Sic Transit, &c.—"Blenheim, the noblest place in Britain," observes Mr. Louden, "is going rapidly to decay. The lake is turned into a morass covered with rushes, &c."——*The best Landholders.*—The same authority notes, that in a recent tour, the only highly kept gardens which he saw were those of small proprietors, professional men, merchants, or bankers. Every gardener knows that a situation under a rich tradesman, merchant, or small landed proprietor, is productive of far more comfort to him than one under a nobleman.——*Cuvier.*—When the Baron paid his accustomed visits to London, the first thing he did after his arrival in the city, was to go out and see all the new *caricatures* in the shop windows. They afforded him more than amusement, for he considered them as curious documents of the moral and political history of certain periods.——*Wholesale Murder.*—In Bounaparte's campaign in Russia, there fell, during 173 days in succession, an average of 2,900 men per day. More than *five hundred thousand* human beings in less than six months! Subseqnently to the peace of Amiens, more than *four millions* of human beings have been sacrificed to the personal ambition of Napoleon Buonaparte. Let his memory perish!——*War.*—It is calculated that England and France were at war with each other for a period of *two hundred and sixty years!*——*Wilson the Ornithologist.*—The remains of this delightful naturalist lie buried in the Swedish Church Yard, Philadelphia: his grave is in a part of the ground where the birds assemble in the trees and sing their songs of sweetest notes.—*(Finch.)*——*Scottish Factories.*—Sir David Barry who visited the Factories of Scotland on commission, during last year, found the chief food of the mill-workers to be, in some instances, potatoes *exclusively*, with a little herring or fat; others *enjoyed* porridge with milk or beer; others potatoes, oat-cake or broth, or kail.——*Stove Girls.*—In Glasgow, the most remarkable persons engaged in a dyeing and printing establishment, are females, termed stove girls. They hang up the prepared webs to dry in the stoves, and afterwards to take them down. They earn 7*s.* 6*d* per week! "I have been," says Sir David Barry, "in the stove, and seen them at work around me whilst the thermometer in my hand marked 140° of Fahrenheit!"——*Weaving.*—At a hand loom weaving Factory in Glasgow, the boys and girls stand on a cold damp earthen floor, in a close damp cellar for 13 or 14 hours a day! They earn *two shillings* a week and live on potatoes and salt!!

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By Vivian.

THE SECEDERS.

Reader! We appeal to you whether or not our Vivian department does not beat the dry editorial details of the other columns of the Gazette all to sticks! The fact is, and the truth must be told, the Editor is by far too *grave* a *subject* for us. He has entered his protest against the few joking lines in sequel, and complains that we are driving hard to make this a *sporting* Magazine. But what of that, Our lease of this department is not yet expired, therefore, we will cling to our bill of rights to the last.

Sombres and *anti-risibles* would do well to recollect that a little good humour shakes the wrinkles out of the heart, and frightens old Time from treading on our toes. Growling should be left to wild beasts, and croaking to the ravens. Ha! ha! ha! should in our opinion, when printed, be set up in capital letters, a prop of admiration between each to prevent its bursting its sides. The very hieroglyphic makes one snigger,—so festive, social, and joyous in its character. A fit of good humoured *laughter* is of essential service in certain morbid cases, as the Faculty will tell you: and many a quinsey in the throat has been broken by a joyous play of the muscles. Yes, this delicious alchymy not only converts a tear into the quintessence of merriment, and makes wrinkles themselves expressive of youth, but lights up the dullest eye with a twinkle, and throws a flash of sun-shine over the cloudiest visage, while it irradicates and embellishes the most beautiful. And the great Sydenham has declared, that the arrival of Punch in a country town or village, has done more for the health and spirits of the lookers-on, than all the stuff of 'Pothecaries Hall. So much for reason, now for rhyme.

ARGUMENT.

At a public festival, it is reported in Town, that one or two gentlemanly individuals made a public secession from the Temperance Society, respecting which they had formerly been the uncompromising advocates. The following song is supposed to have been uttered in honor of one of the new converts.

Come brother John, come here, John,
Attend to me awhile,
I've something for your ear, John,
May happily make you smile.

(Old Song.)

The man who cannot drink, John,
For other things may sigh;
When reason 'gins to wink, John,
The pulse plays wild and high:—
When the care-nought mood is stealing, John,
O'er the moments as they pass——
And the sweet oblivious feeling, John,
About the fourteenth glass.
Let him whom care has school'd, John,
To meet misfortune's stroke;
Let him whom hope has fool'd, John,
Still lay his thoughts in soak;
Drown all his fond regrets, John,
"In bumpers flowing o'er,—
Forget his love and debts, John,
And mind his griefs no more."

You see I quote from Burns, John,
That star of brilliant hue;
From some I steal by turns, John,
And often steal from you;
Bob Burns loved strong glenevit, John,
That best of barley bree;
May bounteous heaven give it, John,
In streams to you and me!

But, know you how to brew it, John?
An art that all should know,—
As we were won't to do, John,
Some twice four years ago.
Sir Morgan, have you read, John?
The knight of whim and glee,
And pondered what he said, John,
His *glorious Recipe.*

Let your fruit be efficacious, John,
Your water hissing hot,—
Your jug, the most capacious, John,
That you or yours have got:
Of sugar quite enough, John,
Of spirit all your store;
And you'll brew such goodly stuff, John,
Was never brew'd before.

Take with you, ere we part, John,
(I leave you with regret,)
The warm wish of a heart, John,
That ne'er dissembled yet:
May you and I get still, John,
As *fresh* as we would be,—
And those, who wish us well, John,
Shout—*here's to the barley bree!*

Note.—Plato, who has recorded the acts and conversations of his master Socrates, tells us that the sage Philosopher had no objection to a good cup of wine. The account in his *Symposium* of a party, which sat out all the rest of the company is amusing, and will probably go far to apologise for any little venial mistakes on the part of the moderns. Some of the most illustrious Athenians were present at the ancient meeting; among others, Alcibiades, Socrates, and Aristophanes. Things were so cheery, that Socrates, before the parting, *compelled them all to confess, that tragedy and comedy are the same thing!*

PURE TRUTH.

ADDRESSED TO THOSE WHO THINK.

It is one of the most valuable discoveries of modern times, that commerce is more profitable than conquest by shooting people dead, and that, in the long run, the merchant has the advantage of the soldier. The factory is your best garrison; the market, the strongest camp; camlets, broad cloth, blankets, punjums, and other manufactures, are the best species of ammunition in laying seige to a town or port; and steam bids fair, by its pacific conquests, to supersede that boasted invention of the barbarous ages, gunpowder,—except for fire-works.

CHINA—DISTRICT OF FEE FA FUM.

A ray of political light has dawned upon China. The mandarins are assisted by councils of five. The debates are unfortunately carried on with closed doors, but from the Report of a Sun Beam, the following is a specimen of the intellectual prowess of the worthy members.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

1st SPEAKER.—I most firmly, and without the least exitation conceive that his X L N Ciiis proposal would prove, and will be discovered if put in execution, of which I, in my humble opinion, do not entertain the least sparkle or shadow of doubt—most beneficial to the welfare, prosperity, and success—not only of the present, but of the succeeding conspicuous, promising, and most illuminated generation.

2d.—All fudge! no prosperity—*maar* the propositie of his X L must be taken.

3d.—De handle van de Slaaven, no good, maar de pipple mut de Geelde hebbe. Zondar dat—plenty Bankrupt. Syne X L speak seer goot.

4th.—Dat is vaar de gentlemans last *Spik*. Very goot opinie—maar de waggen-*hood* negotie mut nit forget de give courage aan de kopman van de Nisner.

5th.—I canna' just bring my mind to vote at the present siderunt.—I most humbly, and with all due respect, submission, and unfeigned loyalty and attachment to His most Gracious Emperor's Representative, his X L, do take the liberty of simply wishing that the question be postponed until I have consulted my well and truly tried friend, Bonze Myrrh Hing Ton.

(From the Tea-Whoo-Hoo! Psha, Show-Chong—Imperial Star.)

REPORTING PROGRESS.

OLD LADY RIX.

DIED, at the advanced age of 161 years, our dearly beloved granny, old Lady Rix, which loss, we feel assured, relations and friends will participate in; at the same time we request to be excused all visits of condolence.

SCHEPEKENNIS & Co.

FURTHER PARTICULARS.

"Great was Diana of the Ephesians"

Afflictions sore, long time she bore,
Physicians were in vain;
At length did please the higher pow'r,
To ease her of her pain.

The most remarkable feature in the character of the old lady, was her love of money and hoarding up treasure. Her covetousness led to dishonesty—for only to covet is to wish to be unjust. Then her hypocrisy was of the most fearful kind. She was the appointed guardian of the poor fatherless and motherless, but never interfered in any case where poverty stood at the door, or when her servants could obtain no fees. She, at the same time, always wished to be thought very charitable, very honest, very useful. When the rich died, she would be the first with her visits of condolence; no matter how distant the abode. In such a case her state carriage with four horses and attendants in deep mourning would be sure to be called out at a moment's warning. Her religion was of the most singular kind: she *lent* money to the churches in the hope of obtaining the best seat in the upper sky;—latterly, however, she inclined towards materialism, or rather to the notion that she was an immortal even on earth—that she was never to die. And when reminded of the possibility of a change in her circumstances, she would get into a fit of passion, and either by herself or her *under* servants, would scold the public at a terrible rate. In these displays of temper the disloyal feeling would break out, and then a preference was given for the government of Algiers, or that of Chaka, late king of Natal.

The old lady had a singular aversion to any ink but that used in her own chambers, and like the devil, professed a mortal aversion to printers' ink. Now and then indeed she was detected writing in one of the papers anonymously and dealing out to herself a good character. And she contrived at one time in the most remarkable manner to ingratiate herself in favour with the *Civil Servant*, who cried out in 1822, *Great is Diana of the Ephesians*. He however preferred the singular charge that the old lady was so slovenly in her methods of keeping accounts that her servants *helped themselves* when pressed by need. This was however in earlier times than the present.

The other defects in the old lady's character are, that her household accounts were badly kept—that no annual balance sheet of her public income and expenditure was made known to the world—hence the mystery and secrecy of her methods of doing business. She was greatly instrumental in keeping up high prices, and assisting monopolies. She always argued for the *Granary* system, by which the poor had either no bread to eat, or must pay her friends full 100 per cent. profit for that article.

Again, the old Lady was notoriously famed as a *Flesher*, and such was her liking to others of the same trade, that she granted them loans on mortgage to any extent She likewise sold at public auction the flesh of human beings, considering it in the light of goods and chattels—tables or chairs—merely gifted with the instinct of walking about, and expressing articulate sounds.

One thing was remarkable in the conduct of the old lady. Her Chief Butler or President is a person of genuine learning, a good, well-disposed, upright man. But strange to say, on opening the Will, the old lady has not left him a single shilling of legacy. To her President this conduct cannot be too severely reprobated.

THE SOUTH AFRICAN QUARTERLY JOURNAL.

This scientific publication, which was formerly a quarterly periodical, is now issued monthly. The chief contributor appears to be Dr. A. Smith, who writes the papers on African Zoology. These must be invaluable to the scientific naturalist. Among the other papers, are Accounts of the Amakosae, a Tribe of Caffers adjoining the Eastern boundary of the Cape Colony, by Dr. Morgan, Assist. Staff Surgeon. From these we select one extract:

The following is the estimated population of Cafferland:—

	Men.	Women & Children.	Total.
U'Gika's Sons and Uncles,	6000	30,000	36,000
U'Botuman,	2000	10,000	12,000
U'Queno,	3000	15,000	18,000
U'Dushanie and Children,	4000	20,000	24,000
Un Thlambe and Children	5000	25,000	30,000
Un Phundis,	2000	10,000	12,000
Congo and Family,	3000	15,000	18,000
Total,	25,000	125,000	150,000

The amount of the military force of Cafferland is above 18,000, of which number any enterprising chief might bring 12,000 together, to support him in any measure that would meet with the universal approbation of the Caffers.

The most interesting communications to the Journal are, we think, those by Mr. Chase—*On the Progress and present State of Geographical Discovery in the African Continent, made from the Colony of the Cape of Good Hope.* These essays will be read with profit by all those who feel an interest in the progress of discovery and civilization in the lands of their nativity or adoption.

ASSOCIATION FOR EXPLORING CENTRAL AFRICA.

The time is now approaching when this spirited Expedition from the Cape will proceed to the field of enterprise. A very numerous public meeting of the inhabitants—civil, military, and mercantile,—took place in the Commercial Hall on the 21st. His Excellency Gen. D'Urban in the Chair. The Report, a highly interesting one, was read by the Honorary Secretary, Mr. Chase. The speakers on this occasion were the Hon. Judge Menzies, A. Oliphant, Esq, His Majesty's Attorney General, Sir John Herschel, Col. Wade, Rev. Dr. Burrow, and Messrs. Von Ludwig, Ross, (H.) &c.

His Excellency the Governor (we learn from the Report,) has granted leave of absence to Dr. Andrew Smith, who conducts the Expedition, and has allowed a military party to accompany him under his orders, consisting of one European officer of the 98th Regt. and two private soldiers; and one non-commissioned officer and four private soldiers of the Cape corps. His Excellency has further granted a quantity of ordnance stores; and the Board of Admiralty, through Sir John Herschel, have forwarded for the use of the Expedition, a valuable collection of philosophical instruments, with directions, also, that it be assisted with other varieties from the Royal Observatory at the Cape.

NEW MARKET.

Considerable surprise generally prevails on the apathy which apparently exists as it regards the intended Vegetable and Fish Market—the foundation of which was hailed by the public with enthusiasm. If, as it is reported, the thing has been delayed out of courtesy to a few inhabitants of Market-square, such policy is, we think, very mistaken to say the least of it. Such an institution in the square, would yield a mine of profit to all the traders in the vicinity, besides saving the valuable lives of the unprotected sellers of vegetables, &c at present occupying the square, or other parts of the town. Besides, all private interests should surrender, as in the metropolitan improvements of London—to the public good.

TABLE BAY.

It appears, that during the last 25 years, four thousand five hundred and sixty-eight vessels, (exclusive of coasters,) have entered this bay, and out of these 44 (forty-four) have been wrecked, which is something less than 1 (one) in the hundred! It should be added that the cargoes of the wrecked vessels have been generally saved, the chief losses being the hulls of the vessels.—*Advertiser.*

THE SEASONS.

February went out like a lion, and March came in like a lamb. Taking it altogether, the summer has not been very oppressive, with the exception of sundry days of extreme heat. The South-Easters have not been so prevalent as in former years, and from June until the middle of February, the rains in Cape Town have been frequently abundant. In fact, we had one or two summer floods, and these will account, perhaps, for the insignificance of the *Musquito* tribe this year, whose awful twang and irritating bite have not annoyed us. Nor have the *Frogs* been heard with their love-notes. The old people, until about the end of February, dwelt largely on the advantages of the *good old times* of South-East, and attributed all their infirmi-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ties to the few and short visits of the moderⁿ South-East winds. But on the 26th, 27th, and 28th of the month, they must have been quite satisfied that the *Vortex* was in the midst of them, convulsing all things, both animate and inanimate. Houses were unroofed, trees were torn up, wagons had well nigh become balloons, ships were driven out to sea, boats capsized, and birds unwinged in their flight. Many of the swallow tribe were seen dropping down dead from the unparalleled fury of the S. E. wind.

PORT ELIZABETH.

After many years of patient waiting, our English Episcopal Church is at length opened for divine worship—but at the same time is in an unfinished state. The jetty, long talked of, is now to be commenced. The value of the goods imported and exported in the two last quarters of the last year was £70,904, exclusive of the goods imported from Table Bay.

RONDEBOSCH.

—— Hail to the State of England! And conjoin
With this a salutation as devout,
Made to the spiritual fabric of her Church;
Founded in truth, by blood of Martyrdom
Cemented; by the hands of Wisdom reared
In beauty of Holiness, with ordered pomp
Decent, and unreproved. *Wordsworth.*

At length a spire "whose silent finger points to heaven," is uplifted at the pretty village of Rondebosch. This Church, built by the voluntary subscriptions of Episcopalians, and other denominations of christians, and which is a model of beautiful simplicity, was set apart for divine worship on the 16th instant, by the Rev. G. Hough, Senior Colonial Chaplain, assisted by the Rev. Mr. Judge. His Excellency the Governor, with Lady D'Urban, and a respectable congregation, attended the solemnities on this interesting occasion. The Rev. E. Judge, A. M. has been appointed Chaplain.

WYNBERG.

This beautiful village has at length progressed in the best sense of the word. A handsome Church, 60 feet by 30, on a Gothic plan, with a Belfry and Tower 80 feet high, is now building. The situation is highly picturesque, commanding a boundless extent of woodland and mountain scenery.

The funds are, it must be confessed, inadequate to meet the expenses, but as Subscription Lists are open at the Commercial Hall and Public Library, it is hoped many will come forward and *give liberally.*

MAURITIUS.

It is quite natural that much party feeling should exist here against Mr Jeremie. He is, nevertheless, a man of surprising nerve, possessing a courage equal to any thing in the records of history. He is also a man of inflexible integrity, and is not to be diverted from the cause of Public Justice. He is as unwearied in the performance of business, as the present Lord Chancellor.

The unprecedented hurricane of the 25th of Jan. will be the ruin of many. The sugar crops have been cut off—the roads rendered impassable, bridges destroyed, and a fleet of shipping in the harbour either wrecked or crippled. Port Louis sustained incalculable injury by the deluge of rain which fell. Many of the streets became a perfect sea, and the stores, cellars, and ground-floors of the houses were all afloat.

THE YANKEES.

Table Bay has astonished the natives, by the *American* forests of shipping which have honoured our shores with a call during the month. These have been for the most part whalers, those sons of enterprise which contribute so much to the glory of our brethren in the United States. They have one and all paid just tributes to the advantages of our port, and the prompt and cheap supplies with which they have been furnished. Many of them were *temperance ships,* having nothing on board as a beverage but water, and we have seen their Captains on shore at dinner who, when even the wine was presented,

"Touched not—tasted not—handled not"

We must candidly confess, we differ from them in this respect—but surely *every man to his own liking*

Contemplating with astonishment as we did one evening, the dexterity with which a whaling crew managed their boat and plied their oars when pushing off from the Jetty, it was impossible to resist an impulse to pay them respect. They heard our shout——

"Success to America,"

when their leader rejoined with enthusiasm

"The same to Great Britain, with all my heart."

INFANT SCHOOL.

The fourth Anniversary was held in the Commercial Hall on the 27th,—His Excellency Sir Benjamin D'Urban presided. Lady D'Urban, Lady Herschel, and a numerous attendance of ladies and gentlemen witnessed the pleasing spectacle. The speeches delivered on the occasion were of the highest order of intellect, and are well worthy of perusal, as reported in the *Advertiser* of the 1st and 5th of March.

CRADOCK.

A hail-storm has been experienced at Cradock, which killed 15 goats belonging to a farmer in the district. The hail-stones are described as large as pullet's eggs.

TYGERBERG.

To the great joy of the country-people here a resident Clergyman has been appointed to the New Church at Tygerberg, and the Rev. JAS. BECK, A. M. has been nominated by the Home Government to the pastoral charge. Mr. B. is the first native of the Colony who has studied wholly at a British University—and that, too, with singular success. The Rev. Mr. BECK happily discourses in the languages Dutch and English, with great acceptance to the hearers of each.

THE SULTAN OF JOHANNA.

The Sultan has wisely submitted the perusal of his official papers to His Excellency the Governor, and we are glad to find a prompt and kind attention to the claims of this injured Chief. "This Government," observes His Excellency in reply, "You may be assured is impressed with the most favourable sentiments of your Highness, which cannot be affected by any attempts to injure you."

THE LITTLE SKIFF.

Arrived in Table Bay on the 5th inst. the *Circe,* a vessel of 22 tons, S. Reynolds, Capt. and two men; from London 2d August, and Saldanha Bay, 28th Feb. to this port, in ballast.

The following are places of arrival and departure:

Augt.	2,	left Deptford.
	12,	,, Scilly
	21,	,, Madeira.
	23,	,, Canaries.
	30,	arrived Cape Verds.
Sept.	19,	left ditto
Oct.	6,	crossed the Line.
	23,	arrived Abrolhas, (So. Am.)
	26,	left ditto.
	30,	arrived Isle Grand, (So. Am)
Nov.	1,	left ditto.
	3,	arrived St. Sebastina, (So. Am.)
	13	left ditto.
Jan.	1,	arrived at Elizabeth Bay, (Africa.)
	18,	left ditto.
Feb.	7,	arrived at Saldanha Bay.

NEW BANKING COMPANY — GOVERNMENT PRINTING OFFICE — ADVERTISEMENTS OF GRAHAM'S TOWN.

AN attention to Political Economy is happily characteristic of the present age. It was practically studied in this Colony for the first time, when a Joint Stock Insurance Company was started. When a people are united each one with his neighbour, or when they are sufficiently educated, it is astonishing how many channels of public utility are set a-going, all tending to the advantage of the community in general. And this leads us to inquire how it is that the *New Banking Company* is delayed? Mr. Canning was always of opinion that a Joint Stock Bank of Deposit and Circulation gave an additional stimulus to the trade, industry, and public spirit of a country, very distinct from that of a Government Bank. He probably thought at the same time, that Government should leave trade and commerce to those who pay the taxes and fill the treasury. The merits of the Colonial Government Bank of this Colony have been sufficiently discussed in the public papers; but there is one thing which appears to us very singular—that Government should still keep up a Printing Office! It would be a great saving to Government to get rid of this Gothic appendage, now of small utility, and more especially as there are three distinct Presses in Cape Town. And now that we are on the subject of the Press, we cannot help remarking on the apparent inconsistency of the methods adopted by the Authorities of Graham's Town, who, on giving notice to the inhabitants that all dogs without owners will be killed on a certain day, (or any *other* official notice,) transmit their information some 5 or 6 hundred miles to the Cape Town Gazette! Why not employ the local Press?

POETRY.

(Received too late for insertion in its proper place.)

THE TWO DEATH BEDS.

I've watched the sinner's dying bed,
Delirious and wild with dread;
I've seen his proud and rolling eye,
Glare with the soul's dark agony.
From side to side I've seen him toss,
And madly then blaspheme the Cross:
His brow was darkened with despair,
Hell, ere its time, was swelling there.
Oh! 'tis a wild and horrid sight,
To see a soul thus take its flight;
Dying with sin yet unforgiv'n,
In hate with man—at war with heaven;
To watch it on the grave's cold brink,
Then pass—but where, we dare not think.

I've seen the Servant of the Lord,
Whose trust was in God's holy word,
Die with a frame with anguish riv'n,
Yet calmly die in hope of heav'n;
I've seen a sweet and winning smile
Play o'er his faded cheek the while;
I've heard his soft yet solemn voice,
Call those around him to rejoice —
Nor o'er his death with hearts forlorn,
In hopeless sorrow 'ere to mourn;
His faith was strong—his hope was clear,
O'er such a death there needs no tear;
Or if it fall that drop should be
Of joy that such a soul is free.
No more with pain or grief oppress'd,
That soul hath gained a Saviour's rest;
Afar hath winged its hallowed way,
To regions of eternal day;
Grant Thou, who reign'st in heaven on high,
I so may live, that thus I die.

VOYAGES OF DISCOVERY.

FIRST NOTICE.

We have recently given a few outlines of the interesting Voyages of Capt. Owen, and that performed by Mr. Lindsay, and others of the Lord Amherst. We now proceed to the notice of Capt. Morrell's Voyages, in one thick volume, printed at New York.* Capt. Morrell is an American; hear this, ye worshippers at the shrines of the Trollopes, and the Halls, and the Cyril Thorntons! Nevertheless, we do declare, that it never was our lot to peruse a record of personal adventures which exhibits a nobler or more heroic spirit than that manifested by this worthy American. There has (we believe) been no report of expeditions of this description from America, hitherto known to us, which appears more fully to justify our opinion of the character and capabilities of her enterprising sons, than the one now before us. The brave, bold, rough hardy sailor of our own England, for a thousand years, presents himself in this American, in all the bold relief which we might expect to find in the original.

Captain Morrell, a native of the State of New York, on Long Island Sound, gave an early proof of his restless and enterprising disposition, by abandoning his family at seventeen and going to sea, for which he shewed a determined passion from his earliest years. Proceeding to New York, he quickly found a berth in a vessel, which was just about to sail for Lisbon with a cargo of flour. This was in March, 1812; and on the return of the vessel, when she approached the American continent, it was her chance to be taken by the English, in consequence of the hostilities which had broken out in the meantime. His next adventure was in a privateer, destined for France: the ship, whilst cruising on the coast of that kingdom, was taken by an English frigate, the crew of which boarded the American vessel. The whole of the party on board were ordered into the British ship, and brought to England, where they were placed in imprisonment at Dartmoor. The author speaks well of the treatment which he received during his incarceration: he found in this dreary abode above eight thousand Frenchmen, and about half that number of Americans, all prisoners of war. Here they received every indulgence that could be expected under such circumstances; and though they had no more than the customary "prisoner's allowance" of food, what they had was good and wholesome. They enjoyed the privilege of an excellent market, at the regular prices of the country, where every thing offered for sale was obliged to be of the best kind. No imposition was allowed to be practised on the prisoners by the English farmers. They had their own cooks and nurses in the hospital, and the doctor was one of the best and most humane men. His name was M'Graw, and he was justly beloved and respected by every American in Dartmoor prison. They had the liberty of a large yard from daylight until dark; and a certain number of the prisoners were each day permitted to go outside the walls to work, for which they were regularly paid by the captain of the prison. Within the walls they amused themselves with schools, dramatic performances, and a variety of games and plays. "In fact," says the Captain, "I cannot conscientiously accuse the British of any inhumanity towards the American prisoners during all my detention of thirty-one months in St. John's and at Dartmoor, excepting the atrocious massacre at the latter place in April, 1815, after the peace." The history of this affair is familiar to every reader. The American prisoners were fired upon, by order of the infamous Capt. Shortland, when eight were killed, and thirty-seven wounded!

Captain Morrell had not been long returned to his native country, when his enterprising spirit impelled him to seek gratification on his favourite element. He heard many stories of romance recorded in connection with the South Shetland Islands, and the seal voyages in the South Seas, and was soon placed in a ship destined for the seal trade, as first mate. In this voyage he had a specimen of the perils to which the navigation was exposed, and was led by his bold spirit into situations which none but a desperate person would venture to seek. The ship, however, returned in April, 1822, in perfect safety, to New York. Upon the very day of his arrival there, the Captain was applied to, to know if he would accept the command of a schooner, which was going out in the course of a month, on a voyage to the South Sea, to catch seals, to trade, and make discoveries. He jumped at the proposal, and in June of the same year set sail, in company with another schooner. The two vessels were provisioned for a couple of years, and their destiny was a cruize during that period, in the South Seas, the Atlantic Seas, and Pacific Ocean. This voyage, and three others which succeeded it, supply the whole of the contents of the present volume.

In the very commencement of his account, the Captain does not hesitate to assure us, that in his opinion, and from his experience, the day is not distant

* A Narrative of Four Voyages to the South Sea, North and South Pacific Ocean, Chinese Sea, Ethiopic and Southern Atlantic Ocean, Indian and Atlantic Ocean, from the year 1822 to 1832. Comprising Critical Surveys of Coasts and Islands, with sailing directions; and an Account of some new and valuable discoveries, including the Massacre Islands, &c. &c. &c. By Capt. Benj. Morrell, Jun.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

when a visit to the South Pole " will not be thought more of a miracle than to cause an egg to stand on its point." He states that this has been long his opinion, and that the results of the voyage, the steps of which we are now about to retrace, satisfy him of the certainty of his predictions. The great object of that voyage was to acquire a more accurate knowledge than any one before possessed of the Antarctic Seas, and to ascertain the practicability, under favourable circumstances, of penetrating to the South Pole. The progress of the vessels in the Southern direction is accurately noted by the Captain; and having occasion to remain for a short time in the harbour of Rio Janeiro, he gives a copious description of the beauties of that city. The Captain visited also and explored the coast of Patagonia, and saw sufficient of the inhabitants to make him disbelieve the common notion of their being giants. Having taken an ample survey of this coast, the party pursued its way to the Falkland Islands, situated in the South Atlantic Ocean, about eighty leagues east from Cape Virgin, in the Straits of Magellan. The author speaks very favourably of the productions of this Island; and describes the species of birds which frequent it.

In entering the Falkland Sound, Captain Morrell came in sight of three islands, one of which, called Eagle Island, he states, was the scene of an act of perfidy by the officers and crew of an English ship.

In continuing the course of the ship, between the south and east, the captain crossed the spot which has been described as the site of the celebrated Aurora Islands. He declares that there are no such islands in existence, and that he knows of other navigators who, like himself, searched for them in vain. The account of these islands is contained in a publication of the Hydrographical Society of Madrid, and their latitude and longitude are very particularly described. But it is the captain's opinion, that the reputed discoverers must have mistaken for islands, a series of icebergs with earth attached to their sides, and covered with snow on their tops.

It is observed by the author, that, whilst in south latitude, up to 64, they met with many fields of ice, but that the further they descended southwards, the less did they encounter them. Steering still southward, they crossed the antarctic circle, and getting into latitude 96 deg. 11 min. and lon. 48 deg. 15 min. E. they found no field-ice whatever, and even of ice-islands very few were observed floating. They also discovered that the winds in this latitude blow three-fourths of the time from the south-east or the north-east, very light, and attended with more or less snow every day, and that the westerly winds were accompanied with severe hail-squalls. The captain, who has passed the antarctic circle several times, on different meridians, has uniformly found the temperature both of the air and the water to become more and more mild the farther he advanced beyond the sixty-fifth degree of south latitude, and that the variation decreases in the same proportion. While north of this latitude, say between sixty and sixty five south, he frequently had great difficulty in finding a passage for the vessel, between the immense and almost innumerable ice-islands, some of which were from one to two miles in circumference, and more than five hundred feet above the surface of the water! When it is considered that they have always about three-fifths of their bulk *under* water, some idea may be formed of their enormous magnitude. He has several times come so near to them, when the weather was so thick and hazy that he could not see twice the length of the vessel, that nothing prevented his striking, but a timely application of the sweeps to bear them off. It was always his endeavour to keep at a respectful distance; for they are sometimes so nicely balanced, that, should a very large piece become detached from below, the whole mass above water, being thus rendered top-heavy would instantly capsize and plunge beneath the surface, when wo to the vessel that lies in its way. Even at the distance of one hundred yards, ships have been lost by the vast waves and whirls occasioned by these rolling mountains. But there is no evil, perhaps, which is not accompanied with some redeeming quality. The shelter which is sometimes afforded by these dangerous friends has preserved vessels from injury, if not ruin, during a gale of wind, especially as the sea is never rough where the ice-islands are sufficiently numerous to break the force of the waves.

Another observation of Captain Morrell is, that he found every spot which he visited beyond the sixtieth degree of south latitude entirely destitute of soil or vegetation; it rather rose in vast mountains or columns of impenetrable rocks, ice, and snow. He states it further to be his opinion, that ice-islands are never formed except in bays, or other recesses of the land, and that field-ice even is not produced in deep water at any time, or in rough seas. If these impressions be correct, this very important inference is devolved from them, namely, that if there be no more land to the south than that with which navigators are already acquainted, the antarctic seas must be less obstructed by ice than is generally supposed; and it follows, as a further inference, that an unobstructed sea for voyages of discovery is open as far as the south pole.

The ship, under the circumstances already mentioned, tacked about, and proceeded to Staten Land, an island forming the southern extremity of South America, where he intended to fish for seals. He presents us with a very excellent account of these animals, at least, the species which frequent this archipelago.

Before quitting the position in which he fished for the seals, Captain Morrell earnestly recommends shipmasters who intend to double Cape Horn, always to pass to the westward of the Falkland Islands, which will ensure them smoother water and better weather. Experience has convinced him that the coast here, at the proper season of the year, is not more dangerous than our own coast in the fall. All navigators would be satisfied of this fact, would they discard from their imaginations the horrible romances they have heard and read about Cape Horn, and judge for themselves with unprejudiced minds—most of these nautical legends being only fit to class with the fiction of the Flying Dutchman.

