow leather, and are the principal substance of boot and shoe leather. The neglect of the butchers at the abattoirs is said to injure the skins tanned in Paris, but the tanners there, and in France generally, are scientific men, and understand their business well. The chamois leather of Niort is at present in great esteem; French morocco is as good as that of the East, and their Russia leather, though it has been rather neglected within the last three years, is by no means bad of its kind. The saddlers and harness makers, particularly M. Fourcy and M. Huard, of Paris, exhibited some excellent work; and the impenetrable water-boots of M. Delacre-Snaude, of Dunkirk, will be highly serviceable to the sailors and boatmen.

LITHOGRAPHY.

Lithography—an art which has been introduced since the peace, and which M. M. Engelmann, Motto, Noël, and Langlumé have raised to such extraordinary perfection—is now employed not only for stamping paper, but for impressing cloth, cotton, silk, and porcelain. Its cheapness has the effect of refining the taste of the lower orders, and it is a powerful auxiliry to that paladium of civilization—the art of printing.

Iron Roofs.—Sheet iron coverings are now universally made use of on all new buildings in Petersburgh, Moscow, &c. In the case of a fire, no harm can come to a house from sparks falling on a roof of this description. The sheets of this iron covering measures 2 feet 4 inches wide by 4 feet 8 inches long, and weigh 12½ lbs. avoirdupois per sheet, or 1 lb. 5 oz. each superficial square foot. When the sheets are on the roof, they measure only 2 feet wide by 4 feet in length; this is owing to the overlapping. They are first painted on both sides once, and, when fixed on the roof, a second coat is given. The common colour is red; but green paint, it is said, will stand twice the time. Small bits or ears are introduced into the laps, for nailing the plates on the two-inch square laths on which they are secured. It takes 12½ sheets to cover 100 feet, the weight of which is only 150 lb.; the cost only thirty shillings, or about three-pence per foot.

NATURAL HISTORY, &c.

CURIOUS FACTS IN VEGETATION.

(From Part xiv. of *Knowledge for the People, or the Plain Why and Because.*)

Why are the stems of the Cabbage tribe considered wholesome food?

Because their acrid flavour is dispersed among an abundance of mucilage. Cabbages were commonly used among the ancients, and Cato wrote volumes on their nature. The Indians had so much veneration for them, that they swore by cabbages, and were therein as superstitious as the Egyptians, who gave divine honours to leeks and onions, for the great benefits which they said they received from them.—*Lemery on Food.*

Why do Cabbages emit a strong animal odour?

Because they contain a great quantity of azote or nitrogen, one of the ultimate elements of animal matter, strongly characterized in the destructive distillation of horn, hoofs, or bones.

Why do not the leaves of the Cabbage remain wet, after being immersed in water, and again taken out of it?

Because they are powdered with a slight layer of resinous matter, similar to that which covers certain fruits, and in particular, plums and grapes. Their sea-green colour is also attributed to this resinous layer.

Why is Quassia so called?

Because it was named in honour of a negro, Quassia, a drunken doctor, who discovered the virtue of the wood in curing malignant fevers.

Why have some plants been termed the Poor Man's Weather-glass?

Because they shut up their flowers against the approach of rain. Linnæus, however, thinks that flowers lose their fine sensibility after the anthers have performed their office, or when deprived of them artificially. Sir James Smith also observes, that some species are sometimes exhausted by continued wet; "and it is evident that very sudden thunder showers often take such flowers by surprise, the previous state of the atmosphere not having been such as to give them due warning."

Many flowers have a regular time of opening and shutting. We have already mentioned the Marigold; the goat'sbeard is vulgarly called "John go-to-bed at noon," from its closing at mid-day; and at the Cape of Good Hope there is a "four o'clock flower," because it invariably closes at that time. The common daisy is, however, a readier example, its name being a compound of day's and eye—Day's-eye, in which way, indeed, it is written by Ben Johnson. It regularly shuts after sun-set, to expand again with the morning light Thus,—

> The little dazie, that at evening closes.
> *Spenser.*

> By a daisy, whose leave spread.
> Shut when Titian goes to bed.—
> *G. Withers.*

Leyden sings of moist or rainy weather foretold by daisies. Thus we may examine a whole field, and not find a daisy open, except such as have their flowering nearly over, and have in consequence lost their sensibility.

The daisy is one of the pet flowers of the poets. Chaucer is ecstatic in its praise, and calls it his "owne hartes' rest;" Burns, "Wee, modest, crimsontipped flower;" and Wordsworth, in beautiful and touching simplicity, has addressed several poems to "the poet's darling."

Appended to Richard's valuable "Elements," is the *Horologium Floræ*, (time-peace of Flora,) or a table of the hours at which certain plants expand and shut, at Upsal, 60 deg. north latitude. The earliest Meadow Salsafy opens from 3 to 4 A. M.; and closes from 9 to 10 A. M. The latest A. M. is the *Mesembryanthemum Modeflorum*, (used in the manufacture of Marc-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

quin leather,) which opens 10 to 11 A. M., and closes at 12 P. M. The latest opening P. M. is the *Cactus Grandiflorus*, 9 to 10 P. M., and closing at 12 P. M., thus remaining open only two or three hours. Other flowers, we may add, are so peculiarly delicate, as scarcely to bear the contact of the atmosphere.

Forster, in his "Researches about atmospheric Phenomena," notices several prognostics of the weather by plants Thus, Chickweed has been said to be an excellent weather guide. When the flower expands freely, no rain need be feared for a long time In showery days the flower appears half concealed, and this state may be regarded as indicative of showery weather; when it is entirely shut, we may expect a rainy day. If the flowers of the Siberian sowthistle remain open all night, we may expect rain next day. Before showers, the trefoil contracts its leaves. Lord Bacon observes, that the trefoil has its stalk more erect against rain. He also mentions a small red flower, growing in stubble-fields, called by the country people *wincopipe*, which if it opens in the morning assures us of a fine day.

THE NEW CONTINENT.

The discoveries of land towards the South Pole, mentioned in the public journals, were made by Captain Biscoe, in the brig Tula, accompanied by the Lively, cutter; both vessels belonging to Messrs. Enderbys, extensive owners of ships in the whale fishery; and the log, together with other particulars, were communicated to the Royal Geographical Society. It is supposed that this land forms part of a vast continent, extending from about long. 47° 30 E. to long. 69° 29 W.; or from the longitude of Madagascar, round the whole of the southern and south Pacific Ocean, as far as the longitude of Cape Horn. On the 28th February, 1831, Captain Biscoe discovered land, and during the following month remained in the vicinity. He clearly discerned the black peaks of mountains above the snow; but he was, from the state of the weather and the ice, unable to approach nearer than about thirty miles. The stormy petrels were the only birds seen, and no fish. It has been named Enderby's Land, long. 47° 30 E.; lat. 66° 30. An extent of about 300 miles was seen. The range of mountains E. N. E. In consequence of the bad state of the health of the crew, Captain Biscoe was compelled to return into warmer latitudes. He wintered at Van Diemen's Land, and was rejoined by the cutter, from which he had been separated during the stormy weather in the high south latitude. In October 1831, he proceeded to New Zealand. In the beginning of February 1832, he was in the immediate neighbourhood of an immense iceberg, when it fell to pieces, accompanied by a tremendous noise. On the 15th of the same month, land was seen to the south-east, long. 69° 29 W. lat. 67° 15. It was found to be an island, near the headland of what may hereafter be called the Southern Continent. On the island, about four miles from the shore, was a high peak and some smaller ones; about one-third of the highest was covered with a thin scattering of snow, and two thirds completely with snow and ice. The appearance of the peak was peculiar: the shape was conical, but with a broad base. This island has been named Adelaide Island, in honour of her Majesty. Mountains were seen to the south, at a great distance inland, supposed about ninety miles. On the 21st of February 1832, Captain Biscoe landed in a spacious bay on the mainland, and took possession in the name of his Majesty William the Fourth. The appearance was one of utter desolation, there being no vestige whatever of animal or vegetable life.

Tincture of Roses.—Take the leaves of the common rose (*centifoliæ*), place them without pressing them in a bottle, pour some good spirits of wine upon them, close the bottle, and let it stand until it is required for use. This tincture will keep for years, and yield a perfume little inferior to attar of roses: a few drops of it will suffice to impregnate the atmosphere of a room with a delicious odour. Common vinegar is greatly improved by a very small quantity being added to it.

Mortality of Astronomers.—Out of 85 persons who devoted themselves wholly to astronomical pursuits, five lived to between 90 and 100 years; eighteen to between 80 and 90; twenty-five between 70 and 80; seventeen between 60 and 70; ten between 50 and 60; five between 40 and 50; and four between 30 and 40.

Yeast.—The yeast prepared by the Hungarians will keep for a whole twelvemonth. During the summer season they boil a certain quantity of wheaten bran and hops in water. The decoction is not long in fermenting, and when this has taken place, they throw in a sufficient portion of bran to form the whole into a thick paste, which they work into balls that are afterwards dried by a slow heat. When wanted for use, they are broken, and boiling water is poured upon them; having stood a proper time, it is decanted, and in a fit state for leavening bread. The Romans prepared their yeast much in the same way: taking wine in a state of fermentation, and working up a given quantum of the flour of millet with it; the paste thus obtained was made into balls and dried. Sometimes the yeast, the invented dough, or the dough itself, will become acid in summer, and acidulate the bread: this may be remedied by throwing some fingers-full of carbonate of magnesia into the yeast or paste. We are told by some chemists, that flour kneaded with water which has been saturated with carbonic acid, may be used in making bread without applying any fermentaceous matter. Others of the fraternity deny that such a process is effectual.—*Foreign Literary Gazette.*

Use of Cattle-horns.—The part of the horn next the root is made into combs—the middle part is flattened and made partially transparent, to serve as a substitute for glass in common lanterns—the tip is used for knife handles, tops of whips, &c. The core of the horn yields a fat which is used in the manufacture of yellow soap—the core itself, when melted down, is used by cloth-dressers for stiffening: finally, the bony part, when stripped of all the virtues just mentioned, is itself ground down, and makes capital manure.

Spiders.—Spiders live and grow without food. Out of fifty spiders produced on the last day of August, and which were kept entirely without food, three lived to the 8th of February following, and even visibly increased in bulk. Was it from the effluvia arising from the dead bodies of their companions that they lived so long?—Other spiders were kept in glass vessels without food, from the 15th of July to the end of January. During that time they cast their skins more than once, as if they had been well fed.—*Redi Generat. Insect.*

TRANSATLANTIC SKETCHES

In North and South America, and the West Indies. By Captain Alexander. 2 *vols.* 8*vo.* 1833.

THE NEGRO PREACHER.

"Hark the voice of Psalms."

I strolled out in the evening to enjoy the cool breeze and moonlight on the verge of the forest. In a lone house in a lane, I heard the sound of Psalm-singing, about eleven o'clock at night, and stopped to listen to a tune which the Covenanters, in the days of their adversity, had often uplifted on the hill-side, when prepared to contend for their religion to the death. The psalm ceased, and a negro slave delivered a long extempore prayer, like those of the Presbyterians, and using excellent language. The prayer was followed by a sermon, in which the fall of our first parents was described, and its consequences to the human race, but regenerate through the instrumentality of a Redeemer. The audience consisted of a few negro men and women, sitting on forms in a loft, lighted by a solitary candle. The preacher could neither read nor write; yet he expressed himself eloquently and energetically. I went away pleased and astonished at what I had seen and heard; and thought that though it is a *penal offence* to instruct slaves in these Southern States, yet with all their enactments, the spread of the Gospel could not be controlled, and that the negro still found means to gain access to the fountain of living waters.—Page 75, vol 2.

The following is rather an extraordinary document in the annals of longevity. It is extracted from the Parliamentary Pocket Book of 1833.

SUMMARY OF THE AGES OF THE PEERS, EXCLUSIVE OF THE PRELATES.

4	Minors.			
26	from 21	to 30	years.	
34	—— 31	to 40	—	
68	—— 41	to 50	—	
92	—— 51	to 60	—	
96	—— 61	to 70	—	
57	—— 71	to 80	—	
9	—— 81	to 90	—	
1	- - - -	92	—	

Take care of your Crockery.—Place a wine glass upon the edge of a table, and another wine-glass upon the edge of another table, at the distance of three or four feet; a pine stick, of one half or three-fourths of an inch square, being then laid across the two glasses, so that its two ends may rest upon the two contiguous edges of the glasses, strike the stick at right angles, in the middle, with a heavy cane, and it will break in two, without breaking the glasses. The two pieces of the broken stick fly up to the ceiling, while the glasses remain, not only uninjured, but are not even moved from their places. I have often, successively, repeated this curious experiment; *when however, the glasses are thin and the stick is too strong, they will break; and they will break in any event, if the stick does not.—Silliman's Journal.*

Curious Sign.—The following is on a violin-maker's sign-board at Limerick:—New Villans made here and old ones rippard, also new heads, ribs, backs, and belleys mad on the shortest notice. N. B. Choos mended, &c.—Pat O'Shegnassey.

Curious Magnet.—Mr. Abraham, a manufacturer at Sheffield, possesses an artificial magnet, formed of 200 straight bars, capable of lifting 140lbs also a famous orrery, made by Heath for the Emperor of Russia, which accurately revolves, by a turning winch, all the primaries

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and secondaries to Saturn. It contains above 400 wheels, and yet may be turned with the force of an ounce.

England: Statistics.—The number of Episcopal and Dissenting congregations in England, are as follows:—Episcopal 9,983; Dissenting 6,422. Episcopal Missionary Societies.—Sums actually subscribed in the united kingdom for 1828-29: Society for Promoting Christian Knowledge (foreign objects) £9,208. 9s. 5d. Society for Propagating the Gospel £6,293. 10s. 5d. Church Missionary Society £52,080 19s. 1d. Total of sums actually subscribed in the united kingdom for 1828-29, £67,528. 18. 11d.. Dissenting Missionary Societies.—Sums actually subscribed in the united kingdom for 1828-29: Wesleyan Methodists £41,846. 12s. 10d. London Missionary Society, £37,207. 0s. 6d. Particular Baptist Missionary Society, £9,305. 10s. 2d. General Baptist Missionary Society, £1,651. 1s. 6d. Total of sums actually subscribed in the united kingdom 1828-29, £90,010. 5s. 0d. Thus it appears that the members of the Church of England, whose ministers and parochial edifices are supported by general taxation, do not subscribe so much by £22,481 sterling per annum, towards the truly apostolical work of evangelizing the nations, as the members of the separate denominations, though they, besides their proportionate contributions to the support of the state religion, have to educate and maintain their own ministers, and erect at their own charge their various places of worship.

An Old New Invention.—The present fashionable mode of warming buildings by means of hot water, appears to have been not unknown to the Romans. In 'A Tour through Great Britain," published nearly a century ago, an account is given of the digging-up of a Roman bath in Herefordshire, the floor of which was partly composed of pipes and hollow tiles, evidently intended for the passage of hot water. On this discovery the celebrated antiquary, Dr. Stukely, remarked, "This would be a most excellent invention to introduce among ourselves for the warming of apartments in the winter season." The worthy Doctor's hint, however, appears not to have been taken till some five score years after he threw it out.—*Mechanics' Magazine.*

Colonial Improvements—The progress of improvement in our colonies does not slacken. In Ceylon, the English stage-coach lately introduced now runs regularly thrice a week between Columbo, the capital, and Candy, the chief town of the interior; and preparations are on foot for running it daily, if increased facility of communication should be required. A road is also forming from Candy to Trincomalee, so as to complete the line from the capital to the opposite coast. In Van Dieman's Land, they are not less active: the latest improvement is the adoption of street lamps in Hobart Town, which, with the lights in the shops, make the town present, according to the newspapers published there, a very brilliant and lively appearance.—*Mechanics' Magazine.*

Roman Nicknames.—The Romans address each other by their Christian names, or by their nicknames, which are so general, and in such current use, that they often supersede the Christian name altogether. The Romans, however, find nothing offensive in these characteristic appellations, and answer to them unhesitatingly. Thus, one is called Signor Baffo, from his beard; another Signor Biondo, from the colour of his hair. A gossip is called Mezzoprete; a bulky man Gigante; and a wearer of spectacles Signor Occhialini. The Roman detects with wonderful accuracy the oddities and peculiarities of every one, and nicknames them accordingly, but without ill-nature or attempt at wit; and not unfrequently an individual receives the same appellation from different persons; so effective and true is the universal sense of criticism in this respect. Foreigners, especially, whose names are often too barbarous for Roman utterance, afford no little occupation for this nicknaming propensity of the natives. At the hotels and tables d'hôte, every stranger has a peculiar cognomen, which is inscribed on his dinner bill at the bar; and when the waiter delivers it, he generally tears off the nickname, lest it should prove offensive to the party indicated. This amusing custom is one of the numerous antiquities which prevail in modern Roman life. A large portion of the most ancient surnames in all nations originated in nicknames, and the Latin Language is peculiarly rich in these characteristic epithets; for instance, the well known Naso, Flaccus, Rufus, Varus, Caligula, Pronto, Pœtus, Ariola, Labea, and other cognomina.

Early Rising.—We have marked taverns and grog-shops, and found them sooner tenanted than any other places of resort—and noticed that a drunkard always commences his career early in the day. Look where you will, and, our life on it, you see a drunkard spend no morning in bed unless compelled to do so by last night's debauch. They awake with the first ray of the morning light, their minds clouded with horror for past conduct, their throats burning with an unnatural thirst, and they hasten to quench the one by adding to the other. These people had better let the sun rise upon their slumbers than take another step towards a horrid death before breakfast. And yet another class get and deserve no credit for leaving their beds before their neighbours; and these are those who make no good use of their time after they are up. What matters if a man have all the good qualities in the world if he makes no good use of them? Would the mines of Peru benefit the world if suffered to remain in the heart of her mountains? A man may get up if he will, and spend more time on his feet than any in the country, and yet not perform half the labour of one who indulges himself in bed till noon. We have heard of a clever old lady, who was always the first person up in the place, *and yet worth nothing after she was up.*

A PILGRIM'S THOUGHT.

(From the Calcutta Magazine)

On other themes our tongues will dwell,
Grow warm where youth or beauty is;
Why loves it not to rest as well
On such a glorious thought as this?

That he who bids the lightning sleep,
Whose home is yon blue sky above;—
Whose throne is on the stormy deep,
Can bend on me an eye of love.

That joyous time, the morning light,
That hallowed time, the fall of day;
All that is beautiful and bright
Is dark if Thou art far away.

The sweet occurrences of life,
All social bonds are doubly dear;
All hopes,—all mem'ries are rife
With greater joy, if Thou art near.

The midnight solitude, the roar
Of ocean, and the wild bird cry,
All sounds and scenes delight me more,
If Thou, my Saviour, art but nigh!

From twilight dawn to close of day,
Is there a sweeter moment given,
Than that which calls the soul away
To spend one hour in prayer to Heaven?

E'er slumber lulls to rest the eye,
To lift to God the voice of love,
And hail, with deep humility,
The light of wisdom from above.

Panting to think one day has brought
Me nearer to that heavenly shore,
Oh! have I spent it as I ought,
As one whose pilgrimage is o'er?

Friend of the poor, to thee I call,
As to yon star unchangingly,
The needle's quivering point will fall,
So turns my trembling heart to Thee.

R. M.

FRENCH NOTIONS OF THE ENGLISH IN 1812.

(From the Life of Sir Wm. Hoste.)

WHENEVER Captain Hoste had the good fortune to make a prisoner of an intelligent Frenchman, he seems to have been very inquisitive as to the sentiments of the stranger with respect to England. He found very often the strangest impressions on their minds about the British people and their designs. A lady, the wife of a French artillery officer, was a psssenger in a corn vessel which was bound from Italy to Corfu. The ship was taken by the Amphion, and the lady was transferred to the custody of Hoste, on board the latter. She showed the utmost alarm when brought into the British ship, and could not for several days, be prevailed on by any concessions and attentions bestowed upon her by the Captain to make her appearance on deck. However, perseverance in the conciliatory plan ultimately overcame her so far that she ventured on the quarter-deck, where a little experience seemed to have operated with the very best results on her mind; she confessed that she had always laboured under the conviction that the English were a race of *cannibals!* and she dreaded that if she were to shew herself to the people on board, the sight of her would have too strongly provoked their unnatural appetites. She also acknowledged that she had been, at the outset, supported very much by the hope that the sailors might, by good luck, have preferred the more natural aliment of wheat to human flesh, and that, as she was caught in a vessel rather amply laden with the former commodity, she might expect a respite, and the chances of impunity of which a delay is generally so productive. Now this lady had been a Parisian, and had received, of course, a due degree of education. No one, indeed, could have been more surprised at her prejudices than herself, as soon as they were removed from her mind, which was speedily and effectually the case, under the judicious arrangements of Hoste.

CHARLESTON, IN AMERICA—SLAVE POPULATION.

(By a Traveller.)

Unceasing agitation prevails in the city; fires are perpetually blazing in the night; and, upon the ringing of the bell, the assembling of troops, guards, and armed citizens, both horse and foot, betrays the general alarm. Every thing gives note of an early and sanguinary struggle; and both residents and strangers evidently live in apprehension of the "business that walketh about in the dark." That the black population are watching, with the eye of the tiger, the political dissentions of the times, is universally believed. Upon the 4th of July, 1831, the writer was present at the celebration of the anniversary of American Independence, in the city of Charleston, when it was generally rumoured that an extensive subterraneous excavation towards the guard-house, and a plan for surrounding the churches during the delivery of the orations, had been discovered a very few days before. Numbers of the slaves are well educated men, hired out as clerks in warehouses and stores, and well informed of the events that are passing in the world. Upon the trial of the conspirators, in 1823, it appeared that the leaders were supplied with pamphlets, books, and newspapers, treating of the progress of the question of slavery in the northern states, and in the parliament of England, and a speech of Mr. King, a member of congress from the states of Massachussets, was in the hands of the mass of the slave population. That so enlightened a multitude can long remain enslaved, is not to be supposed. When the projected insurrection of 1823 is known to have been communicated to more than fifty thousand

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of the slaves, and that more than two years had been consumed in preparation, and yet that the affair was only discovered upon the eve of its irruption, it is apparent what awful unanimity prevails among the conspirators.

To liberate the negro population would evidently be a most profitable policy for these southern states. The cost of slavery is immense. The expenses of overseers, guards, troops, and gaols, weigh upon the fortunes of the planters, and prove that, under a republic, the press of taxation may be greater than under the most expensive monarchy. "The depredations of the slaves," says Mr. Coltsworth Pinkney, "amount to a third part of the entire crop of rice:" and assuredly, the loss by incendiary fires amounts to many millions of dollars per annum. Compulsory labour is of small comparative value; for it has been shewn by Mr. M'Duffie, that the profit upon the labour of an able-bodied slave employed in the cultivation of cotton, does not, at the present time, exceed the sum of 6¼ cents, or less than 3*d.* sterling per day; which sum is to compensate for the numbers of the infirm, the aged, and the young, with all the general charges of the soil. Yet will the planters die in defence of the withering system: and it is generally supposed, that the present determination to retire from the Union, is founded less upon the evils arising from the Tariff, than from the fast-approaching question of the power of Congress to emancipate their slaves. Whatever may be the issue of the present train of events, the traveller in the southern states of this great Union, sees at least these truths—that prejudice is the foulest weed that overspreads this world—that justice is our own self-interest, and liberty the best policy.

A WEEK IN LONDON—REMINISCENCE.

(*From the Calcutta Literary Gazette.*)

.....Scarcely had we planted our feet upon the ground after a pleasant morning's ride in the Oxford Defiance, when a fellow came up with a label on his hat, and a bundle of newspapers under his arm, crying "Here's Lord Grey's letter to the King on his resignation, and the speeches of *hall* the members on the ——." I stayed for no more, but slipping a shilling into the hawker's hand, grasped a *Globe*, and, pale and anxious, rushed into the coffee-room at Hatchett's. My worst fears realised! The Grey ministry defeated, and the Duke authorized to form a new administration!

My chop and pint of port discussed, and the debate on the matter of the *enfranchising* and *disfranchising* clauses read over, the first questions that occurred to me were, will the country tolerate a Wellington ministry? can *any* Government stand that does not give to the people a full and complete Reform in the representation? It needed no "ghost come from the grave" to answer *that*. I sallied out. The very streets teemed with indications of the public mind, symbols of the people's resolution, "coming events cast their shadows before," and spared all doubts as to what would be the final issue of the "Dear Duke's" exertions. *Here* might be seen a fellow selling gross caricatures of the King—*there* stood a vender of ballads, on which the weakness of 'Billy Barlow' and the schemes of the 'German *Frau*' were sung to "filthy tunes;"—*here* you were invited to a meeting at the Crown and Anchor, under the auspices of Sir Francis Burdett, Hume, and O'Connell, *there* you were solicited to sign an address to the sovereign, imploring him to recall Lords Grey and Brougham. *This* wall blazed with placards calling on His Majesty to restore his ministers—or summon the Duke of Sussex—*that* caricatured the Duke of Wellington, or reminded the country of his declaration against *all* Reform Numbers of houses exhibited hand bills, in which the owners or occupants declared that they would '*pay no taxes until the* REFORM BILL *had become the law of the land.*' Some displayed banners with revolutionary devices—others announced the sale of the 'whole stock in trade,' as "the day approached when all security of property, under a Military Government, would be at an end." The newspaper offices were crowded long before the hour of publication, and the items of intelligence which they occasionally exhibited on large placards, were received by the attendant concourse with shouts or yells according as they announced pleasant or agreeable rumours. The *Omnibusses* which bore the names of 'WILLIAM THE FOURTH' or 'QUEEN ADELAIDE,' were at once daubed over with black paint, or disfigured with paper patches:—the "King's Head" public houses reversed their signs, or substituted a perriwigged gentleman who they called 'The Chancellor.' The wax work establishment in Fleet-street presented a figure of the Duke at the window, with the *kingly crown on his head*, and "NO REFORM" labelled on his breast. Beside him stood the effigy of a Lord Spiritual in the act of preaching those words—"unmusical to Volscian ears." You did not meet a man but anxiety sat on his brow, and determination glistered in his eye. I went to the theatres. Dowton, at the QUEEN'S, was called on by the pit to alter the name of the house. At *Covent Garden* Young played Hamlet, and when he told the players to "*reform it altogether*," the house literally shook with the thunders of the audience. At the *Coburg* they acted TOM THUMB, and drew broad comparisons between the uxorious Arthur, the tyrannical Dollalolla, and the mighty Thumb, and certain existing but unpopular personages of rank.

These were the bourly indications of the popular disposition;—these were the rumblings of the volcano which needed but the signal to disgorge its destroying lava and scatter dismay around. As, however, all great public movements must be directed by a head, the excited body had decided on no particular plan of action until the House of Commons, by its glorious vote on Lord Ebrington's motion, gave evidence of its intention to stop the supplies. Then men walked with a firmer step and a less fevered brow. Lord Milton set the example of refusing to pay the tax-gatherer;—the people obeying the signal from the unknown placarders, *ran to the Bank for gold*;*—the Birmingham Political Union, the Trades and the National Union mustered in all their strength, entered protests and resolutions on their records, and prepared for a mighty struggle with the avowed enemies of the people. Many families left town. Bishops were hissed during Divine Service, men wore their hats in Church, but no violence was offered to a single Tory, nor any outrages committed which could serve to separate the cause of the mob from that of the judicious part of the community. Every individual, in short, seemed to say, 'let us reserve our anger until Royalty and the Tories have consummated their schemes for the destruction of our liberties."

At this crisis the Grey Ministry was restored, and the PEOPLE breathed again.

Δ

* The placards ran thus:—
TO STOP THE DUKE!
GO FOR GOLD.

LAW! LAW! LAW!

CASE I.

In a case, Rowe *v.* Brenton, relating to the title of certain mines in Cornwall, Mr. Brougham expressed his opinion, that it would not be necessary to furnish copies of all the documents in the case, since one single set that had been sent to the learned Counsel weighed *fifteen hundred weight*.

II.

An answer in Chancery has lately been filed, consisting of no less than 101 skins of parchment, the writing on which amounts to about 4,300 folios, or 387,000 words.

III.

Lady Essex Ker had long been engaged with her late sister Mary, in contesting the property of her late brother, John Duke of Roxburgh, and just lived long enough to recover about 200,000*l.* of it, at the *moderate* expense of 35,000*l. paid for law!*

IV.

A cause was in 1825 decided in the Chancery Court for the value of *one hundred pounds*, which had been twelve years dormant there. The costs amounted to the *moderate* sum of 500 *l.*

V.

In the Vice-Chancellor's Court, on Chrismas-eve, the Master of the Rolls delivered his final judgment in a suit between a lady, named Threlsal, and the trustees of a school at Ellel, near Lancaster.—The cause of the dispute was two perches of land. It had been in litigation ten years, and, from the conflicting testimony, the judge confessed he never met with a more difficult case. The decision was against the lady. The costs of this long proceeding, on account of a piece of ground not worth 40*l.*, amount to between 3000*l.* and 4000*l.* each party.

VI.

It is confidently said, that Admiral Tatham intends to apply for a new trial in the late Will Cause tried at York. The expenses of the last trial are said to have been 15,000*l.*

VII.

The bill filed in the Court of Chancery, by Messrs. Hoare and Co. against Mr. Goodwin, the brewer, respecting the unfair valuation of some public houses, exceeds 1,300 folios: the defendant, from its extraordinary length, obtained eight months to put in his answer. That answer, when filed, was 3,951 folios; and an application was made to the Vice Chancellor for five months, in addition to the usual two months, to enter exceptions to the answer.

VIII.

The late Charles Gardyne, of Middleton, had an interesting law-suit, some time previous to his death, with the Tacksman of the tolls, and the road trustees here, on the doubtful question whether the vehicle in which he rode was a taxed cart or a chaise, a point which made an essential difference in the rate of toll After the final decision of the supreme court, Mr. G. had the result painted in large legible characters on the back of the carriage as follows:—"A taxed cart by Act of Parliament. A taxed cart by decision of the Sheriff of Forfarshire. A taxed cart by decision of the Court of Session. A chaise, by a second division of the same court. Eight wise judges said it was a chaise. Six, not less wise, that it was a cart. It has been three years on its law journey, and at last has been obliged to stop for want of law grease." "Charles Gardyne Froick's taxed cart." Mr. G. rode in this vehicle on all necessary occasions, during the remainder of his life, and exhibited it at Perth once, during the circuit, at the George inn door, to the no small dismay of the judges, counsel, and agents, and amusement of the citizens.—(*Daily Papers*)

CHARLES THE FIRST.

IT is singular that the tribunal which condemned this unfortunate monarch to the block, did not number among its members a single individual connected with the *navy* The catalogue of those numbers consisted of 1 ecclesiastic, 14 soldiers, 8 lawyers, 3 citizens, 1 butcher, 2 brewers, 1 merchant, 1 chandler, 2 goldsmiths, 2 silk-men, 2 linen-drapers, 1 woollen draper, 1 shoemaker, 1 salter's apprentice, 1 shop-keeper, 36 civilians, without profession or trade, in all 78, being the whole of those who attended out of 150 who were summoned.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

SCHOOL OF MEDICINE AT ABOUZABEL, IN EGYPT.

At the "séance" of the Academy on the 13th of Nov. M. Clot, the founder and director of the school, accompanied with twelve of his Egyptian "élèves" was present. These twelve foreigners have been sent by the Pacha of Egypt to complete their medical education in France. Among them, some are Ulemas, and others, although born and educated at Mecca have left their homes, wives and families, to be entered as pupils at the School of Abouzabel; an occurrence unexampled in the annals of Islamism.

M. Clot, or rather Clot Bey (for he has been made a Bey by the Pacha), gave the following interesting details. "After having taken the degree of Doctor, at Montpelier, I went to Marseilles to reside, while there, I was invited to go out to Egypt as a physician; I did so, and soon after my arrival in the country strongly recommended to the Pacha, the establishment of a Council of Health on the model of that at Paris—my advice was followed, both as regarded the councils, and also the organization of hospitals in different parts. To enhance the respect due to professional men, the medical service was put upon the same footing as the military service; and the ranks in the two were assimilated. My next object was to found a School of Medicine; but what difficulties to conquer!! On the one hand how to convey to foreigners the language of a science, so full of technical terms; and, on the other hand, how to commence the teaching of anatomy in a country where the act of merely touching a dead body is deemed the most profane sacrilege. I explained my wishes to Osman Bey, who promised to communicate them to the Vice Roy; but he, although favourable to the plan, was unwilling to interfere with the religious prejudices of his people. I therefore boldly resolved to address myself at once to the Ulemas, or priests; they objected, and gave as their reason, that to cut a corpse was to inflict pain upon it; to this I answered, that if dead bodies really do feel pain, it must be much more severe to be gnawed away by worms than to be dissected by the scalpel. I also pointed out to them how necessary a knowledge of anatomy was to the right understanding and treatment of diseases, and urged the importance and dignity of a profession, at once most useful and honourable, and which would tend so much to augment the credit and influence of the priesthood. They at length consented, and forthwith I began to accustom my pupils to seeing and handling the dead body. All Cairo soon knew that dissection was practised at Abouzabel, and although the feeling against it was strong at first, reason soon overcame prejudice. At the end of the first six months, we had a public examination; and during that time were translated into Arabic, a Treatise on Anatomy, Majendie's Physiology, Begin's Surgical Pathology, the Internal Pathology, by MM. Sanson and Roche, and the works on Military and Naval Medicine by Percy and Kerandren, and also Orfila's book on the Recovery of Persons who have drowned and asphyxiated. We were obliged to coin many new Arabic words to convey the meaning of the originals; and so diligent has been the Academy of translation, that now we have a vocabulary of upwards of 6,000 words, whose meaning is perfectly understood. Attached to the school, is a class of Pharmacy and of Veterinary Medicine; and we propose to add immediately one for Midwifery, to be attended by Negro and Abyssinian women. The affairs of the school are conducted on the plan of a college, where the pupils are lodged, boarded, clothed, taught, and rewarded, at the expense of the Viceroy. Some of the pupils are Christians, and are treated quite as well as any of the others. At the time of the glorious expedition into Syria, 250 surgeons were sent from the school to join the army; and during the disastrous invasion of the cholera, the zeal, skill, and kindness of the pupils were most nobly and praiseworthily displayed. In Cairo alone 60,000 were cut off in 29 days; most of the European residents, and among these the medical men, with the exception of two or three, fled from the place. Of the 150 pupils who gave their professional assistance, 30 died. In the village of Abouzabel 900, out of a population of 1,800 inhabitants, perished. The particulars will appear in a Memoir which will be speedily printed at Marseilles.

The object of our present visit to France, is to complete the education of these twelve Egyptians in all the branches of medical science, and to improve their knowledge of the French language, in order to enable them to fulfil the duties of Professors upon their return home. The School of Abouzabel musters already more than 400 scholars; and out of these I selected 16 who appeared to be the most industrious and clever; four of them I left in Egypt to superintend the education of the others during our absence; and twelve have accompanied me to France. The Academy will much oblige me by examining and questioning them, that a correct idea may be formed of the progress which they have hitherto made."

Great applause followed this speech. M. Pariset explained the reason of M. Clot-Bey appearing in the Oriental costume:—"The Viceroy of Egypt (said he) has formed very exalted ideas on all matters of religion; and, in testimony of respect for M. Clot's great services, he has honoured him with the dignity of Bey, and requested him, upon leaving Egypt, to bear the garb and insignia of the office in France, that Europeans may know that the Viceroy can reward merit, without expecting a man to abjure his country or his religion. Thus, M. Clot, although a Bey of Egypt, remains still a Christian, and a subject of France." M. Clot added, 'that the Viceroy has uniformly treated him with the highest respect and kindness, and that he had raised the emoluments of his office, independent of those of the professorship, from 8000 to 36,000 francs.'

Post Office.—The ordinary business of each day is, in letters in the inland office alone, 35,000 letters received, and 40,000 sent away—(23,475,000 annually), exclusive of the numbers in the foreign office department and the ship letter office, and altogether independent of the twopenny post. The number of newspapers daily varies from 25,000 to 60,000 (on Saturday 40,000, and on Monday 50,000), of which number about 20,000 are put into the office ten minutes before six o'clock. After that hour each newspaper is charged one halfpenny, which yields a revenue of fully £500 a year, and of which 240,000 newspapers are annually put into the office from six to a quarter before eight o'clock.—The revenue derived from the charges for early delivery in London is £4000, and the sum obtained by the charge of one penny on each letter given to the postmen who go round with bells to collect the letters, is £3,000 a year, giving 720,000, or nearly 2,000 daily. The revenue of London is £6,000 a week, above £300,000 a year; and yet of all this vast annual revenue there has only been lost by defaulters £200 in 25 years. The franks amount in a morning to 4,000 or 5,000, or more.

Man.—Man is a very dirty creature, unless he is kept very clean. Alive, he requires a constant process of washing and scouring; his secretions are abominable; the very rheum from his eyes would corrode iron. His habitation should be built on a stream, and no morning should pass without thorough ablution; and if his employment is sedentary, every part of his frame should be braced with a spunging application of a solution of vinegar. His breath, when confined, is poisonous; too many persons in a room are every instant shortening their existence; and unless his garments are changed and purified sufficiently often, he becomes a regular hot-bed of vermin. But, suppose him not one, but a myriad, dwelling on a spot prejudicial to human life to begin with, in the midst of accumulated masses of putrescent filth, every instant exhaling steams of poisonous vapour, living scantily and on poor food, overworked, unwashed, dejected in heart, subdued, emaciated, and almost macerated by sweat, and breath, and steam: can we wonder that life is shortened? Should we not rather wonder at the extraordinary tenacity of life and vigour of constitution which can resist such a combination of mischief for years, and only exhibit its effects in a meagre body, and a gaunt and pallid face? At length, however, come fever and death, and the suffering body is turned into an inflicting mass of active evil. Instead of being removed to some solitary spot, over which the airs of heaven blow, and scatter and dilute the mischief, he is carried to rot in the place of weekly worship; where, in death, he evaporates in revenge upon society, the ill he has suffered during a life of protracted misery and privation.—*Belinaye on the Sources of Health and Disease.*

Remarkable Anecdote.—The particulars of the following very striking incident were lately told us by a friend, as a fact falling within the range of his personal knowledge; and having the most perfect confidence in his veracity, we scruple not to give it as such to our readers:—In a sea-port town on the west coast of England, some years ago, there was notice given of a sermon to be preached one Sunday evening, in a dissenting chapel there. The preacher was a man of great celebrity in his calling; and that circumstance, together with the pious object of the discourse—to enforce the duty of a strict observance of the Sabbath—attracted an overflowing audience. After the usual prefatory prayer and hymn of praise, the preacher gave out the text, and was about to proceed with his sermon, when he suddenly paused, leant his head on the pulpit, and remained silent for a few moments. It was imagined that he had become indisposed; but he soon recovered himself, and, addressing the congregation, said, that before entering upon his discourse, he begged to narrate to them a short anecdote. "It is now exactly fifteen years," said he, "since I was last within this place of worship; and the occasion was, as many here may probably remember, the very same as that which has now brought us together. Amongst those who came thither that evening, were three dissolute young men, who came not only with the intent of insulting and mocking the venerable pastor, but even with stones in their pockets to throw at him as he stood in this pulpit. Accordingly, they had not listened long to the discourse, when one of them said impatiently, 'Why need we listen any longer to the blockhead?—throw!' but the second stopped him, saying, 'Let us first see what he makes of this point.' The curiosity of the latter was no sooner satisfied, than he, too, said 'Ay, confound him, it is only as I expected—throw now!' But here the third interposed, and said it would be better altogether to give up the design which had brought them there. At this remark the two associates took offence, and left the church, while he himself remained to the end. Now, mark, my brethren," continued the preacher with much emotion, "what were afterwards the several fates of these young men? The first was hanged, many years ago, at Tyburn, for the crime of forgery; the second is now lying under sentence of death for murder in the jail of this city. The third, my brethren"—and the speaker's agitation here became excessive, while he paused, and wiped the large drops from his brow—"the third, my brethren, *is he who is now about to address you—listen to him.*"—*Chambers's Journal.*

Lachrymo Christi.—The noble Italian wine so called is made in the following way. The grapes are nicely cleansed, and then thrown into a cullender, the bottom of which is a strainer. The grapes are then bruised, when the juice comes away into another vessel placed under the cullender drop by drop or rather tear by tear.

HINTS TO MEDICINE TAKERS, &c.

The modifications to which the effects of medicines are subject by reason of the difference of sex, present nothing of an important nature, except what may be easily conjectured; we therefore proceed to consider the influence of custom or habit upon the action of medicinal substances. Dr. Thomson* first considers the power of habit, as it controls the mind, and next, as it operates on the body. One of the most remarkable results to which it gives rise is, the diminution of the sensibility of the nervous system. Thus Boerhave mentions, that when Hungary water was the fashion in Holland, several females wholly lost the faculty of smell by the excessive use of the water. Again, when an extraordinary phenomenon is produced by habit, in the acquisition which it gives of a power of controlling even the process of respiration. The pearl-divers, who remain under water, and of course, without breathing for some minutes, are enabled to accomplish this feat simply by habit. From the same cause, an excessive degree of temperature may also be borne. Du-Hamel states, that the female servant of a baker at Rochefoucault was so accustomed to heat, that she could go into an oven, and continue there for twelve minutes, though the temperature was at 276° Fahr. It is to habit, likewise, that the Russian is indebted when his common bath is heated as high as 160°. Dr. Thomson thinks it needless to proceed farther with his illustrations, and deems it merely necessary to state, that there is not a vital function which is not capable of being influenced by habit.

The action of medicines is also remotely affected by difference of climate. It is well known that divisions have been established in the human race, founded upon the varieties of conformation which it presents, and which are acknowledged to be the result of peculiarity of climate in each instance.

It appears that on first landing in a tropical climate, the heat of the body of a European is raised two or three degrees. This effect produces a considerable alteration of the constitution, and increases the susceptibility to disease. This change, likewise, is only the type of that more permanent alteration which would shew itself in his offspring, for the power of the climate would materially alter the character of the children, even those immediately descended from a European parent. In the variations generated by climate in the lower animals, we have, perhaps, the most remarkable instances of its power. Sheep, in cold mountainous districts, are found with a thick covering of fine soft wool, admirably adapted to resist the severity of the region in which they are placed; let animals of the same breed be sent to any of the inter-tropical regions, and the wool will consist of only stiff coarse hair. Other examples of this effect may be seen in Dr. Prichard's *Physical History of Mankind*. But with respect to the connexion between climate and the action of medicines, it has been ascertained that great care is necessary in the administration of powerful substances to the inhabitants of a moderate climate, when they are sojourning in another, the temperature of which is higher. Thus narcotics act with much greater force in Naples than they do in England on the same person. The nervous susceptibility is increased in the warmer region to such an extent, that it has been known that a dose of henbane, which was always taken in England without any unpleasant symptoms, having been administered to the same patient in Naples, produced temporary blindness. It is proper to relate that, in this latter case, the medicine was, in both instances, derived from the same shop in England. Nitrate of silver acts in nearly the same way, when employed in a warm climate; and, upon the whole, it may be considered as a safe conclusion, that the doses suited to this country are excessive in the climate of Italy, or of any other warm latitude. Still, it must be borne in mind, that very large doses of calomel, perhaps five times the British dose, are ordered in India.

In all these instances, the change is limited altogether to the consumer of the medicine, and is therefore to be distinguished from that alteration which is traceable to the substance itself, and not to the patient. For example, the cinchona bark given in the subsidiary fever of Nagpore, during the cold season, acts almost as a specific in curing the disease; but it is so useless in the rainy season that antimony and calomel are employed as its substitutes. The chief alterations, however, in the medicinal virtues of plants, arise from the effect of transportation from one country to another, or rather, from one soil and climate to totally different ones. The meadow saffron grown in England is characterized by a principle of an acrid, bitter nature, which is regarded by the profession as a remedy of the first importance, and, in a large dose, is even a poison. But, towards the eastern part of the continent of Europe, the bulb (the medicinal part) is eaten as common food. Senna has been brought from Upper Egypt, and grown in the south of France; but not only are the external characters of the plant, the leaves especially, different from those of Egypt, but their purgative virtue is greatly decreased in comparison. There is a tree called Myrospermum Frutescens, which, when it grows in New Grenada, yields Balsam of Tolu; but, when it is found in Peru, it gives out an entirely distinct secretion, known by the title of Balsam of Peru.—Amongst other variations to which the action of plants is liable, may be particularly mentioned their age. The peculiar power of a plant is not present, generally speaking, before it has attained its maturity; and this is so truly the case in poisonous plants, that these may be eaten in their state of imperfect development. Sometimes, however, the active principle suddenly manifests itself at a given epoch of the life of the plant. A narcotic principle is obtained from lettuce, when it is old, though nothing of the sort is found in it when young. In the poppy a similar property is observed, only after the flowering is over, and the ovary begins to enlarge.

The power of habit in controlling mental operations has been already alluded to, but nothing has yet been said of the still greater influence which the mental affections possess. These may be resolved into the passions which depress, and the passions which excite; and no part of his duty is more worthy the solicitude of a physcian, in prescribing medicines, than the degree of dominion which these affections may possess upon the mind of his patient.—He should remember that vexation considerably disturbs the function of the stomach; that it interferes materially with the secretion of the juice peculiar to this organ, and may establish permanently what is called dyspepsia. Sorrow, by the final consequences of its immediate action on the circulation and nervous system, will induce organic diseases. But the emotions produced by *fear*, and its extreme degree, *terror*, have been the subject of observation almost in all ages. Philip the Fifth of Spain expired at the shock which the news of the disaster of his army gave him. Borrelli describes the case of a Frenchman, who, on some charge or another, was cast into prison. He was excessively frightened, and in the course of the night after he was incarcerated, the hair of his head turned perfectly grey. Dr Thomson had an opportunity of witnessing the circumstances of the following very impressive illustration of the effect of the mind over the body.

The death of the celebrated John Hunter was caused by overwhelming passion, and may therefore be set down as a very striking example of the power of the mind over the body. He and Dr. Pearson were disputing about some medical point at St. George's Hospital. Hunter became warm, and retired to an adjoining room; Pearson followed him. "You have followed me on purpose," exclaimed Hunter, "to be the death of me; you have murdered me!" and at that moment he fell back dead! In one of the volumes of the life of Byron, now in the course of publication, we find it stated, that his Lordship's mother died from an ague, brought on by reading her upholsterer's bills.

But the strangest fact of all is, that sudden joy is one of the most fatal disturbers possible of the human mind. Zimmerman, in his treatise on general and particular experience in the heart of healing, mentions the case of a Dutch female, who fell a victim to joy. The family were respectable, but met with reverses, and were reduced to indigence. Whilst in this condition, the eldest son, who had been some years absent, returned home with a considerable fortune, and being desirous of communicating so pleasant a piece of news to his sister in a practical manner, he presented her with one of the richest jewels. She instantly fell down, as if struck by lightning, and expired. The history of ancient Greece contains narratives of similar effects being produced by sudden joy.

A remarkable statement connected with this subject, is found in the works of one of the most learned men that ever adorned the profession of medicine, we mean Dr. Mead, who positively declares, from his own experience, that, during the memorable era of the South Sea Bubble, many more persons went mad on account of sudden prosperity than from downright ruin.

All these effects, it will be seen, are referable to nervous excitement--to a sort of spiritual, or at least, invisible process, which leaves no traces after death. If such results are calculated to surprise us, what will be our amazement when we find, that there are mental emotions which actually have the effect of producing such appearances in the chest as we constantly see resulting from acute inflammation. The disease called *Nostalgia*, or Home-sickness, which is confined exclusively to the inhabitants of Switzerland when they are sojourning in another country, produces lesions of the heart, and unnatural adhesions of the membrane which covers the lungs. The disease *nostalgia*, we may observe, is excited by the music of the national song, the *Ranz de Vaches*, against the playing of which, in the French armies, during an encampment, a strong prohibition exists, for on one occasion, before the period of the restriction, the sound of the ancient song produced a mutiny of the Swiss soldiers. From researches into the remains of those who die from disappointments in love, there is reason to conclude that they are affected in the same way as those who fall victims to *nostalgia*.

Several effects upon the constitution, which are capable of modifying the action of medicine, are attributed by our author to the imagination. The power of this qualification is familiar to most of us, but in the following case it is illustrated in a most signal manner. This case used to be related by an Edinburgh lecturer of high reputation:

A student labouring under fever asked the doctor to give him an anodyne as he had been very restless at night. The doctor replied that he had no objection to the anodyne, and ordered him one. The patient happened to be very deaf, and mistaking what the physician said, took the pill under the impression that it was a purgative, whereas it was opium. The next morning, when the attendant visited his patient, he asked him if the opium agreed with him, when, to his astonishment, the latter replied that it proved a very active purgative.

This story was intended to carry the impression to the students, that a medicine so opposed to any thing like a cathartic effect, could be

* Elements of Materia Medica, &c. By Dr Thomson.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

made to change its very nature under the influence of human fancy.

In a long passage of this section of the work, Dr. Thomson enters into the history of the effects of credulity and superstition on the mind. We shall afford space to a few specimens of the absurdities to which these irregular influences have once given rise:

If we go back to the period of Scripture history, we find that the Jews had great faith in phylacteries—a species of amulets, which are still held in esteem in India and other eastern countries. They consisted of portions of Scripture written upon vellum of a shape and size adapted to the part of the body on which they are to be worn. Thus, a phylactery for the head, preserved in the Duke of Sussex's library, consists of four slips of vellum with verses from Scripture written on each. These are separately rolled up, and placed in a small leathern bag, upon which is written the word *schin*. It is tied to the head by means of thongs of leather, so as to permit the bag to rest on the forehead. These phylacteries are called tephillin, shel-rash, tiffila of the head. Those for the arm are called shel-jad: they are written upon a strip of vellum, which is rolled up spirally to a point, and enclosed in a case made of the skin of any clean beast. They are bound upon the arm, in a situation as near to the heart as possible, by a thong which must go seven times round the arm in a spiral manner, and terminate by being wound three times round the middle finger. Coral, worn round the neck, was supposed to possess the power of driving away evil spirits.

As Christianity advanced, the clerical physicians seemed anxious to render the dogmas of the existing religion subservient to medicine; and, consequently, relics were introduced into the Materia Medica. We read that bread, dipped in oil at the shrine of St. Anthony at Rome, was believed to prevent hydrophobia in those bitten by a rabid animal; that a ring taken from the body of St. Remigius, and dipped in water, produced a drink very efficacious in fevers; and the following cure for epilepsy in children is recommended by John of Gaddesden, Walter Gilbert, and others who flourished in the thirteenth century. "When the patient and his parents have fasted three days, let them conduct him to the church. If he be of a proper age, and in his right senses, let him confess. Then let him hear mass on Friday, during the fast of *quator temporum*, and also on Saturday. On Sunday let a good and religious priest, read over the head of the patient in the church, the gospel which is read in September, in the time of vintage, after the feast of the holy cross. After this let the priest write the same gospel devoutly, and let the patient wear it about his neck, and he shall be cured. The gospel is—"This kind goeth not out but by prayer and fasting."—pp. 85, 86.

Wax from Poplar Flowers.—An extensive landowner in Flanders is said to have succeeded in obtaining a quantity of wax, by putting the flowers of the poplar-tree into bags, and submitting them to pressure. The wax is of good quality, and has an agreeable perfume. So remarkable an experiment is worth repeating.

Hints to Travellers.—Persons exposed to the sun in warm climates shuld line their hats at the crowns with writing-paper several times doubled: they should likewise daily sponge themselves with vinegar, particularly in those countries where the malaria is likely to prevail.

Pigeon Population.—Audubon, the American ornithologist, saw, in Louisiana, a flock of carrier pigeons, the length of which he computes at 110 miles. The number of pigeons contained in one mile's breadth of this enormous flock, taking it in its length, is calculated by him to amount to 1,000,115,136,000; and the provision for these, necessary for one day's sustenance would amount to 8,712,000 bushels.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

MARCH OF THE *MINORS*.

This is surely as much an "age of bronze" or of brass, as it is an era of intellect and excitement. When all the world, from the *Poles* to the Equator, are revelling amidst the ardor of enthusiasm, in what are we delighting on this southern promontory of existence? Our "*spes bona*" is apparent no where but on the road out of town, for we are living in the most placid monotony, and driving on the old dull unvarying scene. We lack of every thing to remind us of those primeval hours of devotion, the good old days of Adam and Eve, and with the exception of an occasional Beef-steak Dinner, and a meeting of the Chasse Ennui, which seems, by-the-bye, to have actually dilapidated its own constitution, or to have departed into a swoon—a resuscitation of the Minor Institute—or an insolvency, *nolens volens*, life would hardly be supportable. In fact, it is the latter stimulant which possesses all the effect of at once depressing and elevating our bodies, as well as our mental ideas, and a monthly "smash" really has a very wonderful consequence. What a tale would a narration of the last six months at the Cape expose, under the appellation of "Six Months at the Cape," by a Visitor! Our history would really embrace much to be wondered at—a great deal more to be surprized at—and still more to know the source of its emanation. But now the winter's evenings have arrived, with all the tedium which appertaineth to them, and we are left by the hurrying hand of time to imagine our diversions and amusements. People can't be always thickening their brains over ponderous tomes, and the fashionable novels of the day, any more than eating beef-steaks four times per diem. Both must be digested. Folks, too, have left off giving their wonted entertainments, for the reason that we have so many relatives and friends, and that to invite one-third of the population of our thickly-studded town, would only be to give umbrage to another third; who, in their spirit of kindness and consideration, would give us either the cut direct or oblique. I remember a gentleman inviting a circle, when the segment of another circle, the next day, in the form of a party of Amazons, canvassed the propriety of his conduct to entertain without their presence. "Ladies," said he, "my next party shall be on the parade, which will hold all my friends, neighbours, and acquaintances, and I have no doubt my interest will obtain for me the Commercial Exchange, with the adjuncts, for a refreshment rendezvous for you all."

Matters are, however, now managed differently, and although we live and have our existence in a major age, the Solon maxim of "know thyself," exposes the magnitude of our march. In fact, we have become juveniles in name, and every thing is minor. The first "minor" is the Institute, where the spirit of black-balling, like the Demon of Darkness, lurks beneath the mask of obscurity, and commits its devastating ravages on our innocence. We really stood aghast when the annunciation of two or three white balls *only*, betrayed our unpopularity; but, like the Fox in the Fable, we from henceforth doomed the Institute, like its precursors, to oblivion. The next "minor," or rather the "juvenile," is the vagrant "*train*," which we saw in a "*ring*" on the day of debarkation, which has really, with the pros and cons, quite non-plus-ed us, and we feel quite at a loss to conceive the success of the importation—especially at such high-prices. We wish it well, however, with all our hearts, and long for those halcyon days of servitude, when the spirit, as well as the manual exertion of negering our domestic, shall have passed away. The third minor or juvenile, are the parties which bear the appellation of "Juvenile at Homes;" and which, besides cheating the dancing-folk out of their long-evening pastime, have an effect which produces arrogance, and a forwardness of manners, which we do not think at all commendable. During this season the fashion hath gone abroad to an incredible extent, and left the young ladies, who have already "come out" to drink tea-water at home, and the young men to go to bed. This is absolutely depreciating the currency, and although a grown child now and then gains a standing place, he is either bored with "parallelograms" of sandwiches, in the shape of juvenile viands, or left to the uncompromising mercy of a gouvernante, who ever and anon extracts your attention with an observation of the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

rapid improvement and manly manners of Master Augustus-Fitz-Augustus—a little urchin of about ten, who is doing the honors of his party, by providing the young ladies with partners; and who, at a later period of the entertainment, screams out—"fill your glasses, gentlemen—the ladies, if you please, *in a bumper;*" but this comes of his having been *in a fashionable Boarding School,* in which many a *Juliana-Adelaide* is so famous for instructing "the young idea." The reader will excuse this compound name, but we should not have given it if it had not been "quite correct," as well as the latter part, which is equally the "thing." Every new article carries with it the cognomen of Adelaide, including new-born babes and Kidderminster carpets, all warranted of the true pattern. We presume that the novelty strikes, and that while "Adelaide armlets" "go off," the rising world of Adelaides will go off equally well. We should like to know if Queen Dollollolah left a fashionable circle of little Dollollolahs. Really the ingenious sagacity is characteristic, and marks with a glaring index the portentous spirit of the age.

The Advertiser—The Tea Trade—and Alleged Monopoly.

The *Advertiser* has returned again to his *cups,* we mean tea-cups, good people,

"——— "the cups
That cheer, but not inebriate."

Yes—we have had another lecture on political economy, and if the reader will be pleased to take up No. 636, Vol. 9th, of the *Advertiser,* he will read all about it. This rage for free-trade and political economy will, we fear, chill our unreserved natures, and make us the veriest churls imaginable. Hence the engrossing subjects of conversation are—Malthus, Sadler, Chalmers, Martineau, and high and low prices. Even the child of the family has come to be a woman, before it was a child. It has learned to go to market; it chatters, it haggles, it envies, it murmurs; it is knowing, acute, and without infantile simplicity. And as for the boys—the schools and study are mere secondaries in comparison with bargain-hunting at sales, and retailing the purchases at so much per cent. profit. Perhaps there is no town in the universe equal to Cape Town, for its devotedness to the shrine of mammon.

But we are to have another palaver with the *Advertiser* about Tea. The opening of the trade will, it is prophecied by the *Advertiser,* give us "Bohea from 10*d.* to 11*d.* per lb." So much the worse, say we. For, ladies, be pleased to understand, that Bohea* is the refuse of all the black teas, which are not thought worthy of being packed in the tea country, and are brought to Canton in baskets, there thrown into heaps along with the refuse black teas, that have remained unsold for several years, and then packed at leisure!!! Now, the free trade is to give us this rubbish at American prices. 10*d.* and 11*d.* per lb.!!

* The word "*Bohea*" is a corruption of the word "*Woo-e,*" the name of the hills in the province of Fo-kien, where the black teas grow which are required for European consumption.

Again, says the *Advertiser*—"There is a curious fact connected with the Company's Monopoly, [Monopoly, indeed!] which has not often been considered. They are under an obligation to keep a year's supply of tea in their warehouses." So much the better say we! But, then, says our contemporary, "according to the most respectable evidence, the teas are thus much deteriorated in quality." Pshaw!—Mr. W. Thompson, an experienced tea-broker, who was examined before Parliament, stated that "black teas *improve* by keeping them two years, that they get stronger, and then there is an increased demand for them." Every farmer knows how much more valuable *old hay* is than new. What, then, becomes of this "curious fact?"

Once more as to prices in general. Do the people of England really imagine that the government of the country will sacrifice its revenues arising from the sale of tea by the E. I. Company, to please the free traders? And can the free traders vie with the Company's prices of *good tea?* If they cannot, why destroy the most respectable mercantile corporation in the world? Now, let us attempt to shew the manner in which the cost of tea is enhanced to the British public, for which the E. I. Company are so unjustly blamed. Mr. Mills, a tea-broker, stated in his evidence before the Lords, that congou tea offered for sale by the E. I. Company (by the most open competition, be it remembered,) at 1*s.* 8*d.* often fetches 2*s.* 5*d.* and other congou tea put up at 2*s.* 1*d.* has fetched 2*s.* 7*d.* Taking the first as an example, the retail cost would stand thus:

	s.	*d.*
One pound of congou put up at the E. I. Company's sale, at	1	8
Broker, for the sake of keeping up the market, which they avow it is for the interest of the trade so to do, raise the selling price	0	9
Purchasing price by the Broker's, ...	2	5
Duty levied by the Crown, ...	2	5
Retailer's profits, brokerage, &c. &c...	2	2
Shop price, ...	7	0

Thus it will be seen, that what the Company offer to sell at 1*s* 8*d.* is raised to 7*s.* before it reaches the consumer's table. In a word, if truth and reason can satisfy the public, then it can be proven that the high price of tea, so vehemently clamoured against, is a perfect *humbug,* (to use a forcible, if a vulgar expression,) and the bright visions of an export trade to China are a golden bubble, destined to be realized when the Cacique of Poyais shall take his place as the richest and most powerful potentate in the world.

As to the *monopoly* (so called) of the Company, pray let it be understood that the profits which the law permits them to acquire in this trade, are not at their own disposal! but the moderate dividend of 10½ per cent. *on their capital stock,* (about 5 per cent. on the whole capital really invested in the trade,) being *awarded* to them, the remainder is disposed of, *to the uttermost farthing, for the purposes of the State!*

In reference to the Vagrant Boys lately introduced to this Colony, the *Advertiser* touched upon the pathetic, and made the little urchins appear as the "Victims of Cruel Fate," "The Persecuted Ones."* But the *Passions taught by Truth* is, after all, much better than the fictitious pictures of the romancer. This has been clearly demonstrated by Capt. Brenton's corroborations of the statements of this Journal; and it is again clearly proven in our present observations on Bohea at 10*d.* and 11*d.* per pound!!!

Finally:—we ask, what are the advantages to be derived by the State, merely to change the persons of the trade, without adding to the total commerce of the country? Again, what has been gained in return for the free-trade export, *such as it is?* Reader, we will just shew you in a few words what has been gained. The lovers of exports, by the *forced sales* which they have obtained for their cottons in India, by destroying the native manufactures, has been the cause of misery and starvation to thousands of natives, who have been thrown out of employ, and thus re-acted with a disastrous influence on the revenues of India. And England's *cheap* manufactures—cheap, at the cost of the tears, health, life, salvation of the poor infant English factory-slave—have been as unblest in their sale as in their production. Yes! every shilling of the profits of this boasted export, has cost the *life* of, perhaps, twenty Hindoos. Again, look at the ruinous prices of British articles in India. What are we to think of British iron, for example, selling in Calcutta at a lower price than in Birmingham! But we must conclude, and sorry are we to differ with our firm supporters, we mean the Merchants; for at the Cape of Good Hope, be it known, as we have before expressed, the Merchants are the main-stay of the *Literary Gazette*—the *only* English publication in the Cape Colony. But we have to do with principles, not persons—and we are bound honestly to maintain, that there is often a species of insane delirium in mercantile speculations, which neither reason can cure, nor misfortune eradicate. Failure after failure will not enlighten the enthusiast; he may be confounded for a moment, but the passion returns with an elasticity that cannot be conquered.

NATURAL HISTORY OF THE CAPE.

SOUTH AFRICAN GLEN.

***A description of an extensive Collection of rare and undescribed Specimens of Natural History, collected in the Interior of South Africa. By* A. STEEDMAN. London. 1833.**

WE had the pleasure to notice some time since Mr. Steedman's Travels (of St. George's-street,) at the Cape as in a state of forwardness for publication. Very shortly, we believe, the public will be in possession of this new work on Southern Africa. In the mean time, we have been much interested by the little publication, before us, of Mr. Steedman on the Natural History of the Colony. The arrangement does the author great credit, and is quite free from that ridiculous affectation with which many Naturalists manage their descriptions in the way of endless definition and scholastic logic. How provoking to take up sundry alleged standard works on the subject of natural history, and after all the toil, and the definitions, and the hard words, and the——*see page* so and so,—to end in a reference, "Rumph. tab. 7, fol. 1."

Where the present catalogue might be amended, it would not be difficult to shew,* but it would involve a minuteness and a species of criticism quite incompatible with the objects of the present examination. We are happy to offer our humble meed of praise to Mr. Steedman for his great zeal and industry in bringing to notice his rare collection of South African specimens of Natural History to the scientific in Great Britain. This collection, we are pleased to observe, is connected with the present "Sights of London." And from

* We may just notice that No. 66, page 21, described in Mr. Steedman's Catalogue as a new species, will be found in the *South African Quarterly Journal* of 1831. The same may be observed of the *Corythaix Steedmanii* claimed by the author. It is also brought to light in the *South African Journal,* by Dr. A. Smith. We may also express our regret that Mr. Steedman has passed unnoticed the *South African Journal,* as well as our splendid Museum. This is curious enough, especially as Mr. S. was a member of the Institution. But, perhaps, the Institution did not happen (as we suspect is often the case,) to appreciate the value of its real friends. We wish with all our hearts a better temper to the Institution. There should be no proud aristocracy in the meetings of Science.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a report of the Zoological Society, Mr. Steedman has been successful in several new discoveries. In the district of Uitenhage, Mr. Steedman procured a little quadruped, the generic name of which is that of *Cynictis*, intended to express a combination of characters, signifying an animal intermediate between a dog, or fox, and a ferret. The Society has been pleased, out of compliment to the author of the Catalogae, to describe this animal by the specific name of *Steedmanii*. Another animal, also introduced by Mr. S. proved to be entirely new to science --*Antilope Ellipsiprymnus*. It is an inhabitant of the country of the *Damaras* and *Bechuanas*.

The following notices respecting Mr. Steedman's Collection, are gleaned 1st, from the *London Literary Gazette*, and 2dly, from the *Record*.]

At the Colosseum, a new and very interesting combination of the features of African scenery has been constructed, and made subservient to a striking display of natural history belonging to that quarter of the globe. A collection of animals, birds, &c. made by Mr. Steedman, and finely preserved as if yet alive, are picturesquely disposed in *habitats* familiar to their real existence. The whole thus arranged and represented in action consistent with their nature, form a very impressive and instructing menagerie.

The Colosseum.—An interesting addition has been recently made to the usual attractions of this remarkable place of public resort. It is known under the title of the African Glen, and consists of an artificial miniature *fac simile* of a wild and rocky scene in Africa, in which a great number of wild animals peculiar to that quarter of the globe, or rather their skins well stuffed, are placed, as it were, in a state of nature. Here are the tiger, the gnu, the comelopard, the hyæna, the crocodile, and the antelope, in many varieties. Amongst others the supposed unicorn of the ancients, which, by the bye, has two horns, start out on you as it were from their dens and lurking places in the desert, while eagles, vultures, and numerous other birds, in strange form and plumage, appear above and around you on every side. Many of the specimens of both bird and beast are new to our naturalists, and therefore more worthy of attention, so that there are few places of public amusement where one could pass a more agreeable and instructive hour than in the artificial scene which Mr. A. Steedman's industay and zeal in natural history has thus so singularly peopled.

THE BEAR AND HIS GUESTS.

(To be interpreted just as the Reader thinks fit.)

A bear, who had seen rather more of the world than bears generally do, acquired a small taste for literature. He gave occasional entertainments, and selected an arch fox and a witty monkey, with whose stories and jokes he was pleased, to be his constant *téte-a-téte* guests.

One day he condescended to invite the badger, a distant relation of his own, a somewhat clever fellow, to join his little party. The supper was good and all were merry. when the bear, as usual, dropt into his afternoon nap, and began to snore. 'Methinks,' said the badger, 'this is a bad specimen of my cousin's polish, and what I consider excessively affronting; pray, is he wont to do so?' 'Even so,' said the monkey; 'but we have become so used to it, that we hardly notice it now; indeed, he rather does us a favour; for we have our *own* conversation whilst he is dozing.' 'How the fellow keeps sucking his paws!" said the badger: 'I wonder what he is thinking about.' 'Thinking about!" said the fox, 'why, he is dreaming of the apiary he once broke into; and where he got so terribly mauled by the bees—he fancies his paws honey.' 'Bravo! bravo!' said the badger. 'Or it may be perhaps, the remembrance of the sores inflicted on his feet by the hot tiles when he took lessons in *dancing*!' At this they all set up a roar to such loud laughter, that it awakened the bear, who gruffly demanded how *those* whom he had honoured by an invitation could be so impudent as to disturb him? 'Upon my honour, cousin,' said the badger, 'we did not intend to affront you, but since you are so irritable and unmannerly, you shall be informed of the cause of our laughter. We were wondering whether you were sucking honey off your paws, or only healing the blisters you got at the dancing school; ha! ha!'

Our Moral.—It is a false, although generally received maxim, that a favour is conferred on another by an invitation, both being of the same rank; whereas his company being sought, it is the *guest* who confers the favour. A good dinner or evening party, with the society of the purse-proud and ignorant, is a sorry compensation for a sensible man's loss of time. An obligation may indeed be said to take place when an invitation comes from superior rank and learning, and the visitor is treated with courteous affability.

GEOGRAPHY AT THE CAPE.

A Note from Dr. A. Smith, on the subject of his recent Tour.

KNOWING well as I do the interest you take in the promotion of knowledge, I lose no time in making you acquainted with my successes during a late journey to Port Natal and the Zoola country. On the expedition I was absent about six months, and, though constantly surrounded with difficulties and dangers, yet I have been more than compensated for all, by the great additions I have been enabled to make to my natural and geographical knowledge. The extraordinary characters of some of the tribes I visited, excited the most lively sensations, and furnished me with actual evidence of the existence of extreme *despotism*, such as I had never seen before. I think the account I shall be able to publish of them will amuse the world, and will raise the feelings of the humane, so as to suggest some means for putting a stop to the horrible practices of at least the Zoola tyrant. Every department of both the animal and vegetable kingdom offered much to attract attention, and I did not return without making an addition of many new species, particularly of reptiles and fishes. Of both the latter I may say I have obtained types for new genera, and some of them are not a little extraordinary. It is curious that, in the very southern parts of Africa, we have little of the Senegal zoological productions, but at Natal they are abundant, and though there be but little difference of latitude, yet there is considerable change in the animal forms. This discovery has set me to observe the geographical distribution of our creation, and if I can trace the causes of the changes, it may throw some light upon the natural system. The geological structure of the south east coast is also very interesting. The granite, which disappears immediately to the eastward of Cape Town, rises again near Natal; and between these points, we have extensive formations of quartzose sandstone, clayslate with quartz rock, and old red sandstone; the extent and form of those will be shewn in the geological map which I am at present constructing—*Addressed to Sir James Macgrigor.*

MEETINGS.

GENERAL Meetings of various Societies and Institutions have taken place in Cape Town during the last month: 1st. The Literary and Scientific Institution. 2d. The Philanthropic Society. 3d. The Society for an expedition into Central Africa. 4th. The Commercial Exchange. 5th. The Public Library. 6th. The Society for promoting Emigration. 7th. The Agricultural Society.

THE ADDRESS

Of the Editor of the Cape of Good Hope Literary Gazette to Lady FRANCES COLE, *on her approaching departure from this Colony.*

MAY IT PLEASE YOUR LADYSHIP!

In pursuing that path of duty to which we consider any Public Writer solemnly pledged of devoting his labours to the moral, religious, and intellectual improvement of mankind, we feel ourselves called upon perhaps at the expense of etiquette, publicly and respectfully to express to your Ladyship our unfeigned regret, that this Colony is so soon to be deprived of your valuable and influential example in private life, as a Christian and a *Mother*,—and in the faithful discharge of those important duties which your Station called you to perform as the *Patroness* of female Society, and the Guardian of its virtues.

With grateful esteem we bear our testimony to the unwearied exercise of Christian Charity, which has characterised your Ladyship's residence in this Colony, and which will long leave behind you in the mind of the Christian Philanthropist, a grateful remembrance of your Ladyship's worth, and of the *extensive good* which you have conferred.

May that benevolence and generosity which clothed the destitute, relieved the distressed, and instructed the Children of the humble poor, (nor forgot our brethren in bonds,) have its full reward: and that your Ladyship may live to see your amiable Family treading that path of virtue and of Christian duty which you yourself have chosen, is the sincere wish of

THE EDITOR.

FAREWELL ADDRESSES

(Which we learn through the Newspapers,) have been presented to His Excellency the Governor Sir G. L. COLE, according to the following order:

1. The Inhabitants of the Paarl, District of Stellenbosch.
2. Representatives of various Churches within the First Presbytery of the Colony, viz:
   Cape Town, Stellenbosch, Malmsbury, Hottentots Holland, Wynberg, and Tygerberg.
3. Kirk Session of the Scottish Church, "on behalf of the Scottish Community."
4. Consistory of the Lutheran Church.
5. Wesleyan Missionaries.
6. Minister and Trustees of the English Episcopal Church of St. George.
7. Inhabitants of Cape Town.

Printed and published by W. BRIDEKIRK, Gazette Office, No. 2, Church-street.

LECTURES
ON NATURAL PHILOSOPHY.

LECTURE X. By Orlando.*

THE SERPENT TRIBE—THEIR PECULIARITIES AND MIND—THEIR MORE REMARKABLE SPECIES—THE ALLEGED SEA SERPENT.

THE Serpent Tribe exhibits the animal mind in another incorporation of material particles, approaching more nearly the Lizard race than any of the preceding classes of animated nature; but yet distinguished from that, and from every other, by peculiarities appropriated to itself.—It has sufficient similarities with all, to shew that it is a part of the same general economy of animated nature; although identical with no other, it has analogies aud relations to all. It is one of the departments of the same grand empire of organized living forms and sentient beings; full of mingled beauty and terror; presenting to us a new exercise of the Divine imagination in its system of Creation; but more exclusively existing for its own enjoyment, and less serviceable to Man or to the rest of Nature, than any other Animal genera that we have been reviewing.

The Serpents have been arranged by La Cepede under eight genera; (1) each including sub-divisions and many species; (2) of which the Vipers are by far the most numerous. (3)

Though destitute of feet and wings, few animals are so nimble as Serpents, or can transport themselves from place to place with equal agility. Whether to seize its prey, or escape from danger, the Serpent moves with the rapidity of an arrow; and emulates,—even surpasses several species of birds in the ease and rapidity with which it gains the summits of the highest trees. Their size greatly varies: some are but a few inches long, while others extend to 40 or even 50 feet. All are covered with scales, or scaley tubercles; and by this analogy are connected with the Lizards and Fishes. Their brain case is constructed, in some measure, like that of the oviparous Quadrupeds; but not reaching so far back in them, scarcely defends the organ of the spinal marrow. Hence Serpents are extremely vulnerable, and easily killed by blows on that part of their head. The rest of their skeleton has a strong resemblance to that of Fishes; but from the nature of their respiration, they cannot remain long under water. All parts of their body have great force, agility, and elasticity. They are most abundant in warm and temperate regions; but increase in size and numbers in proportion to the heat and moisture, and to the freedom of their range. They have less blood than Quadrupeds, and a lower animal heat, and less inferior activity of system: and in these respects they come nearer to the formation of the insects and worms. They are more animated in times of tempest and hurricane, when the electricity of the atmosphere is in the greatest purturbation. Their sense of hearing is dull, but their vision acute. Their eyes for the most part are exclusively brilliant and animated, extremely moveable, considerably prominent and advantageously placed for perceiving the images of objects from an extensive field. They have a membrana nictitans to draw over their sight when the sun's rays are too powerful, or any injury approaches. Their sense of taste is probably of considerable delicacy, as the tongue is very slender, and divided into two points, which admit of its being readily applied to sapid bodies. They touch only by their plates or scales; but as they readily twist these round every substance, their sensations, from the contact must be numerous, and their perceptions of touch proportionably nice and perfect. They give many indications that their instincts and sensations have a superiority over those of all other Animals, except Birds and viviparous Quadrupeds.

Several species of them live quietly about the habitations of mankind, and sometimes enter their houses and fix their residence there. They destroy troublesome animals and noxious insects which they find: but are so far from hurting human beings, that they often pass over their bodies and faces when asleep, without doing any injury. They wander about the rooms with great familiarity, and often seem to choose the finest bed for their repose.

Serpents are sometimes so tamed, as even to shew stronger signs of attachment to their masters, than many kinds of domesticated Birds, or even Quadrupeds; being only surpassed in fidelity by the Dog. (4) Their length of life is unknown, and most likely differs in their various species. (5) They can exist so long without food,

* Delivered before the Members of the Poker Club.

(1) These are,—the Vipers, the Boa, the Rattlesnakes, Snakes, the Amphisbœna, the Cœcilia, Langatra, and Acrochord. The genera of Linnæus, at first only six, are now made by his later editors the same, with a mere difference of position; as he puts the Rattlesnake, Crotalus, for the first; and Coluber, the Viper, as his third.

(2) La Cepede sub-divides the Vipers into two classes: one that produces the young completely formed, 27 species; the other which emits eggs from which the young are afterwards hatched, in 169 species.

(3) To the Boa genus, 11 species are allotted; 6 to the Rattlesnakes; 24 to the Snakes; 5 Amphisbœnas; 2 Cœcilias; 1 Langatra; and 1 Acrochord.

(4) La Cepede, 44.

(5) Reasoning from their comparative growth, the Count La Cepede infers, that the great Serpents live as long as Crocodiles.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

that it is probable, like the Tortoise of Mr. White, whose eating season was the Summer, they only seek it at particular periods. (6) They have no voice, but a hiss, as their wind-pipe has no epiglottis to close its upper orifice, and thereby modify the extruded air into modulated sound. Serpents have great strength from the peculiar construction of their body. (7) They are so tenacious of life, that it is difficult to kill them by wounds in the body, or by the exhaustion of air. Severe cold only suspends the activity of their vital principle, without destroying it. The Rattlesnake can bear to be thawed and frozen alternately, without extinguishing its life or functional powers. They have been from all antiquity, and in most countries, celebrated for their great cunning or sagacity; which must be chiefly displayed in their modes of evading their enemies, or of obtaining the prey they seek for, when they desire it. (8)

Some Serpents are eminently beautiful for their brilliant colours, of which several display fine iridescent changes. (9) It is a curious distinction of Animals, which has been lately made, *that all the species of Serpents, of which the young are hatched within the mother, and which are, therefore, born alive, are venomous.* (10) This seems to be more certain than the converse of the rule, that all oviparous Serpents are not injurious.

But it has been ascertained, that the oviparous Serpents contain those species which are harmless and inoffensive. Even the oviparous Vipers have no fangs, and possess no venom. They only offer to our consideration agile movements, elegant and light proportions, and soft or brilliant colours.

(6) Audubon had a Rattlesnake in a cage, which, for three years, refused all food. It is said, that a Viper can live a year without nourishment. Dr. Shaw mentions that he saw at Venice two horned Serpents which had been kept in a large chrystal vessel five years, without any visible food

(7) This strength in Serpents is easily accounted for from the immense number of powerful levers formed by their chine and ribs, acted upon by a body almost entirely composed of muscle, which winds all around the enemy they mean to destroy

(8) Their food is according to their size and kind. Vipers take insects, Beetles, Scorpions, small Lizards, young Frogs and Moles, small Mice and Toads; the great Serpents lie in wait near waters, for Goats and Antelopes; and the Great Boa will attack, and even swallow the Tiger.

(9) The Naja is admired for the splendour of its scales, and the glow of its colours, but it is one of the most venomous Serpents of the East; and it is supposed to have some distant resemblance to the human countenance in its head.

(10) It was M. de la Borde, of Cayenne, who made this important observation

The green and yellow Viper may be seized without risk; and, after taken, it becomes docile, and can in a great degree be domesticated, and made amusive. (11) Though in its natural state it will, if interrupted, erect itself and hiss, either with anger or fear, yet it does no harm. It has been known to exhibit attachment and affectionate feelings to its human friends. (12) The Roman or Esculapian Viper, is as mild and tractable. The Lady Viper unites the same attractive temper, with a superior beauty of form and colour. The Boiga has a still more magnificent appearance, with the same acquiring gentleness. (13)

Of the other Serpents, it need only be mentioned, that the enormous Boa twists itself round calves and sheep, and goats, to crush their bones, and then swallows them whole, as common Serpents absorb a toad. (14) The dangerous Rattlesnakes are too well known to be described in this Lecture; but their pleasing sensibilities ought to be noticed: (15) and also the fact that they do not willingly injure mankind. (16) Nor will our time this evening admit of any detail as to the Genus of Snakes, nor of the remaining classes. The facts which have been selected, will serve to give a sufficient general idea of this Order of those diversified animated beings, which have been appointed to inhabit our highly variegated Earth. In Egypt and Africa, Serpent's flesh has been made an article of human food; (17) and modern as well as ancient nations have made them objects of religious veneration. (18)

The Serpent tribes with which we have become acquainted, are those which appear on land; whether the ocean contains any classes of this Order of beings is not yet admitted by modern Naturalists. Pontoppidan, two centuries ago, described a formidable creature of this kind in the northern seas; but no late navigators having met with such a one, his account has fallen into discredit, though the American and other mariners have reported similar animals to have appeared occasionally on their coasts. (19)

(11) It may be taught to perform a number of evolutions by signal. (*La Cep.*)

(12) Bomare mentions of a Viper, what seems referable to this species: it was so fond of its owner, who kept and fed it, that it often rubbed along her arms, knew her voice, came at her call, concealed itself among her clothes, or even in her bosom.

(13) In the isle of Boneo, the children play with it; carry it in their hands, and twirl it about their necks, arms, and bodies.

(14) For the most part it exceeds 20 feet in length. In Congo they are 25; In the Moluccas, from that size to 30 feet. It is venerated in Mosambique and Japan.

(15) Mr. St. John saw a tamed Rattlesnake as gentle as a reptile could be. It went to the water, and swam whenever it pleased.

(16) They have no inclination to bite, unless disturbed, and then *give notice* by shaking their rattles. (*Bing.*)

(17) Dr. Shaw says of Egypt, 'I was informed that more than 40,000 persons in Cairo, and in the neighbourhood, live upon no other food than Lizards and Serpents.'

(18) The Gentoo Indians revere the Cobradi Capello, as the Mexicans deified the Boa. Mr. Bryant has collected many notices of the Serpent worship in antiquity, in his Analysis of Ancient Mythology.

(19) Several accounts having appeared at various times, concerning a large Sea Serpent seen in different Seas, it may not be right to omit entirely to notice them. They are not of that kind which authorize the judgment to rest its scientific belief upon them, but they seem too many, and too unconnected with each other, to be wholly passed by. Future facts must be waited for, before we can conclusively admit that such an Animal exists; but it may not be unuseful to notice a few of the more recent periodical statements:—On 25th June, 1827, about 45 miles from Cape Ann, (Massachusetts Bay,) one was said to be seen by Captain White, of the *Hope*, about 60 feet long, with 3 fins on its back. It came within 25 feet.—*Salem Gazette.*——Five witnesses deposed that one appeared off Norway, on 24th August, 1827, of a dark colour. Its head, and about twelve feet, were out of water. It swam away in several bends, which had intervals of 40 feet. From these it was calculated that the whole animal was above 400 feet, and as thick as an hogshead. On the 26th August, it was seen 260 fathoms off. On 3d September again, at New Handspike. On 5th, off Lysagen.—*Christian Lett. New Times, 18th September*, 1827. This is the most extravagant account of any recent ones, and reminds us of Pantoppidan's wonders.——Don Lopez, Captain of an Havannah Steamer, reported to the Captain General of that place, that, on 3d Jan. 1830, at 4 miles from the coast, he saw the upper jaw of a great Fish rise about 16 feet above the surface of the water, with others of various sizes playing about it. About 60 feet from its mouth was a great fin or wing, 9 feet high: its tail remained under water. It suddenly sank, but rose, ten minutes farther north. It was larger than a Whale, and of a different size.—*Charlestown Courier.*——In February, 1830, a Sea Serpent was seen off the Isle of Lewis, in the Hebrides, for a fortnight, sporting in the arm of the sea called the Broad Bay. It was from 60 to 80 feet long, of a white colour, with a mane.—*Inverness Courier, March*, 1830.——Capt. Hancock described one, as seen by him in April, 1830, off St. Augustine's Bar, near Florida, his length from 20 to 25 feet; his jaws wide enough to receive a small barrel, with 4 rows of teeth; his head like an Alligator's; his fins 4 to 6 feet long, like a Seal's, and of the size of a common door; the tip of his tail sharp like a harpoon. Leaping forward to catch a porpoise, he sprang 5 or 6 feet out of the water.—*Savannah Georgian, April 23d.*——The *New York Gazette* of 2d Sept. 1831, stated, that a Sea Serpent was seen, the second time this summer, off Boar's Head, Hampton Beach, on the preceding Saturday, and was carefully observed by several persons for fifteen minutes. Such are some of the latest accounts, which seem to relate to different animals of the Serpent form; but the describers and the descriptions are not such as the cautious Naturalist would deem satisfactory authorities.

SUBJECTS OF THE NEXT TWO LECTURES.

XI. On the Formation of Insects—Their Classes and Importance—Their Metamorphoses—Their Actions and Habits—Their Senses, Qualities, Mind, and Feelings. XII. The Formation of Man—The Principle and Process of his Being—The Divine Image and Likeness—Nature of Human Knowledge—Man's Self-formation, Free Agency, and Free Will.

THE RESPONSIVE MINSTRELS; OR, HERE AND THERE.

BRITISH YOUTH—*Scene*, CAPE OF GOOD HOPE.

No. 1.

High is the bearing of the soul,
In thinking of one's *Native land*,
When on the heart *Home's* feelings roll
Like waves upon the ocean's strand—
The long tried virtues of our *Sires*,
Their *manners* simple and sincere,
The *beauty* which our bosom fires,
Of our lov'd *Country-women* dear.
The *landscape* which our youth admired,
The *streamlet* which our childhood played,
The *hill* we climb'd till we were tir'd,
The lofty *oak-tree's* ample shade.—
The recollection of our home,
A father's or a mother's tears,
And *we* the cause—where'er we roam,
Can never be effaced by years.

* * * * * *

South Afric' is a great Karoo,
Fringed with *some* trees and fountains,
Above a vault of loveliest blue,
Below the *bush* and mountains.
Here parched by an eternal draught,
The greatest part is desert wild,
With stunted-nature good for nought,
Or rocks that nurse the *vagrants'* child.
There, far extended fields of grain
Wave yellow to our autumn's breeze,
And villa's gay thick stud the plain,
From eastern to the western seas.
Here, on the naked mountain's side,
Where issues forth a scanty rill,
Stands a *lone* house—a full hour's ride,
From neighbours t'other side the hill.
There man meets man at every turn,
And news is swift as *morning* gale—
For what fell out at early dawn,
Is the whole people's *evening* tale.
Here in some dell remote from view,
With *bushes* round for many a mile,
The *wild-boer* dwells in his Karoo,
Unblest with e'en a black-man's smile.
There rivers brimful all the year,
Winding and widening to the sea,
Pass town and spire from whence you hear
The joyous hum of children *free!*

CAPE YOUTH—*Scene*, GLASGOW.

No. 2.

The paradise of earthly joys,
For *me* is seen, far o'er the billow,
Where Table mountain seems to rise
From the dark waves like ocean's pillow.
When wearied with the unceasing dance
Of the untamed insatiate main,
My native shores rise like a trance,
And welcome me to home again.
When seas return to parents dear,
What was committed to their care—
Their son, the hope of many a year,
The answer kind to many a prayer.
When friends I often met in thought,
I hail within my mother's hall,
At meals of choicest food unbought,
And *fifty servants* at my call.
My country is no *waste* to me,
I *know* her vales and shady trees,
I love her lengthened plains to see,
And hear the rushing of her seas.
The deepest solitude I love
Sitting alone on mountains grand,
My own clear heavens wide spread above
Outstretched below *my native land.*
There's something felt upon high hills,
Or when alone far in the wild,
That solemnly the bosom thrills,
And charms the heart of mountain child.
When high above the haunts of men,
The mountains your companions seem,
Which rise majestic from the fen,
To greet afar the morning beam.
The *advanced guards* of earth are they,
To meet at morn the king of light,
The last to bid adieu to day,
And yield their golden peaks to night.
Then many a bright descending star,
Kisses their top and disappears,
While far below is heard the war,
By which the sea their basement wears.
Then high and lonely let me lie,
While from ravines the wind sounds drear,
And while I view the studded sky,
Eternity and heaven seem near.
The splendor and the pride of earth,
Have dwindled to a little span,
What are its joys and thoughtless mirth
Compared to *higher ends* of man?
The mountain tops are peopled sure
With spirits of a holy kind.
For *there* men's hearts and souls are pure
And elevated is the mind.
Man's splendid dwellings far below,
Seem little from the mountain's side,
When heaven and earth come in the show,—
To nothing dwindles human pride!
The engrossing interests of the day,
And all the *lust of the world's eye*,
Are *less than nothing* when a ray—
Beams on you from ETERNITY!
Hottentots Holland. E.

"LOVERS OF PLEASURE."

MODERN EDUCATION.

WHENEVER the weather is inclement, and the church-windows are unmended, and

"Rheum and Catarrh"

prevail, we *read at home*. The other day, a volume of good practical discourses, by a reverend gentleman,* attracted our attention, and that discourse in particular on pleasure, or some similar subject, afforded to our minds a good deal of instruction. We were right glad to find that the Pulpit had taken up the subject, because we happen to know that many good people at the Cape are alarmed at that new order of things connected with modern female education, which has introduced so inordinately among *the young*, either in practice or example, the aids of the fiddler and the dancing-master. Not only these,— their concomitants of

"Silks and satins, scarlet and velvet,"

do most cruelly invade the family purse. The increasing insubordination of children is one of the lamentable signs of the times; but does not this arise from the modern system of early introduction into life—from the shew, finery, juvenile associations, and fashionable boarding schools? Louis the XV. once asked an old courtier which age he preferred, his own, or the present? The answer was—"Sire, I passed my youth in respecting old age, and I find I must now pass my old age in respecting children." And so we would respect and love them, and wish them all manner of *happiness*, as we sincerely do—but this is quite distinct from *pleasure*, for we are led to think that in this world no two forms are less alike than those of pleasure and happiness. Young reader! remember that it was the declaration of the greatest and the wisest of men, when he took the whole world for his large but barren text, that "all is vanity." This, recollect, was not the verdict of a hermit, railing from his cell at pleasure untasted, or at grandeur unenjoyed. No! all upon which he so pathetically preached, he had seen with his eyes—heard with his ears—and in his widely-roving search had experienced in his own disappointed mind, and felt in his own aching heart. Again—*mere* amusement of whatever kind, is confessedly a subordinate concern in life, and sorry are we to find these secondary matters made of *primary* importance in some of our schools. But, then, only think how the dear young creatures enjoy themselves! How brimfull of pleasure each one is — how joyous — and what other substitute system of irreproachable austerity do you propose, inquires an objector? It is an ordinary mistake to imagine that pleasure is great only when it is vivid or intemperate, as a child fancies it more delightful to devour a pound of sugar at once, than to eat an ounce daily in his food. It is happily and kindly provided that the greatest sum of enjoyment is that which is quietly and constantly induced. None possess the nature of true pleasure so well, or possess it so much, as those who find it *within their own doors.* If it were not that the *modes of education* are at present opposed to this truth, multitudes would seek enjoyment, and find it here, who now *fancy* that they never partake of pleasure, except in scenes of gay association and diversion:—

If solid happiness we prize,
Within our breast this jewel lies;
And they are fools who roam:
The world has nothing to bestow;
From our own selves our joys must flow,
—At home, sweet home!

No borrow'd joys, they're all our own,
While to the world we live unknown,
Or by the world forgot:
Monarchs! we envy not your state;
We look with pity on the great,
And bless our quiet lot.

(Dr. Cotton.)