He has wintered and summered off Cape Horn and its vicinity, but never witnessed those extraordinary gales which we so often hear spoken of. He has never encountered worse weather on this coast than is experienced every autumn and spring in a passage from New York to Liverpool. In doubling Cape Horn, a ship may carry her royal-yards with as much ease as she can along our northern coast in the seasons before mentioned, and in the early part of winter.

MY NATIVE PLACE.

DUNDRENNAN ABBEY,

Where Queen Mary spent her last night in Scotland.

Dundrennan Abbey! lovely scene!
Last refuge for the Scottish queen;
E'er hunted from her country's shore,
She left it to return no more.
Thy walls are mould'ring to decay,
And time hath changed their hue to gray;
The ivy decks thy ruined cells,
From thee are heard no evening bells—
No hymn is sung—no pray'r is said—
Nor anthem breathes above the dead;
The wind sweeps through thy Gothic aisle,
Thou lonely, ruined, roofless pile.
And wild flow'rs in luxuriance bloom
On many a faded, nameless tomb;

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Rank weeds are in the Abbot's bower,
Where grew the rose—fair England's flower;
No voice is heard within thy hall,
A death-like silence reigns on all—
And yet I love to gaze on thee,
All changed and altered though thou be.
Near thee, beneath a hazel shade,
My mother in her grave is laid;
My sister sleeping by her side,
On these I've wept—and who would chide
The tears a fond child's eyes may shed,
When her who bore him 's cold and dead?
There is an oak within thy glen,
Its age beyond all human ken,
Round which my brothers used to play,
In childhood's free and happy day;
They're wand'ring now on land and sea,
And ne'er may meet again by thee:
That oak hath withered on its stem,
As if it sadly mourned for them.
I've seen thy hills—I've seen thy streams,
All bright when in the land of dreams.
Queen Mary's mount,—Queen Mary's spring,
To those my thoughts shall fondly cling,
While life shall flow within my veins,—
Scenes worthy of a poet's strains;
Kirkconnel Moor, where lies the tomb
Of one who met a martyr's doom,
When Turner, with his bloody men,
Swept hill and dale, and moor and glen.
The sun hath set—the evening breeze
Is murm'ring gently through the trees,
And faint is heard the billows roar,
Soft breaking on the distant shore;
The deer are wand'ring from the hill,
The heath bird's cry is clear and shrill;
The hare feeds on the dewy blade,
Near where her hidden form is made;
The rooks have raised their noisy cry,
As homewards to their nests they fly;
The fox hath left his den to prowl,
I hear his wild and dreary howl;
The night-bird whoops her lonely cry,
And chaunts her dirge where dead men lie;
With these I'm left to muse alone,
On scenes and days long passed and gone.
When death shall set my spirit free,
Oh! may my grave be made near thee;
For me shall sound no funeral bell,
The autumn winds shall breathe my knell;
The mossy turf shall wrap my breast,
And calm and sweet shall be my rest:
I ask no stone to mark the place,
No friendly word my fate to trace,—
A lonely and a nameless grave—
Oh! 'tis not much from thee I crave:
To ruined arch—to cloistered cell—
A long, perchance, a last farewell.

Wynberg. **

TO A ROSE ON A LADY's BOSOM.

May that beautiful Rose,
On the spot where it glows,
Find a lambent repose.

May its freshness impart
Vernal bloom to that heart
Which shall never depart.

May its hue and its grace,
On that figure and face,
Leave a permanent trace.

May its exquisite scent,
Still a beauty invent,
Still a virtue augment.

And may Heaven decree,
That the Rose ever be
Still an emblem of thee!

ODDS AND ENDS FROM A SETTLER'S SCRAP-BOOK.

Albaniana.

No. I.

PRECIOUS STONES IN ALBANY.

A KNAVE OF DIAMONDS.

"All that glistens is not gold."
(Shakspeare.)

THE British Settlers of Albany, before they left the *hospitable* shores of their own country,—that is to say, shores which refused a number of them any longer their usual allowance of beef and pudding, or rather the opportunity of labor which command these indispensibles for an Englishman's existence,—had entered into an agreement with the government that each head of family should, on landing, receive a grant of ONE HUNDRED ACRES OF LAND, which, at the most, is not above one-thirtieth of what was considered sufficient to subsist an African-Dutch Boer.

To men who mostly had not occupied more of their mother-earth than would fill the mignonette-box before a three-story window in some street, lane, or alley of the great modern Babylon, (for the British Settlers were, and I take it more for a glory than reproach, LONDONERS,—*vulgo, Cockneys,*) and whose legs had never, perhaps, stretched in their own land, beyond certain radii, the centre of which was "*the place where Hick's Hall formerly stood,*" or probably "*The Town Hall in the Borough,*" to Tyburn, Baggnige Wells, and perhaps once in their lives to the Gypsies' Canaan, *Norwood;* (the place, I believe, is since—ah, me! refined and *reformed,* and named Beulah Spa!) such a prospect of agrarian wealth as ONE HUNDRED ACRES OF LAND!! was a sore temptation. Thousands rose to the hook, and it was swallowed at with such eagerness, that above *ninety thousand souls,* or bodies, were candidates for expatriation to the Colony with the promising title of THE CAPE OF GOOD HOPE. Out of this number, above four thousand "*came and saw;*" and, as might have been expected, were disappointed, for the Cæsarian laconism of the "*conquest,*" although now the well-deserved boast of the Settlers, has only of late years been added to their history.

To the title-deeds of these *precious* (in more senses than one) and munificent grants of one hundred acres, was appended certain very *cautious* reservations; such as the government right of making roads, of course for public benefit,—the right of levying taxes, such as the government might find convenient at present or hereafter, and the right of that awful dignity, "THE CROWN," to all mines of gold, silver, and precious stones.

It was in the very early days of the British Settlement, and perhaps in some of its wildest, before repeated disappointments had arrested the full tide of that buoyant spirit peculiar to a fresh Immigrant, (stopped for a period, but, thank God, once more in its full flow,) and had congealed its mirthful disposition, that a Settler called upon the Provisional Magistrate (rest his soul!) of the newly-peopled wilderness, a military man, who was rather a crusty character, not very popular, and whom no one delighted to honor, but rather enjoyed to mystify, to consult him upon a subject, the importance of which could be at once gathered from a cast of the most anxious features, assumed for the purpose.

"I am informed, Sir," said the sharp-visaged visitor, "that the government impose certain reservations in the titles of *our* ESTATES." "Hem, yes!" replied the unmoved Justice, lolling in his easy chair. "And among them," continued the apparently much-concerned querist, "discoveries of *precious stones* are included!!" A strange thought suddenly flashed across his worship's brain; visions of El Dorado, of Golconda, and Peru flitted before him with the rapidity of lightning. "What!" exclaimed the multo-functioned functionary, for he was Judge and Jury, Coroner and Lord Lieuten-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ant; in short, he was as all functionaries were in those *orderly* days, *servants of all work*,—Factotums. "What!" and rising from his chair, "do, Sir, please be seated; well, then, you have discovered a mine of precious stones, eh! on your *own* estate, eh!" "Why, no, Sir," replied the hundred-acred gentleman, with affected and provoking hesitation, "I—I—cannot—exactly—state that—I—have—discovered any—precious stones, but I have found *a precious lot of stones*!"

The port and claret-complexioned frontispiece of the worthy (they are always worthy) magistrate thus insulted in his curule chair, first assumed all the prismatic hues—red, yellow, blue, down to deep violet, and then suddenly blanched with rage, and then——. Well, I shall tell the remainder some other day; and for the present refer you to my *Belle-vue* above.

BROTHER SETTLERS CONTRASTED.

Anno 1830. Anno 1820.

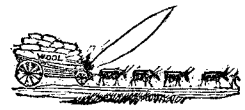
"*Look here upon this picture, and on this.*"
The counterfeit presentment of two *brothers*.
"HYPERION TO A SATYR."
(Shakspeare.)

RARE COMFORTS—BREAD AND WATER.

DRY TIMES, SIRS!!

In the times alluded to in the former reminiscence, when men, just newly transplanted from the land of intelligence, of *free thought*, and *free speech*, had not been *tamed down* to colonial usages, at least such as *then* existed, to suppress their indignation and contempt, because it was dangerous to proclaim such feelings, or convenient to conceal them; a state of things almost as injurious to the community as absolute licence, and more so than the unrestrained use of that safety valve, the Public Press; there were many amongst the settlers, who *boldly spoke out their opinions* of passing events, and some not too *wisely*, nor *too well*. Amongst these was a ci-devant Irish Captain of Militia, who had joined the ranks of the immigrants, and who, from a capacity peculiar to his countrymen, was always getting into one scrape or another; he had an appetite for a *broil*, would have been a martyr for the sake of a *steak* (or stake, hang the orthography of the word.) It was the de'il's fault or his own, and I leave them to settle the matter—

"Jolly companions every one."



Two years of failure of the wheat crops, which had devastated the greater part of the colony, had in the British settlement itself, literally made *bread*, (however vulgar it may be to quote an old home adage,) "*a sight good for sore eyes.*" A drought too, afflicted the country, which in general seasons is somewhat deficient in that pabulum of existence, and Albany, the new land of promise, suffered severely from both these inflictions, because a shoal of eaters aud drinkers, with throats rather dry, and stomachs of singular, (no, rather *plural*) capacity, thanks to a warm and too fine a climate, had been thrown suddenly into the colony without any notice, consequently any preparation, and without any possibility of immediately shifting for themselves.

Captain Paddy (I cannot appropriate to him a better or more significant *alias*,) happened at this period to have occupied the peculiar attention of some of the gentlemen of the local court, doubtless for the perpetration of some unheard of virtue, some extravagant excellence, I really forget the precise nature of the allegation; and was, as *might be expected*, convicted. After summing up the evidence, the *Deputy Landdrost*, for such was the barbarous title of His Britannic Majesty's local representative in those long-to-be-remembered days, adjudged that Captain Paddy should "be confined in the District Jail for three days, upon *bread and water*."

"Och! and by the powers, thank you, Sir," cried Captain Paddy, with his stentorian voice and rich emerald-ian brogue, "thank you, Sir; then I shall get *two* of the *scarcest* articles in the Colony!"

Captain Paddy's wit and philosophy prevented his incarceration.

SHORT TAILS.

"This is the way WE wag-on."

J. C. C.

THE REMINISCENT, No. 6.

A GOVERNMENT CORRESPONDENT.

It is inconceivable—the silly measures which guided many of the acts of the Sidmouth administration. It is a fact which seems to have escaped the notice of political writers, that the Government of England directed monthly returns of the state of the villages: *i. e.* the state of public feeling, from the Post Office Keepers. In England, it is well-known, that many of these are exceedingly ignorant men. It was my lot to take up a temporary abode in a village near Stafford, at the residence of the candidate for the election of the Borough at the next forthcoming dissolution of Parliament. This gentleman had made himself popular by many public acts of beneficence, and was the founder of a Provident institution not only there but in many other places. It was my task to lay hold of the London papers at the Post Office as soon as the mail should arrive. The Postmaster and myself became on terms of talking intimacy, when one day he bowed. humbly hoped to be forgiven, and asked for advice on a delicate subject: the poor fellow expressed in whispered tones his incompetency to carry on a Government correspondence, and solicited my assistance;—he at the same time produced what he termed a rough copy, and begged (entre nous) for my correction. I requested to be possessed of the MS. and promised a more suitable reply. The Post Office Keeper's letter was worded precisely as follows:

"My Loard!

This is to inform your Loardship that there is no news particular in this part of the countery but how long soever this will keep so is moral impossible for aney living man to say. The parliment men that are acoming down to the Borrow next year, it is likely will kick up

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a row—but thers no help for that. I almost forgot to put down that thers a man going about our place* that looks a little suspisious like, and I am very dubrious that no good will come on it. He goes in poor peeples housses—and gives away little books and sich like. One o them was printed on it, REFORM or RUIN. I think as many in our nayborwood do that he should be taken up and put in the cage. He's a tall spare man—dark haire and ies—black coatt with a long tale—has also black pantylowns with spatter dashers.

I am with no more at present
yours to oblige
****

P. S. Humbley hopes your Loardship will not take it amiss my wishing to have an exismans place for my oldest sun. Hes uncommon good at his pen and takes a delight in it. He larnt at Mr. Gillums school on the green—3 doors from the Hen and Chickens."

My friend, the candidate, read this document with unbounded delight. He saw with that ready tact and skill which he was well known to possess, that the subject could be turned to good account. He dictated the following letter, which the Postmaster immediately forwarded to Government:

"My Lord!

I have the honour for your Lordship's information, and in compliance with your Lordship's circular of the 14th ultimo, to inform your Lordship that every thing here and in this neighbourhood bears abundant proof of happiness and content. The people to a man are, perhaps, the most faithful and loyal which England's sovereignty can boast. Here are no clubs or political papers to be found, which, perhaps may, in one sense, account for the good, and orderly, and quiet dispositions of the inhabitants. But, my Lord,—in truth, it is my duty clearly to point out, that the happy state of the people here has arisen from the introduction of an institution called The Provident Institution, (founded by R. I. Esq.) a scheme so new and so popular, that were it only put in practice elsewhere and everywhere, would tend to make the British empire the abede of comfort, loyalty, and peace!

I have the honour, &c."

The thing took—the gudgeon was caught, and my friend was called before the Minister of State. His reception was most cordial—his plan of Provident Institutions, &c. &c. was unfolded, and the minister discovered in his guest, a man of extraordinary acuteness and knowledge of the world. He obtained by this interview, an introduction to Windsor Castle and the Court of France, also a chair in the Magistracy of Brighton, conjointly with Sir David Scott.

The last honour, many months afterwards, was a successful termination of the contest at Stafford. But no sooner was the victory declared, when a few days afterwards, *Richard Ironmonger*, M. P. was, from nervous debility, numbered with the dead!

* He turned out to be a pious itinerant minister. His tracts were purely of a religious character.

POLITICAL ECONOMY.

THE BANK OF ENGLAND,—ORIGIN OF THE STOCK EXCHANGE,—NATIONAL DEBT.

MANY of the Jews of Amsterdam, a famous haunt formerly for opulent Israelites, came over to London with King William III. and when the Bank of England was set up and obtained the privilege of dealing in all the articles *pawned* into that corporation, these Jews became some of its most active and necessary agents. The charter directed that a book should be kept in the Bank, in which all assignments and transfers of its stock, should be registered. To effect this, and to enhance the price of the stock, were matters impossible to vulgar spirits; the Jews only could perform it properly, and it being placed in their hands altogether, the Stock Exchange, with all its complicated machinery, arose. Medina, the Jew, was the first who turned the Stock Exchange to any great account. He accompanied Marlborough in his campaigns, and by the priority of his political intelligence soon contrived to amass a large fortune. The first site of the Stock Exchange was the Bank: but as the members increased they became troublesome, and Change Alley was at length fixed upon as the pandemomium of jobbing. It has been repeatedly the object of attack, serious and ridiculous: but like the Irish fox, which thrives upon curses, the Stock Exchange flourished more and more every year, and it ultimately obtained such influence as to force itself into the dignity of an appendage of the government. The immense operations of the state in 1802, when the government borrowed forty-nine millions in that single year, gave a stimulus to the Stock Exchange. The members no longer submitted to the degradation of meeting at a coffee-house; they entered into a subscription, and, in 1802, erected the present building of the Stock Exchange; for the management of which an administrative body was established. The regulations for carrying on the concern, and for the admission of new members, are fully described by Mr. Pebrer (On the Resources of Britain.) The result of the activity of this body, subsequently to 1802, when they erected their building, is seen in the increasing amount of the debt since that period. The members of this corporation were not content with speculating upon merely British materials; but they went from London to Paris, and from that capital again to Petersburgh or Madrid, so that the rentes of France, and the bonds of Russia, Prussia, Austria, Spain and Portugal, and Poyais to boot, were lately as familiar subjects of traffic, as British Consols, or omniumin the time of the loans. It must have been altogether through the influence of the Stock Exchange that so many unjustifiable loans were raised in England. Thus, through the agency of that powerful body, there were supplied in the way of loan to foreign powers, in the interval of seven years, between 1822 and 1829, no less a sum than seventy-two millions six hundred and ninety-four thousand five hundred and seventy-one pounds!

The debt, which we have traced up to the commencement of the present century as amounting to more than five hundred million, was wofully augmented by Pitt, after the peace of Amiens was put an end to. In 1803, no less than nineteen millions were added to the debt; twenty-six millions more increased it the next year; thirty-nine more the following year, and in the succeeding one a fresh augmentation took place, of not less than thirty-three millions! The utter uselessness of this expenditure, directed as it was against Buonaparte, when that astonishing man was pursuing his triumphant career on the continent, preyed so upon Pitt's mind, that it sunk beneath the pressure. But his admiring disciples, Percival and Castlereagh, like all imitators, carried the principles of their master to an extreme; and to be convinced of that, it is only necessary for the impartial reader to remember that in 1809, above seventeen millions and a half were added to the debt in the shape of a loan; in 1810 and 1811, thirty-one millions more; in 1812 and 1813, one hundred and fourteen millions additional. This was not all, for in 1814—1815, ninety-eight millions more were added by the Castlereagh administration.

The Vansittart project for lessening the debt really only added to it, as is proved by the fact that in 1813 whilst twenty-four millions were redeemed of the debt, not less than fifty millions were added to it, and in 1814 there were twenty-seven millions redeemed, but then no less than one hundred and six millions were newly created. So that in point of fact, after the peace of Paris, the total amount of the debt was exactly eight hundred and sixty-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

four millions, eight hundred, and twenty-two thousand, four hundred and forty-four pounds sterling,—a sum, by the way, which it would take about four times the existing amount of coined money to exhibit in material value. The observations of Mr. Pebrer on this important subject, seems to us to possess considerable interest. We have no hesitation, therefore, in presenting them to our readers.

Thus we have seen, that the national debt of England originated in the real or fictitious wants of her rulers. We have remarked, that some of her proud kings pledged their crowns, their royal robes, and even the jewels of their wives, to borrow money, while others shamefully defrauded their creditors; but it appears that the British people, more than any other, constantly insisted on being repaid the cash they advanced to their sovereigns. We have noticed the practice of contracting loans for short periods, assigning at funds to redeem the principal and interest; and that practice changed, by the adoption of new principles. We have seen that a system, till then quite unknown, was introduced by William III.; and that the funding system was brought into action, in all its essential branches, in the very reign in which it originated. It has been shewn, that the national debt, amounting at the Revolution to only £664,000, was increased to above £146,000,000! by two aristocratical factions—by the sums expended for the preservation of Hanover—and by the expenditure in several foreign wars; and that men in power not only imposed on the nation such an enormous burden, but contrived to raise money by drawing upon posterity, and establishing the first regular system of corruption, avarice, fraud, malversation, and gambling.

The reign of George III., however, commenced with better auspices: ten millions of the debt reduced; the Sinking Fund of Price was adopted; and above four millions and a half more were redeemed, in the interval of peace, and by Pitt's measures. One of these, that bold and wise project, the Restriction Act, gave the greatest power to the propelling engines of the Funding System, namely, the Bank—the Sinking Fund—and the Stock Exchange, which acted in union, and consequently with a force proportionably increased. We have traced the origin and progress of this system, and have seen its immense power, and the use and progress of it to increase the debt. We have seen Pitt, pursuing his policy of foreign interference, widen the range of that system; and his successors carry it to the greatest extreme, by issuing enormous sums in Exchequer Bills, and by creating 160 millions, and redeeming 27 millions, in one year. The general effect of all these combined powers and operations even exceeded the expectations of the most enthusiastic founders of the system; but the grand general result was, the creation of a national debt of 864 millions!!!

Lastly, we find that the ministers, combining with the Bank, began by reducing the interest on Exchequer Bills from 5¼ to 3¼ per cent.: to that operation succeeded the conversions of 5 per cent. stock into 3½ per cent.—or 5 per cent. into 4—and lastly, of 4 into 3½. The restoration of cash payments also took place in this period. We have seen the Sinking Fund often and shamefully infringed upon, until at last it has been entirely annihilated. The absurd manner in which the operations of this fund have been conducted has been demonstrated by the fact of there being 25 millions more debt in 1823 than in 1818, although 120 millions were issued to the Commissioners for its redemption. In short, we find ourselves, at the end of this period, with almost the same amount of debt as at its commencement.

It appears then, that this enormous debt has been chiefly raised by means of the Bank and the Stock Exchange, aided by the delusion of the Sinking Fund; and that it has been principally expended in wars, most of them undertaken against the true interests of a maritime, manufacturing, and commercial nation like England—a nation whose happy topographical situation renders her entirely independent of continental broils and quarrels. Its amount has been immensely increased in time of war; while the reductions effected in time of peace have been exceedingly limited. In the first period of peace, of twelve years' duration, ten millions were reduced; in the second, which lasted ten years, only four millions and a half; and in the last and longest, exceeding fifteen years, the amount of the reduction has been so trifling, that it seems almost incredible.

FLOWERS PROSCRIBED, AND A GREAT VICTORY OVER THE FRENCH BEANS.

When the Dutch patriots were rampant in 1787, flowers of an orange colour were prescribed; and the officers of justice were for some time employed in removing anemones and ranunculuses from the Hague.

Old Admiral Geary had a remarkable antipathy to the French. Whilst enjoying the otium cum dignitate of a retired life at Polesdon, he manifested this dislike in a most singular way. His gardener had long watched over a choice and beautiful crop of early beans, and once was asked by the Admiral "the name of those green looking plants." "*French Beans*," replied the gardener. "Then by the powers," rejoined the Admiral, to the utter dismay of the planter, "here's death and destruction to every Frenchman of the gang." The Admiral then fell furiously to work, and with his gold-headed cane demolished the crop, and *left not a bean behind.*

A FAREWELL TO THE CAPE.

POUR ET CONTRE.

Fare thee well! I abandon thy boisterous shores,
Where the wide southern ocean unceasingly roars;
And thy desolate regions of mountain and rock,
Where the Hottentot *serf* tends the foreigner's flock;
And thy glens and ravines fraught with African gloom,
For the dastardly wolf, an appropriate doom;
And thy torrent and cataract, swift to o'ertake
The tumultuous brook, 'ere it steal through the brake;
And thy hills, and thy vallies, and flowering plains,
Where, for ever, the Floral divinity reigns;
And thy tedious Downs, formed of sand-hill and waste
Which with rushes and heath is unsparingly graced;
And thy rarefied air, with what grief I abjure,
Which, transparent and buoyant, and gratefully pure,
Brings the far removed object apparently near,
And the distant sound faithfully home to the ear;
And thy landscape, when seen by the magic effect
Of the broad light and shadow, with which it be deck'd;
And thy mountain surcharged with the flocculant cloud,
Like a demon revealing himself from a shroud;
But, no more to my heart shall these visions appeal,
I am dead to thy soil, though alive to thy weal;
I resign thee to-morrow, awake to the call
Which now summons me back to the Plains of Bengal.
There, the wandering Ganges, a feculent stream,
Sweeps in sullen repose, 'neath the tropical beam;
There, the succulent earth scarce a hillock displays
Which the labour of man might not easily raise;
And, alas! little sanative buoyancy there
Marks the commonly humid and motionless air.
Let me bid an adieu! to thy vineyards and fields,
Where the clustering grape its oblivion yields;
To thy hedges of oak, and of quince, and of rose,
Around which, in profusion, the blackberry grows;
To that separate hedge, where the quince and the vine
Their luxuriant branches in friendship entwine;
To thy sugar-bush, teeming with blossom and sweet,
Which the farmers, as well as the sugar-birds, eat;
To thy silver-tree woods and umbrageous rides,
Where in silence and solitude nature presides;
To thy broad oaken avenues, stately in mien,
Which at Newlands and Wynberg are happily seen;
To thine awful plantations of oak and of pine,
Whose impervious ranks might a spirit confine;
And a word to thy oxen, yoked twenty a team,
Which a curious spectacle travellers deem;
To thy flexible horses, which, fourteen in hand,
Seem as pliant as four to the driver's command;
To thy wiry-haired sheep, with sebaceous tails,
At the which your legitimate wool-grower rails;
And adieu! to thy mixed population, a race
Who, on Hist'ry's page, may soon merit a place;
From thy settler, who quitting the land of his birth,
Has, in Africa, fixed his old British hearth;
To thy Caffer, and Bushman, and Hottentot kind,
Whose dominions have been so unmeetly assigned;
From thy ignorant Boer, whose sequestered abode
Stands afar in the wild, near the course of a flood,
To his prædial slaves, a deplorable breed
Who, by wise dispensation, are soon to be freed;
From thy spurious white, who, colonial-born,
Form the class, whence, hereafter, thy strength shall be drawn,
To thy freeman of colour, whose various skin
* * * * *
Fare thee well! one and all, whether English or Dutch,
Whether foreign or native born, matters not much.
May thy hands and thy hearts be in unity bound,
And "my Country!" from each be the generous sound.

February, 1834. B.

HINTS TO STUDENTS.

ON THE CONSTRUCTION OF SENTENCES.

The proper construction of sentences is of very great importance in composition. However interesting the subject of a work may be, the work will fail to please us, in which the periods are so constructed; as, *firstly*, to leave us doubtful of their meaning; *secondly*, to distract our judgment by including in *one* period, what should be the subject of two or more periods; *thirdly*, to weary us by their feebleness; and, *fourthly*, to disgust us by monotony or by harshness.

We have been thus particular in pointing out the above faults, not because they are the *only* faults of which a writer may be guilty, but because they are the chief, and because they are the most usual faults of young writers.

Ambiguity arises from two causes; a wrong choice of words, or a bad arrangement of them in sentences. Of the wrong choice of individual words we have already spoken. We have now to impress upon our young readers, that a sentence may be very ambiguous in its meaning, although each word of a sentence be correctly chosen. To avoid ambiguity, we must not only use *proper words*, but we must also use them in their *proper places*. Thus, the individual words of the following sentence from one

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of Bishop Sherlock's Sermons are well chosen, yet the misplaceing of one word renders the sentence ambiguous, if not nonsensical:—

"It is folly to pretend to arm ourselves against the accidents of life, by heaping up treasures, which nothing can protect us but the good providence of our heavenly Father," "*which*," as the above sentence is arranged, refers to the substantive "*treasures*," which immediately precedes it; and thus we are told, that against *treasures* nothing can protect us but the good providence of our heavenly Father. But this was not the bishop's meaning; and the merely changing the situation of four words renders his real meaning as grammatically apparent as it is morally excellent. The sentence should stand thus:—

"It is folly to pretend, by heaping up treasures, to arm ourselves against the accidents of life, which nothing can protect us but the good providence of our heavenly Father."

The next important point in the construction of sentences, is UNITY; and this point is not merely important but indispensable to a good style. A sentence should express one proposition; and though the sentence may consist of many members, they should be so intimately connected as to impress the mind with one object. Long sentences are at once the delight and bane of young writers; who, lest they should be censured for the extreme use of short sentences, run into the opposite extreme, and crowd into one period things which have so little connexion, that they might fairly be made the subject of many periods. This error is so annoying to a reader, that it is far more safe for a writer to venture upon the opposite extreme; of breaking his discourse into many short sentences. In order to preserve the unity of a sentence, it is necessary to avoid the unnecessary use of parentheses. These are sometimes necessary to the sense, and an ornament to the composition, but, generally speaking, their effect is bad.

We shall only name one more requisite to the unity of sentences:— it should always be brought to a full and perfect close. By this we mean, not only that the proposition properly forming the subject of the sentence should be completed, for without that completion there is, in fact, grammatically speaking, no sentence at all; but also that, after that proposition is finished, another proposition shall not be commenced. It frequently occurs, that when we come to the word which ends the legitimate sentence, some other circumstance arises which ought to have been made the subject of another sentence. Whenever this occurs the sentence is faulty, and may in fact be said to be more than finished.

QUESTION FOR DISCUSSION.

Whether mankind owes more praise to Friar Bacon on account of his astonishing discoveries; or, on account of his concealing, from motives of humanity, his discovery of Gunpowder?

In his works, Bacon first describes the effects of the explosion of GUNPOWDER: but as this would not have been fully sufficient to appropriate the discovery to himself, and might have been regarded by his future readers as mere rhodomontade, he gives, with pardonable vanity, so clear a direction for making the article, but so enveloped in mystery, that while it certified him as the inventor, it completely hindered any fatal results from its being put into practice.

In describing the effects produced by this chemical composition, he says, "Sounds like thunder and flashes of light may be seen in the air, and even with greater horror than those which are made by nature; for a small substance, properly prepared, about the size of a man's thumb, makes a horrible noise, and produces a dreadful flash; and by this a city or an army may be destroyed in several different ways."

But, in order to prove his right to this discovery, should others ever happen on the same results, he specifies unintelligibly the ingredients of which this dreadful thundering and flashing composition is made:—"You make this thunder and coruscation, of Saltpetre, Sulphur, and *Luru mope canubre*, if you understand the art of compounding them." (We need not say that he wrote in Latin.) These incoherent unmeaning words, *Luru mope canubre*, were the stumbling-block of all his readers and commentators; and it was not until after the same discovery had been made by Berchtholdt Schwartz, a century later, that the above words were ascertained to be an anagram of the expression, "*Carbonum pulvere*,"—"*the Powder of Charcoal:*" these three substances being the component parts of GUNPOWDER. Thus, while he appropriated to himself the discovery, he completely obviated the dreadful effects which he supposed would result from its being made known.

CORRESPONDENCE.

To the Editor of the Cape of Good Hope Literary Gazette.

BOTANICAL COMMUNICATION.

SIR,—In your last January Number, there appears an Article headed "South African Museum," in which the list of Plants given requires some correction, and the article itself appears to convey the idea, that the plants are now introduced for the first time in the Colony; an inaccuracy which, I am convinced, Mr. Von Ludwig cannot approve of,—Mr. Von Ludwig being placed in a very honorable station, as a benefactor to the Colony, in the introduction of useful plants, more frequently of greater value than military victories.

If none of your botanical readers have addressed you on the above-mentioned paragraph, I take leave to send the following list, &c. which will, if you think proper, enable you to correct that which is already printed; the notes appended will, perhaps, be acceptable to the future cultivators.

B.

1. Zingiber officinale.
2. Maranta arundinacea.
3. Olea europaea.
4. Calamphilis scabra.
5. Zamia sp.
6. Phoenix reclinata.
7. Hibiscus sp.
8. Phormium tenax.
9. Eucalyptus sp.
10. Cassia sp.
11. Acacia sp.
12. Myristica moschata.
13. Salvia splendens.
14. Ipomaea.
15. Buddleia madagascariensis.
16. Helistropium perunianum.
17. Cyclamen pyrenicum.
18. Cyclamen persicum.
19. Cassurina sp.
20. Coffea arabica.
21. Camelia, 18 varieties.
22. Mangifera indica.
23. Cactus sp.
24. Gardinia Thunbergii
25. Urania speciosa
26. Bromelia ananas.
27. Gloriosa superba.
28. Dracaena ferrea.
29. Aloe, several sp.
30. Euphoria Litchi.
31. Laurus nobilis.
32. Eugenia unifiora.
33. Anona squamosa.
34. Tamarindus indica.
35. Bombax sp.

NOTES.

No. 1. Ginger. This plant originally introduced to the Colony in the 17th century.

2. Arrow-root. Introduced 1817, and distributed to several persons.

3. Olive. Introduced in 1821, and again in 1829; two varieties.

5. Zamia. A native sp.

6. Phoenix reclinata. The seeds of this are used as coffee, &c. the leaves for thatch, hat, and matting; increased by suckers; a native of Albany and E Coast.

8. New Zealand Flax. This is a valuable and new introduction; may be increased by suckers.

9. Eucalyptus sp. Large timber. Eucalyptus robusta may be seen in Government gardens, introduced by Sir Lowry Cole.

12. Nutmeg. For an interesting account, see Botanical Magazine.

15. Buddleia has been long in this colony.

16. Helistrope, do.

19. Cassurina. Valuable timber; one species in Government gardens.

20. Coffee. An old introduction.

21. Japan-Rose. Six varieties at the Cape, 1827.

22. Mango. Two varieties have been in the garden of Mr. Breda for years.

24. Gardenia. A native tree.

29. Aloe sp. These, I presume, are native species. The Succotrine and Barbadoes Aloe are, I believe, the only exotic species in the Colony. The former introduced by the Rev. Mr. Hesse, and the latter by Messrs. Borradailes, in 1829.