This subject is worthier of far more attention than is in our power to bestow on it, and we leave it to the attention of any Correspondent who may be inclined

* "Practical Sermons," by the Rev. Dr. Okes.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to dilate on it. In the mean time we may throw out two or three hints as it regards the education of boys. There is, we take the liberty of thinking, a strange want of adaptation in our scholastic institutions to the production of a character at all answering to the christian model: none of our modern methods lead to it: *discipline* is out of the question. The *eye of the master*, or the good old-fashioned *watchfulness of the usher*—even in going to church, or walking the fields, are unknown among us. The *purlieus* of our College discover the unfitness of that situation which has been chosen for a Public School. Then, again, the great truths of our national faith are not recognized within the College walls: we mean they are not taught. Let us be perfectly understood—we are not finding fault with the Teachers; the *system or the situation* are none of their selection or seeking. The machinery may be good for the production of classic literature; but to the formation of habits, the inculcation of principles, and the government of the heart and conduct after the model of that system, which in our creeds and sacred offices is held forth as the only sure and saving system, there is not in our public school any adequate means in existence, to bring about results so important. So far from it, the boys are left, in their commerce with each other, to the guidance of their own wills and feelings. These intimations are thrown out with the purest intentions—they may be also applied by way of caution against the dangerous inroads of modern science—all those systems which exclude religious instruction and merely introduce a vain philosophy—"the dry bones of her diagrams, and the smoke of her furnaces."

THE REMINISCENT.—No. 5.

SHERIDAN,—BYRON,—SHELLY,—SHERIDAN'S DREAM, ETC.

ALMOST every month the periodical Press still continues to turn up fresh ground as it regards that extraordinary man—Richard Brinsley Sheridan. I became acquainted with Sheridan in 1810, and witnessed the closing scenes of his mortal existence in 1816. Nay, more—was enabled to purchase his dead body from the hands of a merciless creditor, whose *law officer* watched his victim even to his bed-side. It is, I think, a great misfortune that Mr. Moore should have become the Biographer of Sheridan. He knew not the man. Professing to be a friend, he has done much injury to the memory of Sheridan. He tells us that Sheridan died considerably in debt. It is not the fact. No man resided for a series of years in so many and repeatedly-exchanged *ready-furnished* town and country houses as did Sheridan. He always paid his rent with punctuality—but during his eventful life he was generally the victim of rapacious servants, prowling *duns*, *unjust* demands, and hungry hangers-on. In other respects, Sheridan was careless of money to a proverb—hence, I verily believe for the space of twenty years he paid *forty shillings* in the pound.—The last days of Sheridan were his best days. This does not seem to have been acknowledged by any who have attempted his moral portraiture. The truth is, Sheridan lived in great retirement towards the latter part of his life. My first knowledge of Sheridan was accidental. He had been paying a visit to the distinguished William Roscoe, of Liverpool. He had strolled to the village of Everton, and was unattended. Here, in a pleasant garden, the Reminiscent was busily engaged in transplanting a few evergreens, when he was accosted by a stranger, who begged permission to rest awhile on a rustic seat just at hand. Here he discovered a book, entitled "Fragments in Prose and Verse, by Elizabeth Smith." He seemed much delighted in turning over its pages, and after the expiration of an hour, he handed me his card, and begged the loan of the "Fragments." Never on any occasion do I recollect his remarkable eyes of a dark colour, and shining as if fire came from them, similar to this. We became friends, and I had the pleasure to occasion his reading, for *the first time* in after years, books which became his favourites, viz:—Cowper's Life and Poems, Foster's Essays, Montgomery's Poems, Pascal's Thoughts, Butler's Analogy, &c. &c.

But I am now to record one or two remarkable anecdotes. On the banks of the Thames (Isleworth), Sheridan occupied a beautiful villa for the summer months. A dinner party of some distinction was assembled on a beautiful Sunday in June. Lord Byron, Shelly, Peter Moore, Tom Sheridan, and others, were among the guests. There was also a remarkably fine youth, the son, if I recollect aright, of the celebrated *Dog Jennings*. Sheridan discovered some degree of mortification at the non-arrival of a guest, Mr. ———' a gentleman having the care of a nobleman's son in the neighbourhood. He was a man of genius, endowed with great metaphysical acuteness. He was, moreover, unrivalled in the justness and extent of his observations on natural subjects: he knew every plant by its name: was master of seven languages—in a word, was an elegant scholar, and had distinguished himself over every competitor at Cambridge, and had carried off each prize.

Just at the moment of dinner, a letter was received by Sheridan, containing an apology for the absence of his expected guest—the scholar in question. Sheridan perused the document with emotion, and, handing it to the Reminiscent, begged him to read it aloud. Conceive the astonishment of this distinguished party when they heard as follows: *

Sunday, June 20th.

Dear Mr. Sheridan,

Amongst the great number of characters with whom I have had dealings in the world, I can with truth say, that I have never met one with a heart so much extended by large philanthropy as your own. The soul of friendship and good good humour dwells in you. On this account, as well as on the usual principle of urbanity, I must frankly confess, that I should be extremely grieved to offend you by lack of friendship on my part—much less could I suffer indifference to waste away our acquaintance.—You will wonder at this prologue—to the question then. Had I possessed half a grain of self-command, I should never have promised to you, what on reflection I could not easily perform. You took me by surprise—*I cannot dine with you to-day!*

Having walked extensively among mankind, and read also somewhat of their doings in past times in History, I have gathered acquaintance with the nature of Good and Evil. I have seen happiness pursued by various means, and *disappointment*, the upshot in so much, that the search is almost given up as chimerical. It's strange that this should be an universal wreck! I feel a conviction that it is *not!* To live with God in the world *is* happiness. To live without Him—certain ruin! Under these impressions, I propose spending every future Sabbath of my life, in a manner worthy the honour of the Supreme Good, and in strict conformity with my baptismal vow and christian calling. You may inquire—why was not this done last Sunday, and many other Sundays? True—but the conflict between duty and pleasure is often severe and terrible. I have been long the victim of the mental strife—the soul's contendings—have fallen and *risen*—fallen and risen again. If I were to attempt to describe to you the anguish of my mind when it is at enmity with God, or opposed to His law, I should certainly fail. I have come to the certain conviction that woe is me if I attempt to live without Him. My internal condition is not the only cause of my desired reform. I have, and with God's goodness, shall have for some years the management of ———'s education. The man who would instill good principles, *must have them himself*—all else were empty vanity—*tinkling cymbal or sounding brass.*

Farewell! and believe me, that the period will never come, when that which concerns your welfare in life, will prove a matter of indifference to

Dear Mr. S.
Your faithful and sincere friend,
* * * *

No sooner was the reading concluded, than one of the party exclaimed—'*this is cant with a vengeance!*' Sheridan

* The original letter is in the possession of the Reminiscent.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

interfered, and hoped that the christian motives of his absent friend, as explained on paper, would not destroy the equanimity of any gentleman's temper then present. It had, however, this effect—there was less of revelry, and more decided intellectual converse than on any other occasion of Sheridan's dinner parties.

Several of the guests retired rather early to sleep at Richmond. Tom Sheridan, with Shelly, Lord Byron, and young Jennings, were to *boat it*, with three others, the next day by six o'clock, for London: they did not leave the house. Sheridan arose from his bed, in a state of great mental anxiety, by four o'clock in the morning. He awoke his son, and other guests, praying them on no account whatever to proceed to London by water. Said he—

"Shadows to-night
Have struck the soul of Richard."

I do not like my dream—I pray you listen for once to my serious advice—give up the boat scheme to London." All obeyed the request with the exception of young Jennings—he, with the three others, took to the boat at six o'clock—two hours after this, they were run down by a coal-barge, and every soul perished!

ANECDOTE.

When Capt. Owen, of H. M. S. *Leven*, visited Cape Town some few years since, he met with a youth of good family, but in circumstances which seemed to require some pecuniary aid. Capt. Owen provided the means of assistance, which the youth declined to accept. Capt. Owen discovered at once the secret of the rejection, and addressed him a letter, from which the following is an extract:

"Remember, that he who is too proud to be able to humble himself to accept a kindness, wants the first character necessary to his ever becoming a benefactor. And depend on it, the sacrifice of our *Self Love* on the altar of *Humility*, is more admirable and praise-worthy than the sacrifice of our whole fortune and hopes to obtain an elevated position among men—call it by the name of *independent spirit*, or what you will. There is such a thing as a becoming pride—but there is a *false pride* which has been the ruin of thousands. Concealment is the bane of friendship, and often leads to destruction. Too many of our race, from this false pride, conceal their difficulties, endeavour to extricate themselves by unlawful means, and perish!"*

PIC-NICS—VISIT TO PARADISE, &c.

I am not exactly a follower or a disciple of Epicuris, nor am I one to think ill of that heathen philosopher, although much hath been argued, as my grandmother used to say, on both sides, in the patriarchal style which the good old dame had of constantly twiddling those fifth part of the hands, called thumbs,—a practice which she constantly observed while engaged in a domestic duet with my grandfather; who, good old soul, would quietly sit and murmur, "res tuos agos," though the aged sire dared do nothing more. Yet we confess ourselves to be something of a bon vivant, which you will believe when we impart to you our extreme predeliction for what is termed a pic-nic, a South African pic-nic, which is none of your pic-nicing where a body of aged matrons, after devising a plan to "surprise the young people," and fix upon a bad day, and a still worse spot, to feast upon a dozen legs of cold roast mutton, which their prudent foresight had not anticipated amidst all their conglomerations for the gratification of the aforesaid young people; and where the paucity of table gear has, through the same notable arrangement, reduced you to the necessity of dividing the sinewy flesh with the aid of your fore-fingers and your fore-teeth. We remember in that part of England called London, a pic-nic incident that occurred, which we must relate *ex officio*, by way of precursing the different style we have of conducting such terrestrial enjoyments at the Cape. A fine day and a fair tide, had brought us to Richmond, when, upon one of the islands, weeping in willow solitude, situate in the middle of Father Thame, we deposited John, with all the edibles, for the purpose of affording that useful member time to bleach the table coverlet on the grassy plain, and spread the numerous display of viands, which we had formed a plan to devour upon our return from the park. The last culinary article that was reposed on terra firma, was an asthmatic pair of lungs, commonly called bellows, expressly devoted to Matinées, but which, by reason of the wear and tear of their constitution, augured no good. Be sure, said one of the party upon seeing the old revivers, to get some water boiled, John,—for I can never do justice to these little excursions without the aid of a little Hyson; and if, while we are gone, you can hook a fish or two, so much the better. John responded in the affirmative, and a few long pulls brought us to the shore. A lounge in the park had its luxuries, but the scenic display of a cold collation would have been more effectual in exciting the passions, than the scenery of Richmond Hill. The pretty view of the church, and the sublimity of the devious stream, as it glided through the distant Kingston, was observedly lost to our vulgar eye; but nature, who was ill disposed to let us pass scot free, gave, as the sequel will propound, a Roland for our Oliver. Every eye on our return, as we pushed from the shore, seemed inclined towards the island, though in one coup d'œil every one failed to discover the object for attraction. Surely, remarked an old lady, whose vision had been somewhat obscured by age, John has not eloped with the island. Really, madam, exclaimed one equally perturbed, it appears very much like it. A younger member of the party was perfectly of their thoughts, and was confident that John had found the island some water nymph, who had in their absence persuaded him to remove to Gretna, asthmatic operatives and all: in fact, John was *suspectus de fuga* by every one. By this time the boat had reached the weeping boughs, and to our unanimous comfort no nymph had bestowed her carressive persuasions upon the object of our attention; for there, like England's King in the Forest of Fairlop, was John, perched in the uppermost bough, while a fellow branch supported the edibles, which had been promiscuously collected in the clean damask that now oscillated, in intermundane glory, to the breath of the pervading breeze. John, who felt not

———"His valour cow'd
As Anthony's was by Cæsar,"

was engaged in dropping the raw hook, by no means to comply with the last parting wish of the aforesaid old damsel, "to hook a fish or two," but to collect the semilunar handle of the mustard-pot, which, in his exalted precipitation, he had left behind, and which, through the lucid waters, he could clearly discern. The common sense of all now suggested in a dozen intonations, our error in visiting the island at spring tide, and having rescued John and his charge from their perils by water, we rowed to the shore, where the huddled provisions being re-spread, our famished stomachs did honor to the repast. We are rather of the opinion that the incident gave a zest to the day's amusement, and caused us to be even more assiduous in our gustful devotions; the old lady, too, was rapacious without her favorite Chinese mixture, though she observed, *de gaieté de cœur*, that there would still be time to boil a little water during the meal.

If such an incident is not usually the companion of a pic-nic at home, some other equally agreeable is, and what with horrid wet days and assembling the party, the anticipated enjoyment is greatly diminished before the looked-for time arrives. In England, the uncertainty of weeping clouds at all times renders a fête champetre precarious. At the Cape, during the summer months, we have only dry clouds bursting with southern winds, and as these bring no rain, a fair day can generally be ensured. It is the custom at the Cape, as well as in every other country, to start the "thing," which is usually accomplished by a confederation of "elders," who soon knock it up. A number of

* The original is in the possession of the Editor.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

young people are named as always ready to participate in bringing their proportions, as well as their personal incumbrances, and so many young ladies who will, with "smiling morning face," ensure that the amusements of the day shall be heightened by the sweet elixir of their presence. A few evenings anterior to the anticipated time a rehearsal takes place, when all the requisitions for the event are embraced in slips of paper, and deposited for the ballot—though black-balls bear not a portion of the expected feast. You then extract the morceau with its hidden contents, when right well glad are you if it contain a turkey or two couple of fowls, instead of two four-wheeled vehicles, with sixteen cavellos, for the conveyance of the ladies, or a 3-dozen hamper of Chateau Margaux. On the previous day every thing is sent to the lady, from whose house the cavalcade is to depart at 6 o'clock the following morning, who most kindly classes the consumption, and adds every thing which has been omitted. Linen, plate, salt, pepper, mustard,—"fifty little things to make the thing go off well,"—and a goodly addition of parfaite amour, gold water, pickles, and confects, so deliciously preserved in Southern Africa, all devolve upon the mansion lady, who really has no sinecure of it, and who, during the interval, becomes almost separated, *a mensâ et thoró*, from her family.

And now, reader, we will apologize for this being rather an essay on a matter, than a full description of a Cape feature; and our reason is, that you should attend a pic-nic in *propria persona*, when you will be able to complete the dissertation by judging for yourself of the degrees of happiness exhibited, and the various characters who may be present, and which we can assure you are as ample as the different hues of the wigged Barristers of the Supreme Court,—some of the younger branch of whom do not spoil their countenances by incasing their upper regions in wigs, more like mops than perukes, and are content with an occasional wigging from the other region — the Bench. However, for the present we must content ourselves to try at the same time to pacify you by introducing you to "Hermon's Heights and Missar's humbler Hill,"—to one of the most picturesque and romantic spots which we were ever in, and which, from its transcendant sublimities, has procured to itself the patriarchal name of Paradise. Paradise at the Cape, though not our Eden of old, teems with scenic grandeur. It is private property, but that matters not, as the proprietor generously permits a "right of way" to all such as may be thither inclined. The road through the vista of aged oaks at Newlands, the former residence of a Governor, though not in the best repair, is of itself an avenue to the magnificence of Paradise. After riding about 20 minutes, Anglicè 2 miles, the scene of beauty commences, and the halt of the caravan at the base of the ascent, prepares you at the same time for the picturesque, and an appetite for your breakfast. A winding path, bounded by Proteas and various shrubs, is sufficiently elevated at about 200 yards, to afford a most expansive view of the Cape Downs—an extensive sandy plain—Simon's and Gordon's Bay, Hottentot's Holland Pass, and, on a clear day, the reposing Stellenbosch and Blueberg Farms. A more elevated ascent displays the surrounding country which lies for several miles beyond the deserted stillness of a barren waste. In performing the devious path, you ever and anon startle from its resting-place the rich plumed sugar-bird, (though here a bird of Paradise,) and its aeriel companions, and occasionally arouse the deer from its lair, which, at the approach of man, bounds high over brake and briar into the mountain's perpendicular height. The ultimatum, or place of rendezvous, is introduced to your sight through a narrow entrance skirted by poplar-trees, when the first object which greets your sight is the grateful spreading of cookables and cooking utensils, with a whole phalanx of domestics rearing *such* a breakfast as will satisfy the egregious appetites of the already famished *coterie*. Conceive, for a moment, the state of internal excitement and disquietude which takes place after the body has been in ascending motion for three diurnal hours before its usual time, and during that period in climbing a hill as steep as a modern stair-case, with two ladies gently reclining on either arm, who gradually indicate to you, by a gentle addition of weight, the steepness of the way. One a married lady, too, who, with her earliest-born pulling at the tail of your coat, *en badinage*, and puffing like a grampus. We always on such occasions, as Mawworm says, defend ourselves with a jacket.

This, then, is modern Paradise;—the ancient we leave to those who travel more eastward,—the destination, during the summer months, of all pic-nic-ing tribes, embracing every hazel shade, and in winter strewn with the yellow poplar-leaves, and presenting the prototype of barren and desert despair. We have often sat at the feast, and mingled with the lovers of well-cooked viands, and therefore are enabled to pourtray the great and direful contrast.

All, in the winter season, is still as death, and the ragged ruins seem, as it were, to remind you of the devastation which time and decay has committed upon the secluded pilgrim's retreat, where the haunt of busy man seldom actuates him to disturb the solitude of an hermit, whose morning orisons would never be interrupted by aught under the canopy of heaven, save the ærial tribe who domesticate, and find a secure retreat from mankind within his benign influence.

We will, however, introduce our reader to our assembled company, who have all gained the summit of their ascent, as well as the acme of their intentions; who have performed their labors upon a substantial breakfast, and have rambled in pairs and in trios, in units and in groups, to pass away those hours of relaxation which happily intervene between breaking the fast and stuffing to repletion. Many a pair may be seen standing in converse sweet, while a knot of the parents of the feast may be observed sitting around a stump of aged wood, discussing the importance of sublunary matters, and a bottle of Saint Julienne. An hour too much at any time is an admitted bore, and therefore, we will, during that period, suffer ourselves to be obliviated behind the steam produced by the cooking utensils, and mutually relieve each other by imparting to you that the hour of commencing an attack upon the feed has arrived, and that the temporary table is already groaning beneath the prepared delicès. Think not that your Gaulic vanities present themselves—none of your a la soubise à la mainteuon, or your à marengos, which almost give one the sciatica to comprehend—none of your entrées and your entremets, or your hors d'œuvres; none of your soup maigres, soup potage, potage à la Julienne, potage a croûtes, or such infernal sorbile esculents,—but a well enacted and ordained table, suited to encourage one's gastronomical progress, *usque ad nauseam*, and sinking beneath viands of every description, and resting so near the mother earth, as to obstruct all possibility of intruding your legs beneath. This you would augur to be by no means agreeable, but rest assured that the reverse is the fact, although the ladies manage to make the best tables, *ex necessitate*, or rather out of their laps. At one end, some goodly senior insinuates a soup-ladle into a tureen of fowl curry, which he spills into the soup plates as they are advanced, while his neighbour labors with indefatigable industry to carve its concomitant—the rice; both of which operations are usually managed *without* destroying a neighbour's habiliments. The vis-a-vis, or croupier, echoes the supply, and a brisk application to the introductory matter ensues. But while curry soup, by no means soup maigre or soup Julienne, is disappearing, we will cast a glance at the intervening dishes which make up the line of gustation. Pray, ma'am, what stands before you? These, sir? these are carbonatjes; and what are carbonatjes, we muttered, being as yet in our noviciate. Why, sir, I believe the English call them mutton chops; the French, mouton à la chemise; and the Africanders, carbonatjes: and those long bits of wood, like a stick of cherries, embracing alternately a piece of fat and a piece of lean, of a globular or square conformation, which really appear in "*parata executio*" for one's dentilization—pray what dish may that be? That dish, said a lady opposite, is not very *recherchè* with the English, though much esteemed by those who get accustomed to our tastes, and, I believe, of eastern origin, and is called in India *Cabobs;* we, however, have given it the name of *sasaitie*, as being softer,—allow me to recommend it with a little rice. Sasaitie, or Cabobs, is really no despicable eating. Then follow, in succession, fowls, hams, pasties, side dishes, with all the leguminous matter; pickled peaches and pickled rattan or bamboo, with numerous stores of acidities and limes; stock fish or old *crackers*, alias leather breeches; custards, pies, tarts, fruits, teas, coffees, cakes, and wines of every description, including *good* Champagne (if the man who has been doomed to provide that commodity happen not to be a Bacchanalian dealer,) and Chateau Margaux. Every one makes himself at home; every mouth is employed, and the utmost good will and cordiality denominates it at once a rustic and a primeval gathering. The ladies, too, ensure the going off of the thing well, by looking all pleasantry and peace, while the younger men gradually assume their different hues of countenance and expression, as the influx of vinous matter operates on the morbid system. Some rise into bold hilarity, while others begin to wear the care-worn countenance of continuous thought: such are the opposite effects of deep potations. Many an one cracks his joke and tells his lengthened tale, while his neighbour performs an analogous attack upon an adjacent decanter, having told the number of glasses full which, at the commencement of the meal it contained, but which, in consequence of his duplex vision, or being *entre deux vins*, appears nought but an unintelligible vacuum. Upon the departure of the ladies the illimits of the tongue break forth,—all the iron braces of restraint burst asunder, and women and wine alternately attract the listening auditory. The "Ladies," and "those whom we like best," are drank with reverential enthusiasm, and the different intonations of music's charms break in upon the listening ear. Dutch, English, French, German, and Swede, with every nation's "nationale," by turn gains its ascendency, which never fails, however execrable, to be commented upon by the unanimous response of "Mr. ——'s health and song." However long before the younger branch of the party are ready for a removal, having got immersed in the quagmire of a second comprehension, the agitation of the younger females of the party is displayed by the awakening sounds of an itenerant imp of Apollo, who, with his kit, found his way amongst the kit of *mahogany* on the hampers of edibles, but now, alas! most fairly masticated—*sic transeat gloria mundi*. The damsel's are perceived enjoying a quadrille to themselves, which *la bonne politesse*, as well as *la bonne volonte*, requires to be disturbed, and each selects his cara sposa to tread in fragile unison the ground beneath. In a few minutes all is upon the most proper footing, and while the fantastic toe is wearing nature's rugged mantle out, the refuse of the viands, with all the paraphernalia, is re-packed, the horses inspanned, and nothing left but quietly to walk down the steep hill to rejoin the resting cavalcade, and be driven home as temperately as the affected heads of the drivers will permit Instances are upon record where the reins have been assumed by higher hands, and the "overcome" obliged to retire to the regions behind,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Upon the arrival at home, a dance generally winds up the diversities of the day, and a good night's slumber prepares every one to resume those hours of industry which the relaxation received, only the better capacitates him to embrace. * * *

LITERATURE.

Treatise on Happiness; consisting of Observations on Health, Property, the Mind, and the Passions; with the Virtues and Vices, the Defects and Excellences, of Human Life. In 2 vols. 8vo. London: Longman, Rees, and Co. 1833.

THE title of this work scarcely imparts any description of the extent and variety of its contents: for it may be regarded as a very large collection of arguments and facts; arranged and digested in such a manner as to serve to illustrate some of the principles which govern men in the ordinary transactions of life. A production executed upon such a plan as this, cannot fail to excite, wherever it is read, a conviction of its utility; because, in developing as it does the nice shades of human character, in penetrating and defining the latent springs of human action, it exposes to the most common capacity the surest means whereby a fault in conduct may be overcome, or a virtue be acquired. But the advantage of such a resource for the mind as this, does not consist merely in the good which it may enable us to do ourselves, but it is also highly calculated for the office of a great moral benefactor of the society in which we may happen to be cast. We have in these volumes a great multiplicity of examples, good and bad; the estimation of the history of which must prove immensely profitable to those who will take the trouble, and who have also the ability, to apply the circumstances of such cases to the familiar occasions of private life. These general remarks on the nature of the work, and of the account of its contents we shall endeavour briefly to illustrate.

After a chapter of preliminary remarks, in which the author comes to the conclusion, that a tolerably good portion of health, a moderate income, a cultivated mind, and well regulated passions, are the chief constituents, in general, of earthly happiness, he proceeds to develop in detail the circumstances which are comprehended within those general constituents. He begins with an account of the nature of the human body. In the chapter on this subject, he considers its popular anatomical and physiological relations, and dwells on the beautiful proofs which its mechanical construction exhibits of the providential adaptation of means to their end. From the consideration of the mere individual, man, the writer extends his remarks to man in the aggregate, and contemplates him in his distribution over the globe, and the varieties in his race, which are to be attributed to the influence of diversity of climate.

The preservation of health forms, by a natural transition, the subject of the ensuing chapter after that upon man; and here we have an elaborate and carefully written review of the nature of food in ancient and modern times. The substances used for food, the proper quantity under different circumstances, and many other points connected with the preservation of health, form the themes of a very important chapter, highly worthy of attention for its practical hints. The same observation applies to the next chapter, that on clothing. With respect to the latter practice, we are altogether disposed to adopt implicitly the opinions of the author upon the rules recommended to be employed in the choice and change of clothes. But there is no part of his advice which we are more inclined to inculcate, than that respecting the very impolitic indulgence which some persons allow themselves in clothing. James, Duke of Ormond, we are told, had ten different kinds of clothing for every day's wear; they consisted of woollen and silk, and these were either simple or quilted, so as to present every gradation of thickness. During the changes of the weather, he was in the habit of endeavouring to accommodate his garments to the state of the day: but it is perfectly evident that the whole of his time must have been devoted to the task, provided that he succeeded on all occasions in having on the garments that were suited to the particular state of the atmosphere to which he was exposed. But a still more whimsical case was that of Cosmo II, the Grand Duke of Tuscany, who, thinking that the only preservative of health was the equal temperature of the head, kept in his chamber a quantity of night caps, which he put on or off, according as the thermometer, which he constantly watched, indicated a rise or fall of the mercury.

We pass over the chapters on Air, Temperance and Intemperance, Exercise, and Sleep; not that much which may be deemed useful and important is not to be found in these chapters, but because their contents are comparatively better known than those of the portions of the volumes which we have yet to consider. The chapter on Dreaming contains nothing in the way of novelty: it is, indeed, an exhausted subject, and may be very well described as being incapable of any further elucidation. In the chapter on Wealth, there are some very judicious observations on the qualifications which must be associated with industry, so as to make the latter successful. The industrious man, in order that he may go through his undertakings with the desired effect, must be punctual, prudent, and economical; and it is the presence or absence of these three, or one of them, which makes one man prosperous and another unfortunate. If a person be engaged in any calling, and pleased with it, he should pursue it steadily; he should not be elated to-day and downcast to-morrow; nor should he be indifferent to his present advantages, but anxiously looking for success in future. Of all things, our author recommends that a speculative castle-building disposition should be avoided. They who cultivate a taste for speculation seldom prosper, as they of course never can make use of that essential instrument of profit, perseverance. We entirely concur with our author in the following remarks:

If a man purchase articles of merchandise, and anticipate the amount of his gain, he is greviously disappointed if he does not obtain it. But having received a pleasure from the anticipation, he will be inclined to consider the matter as settled; while the dull and slow process of realising his expectations will appear exceedingly tedious. The actual gain of a shilling, by an engagement attended with labour, will appear tiresome to that person who has calculated on hundreds of pounds without labour. On the other hand, if this speculative fancy has been checked, the consciousness of obtaining a small profit, cheers and stimulates a man to the performance of his necessary business.

Some persons are continually changing from speculations, which they have scarcely tried, to something which is still more unlikely to prove successful. But novelty is the bait; and any thing will do which presents this tempting snare. They risk the substance for the shadow. Like the "camel driver" of Collins, they will leave a certainty for an uncertainty; and then, with him, they may exclaim,—

"Sad was the hour, and luckless was the day,
When first from Schiraz's walls I bent my way."

A person, therefore, who would move on smoothly, must not be very sanguine or speculative. He must look to the present time for his labour, and its results; and he must look to the future for a continuation of his engagements. He must not be dispirited, but he must buffet the waves of adversity, and climb up

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the precipices which impede his progress. Locke, in his Treatise on Education, observes, that "this brawniness and insensibility of mind is the best armour we can have against the common evils and accidents of life; and being a temper that is to be got by exercise and custom, the practice of it should be begun by times,—and happy is he that is taught it early."

Many persons foolishly increase their unhappiness by a thousand fears and anxieties; and not unfrequently by an officious interference with the affairs of others. If, however, a man be proceeding badly, it will afford him but a sorry consolation to discover that others are doing no better; and if he is proceeding successfully, why should he be envious because others are doing as well? Has not one person as much right to obtain a maintenance as another? It is certainly much better for a man to mind his own engagements, and not to make himself anxious about those of others. If he attend to his own concerns, he may go on prosperously; but a continual attention to the business of his neighbours, with envyings and oppositions, will never assist him in his progress.—pp. 159, 161.

Industry, in the succeeding chapter, is contrasted in its effects with idleness. There are few qualifications of more utility, or that come to us more recommended by high authority, than this one of industry. The famous Duke de Sully, the minister, told the court that he had no leisure for amusements: he rose at four daily. Michael Angelo laboured during the night, sometimes going to bed with his clothes on, merely for a short time, and rising again to resume his labour. The minute account which Dr. Johnson give us of the course of life of the great Milton, shows how preciously that illustrious poet valued the use of time. The industry of some writers has been shown in the magnitude of their works: Wickliffe could afford to have two hundred of his works destroyed, and still he may be regarded as a voluminous writer; Prynne, who flourished at the period of the Commonwealth, wrote more than forty folio and quarto volumes; Anthony Arnauld composed more than one hundred works; and Lope de Vegas assures us that he himself wrote, on the average, five sheets per day during his life. In nothing, in fact, are there greater distinctions of merit occasioned between men, than in industry and idleness. Some one reminded Montesquieu that idleness was placed amongst the pleasures of heaven; it should rather, said that great philosopher, be accounted as one of the torments of hell: and this is the judgment which every experienced man will be inclined to concur in. Louis XIV. warned his son that there was nothing, even in the duties of the kingly office, more laborious than idleness; and a duke of the same nation, De Rohan, was known to have said that a greater curse could not befal a man, than having nothing to do. Dr. Cheyne, a late very penetrating and acute physician, used to say, that the head-aches, stomach-aches, colics, nervous pains, and disorders, so much complained of by certain classes in this country, were universally the produce of idleness and fulness of bread. It is related of Dr. Jeremy Taylor, that he once remonstrated with a lady who was bringing up her son in idleness, in the following manner:—

"Madame, if you do not fill your son's head with something, the devil will."

In an interesting chapter on the Nature of the Human Mind, our author boldly stands up for the equality of the intellect of the female with that of the man. The reason why this truth should ever be put in doubt, is that women have not been usally placed in the same circumstances as men. The occupations of women belong to a very different sphere from that which would give them opportunities of worldly distinctions and eminence; whilst men, in pursuing their ordinary occupations meet with a thousand occasions for calling forth their ingenuity and acquiring a reputation. The balance, therefore, is turned against the women, so far as advantages are concerned; but it does not follow that the balance of innate endowments is against them too.

Many females (says the author,) have attained a considerable degree of eminence in poetry, painting, and music, in logic and in philosophy, in war and in government. There is scarcely any science, or polite accomplishment, in which some of the softer sex have not become illustrious. In sprightliness of thought and expression, as well as epistolary composition, they certainly excel. Professor Stewart says, "I am inclined to think, that in the other sex, (probably in consequence of early education,) ideas are more easily associated together than in the minds of men. Hence the liveliness of their fancy, and the superiority they possess in epistolary writing." Females have been capable of comprehending some of the most profound subjects. Descartes dedicated his "Principia" to the Princess Elizabeth, daughter of Frederick V., and declared that she was the only person who possessed the capability of thoroughly understanding his philosophy; and Jeremy Taylor says that he never met with a person, male or female, of better mental powers than Lady Conway. "She was mistress," he said, "of the highest theories, whether of philosophy or religion; and as she always wrote in a very clear style, so she could argue sometimes, or put the deepest queries imaginable." Dr. Donn used to say of Anne, Countess of Dorset, that her knowledge was so extensive as to embrace almost every subject. Queen Catherine, consort of George II. used to read Butler's "Analogy" at her breakfast-table, with ease and a perfect comprehension of that intricate subject,—a work which gave a learned bishop a pain in his head whenever he looked into it. If we examine the annals of biography, we may find many other females who were celebrated for their mental powers. The school of Pythagoras contained many who were capable of unravelling the philosophical systems of that profound theorist. The difference, then, between the mental powers of the male and the female, is rather in appearance than reality. It depends on the variation of engagements, and the unequal facility for cultivating the intellect. Men are more public—females are more domestic. The former are trained to the pursuit of knowledge; the latter are endowed with a few trifling accomplishments, and then they are inducted into, and encircled with, the various economy of domestic affairs. The engagements of the male call him into the bustle of the world, where is views become enlarged: those of the female keep her within doors, where her faculties are confined by a narrow circle. The former is led, sometimes, for his amusement or improvement, to the science of the heavenly bodies, their peculiarities and government; the latter is restricted to earthly and human bodies—to the rising generation, their cross-purposes and unruliness. The former is bewildered with the music of the spheres; and the latter with music and tears. The sublime principles of light and heat, with the male, are reduced to candle-light and coal-fire with the female. Chemistry with the one, is cookery with the other. How, then, can the latter fly so high, when, having the ability, they have no opportunity?—vol. i., pp. 199—201.

The author, in pursuing the train of his reflections on the nature of the human mind, shows that he is another of those inquirers who believe that the happiness of a future life will consist, to a great extent at least, in the expanded state, of all our intellectual faculties, whereby a fuller and clearer insight of the many things which we can but examine very imperfectly at present, will be afforded to us. He tells us that a celebrated philosopher was so persuaded of this fact, that when he was dying he exclaimed, "I shall now discover more in a few minutes than I have learnt in the labours of a life." There is a great variation in the character of the human mind produced by differences of climate; but our author mistakes for primary, what are really but secondary, causes. There is no physical reason why he who lives beneath the ecliptic should not be as fully endowed with intellectual powers, as he who is born under a temperate sun: all the difference between the two, is the nature of the social condition of the inhabitants in the two places. A Turk can work mentally or corporeally with any other man on the globe; but circumstances forbid the Turkish people to acquire a habit of activity: they are, therefore, and will for a long time to come, be an ignorant people. We do not agree with Goldsmith or our author, in the notion expressed

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

by them that a residence in cities is calculated to enfeeble the mind, as compared with a residence in the country. We had ever thought that cities were the centre to which talent and intelligence always were brought; and if not in such a community as a metropolis affords, where shall we find the best informed, the most inquiring, the most intellectual of the nation?

(To be continued.)

THE TYROL; WITH A GLANCE AT BAVARIA.

(Extracts from Mr. H. D. Inglis's new Work, 2 vols. 8vo. 1833.)

THE KING OF BAVARIA.

THE King of Bavaria, although not a "Citizen King," in the meaning in which that expression is used, when speaking of Louis Philip,—is a Citizen King in another and better meaning; his is not a Political, but a social Citizenship; and although he might not choose perhaps to sit down at table with Mr. Citizen, drummer of a National Guard, he will chat as familiarly with any of the workmen in the Glyphothek, as if he were the overseer; and will listen to the suggestions of a man with a mallet in his hand, as patiently—and even thankfully, as if he had not a Palace to go home to, and a Crown to put upon his head.

The King of even a small Kingdom, is an object of some interest,—it may be difficult to say why! but in the belief that the in-goings and out-goings of the King of Bavaria are worthy of record, I shall make no apology for informing the reader, that His Majesty rises at five o'clock the year round,—that immediately afterwards, he takes a basin of soup,—that about eleven, he breakfasts upon coffee, &c.,—the Queen at the same time, breakfasting à la fourchette; that the Royal Family dine at five, and that His Majesty takes no supper. But with all these plain tastes and unostentatious habits, the King shows at times, that he has not forgotten that he is a King. The usual state equipage is in no respect inferior to that of more powerful Monarchs,—and it is possible that the demeanour of a King may be dignified, at the same time that it is affable.

THE PRISON OF MUNICH, AND DETAILS AND REFLECTIONS.

I was greatly pleased by a visit to the Prison of Munich. The principle of this excellently-regulated establishment is, that every one in it gains his own bread. Every prisoner is obliged to work at his own trade,—so that there is no kind of handicraft that is not going on within the Prison walls. It is like a general manufactory,—carpenters, blacksmiths, saddlers, tailors, shoemakers, dyers,—all are seen plying their trades; but no one is forced to work beyond what is necessary for his sustenance; whatever he gains by his labour, more than suffices to maintain him, is kept until the term of his imprisonment expires, and is then given to him,—deducting a quota for the expenses of the establishment. There is a separate workshop allotted to each trade; the prisoners work in company,—and are permitted to converse upon allowed topics—overseers being of course present. Shortly before I visited the Prison, a man whose term of punishment had expired, received no less than 800 florins (about £83 ster.) upon leaving the Prison. Criminals who are admitted at so early an age as not to have yet learnt a trade, are permitted to make choice of one, which is taught to them. Women, (who are rigorously separated from the male prisoners,) follow their trades also; we see embroidery, stocking weaving, straw-hat making and plaiting, and all the other kinds of labour in which women are engaged: women who have been servants before, are servants still,—cooks are cooks,—housemaids—housemaids. In fact, the interior service of the Prison is performed by the Criminals,—and all their wants are supplied by themselves, or their neighbours. I tasted the soup and meat in the kitchen, and the bread in the bakehouse; and found both excellent.

The proceeds of the sale of articles made in the Prison, (i. e. the surplus remaining after the expenses of the establishment have been paid, and the prisoners maintained,) to be kept for the benefit of the prisoners themselves, generally amounts to nearly 50,000 florins,—upwards of £6000 per annum,—a sum which, properly applied, as it doubtless is, cannot fail to produce most important results upon the future lives of the prisoners for whose benefit it is intended.

I saw some prisoners confined for life; for crimes which, in England, would have sent them to the gallows: these are tasked to a certain quantity of work, and maintain themselves, and benefit the state at the same time. No one has been executed at Munich since the year 1821. By a singularly humane enactment, prisoners for life are allowed some indulgences that are denied to those whose punishment is for a limited term. It is thought, for example, a fair and proper aggravation of punishment, that the use of tobacco should be prohibited to those who may hope by good conduct and industry, to be restored after a time, to the world, with the means of subsistence, and even of rational enjoyment; but this is considered an unnecessary cruelty towards a man whose punishment terminates only with his life.

The utmost cleanliness and simplicity pervades every department of this excellent establishment; a proper discipline, and just restraint, are united to those arrangements that ensure the health and improvement of the prisoners; and the building itself is one of the most complete that I have ever seen set apart for the correction of criminals. There is one singular part of the establishment—a Phalanx of very large and fierce dogs, which, during the night, are turned loose into the open space that surrounds the Prison, and are a sufficient security against escape. When I visited the Prison, there were six hundred and sixty-six persons confined, one hundred and forty of whom were women.

A detail like the above, may well lead to important reflection. The adaptation of punishment to crime,—as well as the true end of punishment, have always been deep and important problems in legislation; and it is certainly the duty of the legislature to collect from every source, information that may direct them right in this matter.

The system pursued in the Prison of Munich, appears to unite all the advantages that ought to be aimed at in legislating upon crime and punishment The State is not burdened with the expense of transporting prisoners to distant colonies, or of maintaining them at home,—nor is the criminal turned out of prison, without a stiver in his pocket, left to the mercy of a hard judging world.

The two great objects ought unquestionably to be, correction of the criminal's habits while under punishment,—and some security, that when punishment ends, these corrected habits may continue. It is well understood now, though not acted upon, that the punishment of crime does not deter others from the commission of it; and that therefore, the two objects above stated are the only wise and legitimate objects of punishment.

Solitary imprisoument — which finds many advocates — may effect the first, but cannot effect the second of these objects: nor does it even always effect the first object—that of correction. It may, or it may not: some minds may be tamed and tutored by it,—and the awfulness of solitude, and the weary, only resource of reflection, must no produce an advantageous result. a different complexion may solitude: impatience of its loss duce a bitterness and doggedness and reflection, in place of leading to wh meditation, may run in a wrong channel. at all events, whatever may be the effects of this punishment in correcting the habits, or rather, in improving the mind of the prisoner, its benefit ceases with its term; and it is impossible to conceive a case of greater cruelty, than that of a criminal who, after being trained by a long course of punishment, for habits of honesty and industry, is then thrown loose upon the world, with no temptation to the one, or call upon the other.

I cannot for my own part, conceive any system so perfectly adapted for the correction of idle and profligate courses, as daily employment in the trade to which a felon has been accustomed in his innocent days,—with a knowledge that his industry is not only procuring him his daily bread, but that it is forming for him a little stock, by which, when his confinement is over, he may carry with him a claim to the consideration of others,—which is the surest foundation of self-respect: it seems a return to honest days: he is again a tradesman, living by his labour,—and laying by the surplus from his necessities; nor am I sure that the society and conversation of others, actuated like himself, by similar feelings, and with similar hopes, under the surveillance of proper persons, is any bar to an improvement in his feelings. Few men are bettered by continued solitude,—however advantageous occasional retirement may be; and if something be subtracted from the severity of punishment, by permitting under proper restraints, an intercourse among the prisoners, it is amply compensated by other advantages. It would be impossible, indeed, to combine solitary imprisonment with the system pursued in the Prison at Munich,—because it would be impossible to have a separate forge for every blacksmith, who indeed cannot work alone,—or a separate workshop for every saddler or carpenter.

The Munich system appears in fact, to come as near perfection, as any human institution can. To be faultless, is a vain hope; to err as little as possible, is all that can be reasonably desired. Whether as respects the State,—the offender,—or society, it seems to accomplish all that legislation can hope for.

The demands of public justice are satisfied without any expense to the revenue; but on the contrary with an advantage. The constant labour of six or eight hundred persons, increases the product of national industry, and therefore enriches the State,—which is also a gainer in another way. Many of the army accoutrements,—saddles,—caps, knapsacks, and belts,—shoes, horse-shoes, and clothing, are produced from Prison labour; and although the prisoners be paid for their labour, there is no injustice in paying for it at a somewhat lower rate than it could be obtained for in the free market. Prison maintenance,—in which no kind of strong drink forms any part,—costs but an inconsiderable sum, so that the surplus is always sufficient to form a respectable fund at the conclusion of the punishment.

Then, if we pass from the state which is benefited, to the offender,—we find a result still more important: industrious habits are recovered,—or formed; the desire of acquisition is addressed,—and the hope of respectability engendered. There are but few men rogues from choice; idleness and poverty—twin sisters, are the fruitful mothers of crime; and after the offender has thus expiated his crime, and in expiating it, improved his own habits and character, he is placed in the world, with a desire for gaining his bread in an honest way, and with

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the means of subsistence until he finds employment, or travels to that part of the kingdom where he may expect to meet friends. It is true, that in some cases the freed offender may squander his money, and recur to his old practices; but it is more likely that he will not; and that the possession of a sum of money greater perhaps than he ever had before, will produce its usual effect,—a desire of adding to it.

Upon a matter of this kind nothing can be so satisfactory as facts. I took some pains to ascertain the result, as far as those in the management of the Prison could inform me; and I learnt that in but few cases offenders were committed a second time,—and that those who had been dismissed with the largest sums, had in no instance returned. Many of the young who had been taught trades in the Prison, were respectable handicraftsmen and tradesmen,—and crime was yearly on the decrease.

As for the results of the system on society, these appear to be equally favorable to society as to the state, and upon the criminal himself. Little more argument is needed in proof of this, than that crime diminishes under the system; and it cannot surely require any proof in favor of so clear a position, as that society is less likely to be injured by the return of some thousands of felons, with improved habits, and money in their pockets, than by an equal number of pennyless vagabonds let loose upon it. With respect to the delusion of severe punishment deterring from crime, it is perfectly well known that the contrary is the fact; that whenever the enactments of law cease to be in accordance with men's opinions, they become worse than useless,—that sympathy with the criminal and not respect for the law is engendered,—and that evil thoughts are born in the very sight of exemplary punishment. Thieves, Forgers, and Incendiaries, have sprung into existence in front of a gallows,—and a man hanging in chains, on a moonlight heath, has begotten a murderer.

I ought perhaps to apolize for the length of these remarks; but the system pursued in the Prison of Munich seemed to be so founded on both wisdom and humanity, that I felt it to be almost a duty to enlarge upon a subject which so well deserves public consideration.

AUSTRIAN RULE OF THE TYROL,—THE TROOPS,—PRESS, &c.

All the regiments stationed in the Italian or southern Tyrol, are Austrian,—both soldiers and officers; and all in the German Tyrol, are Tyrolean soldiers, officered by Austrians. This is a wise stroke of Metternich foresight; and proves incontestably the truth of what I have argued, respecting the diversity in character between the southern and the northern divisions of the Tyrol. Well knowing the feelings that pervade the latter, the Austrians have felt the necessity of avoiding whatever may excite those feelings; nothing could be more likely to do this, than the presence of Austrian soldiers; irritation would produce quarrel,—and quarrel might end in insurrection: they have therefore wisely placed among the Tyroleans their own countrymen; whose Austrian officers, and exact discipline, ensure their fidelity,—and whose connexion with the country, forbids jealousies, and leads neither to irritated feelings, nor remembered oppression. The Italian Tyrol, on the other hand, requiring no delicacy of this kind, is garrisoned by Austrians, who are at any time ready to pour into the upper valleys.

Besides these military precautions, there is a strict inquisitorial police. There is great reserve in speaking upon any political subject, unless where interruption, or espionage is impossible; and such matters, are at no time made the subject of conversation at a public table. Austrian officers and employés mix in all public assemblies; and the theatres and places of public amusement, are placed under the strictest censorship and surveillance.

The Press too is narrowly watched; and whatever might in any way recall dangerous and forbidden recollections, is interdicted. Gold cannot purchase any life or account of Hofer; and at one time, the sword, and other relics of this patriot, now preserved in the Museum, were shut up, and forbidden to be exhibited; but this it was discovered, was pushing the system too far; his memory was too much cherished to render it safe to suppress every memorial of him; and this order was recalled, that the Tyroleans, if they could not follow the banner, might at least handle the sword of a patriot.

MOUNTAIN FREEDOM.

But I am scarcely able to resist the belief, however unphilosophical it may appear, that there is something in mountain air, and mountain scenes, that elevates the mind, and begets a spirit of independence. Mountains are generally left to nature: plains are subjugated to the dominion of art. All the images presented to the senses, among mountains, speak of nature and freedom. There is freedom in the cry of wild fowl; freedom in the untamed step of the animal that roams where it will; there is freedom in the very riot of the streams, and the unfettered course of the breezes; there is freedom in the wide uninclosed expanse that owns no man as its lord. It is all different in the plain. No animals are seen, but those which are subject; the streams flow cautiously along, diverted often from their channels by the industry and cupidity of man; the very winds of Heaven are denied their play; and the soil is taken from the dominion of nature, to be divided among the thousand petty masters who force contributions from it. All this may be fancy; or it may not. The fact however remains the same; and like the inhabitants of other mountains, the Tyroleans love freedom for its own sake. They do not sigh for liberty because their masters are Austrians; or because they are oppressed. To a people desirous of being their own masters—all masters are obnoxious; and whether the Tyroleans were governed by Austria or France, or England, they would desire to govern themselves.

INDIAN CORN FOR FOOD, &c.

However tastes may differ as to the palatableness of an Indian corn diet, the fine athletic peasantry of the Tyrol, sufficiently attest its wholesome and nutritious qualities. Indeed I have generally seen a robust peasantry, in those countries in which Indian corn forms a large portion of their subsistence. The people of Languedoc and Beran, are stronger than those of central and northern France,—and the Biscayans, who eat more Indian corn, than other kind of bread, are greatly superior in strength to the Castilians. In the Tyrol, Indian corn is used in other ways than as an article of diet; the surplus, if any there be, finds a ready market for horses' food; and the husks and sheaths are used in stuffing mattrasses; and also, as a substitute for fire wood. As much flax is generally grown by the Tyrolean peasant, as suffices for the wants of his family; and for employment during the winter.

The cultivation of Indian corn has made some noise in England; and has excited some interest, owing to the idea, that its cultivation would ameliorate the condition of the lower classes; and there have been in fact, two parties in this matter; one, asserting its great advantages, and its adaptation to the climate of England; and the other, denying both. I am no agriculturist; and am able only to state facts. As for the advantages of the cultivation of Indian corn, I can only say, that throughout the valley of the Inn, it is considered the most useful and the surest produce; and that the peasantry who live upon it, are the finest peasantry in Europe.

VILLAGE WORSHIP.

No where perhaps in Europe, are manners so primitive as in the mountain villages of the Tyrol; and in few places, are religious duties more regularly performed, or with more singleness of heart. About six o'clock, just after I had dined, a small treble chime from the village church, called the villagers to prayer; and they all obeyed the summons. The two or three little shops were shut up,—the cottages were locked,—the in doors even were closed; and some seventy or eighty persons—old and young,—the whole inhabitants of the village; were seen straggling along, with their prayer books in their hands. I did not remain alone in the inn, but went with the flock. There was little of the pomp and majesty of the Catholic church, to be seen there: it was as lowly a house, and as unadorned, as any of our Protestant temples but for the single image of the Redeemer, it might have been a meeting house. I saw much apparent, and I have no doubt, genuine devotion among these simple minded villagers; and however much the Catholic faith may be cumbered by ceremonial; or even among some of its professors, debased by superstition, I believe that the Almighty will not reject the devotion that is offered in sincerity.

COTTAGE HUSBANDRY.

The whole of the land owned by this peasant of the Tyrol, appeared to me as nearly as I could judge by pacing it, as well as by the eye, to consist of about four acres. One third of the whole, as the proprietor informed me, was devoted to the culture of Indian corn; of the remaining two acres and two thirds, about half an acre was in wheat, and another half in barley; a quarter of an acre in flax; about an acre, and little more in grass and wood; and about a quarter of an acre in garden, which contained cabbage, potatoes, salad, and a few cherry trees. The Indian corn was all required in the establishment,—about one half for the family, and the other for winter provision for the cow: the sheaths, &c. were used as they are used in other parts of the Tyrol. Of the wheat, there was a considerable surplus; and this, and the barley, were taken to the Brixen market, where they produced more than sufficient to purchase coffee, sugar, wine, such implements as were wanted from time to time, and such clothing for the family as was needed; and formed a small money stock besides, which, after being applied to all the purchases beyond what the establishment itself produced, had amounted then to a considerable purse; but the owner did not tell me the amount; nor would it have been civil to have been more inquisitive. The flax was spun, and wove, and fashioned in the family. The grass was all needed, for summer pasture for the cow; the wood supplied firing,—and the vegetables were looked upon rather as a dainty than an article of common use. The master and his son, with a little assistance from his daughters, managed and tilled the ground, which seemed a good lightish soil; and was remarkably clean; and in excellent order; and all the duties which fall to the care of a small farmer's wife in England, were under the cognizance of the peasant's wife and daughters. No cheese was made,—because the soup consumed all the milk, excepting a little that was saved for butter. Besides the cow, there were two pigs, and a litter of young ones; and a number of hens. The dinner I had seen, was the regular dinner of the house; excepting about two days in the fortnight, when some fresh meat is bought in Brixen market with the money, or a part of it—obtained by the sale of eggs and fowls.

Curious Fact.—If we would preserve ice from melting, the most effectual means would be to wrap it in blankets, which would retard for a long time the approach of heat to it from any external source.—*Lardner on Heat.*

THE ANONYMOUS LETTER.

To write an anonymous letter is ungentlemanly: of this there can be no doubt—nay more, it is mean—dastardly—skulking—depraved! But what could I do? Colonel Plinth was about to marry his cook———

To write an anonymous letter is degrading, to say the least: it would require the skill of a Sophist to render it justifiable—perhaps; and yet when Colonel Plinth was going to marry his cook

---

A vixen—a perfect Saracen of a woman behind his back; and he a man of nice honour—who had gained golden laurels at Seringapatam—an aide-de-camp to Sir David Baird—my friend! The intelligence had come like a thunder-bolt.

To write an anonymous letter, except under the most imperative circumstances, is unquestionably atrocious. I felt that, even posited as I was,—with the most benevolent intention,—conscience—*my* conscience, as a gentleman and an officer, would hesitate to approve of it. I paused—I determined to weigh the matter well;—but the conviction fell upon me like an avalanche that not a moment was to be lost!—Colonel Plinth was on the eve of marrying his cook———

Rebecca Moggs! And he my brother-in-law—the widowed husband of my sainted sister—a K.C.B.—a wearer of four medals, two crosses, and the order of the golden fleece—a man who had received the thanks of parliament—the written approbation of my Lord Clive—two freedoms in gold boxes!—a man who, had he nobly fell on the ramparts of Tippoo's capital, would have been taken home in rum, and buried in St. Paul's.

His fragment—his living remains—(for he possessed only one organ of a sort—having lost a leg, an arm, an eye and a nostril)—had resolved on what I considered a sort of demi-post-mortem match, with—what?

A blowsy, underhung menial, whose only merit consisted in cooking mulligatawny, and rubbing with a soft fat palm the wounded ancle of his partially efficient leg;—the illegitimate offspring of a Sepoy pioneer's trull;—a creature whom my lovely and accomplished sister had taken from the breast of her dead mother (the woman—a camp-follower—received an iron ball in the brain from one of Tippoo's guerilla troops in the jungle)—one whom Evadne had brought up, with maternal care, in her kitchen;—a scullion!—And such a one to be Colonel Plinth's wife—to take the place of Evadne!

To write an anonymous letter is rather revolting; much may be said against it; it is one's *dernier resort:* still it has its advantages—and why neglect them?—Had Colonel Plinth not been what he was—were he but a casual acquaintance or a mere friend—then indeed———

But he was my brother-in-law—my brother in arms—in a word Colonel Plinth.

Had he been a man who would listen to reason—who was open to conviction—to whom one might venture to speak—why really———

But he was hot as curry;—yet not deficient in sense; but dreadfully opinionated—tetchy—easily susceptible of feeling himself insulted—careful as to keeping his pistol-case in such a state as to be ready at a moment's notice—a being inflamed in body, soul, and complexion, by the spices and sun of the burning East.

To remonstrate with him would have been absurd; he would have cut me down with his crutch:—he had amassed three thousand a-year.

Under such circumstances—conscious of his infatuation, I ceased to waver: the end sanctified the means; and I wrote him an anonymous letter.

She, of course, would make a point of having children—and then where were my expectations?

Evadne had never been a mother: the colonel was the only Plinth in the universe; and, posited as I was—Evadne being the link—I naturally had expectations.

To say nothing of being nine years my senior, he was a wreck—a fiery wreck, full of combustibles, burning gradually to the water's edge.

The sun of his happiness, would, as I felt, set for ever, the moment he married such a creature as Moggs—innately vulgar—repulsive—double-chinned—tumid—protuberant—

Social festivity was every thing to Colonel Plinth: but who would dine with him, if his ci-devant cook were to carve?—*I* couldn't.

Therefore, under a sense of overwhelming duty to Colonel Plinth, I wrote him an anonymous letter.

Every precaution was taken: the hand was disguised—the paper such as I had never used; and, to crown all, I dropped the important document in a distant and very out-of-the way post-office.

Conscious of perfect security—animated by the cause I had espoused, I played away upon him, from my masked battery, with prodigious vehemence. Reserve was out of the question, in an anonymous letter, the writer, of course, speaks out:—this is its great advantage. I took a rapid review of his achievements—I recalled the accomplished Evadne to his mind's eye—I contrasted her with his present intended:—

I rebuked—I argued—I ridiculed—I scorned:—I appealed to his pride—I mentioned his person. I bade him consult a *cheval* glass, and ask himself if the reflection were that of a would-be bridegroom. I told him how old he was—what the Indian army would think—in short, the letter carried upon the face of it the perfect conviction of a thirty-two pounder. Here and there I was literally ferocious.

I dined alone that day, and was taking my wine in the complacent consciousness of having done all in my power, when Colonel Plinth knocked. Of course I knew his knock: it was always violent; but on this occasion rather less so than usual. I felt flurried: as he ascended, my accurate ear detected a strange footstep on the stair. Hastily pouring out and gulphing down a bumper, I contrived to rally before my friend entered.

Commonly his countenance was turbid—*billowy*—rufous—the red sea in a storm;—now it was stony—pale—implacable: he was evidently *white hot* with wrath. His eye—usually lurid as that of a Cyclops at the forge—was cold—clear—icy; his look froze me—I had seen him thus before—in the breach at Seringapatam.

His salute was alarmingly courteous: he begged leave to introduce a friend—Baron Cahooz, a noble Swede in the Prussian service. Never before had I beheld such a martinet:—where could Plinth have picked him up?

The Baron, in very good English, expressed his concern at making so valuable acquaintance as that of Major Mocassin under such infelicitous circumstances. Colonel Plinth had been insulted: but as I had so long been his most valued friend—as we had fought and bled on the same fields—as those arms (his right and my left) which had been so often linked together, were mouldering, side by side, in the same grave—as I was his brother-in-law, Colonel Plinth would accept of the amplest possible apology:—with any other man than Major Mocassin, Colonel Plinth would have gone to extremities at once.

I was petrified during this speech; but at its conclusion some sort of an inquiry staggered from my lips.

Baron Cahooz did not understand.

I declared myself to be in the same predicament: would he be so good as to explain?

In reply, the Baron hinted that I must be conscious of having written Colonel Plinth a letter.

Fearing that Plinth's suspicions had been aroused, and that this was a *ruse* to trap me into a confession—remembering my precautions—and feeling sure that nothing could, by any possibility, be brought home to me, unless I turned traitor to myself—I denied the imputation point blank! Indeed, what else could I do?

Colonel Plinth uttered an exclamation of bitter contempt, and hobbled towards the door.

Baron Cahooz handed me his card:—nothing further could be done:—he hoped the friend whom I might honour on the occasion would see him as early as possible, in order to expedite the necessary arrangements.

I made a last effort. Advancing towards the door, where Plinth stood, I begged to protest that I was mystified—that he must be labouring under a mistake.

"A mistake!" shouted he in that tremendous tone, which for a moment had once appalled the tiger-hearted Tippoo—"A mistake, Major Mocassin! There's no mistake, sirrah! Will you deny your own hand writing?"

So saying he threw the letter in my face and retired, followed by Cahooz—

In another moment the veil was torn asunder. Having never before attempted an anonymous letter, and acting under the influence of confirmed habit, I had concluded the fatal epistle, without disguise, in my customary terms:—"*Yours, ever,* JOHN MOCASSIN!!"

THE LIVE AND DEAD OFFICE.

THE portals of the military *Morgue*, were not yet opened—they waited for the usual signal from the clock of the Horse Guards. Two important looking functionaries stood at the window, one gravely engaged in picking his teeth, the other in paring his nails. Both were choice specimens of the government office *martinet*.

A small but interesting group had gathered about the door: the principal figures were three females. The first of these, an old woman, though bending beneath the weight of years, still eclipsed in stature those who stood about her; many a storm had left its mark on her broad bold brow, the surface was torn and tossed up into wild irregular ridges—it looked like a rugged bit of rock. She was blind.

Close by her side stood a short, fair, blue eyed woman, about thirty years of age, full of excitement and activity, but nervous, emaciated, and bearing on her cheek the hectic banner of death.

Her pale, slender hands, gave palpable evidence, that she had long ceased to take a part in any of those manual labours in which women of her humble situation are usually occupied. Judging from her wedding-ring she had been plump, for it was so much too large, that she had taken the precaution of tying it to her slim finger by a bit of silk.

The third was a tall, well-formed girl, ten or twelve years of age: no two individuals could resemble each other less than the old blind woman, and the other female—they were evidently not of the same family; but this girl by her lineaments had affinities with both. In her countenance, the most striking peculiarities of feature, displayed by her companions, were agreeably united. The conviction flashed on me at a glance, that she was the daughter of the poor nervous, consumptive creature, and that the old woman was her grandmother—genealogically speaking, on the male side: nor, as I soon found, did I err.

The grandmother was placid and resigned, but garrulous. Her present humility contrasted stongly with the records of former turbulence graven on her brow; age, poverty, and blindness had toned down her temper perhaps. Without the least touch of querulousness, she told an asthmatic old man, with whom she was conversing—that up to the age of fifty, she had neither been poor nor blind; at a little before that period of her life, she had been left a widow, with one son. Reuben, against her will, had married little Peggy Lorimer; violent dissension ensued, and her son had recklessly enlisted. A few months after his embarkation for a pestilential colony, Peggy became a mother; the little farm, the paternal inheritance of which Reuben was the prop, soon went to ruin; and when blind, and almost a pauper, the old woman, to use her own phrase, had gone and laid her head in Peggy's lap. Peggy, she scarcely knew how, had contrived to support her, for many years past. The poor thing,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

never having received but one short hurried letter from Reuben since his rash action of enlisting, was pining to know what had become of him. All inquiries had proved fruitless, and the three generations, mother, wife and daughter—comprising all who claimed kith or kin with the soldier, had travelled on foot from Dorsetshire, to ascertain personally, at the Live and Dead Office, what had become of him.

Raw puffs of wind tossed about the old woman's white locks, a drizzling rain moistened her cheeks, and every individual composing the unsheltered group at the office door—except Reuben's feverish wife, where shivering with cold. From within, the flashes of a glowing fire blazed through the window. One clerk was still picking his teeth, and the other paring his nails: the Horse Guards had not yet struck, and the doors were consequently still closed.

At length the clock began to tell us it was ten. Reuben's wife looked as though she thought the bell dreadfully tardy: when nine blows of the hammer were heard she turned pale, and exclaimed in a tone of perfect agony, "Good God! it's only nine!" The bell however, with provoking leisure, boomed forth the finale of its announcement, and a fat flunkey opened the doors.

Being, at the period of my anecdote, quite young and inexperienced, I felt anxious to witness the kind consideration with which an inquiry as to the fate of "a gallant British soldier," from his mother, wife, and child, would be received, on the part of those who were employed to represent "a grateful king and country." The family groupe tottered forward to the two functionaries at the window: on stating their business, they were referred to "the fifth gentleman on the left." I followed them, and heard the application repeated in tones tremulous with terror by the hectic wife.

"Of what regiment?" inquired the fifth gentleman.

"The forty-eighth."

The fifth gentleman was mending a pen, and after having completed the operation, he slowly and carelessly took down a heavy book from the shelf above him. He opened it, and as he ran his fore-finger down one of the pages, the wife, grasping the hand of her daughter on one side, and that of her mother-in-law on the other, gazed at him without breathing. The old women looked passive and resigned—the child stared at her mother.

A second page was turned, and the fifth gentlemen took snuff: then fixing his digit on a line, he uttered, in a breath, without pause or point, the usual calm ferocious answer, "DEAD A SHILLING NO CRYING HERE."

"God's will be done!" said the old woman, "Let us go home and die too, children."

The miserable wife tottered out without a sob.

My business detained me at the Live and Dead Office about three minutes; in that brief period, I heard, from different parts of the room, the same heartless and habitual reply thrice repeated. So much for glory! The younger son of a bishop or a peer, if he die in battle, is eulogized in the despatches, and hypothetically entombed in St. Paul's, or Westminster Abbey—his friends can go and see his monument, and the record of his achievements is exposed to the gaze of a grateful nation: but the rural recruit—*the military operative*, if "killed off," is turned into a hole, his name is deemed unworthy of notice in the gazette, and his anxious relatives, on applying for information as to his fate, are thus kindly and considerately answered:—"DEAD A SHILLING NO CRYING HERE."—*(Monthly Mag.)*

Difference between roasting and boiling.—It is found from some experiments, that in respect of economy, it is more profitable to boil than to roast. The loss in general is estimated at from one-fifth to one-third of the piece put down.

LITERARY EXTRACTS.

THE SABBATH.

Amongst the Jews, the minutest violation of the Sabbath was punished with death A man who gathered faggots on a Sunday was stoned to death: this punishment was usually reserved for those who perpetrated the blasphemous act of pronouncing in mockery the name of the God of Israel. So inviolable was the Sabbath, so profoundly did the Jews believe in its sanctity, that instances are recorded where life itself was sacrificed in order to preserve the uninterrupted tranquillity and forbearance observed on that day. The Pagans used to ridicule the Jewish people for their attention to the Sabbath; for they could not, by any proofs or reasoning, comprehend why it was, that at a stated moment every week, the Jew abandoned his ordinary and perhaps most profitable occupations; his fields, which required the vigilance of the husbandman, were forsaken; the ass was unsaddled; the house of the Israelite was a silent desert; the fire extinguished; the provisions unprepared; the servants at rest; and the trafficker refusing the proffered coin: nay, when an army of the Jews was led forth, it stopped on the Sabbath day, and even ceased to defend itself on that day from the most furious assaults of the enemy. But though this observance was the object of ridicule alternately with remonstrance, and though we find in the Roman poets some allusion to this amongst other Jewish practices,* yet neither the Pagans nor even the Christian fathers, seem to have been acquainted with the manner in which the Sabbath was spent in the interior of Jewish families This is sketched in a pleasing manner by the author of *The Genius of Judaism.*

The interior delights of the habitation of the Hebrew were alike invisible to the Polytheist and the Christian fathers. They heard not the domestic greetings which cheerfully announced "the good Sabbath," nor the paternal benediction for the sons, nor the blessing of the master for his pupils. They could not behold the mistress of the house watching the sun-set, and then lighting the seven wicks of the lamps of the Sabbath, suspended during its consecration; for oil to fill the Sabbath-lamp, the mendicant implored an alms. But the more secret illumination of the law on the Sabbath, as the Rabbins expressed it, bestowed a supernumerary soul on every Israelite. The sanctity felt through the Jewish abode on that day, was an unfailing renewal of the religious emotions of this pious race. Thus in the busy circle of life was there one unmoveable point where the weary rested, and the wealthy enjoyed a heavenly repose. It was not without some truth that Leo of Modena, a philosophical Hebrew, called this day, "the festival of the Sabbath."

It is beautiful to trace the expansion of an original and vast idea in the mind of a rare character who seems born to govern the human race. Such an awful and severe genius was the legislator of the Hebrews The Sabbatical institution he boldly extended to a seventh year, equally as he had appointed the seventh day. At that periodical return the earth was suffered to lie fallow and at rest. In this "Sabbath of the land," the Hebrews were not permitted to plant, to sow, or to reap; and of the spontaneous growth no proprietor at those seasons was allowed to gather more than sufficed for the bare maintenance of his household. There was also release of debtors. The sublime genius of Moses looked far into futurity, when, extending this great moral influence, he planned the still greater Sabbatical institution for every fifty years. Seven Sabbaths of years closed in the Jubilee, or the great year of release. Then at the blowing of the horn in the synagogue the poor man ceased to want; the slave was freed; all pledges were returned; and all lands reverted to their original proprietors. To prevent an excessive accumulation of wealth, the increase of unlimited debts, and the perpetuity of slavery, this creator of political institution like no other, decreed that nothing should be perpetual but the religious republic itself.—pp. 131, 133.

* Juvenal appears to believe, that it was a custom brought about by the innate indolence of the Jews.

JEWISH CUSTOMS.

So strong is the force of habit, that up to the present hour no Jew will eat of a beast which is not slaughtered by a Jewish butcher. The latter is understood to search the animal most carefully, to see that no blemish exists in its body, and he affixes to the meat a leaden seal, with the word "*Kasher*" *(lawful)* upon it. This seal renders the meat acceptable to the Jewish consumer, for he will not purchase it on any other terms. Now, mean and trifling as the process appears to be, it certainly serves as a guide to point out to a stranger, in any country, if a Jewish family is to be found in it. Of the truth of this remark the author is satisfied from an example with which he is acquainted. Some Spanish Jews, fleeing from persecution, took ship, and landed by mere accident at Embden. They knew nobody in the place, and were in the most anxious state of doubt not knowing which direction to pursue. On entering the city, they met a lad carrying a goose with a label annexed to it: on the label was the Hebrew word *Kasher:* they followed the lad home, and it is needless to say how they were received by the master, for whose accommodation, of course, the approval of the Jew poulterer was thus officially affixed. The author represents, although we do not know for what adequate reason, that the simple circumstance of prohibited food, has reduced the Hebrew nation to the state of the Hindoos, and been the heaviest curse which they have yet had to endure; because, in all cities, they are condemned, by an intolerance not always Christian, but very often merely Jewish, to inhabit separate and obscure quarters: thus in the city of London we have the *Jewry;* in Paris there are *La Rue des Juifs*, and *La Juiverie.* This sort of appropriation of a specific place of residence in most metropolitan cities for Jews, seems to be of long standing. Cardoso, of whom we have already spoken, sought to reconcile this inauspicious fact to a theory of his own, by saying, that these Jewish enclosures had not originated so much in the contempt of the Jews by the population of those cities, as in the arrangements of a particular Providence, which was ever vigilant in providing that Israel

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

should be as much as possible removed from the contagion of vice and folly.

There can be little doubt that the misfortunes of the Israelites have been very considerably augmented by the contemptible regulation which forbids them to share in the meat of a Christian. When Napoleon assembled the Jewish Sanhedrim of Paris, a banquet was given by him, at which the late A. Goldsmid assisted. He was allowed to convey his own Kasher dish to the table of royalty: for on no other terms would he have joined the imperial banquet. Absorbed for a short time in the subject of the moral and political reform of the Jews, he was silent: but, suddenly striking his forehead, he exclaimed, "But what can be done for their eating?" Goldsmid hit the nail on the head: for, strange as it may appear, the difficulty of deciding upon the forbidden aliments was the main cause of the abrupt breaking up of the Sanhedrim. It is not known to many, that, at this moment, a Jew's kitchen—that is, a thorough-going Rabbinical Jew, such as Abraham Goldsmid was—is a spot as rife in superstition as the haunt of any witch that ever rode on a broomstick.

CHAMBERS'S EDINBURGH JOURNAL.

In this popular *Three-half-penny* Work, there is in one of the Numbers an interesting Article entitled *The unknown Poets of Scotland.* After describing many of considerable talent, the writer gives the following specimen of felicitous genius from the pen of James Ballantyne, a painter, residing in Hanover-street, Edinburgh. The vein of this young poet is one of peculiar humour, containing a picture of extraordinary distinctness, which must assuredly entertain those whose good fortune it is to appreciate the merits of the Scottish language.

THE WEE RAGGIT LADDIE.

Wee stuffy, stumpy, dumpie laddie,
Thou urchin elfin, bare an' duddy,
Thy plumpit kite an' cheek sae ruddy
Are fairly baggit,
Although the breekums on thy fuddy
Are e'en right raggit.

Thy wee roun' pate, sae black an' curly,
Thy twa bare feet, sae stoure an' burly,
The biting frost, though snell an' surly,
An' sair to bide,
Is scorned by thee, thou hardy wurly,
Wi' sturdy pride.

Come frost, come snaw, come win', come weet,
Owre frozen dubs, through slush an' sleet,
Thou patters wi' thy wee red feet
Right bauld an' sicker,
An' ne'er wast keuned to whinge or greet,
But for thy bicker.

Our gentry's we peel-gariie gets
Feed on bear meal, an' sma' ale swats,
Wi' thin beef tea, an' scours o' sauts,
To keep them pale;
But aitmeal parritch straughts thy guts,
An' thick Scotch kail.

Thy grannie's paiks, the maister's whippin',
Can never mend thy gait o' kippin';
I've seen the hail schule bairnies trippin'
A' after thee,
An' thou aff, like a young colt, skippen'
Far owre the lea.

Mang Hallowfair's wild, noisy brattle,
Thou'st foughten mony a weary battle,
Stridin' owre horse, an yerkin' cattle
Wi' noisy glee,
Nae jockey's whup nor drower's wattle
Can frighten thee.

Ilk kiltit Celt, ilk raggit Paddy,
Ilk sooty sweep, ilk creeshy caddie,
Ilk tree-legged man, ilk club-taed laddie,
Ilk oily leary,
Ilk midden mavis, wee black jaudy,
A' dread an' fear ye.

Ilk struttin' swad, ilk reelin' sailor,
Ilk rosin't snab, ilk barkin't nailer,
Ilk flunky bauld, ilk coomy collier,
Ilk dusty batchy,
Ilk muckle grab, ilk little tailor,
A' strive to catch ye.

Ilk thimlin', thievin', gamblin' diddler,
Ilk bellows-mendin' tinkler driddler,
Ilk haltin', hirplin', blimdit fiddler,
Ilk wee speech crier,
Ilk lazy, ballant-singin' idler,
Chase thee like fire.

Ilk waly draiglin', dribblin' wight,
Wha sleeps a' day, an' drinks a' night.
An' staggers hame in braid daylight,
Bleerit, blin', and scaur,
Thou coverest him up, a movin' fright,
Wi' dunts o' glaur.

Ilk auld wife stoyterin' wi' her drappie,
In teapot, bottle, *stoup*, or cappie,
Fu' snugly fauldit in her lappie,
Wi' couthy care,
Thou gar'st the hidden treasure jaupie
A' in thy air.

At e'en, when wearv warkmen house,
Their sair forfoughten spunks to rouse,
An' owre the inspirin' whisky bouse
Croon mony a ditty,
Thou sits amang them bauld and crouse,
Whiffin' thy cutty.

Thine education's maistly perfect,
An' though thou now art wee an' barefoot,
Thoul't be a swankin', spunky spark yet,
Or I'm mista'en,
Unless misfortune's gurly bark yet
Should change thy vein.

O, why sould age, wi' cankered e'e,
Condemn thy pranks o' rattlin' glee,
We a' were callants ance, like thee,
An' happier then—
Than, after clamberin' up life's tree,
We think us men.

To the Editor of the Stockport Advertiser.

TO THE REV. MR. B-K-Y, CURATE OF EL DORIDO,

Who was very fond of using hard words in his Sermons.

Rev Sir, The unanimous and humillimous desideration, as well of your parochian as hicunbiquitarian illiterate semipaganian auditors, submissively demonstrateth, that although your spacious premiums and specious introduction of premised perspicuity in prædication, do inveigle our affections for the meliorating of our minds and indoctrinating our agricolated intellects, and do engage our acroamatic organs and infix our ophthalms for the better inhibition of the stellicides of our beatifying instruction, yet, through the calliginous sublimity of internexed conundrums, to nitraating with obstreperous cadencies, you rather inanimate and obfuscate than illumitate and scientificate our abecedarian conceptions, so that commonly we return as plentifully unedified as when we came—we, therefore, out of the sense of our souls' good and benefiting by your ministry, in bonne esperance that your urbanity will not be exasperated at the presentation of these our cordial desires, do, from the nadir of our rusticity, almacanterize to the very zenith of your unparalleled sphere of activity, in conjunctively requesting that your ingenious genious would be placentiated to nutriate our animal appetites with intelligible theology, suitable to our most paidonatical apprehensions, and to recondite your sacrocondite locutions for more scholastic auscultators and scholiasts, and that ourselves, second-selves, junior ones, and servants, all of ignoramus's offspring, may not hear you evaporate in lycophronian cantharus, and gigantize in farraginous raptures, words we never met with in holy write, as corollaries, ephemeris, and such other syssegists or heterogenial language; for that, without dilucidation of their genuine signification, we lose the gravy and system of your doctrine, and our common sense is admiring at the words we understand not. Being, therefore, angustiated with a panic timidity of another Babel's restoration, or lest some sesquigepalian saltembanco should be circumforaneate, or the spagyric bombast of holienliem have experimented a metempsychosis to re-puzzle the quintessentials of our ingeniosities with more amalgamas, cohobations, and fixations, we shall quote St. Austin's saying, *Mallem ut reprehendant grammatici quam non intelligant populi;* and we wish it may be your practice.

And now, eximious Sir, we supplicate your clemency not to look upon these lines as derogatory to your most exquisite parts, for we rather magnify and admire such egregious acquisitions as being very suitable and much in request; and of such Solomon's exclamation doth well, otherwise St. Paul's exprobation of barbarism may be injected, or the help of an interpreter required. *Qui loguitur lingua scipsum ædificat; nam tibi benefacias, sed aliis non ædificatur: sed verbum sat sapienti.* And thus, having copulated our plebeian endeavours we exosculate the subumbration of your subligacles; and sooner shall the surges of the areniferous sea ignify and evaporate than the chain of our duty be in the least unconcaterated or dissolved. Always wishing you health and happiness,

I am,
Reverended Sir,
Litton, April 30th, 1833. CACAMBO.

Joining a Settler.—Extract of a letter from New South Wales.—"We duly reached Newcastle by the packet; and then hired a boat to take us and our baggage up the river, and we arrived at G——'s Settlement a little before 12 A.M. He was out, as one of his men informed us, 'chipping in murphies;'—and my sister being not a little wearied, I desired the man to inform him of our arrival, while we rested on two blocks of wood which served for chairs. In a few minutes G—— came hurrying in, with nothing on (saving your presence) but his shirt and a large kangaroo skin cap, forgetting how he was attired in his anxiety to welcome us. The first salutations over, G——seated himself on another log, still entirely forgetting his trowsers, until I contrived, by a look, to remind him of them, when he *politely* slipped on a pair in our presence and composedly resumed his seat. After some mutual inquiries, he apologized for having everything in such a rough way, and desired his man to let us have dinner. I looked round, but could not espy a table, but in a moment the only door of the dwelling was unshipped from its hinges, and laid on two blocks of wood. Dennis, the cook, now put three clasp knives *on the door*, and exclaimed, in a tone of some bitterness, 'Sorrow take the black fellers, they've brought us neither fish nor wild ducks to-day, and we've nothing at all but a bullock's head and some damper.'* 'Can't help it, Dennis, fetch it in,' said G——. In a few minutes Dennis returned, and to our inexpressible astonishment placed on the table, all reeking from the cauldron, an immense bullock's head, with the horns, hair, and ears on."

Mount St. Bernard.—Mrs. Starke in the last edition of her Traveller's Guide informs us that, notwithstanding all that has been lately

* A wheaten cake baked in the ashes.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

written on the extinction of the St. Bernard dogs, they are more numerous at present than ever, and are still as frequently employed, as at any former period, in carrying baskets fastened to their necks, which contain provisions and cordials calculated to restore those who are nearly frozen to death. Every traveller, she adds, is courteously received at the Hospice, by the Augustine monks, who inhabit it, and the sick are provided with good medical and surgical assistance, and that too without the least preference in favour of rank, country, or even religion.

Strange Custom.—King John gave to one Solomon Attlefield several lands at Kipperton and Allerton, Kent, to be held on the tenure, that the said Solomon, or his heirs, should attend the king when he crossed the sea, and *hold up the head of his sovereign if he became sea-sick.*

Peculiarities of the Flea.—A flea is the only insect whose tread produces an audible sound. Dr Kirby knew a lady who described the march of a flea over her night-cap, to be like the clack that would be produced if the creature walked in pattens.

Riches and Poverty.—The calculation of riches and poverty is truly fantastical: that the man who wants a million should be a prince, and he who wants a groat a beggar; that he who breaks for 100,000*l.*, and injures thousands, should be respected and pitied; whilst he who fails only for a few hundreds, and injures but a few, should be despised and condemned.

The Island Rock.—It appears by a Parliamentary Paper that the annual expenses of the Island of St. Helena to the E. I. Company, amount to the sum of £83,000!!!

Calumny.—The upright, if he suffer calumny to move him, fears the tongue of man more than the eye of God.

Lord Cornwallis and Tippoo Saib's Children.—Lord Cornwallis, surrounded by his staff, and attended by the principal officers of his army, received the princes (who were delivered into his hands as hostages for their father) at the door of his tent, and having embraced, led them, one in either hand, to seats which had been prepared for them, placing himself between them. When he had done so, Gullam Ally, the chief vakeel, addressed his Lordship and said: "These children were this morning the sons of the sultan, my master; their situation is now changed, and they must look up to your Lordship as their father." Lord Cornwallis, who had received the princes as though they had been his own children, assured the vakeel, as well as the princes themselves, that every attention should be paid them, and every care taken of their persons. Their little faces brightened up; the scene became highly interesting, and not only their own attendants, but all the spectators were delighted to see that their confidence was established, and that they would be soon reconciled to their new friends. The grace and elegance of both the boys, and the propriety of their manners, had a striking effect upon the English, particularly those of the younger one. After some conversation, Lord Cornwallis presented each of them with a gold watch, which pleased them greatly. Betel nut and otto of roses being served according to custom, they departed, and the next day Lord Cornwallis went in state to visit them at the tents which had been pitched for their reception, when they presented his Lordship with two Persian swords. Lord Cornwallis, in return, gave the elder a fowling piece, and the younger a pair of pistols.—*From the Life of Sir David Baird.*

Steam Omnibus.—On Monday afternoon a steam omnibus, built under the direction of Mr. Walter Hancock, an engineer, at Stratford, Essex, and for which he has obtained a patent, made her first trip to Paddington and the city, and was found to answer the fullest expectation of the patentee, as well as the company for which she is intended. The vehicle, which is exceedingly handsome, is about the same length as one of the ordinary omnibuses when the horses are attached, and is capable of accommodating 14 passengers. The guide, who has its management, sits in the front, and immediately behind him the passengers enter the body of the vehicle, which is of the same construction as omnibuses. The boiler and furnaces are in the rear, and between them and the body, or that portion in which the passengers are seated, are the engines. The great improvement in Mr. Hancock's plan appears to be, that the engines act on a crank and not on the axle, and the wheels are propelled by iron chains, passing from one to the other; besides this, the boiler is what is called a chamber boiler, so that it is impossible that any serious accident could occur from its bursting. On setting out, in consequence of the crowded state of the road, it moved on at the rate of seven or eight miles an hour; but on higher pressure of steam being put on, the omnibus in a very few minutes reached the Angel, at Islington, and advanced at a rapid rate to Paddington, when, with a fresh supply of water and fuel, it returned to the Belvidere, Pentonville, where it stopped for a few minutes, and proceeded into the city, and ultimately returned to Charles-street, from whence it started. Some doubts were entertained as to whether the carriage could with fair speed ascend Pentonville Hill, which is exceedingly long and steep, but these were completely removed by the trial made on Monday; as a proof of it, the driver of an omnibus, who had an excellent and spirited pair of horses, endeavoured to take the lead coming up the hill; Mr. Hancock, perceiving his subject, put on an additional force of steam, and in a minute he was nearly 100 yards in advance of his adversary. The complete controul which the guide exercises over the vehicle must remove all prejudices as to the practicability of their being used in crowded streets or thoroughfares, for, while he can proceed at the rate of from 1 to 20 miles an hour, he can in an instant stop, and more easily avoid accidents than the driver of an omnibus with horses could possibly do. Several eminent engineers attended to witness the performance of the carriage, who pronounced the efforts and invention of the patentee as completely successful. The vehicle is intended to ply daily from the Bank to Paddington; and others of a similar construction are in the course of preparation for the company. The steam omnibus makes scarcely more noise when at work than the ordinary stage coaches, and the fuel used being coke, neither smoke nor steam is perceptible.—*London Paper of May.*

PROPHETIC VIEWS

Of Mr. Alison, Author of the History of the French Revolution. 2 *vols.* 8*vo.* 1833.

NOTHING can be more evident than that the changes arising from the extension of knowledge cannot be arrested. Prosecutions are no answer to arguments; chains will not now fetter the human soul. The march of democracy cannot be prevented by the wisdom of man; but it is speedily stopt by the laws of Nature. The people must learn from their own suffering, if they will not from the experience of others, that the gift of *unbounded political power* is fatal to those that receive it; that despotism may flow from the *workshop* of the *artisan*, as well as the palace of the sovereign; and that those who, yielding to the wiles of the tempter, will eat of the forbidden fruit, must be driven from the joys of Paradise, to wander in the suffering of a guilty world.

One only ray of hope breaks in amidst the melancholy anticipations to freedom, and the civilized world, from the dreadful sea of democracy which has broken into the states of Europe, and by which France was the first to be overwhelmed.

Genius, long a stranger to the cause of order, will resume its place by its side; she will give to a suffering, what she refused to a ruling cause.

The indignation of virtue, the satire of talent, will be bestowed on the panders to popular gratification; the sycophancy of journals, the baseness of the press, the tyranny of the mob will employ the pencil of the Tacitus, who is to pourtray the decline and fall of European civilization. It is this reaction of genius against violence which steadies the march of human events, and renders the miseries of one age the source of elevation and instruction to those which are to succeed it; and whatever may be our fears as to the temporary ascendency of violence or anarchy from the measures we deplore, we can have none as to the final tendency of such changes to mankind: we can discern the rainbow of peace, though not ourselves destined to reach the ark of salvation; and look forward with confidence to the future improvement of the species, from amidst the storm which is to subvert the monarchies of Europe.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By Vivian.)

Wolves among the Sheep,—Remedial Measures,—Dogs,—Field Sports,—Export Trade,—Moles, &c.

"Missed since Sunday last, a flock of sheep, driven away by the wolves, and of which 15 have been bitten to death. Whoever can give any information respecting the remainder of this flock, in Shambles No. 1, will be rewarded.

(Zuid-Afrikaan, 16th August.)

HERE's another string for the grumblers to harp on, and swell the *Graham's Town* chords of "dear sensibility" in those descants which so often appear touching the rust, locusts, rascally Caffers, vagabondizing Hottentots, and the wickedness of Ordinance No 50.

But the present question is, how are we to rid ourselves of these mutton stealers—the wolves? No doubt remedies will be suggested in this case, as in all other cases, and these will be as "plentiful as blackberries," or tinctures for the tooth-ache. The *Adver-*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tiser will, of course, advise *free trade,* in which all sorts of *wolves* will fully agree. The *Zuid-Afrikaan* will recommend a *Legislative Assembly:* for, "*Dear Countrymen!*" did we but rule ourselves, not a wolf would appear,—no, not even in *sheep's clothing!* The *Graham's Town Journal* will, *natuurlyk,* cry out for either a Town *Corporation,* or a *vagrancy* law. The latter would scour the country of all wolves, whether aboriginal or of modern import, and effectually rid us of those evils which do so beset us! Now, what is OUR plan? We say—call out our vagrant hounds, those lazy troops which infest our neighbourhoods, and let the wolf be attacked in his lair. This town is overrun with *dogs,*—not merely useless,—but encumbrances and pests. Who can sleep at night, or walk out in the evening, without the *bow! wow! wow!* of some ugly brute attached to certain houses. We do think if all the breeds of hounds, pointers, setters, terriers, Danes, poodles, and pugs, were discontinued, we should sustain no loss; but, on the contrary, obtain an advantage. We should save a quantity of food tantamount to the wants of many hundreds of human beings suffering at home. But, then, what are our Cockney sportsmen to do? Nonsense,—Pigs may be made to point and stand to "birds," and when turned into pork and hams, we are well enough aware afford very toothsome food. But what shall we substitute for dear delightful pugs? We say orphans and poor children should excite more attachment than these disgusting bloated things. O! but our stores and warehouses! We answer these may be quite as efficiently guarded by honest men—of whom there are thousands to be obtained who are out of employ, as by fat mastiffs, few of which are proof against poison enshrined in pieces of boiled liver,—and not one of which is yet capable of giving evidence against burglars before worthy Justice Borcherds. And, moreover, the South African Dog is the veriest gascon in the world. Do but stoop your body and pretend to hurl a specimen of geology at him, when the creature whimpers, howls, turns *trembling coward and forsakes his master.* Here we are led to observe, that our own plan of exterminating the wolves would seem of non-effect. On second thoughts, it does so appear; for we recollect witnessing in the colony a single wolf let loose from a trap, which completely kept at bay upwards of forty of the fiercest-looking of the canine species we ever remember to have seen.

What, then, is to be done with the enemy at the gate? We say, call out without delay the fox-hunting Cape and Indian *Squirearchy.* Let them enjoy their well-trained pack, and become independent of the town nondescripts. And then is it possible to conceive a more noble recreation for a *gentleman,* than riding full speed after a number of hounds, all gloriously giving tongue as they snuff up a delicious Cape scent? What a sublime exercise of the *mental* powers it involves! How it prepares for the duties of the *civil service,* stimulates true mercantile notions to the *counting-house,* quickens the *lawyer's* appetite for *game,* and re-gilds the rind of the Indian visitor's countenance.

Moreover, how splendid is the physical effort of being carried over hedges and ditches, at a racing pace, Tally, O! across a most beautiful *mole-hill* country, and *softest swamps,* with a back and fore-ground scenery, comprising every thing that can delight the most fastidious eye. No wonder that man and horse so frequently *prostrate* themselves like Persian worshippers! And what a laudable ambition to buy horses from Stone, Dixon, or *Baker Moore,* that will not only "live with the hounds," but get in at the death! Nobody but a thorough hunter can imagine the manly joy of beholding the *cherished and protected* game of a country "run into" and torn limb from limb by fifteen couple of magnanimous hounds! And the glory of all is, to be accosted the next day by the sweet smiles of some one of the *fair and softer sex*—"Well, Mr. Jenkinson, I hope you have had good *sport* to-day."*

In a word, then, it would seem that the fox-hunters are the proper constituted personages to destroy the wolves. And that there is no possible *danger* in such extermination, we learn from a late number of the *Advertiser.* A writer on *Field Sports* says, that "persons can enter a wolf's den, unmolested by the animal." How vastly civilized and polite! Sheep-stealers, indeed, how very unlikely! Again, a fellow, whose "strength was inconceivable," (as declared by the same writer,) suffered himself to be *tied, and bound, and taken alive,* by *four* of the hunters. Well, after this, we think it extremely judicious in our government of 1824—which, limiting the clerks of office to one pen and a sheet of paper per diem, directing the total discontinuance of pink tape, removing the signals connected with the Lion's Rump on the one hand, and Simon's Town on the other,—to extend its economical arrangements by withdrawing all rewards or premiums for *wolf-taking.* What government, in its senses, would offer a *premium* for what, in the *Advertiser,* is so very appropriately designated "FIELD SPORTS."

But we must endeavour to carve out a *moral* to these remarks. Ours is a trading colony—*horns and hides* should be our motto; let us examine, therefore, whether it is not possible to suggest a more enlarged attention to our export trade. It is quite astonishing to discover the innumerable uses to which the skins of animals are rendered subservient in Great Britain. We pity the poor cats! In the Metropolis they are the chief holocausts to the god Plato. The inhumanity to which the spectacles of cat-killing necessarily imply, is easily reconciled to a commercial people. The sugar colonies *must* be cultivated; *slaves* are the only creatures fitted to dig about the sugar-cane. Hurrah for the cart-whip! But the cats:—it is declared in the report from the committee on the Bill to consolidate and amend several laws relating to the treatment of animals, &c. that let a man steal a dozen cats per day, and he can live like a gentleman. Cat-skins, it seems, constitute very capital mock furs. They are worth eight shillings per dozen. Dogs, according to the same report, are skinned on the same scale nearly as cats, but they are not quite so productive. It is curious enough that the enemies to Parliamentary inquiry on this head, are the fox-hunters;—the Berkeleys, Ansons, Lowthers, and Darnleys. The savages of America scalp their victims; the English fox-hunters are content with *tails.* Their motto is—the more foxes the more fun

* Madam, we suspect, thinks very little about the farmer's or cottar's corn-fields, nor consider that in the holes made by the horses' feet, which stand full of water—*every blade of corn in those holes will die.* And she may, perhaps, forget that *overworked* horses often drop down dead, that they often commit suicide—refuse to eat, and die! Mr. Andral, in his "Lectures on Mental Alienation," states that suicide is not uncommon among the inferior animals. "Asses," he observes, "when *overworked,* have been known to refuse all food, and thus died of inanition." Let our Cape *Sunday outers,* who *race* and prance on the roads leading to Rondebosch, Wynberg, and Simon's Town, think over their guilty conduct.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

—foxes and farmers are the living jewels of the land! But the joke is, these men cry out lustily against the canting signs of the times, and denounce the interference of Mercy as a methodistical crusade against Old English Sports!