30. Litchi. A delicious fruit from China; may be increased by cuttings.

31. Sweet Bay! I think there must be a mistake in the sp.

32. Eugenia. A beautiful and fine flavoured cherry-like fruit; increased by seeds and cuttings. This shrub forms dense hedges at Mauritius.

35. Silk-cotton-tree. This is a splendid genus, the silky-cotton envelloping the seeds is used for stuffing cushions, &c. the texture of the cotton is too brittle and short for spinning.

FRONTIER PRESS.

[IT is wholly out of our province to interfere with the business of the Pulpit, nor is it our wish, in any respect, to discuss the merits of the modern theology; at the same time the press, on whatever subject, is entitled to legitimate review; in this respect, we make no apology for the introduction of the following critique,—holding ourselves at liberty, at the same time, to submit a few thoughts on the subject.

We are not quite sure that Mr. Shrewsbury has altogether excelled in the present Sermon on "Worldly Pleasures," at the same time a more awful perversion of the texts of Scripture has never been so apparent, we think, as in the "Reply by a Layman."

As to the main question, we conceive that diversions of every kind must always be subordinate to the exercise of the mental faculties. And in such a world as ours, where so much is to be done, and when time is so short, and life so brittle, we cannot conceive how the pleasure-taking people can find time for so much waste of life in the pursuit of, after all, an *ignus fatuus*. Pleasure and *happiness* we apprehend to be wholly distinct from each other, for happiness consists in a quiet series of almost imperceptible enjoyments, that make little impression on the memory. Every free breath we draw is an enjoyment; every thing beautiful in nature or art is a source of enjoyment; memory, hope, fancy, every faculty of the intellect of man is a source of enjoyment; the flowers, the fruits, the birds, the woods, the waters, the vicissitudes, and the vast phenomena of nature, created, regulated, and preserved by the mighty hand of an omnipotent Being, all are legitimate and reasonable sources of enjoyment within the reach of every rational being.]

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—Among other works published in this colony, I have seen two Pamphlets, one by the Rev. W. J. Shrewsbury against worldly pleasures, and a letter in reply by "*A Layman*," both recently printed at Graham's Town.

Mr. Shrewsbury might have chosen a text more applicable to his subject; and, however, suited the sermon may have been to the congregation of Graham's Town, it is to be regretted he consented to its publication, without a careful revision. It perhaps may not be possible to collect more appropriate texts from scripture than those which the author has chosen to prove the doctrine he advances, and on which all real christians are agreed; but I think he has not been judicious in the application of some; for instance, proposing to recite them at the race course or the card table. Had Mr. Shrewsbury availed himself of the advantage to be derived from allusions to the writings of christian ministers of every denomination, he would have considerably strengthened his argument, and so supported, "*A Layman*" might have been deterred from exposing himself by attemping a reply.

It should not be matter of surprise, that those who sedulously seek pleasures and are enabled to kill time by entering into worldly amusements, should attempt their defence; but, when scripture is wrested from its meaning, and turned into ridicule by an inaptness of gradation, which a child could discover, we see a character exemplified, determined to maintain its opinion at the expense of truth. "*A Layman*" has extracted John vi.—40. "What shall I do that I may inherit eternal life? Jesus said unto him, thou knowest the commandments, go thy way, sell all thou hast, and give to the poor, and thou shalt have treasures in heaven." How this can defend the sums of money lavished on the race course, I, for my part, am at a loss to perceive. Neither does it support the argument that "salvation is dependent" "upon an observance of the law," for by the law shall no flesh living be justified. Mr. Shrewsbury never attempts "to degrade the Son of God to his own level," or to shew that there is "a perfect conformity of conduct between Christ and mere man," but he knows our Saviour is the brightest model of purity, and the only perfect example the world has produced, and that the nearer we approach the resemblance of character with the Redeemer, the better we deserve the name of christians.

To infer, because we are commanded to "pray in secret," and that, as "the races do not usually occupy more than four hours," it is clear they do not interfere with religion, is absurd. To whom would "*A Layman*" apply this sentiment, merely to the spectator or to the owners of horses, or those who spend their time and waste their substance in training, purchasing horses, &c. &c. or to those who beggar themselves and families in this *innocent amusement;* or alike to all! Will he allow that fraud, vice, ambition, gambling, drunkenness, swearing, quarrelling, envy, are shewn on a race course, and that even human laws class with criminals, those who by their presence, and tacit acquiescence, abet the crime; and still declare that, those who frequent a race course partake of an *innocent amusement.* "He that biddeth him God speed is partaker of his evil deeds."—ii John, ii. 11.

"*A Layman*" quite mistakes the end for which God placed man on earth. Does he enter it to eat, drink, and be merry; or to serve the Lord his God with all his heart, and soul, and mind, and strength? Is it to enjoy sensual and trivial pleasure, or in a state of probation, to see whether he will serve his God, or whether he will serve him not? Will God be satisfied with a divided heart? He who professes christianity belies the character and name of christian if he dares place his foot in a society where he would be ashamed that God should find him. Even Seneca could say, "I never bring so good a temper out of company as I take into it. What I had been regulating is put out of order. What I had banished from my mind gains admittance again. Thus I receive great hurt from having much company." And what says the scripture—"Rejoice, O young man, in thy youth, and let thy heart cheer thee in the days of thy youth, and walk in the ways of thy heart, and in the sight of thine eyes; but know that for all these things God will bring thee into judgment."

To quote from authors in support of what "*A Layman*" condemns, would be to cite the Homilies of the Church of England, and the works of every valued character, from the period of our Saviour to the present day; but I shall content myself with one from the work of Mr. Wilberforce, and another from President Dwight's Theology.

"Religion prohibits no gratification or amusement that is *really* innocent. The question, however, of its innocence, must not be tried by the loose maxims of worldly morality, but by the *spirit* of the injunctions of the word of God; and by the indulgence being conformable to the injunctions of christianity, and to the tempers and dispositions of mind enjoined on its professors. There can be no dispute concerning the true end of all recreations. They are intended to refresh our exhausted bodily or mental powers, and to restore us, with renewed vigour, to the more serious occupations of life. Whatever, therefore, *fatigues* either body or mind instead of refreshing them, is not fitted to answer the designed purpose. Whatever consumes more *time*, or *money*, or thought, than it is expedient (I might say, *necessary*) to allot to mere amusements, can hardly be approved of by any one, who considers these talents as precious deposits, for the expenditure of which he will have to give an account. Whatever directly or indirectly must be likely to injure the welfare of a fellow creature, can scarcely be a suitable recreation for a christian, who is to love his neighbour as himself; or a very consistent diversion for any one, the business of whose life is to diffuse happiness.

"Rich and multiplied are the springs of innocent relaxation. The christian relaxes in the temperate use of all the bounties of Providence. Imagination, and taste, and genius, and the beauties of creation, and the works of art, lie open to him. He relaxes in the feast of reason, in the intercourses of society, in the sweets of friendship, in the endearments of love, in the exercise of hope, of confidence, of joy, of gratitude, of universal good will, of all the benevolent and generous affections; which, by the gracious appointment of our Creator, while they disinterestedly intend only happiness to others, are most productive of peace and joy to ourselves. O! little do they know of the true measure of man's enjoyment; who can compare these delightful complacencies with the frivolous pleasures of dissipation, or the coarse gratification of sensuality. It is no wonder, however, that the nominal christian should give up reluctantly, one by one, the pleasures of the world; and look upon them when relinquished, with eyes and wistfulness of regret: because he knows not the sweetness of the delights with which christianity repays those trifling sacrifices; and is wholly unacquainted with the *nature* of that pleasantness which is to be found in the ways of religion.

"When the pulse indeed beats high, and we are flushed with youth, and health, and vigour: when all goes on prosperously, and success seems almost to anticipate our wishes: then we feel not the want of the consolations of religion; but when fortune frowns, or friends forsake us: when sorrow, or sickness, or old age, comes upon us, then it is, that the superiority of the PLEASURE of religion is established over those of dissipation and vanity, which are ever apt to fly from us when we are most in want of their aid."—WILBERFORCE.

"It is evident that we are at all times, and in all places and circumstances, surrounded by God. In our walks, AMUSEMENTS, buisness, at home and abroad, when we are asleep, and when we are awake, God is with us as really and as evidently, as we are with each other.

Every thought in our minds, every word on our tongues, every action of our hands, is perfectly naked to his all-seeing eye.—"But I say unto you, that every idle word that men shall speak, they shall give an account thereof in the day of judgment."—Matt. xii. 36. Of what amazing importance is it, then, that these thoughts, words, and actions, be acceptable in His sight; be such as we should be willing to

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

have Him witness, such as He can approve, justify, and reward. Those certainly are the only wise, the only prudent human beings, who continually remember the great truth; who at all times in their *amusements*, as well as in their serious buisness, say—"Thou God seest me." No consideration is so solemn, so affecting, so useful as this. None possesses the same influence to restrain the hands or the heart from sin; to produce, preserve, or quicken obedience; or to awaken unceasingly the most profitable attention of the soul to its everlasting welfare, or its remembrance of that awful judgment, when all its thoughts, words, and actions, will be displayed in the sight of God's countenance, and become the reason and measure of its final removal."—DWIGHT.

I am, Sir,
Your obedient Servant,
ANOTHER LAYMAN.

ON THE MIMOSA BARK.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—Your article on the Mimosa Bark, vol. 4, p. 29, I hope will incite some enterprising person to try what may be done with the Cape species of Acacia, and also to cultivate the Australian species mentioned in your columns. For if it be worth the trouble and expense to send the bark and extract from Australia, it cannot fail to answer commercial speculation to ship the same (if produced) from the Cape of Good Hope.

Acacia longifolia, or Wattle of Australia, is already in several gardens of this Colony, and may be grown to any extent, and in almost every description of soil; and it is not unlikely that the extract may be procured in larger quantities from the wattle, if the tree is treated as recommended for the colonial *Taybosch*. (Rhus lucida.)

There are several other species of Australian Mimoseae in the gardens of the Cape, but the A. longifolia appears to thrive the best. The whole species are highly ornamental in blossom, and many of the tribe curious in the form of the petio, which assumes the appearance, and performs the necessary function of true leaves.

I may here remark, that in this Colony the planting of trees is of the first consequence and neither pains nor expense should be spared in furthering an object which is to produce lasting benefits It matters not where shade only is required, whether the trees be merely ornamental, fruit-bearing, or serviceable as timber; it is the duty of those who may have it in their power not to neglect to "PLANT TREES."

N.B. The Mimoseae are cultivated from seed. B.

LITERATURE.

A VISIT TO THE INSTITUTION OF LA TRAPPE.

THE Institution of La Trappe, the inhabitants of which are usually called the Monks of Melleray, was originally founded by Englishmen. Their names are not recorded; but it is said, that whilst wandering through France to find out a fit spot where they might found a Religious House, they decided upon Melleray, (on the road from Nantes to Chateaubriand,) in consequence of finding, in the hollow of an aged oak growing there, a hoard of honey. The Monks at present resident there, are chiefly English and Irish, sixty of whom, after having spent some time at Lulworth Castle, in Dorsetshire, proceeded to Melleray in 1817.

Mr. Richer has published an account of his recent visit to La Trappe. He tells us that they are by no means the idle drones which some have represented them, but that they are the agriculturists of France; that they have introduced all the most improved modes practised in England into the management of their land, and that in no part of the country is any agricultural produce at all fit to compete with theirs in the market. Their flower-garden, too, is cultivated with the utmost care, and it includes some of the most beautiful exotics. If in farming they are superior to all others, in mechanics they are entitled also to precedence. Mr. Richer was cordially and hospitably received by the monks. When he arrived, the brethren were going to prayers in the church; the visitor went with them, and was gratified with what he saw, as appears from the following account:

The first *religieux* who entered rang the bell, the next did the same, and thus all did it in turn. The *religieux de chœur* took their places at the upper end of the nave, the lay-brothers, habited in brown, remained at the entrance. The cross, the chandeliers, the ornaments of the altar itself, are all wood; only the lamp and the *encensoir* are inlaid with brass. The simplicity which reigns throughout this asylum is extended even to the costume—all ranks wear the same description of garments, nor has the reverend father Abbot himself any thing to distinguish him from the rest, except his cross of box wood at his breast, suspended by a violet ribbon, a ring on his finger, and the wooden cross of the ancient bishops. The service began—for the first time since I entered the cloister I heard the voice of the monks; for, in obedience to their vow of silence, they are never heard to speak excepting at the foot of the altar. I was struck with the august chant of the fathers; it is not the *plain chant* of our churches. The Trappists, desirous of returning to the ceremonies of the primitive church, have left the Gregorian chant for that of the faithful in the early ages, which seems to me, on account of its simplicity, better adapted to the devotions of solitary life. Before us was placed a picture of the virgin, at the foot of which was written, "Come unto me all ye that labour and are heavy laden, and I will give you rest." After *complies* all the brothers prostrated themselves in the middle of the church, in profound silence, broken only by the pendulum of the clock which marked the seconds; it was as if the voice of time wished to associate itself with the thought of eternity. They afterwards chanted the *Salve Regina*. A *religieux*, at the bottom of the aisle, began alone, and majestically, the prayer. All the others, still bending towards the earth, answered him in a low and lengthened note, as if the accents of grief had succeeded to those of triumph. All the fraternity then went to the chapter-house: on a signal being given by the superior, they all fell with their faces on the earth, and remained completely immoveable.

The *Miserere* finished, they arose, and passed one after another in their way to the dormitory, before the friar, who sprinkles each with holy water, and with his benediction the exercises of the day are concluded. From the church we returned to the *parloir*, to sup. our table was served with neatness if not with luxury. We had neither meat nor fish, but vegetables, eggs, and milk, were served up with less frugality than might have been expected, and the good fathers, who refused themselves every thing beyond what was barely necessary for their support, were downright prodigal to their guests of all they had to give.—pp. 341—343.

During the night Mr. Richer heard the matin bell; the solemn sound echoed through the cloisters with the grandest effect, and then all was profoundly still. The next morning, Mr. R. and his companion attended at mass. He says, that during the devotions, several of the monks left their places, and knelt on the steps of the sanctuary: this they did as a public penance for infringing some rule. It seems, that when they are late at prayers, or fall into any negligence, they prostrate themselves on the ground, where they remain until they have a signal from the superior to rise. The visitors were then led into the dormitory, which is a long gallery, with cells arranged on both sides. We quote the following description from this interesting narrative:

The cells are without doors; a couple of planks, a pillow of straw, and a worsted coverlet forms the bed of each Trappiste. There is no distinction of persons: the *celle* of the Abbot is in the middle of the dormitory, and his bed in no respect differs from that of any other. On these hard couches they throw themselves without taking off their clothes, linen being forbidding to them, on any plea whatever. They go to bed at eight. From the dormitory we went into the chapter, a large hall, where at stated hours the brethren assemble to listen to devotional readings, and to accuse themselves to each other of the faults they have committed against the rules.—p. 346.

In going through the convent, the kitchens, the bake-houses, the brewery, the cow-houses, the dairy, the stables, the gardens, the fields; among smiths, pewterers, masons, joiners, carpenters, cartwrights, bookbinders, tailors, and shoemakers, we did not hear a single word spoken. It was the first time I had seen men

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

gathered together united among themselves, yet hold no communion with each other—there was something strange in the sight of so much occupation and such total silence—without, no sound but that of the blacksmith's hammer; within, none save that of the clock. In the garden I saw the cemetery, which I was desirous of entering. I believed that each Trappiste went into it every day to dig his own grave—but I was mistaken—this error, however, has been repeated in every account of them, and credited as every thing extraordinary always is; and M. de Chateaubriand himself has perpetuated it in his *Genie du Christianisme*. A trench is solemnly opened and hollowed out in the presence of a general assembly, to be in readiness, as a grave for the first who may die—and this is the simple fact. When a *religieux* is about to depart, he is carried into the church to receive the last sacrament, after which he is carried back to the infirmary, where he remains extended on straw and ashes, until he draws his last sigh—there he exhorts his brothers, ranged in silence round him, to persevere in their holy life—it is not they who console him, it is he, on the contrary, who encourages them; when he expires, he is wrapped in his woollen robe, and laid without a bier, in the grave which is waiting for him—a simple wooden cross is raised upon the humble mound, and on this funereal sign is written the age of the brother, the date of his profession, and the name under which he was received into the community.—pp. 348.

Mr. R. obtained permission to dine in the refectory with the Trappists. About one hundred and twenty were present. He continues:

Before each was placed a soup, of vegetables boiled with water and salt—butter being forbidden them; to this was added rice milk, half water—some potatoes, and a half pound of black bread. Water was their sole beverage, every thing was served on pewter—at the side of each was a napkin, and a wooden goblet and salt-cellar—their napkin was a morsel of coarse cloth, six inches square. During the repast, one of the brothers read to the rest in French—about the middle of it an Englishman took his place, and read the same portion in his own language, to his countrymen, nearly one-third of the community being English and Irish. Several of the brothers reserved a part of their portion for the evening. In the summer they have a light repast at six o'clock, but in winter they have only one meal in the day. From time to time the friar's bell warned them to be on their guard, to prevent their thoughts from wandering: that instant all was still—the reader suddenly stopped, without even finishing the word he had begun, and the brothers, motionless as statues, in silence lifting up their souls to God.*** After dinner, we went from the refectory with the *religieux de chœur;* the lay brothers ranged themselves on each side of the hall, and bent profoundly as we passed. The community went in procession to the church, reciting the *Miserere* and the *De profundus*.—pp. 349, 350.

THE CONDEMNED SOLDIER.

If the present times be chargeable with increase of crime, it will be admitted that there is a striking change in the grade and character of the criminals—a certain order of things has made state offences infrequent. Enactments against treason are now a dead letter in the statute book. The headsman's axe rusts in the armoury of the town. "Noble Lords," and "Gentlemen of ancient descent" seldom appear at the bar of justice—and rarer still, does capital punishment fall upon any, removed by birth and fortune from the lowlier classes of the community.

That this change is attributable to any reformation in the principles of the upper ranks, would be a very questionable inference. In our days the high-born and the wealthy have small inducement to violate the salutary restrictions of the law. However the moral code is infringed, the criminal one is respected. In breaches of privilege and honor, aristocratic delinquency is chiefly comprised, and loss of character and caste the severest penalty incurred by the offenders.

There are, however, within our own recollection some melancholy exceptions to be found. Men of superior rank have occasionally presented themselves as criminals — and as the well being of society demands, the impartial hand of justice visited the offence with unmitigated severity.

Of the few unhappy cases, *one* will be remembered with lively regret. For no crime were there more apologists—for no punishment more general sympathy—and while his sentence was accordant with the letter of the law, the sternest ethic lamented that justice required a victim like Major Alexander Campbell.

This unfortunate gentleman was the descendant of an ancient family in the Highlands. Having entered the army at an early age, he served abroad under Sir Ralph Abercrombie, and in Egypt had particularly distinguished himself. He was transferred to the 21st Fusileers from a Highland corps, and his promotion to a brevet majority, it was said, had given offence to the senior captain of the regiment. Certain it is, that between these officers no cordiality existed—little pains were taken to conceal a mutual dislike—frequent and angry altercations took place, and the temper of Campbell, constitutionally warm, was often irritated by the cool contradictory spirit of his unfortunate victim.

The 21st Regiment was quartered in Newry when the half-yearly inspection occurred. As senior officer, Major Campbell commanded on that occasion. After dinner, in the course of conversation, Captain Boyd asserted that Campbell had given an order incorrectly on parade. A hot and teasing argument resulted—unfortunately that evening the mess table had been deserted for the Theatre, where the officers had patronized a play, and the disputants were left together at a moment when the presence of a judicious friend might have easily averted the catastrophe. Heated with wine, and exasperated by what he conceived a professional insult, Campbell left the table, hastened to his apartments, loaded his pistols, returned, sent for Captain Boyd, brought him to an inner messroom, closed the door, without the presence of a friend or witness, demanded instant satisfaction. Shots were promptly interchanged, and in the first fire Boyd fell, mortally wounded. The dying man was removed to his barrack-room, and Campbell hastened from the scene of blood. The storm of passion had subsided, and the bosom of the wretched homicide was tortured with unavailing remorse. In a state of mental phrenzy he rushed to the chamber where his victim lay, supported by his distracted wife, and surrounded by his infant family. Throwing himself on his knees, he supplicated pardon, and urged Boyd to admit "that every thing was fair." The dying man, whose sufferings were intense, to the repeated entreaties of his opponent replied "Yes—it was fair—but, Campbell, you are a bad man—you hurried me," and shortly afterwards expired in his wife's arms.

When the melancholy event was communicated, at the solicitation of his friends Campbell left the town. No attempt was made to arrest him, and he might have remained in partial retirement had he pleased. But his high spirit could not brook concealment—and, contrary to the entreaties of his family, and the opinion of his professional advisers, he determined to risque a trial, and in due time surrendered himself. as the summer assizes were approaching.

From the moment the unfortunate duellist entered the prison gates, his mild and gentlemanly demeanour won the commiseration of all within. The governor, confident in the honour of his prisoner, subjected him to no restraint—he occupied the apartments of the keeper—went over the building as he pleased—received his friends—held unrestricted communication with all that sought him—and, in fact, was a captive but in name.

I shall never forget the 13th day of August, 1808. I arrived in Armagh the evening of the major's trial, and when I entered the court-house, the jury had retired to consider the verdict they should pronounce. The trial had been tedious—twilight had fallen, and the hall of justice was rendered gloomier, if possible, from the partial glare of a few candles, placed upon the bench where Judge Mayne was seated. A breathless anxiety pervaded the assembly, and the ominous silence that reigned through the court, was unbroken by a single whisper. I felt an unusual dread, a sinking of the heart, a difficulty of respiration, as I timidly looked round the melancholy crowd. My eyes rested on the judge—he was a thin bilious-looking being, and his cold and marble features had caught an unearthly expression, from the shading produced by an accidental disposition of the candles. I shuddered as I gazed upon him, for the fate of a fellow creature hung upon the first words that should issue from the lips of that stern and inflexible old man. From the judge my eyes turned to the criminal, and what a subject the contrast offered to the artist's pencil!—In the front of the bar, habited in deep mourning, his arms folded across his breast, the homicide was awaiting the word that would seal his destiny—his noble and commanding figure thrown into an attitude of calm determination, was graceful and dignified—and, while on every countenance beside, a sickening anxiety was visible, not the twinkle of an eyelash, or motion of the lip, betrayed on the prisoner's face the appearance of discomposure or alarm. Just then a slight noise was heard—a door was softly and slowly opened- one by one the jury reluctantly returned to their box—the customary question was asked by the clerk of the crown, and—*Guilty*, was faintly answered, accompanied with a recommendation to mercy.

An agonizing pause succeeded—the court was silent as the grave—the prisoner bowed respectfully to the jury—then, planting his foot firmly on the floor, he drew himself up to his full height, and prepared to listen to his doom. Slowly Judge Mayne assumed the fatal cap, and, all unmoved, he pronounced, and Campbell heard his sentence.

While the short address that sealed the prisoner's fate was being delivered, the silence of the court was broken by smothered sobs—but when the sounds ceased, and "Lord have mercy on your soul" issued from the ashy lips of that grave old man, a groan of horror burst from the auditory, and the Highland soldiers who thronged the court ejaculated a wild "Amen," while their flashing eyes betrayed how powerfully the fate of their unhappy countryman had affected them.

Nor did the result of his trial disturb the keeper's confidence in the honour of the condemned soldier. On his return to the jail, an assurance that he would not escape was required and given—and to the last, Campbell continued to enjoy all the comfort and liberty the prison could afford.

Meantime strong exertions were made to save him—petitions from the jury, the grand panel of the county, and the inhabitants of Armagh, were forwarded to the Lord Lieutenant. But the judge declined to recommend the convict, and consequently, the Irish Government refused to interfere. A respite, however, was sent down, to allow the case of the unfortunate gentleman to be submitted to the King.

The mental agony of Campbell's attached wife was for a time severe beyond endurance,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

but by a wonderful exertion she recovered sufficient fortitude to enable her to set out in person for London to throw herself at the Queen's feet, and implore her commiseration To cross the channel before steam had been introduced was frequently tedious and uncertain, and when the lady reached the nearest point of embarkation, her journey was interrupted; a gale of unusual violence was raging, and every packet storm stayed at the other side. She stood upon the pier in a state of exquisite wretchedness. The days of that being whom she loved best on earth were numbered, and to reach the seat of mercy was forbidden! The storm was at its height—a mountainous sea broke into the harbour, while a crowd anxiously watched the progress of a fishing boat, which under close-reefed canvass was struggling to beat up to the anchorage.

The success of the little bark was for a time uncertain. The spray flew in sheets over the mast head, and frequently shut the vessel from the view of those on shore. But seamanship prevailed—the pier was weathered—and amid the cheers of their companions, and the caresses of their wives, the hardy crew disembarked.

At that moment the sorrow of the lady attracted the notice of the crowd, and it was whispered that she was wife to the unhappy convict, whose fate even in that remote spot had excited unusual sympathy. An aged fisherman stood near her, and Mrs. Campbell enquired "if the weather was likely to moderate?" The mariner looked at the sky attentively, and shook his head. "Oh God! he will be lost," she murmured—"Could I but cross that angry sea, he might yet be saved!" Her words were overheard by the crew of the fishing-boat, who were securing its moorings. A momentary consultation took place, and with one consent they offered to carry her across or perish. "It is madness," said the old man, "no boat can live in yonder broken sea." But the courage of the hardy fishermen was unshaken. The lady was placed on board; the skirt of the main-sail set, and after a passage as remarkable for its shortness as its danger, they reached the Scottish shores in safety. To the honour of these noble fellows be it recorded, that they refused to accept one shilling from the mourner, and followed her carriage with their eyes, invoking blessings on her journey.

The commiseration of all classes was painfully increased, by the length of time that elapsed between the trial and the death of Major Campbell. In prison he received from his friends the most constant and delicate attention; and one lady, the wife of Captain ——— seldom left him. She read to him, prepared his meals, cheered his spirits when he drooped, and performed those gentle offices of kindness, which are so peculiarly the province of women. When intelligence arrived that mercy could not be extended, and the law must take its course, she boldly planned an escape from prison, but Campbell recoiled from a proposition that would compromise his honour with the keeper. "What," he exclaimed, when assured that otherwise his case was hopeless—"Shall I break faith with him who trusted in it? I know my fate, and am prepared to meet it manfully; but never shall I deceive the person who confided in my honour"

Two evenings before he suffered, Mrs. ——— urged him earnestly to escape. The clock struck twelve, and Campbell hinted that it was time she should retire. As usual he accompanied her to the gate, and on entering the keeper's room they found him fast asleep. Campbell placed his finger on his lip. "Poor fellow," he said in a whisper to his fair companion, "would it not be a pity to disturb him?" Then taking the keys softly from the table, he unlocked the outer wicket. "Campbell," said the lady, "this is the crisis of your destiny—this is the moment of escape—horses are in readiness, and"—The convict put his hand upon her mouth—"Hush!" he replied, as he gently forced her out, "would you have me to violate my promise?" Bidding her 'good night,' he locked the wicket carefully, replaced the keys, and retired to his chamber without awaking the sleeping jailor.

The last scene of his life was in perfect keeping with the calm and dignified courage he had evinced during his confinement. The night before his execution, the Chaplain slept in his room. This gentleman's exertions to obtain a remission of punishment had been incessant, and now that hope was at an end, he laboured to prepare the doomed soldier for the trying hour that awaited him. On that melancholy night he never closed his eyes, while Campbell slept as quietly as if no extraordinary event should happen on the morrow. To the last his courage was unshaken, and while his friends were dissolved in grief, he was manly and unmoved. He mounted the stone stairs leading to the scaffold with a firm and measured step, and while the rope was being adjusted, the colour never left his cheek, nor did his countenance betray the slightest agitation

One circumstance disturbed his equanimity for a moment. On entering the press-room the executioner, frightfully disguised, presented himself suddenly. Campbell involuntary shrunk from this loathsome being, but as if annoyed that the wretch should shake his firmness for an instant, he calmly desired him to proceed. and take care that the arrangements for death were such as should make his transit from the world as brief as possible

It was a curious incident attendant on this melancholy event, that the 42d regiment, with whom he had served in Egypt, then garrisoned the town; and the same men he led to a bayonet charge against the invincibles of Napoleon formed the jail guard to witness his execution The feelings of the Highlanders when drawn out to be present at the ignominious end of their lion hearted comrade, were indiscribable When the sufferer first appeared at the fatal door, a yell of anguish pealed along the ranks, and every bonnet was respectfully removed. Campbell addressed a few words to them in Gaelic. Instantly every face was upturned to heaven; every cheek was bathed in tears; every lip uttered a prayer for mercy at the judgment seat, and when the board descending with thundering violence, announced the moment of dissolution, the fearful groan that burst from the excited soldiery will never be forgotten.

After being suspended only till life was extinct, the body was placed in a shell, and a hearse in waiting received it and drove off rapidly. The remains of the ill-starred soldier were conveyed to Scotland. There the clan and relatives of the deceased were waiting to pay the last tribute of their regard. In immense numbers they escorted the body to the family cemetery, and in the poet's words, "They laid him in his father's grave"

THE NEGRO MATHEMATICIAN AND ASTRONOMER.

How often are we told that the intellect of the Man of Colour* is naturally constituted of a character inferior to that of his white brethren! Can it be said that a man who has had no opportunity of acquiring mathematical science, is therefore incompetent to acquire it? Yet this is the argument of numbers of whites, who, if this mode of reasoning be correct, must be inferior in natural talent to the individual whose attainments are the object of the reader's attention.

If any one should adopt so inconclusive an argument, let him reply to this question: "Can you calculate an *Ephemeris?*"† If the reply is in the negative, then, in fairness, the respondent must acknowledge his inferiority of intellect to the coloured subject of this brief notice.

Benjamin Banneker was a black man, immediately descended from parents on both sides of pure African blood. He was remarked and esteemed in the circle of his acquaintance for the correctness and gentleness of his manners, and was well known and respected among scientific men as a Mathematician and Astronomer.

In early life, his acquirements were confined to the common elements of education; but afterwards, assisted by such books as chance threw in his humble path, and incited by his thirst for knowledge, supported by his own indefatigable mental energy, and guided by his genius alone, he acquired an extraordinary knowledge of the higher branches of learning.

Mingling the calm pursuits of science with the active every-day occupations of husbandry on his own land, he devoted much of his time to study and contemplation: to no reading was he more attached than to that of the Holy Scriptures. Mr. Banneker was for many years the calculator of an Ephemeris adapted to the geographical situation of the State of Maryland, North America, and generally used in that and the neighbouring states. He died some years ago at his residence in Maryland, in the seventy-third year of his age.

Is it not revolting to reflect, that, under less favourable circumstances, this Negro Newton might have expired under the tormenting lash of an ignorant, brutal, soul-less, unfeeling taskmaster, accused, perhaps falsely accused, of having dug fewer cane-holes, or cut fewer canes, than avarice demanded, caprice ordered, tyranny exacted, or cruelty enforced?

* Man of Colour is an expression in general use signifying a Negro.

† *Ephemeris* is from a Greek word signifying "*daily*," and is appropriated in science to a register, calculated beforehand, of the daily motions and situations of the heavenly bodies. In Navigation it is of the utmost importance, and the compilation is committed to the care of our most eminent astronomers.

LITERARY EXTRACTS.

THE VALUE OF TIME.

THE VALUE OF TIME may be calculated and enforced by the mean duration of HUMAN LIFE: in this country, at least in the Metropolis, about one-half of the rational and accountable creation die under four years of age; and perhaps, were the calculation to be universally extended, upon the average, thirty years existence to each would equal, if not exceed, the life of the individual; from these thirty, ten years may be deducted for childhood, during which period few rational pleasures are cultivated; this reduces the possession of time to twenty years; and, if we allow one-half to sleep and sickness, we shall then have ten years left for the promotion of intellectual improvement and general happiness.

Is this the average portion of active existence allowed to MAN? And is this the Being that is complaining of the tediousness of life, and the slow flight of time; that is continually seeking some new diversion, some fashionable amusement to consume his TIME? and, when his TIME is consumed, bitterly complaining of the BREVITY OF LIFE? yet very rarely reflecting on its UNCERTAINTY! Alas! for the inconsistency of my fellow-creatures! Alas for my own!