We confess this is a somewhat rambling article, and therefore proceed we to notice the Cape Mole. We have often admired the beautiful *mole-skin* adornings of an English lady's pelisse: we have seen it form the ermine of the judge's robe: become an interesting tippet appendage to a lady's neck—enshroud her hands as a muff—or cover them as gloves; we have seen it manufactured into remarkably pretty caps for men, women, and children, and form purses for gold—in short, into innumerable varieties of usefulness. Our opinion is finally, that a greater degree of attention to the skins of animals *in general* in this colony, would greatly multiply our colonial exports.—*This is our case.*

SIGNOR MASONI.

AMONG the novelties of the last month, may be recorded the arrival of a violin player, (Masoni) from Calcutta, on his way to England. The *Signor* managed to bring together two brilliant audiences on two several evenings at the Commercial Exchange. He, moreover contrived, it is said, to purse some *one hundred and fifty pounds* of our currency, with *candle-ends* in the bargain. Now, all this is highly creditable to the state of our funds, and only leaves us the greater to wonder that so many *monthly smashes* should provoke the least *discordant jar*.

But after all, the bravo's "wi' ruffs and dads"* of the audience in favour of the violin player, did a large portion of it really know why they were tickled or pleased? There was no appeal to memory, the scrapings of the *Signor* was not allied to language, and when music is not connected with both, it becomes a mere sensual or vague affair, leaving little permanent impression upon the mind. When, indeed, music awakens national, military, local, or tender recollections of the distant or the dead, the loved or the lost, it then performs the highest office of poetry,—it *is* poetry, as Echo in the golden mythology of Greece remained a nymph, even after she had passed away into a sound. The first music must have been vocal,—

> 'Blest pair of Syrens, voice and verse
> Wed your divine sounds,' &c.

So sang our immortal Milton.

But the *Signor* is a disciple of *Paganini*—only think of that! Poor Paganini!—he that drew together the thousands of London, and disburthened the public of its cash, is now neglected, and cannot find a London audience of sufficient strength to pay for lighting his music room! *Masoni* is doubtless a clever musician; but really we beg pardon to *some* of our readers,—but, despite of the *staccato* and the *pizzicato*, and all the *varorums* of the Signor—

> "I wadna gie our ain Strathpeys,
> For half a hundred score o' 'em."

We rather think *John Bull* at home is of the same opinion. The days were, when a *prima donna seria* would demand for her season two thousand five hundred pounds sterling, a free benefit, travelling expenses paid, and a carriage to be kept for her. When a *primo serio e buffo*, and his wife as *prima donna buffa e seria*, could receive 2,500 guineas for the season, a dressing room, a table with 14 covers, a coach, and an advance of £250. So much for the cooing, caterwauling trills of the opera figurantes!

* 'Dumfries, and a' its bonny Lasses,
"And gallant lads,"
Were drunk in magnum-bonum glasses,
Wi' ruffs and dads.'
(The Siller-Gun.)

THE CHILDREN'S TRIBUTE TO LADY FRANCES COLE.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR —Among the numerous Addresses presented to our late respected Governor on his departure, (when shall we see his like again?) several well-merited compliments were offered to Lady Frances Cole; but none, to my mind, would for a moment bear comparison with the tribute paid to her memory by the children of the Sunday School, which had so long been fostered by her assiduous care and personal instructions. At the first meeting of the School after her Ladyship's departure, *the children could not sing for sobbing.*

Yes, honour'd Lady! here we see
Thy best and truest eulogy!
Young children, humble children, raise
A prouder tribute to thy name
Than all, tho' couch'd in polish'd phrase,
That ever from their elders came.

No word is utter'd;—words were weak
To tell the feelings here that speak:
For ne'er did smoothest tongue on earth
Its fervent gratitude avow,
Or mark its sense of genuine worth
With plainer eloquence than now.

Fair words are given and forgot;
Praise is too oft but ill-bestow'd;
Too oft th' unmeaning tribute's bought,
Or gain'd but from a servile crowd:

Attentions love to throng the gate
Where wealth reclines in purple state;
Power and rank can ever claim
The semblance of an honour'd name;
Smiles the delusive flatterer wears;—
But what's the price can purchase tears?

Yes, Lady! disappointed pride
And selfish vanity may chide,
That with a mother's cares intent,
Thy anxious thoughts were rather bent
To train thy children's early youth,
And deck their minds with every gem
Of knowledge, wisdom, justice, truth,
And virtue,—than to pamper *them.*

The honours round thy memory thrown
Are won by sterling worth alone,
And well may leave in scorn behind
The rancour of an evil mind.
The sun, tho' envious tempests lower,
Shines on with undiminish'd power;
'Tis but this low and earthly scene,
Is darken'd by the clouds between.

Thy tribute is the faltering tongue,
The sobs that check the wonted song,
The prayers and blessings of the poor.
Shame on the harden'd heart that sneers
At th' orphan's and the widow's tears
For her they must behold no more!

J.

A NOTE.

CONGRATULATORY FROM THE EDITOR.

As we have *sometimes* stood alone as it regards the *Press* in this colony, in the great question of the *Slavery and Commerce of the Human Species*, we may fairly congratulate our readers as well as ourselves, on the termination of one of the foulest systems that ever disgraced human nature. The evil in question began in avarice. It was nursed also by worldly interest. It was interwoven into the system of the commerce and revenue of the British nation. Hence the merchant—the planter—the mortgagee—the manufacturer—the politician—the legislator—the cabinet minister—lifted up their voices against the annihilation of it. It even set the pulpit at defiance, or rather gagged the mouths of the ministers of religion.* It was like the famous hydra which was said to have had a hundred heads, every one of which it was necessary to cut off before it could be subdued. But the blessing of Omnipotence on the exertions of the People of England has laid the monster low in the dust. And in America too,—polluted at present by Slavery, the evil must cease—nor *here* nor *there* shall we hear any more of the debasing and atrocious punishment of the *lash*. We bid adieu to this subject in the applicable words of the excellent Clarkson at the close of his admirable volumes on the History of the Abolition of the Slave Trade.—"Reader! Thou art now acquainted with the history of this contest! Rejoice in the manner of its termination. And if thou feelest grateful for the event, retire within thy closet, and pour out thy thanksgivings to the Almighty for this his unspeakable act of mercy to thy oppressed fellow-creatures."

* There were happy exceptions—hence a *Cunningham* of England's Established Church; a *Thomson* of Scotland; and a *Styles* among the Dissenters, did not fail to lift up their protesting voices against the system—adopting the Prophet's determination—"to cry aloud and spare not."

CORRESPONDENCE.

A. M. *On the New Pier—Suspension Act*—is worthier the Newspaper Press than our columns.

We have received a *Prospectus* for a Third Newspaper, "to be published on each alternate Tuesday." This document is clearly *advertising* property, and should be manifested accordingly. We have no objection, at the same time, to record it as our belief, founded on the current opinions of a great many respectable individuals in Town and Country, that the Colony is at length ripe for a Weekly English Journal, which shall not exceed twenty-five or thirty shillings per annum. Many are the communications which we have received on this subject.

A. B. C. is informed, that any general question on *Jurisprudence* would be acceptable. We beg leave to decline inserting in the *Literary Gazette* an individual case relative to a late trial.

On Criminal Debtors has been received, and will be published in our next.

On Lying, will also find a similar reception.

Printed and published by W. BRIDEKIRK,
Gazette Office, No 2, Church-street.

CHURCH-YARDS AT THE CAPE.

Proposal for a Joint Stock Company's Cemetry.

It was an ingenious thought of our worthy Colonial Secretary to take our Cape John Bull on his vulnerable side, and to place before his eyes the naked proofs of a clear profit arising from a *Joint Stock Company Church.* The prospect of saving a shilling, is too much in the nature of an angel visit to be treated with indifference by this growling and long-oppressed personage. Hence the avidity to take a share in George's Church. Let us charitably hope, however, that this thirst for lucre will, after all, turn some to spiritual account; and that fire from heaven may fall on the altar and refine all that is unhallowed, drossy, and secular! But, connected with the Church, there is an appendage belonging to us mortals as our *last home.* Yes: as the living have an interest in coming near a power with which they must one day be familiar, it is well to be made acquainted in life with the nature or situation of that *prison-house* in which the *Grim Tyrant* means to dispose of our remnant of humanity.

It will readily enough be seen by our readers that our subject is the Church-yard. The Church-yards of the Cape are sad, cold, dull, dreary, melancholy places of worn-out human nature. The *Reformed* one is a pathless, dangerous *Golgotha* of pit-falls and damps in winter, and of body-searching reptiles in summer. And, as for the one *next door,* it is literally a place of uncovered skulls. And all the christian places of sepultre at the Cape, convey no sentiment to the living spectator but that of disgust. Save me! save me, ye guardian spirits of the dead! from being interred in any of our civic cemetries, cabined in with high windowless *white-washed* walls, where the weeds are rank, the ground tree and flowerless, where the earth is unctuous with the fermentation of accumulated remains; where the tombstones are dark, desolate, and unperused, and human bones are left scattered upon the surface, as if an unhallowed desert, while the desecrated enclosure perpetually rings with the yell of the wagon-driver, and all the profane hub-bub of commercial life. We conceive not of the peace or the sleep of death, amidst this hurly-burly of the mart.

But to the question. It was, we think, a very remarkable oversight in our Church-building promoters in Cape Town, not to have established the Church-yard upon the same *Joint Stock Principles* as the Place for Worship. In such a case, there would have been little necessity for those *charitable subscriptions* which do so frequently beset us on all sides, there had been no occasion for the recent charitable donations to defray Church-yard enclosures. Now, with all due deference to the clergy, the undertakers, sextons, and that body of *regulars* who form the rear-guard in the march of death's doings to the present places of deposit, we beg leave to propose the breaking-up of all the existing and intended enclosures for the dead, and the formation of a grand

Joint Stock Company's Cemetry.

Such an institution seems highly indispensable for Cape Town. Not alone is it, that our population is making rapid growth, but the situation of our present Church-yards demands an urgent attention. These occupy the most valuable portions of those lots of earth which should serve for the living, rather than the dead. As the building of the New Pier which was commenced a short time since is only suspended for the present, to make room for a more extended plan of public usefulness—so much the more is the value of the lands increased contiguous to Green-point and the Chavonne Battery. It requires no spirit of prophecy to *foretell* the swarms of shipping in our Bay in 1834, —hence the necessity of being prepared with new buildings and warehouses. The commercial changes at home will so materially advance the commercial interests of this colony, and remove the mart of commerce N. of Cape Town, that precious will every rood of land be in that quarter. But what do we behold at present? These spots either occupied as burial-places, and enclosures taking place for new ones in the very teeth of the grand entrance from the new Pier. We earnestly trust that His Excellency the Governor will be pleased to interpose his authority in this important case, and that the public will discover its duty in establishing a Joint Stock Company's Cemetry.

There is no novelty in such an association. Liverpool has stood foremost in this field of enterprise. Increasing both in population and commerce, the inhabitants of that justly-celebrated town long felt the inconveniences attendant on the interment of the dead. The burying-places were found too contracted, and too near the living population. It was even frequently difficult to discover room for a grave, without disturbing bodies that had been previously interred, and many instances occurred when they were removed while only in a state of partial decomposition. To remedy the evil, a Cemetry, comprising 44,000 square yards, was formed in a convenient situation, and surrounded by a handsome iron railing. The ground is beautifully intersected by hill and dale. There are catacombs of various descrip-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tions. The roads and walks are tastefully disposed — there are sloping banks, lawns, caves, seats, shrubberies, forest trees, and even a church, or oratory, of pure Grecian Doric architecture.* Thus has Liverpool given an example to the British nation, both in theory and practice, of forming a public Cemetry, which has been followed in London, by the establishment of a grand Metropolitan Burying-place.

But let us just take a peep at France, and then, perhaps, we shall be less inclined to admit the truth of a commonly received opinion, that the French are people of no reflection, and are solely devoted to frivolity and amusement. Reader! did you ever happen to pay a visit to the Cemetry of *Père la Chaise*, near Paris? If so, how many and choice must be your recollections! It must be admitted by all acquainted with the Cemetry of *Père la Chaise*, that in the precincts of this beautiful and affecting spot, there is not only a more striking assemblage of tasteful decorations and appropriate monumental sculpture, but more pervading evidences of deep, lingering, heart-rending affection for the dead, than can be paralleled in Britain, or in any other country in Europe.† The tombs elsewhere seem to be monuments of oblivion, not remembrance; they designate spots to be avoided, not visited. Those in the Parisian Cemetry seem built up with the *heart* as well as with the hands: they are hallowed by the frequent presence of sorrowing survivors, who, by various devices of ingenious and elegant offerings, still testify their grief and their respect for the departed; and keep up, by these pious visitings, a sort of holy communion between the living and the dead. Never shall we forget the solemn yet sweet and soothing emotions that we experienced at the first visit to *Père la Chaise*. There, on the graves, we beheld crowns, crosses, and wreaths of orange-blossoms, æreanthemum, amaranth, and other ever-lasting flowers, which the mourning relatives had thrown down in honour of the dead. In this sacred place, you walk through a variegated and wide-spreading garden, consisting of hill and dale, redolent with flowers, and thickly planted with luxuriant shrubs and trees, from the midst of which, monumental stones, columns, obelisks, pyramids, temples, and osiered hillocks are scattered in profusion. One thing appeared quite new to us; the lapidary and other inscriptions were of the most perfect order, both in sentiment and *grammar*. The death's head and marrow-bones were out of the question; not a flower was gathered—not a monument defaced—not a stone scribbled over:—*Pourquoi?* Because the lowest Frenchman has been familiarized with the works of art, until he has learnt to take a pride in them, and because the English rabble had not visited *Père la Chaise* with its mutilating propensities.

But the practical inquiry of the reader is, by this time, naturally directed to the spot for *our* Joint Stock Cemetry at the Cape. Well, then, we propose all that elevated ground at the foot of the mountain, N. W. of Chiappini and Rose-streets, to the left of St. Andrew's Church, extending even to the top of Waal-street, as a site well adapted to the objects of christian burial. The ruggednesses, mounds, excavations, hollows and heights, are all objects of interest, and considerably add to the importance of the situation. Here the scenery is sublime, and by planting, preparing walks, and directing an enclosure, we might form a Cemetry which would become at once a source of profit to the shareholders, as well as of pleasing melancholy to the visitor, and of no small interest to families and individuals.

In proposing that all the present and *intended* Church-yards should be broken up, we are fully aware, that we have to contend against those who apprehend, to certain grounds, a *consecrating* virtue from human authority. Now, we have no sort of wish to quarrel with the pious prejudices of the Church of England on this head, and especially now when the "Philistines be upon her;" but we really do think, we might, under present circumstances at the Cape of Good Hope, yield the question of *consecration* to the vast majority of those who do not pin their faith to this rite, or at least, we might commence our new Cemetry, and postpone its consecration until the arrival of the two new Bishops who may touch here on their way to British India. But perhaps the day may come, when the Church shall altogether rid itself of this apparent shackle—its jurisdiction over civil matters in the system of consecration of burial-grounds and surplice fees. And common reason would seem to be on our side, for who has consecrated the sea into which the British sailor, in the cloud of battle-smoke, descends—or who goes down, amidst the regrets of his comrades, to depths to which no plummet but that of God's omnipresence ever reached? Who hath made holy those awful shores of our eastern Africa, in those seasons when "death rides the storm, and humanity drops a fruitless tear for the toiling mariner" in his ill-fated vessel,—but He who holds the waters in the hollow of His hand, and even in the watery grave provides

"A calmer, sweeter spot than all the rest." *

Who has *consecrated* the battle-field, which opens its pits for its thousands and ten thousands; or the desert, where the weary traveller lies down to his quiet rest? Who has made holy the sleeping-place of the solitary missionary, and of our widely-scattered settlers in all lands? But He, whose hands have hallowed earth from end to end, and from surface to centre, for His pure and almighty fingers have moulded it! Who shall seek for a more hallowed bed than the bosom of that earth into which Christ himself descended, and in which the bodies of thousands of glorious patriots, and prophets, and martyrs, who were laid in gardens, and beneath their paternal trees, amidst muirs and mountains,—and of heroes whose blood and sighs have flowed forth for their fellow men, have been left to peace, and the blessings of grateful generations, with no rites, no sounds but the silent falling of tears, and the aspirations of speechless but immortal thanks? From side to side, from end to end, the whole world is sanctified by agencies wholly independent of that single rite of clerical authority. God's sun-shine flows over it; His providence surrounds it;

* There are also a Minister's and a Porter's house attached to the grounds. Mr. Huskisson lies buried in the Liverpool Cemetry.

† This Cemetry, however, in one sense, is vastly inferior to that of Liverpool—it contains no catacombs.

* The ocean, the *unconsecrated* ocean, is a vast family-vault. What sepulchre so sublime as the mighty ocean, with its unimagined wonders and sumless treasures, its ever-rolling billows above, and its boundless floors below, tesselated with spars, and shells, and chrystal! The ocean is probably as deep in some places as the mountains are high above. Fish are not supposed to be found on the bottom everywhere, any more than birds in the higher regions of the atmosphere. Beyond a certain depth darkness reigns, and life is considered extinct. Many ships which founder at sea, do not sink to the bottom, but so far towards it as specific gravity will allow, and no farther. We mention these things to awaken the attention of our young readers, and submit the following question to their consideration.—How deep will a cast-iron box sink in the ocean, twenty tons in weight, and enclosing a cubic yard of air?

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

it is rocked in his arms like the child of His eternal love; His faithful creatures live, and toil, and pray in it; and in the name of heaven, who shall make it, who can need it holier for his last resting-place?

FAREWELL TO SOUTHERN AFRICA.

Table Bay, August, 1833.

1.

FAREWELL to the land where the wild heath and vine,
Their blossoms and tendrils uniting entwine;
Where the orange and citron abound in the dale,
And waving acacias breathe sweet on the gale.

2.

How genial thy clime! thy breezes breathe health,
That blessing more precious than all India's wealth,
Inviting the stranger to haste to thy shore,
Where fondly he hopes his lost strength to restore.

3.

And glorious thy heavens when nightly do shine,
In matchless effulgence, each planet and sign;
And the moon's mellow light uncloudedly beaming,
Round thy mountain king's brow brightly is streaming.

4.

Here Flora has fixed of her empire the seat,
No chill blasts of winter compel her retreat;
In endless profusion her treasures are spread
O'er forest and moorland, o'er mountain and mead.

5.

Pomona, too, scatters with bountiful hand
Her choicest productions abroad o'er the land;
The seasons acknowledge her gentle controul,
As marked by her fruits in succession they roll.

6.

From the deep ocean's bound thy hoar mountains rise,
Majestic elancing their peaks to the skies;
While the dark gathering clouds roll awful above,
Like thine, distant Scotia, the land of my love.

7.

Still green be thy vallies, and fertile thy plains,
And numerous the flocks and herds of thy swains;
Remote each disaster the true heart that grieves,
For leal is the welcome the stranger receives.

8.

Farewell to thee, Afric',—land, sky, and ocean,
Hush'd in my soul be each swelling emotion;
To me, no *relation* e'er hallow'd the scene,
Yet still will I bless thee for that which hath been.

S.

THE HUMAN VOICE.

We may, perhaps, be excused in submitting a few reflections to the notice of our readers on the *music of speech.* To those gentlemen of the Cape Forum or Institute, or to lecturers, or to such as are sharpening their tasks for *Legislative* debate in the Cape Parliament, *(that is to be,)* some attention to the present question would appear requisite.

It is a curious fact in the history of sounds, that the loudest noises perish almost on the spot where they are produced, whereas musical tones will be heard at a great distance. Thus, if we approach within a mile of a town or village in which a fair is held, as we have often done, we may hear very faintly the clamour of the multitude, but most distinctly the organs, and other musical instruments which are played for their amusement. If a Cremona violin—a real Amati—be played by the side of a modern fiddle, the latter will sound much the louder of the two: but the sweet brilliant tone of the Amati will be heard at a distance to which the other cannot reach. The amateurs always went into the gallery to hear the cremona of Barthelemon, when he led at the Opera. Dr. Young, on the authority of Derhan, states that at Gibraltar the human voice was heard at the distance of ten miles. It is a well known fact, that the human voice may be heard to a greater distance than that of any other animal. Thus, when the settler in the woods, or in an open plain, wishes to call her husband, who is working at a distance, she does not shout, but pitches her voice at a musical key, which she knows from habit, and by that means it reaches his ear. The loudest roar of the lion could not penetrate so far. This property of musical sound in the human voice, is strikingly shown in the cathedrals of Europe. Here the mass is entirely performed in musical sounds, and becomes audible to every devotee, however placed in the remotest part of the church; whereas, if the same service had been read, the sound would not have travelled beyond the precincts of the choir. Those orators who are heard in large assemblies most distinctly, and at the greatest distance, are those who, by modulating the voice, render it most musical. Loud speakers are seldom heard to advantage. Burke's voice is said to have been a sort of lofty cry, which tended as much as the formality of his discourses in the House of Commons to send the members to their dinner. Chatham's lowest whisper was distinctly heard; "his middle tones were sweet, rich, and beautifully varied," says a writer, describing that great orator; "when he elevated his voice to its highest pitch, the House was completely filled with the volume of sound; the effect was awful, except when he wished to cheer and animate; and then he had spirit-stirring notes, which were perfectly irresistible. The terrible, however, was his peculiar power. Then the whole House sunk before him; still he was dignified, and wonderful as was his eloquence, it was attended with this important effect, that it impressed every hearer with a conviction that there was something in him finer even than his words; that the man was infinitely greater than the orator."

CROAKOLOGY;

OR THE CROW LANGUAGE.

We have no intention at present to follow the *Advertiser* in his judicious remarks lately published on the importance of the English Language to the Colonists. No:—we have to do with a less graver subject. We have seen a prospectus announcing a Work in the press, in behalf of a very injured portion of the creation—the *Crows.* The inventions of the age it would seem—*steam,* &c. for instance, has interfered with their *vested rights,* and their beloved language; and, among the crow-circles, remedial measures are reported as about to take place for the establishment of a *Tot Nut van het Algemeen.* But to the prospectus in question: the plan of the Work is to include:

1. An Essay, illustrated by a Series of elaborate Tables, showing the Annual Mortality of Horses, under the present state of the Carrying Trade.
2. The number of Horses which will be dismissed that service, that is, be annihilated, under the Steam Carriage System.
3. The deficiency which will thereby be caused in the supply of Horse-flesh and Crow-meat, at the end of four centuries, calculated from the present year.
4. The result of an extensive series of comical experiments, incontrovertibly proving that Crows' gizzards cannot digest worn-out Steam-Engine Boilers.
5. A solemn monition, warning the entire race to abstain from nest-building;—and
6. Arguments in support of a Proposal that VALENTINE'S DAY shall henceforward be kept every Bissextile, or LEAP-YEAR only.

The Author then proceeds to enter into a philologico-ornithologico-etymologico-lexicographico-orthoepico-grammatical essay to investigate the elementary principles of the *Crow language.*

He proceeds by observing that

The Crow acquires more experience than most birds, because he lives long and travels much; which, as every one knows, is a great source of improvement. He does not suffer a man armed with a gun to approach him within its reach; but a stick does not excite similar alarm in him, and he gaily follows the ploughman very closely, to pick up the worms and grubs which the coulter brings to light: this is well known to country labourers.

Some have attributed this discriminating conduct to the glare of the gun or smell of the gunpowder; be it so: but nature produces neither guns nor gunpowder: in many parts of the globe which crows frequent, their use is utterly unknown; besides, brown barrels are in fashion. It cannot be then by any innate instinct that they thus fly from gunpowder and fire-arms.

What then must we infer from their conduct? That the Crow is a very sensible creature; that he knows by personal experience, by accurate observation, or by information derived from his elders, that these machines produce fire, smoke,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and noise; and that in consequence of such fire, smoke, and noise, they wound and destroy. He knows besides that the power of man to kill lies in his fowling-piece, which he has discovered has only a certain range, and this he wisely calculates as greater than it really is. A valuable hint to the venturesome, if they would but mind it.

The Crow is a bird of a very communicative turn of mind; a couple hardly ever meet without entering into conversation; this interchange of ideas must add vastly to their stores of information: even when two pass each other in flying, they usually exchange a few passing compliments, cautions, or observations. From their social disposition and from the knowledge acquired by Crows in their travels, is it not very rational to infer that those among them who have been exposed to gun-shot even beyond the reach of it, or who have seen its destructive effects on other birds not yet so far advanced in the improvement of their natural faculties, for instance, on simple-hearted pheasants, or on innocent patridges, should fear it excessively, should have studiously applied themselves to distinguish guns and their effects, and should warn their companions of the danger attending them?

From the long experience and intense study which the writer of this Dissertation has devoted to this subject, and his familiar intercourse with many well-informed individuals of that nation, the writer has distinguished and appropriated innumerable modulations in their speech, although to the inattentive hearer it may appear almost monotonous. A few of these articulate sounds, as a slight specimen, are here presented to the reader, expressed as closely to the original as the imperfect state of the English Alphabet will permit.

Khrau, khra, khre, khri, khro, khrou,
Khraus, khras, khres, khris, khros, khrous,
Khraue, khraë, khreë, khrië, khroë, khrouë,
Khraukh, khrakh, khrekh, khrikh, khrokh, khroukh,
Khrauö, khraö, khreö, khriö, khroo, khrouô.*

Whether these sounds are entire words, like the Chinese, or Fee-fa-fum language; or only syllables, like the English tongue; or single letters, like the deaf and dumb alphabet, had not been determined by the learned of the human race until the present time, although, beyond contradiction, a definite knowledge as to the truth of the above suppositions, is of far more vital importance to the well-being of mankind at large than the generality of those subjects which engage the attention of Most Learned Societies, both in London and at the Cape of Good Hope.

If the endless varieties of intonation with which they use the accents and diacritical points were enumerated and specified, the above Table of euphonious cacophony might be prodigiously enlarged. Their language, like the German, is very guttural, and no one but a native-born Newcastle man can intelligibly articulate the burr with which every word is embroidered.

Specimen of the Crow Language.

The writer affirms, without fear of contradiction, there is more intrinsic sound sense in the following dialogue, than in nine-tenths of the nonsense-verses which are written, published, set to music, and praised, under the specious name of Amatory Poetry.

* The writer could enlarge this vocabulary to a great extent with very little trouble; but forbears, holding in abhorrence and contempt the very reprehensible conduct of those quartoists whose only aim seems to be to make the length of their articles correspond in exact proportion with the inanity of their matter, the absurdity of their opinions, and the triviality of the subjects they dilate on.

SCENE.—*The topmast branch of a lofty tree.*
TIME.—*The 16th of September.*

MR. CROW, Junior.
Dear, pretty, amiable interesting,
Khra, khriö, khroö, khrauë,
Young, Miss Crow, very, shiny, feathers!
khraë, khrauö, khro, khrikh, khrouö, khreë!

MISS CROW.
Young, Master, Crow, very polite!
Khraë, khrouë, khro, khrikh, khrokh!

MR. CROW, Junior.
Fine, Worm, Ground! Worm?
Khri, khrau, khraukh! khrau!
Worm! Worm!—Fine, dead, Horse!
khrau! khrau!—Khri, khre, khros!

MISS CROW.
Fine dead, Horse?—where?
Khri, khre, khros?—khroukh?

MR. CROW, Junior.
Smell! Field, Field, Field, Field, Field,
Khrou! khroe, khroe, khroe khroe, khroe,
Field!—Fine, high, Tree!—Nest?
Khroë!—Khri, khrekh, khras!—Khrië?

MISS CROW.
Fine, high, Tree!
Khri, khrekh, khras!

MR. CROW, Junior.
Build, Nest? Stick, Stick, Stick.
Khrao, khrie? khrous, khrous, khrous.

LITERATURE.

RUSH'S RESIDENCE AT THE COURT OF LONDON.

This Work seems to have created a good deal of interest in London. It forms a very pleasant personal narrative of an apparently worthy man. Mr. Rush, as Envoy Extraordinary for the United States of America, arrived in London 19th Nov. 1817. Many customs which are detailed in the volume of Mr. Rush, may not be uninteresting to the reader.

It being the rule for a new minister, after having been received by the sovereign, to call on the members of the royal family, Mr. Rush was careful to comply with the practice. The call is made by the minister inscribing his name in books kept at their several residences. His next duty was to leave cards at the houses of the cabinet ministers, and of the other members of the diplomatic corps; he also visited the lord high steward, lord chamberlain, the master of the horse, and a few other officers of the household. The cabinet ministers are understood to be allowed an exemption from the general obligation to return a visit; but the politeness of Lord Castlereagh, it seems, induced that nobleman to waive his immunity in this instance, and he returned the compliment which Mr. Rush had paid him of a visit. Amongst the other consequences of his reception at court, the minister was struck in particular with one which consisted of a series of calls from the servants of official persons for "favours." The nature of these solicitations he had already become acquainted with, as we have seen, at Portsmouth. The first set were the "Palace Drums and Fifes;" the next were "The Royal Waits and Music;" and the third, which surprised the American minister most, was that body which called itself the "King's Marrow Bones and Cleavers." Each made him an address, and had their book to show. The tax on the foreign ministers which these claims imply, had its origin in a long-established custom. Ambassadors, when they quit England, usually receive a sum of one thousand pounds; but to ministers plenipotentiary no more than half that sum is given. So that, if upon the first arrival of the ambassador he is troubled with the claims of the menial officers of the goverment of this country, that government deems it only justice to compensate the ambassador for the losses to which he is thus inevitably put. Now, the hardship on Mr. Rush, and his successors in office, has been, and perhaps still is, that the American minister is forbidden to accept the donation; but as the refusal to pay the "Waits" upon such a ground would require a degree of humiliation on the part of the person applied to, the minister has no resource but to give out the black mail.

Mr. Rush particularly alludes to a conversation which he held with the Duke of Sussex as to the choice of the language in which state papers should be written. The prince observed, that with respect to the French, all foreigners readily acquired enough of it for ordinary purposes; but when treaties were to be drawn up, in which the fate of a nation perhaps depended on the employment of one word differing in its import to the amount of perhaps a scarcely perceptible shade from some other, the necessity of having as far as possible all the advantages derivable from a unity of language was strenuously enforced by his royal highness; and he ultimately proposed that the Latin should be the invariable language of all written instruments to which more than one nation was a party. "Each nation," said the duke, "would then stand upon the scholarship of its public men." Mr. Rush, however, differs from the prince in the selection of the particular tongue for the use of statesmen in the manner just mentioned. He thinks that that language should have the preference which is most likely to be predominant throughout Christendom. In pursuing this view, Mr. Rush informs us that the European dominions of Great Britain have a population of twenty-two millions, in addition to which is to be counted the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

population of the United States; making altogether upwards of thirty-four millions of people, with whom the English language is vernacular Besides this fact, the foreign commerce of Britain and the United States conjointly, far exceed the commercial transactions of all Europe put together, and this superiority cannot fail to have its weight in giving importance to the language, since it is the one that is, under these circumstances, the most widely and the most frequently diffused. Adverting to these indisputable facts, Mr. Rush very properly inquires why it is that the French should insist on the perpetual preference of *their* language by all the world; or rather, why should England acquiesce in their claim? *

Mr. Rush makes the following observations on the Newspaper Press:

Some will suppose that the newspapers govern the country. Nothing would be more unfounded. There is a power not only in the Government, but in the country itself, far above them. It lies in the educated classes. True, the daily press is of the educated class. Its conductors hold the pens of scholars, often of statesmen. Hence you see no editorial personalities; which, moreover, the public would not bear. But what goes into the columns of newspapers, no matter from what sources, comes into contact with equals at least in mind among readers, and a thousand to one in number. The bulk of these are unmoved by what newspapers say, if opposite to their own opinions; which, passing quickly from one to another in a society where population is dense, make head against the daily press, after its first efforts are spent upon classes less enlightened. Half the people of England live in towns. This augments moral as physical power; the last, by strengthening rural parts through demand for their products —the first by sharpening intellect through opportunities of collision. The daily press could master opposing mental forces, if scattered; but not when they can combine. Then, the general literature of the country, reacts against newspapers. The permanent press, as distinct from the daily, teems with productions of a commanding character. There is a great class of authors always existent in England, whose sway exceeds that of the newspapers, as the main body the pioneers. Periodical literature is also effective. It is a match at least for the newspapers, when its time arrives. It is more elementary; less hasty. In a word, the daily press in England, with its floating capital in talents, zeal, and money, can do much at an onset. It is an organized corps, full of spirit and always ready; but there is a higher power of mind and influence behind, that can rally and defeat it From the latter source it may also be presumed, that a more deliberate judgment will in the end be formed on difficult questions, than from the first impulses and more premature discussions of the daily journals. The latter move in their orbit by reflecting also, in the end, the higher judgment by which they have been controlled. Such are some of the considerations that strike the stranger, reading their daily newspapers. They make a wonderful part of the social system in England Far more might be said by those having inclination and opportunity to pursue the subject. pp. 201—203.

* Mr. Canning was the first minister of England to insist on the claims of the English language, in the Government Correspondence with France.—(Ed.)

BOUNAPARTE—MADAME JUNOT, &c.

Perhaps the 5th volume of Madame Junot's Memoirs is the most interesting which have yet appeared. A great deal is said of the promise afforded by a child, Prince Louis, the eldest son of Queen Hortense. This child afterwards died of the croup in Holland. The emperor had been much attached to this boy; and frequently devoted hours of his time to narrations calculated to interest his favourite. A beautiful scene, founded on one of these occasions, is related by the Duchess. One day, at St. Cloud, the emperor began to relate the tragic story of the burning of the ship L'Orient. The young prince, who was sitting on the knee of the empress, got down, in the midst of the story, and, placing himself opposite Napoleon, fixed upon him his large blue eyes, which were animated with a strong expression of interest. Napoleon's talent for narration was quite wonderful; and it was not surprising, that, when in the vein, he should have fascinated the young auditor. The story, in this instance, as we have already stated, was that of a naval battle; and the fire of his words, observes the duchess, seemed to bring to the ears of his hearers, the roaring of the waves, the thunder of the cannon, and the groans of the dying "He placed you," she continues, "on the deck of a vessel, the planks of which, stained with blood, and covered with dead bodies, were already crackling under the action of fire, which sent its thousand tongues, of every diversity of colours, bursting through the hatchways, and climbing in serpentine wreaths along the yards and up the masts. This vessel, which, but a few hours before, rode in her pride, commanding the anchorage of Aboukir, and presenting at her forecastle above five hundred human faces, all full of energy and life, was now a desert; for, whoever of her crew had not been brought down by the enemy's cannon, had hastened to escape a certain horrible death, by throwing himself into the sea to swim ashore. One man only remained there, standing with arms crossed upon his large breast, his dress bathed in blood, and his face black with powder and smoke. He looked with deep sorrow upon another man, lying at the foot of the main mast, with both his legs fractured; breathing still, but losing his blood and life, without complaint: nay, thanking God for calling him from this world, and raising his dying eye to the republican banner of France, which still floated over his head. At some paces from him was a boy, about fourteen years of age, dressed in a blue jacket, without any mark of distinction; a small sword was by his side, and two pistols were fixed in his belt. He looking upon the dying man with an expression of despair, blended with resignation, which impressed the conviction that he also had done with life. This vessel was L'Orient, the admiral-ship of the expedition to Egypt; the dying man was her captain, Casabianca; the youth was his son.

"'Take this child,' said the captain to the lieutenant, 'save yourself and him, and leave an old sailor, reduced to the value of a damaged cartouche, to die alone.'

"'Keep your distance!' said the young hero, 'and save yourself: for me —this is my place; I will not leave my father.'

"'My son,' said the dying man, casting upon his noble child a look which expressed all the happiness the human heart is capable of conceiving, 'my son, I command you to go.'

"At this moment a frightful crash evinced the mastery of the devouring element; the timbers of the deck became burning hot. The lieutenant started forward to seize the youth, who, presenting one of his pistols, threatened to lay him at his feet if he attempted to touch him. 'It is my duty to stay here, and I will stay,' he exclaimed; 'go you: may heaven protect you! but you have no time to lose;' then, laying himself down beside his father, and throwing his arms round him, he added, 'bless me, my father!'

"These were the last words the lieutenant heard; he jumped into the sea and swam towards the shore, which was but two hundred toises distant; ('For,' said the emperor, 'Admiral Brueys, stupid fellow! had crippled all his movements by fighting so close inland,') but he had not made ten strokes towards it before L'Orient blew up with a tremendous explosion. He was saved by assistance from shore,' added the emperor, 'and came to head-quarters; and it was he who related to us the sublime filial devotion of the young Casabianca. 'What have I to do in this world,' said he, in reply to his father's earnest entreaties to him to save himself: 'I shall lose you; and the navy is dishonoured!' He was a noble chid; and I am proud to think that he was related to me.'

"Meanwhile, it was curious to observe the countenance of the young Napoleon. He kept his large blue eyes fixed upon the emperor with an expression of anxiety it is impossible to des-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cribe; and when his uncle ceased speaking, he came to him, and climbed upon his knee; saying, 'Are you quite sure that is all true?'

"'Why do you wish to know?' said the emperor.

"'Because I shall pray to God for that little boy and his papa,' replied the young prince.

The emperor was affected, and tenderly embraced his nephew, saying, 'You are a brave, good boy; then setting him down, his eye followed his playful movements with all a father's solicitude: he felt that this child was his hope. The empress was very happy in such moments.

WHISTLING AND SINGING EMPLOYED AS SUBSTITUTES FOR CONVERSATION IN IMPRISONMENT.

THAT the French are a very ingenious and inventive people, is readily acknowledged; and in nothing is this quality more evident, than in those devices to which their military officers have had recourse, to amuse and circumvent those whom they intended to subdue. They cannot always be vindicated, in the judgment of strict honour and integrity: yet on some occasions, as on that now introduced, it would be moroseness, rather than morality, to impugn the alleviation of sufferings, by means of a skilful application of ingenuity.

We have no need to bring to recollection the imprisonment of several French General Officers, who were induced to seek their personal safety, by quitting the French army, then in insurrection, after the attack on the Tuilleries on the well-known *tenth of August*, These were arrested in their attempt to escape to Holland; and were first seized by the King of Prussia; from his custody they passed into that of Austria, and were long confined in the castle of Olmutz. It is to the honour of Madame de la Fayette, that she desired and obtained leave to share the captivity of her husband: but other wives were not so happy.

To maintain some intercourse with his family, M. de Pusy, one of the imprisoned party, concealed a tooth pick, and mingling his saliva (not seldom his *tears*) with soot, he contrived to write in the blank pages of some pious works, which he hired from a bookseller in the town, such information as he desired should reach his wife.

It is true, that he was never without a guard in his room, but this guard having little taste for the pious meditations contained in the works procured by M. de Pusy, he slept, as too many others do when such things are in question. That the bookseller had *weighty reasons* for tolerating the destruction of his treatises on serious subjects need not be doubted.

Moreover, it so happened, that although each of these prisoners was kept in solitary confinement, yet they were within hearing of each other, when standing at the windows of their respective chambers. To improve this advantage they bethought themselves of the following method:—There is at Paris a number of tunes, called "Airs of the *Pont Neuf*," or those popular ballads that were sung at the corners of the streets, and in other public places.*

The words belonging to these airs were so well known, that to strike up a few of the notes, was to recall the words which they accompanied. The captives at Olmutz gradually composed for themselves, a musical vocabulary, by whistling these notes at their windows, and this vocabulary after a while became so complete, and even *rich*, that two or three notes from each air formed their alphabet, and effected their intercourse.

They communicated to each other, by this means, news concerning their families, the progress of the war, and when by good fortune one of them procured a gazette, he *whistled* the contents of it to his partners in suffering. When any event particularly interested them, we may suppose, the *chorus* was proportionably loud and general.

The Commander of the fortress was constantly informed of these unaccountable concerts. He listened; he set spies; but the whole being a *language of convention*, the most practised musician would have failed in detecting the intention and real *expression* of the notes he heard.

In vain was whistling forbid: was whistling ever made a crime? was it ever punished? At length the Austrian was tired out; and confined himself to conviction, that amongst the most difficult things in nature, was that of keeping Frenchmen from whistling and singing!

* The immense number of Scotch National Songs would probably enable the natives of Caledonia to hold a similar inarticulate conversational intercourse.

CORRESPONDENCE.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—Greatly pleased, and, moreover, considerably instructed by the Lectures in your Journal, now in course, I beg permission to suggest to their enlightened author, that the frequent use of the word animal *mind*, instead of instinct, is calculated to lead astray. Hence we read of bird *mind*, and serpent *mind*, &c. I have been led to make these remarks by the inquiries on this head by some of the junior members of my family. In the hope that *Orlando*, who ever he may be, will explain himself in respect of this question,

I am, Sir, yours,
A PARENT.

NOTE.

At the close of the Lectures which we have had the pleasure to introduce in the *Literary Gazette*, the name of the author of the Lectures will appear, and probably the inquiries of *A Parent* will then meet with attention. In the mean time, we take the liberty of bringing to the notice of our Correspondent the following remarks, which may lead to further intellectual discussion on the subject.

Reason and Instinct have obvious differences: yet the more intelligent animals, in some of their actions, approach so near to Reason, that it is really surprising how small the distinction appears.

The great and most striking superiority of Reason seems to consist in this point: the capacity of knowing and acknowledging our Creator and understanding his commands; this peculiarity of Reason has the solemn effect of rendering its owner responsible for his conduct in obeying those behests.

Reason also is capable of perpetual improvement; Instinct is not. However close, therefore, be their situation at any given time, if one stands still while the other advances, the distance between them will at length become all but infinite.

Which is the greatest calamity of Man, the loss of Reason, or the misuse of Reason?

That which will incur the greatest punishment

Where do the confines of Reason and Instinct abut on one another? What name can be given to that train of ANIMAL THOUGHT which produced the following extraordinary act of justifiable retaliation?

A remarkable fact occurred some time ago in the park of Lord Grantley, at Wonersh, near Guildford. A Fawn drinking, was suddenly pounced upon by one of the Swans, which pulled the animal into the water, and held it there until quite drowned.

This was observed by the other Deer in the park, and did not long go unrevenged; for, shortly after this, this very Swan, which had never been molested by the Deer, was singled out when on land, and furiously attacked by the herd, which surrounded and presently killed the offender, without molesting the other Swans.

If a human observer had cursorily seen the first occurrence, could he have been able afterwards to single out the culprit from his innocent associates?

Was the criminal, the MURDERER, conscious of the delinquency for which he so justly suffered? Would his companions feel the retributive justice of his punishment, and be wary of committing a similar crime?

To the Editor of the Cape of Good Hope Literary Gazette.

MASONI.

OUT upon thee, Mr. Editor, art thou so encrusted with literature, or so steeped in science, so frenzied with poetry, or so abstracted by philosophy; are thy tastes so few or so exclusive, are thy feelings so selfish or so prejudiced, is thy creed so bigotted or so illiberal, that thou deniest us not only the right to exchange our rix-dollars and our tallow-dips for the entertainments of a Musical Festival, but dost even question the reality of enjoyments which we have purchased at so *high* a cost, but in which thou canst not participate!

Think'st thou truly because thou art unmusical, because thou art uninitiated in the mystery, "quod noscent *fideles*," (excuse the pun,) that our halls shall henceforth echo to the idolatrous sounds of sackbuts, cymbals, and psalteries, or worse, to the drone of Lincolnshire bag-pipes?

Will the "two brilliant audiences" whom you so unceremoniously charge with lèse treason for applauding the performances of Masoni, think'st thou, plead guilty to the soft impeachment, and confess that they mistook the nature of their emotions, that these were not pleasurable, that they derived no gratification from listening to those bursts sublime of sweet sounds which Masoni scattered out his instrument—now in tumultuous harmony, and again in strains so soft and ethereal, that

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the sense almost ached "to read what manner music that m'ote be"

Thus far only can I find excuse for you, by supposing that upon that occasion your beef-steak had been burnt to a cinder, that your penultimate glass of grog tasted too strong of the water, or that some unlucky wight in the crowd trod upon your gouty toe as you entered; in short, that through part pain, part hunger, and part jealousy, you were in rather a cantankerous humour, and would have cried, like Lucentio, "Fiddler, forbear!" if there had been any one to second you.

Now, very true it is, as the Poet Cowper says, that

"There is in souls a sympathy with sound,
And as the mind is pitched, the ear is pleased
With melting airs or martial, brisk or grave."

and as you are not suspected to belong to those who have *not* music in their souls, I should be well content to put the philosophic Lucentio's theory of music to the test of experiment upon you, under different circumstances.

I may, for instance, picture you unbuttoning after dinner, "spreading yourself composedly before a sea-coal fire, rolling your easy chair back at a tangent to the bright round table which supports your now half-empty bottle of sack, and sundry dishes, not China dishes, but very good dishes of *naprachees*, stewed prunes, or the like; your rheumatic member entreatingly resting on the woolly back of your antiquated sour-faced Sylvan companion—Crab, the last Number of the *Anti-Slavery Reporter* dropping on your knee, and the holy time quiet as a nun breathless with adoration"——

If then, just then, the sound of music should reach your startled ear, and you confess not to its pleasing influence,—there's neither honesty, manhood, nor good-fellowship in thee. All I will then bargain for is, that when you next go forth to dine, I may be there to see

FANATICO DE LA MUSICA.

Note.—It was scarcely possible that certain remarks in our last Number would be tolerated by those whose predilictions are in favor of cat-gut. But our present Correspondent is so good-humoured in his remarks, that it is our duty to meet him in the best temper we can afford. For this purpose, we shall adopt the language of Pope in one of his letters to Mr. Congreve:—"How can you dignify this modern fiddling with the name of music? Will any of such instruments encounter a wolf now-a-days? Have ever wild boars, elephants, deers, dolphins, whales, or turbots, shewed the least emotion at the most elaborate strains of your modern *scrapers*? all of which were tamed and humanized by ancient musicians. Whence proceeds the degeneracy of our morals? It is not from the loss of true ancient music, by which, says Aristotle, they taught all the virtues? Whence comes it that our present diseases are so stubborn? Alas! we have lost their true cure."

SCIENCE AND NATURAL HISTORY.

RAISING WATER.

In our present number, the reader will find annexed, a sketch* representing the method of raising water, adopted by the Arabs on the Euphrates. And also that in usage in other countries.

EXPLANATION.—No. I.

The first method is by means of horses or bullocks descending an inclined plane, and pulling a rope over a roller in their progress, so as to elevate a large leather vessel, as represented in the sketch.

In one corner, at the bottom of this vessel, is attached a long leather spout, which is curved upwards, as the vessels ascends; but being drawn out by the tightening of a cord (which works of itself) as the machine reaches the surface, the contents are discharged into a trough coated with bitumen, and the vessel descends to fill again. This is accomplished by the time the animal has ascended to the top of the inclined plane, and has turned round to descend again. These bullock-rollers have a brick shaft descending to the river, and of sufficient diameter to contain three, and occasionally four vessels, all at work at the same time, with as many animals, and a man to each. They appear to have been known and used in Mesopotamia from the earliest times. The bank of the river is covered with them here; and as they are kept working all day, they produce the fertility of Egypt as far in the country as irrigation is extended, beyond which all is desert.

No. II.

The second plan is practised in Egypt and Spain, and also in Canada, where it must have been taken by the early French settlers in that country. These water-levers, with small canals running from them, are very numerous along this part of the river, the banks of which, for a long distance into the country, are covered with verdure, and fringed with a double and nearly continuous belt of luxuriant date trees, as far as the Persian Gulf, and attaining a degree of *perfection* and *productiveness* far beyond that of the Nile.

* No. III. represents the Lithographic Press of Mr. Portermann's, a gentleman who has lately arrived in this colony, and who is desirous of establishing himself in the important business of Lithography.

REPRESENTATIONS OF SHIPS IN THE AIR.

The Art of Discovering the Approach of Vessels when one hundred leagues and upwards distant.

Sir David Brewster's Letters on Natural Magic, notices the representation of ships in the air by unequal refraction, and observes that the wizard-beacon keeper of the Isle of France, who saw in the air the vessels bound to the island long before they appeared in the offing, must have derived his power from a diligent observation of the phenomena of nature. This is perfectly true, as the contents of the following extraordinary documents just brought to light do most fully corroborate. The letter and certificates from Marat to Daly have been published by a gentleman in possession of copies taken by himself from the original autographs.

He was a *detenu*, and in the year 1806 resided on his parole at Brussels. It being at that period a fashion among French ladies to collect autographs, Madame Guilleminot, sister-in-law to the General of that name, applied to a sister of Napoleon, with whom she was intimate, for a few signatures of celebrated men. The princess mentioned the request to Cambacères, Chancellor of the Empire, by whose direction an immense package of letters from the state paper office was forwarded to Madame Guilleminot. From these the gentleman before mentioned was employed to make a selection, receiving at the same time permission to copy, for his own use, such as he might think fit. He transcribed several hundreds, and among them those which are translated in the present number on the subject of ships. The presence of such documents in the state paper office is partially, perhaps, to be attributed to the recklessness of the Bureau Noir of the police, but chiefly to the frequent seizures of the papers of individuals during the Revolution. Many of the letters forwarded to Madame de Guilleminot had not passed through the post-office; they were original draughts, defaced by erasures and interlineations.

LETTER FROM MARAT TO MR. DALY.

You know, my dear friend, that much of my time has lately been taken up in preparing my work upon Light, Fire, &c. for the press: it is, however, nearly completed; you may, therefore, expect to hear very regularly from me in future. Mr. Bottineau, whom I mentioned to you in my last letter, has experienced here every kind of disappointment. If he be able to raise sufficient money, he purposes visiting London very shortly, where he is likely to meet with more success; for you gentlemen of the British isles will, I am convinced, patronize the discovery which my friend has made. I, who have made a study of optics, meteors, &c. am, I must confess, somewhat sceptical respecting the science which he terms *Nauscopie*, or the art of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

discovering vessels and lands at a considerable distance; but the concurring testimony of hundreds of persons, the certificates he has obtained from officers of high rank,—all tend to shew that there must be truth in his statement; and although he may have been neglected in France, I hope, for the honor of science, that a fair trial will be given him in your country, and that he will not be treated as a visionary. Certain it is, that if his art should prove to be true, incalculable advantages will be derived from it. I have seen an officer who resided six years in the Isle of France, and he assures me that the whole population will corroborate the averments made by Mr Bottineau: but let the latter gentleman speak for himself; the following is his statement:—"As early as the year 1762, holding then an inferior situation in the King's navy, it appeared to me that a vessel approaching land must produce a certain effect upon the atmosphere, and cause the approach to be discovered by a practised eye even before the vessel itself was visible. After making many observations, I thought I could discover a particular appearance before the vessel came in sight: sometimes I was right, but more frequently wrong; so that at the time I gave up all thoughts of success. In 1764, I was appointed to a situation in the Isle of France: while there, having much leisure time, I again betook myself to my favourite observations. Here the advantages I possessed were much greater than before. First, the clear sky and pure atmosphere, at certain periods of the day, were favorable to my studies, and as fewer vessels came to the island, I was less liable to error than was the case off the coast of France, where vessels are continually passing, some of which may never arrive in sight, although the indications I allude to may have been witnessed by me. I had not been more than six months upon the island when I became confident that my discovery was certain, and all that was requisite was to acquire more experience, and then *Nauscopie* would become a real science. As the officers in the island led an idle life, they were frequently on the shore looking through their glasses to discover when a vessel was arriving from Europe. I frequently laid wagers that a vessel was arriving one, two, and even three days before she was actually in sight, and as I was very seldom wrong, I gained a considerable sum of money. The officers attributed my success to a peculiar power of vision I possessed; but then again, they were quite puzzled on reflecting that although they used glasses, I never employed any. In 1780, I wrote to the Minister of Marine, Marechal de Castries, announcing my discovery. In his answer, he instructed the Governor of the island to enter my *announcements* of arrivals in a private register for two years at least. On the 15th May, 1782, my observations commenced. On the 16th May I announced to the Governor that three vessels were near the island. Orders were immediately given to the *vigies*;* their glasses were turned to the direction I had pointed out. Their declaration was—'No vessel in sight.' On the 17th, the *vigies* informed the Governor that a ship had just appeared above the horizon. On the 18th a second came in sight, and on the 26th a third was visible to the naked eye. Viscount de Souillac sent for me on the last day, and made me an offer of 10,000 livres, and a pension of 1,200 livres a-year, on the part of government, if I would disclose my secret; but not conceiving the remuneration sufficient, I declined accepting the offer. Viscount de Souillac, some months after, wrote to M. de Castries: he stated, that I had made the surprising discovery of a new art,—that of being able to observe the arrival of vessels 100, 150, and even 200 leagues distant; that for more than fifteen years I had regularly predicted the arrival of vessels, sometimes three or four days before they could be seen with a glass: that the register kept by order of the Minister shewed that I had almost always been right in my predictions; and that even when I had announced the approach of a vessel which did not actually arrive, it was proved beyond a doubt, that the vessel or vessels in question were foreign ones that had come within two or three days' sail of the island, and had proceeded to their destination without touching at the Isle of France. 'Upon one occasion he asserted that a fleet of eleven vessels were approaching the island; the announcement caused great alarm, as we anticipated an attack from the English. A sloop of war was instantly despatched to look out; but before she returned, Mr Bottineau came to the Governor, and informed him that the signs in the atmosphere had disappeared, and that the fleet had taken a different direction. Some time after this a vessel arrived here from the East Indies, and reported that she had seen a fleet of eleven vessels sailing towards Fort St. William. In fine, that from the year 1778 till 1782, he had announced the arrival of 575 vessels, many of them four days before they became visible. The letter terminated thus—'However incredible this discovery may appear, myself and a great many officers, naval and military, must bear testimony to the *announcements* made by Mr Bottineau. We cannot treat him as an impostor, or as a visionary. We have had ocular demonstration for so many years, and in no instance has any vessel reached the island, the approach of which he had not predicted; those which did approach, but did not touch the island, were in most cases proved to be foreign vessels.' A short time after this letter had been despatched—(this letter, I am certain, reached the office of Mr. de Castries, but, I am also certain, was never perused by him)—I determined to return to my native country, and accordingly took my passage on board one of His Majesty's vessels, commanded by Captain Dufour. I felt somewhat anxious to ascertain whether the effect produced on the atmosphere, when a vessel approaches, would be somewhat similar, as regards the approach of one vessel towards another, and, to my great delight, I perceived it to be the same, although less powerful; but my eyes now became so practised, that not once, during the voyage, did I make a mistake. I announced to Captain Dufour the approach of twenty-seven vessels, while proceeding to our destination: but what afforded me more heartfelt satisfaction than my previous observations, namely, certain appearances in the skies when a vessel approaches land, the observer being on shore—or similar appearances when one vessel approaches another; yet, in my opinion, to be able to discover land from a vessel by the same phenomenon, long before it is in sight, is, if possible, of infinitely greater advantage to navigation. Upon one occasion I told Captain Dufour, that we were not more than thirty leagues from some land. This he denied to be possible: however, upon looking attentively to his reckoning, he was compelled to acknowledge that he was in error, and immediately altered his course. I discovered land three times during the voyage; once at the distance of 150 leagues. On the 13th June, 1784, I landed at L'Orient, and instantly proceeded to Paris. My applications to the Minister to obtain an audience, were not attended to; and the only answer I obtained from the Officer of Marine was, that my memorial was under consideration. Abbé Fontenay, the editor of the *Mercure de France*, having heard of my *pretended* discovery, without even asking to see my certificates, signed by the Governor of the Isle of France, and all the officers of the garrison there, thought proper to turn my discovery into ridicule, and affirmed that it was not 'ships at sea, but castles in the air,' I had found out. In this state does the affair remain; and all I can add is, that should vexation and disappointment terminate my existence before I can explain my discovery, the world will probably be deprived, for some time, of an art that would have done honour to the 18th century."

* Officers whose duty it is to look out for vessels approaching the island.

Such, my dear friend, is the account Mr. Bottineau has given me; he has also explained the phenomenon which, he assures me, in order to understand perfectly, only requires being on the sea shore for a few hours, and that in less than a week I should understand his art as well as himself. As my poor friend looks very ill, I am afraid he will not be able to visit England, the only resource, he says, that is left him. Mr. Moore, who has been studying medicine here for some time, leaves Paris this evening for London, and will take charge of this letter. I have not time to explain to you the phenomenon perceived in the atmosphere when a vessel approaches land, &c., but I will give you all the explanation in my power in my next letter, and very possibly it may enable you, who have so many opportunities of visiting the coast, to ascertain whether the art *Nauscopie* be one of those sublime discoveries that do honour to the genius of man. For myself, if I could conveniently visit the sea shore, I would certainly make more than one trial. When I have sent you the explanation you will judge for yourself—and do not act as the Abbé Fontenay, for one of your poets has said wisely, that "There are more things in heaven and earth than are dreamt of in our philosophy." Adieu.

MARAT.

CERTIFICATES.

No. I.

A letter from the Governor of the Isle of France to the Marshal de Castries.

Au Port Louis, Isle de France, 18 *Feb.* 1784.

Monseigneur,—A letter which you wrote on the 6th of April, 1782, to Mr. Bottineau, a ci-devant officer of the second class in this colony, in the king's service, as well as in that of the company, renders it imperative on our part, to give him one for you, of which he is the bearer. It is an order to be useful to his country that he is about to visit France; and he would experience much regret were his discovery lost to the world; a discovery with which he alone is acquainted, and which others have, in vain, endeavoured to unfathom: it consists in the art of announcing the presence of one or several vessels at a distance of 100, 150, and even 200 leagues. Is this the result of study, or the application of the principles of some science? By no means: all his science is in his eyes. He sees in nature signs that indicate the presence of vessels, as we assert that fire exists in a place when we perceive the smoke; this is the comparison he makes, when speaking to others concerning his art; in keeping his discovery a secret this is the clearest explanation he has afforded, in order to shew that he did not make the discovery by the knowledge of any art, or of any science, or by the application of any previous study.

He asserts, that it is the effect of chance that led him to the discovery; he has watched Nature and found out her secret; this science, therefore, has not, it may be said, cost him any trouble: but that which has required much study, and really belongs to him, is the *art of judging of distances.*

The signs, he says, indicate clearly enough the presence of vessels, but *they only who can read the signs* are able to judge of the distances, and this art, he asserts, is an extremely laborious study. On this very account, he had for a long time been the dupe of his science: *for these last fifteen years he has foretold the arrival of vessels in this island.*

At first it was merely a play; he was in the custom of making bets, and often lost them, because the vessels did not arrive at the appointed time: on this account, he studiously applied himself to find out the cause of his errors, and the perfection of his art is owing to his exertions.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Since the war has broken out, his *announcements* have been very numerous, and sufficiently correct to create a sensation in the island. We have conversed with him upon the reality of his science; and to have dismissed him, like a quack, would have been an injustice. Moreover, we required proofs, and *he regularly supplied us during eight months with* ANNOUNCEMENTS; *and the result was, that several vessels that had been announced several days beforehand, arrived at the precise time; several others were delayed, and several did not arrive.*

It has since been *proved*, that the delay in the arrival of some of the vessels, was occasioned by contrary winds, or currents, in the ocean. Those which did not arrive, Mr. Bottineau is fully persuaded, were foreign vessels, which passed by; and, indeed, we have since ascertained, that a fleet of English vessels arrived in India which might have been in sight of the island at the time fixed upon by Mr. Bottineau. What we can certify is, that Mr. Bottineau was *almost always right*. Whether this be the effect of chance, or otherwise, it would perhaps be imprudent in us to determine: this, however, is certain, that the circumstance is so extraordinary, in whichever way we consider it, that we endeavoured to prevail upon Mr. Bottineau to make us come to a positive conclusion, either by confiding his secret to us, or to any well-informed person who could be depended upon; but he declined to accede to our request; fearing, no doubt, that he should not obtain a sufficient remuneration for his discovery.

We have the honour, &c.

LE VICOMTE DE SOUILLAC,
CHEVRAU.

(The remaining Certificates, with Bottineau's Explanation, in our next.)

GEOLOGICAL EXPLANATIONS.

To those unacquainted with the subject, many of the terms which are employed in describing the peculiarities of rocks and mountains, will appear as unintelligible, as Egyptian hieroglyphics. To obviate the difficulty, the following alphabetical list is submitted. In a country which developes so much of mountain scenery as the Cape of Good Hope, it were well if the immense displays of Creative Power on this head, were subject of greater investigation than we fear is the case at present.*

STRATIFICATION AND OTHER GENERAL CHARACTERISTICS OF ROCKS.

Rocks are said to be stratified when they occur in layers parallel to or above each other. When they are found, as granite is in a mass, without any such form or order, they are called unstratified. Strata differ in being more or less distinct, regular or irregular, straight or undulating; they are seldom found perfectly horizontal, and are of very unequal thickness.

Rocks, taken in the mass, are very nearly related to each other, nineteen-twentieths of the whole mineral contents of the earth being composed of five substances, namely, silex, alumine, lime, magnesia, and iron—(for a description of which, see below.)—There are other minerals found in the solid parts of the globe, but they occur usually in veins, and are more especial objects of attention to the mineralogist.

Acids are compound substances, which have a sour taste, and, amongst other properties, they dissolve alkalies, earths, metals, &c.

Alumine is one of the earths, and enters most largely into the composition of rocks, clays, and loams, of which it is the plastic principle. When washed and thoroughly dried, it is of a white colour, and destitute of taste or smell. It is the base of alum, and hence its name.

Arenaceous, formed of sand.

Argillaceous, formed of clay.

Bitumen is an inflammable mineral substance, which burns with flame in the open air. There are numerous varieties of this substance which have obtained distinct names, such as naphtha, which resembles common tar, and asphantum, similar in consistency to common pitch. All the varieties of pit coal contain more or less of this substance.

Calcareous, formed of lime. Calx is the Latin name for that substance.

Carbonate, Carboniferous.—Carbon, or charcoal, is a simple body, of which the purest and most valuable specimen is the diamond. Combined with oxygen, one of the gases composing the atmosphere, it forms carbonic acid, an air which is fatal to animal life when inhaled: a carbonic of any thing—for instance, of lime—is carbonic acid in combination with lime. A carboniferous body is one in which carbon prevails.

Chemical action differs from mechanical action thus:—When a river washes away and carries any portion of the earth to the sea, the waste thus borne down is only mixed in the water, not intimately united with it by any chemical affinity: when, however, oxygen or an acid combines with any of the substances composing rocks, and forms a body different from either of the former two, then this is a case of chemical action. In the first instance, the integral particles were only separated from each other; in the second, they are both separated and united again with the solvents. In the one, a sediment is deposited; in the other, a precipitate.

Conglomerate is a mass of rounded pebbles cemented together.

Cretaceous, having the properties of chalk.

Crystalline.—When fluid bodies are allowed to cool with adequate slowness, their particles are arranged in regular figures, which are called crystals:—Ice, for instance, is a crystal.

Decompose, to separate into more simple parts; to decay.

Ditritus, or *Debris*, the waste of rocks and other substances.

Fissure, a cleft, or chasm, where a breach has been made.

Formation, a certain series of rocks, supposed to have been produced under certain general circumstances, and at about the same epoch.

Fossils, organic remains.

Igneous origin, and *aqueous* origin; the first results from the agency of fire, and the second, from that of water.

Lime, a well-known earth, which exists in great abundance, and under various forms in nature. It is a metallic oxide, that is, a metal in combination with oxygen. Common limestone is a carbonate of lime; gypsum is a sulphate of lime, that is, sulphuric acid, or vitriol, in union with lime. The carbonate is widely distributed in nature, and frequently occurs in beds of immense extent. There are a great number of other calcareous minerals, such as oolite or roestone, which will be described as they occur. Chalk is a very common species of calcareous earth.

Magnesia is another earth, which has also a metallic base. It exists in nature under various states of combination, with acids, water, and other earths, and is found in various mineral springs, and the water of the ocean, united with sulphuric and muriatic acids.

Marl is essentially composed of carbonate of lime and clay, in various proportions. Marl frequently contains sand and other foreign ingredients, and some of them are more or less hardened, while others are friable and earthy.

Organic, having the structure peculiar to living bodies. Organic remains are living bodies converted into earth, stone, bitumen, &c., but preserving the appearance of their original forms.

Oxides are metals and other substances, combined with oxygen. They differ from acids, in having less oxygen.

Oxygen gas forms about a fifth part of the atmosphere, and water contains about eight-ninths of it. It is more amply diffused in nature than any other material body, its attractions being very numerous and powerful.

Shale is a slate clay and bituminous slate clay.

Silex, or silica, is an earth; it is a crystalline substance, and presents itself in nearly a pure state in the varieties of flint, agate, &c.

Strata, [singular, *stratum*,] layers of substances placed above or beneath each other, as slates, &c.

Supracretaceous (*supra*, over or above, *cretaceous* chalk,) above chalk.

Travertino, one of the varieties of lime.

Vertebræ, back bone.

* The Explanations are from Chambers's Information for the People.

EFFECTS OF ART IN CHANGING THE FORM AND FEATURES OF THE HUMAN BODY.

All nations, even in their infancy, have recourse to such customs and fashions as gratify that feeling of vanity which appears natural to man. It is not alone in civilized society that fashion exercises her tyranny; she extends her influence over even the most uninformed of the human race. Savages almost universally delight in painting their bodies, in hanging rings through their noses and lips; and the natives of almost all countries, at an early period of their history, have undertaken to fashion particular parts and features of their bodies into a happier mould. In infancy, especially just after birth, all the bones of our frame are soft and pliable, and admit of being compressed into shapes such as were never designed by the provident wisdom of nature. The head, the face, the breasts, the feet, and other parts of the human body, have been subjected to the most capricious interference, the inquiry into which is not so much a matter of curiosity, as of importance, because we may hereby discover the origin of certain peculiar appearances, which are now characteristic of particular races of men. The head, the configuration of which, in early infancy, is changed with great facility, has been submitted to many alterations in figure. The Scythians, as a sign of their nobility, chose to have it shaped like a sugar-loaf, which was effected by the midwives binding the infant's head with cloth bands. Anciently, the women of Peru had recourse to this absurd fashion; so also had many Indians; and, that this form was occasionally transmitted to their children, is evident, from the birth of several infants, with this congenital monstrosity, having been recorded. A remarkable length of head, by other nations, was conceived a beauty. This the ancient Portuguese produced in the same artificial manner. The Germans esteemed a short head as the most preferable, wherefore we are informed that the German mothers took especial care to lay their children in their cradles in such a manner that the back part of the head should be compressed. Other nations preferred round heads, a fashion which was affected by the Greeks, and also by the Turks, who considered it the most commodious form for the turbans they wear; and the Turkish skull, at this day, is observed to be remarkably round. In the province of Old Port, in the West Indies, the men, admiring the square head, gave it that form by compressing the infant head between boards, which enclosed it on all sides like a square wooden box. The forehead has, in like manner, been made the subject of many capricious fashions. The Mexicans judged those to

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

be most beautiful who had little foreheads. The Spaniards, on the contrary, accounted a high forehead a happy distinction; wherefore the ladies drew back their hair, to extend its height beyond its natural dimensions. The Russians admired broad foreheads, to acquire which, they compressed the head from above, so as to increase its breadth. The Italians, on the other hand, endeavoured, by artificial means, to render the forehead more prominent than natural. If possible, a more singular fancy prevailed with some nations, who were accustomed to burn letters on their foreheads. The Siamese, Thracians, and the people of Malabar, adopted this fashion, among whom, both men and women cut into the flesh of their brows, crosses, letters, and numerous fanciful characters. A very receding, or sloping forehead, has been and is still considered a beauty by many of the African tribes, and this they give their children, by making them wear a flat compressing instrument, which has been often exhibited in this country.

Not only has the head been subjected to these capricious changes, but the nose and ears have likewise been submitted to the ingenious contortions of fashion. "The Indians," says an old author, "have their noses slit like broken-winded horses." The truth seems to be, that they made an incision in the centre, down the length of the nose, and used to keep the aperture gaping by pieces of bone or wood stuck in as ornaments. The Chinese consider a short nose a beauty; but some tribes in Africa, and also the Peruvians, reverted this decree of taste, and esteem a large nose the most desirable. The inhabitants of the island of Zanzibar turned the nose from its point upwards, and thus gave it a curved upward direction. The Tartars, and Caffres, and many tribes both in North and South America, took particular pains to flatten the nose in infancy; and this still is a feature desired, and prevailing among most of the natives of Africa. In consequence of their king, Cyrus, having had a hawk-like nose, the Persians considered this shape as a mark of nobility, and adopted every artifice to produce it. This fashion, we find, was also highly esteemed among the Romans, wherefore it has been termed the "Roman nose." Another very preposterous custom adopted has been that of lengthening, by artificial means, the lobes of the ears, and the length to which they have been dragged is indeed almost incredible. We are informed that some Indians, having extended them to half the length of their body, used to lie upon them, making them, as it were, a couch to rest on. In the West Indies, among some tribes the same fashion prevailed, and the elongation was effected by hanging weights to them, which they gradually increased. The Hollanders adopted the custom, and decorated them with heavy jewels. The travellers Condamine and Ulloa saw the lobe of the ear, in many instances, hanging down to the shoulder. Very large ears having likewise been deemed less asinine than at present, were considered beautiful, and diligently cultivated by being continually dragged beyond their natural size. This the Caribs took great pains to effect, as also did the inhabitants of Zanzibar, as well as the Peruvians. Not only were the ears subjected to this species of torture, but many nations esteemed it a very great beauty to have the lobe pierced with a large hole, the great dimensions of which constituted its principal charm. This was effected by means of pegs of wood, the diameter of which they gradually enlarged; this custom was adopted by the people of Malagar. "The gentlewomen of Indostan," says an amusing old author, "have the flaps or nether part of the ears bored when they are young, which they daily stretch and make wider, by things kept in for that purpose, until it at last becomes large enough to hold a ring as big as a little saucer, made for its sides to rest in the flesh; besides which, round about their ears they make other holes for pendants, that when they please they might wear rings in them also." The Brazilians, on the authority of Mr. Southey, insert gourds in the slits of their ears, and increase them in size, until the fist can be put through, and the ears reach the shoulders. The practice of wearing many rings in the ear was common among the natives of Virginia, among the Brazilians, and many nations. The custom of perforating the lobe of the ear, and wearing ear-rings, is extremely ancient, and was condemned by many older moralists, who affirmed that it would have been nothing to wear vain ornaments about the neck and hair, but that it was most absurd and monstrous to "let them into their bodies." We cannot pursue this subject further; but may observe, that we do not think that the beauty of the human form, such as we behold it in the most lovely of the female sex, can be enhanced by the dangling of any jewel from the ear; but, as our learned authority quaintly observes, "the conceit worked very strong in their head who first introduced this fashion."* Almost every person has heard of the practice of the women of many countries, who draw out and enlarge the bosom of their children as soon as they become developed; a custom which prevailed among the Mexican women, and is still practised by the Hindoos, who, while they carry their children on their back, afford them milk by throwing their bosom over the shoulder. It appears, too, that this was once a custom among the Irish; for Meubsel observes, that "the Irishwomen at this day (1653) would give suck to their babes behind their backs, without taking them in their arms;" and adds, "that their breasts were fit to be made money-bags for East or West Indian merchants, being more than half a yard long." The Portuguese of the present day are said to be remarkable for the large size of their bosoms; while the Spanish women, on the contrary, take pains to compress them, and prevent their luxuriant growth. The hands have been, in like manner, made notoriously the subjects of similar fantastic interferences. The ladies of Portugal were formerly ambitious to display long and narrow hands; wherefore the hands of children were, in early years, tightly bandaged, to prevent their increase in breadth. The Hindoos, Chinese, and Esquimaux, are remarkable for their small hands; the sabres of the Hindoos brought into England have the handles too small for the European hand. Among the ancient Spanish women, large hips were deemed desirable; to procure which, they compressed, with cloth bands, the neighbouring superior and inferior parts of the body. In China, from the very earliest period, small feet have been considered so essential to the beauty of personal appearance, that the custom of bandaging the feet of infants to retard their growth prevails among all classes. If a mother, says a traveller, were to break this custom, she would incur the note of infamy, and be punished. But while we are gratifying our curiosity, and smile at these fantastical customs adopted by other nations, we must not forget that we have ourselves, even in these enlightened times, given way to customs as absurd, and as injurious to the healthy condition of the human body. It is not more than ten or fifteen years since the London dandy, then known as the "Bond-street Lounger," assumed invariably a fashionable stoop, lifting up the shoulders, and turning down the neck, till the chin nearly met the chest; and, as if to convey a satire on her own subjects, this despotic genius of fashion immediately afterwards reversed the order of her decrees; and then the same loungers were seen with their bodies erect as ramrods, and their chests stuffed prominently out, as if they were desirous of emulating the breasts of women. We are all too well acquainted with the false notion adopted by ladies, who fancy that a preternaturally small waist contributes to the beauty and gracefulness of their figure; to acquire which, the pernicious habit of tight lacing was introduced, which has given rise to curvatures of the backbone, and deformities of the chest, which are too hideous to contemplate any where, excepting in the cases of a surgical museum. Another abominable practice is, or very recently has been general in this country, that of binding tightly the tender limbs and delicate body of the child just born; another most obvious means of producing deformity in after life. How far the changes of form and feature which we have now enumerated, by transmission from parent to child, may have become permanent, remains to be considered; but, in the meantime, it may be laid down as an axiom, that if we wish to give the body a graceful form, we should encourage its natural and healthy developement, and allow all its muscles full freedom of action.

* See Bulwer, whose amusing book on this subject has the following droll title:—"Anthropometamorphosis—Man Transformed—or the Artificial Changeling Historically Presented in the mad and cruell Gallantry, foolish Bravery, ridiculous Beauty, filthy Fineries, and loathsome Lovelinesse, of most Nations fashioning and altering their Bodies from the Mould intended by Nature." A.D. 1653.

American Silk.—The cultivation of mulberry-trees and silk-worms, in various parts of the United States, is rapidly extending. Orchards containing as many as a hundred acres are now exclusively appropriated to the purpose, and machinery is being completed for spinning and weaving the raw materials, under the direction of competent foreigners.

Cotton.—The first cost of a year's cotton manufactured in England is estimated at 6,000,000*l.* sterling; the wages paid to 833,000 persons employed in its manufacture, in various ways, is 20,000,000*l.* sterling; the profits of the manufacturers may be estimated at 6,000,000*l.* at least. This gives a clear profit of 20,000,000*l.* from the manufacture of not quite one-third of the amount, or the increased value of the manufactured over the unwrought material is 3 1-3 to 1; and nearly a million of persons besides get from it constant employment.

Cheltenham in London.—If a few pieces of silver coin be alternated with pieces of sheet iron, on placing the pile in water, it soon acquires a chalybeate taste and a yellowish hue, and in twenty-four hours flakes of oxide of iron appear. Hence, by replenishing with water a vessel in which such a pile is placed, after each draught we may have a competent substitute for a chalybeate spring. Clean copper plates alternating with iron would answer, or a clean copper wire entwined on an iron rod; but as the copper is apt to become oxidated, it is safer to employ silver.

Extent of the Cotton Manufacture.—The cotton spun in Great Britain last year amounted to about 288,000,000 lbs. Of this vast quantity a tenth was spun in Scotland. The United States supply three-fourths of the consumption, or 213,000,000 lbs. The East Indies about 20,000,000 lbs. The West Indies about 1,600,000 only. All the cotton, except the growth of the East and West Indies, pays a duty of 5·8*d.* per lb. This duty would last year exceed 690,000*l.*; would be as nearly as possible 10 per cent. on the return of the cotton in bond.

DOMESTIC ECONOMY.

The process of divesting milk of its component portion of cream, to an extent hitherto unattainable, has been effected by Mr Carter, of Mottinghan Lodge, near Eltham, Kent, and is thus detailed by him in a paper presented to the Society of Arts:—

"A peculiar process of extracting cream from milk, by which a superior richness is produced in the cream, has long been known and practised in Devonshire; this produce of the dairies of that county being well known to every one by

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the name of "clotted," or "clotted cream." As there is no peculiarity in the milk from which this fluid is extracted, it has been frequently a matter of surprise that the process has not been adopted in other parts of the kingdom. A four-sided vessel is formed of zinc plates 12 inches long, eight inches wide, and six inches deep, with a false bottom at one half the depth. The only communication with the lower compartment is by the lip, through which it may be filled or emptied. Having first placed at the bottom of the upper compartment a plate of perforated zinc, the area of which is equal to the false bottom, a gallon (or any given quantity) of milk is poured (immediately when drawn from the cow) into it, and must remain there at rest for twelve hours; an equal quantity of boiling water must then be poured into the lower compartment through the lip, it is then permitted to stand twelve hours more (i.e. twenty four hours altogether), when the cream will be found perfect, and of such consistence that the whole may be lifted off by the finger and thumb. It is, however, more effectually removed by gently raising the plate of perforated zinc from the bottom by the ringed handles, by which means the whole of the cream is lifted off in a sheet, without remixing any part of it with the milk below. With this apparatus I have instituted a series of experiments; and, as a mean of twelve successive ones, I obtained the following results:—4 gallons of milk, treated as above, produced, in twenty four hours, 4½ pints of clotted cream, which, after churning only fifteen minutes, gave 40 ounces of butter—four gallons of milk, treated in the common mode in earthenware pans, and standing 48 hours, produced four pints of cream, which, after churning 90 minutes, gave 36 ounces of butter. The increase in the quantity of cream, therefore, is 12½ per cent. and of butter upwards of 11 per cent. The experimental farmer will instantly perceive the advantages accruing from its adoption, and probably his attention to the subject may produce greater results."

BRITISH MANUFACTURES.

THE GUN TRADE.

SCARCELY any thing can more strikingly illustrate the vast extent of our local manufacturers, and the freedom of dealing in an article, upon the export of which the political existence of continental states, and even the security of our country might depend, than the gun-trade of Birmingham. Whenever warlike movements are seriously contemplated abroad, the great Warwickshire workshop is resorted to, and customers are welcomed according to their means of payment. The arms which Holland and Belgium employed in the recent struggle, or rather, perhaps, those that might have been required, had the two countries been allowed to continue the contest—were only not furnished by the Birmingham gunsmith because neither the Dutch nor Flemish agents could give that security for payment which was required. Poland, too, unhappy Poland! pending the struggle that, *for the present*, has decided the fate of that country, had its agents in Birmingham, with an order for 50,000 stand of arms; but the singularly novel and unsafe conditions required of the manufacturers,—namely, the safe delivery of the arms in Poland! stood in the way of a ratification of the contract. Attempts were made by parties to meet the emergency; and many cases filled with *iron piping*, were arrested in transitu, the continental inspectors perceiving, at once, the difference of manufacture between tubes for the conveyance of gas or water, and those for powder or ball.

Even the British government itself, if we may admit the authority of a Birmingham Journal, has no objection, under certain circumstances, to re-sell arms purchased from Birmingham, to other countries. It appears that, in November, 1830, the French government despatched agents to Birmingham, where they were led to understand they might, upon the instant, purchase from 400,000 to 500,000 stand of arms. The contemplated use of these arms was the equipment of the National Guard. Upon enquiry, however, the French agents found they were mistaken as to the amount of ready-made muskets to be obtained in Birmingham; and were, in consequence, recommended by the manufacturers to apply to the British government for assistance. Ever since the close of the war, a large depôt of arms had been established in the Tower; and it was known to some in the trade, that of this warlike stock the government were desirous to dispose. Accordingly, the French agents adopted this advice; and immediately entered into a negociation with the English government. At first their applications appeared to be decidedly successful; but, subsequently, owing either to the unsettled state of Ireland, or the commotions and threatening prospects of our own country, the government declined to part with the arms, and the negociation was abruptly broken off. This immediately led to a renewal of the correspondence with the Birmingham manufacturers; the principal agent on the part of the French government being no other person than Mr. Rothschild, the eminent capitalist and money-broker. The total number required by the French government was 140,000 stand of arms, part of which were manufactured by London houses. The whole of this contract was required to be completed in seven months.

The celerity with which fire-arms were manufactured, and the high prices paid to workmen in periods of excitement and demand, are strikingly illustrative of the perfection to which our countrymen have carried this branch of manufacture. At Birmingham, during the war, it was understood that they made a musket per minute, and the contract price at which they were supplied to the British government was 36*s.* each. A serious reduction, however, took place when peace came; so that the prices paid by the French, in the contract above mentioned, and which were considered liberal, were about 28 francs, or nearly 23*s.* each gun. For gun-locks, which, towards the beginning of the previous year, only 1*s.* 6*d.* each was paid, the manufacturers were glad, at the end of 1830, to give 2*s.* 6*d.*

About the period in question, and when the French contract excited considerable attention, especially in connexion with the report that the order was for 1,400,000 stand of arms, a London newspaper asserted that the Birmingham manufacturers would require fourteen years for the completion of so extensive an order. The journal whose authority is before quoted contradicts this assumption, and on satisfactory data; for it appears, by reference to a table in Mr. Parsons's pamphlet on the manufacture of fire-arms, that, in the year 1813, there were fabricated in Birmingham, for the Board of Ordnance, not less than 320,643 stand of arms; and in 1812, 288,741. From the statement set forth in this pamphlet, from authorised returns, it further appears, that from the year 1804 to 1815, more than two-thirds of the fire-arms made for the Board of Ordnance, during the war, were made in Birmingham. Allowing for the reduction of the number of hands which has necessarily taken place within these few years, there is no doubt but at the present time the manufacturers of Birmingham could set up 200,000 stand of arms per annum, while those of London would produce from 80,000 to 100,000.

It will be readily conceived that the fluctuations consequent on such an important but variable trade must be productive of serious inconveniences to the workmen, and even to the town of Birmingham. Such is the fact; and, owing to the comparative extinction of the trade, since the close of the war, the operative departments have often been abandoned by the workmen, for other more certain and permanent sources of employment and subsistence. But when there as been any stir, as with the contract before mentioned, these men, elated by temporary prospect, generally in numbers return to their old avocations.—*(Lardner's Cyclopedia.)*

LITERARY EXTRACTS

SIR ROBERT PEEL *versus* COBBETT.

IN the Mirror of Parliament, May 16th, there is an excellent report of Sir R. Peel's speech, in answer to Cobbett's attack on the honourable Baronet. In one of Cobbett's Registers, a letter is addressed to "Sir Robert Peel, Baronet, and Cotton Weaver." The following is an extract from Sir Robert's speech in reply.

"In the whole range of scurrillity, there is nothing disgusts me so much, as these constant efforts to depreciate men, because they have raised themselves by their talents and exertions above their original condition. Baronet and Cotton Weaver! When the honourable Member wanted to get into Parliament, he did not disdain the aid of a cotton weaver! I will venture to assert, that no man, or a set of men, are bound by such vulgar prejudices of deference to mere rank, as those who affect to stand forward as the especial champions of liberty and equality. It is the greatest insult to them that another man should have emerged from the obscurity into which they are destined to remain. They all talk as if they were Courtenays, or Montmorencys. Yet, no; if they were so, they would be more generous! If they had, indeed, illustrious blood flowing in their veins, they would not grudge others the public honours and distinctions to which they had attained. I know nothing but inherent vulgarity of mind which, in the present age, can induce men to taunt others for having raised themselves from obscurity to public notice and distinction, by the exertions of honest industry, and the possession of unsullied virtue. So far are these taunts from conveying anything like a shame to my mind, and whilst I profess the utmost respect for those who can boast of hereditary honours, I proudly claim equal respect for those new families which owe their honours to the virtues and industry of their founders."

LATE HOURS.

"Whether have I spirit to shake off an intolerable yoke." HUMPHREY CLINKER.

THERE was no contending against it. A fixed displeasure was seated on her countenance, while at intervals she bent her brows firmly, still keeping her eyes riveted on the fire; a slight convulsion of the upper lip plainly showed she was labouring under the influence of some deep mental misery. This is an odd reception, thought I, after frequent attempts to draw my aunt Ursula into conversation; my uncle had been snoring on the other side of the fire-place for an hour.

It was my first visit. My uncle Benjamin and aunt Ursula were brother and sister, and had lived together on a comfortable scale of independence some thirty years. My uncle becoming childless and a widower early in life, had retired from business and taken up his abode with his sister "for better for worse." My aunt Ursula had never married, she might have done so,—she had refused the best offers, and broken the hearts of many,—she was the belle of every ball-room,—she might have kept her carriages. All these facts I have gathered from her own lips.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

A long absence from England had made me ignorant of my uncle and aunt's way of living; I had only returned from India on the day before my visit; and as they were my *nearest* relations, by full three hundred miles, I repaired at once to their neat habitation at Hendon—big with expectation of the delight they would feel at my return, and ready to answer the thousand and one questions I expected to be asked.

Judge then my surprise when, after a slight salutation, and the tea-things were removed, my uncle rubbed his back against his easy chair and fell asleep, and my aunt sunk into the sullen mood I have endeavoured to 'escribe. I began to fear some heavy calamity had befallen my family, which she was unwilling to break to me, but to all questions on such points I received satisfactory answers. Something was wrong—something had happened to sour my aunt's temper; but my uncle seemed to sleep happily and good naturedly enough—it was a matter that evidently had not reached him. I had a right to feel disappointed, and was getting into rather a dignified humour, when I heard my aunt muttering something to herself which ended with "Confound him!" As she said this, she stirred the fire vigorously, and in replacing the poker misplaced the shovel and tongs, Which falling with a splutter and clang awoke my uncle.

"What's the matter?" cried he.

"The matter, brother! the matter!" replied my aunt fiercely, "here's the old story again: three nights last week did I have to sit up for my gentleman! and its the same to-night;—but I knew how it would be;—I could see it as he went out of the gate: but if I don't find out his tricks—"

"Its very tiresome," said my uncle, and he fell asleep again.

Poor aunt Ursula relapsed into her former apparent agony of spirit, and refixed her eyes on the fire, occasionlly ejaculating, "I'll be a match for him—deuce take him—not a morsel of supper!"—and so on.

I remembered to have heard while abroad of a certain cousin who had been adopted as darling by my aunt, and who, like many other darlings, had run his own course, and turned out no credit to her rearing up; I naturally concluded he was the aggressor, and that could not mend the business by inquiring into it.

"Pray!" said my aunt, after suddenly ringing the bell, "Pray!" said she, as Sally entered the room, "what *is* the clock?"

"Nine, if you please ma'am."

"And is Jerry come in?"

"No ma'am."

"Bother him," replied she bitterly: I thought so;—bring up the tray."

The jingling of the supper again awoke my uncle, and he bustled towards it with the good humour of a kindly host willing to do the honours of the table; but my aunt moved slowly, and dragging her chair after her said, as she advanced, "It's my firm belief, brother, that those Miss Jones's encourage him."

"I think it very likely," said my uncle Benjamin.

"Then what *is* to be done?" said she, "am I to be deprived of my natural rest night after night?"

"You have your own remedy," replied my uncle, "get rid of him!"

"Brother! brother! are you mad?" cried my aunt; "are you at your time of life a sufficient guardian to a house like this? No, no, if Jerry has his faults he has his merits also."

"Is it usual," said I, seeing my aunt softening, "is it usual for him to treat you in this way? have you never reasoned with him?"

"Reason indeed—the brute!"

"Why it may not be too late to reclaim him, and the pleasure of doing so would amply repay—"

"Bah!" said my uncle.

At this moment there was a low growl at the outer door, followed by a clear boo, woo, woo, wooh!

"Thank heaven," exclaimed my aunt, rising from the table, "there he is!"

In a few seconds the parlour door opened and in rushed a fine black-tan terrier dog: his tail fell as he caught my aunt's eye, and he crawled imploringly towards me as she reached the little stick from the top of the looking-glass.

"And is this the culprit?" said I, on the servant's closing the door, "I expected to have seen my cousin Stanley."

"Alas!" said my aunt, shaking her head, and looking mournfully at the dog, "He has been dead these four years."

I afterwards learnt that Jerry had been the favourite attendant of my unfortunate cousin in his nightly rambles. My poor aunt Ursula who had loved her nephew, loved his dog also; but Jerry still clung to the old habits of his master. A chain and collar would have done the business, but my aunt was a lover of liberty, and would not hear of such a thing; she bore with Jerry as long as she could, but at last felt compelled to get rid of him on account of inveterate predilection for late hours. J. W.

NEW WAY TO GET MARRIED.

THERE is a singular, eccentric character, a methodist preacher, but, I have understood, a really pious and good man, by the name of Lorenzo Dow, otherwise "Crazy Dow," who itinerates at will through the whole of the United States and Canada, preaching, by appointment, often on the wildest and most romantic spots—from the tops of rocks or in the most sequestered vales. From the top of a rock he will give out an appointment, to be fulfilled, perhaps, five years after; and at the time named Lorenzo and an audience of four or five thousand persons will be found punctual at the spot agreed on. He was preaching in Washington city in June 1830, and I think it was General Green who stated of him that, at the close of a religions meeting,—he observed that he was inclined to *matrimony*. If any lady in his congregation had similar inclinations, she was requested to *rise*. A lady a little advanced in life gave the required intimation. Lorenzo visited her—she became his wife, and shared her fortune with him.—*Mackenzie.*

ON THE SILVER MOUNTAIN OF POTOSI, IN PERU.

A South American writer who ascended to the top of this mountain, has given us the following effusion on the good and bad effects of the riches it has produced. The sublimity, he says, of the surrounding scenery did not so much interest my feelings as the celebrated mountain which has poured forth its lavas of silver upon the world, to animate enterprize, and reward industry; to pamper the luxurious, and minister to the comforts of the sober and the virtuous; to disseminate knowledge and religions, and to spread the desolations of war, marshalling armies in the field, and pointing the thunder of navies upon the ocean; filling cities with monuments of taste and art, and overwhelming them with ruin; founding mighty empires, and levelling them to the dust; inciting, in short, to virtue and to vice, and being the source of much good, and the root of all evil in the world.

WAY TO WEALTH.

Wealth would be wealthier still, and aye to gold aspires:
Wealth, would'st thou wealthier be? diminish thy desires.

BIRMINGHAM RAILWAY.

The traffic between Birmingham and London will be understood by the following estimate for one year, by the present road and canal conveyance. Passengers, 233,155; goods, 62,398 tons; parcels, 46,799; beasts, 50,839; sheep, 365,000; pigs, 15,634. The expense by the existing means of transit is about 1,331,217*l.*; while by the railway it will not exceed 800,728*l.*; thus exhibiting an annual saving to the country of 537,489*l.* independently of the advantages to be expected from the unrivalled celerity of this mode of conveyance.

A DISCOVERY OF THE SECRET OF MAKING INDIAN CURRY.

(From Capt. Hall's third Series.)

Pound well together twelve parts of coriander seed, two of black pepper, one of cayenne, three of cummin (cumin), and five of pale turmeric; then add a few cloves, a bit of cinnamon, half a nutmeg, and two or three onions. The liquid, or the gravy added to this mixture, consists of ghee, a sort of boiled or clarified butter. The ghee is an article of popular consumption throughout Hindoostan, and the best is made from the milk of the buffaloe. In the north of India, a little milk, or dhye, which is curdled milk, is added; and, amongst the Malays, the custom is to use the ground kernel of the cocoa nut as the gravy of curries. A great many varieties of rice are used with curry, and such is the power of the instinctive attachment of man to the place of his nativity, that the inhabitants of a given district will, under no possible circumstances, be induced to consume any rice but that which is grown in their own territory.

VERY INDIGNANT!

IN the last number of the Cape Town Literary Gazette, is an article headed "Degraded State of New South Wales." We felt astonished that our neighbours should publish such a *libel* on this Country. When the South Africaners abolish slavery, when they improve their poisonous wine, and make as much wool from their sheep as will serve to cover their miserable Hottentots, they may then cast reflections on this Country. We assure them, this Colony never was in a more prosperous state. It is true we have a large proportion of convict labourers, but we see no degradation in this fact, when we know that the Cape Colonists exulted, some time ago, in the idea that they should procure about 200 convicts to form their Jetty, and felt aggrieved that they did not succeed in their application. It is invidious to talk in this manner of a neighbouring Country, as they are obliged to us for easing them of 40,000 lbs. weight of fruit, and 157,000 gallons of wine, in one quarter of the past year. It is to be regretted, that such ill-judged articles should issue from the Press.—*Sydney Herald.*

CHARACTERISTIC OF SCOTCH ECONOMY.

AN old negro, who had been sold and re-sold again and again, with the estate to which he belonged, and had thus passed the ordeal of the ownership of individuals of many nations, was asked, by a student of the natural history of man, which nation he liked best. He replied, "Massa, me like um Spaniard berry much; me like um Frenchman good berry, not like um Spaniard. Me like English buckra sometime, Me no like um Dutchman. But, Massa, worser an all, me no like um Cotchman; rascal Cotchman no good for um Nigger." "Why so?" asked the interrogator. "Golly, Massa," was the reply, "um Cotchman him gib poor Nigger him fish wib only one yeye." The fact was, that a frugal native of the North, having made the discovery that his estate was not so profitable as he could wish, became the first inventor of the process of splitting herrings in twain, and thus making one negro ration do the work of two.—*Murat's America.*

THE SUN.

A Translation from the Dutch Poet HUIJGENS.

Measurer of our days from heaven—
Year-disposer—glorious eye;
Mist-absorber—spring-returner—
Day-prolonger—summer's mate;
Beast-annoyer—visage-burner—
Fair-one's spoiler—maiden's hate;—
Cloud-disperser—darkness-breaker—
Moon-surpriser—starlight-thief;
Torch-conductor—shadow-maker—
Rogue-discoverer—eyes' relief;
Linen-bleacher—noiseless stroller—
All-observer—gliding all;
Dust-disturber—planet-roller—
Traveller's friend, and day-break's call.

"HOCUS POCUS."

THE terms "Hocus Pocus" have been derived by some from the words used by the priest in the celebration of Mass, when the transubstantiation is believed to take place, "*Hoc est Corpus*," &c.; but a far more like etymology appears in the following extract from the notes to Pennie's *Britain's Historical Drama*:—"*Ochus Bochus* was a magician and demon among the Saxons, dwelling in forests and caves; and we have his name and abode handed down to the present day in Somersetshire."—*Note to the Dragon King.*

Thus, it appears that modern conjurors, in making use of the words, are invoking the name of their *powerful* predecessor.

Patronage.—In Britain, the love of art is not a common passion: every day we see the merest daubers patronized by the highest of the land; and men unworthy of preparing sculptors' modelling clay, employed to make the statues of heroes and legislators. The public run after whatever is strange or new; and whether it be a so-called genius, or merely some far-fetched oddity, the gaping wonder of the multitude lasts but for a season, and is ever ready to welcome new entertainers.—*Allan Cunningham.*

Beating with the Shoe is a well-known chastisement in Persia, and the shoe being shod with iron, and the blow given on the mouth, the punishment is severe. This use of the shoe, observes Mr. Morier, is quite characteristic of the Eastern manners described in Scripture. The shoe was always considered as vile, and never allowed to enter sacred or respected places; and to be smitten with it, is to be subjected to the last ignominy. Paul was smitten on the mouth, by order of Ananias.—(Acts, xxiii. 2.)

Lions.—The distance which lions travel in search of water is enormous: the footmarks of one of these animals have been traced, the next day, upwards of forty miles.

Bottled Tears.—In some of the mourning assemblies of the Persians, it is the custom for a priest to go about to each person at the height of his grief, with a piece of cotton in his hand, with which he carefully collects the falling tears, and which he then squeezes into a bottle, preserving them with the greatest caution. This practically illustrates that passage in the 56th Psalm, viii.: "Put thou my tears into thy bottle." Some Persians believe, that in the agony of death, when all medicines have failed, a drop of tears so collected, put into the mouth of a dying man, has been known to revive him; and it is for such use that they are collected.

Compliment to the Female Sex.—In one of the ancient councils, it was proposed as a question of doubt, "whether women were human creatures or not;" and, after a long debate, the question was decided in favour of their humanity.

Lord Byron.—The present Lord Chancellor Brougham was the real author of the famous article in *The Edinburgh Review*, on Byron's juvenile production, "Hours of Idleness;" for which Jeffrey was so severely taken to task in the satire, "English Bards and Scotch Reviewers."

The Dunmow Prize.—The last time that the flitch of bacon was claimed by a married couple at Dunmow, in consequence of their having been married a year without either repenting of the union, was in 1751.

Poor of Paris.—It appears from an official return of the state of the population of the French metropolis for 1832, that the whole population amounts to 770,286, of which 69,986 are maintained at the public expense.

A Timely Repartee.—A soldier of Marshal Saxe's army, being discovered in a theft, was condemned to be hanged. What he had stolen might be worth five shillings. The Marshal meeting him as he was being led to execution, said to him, "What a miserable fool you were, to risk your life for five shillings!"—"General," replied the soldier, "I have risked it every day for five-pence." This rapartee saved his life.—*United Service Journal.*

Humanity of the English.—Henry VIII. could not prevail upon any Englishman to put Anna Boleyn to death, so that she was actually beheaded by the hangman of Calais. Stow says that she was executed by the sword; but the people in the Tower show an axe as the instrument.

WIE IS HET, DIE SOO HOOGH GEZETEN.

A Translation from the Dutch Poet VAN DEN VONDEL.

'Tis GOD! who pours the living glow
Of light, creation's fountain-head:
Forgive the praise—too mean and low—
Or from the living or the dead.
No tongue Thy peerless name hath spoken,
No space can hold that awful name;
The aspiring spirit's wing is broken;—
Thou wilt be, wert, and art the same!
Language is dumb—Imagination,
Knowledge, and Science, helpless fall;
They are irreverent profanation,
And thou, O God! art all in all.
How vain on such a thought to dwell!
Who knows Thee—Thee the All-unknown?
Can angels be thy oracle,
Who art—who art Thyself alone?
None—none can trace Thy course sublime,
For none can catch a ray from Thee,
The splendour and the source of time—
The Eternal of eternity.
Thy light of light out-pour'd conveys
Salvation in its flight elysian,
Brighter than e'en Thy mercy's rays;—
But vainly would our feeble vision
Aspire to Thee. From day to day
Age steals on us—but meets Thee never:
Thy power is life's support and stay—
We praise Thee—sing Thee, Lord! for ever.
Holy—holy—holy! Praise—
Praise be his in every land;
Safety in His presence stays—
Sacred is His high command!

FAREWELL TO TIME;
Or, Last Views of Life.

LORD GAMBIER.

The late Admiral Lord Gambier, whose death was recently announced in the newspapers, when visited by his parish minister, the Rev. Mr. Ward, Vicar of Iver, said to him, just previous to his departure,—"When I am deposited in the ground, you will have to perform the service; you will say something over me; pray be as concise as possible; but remember these words:—God so loved the world, that he gave his only-begotten Son, that whosoever believeth on Him, should not perish, but have everlasting life! This is my hope. That is my Rock of Ages, in the Father, and the Son, and the Holy Ghost!"

THE EPISCOPAL CHURCH OF ENGLAND.

The General Society for promoting District Visiting, similar to that among the Dissenters, appears to be extending its usefulness. The one in London is connected with 573 visitors. During the last year, 10,455 families were visited monthly on an average; 2,941 children had been sent to school; 2,191 persons had received medical relief; 47 had been sent to hospitals; 10,000 reliefs had been given either in food, money, clothes, or coals; and 102,622 tracts had been circulated. Similar institutions, in connection with the Church of England, are forming in the cities, towns, and parishes of the empire.

NEW CATHOLIC CHURCH.

This new Church, according to the French papers, is making considerable progress in France. Its members disown the authority of Rome, or any foreign authority. They perform the whole of their ceremonies in their own language, that the people may understand that which they are called on to profess. They moderate several of the ancient tenets, reduce the number of sacraments, and abolish the celibacy of the priesthood.

ANECDOTE.

Lord Byron and Sir John Malcolm.

At Murray's (the Bookseller,) dinner table, Lord Byron and Sir John Malcolm, with other distinguished guests, were present. Lord Byron talked of intending to travel in Persia. "What must I do when I set off?" said he to Sir John. "Cut off your buttons!" "My buttons! what, these metal ones?" "Yes; the Persians are, in the main, very honest fellows; but if you go thus bedizened, you will infallibly be murdered for your buttons!"

THE PRESUMED ADVANTAGES OF THE CHANGES IN THE GOVERNMENT OF INDIA.

IT will lay open to the commercial enterprise of Great Britain the trade of the Chinese empire, which has lain under the incubus of the monopoly for two whole centuries; that is to say, the trade of 370,000,000 of industrious though distant people, for such, by a very recent census, is ascertained to be the actual population of China. It will remove the remaining shackles from the commerce of India. It will abolish the abomination of a trading government over 80,000,000 of subjects and 60,000,000 of tributaries or allies. It will put a stop to the Indian governments trading with the revenue of the country, and thus incurring, as heretofore, the risk of sacrificing in a single year, a full half million of the revenue. It will relieve the British nation from a tax of 2,000,000*l.* per annum, paid to the East India Company for the article of tea; (!!) it will give us tea at half the present price, or in other words, for the same money, enable us, if so disposed, to consume double the same quantity. It will abolish jobbing at the India House in commercial salaries, pensions, and other items, to the yearly amount of more than 300,000*l.* sterling. It will put down jobbing in voyages and shipping, direct and indirect, to the extent of 50,000 tons burthen. It will put an end to a very gross job in China—the factory there, equal to about 120,000*l.* per annum. It will put down jobbing in British India, in commercial salaries and offices, to the full extent of 120,000*l.* per annum.—(*Westminster Review.*)

How to Revive Gilt Frames.—Beat up three ounces of white of egg with one ounce of chloride of potasse or soda, and go over the frame with a soft brush dipped in this mixture. The gilding will become immediately bright and fresh.

TWENTY MILLIONS.

THERE is a clever article in the last Westminster Review, under the head "*Sugar without Slavery.*" The object of the writer is, in the first place, to shew that sugar may be obtained to an almost unlimited extent from the Eastern world—the produce of free labour; and that, notwithstanding SUGAR AND SLAVERY are so generally associated in the minds of Englishmen, that "the sweet may be obtained without the bitter, and that there is no necessary connexion between bondage and muscovadoes."

The Reviewer is utterly opposed to compensation, and observes respecting the vote of twenty millions to the planters—"If it had been to relieve the people from a tax on labour or knowledge; if it had been to serve the cause of humanity at home, or support the true honour of the country abroad, it would have been the maddest of all things to attempt to get 100,000*l.*; but when it was to pay robbers for having robbed us hitherto, the crooked was made straight, and all rough places plain. In one of the wars in the East, a party of irregular horse came to a shepherd: 'We are hungry, give us mutton!' The shepherd killed and set before them, and waited on them at their meal; and when they had done, 'Now pay us for eating it,' said the in-grained ruffians; and their host was obliged to surrender all the money he could produce. *The people of England have been made to pay twenty millions for having their mutton eaten.* All the claim of the plunderers arose out of the fact that they had taken two millions a year from us before, by forcing us to pay a fraudulent price for slave-grown sugar; and *for this* we are to lay down twenty millions more. It is a part of our born-thraldom; and we must get rid of it, like the negroes, when we can."

THE WORLD'S PHILOSOPHY.

(*Translated from the German of Goethe.*)

Go! but hearken to my preaching!
Cast aside thy youthful folly,
Be by times thy young soul teaching,
Of mortals the immortal folly:
Calm and cruel—calm and strong,
Like one who does not suffer wrong,
Live from love and passion free:
Thou must swim or thou must sink,
Thou must venture or thou must shrink,
Thou must serve, or thou must reign,
Thou must lose, or thou must gain—
Hammer or an anvil be!

SELECT NOTICES.

Ignorance.—It has lately been proved before Parliament, that out of 260 malefactors in the agricultural districts, not one could read: that in the town of Bedford, out of 50 criminals, only 4 could read: that in Herts, out of a population of 41,700 only 24,220 were able to read.——*Austrian Jealousy.*—The Press is so steadily watched, that a life of *Hofer* cannot be purchased at any price throughout the Tyrol.——*The Poetical in Childhood and Old Age.*—When I am a man, is the poetry of childhood. When I was a child, is the poetry of age.——*American Missions*—The American Board of Commissioners for Foreign Missions, are about to send out FIFTY Missionaries to Bombay, Ceylon, Siam, China, Persia, Black Sea, Cyprus, Samos, Candia, Negropont, Smyrna, Western Africa, Patagonia, Lake Superior, Upper Missisippi, Upper Missouri, Cherokees, Arkansas Choctaws, Greeks, and other quarters of the globe.

Ink Stains may be taken out of paper in a minute or two by applying a little chloride of soda with a feather or hair-pencil; and the paper rendered as fit for use as before by doing over the spot with isinglass, gum-arabic, or the white of an egg.

A Fire Screen for Ladies.—Draw a landscape on paper with Indian ink, representing a winter scene, or mere outline; the foliage is to be painted with

Muriate of cobalt ..... green.
Acetate of cobalt ..... blue.
And muriate of copper..... yellow.

which will all dry invisible. Put the screen to the fire, and the gentle warmth will occasion the trees, flowers, &c., to display themselves in their natural colours, and winter is thus magically changed into spring.—N. B. When the paper cools, the colours disappear, but the effect can be re-produced at pleasure.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

African Expedition —The latest accounts received from this interesting expedition left them in the Nun River; prior to its arrival there, we regret to state that Capt. Harris, the commander of the Quorra, had died of fever. The crews generally were however healthy, and Mr. Laird and Mr Lander were in the best possible health and spirits.

Is the Moon inhabited?—Telescopes must be yet greatly improved, before we can expect to see signs of inhabitants, as manifested by edifices or changes on the surface of the soil. It should, however, be observed, that, owing to the small density of the materials of the moon, and the comparatively feeble gravitation of bodies on her surface, muscular force would there go six times as far in overcoming the weight of materials as on the earth. Owing to the want of air, however, it seems impossible that any form of life analogous to those on earth can subsist there. No appearance indicating vegetation, or the slightest variation of surface which can fairly be ascribed to change of season, can any where be discerned.—*Sir J. Herschel on Astronomy.*

Buonaparte's Recipe for dispersing a Mob.—When Louis the XVI. pusillanimously placed on his head the red cap at the command of the ruffian *Sans Culotes*, Buonaparte, who had wandered from his caffè towards the Tuilleries, could not suppress his surprise and contempt when he saw Majesty so degraded. "The wretches!" said the young artillery man, "they should have cut down the first five hundred with grape shot, and the rest would soon fly." And he added, "as to that fellow with the red cap, it's all over with him."

Distressed State of Literature.—Whether it be owing to the numerous cheap publications, which pillage the contents of every original work worth reading or not, we do not pretend to decide—but certain it is, that the state of literature in London is more depressed at present than it has been for many years. Publishers appear to have lost all spirit, and the book-sellers' shops are as dull and quiet as if the city had been untenanted by the plague.
(Sun.)

Decline of Paganini's Popularity.—An extraordinary change seems to have taken place in the public mind with respect to Paganini; his concerts, on his first visit to this country, were so well attended, that frequently his receipts exceeded £1000, and, on one occasion, £1400 were received, (of which he had two-thirds, leaving Mr. Laporte to pay the whole of the expenses out of the remaining third.) On his arriving here, about two months ago, he was advised to defer giving any concert until the answer caused by his refusal to play for the distressed English actors in Paris should have blown over. It being supposed, however, last week, that this affair had been forgotten, and that there was every prospect of obtaining full houses, Paganini announced a concert for Friday evening. On Thursday, so few boxes and stalls had been taken, that Paganini, despairing of an attendance that would compensate him for his trouble, and dreading, perhaps, that there would be some disturbance arising out of the Paris affair, on Friday advertised that there would be no performance!—*(London Paper.)*

King James's Clasp-knife.—The word "Jockteleg," which is still Scotch for a clasp-knife, was of unknown etymology till a knife was found with the inscription, "Jacques de Liege," who was a famous cutler, and supplied Scotland with clasp-knives. It is said of James VI., that to puzzle his courtiers in England, he one day said to his stable boy:—"Callan, ha'e, there's thretty pennies, gae wa, and buy me a jockteleg; an' gin ye byd, I'll gang to the bougars o' the house, an' tak' a cabar and reesle your riggin wi' 't." That is, "Boy! here is thirty pence, go and buy me a clasp-knife: and if you delay, I shall go to the roof of the house, and take a rafter and thresh your back with it."—*Jamieson's Dict. in Voce.*

Extraordinary Travelling.—A gentleman of Cheltenham left the Pier-head, at Kingston, Dublin, at five o'clock on Monday afternoon, and arrived in Cheltenham at half-past six on Tuesday a distance of nearly 260 miles.—*(London Paper' of July.)*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

MORE COPY!

Reader! wast thou ever haunted with a De'il—black or blue?

"Oh, ye powers, (for powers ye are, and great ones, too,) which enable mortal man to tell a story worth the hearing,—that kindly shew him where he is to begin it,—and where he is to end it,—what he is to put into it,—and what he is to leave out,"—besides the head and front of the offending, which is generally the most dreaded part of it. How many of our readers must have been perplexed when about to indite an epistle, and have groaned over the first ten lines, while the flow of the imagination was getting fairly into wind, and then the pen of the ready writer would become perceptible. Yet how few, perhaps, of our readers, have ever been doomed to experience the internal agitation which WE are sometimes thrown into, when engaged in our other avocations, by one of our De'ils, who, doffing his beaver from its peg, and placing his fungous-looking *black ball** under his arm, rushes into our apartment with a furious aspect, and a demand for "more copy." We are sure, however, some good reader has been, during his life, drawn involuntarily from his warm bed on a cold winter's morning, to shiver along the streets, with his satchel on his back, and has, moreover, laid awake many an hour in dread of the lighted taper, and the house-maid, to intimate to him the hour of elevation. Yet, is this equal to a demand for "more copy?"

"More copy" may, nevertheless, be readily given, when poets, prosers, writers, reviewers, and critics, all crowd to fill our columns with their labors; but at the Cape, the air, however ethereal, is, somehow or other, anti-poetical, anti-prosaical, and anti-everything which savors either of literature or its pursuits. We have heard of such things as Balaam-boxes, and once bought one for our use; but that, oh, the march of degeneracy! has long been converted to a far different purpose: reader, it is now a coal scuttle! What an emporium of first ideas—of essays, critiques, sonnets to blue eyes and black eyes, have we beheld extracted from the editorial reservoir of a London Literary Gazette. How delightful to peruse the manuscript of L. E. L.'s productions. The only difficulty there, was to evince a taste by a choice selection—like a lady in a draper's shop, when the counter is strewn with the richest Gros de Naples and satins. But where are our Cape poets? They come to us like angel's visits—few and far between. Where are our prosers? Husbands who encourage "tired nature" after dinner. Writers? Gentlemen on sick leave from India Reviewers? The officers commanding the garrison: and Critics? Hush, while we tell you who are critics. All the world's a critic. Thou, fair reader! will even criticise this assertion if we are not mistaken. Every man, woman, and bairn who ever came into existence, live amidst their criticisms of the human race

Yet how is this? Can it be maintained that our soft blue skies—our pellucid firmament—our noble mountains—our genial breezes—the ethereal air that we breathe, and the rides and walks which we constitutionally enjoy:

"The mossy fountains and the sylvan shades,
The dreams of Pindus, and the Aonian maids."

And above all, that monotony which is so loudly declaimed against, are not conducive to make some writers amongst us, energetic;—to call forth those latent talents which many of you possess. Nature hath scattered throughout the entire universe a race of poets, even from the east to the west, and surely when she touched at the Cape, she must have expended a portion of her poetical dust in exchange for our artificial produce. We prophecy that, as a duteous author, we shall have, ere long, to dirge forth "the lay of the last Pringle." The plain ingredient of fact is, that we all want to be amused, yet we are, individually, too inert to devote a few hours in the month to each other's gratification. We have not even a drama that would charm the heart of a school-boy. Histrionic scenes are sometimes attempted, but, like every thing else, they are ill supported. Have we no players? Shakespeare hath said, all the world's a stage. Our parsimony is by no means outrè; on the contrary, our means vie with our will to encourage every

* A black ball is an instrument well known to printers, and is used in pressing the ink on to the type.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

thing which has novelty, and which is attempted for our edification. As an instance of this, let us not forget the brilliant attendances at Masoni's concerts; and that, out of an audience of about 400, scarcely twenty individuals understood music sufficiently to appreciate or to comprehend the *really* excellent *parts* of his performance. We wondered, and so did our Dutch brethren, at seeing a Cape-born youth performing at the theatre the other evening some common-place gymnastics. We must forbear, however, to speak even a sorry word of the Dutch exhibitions and plays, for nothing can be more respectable and neat. Every one appears, from the most insignificant character to the hero of the piece, to devote his ability for the accomplishment of his part. Take also a cursory glance at the house, and rest for awhile on the women—one magic circle of dress, gaiety, and pretty faces;—the pit, a gentle race of husbands, brothers, and lovers, lending their ears and their laughter;—the Gallery, a gallery of pictures, decency, and decorum, though clad in frames of ebon black. In the English plays of late your eyes literally ache in the attempt, as my Uncle Toby would say, to decipher a woman, and the Gallery is but a too faithful representation of England's Deii—one disturbing system of catcalling, thumping and swearing, with an occasional interlude of "Bob and Joan," or a fund of whistling choristers reviving "the good old days of Adam and Eve."

But we are digressing too much, and must finish these desultory remarks, for what was to be the text when a demand was made upon us for "more copy" by our imp, we could scarcely divine. Yet "more copy" was absolutely necessary, and we must go on till we furnish the required modicum,—like a meat jack till the mutton be roasted, or which sounds the more lady like,—a musical box till the machinery gets exhausted. We felt like our medical friends, sadly in want of *a subject*—and like our friends who are dying of ennui, the persecution of our devil. We will, in conclusion, cordially recommend to all men who have leisure hours to dispose of, or those who leave their sanctums at three to a minute, to exert their intellectual ideas of trying to produce a little copy—even if it be but an Epitaph, or some gentle aperient to improve their talents, and to fill our pages. What are the Cape Youths doing—the Collegians? Why ar'n't they made to produce a periodical essay, which we would with pleasure insert within our columns. We have Latin type as well as English. But they do not—alas! we are an incomprehensible set.

THE CROPS.

THE prospects of rich abundance appear from the most impartial accounts, to be unprecedented in the colony. Barley and oats, and the corn lands in general, present a luxuriance of the most cheering description.

GRAHAM'S TOWN READING SOCIETY.
Oh! Oh! Oh!

"AT a General Meeting of Subscribers to the Graham's Town Reading Society, held this day, (Tuesday, the 17th instant,)—It was moved and seconded—that this Society be *abolished* from the end of this month; and that the books, &c. be sold at public auction."—(*Graham's Town Journal, 19th Sept.*)

In Country Parish!—library!
Sure the thought is quite vagary!
Will *farmer-ers*, with heads quite muddy,
Leave their ploughs to take to study;
Bore their heads with Hydrostatics,
Algebra, or Mathematics;
Learn Hebrew, Greek, and Latin tongue,
With thousand other things among?
Read Ovid, Horace, twenty more,
Who lived in ages long before?
Chop Logic, study Globes, view Stars,—
Read Homer, Virgil on the wars?
Books, indeed! for such as *We!*
Who have to do with Gee-up-gee!
And tend to locusts and *ox-ides*,
With lots of other things besides—
Such as the work of—Legislation,
To fit us for our future station,
When WE become a——*Corporation!*
To Books, then, Sirs, we will not yield—
"The King himself lives by the field,"
Horns, Hides, and Ivory, Beef and Chops,
All rise from farmers' sweating drops.
For Libraries we ne'er will mourn,
Then—going—going,——*gone!*

SLAVE VALUATION.

The indemnity is said to be estimated at one-third value of the slaves, viz:—one-third of an able-bodied slave £55; ditto one past his prime, £25; ditto a child, £10. Putting the three sums together, the amount is £90, which gives £30 as the average; and £30, multiplied by 700,000 gives £21,000,000, as the third part of the whole, old and young.

POST WAGONS.

THE public will rejoice to learn that every exertion is making in the interior, to carry into effect the proposition of the Postmaster-General for Post *Wagons* from Cape Town to Graham's Town. We sincerely hope the plan will succeed; it will be an immense acquisition to both towns, and more especially in affording accommodation for small parcels and a couple of passengers.

"GATHER UP THE FRAGMENTS THAT REMAIN, THAT NOTHING BE LOST."

NEVER was advice so important as it respects Cape Town, and the desecrated shores of Table Bay. The daily waste from the Butchers' Shambles would amply feed the starving population of an Irish village. Let us take the simple bones alone, which are found in such heaps along the strand. Let us view them independently of their intrinsic value in the service of agriculture, &c. The 15 parts of bone commonly contained in 100 parts of butchers' meat, will yield 6 of a pure substantial alimentary substance; consequently, the 100 parts of butchers' meat which have hitherto produced no more than about 24 parts of aliment, will now produce 30, if the gelatine and fatty substances of the bone be made use of; thus increasing the available portion of animal's flesh by one-fourth, or making four oxen go as far as five. At a late meeting of the *Académie des Sciences*, of Paris, M. Darcet stated that the Committe of the Faculté de Medicine had reported as follows:—1st, That the employment of gelatine not only introduces into dietetics a great improvement, but an economy that should not be neglected; 2d. That the broth of bones is as agreeable as that which is usually employed in the hospitals; and 3d, That it is nourishing, wholesome, and of admirable digestion.

But let us look a little farther on the importance of gathering up the Fragments. The skins used by the gold-beaters are produced from the offal of animals. The hoofs of horses and cattle, and other *horny* refuse, are employed in the production of the prussiate of potash, that beautiful crystallized salt which is exhibited in the shops of some of our chemists. The worn-out saucepans and tin-ware of our kitchens, when beyond the reach of mending, are of use. They are cut into strips, punched with small holes, and varnished with a coarse black varnish for the use of the trunk-maker, who protects the edges and handles of his boxes with them; the remainder of what is supposed useless of even the fragments of these are conveyed to the manufacturing chemists, who employ them, in conjunction with pyroligneous acid, in making a black dye for the use of calico-printers. Bone carts travel all over Great Britain for the article of bones; so do carts for old woollens; and the *rag-business* is well known to be one of vast utility and profit. *Gather up the Fragments.*

WHAT'S IN A NAME?

Everything. A talented speaker at the Minor Institute the other evening, observed, that if Mr. Bowie's judicious remarks on roads, and overcoming the sand-barriers between Cape Town and Stellenbosch, and which were inserted in this Journal, had been christened with a dignified name, no doubt the public would have followed up the plan. It is just because it was not called the GREAT, GRAND, IMPERIAL STELLENBOSCH ROAD COMPANY, that we are still destitute of those *fresh* and cheap essentials of milk, eggs, butter, and vegetables which are so abundant and so excellent at Stellenbosch.

THE WATERY GRAVE.

We look in vain to see thee now,
In spots in which thou dwelt before;
We miss the brightness of thy brow,
And meet thy sunny glance no more!

That glowing youthful heart lies cold.
The dreams which fired his brain are o'er;
The ship-boy's simple tale is told—
He perished near his native shore.

Yet in the lonely watch of night,
Some hearts may on his memory dwell;
And in the soft-winds murmuring flight,
Still seem to catch his funeral knell.

Then as the sea surge dashes slow,
And sleeps the moon upon the wave;
One tear of pensive grief may flow,
Whilst gliding o'er his watery grave.

LECTURES
ON NATURAL PHILOSOPHY.

Lecture xi. By Orlando.*

[On the Formation of Insects—Their Classes and Importance——Their Metamorphosis—Their Actions and Habits—Their Senses—Qualities —Mind and Feelings.]

The Insects and Worms were the "creeping things" which were ordered to appear among the creations of the sixth day. The Insect race are, in number by far the most considerable portion of animated beings: and whoever duly sudies their habits, economy, and uses, will acknowledge that they have been created with design; and will not doubt but the design was benevolent. (1) The triple metamorphosis or transformation which most of them undergo, has been said to be effected by casting off the different coats or coverings in which the perfect is inclosed; but it may be more near the unknown truth to say, that the perfect Insect is forming or developing in the first or Caterpillar's state, and is completed in its second or Chrysalis condition, from which it emerges into a new and more active existence, which is its last and re-producing form.

Linnæus arranged them into seven Orders; and these into many Genera which were again sub-divided into a large multiplicity of species. The real quantity of these we may conceive when we find that three thousand of them are to be found in Great Britain alone. Those in Britain, are probably not one half of the European Insects; while we know that every other quarter of the globe is still more prolific in species wholly different. Every kind of plant probably affords nutriment, on the average, to three or four species of Insects. Hence there can be little doubt, that the Insect is vastly more populous, than the Vegetable world. Mr. Kirby states the British Insects to be 10,000; and that the number in the whole globe may amount to 400,000 species. In our Cape Colony, the number of Insects is very considerable: and so recently as 1820, M. Lalande sent home 1,500—hitherto undescribed.

The metamorphosis of Insects are their most characterizing peculiarity. In these we certainly behold three distinct animals, as dissimilar from each other, in some genera, as the Bird is from the Serpent and the Shell fish; and yet united into one and the same living being, by the personal identity of their principle of life. This only continues permanent and abiding through their triple change of material form. The bodily substance undergoes the most striking mutations; but the existing and feeling self, remains unceasing and unaltered through all. The same animal crawls in its caterpillar shape; rests or sleeps in its torpid chrysalis; and springs from earth into air, with its new wings, its proboscis, and its antennæ, in its Butterfly or Moth configuration. What a stupendous wonder this magical transformation would be to us, if it were not so familiar! Just for one moment contemplate that Butterfly which I now present to your view. If, at its first exclusion from the egg, and for some months of its existence afterwards, was a worm-like Caterpillar, crawling upon sixteen short legs, greedily devouring leaves, with two jaws, and seeing by means of twelve eyes, so minute, as to be nearly imperceptible without the aid of a microscope. You now view it furnished with wings, capable of rapid and extensive flights. Of its sixteen feet, ten have disappeared; and the remaining six are in most respects wholly unlike those to which they have succeeded. Its jaws have vanished, and are re-placed by a curled-up proboscis, suited only for sipping liquid sweets. The form of its head is entirely changed: two long horns project from its upper surface; and instead of twelve invisible eyes, you behold two very large ones, *and composed of at least* 20,000 *convex tenses, each supposed to be a distinct and effective eye!*

There is no reason to doubt, that all the parts of the Butterfly are in the Caterpillar; as those of the human being are in the oral embryo. The material mechanism, the specific organization, is all ready and arranged; though not at first discernible, from its invisible minuteness. (2) Gradually, this hidden form increases into an object of sight; every limb and function enlarging in just and progressive proportion; until the complete figure, so exactly beforehand conceived, assigned and provided, grows into its last perfection, and emerges like a new creation, into its aerial and beautiful vivacity. (3) It seems like a resurrection from the tomb into a fresh life, with celestial distinctions. It is so analogous to that which the human spirit is appointed to undergo, that the

* Delivered before the Members of the Poker Club.

(1) Samonelle's Entomologist's Companion. All genuine Insects have six legs; a head distinct from their body, furnished with two antennæ; pores for respiration, conducting to tracheæ, arranged along their sides. They are all produced from eggs Some undergo no metamorphosis; others but a partial change; whilst the remainder pass through three stages of existence, after their egg state.

(2) A Caterpillar is not a simple, but a compound animal, containing within itself the germ of the future Butterfly.

(3) In the internal conformation, the changes are even more extraordinary. In the former, we find some thousands of muscles, which in the latter are replaced by others of a form and structure entirely different. Nearly the whole body of the Caterpillar is occupied by a capacious stomach. This has become converted in the Butterfly, into an almost imperceptible thread-like viscus, and the abdomen is now filled by two large packets of eggs, or other organs, not visible in the first state.—*Kirby, &c.*

lege of wit-crackers, with reasons as plenty as blackberries, cannot turn *him* from the career of his humour.

The village of Stellenbosch is not, I believe, a favorite with Cape folk. To me, its air of retirement and of peace were "quite refreshing." How bitterly did I lament as I galloped along the horrid, stale, and unprofitable flats, that I had not listened to the advice of friends, and preferred the alternative of the veil, to giving my countenance to such enormities as sun and sand-flies.

Perhaps, however, this ordeal heightened the satisfaction with which I entered this pretty Dutch village, and rode slowly through its wide silent streets, lined with fine oak-trees. Here is the parade, traversed by the indispensable ditch; there, the solemn and stately Stadhuis, flanked on one side by the great tronk or prison; on the other, by a noble avenue of oaks; opposite, is "the holy edifice of stone," with its walled church-yard, and the usual monuments of mortality; its gates are open, and the white-washed rows of houses which diverge from the spot, with their fantastically-carved gables fronting the street, look like a troop of boarding-school misses, hair newly curled, and in their Sunday's best, ready to march to the church At any other moment I should, perhaps, have thought the place dreadfully sombre and stupid; scarce a human being is to be seen stirring, not even a beggar, trailing his staff after him, to disturb the summer dust, and you might fancy you were passing through a city of the dead, but for a glance here and there behind some window-frame at the rubicund visage of some burly burgo-master, with fair round belly, seated in his round, narrow, hard, wicker-bottomed, high-backed chair, on one side of a small square table drawn close to the window from whence he is contemplating; on the other side of the board, similarly seated, but enjoying the advantage of a possible retreat from curious observation behind the window-curtain, and into the obscurity of the corner, the comely countenance and ample charms of his portly dame. On the table between them is a China jar, containing a bulky and brilliant bunch of flowers; he is *employed* in smoking and soaking, she in silence and simper; and there sit they, like Beatrice among the bachelors in heaven, as happy as the day is long.

Let no man who would be well with a Dutchman in the country, omit, ere entering his house, to shake hands with him, his sons and his daughters, his man-servant and his maid-servant, and the stranger that is within his gates. I am not sure that ladies are exempted from this ceremony, but as I never found any objection raised on the score of being gloved, and as "a lady's privilege is as potent as a lord's" everywhere, I would recommend them to do the same.

Welcomed within the cold brick-floored hall, your patience and perceptions alike exhausted by the glare and the gravel you have been subjected to, you are backed into a corner of the room by your host, who looks and acts like one having authority, with the words of power—*Sit, Mynheer*. No matter how anxious you may be to stretch your weary limbs, or unwilling, let us suppose, to be seated before him; a spell has fallen upon you, and sit you must upon that same narrow, hard, high-backed chair you saw at the window. Your host seats himself *en face;* and, if you have a companion, he is directed *into* a similar settle against the wall; and now, through the palpable obscure of the opposite corner you begin to perceive emerging a massy form in female costume, whose calm, broad, thoughtless aspect breathes repose, a comely full spread matron, evidently not blown with grief like Jack Falstaff, but more probably like the porter at the gate of the Castle of Indolence, "swol'n with sleep." Slowly she advances, and in some guttural exclamation unutterable, save by a turkey-cock, bids you good day. Anon, with a scream like a peacock's, she calls for *Mietje* or *Elsje*. A woolly-headed female domestic appears, with whom the dame retreats into the penetralia of her castle, and presently from within are heard the clatter of knives and plates, and the screaming of children.

By this time you have concluded the purgatorial period of compulsory civility, recover your legs, and involuntarily make for the door, and thence across the court-yard to the stables, that oasis of freedom, that Goshen of liberty, where one forgets the invidious distinctions which "education and government" have placed between man and man, where sometimes it is difficult to discover the difference between man and beast. I go there, however, "on virtuous deeds intent"—to see my steed duly fed, groomed, and bedded,—an operation which, unless you travel with attendance, you will perform for yourself.

Beware of re-entering the house till 8 P.M. Visit the garden, the kraal, the granary; consult the sky for prognostics of the weather, or pluck the grass to know where sits the wind; walk to the first sand-hill to view the country, or, if that be not, "even to the nearest willow on your own business,"—do any thing, in short, out of doors; or, return to the dignity and comfortless repose of the said narrow, hard, high-backed chair, and the pleasures of a tête-a-tête with your host, whom you cannot understand, "for he speaks neither Latin, French, nor Italian," and you have already ended your catechism, and replied to the usual inquiries:—Who are you? Where from come ye? Where go ye? Was ye here before? How long been ye at the Cape? How find ye this place? Be ye a slaughterer? be ye a pedlar? be ye a soldaat? What be ye, then?

(To be continued.)

LITERARY ILLUSTRATIONS, &c.

I.—St. Monica, drawing near her death, sent most pious thoughts as harbingers to heaven, and her soul saw a glimpse of happiness through the chinks of her sickness-broken body.—*Fuller*. Waller has versified this in the well-known lines

The soul's dark cottage, battered and decayed,
Lets in new light through chinks which time has made.

II.—The death of the talented American divine, Cotton, was thus celebrated by Norton, an old American poet. The lines deserve attention, as they seem to have furnished Franklin with the hint for his epitaph upon himself:

A living, breathing Bible; tables, where
Both covenants at large engraven were;
Gospel and law in 's heart had each its column,
His head an index to the sacred volume,
His very name a title-page; and next
His life a commentary on the text!
O, what a glorious monument of worth,
When in a new edition he comes forth,
Without errata, may we think he'll be,
In leaves and covers of eternity!

III.—My Lord Castlereagh's expression of *a man turning his back upon himself*, must have originated from his previous reading of Shakspeare's Henry IV. part I. act I, sc. 1, where Mortimer is made to say,

——————— All the rest
Turn'd on themselves, like dull and heavy lead.

IV.—There is a passage in Sterne's Tristram Shandy, vol. ii. chap. 17, which is purloined, almost *verbatim*, by that wicked sentimental plagiarist Sterne,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

from Dr. Richard Bentley's Sermon "On Popery." Sterne was well known to have borrowed copiously from Barton's Anatomy of Melancholy—but in the present instance it is the more curious, as the passage in question happens to form the very part of the sermon, read by Corporal Trim, which so overpowers the feelings of the sympathetic soldier, that he declares, that 'he would not read another line of it for all the world.'

V.—The poet Waller speaks thus of Milton's incomparable *Paradise Lost*. "The old blind schoolmaster John Milton, hath published a tedious poem on the fall of man."—*(April, 1667.)*

CORRESPONDENCE.

PROPOSED CEMETERY.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—Your proposal to form a Cemetery in imitation of Pere-la-Chaise, will probably be encouraged as it deserves, and as every one must approve, who has noticed the disgraceful state of the Dutch and Military Burial Grounds, more particularly of the latter, which is crowded to excess, so that it is impossible to open a spot which has not been tenanted by numerous occupants. But it is not my intention to enter upon this subject; my purpose in addressing you is to make a few remarks on the leading article in your last Number, in which the officiating Clergy of the Church of England, and the Consecration of Burial Grounds, have not been represented in the most favorable light. You have classed among that body of *regulars*, as you term them, "who form the rear-guard in the march of Death's doings; the Clergy, Undertakers, and Sextons." I remark upon this passage, that all this body of *regulars* attend the funerals of the Dutch and Scotch, as well as those of the English, except the Clergyman! But can the Clergyman be justly said to follow in the *rear-guard* of Death? Is he not rather the Herald of a joyous Resurrection? Does he not proclaim at the verge of the receptacle of mortality the victory which has been achieved by his Saviour over Death and the Grave? Does he not give consolation to the afflicted relatives of the deceased, by reading the solemn service appointed by the English Church? I must confess, that when I first witnessed a Presbyterian funeral, I was shocked at the coldness, the indifference, the almost stoical apathy with which it appeared to be conducted. There was evidently something wanting to fit the minds of the numerous friends assembled on the awful occasion; something to direct their thoughts to a serious consideration of their own mortality, and to lead them to look to Him for Salvation who has brought Life and Immortality to light. This great deficiency is supplied in the Funeral Service of the English Episcopal Church. That heart must, indeed, be callous, which is not affected by the solemn truths it conveys I have often witnessed its influence, on the surrounding audience; an influence in most instances probably only transitory, but which has frequently proved to have been a powerful instrument by the blessing of God, to awaken the sinner, and to lead him to seek for salvation where it only can be found. Surely no opportunity should be lost, especially when a deceased brother in Christ is consigned to the dust, of exciting serious reflections on a future state, in the hearts of those who are too much disposed to levity, or too much engaged in the concerns of a fleeting existence. The next particular on which I would remark, is the Consecration of Burial Grounds. By their Consecration can only be understood, the separating them by lawful authority, and by prayer, for the reception of those that "sleep in Jesus." If you direct your attention to the service appointed by the English Church for this purpose, you will find nothing in it of a supersitious nature—nothing but every one that names the name of Christ, and looks forward with Faith and Hope to an Eternal Inheritance, must approve. The service does not imply that any actual holiness or virtue is conferred on the soil itself by prayer. The pious prejudices of the English do not induce them to attach any intrinsic holiness to bricks, and mortar, and dust. Churches and Church-yards are consecrated by the chief Minister of the Church; the former for the use of living christians, the latter for the reception of the mortal remains of those who have terminated their christian course; nor was it ever imagined that prayer could not ascend from the unconsecrated closet, nor that those who were buried in a wilderness, or overwhelmed in the bosom of the ocean, would not be partakers of the resurrection, together with those who rest within the precincts of a consecrated inclosure. "The hour is coming," says our Saviour, "in the which all that are in the graves shall hear the voice of the Son of God." The hour is also coming, as expressed in the Revelation of St. John, "when the sea shall give up the dead that are in it."

The consecration of a Burial Ground is a security against its application to secular uses; it is intended as a lasting protection to the remains of those who have been most dear to us while living, and with whom we hope again to associate in a future state. Such a security is claimed by our affections as men, who are the servants of the same lord, and by that holy communion which ought to influence every believer in Christ. The word Cemetery, which signifies a place of rest and sleep, was first applied to Burial Grounds by the primitive christians. Death, with them, was not an eternal sleep, as it was generally represented by the heathen writers; bnt a sleep from which they hoped to be awaked to the possession and enjoyment of those never-fading pleasures which are at the right hand of God for evermore.

The application of the word Cemetery to the receptacle of the departed, is authorized by the language of our Saviour, who in two instances makes use of the word *sleep* instead of *death*. 'She is not dead," said he, of the daughter of Jairus, "but sleepeth." "Our friend Lazarus," said he, "sleepeth, but I go to awake him." It may be further observed, that the word "sleepeth" in these passages, is to be understood, not in a figurative, but in a literal sense. For the true believer in Christ can *never die*. "Whosoever liveth and believeth in me," says our Saviour, "shall never die." The proto-martyr, St. Stephen, is also said by St. Luke, in the Acts of the Apostles, to have "fallen asleep." It may, therefore, be safely argued that the consecration, or the religiously setting apart of a Cemetery for those that die in the Lord, of whom the Spirit says that they rest from their labors, is founded neither on pious prejudice nor superstition.

These remarks are not directed against the opinions or customs of other christian denominations, but are merely intended to obviate, in some measure, the very erroneous opinions with which many appear to be impressed respecting the Funeral Service, and the Consecration of Places for

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Burial, as appointed by the Episcopal Establishment.

PRESBYTER ECCLESIÆ ANGLICANÆ.

Note.—To all the pious sentiments which breathe throughout the above communication, we do most heartily say, Amen! But our esteemed Correspondent has utterly mistaken the drift of our remarks. In reference to a *Joint Stock Company Cemetery* in our last, we submit that in adopting the words "*regulars*, who form the rear guard in the march of death's doings," we meant no allusion to any of the Clergy, either of the Episcopal Church or those of any other denomination. Had we so intended, we should not have placed them in the *rear*. Our observations should apply to that almost daily troop of *automatons*, who march in procession to the *gates* of the Church-yard, and more especially to that portion of it, who, leaving their *public offices* and the business of *clerkship*, become body-carriers for *hire*. We are in possession of abundance of facts on this head; it is quite shocking to find in Cape Town a thirst for lucre, besieging a house where a corpse is, and under the mask of sorrow, seeking and obtaining pecuniary compensation in *making up the march to the grave*.

Again, in our remarks, we offered no disrespect towards the ceremonials of the Episcopal Church. On the contrary—he must have a cold heart who is insensible to its singularly beautiful and affecting burial service. When *rightly administered*, it cannot but command a thinking attention. Nor have we any objection to the harmless ceremony of consecration. But when our Correspondent observes, that "the consecration of a burial ground is a security against its application to *secular* uses," he forgets the deep interest which the *Parson's Cow* partakes, in applying the church-yard grass to the family use. Let us clear as we go; we use the term *parson* in no invidious sense. We adopt it, as Judge Blackstone, and the good Herbert have done, as a term of honest meaning and esteem; and in respect to the cow, we refer to that custom in England, which directs the parish minister to hold fast the milk and butter privileges of the church-yard, with a tenacious hand.

SCIENCE.

REPRESENTATION OF SHIPS IN THE AIR.

(Concluded from our last.)

No. II.

The undersigned, chief officer of engineers of the king in the Isle of France, certifies, that Mr. Bottineau has, at different periods, announced to me the arrival of more than a hundred vessels, scarcely without ever being mistaken; that he announced these vessels two, three, and even four days before the coast signals; and moreover, that he stated when there was only one, or when there were several vessels.

16*th November*, 1780.

Signed, GENU,
Do. TREBOND, Colonel of Infantry.

No. III.

I cannot refuse my testimony to truth, and I give this certificate in acknowledgment of the pleasure and agreeable surprise I have experienced from your continued and certain announces. I advise you to cultivate this science which will prove of immense benefit. The remarks of a few idle persons must not deter you. When Christopher Columbus proposed his discovery, he was treated as a madman by John the Second, king of Portugal, and Henry the Eighth, king of England; and had it not been for Isabella of Castille, who encouraged this celebrated Genoese, America would not perhaps have yet been discovered.

This example and a thousand others, show how prudent it is to withhold one's judgment, on points of fact in systems founded on astronomy or philosophy. I am persuaded that Nature possesses a thousand secrets which are still hidden from us.

5*th November*, 1781.

Signed, LE BRAS DE VILLEVIDERNE,
The King's Attorney General of the Isle of France.

No. IV.

We, Commissary-General of the Navy in this port certify, that having wished to try whether Mr. Bottineau really possessed the talent of announcing (before the usual observers placed upon the mountains,) the vessels that arrive here, and having desired him to inform us in writing of his predictions, he has announced to us within six months, one hundred and nine vessels, one, two, three, or four days before the signals were made from the mountains, and in this number he only was twice mistaken; moreover, he explained these errors by contrary winds or the currents. We have also to acknowledge, and not without great astonishment, that his art extends so far as to inform me whether there was one, or there were several in the vicinity of the Isle, and if they were together or separated.

Port Louis, 16*th May*, 1782.

Signed, MELIS.

Bottineau's Explanation of Nauscopie, alluded to in Marat's Letter.

Nauscopie is the art of ascertaining the approach of vessels, or being on a vessel, the approach to land at a very great distance. This knowledge neither results from the undulation of the waves, nor from quick sight, nor from a particular *sensation*, but simply from observing the horizon, which bears upon it certain signs indicative of the approach of vessels, or land.

When a vessel approaches land, or another vessel, a *meteor* appears in the atmosphere, of a particular nature, *visible to every eye*, without any difficult effort: it is not by the effect of a fortuitous occurrence, that this meteor makes its appearance, under such circumstances; it is, on the contrary, the necessary result of the approach of one vessel towards another, or towards land. The existence of this meteor, and the knowledge of its different modifications, constitute the certainty and the precision of my announcements.

If I am asked how it is possible that the approach of a vessel towards land can cause any meteor to be engendered in the atmosphere, and what affinity exists between two effects so removed; I reply, that I must be excused giving an account of the *why* and the *wherefore;* that it is sufficient I have discovered the *fact*, without being obliged to explain the principle.

Do not even the learned acknowledge that the explanation of meteors is often beyond their comprehension? Valmont de Bomarre says, "Almost all meteors present, in the mechanism of their formation, considerable difficulties, profound mysteries, which all the knowledge of philosophers has not yet been able to penetrate."

After this avowal, it certainly is not my province to explain what the most learned men declare to be inexplicable.

The meteor of which I am speaking, although manifesting its effects, may conceal its principle; and notwithstanding my discovery, does not the least exist.

However, the study of twenty years seem to have given me a right to reason upon a subject that has become so familiar to me; and the following is my opinion on this head.

The vast expanse of water forms an immense abyss, in which substances of every kind are continually entering. The enormous number of animals, fishes, birds, vegetable and mineral productions, which are decomposed in the vast body of water, produce a continual fermentation of matter, which abounds in spirit of salt, oil, sulphur, bitumen, &c. The presence of these gases is sufficiently apparent, from the smell and disagreeable taste of sea-water. These gases, closely united with the sea-water, remain stationary so long as the waters are quiet and not disturbed; or they may only experience a slight internal agitation which is manifested externally in a small degree. But when the water is put in motion by stormy weather, or by an active mass which passes over its surface with violence and rapidity (a vessel for instance) then the volatile vapours that are inclosed within the bosom of the deep, escape and rise in smoke (*fumée*,) composing a vast envelope around the vessel. As the vessel advances, the envelope advances with it, increasing every instant by fresh emanations. These emanations are so many small particular clouds, which by degrees joining each other, form a kind of cloud (*nappe*,) that projects forward, one extremity of which touches the vessel, while the other extremity advances to a considerable distance. This train of vapours is not on that account visible; it escapes observation by the transparency of its parts, and it is lost among the other fluids that compose the atmosphere: but as soon as the vessel reaches a circumference, in which it meets with other homogeneous vapours, such as those which escapes from the earth, one perceives, on a sudden, that cloud (*nappe*,) until then so limpid and subtle, acquire consistence and colour, by the mixing of the two opposed columns. The change commences at the prolonged extremities, which, by contact unite, are strengthened, and coloured; and then, every minute, as the vessel advances, the change is graduated, gains the centre, and at length the *engrainement* being complete, the phenomenon becomes more manifest, and the vessel appears.

Such, in a few words, is the revelation of the cause and the effects of a phenomenon, which, however wonderful it may be, accords, notwithstanding, with physical notions.

Whatever cause may be assigned for this phenomenon, it is quite certain that it is the infallible satellite of a vessel; and that, in consequence of its prolonged form, it manifests itself to the eyes, one, two, three, four, five, and even six days before the vessel itself, according to the state of the weather, and the nature of the obstacles it meets with. When the vessel sails with a fair wind (*en poupe*,) and meets with no obstacle, the phenomenon possesses its greatest celerity; and, arriving several days before the vessel, it affords the observer the means of announcing the presence of a vessel at a considerable distance; but when the vessel meets with contrary winds, it will be understood that this circumstance must have a great influence on the progress of the phenomenon. On this account I state that the phenomenon sometimes appears four or five days before the vessel, and sometimes only one day. This defect of uniformity in the apparition results from the greater or less impediment it meets with.

It will naturally be supposed that there may be weather when the phenomenon cannot shew itself before the vessel: for instance, in a violent gale, which appears, at first sight, capable of carrying away the phenomenon—even dissipating, and entirely destroying it. This, however, is not the case. The most impetuous wind only retards the apparition of the phenomenon, without destroying it. But when the vessel has reached a certain distance from land, then the phenomenon has acquired so much consistence, that it overcomes the efforts of the strongest winds, which, though they agitate it, still leave some part which they cannot wholly disperse.

The whole of my science consists in being able to follow the apparition of this meteor, and distinguish its character, in order not to confound it with other clouds in the atmosphere, and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

which are not to be attended to. In order to make these observations, neither telescopes nor mathematical instruments are required; the eyes alone are sufficient.

It is not even necessary to be upon the coast: where the horizon of the sea can be discovered, the observer can announce the arrival of vessels.

The cloudy mass does not present itself suddenly, and with all its character. The first appearance is equivocal, and only puts the observer upon his guard, who then can commence his study, without being in haste, to certify that the vessel is arriving; but, by degrees, the forms are developed, the colours assume a certain tone, the volume acquires consistence, so that the *Nauscopie* can no longer doubt that a vessel is behind; because these forms and these developements are such, that they can only belong to these kind of vapours.

As the vessel advances, the meteor extends, and becomes consistent. From the moment I became familiar with this singular analogy, I never failed seeing my announces followed with complete success; and this punctuality caused the great astonishment mentioned in my certificates, &c. from the governor, officers, and inhabitants. Convinced of the effect, but not understanding the cause, they could not conceive that a science existed which could give to man a fore-knowledge of events so distant, with respect to time and place. The people attributed these operations to the power of magic; the better informed ascribed them to chance. Nothing, however, is more natural than this principle, which has astonished every one, and concerning which, so much incredulity will be manifested throughout Europe.

BOTTINEAU.

Note by the Translator.

The *Gazette de France* mentions this discovery; and Abbé Des Fontains wrote several articles upon the subject; but the public mind was at that period so absorbed in matters of political importance, that the unfortunate Mr. Bottineau was neglected; and a letter from Marat, at the dawn of the French Revolution, merely states that Bottineau had died. The different biographical dictionaries we have consulted, make no mention of him.

J.

ANIMAL MAGNETISM.

FOR the last half century the scientific circles of France have been agitated by discussions on the strange subject of animal magnetism. It was first taken up by the learned societies of that country, in consequence of the unusually bold pretensions set up by some of the early advocates of this practice, but particularly by Mesmer, whose name is handed down to posterity in association with the art.

Mesmer was a Swiss physician, who, about the middle of the last century, attracted much attention by his astrological writings. He held that the planets exercised a certain influence over the bodies of men, and that the agent of this influence was electricity. In the next work, however, which he published, he showed that his devotion had been directed towards a new object altogether, and that, instead of the stars, he now chose the magnet as his favourite subject of contemplation. It is well known that Mesmer practised magnetism to a great extent in France, and certainly he gained the reputation of having performed some wonderful cures. There was, however, about him a mystery, in which he may be said to have shrouded himself altogether from the prying eye of curiosity; and those who might have sustained his principles, were disgusted with the elaborate empiricism which so unfortunately characterised his practice. In the meantime animal magnetism throve apace in France; it became popular, and threatened to establish a system, whereby all regular medical science would be completely superseded. The profession took alarm; they united their exertions; and, in a short time after they began to co-operate, a royal ordinance appeared, directing that two commissions of inquiry should be forthwith appointed by the medical faculty. This ordinance bears the date of the 12th of March, 1784. The commissions consisted, the one of the members of the Academy of Sciences, the other of the members of the Society of Physicians. Both investigated the subject minutely, and were decisive and nearly unanimous in their declaration, that animal magnetism was altogether unworthy of credit.

Notwithstanding the high authority of the commissioners, there were many individuals, of great sagacity and learning, who differed altogether from the tenor of the unfavourable report. Jussieu, the celebrated naturalist, was one of these. This distinguished man had been originally appointed as one of the commissioners; he examined the question with his colleagues, and came to a very different conclusion from them on the merits of animal magnetism. Instead, therefore, of signing the report, which condemned the new art, Jussieu declined to do so, and published a full account of his own sincere impressions. In this condition animal magnetism has remained up to a very recent period, still scoffed at by the learned, still practised partly in secresy by a few intrepid men. In England, we scarcely know any thing of the art, except historically, and then it is called to our recollection by the term Mesmerism. It is only a few years back that Mr. Chenevix attempted to introduce the practice into these countries; but, though what may be regarded as a fair trial was granted him, still no other general effect was produced than that of increasing the contempt in which Meserism was previously held. Nevertheless, it is a very curious fact, that in the chief countries of Europe, now and then some individual, fully entitled to the character of a philosopher, was to be met with, who looked upon the principle of animal magnetism as one full of promise. Indeed, it is impossible for one who is well informed in ancient and modern history, not to feel that he has no right to be incredulous when he hears an account of any phenomena which may have been produced by violent moral emotions. In Greece, the Delphic Oracles were universally respected; and the moral feelings of human nature have been at all times made a convenient medium for acting on the physical powers. The testimonies in fact are abundant, which prove the influence of the imagination over the judgment. Hence it is, that those persons who are eminent for their knowledge of human character, have ever been most prone to treat every suggestion connected with the phenomena of life with great attention; and it is to this cause that we attribute the indulgence which has been so frequently granted to Mesmer and his doctrines by individuals apparently the most opposed to him in sincerity and good sense. To such a pitch have men of discernment lately carried this indulgence, this willingness to be persuaded, that, at the very moment in which we write, there exists in Berlin a "magnetic Clinic," in which the practice is permanently established. In short, this general feeling, particularly in France, has been attended with some practical results, which are likely to prove important to the best interests of mankind. In the kingdom just mentioned, so late as the year 1826, the experience of the good effects of animal magnetism was so very striking, that a proposal for a fresh inquiry into its merits was unhesitatingly adopted by the French Academy of Science. A young physician, named Foissac, who had witnessed the effects of the practice, made a distinct proposition to the Academy, when a commission was appointed, consisting of the following members:—Messrs. Bourdois, Double, Itard, Gueneau de Hussy, Guersent, Fouquier, Laennec, Lerous, Magendie, Marc, and Thillage. The commission commenced its labours in 1826, and only made its report in June, 1831, when its contents gave rise to an extraordinary sensation, and ultimately to a long discussion. The report forms one of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the most curious documents which was ever submitted to the world ;* it contains the results of examinations and experiments which appear to have been undertaken and conducted with the severest caution and circumspection ; and, from the first to the last line, exhibits a spirit of uncompromising preference for truth, which at once commands our confidence and admiration.

One of the most singular and overwhelming of the cases which come under the head of the more recent and important ones, is that of Jules Cloquet, the well-known anatomist in Paris, who had, of his own accord, sent in an account of this case to the section of the academy. He was no magnetizer, but, very likely, laughed and ridiculed the art with as much asperity as the most determined of its enemies. This gentleman, it appears, was called, on the 8th April, 1820, to see a Mrs. P., then residing at 151, Rue St. Dennis, Paris. He found that she had the cancer of the breast, and that nothing but extirpation of the disease could effect a cure. The lady, at this time, had been attended by the physician whom she had long employed, and who was in the habit of magnetizing her into a sleep, or rather somnambule (for there is a great difference between them), to produce an oblivion of her sufferings. The physician, M. Chapelain, was sensible that no other hope of saving his patient from a miserable fate remained than that held out by Mr. Cloquet, and he proposed to the surgeon that he should perform the operation whilst she was in a state of magnetic sleep. The surgeon agreed to it, and the operation was performed accordingly, but was kept asleep for two days, and, upon being awoke, and informed of what has taken place, she experienced, says M. Cloquet, a very lively emotion.

The power which, it was represented, some somnambulists possessed of seeing perfectly through their closed eyelids, formed the subject of some very close and attentive examinations. The result was, that the commissioners were satisfied, for they looked on, that in one case a patient, in this state, was able to read a book by seeing it through his eyelids! But this was not all ; for although his somnambulism continued, yet the patient became very much fatigued, and was invited to play a game at *écarte*, of which he was very fond. He showed amazing dexterity all the while, and always beat his opponent. It is to be remembered, that during all this time the patient was in a state of somnambulism, and, of course, was unconscious of what he was doing. The following is the exact language in which this respectable commission describe a portion of this scene. The name of the patient, it is proper to remember, is Petit :

One of the gentlemen present, M. Raynal, formerly inspector of the university, played a game at Piquet with M. Petit, and lost it. The latter handled his cards with the greatest dexterity, and without making any mistake. We attempted several times in vain to set him at fault, by taking away or changing his cards. He counted with surprising facility the points marked upon his adversary's marking card. During all this time, we never ceased to examine the eyes, and to hold a candle near them; and we always found them exactly closed. We remarked, however, that the ball of the eye seemed to move under the eyelids, and to follow the different motions of the hands. Finally, M. Bourdoise declared that, according to all human probability, and as far as it was possible to judge by the senses, the eyelids were exactly closed. While M. Petit was engaged in a second game at piquet, M. Dupotet, upon the suggestion of M. Ribes, directed his hand, from behind, towards the patient's elbow, and the contraction previously observed again took place. Afterwards, upon the suggestion of M. Bourdois, he magnetized him from behind, and always at the distance of more than a foot, with the intention of awakening him. He carried his hand several times to the back of his head, as if he suffered pain in that part. At length he fell into a state of somnolency, which seemed like a slight natural sleep ; and some one having spoken to him when in this state, he awoke as if with a start. A few moments afterwards, M Dupotet, always placed near him, but at a certain distance, set him again to sleep, and we recommenced our experiments. M. Dupotet being desirous that not the slightest shadow of doubt should remain with regard to the nature of the physical influence exerted at will upon the somnabulist, proposed to place upon M. Petit as many bandages as we might think proper, and to operate upon him while in this state. In fact, we covered his face down to the nostrils with several neckloths; we stopped up with gloves the cavity formed by the prominence of the nose, and we covered the whole with a black handkerchief, which descended, in the form of a veil, as far as the neck. The attempts to excite the magnetic susceptibility by operating at a distance in every way, were then renewed ; and, invariably, the same motions were perceived in the parts towards which the hand or the foot was directed. After the new experiments, M. Dupotet having taken the bandages off M. Petit, played a game at *écarté* with him, in order to divert him. He played with the same facility as before, and continued successful. He became so eager at his game, that he remained insensible to the influence of M. Bourdois, who, while he was engaged in play, vainly attempted to operate upon him from behind, and to make him perform a command intimated merely by the will. After his game, the somnambulist rose, walked across the room, putting aside the chairs which he found in his way, and went to sit down apart, in order to take some repose at a distance from the inquisitive experimentalists, who had fatigued him. There, M. Dupotet awakened him at the distance of several feet; but it seemed that he was not completely awake, for some moments afterwards he again fell asleep, and it was necessary to make fresh efforts, in order to rouse him effectually. When awake, he said he had no recollection of any thing that took place during his sleep.

LITERATURE.

THE LONGEVITY OF STUDIOUS MEN.

Mr. Madden, in his new work—"*Infirmities of Genius,*" 2 vols. 8vo. has furnished a curious record of the average influence of different studies, on the longevity of those engaged in them. The record consists of a tabular arrangement, in which are several series of the most celebrated authors in the various departments of intellectual labour. Twenty persons are included in each list; the names and ages of each are given, and from the united amount of the latter, is taken the average age to which the members of each of the classes survive. These tables no doubt are curious, but how far they can be relied on as affording unequivocal evidence of the exact influence on the body, of mental fatigue, is altogether another question.

The first table includes natural philosophers, whose names and ages are as follow :—Bacon (Roger,) 78; Buffon, 81; Copernicus, 70; Cuvier, 64; Davy, 51; Euler, 76; Franklin, 85; Galileo, 78; Dr. Halley, 86; Herschell, 84; Kepler, 60; Lalande, 75; Leplace, 77; Lewenhoeck, 91; Leibnitz, 70; Linnæus, 72; Newton, 84; Tycho-brahe, 55; Whiston, 95; Wollaston, 62

The second table is that of poets,—Ariosto, 59; Burns, 38; Byron, 37; Camoeus, 55; Collins. 56; Cowley, 49; Cowper, 69; Dante, 56; Dryden, 70; Goldsmith, 44; Gray, 57; Metastasio, 84; Milton, 66; Petrarch, 68; Pope, 56; Shenstone, 50; Spencer, 46; Vasso, 52; Thomson, 48; Young, 84.

The contents of the remaining tables are as follow :—

Moral Philosophers,—Bacon, 65; Bayle, 59; Berkeley (G.), 79; Condorcet, 51; Condillac, 61; Descartes, 54; Diderot, 71; Ferguson (A.), 92; Fichte, (J. T.), 52; Hartley, (D.), 52; Helvetius, 57 Hobbes, 91; Hume, 65; Kaimes 86; Locke, 72; Malebranche, 77; Reid, (T.), 86; Stewart, (D.), 75; St. Lambert, 88.

Dramatists,—Alfieri, 55; Corneille, 78; Goethe, 82; Massinger, 55; Marlow, 32; Otway, 34; Racine, 60; Schiller, 46; Shakspear, 52; Voltaire, 84; Congreve, 59; Colman (G.), 61; Crebillon, 89; Cumberland, 80; Farquhar, 30; Goldoni, 85; Jonson, (B), 63; Lope de Vega, 73; Moliere. 53; Murphy, 78.

Authors on Law and Jurisprudence,—Bentham, 85; Blackstone, 57; Butler

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

(C.), 83; Coke, 85; Erskine, 73; Filangieri, 36; Gifford, 48; Grotius, 63; Hale, 68; Holt, 68; Littleton, 75; Mansfield, 88; Montesquieu, 66; Redesdale, 82; Romilly, 61; Rolle, 68; Tenterden, 78; Thurlow, 74; Vatel, 53; Wilmot, 83.

Miscellaneous and Novel Writers,—Cervantes, 70; Le Sage, 80; Scott, 62; Fielding, 47; Smollet, 51; Rabelais, 70; Defoe, 70; Ratcliffe, 60; Richardson, 72; Sterne, 56; Johnson, 75; Addison, 48; Warton, 78; Steele, 59; Tickell, 54; Montaign, 60; Bathurst (R.), 84; Thornton, 44; Hawkesworth, 59; Hazlitt, 58.

Authors on Revealed Religion,—Baxter, 76; Bellarmine, 84; Butler (John), 60; Bossuet, 77; Calvin, 56; Chillingworth, 43; Doddridge, 54; Fox (G.), 67; Lowth, 77; Luther, 63; Massillon, 79; Melancthon, 64; Paley, 63; Porteus, 77; Priestly, 71; Sherlock, 67; Wesley, 88; Whitefield, 56; Wycliffe, 61.

Authors on Natural Religion,—Annett, 55; Bolingbroke, 79; Cardan, 75; Chubb, 65; Drummond (Sir W.), 68; Dupois, 67; Freret (N.), 61; Gibbon, 58; Herbert (Lord), 68; Jacobi, 56; Paine, 72; Pomponatius, 63; Rosseau, 66; Spinoza, 45; St. Pierre, 77; Shaftesbury, 42; Tindal, 75; Toland, 53; Vanini, 34; Volney, 66.

Medical Authors,—Brown (J.) 54; Corvisart, 66; Cullen, 78; Darwin, 72; Fordyce, 67; Fothergill, 69; Gall, 71; Gregory (John), 48; Harvey, 81; Heberden, 92; Hoffman, 83; Hunter (J), 65; Hunter (W.), 66; Jenner, 75; Mason Good, 64; Parcelsus, 43; Pinal, 84; Sydenham, 66; Tissot, 70; Willis (T.), 54.

Philologists,—Bentley, 81; Burton, 64; Casaubon, 55; Cheke, 44; Hartzheim, 70; Harman (J.), 77; Heyne, 84; Lipsius, 60; Parr, 80; Pauw, 61; Pighius, 84; Porson, 50; Paphelengius, 59; Salmatius, 66; Scaliger (J. J.), 69; Sigonius, 60; Stephens, (H), 71; Sylburgois, 51; Vossius, 73; Wolfius, 64.

Artists,—Bandinelli, 72; Bernini, 82; Flaxman, 71; Ghiberti, 64; Giotto, 60; Michael Angelo, 96; San Sovino, 91; Verocchio, 56; Caracci (A.), 49; Claude, 82; David, 76; Guido, 67; Raphael, 37; Reynolds, 69; Salvator Rosa, 58; Titian, 96; Veronese (Paul), 56; West, 82.

Musical Composers,——Arne, 68; Bach, 66; Beethoven, 57; Burney, 88; Bull, 41; Cimarosa, 41; Corelli, 60; Gluck, 75; Gretry, 62; Handel, 75; Haydn, 77; Kalkbrenner, 51; Keizer, 62; Martini, 78; Mozart, 36; Paisello, 75; Piccini, 71; Porpore, 78; Scarlatti, 78; Weber, 40.

The result, then, that we derive from these tables is, that natural philosophers have the longest lease of existence, the united ages of the twenty enumerated being 1504 years, which gives an average of 75 for each. The results in the other cases with respect to the united ages, and the average each, are—Moral philosophers united ages, 1417—average of the life of each, 70: sculptors and painters, 1412—70: authors on law and jurisprudence, 1394—69: medical authors, 1368—68: authors on revealed religion, 1350—67: philologists, 1323—66: musical composers, 1284—64: novelists and miscellaneous authors, 1257—62½: dramatists, 1249—62: authors on natural religion, 1245—62: poets, 1144—57.

According to the results of this calculation, it would appear that those mental labours in which the imagination is most actively employed, are least conducive to long life.

PIOZZIANA.

A little Work, thus entitled, has appeared. We shall simply select a few of the anecdotes which we find in the book, which has been published from the MSS. of the celebrated Mrs. Piozzi.

Garrick had the following lines engraved in letters of gold in his library at Hamton:

La premiere chose quand on emprunte un livre
C'est de le lire; la seconde, c'est de le renvoyer.

(The first thing one ought to do, who borrows a book, is to read it; and the next, to return it.)

George the Third, being very near-sighted, once touched the sun-dial on Windsor Terrace somewhat roughly. "Let it alone, your honour," said the sentinel. "Dost not know me," said the King, somewhat haughtily. "Yes, Sir, I do; but your Majesty knows I must obey orders." The King immediately put a piece of gold into his hand.

During the period of Lord Mansfield's occupation of the bench, it was usual, whenever the *Merchant of Venice* was played, for *Portia*, in the celebrated speech about mercy, to mimic the gesture, tone, and manner of his lordship.

Piron, the celebrated French academician, was walking one morning homewards from Notre Dame when he was accosted by a blind man, who asked him for charity: he replied, in the language of St. Peter, that he had neither gold nor silver; but of that which he possessed he would readily bestow some portion on the mendicant. He thereupon took out his tablets, and wrote the following verses, which he pinned to the old man's breast:

You that enjoy the light of day,
Relieve a wretched blind man, pray:
Unseen by me, your alms let fall,
He sees them clear, who sees us all;
And when His rays remove all shade,
In sight of all, you'll be repaid.—p. 187.

Corneille was killed by the unkindness of Louis XIV. The poet presumed to offer his Majesty political advice, and the King resented this impertinence by utter neglect.

Samuel Boyce is the name of a very unfortunate gentleman of merit, who was known to the world some time about the close of the last century. Dr. Johnson used occasionally to beg for him, and once that he had received a guinea, bought some roast beef and port wine for poor Boyce. The moment that the latter sat down to eat, he commenced a serious quarrel with the Doctor because he had not also added some mushrooms or catsup!

It is an authentic fact, that one of the Bishops, in the time of James the First—some say the Bishop of Durham—others, as D'Israeli, make him a Welsh Bishop—made an apology to that monarch for preferring the Deity to his Majesty! Dr. Neale, the Bishop of Durham, at the period, declared that James the First was the breath of their nostrils.

A lady once asked Mrs. Piozzi to lend her a book. The latter inquired what sort of a book she liked? "Oh, an abridgement," replied the lady; "the last pretty book I read was an abridgement."

Scarron wrote a dedication to a dog. Mrs. Hannah More once addressed an ode to Garrick's dog, whose name was Dragon.

A man, accompanied by his friend, visited an ancient mansion, and there he saw, among other things, the figure of a lion in marble, represented as open-mouthed and enraged. On beholding the figure, the man exclaimed, "there's my enemy! I more than once have dreamed that I should owe my death to a lion." And so saying, and smiling in scorn as he spoke, he thrust his arm into the lion's mouth. But within was an iron spike, which severely lacerated his hand; and a mortification ensuing, he died in consequence.

The following melancholy narrative was related by Mrs. P. to her friend. It was fully calculated to bear out the inference which she promptly drew from it, namely, that dreadful as was the penalty inflicted upon the father, still the calamity recorded ought to be considered as a just penance for a disregard of that sound principle which ought never to be obstinate in what is obviously not an affair of moment:

A prelate of the Church of England, much admired for his fine understanding, talents, and political liberality, was one day proceeding to take an airing with his wife in their carriage. Just at their setting out, their eldest son, a highly educated and most promising young man, rode up, and desired to be of the party inside. This the bishop peremptorily refused to allow, directing his son by all means to remain on horseback, and ride by the side of the carriage. The youth for a moment remonstrated, but his father insisted, and was cheerfully obeyed. The bishop's lady then begged his lordship to tell her why he so resolutely adhered to his determination of not admitting his son to a seat with them; adding, that in a matter of so much indifference she wished he had yielded. But the father replied that he had not acted without a reason; for that he had been tormented with a dream the night before, when he imagined that he saw his son suddenly thrown from his horse and killed; and that through fear of thinking himself superstitious for the rest of his days, he had persevered in rejecting his son's request. The bishop had scarcely spoken the words, when the horse on which his much-loved son was riding, threw the young man to the ground, and he was killed on the spot. The unhappy parents, the father especially, grieved incessantly for their loss; and Mrs. Piozzi remarked, that, dreadful as was the penalty suffered by the unfortunate father, it was a just infliction on a person who had disregarded one of the grand laws in the code of common sense, which prescribes to us never to be obstinate in what is apparently not an affair of moment.—pp. 227, 228.

RESOURCES OF THE BRITISH EMPIRE.

ON this subject a most extraordinary volume has appeared from the pen of a learned Spaniard—*Pablo Preber*. It is no unusual thing for Englishmen to

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

be indebted to foreign writers for the best account of their own history and institutions. Rapin, De Lolme, Dupin, Cottu, and Moreau have, in this respect, laid them under the deepest obligations.

Mr. Preber has, in his important Work, placed before the Legislature at one view, the whole statistical and financial economy of the British Empire, in all its ramifications. Very few persons in this colony have the slightest conception of the means or the capital, the extent or the resources of the empire which engirdles the world, and levies tribute on all nations.

'There does not exist,' remarks Mr. Preber, 'the record of a nation ever ruling such a number of inhabitants, possessing such vast territories, having such immense colonies, and commanding such extensive dominions all over the world, as England does at the present time. They encircle the globe as it were. From Heligoland to Quebec, from this stronghold to the fortified Malta, from the impregnable Gibraltar to the IMPORTANT CAPE OF GOOD HOPE, from the military rock of St. Helena to the rich Ceylon,—scarcely can there be found on the surface of the globe a place where a warehouse of British goods does not rear its head, and a squadron is not at all times ready to defend British property.

'Thus, English capital is spread over all her dominions, and invested in forwarding the productions of her remote and extensive possessions in all parts of the world. It is true, that a grand political and economical question is often agitated in respect to these colonies; namely, whether England receives a compensation for the large capital employed in these possessions; or whether she derives any commercial advantages from them, which she might not have without them; and consequently, whether it would not be much more advantageous to the British interests, revenue, and capital, to emancipate them from her rule.

'But leaving these vital questions to the able contending parties, and entertaining an equal regard for both, the author cannot but agree with one of them, that from the very day on which the adamantine chain above described shall either be *broken or abandoned* to other powers, the mighty England will begin to cease to be the First of Nations; her influence over the commercial world will be diminished; her proud trident will undoubtedly lose the respect it now commands from all nations. But until that day happens, (and, for the happiness of the human race, may it be retarded for ages!) it must be agreed on all hands, that these possessions not only constitute an integral part of Great Britain, but that their value forms an essential portion of the aggregate capital of the British empire.

'It appears that, according to the moderate calculation adopted in all these estimates, there exists, in the United Kingdom of Great Britain and Ireland, a capital, public and private, of 3,679,500,000*l.*!

'The greatest part of this enormous capital is beneficially employed in creating substantial property and in promoting industry and enterprise in the multifarious pursuits and occupations by which the necessaries, the comforts, and the luxuries of life are raised and provided. The most useful and important of these is Agriculture, which raises, in all its branches, annual produce to the value of 246,600,000*l.*; or fifty-two millions and a half more than the total produce of this branch in France, considered to be the first agricultural country in Europe. The value of the produce of Mines and Minerals in the United Kingdom, is 21,400,000*l.* The produce and profits of the numerous classes engaged in Inland Trade, amount to the large sum of 48,425,000*l.* And of those important branches to all maritime nations, the Coasting Trade and the Fisheries, the former yields 3,550,000*l.*, and the latter 3,400,000*l.* The annual gains of all those engaged in Shipping and Foreign Trade, amount to 31,308,059*l.* The profits of Bankers may be stated at 4,500,000*l.*; and the income derived from property invested in foreign securities, including the sum annually remitted from India, is estimated at 4,500,000*l.* Lastly, the capital, labour, and machinery employed in all the numerous and extensive branches of manufactures, annually raise produce valued at the enormous sum of 148,050,000*l.*!

'Thus, the grand result of the combination of the prodigious capital above stated, with all animate and inanimate power, is the annual creation of produce and property to the amount of 514,823,059*l.*!!

'Such are the astonishing effects of the wealth, talent, industry, and intelligence concentrated in this extraordinary country: such is the immense capital, and such are the amazing productive powers of this little isle—this "precious stone set in the silver sea,' as the poet calls it. But even *his* portentous imagination was far from conceiving the power which "that little world"—"that fortress built by nature"—would one day reach: he could not even have fancied that thousands of tons of goods would be conveyed with a speed greater than that of the messenger pigeons of Aleppo and Antwerp: he could not have imagined, that, by the combined aid of steam and capital, the productive powers of each of that "happy breed of men" would be rendered equal to the simple exertions of several hundred individuals!

'From all this may be easily concluded how imperfect have been the statements of those who have calculated the productive powers of Great Britain, and compared them with those of France and other countries: this important inquiry and comparison is reserved for another opportunity; while sufficient facts and data are here stated to give the mind of the reader more just and correct ideas of the real productive powers and capital of this country; a country, however, only to be considered as the *mighty heart*, which diffuses strength and vigour throughout all the *limbs* of that gigantic body, the British Empire; while they, by a strong and reciprocal motion, return and increase its vitality, action, and power.

'In the parts more immediately connected with England, and in all her dependencies in Europe, there is supposed to exist a capital of 27,115,094*l.*; and the produce annually raised, is valued at 2,146,198*l.*

'The seven important North American possessions, as may be seen by the Table, have a capital of 62,100,466*l.*; and raise annually produce and property worth 17,620,629*l.*

'The West India Colonies, with a capital of 131,052,424*l.*, raise every year produce valued at 22,499,672*l.*

'The whole British capital in Africa amounts to only 6,444,398*l.*; and these settlements, unproductive like the country itself, yield an annual produce of only 1,066,065*l.*

'To compensate for this, there is in the two fertile islands in the Indian Ocean, a capital of 27,569,781*l.*; and the value of the produce annually raised is 4,291,332*l.*

'While the new, but rapidly improving settlements in Australia already possess a capital of 2,685,000*l.*; and raise produce amounting to 520,000*l.*

'It is almost impossible to obtain sufficient data and facts, on which to make a sound calculation of the immense and diversified productions raised in the vast territories of British India; peopled by such numerous races, all differing from ourselves in habits, religion, customs, and manner of living. However, by the help of a multitude of official documents, and such statistical information as could be collected from the numerous works relating to that region, the total capital of the British Empire in India has been estimated at 1,611,077,354*l.*; and the produce and property annually raised, at 313,200,000*l.*

'Thus, the total aggregate capital existing in all the extent of the British Empire in Europe, Asia, Africa, America, and Australia, will amount to 5,547,484,571*l.*; and the aggregate value of all produce and property annually raised and created by the combination of that capital, with all animate and inanimate power, to 876,175,755*l.*: the total population to 116,969,978; and the total extent of territory to 4,457,598 square miles; with a superior navy of 27,000 men, and a regular standing army of 96,419 men in Europe, and 223,461 men in India.' pp. 472–476.

A Statistical Table is annexed, from which we take the following calculations.

	Population.	Geogra. Sq. Miles.	Public and Priv. Prop.*
Great Britain and Ireland,	24,271,758	90,948	3,679,500,000
British Dependencies in Europe,	247,701		27,115,094
North Amer. Colonies,	911,229	1,930,000	62,100,466
West Indies,	733,617		131,052,424
Indian Ocean, (Mauritius and Ceylon,)	1,034,736	23,000	27,569,781
Africa,	154,046	91,000	6,444,398
Australia,	39,685	1,499,000	2,685,000
East Indies,	89,577,206	820,650	1,611,077,354
	116,969,978	4,457,598	5,547,484,571

* These are distinguished in the Table.

In the above enumeration, neither the kingdom of Hanover nor the Ionian Republic is included. The latter is, to all intents and purpose, a dependency of Great Britain, although it is in form an independent State, under the protection of the King of Great Britain and Ireland, his heirs and successors.' The population is estimated at 208,100 inhabitants. That of the Kingdom of Hanover is about a million and a half. The population of the West Indies is underrated, as is that of the North American Colonies and Australia. India also, including the dependent and tributary States, contains more nearly 120 than 90 millions. The estimate of the superficial extent of the British empire, which is the same as Balbi's, makes it considerably larger than the Chinese empire, two thirds the extent of the Russian, and almost three times as vast as that of Imperial Rome, which it very far exceeds in populousness. In point of substantial wealth and moral supremacy, the British Domi-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

nions leaves the boasted empires of antiquity immeasurably behind.

One of the most striking features of the general Statistical Table, is the comparative view it exhibits of the imports and exports, and of the estimated value of the produce annually raised in Great Britain and her respective colonies. We shall merely give those of the East and West Indies.

	Value of Produce.	Imports into the United Kingdom.	Exports from the United Kingdom.
West Indies,	22,496,672	9,087,914	5,521,169
Mauritius & Ceylon,	4,291,332	654,666	372,026
East Indies,	313,200,000	6,218,284	4,100,264

Thus, it would seem, that while the annual produce of the East Indies is fourteen times that of the West Indies, this country imports only two thirds as much in value from her Indian possessions, that she does from her sugar colonies in the Western hemisphere. If this circumstance may be thought, on the one hand, to prove the importance of the West India trade, it shews at the same time, how much the prosperity of India has been sacrificed to it. Upon the subject of opening the trade to India entirely, Mr. Pebrer has the followingremarks :

'Would these beneficial results' (those which have followed the partial opening of the trade to British subjects in 1813) 'continue their progress, if the trade was *quite* opened to the British nation?—Ought the British to be allowed to settle, buy lands, employ their capital, and act as the subjects of other nations do, in India? Upon the decision of these questions depends the happiness or misfortune, the prosperity or distress of millions of British European and Indian [illegible]. It cannot be denied, even by the [illegible] 'that this measure would be [illegible] more mischief than good," that the application of British capital, activity, and industry, to India agriculture, deficient as it is in every respect, but especially in *means*, would produce the most wonderful results. The cultivation of sugar, coffee, tobacco, and above all, cotton, might be increased *ad infinitum*. All men conversant with the manners and feelings of the natives of India agree as to their willing disposition, and the absence of all jealousy towards the Europeans, *on these points:* all parties allow, that the soil of India, its extent, variety of climate, and fertility, are eminently adapted to the cultivation of these productions Now, after reflecting how often the production and supply of particular articles has, in a short period, passed from one nation to another,—after remembering how the present of a few Merino sheep, injudicously made by the King of Spain to the King of Saxony, threw Spanish wool out of the English market,—and considering how the cultivation of cotton passed from the Spanish colonies to the North Americans, and how the Spanish American indigo was superseded by its immense production in India, and this is by a very limited number of industrious British individuals, and in a very short space of time,—one is really at a loss to see why the same results should not ensue with regard to sugar and coffee, and particularly, why tobacco and cotton, which are of easier cultivation, and require less skill than indigo, could not be brought to supersede the two staple exports of North America; thereby saving five millions a year, which we now pay for the last article alone, and imposing, at the same time, a good check upon American tariffs. One cannot but think, that England would derive grant advantages by opening the trade to India, and encouraging the investment of capital there: besides increasing the Agriculture, industry, commerce, and above all, the shipping, of her own subjects.' pp. 443, 444.

The author concludes the Section with expressing his regret, 'that, for the sake of the general commerce and intercourse of nations, and the happiness of mankind, England does not direct a part of her force, a part of her immense power in India, towards China.'

'For the first mercantile nation to suffer one of the best parts of the world, with a territory of 155,000,000, to be almost hermetically closed against the rest; to endure daily insults from an infamous despotical government, one of whose maxims is to despise foreigners and trade, and which does not possess a shade of power capable of facing the mighty combined naval and military superiority of the British, is certainly quite unpardonable and unwarrantable, and utterly unworthy of the British nation.' p. 453.

VOYAGES.

CAPTAIN OWEN'S NARRATIVE OF VOYAGES, 2 *vols.* 8*vo.* 1833.

The following is interesting in several points of view :—

'Having surveyed Europa Island, we made the shore of Buok, and then continued to the southward, on the 20th anchoring on the edge of a bank, with Cape Bazaruta about five miles to the westward: this we did merely to determine the geographical position of that Cape, which is one of the most remarkable features on the coast of Africa, and a counterpart of Cape Inyack. This is the site of the famous pearl fishery of Sofala, and hence those jewels are supposed to have been carried up the Red Sea, together with the gold of Ophir in the days of Solomon, and probably some generations before that period. Cape Bazaruta has sometimes been called St. Sebastian, while a variety of other situations have been assigned to a cape of that name; it is therefore omitted in our charts, to avoid confounding it with another Cape St. Sebastian, on the island of Madagascar."

Again, on the Mapoota shore:

"Fish of all kinds are plentiful, and the party saw a great variety of rare and beautiful shells The pearl oyster is found in every direction, but the finest are said to be near the continent, a little to the northward, which coast is called Buok, where the Portuguese say they have a small establishment upon the river Mambone. As the pearls on this coast have not been fished for several generations, there is not, perhaps, any spot which offers so fair opening for mercantile enterprise. Their sheep are of the Tartar or large-tailed breed, with hair instead of wool: the price demanded for one was a fathom and a half of blue or check durgaree; and numbers of these, together with fowls and goats, were purchased for trifling pieces of the same stuff. For six fathoms, the old king sold fourteen ounces of good ambergris, worth, perhaps, twenty pounds. He had with him about as much more, but would not part with it, having procured as much cloth as he desired. Several women visited our party: they wore belts of large beads, cut out of the columns of conch-shells, and had one custom which we had no where else observed. This consisted in having the upper lip bored through, into which was introduced a piece of ivory, or shell, made in the shape of a horn, very smooth, and about three inches in length. The extremity of this being in the mouth, the lady's principal amusement appeared to be in keeping it in constant motion with the tip of her tongue."

THE FATE OF CAPT. LECHMERE.

"On the third of November, Capt. Lechmere came off from the observatory in a low fever, and during the night was so ill that he was hardly expected to survive until morning; but as daylight approached, the dangerous symptoms abated, and he felt better. Yet the flattering change, however it relieved his bodily sufferings, did not deceive his mind with false hopes; he was perfectly aware of the inveteracy of the disease under which he laboured; and, from the moment of his attack, fully anticipated the fatal result to which it might lead. Capt Lechmere had excited so general a feeling of respect and esteem amongst all on board, that the details of his illness will be readily pardoned. The interest in his fate was strongly exemplified in the attachment of his attendant, William Newman, a marine, who was as much concerned as if he had been his nearest relative; he carried him from place to place like a child, as poor Lechmere's fevered fancy dictated; sang to him, fanned him, moistened his lips, and was silent or still as his patient directed, and at last brought him by his special desire into the captain's cabin, where there was already a young midshipman in almost the same hopeless state. As the bell was striking the midnight hour, he sank into the dreamless sleep of death. His last moments were attended with a romantic interest. The fever being very high a short time before his disease, every means were tried to calm him, but in vain; the same impatient, painful restlessness still prevailed. At length Captain Owen, who knew from experience that singing had a powerful effect in soothing extreme pain, by diverting the mind from its sufferings, and fearful that the heart rending expressions and cries uttered by Capt. Lechmere might produce an injurious effect upon the other object of his solicitude, commenced the pathetic ballad, 'Here a sheer hulk lies poor Tom Bowline.' The first note produced a cessation of his frenzy: from raving madness he sank into almost total insensibility, which continued until Captain Owen came to the words, 'His soul is gone aloft!' when a long guttural sound announced that *his* spirit was fled, which was instantly confirmed by his attendant saying in a melancholy tone, 'He's gone, sir!'—'And aloft, I hope!' replied the captain, as he concluded his song."

BIOGRAPHY.

AN EXTRAORDINARY CHARACTER.

Richard Roberts Jones, of Aberdaron, in the County of Carnarvon, in North Wales, who resides at Liverpool, is thus described in Roscoe's Life of Roscoe, two octavo volumes recently published.

This most singular person, who is still living, and who continues to display a love of learning and an extent of erudition seldom exhibited within the walls of schools or universities, united with a want of common sense amounting almost to idiotcy, and a squalor and wretchedness of appearance of which a common mendicant would be ashamed, was first introduced to the notice of Mr. Roscoe, in the early part of the year 1806. The impression which his extraordinary appearance and acquirements made

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

upon Mr. Roscoe at this time is described in the following letter to Dr. Parr, who had unfortunately left Allerton just before the appearance there of the Welsh scholar:—

"Your letter found me in conversation with one of the most extraordinary beings that ever occurred to my notice—a poor Welsh fisherlad, as ragged as a colt, and as uncouth as any being that has a semblance of humanity. But beneath such an exterior is a mind cultivated not only beyond all reasonable expectation, but beyond all probable conception. In his fishing boat on the coast of Wales, at an age little more than twenty, he has acquired the Greek, the Hebrew, and the Latin languages, has read the Iliad, Hesiod, Theocritus, &c. studied the refinements of Greek pronunciation, and examined the connection of that language with the Hebrew. He reads Latin with the usmost facility, and translates it either into Welsh or English. I asked him whether he knew Italian? Yes, he could read it. I spoke to him in French,—he answered me, and we carried on our conversation in that language.

"He is well disposed, modest, truly pious, and intelligent, but in his exterior motions is certainly like no other creature on earth. He has just entered the room with a wallet of books in all languages, and on my speaking to him, he saluted me with a sort of curtsey instead of a bow. Yet, the expression of his features speaks his mind; and if shaved and docked, he might not perhaps appear so frightful as at present. He has now left his country, where he says he is persecuted, and thrown himself upon our benevolence, of which he thinks he had some proof, on one of his visits here with fish."