The fact affords us this important lesson, which cannot be expressed with more point than the Wise Man's inference from the premises —"Whatsoever thine hand findeth to do, do it with *thy might*.

It suggests the necessity of using

1. *Diligence in acquiring Useful Knowledge.* Have you yet a few years before you commence the anxieties of life on your own account? How are you improving their fleeting precious moments? Are you wasting any of them?

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

2. *Diligence in Business.* Are you the possessor of only TEN years of life, and those perhaps half spent, and do you stand idling in the market place, the very centre of activity? But little need be said here, an idler is universally despised.

3. *Economy of Time.* Are you the possessor of only TEN years, and those, it may be, nearly exhausted, and are you seeking expedients to kill time? Alas! go on with your reduction, and from these ten years deduct those lost by negligence, or wasted in idleness, or murdered by vice, and what is the final result?

4. This reflection suggests *Energy in Benevolence.* Look around on your fellow-men; you mean to do a great deal of good, but you are hesitating—considering—calculating, what you shall do: and while you are thus hesitating, the poor and distressed are starving—sickening—dying!—dying in ignorance, misery, and vice.

But, have you already far outlived this calculation, and do you see many probable years of existence still before you? Be it so: sit down then, with pen in hand, and calculate—how many years you have employed in your proper sphere of duty? how many years or days have you filled up in acts of beneficence to men, justice to yourself, or devotion to your Maker? Farewell, Reader; pursue these inquiries alone; "Take thy bill, and sit down quickly, and write" —and may CONSCIENCE do its office!

LAVATER AND THE POOR WIDOW.

The benevolent Lavater, the countryman of Tell, fell a martyr to the Cruelty of War, at the loss of that Independence under French usurpation which the former founded.

Lavater was a pious and conscientious minister of the Gospel, but is better known as the author of a most ingenious, although very fanciful, system of Physiognomy.

He was wounded by the bayonet of a ferocious French soldier, in the storming of Zurich by Massena, in 1799, and died in consequence of that wound; at his funeral, so great was the esteem for his memory, that all the French officers then in the place requested permission to follow his remains to the grave.

The following is an extract from his private diary:

Jan. 2, 1769:—"Awoke at six o'clock—remembered that I am mortal—gave thanks to God, and read the 5th, 6th, and 7th chapters of St. Matthew. What a treasure of pure morality! I now went to my avocations, and continued them until noon.

"My wife asked me during dinner what sentiment I had chosen for the day. 'Give to him that asketh thee, and from him that would borrow turn thou not away.'—'Pray how is this to be understood?' said she:—'Literally.'

"Just as I arose from dinner a widow desired to speak with me. 'You will excuse me, dear Sir (said she), I must pay my rent, and I am six dollars short. I have been ill a whole month, and could scarcely keep my poor children from starving. I have laid by every penny—but I am six dollars short, and must have them to-day, or to-morrow—pray hear me, dear Sir.'

"Here she presented me a book enchased with silver. 'My late husband (said she) gave it me when we were betrothed, I part with it with reluctance, and know not when I can redeem it.' I put my hand into my pocket and touched my money: it was about two dollars and a half. 'It won't do (said I to myself), and if it would I want it.'

"My wife entered the room. Conscience whispered 'Give to him who asketh.' My wife whispered. 'She is a pious, honest woman.' 'I have but two dollars (said I), and she wants six.' The widow was going—my wife bade her stop in the passage. 'Don't you know (said she to me in private) there are six dollars in your bureau?' I pressed her to my bosom, and dropped a tear. I gave the money to the woman. 'O how shall I thank you (said she), I have nothing but this poor book.'—'Keep your book and your money, and thank God, and not me. Indeed I do not deserve it, because I hesitated.—Go, in the name of God, and say not one word more.'"

It is said that the author of the "*Sentimental Journey,*" when himself was in easy circumstances, permitted his aged mother to pine in unnoticed and unassisted penury. Can all the pages of that writer equal the practical benevolence of the simple-hearted amiable subject of the anecdote above-mentioned?

COMMERCE WITH AMERICA.

The sale of Books annually in the United States is calculated to amount to the value of ten millions of dollars; in addition to which is to be considered the value of the sale of newspapers, and the amount of that item is about three millions of dollars. It may be of importance to English booksellers to be apprized, that since March, 1833, a considerable change in the duties on imported books to America has taken place. On English books a drawback of three-pence per lb. is now allowed on their exportation to the United States, or other foreign countries. The publishers or proprietors of new or copyright works and stereotyped publications, printed in Great Britain, may profit by the change made in the United States tariff. This drawback, added to the difference between the tariff duties of 1828 and 1832, will form an additional inducement to English publishers to print an additional number of copies of each new work, for the American market, to be sold there at a price far below the rate charged in England. In this they have the example of the government; for by its regulations glass, paper, soap, &c. made in Britain, are sold lower in Quebec than in London, or at the door of the manufactory.

ANECDOTE
OF THE LATE DR ADAM CLARKE.

Among the questions asked before admission as a preacher in the Wesleyan connexion, is the following: "Are you in debt?" Which upon being put to Dr. Clarke, sadly preplexed him, as the following extract illustrates:

"Though rather a whimsical incident, this question was likely to have deeply puzzled and nonplussed Mr. Clarke. Walking in the street that day with another preacher, a poor man asked a half-penny. Mr. C. had none, but borrowed one of the preacher who was walking with him; that preacher happening to go out of town, he could not see him during the day to pay this small sum. When he stood up with the others, he knew not what to say when the question '*are you in debt?*' should be proposed; he thought, if I say *I am in debt,* they will ask me '*how much?*' when I say I owe one half-penny, they will naturally take me to be a fool. If I say I am not in debt, this will be a lie: for I owe one half penny and am as truly under the obligation to pay, as if the sum were twenty pounds, and while I owe that, I cannot consistently with eternal truth, say 'I am not in debt.' He was now most completely in a dilemma, and which way to take he knew not; and the question being put to him before he could make up his mind—'Mr. Clarke, are you in debt?' he dissolved the difficulty in a moment, by answering—NOT ONE PENNY."

Real Freedom and Real Imprisonment—No prison can deprive the Good Man of liberty: he is at ease in his own mind. The Evil Man, roam where he may, is incarcerated in the deepest of dungeons: his mind is manacled in horror. The difference is in the mind, not in personal circumstances.

Guilt is a dungeon that darkens the soul beyond the power of the sun's brightest beams to illuminate it. The perturbed spirit finds itself ill at ease the world throughout. He who carries Hell in his bosom, would be wretched even in Heaven.

THE REJECTED ONE!
A TALE OF THE PIG AND WATCH-BOX.

"Cruel, cruel fate!" said the young Augustus Blenkinsop, dropping a tear into the empty porter mug, "wherefore dost thou torment me thus? I have a prepossessing leg, an inimitable tie, and a mind far above buttons—yet I was born to disappointment! Evil, thrice evil, is the fate that dogs the representative of the Blenkinsops;—thou art rejected of men."

The eyes of Stoker gleamed with the intelligence of those of a deceased mackerel.

"Help yourself," said Stoker, with emphasis, replenishing the pot with Henry Meux's best XX.

"Kindest of men," cried Blenkinsop, "love may perish, but friendship never dies!" The pot not being born beneath the same horoscope with the speaker, was not rejected.

"Come, Blenkinsop, my boy," said Faucitt, filling his pipe, "no long faces here. Let's have a song,—or 'spoose you tip us a bit of autobiography. Waiter,—another quart of stout; remember what the great Dr. Watts says—

"Woe is the child of thought, and kin to fear,
One yields to pipes, but both must yield to beer!"

"My sorrows," answered Blenkinsop, can yield to neither O, Leged, emperor of Ethiopia! well hast thou said—

"O, hang Leged," said Faucitt, "let's have none of him."

"Certainly not," said Stoker.

"Well then, friends, listen and be dumb; but first, I'll trouble you, Stoker, for the other mug!" A deep silence followed, broken only by the protracted breathing of Augustus at his draught, until, having rivetted his eyes for a moment on the bottom of the pewter, he set it down with a sigh, and proceeded.

"Need I tell you that I am the only son and heir of Reginald Nicodemus Blenkinsop, of Dot and go one Hall, county Somerset,—that his father was—

"We knows all that already," interrupted Stoker.

"Rash young man!" said Blenkinsop, with solemnity; "the blood of a hundred sires burns within me! but I forgive you. You know I was born with considerable expectations—that godlike fortune seemed to welcome me from the hour of my birth, and the heavens, for a time, appeared to smile benignantly on the scion of an ancient stem. In the words of the poet—

"None of the poets," shouted Faucitt.

"Certainly," said Stoker.

Blenkinsop looked sternly.

"Alas!" said he, "those were the last hours of unadulterated happiness that I ever enjoyed. I went to the university—I studied hard—I bought an alarum clock—eschewed wine parties—proctors reverenced me—my tutor smiled upon me—my acquaintance cut me—I read for my degree—I stood the examination—heavens and earth, I was *rejected!*"

The two friends exchanged looks of astonishment, though in a peculiar fashion.

"Next morning I was far from Oxford. Rouse thee, O Augustus!" exclaimed I to myself, "and let not this misfortune overwhelm thee. The Spartan mother shed no tears over her departed son, and why shouldst thou mourn for a paltry degree? No! rather like my sires of old, will I take my father's sword from the wall, and go forth against the enemies of my country to conquer or to die!' So saying, I lighted a cigar. The Blenkinsops have always voted with ministers—I had interest at headquarters—I was promised a commission, and I at once purchased my regimentals, and let my moustachios increase. 'Never,' cried the enraptured, though alas! suffering tailor, as he gazed upon the martial figure that issued from his hands all scarlet and gold, 'never seed I a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

gemman vot looked better!' And he spake right. I felt then within my bosom the ardour which lighted up as with a spell the soul of Anthony, and drove Themistocles to the combat; and I called to mind the glorious saying of Miltiades, 'Cowards die many times, but a brave man never dies!'"

A prolonged whistle issued from the lips of the petrified Faucitt.

Stoker squinted with a horrible obliquity of vision.

Blenkinsop sighed.

"My evil destiny again interposed. That very evening I received a letter from the War Office. Fire and steel! what did I behold! Cruel Hobhouse! Relentless Hill! Implacable Wellington! My application was *rejected!*"

I fixed my useless sabre in the wall, and retiring to the other end of the apartment, prepared to die like Cato; but the carpet caught my spurs, and I fell prostrate on the ground. I rose an altered man, and sitting calmly down, I drank deeply of thought, and brandy and water cold without. After all, said I, war is a savage pastime; the soldier is but a hireling. So saying, I drew another cork. Life, I resumed, is but short; thou knowest this well, O immortal Flaccus!

"Oh, confound Flaccus!" said Faucitt.

"Certainly," said Stoker.

"Yet despair not, Blenkinsop! Thou wert formed to shine in the court, and not in the camp; surely there is many a beautiful maiden, saturate with silver, who would be proud to be called Mrs. Augustus Blenkinsop!

"Miss Emily Pelican was both rich and beautiful; she had the figure of a Cleopatra, and the mind of a Sappho! She had published a volume of poetry, called, "The Undispairing One of Kamtskatka," and she had two thousand a-year! Her hair was of the hue of sunset, a rich and glorious crimson, and her eyes were of a pale, etherial green. The first moment I saw her, I loved her; and hope whispered me that she was my affianced bride. I gave a *post obit* to a wealthy Shylock, Manassch Ben Melchiseek, who at cent. per cent. furnished supplies. Stulty again suffered, and I sported a cab. The sweet Emily received me favourably, and I won the good will of her maiden aunt, by escorting her twice to church."

Faucitt thrust his tongue into his cheek; and Stoker significantly elongated his outstretched hands, resting his left thumb upon his nose. The very bars of the grate grinned.

"I sat with my beloved in the same box at the Opera. I was her partner at balls, her attendant every where, and I thought at last I could discover the symptoms of a reciprocal attachment. The crisis was approaching—bills came fast pouring in, therefore my love must be confessed.

One day she was reclining on an ottoman, caressing a corpulent poodle, while I lay stretched before her on the carpet, in the attitude of the Dying Gladiator. Tenderly, yet impressively I seized her hand, and modulating my voice to its lowest and most musical tone, I ventured to say, "Emily, sweet Emily! do you love?"

A roseate blush overspread her countenance. "Spare me, Augustus!" she murmured. 'Ah! dost thou confess the soft enslaver,' said I starting to my feet. 'O thou terrestrial seraph! speak—tell me—wilt thou wed?' A blush still deeper than before dyed her burning cheek. Gates of paradise!—and when?' In half audible accents she whispered—"Wednesday!"

I seized her hand again: O Cupid! fairest denizen of Olympus! What do I not owe thee for this—Wednesday! Sweet, sweet Emily! adored Miss Pelican! On that propitious day shall I lead you to the altar! On that day shall I place the sacred ring upon——

She started with a look of astonishment—*you* lead me to the altar! On Wednesday I am to be married to Captain Ferdinand Fitzspurs!"

My brain spun round—a red gleam of fire flashed before my eyes—a bolt of ice quivered in my heart—I staggered, and reached the street, I know not how. O the agony of that moment! I feel it even now—my heart—my brain! O Stoker—O Faucitt—how hard it was again to be *rejected!*

"Werry," said Faucitt.

"Werry," reverberated Stoker. And he grinned like a bag of nails.

"I rushed home like a demon. Fury was in my heart, and I kicked over a stall of oranges—I reached my lodgings, and entered my room—amongst an infinity of bills lay a packet, carefully sealed—was it a remittance from my relenting father—I seized—I opened it—madness! my two last articles for the Monthly Magazine, *rejected!* O friends, do you not pity me?—

"I do, pon my credit," said Faucitt. The interestsng youth had just emerged from the Insolvent Court.

"I do, pon my honour," said Stoker. He had been horsewhipped at Epsom, for cheating at a thimble-rig.—*Monthly Magazine.*

Glories of the Law.—In a late amusing publication of Charles Butler's, he mentions some astonishing instances of legal absurdity. A gentleman having six estates, wished to settle one on each of his sons, and the heirs of their bodies respectively, with what lawyer's term *cross remainders* between them, where on failure of issue in one line, the estate passes to the other branches. Mr. Butler, being directed to prepare the deed, conceived at first that one proviso would be sufficient: he then thought six would do; but on examining more minutely how many clauses would be requisite to legally express the whole settlement, he found that it would require 720, being every possible combination of the number six—$1 \times 2 \times 3 \times 4 \times 5 \times 6 = 720$. The other example is still more striking. Ten gentleman, partners in a mining company, wished to provide by deed, that if any one of the number advanced money to any of the others, it should be considered a sort of mortgage on the borrower's share, and have preference to all subsequent charges. The number of contracts necessary to make this provision with the due legal accuracy, were found to amount to 3,628,800, being all possible combinations of 10. On each of these clauses the benevolence of government has imposed a stamp duty of 25*l.*; so that the whole duty would have mounted to 90,720,800*l.* Ninety millions of stamp-duty on a single and simple deed! Well might Fortescue write a laborious treatise, "De laudibus Legum Angliæ."

Hypochondriasis.—The celebrated Dr. Watts though a puny man, took a fancy, in his latter days, that he could not pass through a door; an error which was only corrected by his passing through the portal of Death.

Every practitioner must have seen or heard of persons fancying themselves made of *glass;* I once had occasion to visit an *earthenware* patient. A fat gentleman sent for me, having met with an accident, not very serious in its nature, but very painful. Lotions, bandages, and plaisters were applied, *secundum artem,* and the case went on most prosperously:—but in proportion as he got on surgically he fell off physically, and, instead of being pleased and thankful, he became querulous and morose. Remembering Bouvart's Scale for Convalescence, and, that "Good morning, Mr. Bouvart," was the announcement of a perfect cure, I guessed this was my patient's case. I did not, however, perfectly comprehend all its bearings, till his valet, a very shrewd fellow, said, "Bless you, Sir! you must not mind him—he's only coming back to his old ways." "Old ways?"—"Yes, Sir, he's going to be a tea pot!"—"A what?"—"A tea pot!"—*Wadd.*

How to make the Demand equal to the Supply.—An unprofitable consignment of spectacles lying upon a merchant's hands at Lima under the old Spanish regime, a corridor was applied to, who gave an order that no Indian should appear at divine service unless ornamented with spectacles: the cargo was of course instantly sold at an enormous profit.—*Spectator.*

Influence of Climate.—M. Von Buch informs us, that where the spruce and the Scotch pines, or where any sort of bushes will not grow nor thrive, the nature of man seems equally defective. He sinks in the struggle with necessity and with the climate.—*Mag. Nat. Hist.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By Vivian.

A respectful remonstrance has been received relative to one or two notices in this department of the Gazette, which appeared in the last Number. But we think it our duty to *hold on* our course, trusting that the colonial mind is by this time out of *leading-strings* and the *go-cart*, and that lolly-pops, bull's-eyes and suckers, are no longer suited to the taste of those who are now grown into men. As for the *cant* of *personalities*, respecting which so much has been said "about and about it," it is scarcely worth while attending to it for a moment. The word will soon become obsolete, and the sooner the better.

Let it be remembered that the acts and opinions of public men are public property — it is the same with the people in general. Criticism even deals with the minutiæ of a man's wardrobe. The fame of old Dr. Parr's Wig has reached far as

"The Equator to the Poles."

And the talented old gentleman used to rejoice over the public notices of his big wig. Not so good Dr. Folliot, in Crotchet Castle. "Sir," (the Doctor is addressing the supposed writer of a paragraph,) "you have sketched me off even to my nose and wig. What business have the public with my nose and wig? You have dished me up like a savory omelette, to gratify the appetite of the reading rabble for gossip. The next time, Sir, I will respond with the *argumentum baculinum.* Print that, Sir; put it on record as a promise of Dr. F. which shall be most faithfully kept, with an exemplary bamboo. Sir, my blood boils! What business have the public with my nose and wig? Sir, begone! and henceforth touch me not! There, put that in your pipe and smoke it."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

And even in controversial matters, on any subject, we never were of those, who declaimed against the right of free inquiry, for without it the world would move but tamely, and the mind would become stagnant. The tranquil equability which distinguishes a streamlet isconsidered emblematic of peace and regularity, but we prefer the more vigorous current, which, though it may endanger the banks of its channel, conveys freshness and liveliness for a recompence. Lastly, as to authors: whoever publishes, whether in folio, quarto, octavo, duodecimo, pamphlet, or advertisement, has no choice, but contentedly to abide what he may dislike. Even the most unfriendly censures may be made to produce many compensatory advantages. But we hasten to notice a species of literature of no small *interest* to the reading public and the Press.

GEORGE ROBINISM AT THE CAPE;
Or, the Philosophy of our Advertisements.

THANKS to the immortal Gods, the spirit of George Robins has dawned upon the Cape. And we may be allowed to be a little sweet upon ourselves in being the first to call the attention of the "swinish multitude," or pig-headed public to that display of genius which now peeps forth in our almost daily advertisements. Let us, in the first place, glance at the advertising notions of the *Good old Times* of interdiction and exclusive privilege. We just dip into the State Papers of the Cape Gazette, beginning Anno Domini 1806.

1. Here is a charming young widow making known the death of a "tender husband," and she tacks to it a little piece of *negotie winkel:*

"In consequence of this distressing calamity, will be sold, Europe cows, goats, peppermint," &c.

2. What follows is no uncommon want, where mothers are strangers to their infants, therefore we quite applaud the idea of putting forth the following inestimable request:

"Wanted, a good breast of milk."

3. And this want having been of course supplied, it is too good a *spec.* to be lost on the milk-men. So what follows is all natural enough:

"To let, two wholesome breasts of milk."

4. "Dear sensibility! source of all that is precious in our joys, and costly in our sorrows." So said that man Sterne, whose soul was lodged in triple-brass as to parental affection. But here the case is different. Here is a worthy widow sorrowing over an old gentleman of *ninety-two:*

"*This night* has afflicted me with the bitterest *sensations*, in the demise of my worthy man."

She refuseth to be comforted, and concludes with the following desire,—

"Nobody must condole with me."

5. Here is an Advertiser, who acknowledges his gratitude to the good Earl of Caledon, for

"Having been *graciously pleased* to grant the undersigned permission to leave the colony."

The undersigned, at the same time, leaves a legacy to the colony—no invaluable affair, by-the-bye, at a time when good women were scarce—

"He begs with this opportunity to bid adieu to all his friends, trusting the Almighty will bless them, together with his wife, whom he leaves under *their* protection."

6. Now come we to the first dawnings of advertising genius; here is Brinsley Sheridan's puff oblique—

"The public is hereby informed, that the *Institute* for the education of young ladies, under the direction of the undersigned and his wife, is by *no manner of means likely* to be discontinued, as *some people* seem to think."

No, no; by no means, ye story-tellers—

"On the contrary, it will be carried on from the *first of April* next, [an awkward day, by-the-bye,] for the private account of the undersigned."

7. "Hail, holy light!" the reader will not have forgotten, is an effusion from our inspired Milton. But some men *love darkness rather than light*, observes one still more inspired. This, perhaps, will account for the following singular notification by order of *the Senate:*

"No person shall be allowed to open lanterns on any pretext whatsoever, under a penalty of Rds. 25."

When the inhabitants of St. George's, a couple of winters ago, lit up, perhaps they were not aware, that they were all liable to "fine, corporal punishment, or imprisonment."

8. In such a community as ours, *Price Currents* must always claim a precedency among the negociating *literati*. We, therefore, gather up Mr. Strombom's farewell advertisement.

"Mr. Strombom not having any more use of his slaves *or* horses, intimates that they are to be had at the following fixed prices.
His best Cook, Rds. 2000,
Two ditto ditto, Rds. 1,200,
Two House Servants, each, Rds. 1,500,
A Carpenter, Rds. 1,500,
A Gardener, Rds. 1,200,
Assistant Coachman, Rds. 1,200,
About six Work Boys, each, 1,000
A female *Woman*, with 2 Children, Rds 2,000,
Another, with one Child, Rds. 1,800, &c.
Also, his *Press*, and an *Iron* Chest, &c."

9. The following is quite unique, and we guess the advertiser had his eye on the fitness of his Slaves as landlords for the Canteens.

"He (Mr. Van Wielligh) will dispose of various utensils, wine, and brandy-slaves."

10. A Lodging-house Keeper expresses his regret at parting with

"Dignified and exalted characters at Stellenbosch!" A farewell to each is "extremely distressing to the Advertiser."

11. After all, the *Old Times* were the times of intellect. This is a degenerate age. We all know the story of the buried Pict, who bit off the end of a pickaxe, with which sacrilegious hands were breaking open his grave and called out with a voice like subterranean thunder,—*I perceive the degeneracy of your race by the smallness of your little finger*, videlicet, the pick-axe. When shall we ever hear again of any thing similar to the following notices of Cape intellect.

1. "The Quadrature of the Circle discovered by Mr. Schonegevel, is hereby respectfully dedicated to the Royal Society of England."
2. "Among the Kitchen utensils, A. W. will dispose of a Slave well calculated for a *Billiard Maker*, a Slave Girl with her Child, Dutch pipes, and *empty* bottles."

Nota Bené.

In our next we shall come more fully into the spirit of *George Robinism.* We are obliged to leave off thus abruptly, owing to some villainous twitches in our great toe.

OPEN DOORS! OPEN DOORS, &c.

(From the Tea-Whoo-Hoo! Psha! Shou Chong Imperial Star of China.)

By late arrivals we have much news from the Cape and Europe, of considerable interest. We sympathise truly with the poor Barbarians of the African promontory on the *close system* which so awfully prevails there. The Legislators, it appears, meet with *closed doors,* and the poor people are absolutely unacquainted with the methods of council-business, or who

"Suits the action to the word, and the word to the action."

Maar, the *weakness* of the exclusive system of our own districts, is well known, but as *the people* are now-a-days everything, and "locks, bars, and bolts," mere ginger-bread affairs,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the Cape Barbarians have only to act as Messrs. Lindsay, Gutzlaff, Simpson, & Co. of the *Amherst* did, during a recent voyage on our Northern Coast. We extract the following from the Barbarian Press:

"Having arrived at the Taoubae's office, which is an expensive building, the *lictors* hastily tried to shut the doors, and we were only just in time to *prevent it;* and, *pushing them back*, entered the outer court of the office. After waiting a few minutes, and repeatedly knocking at the door, seeing *no symptoms* of their being opened, Mr. Simpson and Mr. Stephens settled the point by two *vigorous charges* at the centre gate with their *shoulders*, which shook them off their hinges, and brought them down with a great clatter, and we made our *entrance* into the Great Hall of *Justice*, at the further extremity of which was the State Chair and Table of the Taoutae" *

Again: our sensibilities have been greatly touched at some of the dreadful customs of the Barbarians of the island of England. We learn by their newspapers, that men of well-dressed habits often meet and shoot each other in cool-blood. We are glad to learn that many of our *dear countrymen*, with that humanity which is so closely allied to their natures, are about to call a public meeting at Hex E ter Hall, in order to send a few missionaries to the Barbarian island, to endeavour to convert the poor creatures from the practice of what they call duelling. The deluded *inconsistents* pretended, a while ago, to be shocked at the immolation of women amongst our neighbours, the Hindoos—but of the custom of immolation, Duelling, according to our humble notions, is the sister. Why does a Hindoo mount the funeral pile? To vindicate and maintain her honour. Why does a barbarian Englishman go to the heath with his *bang, bang?* To vindicate and maintain his honour. What is the nature and character of the Hindoo's honour? Quite factitious. Of the Duellist's? Quite factitious. How is the motive applied to the Hindoo? To her fears of reproach. To the Duellist? To his fears of reproach. What, then, is the difference between the two customs? This—That one is practised in the midst of gross darkness, and the other in the land where the Book of the Precepts of Jesus is the professed law of the land!

* This paragraph is approved by the *Advertiser*, in a Leading Article of the 22d ultimo.—(*Vivian.*)

THE COLLEGE.

COLLEGES are the ancient lights of the world—some of them now burn dimly, and require *trimming*. We know nothing more delightful than the recollections and associations of those happy days spent at a College. But we believe the fact to be, that they are not the brightest men of a country, or of the College, who obtain honours. The course of study by which prizes are won, requires more of labour and memory, than intellect. Colleges are schools for *grown persons*,—hence, the founders of the South African College were clearly guilty of misnomer when they magnified their school into a college. We always knew that the Institution contained within its bosom many excellent and *sincere* men among its office-bearers,—at the same time we foresaw, years ago, that its *legal* advisers were too many for the purposes of peace and good-will. Then there was about the thing a vain confidence, an apparent contempt for all other establishments—it was lauded by the Pulpit and the Press—

"Cheered by the boxes,
Clapped by the gallery, and
Applauded by the pit."

And there were in honour of the "babel"—the *Mountain* that was never to be removed, church processions, and speeches, and festivals, and illuminations, and midnight music—

"Shout and revelry."

In fact, it was the *rattle* of the *people*—it was the *people's* triumph, the *people's* victory—independent of that old-fashioned affair — termed *Government!*

But the real friends of education predicted the coming *day of adversity*, and at length the lowering clouds announced the tempest. The vessel drifts!—the breakers are a-head—upon the rocks she must go. *What must we do?* is the general cry. A general council is held, and it is unanimously and wisely determined to apply to that source of help and strength which was at one time looked upon with indifference. As the poor prodigal son—the College repents, and is received with compassion by a kind, tender, and legitimate Father. This good Samaritan, the Government, finding the College *half stripped and wounded, &c.* comes generously forward with those needful supplies which saves the almost dying, and bids it be of good cheer.

In plain terms, His Excellency the Governor, in the most kind and prompt manner, offers from £150 to £200 per annum to assist the funds of this public school. A most useful public grant for the purposes of colonial education. Learning needs not wealth, but competence: riches and poverty are alike injurious to it; the one cloys, the other chills it. There were some personages connected with the college who had not brains enough to appreciate this handsome gift of Government. But the good sense of the many prevailed, and this kind interposition in behalf of the Institution was hailed by the true friends of the College as a real God-send.

We have now every confidence in the future prosperity of the College. It is happily associated with the Government of the country—but will continue as free in its operations as the Commercial Exchange, when Government held its thirty shares, and possessed the right of five votes in its administration.

PUBLIC MEETING.

A Meeting of "Slave Holders" was holden in the Commercial Hall on the 22d instant. Some Resolutions, and a Memorial to His Excellency the Governor, were adopted. The recommendation to apprentice children of six years of age until they attain to that of 21, we trust, will not be listened to for a single moment. Indeed it is quite contrary to the Act of Parliament. Here would be fifteen years of slavery entailed, on the freshness and prime of human life. The Resolutionists *humanely* intimate that a shorter period than 21, "would be unreasonable towards the Master, injurious to the skill and the *morals* of the servant, and mischievous to social order!" How considerate *all at once* for morals and social order! Do the "holders" apprentice any of their own children or relations for a similar term of years and upon the same principle? No—no, the Reformed Church of the Colony tells you that the years of puberty commence at the ages of fourteen or fifteen Hence the extreme anxiety to get the catechism by rote, and be confirmed, as a prelude to the marriage act We consider the age of 15 and 16 in this climate to be tantamount to that of 21 in England, and we trust the whole of our coloured population will enjoy that perfect freedom at the age of 15, to which they are so justly entitled.

GRAHAM'S TOWN.

A respectable visitor thus reports of the Government Grammar School at Graham's Town (Monday, 10th March.)—On looking in at the School, we found present this day 113 pupils, viz: 106 boys, and 7 girls. The number on the books is 116, and a regular attendance is most strictly enforced. The School is ably conducted on the National System. Extra hours are devoted to those who desire an acquaintance with the higher branches of learning, —Mathematics, Latin, &c. &c.

UITENHAGE.

After the tuggings of an overland journey from Cape Town to the Frontier, a respite here to recruit and brush-up for a visit to the far-famed Graham's Town is absolutely necessary. One finds a good deal of interest in looking about, even in a country village where there is the least disposition to be communicative with its local *omnium gatherums*.

The Clergyman of the Reformed Church (a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

native of Scotland,) is by one consent a man who

"Points to brighter worlds,
And leads the way."

His Dutch discourses possess all the *onction* of one that speaks from the heart,—nor are his English sermons less impressive and faithful.

Of the Government School——this may form a separate article on some other occasion. In point of utility and reputation, here is a boarding and day school, conducted by Messrs. Walker and Wainwright, which deserves greater encouragement than it seems to possess. They modestly bound their pretensions to teaching the Latin rudiments. As a Preparatory School where the really useful branches of education for the boys of parents who are not ambitious of their passing by the Counting-house, the Plough, or the *Wool-sack* for the distinguished felicity of becoming itinerant advocates, travelling pill-doctors, or "Meesters" in a Boer's house, nothing seems to be better than the course pursued in this seminary.

In many instances the Settlers on the Frontier have their children taught Dutch—others Greek and Latin! The reasons for Dutch are, that you can come better at the Caffers through this language! If the good folks will determine that their lads shall know something of the classics, will not the excellent translations which abound suffice for all the purposes of useful life? And as for Dutch—the best way to win the Caffers is to learn their own language. The Wesleyans say that the Kaffer language is used, with certain variations, by 600,000 souls. Now that a complete Kaffer Grammar has appeared by the Rev Mr. Boyce, it is surely high time for the Frontier Schools to introduce a few classes for the learning the language of their neighbours and future customers.

Provisions are in this village cheap to a proverb, water abundant, and house-rent moderate.

GRAAFF-REINET.

Drought has sent many of our neighbouring farmers across the boundaries. Many will, doubtless, return to civilized life—but some will, from a natural predilection to gypsey modes, become *squatties*. The farmer vagrants on the other side of our District are much more numerous than some people imagine, and with such rambling notions as a great many possess, with but little acquaintance with the doctrines of *meum and tuem*, it is readily enough to be apprehended how much the civilization of the native tribes will be thrown back. From custom, the wanderers have hitherto obeyed the orders of the Civil Commissioner, but the time is fast approaching when the King's authority must not be impeded by an imaginary boundary line; otherwise, fugitives from justice, unprincipled men, bankrupts in pocket and reputation, will be exercising discord and other evils among the Tribes with impunity.

PAARL.

During the summer, several visitors have taken up a temporary abode here, as a pleasant situation for health and change of air. But these visits have been of short duration. It is altogether, as far as it regards the English language, and Divine Service in any of its English forms, an Anti-British Village. The English Government School is abandoned. The *why and the wherefore* should be made known. And what is to be deplored is, that many children of English families scattered in various parts of the Paarl, have forgotten their own language, and are speaking a wretched mongrel Dutch—which few can understand but themselves and fellows.