This extraordinary being was immediately taken by Mr. Roscoe under his protection. His rags were replaced by decent clothing, and a comfortable bed was prepared at night. So little, however, was he accustomed to the usages of civilised life, that, instead of getting into the bed, he crept under it. Such, also, was his attachment to the squalid habits in which he had lived, that it was with the utmost difficulty he could be persuaded to submit to those ablutions which were absolutely necessary to render a near conversation with him agreeable, or, indeed, safe. One of Mr. Roscoe's first objects was to provide him with some employment to which he had been accustomed, and upon enquiry, it appeared that he had been brought up to the occupation of a *sawyer*. The sequel is thus told in the memoir.

"A recommendation was given him to a person who employed many hands in sawing, and Richard was put down in the saw-pit. He accordingly commenced his labours, and proceeded for some time with a fair prospect of success. It was not long, however, before his efforts relaxed, and grew fainter and fainter, till at length he fell on his face, and lay extended at the bottom of the pit, calling out loudly for help. On raising him up, and inquiring into the cause of his disaster, it appeared that he had laboured to the full extent of his arms' length, when, not being aware that it was necessary he should also move forward his feet, and being quite breathless and exhausted, he was found in the situation described. As soon as he had recovered himself, he returned to the person who sent him, and complained loudly of the treatment he had received, and of his being put under ground. On being asked, why he had represented himself as *a sawyer*, he replied that he had never been employed in any other branch of sawying than *cross-cutting* the branches of timber trees when fallen in the woods in Wales."

Other attempts were made to discover a suitable employment for Richard, but in vain. He was placed in the office of a printer in Liverpool, where it was supposed his complete knowledge of the dead languages might render hsi services useful; but his inaptitude for business, and his inattention to the common decencies of personal cleanliness, soon terminated the engagement. At Allerton, many persons of distinguished learning had an opportunity of witnessing the extraordinary attainments of Richard Roberts, who never failed to leave a deep impression of the singular powers of his intellect upon their minds. It was during the visit of Mr. Coke and Dr. Parr at Allerton, in the year 1815, that the following incident, related in the memoir, occurred:—

"One of his friends happened to have a party to dinner, several of whom were persons of considerable literary distinction; when, by the misunderstanding of a message* after dinner, the door opened; and, to the equal surprise of both the host and his guests, Richard entered the room, his whole dress and appearance being grotesque in the highest degree. The curiosity of the company was excited; and, after the mistake to which this introduction was owing had been explained, he was asked several questions in French, to which he gave ready and correct answers. The conversation was then changed to Italian, in which he acquitted himself with equal readiness. To this succeeded an inquiry into his knowledge of Latin and Greek in which languages he read and translated some passages to the satisfaction of the persons present. One of the party then proceeded to examine him more particularly, when the following dialogue occurred:—

"Q. As you seem to have made no little proficiency in languages, pray tell me what means you take in acquiring a language?

"A. It is according to what the nature of the language is.

"Q. How would you set about acquiring a modern language?

"A. If it was Spanish, for instance, I would take a vocabulary of the language, and examine what words correspond with, or resembled the words in any other language with which I was acquainted; as, for instance, the Latin, French, or Italian; and those words I would strike out of the vocabulary, learning only such as were the original or peculiar words of the Spanish tongue; and then, by the assistance of a grammar, I should soon be able to attain a knowledge of that language.

"All the party admitted, that this was a most judicious and excellent method; and Richard withdrew, with expressions of approbation from all present."

It was on a previous day, during the same visit, that Richard had an interview with Dr. Parr, who immediately plunged into the darkest recesses of ancient learning. The refinements of the Greek language, and the works of the critics who had illustrated it were entered into, and gradually the conversation changed to the Hebrew, its peculiar construction and its analogous tongues. Here Richard had evidently the advantage; and after an attempted inroad into the Chaldee, the Doctor rather precipitately retreated, leaving a token of his liberality in the hands of the poor scholar. Richard being afterwards asked what he thought of the learned person with whom he had been conversing, replied, "He is less ignorant than most men."

* The mistake which Mr. Roscoe alludes to was this. Having been conversing with the friends around him on the subject of the instinct of animals, he mentioned to them the singular habits of a Brazilian weasel (the *Coati Mondi,*) which had been presented to him. One of his sons, sitting at the other end of the table, was desired "to bring in *the beast;*" but, unluckily, not having heard the previous conversation, he conducted Richard Roberts into the dining-room.

THE SAILOR'S RETURN.

A Sailor having returned to his native place, (Liverpool,) after an absence of some years, addressed Mr. Roscoe as follows:

"Kind Sir i take this oportunity of wrighting to you being advised by a Ladey of Liverpool to do so in order to tell you i am a British Sailor that as Lately arrived in England after aving maid moy escape from the Cost of New Zeland ware i was ten years a prisner and is most Most beautifull tatued over the face and bodey, and as wrote a manuscript of every think Consirning the interior of New Zeland, the wars, Mariges, Berings, and the Descriptions of every Animals of Birds Beasts and Reptiles and Menney others of the South Sceas, the Manucsript is valuable and wold make a Book of 200 Pages if wrote by a good Editor being such enformation as Never yet being in print not aving the menes of printing it moy Self i wish to Dispose of it and being advised to wright to you Concerning it i shold wish for you to send me a note wether i must atend at your house or whether you will whait on me at Mr. Calvert's Exibition in the Market Liverpool where the are exibiting me as a curiosity your obedunt Sirvent

"JOHN ROTHERFOOT."

LITERARY EXTRACTS, &c.

REMARKS ON EDUCATION IN THE COLONIES.

By Lord John Russell.

I trust that the time is now past when we are to look for the safety of the Colonies in the perpetuation of a state of slavery and ignorance. And if we are to look for the welfare of the Colonies as founded upon the opposite principle—those of freedom and knowledge—how important is it that *men of sound principle,* and of deep experience, should take upon themselves *the office of teaching* our fellow subjects the duties they will have to perform to their Sovereign and those around them; and that they may convert ignorant Africans into a civilized—a christian community. Until by means of a moral and scriptural education vigorously adopted in the Colonies, we have no well grounded right to hope for improvement.—*Speech, 29th June.*

EXTRAORDINARY IMPOSTURE.

Lancashire has been famous as a country, at different periods of time, for imposture. Ann Moore, formerly of Tatbury, and known as the fasting woman, is only equalled by a Miss M'Avoy, of Liverpool. The nature of the faculty which she pretended to possess, and it will surprise those who have never remarked the extent to which human credulity may be carried, to learn that numbers of sensible and scientific men were persuaded that her pretensions were well founded.

"I have heard," says Sir Joseph Banks, writing to a friend, "so much of a woman at Liverpool, who can see with the ends of her fingers when it is light, but cannot, in like manner, see with the ends of her fingers when it is dark, and have been told that two medical men of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

reputation are convinced that there is no fallacy in this most extraordinary sixth sense, that I am inclined to hope that you will forgive me if I request you to take the trouble of inquiring into the evidence and favouring me with your opinion on the subject."

The imposture, after a very minute inquiry, did not long remain undetected. By the application of a number of ingenious experiments, the trick was made appareut.

SONNETS.

WHEN reverses in business compelled the late Wm. Roscoe, of Liverpool, to part with his invaluable Library, the following sonnet unknown to Mr, Roscoe, found its way into the public prints:

"As one who destined from his friends to part
Regrets his loss, yet hopes again erewhile
To share their converse and enjoy their smile,
And tempers, as he may, afflictions dart,—
Thus, loved associates! chiefs of elder art!
Teachers of wisdom! who could once beguile
My tedious hours and lighten every loit,
I now resign you; nor with fainting heart—
For pass a few short years, or days, or hours,
And happier seasons may their dawn unfold,
And all your sacred fellowship restore;
When freed from earth, unlimited its powers,
Mind shall with mind direct communion hold,
And kindred spirits meet to part no more."

The above gave rise to the following beautiful Sonnet, which appeared in a Liverpool Paper:

"Thou art not friendless now—thou on whose head
The day-star of delight so long hath shone,
Friend of the friendless! though his beams be gone,
And o'er thy path dark clouds may lower instead.
Arm thy strong soul anew! with firmness tread
Thy destined road, and let thy manly breast
In the calm confidence of honour rest,
Rich in the only wealth it coveted.
Live on hope! Seek thy pure treasure there—
There, where the good man garners up his trust;
And if the record of his deeds be fair,
Esteems all else but vanity and dust;
Content to know, whate'er the fate he share,
That God appoints it still, and God is just.
"E. T."

HINTS TO EMIGRANTS.

Mr. McKenzie, in his Miscellanies about America, gives the following advice to emigrants. His recommendations are homely, from which all classes of persons may derive some advantage:—

"Be diligent—persevere—neither eat, drink, nor wear anything that is not of the produce of your own farm—if you can avoid doing so—until your lands are paid for, and a freehold title recorded and in your pocket. Rather miss a good bargain than grasp at too much with the risk of getting in debt. If your clothes be plain and clean, never care although they be coarse. You will be valued by your conduct, and not by your clothes. As to food, your own mutton and beef, and pork and veal, and butter and cheese, and potatoes and corn, and poultry, &c. raised at home, will render you as independent as King William IV. Drink good water, or plain family beer, (there is no malt-tax or exciseman to interfere with you,) and look forward to the time when the orchard you have planted and enclosed will bear fruit abundantly, and enable you to refresh yourself and comfort a friend with an occasional tankard of racy home-made cyder. As to tea, coffee, smoking or chewing tobacco, snuffing, and the vile practice of drinking spirits, be not tempted by the extraordinary lowness of price in America; '*touch not, taste not, handle not.*' Remember our European landlords.

"It is of no use for silk or cotton weavers, mill-spinners, clothiers, cutlers, watchmakers, calico-printers, and other mechanics who, like them, manufacture wares easily and cheaply imported from Europe, to emigrate to Upper Canada for the purpose of pursuing their respective occupations. They would be met at every corner by the productions of the half-starved workmen of these kingdoms, offered at the lowest rates. Taylors, Tory-parsons, physicians, lawyers, surgeons, shopmen, and clerks, are not at present in great request in Upper Canada; but wagon-makers, merchants, (shopkeepers,) bricklayers, carpenters, stone-masons, cabinet-makers, blacksmiths, and joiners, might probably better their circumstances by crossing the ocean. Common-school teachers, shoemakers, saddlers, coopers, brewers, and bakers, may do well enough, but I think that their chance is not so good as that of the preceding classes. Each man, on resolving to emigrate, should have previously sat down and counted the cost, and seriously asked himself the question, What am I to do when I get to America? He has the whole of that wide continent in which to make a choice, and may readily amend a first choice if he find that it would be to his advantage."

SWEET SUSAN.

(FROM THE CALCUTTA LITERARY GAZETTE.)

Sweet Susan was a lovely lass,
And *suitors* her *pursued*,
And *sued* to *Sue*, till *suing* crept
Into *desuetude*.

Tom Tees the turnpike-man was first
Who sought the lass to please:
Tees used to *trust* her for the toll,
Thus *teazing* the *Trustees*.

He told her if she'd love him, she
Might pass at any *rate;*
But Sue liked not the turnpike-man,
He had an awkward *gait*.

The cobbler next a *suitor* was,
But his *soul's* joy soon past;
She said he dealt too much in *ends*,
His love could never *last*.

The tailor he *took measures* too,
To make her his for life,
And often said, that she would make
A *pattern* of a wife.

The parish clerk and auctioneer
Said "*Going*," to a frown;
And wish'd her much to say "*Amen!*"
But Susan *knocked him down*.

The undertaker wasn't *mute*,
He made a *morning* call,
Coughing rehearsed and *told* his love,
And said 'twould never *pall*.

But he, altho' so *grave* a man,
Pulled about other *bells;*
And Sue had no desire to see
His *cabinet* of *shells*.

Bill Dough, the baker, *rolled* his *eyes*,
And *eyed* his *rolls*, and said,
"I *need* you"—"but," says Sue, "you're not
Quite to my *fancy bred*."

The grocer also wished to *plumb*
The *current* of her thoughts;
She spoke the word that *clove* his heart,
She'd *reasons* of all sorts.

For he was *grosser* than she liked,
And she refused him twice,
Because he'd had some business
With *Carolina Rice*.

A soldier wished her to obey
At his word of command,
Though he *presented arms* to her,
She wouldn't take his *hand*.

He thought to put by storm at once
Her scruples to the rout;
But she was *formed too deep* for him
This girl I *write about*.

Still tho' she was so hard to please,
To *all* men gave no *quarter*,
Stood *earth* and *fire*, and all that '*ere*,
She couldn't stand the *water*.

Bill Float he was a waterman,
At Wapping he was bred,
And being used to *Wapping sculls*,
He got into her *head*.

He took her in his *wherry* out,
Which she thought *wery* kind;
And while he *rowed* the boat before,
She also *rode* behind.

One day as they went out to sail,
(To cut a long tale *shorter*,)
A *squall* upset the boat, and left
Sue *squalling* in the water.

Bill swam *ashore*, *(as sure* as death,)
Sue could'nt follow him;
For though 'tis true she'd got a *duck*,
Yet that *duck* couldn't *swim*.

They took her out, when she was dead,
And finding, spite their bother,
That they could not *wring* this *belle* dry,
They went and *tolled* the other.

A crowner's 'quest was held on Sue,
And thus they did decide:
That though it was an accident,
'Twas doubtless *Suecide!*

A fancy circumstance there was,
I've heard the people tell it:
Her gown that had been *gingham*, was
Discovered to be *well-wet!*

Now maidens all a lover take,
Whene'er you go to church;
Who, if the boat a *lurch* should give,
Won't leave you in the *lurch*.

A. T. B.

GERMAN SCEPTICISM PUNISHED.

"When the first news of the capture of Varna reached Warsaw, a German trader ventured to doubt its truth, in a large coffee-house, where the company were discussing on the subject, and said that it wanted confirmation. He was scarcely out of his bed the next morning, when a police-officer came into his room without ceremony, and informed him that the grand duke wanted to see him. 'Why—what—' exclaimed the terrified German, 'what have I done?' 'You will soon know,' replied the satellite. With unpleasant forebodings the poor man arrayed himself in his best, and obeyed the summons. 'So,' says Constantine to him, 'you do not believe that the emperor's army has taken Varna—what do you know about Varna that makes you doubt of its fall?' 'Please your highness, I am a poor ignorant man;—I merely thought—' 'You thought; then sir, you must learn to think right.' 'Pardon, your highness—I meant no harm.' 'There is no harm done: do not be afraid. 'Hold!' continued Constantine, seeing the German about to prostrate himself—'a courier is this moment going to Varna, you will go in his kibitka and clear up your doubts.' Away they go, click clack, day and night—the poor German in a mortal fright, under the idea

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

that he is on the road to Siberia. They arrive at Vienna, and the courier addresses his companion for the first time since they left Warsaw. 'Sir, this town is Varna; you will have the goodness to put the question to any body you like, and convince yourself. Now, sir, you see these troops—look at them well—examine the uniforms. Are you satisfied that they are Russian troops?' 'I am perfectly satisfied,' answered the German. 'Then, sir,' replied his companion, 'you have no further business here. In a quarter of an hour another courier will start for Warsaw; you will return in his kibitka, and report yourself to the grand duke.' Away he goes again, jolt jolt, in fear of dislocating half his bones, for being free, this journey, from mental anxiety about Siberia, he had leisure to observe that he was made of flesh and nerves. Constantine welcomed him with a horse laugh. 'Now,' he said, 'you will go to that cafe, where you were the last evening you were in Warsaw, and acquaint the company that the Russians *are* in Varna.'"—*Record of Travels in Turkey.*

THE PIRATE.

[FROM THE CALCUTTA LITERARY GAZETTE.]

******* The gong had just sounded "eight bells," as Capt. M. enter'd the cuddy of the E. "care on his brow, and pensive thoughtfulness" So unusual was the aspect he wore, that all remarked it—in general his was a face of cheerfulness, not only seeming happy itself, but imparting happiness to all around. "What has chased the smiles from thy face," said young C. a writer much given to Byron and open neck-cloths. "Why looks our Cæsar with an angry frown? Poetry apart, what is the matter:" 'Why! the fact is, we are chased," replied the Captain—"Chased! Chased!! Chased!!!" was echoed from mouth to mouth in various tones of doubt, alarm and admiration. "Yes, however extraordinary it may seem to this good company," continued our commander, "I have no doubt that such is the fact, for the vessel which was seen this morning right astern, and which has maintained an equal distance during the day, is coming up hand over hand. I am quite sure therefore she is after no good—she's a wicked looking craft—at one bell we shall beat to quarters."

We had quitted the Downs a few days after the arrival of the "Morning Star," and with our heads and hearts full of that atrocious business rushed upon the poop. The melancholy catastrophe alluded to had been a constant theme with us at the cuddy table, and many a face showed signs of anxiety at the news just conveyed to us. On ascending the poop, assurance became doubly sure, for certain enough, there was the beautiful little craft, overhauling us in a most gallant style—she was a long, dark looking vessel, low in the water, but having very tall masts, with sails white as the driven snow.

The drum had now beat to quarters, and all was for the time bustle and preparation; sailors clearing the guns, handing up ammunition, and distributing pistols and cutlasses—soldiers mustering on the quarter deck in full accoutrements, prior to taking their station on the poop—we had 200 on board—women in the waist with anxious faces, and children staring with wondering eyes—writers, cadets, and assistant-surgeons in heterogenous medley. The latter, as soon as the news had been confirmed, descended to their various cabins, and reappeared in martial attire—one young gentleman had his "toasting knife" stuck through the bottom hole of his inexpressibles—a second Monkbarns—another came on exulting, his full dress shako placed jauntingly on his head—as a Bond-street beau wears his castor—a third—with pistols in his sash, his swallow-tailed coat, redolent of saw-dust, doffed, his sword dangling between his legs in all the extricacies of novelty—he was truly a martial figure—ready to seek for "reputation even at the cannon's mouth." Writers had their "Joe Manton," and assistant-surgeons their instruments. It was a stirring sight, yet withal ridiculous.

But now, the strange sail quickly approached and quiet was directed to be preserved. The moment was an interesting one—a deep silence reigned throughout the vessel, save now and then the dash of the water upon the side, and here and there the half-ejaculation of some impatient son of Neptune. Our enemy, for so we had learned to call her, came gradually on in the wake of the ship—no light, no sound issued from her—when about a cable's length astern she lifted to the wind as if to pass us to windward, but the sonorous tone of the Captain, who hail'd her with the accustom'd cry of "ship, a hoy," made her apparently, though she answered not, alter her purpose, for posting her helm she came up to leeward. Again the trumpet sent forth its summons, but still there was no answer—she was now about a pistol shot from our larboard quarter. "Once more, what ship's that? answer—or I'll send a broadside into you"—blew harshly from the trumpet's mouth. Still all was silent—and many a heart beat with quicker pulsation—on a sudden we observed her lower steering-sails were drawn in by some invisible agency,—for all this time we did not see a single human being,—or hear the slightest noise—no—not though our ears listened with painful attention. It was assuming a very mysterious aspect, and Capt. M. gave orders that 2 main deck guns should be fired across her bow, and if she did not answer then, or shew any signal, directed the larboard broad side should be poured into her. The guns were fired,—as if by magic, the starboard ports of the other vessel were lifted—guns run out in an instant—each gun had a lantern above it, plainly visible through the port—M was just giving the signal to fire,—when as suddenly as the guns had been run out, they were withdrawn—we heard "Port"—and the vessel fell off to leeward and in a few seconds was astern We gazed on one another in astonishment; but all was presently explained Our attention had been so fixed that we had not thought of the weather, which had been threatening for some hours, and indeed we had been under snug sail the whole evening. During the various manœuvres I have related, the wind had been gradually increasing, and two minutes after the enemy had dropt behind, it blew a perfect hurricane, accompanied by heavy rain. We had just time to see our friend scudding under bare poles, ere the sleet shut her from our sight, and—we saw her no more,—* * next morning no vessel was to be seen. * * * *

FERN.

PAGANINI.

The resentment against his grinding greediness has overpowered the curiosity and delight of hearing him. One of his own learned and accomplished countrymen has addressed him in the following sonnet:—

Se suona il violino, e tu nol miri
Il crederai maggior del finto Orfeo;
Di lui può dirsi, che natura il feo
Per dimostrar quant' alto il genio aspiri—
Ma se della sua vita i fatti ammiri,
E la sozza avarizia, e l' uso reo,
Che fa dè suoi talenti, un vil Giudeo
A lui preferirai, se non deliri—
Ahi! Paganini, quanto mal tu fai
A te stesso, e all' Italia, che s' onora
D' averti dato della luce i 'rai—
Nei regni dell' Occaso, e dell' Aurora
Viorà tua fama, ma del mesto, il sai,
Regnano in te vizj più grandi ancora.

June 8th. F. DE MOSCATI.

THE CHURCH.

(*From* BULWER'S *England and the English*, 2 vols. 1833.)

"There is another cause of weakness in the established church, proceeding from that aristocratic composition which appears a part of its very strength. Its members never harmonise with the people in political opinion; they often take a severe and active course in direct opposition to the wishes of the popular heart. As a body, they are and profess themselves to be, wound up with the anti-popular and patrician party; whereas, the greater part of the dissenting sects are, more or less, favourers of the popular side; the latter thus acquire power by consulting opinion, and become the rules of the poor by affecting to be their friends. Even where, in the case of the loyal and surbordinate Wesleyan, the politics generally may incline to the powers that be, some individual point, some isolated but stirring question—to day the slavery question, to-morrow the factory bill—occurs, on which the Wesleyan, no less than the bold and generous 'Independent,' is united with the most popular opinions. For I know not how it is, sir, but it seems to me, that wherever a man is very active on some point of humanity, he always finds himself suddenly surrounded by the great body of the English people. Let me not, however, be misconceived; I would not desire the preachers of a serene and passionless religion to mix themselves ostentatiously with the politics of the day, or to be seen amidst their roar and tumult of democratic action; but, surely, if they ought not to be active in support of the people, it is like laying a mine of gunpowder beneath their spiritual efficiency, and their temporal power, to be distinguished in activity against them. Every unpopular vote of the bishops is a blow on the foundation of the church. Religion is the empire over the human heart; alienate the heart, the empire necessarily departs But if, sir, the composition of the church establishment were less exclusively aristocratic; if its members, as in its days of power and of purity, sprang more generally from the midst of the great multitudes they are to rule, I apprehend that, while they would be equally on the side of order and of strong government, their principles would be less exposed than at present to suspicion, and would seem to the people dictated rather by the sacred spirit of peace, than by the oligarchical and worldly influence of temporal connexions. And thus, sir, by a far-sighted and prophetic sagacity, thought the early patriarchs and mighty men of the Reformation It is they who complained that general zeal and diffused learning would cease to be the characteristics of the clergy, exactly in proportion as the church should become more an established provision for the younger sons of the great. It is they who predicted that when the people saw none of their own order officiating in the ministry, the divine sympathy elsewhere in schisms and sects. The lethargy of the established church is the life of dissent."

WEALTH.

"The respect we pay to wealth absorbs the respect we should pay to genius. Literary men have not with us any fixed and settled position *as* men of letters. In the great game of honours, none fall to their share. We may say truly with a certain political economist, 'We pay best, 1st, those who destroy us—generals; 2d, those who cheat us—politicians and quacks; 3d, those who amuse us—singers and musicians; and least of all those who instruct us.' It is an important truth not by Helvetius, that the degree of public virtue in a state depends exactly on the proper distribution of public rewards. 'I am *nothing* here,' said one of the most eminent men of science this country ever produced; 'I am forced to go abroad sometimes to preserve my self-esteem.'"

THE BRITISH SETTLERS.

A Sketch of the Establishment, Progress, an Present State of the British Settlement c ALBANY, on the Eastern Frontier of th Cape of Good Hope, from the date of i foundation in the Year 1820, to August, 183 By JOHN CENTLIVRES CHASE.

THE following Memoranda, contrasting the original state with the present situation of the British Settlement of Albany, were drawn up a short time back in order to exhibit the progress of the Immigrants, and to answer the frequently repeated question, "Whether success has, or has not, attended the efforts of the Settlers as well as the objects of the English Government in encouraging them to abandon their native hearths?) All they pretend to give, is a mere bird's-eye view over a period of thirteen years of great (perhaps extravagant) expectation, long deferred hope, and at last, of grateful and extraordinary realization; and as thus, with all their imperfections (inseparable to so condensed a sketch), here placed upon record, to serve some future historian of the Eastern Province.

In the year 1820, three thousand seven hundred and twenty British subjects landed upon the beach at Algoa Bay without the loss of a single life where they encamped previous to their journey towards the *Canaan* of their wishes. Under the Block House of that place called Fort Frederick, they found *four* houses, (exclusive of the Fort itself, and a Barrack,) and the resident population, at the most, not exceeding one hundred persons. The trade of the Port then consisted of a few tons of Butter and some Salt, occasionally exported to Cape Town by one or two vessels, whose visits were casual, and like those of Angels "few and far between." From the peasants, animated by his example, forgot their excuses, and hastened with one consent to fetch their tools to follow him. At length every obstacle was surmounted. Walls were erected to support the earth, which appeared ready to give way; mountain torrents, which had hitherto inundated the meadows, were diverted into courses, or received into beds sufficient to contain them; and *the thing was done*. The bridge still bears the name of '*Le Pont de Charité*'—the Bridge of Charity. '*It is impossible!*' said some, as they looked at the impenetrable forests which covered the rugged flanks and deep gorges of Mount Pilatus, in Switzerland, and hearkened to the daring plan of a man named Rupp—to convey the pines from the top of the mountain to the lake of Lucerne, a distance of nearly nine miles. Without being discouraged by their exclamations, he formed a slide or trough, of twenty-four thousand pine-trees, six feet broad, and from three to six feet deep; and this slide, which was completed in 1812 (and called the slide of Alpnach, from the name of the place where it was situated), was kept moist. Its length was forty-four thousand English feet. It had to be conducted over rocks, or along their sides, or under ground, or over deep gorges, where it was sustained by scaffoldings,—and yet skill and perseverance overcame every obstacle, *and the thing was done* The trees rolled down from the mountain into the lake with wonderful rapidity. The larger pines, which were about a hundred feet long, ran through the space of eight miles and a third in about six minutes. A gentleman who saw this great work, says, that 'such was the speed with which a tree of the largest size passed any given point, that he could only strike it once with a stick as it rushed by, however quickly he attempted to repeat the blow.'

Application.—Say not hastily, then, 'it is impossible!' It may be so to do a thing in an hour, a day, or a week; or by thoughtlessness, carelessness, or indolence; but to act with wisdom, energy, and perseverance, is to insure success. 'Time and patience,' says a Spanish author, 'make the mulberry-leaf satin!' And Periander remarks, that 'care and industry do every thing.'

THE ORCHIS.

That which is thought wrong may yet be right.

A gentleman stated some years ago that a species of orchis is found in the hilly parts of Kent, which has in it *the form of a bee*, apparently feeding on the breast of the flower; and so exact is the resemblance said to be, that it is called the bee-flower, and at a very small distance, it is impossible to detect the imposition. A friend of his, however, who saw this account, wrote to him, saying—'The orchis is found near our sea-coasts, but instead of being exactly like a bee, *it is not like one at all.* It has indeed a general resemblance to a fly, and by the help of imagination, may be supposed to be a fly perched upon the flower. The man drake very frequently has a forked root, which may be fancied to resemble thighs and legs; and I have seen it helped out with nails on the toes.' Now, which of these persons was right? It seems one must be wrong; which of them, then, shall we disbelieve? *Neither! Both* are right! The fact is, there are two kinds of orchis: the *bee*-orchis and the *fly*-orchis. Thus there was an error on the part of the writer last mentioned; for he should not have asserted that the representation on the flower was that of a fly, till he was quite certain that there was not one with the figure of a bee.

Application.—Be very cautious in all you say;—never be too positive;—you will often be wrong when you feel sure of being right. And then never condemn hastily what others say; they may after all be right, though you at first feel certain they are wrong. It is quite possible, you see, for two different and opposing statements to be true. It is said that two knights quarrelled, fought, and wounded each other about a shield that stood between them; the one said it was red, the other said it was blue: but at length some one interfered, and shewed that it had a red side and blue side; that each of them therefore was right; and that had they been wiser, and looked *at both sides*, the strife would have been prevented.

ALARMING INTELLIGENCE TO THE WHITES.

The coloured populations are multiplying like the Israelites; and Europe and America are on their side, and anxious to assist in raising up some black or mulatto Spartacus with better fortunes than his prototype. In South America the dark races are rapidly rising to power and command. There are black lawyers and priests, and schoolmasters, and it will not be long before black generals hover on their frontiers.—(*Westminster.*)

THE CHURCH AND THE GRAVE.

I know not how it is, but whenever I come to Church, I derive almost as much spiritual benefit from the sight of the graves and the monuments, as from all the ordinary ministrations of the Sanctuary. They are beautiful and quiet homilies sinking into the soul, as the light dew of the morning sinks into the earth and makes it fruitful. —*The Puritan's Grave.*

A PRODIGY IN PAPERS.

AT White Hall Mill, in Derbyshire, a sheet of paper was manufactured last year, which measured 13,800 feet in length, 4 feet in width, and would cover an acre and a half of ground. In these days, one would hardly be surprised to see a New Penny Periodical started on a sheet of the above dimensions. Such a paper, however moderate in its politics, must of necessity go great lengths; and covering, as it is said to do, an acre and a half of ground, must have an extraordinary wiseacre as its editor. The contributors to cheap periodicals must commence writing by the *foot;* no difficult matter to them, as writing by the *head* seems to be their grand difficulty.

NEW DISCOVERY IN THE PACIFIC.

Capt. Covell, of the *Alliance*, in lat. 4 3 N. long. 168 49 E. of a group of 14 Islands, not laid down in any chart, and they were all inhabited, and the natives spoke the Spanish language:—he called them the Covell Group. *(Philadelphia Paper.)*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

THE SPIRIT OF OUR ADVERTISEMENTS, No. 1.

"THE YOUNG GENTLEMEN'S *Birth.*"

What an era of refinement do we not live in! The world is bursting with an intellect which sooner or later will ripen into an unnatural *Birth.* Look but at the press, and peruse the Journals which emanate from it. How prolific has the mind of man become within the last century. The very age groans with a race of *illumaniti*—a very army of *literatii.* Every thing has suddenly become changed. In old times, a book was written and published, and read by all the readers in the kingdom—now-a-days *Penny-worth Magazines* float on the æther of existence. In ancient hours a bairn was engendered, and ushered, under the aid and indefatigable influence of some old dimity-gown and puckered petticoat dame, wearing a long and serious aspect, into terrestrial vicissitude. Now-a-days the times are relieved of such domestic charges, while, on the contrary, a race of another kind has sprung up. This reflection was

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

made from reading a few days ago the following hand-bill:

"Wanted, a Steward on Board H. M. Ship *Pelorus*, for the young Gentlemen's *Birth*, &c. &c."

We cannot presume but a *Birth* was to take place, and that the anticipated offspring was connected with the young gentlemen, who had kindly lent their moiety of H. M. S. *Pelorus*, and, moreover, advertised for a steward to preside at the awful and unwonted crisis. We further opine, that the consequent *hours of idleness* have followed, and that an addition to the ship's crew has taken place. Added to this, the steward has no doubt been found, and must have done his duty. Nothing seems to be more probable than the presumption; for, in commemoration of the eventful period, a Jubilee will or has happened, as another hand-bill has been published, setting forth that a Fiddler is wanted on board the same vessel Surely such advertisements as these would alarm the inventive mind of the author of Tristram Shandy, if it were but possible for him to raise his genius on earth, and prescribe a plan for the future midwifery of mankind.

STATE OF THE MORAL PULSE; OR, STONY-GROUND HEARERS.

No. 2.

We learn from the Advertiser, Oct. 30th, that "*pathetic* appeals" were made to the audience composing the South African Missionary Meeting in Long-street, on the evenings of the 23d and 24th ult.—That the Rev. Mr. Robertson "delivered a most *eloquent, forcible,* and *pointed* address," and that the audience was "respectable and numerous." The results—£4 : 1 : 0!!!

From the same source we learn, that the Rev. Dr. Adamson preached in the same place "a most suitable and *pathetic* sermon." We also learn that there was an "impression made" in behalf of the "*heathen population.*" (Heathen population at the seat of British Christian Legislation and Missionary Establishments! *Credat,* &c. &c.) The results—£3 : 12 : 6!!!

VERY CHARACTERISTIC.

Gentlemen! I move that *Mr. Speaker* do take the Chair.

I beg leave to second the motion.—*All! all! all!*

Mr. Speaker.—Gentlemen! I am proud of the honour done me. We are met here to determine on a plan for a new vegetable and fish market.

Resolved I. That *Mr. Scribe* be the Secretary.

Resolved II. That *Mr. Collector* be the Treasurer.

Resolved III. That the New Market be immediately commenced.

Resolved IV. That the sincere thanks of the Meeting be given to *Mr. Speaker* for his very able conduct in the Chair.

Thus—

"They Resolve and re-Resolve,
And die the same."

VOCAL MUSIC.

(Not *from a Correspondent.*)

We had scarcely penned in our Publication for September, that "music, when not allied to language, becomes a sensual affair," and that "the first music must have been vocal," when, to substantiate our opinions, and expressly to annihilate those of *Fanatico de la Musica,* a Correspondent who threw a lance at us in the subsequent Number, the *Sherbourne* quietly enters Table Bay, and lands a lady of fair fame and high renown, in alliance with

"Divine sounds and immortal verse."

The lady in question is thus described in an interesting work On Music, by Mr. Stafford, and published by Constable, of Edinburgh:

"Mrs. P. Atkinson (formerly Miss Goodall,) has a voice of much sweetness, possesses great talents, and is, perhaps, one of the most scientific singers of the day."

During Mrs. Atkinson's short stay at the Cape, the public were gratified by the exhibition of three Concerts, and it is quite certain that the enthusiasm which hailed her first appearance was not abated at the last. On the contrary, it was considerably augmented. The truth is, it was natural it should be so; for who could be otherwise than charmed by the purity, uniformity, and richness of her tones, the noble simplicity of the declamation, the accurate articulation both of syllables and sounds, the rejection of affected meretricious ornament, and lastly, by that happy expression of countenance—refreshing and re-producing, which so peculiarly marks the features of this accomplished vocalist.

The selections of Mrs. Atkinson for her Concerts, were admirably chosen from the Italian, Swiss, English, Scotch, and Irish melodies. But those which were decidedly popular at these Concerts, and which were hailed with enthusiasm by the several audiences, were the Scottish Songs:

1st, *Wandering Willie,* by Burns, a new version, and arranged by Mrs. A. herself. The lines

"There's a cheer in thy voice and thy bounding step,
And there's bliss in thy blythesome e'e,"

were received with rapturous applause.

2d, The old Jacobite song—*Charlie is my Darling,* was also received with unbounded delight.

3d, *Roy's Wife of Aldivalloch* was another in which much skill and taste were displayed. This song is said to be written by Mrs. Grant, of Carron. The closing description of the Highland enchantress (*Roy's Wife,*) conveys a lesson to all the dissappointments of our own sex.

The hero is quite a model for all forsaken swains; he admires the person of his lover, admits her witchery in the dance, and reminds her in the gentlest manner how she vowed herself to him before she took honest Roy of Aldivalloch. Now, this is much better than if he had gone "dannering about the dykes," and sung songs, long and dolorous of "Woman, inconstant Woman!"

4th, *Auld Robin Gray,* exquisite though it be, was, perhaps, less adapted for a mixed multitude than others of the Scottish songs. It is, perhaps, better suited to the select appointments of the drawing-room. All who are charmed with simple grace and happy delicacy, will love the song of *Auld Robin Gray.* It was written by Lady Ann Lindsay, before her ladyship was twenty years old. Lady Ann married Andrew Barnard, Esq. Colonial Secretary in this Colony in 1807. Lady Ann used her pencil with a masterly hand. She was a great admirer of mountain scenery, and resided at *Paradise,* and once pitched her tent on the heights of Table Mountain, in which she dwelt for a week.

In this glance at the Concerts, we have noticed more especially the Scottish song, because it is so much connected with the natural unstudied grace of thought—the felicitous yet unsought beauty of language. Because it tells us of pastoral lands, and a happy peasantry and people. Because we are associated in the songs with the stars which shine above us, and the names of the flowers over which we walk: because, though thousands of miles distant, the breckan, the gowan, the hawthorn, and the banks and the braes, and the moor, and the heather, and the silvery streams, and the mountain torrents, are all brought before us in picturesque recollection.

Again, a Scotch song is a story—not so with the English. At the same time, we are glad to discover a better taste in progress in this respect in England than formerly. We trust the days of "Cherry Ripe," and "Buy a Broom," and "Moll in the Wad," and "Tally-i O the Grinder," and "Derry Down," and "Rum-ti-tiddly pig bow, wow," and "Ge-ho, Dobbin," and "Tol de roll loll," and "Rumti adity," are well nigh over, and that English associations will be more hallowed in future, by the introduction of that true poetry and music which gladden the hearts of Caledonia's sons

"From the centre all round to the sea."

[illegible] wishes of the popular [illegible]

ly, they are and profess themselves to be, und up with the anti-popular and patrician rty; whereas, the greater part of the dissent- sects are, more or less, favourers of the pular side; the latter thus acquire power by sulting opinion, and become the rules of poor by affecting to be their friends. THE BRITISH SETTLERS.

A Sketch of the Establishment, Progress, and Present State of the British Settlement of ALBANY, *on the Eastern Frontier of the Cape of Good Hope, from the date of its foundation in the Year* 1820, *to August,* 1833. By JOHN CENTLIVRES CHASE.

THE following Memoranda, contrasting the original state with the present situation of the British Settlement of Albany, were drawn up a short time back in order to exhibit the progress of the Immigrants, and to answer the frequently repeated question, "Whether success has, or has not, attended the efforts of the Settlers, as well as the objects of the English Government in encouraging them to abandon their native hearths?" All they pretend to give, is a mere bird's-eye view over a period of thirteen years of great (perhaps extravagant) expectation, long deferred hope, and at last, of grateful and extraordinary realization; and are thus, with all their imperfections (inseparable to so condensed a sketch,) here placed upon record, to serve some future historian of the Eastern Province.

In the year 1820, three thousand seven hundred and twenty British subjects landed upon the beach at Algoa Bay without the loss of a single life, where they encamped previous to their journey towards the *Canaan* of their wishes. Under the Block House of that place called Fort Frederick, they found *four* houses, (exclusive of the Fort itself, and a Barrack,) and a resident population, at the most, not exceeding one hundred persons. The trade of the Port then consisted of a few tons of Butter and some Salt, only occasionally exported to Cape Town by one or two vessels, whose visits were casual, and like those of Angels, "few and far between." From this unpromising and apparently barren spot, a wilderness of rock and sand hills, the Settlers marched to that division of the Uitenhage District named ALBANY, a distance of one hundred miles from the Port, through a picturesque but uninhabited country, where the only signs of prior occupation were the ruins of numerous buildings burnt by the Caffres, in the murderous wars maintained during the preceding twenty-two years between themselves and the colonists, the latter of whom had now been driven out after three unsuccessful attempts permanently to establish themselves, made by special invitation,* and backed by the whole strength of the colonial government; the abundance of game, especially of the Antelope species, observed by the Settlers on their journey, while it heightened the effect of the otherwise silent scenery, was proof enough of the rapid reversion this lovely tract was undergoing towards one of unsubdued nature.

On their arrival at their destination, the Immigrants were scattered in small parties over the surface of this new division of the colony, and the Sun of the end of that year beheld them the Tented occupants of their newly acquired wastes, with a beaten but enraged enemy upon their borders, behind them a depopulated territory of large extent, above the open sky, and, at their feet, a soil requiring patient industry and hard labor to make it yield the necessaries of life.

The only town then in this District, was that called after Lt.-Col. Graham, who in 1812, established it as the head quarters of the troops employed at that time in driving the Caffres across the colonial boundary, it then numbered *twenty-two* houses, including huts.

PRODUCE, MANUFACTURES, or EXPORTS there were none, the necessaries of life were brought from Cape Town or introduced from the neighbouring provinces in exchange for *hard cash alone,* and this the pay of the military body, an expense which the whole colony had to meet in the shape of a Commando Tax, without any return whatever; for the savage beaten out one year or his depredations repressed for a time, was sure to return with encreased force and greater mischief, with "seven devils more wicked than himself," as soon as the pressure of the troops was taken off. CULTIVATION was confined to the gardens of the officers and very few inhabitants of the town. There was no regular communication by POST. TRADE with the Caffres was not permitted, a system of non-intercourse having been the policy of the colonial government for 160 years, that is, from the date of its establishment under Van Riebeek, and *death* was the penalty proclaimed for its infraction. There were no *villages,* no *places of worship,* the Sabbath, according to the remarks of a military officer in 1820, never having travelled farther than the Sunday's River, which is eighty miles to the westward of the boundary. There were no *schools,* if we except the new missionary station at Theopolis, which, exposed to constant and harrassing warfare held a precarious existence. The *population* was trifling, and dependent upon the military alone, who were introduced for the sole purpose of liberating the frontier from savage inroad, and then

* 6th June, 1812,—Proclamation inviting Settlers to occupy the Zuureveldt.

28th Jan. 1814,—Proclamation again offering the Zuureveldt to Settlers.

18th April, 1817,—Proclamation repeating the same invitation.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to retire. In fine, Albany was a desert space, where the power of fire and sword for the purpose of aggression or avengement had immediately before passed, and with every prospect of remaining so, but for the arrival of the Settlers, and as has before been remarked, after previous expulsions of the natives, three attempts having failed to people it with *native born* Colonists.

Before the end of 1820, the British Settlers who sought

> "A warmer world, a milder clime,
> "A home to rest, a shelter to defend,
> "Peace and repose;"

were placed upon their respective allotments of ground, but their labors for the first four years were attended with continual failure, bitter disappointment, and much severe suffering, owing to the devastation of Rust, Floods, Drought, Caffre incursions, inattention on the part of the functionaries, and a cruel stigma cast upon the character of the Settlers themselves of disaffection to the Government. Discontent naturally became general, and the new settlement was hastening to immediate dissolution, when, at the close of 1824, a sudden, and unexpected change of its circumstances ensued. His Majesty's Commissioners of Inquiry wiped off the odium of *disaffection* fixed upon the body in order to screen indolence and neglect, and publicly proclaimed their unsullied loyalty; evils of a political character were removed, (and these had pressed heavily upon the spirit and industry of the people;) pecuniary relief was afforded by Government and from other sources, to those who had risked and wrecked their all in a fruitless attempt at wheat cultivation; a number of enterpizing individuals who, with the alternative of prosecuting an illegal but lucrative trade, or starvation before their faces had braved the penalty of the impracticable and absurd law of non-intercourse, forced the opening of a traffic with the Caffres; others commenced and succeeded in projects of various improvements, and ALBANY, over which the sword of wrath and inevitable ruin seemed to impend by a single hair, at once commenced a march of success, I believe the most unparalleled in the history of colonization, especially after such a tissue of disasters. Of the results of this I shall give a very concise view, a mere simple and unvarnished statement of facts, stating as my authority that of OFFICIAL records.

The Caffre Trade just alluded to, within the first eighteen months from its foundation poured native produce into Graham's Town, chiefly Ivory, to the amount of £32,000 sterling, and it has now settled down into a steady but progressive commerce to the value of £34,000 annually. The Traders have opened up the hitherto unknown country along the southern coast to 150 miles beyond Port Natal, and in the northen interior, to which they have also extended their operations, bringing in yearly about £2000 more: they have penetrated to the Tropic. They have been the pioneers of the missionary who has followed their footsteps. They have established a considerable outlet for British manufactures, as the demand for the insignificant *bead,* usually of Italian manufacture, is being rapidly superseded by the more useful articles of Calico, Kersey, Iron Pots, &c. and to this trade may the safety of the colony, its relief from the tremendous annual charge of the Commando Tax of £4500, and the permanent establishment of the District be ascribed.

The Exports hitherto without existence, from the Settlement *alone*, were for the past five years as follows, viz:

1829,	- - -	£32,273 sterling.
1830,	- - -	34,166 ,,
1831,	- - -	50,140 ,,
1832,	- - -	51,290 ,,

shewing a growth the more promising from its gradual increase. Hides, Horns, Skins, Tallow, Butter, Salted Provisions and Ivory, were the principal items.

The exports of the entire colony in 1821, one year *after* the arrival of the Immigrants, were only three times greater than those from Albany *alone* in the last year; the latter now bear a proportion of more than one-fourth.

Cultivation, which met with such sad reverses in the earlier years of the Settlement, has within the few last been considerably extended, Oats, Barley, and Oat Hay being the principal, chiefly for supplying the Commissariat Department; Wheat has also lately been raised in small quantities, but the visitation of the Rust has not entirely abandoned the frontier districts; it is, however, brought from other parts of the colony at a very cheap rate. Indian Corn and Vegetables grow most luxuriantly. Fruit has become plentiful and the varieties improving. Cattle, Sheep, and Horses are abundant, and every necessary of life extremely cheap.

Wool is an increasing and popular object of attention, there are about 2,000 of the improved breed of Sheep in the hands of the Settlers, and the prices they received for their fleeces last season was 14½*d.* per lb. from the frontier Merchants on the spot. A sum of above £700 has lately been raised by public subscription among the Immigrants for the introduction of the purest stock from Europe, and this branch of agriculture is not only becoming the staple produce of this district, but its cultivation through the success and example of the Settlers is gradually extending itself into the neighbouring elder and Dutch divisions of the frontier.*

Graham's Town has increased from a cluster of 22 houses, to be the second town in the colony, for extent, population, and commerce; there are now in it nearly 600 houses, and 2000 inhabitants, and at the present time 66 more houses of good size are in progress of building.

The Settlers have built eight villages or hamlets, eleven places of worship, and the schools in the Settlement, including the two government and the private establishments, are in number fifteen, at which, about one-fourth of the population are under instruction. It must be remembered, that Albany is by far the *smallest district in the Colony*, none of which, excepting the Cape or Capital, have more than *two* towns including the chief one, *four* places of worship, or at the most, *three* schools.

Within the Settlement have been established 1 Hat, 1 Blanket, and 1 Tile Manufactory; numerous Lime Kilns, 3 Water and 6 Wind Mills, 2 Tanneries, and 2 Breweries. Besides which there is an Infant School, a Benefit Club, a Savings' Bank, a Public Reading Room, and a Commercial Hall.

A Newspaper called "THE GRAHAM'S TOWN JOURNAL; or, CAPE OF GOOD HOPE EASTERN PROVINCE REGISTER," was commenced in January, 1832, and is rapidly encreasing in talent and popularity;

* WOOL.—Exports of Wool from Port Elizabeth:

1830,	. . . .	£222 sterling
1831,	. . . . .	551 ,,
1832,	. . . . .	931 ,,
1833, to 30th Sept.	.	2,372 ,,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

most of its leading articles are written with considerable spirit and knowledge of the wants and situation of the frontier, and it has already been found of great service to the Settlement and neighbourhood.

The population in 1826 was estimated at 5,777, the census of last year makes it 9,913. In evidence that the country is favorable to human life, I give a return of the first party who landed. (in 1820) and which is made up to February, 1830.

Men, Women, and 101 Children, from the age of 14, downwards, together, .	248,
Of these have died 21 Adults and 3 Children, ...	24.
Births since arrival, *surviving*, . .	123.

The village in Algoa Bay now called Port Elizabeth, although in the adjacent district of Uitenhage, may be considered as a dependency of the settlement, (for to its success it) owes its rapid elevation, with its *four* houses in 1820, has been enlarged to more than 100, and its residents rated at above 1,200 persons, and both, it is no exaggeration to say, are increasing with almost the powers of magic. For permanent importance, it is one of the most promising portions of the Cape Colony, and only wants, to command the resort of almost all vessels returning from India, a Light House on Cape Receife, which could be erected and maintained at a small expense, and a Jetty at the landing place, subscriptions for which have been already raised £5000.

Its Exports and Imports, including those of Albany, have for the last five years been as under, viz:

1828,	Imports,	£55,201.	Exports,	£41,290.
1829,	,,	63,491.	,,	59,309.
1830,	,,	99,742.	,,	60,828.
1831,	,,	65,518.	,,	65,351.
1832,	,,	112,845.	,,	86,931.

But in the above account of exports, the amount of the military pay, of the incomes of a number of half-pay officers, pensioners, and many small funded proprietors, and of the missionary expenditure is not included.

The Exports for the first seven months of the present year, are rated at £61,987 sterling; of which £43,462 were *direct to England.*

The tonnage to Algoa Bay the year after the Immigration, that is, in 1821, was 1961 tons, employing 200 men; that of 1830, was 14,208 tons, employing 500 men.

The coasting trade is now performed by thirteen vessels, the average annual number of passengers being two hundred.

There now annually arrive about 50 vessels in this bay.

The number of ships connected with the *direct* trade to Europe are five, and cargoes have already this year been loaded upon nine, and at this time there is enough for two more.

In 1821, the amount of Postage from the Districts of Uitenhage and Albany, *then conjoined*, was £125, that of Albany *alone* in 1832, was £1,203; the whole postage of the colony in 1832, was £3808; to which that of Albany bears nearly the proportion of one-third, while its population, allowing for the egregious errors of the returns, is about one-fifteenth part of the whole Colony.

Such is the result of thirteen years settlement, nearly five of which were those of failure and distress. From what has been related, it may be seen, whether success has attended the efforts of the Immigrants or not; their only present difficulty, in as far as my own knowledge goes, is that of a want of additional laborers to gather in the harvest of growing prosperity, and as a proof of which want, I refer to the many and frequent appeals to the Home Government successively made since 1825 for a new emigration.

Cape Town, 20th Oct. 1833.

FOUNDERING AT SEA.

A FRAGMENT.

"*Their tale is short, the ocean is their grave.*"
(CORNWALL.)

Her white sails glittered in the sun;
And while her onward course she won,
The crouching billows seemed to own
Her right to ride triumphantly.

And all that on her deck then stood
Were gay, and in most joyous mood;
For, oh! they thought their voyage should
Next day be ended happily.

But what may profit human thought?
Man dares—but cannot change his lot:
And hope, though high, availeth not,
With all its vain imaginings.

Scarce had the sun sunk down to rest—
Scarce had the sea-mew sought her nest—
Scarce had all splendour left the west—
Ere rush'd the tempest Spirit forth.

In wrath, it lash'd the waves to foam;
High leap'd they up tow'rds heaven's high dome,
As if they sought to find a home,
Where they might dwell in quietness.

Bright flash'd the lightning through the sky,
Showing to every anxious eye,
The fiercely scowling clouds on high,
And billows raging fearfully.

These gaped to seize their helpless prey,
As prone upon the surge she lay,
Awaiting the dark destiny
To which she fast was hurrying.

Hark! the *spruce* masts are overthrown!
The sails, the spars, the helm, are gone,
And o'er the waste of waters strewn,
In melancholy recklessness.

And now, without a hand to save
From the wide yawning of the wave,
She sinks into her earthless grave,
Down, down thro' waters fathomless.

* * * * * * *
* * * * * * *
* * * * * * *
* * * * * * * *

A minute!—it has passed away—
Hope came not, with its fond delay;
Brief was the struggle—gone are they,
Whom life inspired a moment past.

And where before, in power and pride,
The bark had spurn'd the rolling tide,
The raging waves in triumph ride,
In all their dreary loneliness.

CAPE RAMBLES, No. II.

GIPSYING.

"PRINCES KASTEEL."

"FIVE to a minute," said we, as the hour of assembling the *forces* was mentioned. Actually in the middle of the night, and the lunar guide of existence will be at its zenith. So much the better, replied our friend, for in one hour afterwards, all nocturnal solitude will be merged in the glorious beauty of a summer's morning. Humph, we ejaculated, but nevertheless we intended to adhere with our promise to be ready. Our usual and unprecedented punctuality had never been called into dispute.

Who can possibly understand the evening's deliberation which precedes a gipsying pic-nic, though we will withdraw our attention from a description of it, as we have previously done so in a former Number of this Gazette. However, every pic-nic is more or less different as the seasons and the places vary. The parties, too, who compose the several joyous *vergaderings*, are of climates, professions, trades, occupations, and caste, seldom the same; their habits, modes, and customs probably assimilate, and are more in accordance, but in one thing they generally coincide—the construction of the edibles. The feed being the *primum mobile*, is always correct, both in quality and quantity. Seldom is there a hamper lost, containing either the minutiæ or more substantial matter, and less frequently a case of claret or burgundy annihilated by the rude movement of the sable sons of earth who carry it to its place of future invisibility. We have visited many spots, grottos, and caves in our short life, even to the mountain's height, and into the internals of nature; we have shivered on Skiddow's top, and frozen on the summit of Ben Lomond. We have felt our very texture oscillate, like the weather-cock of a frigate in crossing the line, on the top of Table Mountain, and groaned in the bowels of the Sepulchre beneath the Peak of Derbyshire. We have been to Paradise and to the Devil's Hole; to Camp's Bay and to Kalk Bay; to the Cape Downs and to Green-point, besides to almost every pic-nic-ing place of resort within the suburbs of the settlement of Southern Africa. But to "Princes Kasteel" had we never been till within the last year; and the powers forbid that we ever go again. We would even close our ears to the gentle and rhetorical persuasiveness of female influence, though we would kiss the kindness which should tempt us to the attempt. We would watch the smiling lip and the pathetic eye—the tender look, and the lisping invite,—but we would never again visit the Prince's Castle. Really, reader, the passage and topography of the road was more difficult than Napoleon's emigration over the hitherto impervious Alps.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

'Twas on a bright morning, and every sound was hushed in the pensiveness of nocturnal power. The south-easter of the preceding night had already spent its last breath with the retiring morning star, and nought was heard to disturb the hilarity of our converse, except the semi-quavers of *old Cupido.*

" Love they say is growing old,
Heigh oh! heigh oh!"

The rosined hero of horse-tail and feline intestine, who was fiddling with fury an old "exquisite" quadrille, on the hindermost seat of the hindermost of four wagons. The wind was from the north west. We sang and laughed, and told fairy tales; and, perhaps, looked a love tale to boot, and wiled away the hours of sweet delusion till the caravan halted in silence beneath the amphitheatrical range of mountains comprising the Constantia and Tokai farms. How beautiful every thing looked. Nature seemed to be holding a jubilee. The prospect was truly charming, the vineyards smiled with the tint of the rising sun, and the quail chirped a most sportsman-like ditty in the adjacent corn-fields. But this was all in the valley.

Above was our object of pursuit, which seemed afar off at the mountain's top—a dark and dismal cavern. Nevertheless, we were determined, despite the distance, and with buoyant spirits and minds intent on our saturnalia, began to ascend the steepy height. Men with sumpter loads *in principio*, and following all the spare horses, which soon came into requisition. We were, indeed, a lively group, as we huddled together, and seemed to emulate the morning in tranquil happiness. Sometimes our similitude approached nearer to the out-pouring of a country kerk, when the straggling party stretched and widened along the ascent, as the individual feeling more sensible of the fatigues of reaching "Princes Kasteel."

Bless us, said we, as we puffed and dropped our substance on a stone which lay by the way side, and sent forth a grunt like a pavior, and watched the rivulet which flowed under our knees, and thought of Sterne's Maria, and looked at the vale below, and surveyed the tiring chain of demoiselles till our human nature began to be very susceptible of tender impressions. We actually sighed—'twas something in the air—both were pure. However, we arose and plucked the "immortal amaranth" which died not at our culling, for it was a mummy of the past. Both white—a perfect alabaster—a red crimson—a rich carmine, which distributed their beautiful groups in the richest profusion over the arid heath. But we dared not pluck, for our tired limbs began to yield to the wearisome way which we were treading, and to have added an ounce would have been too superincumbent. Onward we went, surveying on the one side the masses of stone and rock, on the other the rich country which lay below, and the distant scenery, with the two bays collaterally on either side, till the ultimatum of our perilous road was nearly accomplished. We had ascended a great height, and scrambled over heaps of antediluvian piles of unattached strata—had been on our blessed legs in quiet motion for nearly four hours, and out of our blessed beds half as many more. The excursion was rapidly drawing to a close, and after a further quarter of an hour, "Princes Kasteel" would have displayed to all the Nabobs and Nabobesses in the universe, if any such could have seen us, as merry a group of gipsy-looking bodies as ever assembled on a gipsy party—with a liquid torrent of malt, wines and, spirituous liquors by wholesale, which simultaneously were extracted from the wickered tenement.

Our passage from the summit to the cave, was of rather a perilous kind. The road being none of the fairest sort, our fears were almost equal to our hopes in passing along the height of the mountain's brow which led to the "Kasteel," and which we reached after some slight difficulty. It was in appearance from a distance, a large hole at the top of a perpendicular mountain, and which apparently could be nothing else but a domicile for the neighbouring hordes of baboons and monkies. Its isolation from any human approach, seemed, as it were, to separate it from mankind. But on reaching the cave, the grandeur was truly remarkable. We found it to be a large receptacle, in height, at some parts, about 40 feet, and of equal width, on rather a precipitate declivity with a roof of partly iron-stone and partly granite. At one end there was a small gathering of water, caused from the many drops of chrystal element which sparkled in the morning sun as they fell

——— From the arched roof
Pendent by sable magic, many a row
Of starry lamps and blazing crescents fed
With japhtha and asphaltos, yielded light
As from a sky ———

At another part, bulbs and bushes indigenous to the soil; above, also, hung trees, the species of which the eye could scarcely discover, while the ear was enlivened with the tones of invisible warbling birds, whose gentle notes echoed in the interstices of the rocks. Beneath was a sight as rare as the gems of oriental magnificence, and as splendid as Herod's fragrant groves. Vallies of vines which resembled the spring-tide of nature; hills of geraniums and shrubs, which spread their fragrance and their tapestry on every side, and the cool refrigerating forest of proteas, which waved in the vale, as their silv'ry sides partook of the refreshment afforded by the gentle breeze from the north-west. Here we sat and gazed from our altitude upon the scene, admiring nature in the unbounded range of hill and dale which our elevation commanded, and were fastly merging into a pathetic delusion, when—

——— The small musketry
Warred on by cranes,

went pop, echo pop-pop, echo pop, to the astounding auditorial nerves. We quickly raised our corporeal matter, and discovered the approach of two pages carrying a turkey, which had been left behind for their conveyance. The poor defunct knew not the honor that was done to the *dead*, though the *liver* certainly looked very fine, and *toute à l'envi* of the spitted pig, which by no means seemed as if it had departed in a consumption, as it performed its circumrotary evolutions over a fine roasting fire. In a few minutes the scene of comfort arrived,—unpacking in every quarter was fully pourtrayed, and wines and viands of every description soon covered the damask which had been spread over the unbleached surface. Shortly after, every one was at his post, and a speedy dislocation of fowl and duck was the consequence. The pig lost all remembrance ere he had scarcely reached the festive cloth, and many an one *squeaked* for his portion which had devolved upon another. The turkey, too, invisibly absconded a short while after he had been *unbosomed.* The wines were equally *up*, and the effervescence of the champaigne, with the placidity of the burgundy, departed with *scarcely a groan*—three dozen obliviated into the shade of invisibility, while a due proportion of eau de vie and *pale ale* glided down the same dark stream. In truth, a walk of three hours had rendered every one ravenous, and the departure of the ladies obliged us somewhat too soon to collect our orbs to afford them an assistance in their return. No sooner had we re-passed this terrâ incognita, and reached an actual *terrâ firma*, than a re-visitation to the Bacchanalian remains took place, and sparkling eyes, as well as sparkling glasses, seemed to outvie each other in brilliancy.

"To ladies' eyes around, boys! around, boys!"
'Tis hard to chase ———

A fire, too, of dried silver-wood, was readily kindled, and with equal celerity a kettle-full of limpid water was boiled for making coffee, when the unforeseen absence of that article was discovered which caused an abatement of the fury of our mountain hearth, as well as our expected delight at sipping one tasse of that delicious beverage. This was an unforeseen desideratum in the economy of the arrangement—*mais n'importe*—the ladies murmered not, and why should we have done so? As many as had cavellos mounted, while some took their "sweethearts and wives," and some their fairest cousins, while several walked in silent attendance at the sides of their palfries, like a troop of travellers on a pilgrimage to Mecca. The Crusaders could not have been more orderly, till we regained the wagons which awaited our arrival, when with one accord it was agreed that the day had been very merry—the company joyous—that the utmost hilarity had prevailed—that the folk had participated in each other's society—but that the way had been too fatiguing, and that it was and would be the Alpha and Omega of a pic-nic to "Princes Kasteel."

In the evening, the Constantia woods echoed with the "timbrel and the harp, the dulcet and the song," while the dance concluded a most happy and contented day. * * *

REMINISCENCES OF HANNIBAL STRAW.

Some years ago, a slave named Hannibal Straw was imported into England from one of the West India Islands for pugilistic purposes. His frame was Herculean, his agility astonishing for a man of such heavy muscle, and his disposition dauntless. After having acquired considerable local celebrity as a boxer, he was at length regularly matched against a brawny stout-hearted sailor, whom he put *hors de combat* with such ease, as to render him an object of speculation to a Bristol skipper, who witnessed the fight. This fellow, when in his native city—then the hot-bed of pugilism—generally associated with a set of persons who warmly patronized the ring; and it occurred to him, that a good deal of money might be made of Hannibal, if he could be got over to England—for it was evident to the skipper, that the champion himself would have no chance of success in a match with our hero. Morgan, so the skipper was called, accordingly threw himself in Hannibal's way, and by glowing pictures of the glory he might gather in England, through the exercise of his fistic accomplishments, endeavoured to prevail upon the slave secretly to stow himself away in his, the skipper's hold. Hannibal's owner, however, a free man of colour, had always used him so well, and was, moreover, so borne down by bodily ailments and a large family, that, nipping the bud of ambition in his bosom, Hannibal declined the skipper's offer.

On returning to Bristol, Morgan gave such an account of the black's abilities, that he was commissioned by his gang to buy Hannibal, and to bring him over. Accordingly, when homeward bound from the next trip, the skipper included among his cargo the thewes and sinews of Hannibal Straw. Wild with delight at obtaining his freedom, and eager to display his gratitude towards those who had conferred the precious boon upon him, Hannibal panted for a match. Those into whose hands he had fallen, meditated a deep scheme. They proposed, previously to pitting him against the champion for a very heavy stake, that he should enter the ring for something trivial, with a man of minor reputation, and *be beaten.* Honest Hannibal took fire at this—he would not be conquered by any man living if he could help it—he did not see why he might not be permitted to fight fairly—and rather than not do so—with many thanks to the gentlemen—much as he loved liberty, he would rather go back to his own owner.

Finding him proof against all their arguments and entreaties they assumed a different tone, and swore he should rot in prison until he re-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

paid his purchase-money and the expenses of transport which they had disbursed in his behalf. Poor Hannibal quailed at this so perceptibly, that his owners and importers—so they termed themselves—followed up their advantage, by depicting the terrors of an English gaol in such fearful colours, that Hannibal, half frantic, made an attempt to escape. He was instantly surrounded, and nearly overpowered; but goaded to desperation by the efforts made to secure him, he began to put out his strength, and rapidly shook his importers off, as a mad bull would so many puppy dogs. His blood being up, he laid about him with such vigour, that it was not until he had given each of the most conspicuous, especially the skipper, a frightful threshing, that he recollected the purpose for which he had got on his legs—namely, effecting an escape.

He dashed into the street, and ran on he knew not whither—he had never been suffered to go out alone—in fact, since his arrival in England, he had been held in more complete bondage than when a positive slave. A consciousness of this fact had faintly glimmered upon him more than once, and for the last few days he had been by no means comfortable.

It was night, but not so late but that the streets were still thronged, and Hannibal, when he had become tolerably calm, considered himself fortunate in having reached the outskirts of the city;—but what course could he pursue? where was he to go? what could he do? There was no *bush*, as he had heard, to which he could retreat: he was destitute of money—he had no friends—his enemies were in his rear, perhaps on his track—and this thought induced him to proceed with all possible speed in as direct a line as the nature of the country would permit. At day-break he found himself on an extensive heath or down: patches of green fern, drooping with dew, were scattered about him; into the nearest of these he threw himself, fatigued and disconsolate. By so doing he disturbed a lark, which fluttered up in a direct line above him singing cheerily; the lambs on a distant hill awoke and began to gambol; the last star in the centre of the heavens was about to be outshone by the fiery dawn; the small birds were gladly twittering on the thorns; a general jubilee seemed about to commence; and Hannibal, huge Hannibal Straw, who had been brought over to fight the champion, began to blubber like a boy deprived of his bread and butter.

He bitterly lamented that he had ceased to be the property of his old owner, the free man of colour, and literally cried himself to sleep. When he awoke, the dew had gone, the lark was silent, a cow was standing knee-deep in a neighbouring pond, and no sound was heard save the drone of a bee, and the busy buzz of a multitude of flies. It was noon, but Hannibal shivered. He was hungry too. For an instant he thought of returning to his importers; but to speak the truth he was afraid. After having sauntered about the common for some time, without aim or object, he turned into a path, which, passing through a thick wood, suddenly emerged in a straggling sequestered village

On getting into the road Hannibal picked up a horse-shoe; he was a blacksmith by trade, and the incident afforded him a slight sensation of joy, which even the melancholy tolling of a bell from the village church could not subdue. An old gander, without geese, hissed at him from a respectful distance; an idiot boy ceased to throw pebbles at the sun as he passed, and with a grin asked him for a suit of mourning; besides these, Hannibal saw no living thing. The houses, the farm yards, seemed to be desolate. At length, in a nook, on the right of the main road—oh! joyful spectacle!—he beheld a smith's shop, and reached it with a run. The anvil was cold; the fire had evidently long been extinct—its dead clinkers were covered with a thick pall of soot. Beyond the smithy was a kitchen, the door of which stood invitingly open. Hannibal entered, twirling the horse-shoe with great rapidity round his fore-finger. An infant in a cradle was squalling vehemently—a little girl, who had apparently been left in charge of it, was perched on the upper rail of a chair, stealing sugar from a brown crock on the top shelf of a three-cornered Beaufet. At the sight of Hannibal she screamed, and would have tumbled with terror had he not reached forward and caught her. In doing this he awkwardly upset the cradle, and the child rolled under the grate. The little girl struggled to get free from him; and the moment he had placed her on her legs, she ran off too breathless even to shriek. Hannibal then put the baby clothes to rights, replaced the child in its cradle, and by his quaint contortions of countenance, and exhilirating snatches of song—for Hannibal had now forgotten all his troubles in the occupation of the moment—he made the little creature crow with delight.

Meantime the melancholy toll of the bell had ceased, and while the whole of his faculties were absorbed in amusing the young gentleman in the cradle, a train of persons, all clad in black, approached. At a short distance from the smithy they stopped, fell out of column, and formed an irregular group; which, after some slight consultation, flocked tumultaneously into the kitchen. They stared in silent astonishment at the scene before them—Hannibal stopped, got up, and made his most obedient bow.—"Poor fellow," said a pale, fine-formed young woman, raising her blood-shot eyes—"after all its only a black man. I've seen many such, neighbours; there's no harm in him—for look how little Peter laughs"

The woman now snatched the child from the cradle, placed its mouth to her breast, and seemed to derive exquisite consolation, from the little creature looking up into her eyes as it sucked. The other parties still regarded Hannibal with awe—for they had never seen a black human being before. At length the tailor hobbled in on crutches to partake of the funeral feast—for the village smith had just been buried—and speedily set all to rights. He had been at Trinidad, Tobago, and various other outlandish parts; he rejoiced in the sight of Hannibal, for now Simpson could no longer laugh at him for asserting that there were men abroad as black as a sea-coal. Neighbour Simpson gaped at Hannibal like a gudgeon with a fish-hook in his throat. He saw—but scarcely believed.

Under the auspices of the tailor, and the smith's handsome widow, whose favor he had won by his successful attention to her child, Hannibal soon found himself at home. He partook of the burial bread and cheese and ale; and before the guests departed irradiated their hearts with a dawning beam of delight by assuring them that he could shoe their horses, tip their bullocks, point their pitch forks, weld their broken coulters, retooth their harrows, and new-tongue their hinges as well as their deceased neighbour, Blacksmith Batterbee, or any other individual of the craft.

That night Hannibal slept in the loft above the widow's bed-room; the next morning, the voice of the bellows, the roar of the fire, and the clink-clank of the hammer and anvil, awoke her. Hannibal became her journeyman—he had never been so happy in his life—the villagers idolized him for his kind disposition, his skill as a smith, and his prodigious strength. At quoits he was pre-eminent—no man but the tailor's slim son could give him a backfall at wrestling. His odd antics, after his day's work was done, rendered him most beloved of boys, and more than one strapping farmer's daughter seemed to entertain no repugnance to his colour. But the farmer's daughter was not destined to be the happy bride. Hannibal married the blacksmith's widow, and a loving couple they were.

At the age of thirteen I became Hannibal Straw's apprentice—my father was a farmer in the neighbourhood—he had eight children, all lads, of whom I was the eldest. Never had boy better master than was Hannibal Straw, or sweeter mistress than the widow of bandy-legged Jehoiakim Batterbee. I have since seen the daughters of the great—those who have been accounted the loveliest of their generation—but they were plain, compared with Mrs. Straw. Black Hannibal's wife, I should decidedly say, was almost the finest woman in all England, and yet I have often seen her pointing nails at the vice; and it was traditionary, that before she had emerged from her teens she had often wielded the big hammer over a red-hot bar in front of knee-broken Batterbee, her bed-ridden papa's apprentice. Be this as it may, she was a capital wife to Hannibal, and a most motherly mistress to me: both of us loved her—idolized her—and doated on Batterbee's boys, as if they had been his own, and so did I.

The years of my apprenticeship glode away like a pleasant dream, and happier days than mine were, with Hannibal and Mrs. Straw, could not be on this side the grave. I am now grown into manhood, and am far away from the hamlet of my apprenticeship: but I often hear of the state of things, and of Hannibal's well-doing. The hamlet has become a village, and the Straws are now wealthy people. My last letters announce the building of a new church, and the election of Hannibal as one of the church-wardens. My old friend is a great patron of education and the poor. He subscribes also to foreign missions, and visits the metropolis once a-year, in the month of May, to attend the annual festivals of benevolence and good-will to man. Should letters arrive in the course of the succeeding six months, the reader may, perhaps, hear more concerning *Hannibal Straw.* *

TO MY PEN.

I've often wished to know the reason why
You scribble so much nonsense, and I never
Can find it out, although I often try,
For hitherto I've tried in vain; however
I think I've found it out at last, so I
Will just attempt (that is to say, endeavour)
To shew you (what I should have found out long since)
The reason why you scribble so much nonsense.

Now it's as clear as mud—for how the deuce
Could you write any thing but nonsense, when
'Tis plain that you're the *offspring* of a *goose*,
Put in the hands of other *geese*, called men,
To scribble nonsense with; so what's the use
Of keeping you, you rascally old pen?
I'll *cut you up*, (as you have oft done others,)
And so you'll share the fate of all your brothers.

It grieves me much; oh! that it does, my pen!
Thus after all your service to discard you—
I'll never get so good a one again;
No! that I sha'nt:—I do not like a parting last adieu!
You've written many a hundred lines, but then—
The whole was nonsense; and I think its hard, you
Could never write a line of sense! however,
I think you're (as a *goose* quill) vastly clever.

Farewell, my Pen! Your course is nearly run;
'Twould be in vain for me to try and *mend* you.
You would not *mend* at all—you're too far gone:
And so out of the window I must send you.
You've served me faithfully, and always done
Your duty, ever since at Norden's vendue,
I bought you with some more; but you and I
Must part good company; and so—*Good bye!*

Graham's Town. A.

LITERATURE.

OWEN'S VOYAGES TO AFRICA, ARABIA, AND MADAGASCAR, 2 vols. 8vo. 1833.

Under the direction of Mr. H. B. Robinson, to whom Capt. Owen transferred the whole of his valuable documents, the present interesting volumes have been published. The vessels which composed this expedition were the *Leven* and *Barracouta*, which departed in Jan. 1822, for their destination. The Admiralty, with its characteristic Scotch notions of economy, under my Lord Melville, attached no scientific naturalists to the expedition. An excellent young man, however, Mr. Forbes, was sent out by the Horticultural Society. But he fell a victim to the climate, and he had no assistant, successor, or adjunct. The expedition stopped for a short time at the Cape de Verd islands, the longitude of which they were able to verify by means of a new and singularly simple process. Capt. Owen, by previous experiments, found that the flight of a Congreve rocket, when fired off from a gun, corresponded in exact proportion to its own weight, and this circumstance immediately suggested to him the measuring distances within a certain limit. From these islands the vessels directed their course to Rio, and on the 8th of July entered Simon's Bay in this colony. Capt. Vidal, and all the junior officers, now commenced a survey of the whole peninsula of the Cape, and the shores of False, Hout, and Table Bays. The scale for this survey, measured astronomically from the Devil's Peak to the Peak on Cape Point, was 24' 33" geographical miles of latitude. The surveyors, with Capt. Owen, decided against the numerous dangers which were alleged to exist to the southward of the Cape, and considered the Telemaque Shoals, &c. to be imaginary. A warning is given to seamen in entering Simon's Bay—to avoid mistaking the northern extremity of the high land seen in the night at Muisenburg, for the south point of Simon's Bay. To remedy this dangerous error, the late Commodore Nourse proposed the erection of a small light-house on the Noah's Ark rock. The whale-fishing establishments in False and Kalk Bay, as *shore establishments*, Capt. Owen considers as extremely destructive to the species. Some attention seems to have been paid to certain portions of our then-existing domestic policy. The following is an extract: we recommend it to the attention of the traducers of the African character.

"The system of warfare pursued on the eastern frontier, appeared to have for its object the extermination of the native Kaffers from our settlements, was universally punished by death or captivity. As the peculiar habits of this race rendered them at all times most unprofitable and dangerous prisoners, very few were subjected to the latter misfortune. There were, however, seven of them in captivity on Robben Island, whom the government sent to us for interpreters. They were very handsome, strong, and tall negroes, with habitual freedom strongly marked in their gait and carriage. When first received, their gloomy countenances bespoke their uncertainty as to the purpose for which they were sent on board ship, a circumstance in itself considered by them as worse than death; such is the antipathy and dread of the sea felt by all the native tribes of South Africa.*

"The purposes for which they were embarked having been explained to them, with the promise of being set at liberty in their own country if they behaved well; they were stripped of the greasy skins which served them for raiment, and which were covered with vermin, washed and clothed in wholesome jackets and trousers, and in half an hour appeared as much at their ease as if they had never worn any thing else."

It appears from the sequel that these poor Kaffers failed as interpreters, "but," says Capt. Owen, "*in other respects they were excellent, trust-worthy men.*" He mentions further, that—

"Six other negroes were also selected from the government slaves in the dock-yard, natives of different parts of the eastern coast and Madagascar, to be used as linguists, *all of whom turned out most orderly and useful people*, and were, after some time, discharged in their respective countries, enriched by a considerable accumulation of wages."

In the survey of our coast by the *Barracouta*, much valuable information is supplied. These surveys commenced from Cape Hanglip to the eastward, as far as the Keiskamma River, and from thence northward to Delagoa Bay. In reference to the Cape colony, it is stated

"That in all parts, the approach for ships is free from all danger, with good anchorage ground; but, being quite open, is exposed to the southern ocean. During both monsoons a heavy swell sets in-shore, yet there are few points where boats may not land more than half the year, and there is no doubt that vessels, *properly constructed*, might carry on a coasting trade with much safety and advantage: *the government*, however, have not given *sufficient attention* to this subject, their only settlements upon this coast being Port Elizabeth and Kowie River.* There appears nevertheless, one great source of gain open to enterprise in the great bank of L'Agullus, which is equal to that of Newfoundland, and would probably be as productive a fishing establishment as any in the world. Salt is destructively plentiful, being the principal drawback to the fertility of the soil; while a market for salt fish may be found in every direction, including Cape Town, Bourbon, Mauritius, Mozambique, and even India. Not a European fisherman is now to be seen, excepting the whalers, and nothing but an alteration in the oppressive and unjust fiscal laws, to which the poor Malay fishermen are now subjected, will induce them to venture upon this field for speculation. There are many desirable situations along the south coast for the establishment of fishing-towns; amongst them may be enumerated Hout, Table, Simon's, and Gordon Bays. To the eastward of Cape Hanglip is also a large bay: the eastern side of the peninsula of Cape Vachez offers no less than three good harbours. Between Mussel and Plettenberg Bays is the River Knysna, *an excellent port;* and within sight of the latter, the Bays of St. Francis and Algoa. From Cape Padrao, along the E. coast, are numerous situations adapted for such establishments."

Then certain objections to these ports or rivers are started, which, to the colonists have been hitherto looked upon as insurmountable. But Capt. Owen alludes to the same evils as existing on the Portuguese coast, and adverts to their *remedies*.

"All the rivers (in reference to the E. coast,) are overflowed, and their course lost during the rainy season, when the rush of water carries off the alluvial and other deposits; these are, however, returned by the constant south-east winds that prevail during the dry weather, and which then produce bars of sand at their entrances, making most of them unnavigable for decked vessels, and often dangerous for boats of common structure, the usual rise of the spring tides seldom exceeding five feet. This is also the case on the coast of Portugal, where, however, *much has been done by science and industry to remedy the evil.*

"This may not be an improper place to offer a few remarks on the peninsula of the Cape of Good Hope, and the improvements which suggest themselves for Table and False Bays."

We regret that our limits do not permit us at present to go into the detail of these with other interesting points of consideration which this work presents; we conclude, therefore, with a single additional paragraph, which involves many serious considerations.

"At this point of the colony, the population is already sufficiently numerous to carry any rational works into effect, and a finer opportunity for the investment of British capital will not readily be found.

"The greatest evil in the situation of Cape Town, is the insecurity of Table Bay as a port; and a temptation is thus offered to unprincipled men, who have insured their vessels at high premiums, to choose this spot, for the termination of their voyage. *Of the numerous wrecks which occurred in Table Bay, and its vicinity, during the term of our voyage there was not one, at least where*

* The same may be said of the white colonists. How seldom is it that a Cape of Good Hope boy adventures to sea, and yet one would think that our present youthful population, from its vast increase, must be a burthen to many poor families. With British India, and Mauritius, and Ceylon, and Australia before him, how is it that the Cape lad feels no inclination to seek his fortune like other of the human race? Nay, the very interior of the Cape colony, and the frontier, excite none of his inquiries. He would much rather idle away his time in small talk and gossip, ride on the Rondebosch road, play billiards, smoke a cigar, or feed on snoek and rice at his grandmother's, than take a look at the wide world. Again, in numerous instances, many of the lads in question are unqualified for foreign place. The neglect of the English language, so as to correspond in it, is an immense drawback to the purses of the colonists. Those men have much to answer for, who encourages this neglect. And if the sea-service is *awfu' work* to the African, how much greater is the dislike to *gunpowder!* How many a smart Cape young man, tickled with the show of military display, has entered the British Army—*sold out*—nor "followed to the field some warlike lord!" And then (O, inglorious!) to sit down for life on a government clerkship pittance!

* The terrors of the Kowie mouth have been recently discovered to be imaginary. See an important communication by Mr. Nourse, in the Graham's Town Journal of 21st Nov. 1833.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

we had the means of inquiring, which could not be traced either to extreme ignorance, negligence, or design. The evil that has been done to the colony by the frequent recurrence of such events is incalculable."

AUSTRALASIA.

As we are well wishers to all the Colonies of His Majesty, we naturally rejoice in the well doing of all. Capt. Sturt, of the 39th Regt. has recently published two interesting volumes of an expedition into the interior of Australia, and Mrs. Augustus Prinsep has put forth the Journal of a Voyage from Calcutta to Van Dieman's Land.

The settled portion of New South Wales now extends from the 36th to the 32d parallel, and has been distributed into counties, parishes, and townships; its internal arrangements having been intentionally assimilated as nearly as possible to those of the mother-country. The population of the colony is said to consist of 45,000 free and 25,000 convicts. Its imports in the year ended January 1833, amounted to £602,032, of which £144,793 was the value of commodities imported from foreign states, the rest being the produce of Great Britain and her colonies. The exports amounted to £384,344, of which £81,969 consisted of British and foreign merchandize re-exported, the remainder was the produce of the colony, the New Zealand fisheries, and the South Sea Islands. The chief articles of export, and which were shipped to the mother country, are New Zealand flax, 806 tons, value £15,393; sperm and black oil, 3,186 tons, value £142,921; and wool, 1,515,159 lbs., value £73,559. In 1831, no less than 150 vessels entered the harbour of Port Jackson from foreign ports, the amount of their tonnage being 31,259 tons.

The staple product of the colony is wool. The total amount of this article imported into Great Britain from the Australian colonies (New South Wales and Van Diemen's Land), in 1832, was two millions and a-half of pounds, and it has been sold as high as 10s. per lb.; the best now sells at 5s. The history of this commodity, which promises to become a prime source of colonial wealth as well as of benefit to Britain, by rendering her independent of foreign supply, deserves a short notice, since it shows how much may be effected towards developing the capabilities of a young settlement by an individual. About forty years ago, Mr. John McArthur commenced sheep-farming, and in a year or two, he had an opportunity of crossing his coarse-fleeced sheep with Merino blood. So prolific was the mixed breed, that in ten years, a flock, originally consisting of not more than seventy Bengal sheep, had increased to 4,000. In 1803, Mr. McArthur went to England, carrying samples of his wool, which were so much approved of by a committee of manufacturers, that Government were induced to encourage him in his attempts to produce fine wool in the colony, by directing that he should receive a grant of land for that purpose, in the Cow Pastures, which is now named the district of Camden. In 1806, Mr. McArthur returned to New South Wales with two ewes and three rams purchased by him from the Merino flock of George III.; his flock was removed to the Cow Pastures, and since that period, the wool of New South Wales has been rapidly increasing in value in the home-market.

The accelerated advance of the colony may be dated from the commencement of General Darling's administration; yet it is remarkable that General Darling was not only the most unpopular governor the colony ever had, but is even still pursued by the colonists with an acrimony and a rancour, which can scarcely be accounted for on public grounds alone. Armed with despotic powers, and entrusted with the entire functions of a government, of which coercion was, from the peculiar circumstances of the colony, an essential and obvious feature, at a time when the colonial commmunity, incited by a free press, began to discover that expansive principle, which is perhaps necessary in order to establish a title to rights which are merely in abeyance, Governor Darling was placed in a situation of peculiar difficulty, and his errors should experience the utmost indulgence.

The pleasant little volume of Mrs. Prinsep affords a good picture of the physical and moral characters of British Tasmania. On landing from India at Hobart Town (corrupted first by pronunciation and now in writing into *Hobarton*), Mrs. Prinsep was not a little surprised at its extent and the size of the warehouses. As she walked up the High Street, a thousand English recollections revived,—"carts and cottages, girls in their pattens, boys playing at marbles, above all, rosy countenances, chubby cheeks, and English voices."

After describing the metropolis of Tasmania (which is about a mile and a half square), Mrs. Prinsep gives an account of a trip to Elizabeth Town, twenty-two miles in the interior, to which a *stage* runs twice a-week, which stage is "a cart fitted up with benches like an Irish jaunting-car." On arriving at the town, it was extremely difficult to find it; upon inquiry, it appeared that, besides the magistrate's and governor's houses, and the school, there were but two houses and a half, the third not being yet completed. The views, however, on the road and from the town, were beautiful. Tasmania, in fact, consists, as yet, in its two towns of Hobarton and Launceston.

The details which Mrs. Prinsep furnishes of the economies of this country are not unattractive:

"The sources of accumulation here have engrossed my attention completely, and the island possesses temptations, in my eye, even above the glorious power to be obtained in our East India civil service. See how I am changed! Romance, and even ambition, have vanished; for amongst all the beauties and interests of this place, I am beginning to think none are so beautiful as the interests of capital. The colony contains valuable property, many sources of wealth, security, health, every thing but money, consequently the latter obtains a most profitable return. Interest alone on mortgages, with the very best securities, is at fifteen or twenty per cent. Invest your money in stock for wool, and it brings a return of fifty per cent. per annum—in the whale fishery, one hundred per cent. There are two banks founded upon joint-stocks, and the shareholders are the wealthiest people in the community; dividends now paid are sixteen per cent., shares £100; the banks are constituted upon the safest possible principle—the business is almost confined to discounting bills—security is insisted on, and mortgages declined, lest land should be obtained instead of money. The quarter of the globe in which all these profits are to be safely made is so little known, that capital has not been drawn to it.

From these few remarks, I deduce the certain inference that there is so immediate prospect of any check to that rise in the value of land, and such other property, which is now observable. Money well invested in land here, and allowed to accumulate, will be tenfold its original value in fifteen years. Two hundred pounds would purchase a noble property here; in England, the interest on it would scarcely furnish two boxes of millinery annually! You have no idea of the cheapness of things here; £1,000 will buy a fine, healthy, and beautiful estate of 1,200 acres, 200 of them already in cultivation, and the whole becoming more valuable every year. Corn and potatoes export to Sydney, wool to England; wool averages sixpence a pound. The whole colony is on the advance, and its resources remain to be developed. Fresh lands are granted in square miles, in the proportion of the square mile, or 640 acres, for every £500 sterling of capital, which the applicant can immediately command, to the extent of four square miles, of 2,560 acres, which is the largest grant that is made to any settler without purchase, as the smallest is 320 acres. The total territory in acres is 15,000,000, of which about one-half is rocky, or thickly wooded, the rest arable and pasture; arable being, as one to six of pasture. Total acres granted to Dec. 1829, 1,323,523, consequently unlocated acres, 13,676,447. The wool of Van Diemen's Land is of peculiar softness, and from the greater attention now paid to cleaning and packing, the price is rising. Wheat is of a very superior quality, weighing generally about sixty, and sometimes as much as sixty-five pounds a bushel. Oats are beginning to be raised, barley has not yet succeeded, pease and other species of pulse are plentiful. Skins are also valuable. Seal skins the most so, being worth about twenty-five shillings each in England. Kangaroo-skins are essentially useful in the colony, for hats, and also for shoes, which are remarkably durable; when well packed, and of a good size, these skins fetch nearly sixpence a pound in London. Shoemakers make 100 per cent. on the raw material."

To be sure, this lady is not very encomiastic upon other points, which are in such cases to be put *post nummos*. "The Society of Hobarton," she says, "is very pleasant, and to us has been very kind; but the chief amusement to strangers is the constitution of this society. The population of the future empire of Van Diemen's Land (for in fifty years it must be independent) is founded upon the dregs that have been drained from England. Most of our new friends have sprung from the lowest democracy. Their mother language will soon undergo a change: the next generation will certainly expel the *h* from its place in the dictionary, and admit it as a h'aspirate to the h'apples, and the h'oranges. A little more respectability may perhaps be imported from England or from India, when the advantages this colony holds out is better known." If the history of every house were made public, she observes, it would make Europeans shudder. "Even in our small menage, our cook has committed murder, our footman burglary, and the housemaid bigamy: but these formidable truths are hushed up!"

AMERICA.

A Subaltern's Furlough.—Descriptive of Scenes in the United States, &c. By Lieut. Coke, of the 45th Regt. 8vo. 1833.

This work appears to be the production of an impartial mind, and is written in a much better spirit than that of the Halls, Trollopes, or the new work on America, by the author of Cyril Thornton. Before submitting two or three extracts from the publication before us, we may briefly observe, that whatever changes are going on elsewhere, none provoke more attention or curiosity, than those of America. The press teems with books on the progress of society in America, and all the world seems to be wonder-stricken at that moral impetus which displays itself in the American field of persevering enterprise.

TEMPERANCE SOCIETIES.

Since the institution of the Temperance Societies, the use of ardent spirits amongst the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

higher classes of society has been almost laid aside. I have seen a range of well-filled spirit decanters placed upon the dinner-table before upwards of 150 people, and not a single stopper removed. The strongest proof, however, of the great decrease of ardent spirits, appears from the following returns of the number of gallons imported into the United States during seven successive years. In

	Gallons.
1824,	5,285,047
1825,	4,114,046
1826,	3,322,389
1327,	3,465,302
1828,	4,446,698
1829,	2,462,303
1830,	1,095,488

Many hotels have "Temperance House" inscribed in large gilded letters over the door or sign, as a notice that wines and malt liquor only can be obtained there. Like all other new institutions, the Temperance Societies had their enthusiasts at first. Abstinence Societies emanated from them, the members binding themselves to drink pure water only; and, in some churches, neither males nor females were admitted to the communion unless they had enrolled themselves the members of one or other society. All these bigoted absurdities are now softened down into wholesome and sound regulations.

AN HOTEL.

A large varnished and painted board, with the following strange notice upon it, in gilt or yellow-painted letters, was fixed up against the wall opposite the window of my room, in a most conspicuous part of the hotel:—

"Constantly on hand for the
accommodation of travellers,
on the most reasonable terms,
fine linen shirts, cravats,
collars, show bosoms, silk stockings,
gloves, suspenders,
silk and linen pocket handkerchiefs,
razor strops, patent Venus pomatum
for dyeing the hair and whiskers
without injury to the skin.
Razors set to order.
Best chewing tobacco."

But this medley of pomatum and tobacco did not astonish me half so much as the following strange address in the news-room, to the visitors of the largest hotel in the United States:— "Five dollars reward for the discovery of *the villain who cuts or tears the newspapers!!*"

RISE OF AN AMERICAN TOWN.

A town rises in America with an almost talismanic rapidity. Immediately some new line of canal or railway is projected, or a clearing commenced on the banks of a navigable stream, a tavern makes its appearance upon a spot where it is imagined the traveller will require a "drink;" this is followed by a saw and grist-mill, a store or two, *post-office, printing press, and bank*. To use their own expression, "every one goes the whole hog;" the freshets probably carry away the mill, or the bank breaks, and the owners "clear out," to commenee their speculations afresh elsewhere. Where sixty days since had been a complete wilderness, was now a scene of bustle and confusion: a town was fast rising from amongst the bushes; the streets were marked out, and a tavern, several stores, and upwards of fifty houses, were already inhabited.

MORAL EFFECTS OF MRS. TROLLOPE'S CARICATURE OF THE AMERICANS.

Although I should not wish to identify myself with Mrs. Trollope's opinions and sentiments, inasmuch as she evidently is a writer who, in drawing a tolerable likeness, has given a broad caricature of the Americans, and most unjustly impressed those who have not visited the United States with the imagination that no gentlemen are to be met with there, yet I must think her "Domestic Manners" will do good amongst a certain class of people. The effects had even begun to shew themselves before I quitted the country; and I record the following anecdote, in order that, if these poor pages ever meet the eye of the witty and much abused authoress, she may congratulate herself on having already worked a partial reform. When Miss Kemble made her first appearance at the Park Theatre in New York, the House was crowded to excess; and a gentleman in the boxes, turning round between the acts of the play to speak to some one who sat in the bench behind him, displayed rather more of his back to the pit than was thought quite orthodox. This was no sooner observed than a low murmur arose amongst the insulted part of the audience, which presently burst forth into loud cries of "Trollope! Trollope!" "turn him out," "throw him over," &c., and continued for several minutes, accompanied by the most discordant noises, until the offending person assumed a less objectionable position.