PORT ELIZABETH.

If Anthony Oliphant, Esq. the King's Attorney, or Conservator of Public Morals, would be pleased to devise an Ordinance for the regulations of the Markets—specifying the hour of business, the fees,—and that for all goods sold on the market, the money to be received by the Market-master,—a questionless good would arise. The most pennyless on the Frontier Market are those who bid the highest prices,—and then, when the Farmer comes to the Store, with all its "beggarly account," the purchaser cries out—"I have no money, you must take *negotie*" The truth is, the *Truck* system too awfully prevails in this country. Many a Hottentot family knows this to its own sorrow. A Market-master, to be free from local interest, should be appointed by Government. Under the impression that he is under the sacred cognizance of the law, the Farmer would bring his produce to market with far more freedom than is now the case. At present (without Government interference) it is *all fish* that *comes within the net* of either buyer or seller. It is a lawless struggle for a bargain at any rate, or by any means, however vile and disreputable.

WORCESTER.

The Church Service in the English language is now performed here by the Rev. H. Sutnerland. The necessity of this practice becoming general in all the churches of the colony, on Sundays, will soon become apparent. In most of the towns, the number of English inhabitants is rapidly increasing.—*Advertiser.*

A MODERN PHILOSOPHE;
OR, A CHIP OF THE OLD BLOCK.

THE petty dealings "Of the old Dutch Colonial Government under the administration of an exclusive Company," are thus noticed in a late number of *The South African Quarterly Journal.* "No subject was too elevated or too mean for the Old Government," observes the writer. "It could soar to the deposition and disposal of a foreign sovereign and independent Prince, or sink to the regulation of a petty traffic in pickled cabbage."

Minute of Resolution of Council, dated 17th June, 1722.

"Resolved, That no more Pickled Cabbage shall be sent to India."

But if the Old Company were dealers in a small way, what shall we say of a modern scion of the ancient *noblesse*, who announces the other day—first his degree as

"Philosophical Doctor,"

and then concludes his card, viz:

"☞ *For sale, excellent cauliflower seed.*"

SUITABLE BOARDING.

IN the absence of good book-binding at the Cape, according to the old rule of leather and paste, we think the affair should be taken up by the timber merchants. *Board* will be found to be the best and the cheapest, and if our plan were adopted, the frequenters of a Library might know the subject of a work without being at the trouble of taking it from the shelf. For instance—thus to catalogue a little. We would bind

"The Sorrows of Werter" in *pine.*
"Hoyle's Games" in *deal.*
"Bankruptcy Laws" in *sloe.*
"Navigation Laws" in *elm.*
"Sea Laws" in *beach.*
"Anecdotes of Dogs" in *bark.*
"Lives of the Pugilists" in *box.*
"Tales of the Crusaders" in *lance-wood.*
"The Siamese Twins" in *pear*
"Skellet on the Cow" in *melk-hout.*
"The Tutor's Assistant" in *birch* or *beet-root*, with *caned* sides.
"Memoirs of Jonathan Wild" in *peach.*
"Literary Gazette" in *pop'lar.*

THE LATE ARRIVALS.

From a glance at the last London journals of January, literature seems to beat a remarkably low ebb. There is scarcely an advertisement which announces any new publication of interest. Galt has put forth his last work—*Tales of the Study;* and there appears to be a good pamphlet in circulation, entitled "A Refutation of the Calumnies of the Quarterly Review respecting the Lord Chancellor."

Two periodicals of Republican principles, with a view to give greater publicity to the views of each, have made a considerable abatement in prices. The Westminster is now published at 4s. instead of 6s. And Tait's Edinburgh Magazine at 1s. instead of 2s. 6d.

The new volume of the Annual Register contains interesting biographical notices of Earl Fitzwilliam, Sir J. Malcolm, W. Wilberforce, Rowland Hill, and Hannah More.——A new Record Office, on the site of the Rolls' Garden, is now determined upon.——A fierce war is raging against the Penny Magazine, and the Works published by the Society for the Diffusion of Useful Knowledge. It appears to us to be mere booksellers' squabbles—sheer jealousy against Mr. Knight, the publisher of the Society's publications, supported by Colburn and his New Monthly, and Literary Gazette, &c.——Success seems to attend the Lander expedition. Favourable accounts have been received, under date 3d of Nov. —Another Mummy has been opened in London by Mr. Pettigrew. It turns out to be the body of Horsiesi, an incense-bearing Priest of the Temple of Ammon, at Thebes!——An Observatory and Professorship of Astronomy is about to be established at Edinburgh,—government allowing £300 a-year to the principal, £100 a-year to the assistant, £1000 towards the building, and £100 per annum to maintain the house.——Seven new newspapers were to start at Madrid on the 1st of Jan.——*Works forthcoming.*—1st, A Work of Fiction, describing the grand and romantic scenery of SOUTHERN AFRICA and the Indian Ocean, will shortly appear It includes the extraordinary history of the Prophet Chieftain *Makanna*, after whom it will be named 2d, History of the British Colonies, by M Martin 3d, Life of Rev. R. Hill. 4th, The Letters and Journals of a Gentleman filling a Judicial Situation at Swan River. 5th, A Series of Sermons, by the Ettrick Shepherd. 6th, The Life and Campaigns of General Sir John Moore.——*State of the Country*—The British Empire may be congratulated upon the sound state of trade, and upon the solidity of the demand for every article of merchandize.——*The Church.*—The fury against the Established Churches of England and Scotland is not yet spent, but the storm appears gathering in all directions. May a *moral conductor* become the safe-guard of the nation's hope and trust!——*Deaths.*—Capt. Hoppner, R. N.; Mr. Sotheby; Lord Grenville; Mr. Brougham; Mr. G. Lambe; Richard Martin; Col. Wardle; Gasper Hauser, the mysterious German; Mr. A. Picken; Bishop of Limerick, (Dr. Jebb); Lord Kingsland; Lord Exmouth; Sir C. Majoribanks, M.P. for Berwick.——Mr. Babbage has refused the honour of Knighthood proposed to him by Government, considering it in the light of an insult to be offered a foreign (Hanoverian Guelphic) order.——The army of Belgium is established for the year at 110,000 men, with a contingent of 12,000.— There is an article in the United Service Journal for Jan. of some interest, by Major J. Mitchell—On the Expediency of immediately occupying Egypt and Candia.——In the same Journal there is an excellent paper On the practice of Prize Fighting, with its concomitant demoralization and debasement of the people. The list of Prize Fighters, and their associations with crime, is a sad breviary of the *morale* of the Prize-ring.

Printed and published by W. BRIDEKIRK, at the Gazette Office, No 2, Church-street.

VOYAGES OF DISCOVERY.

By Capt. MORRELL.

SECOND NOTICE.

Capt. Morrell presents a very copious account of the various sea-ports on the coast of South America, on its western shore, washed by the Pacific Ocean. Amongst the islands called the Gallipagos, his vessel remained for two months, during which time the crew took about 5,000 fur seals. The ship then proceeded to Juan Fernandez, celebrated as the residence of Alex. Selkirk, or Robinson Crusoe. It was from Selkirk's Journal, who lived on the island four years and four months, that the materials for De Foe's Robinson Crusoe was taken, a book that has never been equalled in popularity since the art of printing was discovered, (if we except Bunyan's Pilgrim,) a book that has had, and still has, more influence on the minds of youth, than ever had the legends of chivalry in Spain, or the dramas of Schiller in Germany.

The cargo with which Capt. Morrell succeeded in filling his ship proved, on his return to America, to be very valuable, and the owners prevailed on Capt. M. to take another voyage of two years or upwards to the Pacific Ocean. The Captain continued his nautical observations on the S. American coast with his usual perseverance, and adds very considerably to the practical information of a former voyage. In his survey of the islands in the Pacific Ocean which he visited, the Captain takes occasion to dwell for a brief space on the results of Missionary labours. And as this subject is of great importance, we deem it to be only justice to Missionary benevolence, to place before our readers the testimony of an eye-witness who presents himself to us under circumstances of impartial and unquestionable credit. Let Capt. Morrell be heard for himself:

"In this place I beg leave to detain the reader by another short digression, to show that the results of missionary labours abroad have been misrepresented, misunderstood, and much under-rated. Among the native islanders of the Pacific Ocean, the good they have done is incalculable. I consider most, if not all, of the persons who have visited these islands in the character of religious missionaries, as the benefactors, not of the natives merely, but of the human race. I shall not allude to what *spiritual* benefits they may have conferred on those whom they have been instrumental in turning from Paganism to Christianity, but I rest their defence on the good they have done to the cause of civilization, science, and commerce. They have opened new channels for lucrative trade, which were formerly closed by the ferocity of cannibals. They have extended a knowledge of literature and the useful arts to countries where they were never before known, and may be said to have created new countries of civilized men.

"If commerce be a blessing to the world—and who, at this day, is bold enough to deny it?—then the missionaries to the Pacific Islands have done much to promote its interests, and have thereby added much to the sum of human prosperity and happiness.

"Let us, then, do justice to the missionaries, and bid them God-speed. If they have merely caused two blades of grass to grow where but one grew before, they deserve the approbation of the world. They cannot act from selfish motives, when they voluntarily submit to so many privations, sufferings, dangers, even death itself, to benefit others. They leave the comforts of home, the associations of their early years, wives and children, lucrative situations, and expose themselves to all the dangers of the sea, to the fatigues of a long voyage, to war, pestilence, and famine; and all for what? Not to acquire worldly riches for themselves or their friends, but to impart what they conceive to be spiritual riches to strangers and savages; to cause them to pursue the path which leads to happiness, and to teach them that all mankind are their brethren, and that they must no more massacre the white men who visit their islands, but treat them with hospitality and kindness.

"This the missionaries have done—this they continue to do—and every ship-master should say, God prosper their labours, unless, indeed, he prefer to obtain refreshments for a starving crew by force of arms But, all ships have not sufficient arms or men to force a landing against thousands of ferocious savages with poisoned weapons. There have been instances where the ship's company, officers and all, have been too much weakened and emaciated by famine and scurvy, to maintain a contest with savages. Such have either perished with hunger, or became themselves the food of cannibals.

"Such instances certainly have been, and these islands are still inhabited by the descendants of the same people What force of arms could not effect, the gentle manners and mild persuasions of pious missionaries have accomplished. No sooner does a ship stop there *now*, than the inhabitants vie with each other in acts of kindness and hospitality. The best their country affords is offered, and freely offered, to refresh the wearied and weather-beaten mariners, whom they meet on the beach, and, armed with nothing but smiles of welcome, inquire their wants. Here the stranger can eat and drink, and sleep, in perfect security, under, perhaps, the same roof beneath which human flesh was once an article of food. Who have effected this wonderful change in the short period of one generation? I answer, this is the work of missionaries. GOD BLESS THEM!" —pp 157, 158.

The ship next anchored amongst the islands forming the archipelago of Chiloe. Chiloe is the largest of the group. Speaking of the ladies, he (Capt. M.) states, that the first thing which struck him was their liberal use of ornaments, such as gold hair-combs, splendid ear-jewels, bracelets on the arms, chains around the wrists, rich chains of gold around the neck and waist, with shoe-buckles of the same valuable material. He was reminded in many instances of Rebecca in Sir W. Scott's Ivanhoe. But the hoop-dresses of the ladies, and their short petticoats, quite upset the American's notions of order and beauty. But the Captain has music in his soul, and was quite delighted with the lady skill on the guitar, harp, spinnet, harpsichord, and piano-forte.

Interesting descriptions are given by the author of Callao and Lima, and other places on the same coast. At Port St. Francisco the inhabitants of the town are principally Mexicans and Spaniards, who pass a very indolent life. But the deficiencies of the town, the Captain thinks, are amply atoned for by the abundance which is found at the mission of St. Clara, lying not far off the interior. Here ten ships at a time

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

may be stored, at a moderate expense, with every requisite accommodation. The mission was founded in 1777, and contains about 1200 native Indians. The author considers the Missionaries to be of a superior order of Catholic evangelists, and what is a pleasing feature in the history of their converts is, (we quote the author's words,) "that the sins of lying and stealing are held by the converted Indians in the utmost abhorrence, and they look upon them as two of the most heinous crimes of which a man can be guilty, murder alone excepted." The next of the islands visited by Capt. M. was the Sandwich group, and here he offers a piece of advice to all navigators. In crossing between the parallels of latitude 20 degrees and 30 degrees north, a vessel should never run in thick weather, and even in the clearest of weather they should always have one or two men at the *mast-head*, day and night. The reefs, which are all formed of coral, may be seen from the mast-head, by their light reflecting on the top of the water, day or night, double the distance that they can be seen from the deck, and in time sufficient to avoid them, if there be a breeze of wind. As another reason for keeping a look-out from the *mast-head*, it is observed, that in running free or before the wind, a vessel is running on the back of the breakers, the foam of which cannot be seen from the deck until the vessel is close on board of it. But from the *mast-head* a man can see the foam over the breakers at a sufficient distance to give time enough to tack ship, or haul off.

At five degrees S. latitude the party landed at a town called Sechura, of the inhabitants of which the author speaks favourably, as exhibiting the marks of cultivation; they are hospitable, social, kind, and obliging: and they are in the habit of *bathing* every morning before sun-rise, from which practice they derive a vigorous degree of health, such as is easily perceived in their persons. Spinning and weaving appears to be an employment pretty general among the women. Capt. M. on this second voyage again anchored at Callao, and on due consideration and inquiry, he discovers that though the present generation of Patagonians is not remarkable for extraordinary height, yet it is probable that there might once have been a gigantic species of them, of which the existing people are a degenerate race. One thing, however, he is satisfied about, that there is just as strong a testimony in favour of a former gigantic race in Patagonia, as there is in favour of the former existence in Europe of a race of animals now known by the name of manmoth. The bones, and even entire skeletons of this huge creature, are found in the British Museum; and "I have observed," says Capt. M. "in the interior of Patagonia, the bones and entire skeletons of men, who, when living, must have measured more than seven feet in height."

After an adventurous and toilsome voyage of more than twenty-one months, Captain M. returned to New York with a cargo of 6,000 fur seal skins. But soon after this he is engaged with a firm of ship-owners, for the purpose of proceeding to the coast of Africa on a trade-speculation. Capt. M. set sail in June, 1829, and, after a short passage, the *Antarctic* entered Table Bay of this Colony.

Having left the Cape, of which, in the volume before us, there is an account, historical as well as geographical, the Captain proceeded to the neighbouring islands in a northern direction, and finally anchored on the E. side of Penguin Island. At about 10 A.M. the sand winds, he says, came off; and to his great satisfaction he had an opportunity of witnessing, for the first time in his life, one of those moving pillars of sand which has been spoken of by the celebrated Adanson. It rose about five miles inland from the head of the bay, and moved in the direction of the wind towards the S. W. increasing in magnitude as it advanced, until it left the shore, when it began gradually to diminish as it crossed the bay. This moving column of sand passed within a cable's length of the *Antarctic*, at which time it would measure 15 or 18 feet in circumference, of a conic form, and about 200 feet in nearly a perpendicular height from the water, leaning a little to the S. W. Its heat in passing the vessel was sensibly felt, while it emitted a strong odour not unlike that of sulphur, which was soon dissipated, however, by the strong gusts of wind which came off from the shore, raising the thermometer to 113 degrees. This column finally fell into the water.

A considerable number of his pages is devoted by the author to the object of shewing the capability of the eastern side of the African Peninsula, particularly the unappropriated tract lying between the English and Portuguese colonies, to become a fertile source of profit to any commercial country which might take it under its *protection*. Continuing his voyage along the coast of the old kingdom of Benguela, the country around the capital which is called St. Philip, and is a place of great trade, abounds with oranges, pine apples, melons, plantains, bananas, palms, date, cocoa-nuts, guavas, figs, grapes, and a variety of other fruits The vine also flourishes, as well as cassia and tamarinds. But the agreeable associations which such a luxurious natural spectacle afforded to Capt. Morrell were sadly put to flight, by the presence of no less than four infernal slave-ships from Brazil, waiting in the Bay of Benguela to complete their cargo of human beings. One of the vessels stood close to the American, and the Captain, from the first moment of anchoring, could have no rest on account of the shrieks and groans which he heard from the wretched captives in the slave-ship. Thinking illness was the cause of their sufferings, he caused one of his boats to be manned, and proceeded to the slave-ship, which he boarded without the slightest ceremony. He was received by the officers on deck with surprise, and when he announced the object of his visit, they heard him with marks of derision. He, nevertheless, proceeded to the scene of suffering, and exclaims — "Gracious Heaven! What a horrible spectacle was presented to my view!" The descriptive scene which follows is too horrible to relate.

We must pass over all further notice of this report of a third voyage, and shall glance over Capt. Morrell's fourth and last expedition to the N. and S. Pacific Indian Oceans, &c. It is, however, important to add, that parting with the *Antarctic*, the vessel in which the third voyage was performed, that she had *no ardent spirits on board* during the whole time.

On the 2d September, 1831, Capt. M. accompanied on this occasion by his wife, proceeded in the *Antarctic* from Sandy Hook Light, the Cape de Verd islands being the first place at which they were destined to rest. This part of the voyage was disastrous, as nearly all on board were struck with a fever. Several of the crew died, but the disease totally disappeared before the arrival of the ship at Tristan d'Acunha. From this they proceeded to the Auckland group, of the natural history of which the Captain gives us a very elaborate account. These islands once abounded in numerous herds of fur and hair seal; but the English and American seamen have nearly exhausted the breed, for whilst Capt. Johnston, in an American ship, took from one of these islands

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

about 13,000 good seal-skins, in 1831 there was not a single skin to be found there. From these islands the *Antarctic* sailed towards New Zealand, and anchored at a short distance from Molyneaux Harbour. As New Zealand is at present an object of considerable attention, on account of its production of an excellent species of flax, &c. &c. we shall not hesitate to present to our readers the account which Capt. Morrell has collected concerning its inhabitants. He states, that they have some excellent domestic habits, and evince extraordinary ingenuity in a few arts.

"Having no metallic vessels for boiling their food, they contrive to cook their fern-root and their potatoes by means of two hollow stones, in which they first put the roots, surrounded by a few moist leaves of some well-flavoured plant, and then applying the hollow sides of the stones to one another, heat them thoroughly for a due length of time, at the end of which the contents are well stewed and palatable food. They make wooden vessels, and carve them with much taste; cultivate their fields with great neatness, with nothing but a wooden spade; construct large and well-finished canoes; and prepare fishing-tackle and other implements in a wonderful manner, considering their limited means and want of tools. Their principal mechanical tool is formed in the shape of an adze, and is made of the serpent-stone, or jasper. Their masterpiece of ingenuity is carving, which they display on the most trivial objects, as well as in the elegant figure-heads of their canoes, &c. Their cordage for fishing-lines, nets, &c., is not inferior to the finest we have in this country, and their nets are admirably made. A bit of flint, or a shell, is their only substitute for a knife, and a shark's tooth, fixed in a piece of wood, serves for an auger or gimlet. They also fix on a piece of wood, nicely carved, a row of large shark's teeth, setting them in a line, and their sharp edges all one way. This answers for a saw, which they use in their carpenter-work, and also for the purpose of cutting up the bodies of their enemies who are slain in battle. Their wars are conducted with the utmost ferocity. They have short spears, which they throw like javelins, from a distance; long ones, which they use as lances; and a board, thick, sharp-edged weapon of stone, called *patoo-patoo*, with which they strike each other in close combat, and which sometimes cleaves the scull at a single blow. They devour the bodies of their enemies, but not from a physical appetite or relish for human flesh, as many suppose. Such an appetite or relish was never yet experienced by any cannibal that ever existed. The horrid rite is performed merely to appease a moral appetite, far more voracious than that of hunger. It is done to express the extent of their hate, their vengeance, or, rather, an insatiable malice, that would pursue its victim beyond the confines of the grave; for, it is an article of their religious creed, that the soul of a man thus devoured is doomed to eternal fire."

In latitude 4º 50' 30" south, and longitude 156° 10' 30" east, the *Antarctic* cast anchor near an island, for the purpose of fishing on the coast, which appeared to be well supplied by the species coveted by the crew. Here the natives showed every kindness imaginable, and the Captain obtained permission of the chiefs to dig garden-ground, and to sow valuable European and other seeds.

(To be concluded in our next.)

A CHAPTER ON CAPE SCENERY.

TO DAY-DREAMERS.

LET those on whose apathetic minds the Beauties of Landscape have no effect,—Let those whose sluggish spirits the freshness of the dawn never raised, and the calmness of the twilight never soothed,—Let those in whose hearts the cheerful sounds of animated nature awaken no responsive echo,—Let those, and such as those, pass on—this Chapter is not to them. They may sneer at or pity it as nonsense,—they may class it with affected sentiment, if they choose,—but this we can only tell them, the admiration of nature is a source of enjoyment from which they are cut off,—its purity they can never appreciate,—it is far removed from that over-strained and sickly feeling which finds food for sighs in a fallen leaf, for tears in a withered flower.

Many who would turn with disdain from the slightest doubt of the cultivation of their minds, who would deem such an insinuation unworthy of reply, many of those can see no object in a walk save the excitement of appetite, and the benefit to health resulting from exercise. They could look on the romantic beauties of the Camp's Bay Kloof,—they could pass beneath the rugged masses of the Lion's Head, even when mellowed in the rays of the setting sun,—they could behold the Sun himself sinking in glory beneath the unbroken horizon of that vast ocean whose billows are thundering beneath them,—they could look on such a scene without a feeling of its beauty or its grandeur! It was to be seen yesterday; may be seen to-morrow, or any day. Aye, there are men in whose hearts the shady woods that clothe the foot of the Table-rock and Duivelsberg to the east, never excited a thought unconnected with the *Rds.* *Sks.* and *Sts.* they might produce.

Our scenery in the immediate neighbourhood of the town is barren enough, it is true, but grand in its barrenness. The Table Mountain is always a striking object in whatever view he is taken; in the glaring light of a vertical sun, when relieved by no shadow on which the weary eye may repose, he seems resting in still grandeur;—in the evening, when touched by the level rays with their soft lights and broadened shadows, his weather-beaten face assumes a benignant aspect, and seems to smile on the town in his own valley, on the shores of his own bay;—in the storm, with his grey head enveloped in the cataract-like folds of the table-cloth, he scowls o'er the landscape like a giant in wrath;—but with his craggy shoulders wreathed in those light fleecy clouds that sometimes float around him in the cool morning—ere the sun has yet strength to disperse them—he unites beauty with his majesty—and affords a subject of contemplation well calculated to awaken the better feelings of the heart.

The demand for fuel has sadly destroyed the beauty of the Table Valley; the silver-tree woods that once graced its sides have fallen beneath the axe; no young trees supply their place, and the dwarfish bushes that struggle for existence amid the grey rocks, are but a poor substitute in the beauty of the landscape; except the fir-groves behind Leeuwenhoff, the Platteklip ravine is, perhaps, the only spot in it sufficiently picturesque to induce an extension of the evening walk beyond the shade of the Government gardens. But he who will endure the uninteresting sameness of the hot dusty road between Cape Town and Rondebosch, may then prolong his ride in the shade through the woods of Newlands to the romantic skirts of Wynberg-hill; there, the scene is full of variety—the open heath the gay flowers, and the green proteas, refresh the eye; the taller bushes, mixed with the shining branches of the silver trees, festooned with creepers, occasionally present the finest groups of foliage; while the Table Mountain and Duivelsberg, or the distant Stellenbosch range, form a back-ground worthy of such scenery.

These,—all these beauties must have forced themselves on the attention of every one who has seen them; they are perfectly accessible to the horseman; many, within reach of the carriage. But grander by far, and lovely in their grandeur, are those spots that lie hid in the bosom of the Kloofs, high in the side of the mountain, they are only attainable by him whose strength and elasticity of limb will hold good in the rough scramble through the bushes and over the rocks of the steep ascent; there he will find what appeared from below to be stunted proteas and grey stones, magnified, on near approach, to masses of crags and mimosa trees; there nature reigns with sway uncurbed by the hand of man, for the stumps

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

bearing the mark of the axe are as yet few. There he will find gems of scenery of that sort which has been well described as "Beauty reclining on the lap of Terror."

He whose ideas of Landscape Beauty have been wholly acquired, or even only partially trained in the drawing school or picture gallery, who looks on the works of nature with a scientific eye, and there are many such, who can see no beauty in a scene where they can't trace a likeness to any of those peculiarities of effect that Claude, Salvator Rosa, or any old Master with a fine sounding name delighted to handle,—he who thinks it beneath him to honour with a second glance a landscape that will not look well in his Sketch Book, may save himself the trouble of climbing so high; the mere Sketcher will certainly be disappointed; he will find all his Views towards the hill to consist of fore-ground, with neither sky nor distance; from the hill, all sky and distance, little fore and no mid-ground; looking along the steep sides, though the irregular succession of crags jutting through the foliage are splendid as he could wish, he will seldom be able to balance one of his Sketches. But to the real admirer of nature, with eye unfettered by the rules of art,—who views her handiwork unconnected with the slightest idea of linseed oil or varnish, of scumbling or glazing, a day spent in scrambling of this sort will be one of unmixed enjoyment; let him start 'ere the morning gun has awakened the slumbering echoes of the Table-rock, let him reach the upper Block House on the Devil's Hill, in time to behold the rising of the sun; let him skirt the foot of the cliffs, and see each ravine in the morning light,—and, if he has chosen his day after a fall of rain, the soul-stirring effect of the wild scenery in each will be ten-fold increased by the foaming waterfall then dashing through it. He may spend the heat of the day in the cool Kloof above Kerstenbosch, in the uninterrupted enjoyment of his own thoughts, or of some favorite author, and descending into the valley of the Liesbeek when the shade of the mountain begins to stretch towards Wynberg Hill,—return to town in the cool of the evening

The scenery of the Kerstenbosch Kloof will be found well worth the attention of the embryo artist or black-lead sketcher. A rivulet (the infant Liesbeek, I believe,) rises in the flat on the top of the mountain, and finding its way over the precipice above the Kloof, flows through it with a trickling murmur that mingles well with the drowsy hum of the inse hommelbei, the cry of the beckbecary, and the twittering of the graceful sugar-birds. This rill swells after rain to a raging torrent,—roaring, tearing, and foaming through the rocks and bare gnarled stems in its course. The decayed trunks, the skeletons of trees, bleached white by many a winter's flood and summer's sun, catching the rays and relieved from the gloomy foliage behind, form the finest subjects for the student of light and shade, and effect; while the frowning crags. The succession of waterfalls, the large stones heaped loosely together on the banks, among the stems of the trees, with the bushes peeping through, or here and there covering them with their varied foliage, —specimens of nature's own rock-work which the finest attempt of art, with all its studied irregularity, never could equal,—will afford him lessons in grouping his scenery, which may be studied day after day, and week after week, each change of position or point of view disclosing fresh beauties, and imparting new ideas of his art. While the frowning crags——I can't describe them—go there and see. P. McK.

CORRESPONDENCE.

JURISPRUDENCE—COMMERCIAL FAILURES.

To the Editor of the South African Commercial Advertiser.

SIR,—A series of investigations into the cause of every bankruptcy in this colony would, I think, form a valuable part of knowledge. Such inquiry could not, I conceive, be in better hands than your own, and I take the liberty of directing your discriminating attention to the subject. No reflections are here intended on those individuals whom pressing misfortunes have laid low, but I submit that the profligacy of very many of the Insolvent and Composition cases in this colony, is as notorious as the sun at noon-day. And in seeming defiance of the perpetual obligation to pay debts, is it not truly alarming to witness the increase of the innumerable legal channels for their recovery. Every where there is a dun at work, or an agent, or a collector, or a notary,—everywhere a brief for the lawyers.

The amount of property which the commercial part of the community loses by insolvency, is great enough to constitute a considerable colonial evil. The fraud, too, that is practised under cover of insolvency, is doubtless the most extensive of all species of private robbery. And I have witnessed cases of singular effrontery, in which the guilt of the party was conspicuous to the world, and yet from some defects in the *terms of the law,* or that it was a *flash* question,—*not guilty* has been returned. Thus they who are bankrupts to-day, riot in ease and affluence to-morrow; they smile at the creditors whose money they are spending, and exult in the success and impunity of their wickedness.

That there is a great deal of truckling, shifting, shuffling, shirking, *concealing* abroad, in reference to the payment of debts, is glaring enough. Just look into the insolvent cases where the ties of consanguinity are extensive, and behold the chicaneries of a *distribution of property,* preparatory to a surrender of the estate. Surely a stricter inquiry on this head than has been hitherto promoted, is self-evident. And it would appear desirable that laws regarding Wills, Legatees, and Heirs, should undergo revision.

Perhaps nothing would tend so efficaciously to diminish the general evils of insolvency, as a sound state of public opinion respecting the obligation to pay our debts. We should no more sit at the table, or take the hand of a *fraudulent* person, than if we knew he had obtained his money last night on the high-way. If Public Opinion held the conduct of a *deceiver* to be of the same character as theft, probably a more powerful motive to avoid insolvency would be established than any which now exists.

We hear frequently great outcries about the increase of crime, and we find men daily declaiming on the necessity of laws to suppress what the call vagrancy, and fortelling the robberies which they allege will take place when the coloured population shall enjoy the rights of British subjects. And they express great anxieties for a law which shall compel this race of men, and the aborigines of the colony, to state *by what means they obtain a livelihood.* I think, Sir, such a law, if passed for *the whole of the people,* instead of one or two of its proportions, would non-plus many an inhabitant of this town, should the question be proposed. That crime does increase is true,—but it is principally in those

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

quarters where we should least expect it. It is in money-transactions that the guilt is more apparent. To every single individual who loses his property by theft, there are probably twenty who lose it by criminal debts. Such facts evidently furnish weighty considerations for the government of the country, as the guardian of the public welfare. Justice and policy alike indicate the necessity of more efficient security against the want of probity in debtors than has hitherto been furnished by the law.

It will be already seen that I have not included in these strictures, those who have been reduced to surrender their estates from untoward circumstances. That these are the oppressions of the merciless creditor, I fully believe; that there are those who would immure men in a prison for committing no crime, is a fact not to be questioned, and that there are others who would

"Seize a last blanket to-day,"

and *shout hymns* to the praises of a God of Mercy on the morrow, is, alas! too true of depraved human nature.

I am, Sir,
Your obedient Servant,
HERMES.

THE PARADE, BRIDGES, &c.

A Correspondent suggests the facilities at hand, combining cheapness and duration, in exchange for the wretched worn-out state of the wooden foot-bridges leading from the parade to the Custom House, Butchers' Shambles, Commissariat Offices, and Jetty. Iron Bridges requiring no repairs, may be cast at the Foundry in Broad-street, which would be a most desirable substitute for those now in a weakly state of dilapidation, and which are frequently dangerous and impassable altogether. The seats, too, in the Parade, are now gone to ruin; iron ones would stand good for many years, and could be manufactured on moderate terms.

The Parade-ground is becoming sadly rugged, and requires a new whole covering of gravel. The time was when a pebble on the Parade larger than a pea would be discarded, and when a single blade of grass was not tolerated.

THE HESSIAN BOOTS; OR, "NOTHING LIKE LEATHER!"

I NEVER knew but one man who was really attached to hessian boots. It was my friend S——, and his attachment amounted almost to reverence. He always wore them summer or winter. Although a martyr to the gout, his respect for hessians overcame all desire for an easy shoe, when his fit was at the highest. I have seen him writhe with pain under the infliction, and yet smile complacently at the polished calf of his favourite leather. When night came, a stranger might observe his ruffled temper, as he encountered the boot-jack and slippers; they were to him the heralds of departing bliss. He sighed as he drew them off; and woe to the person whose business it was, if the boots were not in readiness in the morning at the moment he required them! Yet he was not punctilious in his dress; he wore not hessian boots for their smartness; he cared little whether they were clean or dirty: his love had a deeper root—it sprung from gratitude.

It is extraordinary how chance or mishap may suddenly bring to light the most inestimable qualities in very common and, to all appearance, very trifling things. Hood has immortalized a wig as "a life-preserver," a property few could have guessed at. The wearer, falling into the clutches of some wild Indians in the back-woods of America, was sentenced to be scalped; and the operation was quickly performed—but the knife passing fortunately between the scull and the frizzled top-knot, the artificial scalp came off in the Mohawk grasp, thus leaving the proprietor minus only his wig.