OBSERVANCE OF THE SABBATH.

The inhabitants of Hartford appear strictly attentive to their religious observances. There are nine or ten churches to 8500 inhabitants; and, on walking out in the afternoon, there was literally *not one person* to be seen in the streets. Feeling rather ashamed at being apparently the only absentee from divine service, I proceeded a short distance out of the town to the Deaf and Dumb Asylum, which was the first establishment of the kind in the States, and is partly conducted by a gentleman who has the misfortune to be afflicted himself in the same manner. The building is a very extensive one, situated on an eminence in the town, and generally contains from sixty to seventy inmates. It was a lovely afternoon, and as I sat upon the grass, gazing upon the town and river beneath, whence neither the hum of voices nor the sound of any one stirring arose, and not a living being was even to be seen crossing the long straight streets, or standing at a door or window, I thought I had never before seen a day so truly set apart as a day of rest, nor one, I would believe, so strictly kept.

BOSTON.

Boston is often called "the paradise of clergymen," and never did a place possess such a proportion of churches; including Charlestown, it has not fewer than sixty; their style of architecture is generally neat. Trinity Church, which has not been long built, is a handsome and substantial edifice, and King's Chapel (or stone church, as some of the republicans call it,) in which the British Governor's pew still remains, more closely approach the English style of places for sacred worship than any others I saw.

The hospitals and charitable societies are very numerous. One of the latter is very creditable to the British Inhabitants of the city: it was established for the purpose of giving *advice to emigrants upon their arrival* in the country, and to render pecuniary assistance to those who may require it, or have been reduced to poverty by the failure of their enterprise. Though established only fifteen years it has given relief to more than a thousand British subjects, the funds being created by annual subscriptions of two dollars and upwards. The Massachusetts General Hospital, which was commenced about the same time by private subscription, is a fine building near one of the Charlestown bridges, and its interior economy well arranged. The origin of the hospital was the bequest by a gentleman of a large sum of money, which was added to by a general subscription throughout the state, and so far exceeded the amount required that the committee built a lunatic asylum at Charlestown with the surplus. Several of the private subscriptions amounted to from 1000 to 5000 dollars, and one even to 20,000.

SINGULAR INSTITUTION.

At Whitesborough, in the vicinity of the city, is the singular but laudable "Oneida Institution of Science and Industry," which, similar to some institutions in Switzerland, combines learning with manual labour. It was established by a clergyman in bad health, who, opening a small school ten years since, discovered that, by the pupils working a few hours daily, they earned sufficient money to defray the expense of their education. Since that time it has been much encouraged and had several benefactors. There is a farm, containing upwards of one hundred acres, attached to it, upon which the students may be seen working for three or four hours daily; and two years' produce will pay their board for that time. It is principally intended for those designed for the Church, but some are also educated for other professions. The merit of the institution, independently of that derived from the system, is, that young men of talent may obtain an education here who cannot afford to go to more expensive establishments.

NATURAL HISTORY.

The Tropical Agriculturist. By G. R. PORTER. 8vo. 1833.

WE hail this book as a treasure to the Colonies, and are glad to announce its introduction in our Public Library. Mr. Porter's work contains accounts drawn from the best authorities, and supplied by persons of experience in the management and use of almost every tropical plant of importance: among several others, of

Cotton,	Coffee,	Tea.
Tobacco,	Rice,	Indian Corn,
Millet.	Sago,	Cassava,
Arrow Root,	Cocoa-nut,	Cinnamon,
Clove,	Nutmeg,	Pepper,
Ginger,	Pimento,	Cardamom,
Indigo,	Poppies,	Senna,
Camphor,	Rhubarb,	Aloe,
Castor oil,	Aniseed,	&c.

The chapter on cotton is particularly interesting; that upon tea may be very advantageously consulted. Mr. Porter thanks with Cobbett, that maize (Indian Corn,) might be introduced with great success in England, and quotes from Dr. Franklin a list of its uses, the bare enumeration of which, any one would suppose, might procure it a place on every estate, if he were not at the same time aware that of all prejudiced animals under the sun (next to the Cape farmer), there exists no one so essentially and entirely bigoted to a previously conceived opinion, as an English farmer. In the chapter on opium, we are made acquainted with the astonishing fact, that the revenue obtained from the growth of this plant in our East India possessions, amounted in 1830, to the sum of two millions sterling!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

THE SABBATH.

Thy creatures have been my books, but thy scriptures much more. I have sought Thee in the courts, fields, and gardens, but I have found Thee in Thy temples.—(*Lord Bacon.*)

It is not to be doubted that nations and empires flourish or decay in proportion as habits of piety, industry, and temperance, or of impiety, sloth, and luxury, obtain the ascendancy. The stimulus to the former, the check to the latter, is the Lord's-day. So that the Sabbath is virtually the barometer of the times, and its observance or desecration presents the mark of a rising or falling kingdom.

In its bearing upon individuals also, the Sabbath, like the Lord of the Sabbath, is for the rise and the fall of many. Neither rank, nor wealth, nor science, nor talent, will avail to rescue the violator of its duties from condemnation; whilst the meanest disciple who improves his privileges will be raised to glory, honour, and immortality. The Sabbath has been justly styled the "Queen of Days." Faith, Hope, and Charity are her associates and attendants. The gates of her palace stand open: she invites all her subjects to her presence; and offers liberally to supply their wants. The Ceremonial Law ceased, but the Sabbath abideth. No diversity of metaphor, in its largest profusion, can fully display the value of the Sabbath, to nations, to churches, to families, or to individuals. It is the record of the world's creation; the memorial of Christ's second birth, at his Resurrection. It is the ordinance of our God; the court-day of our King. It is the sign of a covenant, the badge of our profession, the rampart of the realm, the festival of the church, the shield of the state. It is an almoner to the poor, an asylum to the weary. It is the child's instructor, the guardian of youth, the solace of the aged. It is the test and touchstone of religious obedience; the day of jubilee on earth, and the harbinger and type of heaven. It is from this fortress of our faith, this stronghold on the frontiers, that incursions have been ever made on the kingdom of the great adversary. Its surrender would expose the territory already won by the church militant, to sudden and irreparable desolation: its defence, therefore, should be as strenuous as that of the most heroic of the ancients, when they occupied their fastnesses and straits, and contested every inch of ground with their assailants.

LITERARY EXTRACTS, &c.

SCHOOLS IN SARDINIA.

Of 392 villages, more than 300 are provided with schools for the instruction of the country people in reading, writing, arithmetic, religious catechism, and the elements of agriculture.—(*Foreign Quarterly.*)

The same authority states, that 6000 workmen are employed by the Government in the creation of roads.

ROYAL SOCIETY.

Out of the one hundred and nine members who had contributed, in 1830, to the transactions, there were—how many peers, think you?—ONE!

"*A sun-beam that had gone astray.*"

JEFFERSON.

(*By the Author of Cyril Thornton.*)

The moral character of Jefferson was repulsive; continually puling about liberty, equality, and the degrading curse of slavery; he brought *his own children to the hammer*, and made money of his debaucheries. Even at his death, he did not manumit his numerous offspring, but left them, soul and body, to degradation and the *cart-whip* A daughter of Jefferson was sold some years ago, by public auction, at new Orleans, and purchased by a society of gentlemen, who wished to testify, by her liberation, their admiration of the statesman,

"Who dreamt of Freedom in a slave's embrace."

This single line gives more insight to the character of the man,* than whole volumes of panegyric. It will outlive his epitaph, write it who may

GOOD GOVERNMENT.

The Governor of Durazzo, a Turk, thus addressed Mr. Urquart, during his recent tour in Turkey:

'It is the part of a wise government to favour and facilitate commerce by every possible means, as that alone gives value to our possessions, and turns our harvests into treasures; but if a government so wretched as ours has been, neither affords it a shelter from the storm, a landing-place from the waves, nor a road across the country, it certainly ought not, in addition, to burden it with charges, which are a profit of one, and a loss of nine.'

MOHAMMEDANISM.

In the Bible nothing can be found, which, fairly construed, can be regarded as contradictory to the true system of the universe, or to any modern discoveries in astronomy and physics. With the Koran it is otherwise; Mohammed is as absurd in his cosmology as the ancient fathers, and his gross blunders would disgust the merest school-boy. His system cannot, therefore, resist the advancement of knowledge and the progress of civilization, but the means of its overthrow must be the science which it contradicts, not of the Bible, of which it *pretends* to be confirmatory. But whatever be the means most likely to prove effectual, it is a fact beyond all doubt, that the religion of the Crescent is rapidly falling into decay.—(*Foreign Quarterly.*)

RESPITE FROM LABOUR.

A writer in *Louden's* admirable Magazine, the Gardener's, observes, "I will mention what I have often been told by a very intelligent young man who laboured two years in a gentleman's garden in the county of Durham, namely, that his master was so convinced of the beneficial results of giving a degree of relaxation to his men, that they uniformly left their work at 5 o'clock in the afternoon, and on Saturday at 3 o'clock; and the effect of the practice was, and is, that the place is so celebrated for its high keeping and good management, that a saying has been rendered current in the neighbourhood, that if the gentleman found a weed upon the premises, he pulled it up, and brought it to the gardener's door."

COLONIAL WOOL.

It is now certain that England may soon expect to be capable of being exclusively supplied with fine wool from the Australian colonies. And what is remarkable is, that it can be obtained from Australia at a much cheaper rate than from Spain and Germany. The gross charges on the latter are from 4*d.* to 4¾*d.* per lb.; those on colonial wool amount to no more than 3¾*d.*—(*Journal of Agriculture.*)

NEXT YEAR.

Procrastination is the thief of time.—YOUNG.

I remember reading in some book—a German author, I think—"Shew me your apartment, and I'll be your fortune-teller." There is much reason in this saying, for assuredly if fortune can be foretold by the character of an individual, in no manner can you form a better estimate than by a glance at his domicile. Let any man of discernment enter the chamber of his friend, and attentively survey the signs and appearances therein, and I am much mistaken if he do not arrive at a more just conclusion respecting the character and disposition of its occupant, than ever could Lavater by his physiognomy, or another, and more amusing class

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of speculators, by the lines on hand, or the development of his tympanum.

Is the tenant of the chamber extravagant? it will be indicated by the costliness of its decorations, and the little care with which they are preserved. Is he parsimonious? by the meanness of its appointments, and the evident appearance of comfort sacrificed to saving. The scholar will be known by his books, and their marks of use—the nature of his studies by their contents. Can any one, for example, desire a more complete insight into the character of Mark O'Gormand than by looking at his table? Upon it you see Mrs. Mac Murdo's cookery, well thumbed and dog-eared, with an essay on diet and indigestion uncut. There is the story of a man who, to make a more pompous display of plate, placed a pair of silver spurs on his sideboard: can any thing indicate the vanity of an individual with greater force? In short, whether a man be ostentatious or humble, intemperate or sober, musical or melancholy, may be as easily known in a visit or two, by "signs and appearances," as can the age of a horse by looking into his mouth.

My friend Will Hopeful is a remarkable truth of what I shall in future call the science of Chamberology. Will's apartment is strewed up and down with half-formed models of ships, half carved plans of mines, unfinished draughts of speeches, petitions to Government for lands in the colonies, penned on the back of proposed mortgages on his own estate, copies of letters for the loan of thousands on the reverse of dunning notes for hundreds, and amid this chaos of half digested prospectuses and unaccomplished designs, sits my friend, revelling in all the luxury of an idealist, the delighted architect of a thousand air-built projects.

From this sketch it will be at once perceived that Hopeful is a great projector; but he is not so unsuccessful as many of his fraternity, for he never, by any chance, attempted to put one of his schemes into practice. They are all to come; Will has, therefore, never known disappointment. One morning I found him attentively studying an account of the Carib Islands, and so engrossed was he with some important scheme to result therefrom, that he was not aware of my entrance. His grand project was, to form a settlement on one of these islands for the fishery of turtles, which he said were in such numbers, and the flesh were discovered to be so wholesome, that he proposed to freight annually a certain number of ships with them, and to bring them to England as food for the poor! This he was convinced would be a sure fortune to the speculator, and a national blessing. I inquired when this great design was to commence? he thought about *next year!*

He accompanied me one day to a chalybeate spring, in the fields to the north of London, when I accidently remarked that the nature of the water indicated extensive strata of metallic ore in the vicinity. "Hush! my dear friend," said Will; "never let that secret escape you. I intend to make a national concern of it. I shall petition Government for the grant—get an Act of Parliament for the charter—raise a company with 500,000*l.* capital, and then erect works that will supply all England with iron—aye, perhaps, all Europe." On the usual inquiry of when? "My dear fellow," said he, "always do one thing at a time, that's my maxim. I shall be ready *next year!*"

To enumerate all poor Will's absurdities would be an endless task. At one time he talked of illuminating London with inflammable air—propelling carriages by machinery—recomposing cooper's chips into staves, and all these fine things were to be done *next year!*

I have known Hopeful now more than ten years, and he is still the same both in body and mind. He has the same dark, wandering, speculative eye, the same long, spare figure. He is one of a class of persons that is said never to die, but dries up, and is blown away. The last time I saw Hopeful, he accosted me with "Well, what do you think I am going to do?" "What you have been going to do all your life, I suppose—nothing!" "Your reproach is just," said he, "but I was about to tell you that I see my errors—that I will plan no more, but execute; think of my own affairs, instead of those of the whole human race; pay my own debts, instead of those of the nation: in short, instead of amassing imaginary fortunes by chimerical schemes, I will make a real one by the good old-fashioned mode of honest industry. What do you think of that, my friend?" I cordially shook him by the hand, and most sincerely delighted was I to congratulate him on such a resolution. "And when do you intend to commence this reform, Will?" I inquired. His reply was, "*Oh! next year!*"—*Monthly Magazine.*

THE BRITISH PRESS.

THE IMMENSE VALUE OF ENGLISH NEWSPAPERS.

(From Rush's Narrative of a Residence at the Court of London.)

"IN three days a London Newspaper reaches every part of the kingdom, and in three months every part of the globe."

"One of the things that strike me most, is their press. I live north of Portman-square, nearly three miles from the House of Commons. By nine in the morning, the newspapers are on my breakfast-table containing the debate of the preceding night. This is the case though it may have lasted until one, two, or three in the morning. There is no disappointment; hardly a typographical error. The speeches on both sides are given with like care; a mere rule of justice, to be sure, without which the paper would have no credit, but fit to be mentioned where party feeling always runs as high as in England.

This promptitude is the result of what alone can produce it; an unlimited command of subdivided labour of the hand and mind. The proprietors of the great newspapers employ as many stenographers as they want. One stays until his sheet is full. He proceeds with it to the printing-office, where he is soon followed by another with his; and so on, till the last arrives. Thus the debate as it advances is in progress of printing, and when finished, is all in type but the last part. Sometimes it will occupy twelve and fourteen broad closely-printed columns. The proprietors enlist the most able pens for editorial articles; and as correspondents, from different parts of Europe. Their ability to do so, may be judged of from the fact, that the leading papers pay to the government an annual tax in stamps, of from twenty to fifty thousand pounds sterling. I have been told that some of them yield a profit of fifteen thousand sterling a-year, after paying this tax, and all expenses. The profits of "The Times" are said to have exceeded eighteen thousand a-year. The cost of a daily paper to a regular subscriber is about ten pounds sterling a-year. But subdivision comes in to make them cheap. They are circulated by agents at a penny an hour in London. When a few days old, they are sent to the provincial towns, and through the country at reduced prices. In this manner, the parliamentary debates and proceedings, impartially and fully reported, go through the nation. The newspaper sheet is suited to all this service, being substantial, and the type good. Nothing can exceed the dispatch with which the numerous impressions are worked off, the mechanical operations having reached a perfection calculated to astonish those who would examine them.

What is done in the courts of law, is disseminated in the same way. Every argument, trial, and decision, of whatever nature, or before whatever court, goes immediately into the newspapers. There is no delay. The following morning ushers it forth. I took the liberty of remarking to one of the judges, upon the smallness of the rooms in which the Courts of King's Bench and Chancery sit, when the proceedings were so interesting, that great numbers of the public would like to hear them. '*We sit,*' said he, '*every day in the newspapers.*' How much did that answer comprehend! What an increase of responsibility in the judge! I understood from a source not less high, that the newspapers are to be as much relied upon, as the books of law reports in which the cases are afterwards published; that in fact the newspaper report is the best, being generally the most full, as well as quite accurate. If not accurate, the newspaper giving it would soon fall before competitors. Hence, he who keeps his London daily paper, has, at the year's end, a volume of the annual law reports of the kingdom, besides all other matter.

In the discussions of the journals, editorial or otherwise, there is a remarkable fearlessness. Things that in Junius's time would have put London in a flame, pass almost daily without notice. Neither the sovereign nor his family are spared. Parliament sets the example, and the newspapers follow. Of this, the debates on the royal marriages in the course of the present month, give illustrations. There are countries in which the press is more free by law, than with the English; for although they impose no previous restraints, their definition of libel is inherently vague. But perhaps nowhere has the press so much latitude.

Every thing goes into the newspapers. In other countries, matter of a public nature may be seen in them; here, in addition, you see perpetually even the concerns of individuals. Does a private gentleman come to town? you hear it in the newspapers; does he build a house or buy an estate? they give the information; does he entertain his friends? you have all their names next day in type; is the drapery of a lady's drawing room changed from red damask and gold, to white damask and silver? the fact is publicly announced. So of a thousand other things. The first burst of it all upon Madame de Stael, led her to remark that the English had realized the fable of living with a window in their bosoms. It may be thought that this is confined to a class, who, surrounded by the allurements of wealth, seek emblazonment. If it were only so, the class is immense. But its influence affects other classes, giving each in their way, the habit of allowing their personal inclinations and objects to be dealt with in print; so that, altogether, these are thrown upon the public in England to an extent without parallel in any country, ancient or modern. When the drama at Athens took cognizance of private life, what was said became known first to a few listeners; then to a small town; but in three days, a London newspaper reaches every part of the kingdom, and in three months, every part of the globe.

CHANGES IN THE EAST.

WONDERS OF COMMERCE.

Hitherto, in its vast ramifications, the circulation of commerce has been maintained by the very insecurity of the government and by the greater consideration granted to this than to its sister blessings, agriculture and manufacture. In the thousands of leagues from east to west over which it extends, between latitudes nearly parallel, and climates not very dissimilar, if not all, at least many of the objects of commerce might have been produced in many other localities besides those to which they have been confined, and whence they have at present to be exported. It is thus, probably, that Tunis has remained so long in possession exclusively of the manufacture of red cap. Cashmere of shawls; that Mussulepatam has remained peculiarly celebrated for chintzes,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Bagdat for brocades, Ispahan for velvets, Herat for carpets, Bochara for camelets and felts, Galconda, Guzerat, Mussul and Dacca, for muslins; ebony has continued to be brought from Cochin China, aloes from Chiamsi, benzoin and camphor from Sumatra and Java.* It is on this that our hopes of commercial prosperity must rest, that notwithstanding eastern despotism, the means of exchanging commodities are open. It is established, that our cottons and muslins, calicoes, chintzes, &c., are, if not better, infinitely cheaper than those of the East. Taste is gradually directing itself to our manufactures, and money less expended than formerly on furs, jewels, Persian and Damascus blades, ambey mouth-pieces and shawls. We may calculate, at no remote period, if indeed, political troubles are arrested, of supplying the necessaries as well as the luxuries of the whole of the eastern population, whose attention will thus be exclusiveiy directed to agriculture, and the furnishing of raw produce; when we can take from their produce in return for our wares, or find them the means of exchanging it. These changed circumstances are beginning to produce their effects. Persia, which lately drew raw silk from Turkey for its manufactures, now has commenced to import wrought silk from England; and the current of precious metals, which a few years ago carried yearly 5,000,000*l.* towards the east, is now drawn backwards by the spinning mules and power looms of England.

It is not in looking on the miracles of machinery, or the accumulation of wealth at home, that a just idea can be formed of the greatness of England, or of the influence she exercises on the fate of millions of men with whom she has no visible connexion. Take some remote village of Turkey, and trace there the effects of England's machinery. This village grows corn and tobacco and cotton; it has vines and flocks; it has enough of the necessaries of life for subsistence, and cotton, and wool, and hides, for clothing; and grows no more except the portion required by government, which, if the population is Turkish, is very small. This village, then, employs one half, say, of labour in agriculture, and one half is manufacturing its cotton into cloths, its wool into carpets, its hides into zarouchia, while fields lie uncultivated around it. It is removed from the road, not to be subject to the passage of troops, and so placed as to be hidden from the observation of travellers. Its inhabitants have no inducement to accumulate wealth, or to gain information; they are led to form no new desires, to feel no wants by intercourse or traffic with the surrounding country, because they find weaving their own cotton cheaper and less laborious than raising an additional supply of corn to exchange for the cotton cloth of their neighbours, who have no better machinery or greater expertness than themselves. But reduce prices so as to make it their interest to purchase—present the goods and the means of exchange, the whole scene instantly changes; communications are opened, connexions established, desires created, energies raised, and progress commences. Commerce naturally, in every case, has this effect, but how important is that effect, where the objects of it are the clothing of the mass of the nation? The manufacture of cotton is the principal in-door occupation of the greater portion of the East—of above sixty millions of men, with whom our future commerce will probably be carried on through the scales of the Levant—of men who are applying their labour to manufacture the cotton, and wool, and silk, that clothe them, while their fields lie uncultivated—under a climate producing all those articles which at present give the highest remuneration for labour. Throughout these vast and varied regions, these resources have lain dormant, as in the Turkish village; because hitherto the first object of necessity was not furnished to them cheap enough to induce them to forego its manufacture, and turn their attention to cultivation. How important, then, is it to establish the fact, that our cottons are at a sufficiently low price to induce them to forego the home manufacture! It is superfluous to follow out the vast consequences thence to be deduced; but it may not be uninstructive to remark, that perhaps a few pence diminution of price and charges in a pound sterling, may open or close the door of the market of a village, and for the same reason of a quarter of the globe, to our manufactures.

The village which was insulated before, now seeks to connect itself with the lines of communication with the principal marts; cultivation extends, wealth accumulates, instruction follows, desire for new objects increases, produce is raised, England's looms have called this prosperity into existence.

* This is a general rule with a whole host of exceptions. Silk in India, tobacco all over the East, tombac at Siraz, Sea Island cotton in Egypt. Ali Pasha attempted to transport the culture of the rose from Eski Serai to Castoria; his prototype Zalim of Kotah, attempted also to naturalize the Cashmere at Kotah; it has partially succeeded at Delhi; a colony of Damascus reproduces its steel at Mushed, &c.

MISCELLANEA.

Marriage.—Jacobus de Voragine, in twelve arguments pathetic, succinct, and elegant, thus describes the benefits of marriage.

1. Hast thou means? Thou hast one to keep and increase it.
2. Hast none? Thou hast one to help to get some.
3. Art thou in prosperity? She doubles it.
4. Art in adversity? She'll comfort, assist, bear part.
5. Art thou at home? She'll drive away melancholy.
6. Art thou abroad? She prays for thee, wishes thee at home, welcomes thee with joy.
7. Nothing is delightsome alone. No society is equal to marriage.
8. The bond of conjugal love is adamantine.
9. Kindred is increased, parents doubled, brothers, sisters, families, nephews.
10. Thou art a father by a legal and happy issue.
11. Barren matrimony is cursed by Moses. How much more a single life.
12. If nature escape not punishment, thy will shall not avoid it; as he sung it, that, without marriage:

Earth, air, sea, land, oft soon will come to nought,
The world itself would be to ruin brought.

Recipe for a Wife.—Good temper, health, good understanding, agreeable physiognomy, figure, good connexion, domestie habit, resources of amusement, good spirits, conversation, talents, elegant manners—*Money!*—[Found in a Bachelor's Portfolio.]

A hint to Belles.—Be not led away by each meteor of a spark, or too readily yield your hearts to an elegant and agreeable exterior, for the serpent is often ambushed beneath the fairest flower. Let not your reason be blinded by love, or your sense enslaved by passion, above all seek not to make captives by personal accomplishments alone, nor trust too much in an enchanting face; for recollect

"Charms strike the sight, but merit wins the soul."

One Letter!—A letter was lately found, in which one friend spoke so freely of another, that it led to an irreconcilable quarrel. "I am surprised," observes W., "that such bitter hostility should arise out of so trivial a cause." "I am not at all," replied J., "it is quite natural; for *a friend* becomes *a fiend* if you drop a letter."

SINGULAR FALLS.

We have heard of the fall of Lucifer, and the fall of Cromwell, and the fall of Wolsey, but one of the pleasantest tumbles upon record, was that of Mr. John Fell, who, when he removed from one part of the Metropolis to another, wrote over his door "*I Fell* from Holborn-hill."

A BOY'S LETTER.

The following specimen of a boy's letter is from *Mr. ~~Annual~~ of* 1832. We do not remember to have seen it, until the other day. There is such a truth of character in it—so much of that spirit of drollery, mixed with mischief, which often prevails in the young human being of the male sex—that we cannot help declaring it to be, in its own words, "capital fun." The letter proceeds from a country boy, to what the polite letter-writer would call "his friend in town:"

"Now, Bob, I'll tell you what I want. I want you to come down here for the holydays. Don't be afraid. Ask your sister to ask your mother to ask your father to let you come. It's only ninety mile. If you're out of pocket money, you can walk, and beg a lift now and then, or swing by the dickeys. Put on Cordroys, and don't care for the cut behind. The two prentices, George and Will, are here to be made farmers of; and brother Nick is took home from school, to help in agriculture. We like farming very much; it's capital fun. Us four have got a gun and go out shooting; it's a famous good un, and sure to go off if you don't full cock it. Tiger is to be our shooting dog, as soon as he has left off killing the sheep. He's a real savage, and worries cats beautiful. Before father comes down, we mean to bait our bull with him. There's plenty of New Rivers about, and we're going a-fishing as soon as we have mended our top joint. We've killed one of our sheep on the sly, to get gentles. We've a pony, too, to ride upon, when we can catch him; but he's loose in the paddock, and has neither mane nor tail to signify to lay hold of. Isn't it prime, Bob? You *must* come. If your mother won't give your father leave to allow you—run away. Remember you turn up Goswell street to go to Lincolnshire, and ask for Middlefen Hall. There's a pond full of frogs, but we won't pelt them till you come; but let it be before Sunday, as there's our own orchard to rob, and the fruit's to be gathered on Monday. If you like sucking raw eggs, we know where the hens lay, and mother don't; and I'm bound there's lots of bird's nests. Do come, Bob, and I'll shew you the wasp's nest, and every thing that can make you comfortable. I dare say you could borrow your father's volunteer musket of him without his knowing of it; but be sure any how to bring the ramrod, as we have mislaid our's by firing it off.

A PUFF.

A seller of cheap articles in Dublin, has the following puff at the head of an advertisement:

'What will the world come to? Only think of silk parasols at 17*d.* and 18*d.* each!" "What will the world come to?" said a son of a sod as he read this; "why, to the *shads* at this rate, what else?"

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

WANTED—A WIFE.

THE following curious document has been published in the Parish of North Creake:—

"*May no mis-carriage prevent my marriage.*"

Jeremiah Southgate, of North Creake, Norfolk, intends to be married at Syderstone Church, on Thursday before Michaelmas-day. when that may happen, and to return to North Creake to dine.—Mr. Reeve gives a goose to be roasted; Mr. Elliot gives a hen to be roasted; Mr. Rowe gives a pig to be roasted; Mr. Hendry gives a calf to be roasted; and Mr. Fairclogh Brett gives one stone of flour; and in order that the meat should be well basted, do you see, Mrs. Ludman, Mr. Jarriotte, Mrs. Fitte, Mrs. Sharpe, Mr. Brett, Mrs. Sutton, and Mrs Palfield, do each give a pound of butter. The said Jeremiah Southgate will provide every thing else suitable to so festive an occasion, and hereby gives notice to all young women desirous of changing their condition, that he is at present disengaged, and he advises them to consider that though there be luck in leisure, yet in this case delays are dangerous: for with him, he is determined first come first served.

"So come along lasses, who wish to be married,
Jeremiah Southgate is vex'd that so long he has tarry'd."

Aug. 1833.

LITERAL TRANSLATION OF AN INK-MAKER'S SHOP BILL.

At the Shop *Shun-wang*—very good Ink—fine, fine, Ancient shop—grandfather, father and self make this ink,—fine and hard, very hard,—picked out, very fine and black, before now,—sell very good Ink, prime cost very high. This ink is very heavy,—so is good. No one makes like it. Others who make ink, make it for money, and to cheat; I only make it for a name. Plenty of gentlemen know my ink. My family never cheats, always bears a good name. I make ink for the "Son of Heaven," and all the mandarins round. All A-kwan-tsae's (gentlemen) must come to my shop and know my name!

We have long been in the habit of considering Mr. Warren, of No. 30, Strand, London, and the Lottery Office keepers in America, as the princes of the noble art of "puffing," but have been recently convinced that our friends, the Chinese, leave them far behind. The above translation of an ink-maker's card, will vie with the most perfect of the celebrated Blacking-manufacturer's tributes to the charms of his "liquid jet." It is not easy to say, whether the Chinese jet-maker "keeps a poet," but from the style of the document, there is every reason to believe that the ingenious gentlemen who celebrate blacking in hexameters, and make sonnets on the Doctrine of Chances are not confined to Europe and America.—*Chinese Courier, April* 6.

Patronage.—Not long after Benjamin Franklin had commenced editor of a newspaper, he noticed with considerable freedom the public conduct of one or two influential persons in Philadelphia. This circumstance was regarded by some of his patrons with disapprobation, and induced one of them to convey to Franklin the opinion of his friends with regard to it. The Doctor listened with patience to the reproof, and begged the favour of his friend's company at supper, on an evening which he named; at the same time requesting the other gentlemen who were dissatisfied with him should attend. The Doctor received his guests cordially, his editorial conduct was canvassed, and some advice given. Supper was at last announced, and the guests invited to an adjoining room. The table was only supplied with two puddings, and a stone pitcher filled with water. All were helped; none could eat but the Doctor. He partook freely of the pudding, and urged his friends to do the same; but it was out of the question—they tasted and tried in vain. When their host saw the difficulty was unconquerable, he rose and addressed them, "My friends, any one who can subsist upon saw-dust pudding and water, as I can, needs no man's patronage."—*Watson's Annals of Philadelphia.*

The Polite Magistrate.—"His delicacy was proverbial. I myself was present on more than one occasion when he was engaged on a criminal investigation. 'My honest friend,' said he to a regular ruffian, 'my honest friend, you are found guilty of felony.' At another time I have the most distinct recollection of his taking an examination thus: Sir Diggory questions—(he had a little peculiarity of repeating the answers made to him)—and the man replies; bear this in mind, and you'll understand the affair in a trice. 'My good friend, you are brought before me on a charge of murder; what have you to observe on the subject?' 'Eh, your worship.' (Those hardened wretches are always so ignorant.) 'How did it happen?' 'Why, thus, your worship:—Jem was very saucy, and said has how he would knock the breath out of my body.' 'Good! And what did you reply?' 'Nothing; I floored him.' 'Good! and then—' 'Why, then, your worship, they took him up, and found that his head was cut open.' 'His head was cut open! Good! and what followed?' 'After that, your worship, they gathered him up to take him to the dispensary; but he died on the road.' 'He died on the road! Very good!'"

Moving Trees.—The following is Mr. Baker's account of the experiment (conveying plants and fruit-trees by sea):—"In regard to the means I possess of conveying live plants of the white mulberry of Italy to Bombay, you will indulge with me in the expectation of the success of my endeavours when I inform you that when in Aleppo, for four years successively, I received annually, from Messrs. Martin, Bardin, and Co., of Camberry, in Savoy, 200 to 300 grafted trees of all the fruits of Europe, which were sent to me packed in damp moss, without requiring any watering or care on board ship, but thrown into the hold, like any package of dry goods, and after having been thus necessarily deprived of light, air, earth, and water, for five months, I have sometimes, on unpacking them, found the tree in blossom. It has been planted, and I have, in two or three instances, eaten of the fruit of that very blossom."—*Alexander's East India Magazine.*

Custom-house Homage to the Fine Arts.—It was comparatively an easy matter to get into Tours: the difficulty was to get out of it. In almost all the provincial towns of France, the ignorance and stupidity of the police and other functionaries are very remarkable. Most of them appear even to write with difficulty; and if a question arises requiring the slightest exertion of their own judgment or common sense, they are all at sea. At Tours they refused, for a long time, to *viser* our passport for Nantes, because it was not the original English document, although it bore distinctly the declaration of the prefect of police, that 'it was to stand in the place of the English one, which had not arrived from Calais.' This, however, was the objection of the sous-chefs, and was overruled by the mayor; but he, on his part was anxious to know what possible business we could have in the seat of rebellion. It was in vain to say that the authorities at Paris would have *vised* the passport at once for Nantes, if we had desired it: he, the mayor, 'did not know us—we were strangers in the country, and journeying without apparent object to the centre of disaffection.' In this difficulty the Arts came to our relief. We had fortunately in our possession a few of the beautiful engravings of this volume, and a copy of the 'Picturesque Annual' for last year. The mayor's heart opened as he gazed, 'Aha!' said he, 'that is another thing. They are superb! You English are a very strange people—a very extraordinary people! But come, since I perceive that you are *only a Walter Scott*, why you must go where you please!'"—*Ritchie's Wanderings.*

Parties.—Through life, I have observed, there is no superfluous civility that brings more dissatisfaction to its donor than parties; those that are not invited, become his enemies, while those that are, receive the intended compliment only as their due, and depart ridiculing the inadequacy of his efforts.—It is even worse with those who are concerned in a political party. They make substantial enemies, who never forget them, and acquire friends, who will always forget——to remember them.

The Fleas.—We were much astonished and entertained, yesterday, at the Exhibition of the "Industrious Fleas," in Regent Street. The most curious part of the exhibition is, perhaps, the Ball Room, in which, whilst some of the Fleas dance a waltz, others are in the orchestra playing on instruments, the music of which is audible. The information given to us respecting the process of instruction, which the fleas undergo, by their ingenious tutor, Mr. Bertolotto, was not the least interesting circumstance of our visit.—*National Omnibus.*

Discovery of Oil Painting.—The discovery of painting in oil is generally attributed to Van Eyk, who taught it to Antonio of Messina, and by him imparted to Dominica Beccafumi; the latter taught the art to Andrea del Castagna, who, eager to become the sole possessor of the art, assassinated his friend and benefactor, as he then flourished without suspicion loaded with riches and honours. On his death-bed however the horrors of guilt overtook him, he made a full confession of his crimes, and died detested and execrated by his fellow citizens in 1480, aged seventy years.

Exclusion of Lawyers from Parliament.—By an Act the 5th Henry IV. Lawyers were excluded from Parliament, because they were generally auditors of men on property, and considered as retainers, receiving annual stipends. On the 20th November, in the 20th year of James I. a proclamation was issued in which the voters for members of parliament were directed "not to choose curious and wrangling lawyers, who may seek reputation by stirring needless questions."

British Trade with China.—From a list published in our *Price Current*, it will be seen that the number of vessels under the British flag which arrived in China during the last year amounted to eighty-seven. Of these nine (H. C. ships) were from London direct; twenty-four from Calcutta; thirty-one from Bombay; two from Madras; one from New South Wales; four from Java; six from Singapore; eight from Manilla; and two from cruises on the coast.—*Canton Register, May* 3.

The Signs.—At a public dinner at Brighton, (600 persons present) a speaker said he liked neither Whig nor Tory; he wanted to see a Radical Ministry, Mr. Hume, Premier; and Mr. Faithful, Chancellor.

News from Jamaica, (Sept. 15.)—A packet just arrived in the river, announces that there is at length a feeling of general satisfaction on the Slave Emancipation Bill.

The talent of choosing Men for Office.—A Greek lawyer of considerable celebrity, speaking of the Lord High Commissioner of the Ionian Islands, Sir Frederick Adam, said,—"*Poveretto ha buone intenzioni qualche volta, non ha il talento della scelta: cosa volete?*" Poor man! he has sometimes good intentions, but you see he wants the talent of choosing men: what can you expect?—*Colonel Napier.*

OBSTACLES TO HUMAN SUCCESS,
Arising out of the Obstinacy or Jealousy of Others.

YOUNG Linnæus, whose instinctive partialities for natural objects were ignorantly misinterpreted into a disinclination for study, was threatened by his father with being bound to a shoemaker. But the entreaty of his friends, and the importunity of the youth himself, succeeded in bending the mind of the parent, and Linnæus was finally sent to the University; there, however, only to encounter fresh difficulties; for it is well known that whilst there he suffered from the want of books, of clothes, and even of food, being compelled to patch up his shoes with the bark of trees. When, afterwards, Linnæus was sent by the Academy of Sciences into Lapland, to explore the vegetation of that country, he was allowed no more than a pittance which was scarcely sufficient for his subsistence. Again, on his return, after he had begun to give lectures at the University, it was discovered by a jealous rival that he was without a degree; and as the regulations of the institution required that qualification in a professor, so the want of it was urged successfully against him. Difficulties and perils are then the lot of every great mind in this world. Was not Priestly driven from his native town by fire and sword, and, what was still more terrific, the ruthless anger of fanaticism? Harvey, the discoverer of the circulation of the blood, lost his practice, and finally had his house and library burned by the mob, who believed that he must have been studying the "black art." Even Arkwright, who is generally spoken of as one of the most fortunate of men, had to go into the Court of King's Bench to have his right of patent tried, and was compelled to undergo the most mortifying tribulations, and to meet a considerable amount of expense in defending his interests. A still more forcible example of an innocent victim to prejudices was the late Mr. Fulton, who first introduced the steam-boat in America. After being the laughing-stock of every body while pursuing his object, and making experiments, he at length announced that he was prepared to take a boat up the Hudson River, and solicited passengers to come on board and witness his success. Many came, and to their very great surprise, the boat moved forward upon her course. It had not proceeded far, however, before it stopped abruptly, and the general voice immediately exclaimed at the absurdity of the project! "We said it would never succeed!" &c. Fulton addressed them mildly; declaring that he did not know the cause at present, but if they would have a little patience, he would descend and see. He did so, and soon rectifying the error, the boat again moved forward, and amidst the incessant cavilling of the learned and unlearned fools, their momentary expectation of another and a final stoppage, proceeded steadily till it reached Albany, and then returned to New York; thus performing a distance of nearly three hundred miles. When, however, they had reached home, as Fulton writes in a letter to a friend, "he was still doomed to be disappointed: imagination superseded fact; they said he could not do it again, and if he could, what was the use of it?"

But the most unsatisfactory consideration, after all, is this, that notwithstanding the illumination that has been shed in modern times on every subject—notwithstanding the progress of knowledge, and of intellectual light, in every class of society, still the melancholy fact is as true with respect to the present times as it was at any former period, that a man of the greatest genius is as liable to be starved as ever. The causes which used to bring about this sad result, are still, argues our author, in existence, and the only difference in their operation at present, is in nothing more than the manner. * *

SELECT NOTICES.

Parliament.—We recommend to our readers, the perusal of Mr. Hill's speech on Slavery, as reported in the *Parliamentary Mirror* of the 10th of June. One paragraph is striking. "While I am on the subject of compensation," observed Mr. Hill, "let me congratulate the House that the Slave does not add to our difficulties, by himself demanding compensation; for I confess I know not how we should resist his claim."——*Dr. Chalmers.*—This gentleman appears to have been the great centre of attraction in England during the months of July and August. He was hailed in London by all that was distinguished in greatness and in rank. A festival took place at Cambridge, Trinity Hall, at which the Doctor was present. The University of Scotland, and the healths of Dr. Chalmers, Sir D. Brewster, and Professor Forbes, were drank with great enthusiasm.——*Pompeii.*—The supposed discovery of the old port of Pompeii, turns out to be an error. What were mistaken for the masts of ships, are ascertained to be the remains of the cypress-trees, covered by the eruption of volcanic materials from Vesuvius. ——*Egypt.*—The Pasha of Egypt is resolved on attempting to cut the long-projected canal between the Nile and the Red Sea across the Isthmus of Suez; and has sent to Europe to make arrangements for carrying the design into effect.—*Botany.*—The Home Government has sent out a gentleman of known abilities, as Botanist to Australia, with a salary of £600.——*Zoological Gardens.*—No less than 82,507 persons visited the Society's Gardens, near London, in May and June.——*Plate.*—In the days of Charles I. the Duke of Buckingham's service of plate was valued at £80,000.——*Military sacrifice of life.*—The 31st Regt. landed at St. Lucia, 776 strong in May,—by the latter end of October following, there were only sixteen fit for duty."——*Again.*—In four years it is estimated that the Europeans had decreased in the West Indies, from 20,000 to 7,000. ——*Play Acting.*—The average receipts of Covent Garden Theatre for five seasons, ending in 1815, were £86,096; and the average of five seasons, ending 1832, were £47,148!! And three successive lessees of Drury Lane Theatre have totally failed within the last ten years.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(By VIVIAN.)

THE readers of this Journal will, we are persuaded, derive considerable satisfaction in reading the Leading Article of the present Number. It should awaken (as we have no doubt it will,) general attention, and be more extensively published than is within the compass of our own comparatively-confined limits. It is a document that will unquestionably engage the attention, not only of the people at home, but of the Parliament itself. It unfolds the triumphs of industry on the part of the British Settlers, which we think has no parallel in history.

In general, the Cape colony is happily in a prosperous condition, and still brighter days, we trust, under God's good blessing, awaits it. Surely, there is much reason for a day of general thanksgiving for all that is enjoyed in this climate of health and peace. And the more so, when we contemplate the distresses at home, and read the heart-rending accounts just received of the plague, pestilence, famine, storm, tempest, earthquake, and generally depressed state of British India.

PORT NATAL.

We are glad to learn that the mercantile body of Cape Town are about to institute enquiries into the advantages held out for the purposes of trade at Port Natal; and, should these prove worthy, to take measures for the formation and *protection* of an establishment at that place.

SWIMMING.—BATHING.

DEPENDENT as we are in Southern Africa on the facilities and resources of the ocean which are attached to our coasts, and which invite our familiarity, it is quite surprising that the youth of the colony should have so long suffered themselves to remain ignorant

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of the *art of swimming*. We ought at the Cape to be almost amphibious—the art of swimming should form one of the primary elements of our colonial education. But the very reverse is the case. We know well enough that many parents entertain a perfect horror of the water, but that parent acts without forethought, who prevents his child from learning to swim—because the chances are full ten thousand to one in his favour, that, during his noviciate, no accident will occur to him; while there is at least the same odds, if, in after life, he happen to be plunged into deep water, against his being rescued. How many fine young fellows, the pride of their families,—how many young men in the vigour of life, husbands and fathers, have been drowned in comparative puddles, which a child who had taken ten lessons from an older playmate, could have crossed lightly as a cork! But the great *professor* of the art of swimmiug is the FROG,—a creature which, for ages past, has taught the human tyro gratis.

Then, again, think of sea-bathing as a source of purity and health! And do you ask the *time when?* We say, the morning for ever! Be at the sea side before the bee has done snoring, or Mynheer has taken his morning *sopie*—strip while the swallow, preparing for his first flight, is shaking his feathers—before the *snoek* has taken his first nibble, or the *kabbeljau* its matinal snack. Heed not the trash which old women—male and female—babble about waiting until the waters are warmed by the rays of the summer sun,—attend to us, and bathe in the grey dawn.

THE SLAVERY OF CAPE ETIQUETTE.

"THE Colony will not be worth a rush," said a worthy civil servant some few years since,—"the introduction of this rascally press will cause the *topsy-turvey* of every thing. We sha'n't be allowed to think and act for ourselves, and as for 'the good old practice' of knocking your black fellow down or giving him a —— hiding, why the consequence will be that you will be *served out* by the newspapers."

Now, the latter part of the story is all very true, and just as it ought to be. And the press has, moreover, exercised its legal power in the investigation of every subject connected with the thinking and doing of man in his every political, commercial, moral, and religious transaction. We know well enough that these iuquiries most heartily provoked the "proud flesh" of the colony—we mean that portion of it which may be classed among the

Eunuchi sapientiæ,

We are by no means certain that these tenth class of brains are extinct—on the contrary—and, therefore, to our text.

We consider the colony to be greatly behind-hand in intelligence, public spirit, and independence from its devotedness to the superfluities of shallow etiquette and empty parade. We recollect on a certain occasion, the village of Caledon all in ferment, because, forsooth, we trundled a wheel barrow in the minister's garden, and delved with the mattock and the spade. Such conduct was *out of order;* if the *whites* work, the *blacks* won't. And yet the poor villagers were steeped in poverty, and their gardens exhibiting the wildest negligence and confusion. The time was, too, when a school boy was followed by a little slave urchin or old woman to carry his A. B. C book, his *Murray*, his *Korte Schets der Christelyke Leer*, or his *Eerste Gronden der Nederduitsche Taal.* These things are bettered, still there is an immense reluctance on the part of some young men, and in office too, even to convey a book or a parcel, though secured genteely with *pink tape.* As for a *blue bag*, this is quite out of the question. Many are the squabbles we have witnessed on this head. Carry a blue bag, indeed! What next for the poor colonists! And all this attachment to old proudish customs, governs and binds whole families, and extends to the *very servants.* Well do we know the opposition made by *our* head man on the introduction of *coals.* Wood was far the best to cook with, and the old *iron pot* made the meat far more *kostlyke* than the infamous whirl-a-gig, roasting-jack, or House-oven. Then, again the introduction of a *toasting-fork,* was a perfect libel on the sinewy potency of the hand of the toaster. And as for *bellows*, what toyism to introduce a system at once opposed to the good old custom of going down on *all-fours*, and puffing with a living breath, and participating in all the pleasurable sensations of dying of the *choak.* The fact is, that we have obtained a victory over the *iron pot* system, but as for *toasting-fork* and *bellows*, the antediluvians have been a match for us. Nay—to such a pitch does the power of custom operate on the human mind, that we have seen a servant toiling away in bringing water from a distant pump for household purposes, rather than receive it on the premises from *newly* laid resources.

But let us extend our inquiries to a higher grade. What a fuss there is about *first* calls, and *first* visits, and *returning thanks' cards,* and accepting or refusing *invites.* Honest souls that we are, we some years since declined an invitation to dine at Government House—just because we told the truth—that a previous engagement prevented our acceptance of the kind request to partake of

"Fish and good fare."

We gave offence, and on submitting the matter to an *arbiter elegantiarum* of the *beau-monde*, we were seriously told that our conduct was a direct affront to the higher powers, and that we should have broken faith with every engagement, so as to have done honour to the head of the *first circle!*

Again, looking into the towns and villages, how impeded is the march of free and independent intercourse arising from the influence of vain shew, empty parade, and frivolous etiquette. Even disunion is carried to the very churches: and just because the church regulations feed that spirit of etiquette of which we complain. Many are the ludicrous scenes that often occur in the churches: these would be invaluable for a Hogarth to paint, or a Peter Pindar to satirize. *Rules for precedence* are attached to the churches extending to upwards of five and twenty grades of society.* The geneology of the parties is, we suspect, not taken into an account, else there might be some curious data to found reflection. The artificial sub-divisions of society in small places produce misery and disquietude—there are as many sub-divisions as families; each is afraid of compromising its own dignity, and thus discord and animosity prevail.

This emptyness of etiquette, and the attachment to *hollow* customs, discovers itself in almost every weekly newspaper. We see it in the history of death's farewells, *fire escapes*, &c. all of which are nothing less than the spirit of *puff;* not the puff preliminary, the puff collateral, the puff oblique—but the puff direct!

Lastly, let a just estimate be taken of the

* We once entered the *Paarl* Church, when we were accosted by a gentleman in black, who demanded what we were by *rank.* We were really puzzled in this affair; notwithstanding that distributor of degrees, the Cape Almanack, had placed us among the *Squirearchy.*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

etiquette methods and manners of that portion of people, who arrogate to themselves the right of being of a higher order than their neighbours. Their passions and affections, their loves and friendships, are so encumbered with dull rites and irrelevant forms, that they can scarcely live under the load. They accumulate drapery and figure work, till the substance is quite buried under shew, and nothing remains but hollow signs and heartless appearances; till dropping a card at his door is a *visit* to an acquaintance, and sending an empty coach or gig to his funeral is *mourning* for a friend. The worst effect of these forms and superfluities is, they break down the energies of the mind, and thoroughly incapacitate a man from *acting or thinking for himself*, with directness and promptitude. The fatal capture of Louis XVI. at Varennes, was caused as Mad. de Stael declares, "by some delays of form and ceremony, without which, it was impossible for the King to get into his coach;" as for bundling him in at once, and scampering off with him for his life, as though he had been nothing but a man in his senses, it was not to be thought of. True, the danger was pressing, and nothing less than death—but the cocket-hat, the bag-wig, the *gold stick!* and the *silver stick!* and all other sticks, bearing or borne, would you think of neglecting them for a moment, or in any moment?

Our readers will be able to discover the drift of our remarks much better, perhaps, than we can clothe our ideas in language. At the same time, some may be ready to ask—What! do you want to get rid of the polite attractions and good manners, attentions and civilities, of civilized life? No, we do not: but it is the *tinsel* of which we complain; it is the heartlessness of *counterfeit* compliments, the mere artifice of outside show, the pomp and circumstance of the emblazoned courtesies of *pretence*, opposed to which we would place those "ten thousand *quiet attentions*," which, as the late inestimable Mrs. H. More justly observes, "are the surest way to a delicate heart."

THE POOR ATTENDED GRATIS.

This important subject has at length been taken up as it deserves. We have always thought the notice—"*the poor attended gratis*," affixed to a professional man's card, to be a mere clap-trap, degrading he who proposes it and they who receive it. It not only encourages the poor to habits of improvidence, but it teaches dishonesty of principle. What right has that man to come before a medical man as a pauper, when it is well known in innumerable instances, that he and many more similar to himself are shareholders in the Savings' Bank? We should be sorry to check the full tide of charity, flow as it may, but we cannot help thinking that much positive evil is attendant on those schemes of modern charity, in which, perhaps, a singleness and integrity of purpose may be a-wanting. There may be the *dust*, and *smoke*, and *din* of philanthropy; school may rival school, and teachers canvas for scholars; there may be the *bazaar* and the ball; much *female commotion and fair impertinence;* the ladies may stand at their stalls in all the bravery of attire, and traffic, and exposure, but we can tell them that a vagrant charity but ill compensates for a deserted hearth, a distracted economy, and a loose domestic government. *Home! sweet, sweet, Home!* is, after all, the best nucleus of national morality and disinterested charity. But we are, perhaps, wandering from our subject—what we wish to observe is, that we think *the poor*, so denominated, are considerably injured by many of the ill-judged charities of the day;—walking on the public crutch they refuse to rely on their own endeavours,—hence, their endless cravings require endless supplies. Our meaning is better illustrated as follows. A London clergyman has, in a vein of happy humour, pointed out the *abuses* to which the facilities of obtaining public assistance are liable:

He supposes a young weaver of twenty-two marrying a servant-girl of nineteen. Are they provident against the prospects of a family—do they economise—toil—retrench?—No: they live in Spitalfields, and rely upon the Charitable Institutions. The wife gets a ticket for the "Royal Maternity Society,"—she is delivered for nothing—she wants baby-linen—the Benevolent Society supply her. The child must be vaccinated—he goes to the Hospital for Vaccination. He is eighteen months old, "he must be got out of the way;"—he goes to the Infant School;—from thence he proceeds, being "distressed," to the Educational Clothing Society, and the Sunday Schools. Thence he attains to the Clothing Charity Schools. He remains five years—he is apprenticed gratis to a weaver—he becomes a journeyman—the example of his parents are before his eyes—he marries a girl of his own age—his child passes the ancestral round of charities—his own work becomes precarious—but his father's family was for years in the same circumstances, and was always saved by charity; to charity, then, he again has recourse. Parish gifts of coals, and parish gifts of bread, are at his disposal. Spitalfields' Associations, Soup Societies, Benevolent Societies, Pension Societies—all fostering the comfortable luxury of living gratuitously—he comes at length to the more fixed income of parish relief—"he begs an extract from the parish register, proves his settlement by the charity-school indenture of apprenticeship, and quarters his family on the parish, with an allowance of five shillings a week. In this uniform alternation of voluntary and compulsory relief, he draws towards the close of his mendicant existence. Before leaving the world, he might, perhaps, return thanks to the public. He has been born for nothing—he has been nursed for nothing—he has been clothed for nothing—he has been educated for nothing—he has been put out in the world for nothing—he has had medicine and medical attendance for nothing—and he has had his children also born, nursed, clothed, fed, educated, established, and physicked—for nothing!

FROM A TRAVELLER'S NOTE BOOK.

Worcester, Stellenbosch, and Paarl,* are remarkable for the dearth of intellect. Indeed, the Dutch clergyman at the latter place lately thanked God from the pulpit, that the *march of intellect* had not crossed the mountains!! At George, Swellendam, Uitenhage, and other places, the *progress of society* is evident. The inhabitants think and read. The people of the *dark places* enumerated, have their physical wants well supplied, it is true; but the food for the mind, as necessary to the moral being of man as bread is to his physical existence, is absolutely wanting: the circulation of ideas, as essential to the existence of a nation as the circulation of blood is to the life of man, is denied to them.

* The English School and the Book Society have fallen at this place, much to the disgrace of the men who should have watched and protected them.

ANOTHER GLANCE AT CAPT. OWEN'S VOYAGE TO AFRICA, &c.

With respect to the important question how far the introduction of civilized society into the scenes of savage life influenced the latter, the members of the expedition are not in a situation to give an answer which can be considered as at all decisive. It is true that the savages in this part of the world have had before them the example of Portuguese settlers for no less a period than three whole centuries, and there is every reason for concluding, that these settlers were as civilized a people as could be chosen from the European nations. But then, when we consider how little the intercourse of the Portuguese with the natives was calculated to make them respect or confide in the strangers, we shall be enabled at once to determine the probability that the unthinking conduct of the Portuguese completely neutralized the influence of their example towards ameliorating the rude natures of the Kaffers. But if we are to believe the authority before us, not only did the Portuguese fail to change the natural habits of these tribes, but they even *destroyed whatever of civilization had existed amongst them;* and it has been observed by the travellers, that wherever the jurisdiction of the Portuguese extended, there, and there alone, did they find it necessary to take precautions against the dishonesty and petty cunning of the inhabitants. Upon this great subject, however, we are willing to listen to the inferences which long experience, united with wisdom, have given rise to; nor is it without a melancholy feeling that we submit our minds to the sad probabilities contained in the following passage, with which this work closes:—

"But after all it is doubtful whether civilization can be imparted, whether it is not a spontaneous growth which must first be planted by the hand of an all-just and wise Creator. The mind of the savage must be prepared by a modification of the fiery passions of his nature, before he changes his state; he cannot at once see the advantages of a civilized over his own wild life, and must therefore by a *gentle and well-directed* hand be subdued to reason; for to try at once to introduce civilization into the mind of the savage, is like breaking the shell of the chrysalis in order to extract the dormant moth. It is one of the operations of nature which time alone can accomplish, and which any hasty or premature attempt serves only to destroy."

THE CAPE MUSEUM.

In the absence of the many sights at the Cape, there is *one* possessing deep interest, and which should be more generally visited and studied than is the case—we mean the *Cape Museum*. The recent improvements, beauty, and enlargement of this splendid collection, is at once the delight and wonder of the visitors. Why are not the inhabitants more alive to an institution so worthy a personal and family inspection?

If we delight to see the evidence of consummate skill and wisdom, where can we find them more abundantly exhibited than in the unrivalled collection of *birds* at our Museum? Or, if beauty

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

charm us, where is it more lavishly displayed than in their wondrous plumage? And next to the glorious displays of Creative Wisdom in these beauteous forms, is the exquisite skill of the artists in the arrangement. They have studiously copied nature in the very habits and attitudes of the feathered tribe to such a degree, as to excite the unqualified delight of the beholder. Then, again, the quadruped specimens in the Museum excite feelings of admiration. On this head, we have heard some persons hold, what they have been pleased to term *stuffed articles*, in contempt. Surely it is no unimportant study to the philosopher or the political economist to witness representations of those animals from all parts of the world, which supply the human kind with dress. How many thousands of poor individuals are covered with the skin of the seal: the poorest peasant of any civilized part of Europe derives his clothing not only from one, but many species of animals. The *ox*, the *dog*, the *sheep*, the *beaver*, the *rabbit*, and the *mole;* in almost every instance, contribute their direct contingent to the apparel, to the humblest individual of Europe, who is not absolutely a mendicant; and with reference to the dress and ornamental appendages of individuals of elevated rank, to the animals already mentioned, may be added the *deer*, the *goat*, the *camel*, the *elephant*, the *ermine*, and numerous other animals which supply the various and rich furs of commerce; the *ostrich*, and many other birds; and even the *oyster*, and the *puny coral architect*, also contributes to the wealth of nations.

Again, (for we want to stir up our readers on the subject,) with reference to general commerce, and the arts and economical purposes of life, there are other portions of natural history of no less importance, than the foregoing. How many different substances as *leather*, and *parchment*, and *glue;* and what various instruments either for common use, or ornament, or amusement, are manufactured from *skin*, and *horn*, and *bone*, and *ivory!* With respect to the last-mentioned, of which substance, indeed, it is a highly interesting fact, that the world has not been supplied with it solely from the two still existing species of elephant, but also, and in a very large proportion, from the extinct and fossil species. Under the name of *licorne fossile*, the tusks of the extinct species have *for ages* been an object of commerce in the Russian dominions: and M. Pallas describes the abundance of the fossil tusks to be such, that they are found in every direction throughout the greatest part of north-eastern Russia.

If we only consider the amount of the consumption of *wax* and *honey*, of what importance is not that little insect the *bee!* and the same observation may be made with reference to the *silk-worm*, and the *cochineal!*

Lastly, for it is necessary to bring the present subject to a close, what immense advantages accrue to commerce and navigation, from the traffic in even a very few species of fish; as the *whale*, the *cod*, the *herring*, and the *pilchard!* So great, indeed, are those advantages, that the question of the right of fishery on a particular coast, has sometimes been the occasion of involving the most powerful nations in expensive wars: for these fisheries, at the same time, that they are a source of immense riches to individuals, constitute, as it were, a nursery for the hardiest race of sailors; and thus become of the highest importance of a national point of view.

CAPE OF GOOD HOPE SAVINGS' BANK.

SINCE the foundation of this admirable Institution in Cape Town, in 1831, upwards of forty thousand pounds sterling have been deposited. It is also branching out in the Country Districts. In the following places Savings' Banks have been established—Graham's Town, Graaff-Reinet, Stellenbosch, Swellendam, &c. Every success must attend these Societies, as long as their Directors and Managers go forward in the discharge of their duties with persevering fidelity.

CAPE WHIMS AND ODDITIES.

Why does it appear unlikely that our new Jetty will be completed under the present administration?

Because the Reformed Parliament are averse to the creation of *Peers*.

Not long since, an elegant chariot, with a happy-looking couple, drove up to the office of the Matrimonial Court. Curiosity led a crowd of persons to witness the alighting. "Who are they?" was the general inquiry. "All I know about it," observed a bye-stander, "is, that the gentleman is a *flambeaux*." The name of the lady was Flamme.

Passing by the Shambles the other day, A. observed to B. "do but look at the tempting appearance of that loin of pork. How fresh and beautiful,

"Blushing celestial rosy red."

"No wonder," replied B. "when the name of *John Milton*, pork butcher, is written over the door."

Hand Bills.—Two hand-bills of last week announced that Mr. *Wolf* had good slaughter oxen for sale, and Mr. *Shepherd* extra fine sheep.

Sale of Household Furniture.—"All sorts of household furniture; such as Tables, Chairs, Bedsteads, Earthen Ware, a House Clock, 30 *male and female slaves*."—(*Advertisement in the Zuid-Afrikaan, signed M. C. A. Neethling.*)

All sorts of Merchandise.—"All sorts of Merchandise, consisting of linen and woollen goods, some bags of sugar, coffee, rice; a shooting horse, with saddle and bridle, two fowling pieces, an able and healthy African *Boy*, 19 years of age, &c."——(*Advertisement, Zuid-Afrikaan, signed J. G. Faure.*)

A Revolution at Sea.—The Fenella. "The vessel and several of the crew were drowned at Port Louis, and the *vessel* was *in the command* of the mate!"—*(Advertiser.)*

In large capitals "FOOLSCAP Paper" has been advertised in Cape Town, as "particularly useful to *Barristers!*" Why were not the *Clients* included in the affair?

Proposal.—The Kat River settlement of the Hottentot nation, is declared to be superior to any thing in Scotland! And the worthy Aborigines of this colony are set up as an example to the Scottish peasantry!!! The name of *Nova Scotia* should be immediately transferred to the Kat River.

The South Easter of the Cape is generally denominated *the Doctor*, on account of the health which it brings in the breeze. "It may be so," said a visiter the other day, "but it is certainly no *Oculist*."

Milk a-day.—The newspapers announce, by advertisement, that Mr. DONALD CAMERON'S cow gives 45 bottles of "Milk-a day." What new fluid is this?

"NOT PRESENT, YOUR WORSHIP;" OR, *An Absentee in Judicio.*

IT is the practice upon the non-appearance of a defendant, for the messenger of the court to call out his name three times in some such clear and audible tones as the London Cries are daily to be heard in the streets of the metropolis. In the Resident Magistrate's Court last week, the messenger called out the *defendant's name* most stentoriously with a thrice good vociferation, and concluded with the important information of "not present," your worship. *The messenger himself was the defendant.*

CONVERSAZIONE, &c.

(From actual Life.)

1. "The Hottentots are the most idle, lazy, *indigent* race on the face of the globe."

2. "After a man has been many years in a warm climate, he becomes so *addicted* to it, that he is quite *neutralized*."

3. "No—I cannot let my cottage; I bought it merely as a *subterfuge* for my family. It is quite charming to have a *digression* to retire to now and then."

4. *(Copy of a Note.)*—"Mr. ——, send by my boy a few *shammy* leathers for my coachman to *preserve* [probably *pickle* was meant,] the *harmourial bareings* of my coach."

A Dutch Translation of a few lines from Milton's Comus.

Lachjes, lonkjes, toverlusjes,
Kneepjes, wenkjes, zachte kusjes;
Kusjes geurig als muskaat,
Zoet als versche *honigraat.*

Whit Monday, ...	19th do.
Waterloo Day, ...	18th June.
THE KING'S BIRTH DAY, .	21st August.
The Coronation, ...	8th Sept.
Christmas, ...	25th and 26th Dec.

VALUE OF TIME.

Reflections at the close of another Year.

Thou evanescent, dying year!
The musing spirit finds in thee
Lessons impressive and severe,
Of deep and stern morality!—
Thou teachest how the germ of youth,
Which blooms in being's dawning day,—
Planted by Nature—reared by Truth—
Withers like thee in dark decay.

What is life but a chain of those brief portions of eternity, which man calls hours, so inseparately linked together, that the first and the last, and every link throughout the series, have a mutual dependence and connection with each other!

Oh! let no one despise an hour! It is fully enough to change dynasties and overthrow empires—to make or mar a fortune—to win high renown or stain a noble name—to end our being or to fix our destiny here and hereafter, in time and through eternity. So awful a thing is one hour—ay, one moment of active being!

CORRESPONDENCE.

WE are sorry that *The Suicide* is too lengthened for our columns.

The contributions by *A Subscriber*, are too common-place for insertion.

Vol. IV.

To appreciate the value of Periodical Publications, only suppose that they were totally to be discontinued for six weeks. I turn with horror from the frightful idea! I deprecate such a shock to the circulation of table and town-talk. It would operate more unfavourably than the gloom of November is said by foreigners, to operate on the nerves of Englishmen; and after snch a suspension of information, I am afraid the papers would contain nothing but accounts of sudden deaths which had happened in the interval, with the deliberate of the Coroner's Jury—*Died for want of Intelligence.*

(Horace Smith.)

INTRODUCTORY.

SITTING over a delicious cup of Coffee, and *trying* to relish Dr. Webster's *Chanticleer* Voyage to the South Atlantic—this Note came to hand:—

Gazette Office, Church-street.

SIR,—Have you forgotten the Title Page for 1834, and do you mean to have a Dedication, according to custom? if so, we will go to press immediately.

I am, Sir,

Your obedient Servant,

LONG PRIMER.

Many thanks to our worthy Printer, said we; but as to the Dedication—we must take time to consider the question—this is not a thing which must be done hastily. If there be a Dedication it ought to be a judicious one. And after all, says my Lord Bacon, printed publications should have no Patrons but truth and justice. But the simple *existence* of a Fourth Volume of an English Journal in a Colony teeming with plans, projects, and institutions, alas! of fragile nature and speedy extinction, is an *event* which must not be passed over unrecorded without the IO TRIUMPHE of a congratulatory paragraph. Now, we attribute our prosperity to that independence of sentiment, freedom of discussion, and sound English feeling which characterise the many interesting Papers of our kind and manly Contributors. But what of these without Readers?—Now come we to the

Wilberforce.

Oh! is it nothing that the millions knelt,
Morning and evening, with a prayer for him?
Far in the desert-lands his name hath gone,
Breathing of hope, and charity, and love.
O'er many a worn and heavy-laden heart
Hath fallen, like the dew of happiness,
The whisper, from God's wandering servant's mouth,
That many a mile across the pathless sea—
Towards the setting sun—a being toil'd
To break the shackles from their fetter'd limbs.
For years and years the Slave from labour turn'd,
To watch the waning sun—like falling hope—
To bless thee, Wilberforce! and traced thy home,
In his untutored mind, among the halls
And cloud-wrought temples of the golden sky.

* * * * *

Where Ganges rolls her undiscover'd tides,
Where Afric's mountains tower to kiss the moon;
O'er lands where never European foot,
Nor stern *commandoes* have essayed;
Beyond the deserts, whiten'd on their skirts
With *skeletons* of ornaments out-worn,
The name of William Wilberforce shall pass,
With worship of the true and living God.

* * * * *

O, bury him!—with neither pomp nor shew:
He wills it;—and the Christian little needs
Earth's grandeurs in the presence of the Lord.
Lay silently, beneath the simple stone,
His reverend, time-honoured head to rest,
With the deep blessings, unrestrained tears,
Of weeping nations, bear him to the grave!
No cenotaph, on foreign lands, uprear:
Heaven's canopy alone contains his fame:
Against the stream of grasping injury
He fought the battle of the weak and out-cast poor
He died amid the freemens' gathering song,
In the bright morn of Freedom's coming day,
And fell beneath the flutter of her flag!

* * * * *

But, hark! the *Voice of England* cries—
Bury him with honours! Bury him
In the Cathedral's shafted aisle, among
The great and god-like of all time. Strike up
The Organ! Let the choral anthems rise
And shake the storied temple with their hymns!
One joins the dead, and brings a lofty fame
And sacred memory, like saintly light,
To shrine him and to sanctify his tomb—
To glorify his God, and bless the land!
O, bury him! the great, the good, the just!
The moral of his long life rests with those
Whose bitter hearts will rue their bitter deeds.
The funeral anthem shall resound for long,
And far and wide,—o'er mountain, plain, and sea;
Against oppression's stand, his name shall be
A watchword and a cry to victory!
In Fame's broad temple his escutcheon hangs,—
His name embalmed in every Briton's heart.
To ages yet to come, to brighter times,
Whose radiant sun is on the horizon,
Commit the holding of his memory:
Upon the monumental stone inscribe,
"*Sparta had no worthier son than he!*"

RECENT DISCOVERIES IN THE NORTHERN PARTS OF CHINA.*

The voyage of the *Lord Amherst*, performed by Capt. Lindsay, has not only added very materially to our geographical knowledge of the maritime districts of Northern China; it places the character of the natives altogether in a new light, and opens to us the most cheering prospects as to the possibility of wholly breaking down the partition wall which has for ages separated from civil society a portion of the human race.

The origin and objects of this voyage are not clearly stated, but the sum of what we can collect upon this head is, that the Lord Amherst, with Mr. Lindsay and the Rev. Mr. Gutzlaff on board, sailed from Bengal in February, 1832, for the Northern parts of China; that she was laden with a cargo of broadcloth, camlets, calico, cotton, and other goods. It does not appear from the Report who Mr. Gutzlaff is, but on inquiry we find him to be an excellent Protestant Missionary, a most extraordinary man for the acquirement of languages and his perfect knowledge of the Chinese tongue. His medical skill is also understood to have proved an excellent passport to him in every part of the Indo-Chinese regions that he has visited. But were turn to a further glance of this interesting volume.

After the party had gained sight of the coast for which the ship was destined, they met with a series of very adverse weather, which obliged them repeatedly to anchor in convenient positions near the coast. On all these occasions they landed and made excursions into the adjoining country, and, upon the whole, were greatly pleased with their reception. They either walked in a body, or proceeded up the rivers, in boats, to the cities or towns, and in the coolest manner, not only entered them, but walked up to the Mandarin's house for the purpose of explaining who they were. Now, the general notion which we had hitherto entertained of any attempt on the part of a foreigner to get into the precincts of China, was, that at once he met with an obstacle, and was driven back by main force. Perhaps the impression all over the world that this was actually the case, may explain the infrequency of such attempts; for, that they were very rare is readily proved by the fact that wherever the party from the ship made its appearance before the inhabitants, it was looked upon with utter amazement, and was followed by crowds through the streets, as a spectacle entirely new and inexplicable. It occurred, however, uniformly, that the Mandarins and other Chinese individuals in authority, showed the greatest uneasiness at the presence of the "barbarians" as they were everywhere designated; and the party never failed to be told by these officers that they must depart without delay. It was the knowledge of the Chinese language that enabled Messrs. Lindsay and Gutzlaff to succeed as they did; for, it was by their remonstrances and threats, firmly and manfully made, that they induced the Chinese to listen to them: and the proofs which they met with of

* Report of the Proceedings on a voyage to the Northern parts of China in the ship *Lord Amherst*, printed by order of the House of Commons. 8vo. 1833.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the facility of making an impression on the inhabitants, present us with an entirely new and auspicious view of their character. It was altogether by this acquisition of the language that the party were able to guide their ship through the dense mass of junks stationed round the ports, and in which they found Chinese officers always ready on their arrival to insist upon their departure, but also exceedingly disinclined, after a few moments expostulation, to carry their menaces into effect. However, in all cases without exception, the party found that any spirit of opposition by which they were annoyed, was wholly confined to persons in authority; the great body of the people in the towns and villages which they visited, not only not joining in acts of hostility, but actually emulating each other in efforts to conciliate and compliment the strangers. Thus, at Shin Tseun, a walled town, built on the left bank of a considerable river of the same name, where the party remained for several days, they were every where surrounded by crowds of wondering inhabitants, whose demeanour was uniformly kind and polite. The little they had was readily offered to the party; and in the villages it was frequently a contest among them who should prevail on the strangers to enter their cottage and partake of their humble fare.

The villagers seemed quite suprised when told the party would be delighted to see them on board their ship; and, the day after their arrival, many availed themselves of the offer, bringing off fish and vegetables. Both here and at Cup-chee several poor people profited by Mr. Gutzlaff's medicines.

The various excursions to which we have been hitherto alluding, were made on a line of coast which circumscribes the northern portion of the province of Canton. The Amherst proceeded forwards, and came at length to the island of Namo, which is the second Chinese naval station of Canton The island itself is divided geographically into two divisions, the one being in Canton, and the other in the province of Fokien. Here the party met with the strongest proofs of the jealousy and suspicion of the mandarins. "Wishing," says Mr. Lindsay, "to go on board one of their war-junks, we were refused admission, under pretence that the admiral had issued positive orders that no one should hold the slightest communication with us. There were several large trading vessels windbound here, and on sailing past one we went on board by the express invitation of her commander, an intelligent and respectable person, who received us with the greatest cordiality. We had been here but a few minutes, before no less than three small warboats with mandarins joined us, and at first commenced angrily upbraiding the captain for entering into communications with barbarians. An interesting and amusing conversation followed, in which we soon found, that, though our opponents were very ready to commence with violent and angry words, yet that a mixture of independent and good-humoured argument very soon lowered their tone, and they ended by apologizing for the uncivil reception the English had met with: the blame they threw entirely on their superiors; and the party then spent half an hour talking on various subjects in the most friendly manner. The point which seemed to puzzle them most, and indeed gave them most uneasiness, was hearing foreigners converse in their own language, and show some knowledge of their local institutions and geography It was, however, decided among them that Mr. Gutzlaff was a Chinese from Amoy; and one of them asked me, says Mr. Lindsay, in a confidential way, to confess that their surmise was true. I took some trouble to explain to him, that, far from such being the case, the gentleman had only been six years out of Europe, and previously to that was perfectly unacquainted with the language. Having given all the information required for a report to the mandarins, we parted on friendly terms, the chief man saying to me, "We shall report you to be well-disposed persons, who thoroughly understand the rules of propriety. Much regret was also expressed at their not daring to avail themselves of my invitation to visit the ship."

In short, wherever the party landed, or to whatever place they proceeded from the coast, they received marks of kindness from the natives. Those whom they met from time to time in the province of Canton, made repeated inquiries of them for opium. The calicoes appeared to attract most notice amongst the poorer classes.—The party proceeded from the coast of Canton to that of Fokien, and cast anchor within a mile of the town of Amoy, a celebrated emporium of commerce. The district where this enterprising town is situated, is one of the most barren in China, and is dependent for the necessaries of life on the neighbouring island of Formosa—this being aptly denominated the granary of the eastern coast of China. The arrival of the party at Amoy created a great sensation amongst all classes; and scarcely half an hour passed from the time the ship weighed anchor, before three separate parties of mandarins, sent by the authorities, visited the Amherst, to inquire into the objects which had brought her to their port. They showed a strong desire to resist the strangers in their attempt at landing, but still were so influenced by the sharp remonstrances of Messrs. Lindsay and Gutzlaff that they excused themselves by saying they were messengers of a communication in the spirit of which they did not sympathize. However, the messages to the ship, and the warnings and threats still continued from day to day, and additional war-junks and boats were sent down to strengthen the state force which was to prevent the strangers from carrying their avowed purpose of landing. But the latter had the prudence to persevere, and they subsequently visited the town without any great opposition, and were welcomed by the numerous inhabitants, who surrounded them in great crowds, and were most kind in their manner. They soon received a government proclamation commanding their immediate departure; but, as they appeared unwilling to move, some mandarins informed Mr. Lindsay, that, if he wished to have an audience of his Excellency the *Tetuh* of the province, he should be gratified. An interview was accordingly appointed, previously to which Mr. Lindsay sent up a petition to explain the character and objects of the mission. At the hour prescribed for the interview, a messenger from the mandarins came to request the attendance of the strangers, who accordingly proceeded to the place already agreed upon, which was a temple on the shore fronting the ship. The description of the proceedings of this meeting is highly interesting, and we shall therefore insert it in the language of Mr. Lindsay himself.

'About 500 troops were drawn up along the beach, making as great a display of numbers as possible, most of them being in a single file. A vast crowd of people covered the beach and the sides of the adjoining hills, presenting a very interesting and animating spectacle. We were received by Le Laouyay, and several other mandarins with white and gold buttons, and by them

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ushered through a double line of troops to the principal hall of the temple, where a party of ten mandarins were seated in a semi-circle to receive us. The outer hall of the temple was filled with military officers in full uniform, with bows and arrows. The party seated consisting of the tetuh and tsung-ping, both military mandarins with red buttons; the funfoo, a civilian of the sixth rank; and several others, with blue buttons, of military rank.

'The tetuh was a stout old man, with a weather-beaten countenance and an open good-natured expression. I delivered my letter into his hands, which he opened, and commencing reading with the funfoo who sat next to him. We withdrew to a little distance, and, seeing that no chairs were offered, I signified my intention not to remain standing before the tribunal, on which we were requested to go into an adjoining department, where tea and refreshments were handed to us. In a short time we were requested to return, and the tetuh then addressed me, stating that it was their wish to treat us with the greatest kindness, as our two nations were on friendly terms; but that we could not be permitted to remain where we were, as it was against their laws; that we must instantly remove to a short distance, and that then we should be gratuitously supplied with all we required. To this I replied, as I had previously done, that it was contrary to English customs for merchant ships to receive gratuitous supplies, and that it would lower their character if they consented to be treated like paupers; that all I wished was the liberty to purchase such supplies as we required; and that such a permission could not be refused by any nation which styled themselves our friends. The tetuh was evidently inclined to concede to our request, and to be as polite as Chinese assumption of national superiority would permit. The tung-ping, who is a Canton man, however, repeatedly interfered, and throughout the whole discussion manifested the most decided spirit of hostility towards us. A conversation ensued between himself and Mr. Gutzlaff in the Fokien dialect, in which he roundly declared that our plea of wanting provisions was merely a pretence to veil some sinister purposes; but Mr. Gutzlaff was not the person to be brow beat by angry words; and he replied to his accusations with so much tact and spirit, that we had the satisfaction to see his opponent completely foiled in his arguments. On this the tung-ping, who was a very violent-tempered man, lost all command of himself, and the tetuh several times interfered to moderate his anger, which appeared to be greatly increased by seeing that the bystanders evidently enjoyed his discomfiture, and were much amused by some of the apt remarks made by Mr. Gutzlaff.' —pp. 23—25.

In this conference the Chinese saw that the determination of the strangers was to refuse any gratuitous assistance, and ultimately yielded to the demands of the party, to furnish all that might be required at a moderate valuation. Mr. Lindsay, after thanking the tetuh, invited him to the Amherst, but his excellency declined the invitation, when Paou Tajin again interfered, and said, "I view your ship and yourselves with equal contempt and anger:" and then turning to Mr. Gutzlaff, he said, "I know you to be a native of this district traitorously serving barbarians in disguise." This was the highest compliment to Mr. Gutzlaff's excellence of knowledge of the Chinese that could possibly be paid to him.

(To be continued.)

LINES
ON THE DEATH OF A CHILD.

SHOULD we mourn that Death's Angel on dusky wing,
O'er thy flow'ry path hath driven;
That he crush'd the buds of thy sunny-spring,—
That thy spirit is borne to heaven?

How soon will the visions of Earth grow dim,
How soon will its hopes be faded,
And the heart which hath leap'd to the Syren's hymn,
With sadness and gloom be shaded!

The feelings are fresh but a little while,—
We can bask but an hour in Affection's smile,
Ere the friend and the lover have pass'd away,—
Ere the anthem is sung o'er their wasting day.

BIBLIOGRAPHICAL RESEARCHES.
NO I.

Increasing Demand for Books,—Book Spoliators,—Guide to the Choice of Books,—Libraries of George III. and Buonaparte, &c.

A greater change, probably, never took place in the manners of the world than that which may be observed in the increased demand for books, and the very considerable portion of time now consumed in reading, compared with the abstemiousness of our ancestors in both these points. In place of a solitary volume of Chaucer, or the amusing history of Froissart reposing in the window-seat, no house is now-a-days duly furnished, without its dazzling files of history, poetry, travels, and theology. In fact, the last new romance usurps the place of the *Complete Racing Calendar*, and even divides empire with the sports of the field and the pleasures of the chace. And this appetite for reading hath extended to us colonists. We may safely aver, that at no period of the colony has the demand for books been so vigorous, so widely extended, but, we must add, so *indiscriminately* supplied. The truth is, and it is our duty to declare the fact, that the greater proportion of the books which find their way to our *market*, are decidedly trashy and exceptionable. They are the mere sweepings of the London publishers,—the *old shop-keepers* of the *Minerva* Press. Very little that is standard, useful, inviting, and digestible, is found at our book-sales: and even many of those which are termed *Religious Books*, are scarcely worth the perusal.

It is readily enough seen, that one or two London quack houses of a secondary class are acquainted with the demand for books at the Cape. But the supplies are wretched, never varied, but constantly *repeated*. Now, what we require, or rather what our youth require, is perhaps, a *Guide to the Choice of Books* At present, our remarks shall be general, or introductory to a series of inquiries on the subject. In our subsequent Numbers, we will conduct our young readers, if they please, to the varied departments of literature in *The Public Library*, and just endeavour to impress on his mind a legitimate taste in the cultivation of literature, by a few critical notices on the works of paramount interest.

Respecting the preservation of the public collection in question, we may observe, as far as we have had opportunities of judging, that it appears to be in tolerably good order, and but few of the books are missing or lost The Graham's Town Library advertised the other day, 300 volumes as awanting to complete its sets of works. Monstrous! That any single book should be missing from the Cape Public Library, is extremely vexatious, and should call for inquiry somewhere. But the truth is, there is not a more pestilent class of nuisances on the wide surface of the globe, than book-borrowers. They who borrow and never return. It is a melancholy fact, that persons who would not wrong you of a six-pence in hard cash, will have no scruple whatever in *keeping* your books. But there is another class of people greatly to be dreaded—your book-*spoliators*—plate-destroyers, mutilators, *back-breakers*, and marginal *scribblers*, aided and abetted by that large family—the *tear-sheets*. But the Novel-readers!—These dear sentimentalists,—they are the best-tempered people in the world. The evils of which we complain, are to them but so many *compliments* to their reading selections and study. How beautiful to a genuine lover of Rosa Matilda, and L. E. L. and "Mary de Clifford," and the Mysteries of Udolpho, are the sullied leaves, and worn-out appearance,—nay, the very odour (beyond Russia) are the contents of what is called *a Circulating Library*. How they speak of the thousand thumbs that have turned over the pages with delight! Who would have them a whit less soiled? What better condition could we desire to see them in? And then only think (regarding their hues and tinges,) of the time *when*, and the place *where*, and the manner *how* these adornings have taken place. One young lady reads your "Stories of a Bride" in bed, and leaves a tumulus of tallow on the passage descriptive of the *lovers' quarrels*. A second puts the Saxon Bride of "Ivanhoe," and the whole of her attendants, into deep mourning, at the very moment she is plighting him her troth, by overturning an ink-stand upon the narrative. A third, a toilette reader, endeavours to improve Capt. Robinson's style, by

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

adding to its lusciousness in disposing of a bottle of *Huile Antique a la Rose* over his "Cyril Thorntorn." A fourth manages to give "Evilina" the benefit of a shower-bath before breakfast, by leaving her out twelve hours upon a garden-seat, to endure the cooling of the midnight rain. So much for your Cherubina's, Celestina's, Angelina's, Selina's, and Malvina's. Now for our Edwin's, and the Edgar's, and Edmund's —the *men* who build all their felicities on obtaining a *first reading* of the trash from the house of Colburn or Bentley. Not a few of these do not scruple to feed the hungry heroes and heroines of your novels, by administering to their necessities half the greasy crumbs of their breakfast-tables; and by a dish of coffee converting the fair faces of Sir Walter's "Mina" and "Brenda" into tawney-coloured mulattoes.

Your sick-readers are also greatly at fault. From the state of many books, their discoloured pages, and *impressions* of cup and saucer, or wine-glass, it is soon discovered who the afflicted people are. One word of advice to these gentry. When taking a dose of "*Dr. Wright's celebrated Pearl Ointment for the cure of Indolent Tumours and all Cutaneous Diseases,*"—be sure to have your book removed at some respectful distance, least the state of your nerves cause you to let the "pot" fall which contains the specific so "strongly recommended by all the faculty." Again, remember that whilst you are greatly busied in removing from your person all "freckles, pimples, spots, and redness," by the adoption of that "indispensable and surprising specific"—"Rowland's *Kalydor*," recollect, that whilst it is remarkable "for beautifying and preserving the skin and complexion" of your own self, it has a very different effect on *sheep and calf*. Take care, therefore, to cause a separation of bed and board between yourself, and your "Kalydor," and the books. For remember, that the upset of that lotion on a neatly-bound octavo, which adds such "a truly comfortable and refreshing appearance" to the rhind of your own countenance, acts directly the reverse on inanimate substances.

But perhaps the *careless* class form a great proportion of readers. They who read—throw aside the book, and leave it to the determination of the cook or chamber-maid whether it shall be returned to its owner, or become curl paper or *materiel* for lighting the fires. Or else, if the return be made in due course, conceive of the manner in which this is frequently done. Many an "Amelia," an "Abbess," a "Julia Mandeville," a "Camilla," a "Geraldina Hamilton," with "Village Belles," "Mothers and Daughters," and the "Children of the Abbey," have been put into *delicate* Mosambique hands, and huddled, unprotected and uncovered, into the market-cart or gig-box,—when shaken, disfigured, tattered and torn, they are either brought back to their place of deposit, or, as it may happen, thrown aside in some livery stable or butchers' shambles. These are not imaginary suppositions,—they are, unfortunately, stubborn facts, and they betoken much that is unbecoming, and ungenerous, and dishonest in they who do these things.

As we have already intimated, our critical notices will appear monthly, as it respects a guide in the choice of books; in the mean time, we conclude the present article by an anecdotal reference to the select Libraries of George the III. and Buonaparte In the year 1795, when His late Majesty was about to proceed to Weymouth, and wished to have what he called *a Library for a Watering Place*, he wrote to his Bookseller for the following works. The list was written by him from memory. It is as follows—copied from the original document in the *King's own handwriting:*

The Holy Bible, 2 vols. 8vo. *Cambridge.*
New Whole Duty of Man, 8vo.
The Annual Register, 25 vols. 8vo.
Rapin's History of England, 21 vols.
Elémens de L'Histoire de France, par Millot, 3 vols. 12mo. 1770.

Dictionnaire Francois & Anglois, par M. A. Boyer.
The Works of the English Poets, by Samuel Johnson, 68 vols. 12mo.
A Collection of Poets, by Dodsley, Pearch, and Mendez, 11 vols. 12mo.
A select Collection of Poems, by J. Nichols, 8 vols. 12mo.
Shakespeare's Plays, by Steevens.
Œuvres de Destouches, 5 vols. 12mo.
The Works of Sir W. Temple, 4 vols. 8vo.
The Miscellaneous Works of Addison, 4 vols
The Works of Swift, 24 vols.

We fairly put it to the well-read bibliographer and philologist, whether the above select list be capable of much improvement.

The following list of books, for a Camp Library, is copied from a paper written by Buonaparte, and given by him to his private secretary to make the purchases. The volumes were to be in 18mo. The sad affectation in the title and contents of the last division, No. VI., will be apparent to the reader.

I. *Science and the Arts.*—Plurality of Worlds. Fontenelle, 1 vol. Letters to a German Princess, 2. Course of the Normal School, 6. Treatise on Artillery, 1. On Fortifications, 3. On Fire-Works, 1.

II. *Geography and Travels.*—Barclay's Geography, 12 vols. Cook's Voyages 3. La Harpe's Collection of French Voyages, 24 vols.

III. *History.*—Plutarch, 12 vols. Turenne, 2. Conde, 4. Villars, 4. Luxembourg, 2. Duguesclin, 2. Saxe, 3. Memoirs of the French Marshals, 20. President Hainault, 4. Cronology, 2. Marlborough, 4. Prince Eugene, 6. Philosophical History of India, 12. Germany, 2. Charles XII., 1. Essay on the Manners of Nations, 6. Peter the Great. 1. Polybius, 6. Justin, 2. Arrian, 2. Tacitus, 2. Livy, vols.—. Thucydides, 2. Vertot, 4. Denina, 8. Frederic, II., 8.

IV.—*Poetry.* Ossian, 1. Tasso, 6. Ariosto, 6. Homer, 6. Virgil, 4. Henriade, 1. Telemaque, 2. The Gardens, (Delille,) 1. Masterpieces of the French Drama, 20. Fugitive Poetry, Select, 10. La Fontaine, vols —.

V. *Fiction.*—Voltaire, 4. Heloise, 4. Werther, 1. Marmontel, 4. English Novels, 40. Le Sage, 10 Prevost, 10.

VI. *Political.*—Old Testament and New. The Koran. The Vedam. Mythology. Montesquieu. Spirit of Laws.* (In all, 320 vols.)

LINES

AFFECTIONATELY ADDRESSED TO—TO—MYSELF!

On My Thirtieth Birth-day.

Now, prithee, dear Hal! take a moment's reflection,
And bend on the past a contemplative eye;
Although Time may be fleeting,—for wise retrospection
To man, a brief moment, 'twill never deny.

Thine has been, the estate of too many in sooth,
To permit the indulgence of special regret—
Fairy dreams have beguiled and deluded thy youth,
Which, alas! it were cruel and vain to forget.

Love, and Pride, and Ambition have fever'd thy brow,
And thy heart has in tumult and agony beat;
But thy Trust, may I hope? is in Providence now,
And the world shall no longer thy spirit defeat.

In the darkness and doubt of to-morrow, thy lot
Will be chequered with care, and be clouded with grief;
But thy hope in *His mercy* must not be forgot,
His afflictions are truly sent for thy relief.

Then serenely prepare for the Future, and meet
With an humble, yet cheerful, reliance on God.
The events and the chances, which fail not to greet
Human nature, from birth, to the sheltering sod.

Stellenbosch, January, 1834. B.

SOMERSET HOSPITAL.

This Asylum claims precedency in the list of our public institutions; and, having recently made some inquiries respecting it, we feel it our duty to point out its origin, and advert to its great practical usefulness. As we may fairly anticipate, at no very distant period, an annual increase of shipping in Table Bay, we may readily conclude, that the Hospital labours will be greatly augmented.

The Somerset Hospital was founded

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and established (under the patronage of His Excellency Lord C. H. Somerset,) by Dr. Bailey, Surgeon of the Royal Navy, in the year 1818, for the reception of Merchant seamen and inhabitants of the Colony; the want of such an establishment had for a series of years been severely felt by seamen visiting our ports.

The Institution comprises a Lunatic Asylum; a Building for the reception of Lepers; and two distinct departments for male and female patients, capable of containing together 120 individuals; the utility of this establishment is daily experienced, and through the great liberality of the Government, relief is annually given to numbers who cannot afford medical attendance.

REPORT of SOMERSET HOSPITAL, from 1st JANUARY, to 31st DECEMBER, 1833.

Remaining in Hospital, 1st Jan. 1833.	Admitted since.	Discharged, cured.	Discharged, relieved.	Dead.	Remaining in Hospital, 31st Dec. 1833.

The Hospital is naturally an excellent school of surgery, and we select one case of recent date, which is worth recording:

LIGATURE OF THE AORTA.

In the case of an immense aneurism of the right external iliac artery, threatening immediate danger to the patient from the near bursting of the sac of the aneurism, and the commencement of mortification in the leg and thigh of the corresponding side, Mr. Bailey, the Surgeon of Somerset Hospital, having declined to tie the aorta, for reasons given by him at a preceding consultation on the case, Dr. Murray, the Deputy Inspector of Hospitals, undertook it on the 26th instant, with the view of affording the man the only chance or gleam of hope (however forlorn,) that remained of prolonging his life.

The patient bore the operation with heroic fortitude, and on the following morning he appeared really better than before the operation; so much so, that there seemed some reasonable hope of his recovery; towards noon, however, an unfavorable change took place, and he gradually sunk, surviving the operation but 23 hours.

Dr. M. is of opinion that this case will go far to decide the unsettled question of the possibility of recovery after tying the aorta,—an operation of which there are only two instances on record which proved unsuccessful; but the failure in these cases was attributed to their having been performed under more unfavorable circumstances rather than to the impossibility of recovery from the operation.

The Profession will, no doubt, look with considerable interest to the publication of the particulars of this case. It is but just to observe, which we learn from an eye-witness, that had the success of the operation depended on the surgical skill with which it was performed, then it would not have been presumptuous to have anticipated the happiest results.

RESOURCES OF THE COLONY

Not developed—Water from the Rock—Rivers available to mechanical purposes—Ignorance very expensive—Lectures on Natural Science required—A Farm lost in the sand—Value of the Mountains.

THE more frequent our inquiries into the resources of the colony, the more are we convinced that but few parts of it have been examined with minute attention, and that there is every where around us, a boundless field of enterprize,—every thing to rouse curiosity, awaken conjecture, and repay human industry. John Galt, of great celebrity, from his numerous publications, in his recent work communicates the following interesting fact:

"My custom in the summer evenings, in Canada, was to prowl alone in the forest. In going along the bottom of the precipices alluded to, I noticed several springs of great affluence, welling from fissures in the rock, and concluded that there were veins and issues of water in the strata, coming from some fountain head. In consequence, I sent for an old German, as famous in those parts for the discovery of ores and springs, as Dousterswivel himself, and employed him to preambulate with the divining rod the table land, on which, in time, I intended to build, in order to ascertain where the well should be excavated.

"I became a little interested, very little at first, in the man's proceedings, but ultimately made him prepare a rod, and took a part in the mystery myself; my own experiment, however, owing no doubt to its being a first attempt, was unsuccessful; but after some time he pitched on a spot for the well, and this was on a top of the artificial mound before described; I determined, however, in spite of reason, to give the German fair play, and accordingly, in disregard to remonstrance, ordered the well to be excavated there.

"After digging through the earthen mass, which was six or seven feet deep, the digger came to the rock, which, with much blasting and perseverance, was penetrated to the depth of between thirty and forty feet, without any symptom of water; at last he reached a porous stratum, in which were the remains of tropical fishes petrified, and the limestone apparently perforated thickly with worms. I have some specimens of this curious subterranean wonder in my possession, but all was yet as dry as hay.

"The well-digger then had recourse to his iron rod, and soon reached with it a subterranean stream of water, which, by rising through the aperture, half filled the well. I offer no comment on this fact, but the well is there, and obtains its water from the perforated rock."

Again, Mr. Galt having contemplated the lakes and quiet streams, or stagnant rivers, set himself to work to find out how these waters could be available to mechanical purposes. He says—

"The practicability of this notion haunted me in my sylvan ruminations, and at last, I hit upon what seemed as important a discovery as steam to myself and it occurred to me, that to make an excavation in the banks, wherever water might be found, like a dry dock for example, and to build within it two mills, one for ordinary purposes, and the other to pump out the water, would supply the desideratum, for it would then be only necessary to conduct a stream to the first mill, which being set agoing by it, the same water might be led on to the second on a lower

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

level, and by its working pumped out again into the lake.*

We are fully aware that art and science must lead the way in directing our colonists in their inquiries, and if they could only be brought to consider the advantages of education and reading, we should soon discover a new creation arise in the land. That ignorance is a very expensive thing is best illustrated by the fact, that not many years since, an attempt was made to establish a colliery at Bexhill in Sussex. Certain appearances similar to what occur in the neighbourhood of the great coal beds in the North of England, led to the sinking of a shaft, and the erection of machinery; not less than £80,000 was laid out in this project, which, it is almost needless to add, proved completely abortive, as every geologist would at once have declared it must: the whole assemblage of geological facts being adverse to the existence of a regular coal bed in the Hasting's strata.† A few *practical* lessons or lectures on natural science in this colony, would surely prove of essential benefit. That we require a larger diffusion of education is most certai... So true it is, that a diffused education is economy; that the spending of money on it would be capital put out to large usury; that it is our interest, and the interest of the government to encourage and diffuse it, even on the sole principle of saving waste; for it is notorious, how many buildings have fallen, ships lost, bridges gone down, under ignorant superintendance, workmanship, and bad geometry. And further, as it regards *waste*, we remember some few years since, to have visited a very beautiful little farm in one of the country districts, which was situate at no great distance from the mountain heights. The trees were growing luxuriantly, the joy and the shout of harvest were heard in the vallies, and the garden exhibited fruits worthy of paradise. Three years more transpired, and the place had become a perfect wilderness—the violent action of certain winds, as well as the currents of an *unchannelled* mountain torrent had laid waste all the bright prospects of the farmer, and his whole domain exhibited the picture of a Siberian winter or a sandy desert:—all seemed "death—unrepealable eternal death." But there was a wise and a counteracting force at hand, and a voice from the mountains seemed to say—"Come up hither!" The call was obeyed, a new location was commenced on the side of the range of mountains, and at present, the farm and its auxiliaries exhibit every mark of smiling plenty. Now, it must be observed, that the very mountain torrent, and the unusually severe inclemencies of the weather, aided by the winds which had laid waste the valley, had enriched far larger portions of the hill-side—portions which had hitherto exhibited all the symptoms of sterility. Should the unthinking mind ask how all this was accomplished, the answer is at hand; and it may, at the same time, resolve the question at one time put to us by a country farmer, viz:—"Of what possible use are yonder naked mountains?"

These mountains are the sources of productiveness, they are the physicians to the parched lands, or they restore with ten-fold profit, those lands which other causes have taken away or obscured. For it has been remarked by geologists, as the evidence of presiding design in nature, that the waste of the soil is so nicely balanced by the supply from the disintegration of the upland rocks, which are worn and pulverized at such a rate, as to keep up constant supplies of a good vegetable mould on the surface of the earth.

* The practicability of raising a stream of water back to its fountain head after it has set a mill a going, by machinery, on the principle of the forcing pump may soon be tried. But possibly there exists a power in nature which may be applied with more simplicity. Between the pressure of the atmosphere, which forces water to rise in vacuum, and the attraction of the earth this power may exist.

† Sir John Herschel's Lectures.

FERDINAND HAREWOOD,
THE LAD OF GENIUS.

"Knowledge and Wisdom, far from being one,
Have oft-times no connection."
(Cowper)

To be very candid with the colonists, we have as yet seen very little native *genius* put forth among them: but perhaps genius we have no right to expect; it is only now and then that the first order of mind appears even in Europe:—a Milton, a Bacon, a Shakspeare, a Bunyan, are not the produce of every age. Well, then, have we any *talent* in existence among us? No! For where are our colonial *poets*, or historians, or architects, or painters, or astronomers, or mathematicians, or travellers? It is quite true that we have heard of late of a variety of youthful prodigies. The schools are understood to have raised up many a young hopeful, and with high attainments a troop of juvenile aspirants are proceeding from time to time to Europe. What the end of these things will be, it requires no prophetic ken to determine. The counting-house, mercantile affairs, or the noble pursuits of agriculture, will scarcely reap advantages, whilst a number of poor, pennyless lawyers, doctors, and parsons, will become a burthen on their relations and friends. In the *Friendship's Offering* for the present year, there is an applicable tale, well told, by the author of that beautiful work — *The Puritan's Grave*. It unfolds the folly of inculcating any system of education which has no bearing on the *practical duties of life*.

Ferdinand Harewood, the son of honest parents, was born on a small farm rented under Sir Arthur Bradley. Young Harewood's education received a wrong bias—but the schoolmaster was pleased to declare him a prodigy. As the youth grew up towards manhood, he manifested every proof of *genius*, by his decidedly *anti-agricultural propensities*. The ordinary implements of industry, only fit for slaves, were his utter aversion; no persuasion in the world could induce him to handle the plough or the spade; harrows were his abomination; and from scythes and sickles he turned away with undisguised disgust. His father was too amiable a man to horse-whip the young genius, though he often said that he did not know what the dickens would become of him if he did not learn to work. Ferdinand, not like many of our Cape lads, who are all for the learned professions, because, forsooth, many who enter such, *are licensed to be ignorant*, and can *afford*, when duly *appointed* and *provisioned*, to remain so, was wholly devoted to the study of attempting verses, making poetry while his mother was making puddings, and cooking fat bacon. His poetry, however, got him into note; and, by the instrumentality of the parish clerk, and the parson to boot, the fame of Ferdinand reached the Hall, and quite astonished Sir Arthur Bradley, for Sir Arthur had been at College for years, and notwithstanding all the mathematics, port, and morning prayers, *he* could not write six lines of poetry for the life of him. Sir Arthur determines to send for the genius, and the poet dines with the baronet, and passes a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

very pleasant evening. But the visit set him upon making comparisons, and comparisons are odious. He compared bacon and cabbage with turbot, venison, and such like diet, and gave the preference to the latter. In the next place, the whole village were up in arms against him for having dined at the Hall, and they endeavoured to mortify him and his worthy parents by making sneering remarks about being a *scholard*, &c. But his mother said, "with his talents he may do anything!" so said the parish clerk, so said the parson, and so said Sir Arthur. The worst of these talents, as many a poor family knows to its sorrow, is, that they are, at the same time, the talents with which the owner does nothing. We now come to the death of the poet's father and mother. The goods and chattels were sold, and when one debt was set against the other, all seemed so well fitted, that when all was settled nothing remained, and Ferdinand consulted his *friends*. These grew not thick on every bough—but London was the place to make a fortune, and with a presentation of five guineas from Sir Arthur, and a copy of Cocker from the parish clerk to teach him how to lay the money out, Thompson's Seasons, and Young's Night Thoughts, Ferdinand journied to the metropolis of Britain. To abridge many interesting particulars of his doings in London, necessity compels us;—suffice it to say, that the five guineas were soon spent in board and lodging, He had made use of some letters of recommendation, and his new friends all expressed how delighted they would be to serve him. A dinner, however, none would give him—he did not ask them, to be sure—but it was their business to ask him; it was not, however, their pleasure. Generous people, we have frequently had occasion to observe, like to do good their own way—they object to all kinds of dictation: so it was with Mr. Harewood's friends. They did not give him a dinner, which at best could have served him but a single day, but they gave good advice enough to last for many months: they recommended him to finish a poem he had commenced, and then his friends said he would be sure to do well.

It happened, in the course of his multifarious reading, that Ferdinand had somewhere seen it set down in print that booksellers are the best patrons of genius; so he went to a very respectable bookseller, and, after waiting two hours and three quarters, was admitted to an audience. Ferdinand thought he had never seen such a nice man in his life—so pleasant, so polite, such a pray-take a-chair-ative style of address, that, by a hop, skip, and jump effort of imagination, Ferdinand, with his mind's eye, saw his poem already printed, and felt his mind's fingers paddling among the sovereigns he was to receive for the copyright. At the mention of an epic poem, the bookseller looked serious; of course, it is all right that he should look so—as an epic poem is a serious matter.

"What is the subject—sacred or profane?" "Sacred, by all means," replied Ferdinand; "I would not for the world write anything profane." "Certainly not," said the bookseller; "I have a great abhorrence of profanity. What is the title of your poem?" "The Leviticnd: I am doing the whole book of Leviticus into blank verse. It appears to me to be a work that is very much wanted, it being almost the only part of the sacred scriptures that has not been versified." The bookseller looked more serious, and said, "I am afraid, sir, that I cannot flatter you with any great hopes of success, for poetry is not in much request, and especially sacred poetry—and, more especially still, epic poetry." "Now, that is passing strange!" said Ferdinand. "Poetry not in request! Pardon me, sir; you ought, of course, to know your own business; but I can assure you that poetry is very much in request. Is not Milton's Paradise Lost in every Library? And have not I, at this very moment, the tenth edition of Young's Night Thoughts in my pocket?" "All that may be true," replied the bookseller, relaxing from his seriousness into an involuntary smile; "but modern poetry, unless of very decided excellence, meets with no encouragement." On hearing this, Ferdinand's hopes were raised to the acme of full assurance, for he was satisfied that his poetry was decidedly excellent.

Exultingly, therefore, he replied, saying, "Well, sir, if that be all, I can soon satisfy you, for I wrote some verses on the River Dee, which runs by the village where I was born, and I showed them to Sir Arthur Bradley, who said he had never read any thing so fine in his life, and that they were equal to any thing in Thomson's Seasons! Have you read Thomson's Seasons, sir?" Then, drawing his MS. from his pocket, he presented it to the bookseller, saying, "Just have the goodness to read two or three hundred lines of this poem, and I will venture to say that you will pronounce them to be equal to any thing in Thomson's Seasons. I am in no hurry—I can stay while you read them, or if you prefer it, I will read them to you." The bookseller chose neither; but speedily, though not discourteously, dismissed the genius from the audience, hopeless of all negociation. "Bless me," said Ferdinand to himself, as soon as he was alone, "what a strange place this world is! I never saw any thing like it in the whole course of my life! The man would not even read my poetry, and I was not going to make him any charge for reading it!"

There are more booksellers than one in London, so Ferdinand tried another—another—and another; they were all in the same story. They had evidently entered into a conspiracy against him; but who was at the bottom of the conspiracy it was impossible for him to say, or to conjecture. It was a manifest absurdity, he thought, that all the world should admire Thomson's Seasons, and yet that nobody should admire him, whom Sir Arthur Bradley had pronounced to be equal to Thomson. It now occurred to him, that about this time Sir Arthur Bradley himself might be in London. He knew that the baronet had a house in town, but he did not know where, so he inquired of one or two people in Holborn, and they could not tell him; but finding a court guide on a book stall, the secret of Sir Arthur's town residence was revealed to him; and, having ascertained that it was at the west end of the town, he prepared to seek it out, and, for a while, he was puzzled to find the west end of the town, for it appeared to him that the town had no end. However, as they who seek till they find will not lose their labour, so it happened with Ferdinand Harwood, who did at last discover the residence of his patron, far away, indeed, from any end of the town, for it was in the midst of many squares and streets. It seemed to the unfortunate genius that he was destined to meet with wonders and paradoxes wherever he went, for the servant who opened the door to him told him that Sir Arthur Bradley could not be seen. Is he invisible? thought Ferdinand, and so thinking, he looked astonishment. "Indeed, Mr. Harewood" said the servant, "my master is in such a state, that he can see no one!" "Is he blind?" said Ferdinand. "No;" replied the porter. "Is he deaf?" "No;" replied the porter. "Then I wish you would tell him that I am starving!" Now, the domestics of Sir Arthur Bradley had not any idea of starving; therefore the porter looked upon Ferdinand Harewood with much astonishment, and seemed, for a moment, to regard the starving man as a great natural curiosity; but, when the first shock of his wonder was over, he felt compassion for the youth; for, though he did not know what starving was, so far as himself was concerned, yet he knew it was something greatly to be dreaded, and that he found it a serious inconvenience even to wait for his dinner, of course he concluded that it must be a far greater inconvenience to have no dinner to wait for. The domestic, notwithstanding the invisibility of Sir Arthur Bradley, invited Ferdinand into the house, and into the house-keeper's room; and, when the servants heard that he was starving, they all lifted up their hands, and eyes, and voices, saying, "Law bless us, what, the young man what used to make such nice poetry!" They were incredulous, forgetting that poetry is not good to eat. But when the house-keeper brought him out some cold beef and pickled walnuts, they all saw that he had a marvellously good appetite. While he was eating, they kept asking him many questions, to few of which he had leisure to make reply But at last he finished, and when he had satisfied his hunger, he was desirous of satisfying his curiosity; he made inquiry into the cause of Sir Arthur's invisibility, and he heard that the baronet was in great trouble because his daughter had married without his consent. "I should not care who were married or who were single," said Ferdinand to himself, "if I had such good beef and pickled walnuts to eat every day of my life." Then, addressing himself to his informant, he said, "And, I pray you, what is the great evil of this marriage, that the baronet has taken it so much to heart?" "Sir Arthur is angry that his daughter has not only married without his consent, but that she has degraded herself by a low connexion," was the answer. When Ferdinand Harewood heard this, he supposed she might have married the parish-clerk or village blacksmith; but when he heard that the degradation went no farther than to a marriage with a merchant in the city, he was rather more surprised at the fastidiousness of Sir Arthur Bradley than at the humble taste of his daughter, and he replied "It is well it is no worse." "But he is of such low origin," said the cook. "Not lower than Adam, who was formed out of the dust of the ground," replied Ferdinand.

"Sir Arthur swears," said the butler, "that he will not leave her a single shilling; and that if any of the servants carry any message to her, they shall lose their places; and that if her brother keeps up any acquaintance with her he shall be disinherited." "Bless me, what a Turk!" exclaimed Ferdinand, "I could not have thought that when he admired my poetry, and said that it was equal to Thomson's Seasons, he was capable of being in such a towering passion" While he was speaking, a message came from Mr. Bradley, the son of Sir Arthur, to desire that Mr. Harewood would favour him with his company in the library for a few minutes. Ferdinand obeyed the summons, and the son of the angry baronet said, "Mr. Harewood, understanding that you were in the house, I took the liberty to send for you to ask if you will have the goodness to take a small parcel into the city for me." "Sir," replied Ferdinand, whose spirits and gratitude were amply excited by the opportune refreshment of the baronet's pantry,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"I would walk to the world's end to serve any individual of the illustrious house of Bradley." "I don't wish you to walk so far as that," replied Mr. Bradley; "but if you will take this packet to its address, you will oblige me; you can keep a secret?" "Ay, that I can," said Ferdinand, and he was about to tell Mr. Bradley how many secrets he had kept, by way of proof and illustration, but the young gentleman had not time or inclination to hear them, and he cut the matter short by saying,—"You have heard from the servants of my sister's marriage, and of my father's disapprobation of it. This parcel is addressed to her, and I must beg that you will deliver it into her hands, and bring me at your earliest convenience an answer" Mr. Bradley, with the parcel, put also a piece of money into the messenger's hand, and the messenger put the money into his pocket without looking at it, but he made as much haste out of the house as he possibly could, in order that he might ascertain whether it were a shilling or a sovereign. He would have been glad of a shilling, but of a sovereign gladder still—and it was a sovereign. So he walked away light-heartedly, singing jubilate, and for a moment he forgot the Leviticud. Then he said to himself, "I shall get more money by going errands than by writing epic poems."

When he arrived at the merchant's house, which was quite as handsome and well furnished as Sir Arthur Bradley's, and saw the baronet's married daughter, the lady very readily recognised him as the Mr Harewood who was distinguished for his poetical talents. "So you have come to London to exercise your poetical talents," said Mrs. Marshall, "I hope you find it answer." "I cannot say much for the matter at present," replied Ferdinand. "I believe that poetry is not done at a premium now," said the merchant, who happened to be present at the colloquy. "Ah, sir," said Ferdinand, not exactly apprehending the mercantile metaphor, but perfectly understanding the word premium, "I only wish that a premium were offered for poetry—I think I should win it. But the publishers are in a conspiracy against me, and will not let the public judge of my talents." "Then, if I were in your place, I would conspire against the publishers, and not let them have any more manuscripts."

"But, sir," how can I live without it?"

"How do you live with it?" "Not at all," replied Ferdinand; "but what else can I do? I have no skill in farming, and no capital to stock a farm withal." "Then, of course, you cannot be a farmer. Can you write?" "Admirably." "Do you understand accounts?" "Perfectly." "Will you try a seat in my counting-house?" "Most thankfully." Twenty years after this, Sir Arthur Bradley was reconciled to his daughter, and Mr. Marshall retired from business, and Ferdinand Harwood succeeded him, rejoicing that he had not succeeded as a poet. The Leviticud is unfinished.

LIBRARIES FOR THE PEOPLE.

Sir John Herschel's Address.

It affords us great pleasure to observe that, in several towns and villages of England, the mechanic and the labourer may now obtain useful and amusing books to read, upon the payment of a very small subscription. Such institutions we have no doubt will become generally established. A "Public Library" of this open nature has been recently founded for the use of the people of Windsor and Eton; and Sir John Herschel, who unites to profound scientific attainments an ardent desire for the general diffusion of knowledge, is president of the institution. In the discharge of the duties of that office, he delivered an address to the subscribers to the library on the 29th January last, which has just been published. This little tract is remarkable for its liberal and manly spirit, and its sound sense. In the conviction that it will be agreeable to the author that his benevolent views of the important subject of education should be widely disseminated, we shall venture to quote somewhat largely from this address.

After noticing the immense national importance of endeavouring to enforce the standard of moral and intellectual culture in the mass of the people, the President of the Windsor and Eton Public Library adverts to the regulations by which the books are accessible to the humbler classes. It appears that in this establishment there are two rates of subscription,—the one admitting the subscriber to a reading-room, furnished with newspapers and periodical works and entitling him to the loan of the standard works of the library,—the other throwing open the library only to a humbler class. This is, no doubt, a judicious arrangement. Sir John Herschel regrets that the use of the library is not altogether gratuitous for certain readers. Of the prudence of such a plan we have considerable doubts. Experience has undeniably shown, that what is given away is often little prized by those who receive it; and, besides this, the pay ment of even a penny a week to a library makes the working man feel as independent as the wealthier subscriber. While his mind is being elevated by the process of acquiring knowledge, it must not be degraded by the feeling that others are paying for the means of his improvement.

It has always appeared to us that those who have little leisure for reading, and whose hour of leisure is often an hour of weariness, must be principally attracted to a book by the desire of amusement. Sir John Herschel, has put this point so forcibly that we cannot refrain from giving his argument entire:—

"There is a want too much lost sight of in our estimate of the privations of the humbler classes. though it is one of the most incessantly craving for all our wants, and is actually the impelling power which, in the vast majority of cases, urges men into vice and crime,—it is the want of amusement. It is in vain to declaim against it. Equally with any other principle of our nature, it calls for its natural indulgence, and cannot be permanently debarred from it, without souring the temper, and spoiling the character. Like the indulgence of all other appetites, it only requires to be kept within due bounds, and turned upon innocent or beneficial objects, to become a spring of happiness; but gratified to a certain moderate extent it must be, in the case of every man, if we desire him to be either a useful, active, or contented member of society. Now I would ask, what provision do we find for the cheap and innocent and daily amusements of the mass of the labouring population of this country? What sort of resources have they to call up the cheerfulness of their spirits, and chase away the cloud from their brow after the fatigue of a day's hard work, or the stupefying monotony of some sedentary occupation? Why, really very little—I hardly like to assume the appearance of a wish to rip up grievances by saying *how* little. The pleasant field walk and the village green are becoming rarer and rarer every year. Music and dancing (the more's the pity) have become so closely associated with ideas of riot and debauchery, among the less and cultivated classes, that a taste for them for their own sakes can hardly be said to exist; and before they can be recommended as innocent or safe amusements, a very great change of ideas must take place. The beer-shop and the public-house, it is true, are always open, and always full, but it is not by *those* institutions that the cause of moral and intellectual culture is advanced. The truth is, that under the pressure of a continually condensing population, the habits of the city have crept into the village—the demands of agriculture have become sterner and more imperious; and while hardly a foot of ground is left uncultivated and unappropriated, there is positively not space left for many of the cheerful amusements of rural life. Now, since this appears to be unavoidable, and as it is physically impossible that the amusements of a condensed population should continue to be those of a scattered one, it behoves us strongly to consider of some substitutes. But perhaps it may appear to some almost preposterous to enter on the question. Why, the very name of a labourer has something about it with which amusement seems out of character. Labour is work, amusement is play; and though it has passed into a proverb that one without the other will make a dull boy, we seem to have altogether lost sight of a thing equally obvious—that a community of 'dull boys,' in this sense, is only another word for a society of ignorant, headlong, and ferocious men.

"I hold it, therefore, to be a matter of very great consequence, independent of the kindness of the thing, that those who are at their ease in this world should look about and be at some pains to furnish available means of harmless gratification to the industrious and well disposed classes, who are worse provided for than themselves in every respect, but who, on that very account, are prepared to prize more highly every accession of true enjoyment, and who really want it more. To do so is to hold out a bonus for the withdrawal of a man from mischief in his idle hours—it is to break that strong tie which binds many a one to evil associates and brutal habits—the want of something better to amuse him—by actually making his abstinence become its own reward.

"Now of all the amusements which can possibly be imagined for a hard-working man, after his daily toil, or in its intervals, there is nothing like reading an entertaining book, supposing him to have a taste for it, and supposing him to have the book to read. It calls for no bodily exertion, of which he has had enough or too much. It relieves his home of its dullness and sameness, which, in nine cases out of the ten, is what drives him out to the ale-house, to his own ruin and his family's. It transports him into a livelier, and gayer, and more diversfied and interesting scene: and while he enjoys himself there, he may forget the evils of the present moment, fully as much as if he were ever so drunk, with the great advantage of finding himself the next day with his money in his pocket, or at least laid out in real necessaries and comforts for himself and his family,—and without a headache. Nay, it accompanies him to his next day's work, and if the book he has been reading be anything above the very idlest

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and lightest, gives him something to think of besides the mere mechanical drudgery of his everyday occupation,—something he can enjoy while absent, and look forward with pleasure to return to.

"But supposing him to have been fortunate in the choice of his book, and to have alighted upon one really good and of a good class. What a source of domestic enjoyment is laid open! What a bond of family union! He may read it aloud, or make his wife read it, or his eldest boy or girl, or pass it round from hand to hand. All have the benefit of it—all contribute to the gratification of the rest, and a feeling of common interest and pleasure is excited. Nothing unites people like companionship in intellectual enjoyment. It does more, it gives them mutual respect, and to each among them self-respect—that corner-stone of all virtue. It furnishes to each the master-key by which he may avail himself of his privilege as an intellectual being, to

'Enter the sacred temple of his breast,
And gaze and wander there a ravished guest;
Wander through all the glories of his mind,
Gaze upon all the treasures he shall find.'

And while thus leading to look within his own bosom for the ultimate sources of his happiness, warns him at the same time to be cautious how he defiles and desecrates that inward and most glorious of temples.'

The best sorts of reading to be provided for the humbler classes are pointed out by Sir John Herschel with great felicity. We are well pleased to have so excellent an authority in support of the principle which we have endeavoured to bear in mind, that no distinctions ought to be made between the reading for one class of the community and the reading for another class The patronizing, condescending style in which the working-people are to be addressed is, we trust, worn out. Perspicuous thoughts, expressed in the clearest language,—this is the best definition of a good style, whether for the rich or the poor. The address before us puts this point very forcibly:—

"If then we would generate a taste for reading, we must, as our only chance of success, begin by pleasing. And what is more, this must be not only the ostensible, but the real object of the works we offer. The listlessness and want of sympathy with which most of the works written expressly for circulation among the labouring classes are read by them, if read at all, arises mainly from this—that the story told, or the lively or friendly style assumed, is *manifestly* and *palpably* only a cloak for the instruction intended to be conveyed,—a sort of gilding of what they cannot well help fancying must be a pill, when they see so much and such obvious pains taken to wrap it up.

"But try it on the other tack. Furnish them liberally with books not written expressly for them as a class—but published for their betters (as the phrase is), and those the best of their kind. You will soon find that they have the same feelings to be interested by the varieties of fortune and incident,—the same discernment to perceive the shades of character,—the relish for striking contrasts of good and evil in moral conduct, and the same irresistible propensity to take the good side—the same perception of the sublime and beautiful in nature and art, when distinctly placed before them by the touches of a master—and, what is most of all to the present purpose, the same desire, having once been pleased, to be pleased again. In short, you will find that in the higher and better class of works of fiction and imagination duly circulated, you possess all you require to strike your grappling iron into their souls, and chain them, willing followers, to the car of advancing civilization.

"When I speak of works of imagination and fiction, I would not have it supposed that I would turn loose among the class of readers to whom I am more especially referring, a whole circulating library of novels. The novel, in its best form, I regard as one of the most powerful engines of civilization ever invented—but not the foolish romances which used to be the terror of our maiden aunts; not the insolent productions which the press has lately teemed with under the title of fashionable novels nor the desperate attempts to novelize history which the herd of Scott's imitators have put forth, which have left no epoch since the creation untenanted by modern antiques, and no character in history unfalsified:—but the novel as it has been put forth by Cervantes and Richardson, by Goldsmith, by Edgeworth, and Scott. In the writings of these, and such as these, we have a stock of works in the highest degree enticing and interesting, and of the utmost purity and morality—full of admirable lessons of conduct, and calculated in every respect to create and cherish that invaluable habit of resorting to books for pleasure. Those who have once experienced the enjoyment of such works will not easily learn to abstain from reading, and will not willingly descend to an inferior grade of intellectual privilege—they have become prepared for reading of a higher order—and may be expected to relish the finest strains of poetry, and to draw with advantage from the purest wells of history and philosophy. Nor let it be thought ridiculous or overstrained to associate the idea of poetry, history, or philosophy, with the homely garb and penurious fare of the peasant. How many a rough hind, on Highland hills, is as familiar with the 'Paradise Lost,' on the works of his great national historians, as with his own sheep-hook! Under what circumstances of penury and privation is not a high degree of literary cultivation maintained in Iceland itself—

'In climes beyond the solar road,
Where savage forms o'er ice-built mountains roam;
The muse has broke the twilight gloom
To cheer the shivering nature's dull abode!'

And what is there in the character or circumstance of an Englishman that should place him, as a matter of necessity, and for ever, on a lower level of intellectual culture than his brother Highlander, or the natives of the most inhospitable country inhabited by man? At least, there is always this advantage in aiming at the highest results—that the failure is never total, and that though the end accomplished may fall far short of that proposed, it cannot but reach far in advance of the point from which we start. There never was any great and permanent good accomplished but by hoping for and aiming at something still greater and better."

We add one or two detached passages from this excellent tract:—

VILLAGE ENTHUSIASM.—"I recollect an anecdote told me by a late highly-respected inhabitant of Windsor as a fact which he could personally testify, having occurred in a village were he resided several years, and where he actually was at the time it took place. The blacksmith of the village had got hold of Richardson's novel of Pamela, or Virtue Rewarded,' and used to read it aloud in the long summer evenings, seated on his anvil, and never failed to have a large and attentive audience It is a pretty long winded book—but whether patience was fully a match for the author's prolixity, and they fairly listened to it all. At length, when the happy turn of fortune arrived, which brings the hero and heroine together, and sets them living long and happily according to the most approved rules—the congregation were so delighted as to raise a great shout, and procuring the church keys, actually set the parish bells ringing. Now let any one say whether it is easy to estimate the amount of good done in this simple case. Not to speak of the number of hours agreeably and innocently spent—not to speak of the good-fellowship and harmony promoted—here was a whole rustic population fairly won over to the side of good—charmed—and, night after night, spell-bound within that magic circle which genius can trace so effectually, and compelled to bow before that image of virtue and purity which (though at a great expense of words) no one knew better how to body forth with a thousand life-like touches than the author of that work."

A TASTE FOR READING.—"If I were to pray for a taste which should stand me instead under every variety of circumstances, and be a source of happiness and cheerfulness to me through life, and a shield against its ills, however things might go amiss, and the world frown upon me, it would be a taste for reading. I speak of it of course only as a worldly advantage, and not in the slightest degree as superseding or derogating from the highest office and surer and stronger panoply of religious principles—but as a taste, an instrument, and a mode of pleasurable gratification. Give a man this taste, and the means of gratifying it, and you can hardly fail of making a happy man, unless, indeed, you put into his hands a most perverse selection of books. You place him in contact with the best society in every period of history, with the wisest, the wittiest, with the tenderest, the bravest, and the purest characters who have adorned humanity. You make him a denizen of all nations,—a cotemporary of all ages. The world has been created for him. It is hardly possible but the character should take a higher and better tone from the constant habit of associating in thought with a class of thinkers, to say the least of it, above the average of humanity. It is morally impossible but that the manners should take a tinge of good-breeding and civilization from having constantly before one's eyes the way in which the best-bred and the best-informed men have talked and conducted themselves in their intercourse with each other. There is a gentle, but perfectly irresistible coercion in a habit of reading, well directed, over the whole tenor of a man's character and conduct, which is not the less effectual because it works insensibly, and because it is really the last thing he dreams of. It cannot, in short, be better summed up, than in the words of the Latin poet—

Emollit mores, nec sinit esse feros.'

It civilizes the conduct of men, and suffers them not to remain barbarous."

CUVIER'S MEMOIRS.

Louise Scheppler,—Oberlin,—Origin of Infant Schools,—the French Academy, &c.

Louise Scheppler, the coadjutor of Oberlin, late pastor of the High Alps, has received a prize of 5,000 francs from the French Academy. Her life and manners are elegantly dwelt on by Cuvier. This woman, resides in a valley in the rudest part the Vosges moun-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tains. Sixty years ago this valley yielded only very scanty nourishment to a half-civilized population. The families were about eighty in number—they had a government of force—they were divided by hereditary feuds—and acts of criminal violence were committed amongst them. Under these circumstsnces a pious pastor, named John Frederick Oberlin, undertook to civilize them. Like one, who was well acquainted with mankind, Oberlin began by striving to get rid of their poverty, and with his own hands he set the example for all useful labours, and, armed with a pickaxe, he directed them in the construction of a good road, digging and labouring with them; he taught them to cultivate the potatoe; he made them acquainted with good vegetables and fruits; showed them how to engraft, and gave them excellent breeds of cattle and poultry.

He established manufactures, he gave them a saving-bank, and put them in communication with the commercial houses in the neighbouring towns. He began to give them higher instruction and made himself their schoolmaster: select works were provided for them, the influence of which were assisted by his own exhortaitons and example—by degrees religious feelings, bringing in their train mutual benevolence, insjnuated themselves into their hearts—quarrels, crimes, and law-suits disappeared, and Oberlin was at last the only tribunal to which in all their disputes they appealed. In short, he saw this community, just before his death, which at first consisted of eighty families of half-barbarous and starving population, he saw them a body of three hundred families, regular in their habits, pious and enlightned in their sentiments, enjoying ease in their circumstances, and amply provided with means of handing down to their posterity sufficient to render them comfortable too. The whole of those happy results were not however exclusively attributable to Oberlin, for he was materially assisted in his benevolent labours by the individual whose heroic exertions called forth the prize to which Cuvier is now particularly alluding. We give his account of this female.

'A young female peasant from one of these villages, named Louise Scheppler, though scarcely fifteen years of age, was so forcibly impressed with the virtues of this man of God, that, although she enjoyed a small patrimony, she begged to enter into his service, and take a part in his charitable labours. From that time she never accepted any wages; she never quitted him; she became his help, his messenger, and the guardian angel of the rudest huts. She afforded the inhabitants every species of consolation; and in no instance can we find a finer example of the power of feeling to exalt the ntelligence. This simple village girl entered into the elevated views of her master, even astonishing him by her happy suggestions, which he unhesitatingly adopted in his general plan of operation. She it was who remarked the difficulty that the labourers in the fields experienced, in combining their agricultural employments with the care of their younger children, and who thought of collecting together even infants of the earliest age in spacious halls, where, during the absence of their parents, some intelligent instructresses should take care of, amuse, teach them their letters, and exercise them in employments adapted to their ages. From this institution of Louise Scheppler arose the infant schools of England and France, where the children of the working classes, who would otherwise be exposed to accidents and vicious examples, are watched over, instructed, and protected. The honour of an idea which has produced such beautiful results is solely due to this poor peasant of Ban de la Roche; to this she consecrated all her worldly means, and, what are of more value, her youth and her health. Even now, though advanced in years, she, without receiving the smallest conpensation, assembles a hundred children round her, from three to seven years of age, and instructs them according to their capacities. The adults, thanks to M. Oberlin, have no further moral wants; but there are yet some, who in sickness or old age have need of physical aid. Louise Scheppler watches over them, carries them broth, medicine, in short, every thing, not forgetting pecuniary succour. She has founded and regulated a sort of Mont de Piété, of a peculiar kind, which would be an admirable institution elsewere, if it could be multiplied like the infant schools; for it is among the very small number of those which merit the name given to them, for money is there lent without interest and without securities.'—pp. 163.

It is a curious part of this history, that Oberlin, before his death, made a will, in which he left Louise as a legacy to this people.

CORRESPONDENCE.

THE BRITISH SETTLERS.

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—A serious error of the Press having been made in the "Sketch of the Establishment, Progress, and present State of the British Settlement," inserted in the last number of your interesting Periodical, I have to request that you will be good enough to make the following corrections, and at the same time to add a few explanatory Notes for the satisfaction of several Persons who have expressed some interest in the subject of that article, as well as in the Settlers themselves; of whom, perhaps, may with justice be quoted that celebrated observation made upon the British Emigrants to America nearly two hundred years ago, that

"It was not with them as with other men, whom small things could discourage, or small discontents could make them wish themselves home again." I am, &c.

John Centlivres Chase.

Cape Town, 5th Jan. 1834.

Wool,—*page* 182, *column* 3.

The number of fine woolled Sheep in the hands of the British Settlers, exclusive of the flocks near Port Elizabeth, was stated at *two thousand* instead of *twenty thousand*. Since the oketch was written, however, it appears by the Official Returns completed for the year 1833, that the number is 26,000.

Commando Tax,—*page* 181, *column* 3.

This Tax was established by Government Proclamation of the 4th Dec. 1812, "for the maintenance of a Corps for the defence of the frontier," its annual amount, made in part available for the object, was £4,575; and, at the dele time of its abolition in 1829, bore a proportion of 1-13 to the then amount of the Revenue. The Cape Corps, for the support of which this impost was raised, was paid by the Colony until the 25th Dec. 1827, when the expence was made chargeable upon the Home Government.

Post,—*page* 181, *column* 3.

The first regular Post to Graham's Town was despatched in the year of the Settler's arrival

Trade with the Caffrees,—*page*. 181, *column* 3.

Lord Macartney, on the 11th July, 1798, proclaimed death as the punishment for passing across the Great Fish River, *which Proclamation was repeated by Lord Charles Somerset on the 28th Nov.* 1823, in consequence of this cruel adherence to an antiquated and impolitic law, several respectable individuals were thrown into Prison; but owing to the spirited conduct of some independent Heemraaden, who tried these enterprising delinquents, the law itself fell into abeyance, and the present successful and extensive Trade was called into existence. Lord C. Somerset's Proclamation of 13th Sept. 1822, totally prohibited the traffic.

Graham's Town,—*page*, 182, *column* 3.

By the Returns for the year 1833, just made up, the number of Houses is stated at 650, exclusive of the Barracks, one hundred of which it is stated have been added to the previous number during the current year. The population of the Town is now officially declared to be 2501, a number, there is every reason to believe, far below the fact.

There were no Places of Worship, *page*, 181, *column* 3.

Excepting the Institution for Hottentots at Theopolis, there was no Place of Public Worship. From the establishment of Graham's Town in 1812, up to the period of the arrival of the Settlers in 1820, Divine Service was performed upon one or two occasions by the Minister of Graaff-Reinet, a Village 180 miles distant, who visited it for the purpose. The Settlers brought out with them one Clergyman of the English Episcopal Church, and a Dissenting Minister.

NATURAL HISTORY, SCIENCE, &c.

WHALE FISHERY AND UTILITY OF THE ARCTIC DISCOVERIES.

There is every reason to believe, that if the arctic voyages had not been undertaken, the whale fishery, which employs a capital of upwards of a million, which is one of the best nurseries in the world for seamen, and on which Hull, Peterhead, Frazerburgh, and several other towns of the kingdom mainly depend, would have been lost to the country. For many years a great change has been taking place in the habits of those stupendous creatures, which draw the enterprise of the merchants and mariners of England and Scotland into the arctic seas. When the fishery commenced, they were so tame that they were found floating in all the gulfs and bays of Spitzbergen, fearless of harm, and where taken by hundreds, and with-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

out an effort. In a few years, however, this dreadful destruction drove them to the more remote bays, from whence they were soon driven into the open sea, far away from land. But the trackless ocean afforded them no shelter from their enemies; they were pursued, and that with so much resolution, that the Dutch are calculated to have destroyed upwards of 50,000 in no very long course of years. Retiring before their ruthless pursuers, they next took refuge along the line of perpetual ice, which was their habitation when Scoresby wrote his celebrated work. Here as many as 1,400 of them were killed in one year. At last, worn out by perpetual persecution, they have plunged into the regions of eternal ice, where the boldest whaler dares not pursue them. The consequence is, that the Greenland fishery, which was formerly carried on in the sea between Greenland and Spitzbergen, is nearly abandoned, and the whole trade would soon have been at an end if Ross had not penetrated in his first voyage through the mass of ice which renders the entrance to Baffin's Bay so hazardous, and opened to the whalers vast seas never before fished, and which the monsters of the deep are found to frequent in great numbers. The most northern parts of Baffin's Bay, together with Lancaster Sound, Regent's Inlet, &c., are now the great fishing stations, and all these regions have been discovered, or at least laid down with accuracy, by the recent navigators, who opened the route to the less adventurous traders —showed them that the seas abounded with whales—broke the icy barrier which had never been passed since the days of Baffin, and described the coasts and harbours so correctly as to deprive the voyage of the greater part of its perils. The mere pecuniary expense of the voyages of discovery has therefore already been repaid many times, independent of the extension of geographical knowledge and the improvemen of science.

THE MANUFACTURE OF STARCH.

Starch is prepared from wheat: this being well cleansed is steeped in vessels of water, which are exposed to the sun; the water is changed twice a day during the period of eight, or sometimes twelve days, according to the heat of the season. A slight fermentation is then induced, which is considered to have been sufficently excited when the grain bursts freely under the finger. Thus softened, it is put into canvas bags, in order to separate the flour from the husks. This separation is performed by rubbing and beating the grains enclosed in the bags, while laid on a plank placed across the mouth of an empty vessel, which is to receive the flour, as mixed with water it runs through the bags.

Or, instead of being put into these bags, the grain is, from the steeping vessel, removed to a tub of water, and trodden upon. By this operation the starchy part is washed out, and, mingling with the water, gives to it a milky appearance. This fluid is then drawn off through a sieve into another vessel, called the sitting-tub. Fresh water is effused on the grains, and the same process is continued until the water in the treading-tub no longer becomes turbid. While the starch is subsiding in the sitting-tub, the water at the surface assumes a reddish hue; this should be carefully removed from time to time, and replaced by clean water, and the whole should then be stirred together. Sometimes it is again strained through a cloth, the starchy particles are returned into the vessel, and the water is entirely renewed. The starch now gradually precipitates by repose from the water in which it was held suspended, during which, sometimes, and especially if it be a warm season, the mucilaginous saccharine matter of the flour held in solution by the water goes into the acetous fermentation. This causes the starch to become purer and whiter. If this fermentation does not take place, the starch is of a grey colour, but it is rendered white by steeping it in water, slightly acidulated, as the acid dissolves and carries off its impurities.

After the subsidence of the starch, some of the water is drained off by inclining the vessel; the remaining part is suffered to drip through linen cloths supported by hurdles, and upon which the wet starch is placed. When great part of the moisture has drained through, the starch is wrapped up and wrung or pressed between the cloths, that the whole of the fluid may be separated. It is afterwards cut into pieces, which are placed in an airy situation, on slightly burnt bricks, to promote the complete desiccation, partly by the free current of air, and partly by the absorbent quality of the bricks. Lastly, the outer crust is scraped off, and the whole is broken up into smaller pieces: it fractures into oblong irregular masses. Starch has scarcely any smell, and very little taste; when kept dry it continues for a long time uninjured though exposed to the air. It does not dissolve in cold water, but soon falls into a powder; with boiling water it forms a thick paste. One hundred pounds of wheat produce thirty-three pounds of starch and twenty pounds of bran, the remaining part being considered as refuse. The starch-makers are not allowed to sell this refuse, because it still contains some portion of starch, on which article there is an excise duty levied; and it is supposed, with how much reason it were vain to inquire, that the revenue might possibly be defrauded, if this strange prohibition were not enforced. The refuse matter is found to afford excellent nourishment for pigs; and therefore, that it may be profitably consumed on his own premises, every starch-manufacturer is in a manner compelled to combine with his own regular business, the some what anomalous calling of a swine-keeper.

Starch is found in the greater number, if not in the whole of the seeds employed as articles of food. A large proportion is extracted from potatoes,—about five pounds of these roots yielding one pound of starch.

VALUE OF THE ARTS.

LANDSEER—WILKIE.

LANDSEER reminds us of those metaphyscians, who have given animals a soul. He breathes into the brute world a spiritual eloquence of expression, beyond all literary power to describe. He is worth to the "voice of humanity," all the societies in England. You cannot gaze on his pictures and ill use an animal for months afterwards. He elevates your sympathies for them to the level of human interest. He throws poetry over the most impoetical; nay, he has given a pathos to "a widowed duck"

WILKIE is the Goldsmith of painters, in the amiable and pathetic humour,—in the combination of smiles and tears,—of the familiar and the beautiful. Wilkie, like Landseer, is the great benevolist of painting; he dips his pencil in sympathy—carrying down the sentiment of humane humour from man to man's great dependant family, and binding all creation together in one common sentiment of that affection, whose wisdom comprehends all things. It is an anecdote, that for many years an aristocratic feeling prevented Wilkie's "Distraining for Rent" being engraved, *less it should excite an unpleasant feeling towards the country gentlemen!*

Method of making Salt.— In Guiana, in the Western Continent, a species of palm is found, in which the flowers are surrounded by a sheath of great density and strength of structure. This sheath is capable of containing several pints of water, and even resists the action of fire to such a degree, that it is employed by the natives to evaporate the sea water for the purpose of obtaining a speedy supply of salt.

University Shrewdness.—In St. John's College, Oxford, there is a very curious portrait of Charles I., done with a pen, in such a manner that the lines are formed by verses from the Psalms, and so contrived as to contain every psalm. When Charles II. was once at Oxford, he was greatly struck with this portrait, begged it of the college, and promised, in return to grant them *whatever request they should, make.* This they consented to, and gave his Majesty the picture, accompanied with the request,—*that he would return it.*

Ingenious Fire Alarm.—At the top of a wooden tower attached to the state-house in the city of Philadelphia, in America, is a bell, which has been ingeniously converted into an engine of considerable value. When a fire occurs in any part of the city, the tolling of the bell indicates instantly the quarter in which the calamity occurs. There is one toll to indicate the north, there are two for the south, three for the east, and four for the west. The practical utility, the ingenuity, and, above all, the economy which are found combined in this appropriation of public property will, we trust, make some impression in this country, even though we should leave ourselves to the charge of borrowing a good idea from the Yankees.

LITERARY EXTRACTS.

"THE GLORIOUS REVOLUTION" *versus* TAXATION.

IT is curious enough, on turning over the pages of History to find, that the Glorious Revolution which placed William of Holland on the Throne of England, produced at the same time from Holland, every species of Fiscal ingenuity, for the purpose of exacting money from the people of England. Out of *ten* branches of excise existing at the close of William's reign, *eight* were introduced *after* the Revolution; of nineteen custom duties only *eight* subsisted previous to the Revolution; and of eight branches of inland duties, six owed their establishment to the Dutch system of finance and extortion; while, above all, *a national debt was commenced,* by *mortgaging* the revenue for a term of years, with authority to borrow money on interest. Taxes were then levied on houses and windows, on malt, on salt, land, paper, glass, hops, soap, starch, hackney coaches, on *marriages! births!* and *burials!* stamp duties were first levied, and the whole existing taxes were doubled, trebled, and quintupled in amount, so that from the 5th of November, 1688, to 1700, the amount of the public revenue, taxes, and loans, exacted by *Koning Willem*, was £65,987,566 : 17 : 8 sterling!

THE COTTAGE—PALACE.

I have been to Bembridge, and read Burder's poetic abridgment of the Pilgrim's Progress, with profit and delight to us all. How much more am I in my element, among my little flock,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

than *scheming* in the world. Drank tea at John Wheler's; his cottage is God's palace.—*Rev. Legh Richmond's Journal.*

Mr. WILBERFORCE and NEGRO.

Yesterday, at the sacrament, I observed kneeling at the rails close to Mr. Wilberforce, a *Negro.* I was much struck, and many interesting associations filled my mind. I find also that it was quite accidental, and Mr. W. knows nothing of him.—*Ib.*

ACCOUNT

Of the Funeral, and Tribute to the Memory of Lieut. Reitz, R. N. *of the Cape of Good Hope, extracted from Capt.* Owen's *Narrative of Voyages to explore the Shores of Africa, Arabia, &c.*

Mombas.

For the interment of the remains of this much lamented officer, the interior of the ancient Portuguese cathedral was chosen. A grave seven feet in depth was dug near a ruinous piece of masonry, that alone indicated where once the altar had stood. The corpse, decently arrayed in fine cambric, was conveyed to the cathedral, followed by a procession of the first people in the Town. The funeral service was read, and the body consigned to the earth with military honours. An humble specimen of Arab masonry, plastered over, marks the spot. Lieut. Reitz was in his twenty-second year when he died; he was a good musician, and in possession of an uncommon share of wit and good humour, together with a pleasing frankness of manner, that made him respected and beloved by his companions, as also by the Arabs, who ever after spoke of him in the highest terms of admiration, and with many expressions of regret for his untimely fate.—*Vol. 2, page* 147.

ADVICE to TROPICAL NAVIGATORS.

(From Owen's Voyages.)

Good clothing, food, and moderate exertion, without exposure, were always found the best physical, while religious faith, a fearless reliance on the mercy of God, and a mind beyond the reach of fear, were the best moral preservatives. It may in fact be questioned, whether our very losses were not, in some measure, attributable to European medical practice, *bleeding ana calomel* being decidedly the most deadly enemies in a tropical climate. During the whole time of the prevalence of the fever, we had not one instance of perfect recovery after a liberal application either of the lancet or medicine. The author lives to impress upon all tropical navigators his advice, *always to avoid bleeding and calomel, when the fever has actually taken possession of the frame.*

TEMPERANCE RECOMMENDED,

By the late Right Honorable R. B. Sheridan.

Dear Nat Ogle,—Leave off wine, ale, and spirituous liquors,—to bed betimes, and rise early,—addict yourself to good society; in short, follow the example of your's truly,

R. B. S.

Be your disorder fix'd or chronic,
In either case, your cure's a Tonic.
Instead of drawling, be laconic;
But what can aid the change? a Tonic!
Corinthian piers scorn mass-Ionic.
Yet noble nerves require a Tonic!
Tho' no great songster—be harmonic,
Your voice and ear both need a Tonic!
Reply in verse—in verse adonic—
Then I shall *know* you've *ta'en* a Tonic!

BARON CUVIER ON LEGISLATION.

Give Schools before political rights; make citizens comprehend their *duties* that the state of society imposes on them. Then all ameliorations will be made without causing a shock; then each new idea, thrown upon good ground, will have time to germinate, to grow and to ripen, without convulsing the social body. Imitate nature, who, in the development of beings, acts by gradation, and gives time to every member of her most powerful elements. The infant remains nine months in embryo; man's physical perfection only takes place at 20 or 30, and his moral complexion from 30 to 40. His mind is most vigorous at 50. Institutions must have ages to produce all their fruits; witness christianity, the effects of which are not yet accomplished, notwithstanding a thousand years of existence.—*Speech before the Council of State.*

THE PRAYER OF Mr. K.

On hearing that Mrs. K. was brought to bed of Twins.

My wife she hath bestowed on me
A blessing unforeseen,—
Grant, that these "Cupids' visits be
But few and far between!"
For now who knows what scores of sons
My scanty board may bless!—
I used to doat on *little* ones—
But find I like them *less.*
There's J. T. B——, that witty spark!
'Pon honour he declares—
My house resembles Noah's ark—
Where things come in by pairs
But at *that* Patriarch's famous launch,
His dove, when out she flew,
Brought Noah back one olive-branch—
Ah! *mine* has brought me *two!*
Yet, don't suppose, my friends, that I
Of Mrs. K. complain;
I only trust most fervently
Things mayn't chance so again!

AUSTRALIA.

The proportion of bad soil to that which is good in New South Wales, is certainly very great; I mean the proportion of inferior soil to such as is fit for the higher purposes of Agriculture. The most serious disadvantages under which the colony of New South Wales labours, is in the *drought* to which it is periodically subject. Those seasons, during which no rain falls, appear to occur every ten or twelve years.—*Sturt.*

A FEW THOUGHTS ON THE NOSE AND NOSE-MAKING.

Queen Elizabeth, noted for her large nose, ordered that all who spoke ill of her person or government, should have their ears and noses cut off.—*Hallam.*

M. Labat, ex-surgeon of the Viceroy of Egypt, has contributed a humorous paper on the subject of Rhinoylastie, or the art of nose-making, to Broussais Annales. We shall make a few extracts for the amusement of our readers. No deformity, we are told, is more disgusting than the loss of a nose. History informs us that the chaste Eusebia, abbess of the Monastery of St. Cyr, at Marseilles, and 40 of her nuns, cut their noses off, to save themselves from being ravished by the Saracens, who had gained possession of the town—a dreadful alternative! The English chroniclers relate instances of equal magnanimity on the part of some of their fair countrywomen, during the period of the Danish invasion. From Diodorus Siculus we learn that, by command of Actasan, the noses of all the inhabitants of Kistipoor were cut off, in order that these robbers and assassins might be known wherever they went; their town was afterwards called Nasica-Tipoor. Among the Egyptians, Greeks, and Romans, the loss of the nose was the punishment inflicted on adulterers; and, to add to ignominy, the injured husband had the privilege of being the operator. No doubt the incisions were, according to the precepts of modern surgery, free and extensive! M. Labat was travelling through Egypt in 1824, and arriving at Foha, he observed a great number of people who had lost their noses. His guide informed him that the neighbouring district had long been infested with banditti, and that it was necessary to inflict a severe punishment upon such robbers as were seized, in order to intimidate the rest. The same penalty, was awarded, also, to adultery, that crime being considered as the arch or master-theft of all. Our readers may recollect the lines of the poet Musianus—

"Si mæchis rasum mos esset tollere nasum
Multi per mundum sine naribus esset eundum."

Charles the 2d punished one of his noblemen, for some satirical observation, by the loss of his nose; and who has not heard of the notary's wife in Paris, who wreaked her vengeance on her husband's paramour, by tearing her nose clean away!

There are many curious details in the traditional history of the nose. According to Herodotus, it signified, in the symbolical language of the Egyptian ritual, a wise and cautious man. We know how highly the Greeks and Romans esteemed the long and square-pointed nose—"longus, quadratusque nasus," and many of their leading citizens thus derived their appellatives, as Ovidius Naso, and Scipio Nasica. The French language has borrowed many idioms from this most honourable member—thus, we say "*il a un bon nez,*" to mean a discreet person; "*on lui a donné sur le nez,*" a mortified person; "*se casser le nez,*" an unsuccessful person; "aire au nez," to rail or ridicule another; and we even apply the terms "nasilard, nasiloques, homme qui parle du nez," to the poor unfortunates who are noseless altogether, following, no doubt, the practice of the scholiasts, who derive their "lucus a non lucendo." Travellers assure us that the Tartars squeeze and flatten their children's noses, for the sapient reason, that it is a great folly to have one's nose sticking out in the way of the eyes. Their neighbours the Brahmins, on the other hand, seem to have been the original nose-manufacturers. Galen travelled in the East, and gives us a description of the operation; the skin of the cheeks was drawn forwards, and, to facilitate the extension of the integuments, several longitudinal incisons were made in them, so that the flaps might be brought into contact with each other from their side.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Celsus recommends that the incisions be made close to the ears; and in other respects he follows the preceding method—"non creatnr ibi corpus, sed ex vicino adduntur; quod etsi in levi mutilatione fallere oculum potest, in magnâ non potest." Baron Larrey has successfully employed the ancient operation in two cases—*vide* Journ. Complem. des Sciences Med. Mai, 1821, and the 4th vol. of his works. The plan proposed by Dieffenbach, differs little from the rhinoraphy recommended by Celsus. That curious old boy Olaus Nagnus, suggests the use of a picce of the flesh from a living fowl, as a substitute for the lost nose!! In the 16th century, two brothers of the name of Boiani, Neapolitans, acquired prodigious fame by their skill in repairing noses; unfortunately for poor Tycho Brahe, who lost his nose by a sabre-wound in a duel, they did not visit Denmark. In 1587, Tagliacozzi published a tract, entitled "Epistola and Hieronimum Mercurialem de Naribus multo ante abscissis reficiendis;" and ten years after his "Chirurgia Nova de Narium, Aurium, Labiarumque defectu, per Insitionem Cutis ex humero." So proud were his fellow-citizens of Bologna of this celebrated rhinoplast, that they raised a statue to his memory, and in his hand he held a nose! The taliacotian cure was a very tedious and fatiguing one to the patient; for, as the flap wnich was to serve for the new nose was obtained from the arm or fore-arm, it was necessary that the upper extremity should be kept folded across the face, so that the bleeding wound on it, and the raw edges of the nose, be kept accurately in contact until perfect union had taken place; for not till then, a period usually of 30 days, was the radicle of the flap to be divided Tagliacozzi particularly recommends that the nose be made large enough—"melius est amplas gestare nares, quam imminutas et deformes" a modification of the above operation was tried by some surgeons. They made an incision through the integuments of the middle and anterior surface of the fore-arm; they then made the edges of the mutilated nose raw, and applied them to this wound, retaining them in accurate contact with each other. At the end of 15 or 20 days, when adhesion had taken place, two triangular flaps where dissected from the adjacent integuments of the fore-arm, and left hanging to the nose; these were then brought in opposition with each other, forming thus a raphé, or bridge of the nose, and retained by sutures.

(To be continued.)

ANECDOTES OF THE ENGLISH LANGUAGE.

—*Ation* is a modern finish, which has been much in use since starv*ation* was heard in Parliamentary language. It will splice very conveniently with either a verb or a noun, which has carried it even to bother*ation*. At a rout-*ation* you may meet with a great deal of talk-*ation* and scandaliz-*ation*;—at a concert much fiddle-*ation* and faddle-*ation*;—and at a festive entertainment, much eat-*ation*, drink-*ation*, breakfast-*ation*, roast-*ation*, and every kind of luxurious anti-starv-*ation*.

W & V.—The offensive error of the Londoners in the tranpositional use of the letters W and V still continues. Thus *Weal* for Veal; *Winegar*, instead of Vinegar; *Vicked* for wicked, and for instance:

Alderman.—Villiam, I vants my Vig.

Servant.—Vitch vig, Sir?

Alderman.—Vy the vite vig in the vooden vig-box, vitch I vore last vensday at the westry.

We give one more extract from Dr. Pegge, by way of beacon to those gentlemen who may be aspirants to a seat in our legislative Council.

You have often, no doubt, Sir, heard luxuriant Orators in Parliament talking *about it* and *about it*, without your being able to understand the jet of the argument. Let me then introduce to you a true mercantile COCKNEY in the House of Commons; one who has regularly risen, from sweeping the shop, and snoring under the counter, to ride in his coach, and dose in St. Stephen's Chapel, and who affects no language but such as, he would tell you, his father *learnt* him; he would shew a sovereign disdain of rhetoric and elocution, and give his own reasons in his own words thus:

On a motion to adjourn, in order to get rid of the question, Mr. ———— Member for Horsly-down, said, "I rise, Mr. Speaker, to say a word on the motion now *afore* the House; and *that there* is *this here*. The point is, *shall us* adjourn, or *shall us* not? Now, Sir, I never *know'd no* good that ever *com'd* from hasty decisions; and therefore I shall support the motion, but upon a different ground from that on which the Honourable Gentleman stood when he made it. I would *ax* the Honourable Gentleman, whether, if he had not *see'd* that this question *mought* have been lost, he would have *went* so far as to have moved the adjournment; but that is *his'n* affair; and I shall *wote* for it, and because why? Delays are not always so dangerous to the good of the community as the Honourable Gentleman may think. When I shall be *ax'd* by my constituents, what *went with* such a question? can I, without blushing, say, it was lost for want of due consideration therefore! Sir, I *wote* that we adjourn; and, it being now early in the day, and none of us perhaps either *a'dry* or *a'hungry*, we shall thereby have an opportunity of *fetching a walk* for *a few while*, and each may consider with *his-self* on the main question, and how far it is attended with profit or loss to his country."

WORDSWORTH.

WORDSWORTH's Poetry is of all existing in the world, the most calculated to refine—etherealize—to exalt;—to offer the most correspondent counterpoise to the scale that inclines to earth It is for this that I consider his influence mainly beneficial. His poetry has repaired to us the want of an immaterial philosophy—it *is* philosophy, and it is of the immaterial school. No writer more unvulgarizes the mind. His circle is small,—but for that very reason the votaries are more attached. They preserve in the working-day world the holy sabbath of his muse—and doubtless they will perpetuate that tranquillising worship from generation to generation, till the development of the few shall grow into the custom of the many.—*Bulwer.*

Warning to Will makers.—The late Mr. Thelluson, by one of the most imbecile acts that ever disgraced the human intellect, so arranged his will, that the whole of this fine property, which he intended to give his heirs, was for many years in the Court of Chancery. If the good, but foolish old man were now to look from his grave and see the amount of the reckoning which that property has now to pay for his foolish and ridiculous gratification, he would scarcely stand such a shock. The reader will stare at the account.

The amount of costs and salary paid to the Solicitors by the Executors -	£9,169	8	1
Ditto of costs by the Accountant-Gen.	88,943	4	2
Ditto on passing Receiver's Accounts	18,330	7	3

TO THE PEOPLE.

THERE is a false likeness among you, my dear friends; a vile, hypocritical, noisy, swaggery fellow, that is usually taken for you, and whom the journalists invariably swear by; a creature that is called "THE PUBLIC." I know not more pragmatical conceited animal than this said *Public*. The PUBLIC is the grub of the day; he floats on the mere surface of time; he swallows down the falsest opinions; he spouts forth the noisest fallacies; what he says one hour, he unsays the next: he is a thing of whims and caprices, of follies, and of frenzies.—*Bulwer.*

LINES

COMPOSED ON A SICK-BED,

By S. T. Coleridge.

THE Heir of Heaven! henceforth I dread not death,
In Christ I live,—in Christ I draw my breath
Of the true Life. Let Sea, and Earth, and Sky
Wage war against me: on my front I shew
Their mighty Master's seal! In vain they try
To end my Life, who can but end its woe.
Is that a Death-bed where the Christian lies?
Yes!—But not *his*: 'tis DEATH itself *there* dies.

A QUESTION FOR ALGEBRAISTS.

Two Arabs had sat down to dinner, and were accosted by a stranger, who requested to join their party, saying, "that as he could not get provisions to buy in that part of the country, if they would admit him to eat only an equal share with themselves, he would willingly pay to them for the whole." The frugal meal consisted of eight small loaves of bread, five of which belonged to one of the Arabs, and three to the other. The stranger having eaten a third part, and each of the two Arabs a third part of the eight loaves, arose and laid before them eight pieces of money, saying, "my friends, there is that which I promised to you, divide it between you according to your just rights." A dispute, of course, arose respecting the division of the money; but a reference being made to the Cadi, he adjudged seven pieces of money to the owner of the five loaves, and only one piece to him who had owned the three loaves. Yet the Cadi decided justly.

SIR P. LAWRIE.

The late Lord Mayor piques himself on his acute perception of crime, and forgetting the great leading principle that every man is considered honest until proved a rogue, he treats every man as a rogue until proved to be honest—an excellent Dogberry maxim, and stands in full force against his *worship* The fabrication of saddlery is not the most efficient course of study for a professor of jurisprudence; neither is a parer of pig-skins the best qualified for a judge. The following is a specimen of an *acute* magistrate of former days, disposing of a *charge* of piracy. He must surely have been a "citizen and saddler," or a Queen's-square stipendiary:—

Magistrate.—"Harkee, sirrah; you pitiful ill-looking wretch; what have you to say why you should not be tucked up immediately, and sent a sun-drying like a scarecrow? Are you guilty or not guilty?"

Prisoner.—"Not guilty, an't please your worship."

Magistrate.—"Not guilty! say so again, and I'll have you hanged without any trial. Answer me, sirrah, how will you be tried?"

Prisoner.—"By God and my country."

Magistrate.—"The devil you will! Why then I have nothing to do but to proceed to judgment."

Officer of the Court.—"Right, your worship, for if the fellow should be suffered to speak he

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

may clear himself, and that's an affront to your worship"

Prisoner.—"I hope your worship will consider———"

Magistrate.—"Consider! How dare you talk of considering, sirrah."

Prisoner.—"But I hope your worship will hear some reason."

Magistrate.—"I'd have you to know, rascal, I don't sit here to *reason*, I go according to *law*. Is my dinner ready?"

Officer of the Court.—"Yes, your worship."

Magistrate.—"Then, harkee, you rascal at the bar, you must be hanged because you have a hanging *look*; you must be hanged of *course*. That's the *law*. Take him away, gaoler."

SELECT NOTICES.

Hard Drinkers.—Burns greatest solace was whiskey and tobacco. Byron's love of wine made him savage instead of mirthful; and when commenced drinking so largely of gin, he assailed the character of Burns, and called him "a strange compound of dirt and deity" Cowley died by lying out drunk in a field one night. Dryden drank hard, but wine did not exhilerate his spirits. Parnel was a great follower of drams. Churchill was often found drunk. Prior was very intemperate, and Pope hastened his end by drinking spirits.——*Jenner.*—Krausse has calculated that before Jenner's immortal discovery, 400,000 were annually immolated in Europe by the ruthless monster—small-pox.—— *The Juvenile Vagrant Society.*—At a Parish Meeting in Holborn on this subject, Mr. Fearon very properly expressed his fears less the children sent to the colonies should be *enslaved* H. Amsiock, Esq. R. N. and Secretary under Capt. Brenton, said in reply,—"I have had a long acquaintance with the colonies, and have no apprehensions of any attempt being made to reduce them to a state of *practical* slavery!! We neither send them to the slave nor the penal settlements!!! It is true, slavery may be said to exist at the Cape of Good Hope, but then it is in a *very modified* form, and relates only to household work!!!!———*Expressions.*——The Duchess of Chandos would pertinaciously insist upon calling the drawing room *drawling*-room.—— Most of the despatches of the British Admirals have began very religiously—"It has pleased Almighty God, &c." but Lord Rodney, when he gave a drubbing to De Grasse, comprehended a new idea; the Admiral writes, "It has pleased God *out* of His divine Providence, to grant to His Majesty's arms a most complete victory."—— *Apology for eating Pork.*—Sir John Sinclair says in his Code of Health—"Pork is a savoury food; and as this animal is of *no use* to man when alive, it is, therefore, properly designed for food." —— *His present Majesty.*—Previously to the first appearance of the Royal stud in the name of William IV. the trainer had an audience of His Majesty, and humbly requested to be informed what horses, it was the royal pleasure, should be sent to Ascot Races? "Send the whole *squad*," said the King, "*some* of them, I suppose, will win."——*Precision.*—Honest Manton wrote 119 sermons on the 119th psalm.——In the Civil Wars, Stephen Marshall beginning to preach, divided his text into twenty-four parts, one of his hearers ran home for his night cap and slippers. ——*Noah's Ark.*—This vessel which took a hundred years in building, was, according to Bishop Wilkin, 547 feet long, 91 broad, and 55 high. It contained 72,625 tons! Sir Thomas Browne has a fine answer to the oppugneas of the scriptural deluge,—"That there a deluge once, seems not to me so a great a miracle, as that there is not one always."——*New World about to be Discovered.*—"To all the World. I declare the earth to be hollow and habitable within: containing a number of concentric spheres, one within the other, and that their poles are open 12 or 16 degrees. I pledge my life in support of this truth, and am ready to explore the concave, if the world will support and aid me in the undertaking." Signed Jno. Symmes, of Ohio, late Captain of Infantry.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

THE KING'S PROCLAMATION

Of the 4th day of September, 1833.

On the 1st of August next, *begins* the reign of universal liberty throughout the vast regions over the earth, where the sceptre of our Sovereign Lord the King is acknowledged; and on the 1st day of December next, the *monopoly* in human flesh in this Colony shall cease; or in the words of the Blackman's Charter, all Slaves "will upon, and from that day be absolutely and for ever manumitted and set free." Yes, upon that day, slavery in this Colony is numbered amongst the crimes denounced for punishment by the Law. The consequence of such a singular change as this, must occasion in society, has been ingeniously provided for by the Government; for whilst, by the rapidity and decision of their acts, they have nearly satisfied the abolitionists, they, on the other hand, have succeeded in turning the Slave-owners into friends of the measure But it was not merely to the down-fall of slavery and compensation of the proprieter, that Government were to confine their care. If they stopped short, after a mere abolition of slavery, what was to become of the slave? The ministry hesitated but little, and the Act contains ample provision for securing the interests of both parties in question.

It seems an exceedingly wise provision of the Act, that by an *intermediate* state of attachment to the soil, the negro should for a time, retain possession of his present habitation, and during the time of his contract pay for it, and for the periodical supplies of clothing, by a *reasonable* portion of labour in lieu of money. Before the expiration of the term of apprenticeship, much will certain require to be done by Government, the Clergy, and the Missionaries; but much more by the landed proprietors themselves. No *good* master need fear a want of hands to assist him in the labours of his estate. Let him turn his attention to the cottage system—let him seek to make a happy peasantry around his farm. Let him set apart garden allotments, and let the cow and the pig be associated with such arrangements. Then come the schoolmaster and the missionary. And by the bye, this act of redemption is worthy of notice in its important particular of *toleration*. It gives for the first time, a *Toleration Act* to this Colony. It removes every sort of restriction hitherto felt by the ministers or teachers of the christian religion, whether lay or ordained, in their labours to diffuse it; the only limitations to their perfect freedom being the same as those which exist in the mother country.

Another provision of this statute is, that to ensure a wise and impartial administration of the laws under the present and future circumstances, a body of gentlemen to act as special magistrates are to be appointed, unconnected with local prejudices, and independent of colonial influence,—whose presence every where dispersed, cannot but inspire confidence, and promote the march of civilization and general improvement.*

LITERATURE.

The South African Directory and Almanack, for the Year 1834. By George Greig. Pp. 280.

This Annual contains a large fund of colonial and general information, and carries with it, its own evidence of great practical utility. The Calendar exhibits its usual perfection of accuracy, and in the astronomical arrangement, historical interspersions, and reminiscenses, the reader will not be disappointed in looking out for events to come, or in taking a retrospect of the past The farming and horticultural directions embrace a great deal of physiological information, interesting and useful: in a word, there is in the two hundred and eighty pages before us, matter enough to furnish the reader, almost daily, with renewed materials for exercising his thoughts, and contemplating the progress of society, and the growth of the public Institutions at the Cape of Good Hope.

MEDICAL TREATISE,

By R J. Zeederberg, M. D.

We have been pleased with the Thesis of this talented native of the Colony, on obtaining the degree of Doctor of Medicine in Edinburgh's famed University. The subject, which is written in Latin, is on *Peripneumonia;* or, Inflammation in the Lungs, a disease prevalent in every climate of

* It is said that a number of poor ignorant farmers in the distant parts of the Colony, are acting like Pharoah, and are determined "not to let the Children of Israel go" free. And that they are seeking asylums in savage countries. So much the better—there will be more compensation-money for those who remain behind Will nobody recommend certain other Patriots to join in the graud march!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the world. The treatise before us, describes, in the first place, the many distinct or specific *kinds* of inflammation, and the author founds his theory on the opinions of the celebrated Dr. Cullen Mr. Zeederberg then proceeds to point out the causes of the disease and methods of cure. We are told that *cold* sustained in any part of the body which checks perspiration, and occasions a great determination of blood to the lungs, is the cause of Inflammation. A particular attention to clothing, more particularly the wearing of flannel, is a preservative which parents would do well always to bear in mind. In the methods of cure, the author recommends the *low system*, in which *the lancet* stands pre-eminent.

This learned production is written in fair and classical language, but we smiled over a paragraph at page 9—in reference to a patient being carried off after a short attack of the disease—"Ubi homo breri post morbi accessionem extinguitar;" which, in the literal, we take to be, *extinguished* or *snuffed* out.

This Thesis, under the influence of the proper sense of filial affection, is dedicated to Mr. R. A. Zeederberg, of Cape Town.

REPORTING PROGRESS.

JANUARY, 1834.

Retrospect.—We have had the pleasure of seeing all the great questions, and all the great undertakings, connected with the welfare of this colony, which we have either advocated or recommenced, settled or proceeding towards a settlement We need only to refer to the liberty of the Press; the abolition of the partial and injurious laws affecting the free-coloured population: the abolition of slavery; and in the improvements in agriculture, not to mention a multitude of less conspicuous but highly valuable changes which have been effected within the last *ten years*—to satisfy our readers that we have no ground of complaint against Providence. *S. A. Commercial Advertiser.*

Whale Fisheries.—During the last year there have been symptoms of decline in our fisheries; owing, we believe, to three great wants, viz: the want of capital, the want of hands, and the want of *skill.*—*Ib*

Government Circular.—In reference to His Majesty's Proclamation for the abolition of slavery, a circular was issued on the 7th, requiring the Public Functionaries, but more especially the colonial clergy and ministers of every religious persuasion, to unite with the local government, &c. and requesting them to cause His Majesty's Proclamation to be desseminated as extensively as possible.

Agricultural Society.—The Annual Meeting was holden on the 8th, in the Commercial Exchange, Hon. Sir J. Wylde, LL.D, in the chair. The 2nd annual Report of its proceedings has been published Agriculture appears to be advancing in all its branches The Prizes this year were awarded as follows: Messrs. Korsten, Scheuble, & Co Cradock's Town, near Port Elizabeth, for the nicest sample of wool. 2d prize to Messrs. Breda, Reitz, & Co. 3d, to Mr. Davis near Cape Town, for a sample of bacon Four Silver Cups were distributed as follows: Mr. Marais, Drakenstein, for the best sample of Wine. Mr. Collison, Cape Town, for the best sample of Brandy, Messrs. Deneys, Cape Town, for the best sample of Beer, and to Mr. O'Connell, of George, for the best sample of Hops.

Arrival of His Excellency Sir Ben. D'Urban.—His Excellency, with Lady D'Urban and Suite, landed from the Mount Stuart Elphinstone on the morning of the 17th. The Governor was received by the whole of the Public Authorities; the streets were lined with the military—colours were every where flying, and the Artillery fired a salute. Besides these public demonstrations, the whole population of Cape Town, had turned out in the streets, or were at the windows or tops of the Houses. There seemed to be in the anxious and respectful demeanour of the immense multitude, the wish imprinted on each countenance, in reference to Sir Benjamin D'Urban and his family,—as recorded in the 118th Ps. verse 25.

Port Natal.—A highly respectable and numerous meeting of the inhabitants took place at the Commercial Hall, to consider the propriety of establishing a settlement at Port Natal. Mr. Borcherds was called to the Chair, when a series of Resolutions were adopted, the 6th of which embodied a memorial to His Majesty in Council, praying for an adequate Military force, &c. The movers and seconders were Mr. Advocate Cloete, Dr. McCartney, and Messrs. M. Breda, Korsten, Phillips, (of Albany,) Ebden, Chase, Gadney, Pillans, Merrington, Greig, H. Ross, and Chiappini.

Exports.—The last quarter's Return of Exports during the months of October, November, and December, 1833, is of the most satisfactory nature, and furnishes additional proof of colonial prosperity.

Public Schools.—The Grammar School, under the direction of the Rev. E. Judge, A.M. the Rev. Dr. Okes' School, and the South African College, were re-opened on the 27th. The latter was recommenced with religious service in the Reformed Church.

[COMMUNICATED.]

Graham's Town.—We are all a *wool-gathering* here—merino's are all the fashion, and a surprisingly happy change has taken place in the prospects of the settlers. An Agricultural Society has been formed, uniting in co-operation with Uitenhage and Graaff-Reinet Our "Journal" does not hesitate to say, that the fire thus kindled, has been lit by a spark blown hither from Cape Town. Mr. Collis, a trader, is about to start for Port Natal, (over-land,) and to commence business there on a grand scale. The field of enterprize beyond the boundaries of the colony is opening up, and presents a boundless extent for investigation. Our Missionaries are all of them more or less engaged—it were desirable that in translations of the scriptures into Caffer—the English text should also accompany the work. In the Schools it is surely high time to teach the English language.

Beaufort.—New year's day, the thermometer was as high as 88 degrees in the shade. There is a great need of mechanical labourers here. Many buildings are at a stand-still for the want of such. We have not been visited (like many parts of the world) with pestilential diseases,—with hurricanes,—with unfavourable seasons,—or with rebellion; but, on the other hand, it is gratifying to find the colony fast improving both in respect of agriculture and commerce. We are blessed with the necessaries of life in abundance, and which are attainable by the humblest individual, if possessed of common prudence and industry.

George.—People complain here of the great want of an English Service in the Church. And such utterance is most just. There are a great many English families around George, and such deprivation is a great drag-chain to the prosperity of the towns and villages of the interior. It frequently prevents many a family with capital from fixing its location in these places. Not only so, where the service is conducted in one language, and that, too, a *foreign* language, it affords but poor encouragement to the Government English Schools. The School and the Pulpit should be allies instead of enemies. Most men in all the public offices speak and write in both languages, why should any appointment take place to a *Church* paid by Government, unless the incumbent be as qualified as other men are, to speak in English. The press has been at fault on this head—let our statements of this grievance be heard at the Colonial Office, and let us beseech His Excelleney to remedy the evil of which we complain.

Graaff-Reinet.—A load of fine wool was brought this month to our market, to the great satisfaction of the friends of colonial improvement It was well washed and packed. The sum actually realized by this single freight was a trifle under Rds. 500.

Caledon.—The storm which seemed to gather against our Village Pastor for anticipating the downfall of slavery just one day and three-quarters of the actual official notification of this mighty event, has ended in sun-shine. The district is prosperous—the Moravian Brethren in their Missionary labours—

'Pursuing the noiseless tenor of their way,'

and best demonstrating that

'The bird that flutters least is longest on the wing.'

The Hot Baths continue to be visited as usual. The village might be greatly renewed by the example and presence of a few public-spirited individuals. Such would no doubt prove a match for the idle and the talky, who often infest the villages, and between whom and Truth there is no connection.

Swellendam.—A comfortable Inn is much required here, and the facilities of procuring horses. Water is abundant—and is even wasted. The Government Villa of the Civil Commissioner is quite an ornament to this part of the country. No man, however ambitious, could require a more charming spot for the enjoyment of his *otium cum dignitate.* The attendance at the English School is but small—but the master does his duty. Country people have no idea of school discipline, and never second the efforts of the teacher. The Fair has failed—the Sessions are just over, and only think of the blockheads of Jurymen, who, in a case where several were indicted, and when the Judge in the clearest manner pointed out that only one of the party was guilty, and that not a shadow of evidence had appeared against the others, yet these sapient *legislators* brought in a verdict of *all guilty.* Public business (at the offices,) is soon over here in the day, but Mr. Aspeling is ever ready at his post, and is an excellent magistrate. Much is due to Mr. Barry for his prompt methods of doing business. To the farmers he is a liberal purchaser, and is ready to supply money or goods for their produce. A good deal of surprise has taken place on the report that the new minister of the Reformed Church is about to open a school and take in boarders from Cape Town. *No man can serve two masters!* What, *if the hungry sheep (in this extensive district,) look up and are not fed?* But what can parents think who desire an efficient education for their children, in removing them away from the Public Schools of the metropolis, with all the accompaniments of polite education,—for instance, French, and Music and Drawing, and Books and Lectures, and a *knowledge of the world,*—for the sake of rencontre with the mediocrities, the self-denials and mortifications of an unlettered village.

Stellenbosch.—This populous town is improv-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ing, and would make still more progress, could an *English Service* take place once a week in in the Church. It is the interest of all the inhabitants, both in a spiritual as well as a pecuniary way, to lay this to account. Many visitors, who might become residents, are kept away by the lack of such services,—*Dutch* being the only language introduced in the Church of the English Government. * * * * The medical attendance here is of the most valuable kind, and provisions are amazingly cheap And a good road is only required from hence to town to throw in loads of provisions—meats, drinks, and vegetables into Cape Town at rates lower by 50 per cent. than what the inhabitants now pay. It must not be forgotten that the people of the district are ready to make the road at their own expense, provided Government will permit it—or do the work itself.

Hottentot's Holland.—The English School here is most prosperous, and very efficient are the pupils. The Rev. Mr. Edgar, minister of the parish, is the master. This is the only instance in the colony in which Mr. Barrow's plan is adopted. He proposed, when editor of the *Government Gazette*, that the country ministers should also become teachers of the English language. The arrangement at this pleasant village on the part of the excellent pastor, does not interfere with his clerical duties. The whole of the parish can be visited in half-a day. Besides, the school is open betimes in the morning, and the work done when some people are sleeping. But the disinterested conduct of the minister is beyond all praise. He receives the stipend from Government for conducting the school, and disposes of it to liquidate the debt of the church. The strand near the village is becoming celebrated as a watering place. It presents a beautiful shore, and may be considered the Worthing of the Cape. The present applications for lodgings are beyond precedent.

N. B. No communications have been received from Worcester, Tulbagh, Clanwilliam, Cradock, Somerset, or Uitenhage. We shall be glad to hear from these places.

WHIMS AND ODDITIES.

Going-a-Wrecking.—"Life is but a journey, let us live well on the road," is the inscription on Mr. Peck's sign-board, at the Gentle Shepherd, near Simon's Town. On this principle we suppose the four gentlemen acted, who started last week to the sale of a wreck off Dyer's Island, about two days journey from Town. The bill of fare has fallen into our hands, viz:

1 Ham,	2 Turkeys,
6 Tongues,	3 doz. Sausages,
2 Pine Cheese,	6 loaves of Bread,
1 box of Biscuits,	3 doz. Champaigne,
2 gallons Brandy,	3 doz. Madeira,
4 dozen Claret,	100 bottles of Beer,
1 doz. Seltzer Water,	&c. &c. &c.

6 boxes Seidlitz Powders,

The Calculators at Fault.—On the 25th of last month (Christmas,) the whole population of Town and Country were all in readiness to witness an eclipse of the moon, which was predicted in the *Advertiser* to appear about 8 o'Clock at night. The moon, however, shone as resplendantly as ever, and no obscuration took place. The next morning meeting a little fellow connected with Mr. Greig's Office, the inquiry was made—"Where is the eclipse you told us about?" "O! Sir," was the reply, "it was put off for a day,—it will certainly appear to night." The boy was correct.

Killing two Birds with one Stone.—A medical gentleman announces to the Cape Public, by *advertisement*, that he has just married a wife, and for the information of the ladies in general, tags to the information "Obstetrick Doctor."

Kaapsche Almanak.—In Mr. De Lima's Almanack, which is, by the bye, outrageously high-priced, we discover one or two literal novelties. We read as follows:

"Moore, Edward, messenger to the cottage of the late Mr. Advocate Joubert."

"Home, James, *must* be James Horne."

"Bance, John, must be James Port Captain."

"*Whiskey* & Co, Brewery, 59, Dorp-street."

Anecdote.—"I am going to build a cottage," said a medical gentleman, who is celebrated as an extractor of teeth; "And pray tell me," said he to his friend, "of what order it shall be, and how I shall name the place." "You can't do better," said the other, "than build in the *Tuskan* order, and call it "Forcep's Hall."

A Writer on the Cape Cookery.—In the Journal of Agriculture, great fault is found with the culinary matters of the colonists, and the writer declares it to be his belief, that all the profits of merino wool, will not tempt the farmers or their wives to forgo the greasy temptations of sheep's tail. It is true enough, that we do not greatly excel in the gastronomic art, especially if we contemplate every kind of meat boiled to rags, or burnt up by roasting; game without gravy, and turkeys without *stuffing*. And, moreover, beans *run to seed*. brought to table and drowned in sour wine, (a substitute for vinegar,) potatoes peppered with nutmeg, and cabbage strewed with pounded cinnamon and sugar. But we check ourselves, —let us not forget our ancestors in English history, and their modes of decking the table. Only think of their peculiar tastes—pepper, oil, and lemon associated with patridge —larded hog's feet, and bacon tart,—pork with molasses,—mackerel with gooseberry sauce,—and roast rumps of beef well covered with virgin honey !*

The Reason Why.—The other day, a merchant affixed to his notification placard in the Commercial Room, the word Sydney, to which a vessel was to sail, was written *Sidney*. "That's an error," observed a bye-stander, "and I'll tell you the reason why. That—*i* ought to be *y*, and that's the reason **Y**.

Extraordinary Bill of Fare.—The Advertisement of the Agricultural Society the other day, announced to the public, that "a dinner of the members" was to take place.

EXTRACT

OF AN ADDRESS OF THE MEMBERS OF THE SOUTH AFRICAN LITERARY AND SCIENTIFIC INSTITUTION TO SIR G. L. COLE.

Our resources are very limited when compared with the objects to which they may be profitably devoted, or rather when contrasted with the means for their accomplishment, the works to which our position and circumstances invite us are boundless. But all parts of the empire are influenced by our condition and our progress. They are interested in the statistics of a country so new and so peculiar,—in its facilities for the progress, improvement, and extension of its population and power,—in the materials it offers to Art and Commerce,—and in the discoveries it may afford to Science. Every generation will profit according to the energy, perseverance, and liberality of its efforts. There may be o rapid accumulation of knowledge and advantage from combined, constant, and well-directed endeavours to obtain them, or on the other hand, much which men need, or would value, may lie dormant till awakened in the slow or accidental gradations, by which individual exertion creeps to its discoveries. We would as an Association seek the benefit of our country by combining together the small efforts which each has the means of making. But this Colony can do little singly. It is only an individual amid the members of the empire, and we would fondly cherish the hope that other countries will never be indifferent nor refuse their help toward proceedings which tend to benefit them all. We are therefore convinced that if the ease, safety, and advantage of exploring the great Regions to the North of us were appreciated by the National Government, we might expect early and effectual aid for that purpose. We would also confidently anticipate that something may be done to forward a suggestion made by your Excellency, that part of the ground adjoining to Government House may be converted into a Botanic Garden, or a Preserve for native Plants which it is of importance to examine, or foreign ones, which it must be beneficial to naturalize. We respectfully request that your Excellency will make representations in England on our behalf in regard to these objects, and your Excellency may rest assured that this Institution will be ever ready to devote to them any resources or endeavours which our circumstances may enable us to afford.

* Allowed to the boys of Westminster School 100 years since, on days of public rejoicing.

SOUTH AFRICAN MUSEUM.

Mr. Von Ludwig, in prosecution of his zealous and effective endeavours to naturalize the productions of other lands, has succeeded, during the last year, in procuring thriving plants, now growing in his garden, of the following species:

Amonium Zinziber, Ginger; Maranta Arundinacea, Arrow Root; Olea Europea; Calampilis Scabra; Zamia, new sp.; Phaenix Reclinata; Hibiscus, several species; Phormium Tenax, New Zealand Flax; Eucalyptus, several species; Cassia, several species; Mimosa, do.; Laurus Cinamomum; Nux Ministica; Salvia Splendius; Ipomæa, several species; Budleya Madagascariensis; Heliotropium] Peruvianum; Cyclamen Pyrenaicum; Cyclamen Persicum; Casuarina, several species; Coffea Arabica; Camelia Japonica, 18 varieties; Mangifera Indica; Cactus, several species; Gardenia Thunbergii; Urania Specciosa; Bromelia Ananas, 4 varieties; Gloriosa Superba; Dracoena Ferrea; Aloe, several species; Democarpus Litchi; Laurus Nobilis, Eugenia Uniflora; Anno squammosa; Tamarindus Indica; Bombax.

INTERESTING APPEAL FROM THE ISLAND OF TRISTAN DA CUNHA.

THE following official document has been kindly placed in our hands. Southey in one of his poems fortels the day when instruction shall visit all lands:—e'en

"The smallest habitable rock beaten
By lonely billows, shall hear the sounds
Of humanized Society."

And here is a happy illustration of it at Tristan da Cunha.

WE, the Undersigned, being three of the Senior and principal Inhabitants of the Island of Tristan da Cunha, do hereby agree to furnish any respectable middle aged people, (as man and wife,) who are willing to and capable to undertake the office of Schoolmaster and Mistress, with house and all necessaries for their subsistence, as well as to present them every year at Christmas with a tenth part of the amount of sale of our produce, so long as the Schoolmaster and Mistress shall conduct themselves with propriety, and chuse to remain with us. And we do further agree, that any persons sent us with a Certificate of good conduct and necessary qualification, signed by the Governor of the Cape of Good Hope, or by Admiral Warren, (the Naval Commander in Chief,) shall be considered by us eligible to the situation, and their passages to this Island paid to the Master of any merchant vessel bringing them immediately on their arrival, (the sum of passage money having been agreed upon by either the Governor or Admiral before-mentioned.

Signed by us at Tristan da Cunha, this 17th day of January, 1834, on board H. M. Brig *Forrester*, in the presence of Commander Booth, R. N.

WM. GLASS, Governor.
RICHARD RIELLY, his X mark.
JOHN TAYLOR, his X mark.

RECENT DISCOVERIES IN THE NORTHERN PARTS OF CHINA.

(SECOND NOTICE.)

(Concluded from our last.)

PROCEEDING in their course from Amoy, round the northern coast of China, they were obliged, by stress of weather, to anchor the *Amherst*, under the direction of Mr. Lindsay, off an island called Keetan, where they had an interview of a singular nature with a mandarin, who was the government admiral of the district. His Chinese name was *Tsung-ping*.

'This mandarin, whose name is Wan Tajin, is a native of Keung-shan, and had lived some time in the neighbourhood of Macao, where he had frequent opportunities of seeing foreigners. He was received on board the Amherst with the respect due to his rank; a salute of three guns was fired, and every attention paid to him; but it appears that the ideas he had there acquired of foreign character, did not lead him to imagine that much courtesy was requisite towards us. He began the conversation by abruptly asking various questions, hardly giving me time to reply: "Where do you come from? What is your nation? What business have you here? You must be gone instantly," &c. &c. I had just commenced a reply, when his Excellency turned sharply to Mr. Gutzlaff, and said,—"You are a Chinaman;"* Mr. Gutzlaff denying it, he told him to take off his cap, that he might see if he wore a tail; which being done, he said, "No, I see you are a Portuguese." I now told him that the ship was English, which he treated with perfect discredit, saying, "I have lived at Macao, and know the barbarian customs; your ship is from Macoa." I again replied that it was strange in his Excellency to accuse me of falsehood in this manner, and that both myself and the ship positively were English, in spite of all that he had known and learned at Macao. I then took a pencil and wrote on a slip of paper, "Ta-ying-Kwo (Great Britain) is my nation," and placed it in his hands. On receiving it he burst into the most scornful laugh, and exclaimed, "Nonsense! the great English nation! the petty English nation you should say! You tell lies to me." Up to this moment I had kept my temper perfectly, and answered all his insulting remarks with civility; but I confess that the grossness of this last speech completely overcame the natural placidity of my disposition. I snatched the paper, which he was still laughing at, out of his hands, and seizing hold of the admiral's arm, I said, "As you have come to my ship merely to insult my nation (the Ta-ying-Kwo) and myself, I insist on your instantly quitting it; and suiting the action to my words, I was on the point of handing him out of the cabin. His Excellency now saw that he had carried the matter too far, and commenced apologizing. "Pray excuse me; I did not mean to offend; you know well there is the Ta-se-yang and the Leaon-se-yang (the one is generally applied to Portugal, the other to Goa,) I thought there was also the Ta-ying-Kwo and the Leaon-ying-Kwo; I acknowledge my offence, and again beg you will excuse me." This ingenious apology was accompanied with a profusion of bows, and behaviour as cringing as it had before been insolent. He staid on board a considerable time, but his manners and conduct were so singular as to raise a suspicion that his judgment was not quite sound, which was corroborated by some of his officers who accompanied him, and who expressed much regret at the indecorous behaviour of their commander. I certainly, on no other occasion, witnessed such grossness of manner as was exhibited by Admiral Wan; for, the demeanour of Chinese mandarins in public is generally distinguished by a considerable degree of dignity and decorum.'