To pass from the head to the heels, it would be difficult to conceive how a pair of hessian boots could have rendered so important a service to my friend S——; yet they did. They were a life-preserver to him, and he treasured them accordingly—but let him tell his own tale.

"I dare say," said he to me one day, after an affectionate glance downwards, "I dare say you wonder at my fondness for hessian boots, but I am bound to them from respect to myself and family. But for these bits of leather, sir, I should not be standing before you at this moment: they saved my life, sir. Thirty years ago (it was the winter of 18—), I was riding a little cross-grained chesnut cob over my own farm, when the beast making a sudden start, I was thrown off my guard and off the horse at the same moment. Well! instead of standing still (the horse I mean), as he should have done, he scampered away, as fast as his legs could carry him, across a forty-acre field; and what is worse, sir, my right foot hanging in the stirrup, he dragged me along with him. Luckily for me, there had been a heavy fall of snow, which doubtless saved me many broken bones; but, what was a hundred times more fortunate, I was wearing hessian boots, sir. Well—when we had got to the opposite hedge, what with rolling and tumbling over and over, I had become a perfect snow-ball; and, luckily for me again, there was a ditch, which as I slid in, my foot slid out—out of my boot I mean; and away went the cob, boot and all. Well—there I laid a senseless lump of snow; and, God knows, but for one circumstance, I might have laid there till the thaw came. It so happened that my eldest boy was out, wandering about with a gun shooting rooks and crows, and such like, as passing near the spot where I laid, he up with his gun at what he thought was a crow on the edge of the bank. Now, what do you think it was, sir? it was nothing more no less than my left hessian boot, the only visible part about me; rather a critical moment, you'll say, if I could have known the rights of it; but, luckily for me, I was insensible. If I had moved my foot the least in the world, he'd ha' shot me as sure as a gun; but the boot was quiet; so he was doubtful of wasting a charge of powder and shot, and crept up towards it, holding his gun ready all the while. Well!—in course he knew his father's boot, when he came close, and wondered how it come there. Well! he tugged and pulled but all to no purpose—there it stuck; he little knew at the moment that his father's leg was inside. However, by this time, assistance was at hand; my horse it appeared had excited some surprise at home, where he had found his way, with my boot hanging at the stirrup; so one and all set out in search of their master; but my belief is they'd never have found me, if my hessian boot had not shewn itself above the snow. Well, sir! I was carried home and thawed inside and out, and luckily for me, very little damage done. Now, sir, I conceive my life was saved, in the first place, by my right boot coming off; and, secondly, by the left boot keeping on: and I'll only appeal to you as a man of feeling, whether, after such a warning as this, it does not become me to wear hessian boots for the rest of my life!"

T. W.

BIOGRAPHY.

GEORGE CRABBE, LL. D.
POET OF THE POOR.

As our readers are no doubt fully aware, Crabbe, the "Poet of the Poor," is numbered with the dead. But his memory is precious, *the fragments respecting it are gathered up so that nothing may be lost.* The first of a series of eight volumes, containing the life, journals, and annotated Poems of Mr. Crabbe has been published by his son;* and is a document of

* Curate of Pucklechurch, (Gloucester.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

no inconsiderable interest. In a few words, respecting the poems of Crabbe, it may be safely said, that in these, the peer, the peasant, and the mechanic, will find every thing to elevate their aspirations, and yet nothing to quicken envy or uncharitableness. In his works—we find the christian poet, —his satire strong, but never rancorous—his lessons of virtue are earnest, but modest—his reprehensions of vice severe, but brotherly. He was well known in *sentiment* to be an Episcopalian churchman, bordering even on the ultra side of High Church principles. Hence his sarcastic censures on those connected with the interests of Dissenters. But what of that? The Dissenters of Trowbridge knew the Rev. Mr. Crabbe to be (however mistaken in some things) a good and a worthy man—one who concealed not his opinions, but carried his heart in a chrystal vase that all might see it, and they followed of their own accord in the procession to his grave, and delivered funeral discourses at their meeting-houses, and mourned over him.

Mr. Crabbe was a most exemplary parish priest, and was *simple and unaffected* in his manner. He was frequently *familiar* even in the Pulpit. He has been known to say, "upon my word I cannot see; I must give you the rest when we meet again" Or, he would walk into a pew near a window, and stand on a seat and finish his sermon, with the most admirable indifference to the remarks of the congregation. He was always like his own Author-Rector in the "Parish Register,"—"careless of hood and band!" &c. Mr. Crabbe was born in a very poor family, hardly raised a step above the common fishermen of Aldborough, (Suffolk,) in a mean cottage on a squalid shore; and bred up from infancy to boyhood with no ambition of his parents, higher than that of seeing him established in life as an exciseman, or, perhaps, *a clerk in the custom-house* of an insignificant sea-port. He was taught to read by an old dame; and after he could read at all, he was indefatigable in reading. Observing his bookish turn, a salt-master sent him to a commercial school at Bungay; and afterwards to one of a better sort at Stowmarket When George was about his fourteenth year, it was resolved to bind him apprentice to a surgeon-apothecary; but before a situation could be found, he was employed on the quay of Slaughden, in piling up butter and cheese. At length he was apprenticed at Wickham-Brook, a small village near Bury St Edmunds. Besides the duties of an *apotheek*, he was employed in the drudgery of the farm—for his master had more occupations than one —and was made the bed-fellow and companion of the plough-boy. One day as he mixed with the herd of lads at the public house to see the exhibitions of a conjuror, the magician having worked many wonders, changed a white ball to black, exclaiming,—"*Quique olim albus erat nunc est contrarius albo*—and I suppose none of you can tell what that means." "Yes, I can," said George. "The deuce you can," replied he of the magic wand, eyeing his garb, "I suppose you picked up your Latin in a turnip-field." Crabbe completed his apprenticeship at Woodbridge; but he never liked the profession, but always took an immense pleasure in botanical pursuits. Here he fell in love with Sarah Elmy, the niece of a wealthy yeoman, an amiable and beautiful girl, who, after a lapse of twelve years, became his wife. The apprenticeship expired, Crabbe returns to his native place and worked on the quay. He at length manages to get to London and walks the hospitals. His resources exhausted, he once more returns home and becomes assistant to an apothecary. But his passion for botany proves injurious to him, for his ignorant patients seeing him return home from his walks with handfuls of weeds, decided that as *Doctor* Crabbe got his medicines in the ditches, he could have little claim to payment. In the summer of 1778, the Warwickshire militia were quartered in the town. Col. Conway took much notice of Crabbe, and presented him with several Latin works. Meantime he had perused with attention the works of the British poets. He now began to indulge in the dreams of a young poet, and in a sudden moment, 1779, he resolved to seek his fortune in London. On this occasion he wrote a pious effusion in his note book, which concludes thus:

"Whether I live, or whether I die, whether I be poor, or whether I be prosperous, O my Saviour! may I be thine! Amen!"

George Crabbe settled his little affairs, went on board a coasting smack, and landed at the Tower-wharf of London, master of a box of clothes, a small case of surgical instruments, and three pounds in money. Before he left Aldborough, it must be observed, that he had been brought very nigh death's door by sickness. In this affliction he was made to kiss the rod, and recognize the hand of the smiter. On his recovery he had *family worship* regularly in his little lodgings, where his only sister superintended his affairs for him; and from this period all who observed him agree that his whole subsequent life was that of a virtuous, religious man.

The next extraordinary chapter in the book is the narrative of Crabbe's struggles, miseries, patience, and long-suffering in London. The tale is told by his son in a plain unadorned style, which does honour to his head and his heart. On arriving in town, he had but one acquaintance there, Mrs. Burcham, an old acquaintance of Miss Elmy, wife to a linen draper in Cornhill. O! there is (after all) much real goodness in people of this rank in life! He was welcome here, whenever he chose to pay a visit. Crabbe dined with the Burchams every Sunday; and fifty years afterwards he told Sir W. Scott, that he remembered their noon day leg of mutton baked in the pan, as the highest of luxuries. And chiefly that he might be near his draper-friends, he took lodgings in the house of Mr. Vickery, a hair-dresser in Bishopsgate-street, who afterwards rose to distinction in his trade, and who still survives in old age to pronounce the "well done" to the memory of the Rev. Geo. Crabbe. Poor Crabbe now commenced poet, and was doomed to be slighted by Lord North, Lord Shelbourne, and his bookseller, who became a bankrupt soon after Mr. Crabbe's "Candidate," a poem, had been published. The young poet was now reduced to great distress—happily, he applied for assistance to Edmund Burke. He was called before that great man, a poor young adventurer, spurned by the opulent, rejected by the publishers, and his last shilling gone. Burke, at the very first interview, took him by the hand, welcomed him to his house, and treated him as a son. This is a bright passage in Burke's history, which has been overlooked. Young Crabbe was now established under the roof of his disinterested patron at Beaconsfield. Under his eye, "The Library" and "The Village" successively issued from the press,—and Reynolds, Johnson, Fox,—in a word, all Burke's friends,—partook his interest in his new *protegé*. We cannot afford space to relate some after particulars relating to this period—but, singular to relate, in 1781, Mr. Crabbe, from the bent of his inclination, became an ordained clergyman; and where do you think, reader, he first commenced his "goodly race?" Why, he became Curate to his native Aldborough! He, the coolie at the wharf,—he, the farmer's boy, the apothecary's apprentice, who left his home, a deserter from his profession, convicted of "the crime of poverty,"—denominated a hare-brained visionary, returns to his birth-place a man of acknowledged talents, a successful author,—a priest at the altar of the living God!

Of course, there was a good deal of mortified pride at Aldborough. "Is not this the carpenter's son?" was said of old respecting *Him*, who is still the world's best Friend and only Hope! Some time after this, Mr Crabbe, through the unwearied kindness of the great Edmund Burke, became domestic chaplain at Belvoir Castle. But Mr Crabbe was not in his element under the roof of the Duke of Rutland. His adherence, however mild, to the Whig tenets of Burke's party, may not have much gratified the circles of Belvoir. And it turns out to be a fact, that he had more than once "to swallow bumpers of salt-water, because he

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

would not drink Tory-toasts." But at Belvoir Castle, Crabbe had the good fortune to meet with men who became his friends. These were Dr. Watson, Bishop of Llandaff, Lord Thurlow, &c. In after years, Mr Crabbe added to these, Mr. Fox, Mr. Canning, Lord Holland, Lord Grey, Mr. Wilbraham, Dr. Mansel, and Sir Walter Scott, Mr. Bowles, Mr. Moore, Mr. Rogers, Mr. Mackenzie, &c. Lord Thurlow, the rough Chancellor, used to say of Crabbe, that he was "as like Parson Adams, as twelve to a dozen." And it is a recorded fact in honour of Crabbe's genius, that after the return of Sir Walter Scott to Abbotsford, in 1832, when he was sufficiently himself to ask his family to read aloud to him, the only books he ever called for were his Bible and Crabbe's Poems.

For twenty-two years, after the publication of "The Borough," "Tales of the Hall," "The Parish Register, "The Village," &c. &c, Mr. Crabbe withdrew wholly from public view. But let it be recollected, that he was all this while a most devout, holy, indefatigable parish minister. He never allowed any call, either of pleasure or worldly business, to interfere with the discharge of his professional duties. If a peasant was sick, and wanted him at his bed-side, that was always a sufficient reason for suspending any journey or engagement. No sympathy was like his,—and probably to no human ear were ever so many sad tales of anguish and penitence revealed, as to that of Mr. Crabbe in his ministerial capacity. Moreover, during the nine-and-twenty years that he was a *country* clergyman, he continued to practice as the medical attendant, *gratis;* supplying all with medicines at his own sole cost, and not shrinking, when the occasion pressed, even from the most painful duties of the accoucheur. * * * On the day of Crabbe's funeral, all business in Trowbridge was suspended; the streets crowded, and the church full. The choir on the occasion selected the beautiful anthem:

"When the ear heard him, then it blessed him;
And when the eye saw him, it gave witness of him.
He delivered the poor that cried, the fatherless, and him that had none to help him:
Kindness and meekness and comfort were in his tongue."

WORKING PEOPLE:
WHETHER CLERKS, MECHANICS, OR LABOURERS.

PERFECTLY distinct from *party* politics, we are right glad to discover at home, a rising spirit in behalf of the industrious working classes of the people of England. Too long have these worthies of the Commonwealth been subject to bondage worse than Egyptian slavery But justice, though sometimes tardy, is nevertheless sure The emancipation of the weaker of our brethren (the *Blacks),* will of course break in twain the fetters of our kinsmen, the *Whites.* Already the shout of freedom has commenced in England, and the animal machine is no longer to be sacrificed at the shrine of the monster AVARICE! Had the Government of the country but taken up the question, it would have formed an interesting feature in its *reformed* annals. Or had the British Worthies —the Philanthropists, attended to the subject, it would have added an additional lustre to their far-famed benevolence. As it is, we are thankful that the men generally denominated *Radical Reformers,* have attended to the scriptural injunction of *doing justice and loving mercy.* In all parts of the country we discover, from the recent European communications, a disposition abroad (independent of the landholders,) to relieve the peasantry of the country from the galling inflictions of the *pains and penalties* to which they have been long subject. Societies appear to be every where forming, possessing features very distinct from those hitherto conducted on infidel principles. It is quite true that these societies are formed and recommended by men hitherto considered agitators and disturbers of the country, but we think we discern a far better spirit in the following document, which has been extensively circulated, than in any other tract that has been published by men of a similar calibre of mind.

CATECHISM
OF THE
Society for Promoting
NATIONAL REGENERATION:

Whose object is, to remove as far as possible, the social and commercial evils now esisting, and which, by their rapid increase, are fast destroying every vestige of happiness and order.

"Judgment is turned away backward, and "Justice standeth afar off: for Truth is fallen "in the street, and Equity cannot enter. Yea, "Truth faileth; and he that departeth from "evil, maketh himself a prey: and the Lord "saw it, and it displeased him that there was "no Judgment."—ISAIAH, chap. 50, verses 14, 15.

1. Q. What is society?

A. A number of rational and moral beings, united for the mutual happiness and preservation.

2. Q. Explain this further.

A. It is an association of human beings, to enable the individual members to produce wealth and distribute it—to form the character of the rising generation, and to govern the whole body in such a manner as to obtain the greatest possible amount of happiness, health, intelligence, and wealth.

3. Q. Explain further the legitimate object of human society.

A. The happiness of the human race, *without distinction of class, sect, party, country or colour,* in obedience to the divine command,— "*Whatsoever ye would that men should do to you, do ye even so to them,*" and in accordance with the Christian principles of universal charity and kindness.

4. Q. Is the present state of society such, as generally to enable honest and industrious men to practise these golden rules, without being in danger of going to bed pennyless every night?

A. No—"He that departeth from evil, maketh himself a prey."—*Isaiah* lix. 15.

5. Q. What obstacles now exist in society which thus prevent the observance in practice of these golden rules?

A. Individual *competition* and unrestricted though mistaken *selfishness,* are the obstacles which require to be removed, in order to obtain the legitimate and beneficial purposes of society. "They hunt every man his brother with a net;" "The best man is a *brier*—the most upright is sharper than a *thorn hedge.*"—*Micah* vii. 2. 4.

6. Q. What are the most obvious means for producing the contentment and happiness of society under its present circumstances, or in other words, its REGENERATION?

A. First, the inculcation and bold assertion and maintenance of *Christian principles:* and in connexion therewith, properly devised arrangements to enable society to *produce* the greatest amount of the most valuable wealth in the shortest possible time, and with the highest advantage to the producers; and to *distribute* this wealth most beneficially for society at large. Secondly, by other arrangements, combined with these, to nourish and cultivate the *physical, intellectual, and moral powers and faculties of every child.* in order that it may become as useful, valuable, intelligent, good, and happy as possible, and so to unite these separate arrangements in their due proportions, that they may always proceed together in order and harmony, and thus effectuate the greatest permanent benefit to every member of society

7. Q. Is it *now* practicable to form arrangements throughout society that will produce improvements so extensive and important?

A. It will be comparatively easy of accomplishment when *liberty of expression* without evil to the speaker, can be secured for the conscientious views of every individual *upon the state of society,* and the operations of our present commercial system, without prejudice on account of the political party or religious section to which a man may be attached; and also, without prejudice on account of the *relative* situation of persons, especially that of masters and servants.

8. Q. Then you consider this liberty of expression without offence or prejudice, to be a first step towards the practice of real Christian charity?

A. *Yes;* for until this great change be effected in the practice and dispositions of men, it will be vain to expect any essential improvement in the worldly and moral condition of society, or in the practice of social virtues, inasmuch as the TRUTH, regarding the *sources* of social and commercial evils, cannot be established without this free discussion.

9. Q. State further what it is, which *now* prevents the introduction of practical measures to effect a beneficial change in the present deplorable and increasingly disastrous state of society.

A. *The want of correct views*—First, in those who *govern* the most civilized nations; secondly, the want of the knowledge in *their subjects:* and thirdly, *in this country especially, the overwhelming ascendency of the love of our money over the love of our neighbour.*

10. Q. What power do governors possess to remedy these evils?

A. *Much* that is required to make the population of every country rich, intelligent, good, and contented.

11. Q. In cases where these governors do not exercise this beneficial knowledge and power, what practical measures would you recommend for adoption?

A. It is recommended that the productive and more useful classes of society, in all countries, should unite among themselves to accomplish peaceably, and by *moral force alone,* those changes, which it would have been *far better for the Government of the civilized countries of their own accord* to have commenced and effected.

12. Q. Suppose the union of all the industrious and more useful classes to be effected, what ought to be the first measure for them to adopt?

A. They should fix a MAXIMUM OF TIME

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and a MINIMUM OF REMUNERATION, for their daily labour.

13. Q. What ought to be the maximum of time?

A. EIGHT HOURS A DAY—or from eight o'clock in the morning till mid-day, and from two o'clock in the afternoon till six o'clock in the evening.

14. Q. Why would you fix *eight* hours?

A. 1st. Because—it is the longest period that the human race (taking the *average* of strength, and *allowing to the weaker, the rights of existence as well as the stronger*) can endure, of physical exertion, so as to be healthy, intelligent, virtuous and happy. 2nd. Because of the modern discoveries in chemistry and mechanics, which render it *unnecessary* to require a longer period of physical exertion. These discoveries, which Divine Wisdom and Goodness hath permitted and intended for the *relief* of his creatures, and to *lessen* the duration as well as the intensity of their toil, have been hitherto perverted by mistaken selfishness, and individual competition: so that with these improvements, human *labour* has *increased* and its *rewards* have proportionably *diminished*. We own these mechanical and chemical discoveries to be the gifts of God, and that by the present system we virtually despise and pervert them; and we perceive that the practice of doing so, has been partly introduced by *ignorance*, and acting upon mistaken theories; and much more so, by the baneful selfishness of a few *artful* capitalists, who sacrifice the interests of millions to enrich themselves. And thus from these causes principally, what happened of old hath happened unto us, and, "*That which should have been for our welfare, has become a trap*,"—Psalm lxix 22. 3d. Because by eight hours' labour, under proper arrangements, a superfluity of wealth may be created for *all*. 4th. Because no man has a *right* to require his fellow man to be employed longer than is generally beneficial to society, merely that *he* may grow *rich* by making many *poor*. 5th. Because it is the *real interest* of every human being, that every other human being should be *healthy, intelligent, contented, and happy*.

15. Q. What other considerations should lead us to strive for the attainment of these objects?

A. Above all, we should consider that mankind are possessed of IMMORTAL SOULS, and of minds capable of incalculable expansion and enjoyment: and although man in his present state is necessitated to earn his bread by the sweat of his brow; yet it should be the endeavour of all classes to *mitigate* and *not to aggravate* his physical toil, to *redeem* time for his spiritual enjoyment, and for the cultivation of social virtues, to the greatest possible extent. Thus we conclude, that any state of society which dooms man to mere physical exertion, is unnatural, and opposed to the intentions of Divine Goodness.

16. Q. What ought to be the minimum of remuneration for *eight hours'* daily employment in the service of mankind, that is, in producing food, lodging, clothes, furniture, or knowledge, or pleasure, for our fellow-creatures?

A. The *return* for these services ought to be *a sufficiency of all these things, to the honest and industrious* producer. The original imposition of labour was manifestly attended with this promise, "In the sweat of thy face thou shalt eat bread;" (Genesis iii. 19); but the present system tends to *reverse* this merciful condition, and *in effect* says, "In proportion as thy face shall sweat, thy bread shall fail."

17. Q. What other advantages is the honest and industrious labourer entitled to?

A. Sufficient time for religious duties; for "*What shall it profit a man if he gain the whole world and lose his own soul?*" Also for mental improvement and rational pleasures.

18. Q. Can men who *wilfully and knowingly* uphold and perpetuate a system, which thus tends to impoverish and brutalize mankind, be entitled to be considered *honest* men or *sincere* Christians?

A. By no means—for "by their fruits ye shall know them." Matthew vii. 20.

19. Q. But suppose such men to make great professions of piety, and to be highly and generally esteemed as such?

A. "Satan himself is transformed into an Angel of light." 2 Cor. xi. 14.

20. Q. Can the physical and mental powers, wisely applied, produce all these necessaries and comforts of life, and a surplus?

A. Yes; and if there was either necessity or utility in it, they could in a short time, under a wise direction of human powers, applied to land and capital now in existence, produce wealth, to which no assignable limit can be fixed.

21. Q. Then you, in fact, recommend that knowledge and happiness should, by these means, be *insured* to the productive classes?

A. Yes; we recommend also, that for this end all the producers of wealth and knowledge, whether employers or employed, should unite to obtain for their productions, and in return for their industry, from those who neither produce knowledge, nor wealth, nor anything really useful to mankind, a sufficiency of the necessaries and comforts of life. But that if those who do *not produce* wealth, will *not thus* remunerate the producers, they break the natural compact of society, and ought at least to be left to produce those things for themselves.

22. Q. The first step you recommend to the Union of the Productive Classes being to fix a maximum of time and a minimum of wages, what do you *secondly* recommend?

A. That they should zealously endeavour to put an end to all injurious and all immoral habits, now prevalent amongst them, and especially intemperance; which habits, their excess of labour, and deprivation of moral and intellectual culture have greatly tended to produce. And that they should daily exhibit in their intercourse with each other and with the world, the *Christian virtues of forbearance, charity, and kindness, and upon all occasions show a* readiness to return *good for evil* and *blessing for cursing* after the example of *the Great Redeemer* of mankind; until by a perseverance in such conduct, the evils which now afflict society shall be greatly diminished, if not removed.

23. Q. Do you believe that a Union of the Productive and Useful Classes is calculated to bring about such a virtuous, intelligent, and happy state of society?

A. Yes; by the blessing of God, great advances might be made towards it, if both employers and employed can now be induced to unite, in measures the most obvious, for their mutual benefit.

24. Q. But should either one or both be yet ignorant to comprehend this enlarged interest which you have described, what course should be adopted?

A. If both parties are not yet sufficiently informed, to perceive the overwhelming interest which they have in these measures, then the intelligent and best disposed who *do* understand these principles, and know the benefits they will produce when applied to practice, are called upon by their desire for happiness, to use every means in their power to enlighten both parties for their mutual advantage.

25. Q. But suppose the employers should not now perceive these things, as they do not suffer *so much evil* from the present practices *as the operatives whom they employ*, and that the latter *should* discover the *full* extent of the errors of the principle, by which their labour is called into action, what course would it be wise and prudent for the employed to adopt, to put an end, in the shortest time, to the unnecessary misery which they and their families now experience?

A. They have but one course left for them to pursue—they must *unite* as all other associations of men have done for their mutual safety and interest, and by their *union* induce the most *enlightened* of their *employers*, and the *public* to aid them, to do without the assistance of such of their present employers as cannot be induced to join them in these fundamental measures for their own security, and the regeneration of society.

26. Q. Is the time arrived for this great change to be effected, without throwing society into confusion, or doing a greater evil by raising some portion of society in the scale of happiness, and depressing other large portions, perhaps the greater number?

A. We believe the time *is* come, when this highly-to-be-desired change may be accomplished not only without any real injury to any portion of mankind, but also with the most substantial permanent advantage to the whole of the human race, and moreover we are persuaded that the *present* system cannot proceed without producing the violent and complete breaking up of society; for it is evident that the diffusion of knowledge (partial as it now is) and the existence of almost any degree of liberty, are utterly incompatible with the increasing depression of honest industry in our own country especially.

27 Q What is the object intended to be attained by the establishment of the Regenerating Society?

A. The happiness of the human race.

28. Q. By what means?

A. First, by introducing into *every day's practice*, the fundamental precepts of the Christian religion—universal charity and kindness: secondly, through the abandonment of the commercial principle of *individual competition:* and thirdly, by a suppression of immorality.

29. Q. Cannot the Christian precepts of charity and love be practised under the commercial system of individual competition?

A. No, never; and it is in vain longer to continue the useless attempt.

30. Q Then all sincere friends of Christianity and Truth must ultimately adopt these practical measures?

A. Without the adoption of such a plan, we do not see how the fundamental precepts of the Christian religion can be effectually carried into practice.

31. Q. What will be the consequences of delay and procrastination?

A. NATIONAL CONFUSION AND RUIN.

LITERARY EXTRACTS.

THE THREE WESTMINSTER BOYS.

PART FIRST.

IN Mrs. Johnstone's Edinburgh Magazine, we find in her "Nights of the Round Table," the following pleasing article. We recommend it especially to our young readers:

The Magic Lantern, which belonged to Mr. Dodsley, was elegantly and ingeniously formed. He chose to exhibit its wonders himself; and, story and picture aiding and illustrating each other, agreeably occupied several nights of the round table.

"Peep, and tell us what you see, Charles," said the Reverend showman to our old friend Charles Herbert.—"An old building, forms, desks, a lofty large room, many boys and youths, and three apart and prominent."—"Let *me* look," cried Sophia,—"Westminster school, I declare! and those three boys!—one very noble and graceful; the next dark, thoughtful, resolute, with keen eyes, and compressed lips; and the third—O! how gently, yet brightly he smiles, dear bashful boy, as his dark, bold companion extends his arm, haranguing

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and pointing forward to some high distant object!—A picture is it,—a figure in state robes? —or is it to the insignia, blazoned on that desk? —Nay, I daresay he wishes to be head-master."

"Have you all seen the three school-fellows?" asked Mr. Dodsley; "look at them well, for here they part on the path of life, never to meet again. Presto! change:—What see you now, Sophia?"—"Still the stern dark youth, and the gentle timid one:—they are older now, but I know them well. The noble-looking boy has disappeared. The scene seems chambers in the temple. Through an open window I have a glimpse of gardens: piles of huge books are lying on tables, floors, and shelves. The dark resolute youth pores on a black-letter folio, and makes as it were notes and extracts. The other leans by the window, gazing over the gardens, a small open volume fluttering in his relaxed hand. Ha! I read on it "Thomson's Seasons.'"—"Yes, Sophia, your gentle law-student is an idle rogue; he has been seduced into the 'primrose paths of poesy'—let us see the result;—meanwhile here is another picture."—"Beautiful! beautiful!" cried the admiring girl, "A large ship!"—"An outward bound Indiaman," said Mr. Dodsley.—"All her sails set," continued Sophia. "How proudly, how statelily she ploughs her way, breasting the waters like a swan. And there, on her deck, that noble gentleman, the third Westminster boy,—and yet not he,—walking so proudly as if in accordance with the majestic motion of the brave ship. I am glad to meet him again:—and all those military attendants—the gaudily-dressed musical band,—the plumed officers,—and he the centre of all! What a great man he must be, and how well honour becomes him."

"Shall we follow his progress to the East, or return to yonder gloomy, sombre chamber in the temple?"—"Both," cried several young eager voices; "we must trace them all,—all the three school-fellows."

The next view was of a large Oriental city, its architectural splendour and magnificence of outline glittering in the dazzling, but uncertain brilliance of the morning sun; domes and minarets, Mahomedan mosques, and Indian pagodas, fountains, and palaces, and stately dwellings, sparkling in the outpouring of the increasing flood of intense and golden light. Over this scene were grouped and scattered Mussulmans, Arab warriors, Brahmins and Sepoys,—all in diversified and picturesque costumes,—ornamental palanquins, European officers richly dressed, and mounted on beautiful horses; elephants prancing in their splendid trappings; females and children, their dark skins and silky hair, and large black eyes, contrasting with their white and gaudily spangled dresses; dancing girls, and marabouts,—all, in short, that could compose a picture of Oriental beauty and splendour; and that princely man, now of middle age, on the large white elephant, still the centre of all.

The scene changed slightly, and discovered the interior of the magnificent saloon of a residence that appeared royal, where the noble figure, whom Sophia still rightly declared the third boy of Westminster school, received, in Oriental state, homage, paid with the lowliest prostrations of the East, from a long train of nawaubs, rajahs, and envoys, illustrious captives or princely tributaries, whom his policy or his prowess had subdued to the dominion of England. Royal and magnificent were all about him; his aspect grave, dignified, and elate, his step and air majestic; yet the shadow of deep, anxious thoughts, of heart struck care, at times darkened his embrowned visage. Whence then had fled the generous, sunny, open smile, that lightened the grey walls of Westminster school;—the noble, free expression of the younger man, who so proudly trode the deck of the outward-bound Indiaman?

"Alas! what change!" said Sophia; "I almost dread, yet long to follow him farther."

Dim, troubled, misty scenes next flitted by; battles hid in smoke and obscurity; the wide plain of Hindostan flooded or desolate,—naked huddled millions, signs of disaster, famine, and misery; and in the foreground still that princely man, his features ploughed with care, knitting his brow in fierce anger and disdain, stamping on the ground, while his eastern slaves cowered around him, as he hastily perused letters and despatches, his English secretary, attendants, and aides-de-camp standing back, anxiously scanning his looks, and reading his troubled mind in his working and eloquent features.

The scene passed, and he was next seen in an English ship, more stately if possible than the former vessel, freighted with all the rich and rare productions of the East; but the bright look had waxed dim, the buoyant step of the outward-bound voyager was now heavy and slow. Anon, and he lay reclined on a couch on the deck, under a silken and gold awning. A physician felt his pulse; black servants in splendid costumes fanned him; others approached with profound salams, bearing perfumes, and offering service, as they might have done to a divinity. Indifferent to all, his eye remained riveted on one paper, on a few cabalistic words, which, like the damned blood-spot on the hand of Lady Macbeth, would not out, could not sweeten.

"Turn we again to England," said Mr. Dodsley, shifting the scene, "to our stern ambitious, iron-minded man, of invincible purpose, of unconquerable perseverance and, let me add, of strong intellect, and yet stronger ambition:—there you see him, the slough of the Temple cast, in the King's Bench, in the Court of Chancery, in the Commons' House of Parliament, every energy of his mind in perpetual activity, already surrounded by satellites, the ministers or slaves of his will, subdued by that mighty and resistless will to its own purposes of selfish aggrandizement, of intrigue and political ambition, and, it may occasionally be, of pure patriotism. And now, every obstacle overcome, underminded, or boldly trampled under foot, see him make one grand spring to reach the height at which every act of his life has aimed; while all men, the stronger as well as the feebler spirits, give way to his resistless progress, or cheer him on to the spot where lie the coveted rich robes, the patents, and the purses, and by these the mighty insignia of the Lord High Chancellor of England."

"I begin to long for a glimpse of our gentle boy now," said Sophia, "dreaming over his 'Thomson's Seasons.' Has he been borne down by the torrent which has carried his bold and daring companion so high and far?—Our gentle interesting boy!—has he been cast away like a weed, or has he cast away himself?"—"You shall judge," said Mr Dodsley,—"Here is our lost one——" And there he was, the very boy, developed in the thin melancholy, wo worn man, sitting lonely on a tombstone, under the elm of a country churchyard.—"He is curate of that church," said Sophia; "and I dare say he has lost his wife or his child. How refined and how expressive are his faded features; a look of meek resignation, stealing over the traces of some deep mysterious affliction."

"He never was in orders, nor yet had wife or child, my sprightly guesser," said Mr. Dodsley. "Mental blight, dark and fearful trial, and the utter desolation of worldly prospects, have passed all over him; but he is, as you see, better now,—there is even an occasional flash of humour kindling over those placid features,—of which, however, gentle kindness, deep, holy submission, is the fixed and habitual expression."