* Mr. G. is a Prussian Missionary.

Remaining here for some days, the party established with the natives, who were at first shy and reserved, a communication, which was particularly satisfactory to them, because they constituted the first Europeans on whom these people had laid their eyes. The party next entered a river which led to Fuh-chow-foo, the capital where the governor-general of the provinces of Fokien and Che Keang resided. Mr. Lindsay drew up a petition to this authority, in which he stated that an English ship had arrived with a cargo, the chief articles of which he enumerated; and, having expressed his willingness to sell these to the people, he proposed to take either money or tea in barter, the latter he heard, being of excellent quality in the district. The petition was finally sent to the governor, as we shall see; and the Amherst passed up the river, in which it anchored near an island called Koo Keang. No sooner was the ship seen by the people, than they came down in multitudes from curiosity, and indeed, in the first few days, they so impeded the crew in their business, as to require that the Captain of the ship should hang a rope across the deck, beyond which none were to pass. In conformity with the very politic conduct which they had adopted during the whole voyage, the party here, as elsewhere, fixed up a tablet, on which an inscription was engraved, implying that medical assistance would be afforded gratuitously. The Chinese have a very strong confidence in the power of foreign physicians, and it was therefore with great delight that they read this address. On the afternoon of the day of their arrival, two respectable men came on board, and earnestly solicited a few of the party with whom they conversed, to land and see them at their village. Mr. Lindsay and Mr. Gutzlaff complied with the invitation, and proceeded to the island and there took tea in the shop of their host. The people of this island as they walked over it, exhibited a great desire to obtain some tracts which the travellers carried with them, and which were of a moral, religious, and scientific nature. "Having walked," says Mr. Lindsay, "over the island, we were about to return to the ship, when our two friends again assailed us with entreaties to return and partake of a small entertainment they had prepared for us; this we could not refuse, although it was already dark, and they led us to a public hall of the village, where we found a table spread with an excellent Chinese dinner, to which we were invited to dine. Our hosts would not be seated, but stood and waited on us, at the same time keeping off the dense crowd, which soon filled every part of the hall. The younger ones climbed on the rafters, and every place from which a glimpse of the strangers could be caught. Nothing, however, could exceed the decorum which was kept up, or th e general feeling of kindness and goodwill which seemed to prevail towards us. This anecdote is trifling in itself, and unconnected with the public business of the voyage. I have mentioned it," says Mr. L. "as indicative of the natural friendly disposition of the Chinese towards foreigners; and I am happy to say that nothing occurred during our residence here in any way to lessen it."

Led by his experience, Mr. Lindsay did not hesitate to propose an expedition to the capital itself of the province, Fuh-chow-foo, in order to present his petition in his own person. On his ascent up the river, he was met by several mandarins' boats, which were carrying officers from the capital to hold communication with the strangers; but, by acting on their resolution to yield nothing to intimidation, the lat-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ter were allowed, though frequently stopped, to proceed without further molestations. After pulling for about twenty-five miles, they at last came within sight of the far-famed bridge, on both sides of which the town lies; and, having arrived at a public office on the south side, boldly inquired for the viceroy's palace. They were told that it was on the opposite side of the river; the boat veered about, and they dashed to that side. The bridge was covered with the awe-struck inhabitants; and, when five of the party landed, they were surrounded by an immense crowd. They had to proceed about a mile and a half through the suburbs, when they arrived at the city; here, they entered a spacious building, through a vaulted passage, to which, however, there were no gates, and afterwards walked a quarter of a mile more, when they were ushered into a public office, the door of which was immediately closed after their entrance, in order to keep off the crowd. Here, the utmost amazement was expressed by the officers, who could not imagine for an instant how such an apparition could have come upon them, since the strangers were obviously beings in a form and shape, and with an exterior which they never had seen before, and yet had no guides to lead them. A mandarin soon came to take down the names and surnames of the party, upon which Mr. Lindsay showed his petition, saying, that he wished to present it in person. The officers told him that every thing should be settled by the next day, and that, upon that night, they should be conducted to a respectable house, not far from their ship, where they would be hospitably and kindly treated. The strangers, trusting to these promises, returned to the place where they had previously landed, but found that their destiny had really been appointed, not for the land, but for the water; and they must retire to a boat selected on purpose for them in the river. After some altercation, they agreed to go to this boat, but, on reaching it, found that it was a common trading vessel, filled with persons of the lowest class. Mr. Lindsay, with his party, instantly returned to the shore, and, going straight to the custom house, told the people that they intended to spend the night there. The residents immediately complied, and they had scarcely been seated there, when the mandarin named Whang, who had already been the person to procure them the boat which they were forced to abandon, made his appearance. As the place was government property, the party was induced to leave it, particulary as another mandarin who had already shewn them kindness directed them to a public office belonging to a Tartar general, where they would, as he promised them, be taken care of. But scarcely had they established themselves there when they were again visited by Whang, who was insolent enough to tell them that barbarians could not be permitted to remain on shore, and ordered them contemptuously to rise and go back to their boats. Mr. Lindsay and his companions now became indignant, and burst forth into a torrent of expostulation against Whang, telling him over and over again that they meant to stay where they were; and so saying, they drew a large table from the corner of the room, and placing their stores upon it, took their seats around it. "It was midnight," says Mr. Lindsay, "before the matter was finally settled, and the mandarins all left us to our repose. The old mwan-chow who had brought us here appeared much annoyed and said, It is not my fault, but Whang is my superior; and both himself and several of the others expressed themselves ashamed of the inhospitality shewn towards us. It is worthy of remark, that, from the moment we put their authority at defiance, the demeanour of many of the mandarins who appeared before indifferent became cordial and friendly, and even Whang's tone of contempt and insult changed to that of persuasion and argument. It is a singular fact, and one so contrary to general principles of human nature, that nothing but practical experience can convince one of the truth of it; but, in every case, both on matters of greater and smaller importance, I have found that little or nothing either can or will ever be obtained from the Chinese government or its officers by humble entreaty and conciliatory arguments, but that the moment the tone is changed, and a resolute determination is evinced of carrying your point at all risks, it will be conceded with apparent readiness, particularly if the claim is founded on justice and moderation; and, what is more singular they appear to look on you with more good-will and cordiality in consequence."

Shangae in Keang-soo, a celebrated emporium of China, was the next place which the Amherst visited. Here their approach was disputed very strongly, but firmness and courage triumphed over every opposition. All the wharfs, as Mr. Lindsay says, quoting from his journal made at the time.

'All the wharfs were crowded with people, who were attracted by our appearance. We landed in front of a large temple, dedicated to the Queen of Heaven, where we were subsequently lodged. The crowd opened right and left to give free admission, and we walked through it into the temple, where a theatrical performance was going on, which our appearance immediately stopped, as every one's attention was turned to us. I asked the way to the city and the taoutae's office, and we proceeded at a rapid pace in the direction indicated As we approached, the lictors hastily tried to shut the doors, and we were only just in time to prevent it, and pushing them back, entered the outer court of the office. Here we found numerous low police people, but no decent persons, and the three doors leading to the interior were shut and barred as we entered. After waiting a few minutes, and repeatedly knocking at the door, seeing no symptoms of their being opened, Mr Simpson and Mr. Stephens settled the point by two vigorous charges at the centre gate with their shoulders, which shook them off their hinges, and brought them down with a great clatter, and we made our entrance into the great hall of justice, at the further extremity of which was the state chair and table of the taoutae. Here were numerous official assistants, who seeing us thus unexpectedly among them, forgot totally our unceremonious mode of obtaining entrance, and received us with great politeness, inviting us to sit down and take tea and pipes.'

In the further intercourse which the party had with the authorities, Mr. Lindsay showed a degree of boldness and contempt for them, by which they were not only completely astonished, bnt humiliated, readily complying with every demand which he made upon them, and endeavouring to conciliate him and his party by the exercise of the most liberal hospitality. Notwithstanding all this kindness, the government was making preparations in the meantime to force the barbarian vessel to depart, and from the account of the warlike resources collected by the government, which is given by Mr. Lindsay, it appears that their ideas of war were conceived on a most ludicrous scale. Several excursions into the neighbouring country were performed by the party, and in those districts which they visited, where the people were not restrained by the presence of mandarins, they exhibited the greatest attention and kindness to the strangers, all without exception behaving towards them with evident partiality, and many loading them with presents of vegetables, fruits, &c. It was during this part of the voyage that Mr. Lindsay witnessed a curious

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

instance of the severity of military discipline in China. A mandarin, whose cap with a gold button was borne before him, was marched about in procession between two executioners, blindfolded, with a small flag on a short bamboo, pierced through each of his ears; before him was a man bearing a placard with this inscription:

"By orders of the general of Soo and Sung; for a breach of military discipline, his ears are pierced as a warning to the multitude."

CORRESPONDENCE.

To the Editor of the Graham's Town Journal.

THOUGHTS ON OUR HUMANE POLICY, AND THE CIVILIZATION OF THE NATIVE TRIBES.

"Thou shalt not kill."

SIR,—I congratulate you on that decision of character which you have manifested in the case of a recent *military* appointment to a *civil* station; and I thank you for that kindlier view of Caffer politics which you have taken than was wont to be discussed in your now greatly-improved Journal. My present object is not to tilt with the military gentlemen, many of whom are known to be inestimable men, but I would just throw out the fact for their consideration, and those who appoint them to civil duties, that by an order of the home government, all *civilians* are immediately to vacate the army. (such as garrison appointments.) Of course, the large revenues derived by the Governor of Gibraltar from *local* revenues are to be abolished. And, instead of holding out temptations to officers of the army to yearn after and make applications for civil service in connection with half-pay or otherwise, it is intended to establish *a scale of rewards* to *merit;* the amount of which is fixed at £8,000 a-year.

Now, as to our border tribes, it is high time the subject should be taken up broadly and fearlessly, and the press woefully hides its light under a bushel, if it suffers itself to be hoodwinked any longer on this subject. You, in your *Journal*, Sir, and the *Advertiser*, have done your duty.—May you persevere in your honourable career.

Strangely have we applied our christian philanthropy for a series of years past towards winning the frontier tribes to the standard of peace and good-will. Instead of exercising in the least degree our boasted civilized superiority, we have brought into the field all the fierceness of savage life—all the hatred, contempt, distrust, and cunning of those who are the mere children of untutored nature. We have been true *Ishmaelites* in the case, —*Our hand against every man, and every man's hand against us.* But let me advert to a fact in my own experience. I visited the Frontier, and was about to proceed to various parts of Caffraria. An authority, with much earnestness, begged me to desist. Dangers innumerable were pointed out—death and destruction were presented in reversion, in all manner of hideous shapes—the Caffers were intent on murder and pillage; in a word, the Frontier towns and villages were all in the most imminent danger. If I still determined to run the risk of forfeiting my life by advancing it was considered of paramount importance that myself and servant should be well armed. Without adopting the advice given, we entered Caffreland, being *armed* with a couple of quince twigs gathered from the hedge. We visited many parts of the country, as well as numerous kraals: we were sometimes benighted, and frequently thrown among bands of Caffres, who hailed us with every demonstration of respect. Everything was peaceable and quiet, and everywhere the hand was held up, not to curse, but to bless. In fact, I found out by actual experience, that the authority at Graham's Town had done injustice to the character of the Caffres, originating, probably, in some false report respecting them.

A general history of the wrongs of Africa may one day or other be gathered up. He that would do justice to the subject, would naturally expatiate on the monstrous, the wholesale persecutions perpetrated on the defenceless by the strong,—and which custom has almost legalized. I am not now adverting to the practices of commandoes and their auxiliaries—the boers; there have been cruelties and wrongs innumerable in the over-reachings and chicaneries of *business;* and it is awfully true, that the lust of *gain* has no where made so fierce and fell an exhibition of its hardihood as in this quarter of the globe. As the wealth and rising advancement of Graham's Town is so manifestly dependent on trade with the native tribes, it were well if the principles of this trade were *always* conducted with even-handed justice, truth, and integrity. It is not sufficiently considered, nor indeed is it sufficiently *known*, how powerful is the influence of truth and candour in conciliating the good opinion and the good offices of the savage. The latter is keen enough to distrust those whom they perceive to be unworthy of confidence. Real integrity is not without its voucher in the hearts of others; and they who maintain it, are treated with confidence, because it is seen that confidence can be safely reposed.

Perhaps, Sir, in no better way could we pay the debt we owe the Caffers, than by calling together (as some one has suggested) the Chiefs of every tribe, and, at a general public meeting, founding a society expressly for the purposes of civilization. In such a case, the inhabitants of Albany, and especially those of Graham's Town, are more intimately concerned. I think at such a meeting it would not be desirable that any gentlemen should be present dressed out in the paraphernalia of death's emblems. The "pomp and circumstance" of any war-like appearance would not be advisable. But I am aware that I am digressing, and shall therefore come to the *moral* of the present subject, by a reference to historical fact, in the progress of settling among tribes, either uncivilized or savage. I must premise, Sir, that in producing these facts, (even without comment,) they will be met by some men with a sort of instinctive opposition: they, nevertheless, deserve serious consideration, and will not be lost *to that small but increasing number—whether in this colony or elsewhere, who maintain in principle, and illustrate by their practice, the great duty in conforming to the laws of christianity, without regard to dangers or present advantages.*

A living writer of eminence, and one quite aloof from enthusiasm, (Southey) bears this remarkable testimony:—"There is but one community of christians in the world, and that unhappily of all communities one of the smallest; enlightened enough to understand the prohibition of using the sword to exterminate their brethren of mankind—taking for their guide the command of our Divine Master, in its *plain, literal, and undeniable sense;* and conscientious enough to obey it, subduing the very instinct of nature to obedience."* The reader of American History will recollect, that in the beginning of the last century a desultory and most dreadful

* Southey's History of Brazil.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

warfare was carried on by the natives against the European settlers; a warfare that was *provoked*, as such warfare has almost always originally been, by the injuries and violence of professed christians. The mode of destruction was secret and sudden on the part of the barbarians, and their cruelties were too horrible to relate. From this warfare the settlers sought safety by abandoning their homes, and retiring to fortified places, or to the neighbourhood of garrisons. But amidst this desolation, the *Society of Friends*, who were a considerable portion of the whole population, were stedfast to their principles. They pursued their occupations in the fields openly and unarmed; and without any weapons, either for annoyance or defence. And what was their fate? They lived in security and quiet. The habitation, which, to his armed neighbour, was the scene of murder and of the scalping knife, was to the unarmed Quaker a place of safety and of peace. *Three* of the Society were, however, killed. And who were they? They were three who had abandoned their principles—a spirit of distrust taking place in their minds, they took up arms and perished.*

The fate of the Friends during the Rebellion in Ireland, was nearly similar. It is well known that the rebellion was not only a time of open war, but of cold-blooded murder; of the utmost fury and bigotry, and the utmost exasperation of revenge. Yet the Quakers were preserved even to a proverb; and when strangers passed through the streets of ruin and observed a house standing uninjured and alone, they would point and say—"*that is the house of a Quaker.*" So complete was the preservation which these people experienced, that in an official document of the Society they say—"no member of our Society fell a sacrifice but one young man; and that young man had assumed regimentals and arms."

Again—whatever the quarrels of the Pennsylvanian Indians were with others, they uniformly respected and held sacred the territories of William Penn. The Pennsylvanians never lost man, woman, or child by them, and whilst those around them were suffering, and trembling for their existence, these were the people who possessed their country in peace and security. Pennsylvania continued to enjoy this repose for more than seventy years, and subsisted in the midst of six Indian nations, without so much as a militia for her defence. "The Pennsylvanians became armed, though without arms; they became strong, though without strength; they became safe, without the ordinary means of safety. The *constable's staff* was the only instrument of authority amongst them for the greater part of a century."* I cannot wonder that these people were not molested. There is something so noble in this perfect confidence in the Supreme Protector, in this utter exclusion of "slavish fear," in this voluntary relinquishment of the means of injury or defence, that I do not wonder that even ferocity could be disarmed by such virtue.†

In conclusion:—'There is reason to expect,' says Dr. Johnson, 'that as the world is more enlightened, policy and morality will at last be reconciled. When this enlightened period shall arrive, we shall be approaching, and we shall not till then approach that era of purity and peace, when "violence shall no more be heard in our land, wasting nor *destruction* within our *borders*." That a period like this will come, I am not able to doubt; I believe it, because it is not credible that the Righteous One will always endure the butchery of man by man; because He has declared that He will not endnre it; and because I think there is a perceptible approach of that period in which He will say—"*It is enough.*"—"Shall the sword devour for ever?"

With every good wish,
I am, Sir,
Your obedient servant,
HERMES.

* Barclay.

* Clarkson.

† Ramond, in his "Travels in the Pyrennees," fell in from time to time with those desperate marauders who infest the boundaries of Spain and Italy,—men who are familiar with danger, and robbery, and blood. What did experience teach him was the most efficient means of preserving himself from injury? To go "unarmed." He found that he had little to apprehend from men we inspire with no distrust or envy, and every thing to expect in those from whom we claim only what is due from man to man. The laws of nature still exist for those who have long shaken off the law of civil government. The assassin has been my guide in the defiles of the boundaries of Italy; the smuggler of the Pyrennees has received me with a welcome in his secret paths. Armed, I should have been the enemy of both; unarmed, they have alike respected me. In such expectation, I have long since laid aside all menacing apparatus whatever. Arms irritate the wicked, and intimidate the simple; the man of peace amongst mankind has a much more sacred defence—his character."

HINTS AND SUGGESTIONS FOR COLONIAL IMPROVEMENTS.

By WM. DUNN, *Esq. Resident at Sebastian's Bay.*

[THE following communication has been addressed to our publisher. Though somewhat too lengthened for our columns, we consider Mr. Dunn entitled to obtain a fair hearing. In the discussion of his varied subjects, we ask how it happened that the great staple commodity of the frontier (wool) should have been omitted. Mr. Dunn is evidently of sanguine temperament, and we like him the better for it. No man ever succeeded as a traveller or an agriculturist without possessing an ardour approaching to enthusiasm. Mr. Dunn has, we know well enough, laboured long in the field of enterprise, and amidst many diversified privations and discouragements, has pursued a manly course.]

BREEDE RIVER, SWELLENDAM,
1st February, 1834.

Mr. W. BRIDEKIRK,
Cape Town.

SIR,—As I presume you are a publisher as well as a printer, I have taken the liberty of laying before you a few thoughts relative to Public Improvements. I was induced to commit these to paper, in consequence of the offer of a gold medal by the Dutch Society for the enlargement of Civilization and Literature, (of which Mr. Changuion is Secretary,) to the person who should propose the best plan of improvement. In case I was successful, I desired the medal might be retained by the Society, but my packet was too late for the post. Perhaps some Society, or some new Publication, would accept of the enclosed, or it is equally at your service. I wish there was a Cape publication (like Young's Annals of Agriculture) in which the opinions of the editor were unknown. Why may it not form the commencement of some cheap periodical? Perhaps Mr. Changuion's Society contemplate such a publication; but it is advisable to do so soon, that our poor farmers may be assisted in finding purchasers for their grain now that God has sent them so fine a harvest. I will thank you to interest yourself on the subject: I would sooner have the enclosed printed and published in my own name, than longer withhold what I consider of great importance to make known.

Rivers in New South Wales, which often end in a morass, are minutely examined but no survey can I obtain of this noble river, which may be said to be an arm of the sea. By the introduction of fresh water here, I have rendered the only navigable river in the colony available to the purposes of commerce. It is obvious, from the neglect of Saldanha Bay, that the want of fresh water will render the finest port in the world useless. My exertions here have consumed my health and strength; the foot of man could hardly be traced when I first settled on this side of the river. I wish government would make the place private property, or some means could be devised to assist me. An English mind at once decides that, if this river runs into the oldest-settled and richest part of the colony, and *if* exports are the only source of wealth, that the metropolis of the colony should be here. I have seldom read of such facilities for commerce as at Breede River. A leading wind out of the river carries a vessel on her voyage, if she is bound to the eastward; if she is bound to the west, as calms prevail

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

morning and evening, she may be towed out with the wind at east, and pursue her voyage; if she arrives at Breede River Mouth from a foreign voyage, should the wind be adverse to her entering the river, she then lays in smooth water, as the wind blows off the land; if the wind is the contrary, she can enter the river.

I am, Sir,
Your obedient humble servant,
—— WILLIAM DUNN.

HINTS, ETC.

It has been proposed that every person capable of committing his thoughts to paper, should present to his brother colonists some account of his immediate neighbourhood. Thus a topographical description of the Cape of Good Hope might be formed, (similar to that of Sir John Sinclair's,*) and general improvement everywhere promoted

Every society succeeds as far as it is moral—"If there be any virtue and if there be any praise," it arises from religion—I therefore propose—

1st. That associations of two hundred persons be formed throughout the colony, who will subscribe in money or produce to the amount of five rix-dollars per annum each, for the support of a minister. The fees at marriages and christenings, with the above Rds. 1000, would be found sufficient to induce pious men to give up the whole of their time. If they merely preached two sermons on a Sunday, the individual subscription would only amount to about one penny per sermon, and a room could easily be built by mutual co-operation.

2dly. I propose that the Bible Societies deposit Bibles where the quarterly avont-maals are celebrated, which shall be sold at a reduced price, (and on credit, if required,) so that every one who can read may possess the word of life.

3dly. I propose that the field cornet and the four elder landed proprietors form a standing committee in every field cornetcy of the colony, for the purpose of establishing and conducting an English Manual-Labour School The boys being employed four hours per day in the cultivation of a garden-farm, would ultimately furnish food for the establishment; and, if possessed of a useful library, diligent youth would be enabled to educate themselves in the higher branches of learning.

One of the most striking improvements of the age we live in, is the virtual lessening of distances by affording facility of transport—it is the common theme of the colony—"that facility of transport is the great desideratum." Every suggestion, therefore, from the local inhabitants, relative to the means of obviating difficult mountain passes in their respective neighbourhoods, should be minutely examined.

The British Parliament, *many* years since, by their improvements of the roads in the Highlands of Scotland, and their subsequent forming of canals, laid the foundation of the present prosperity of North Britain.

We have but one navigable River in the Colony, (Breede River) which was lately nearly abandoned from the want of fresh water. This is now abundantly supplied at the new residency, and ships of large burthen can anchor close to the shore—vessels of 200 tons can with safety enter the River, and large barges can ascend sixty miles. Should the Breede River be made navigable for boats to Worcester, it would reduce the General Land-Carriage of the Colony by about 200 miles—and the River Zonder-End which runs into Breede River is already a kind of navigable canal.

Whether any communication could be effected between Breede River and one that runs into St. Helena Bay remains to be proved, but rumour is favorable to the enterprise. It is worse than useless pleading that *our* rivers are subject to land floods, &c; the colonists must refrain from poring over the difficulties of the country, and observe the obstacles that have been overcome elsewhere for the promotion of water-carriage, (Eccles. 34, 9,) "A man that hath travelled, knoweth many things." The land floods in the Oporto River are so rapid, that vessels are secured by six or seven cables to the shore, and many of the rivers in Europe are liable to torrents. It is vain to say, we have no trade that will compensate for the great public expenditure that improvements would occasion. If such reasoning had been admitted, the once almost impenetrable Highlands of Scotland would not have been pierced with roads at the expense of the nation.

Facilities of transport *create* trade. The number of passengers, &c. between Liverpool and Manchester is greatly augmented by the new Rail road, and the establishment of *one* steam-vessel *creates* the *necessity* for a second.

The staple article of export in the districts bordering on Breede River is grain; and it would be a moderate computation, considering the extent of these districts, to say that five hundred thousand muids per annum could be readily furnished for exportation if the navigation of the River was extended.—Grain, from being bulky, it cannot be brought from a great distance by land-carriage and exported to a profit. The two hundred miles of land carriage from the neighbourhood of Breede River to Table Bay incurs an expense of about eight Rix-dollars per muid on wheat, but if general exportaion was effected from the higher parts of the River, expense might be reduced (by employing large vessels) to ninepence per muid. The Farmers instead of being very frequently absent from their families for three weeks, and withdrawing their oxen from the legitimate objects of farming, and fatiguing themselves and cattle, would remain at home and attend to the hourly claims which a farming establishment demands. There are favored situations where the most incalculable return of grain would be produced—and there is scarcely a plant in the world which might not be naturalized in some one of our districts. Access of communication with these favored spots might concentrate at the Cape of Good Hope whatever is most esteemed in every other part of the globe.

Why should Parliament authorize a public expenditure for the making of Canals in Canada, and reject the improvement of the Cape of Good Hope? It may be truly said—"we *have* not, because we ask not." This Colony being more prized than the Canadas by the HOME GOVERNMENT, as being a military station and the stepping stone to India.

Ships have cleared from Breede River, both to the Mauritius and to St. Helena, and we therefore only want an extended boat navigation to Worcester; *this* can be accomplished either by improving the Drift, or by forming circuitous cuts around them. The first Drift in Breede River only occurs at about sixty miles from its entrance. Slight interruptions by drought in summer should form no impediment to the general success of the enterprise, for the frosts of Europe impede navigation.

If formerly, near twenty thousand muids of grain were shipped from Breede River in one year for colonial consumption alone, surely the stimulous of a foreign market would procure a supply of five hundred thousand muids, as the Swellendam district itself contains seven hundred Farmers.

The people of Birmingham only manufacture arms when there is a market for them. At a distance from Cape Town, the farmers are hardly paid an equivalent for the carriage alone of their grain, and the population of the Cape District can be fully supplied by the growers of corn in their immediate vicinity.

It should first be ascertained, whether a foreign market *can* be found. The farmers who have confined themselves to the growing of corn for their own household only, would, from the novelty of the offer of *constant* purchasers, pour in their grain to the stores of Breede River, from the distance of some weeks, and would be all ruined if wheat, barley, rye, and oats could find no sale.

Great Britain favorably receives *colonial* grain.—The trade to India and China being open, will cause a rush of adventurers, and our introduction to some millions of new customers in India and China may occasion an extra demand for our incomparable wheat.

Our local situation with regard to India, together with the resort of outward and homeward-bound vessels to our ports for refreshments, place us in more favorable circumstances, than the growers of wheat in New South Wales; and we have a preference to the Canadas, as *they* can hardly supply a European deficiency of harvest. In the same year, by reason of the ice, our farmers from the want of a market, have hitherto very wisely abstained from growing more grain than their domestic necessities required; but give them a stage for action—remove the obstacles of lengthened journies, (fatiguing to man and beast,)—place a market within reach, by the introduction of water carriage; and whether of Dutch, or German, or of French extraction, or from the hard-wrought race of Britain, the Cape farmers in general, will energetically respond to the demands of commerce.

One of the surest means of succeeding in trade, is to arrive at cheap production. With regard to *our* being able to produce cheap grain, we have NO rents to pay—*No Tithes—No Poor Rates*—and, *a very few Taxes;* for the quit-rent and loan-rents may be said to answer to the interest of the capital, which, in America, is necessarily invested in the purchase of land;—who can, therefore, compete with us as to cheapness of production? Our wheat is far superior to English wheat, and the return of Price Currents will always convey information, whether the value of an English quarter of wheat allows a profit on the exportation of eleven schepels, which is the same amount.

If our barley or oats are inferior, the merchants can provide superior seed; and we have the advantage of furnishing many articles not within the reach of the English agriculturists. Our wine, and the various productions of the grape, aloes, tobacco, dried fruits, cotton, probably coffee, possibly tea; and no doubt oil, (as gobd as the Italian,) might be exported; and, moreover, we have hardly any winter, and a healthful climate. It is not enough that grain may be *occasionally* exported to a profit—it must become a staple article of export like fine American flour. The government can do no more—the most impassioned bigot for free trade, rhymers against the Corn Laws, and Mr. Huskisson himself (if alive,) would not require more freedom in respect to trade in grain, than that which is by law established at the Cape of Good Hope.

It may be answered—that my expectation of so large an extra exportation of grain as 500,000 muids, supposes that many vessels be added to the Colony. This may be true, but it is equally true, that there is scarcely a single manufactory at the Cape of Good Hope. We import our iron, earthen ware, tea, sugar, &c. and the greater part of our clothing. We have, therefore, very much to *learn* and much to counteract by exports, and it will take shiploads of grain to pay for a cargo of woollens and cottons; in fact—imports impoverish, and it is exports alone that are a source of profit.

The Home Government which regards this as their favorite colony, will no doubt appoint surveys of every river in South Africa. The introduction of steam vessels imposes a new duty on our navy—they should *now* examine rivers which were never thought within their jurisdiction, until the present time, when steam vessels of large burthen are found not to draw more than two, three, or four feet water.

The connection of this colony with Great Britain, offers to our colonists advantages to which other ages were strangers—the British

* Statistical Account of Scotland.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Press confers by its cheap publications, capabilities of extraordinary magnitude, and the *English Language should be sedulously and generally cultivated.*

Prosperity usually follows religious habits. Let, therefore the colonists earnestly endeavour to establish churches and schools in every Field Cornetcy. If Government pay ministers and schoolmasters, the taxes must be proportionably increased; but *if* ministers and schoolmasters are paid by the people, they have the advantage of selecting their own clergy, and their own teachers.

The intended exertion of the Cape Town Society for extending our acquaintance with the interior of Africa, are entitled to every praise: yet the difficulty of retracing the steps of *the intended expedition* hereafter, and the obstacles of lengthened journies of hundreds of miles overland, will greatly retard the advantages which are expected:—Not so, if the facilities of water carriage are referred to.

I allow, nevertheless, that the British Settlers in Albany have happily succeeded in establishing a land commerce with the interior, which has almost doubled the exports of the colony; but their success might have been augmented had they ascended the rivers. From the Report of Dr. Smith, it is evident, that the rivers on the East Coast of Africa are so capacious, that the bars of some of them can be passed only with difficulty by a wagon at low water. Our steam boats which draw only two, three, or four feet water, would therefore ascend these rivers with the greatest ease, and should not our Naval Officers, (having no enemies to meet,) be made the auxiliaries of our merchants, by taking soundings, and even exploring the sources of these rivers; surely, it would be no misuse of the powers of our numerous steam vessels now attached to our Naval establishment, (one of which I presume is on this station,) if they were *Civilly* occupied during the intervals of *War*

If it were asked to what country the glorious Monarch of Judea resorted for his gold, it would certainly be answered—"To the Rivers of the Eastern Coast of Africa:" and notwithstanding, it would be better for the colonists to cultivate their *unrivalled* wheat, than to go in search of the precious metals; yet the receipt of gold in return for the cottons and woollens of Manchester and Yorkshire *is not to be despised.* But it is not alone on the East Coast of Africa that water carriage would introduce to an acquaintance with the interior; the Western Coast *teems* with large rivers, where an expedition could at once arrive, which would anticipate by many months, any intelligence which land travellers could communicate, even supposing they surmounted the dangers which overwhelmed Messrs. Donovan, Green, and Cowie.

Independent of the Orange River, whereby light boats could communicate from one station to another, (the bar of it being impassable) Capt. Chapman who surveyed the Western Coast by order of Commodore Nourse in H. M. Sloop *Espiegle*, in the early part of 1824—reports that, in Lat. 22 53 South, 13 miles North of Walvisch Bay, there is a river "of some consequence."—Another river 17 10 South, "remarkably spacious, having a constant discharge from its source far back in the mountains." In Lat. 15 8 South, a river is described running into little Fish Bay; and in Lat. 14 15 South, is the Victoria, "a fine river, with fresh water close over the bar, and good entrance for boats." Our scientific expeditions have not been successful: but our Missionaries have advanced unrestrained, and are cheered on by the religious Public at home, who have never hesitated in supplying pecuniary help for that cause of civilization, in which we, as colonists, are most interested. Lamentable to say, there are debased minds here, who grudge the Natives that instruction which is afforded to them from the hard-earnings of the *British People.* However, the benefits of *British generosity* is now extended to the colonists themselves, to whom the *British Public* pay twenty millions of pounds sterling for delivering them from the overwhelming expense of the slave system: for, after a few years, as a labouring man hardly earns food and raiment, these twenty millions will be proved to be *more* than a free-gift: for free labourers will work better than slaves, and will increase in numbers in consequence of their liberation. But above all, and better than forty millions of pounds sterling, the colonists will be delivered from that incubus of considering a man of colour inferior to themselves. *This* retards the energies of the colonial mind, and so reminds us of what our Lord said on another occasion, that we are almost prompted to say—"How hardly shall they that have riches [slaves] enter into the Kingdom God."

However incorrect the principles of conquest were, which have gained for us our Indian Empire, yet the despised saints at home have infused into the most distant parts of these possessions, through Missionaries and Bibles, a saving knowledge of the Redeemer.

If the result has thus almost sanctified the improper means used to establish British ascendency in India, what a consummation of good may we not expect, if our advance into the Interior of Africa is guided by the *single* aim of doing good to the Natives. We have a guarantee in the *integrity*, and the *voice* of the *British People* expressed through their Representatives in Parliament, that no love of dominion will ever again prompt the advance of the British arms.

Great Britain looks for a recompense in the elevation of savage nations: and through Missions and Bibles, and the Press, render them happy and capable of sustaining the relations of commerce.

The Caffer Tribes may rely on their integrity being respected, and the people of the Interior will find that the British have no other end in view in cultivating their frrendship, than the promotion of the arts of peace and advancing their happiness. Let, therefore, the new expedition to the remote Interior, carry with it the blessing of God, by having for its *first* object the selection of a forward position for Missionaries. Let a kind of *Point D'Appui* in the kingdom of misrule, be advanced to the very farthest point in the Interior, where the necessaries of life can be produced and a communication kept up. Thus the Cape of Good Hope Society which has remained dormant, whilst the inhabitants of other later settlements have kept pace with the improvements of the age, will claim a consideration with the excellent of the earth. This Colony, equal in climate to the most favored parts of Southern Europe, may become like Italy, the resort of the British gentry, and the valetudinarian in search of health. Our *inferiority* as to our *state of society* has hitherto prevented our being visited by the opulent; and we have seen capital pass by us and settle in a *Convict Colony!!!* at double the distance. May God turn this land of Hope into the happy fruition of British feeling, British principle, and British institutions. J. D.

Destruction of the Bushes near the Cape Flats—Mountains near Town—the planting system required—Destroyers of the Silver Tree—Commissariat Purchases, &c.

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—In looking over some of the back numbers of your Magazine, I noticed some judicious remarks on the present state of the Cape Flats or Downs, and the *tearing-up* system on the part of a number of persons of the roots and bushes for the purposes of sale, by which the roads are becoming worse and worse, and the sand is overwhelming the country. I regret that the thing still continues, and it is my duty at present to re-echo your warning voice to those who, being in authority, can put down the evil.

Again, Sir, can you account for the barren, sterile appearance of some of the mountains which enclose Cape Town? If not, I may be able to throw some light on the subject. The Lion Mountain,—under Table Mountain—the Devil's Hill, &c. are strangely unclothed by trees or shrubs, whilst at the same time, it is well known, how adapted for the soil, and how flourishing would be the plantations of Ericas, the Pelargoniums, and the Protea argentea of Linnæus (Silver Tree.) This latter tree might with care have made the mountains a beautiful scenery of "wood crowned heights," but how reverse is the case. A few of the last-mentioned trees do spread their foliage on the mountains S. E. of Cape Town, but their growth is notoriously impeded by the juvenile and other vagrants, who, on Sundays, sport among the plantations and destroy the young plants. Then, again the Malays, slaves, and coloured population in general, are great pests to the spread of the Silver Tree. For the uses of smoking as a substitute for tobacco, whole forests of young silver trees are destroyed. The other day a poor creature was taken into custody for washing the contents of the wardrobe which he carried about with him on a Sunday, near some solitary mountain stream. Far better would it have been for the official, if he had put down the tree-destroyers in the neighbourhood. Lastly, Sir, it is said, (which I trust is not correct,) that the Commissariat, with its characteristic notions of thrift, purchase wood at a cheap rate from these mountains, which should beautify and adorn the capital. Sir, with every good will towards this department, I do hope it will (if the thing be true,)

"Cease to do evil,"

and just afford the fourth-part of a farthing a pound more, for the required supplies, which may be obtained from Rondebosch, or other parts of the neighbourhood.*

I am, Sir,
A Mountain Man.

---

* An erroneous opinion often prevails, that trees seldom thrive near the sea-coast. The Evergreen Oak *(Quercus Ilex)* is found well adapted for planting in such situations.

SWIMMING.

To the Editor of the Cape of Good Hope Literary Gazette.

I was much gratified by observing in your No. 12, some judicious remarks on swimming and bathing; I have, with yourself, often felt surprise at that apathy on the subject which is manifested by the Cape colonists, and have often endeavoured to account for it. Being one of the early settlers who marched in procession to Graham's Town, &c. the English youth and boys of our party used greatly to astonish the Field-Cornets and others of the authorities who happened to be of Cape birth. In landing at Algoa Bay, and in crossing the rivers, they would behold with wonder the juvenile daring of our young swimmers. At one time I recollect at the Cowie, the boors who were there with a numerous train of wagons, declared the river impassable for hours to come. But the youngsters,from their dexterous swimming habits, soon determined it otherwise. Many accidents might have occurred in fording the rivers by the diversion of the oxen, &c. but for the useful assistance of the English lads, who on these occasions discovered great skill in taking the lead and securing much valuable property as ,well as lives. Many are the lives lost in this colony by the inability to swim. I hope some greater attention will be paid to the subject than heretofore.

I am, Sir, yours,
ONE OF THE EARLY SETTLERS.

Albany.

AMERICAN NOTIONS OF SOMERSET HOSPITAL.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—My attention was recently directed by your short notice of Somerset Hopital to pay it a visit. I was glad of the opportunity thus afforded me during a short sojourn in Cape Town, because I was desirous of reporting on the state of medical science on the shores of Arabia, and at the Cape, when I should arrive once more at Boston, U. S.

I fully agree with you, that the Somerset Hospital claims precedency in the list of your public institutions, and I consider it highly honourable to your monarchial government, that it deals so liberally towards its subjects, on the score of the patronage given towards the support of the Hospital, which is *open to the people of all nations.*

As you suggest the Hospital is naturally "an excellent school for surgery,"—this, however, can only take place under proper administration. But certainly, as it respects the Lunatic Asylum, nothing appears to me, to have been worse contrived; and common humanity seems to demand that some very considerable improvement should be made in this department. Under the management of the resident Surgeon, as far as I could discover, every attention is paid to the comforts of the lunatic inmates, but the accomodation is wretched—the sexes scarcely separated, and in taking their exercise, they are exposed to the gaze, not only of strangers who visit the Hospital, but to the patients of all descriptions, who must witness scenes occuring to the unfortunate maniacs which were better concealed, and which must prove highly distressing to those patients in the Hospital, whose diseases require quiet, and silence, and rest.

Respecting the interesting surgical case recorded as attached to the Hospital Report—it reflects lasting honour on Dr. Murray, (the name of the gentleman I think) who undertook it. The profession look naturally with intense interest on the publication of the details. But, Sir, conceive the surprise of many of the surgeons in Cape Town, whom I had the honour to meet, who were ignorant of the case until it appeared in your Journal. In Europe all "hole and corner" surgery is now happily exploded from the public Hospitals, and I feel confident that the medical men in general in Cape Town, would have felt much obliged to the resident Surgeon had he informed them of this case of rare occurrence. There should not exist, I imagine, any objection against the appointment of fixed operating days at the Somerset Hospital, (as in the case of the British and American Hospitals,) so that the profession may bear witness to the practical operations within the House; —when this is done, Sir, then Somerset Hospital will become more extensively—*an excellent School for Surgery.*

I am, Sir,
Yours faithfully,
JALEEL BROOKSBANK.

Table Bay, 20th Feb. 1834.

CHEAP PERIODICALS.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—This age seems to be the age of mediocrity—the penny age, for the penny publishers and the penny readers seem to have no ideas beyond the confines of these humble selections of the day. Such publications do, in my opinion, cause considerable injury to the strength of intellect. They teach nothing sound—but a smattering of most things. They draw away the reader from the study of books, and lead to a frivolity of taste. But men will be wiser bye and bye—they cannot eventually submit to be "*pennywise* and pound foolish." I should not, Sir, have thrown together these hastily composed remarks, but for the purpose of expressing my surprise, that you with a few others should become instrumental in spreading a *pottle* instead of a *bushel* literature, for the use of the growing population of the colony.

ANTI-SUPERFICIAL.

Note.—In answer to the above writer, we cannot help expressing our regret, that the standard and stock works of literature are obtaining at the present time, so low and limited a sale—and that few volumes larger than a duodecimo or cabinet size, stand a fair chance of repaying a publisher. But in one point of view, the cheap publications have done good; they have brought a new article into a dull market, when nothing old could tempt purchasers. Still we admit, that we look upon the penny publications but as temporary expedients, better adapted to *diffuse* information rather than *advance* it.

ON CAPE OPIUM.

[WE readily give a place in our columns to the following observations on Opium, by Mr. Kunhardt. The growth of this detestable weed has been strongly recommended to our colonial agriculturists, but we trust their thoughts will be directed to objects more conducive to the general welfare, than the cultivation of Opium. For instance, to the growth and manufacture of *Cotton, Hemp, Coir, Mangrove, Rape. Linseed-oil, Palm, Cocoa-Nut, Lavender, Mimosa, the Olive, the Bamboo, the Cane, the Hop, the Sugar-cane.* Let the impartial reader take up Col. Tod's truly great work on India, and he will discover that the culture of Opium has tended more to the physical and moral degradation of the natives of that country, than the combined influence of pestilence and war.]

To the Editor of the Cape of Good Hope Literary Gazette.

Ich sage dir, ein kerl der spekuliert,
Ist wie ein Thier auf dürrer Heide
Vom bösen Geist herumgeführt,
Und rings umher ist grüne weide.
Göthe, Faust.

AFTER an interesting, though laborious analysis, I shall venture a few hints on the propriety of cultivating Opium in this colony, a subject which has lately excited public attention, and on the advantages or disadvantages likely to be derived from its cultivation.

It appears* that the importation of Opium to China since 1816, has never been so extensive as during 1829 and 1830. Two kinds of Opium are imported there; one from Patna and Benares, and another from Malwah. The importation of the first, in 1830, amounted to 7143 chests; of the other, to 6857; together 14,000 chests; to value of 12,057,157 Spanish dollars. Trade to China will be free! We may have, shortly, speculations amongst our merchants direct to China, our produce will therefore find its relative value in the place.

But to have a share in the China Opium trade, it will be requisite to produce the Opium at least as cheap as in India; how far this is possible will be proved by experience.

As to the quality of the Opium produced by Major Parlby, I confidently assert that the specimen is superior to the Indian generally brought into market, but I must at the same time

* Manufactur Journal.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

observe, that it has been prepared with a care, which, in the manufacture of opium to a greater extent, may be found wanting. The attention paid to its preparation is particularly proved by the very trifling quantity of fibre found in it; it ought to be questioned, therefore, will the produce be equally good if not prepared with that care? and will that care be repaid by the cultivation of it?

In the European market there is but a very trifling chance of success; the difference from Turkey Opium being very striking. It contains, like all India and home-made Opium, more parts soluble in water; various tests, particularly Muriate of Baryta and Acetate of Lead, act in a different manner on it. Should the cultivation of Opium, differing from Turkey, be lucrative, it ought to be so particularly in England, where the cultivator is protected by an import duty. The experiments of Mr. Ball procured him already in 1796, a premium for the best specimen of Opium. Messrs. Cowley and Stains collected in 1823, 196 lbs. of Opium, which sold at 36*s.* per pound, (N. B. Opium was very dear then,) and Mr. Young appears to have been still more successful. Notwithstanding all these favourable trials, it is not probable that Opium will be made in large quantities in England,* and why not? In England every part of the plant is useful; the oil of the seeds, and the dry cakes are turned to advantage. Let me answer that it is certainly not for want of capital, industry, or enterprise, but because the Opium produced finds no market. And yet the analytical investigations of Pagenstecher and Vauqelin, show us that home-made Opium contains almost all the component parts of Turkey, notwithstanding it will never be admitted into medical practice as long as Turkey Opium can be obtained.

The quality of Opium cannot yet be decided on with precision by the most minute chemical analysis, much less can we rely on the favourable results in a few medical observations.

It is a strange fact indeed, that there has been no medicine attracting the attention of chemists to such a degree, and that there is none of equal importance to the medical profession, or about which we remained in so great and almost perfect obscurity as to its component parts, as to the substance contained in it most active on the human constitution, and as to the original process of its preparation.

The labours of men, immortal for their merits in advancing chemistry, and famous for the accuracy of their researches, have been employed in a series of chemical decompositions of Opium for the last 40 years. Our views have become gradually changed by the various discoveries of Derosne, Serfuner, and others. Is it not a fact then, at once puzzling and interesting, that only a few months have elapsed since new publications have made us again acquainted with three entirely new substances discovered in the Opium, and set down by their peculiar characters, viz: the Meconia of Couerbe and Dublanc, the Narceine of Pelletier, and the Codeine of Robiquet.

As to the most active component parts in Opium, scientific men, the ornaments of the present age, differ yet in opinion; although to Morphia, in combination with vegetable acid, the superiority is yielded.

About the original process by which the real Turkey Opium is obtained, nothing positive can be recorded, for, in fact, we know not yet whether it is derived from Papaver Somniferum or Pap. Orientale, two distinct plants. The accounts of travellers, as Chardin and others, are different, and even contradictory. The mode of obtaining the best Opium is generally asserted to be by wounding the capsulas, and letting the exuding milky juice harden. But Saravasi and Saxe, who accompanied Buonaparte to Egypt, tell us that another and very superior kind is obtained by boiling the Poppy-heads, and mixing the concentrated extract with the hardened juice spontaneously exuding, by wounding the outer coat of the capsulas, the mass is then formed into cakes to be dried in the sun; others again inform us that the juice of the Poppy-heads is brought into fermentation with particular parts of the plant, and if Kerr* gives an account of the manner in which Opium is made in Bengal, he speaks merely of the well-known India Opium.

This will sufficiently show that it would be presumptous to expect favourable results from our Opium in the European market.

But suppose even that we had all possible chance of success, and granted that our Opium would become a lucrative article in the China trade, would it not be worth while to reflect for a moment on the moral effects of the cultivation of this commodity in the Cape colony? A single glance at once shows us weak and degenerate populations, though once strong and mighty, where ever the Opium is produced. Will it be advisable in a rising colony, where we observe an unhappy propensity for intoxication with the original natives, where the large, energetic, and useful part of the community embrace the Mohamedan faith, to teach them an easy method of obtaining an article which they can only now procure at a high price from persons defying wise laws, prohibiting the sale of it? Would we not soon have the miserable visages of Opiophages, instead of those full faces of the beer-consumers, a beverage at once nutritive and wholesome, of which an over-indulgence requires already determined habits of debauchery, and yet can never be so prejudicial. Much could be written on the miserable existence of the Opiophage, and the temptations to which the Mohamedans are subjected by Indian and Chinese visitors, but let this suffice. I cannot help thinking that the cultivation of Lint Seed, the manufacture of Castor Oil, to expel the importation thereof to this colony, are subjects deserving particular attention and energetic exertion. In my next, I shall offer a few suggestions on this subject, and at the same time point out to those who may be inclined to cultivate, the price they will likely obtain for such produce.

KUNHARDT.

A FABLE.

Imitated from the Spanish of Don Tomas de Yriarte.

Ningom partiaclar dabe ofemderse de lo que se dice en comun.

The Governor and the Governed; or, The Elephant and other Animals.

In climes that we shall never reach,
When beasts possess'd the power of speech,—
(But I'll defy e'en college men
To specify the place, and when;)—
'Tis said, an Elephant, most wise,
Saw, with disquiet and surprise,
In conduct, manners, and discourse,
There were errors, that, by force,
(As he perceived,) or reasoning plain,
It was his duty to restrain:—
This to effect, at early dawn,
He summon'd, on a spacious lawn,
All quadrupeds beneath the sky,
And fowls that walk, and birds that fly;—
And in a speech of decent length,
Replete with argument and strength,
Harangu'd them with a lawyer's power,
And wondrous well, at least an hour!

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Vices of every sort and kind,
And each depravity of mind,
As envy, malice, accusation,
And scandal, met his reprobation:—
He said, that anarchy and strife,
Were ills that would embitter life;
That power abus'd, and pride, and shew,
In disappointment end, and woe;
While virtue often waits on health,
On industry, respect, and wealth;
And spoke a truth, that men should know,
"Content makes happiness below."

Now this address, the style, the cause,
Met, from some hearers, great applause;
They thought it full of solid sense,
And urg'd us not to give offence.
Such was the opinion of the dove,
The symbol of connubial love;
The lamb, who pass'd his time away,
In innocence and harmless play;
The partridge, loyal in th' extreme,
Bees that laborious ever seem;
The noble horse, with courage blest,
The dog, of gratitude possess'd;
And oft' the sparrow chirp'd with glee,
And crow'd the cock in ecstacy.

But lo! though these the matter prais'd,
A clamour by the rest was raised.
The tiger, all his rage assuming,
Declar'd the censor was presuming,
In which the rav'nous wolf agreed,
And vow'd that he'd avenge the deed;
The serpent too, began to rail,
His venom shew'd, and coil'd his tail,
While others, with less fatal rage,
Vow'd naught their anger should assuage;
And hence, the seed of discord sown,
The viper, moth, and listless drone,
The crafty fox, replete with guile,
And sturdy ass, inur'd to toil,
Rose up,—and all, with one accord,
Swore they'd not hear another word.—
To whom, as nothing mortified,
The reasoning Elephant replied:
"Good friends, what I advance as true,
"Applies to me, as well as you;
"I name no crime, in terms severe,
"But if you will not feel the force
"Of my well meant, and plain discourse,
"I beg this riot you will cease,
"And straightway journey home in peace."

In works design'd for general use,
'Tis painful oft to see abuse,
Level'd with much severity,
Not at the errors critics see,
(While they, an author's writings scan;)—
But at his foibles as a man.—
Yet many, full of spleen, delight
To censure faults in those who write;
Pleas'd imperfections to disclose
Of persons, or caprice expose;—
To all those bright conceptions blind,
That issue from the vigorous mind:—
Anxious to dim a writer's fame,
By coupling folly with his name. D.

COLONIAL LITERATURE.

The New South Wales' Magazine, Nos. 1 and 2. Printed at Sydney.

We have been favored with the sight of the two first numbers of this interesting and useful publication. We heartily wish, in the words of the Editor, that it may prove as the germ of a work that shall gradually strike its roots into the affections of the people —spread out into a vigorous maturity— and shake from its prolific boughs, fruits for every taste. One thing respecting it, which we are bound to commend, is, its honest tone of independence. It does not form a nucleus of homogeneous principles, worked up and softened down to a standard previously fixed by the Editor; but on the contrary, forms an arena accessible to all seekers after truth, quite distinct at the same time from personal asperity or party violence.

The two numbers before us contain much varied local information,—literary, scientific, and miscellaneous. "The First Press" of New South Wales is an excellent article, and a just tribute is paid to the memory of the first colonial printer, the late Mr. George Howe. Poor Howe was subjected to a censorship. Well do we remember, observes the writer, with what pathos Howe would descant on the hardships he had to endure. With tears rolling down his cheeks has the hoary veteran detailed to us the horrors he was often and often doomed to feel, on receiving back his inspected sheets. Sentences altered, till he could scarcely recognise a fraction of their original import—paragraphs struck out which were vital to the sense and consistency of his articles—and sometimes whole colums amputated at one blow—were the sweet rewards of his editorial toils."

Oh! the blessings of a Censorship! What Englishman can endure the thought?

Among the Horticultural improvements we find it stated, that the cultivation of the vine has afforded substantial benefit to the country. The names of the principal growers are mentioned, among which appears that of Sir John Jamison, who has formed a *terraced* vineyard,—the most picturesque of all the forms in which the vine can be trained. We also find that ale has been produced by Mr. Cadell, formerly an eminent brewer in Edinburgh, of so excellent a quality, that it is equal to Hodgson's Pale Ale. Starch is also manufactured with success.

JESUITISM.

A Correspondent inquires—"Is there any reason to be given in these days of Christian liberality, why a colonial law should exist of so recent a date as January, 1839, by which any person landing here who shall be a Jesuit, "or member of any such Religious Order, Community, or Society," shall be dealt with as a criminal, and banished the colony? And further, can the inquirer be favoured by any statement, from which it could be proven that the opinions or the doctrines of the Jesuits are dangerous to the state?" A few words in reply.

The opinions of the modern Jesuits differ in no respect from those of former years. The French legislature drew up a list of the Jesuit opinions extracted from their authentic publications. This list was published under the sanction of Parliament by an *arrêt* of the year 1762.

We have room but for a glance at this code. The leading doctrine of the Jesuit morality was called *probabilism* —an extraordinary adaptation of all principle to the convenience of the party and the time. Probabilism is defined to be that doctrine by which, in the conflict of two opinions, one of which is the more *probable* and suitable to the moral law, and the other is the more favourable to personal desires and purposes, the doubter is held justifiable in adopting the more *convenient side.*

A doctrine so monstrous, and opening so vast a channel for all kinds of iniquity, might be considered a *primâ facie* moral impossibility. Its establishment would palpably break down at once all the barriers of the moral world, make law, religion, and the general conventional honesty of mankind, a burlesque, and leave all things at the mercy of a prejudiced understanding, or a corrupted conscience. Such was the doctrine of *probabilism;* and there is tremendous proof that, whatever might be the guilt of the principle, it was sustained by the guilt of the practice.

Of all the doctrines of the order, there was not one which received a more constant sanction of its leading authorities, than this monstrous perversion of common sense and common principle. Of this we shall quote an example—

"In the case of a matter before a judge, where both sides are equally probable, the judge may lawfully decide in favour of his *private friend.* He may, moreover, decide first on one side, and then revoke his opinion, with the object of *serving his friend*, provided it be done *without incurring scandal!*"—(*De Valence, 1609, tom.* iii.)

Another of their remarkable doctrines was that of *Philosophic sin,* namely, that—

"The most criminal action cannot offend the Deity, nor be obnoxious to Divine Justice, provided the perpetrator is either unacquainted with the existence of the Deity; or does not *think of him at the moment,* or does not *conceive* that *he is offending him.*"

"It is no crime to take in secret that which would have been given if we had asked it; and although we may know that its being so taken would be contrary to the will of the proprietor, no *restitution* is necessary."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"If an individual is stupid enough to believe invincibly that a desire to commit homicide is no sin, there is actually *no sin* in the desire."—(*Platelius, plan d'un Cours.*)

"The revolt of a cleric against the king is *not high treason*. Because a cleric is *not* the *subject* of a king. (Obviously from his having a superior sovereign in the Pope.)—(*Emmanuel Sa, Aphorismes des Confess.*)

"The spiritual power, if it shall discover that the temporal is an obstacle to the spiritual end, may, and should, repress it by *all sorts* of means and expedients that it may find necessary. The spiritual power may change kingdoms, and take them from one to give them to another, in its capacity of spiritual sovereign, if that be necessary for the salvation of souls."—(1596. *Controverses*, l. v. c. 6. *Du Pontife Romain.*) He proceeds, "Christians *cannot* be suffered to *tolerate an infidel or heretic king*; if that king attempt to draw his subjects into heresy or infidelity. Yet it belongs to the sovereign pontiff, who is charged with the care of religion, to judge if the king does or does not draw his people into the heresy. It thus rests with the sovereign pontiff to decide on the disposition of a king.

"If the Christians of old did not depose Nero, Dioclesian, Julian the Apostate, and Valens the Arian, it was *because they had not sufficient power*."—(*Ibid.* c. 7.)

THE ASSISTANT SCHOOL-MASTER ABROAD.

[A REMINISCENCE.]

I remember a few years since, to have been attracted by an advertisement, which set forth, that the situation of senior assistant in Mr. B's academy was vacant. As the first crow picks the first worm, I was off by the peep of day next morning, and in the evening was set down by the stage at the school-house gate of Mr. B. A country clown of a servant received me, and said—"You're come I suppose to offer for the place of he that died," he remarked in the most familiar tone imaginable; "but I don't think you'll do, for master said the next should be a strong un." Out of all patience at this, I demanded to be instantly shewn into the parlour. With a shrug of the shoulders the man complied, saying as he left me, "You mustn't sit in the great chair, because that's master's."

Whether he had been aiding and abetting John in his dirty work I know not, but another quarter of an hour had elapsed, before with face newly washed and shining shoes, Mr. B. entered the room. For that quarter of an hour, which seemed an age, I was left to indulge my own thoughts as it is called;—and what indulgence! Remorse for the past, despair of the future, all that I had done, and all that I had omitted to do, struck a horror on my spirits which I cannot describe, and which none but those who have fooled away their opportunities as I have done would be able to understand. I thought of the high promise with which I had entered on my university career, of the meagre performance with which it closed, of a father's disappointed hope, of a sister's tears. In short, I *indulged* in reflecting upon all those little disagreeables which coward conscience flings in a man's teeth when friends and fortune have deserted him. Then the many small, but no less irritating evils of the situation I was seeking, stuck like so many burrs upon my fancy; to become at once an underling tyrant, a Dionysius the little, an *anceps syllabarum*—to waste my whole voice soul, and energies, on hopeless stupidity, or malicious inattention—to be eloquent on the right position of an accent, indignant at a false quantity, enthusiastic on a particle—to such a life was I destined by poverty, at least for the present; and how could I be certain that the practice of one short year would not so far pulverize the power of my mind, so assimilate them to the minutiæ of the objects about which they were engaged, that I should never again be capable of any noble or manly exertion? I may become, I thought, a willing, a contented pedagogue for life. A moment more, and I should have been working my way through snow, sleet, and slime, back to London, and my unpaid-for garret. My hand was on the lock, when Mr. B— entered; a rude concussion, and a mutual beg pardon, perfected our introduction. Bowing was impossible—the slightest inclination on my side would have brought my head in contact with his nose, and the wall was too near *him* to allow of that back fling of the foot, so necessary to a schoolmaster for the completion of the performance. With much movement of legs and arms he motioned me a chair. There was a certain baggyness at the knees of his breeches, contracted from much sitting, and a whiteness at the elbows of his coat, that marked the nature of his profession; but no single ray of intellect illuminated the waste of his countenance. Every question, reply, and rejoinder, in the dialogue which ensued, seemed to throw me farther from the situation at which I was aiming: and it became evident, before the end of our conference, that no one acquirement of which I was possessed, would be requisite in Mr. B's. intended assistant, and that all which I had not were absolutely indispensable. I did *not* believe without reservation in Dawes's miscellanea—I had never learnt the *Propria quæ maribus*, nor ever heard of the grammar school at Leeds; and what was worse than all I could not undertake to carve a leg of mutton for fifty hungry boys so as to satisfy *all*. But I had been educated at Cambridge; no matter, Mr. B. had taken an *underline* degree at Oxford. I *had* studied Porson, but Porson was of Cambridge; and Herman—"Pooh, he was a Dutchman."

"Well, then," I exclaimed, not a little indignant at the contempt manifested for my classical knowledge, "I have read Aristophanes, Eschylus, Sophocles, Euripides, Aristotle, Plato, ——."

"No donbt, sir, no doubt," said he, taking ungenerous advantage of my pausing to recover my breath, "I dare say you have read all these authors, and a great many more. But excuse me, *est modus in rebus*. There is a manner of doing things; besides this is *not* the *sort* of knowledge which I look for in my academy. My system, sir, is an entirely new one, a mode not pursued in any school or university but my own. It will be necessary that my *seniaur* assistant should have devoted his time and attention almost exclusively to the formation, sir, the derivation, and the radical foundation of nouns, adjectives, and verbs."

As this dictum was delivered from the head master of an academy in a high-backed elbow chair, well furnished with pads and cushions, to an expectant usher, wet and shivering, on a meagre cane-bottom, I merely ventured to reply, that I thought knowledge of that kind, was in some degree inculcated in every school in the kingdom. A smile of odious condescension, that seemed to pity the ignorance he was about to cover with confusion, was his only answer; and rising from his chair, like one who meditates mighty purposes, he rang the bell, and bid the servant summons master Williams immediately into his presence. While master Williams was being screamed for through the premises, I thought I might turn to subjects of lighter import. I spoke of the theatres and the opera. He heard with apparent attention, and I fancied that I had interested him by my remarks, till his reply, alas! shewed too clearly, that his whole mind had been all the while occupied in the labour of producing a small pun—"These, sir," said he, "are not the subjects which engage our thoughts here. We know of no theatre here, but the theatre of the Greeks—no opera but the *Opera Vergilii*."

The laugh which followed this speech, reverberated by the expectant usher, occupied by the remaining time till master Williams burst into the room; he was one of the young gentlemen by the way who had witnessed my misfortunes before the door. A painter could have desired no better specimen of a school-boy. Long, straight, uncombed hair, a Saturday frill, brown corduroy trowsers, worn at the knees with marble playing, and shrunk more than half way up the spindle shanks, blue worsteds, in folds, and rusty calf-skin shoes, were the distinguishing characteristics of the exterior of master Williams. Of his mental accomplishments I was shortly to judge. "Come here, sir," said the master, in a patronizing voice, "come here and shew this gentleman, that we do know something, even at ——. Just stand upright, look at me, and blow your nose, my boy. Now, answer my questions." Master Williams *parroted* half a dozen stupid answers to as many ridiculous demands upon his memory. "Pray, young gentleman," said I,—"That's right, you may go," exclaimed Mr. B. drowning my voice, and affecting not to perceive my intention of taking up the examination myself. The words were no sooner out of his mouth, than the young phenomenon snatched his hands from his breeches pocket and bolted.

"And now," said B. "now that I have practically developed my system, will you favour me with a translation or two from some ancient author." I replied that I had no objection, and muttered something of testimonials from my tutors. "Testimonials!" exclaimed he, "yes, sir, no doubt: we all know what Cambridge testimonials are; every applicant has testimonials. I would rather take my own opinion than that of all the Cambridge classics together." Well, my trial, as he called it, began; I proceeded, apparently to his satisfaction, until in turning an English passage into Latin, I used the expression, *studebat eloquentiæ*. "The accusative, if you please, after *studeo*," he thundered out, "at least so it has been ever since I have been head master of this academy." "Never before," I thought, and might have quoted Cicero's authority in my defence, but what had an expectant usher to do with Cicero? So I bowed to my superior in silence.

"Proceed we now, sir," said he, shutting the books, "to state the duties required to be performed by my *seniaur* assistant. He must be in the school-room every morning at six o'clock precisely,"—"Winter and summer, sir?" "Yes, sir; all the year round; I myself take the chair at half-after eight. From nine o'clock till the half hour during which time the boys hear prayers by me, wash themselves, and take their morning meal, he will be at liberty—" "To take his breakfast, I suppose sir?" "Yes, or employ himself in any *other* way he likes. From half-past nine till two, he will be in school again, hearing lessons in classics or mathematics, as it may happen. At two, he will dine with the boys, and carve for them. He will return to the school at three."—"And the salary, sir," I cried, "is"—"At six he will be free, at least—no, not free—he will of course have to look over the exercises of the day."—"And the salary?" I repeated in agony.—"He will walk, on Sundays, twice a day to church, hovering on the flank of the line, and seeing that the boys keep open order—nothing annoys me more than to see them huddled together like so many charity children."—"And the salary, sir?"—"Then as regards order on the common, especially when it's dirty, as to-day, for instance.—" "And the salary"—"Why, to tell the truth, I don't think you'll suit; still I've no objection to try you on a reduced scale." "What may be your minimum, sir?" "I am not illiberal, sir: to a D.D. I believe to have given as much as a hundred a-year. But then he was an Oxford man—an

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Oxford Doctor, sir? To a bachelor I have gone so far as seventy-five; that is, where they have had large families to support in comfort and respectability—I think you said you were not married."

I was looking for my half-drowned hat, which I had placed beneath one of the chairs, determining to be off before he should rouse my indignation, by an insulting offer of thirty-five or forty pounds a year, when the door was opened, and in swam a fine woman, about forty—fashionably attired—affecting *un air pronouncé*, but rather *gauche*, and a *leetle* vulgar.

"I was not aware that you were engaged," said she, with premeditated confusion, but evincing no intention to retire.

"It's only an usher—another candidate my dear," said B. "Oh! indeed." She had already scanned me with her eye, and notwithstanding the state of my attire, I felt that she was far from disgusted. I bowed—she curtsied—motioned me to the arm chair from which B. had risen on her entrance, and was about to throw herself on a settee, when a sudden thought seemed to strike her, and she hastily approached the pedagogue, exclaiming, "Oh! Mr. B. you can have no conception of the filthy state of those plebeian little wretches, the grocer's wife's boys are in; they are actually dabbling in the duck-pond. Sweeping the common with my opera-glass, from my boudoir window just now, I luckily detected them. You know their horrid vulgar mamma is coming this evening. You must exert your personal authority, for not a monitor, not an usher is to be seen."

Finding that my new acquaintances were not inclined to offer more than the amount of a *paltry salary which a Government Clerk gets at the Cape of Good Hope*, I wished them a good morning and departed. And this was lucky, for on my way home, I fell in with a *rider* in the *patten trade* We entered into conversation, until at length we so won upon one another, that he engaged me as his clerk, on a salary of £220 per annum I have enjoyed this situation many years, which, next to ironmongering, shoe making, and tailoring, I am happy to say are most prosperous in old England, and are in themselves—

"Above all Greek,
Above all Roman praise."

LITERARY EXTRACTS.

METHODS OF SPENDING TIME DURING THE EARLY PART OF THE MIDDLE AGES.

During the early part of the middle ages, learning was held almost in contempt in palaces and castles. There lay however, generally in the hall of these rudely splendid dwellings, a large volume of legends and tales, meant for the use of all who might think proper to apply to it for entertainment, but it was simply resorted to by the priests of the castle, as frequently neither the barons bold themselves, nor their retainers nor families, had sufficient education to be able to read even in such a book. We have lately got the means of a valuable peep into the interior of such towers, through the publication by Mr. Pitcairn of his investigations of the ancient records, in which he has supplied us with extracts from the accounts of the lord high register of Scotland, and brought otherwise into notice curious facts generally before unknown. Many of them refer to the days of James IV., and give an account indirectly of the entertainments of that monarch, and other grandees of those early days. Much of their time appears to have been spent in hunting, hawking, and other such sports, bes des their tournays and other war-like exercises; but, like our own little boys, they were much engaged also in playing at the common hand-ball against a wall, which in those days was called *cachee*, or the cage-ball. Much of their leisure was also spent in hearing the coarse jokes of buffoons, or listening to the tales of minstrels, who interested them about the doughty deeds of men even more barbarous than themselves; or in partaking of the pleasure afforded by the rudest plays or masques, in playing at "tables," cards, and dice, or, to use the expression of the day, in "daffing" away the time at the social board There are no marks in these extracts of his majesty's learning, taking that term in its usual acceptations: but he seems to have had the capacity of *writing*, for upon one occasion a pen-horn and an ink-horn appear to have been bought for him at a shilling, and at an after-period, the same articles got for him seem to have cost only ninepence. But our learned readers may be anxious to know something also of his majesty's library, and the two following entries give us a little information as to it too,—viz. that in 2d April 1502, there was paid eleven pounds "to Walter Wodd's wife for a buke to the Queen's grace," and in 22d Dec. 1507, fifty shillings were "paid for three prented bukes to the King, tan frae Andrew Millar's wife." Those wives were probably hucksters or venders of small wares, near some of the palaces used at Sterling, or Linlithgow, or Falkland, or perhaps in the Canongate of Edinburgh; and it is not a little amusing to look back to days when such persons were, to use the language of our *sign boards*, the "Booksellers to his Majesty," and to contemplate in idea the state and extent of the sovereign's store of books at this age.

Such was the state of manners and literature in our country, even among the higher ranks at that period. And recollecting the general barbarism which prevailed, it is almost unnecessary to contrast that time with our own, in point of happiness, virtue, and occupation. But the graphic pen of Sir Walter Scott, in his description of a Scotch laird of a much later period, viz. about the era of the Porteous Mob, enables us to make a comparison of the manners of that time with those of our own day. The person alluded to is the auld laird of Dumbiedykes, one of the characters mentioned in his novel the heart of Mid Lothian, who, the author says, "brawled, swore, betted at cock-fights and horse-races, and whose humours and pranks" were the themes in the neighbouring alehouses. The picture of him is completed by that writer in the language of douce Davy Deans, when he compared with him his son, the younger Dumbiedykes. The fault of the young man, as that venerable man marked, was "cleaving to the warld, and the warld's gear, a wee o'er meikle:" but then he said the laird was in many respects unlike his father, for he was "nae profane company keeper, nae swearer, nae drinker, nae frequenter of alehouses, or music houses, or dancing-houses, nae Sabbath breaker." All well instructed men are not, as a matter of course, well behaved ones; but some of this old laird's vices appear, like Lord Bacon's, to have been as much those of his times and his situation as of his nature; and if the elder Dumbiedykes had lived in our own day, and been well educated, it is not impossible that he might have been a respectable gentleman, engaged in rural affairs, filling up his vacant hours with good literature, and the temperate society of enlightened friends, while he was benefiting his family by judicious improvements of his estate, and the community by his meritorious attention to the business of his country and other public affairs.

PUBLIC MEETINGS.

It is really quite amusing to read of the tricks and fancies of many of the political meetings in Great Britain. We read of one, when *six groans* were proposed, seconded, and carried against the Emperor of Russia, and three against Don Miguel! But at a Carlow meeting, a Rev. Gentleman delivered an oration from which we extract a passage:

"But, Mr. Chairman, mark the insultingly magisterial vigilance of a certain Grand Jury. (Ha, ha, ha!) On pretence of dreading the manufacture of pikes, they summon all the blacksmiths of the country to appear in the court-house; they institute a public investigation into their characters; they make all the above-said blacksmith gentry take the oath of allegiance (as the blacksmiths expressed it) down on the *nail*, and then forsooth, they grant licences to these unoffending poor tradesmen to pursue their avocations. This farce was got up and performed, as you are all aware, amid the scorn, the derision, and the contemptuous railing of every man, woman, and child in the country. It was said that every licensed blacksmith (ha, ha, ha,) should have a *log* about his neck, by way of rendering him harmless. (Ha, ha, ha!) Come, let us give one universal laugh at the comical act of logging blacksmiths. (Here the whole assembly burst out into a tremendous fit of laughter.) Let us give another louder laugh. (Here the laugh of the multitude became terrific.) Let us give a third laugh ten times louder still. (A third time the ten thousand vociferated one stupendous laugh, which actually shook the ground on which they stood) I am glad you have given these mighty laughs. They are the exact suitable expressions to point out your contempt of the blacksmith humbug. As well might they summon at this moment all the pump-sinkers, and all the quarry-blasters, and make them take the oath of allegiance (ha, ha, ha!) for fear they might conspire to blow up the earth. (Ha, ha, ha!) Ho! the blacksmith investigation is really comical, and rather a good thing in its way, inasmuch as it gives a fine illustration of the hyper-sapient wisdom of our rulers—in fact, the country should be delighted, inasmuch as this proceeding has caused more merriment among the lower and higher classes than any judicial act hitherto published in Ireland. (Ha, ha, ha!)"

Was this laughter occasioned by the thought that the blacksmiths of Carlow or Kildare could be suspected of forging pikes, or at the simplicity of the Magistrates who imagined that oaths could bind them?

HOW TO MAKE THIS WORLD A PARADISE.

In Dr. Chalmers' admirable Bridgewater Treatise, he brings forward, among many others, another argument in favour of the righteousness of the moral Government of the Creator—from the *sense* of pleasure or of pain which arises from the taste and feeling of moral qualities. The effect of this adaptation of men to act on each other, is quite surprising in its consequences. Dr. Chalmers has, upon this subject, a beautiful passage, which we insert more on account of its innate merits than for any value we attach to it as an illustration of the author's theory:

By the purely mental interchange of these affections, there is generated a prodigious amount of happiness: and that, altogether independent of the gratifications which are yielded by the material gifts of liberality on the one hand, or by the material services of gratitude

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

on the other. Insomuch, that we have only to imagine a reign of perfect virtue; and then, in spite of the physical ills which essentially and inevitably attach to our condition, we should feel as if we had approximated very nearly to a state of perfect enjoyment among men—or, in other words, that the bliss of Paradise would be almost fully realized upon earth, were but the moral graces and charities of Paradise firmly established there, and in full operation. Let there be honest and universal good-will in every bosom, and this be responded to form all who are the subjects of it by an honest gratitude back again; let kindness, in all its various effects and manifestations, pass and re-pass from one heart and countenance to another; let there be universal courteousness in our streets, and let fidelity and affection and all the domestic virtues take up their secure and lasting abode in every family; let the succour and sympathy of a willing neighbourhood be ever in readiness to meet and to over-pass all the want and wretchedness to which humanity is liable; let truth, and honour, and inviolable friendship between man and man, banish all treachery and injustice from the world; in the works of merchandise, let an unfailing integrity on the one side, have the homage done to it of unbounded confidence on the other, insomuch, that each man reposing with conscious safety on the uprightness and attachment of his fellow, and withal rejoicing as much in the prosperity of an acquaintance, as he should in his own, there would come to be no place for the harassments and the heart-burnings of mutual suspicion nor resentment or envy: who does not see, in the state of a society thus constituted and thus harmonized, the palpable evidence of a nature so framed, that the happiness of the world and the righteousness of the world kept pace the one with the other?—Vol. i. pp. 172—174.

THE PACHA OF EGYPT.

Of the Pacha of Egypt, Sir Alexander Johnston says:—

The Pacha of Egypt, a chief of a clear and vigorous mind, observing the advantage European states have derived from a similar policy, has publicly encouraged the introduction into Egypt of all those arts and sciences which are calculated to improve the understandings of the people, to mitigate the effects of their religious feelings, and to secure the stability of the local government; he has assimilated his army and navy to those of Europe, and subjected them to European regulations and to European discipline; he has formed corps of artillery and engineers upon European principles; he has attached regular bands of military music to each of his regiments, with European instructors, who teach the Arab musicians according to the European notes of music, to play upon European instruments the popular marches and airs of England, France, and Germany; a short distance from Cairo he has established a permanent military hospital, and placed it under European surgeons, and the same rules as prevail in the best-regulated hospitals in Europe; and he has formed a school of medicine and anatomy, in which not only botany, mineralogy, and chemistry, are taught, but human bodies are publicly dissected by students who profess the Mahomedan religion, and who are publicly rewarded in the heart of a great Mahomedan population according to the skill and the knowledge which they display in their different dissections. At Alexandria he has established a naval school, in which the Mahomedan students are instructed in the several branches of geometry, trigonometry, mechanics, and astronomy, connected with naval architecture and the science of navigation, and a dock-yard under the control and superintendence of a European naval architect, distinguished for his talents and his skill, in which, besides frigates and other vessels of smaller dimensions, four ships of the line, three carrying one hundred and ten guns upon two decks, and one of one hundred and thirty guns, have been recently built; he has opened the old port, which was formerly shut against them, to all christian vessels. He has encouraged the formation of regular insurance offices, and authorised christian merchants to acquire a property in lands, houses, and gardens. He has employed an English civil engineer of great eminence, on a very liberal salary, to improve all the canals in the country and the course of the Nile; he is about to construct carriage roads from Alexandria to Cairo, and from Alexandria to Rozetta and Damietta; and M. Abro, the cousin of his minister, is about to establish upon them public stage-coaches, built on a model of one sent to him from this country; he has introduced steam-boats, which navigate upon the Nile, and steam engines, which are used for cleansing and deepening the bed of that river, and for various other public works; he has patronised the employment by Mr. Briggs of two Englishmen, taken for the purpose from this country, in boring for water in different parts of the desert, and he has discovered through their operations some very fine water in the desert between Cairo and Suez; he has encouraged the growth of cotton, indigo, and opium, and the former of these productions is now a great article of trade between Egypt and England, France, and Germany; he has established schools in the country, for the instruction of all orders of his people in reading, writing, and arithmetic; he has sent, at great expense to himself, young men both of the higher and lower ranks of society to England and France, for the purpose of acquiring useful knowledge; the former in those branches of science and literature which are connected with their service in the army, the navy, and the higher departments of government; the latter in those mechanical arts which are more immediately connected with their employment as artisans and manufacturers; he has constituted a public assembly at Cairo, consisting of a considerable number of well-informed persons, who hold regular sittings for forty days in each year, and publicly discuss for his information the interests and wants of his different provinces; he patronises the publication of a weekly newspaper in Arabic and Turkish, for the instruction of his people; and finally he protects all Christian merchants who are settled in this country, not only in time of peace, but also in time of war, and afforded the European merchants who were settled at Alexandria and at Cairo, a memorable instance of his determination to adhere under all circumstances to this policy, by informing them, as soon as he received intelligence of the battle of Navarino, that their persons and their property should continue as secure as if no such event had occurred. I have dwelt at some length upon this subject, because I have felt it to be my duty, in consequence of the information which I have received as Chairman of the Committee of Correspondence, to give publicity in this country to those measures by which one of the most distinguished of our honorary members has restored to Egypt, in their highest state of perfection, all the arts and sciences of Europe; has emulated, as a patron of knowledge, the conduct of the most enlightened caliphs of Bagdad; and has afforded, as a Mahomedan, a bright example for their imitation, to all the Mohamedan sovereigns in Europe, Africa, and Asia."

Tenacity of Life.—The genus of animals called sea-nettles is very tenacious of life. If one of these creatures is sliced, either perpendicularly or crosswise, each slice forms a new and complete being, in which will be found the mouth, stomach, and every other organ, as perfect as in the original. The young of these sea-nettles sometimes come into the world from the mouths of their mothers.

Fluent Orators.—It was a notion of Dean Swift's that a man with a multitude of ideas could never speak well, whilst one with a limited number could address an audience without interruption. Ideas he used pleasantly to say were like a congregation in a church, the thinner they were, the less difficulty was there in emptying the church.

Manner of naming Countries.—The origin of the word Canada is curious enough. The Spaniards visited that country previous to the French, and made particular searches for gold and silver, and, finding none, they often said among themselves, "aca nada" (there is nothing here). The Indians, who watched them closely, learnt this sentence and its meaning. After the departure of the Spaniards the French arrived, and the Indians, who wanted none of their company, and supposed they also were Spaniards, come on the same errand, were anxious to inform them that their labour was lost by tarrying in that country, and incessantly repeated to them the Spaniards sentence "aca nada." The French, who knew as little of Spanish as the Indians, supposed this incessantly-recurring sound was the name of the country, and gave it the name of Canada, which it has borne ever since.

Beauties of the Statutes.—One of the most amusing of the results which the reckless system of multiplying Acts of Parliament at least used to give rise to was the introduction of particular clauses relating to persons and things which had no earthly correspondent connection with each other. A remarkable example of this was brought to light during the last session. In going through the Acts of Parliament for precedents on the question of admitting Quakers into Parliament, the Committee found out that one of the most important provisions relating to this point was absolutely inserted in the body of an Act for preventing the under exaction of tolls or fees on the River Thames, and to prevent the spreading of disease among horned cattle!

Bakers in Paris.—The number of bakers in Paris is limited. Every baker is obliged to record his daily sale, and compelled, by a statute enforced by the Prefect of Police, assisted by the advice of the Syndicat (a body of men selected from among the bakers, with a chief, appointed by the Prefect) to lay up in the storehouses of the city of Paris a certain number of sacks of flour of first quality, which are taken back, or renewed, according as the season is less or more favourable to keep them in a state of preservation. This stock, the produce of all the bakers, is to provide for the subsistence of the inhabitants in case of dearth. The price of bread is regulated by the Prefect of Police, and is kept lower than the current price in the country, when too dear; but if cheap in the country, they keep up the price in Paris long enough to make up for the deficiency experienced by the bakers when obliged to undersell. If a baker has not the means to carry him on the length of time during which he is obliged to undersell, the Syndicat supplies the money out of the funds possessed by the said Syndicat, whose duty it is to watch over the interests of the bakers in general, and the subsistence and safety of the inhabitants. The bakers of Paris are wealthy, and could not carry on business without being possessed of a large capital.

Hints to Actors.—Madame Clairon attributed her growing prematurely old to the influence of the griefs and distresses which it was her constant province to represent on the stage; and the *malade imaginaire* of Moliere is said to have proved fatal not only to Moliere himself, but to the actor who succeeded him in the part. Pliny has a still more remarkable anecdote to the same effect: he states that there was an actor who imitated the feelings of the gout so naturally, as at length to bring the disorder upon him.

Bird Catching.—The following simple but ingenious method of catching wild fowl is practised in Mexico. The lakes of the Mexican vale, as well as others of the kingdom, are frequented by a prodigious multitude of wild duck, geese, and other water birds. The

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Mexicans leave some large empty gourds to float upon the water, where those birds resort, that they may be accustomed to see and approach them without fear. The bird-catcher then goes into the water deep enough to hide his body, and covers his head with a gourd; the ducks come to peck at it; and then he pulls them by the feet under water, and in this manner secures as many as he pleases.

The Lean Patient.—"What is the cause of my leanness?" said a thin gentleman, who would have given half his fortune for half of my fat; "what is the cause of my leanness?"—"*Demandez ce à ce Dieu!*"—"Pho! demand a fiddle-stick's end!—I want *you* to tell me, Sir—*you*, Sir;—what is the cause of my leanness?"—"Well—*soyez tranquille*—be quiet a minute: there is a predisposition in your constitution to make you lean, and a disposition in your constitution to keep you so." This explanation, about as satisfactory as Dr. Thomas Diaphoreus's explanation of the properties of opium—"*quia est in ea*," &c &c. did not soothe the irritability of my lean inquirer, who became, if possible, more shrunken and wizened as his heart increased. Seeing the nature and temper of my antagonist, I went to book with him in another way:—"Why, Sir, as to the causes of leanness, there may be many that an ingenious theorist might suggest;—I speak to you, Sir, as *to a sensible man*."—The storm and heat began to subside; an oily word is like an emollient;—"I speak to you, Sir, as a sensible man, and I am aware that it is not sufficient to talk to *you* in general terms, of constitutional peculiarities, digestive organs, and alimentary functions; you must have a positive specific cause; and, if possible, an explanation of that cause, as plain as the specification of a patient."—"Just so; that is what I want—you speak like a *sensible man*—(the retort courteous.)—Every effect, Sir, must have a cause; and I want to know whether the cause may be in the stomach, or any particular part of my inside, and if so, whether by particularly directing our attention to that part, wherever it may be, we can in any way alter its nature?"

But "*revenons à nos moutons:*" finding that my patient's mind was bent on *localities*, I suggested the intestinum cœcum for his consideration—the newly discovered organ of fat! He had never heard of it: this was what he *expected of me;* (another retort courteous, for which I owed him one.) "This was news! What was it? how was it?"—"Why, Sir, some are of opinion that the cœcum contains a certain ferment—some that it is destined to secrete an important fluid—others take it for a *second ventricle*, wherein the prepared aliments may be stored up, and so long retained, till a thicker and more nutritive juice may be drawn from them;—and how it is a depot of fat, you will find in the 'Philosophical Transactions.'"—*Wald.*

A modest Editor.—We advise our subscribers to buy a portfolio for the *Yankee*, or to make something of the sort for themselves, out of two pieces of pasteboard, or thin board, with straps over the back, or a bit of cloth, nailed so as to secure the two covers. *Our Yankees are worth it*, and they will find it so, as we pursue our way. There is no knowing how long we may choose to be a slave; and if we stop, they will wish they had taken our advice, *for they'll never get such another paper.* We don't say this to make them buy two copies a-piece; for we have no interest in the matter, and our publisher has but few to spare now; and the few that he has, he will not have long.—*The Yankee.*

NATURAL HISTORY.

CANE AND BAMBOO.

Canes, which are used so abundantly as a material for forming the bottoms of chairs and other articles of furniture, are of eastern production.

The Indian cane grows straight and tall without branches, and is surmounted by a tuft or crown. Its bark is thickly beset with straight spines, but this being removed, the smooth cane is disclosed, having no marks of the thorns which grow on the outside.

Sumatra produces this plant very abundantly. The Dutch were formerly the exclusive importers of canes from that place into Europe, and we were accustomed to purchase them from this people, who studiously withheld all information concerning the plant from which they were obtained, fearing lest travellers should discover how plentifully they were produced in the woods, and that others beside themselves should divest the cane of its thorny covering, and appropriate it to useful purposes, without having recourse to their intervention.

Such a matter could not, however, long be kept secret. As our mariners found their way to the eastern islands, and different parts of the Indian ocean, they became well acquainted with the cane plant, and the great variety of uses to which it might be applied. At Java as well as at Sumatra,—at Japan, Malacca, Siam, Pegu, and many other places, the rattan was found in great abundance. The natives of Java cut the cane into fine slips, which they plat into beautiful mats to sit upon, manufacture into strong and neat baskets, or twist into cordage. With them it supplies the place of our string or twine, for all their parcels are neatly tied up with thin fibres of cane. The fruit it bears, which, when ripe, is roundish, as large as hazel-nuts, and lies in clusters, they sell in their market as an article of food. They sometimes suck out the pulp by way of quenching their thirst, and at other times pickle the fruit. Here, as at Sumatra, and indeed throughout the eastern islands, vessels are furnished with cables formed of cane twisted or platted. This sort of cable was very extensively manufactured at Malacca. "Here," says Dampier, "we made two new cables of rattans, each of them four inches about. Our Captain bought the rattans, and hired a Chinese to work them, who was very expert at making such wooden cables. These cables I found serviceable enough after mooring the vessel with either of them; for when I carried out the anchor, the cable being thrown out after me, swam like cork in the sea so that I could see when it was tight, which we cannot so well discern in our hemp cables, whose weight sinks them down; nor can we carry them out but by placing two or three boats at some distance asunder, to buoy up the cable, while the long-boat rows out the anchor*." In Japan the ingenious natives not only make all sorts of baskets of split cane, but work it up into cabinets with drawers, &c., which are woven in the neatest and most elegant manner.

That gigantic reed, the Bamboo, is applied to a still greater variety of purposes. Indeed, among the Chinese, it may be said to be used for almost every thing. Marco Polo informs us that in his time they had canes fifteen *passi* (thirty English feet) long, which they split in their whole length into very thin pieces, and then twisted them together into strong ropes 300 passi long, that were used to track their vessels on their numerous rivers and canals. M. De Guignes says, that in the course of his journey through part of the Celestial Empire, he often saw Chinese making this description of rope: the artisans were mounted on scaffolds twelve or fifteen feet high, and let the cord fall to the ground as it was platted: and M. Van Braam, another modern traveller, speaks of this bamboo cordage as being admirably light and strong. The sails of the Chinese junks, as well as their cables and rigging, are made of bamboo. The old Venetian also describes a pavilion of the Grand Khan, the roof of which was made of bamboo cane richly gilt and varnished. These bamboos, he says, were each three palms in circumference, and ten fathoms long, and being cut at the joints, were split into two equal parts, and laid concave and convex to form gutters. The missionaries inform us that not merely the roofs, but entire dwellings are constructed of bamboo: this is particularly the case in the southern province of Se-chuen, where nearly every house is built solely of this strong cane. Moreover, almost every article of furniture—mats, screens, chairs, tables, bedsteads, bedding, &c. are all made of the same material. This same curious people convert bamboo into paper: in short, as Van Braam remarks, "scarcely any thing is to be found in China, either upon land or water, in the composition of which bamboo does not enter, or to the utility of which it does not contribute." The same extensive use of the hollow reed is made in Japan, nor is it much less employed in Java, Sumatra, Siam, Pegu, the Ladrone islands and other eastern countries.

The Chinese extract an article of food from the young shoots of the bamboo; nor is this practice, any more than that of making candle-wicks from its fibres, confined to China: both obtain in Japan and some other neighbouring countries.

Although the bamboo grows spontaneously and most profusely in nearly all the immense districts included in the southern portion of their empire, the Chinese do not entirely rely on the beneficence of nature, but cultivate the gigantic reed with much care. They have treatises and whole volumes devoted solely to this subject, laying down rules derived from experience, and showing the proper soils, the best kinds of water, and the seasons for planting and transplanting this useful production.

* Voyages, vol. ii.

MIMOSA BARK.

There is at present every prospect that the use of the extract of bark will at length be adopted, and that this substance will form an important article of commerce between Great Britain and Australia. In the year 1832 the extract of the bark of two species of mimosa, which are cut down for the purpose of clearing the land, was imported from Australia, and was sold to some English tanners at £5 per ton, under the name of extract of wattle bark. It was found on trial to produce as much leather as between four or five times its weight of oak bark of fair average quality. It is not quite equal in strength to the extract of oak bark, but the importation price more than counterbalances this inferiority, and this will be the case, notwithstanding the distance of New South Wales, as long as mimosa-trees are cut down in clearing land for cultivation.

The bark was stripped from the trees in August, September, or October. The rough outward bark was taken off, and the inner bark while green crushed in a mill with fluted copper rollers like a sugar-mill. It was then put in a copper boiler containing clear water, 12 lbs. to 100 gallons, and boiled gently during two hours; the decoction was then strained through a sieve into broad flat copper pans, and evaporated to the desired consistence. One ton of bark produced 4½ cwt. of extract when brought to the consistence of tar. If made hard as pitch, then only 300 cwt. would be obtained; but the evaporation if carried thus far will char the extract, which must on every account be avoided, since its tanning properties are then entirely destroyed. A ton of the best white oak bark produces 500 cwt. of extract, two thirds of which is pure tannin. The Mimosa is therefore rather less rich in tannin than oak bark, but where it so abounds this difference is not of any importance. Five tons of this extract sent from Van Diemen's Land were also favourably received. This extract was prepared rather differently, being boiled for twelve hours and then strained; then boiled for twenty-four hours

* Account of an Embassy to China. vol. ii.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and strained, and again boiled for an equal time and again strained.

The wattle bark, in its unprepared state, has been shipped to this country in small quantities, and the advantage arising from its importation in the form of an extract, has induced thsoe persons interested in the subject to engage the attention of some of the first chemists in its examination and preparation. Professor Davy, of the Royal Dublin Society, has, in consequence, very recently prepared from the bark a dry extract by the employment of a new method of evaporating, by means of which the extract cannot by any possibility be charred. The adoption of this simple method in Australia would ensure the importation of the substance in a state uninjured for use; while in the solid form its transport will, in every way, be less expensive. The present price of mimosa, or wattle bark, is £7 to £7 10*s.* per ton.

SELECT NOTICES.