"It makes my heart ache to see him so far thrown out," said Sophia; "for even at Westminster I liked him best."—"He was my boy, too," cried Fanny. This was not quite correct, for Sophia had expressed strong sympathy with the "noble boy," as she called him, and great admiration of the oriental Vice-King; but Mr. Dodsley accepted her own interpretation of her altered feelings, and said, "He was 'a stricken deer that left the herd'—nor was he free from blame; but his dark hour is past. Shall we follow him to his humble abode, not far from those churchyard elms, or return to those scenes of splendour, of grandeur, of substantial wealth, of real power, in which his early compeers preside, guiding or wielding the energies and the destinies of nations?"

"Follow him, Sir," said Sophia; and the boys, though anxious for more stirring pictures of life, politely yielded to her wish. The quickly-shifting scenes exhibiting a dull, dingy, and even mean-looking house, in the centre of a small, fifth-rate market town, and again a low-roofed parlour in that house, very plainly furnished with things neither fine or new, and still less fashionable. Here sat an elderly, but comely gentlewoman knitting; and before her stood a plain tea equipage, waiting, as the next scene showed, the arrival of the loiterer under the churchyard elms, whom she seemed to welcome with the placid smile of long-tried affection. This scene looked brighter than the former. The old window curtain was let down, the old sofa wheeled in, the tea-kettle was steaming,—and it was singing also, no doubt, if pictures could give out sounds; the shadows of a blazing fire of wood, were dancing and quivering on walls and roof, and shining on all the polished surfaces of the furniture; and a couple of hares, at a touch, were seen in another scene, leaping from a box. They gamboled and wheeled on the well-brushed carpet, their benevolent master and protector looking on their sports, and caracoles, and gambades, with pleased, affectionate, and even interesting eyes.

"How lively those scenes—they are nature itself, Mr. Dodsley," said Miss Jane Harding. "Your magic lantern is the finest mimic representation of life I ever saw."

"I know whereabouts we are now," cried Sophia, in a low, earnest, yet delighted tone of voice. "Olney! Cowper, Mrs. Unwin!—Ah! sulky Tiney, and Mrs. Bess the vaulter!" "Let me see, let me see!" cried the younger children, and Sophia had now a much stronger object of interest than the pictured scene, which she left to Fanny and Charles, and the other little ones.

"But the studious, thoughtful youth, who pored over the folio in the temple," she cried, "the dark-browed, stern man of the Chancery Court, Cowper's early friend, who was he?

"Edward Thurlow, Lord High Chancellor of England."—"And that other boy—the Westminster scholar?" said Sophia.

"Warren Hastings, Governor-General of India. These three youths started from the same point. In birth, Cowper was certainly the most distinguished of the three;—of their respective talents we will not now speak—great men they all were—good men too, let us hope. The lot was cast into the lap. All started for the prize:—by routes how different did each gain the appointed place where all human travellers meet! What then were their gains?—which was happiest in his course of life? But we must follow them farther: true is the Italian proverb, which says that no man can be pronounced happy till he is dead! Which of the three Westminster boys became the best man? Which most nobly fulfilled his duties to his God, his country, and his kind? Which—now that they are all gone to their reward—enjoys the widest, the purest, the highest fame? Which remains the best model to the youth of England? Not one of the three faultless, without doubt; but which of these three great men comes nearest the mark at which you, my boys, would aim?"

"I suppose Lord Thurlow was Chancellor before Henry VII.'s time," said Fanny Herbert; and Charles added in explanation, "*Our* history of England only begins then, so we don't know Lord Thurlow. Sir Thomas More, you remem-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ber, Fanny?—he was a merry, kind man, that Chancellor."

"Your history goes back to a decently remote period," said Mr. Dodsley, smiling at the observation of the young historians. "Lord Thurlow held this high office at a very recent date, in the reign of George III., at the same time that Mr. Hastings exercised the mighty government of the East, and Mr. Cowper lived in neglect and obscurity, composing his poetry."

"If we were to judge by our little audience," said Mrs. Herbert, "one of your questions, nay, perhaps two, are already answered. The modest poet, living apart in that nameless obscurity, already enjoys not only a higher, but a more universal fame than either of his youthful compeers. All our good little folks here know him, less or more, in his daily life, as well as in his beautiful verse; they read him, and quote him, and love him; and, by daily draughts from his stores of wisdom and of love, nourish their moral and intellectual nature to a strength and stature it might never otherwise have attained."

"I fear you are a confirmed Cowperite," said Miss Harding to her sister. "But what say you, young gentlemen?"

"Hastings for me!" cried Mr. Frank Cansadine, the Irish youth. "Hastings, Prince and Conqueror!"—"And for me the woolsack," cried George Herbert. "I would rather, I think just now,—but I may change my mind,—be High Chancellor of England, than England's Sovereign; to the one a prince is born, the other a *man* must achieve."

"If," said Norman Gordon, the Scottish youth, "one could be an Eastern Vice-king, or English Chancellor, and author of the 'Task' at the same time, one would be at no loss to decide;" and he half laughed at the profound silliness of his own cautious conclusion.

"You would unite impossibilities, Mr. Norman," said the Curate. "Cowper's poetry required not only an original cast or bias of mind, but a preparatory course of life, and a mental discipline quite peculiar—very different, indeed, from that of a lawyer and politician or Eastern legislator and conqueror. We must take our three school-boys and men exactly as we find them; and determine the claims, and estimate the happiness of each on his own merits, nor think of what might have been."

The younger children liked pictures better than discussion; so the whole group solicited Mr. Dodsley to proceed with his exhibition, which he did, still adhering to the original idea.

NATURAL HISTORY.

SELTZER WATER.

(By the Author of "Bubbles" from the Brunnen of Nassau.)

Seltzer water—to all sojourners in hot climates is one of the most healthful of luxuries. Some like the water pure and unmixed, others dash a little sugar only in the glass, Germans generally prefer it with Rhine-wine, and French voluptuaries with Champagne, while many of the softer sex appear to be of opinion that the most delicious of all compounds is Seltzer water and milk. We do not enter into this controversy.

'The moment we entered the great gate of the enclosure, which, surrounded by a high stone wall, occupies about eight acres of ground, our first impression was: that we had discovered a new world inhabited by brown stone bottles, for in all directions were they to be seen—rapidly moving from one part of the establishment to another—standing actually in armies on the ground—or piled in immense layers or strata. Such a profusion and such a confusion of bottles, it had never entered human imagination to conceive.

'On approaching a large circular shed, covered with a slated roof, but open on all sides, we found the single brunnen, or well, from which this celebrated water is forwarded to almost every city in the world. A small crane with three arms, to each of which there was suspended a square iron crate or basket, a little smaller than the brunnen, stands about ten feet off; and while peasant girls with a stone bottle (holding three pints) dangling on every finger of each hand, are rapidly filling one crate containing seventy bottles, a man turns the third by a winch, until it hangs immediately over the brunnen, into which it then rapidly descends. The air in these seventy bottles being immediately displaced by the water, a great bubbling of course takes place; but in about twenty seconds this having subsided, the crate is raised; and while seventy more bottles descend from another arm of the crane, a fresh set of girls bear off these full bottles, one on each finger of each hand, and range them in several long rows, upon a large table or dresser. No sooner are they there, than two men with surprising activity put a cork into each, while two drummers, with a long stick in each of their hands, hammering them down, appear as if they were playing upon musical glasses. Another set of young women now instantly carry them off, four or five in each hand, to men who with sharp knives slice off the projecting part of the cork; and this being over, the poor jaded bottles are delivered over to women, each of whom actually covers three thousand a day with white leather, which they firmly bind with packthread round the corks,—then a man seated beside, without any apology, dips each of their noses into the boiling hot rosin: before they have recovered from this operation the Duke of Nassau's seal is stamped upon them—and off they are hurried, sixteen and twenty at a time, to magazines where they at length repose in readiness for exportation. When it is considered that a three-armed crane is drawing up bottles seventy at a time, from three o'clock in the morning till seven o'clock at night (meal hours excepted), it is evident that without very excellent arrangement some of the squads either would be glutted with more work than they could perform, or would stand idle with nothing to do. No one, therefore, dare either to hurry or stop: the motto of the place might be that of old Goethe's ring with the star upon it—*ohne hast, ohne rast—haste not, rest not!*

'Having followed a set of bottles from the brunnen to the store, where we left them resting from their labour, we strolled to another part of the establishment, where were empty bottles calmly waiting for their turn to be filled. We here counted twenty-five bins of bottles, each four yards broad, six yards deep, and eight feet high. A number of young girls were carrying (each thirty-four of them at a time) on their heads to an immense trough, which was kept constantly full by a large fountain-pipe of beautiful clear fresh water. The bottles were filled brim-full (as we conceived for the purpose of being washed), and were then ranged in ranks, or rather solid columns, of seven hundred each. . . . . .

'We had no sooner, as we thought, bidden adieu to bottles—than we saw, like Birnham Wood coming to Dunsinane, bottles approaching us in every possible variety of attitude. It appears that all the inhabitants of Nieder Selters are in the habit of drinking in their houses this refreshing water; but as the brunnen is in requisition by the Duke all day long, it is only before or after work that a private supply can be obtained; no sooner, therefore, does the evening bell ring, than every child in the village is driven out of its house to take empty bottles to the brunnen. The children really looked as if they were made of bottle. Some wore a pyramid in baskets on their heads; some were laden with them, hanging over their shoulders before and behind—some carried them strapped round their middle—all had their hands full, and the little urchin that could scarcely walk came hugging in its arms a single bottle. The road to the brunnen is actually strewed with fragments, and so are the ditches; and when the reader considers, besides all he has so patiently heard, that bottles are not only expended and exported, but actually *made* at Nieder Selters, he must admit that no writer can possibly do justice to that place, unless every line of his description contains at least once the word bottle.

'As soon as I reached the village inn, I found there all the slight accommodation I required: a tolerable dinner soon smoked on the table before me; and feeling that I had seen quite enough for one day of brown stone bottles, I ventured to order (merely for a change) a long-necked glass bottle of a vegetable fluid superior to all the mineral water in the world.

'In the morning, previous to returning to the brunnen, I strolled for some time about the village; and the best analysis I can offer of the Selters water, is the plain fact, that the inhabitants who have drunk it all their lives, are certainly by many degrees the healthiest and ruddiest looking peasants I have any where met with in the Duchy of Nassau.'

Next day being Sunday, the travellers had the locality of the brunnen to themselves:—

'In the middle of the great square were the stools on which the cork-covering women had sat, while, at some distance to the left, were the solid regiments of uncorked bottles, which I had seen filled brim-full with pure crystal water the evening before. On approaching this brown-looking army, I was exceedingly surprised at observing, from a distance, that several of the bottles were noseless, and I was wondering why such ones should ever have been filled, when, on getting close these troops, I perceived, to my uttermost astonishment, that about one-third of them were in the same mutilated state. The devastations which had taken place resembled the riddling of an infantry regiment under a heavy fire, yet few of our troops, even at Waterloo, lost so great a proportion of their men as had fallen in twelve hours among these immoveable phalanxes.

'The governor was good enough to inform me, that bottles in vast numbers being supplied to the duke from various manufactories, in order to prove them they are filled brim-full (as I had seen them) with water, and being left in that state for the night they are the next morning visited by an officer of the autocrat, whose wand of office is a thin, long-handled little hammer. It appears that the two prevailing sins to which stone bottles are prone, are having cracks and being porous, in either of which cases they of course in twelve hours leak a little. The officer, who is judge and jury in his own court-yard, carries his own sentences into execution with a rapidity which even our Lord Chancellor himself can only hope eventually to imitate. Glancing his hawk-like eye along each line, the instant he sees a bottle not brim-full, without listening to long-winded arguments, he at once decides "that there can be no mistake, that there shall be no mistake," and thus, at one tap of the hammer, off goes the culprit's nose—"So much for Buckingham!"—*Bubbles*, p. 330.

The bottles filled for exportation in 1832 were, according to the governor's book—*large*, one million thirty-three thousand six hundred and sixty-two;

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

small, two hundred and sixty-one thousand five hundred and twenty-one: and besides this there is a *gratis* consumption on the spot, and its immediate vicinity, of at least half a million of bottles. The large bottles, when full, are sold at the brunnen for thirteen florins a hundred. The duke's profit in 1832, deducting all expenses, appeared to be as nearly as possible fifty thousand florins; and yet this brunnen was sold to his highness's ancestor for a single butt of wine!

HOW TO SAVE ONE'S BACON.

EARLY one fine morning, as Terence O'Fleary was hard at work in his potatoe-garden, he was accosted by his gossip, Mick Casey, who he perceived had his Sunday clothes on.

"God's 'bud! Terry, man, what would you be afther doing there wid them praties, an' Phelim O'Loughlan's berrin' goin to take place? Come along, ma bochel! sure the praties will wait."

"Och! no, sis Terry! I must dig this ridge for the childer's breakfast, an' thin I'm goin' to confesshin to Father O'Higgins, who houlds a stashin beyont there at his own house."

"Bother take the stashin!" sis Mick, "sure that 'ud wait too." But Terence was not to be persuaded.

Away went Mick to the berrin'; and Terence, having finished "wid the praties." as he said, went over to Father O'Higgins, where he was shewn into the kitchen, to wait his turn for confession. He had not been long standing there before the kitchen-fire, when his attention was attracted by a nice piece of bacon, which hung in the chimney-corner. Terry looked at it again and wished the childer "had it at home wid the praties."

"Murther alive!" says he," will I take it? Sure the priest can spare it, an' it wou'd be a rare thrate to Judy an' the gorsoons at home, to say nothin iv meself, who hasn't tasted the likes this many's the day." Terry looked at it again, and then turned away, saying—"I won't take it—why wou'd I, an' it not mine, but the priest's? an' I'd have the sin iv it, sure! I won't take it," repeated he, "an' its nothin' but the Ould Boy himself that's timptin' me! But sure it's no harm to feel it, any way," said he, taking it into his hand, and looking earnestly at it. "Och! it's a beauty; and why wouldn't I carry it home to Judy and the childer? an' sure it won't be a sin afther I confesses it!"

Well, into his great coat pocket he thrust it; and he had scarcely done so, when the maid came in and told him that it was his turn for confession.

"Murther alive! I'm kil't an' ruin'd, horse an' foot, now, joy, Terry; what'll I do in this quandary at all, at all? By gaunies! I must thry an' make the best of it, any how," says he to himself, and in he went.

He knelt to the priest, told his sins, and was about to receive absolution, when all at once he seemed to recollect himself, and cried out—

"Och! stop—stop, Father O'Higgins, dear! for goodness sake, stop! I have one great big sin to tell yit; only, sir, I'm frightened to tell id, in the regard of never having done the like's afore, sur, niver!"

"Come," said Father O'Higgins, "you must tell it to me."

"Why, then, your Riverince, I will tell it; but, sir, I'm ashamed like!"

"Oh, never mind! tell it," said the priest.

"Why, then, your Riverince, I wint one day to a gintleman's house, upon a little bit of business, an' he bein' ingaged, I was shewed into the kitchin to wait. Well, sur, there I saw a beautiful bit iv bacon hangin' in the chimbly-corner. I looked at id, your Riverince, an' my teeth begin to wather. I don't know how id was, sur, but I suppose the Divil timpted me, for I put it into my pocket; but, if you plaze, sur, I'll give it to you," and he put his hand into his pocket.

"Give it to me!" said Father O'Higgins; "no, certainly not; give it back to the owner of it."

Why then, your Riverince, sur, I offered id to him, and he wouldn't take id."

"Oh! he wouldn't, wouldn't he?" said the priest; "then take it home, and eat it yourself, with your family."

"Thank your Riverince kindly!" says Terence, "an' I'll do that same immediately, plaize God; but first an' foremost, I'll have the absolution, if you plaize, sur."

Terence received absolution, and went home, rejoicing that he had been able to save his soul and his bacon at the same time.

SMOKING.

(By the Author of "Bubbles," with a Note from the Quarterly Review.)

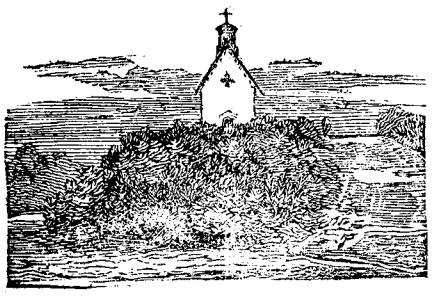
Almost all German lords of the creation hid themselves in holes and corners to enjoy smoking their pipes,—and surely nothing can be more filthy, nothing can be a greater waste of time and intellect, than this horrid habit. If tobacco were even a fragrant perfume, instead of stinking as it does, still the habit which makes it necessary to a human being to carry a large bag in one of his coat-pockets and an unwieldy crooked pipe in the other, would be unmanly: besides creating an artificial want, it encumbers him with a real burden, which, both on horseback and on foot, impedes his activity and his progress: but when it turns out that the said artificial want is a nasty, vicious one—when it is impossible to be clean if you indulge in the habit,—when it makes your hair and clothes smell most loathsomely,—when you absolutely pollute the fresh air as you pass through it,—when, besides all this, it corrodes the teeth, injures the stomach, and fills with red inflammatory particles the naturally cool, clear, white brain of man,—it is quite astonishing that these Germans, who can act so sensibly during so many hours of the day, should not have strength of mind enough to trample their tobacco bag under their feet, throw their reeking sooty pipes behind them, and learn (I will not say from the English, but from every bird and animal in the state of nature) to be clean; though certainly, whatever faults there may be in our manners, our cleanliness is a virtue which, above every nation *I* have ever visited, pre-eminently distinguishes us in the world. During the time which was spent in this stinking vice, I observed that people neither interrupted each other nor did they very much like to be interrupted,—in short, it was a sort of siesta with the eyes open, and with smoke coming out of the mouth. Sometimes, gazing out of the window of his hof, we saw a German baron in a tawdry dressing-gown and scull cap, (with an immense ring on his dirty fore-finger,) smoking, and pretending to be thinking; sometimes we winded a creature, who, in a similar attitude, was seated on the shady benches near the Stahl brunnen: but these were exceptions to the general rule, for most of the males had vanished, we know not where, to convert themselves into automatons which had all the smoky nuisance of the steam-engine without its power.'—*Bubbles*, pp. 216-219.

Our author says pretty truly, that man is the only unclean animal—perhaps no unsubdued living creature is ever happy for a moment when not perfectly *clean*. He is also quite right in saying that the use of tobacco is carried to a most disgusting and unhealthy extent in Germany; but no such *counterblast* as the above 'bubble' will produce any abatement of the nuisance. The universal answer will be, 'The gentleman does not smoke—so much the worse of him. He prefers his bottle of port and his snuff-box to Johannesberg and a Meerschaum. *De gustibus non disputandum.*' As regards ourselves, we have only one remark to offer; and that is, that we heartily wish the regulation, which almost all over Germany forbids *smoking in the streets,* were introduced in England. At certain times of every day Regent Street, so well entitled to form the principal *promenade* of London, is rendered intolerable to all decent persons by the eternal whiffing and spitting of Spanish Patriots and shopboys in fine waistcoats.

ADVICE TO EMIGRANTS.

1. "Beware of what acquaintances are formed. It sometimes happens that emigrants are thrown upon arrival, among classes who have formed a jaundiced opinion of every thing around them—of the colony, of its administration, its resources, its general state and condition; and whose chief delight now is in gaining proselytes to their own notions. Whatever information these communicate, will be tinged by the state of their own minds; and as a general rule, therefore, every thing that so reaches the ear of the emigrant should be received by extreme caution. Equally to be guarded against are another class, or those who always view things in their brighest colours; for a young colony presents of itself a peculiar field for the man of enterprise and speculation, and if these be nourished by too much encouragement from persons whose acquaintance with the place lends a sanction to their opinions, magnificent schemes are sometimes formed without duly considering the impediments that lie in the way, one which, instead of ever being completed, bring ruin on the projector.

"2. Beware of becoming a politician or of belonging to party. An emigrant should leave all things of this sort in the country to which he has bid adieu. He cannot afford to have his mind or his time divided between what his new avocations demand of him and such pursuits as these. Delightful as they may be also, they are perfectly out of place in a young colony, the governing principal of whose inhabitants should be the moral coveyed in the bundle of sticks. Let an emigrant once take a greater interest in cobbling the affairs of government than in cultivating his land, and it requires little of the spirit of prescience to fortel what will be his fate.



3. "Never forget you are in a country where, for a few years at least, prudence requires that the veil of oblivion should be drawn over many of the comforts, and still more of the luxuries of life, to which, perhaps, you have been accustomed for many years. Whatever may be your circumstances, things of this sort cannot be indulged in for a time without departing from those maxims of prudence which have been already inculcated.

"4. Be extremely cautious how you are led into making purchases, or forming bargains of any sort. Almost every one you meet will have the best horse, the best cattle, sheep &c., the island produces, for sale; but let the second best be good enough for you; or rather remember, that there is nothing so good that something

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

else may not be found which will equally answer the purpose; or, again, that it is better sometimes to be without a thing a week than to have it one day too soon."

THE VILLAGE CHURCH.

(RONDEBOSCH.)

DEAR is the hallowed morn to me
When Village bells awake the day;
And, by their sacred minstrelsy,
Call me from earthly cares away.

And dear to me the winged hour
Spent in Thy hallowed courts, O Lord—
To feel Devotion's soothing power,
And catch the manna of Thy word.

And, dear to me, the loud 'Amen,'
Which echoes through the blest abode,
Which swells and sinks, and swells again,
Dies on the walls, but lives to God.

And, dear the simple melody,
Sung with the notes of rustic art;
——— That holy, heavenly harmony,
The music of a thankful heart.

In secret I have often prayed,
And still the anxious tear would fall;
But, on thy sacred altar laid,
The fire descends and dries them all.

Oft when the world with iron hands,
Has bound me in its six days' chain,
This bursts them, like the strong man's bands,
And lets my spirit loose again.

Then, dear to me, the Sabbath morn,
The village bell, the pastor's voice—
These oft have found my heart forlorn,
And always bid that heart rejoice.

——— Go, *man of pleasure*, strike thy lyre,
Of broken Sabbaths sing the charms;
Ours are the prophet's car of fire,
Which bears us to a Father's arms!

(CUNNINGHAM.)

THE BELGIANS.

THE Flemings are the great-grandfathers of us Englishman; a native of the northern countries has only to go there, and find the language, people, manners, scarcely differing from their own. There is no reason, in these days of steam-boats, why England and Belgium should not be connected in as close a bond of intimacy as Westminster and Southwark. One thing only is wanting,—to get rid of the oppressors at home. The Belgians have their oppressors, in the shape of a *manufactory* interest. These are the Dutch faction; and their object is to prevent the introduction of British goods, and keep up the remnant of the old "Continental Sykin."—(*Westminster Review, No.* 39; *Article, Importance of Belgian Independence.*)

RUSSIA—*v*—INDIA.

THE theory of preserving India from Russia is brief; give the Indians all that England *can* give them and Russia will not, and multiply Englishman to be the distributors. The Russians take India!—they had better think of defending Petersburg. The Russian Empire will be split into six republics, one and indivisable, before Russia gives or receives the knout at Calcutta.—(*Ib.*)

RURAL ECONOMY.

To Destroy Moles in a Garden.—Collect earthworms, kill them, and mix them with the powder of *nux vomica*. After the mixture has remained for 24 hours, take the worms and place one or two here and there in the routes and holes of the moles.—(*Bulletin Universel.*)

MALTHUSIAN DELUSION.

THE evidence of the Committee of the House of Commons on the state of agriculture, (1833) which occupies 700 folio pages, states the following interesting fact:—"That there are not more labourers in England than could be beneficially employed in the cultivation of the soil, provided the farmers could afford to employ them." This single established fact is quite sufficient to demolish the whole Malthusian theory of the possibility of the population increasing beyond the means of subsistence.

LITERATURE.

[WE have just caught a glance at a Publication of some interest (as its title indicates,) to the inhabitants of the Colony. The following flattering and partly ridiculous notice of the Work is extracted from the *New Monthly Magazine*. The Reviewer was not probably aware, however, of the singular *Omissions* which is understood by better judges to be characteristic of Mr. Kay's Travels]

Travels and Researches in Caffraria; describing the Character, Customs, and Moral Condition of the Tribes inhabiting that portion of Southern Africa; with Historical and Topographical Remarks, illustrative of the State and Prospects of the British Settlement on its Borders, the introduction of Christianity, and the progress of Civilization. By Stephen Kay, Corresponding Member of the South African Institution, &c.

The civilization of the immense savage population with which the British possessions in Southern Africa are environed is becoming every day, both in a moral and political sense, a matter of deep and increasing moment. Under this impression we have perused the small but judicious work before us with feelings of far greater interest than its varied contents, amusing as they are, would otherwise have excited.

With extensive opportunities for observation, it fortunately happened that the present author combined a spirit of investigation and the advantage of much general information; so that, independently of its serious object, the work is valuable as a book of travels, contains more miscellaneous information than a single volume of such a size would seem to promise.

We perfectly agree with Mr. Kay, as to the propriety of rendering missionary stations, when *discreetly* managed, the foundation of our commercial intercourse with the coloured *Africanders;* but, from a strong impression that it will be from the promontory of Africa that the tide of civilization, with the blessings of Christainity and freedom, will ultimately overflow the whole of that immense continent, we would place far more stress than he has done on the propriety, nay, the necessity (in a political sense), of the appointment by Government of civil agents to reside with the different tribes, as advised by his Majesty's Commissioners in their Report on the Cape.

With the same views we would strongly recommend that the original costume of the Kaffer nation—the kilt, &c.—should be carefully retained, as the partial assumption of a second-rate European dress would soon render them ridiculous and contemptible in the eyes of their inland neighbours, and effectually counteract the force of their example in more important matters.

For information in some particulars which he considered beyond his purpose, the author has very properly referred the reader to other works, among which we would requote those by Lichtenstein and Thompson, with the addition of the delightful "Letters from Southern Africa," by Rose, not mentioned, but really entitled to high praise for their descriptions of the sublime and beautiful in landscape.

In concluding we would remark, that, though rather too much inclined to the gloomy side of the picture, the view of the native tribes, as given by this writer, fully accords with our previous impression that they are the most intelligent, brave, generous, and picturesque race of savages known: indeed, their very vices and superstitions, dreadful as they are, frequently arise from untamed force of character and vigour of imagination, as the rankest weeds spring from the richest soil.

Some traditional records of the principal tribes are well condensed; and the historical details, quoted from Pringle, relative to the patriotic usurper and pretended prophet, Makana, are romantic and interesting. Upon the whole, we can only wish for many more such missionaries as Mr. Kay, and the fostering interference of a benevolent Government, to render the now wild *Africanders* of the wilderness, in less than half a century, most important allies to the British Crown in Africa.

SELECT NOTICES.

WE find by the English papers, that the opposition to the Church Establishment continues to rage with redoubled vigour. We look at this question as one of the most remarkable "signs of the times," and watch its progress with sincere interest. The form under which the opposition manifests itself, is naturally affected by the civilization and intelligence of the age. In days of an imperfect refinement and scanty literature, this hatred would unsheathe the sword, and light the pile. The savage violence is gone, but new weapons are taken up. There is the unhallowed portion of the press—the specious sophistry—the licentious effrontery of sceptical writings—the dogmas of unassisted reason—the siren strains of a voluptuous poetry—the noisy brawling of the political infidel demagogue—all waging war against the apostolic churches of England and Scotland.

In the month of January, the Church of Christchurch, (Surry) was abandoned by its different officers. The clock was stopped, and there were no churchwardens, no bell-ringers, no pew-openers, no fires; but a congregation attended, and a clergyman of the name of South addressed the people, his services being

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

afforded gratuitously. He dwelt much on the modern persecution of the church.——*Denmark.*—The King of Denmark having been plentifully supplied with all sorts of books and pamphlets by many of the people of England, has put forth an official notice stating, that if the practice be pursued the packets will not be taken in.——*Sweden.*—The Stockholm papers congratulate the King on his having relieved the country from foreign debt.——*Duke of Wellington.*—His Grace has been installed Chancellor of the University of Oxford. The Duke pronounced his Latin address in a most excellent and impressive manner. It was classical in style, and in substance eloquent.——*Tradesmen in Paris and London.*—The vulgar English notion of a French tradesman, is that of a cringing, bowing, servile fellow. The truth is, there is more servility behind a single counter in Bond street or Pall Mall, than in all the commercial Houses of Paris united! The counter of a Parisian tradesman is his throne, and his customers may come and bow to it. He descants upon the merits of his wares, not as if he wanted to sell them, but as if proud of them. He sends no goods out for inspection; and only despatches them home when bought, at his own time and convenience. They are paid for on delivery: *no credit is given* No offer, as in a London shop, to *procure* the article wanted; no assidiousness, no obsequiousness! The spectacle daily to be observed in the streets of London of well-dressed men, decently-educated men, standing bare-headed in the wind, rain, or snow, while the women in their snug carriages are playing with rolls of ribbons, rumpling pieces of silk, &c. is utterly unknown in Paris. Much of this independence, however, may be ascribed to the ready money system. Tradesmen are not, as in London, at the mercy of their customers. Great names are not inscribed year after year, and permanently, in their books of credit.—(Tait.)——*Government.*—The Radicals, a party so called in Great Britain, are quite delighted at the idea of naming the following persons as perfectly qualified for office. They publish the list in alphabetical order to avoid any invidious precedence!!! Oh!—Mr. C. Buller, Mr. E. Bulwer, Mr. Clay, Lord Durham, Mr. Hume, Mr. Grote, Mr. Loydd, Sir W. Wolesworth, Mr. O'Connell, Sir H. Parnell, Mr. Roebuck, Mr. J. Romilly, Mr. Faithful, Mr. Shutt, Mr. Wallace, Mr. Warburton and Mr. Cobbett.!——*A good Man of Business.*—Pitt used to say of Sir John Anstruther, that he was the best attendant on his duties of any member of Parliament.—"He was never present at a debate, nor absent from a division, from the time Parliament sat until it rose."——*Watering Places.*—When there was a difficulty in getting to these places of summer resort, (Margate, for instance,) then *all London* was anxious to visit Margate. But the mind wants excitement, and now because people can reach Margate by steam, (at rates ridiculously cheap) nobody visits Margate. According to the papers, the public buildings are falling to decay, and the grass growing in the streets.——*The Polar Expedition.*—Capt. Ross and his nephew have dined with His Majesty at Windsor, and Capt. R. is not a little astonished at the geographical knowledge displayed by the King on this occasion.——*Belgium.*—Prince Leopold has introduced steam carriages in Belgium with great success. He has also introduced a system of national education for the people, on a plan similar to that of the system founded by the disinterested Joseph Lancaster.——*Silk.*—"Silk," observed a Turkish peasant to Mr. Urquhart, "has been yellow gold to us for years past, it requires no sowing or reaping in the field—no cattle, implements, or seed.——*New Testament.*—In all the New Testament there is not one example of the *Dual Number.*——*Patrons.*—Patrons are but too apt to reward their authors with compliments instead of something more substantial. Sorbiere, being treated in this manner by Pope Clement IX. complained in the following terms:—"Most holy Father, you give ruffles to a man who is without a shirt."——*The Chancellor.*——Lord Brougham has pledged himself to bring in a Bill next Session, by which his own salary is to be reduced from £14,000 a-year to £8,000 a-year.

ADDITIONAL CORRESPONDENCE.

SUGGESTIONS OF PUBLIC INTEREST.

[We earnestly recommend the attention of the Public Authorities to the following observations, communicated by no common observer of men and things. They are written, we are fully aware, without any reference to the gentlemen at the head of the Town Administration,—who appear to perform their duties in proportion to the means placed at their disposal. The general state of the town, buildings, bridges, the fish-market, shambles, and the shores of Table Bay, seem to require legislative inquiry without delay.]

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—Allow me through the medium of your columns to bring to the notice of the proper Authorities, the disgustingly filthy—the loathsome and highly insalubrious condition of the streets of Cape Town. It can surely only require pointing out in the proper quarter, the evils which must necessarily result from the state of the streets adverted to, to obtain the subject that attention it so justly and earnestly demands. The subject being one, as I think I shall be able to make it appear, of really vital importance, and interesting every member of the community: health being of all blessings the most highly to be valued. For allow me, as a professional man, to say, that it is utterly impossible the air in Cape Town, polluted as it is by the heaps of filth, and foul state of the gutters of its streets, can be respired by its inhabitants with impunity.

The diseases at the summit of the scale of malarious influence, or which attend the respiration of malaria, or an impure and poisonous atmosphere—Cholera and Fever, it is true, have never, I believe, prevailed at Cape Town; the latter, I mean, in its more virulent and epidemic form, or the public attention would have long since been attracted to the subject; but nevertheless, an infinitude of minor ailments, flowing from the same cause—malarious influence, are of every day occurrence; affecting the system in the numerous disorders of the stomach—bowels and liver, and of the brain in nervous affections; head-ache, sore eyes, and rheumatism. Disorders, sufficiently characteristic of their origin, and too common in Cape Town to be undeserving of attention: and to this catalogue I might, and with justice, I am of opinion, have added, fever,—which, I believe, is of no uncommon occurrence.

Nature, perfect in all her works, has, for our preservation, endowed us with certain senses, to be exercised in discriminating and avoiding what is pernicious to our nature, rather than in the gratification of our appetites. The sense of taste for example; this bears the same relation to the stomach, as the sense of smell does to the lungs: and this, every one—man, woman, and child,—has the discrimination to exercise upon every proper occasion, and eject from the mouth as pernicious, and refrain from whatever is offensive or unsavory to the palate. But few regard the manifestations of a sense of infinitely more importance to the health and well-being of the animal—that of smell. Paramount in importance, inasmuch that the air, the pabulum vitæ, inspired through the nostrils, and subjected to this beautifully-ordained discriminating function, has from the lungs, into which it is received, immediate admission into the blood; and, consequently, should the manifestations of this sense be neglected, and the air inspired be vitiated, the blood thus polluted must, in circulation, at once contaminate the whole system; and hence fever, and the numerous nervous and anomalous affections which are of such constant occurrence in large towns, from the respiration of impure air. And impure air, that certainly will be considered, and poisonous too, circulating in Cape Town, with a knowledge of the fact, that one of the gasses most offensive to the smell, and exhaled from animal substances which (as fish and flesh) abound in Cape Town in a state of decomposition or putrefactive decay, is sulphuretted hydrogen—a gas, so highly deleterious to animal life, that a single inspiration of it has been known to produce apoplexy and death;—and experiments have also proved, that air contaminated with but one fifteen-hundredth part thereof, is shortly destructive to animals which have been exposed to its influence.

The influence of malaria on the human species, it may, however, be observed, will necessarily have reference to its intensity,—to its virulence with respect to composition,—to individual susceptibility to impression,—as well as to many other contingent and modifying agencies to which the system may be at the same time exposed,—and hence its various effects. For the same reasons, also, persons in the enjoyment of pretty robust health, may, and often have sufficient resisting power to its influence, and escape disease, as we see exemplified in persons subjected to many other causes of disease—epidemic influences and contagion: but not so the delicate and weakly, whose liabilities to disorder must be as proportionately increased.

Much, Mr. Editor, might be added, but enough has, I think, been said, to prove that the subject is one of the highest importance to every member of the community, and not undeserving the attention of the authorities I would direct to it. The disgustingly filthy state, and offensive smell of the streets in Cape Town, not only being a great nuisance to every individual passing through them, but what is of much more importance is, that their condition and polluted atmosphere is highly pernicious to the health of its inhabitants. Before concluding, I may be permitted to direct attention to a few particulars in the way of remedy. It can hardly be necessary to point out how much every housekeeper is interested in keeping his premises and drains clean and as free from every bad smell as possible. The ventilation of the house, and free admission of air to every part of the premises, is also of much importance, seeing how much alone must the air be contaminated by the respiration of so many persons, as well as other animals existing about them. The servants in Cape Town should not be permitted to sweep the drains, and throw the dirt from houses into the streets; or if allowed, it should be at dawn of day, that it may be carted and removed before or soon after sun-rise. And on no account should the filth from the street-gutters be swept up, and be allowed to remain in heaps exposed to the influence of the sun and fermentation through the day: when the gutters and streets are swept, which should be as often as possible, the filth should be as instantly removed. Attention to these, and a few other particulars of the kind, that is to say, the removal of the fish-market, or at all events having it kept clean; and the same I would add of the shambles; and, flooding the huge drains, or, what is preferable, covering them, I am of opinion, would render Cape Town one of the most healthy in the world: its climate, soil, and situation being, in this respect,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

wholly unobjectionable. Whereas, should the subject be neglected, there is but too much reason to fear that Cape Town, at no very distant period, may be visited by Cholera, Epidemic Fever, or Dysentery: indeed, to the prevalence of South-Easters during the hot season preventing stagnation, ventilating the town, and purifying the air, it is alone, I am of opinion, that it has hitherto been exempted from some visitation of the sort.

MEDICUS.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By VIVIAN.

THE river of human life is divided into two streams—occupation and leisure; or, to express the thing more accurately, that occupation which is prescribed, and may be called the business of life, and that occupation which arises contingently, and not so much of absolute and set purpose, not being prescribed. It is good for every man to have some regular and stated occupation, and none are so much to be feared and shunned as those useless characters in a country—*your gentlemen at large.* Man may be practically too free: we were sent into the world under the condition, "In the sweat of thy brow thou shalt eat bread." Let us rest assured that habits of industry inculcated in early life—

("Whatsoever thy hand finds to do, do it,")

is, of all other things, the great ingredient of human happiness. It is the idle, the lazy, the slothful, the negligent, the ignorant, that become the Devil's best servants. But with all this industry, this labour for daily bread, either by the pen,

"the plough, the mattock, and the spade,"—

some honest labour, no matter which, it is certainly most desirable that every man should have seasons of relaxation and leisure. Unhappy is the wretch whose condition is to be perpetually bound to the oar, and who is condemned to labour in one certain mode during all the hours that are not claimed by sleep, or as long as the muscles of his frame, or the fibres of his fingers will enable him to persevere. "Apollo himself," says the Poet, "does not always bend the bow."

It is thus that WE feel inclined to recreate each week of the month, by taking a few notes of the passing things around us. And we proceed in the present instance to glance at certain novelties which have attracted our attention during the last revolving period.

THE DISTILLERY.

Never did a man give a better proof of his fitness for the execution of a given work than Postlethwayte, when, in his Annals of Trade and Commerce, he observed—"These are the arts which keep the mass of the people in useful action, and their minds engaged upon inventions beneficial to the whole community; and this is that grand preservative against that barbarism and stupidity which ever attend an indolent and inactive or *prejudiced* community: the due cultivation thereof of practical manual arts in a country, has a greater tendency to polish and humanize mankind than mere speculative science, however refined and sublime it may be."

Attracted by the columns of smoke which issued from the elegant premises of Mr. Francis Collison, in the Somerset Road, we took a look at his new Distillery: it is really a beautiful specimen of the art of machinery, and is working with all the order and perfection of the heavenly bodies. The steam-apparatus is on the new and most approved principle for the distillation of spirits, essences, oils, &c. And possesses this advantage, that it is never found necessary to heat the juice above a temperature of 100°. Extracts prepared in this way are found to be greatly preferable to those obtained by evaporation at a high temperature; they are considerably stronger, as the active principles in the juices are not decomposed by re-action between their elements, favoured by heat; and they are free from all burnt or unpleasant flavour. There are not a great many *sights* at the Cape, (independently of the wonders of the polyglot family of human kind,) but the one above mentioned is decidedly worth contemplating.

THE STEAM MILL FOR GRINDING CORN.

Here is also a new introduction at the Cape, indicative of the march of mind. At the Steam Mill of Mr. Prince we behold engineering brought into active play, superseding the old powers of wind and water, and possessing, *it is said,* many singular advantages. But we solicit information on this head, and greatly as we admire the wonderful mechanical operations of the Steam Mill, we would simply desire to learn its economical advantages over the common wind-mill. A wind mill with four sails, let it be remembered, measuring 70 feet from the extremity of one sail to that of the opposite one, each being 6½ feet in width, is capable of raising 926lbs. 232 feet in a minute, and of working on an average 8 hours per day. This is equivalent to the work of 34 men; 25 square feet of canvass performing the average work of a day-labourer. A mill of this magnitude seldom requires the attention of more than two men.

THE CAPE FOUNDRY.

This introduction in the colony by Mr. Hunter, is most *striking* to those who never have witnessed the marvels of machinery. Here casting in iron, or the progress of converting fusible metal into any given form, by pouring it when in a liquid state into a mould, is at the Cape a source of novel attraction. Yet, because of its novelty, because it is a new introduction, it is a positive fact that there are men who shrug up their shoulders as to its importance! Hence the Foundry does not receive that encouragement which it deserves. It has many low, grovelling, sordid interests to contend with. *We are not ripe* for the thing is an exclamation which we have heard, whilst others look upon it as a sort of hell upon earth! It does not come within our scope to enumerate every article for which science and commerce are now indebted to the iron-founder; among the more striking may be mentioned those which have superseded the use of wood and stone; as frames for machinery, wagon-races, spandrils for roofs, columns, bridges, seats, bells, barges, and even churches; to say nothing of bearers, doors, window-frames, and the like, which have become common in our day.

THE BREWERY.

We mention this (*par excellence*) because it is in contiguity with the *sights* already enumerated, and because, moreover, it is really a well-arranged Whitbread's Brewery in miniature. It was designed, built, and set a-going by Mr. Le Breton; it has now become the property of the gentleman owning the Distillery. Success to malt and hops, say WE: and of these two things we can state with satisfaction, that we beheld at this Brewery the *Farnham pockets* in their true and original dress, and Cape barley in large quantities, purchased at our own market, weighing 51½ lbs. to the English bushel. These are no bad signs of a good brew.

DR. MCCARTNEY'S LECTURE.

On the evening of the 31st, Dr. McCartney entertained a numerous and distinguished audience in the Commercial Hall, by lecturing on the following passage from Shakspeare. It was accompanied with music, (by the band of amateurs under Mr. Biel.) The Lecture was well received.

—— "Look how the floor of Heaven
"Is thick inlaid with patines of bright gold,
"There is not the smallest orb which thou beholdest
"But in his motion like an angel sings,
"Still quiring to the young eyed Cherubins,
"Such harmony is in immortal souls;
"But which this muddy vesture of decay
"Doth grossly close it in, we cannot hear it."

MR. FAIRBAIRN'S LECTURES ON EDUCATION AND GOVERNMENT.

The resumed course of Lectures has taken place at the Exchange, and the last two of the present season have been decidedly the best.

BELL-RINGING.

We are glad (right glad,) to learn, that a ring of bells is at length ordered for St. George's Church, which church is now happily rearing its head far above the secularities of the things around it. The mysteries of bell-ringing are very great. It would take 91 years to ring the changes upon 12 bells, at the rate of two strokes to a second. The great merit of bell-ringing is, that of all devices which men have sought out for obtaining distinction by making a *noise in the world,* it is the most harmless.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

THE MIRACULOUS PILE OF STONES.

(FROM A TRAVELLER.)

IN the vicinity of Praamberg I passed a pile of stones about 25 feet square. and 8 in height, denominated by the boers "The Devil's Neck," owing to a tradition existing among the Bushmen, that at one time the arch-enemy was vanquished by some of their race, and buried at this spot. On approaching it, the Bushmen who were with me dismounted, and taking each a considerably larger stone placed it solemnly on the pile. One who spoke Dutch informed me that if they neglected to do this, the horses' necks would turn round, and that in future they themselves would be unsuccessful in hunting. He also stated, that if any Bushmen were sick, they repaired to this spot, and by rubbing the place where the pain was felt against the stones, they were relieved. A farmer who has long resided in this remote part of the colony, assured me that numbers of Bushmen have been seen rubbing themselves against the pile, exclaiming, "'t issi, 't issi,"—pain, pain.

DEPRESSED STATE OF THE *MARKET*.

AT a public sale the other day, at the Office of the High Sheriff, how much, think you, was the highest bidding for a Black Man? Why—Four Skillings!!!

PLANTING.

MANY of the ever-greens on the Parade were, by the violence of the winds of the last season, blown down. Many are the gaps which are now presented to the eye. By way of hint to all those whom it may concern, the season of planting is fast approaching, and we earnestly hope in a *restoration*.

ROAD TO STELLENBOSCH.

Our house-keeping book has of late caused a *chop-fallen* aspect on the pent-house of our brow. The prices of potatoes, butter, milk, and vegetables in general, are serious affairs to poor people like ourselves, as well as our neighbours in similar circumstances. Now we ask for no place or pension, but we request to be nearer a cheaper market than that presented by the monopoly one in the vicinity of Cape Town. And this can only be done by our lawful guardian, the Government of the country, and to *it* we look with confidence for some redress on the subject. We are much afraid (in reference to these high prices,) that Council would scarcely take up the business, at least that part of it holding *vested rights* in the high prices of parsley, onions, and potatoes, butter, and milk. Let us only get a new line of road to Stellenbosch, and a cheap and superior market will be brought to our very doors. Socially, economically, commercially considered, the matter is well worth the attention of Government.

Note.—Sir Henry Parnell has just published an excellent "Treatise on Roads," 8vo.

WHIMS AND ODDITIES.

WHY is Wales larger than England?—Because it contains more *Morgens*.

When is a bed no bed at all?—(*Cape* answer)—when it is a little *Buggy*.

When is *Stationery* no Stationery?—(Answer from the purchasers at the Stamp Office,)—When it is a little *runny*.

Why is a *Dutch*-woman's long legs like a couple of Telescopes?—Because they are a pair of *Verre-kykers—(far-kickers.)*

A COUNTRY CALL.

To the Inhabitants of Cape Town.

Come away, come away,
Hark to the summons!

March, march! Church-street and George's street,
Pepper-steeg, Koffy-steeg, march forward in state!
March Grand Parade, and famed *Kromme-elboog-steeg*,
Which limps on its crutches like *Government Gate!*

Come from the *boards* of *broek* manufactories,
And ye who are crowded apart from fresh air,
Fly from the scene where Old Nick the chief actor is,—
From *Duns*, and *Per-centers*, and *Vanity Fair*.

March from your *pent-house*, Mynheer of the City,
Start for the country, oh! *run, neighbours, run!*
Up Clerk and Principal—for once—t'were a pity
To live all your lives, without *seeing* the sun.

Oh! think dearest *Capenaar*, how lovely the roses
And wild-flowers blooming, that perfume the air.
Oh! rusticate instantly—(*pas op* for your noses,)
Thro' *Zieken*-straat, *Boquet*-straat—*Hottentot*-square.

Think! think of the moon-beam that sleeps on the river,
Of the rock and *pure ocean*, the mountain and dell,
Of the foliage so bright, and the fir-trees that quiver,
And the fountain that plays in its own coolest cell!

Oh! think of these loveliest sentimentalities!
Your convict-like drudging *must* make a man spare;
Then quit the low scene of life's sordid realities,
Haste! haste to the hills and vales—*try* the fresh air!

DISCOVERY OF THE LOST TEN TRIBES.

MUCH theory is afloat on the subject of the lost ten tribes of Israel. The celebrated, and, we think, excellent Joseph Wolff, has done much by way of research to set the matter at rest. But we humbly conceive that he has failed so to do. And the truth is, the discovery belongs to OURSELVES.

That the Tribes of Judah and Benjamin flourish here, must be quite evident to all those who

'*Take their walks abroad.*'

And never, perhaps, on any particular occasion, did the Israelites muster stronger, and become a more conspicuous body, than at the trial of one of their brethren the other day for theft. But if we wish to meet the Tribes in all their

'Pride, pomp, and circumstance,'

we must take their Festival-day—*Saturday* in each week, and unite with them on

'*The Grand Parade.*'

Here they are in all their glorious diversities of size, shape, colour, country, and complexion:

'*Black, White, and Grey;*'—

"cherry-ripe" for all subjects connected with the immortal *rix*.

Here they are building all their felicities, placing all their hopes, and staking their very souls on the interests of those desultory masses of shapeless, unintelligible, and antediluvian things which find a welcome on

'*The Grand Parade.*'

Here they are, the happy monarchial inspectors of that bivouacry of invalided utensils which become the periodical "pride, grace, and ornament" of

'*The Grand Parade!*'

But from these tribes a new sect or branch has sprung. These are the bond-*ites*, the usury-*ites*, the twenty-per-cent.-*ites*, and the schepekennis-*ites*. As for the Hitt-*ites*, they have sadly degenerated, and never meet you face to face. This has arisen from their intermixture with the Africans, among whom there are many who promise much and perform little, who bluster, and storm, and rail, but never "come up to the scratch," whose wit and humour are strictly confined to some old saying of Frederick the Great or Voltaire, (handed down from father to son,) and whose courage is only conspicuous in challenging you—before the *Magistrate's Court*—or sending you an anonymous letter. This is the only species of gymnastics with which they are acquainted. As for the Amour-*ites*, they are to be found in town and country, and they quote Walter Scott in justification. And the Gad-*ites*—wait a little a good Sirs, no more of your wanderings without leave or license—*Lor is a going for to put* a *bit* in your mouths, and a drag-chain for your feet. You have no right *for* to sleep in, and sniff the open air! How dare you prefer the wild mountains for your home, rather than domicile in the towns and cities? Live in the bush, indeed! strange and uncivilized people! it must not be: *go-carts* are preparing for your benefit, and your nursery will be the *licensed* canteen! There is another branch which must not be forgotten—the Puh-*ites*. They profess *joint-stock* notions, and have set up in the building line—happily confined to churches. The Man-ass-*ites*, as they are found all over the world, will of course find relationship at the Cape. They are fond of exhibiting their persons, talking vastly big and fine, and puffing cigars. The Shuam-*ites*, (the cordwainers,) are extremely numerous at the Cape. The Team-*nites* are on their last legs: free trade has nearly closed the doors of Bohea and Company in St. George's-street. Those enumerated are especially connected with the Tribes in question; but these are times of great innovation—hence the Gett-*ites* and Hav-*ites*, are said to be about emigrating to other lands in consequence of heavy losses.

THE PUBLIC LIBRARY.

ON the 29th, the Annual General Meeting of the Subscribers took place, when the

Hon. A. OLIPHANT

was called to the Chair. The meeting was as usual an interesting one, and the attendance highly intellectual and respectable. The Annual Report of the Committee was read by the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Hon. Sir Jno. Wylde, LL.D. who, with the following other gentlemen, took a share in the business of the day:—Dr. McCartney, Rev. J. Pears, Mr. Fairbairn, Mr. Sanford, Hon. Mr. Stoll, Sir John Truter, Mr. W. Hawkins, H. E. I. A., Mr. Advocate Cloete, Mr. Merrington, Mr. Clerke Burton, Mr. H. Buckton, &c.

A letter of resignation from Mr. W. Wilberforce Bird (a member of the Committee of the Library for the last ten years,) was read, and received with feelings of deep interest. The Meeting with one unanimous consent, passed a Resolution expressive of its deep regret, and acknowledged the powerful services of Mr. Bird at all times in furtherance of the prosperity of an Institution over which he had been so long one of its able guardians.

After some popular discussion, all the Resolutions (including the thanks of the Meeting to the Committee of the last year) passed unanimously, and the sense of the meeting having been taken by ballot, the following gentlemen were returned as duly elected to serve in Committee for the ensuing year:

G. Sanford, Esq.
Hon. Sir J. Wylde, LL. D.
John Murray, Esq. M. D.
John Marshall, Esq.
Mr. Advocate Cloete, LL. D.
Lieut.-Col. Thomson, R. E.
Rev. G. Hough, A. M.
Rev. Jas. Adamson, D. D.
Wm. Gadney, Esq.*

We were sorry to hear *a* remark thrown out against that regulation of the Library, which enjoins that its rare or expensive editions of the Bible shall be reserved within its walls. The same of the Book of Common Prayer—polyglot edition, forsooth!! Again, as to the works of fiction, there was some peppercorn of difference on this head. What we happen to know from due examination, is, that the works of imagination have borne but a very slight proportion in the Library accessions in comparison with those of science, belles lettres, history, biography, voyages, and travels. If people will but take the trouble they will learn this fact for themselves. An annual synopsis of the supplies is always at hand—the catalogue is widely scattered; and on the cover of the present number of this Journal let them take an honest view of the recent abundant additions to the Library, and then say how the account stands. Besides we have no right to compel others to adopt our own exclusive course of reading. Men *will* differ. The imperfections of human language, the various capacities of human intellect, the wide diversities of education, the countless varieties of human feeling, tend to these differences. And the bed of Procrustes will never bring them all to one standard.

The weekly Press has put forth some critical remarks on the works of imagination as connected with the Library, and very properly trusts that the subscribers will not compel their Committees to pervert their "taste for study into a degrading thirst for the "zoor krout" of unimaginative weavers of fiction." The subscribers have done their duty on this head. They have placed their confidence in nine gentlemen connected with *family interests;* and two of their conservatives are clergymen—

"The most important and effectual guard,
Support and ornament of virtue's cause."

But on looking over the stock of the works of imagination on the shelves of the Library, subsequently to the public meeting, glad are we to find this class of books not confined to *contemptible* authors. There are two sets *only*, which appear from the Minerva Press. The main collection of this department is chiefly the produce of *known* authors, and as we take it not deserving to be ranked with the race of *unimaginatives*. For instance, among the works produced by ladies, we find the following writers in the Library collection:

Mitford,	Norton,
Ballie,	Edgeworth.*
Lander,	Hawkins,
Brunton,	Sherwood,
Lee,	D'Arblay,
H. More,	Austen,
Porter, (Sisters,)	Barbauld.

Among the gentlemen—

Irvine,	Marriot,
Fielding,	Atherstone,
Cooper,	Lister,
Bulwer,	Hogg,
Inglis,	Scott,
Gleig,	Johnson,
Picken,	James,
Roscoe,	Frazer,
Galt,	Croly,
Crocker,	Banim,
D'Israeli,	Hope,
Smith (Brothers,)	Cunningham.

But our space precludes any further reference to names.†

A few general remarks on the question at issue shall conclude the present notice. Is it denied that there is oftentimes a great deal of valuable truth in fiction? Fiction may be false in its facts, but true in its character; while what you call veritable history may be true in its facts, but false in its conclusions; and, after all, what is fiction but recollection?

But fiction may be absurd. Just so, and for that reason it is, that many illustrious worthies of our times have taken up their pens to make it subservient to the purposes of moral instruction. Various means may be employed to produce the same end. Some preach virtue. Some only practise it. Some make a picture of it, and some a poem. And lastly, some adorn it with the garb of fiction, that it may ensure a welcome where it would not otherwise obtain an entrance. Fiction may be compared to a key which opens many minds that would be closed against a sermon or a discourse on moral philosophy. Nor is it without authority in the writings of distinguished christians‡ The wide range of allegory affords innumerable subjects for instruction, and many a weary wanderer through the valley of the shadow of death, has been cheered by the remembrance of that almost inspired work—*The Pilgrim's Progress*.

But the Scriptures themselves afford the highest evidence that this style of writing *may* be made serviceable, as a means of reproof and conviction. Where can we find any thing comparable to the affecting story of the "ewe lamb," addressed to the King of Israel, as a violator of the laws of virtue, honour, and generosity?

* New Member.

* The *Advertiser* is pleased to exempt the writings of Miss Edgeworth from any censure. Now it is curious enough (so widely do men differ) that the great *Robert Hall* observed that he never discovered a single line of either morality or religion in any of her writings.

† It is but fair towards the London bookseller to observe, that his parcels of books are generally selected with much sound taste and judgment.

‡ The Rev. Jno. Wesley used to observe that *Tom Jones* contained an admirable portraiture of human life; and in the Library there is a novel, *The Fool of Quality*, or History of Henry, Earl of Moreland, with a recommendatory preface by Wesley. It was originally published by Mr. Brooke. It is a work which was recommended by the late Mr. Wesley to all the preachers in his connection.

COMMERCIAL EXCHANGE.

The Annual Meeting of the Members and Shareholders of the Commercial Exchange has taken place, and a dividend declared of One Pound Sterling on each Share. The public accommodations of the Exchange are considerably extended, and new works are in contemplation to render it still more perfect.

The Committee chosen by the last Meeting are as follow:

Messrs. R. P. Jones,
Ebden,
Chiappini,
J. T. Buck,
Gadney,
Simpson, and
Sutherland.

ANECDOTE.

FLAG AT THE CASTLE.

In the days of yore, when there was a considerable difficulty on the part of the Colonial Press to represent any real or supposed grievance without some one or other *taking offence*, the following hint was thrown out by the editor of a newspaper. "A correspondent regrets that His Majesty's flag at the Castle should have remained so long in rags and tatters, and transmits Rds. 10 as a donation towards the purchase of a new one." The very next day a new flag was hoisted, and soon after Col. Cary waited on the printer, requesting a bill and receipt for his subscription towards the newspaper. Having received the same (the amount being one pound,) the Colonel put down 5*s*. and said, "there, this 5*s*. and the Rds. 10 which you acknowledge to have received on account of the Castle-flag, will discharge my account. The Colonel then said "Good day, sir," and walked away, apparently highly pleased at making so good a bargain.

THE AMERICANS.

We have read in the *New York Commercial Advertiser*, that the Commissioners of Baltimore, appointed for the Colonization of the free people of colour of that State on the Coasts of Africa, have fixed, in the *first instance*, upon *Cape Palmas*, and not *Port Natal*, as was first intended.

"LINE UPON LINE—PRECEPT UPON PRECEPT."

VOYAGES OF DISCOVERY.

By Capt. MORRELL.

THIRD NOTICE,—(CONCLUSION.)

We noticed in our last, the arrival of Capt. Morrell at an island in lat 4° 50' 30" south, and long. 156° 10' 30" east, and, notwithstanding the good understanding which was maintained between the natives and the strangers, still the utmost precautions were nightly provided against the accident of a surprise. The men from the ship at length commenced operations on the island for building, and laying out the ground, and were cheerfully assisted by the islanders until the armourer commenced operations; but when the furnace had been put up, and the bellows began to play upon the coals, the natives, astonished and alarmed, fled from the scene. They were soon prevailed on to return, but amongst them were persons who stole some of the iron, with a part of the tools. These thefts commenced one by one, but afterwards multipliedso that the islanders, under the influence of the chiefs, formed one party, and the thieving body, which increased in numbers, another, and both now began to be engaged in serious conflicts. The two chiefs, Nero and Henneen, had done every thing for the purpose of stopping these robberies by their subjects, but at last it turned out, that, notwithstanding all their show of regard to the strangers, a theft of some importance was committed in which the chief, Henneen, was a principal. The captain hearing this, went to Nero, but the conduct of this savage explained every thing. The occasion, however, was one of extraordinary advantage, and was not to be lost for a trifle, so that Captain Morrell redoubled his attentions, and by hospitality and presents seemed to have eternally fixed the chiefs as his friends.

It was on the morning after a night of recreation, spent by the chiefs on board the Antarctic, that the Captain's ears were startled by a sound, which sent the life-blood curdling to his heart; it was the *war-whoop,* and he knew the fatal yell. It would be but to harrow up the feelings of the compassionate, to go through a detail of the results: it must be sufficient for us to state, that the part of the crew on the island rushed to the shore opposite the Antarctic, and there they found the two sentinels, their shipmates, basely butchered, and about three hundred savages, with bows bent, to dispose of them in a similar manner; a shower of arrows assailed them, and three men fell, and the rest were wounded. A whale boat at the moment of alarm was despatched from the ship with ten sturdy oarsmen. In the mean time the gallant seamen on the island were determined to sell their lives at the dearest price, and for every white man that fell, half a dozen of the savages were made victims. Just when fourteen of the party had been murdered, and the remaining seven were in a state of total inability to fight any more from exhaustion, the whale boat reached the edge of the shore. The oarmen commenced a well-directed fire upon the savages, which made them fall back and allow the seven to retreat to the boat; four of them were badly wounded. The savages rallied and made a rush upon the boat, but it was soon in deep water. One portion of the natives continued firing at her, while the greater part took to their canoes. As the boat was full and consequently slowly rowed, the canoes were able to gain upon her; the boatmen fired their muskets, but the falling of the victims seemed only to add fresh fuel to their sanguinary appetites, for they rushed forward with the greater desperation. The captain, now dreading the total destruction of the men in the boat, brought the broadside of the schooner to bear on the canoes by means of springs on the cables. The guns were loaded with canister and grape shot, and, by a signal, directed the boat to be moved towards the stern of the vessel. By this arrangement, the canoes, about twenty in number, were presented in a detached group, quite distinct from the boat. The Antarctic opened her flaming battery at once, and two of the canoes were in an instant seen floating in minute fragments on the waters. The effect was what may be expected, the canoes which were untouched by the broadsides, retired to the banks, and the boat was enabled to come alongside the ship in perfect security. The poor wounded were then removed into berths, and the Antarctic had now only a force of eleven efficient men to defend her in case of an attack from the savages. Almost immediately, an immense flotilla of canoes made its appearance, and there is no doubt that, from the numbers of the natives which filled these boats, they would have been able to take the ship, had it not been for the providential springing up of an easterly breeze, which carried on the vessel so rapidly, that the canoes by degrees were obliged to drop astern, and finally to give up the pursuit. It appears that the natives of the particular island to which the strangers became obnoxious, were joined at this crisis by the inhabitants of all the surrounding islands, who were, no doubt, persuaded that the general interests of the whole required a common effort to annihilate the enemy. During the whole of the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

night which succeeded this memorable day, the captain kept looking at the island through a telescope. Fires, he tells us, were kindled on the beach in every direction, among the dead bodies of the unfortunate crew, from which those hell-hounds were cutting the flesh, and roasting it in the fire; and then, with savage ferocity, tearing it to pieces with their teeth, while from the half-cooked fragment the fresh blood was running down their ebony chins.

Soon after, they began to drag the bodies of their own fallen comrades to the edge of the beach, and then buried them in the bosom of the lagoon. When they had finished this necessary task, they proceeded to gather up their plunder, and divide the remains of the slaughtered strangers among them; after which, each party of warriors embarked in their respective canoes, and started for the several islands to which they belonged, and which the last reached about dusk. All this he distinctly beheld, and when he looked again, fires were being kindled on the different islands, until they ranged along all the beaches that fronted the schooner. Around these fires the natives appeared to be very busy for the greater part of the night. This was, no doubt, for the prosecution of their horrid orgies; but, fearful that treachery lurked beneath their operations, that these fires might be intended to deceive the strangers, and that they intended to attack the Antarctic under cover of the darkness, every man was kept at his quarters during the whole of that melancholy night. Eighty muskets were loaded with buckshot, and laid upon the trunk. The guns and swivels were all double-shotted; the matches kept lighted in their places, and one man was stationed in each top, to keep a sharp look-out for canoes; their matches were also lighted, and the top-swivels in complete readiness. During the night, the ship cruised about among the shoals and reefs of the lagoon, anxiously waiting the tardy approach of daylight, which at last was hailed with joy and heartfelt thankfulness.

As the islands where they met with such extraordinary treachery were hitherto unknown to the civilized world, Capt. Morrell gave them the infamous designation of the "Massacre Islands." The Antarctic then proceeded to Manilla, where the captain and crew were received with great hospitality, and where Mrs. Morrell awaited her lord. Nothing could pacify the captain's conscience when he bethought him that some of his men might still be living and be objects of persecution in the Massacre Islands. He determined at once upon a plan of going back to the Massacre Islands with such a force as would make the enterprise a rational experiment for the recovery of any of his shipmates, who might by possibility still survive, to form subjects of gratification for the monsters in whose hands they still unfortunately might remain. Many of the merchants and ship-masters in Manilla took pains to dissuade the captain from this hopeless enterprise; but his invariable reply, and to his eternal honour it should be remembered, was this: "I could never again enjoy life, until my mind was relieved from its present horrid suspense. Should one of my crew be still living, a captive to those ruthless, remorseless cannibals, what must have been his agonizing distraction of mind to see the Antarctic depart for ever from his view; what must be his hopeless despondency during her lengthened absence; what would be his ecstasy of delight to see her return!"

His wife, with that spirit of valour which is instinctive to the sex whenever the proper occasion calls for such an exertion, insisted upon being one of the party; and with her and sixty-six Manilla-men, together with nineteen Americans on board, the captain boldly steered back for the Massacre Islands. The ship was under the necessity of anchoring before a neighbouring island, forming one of Monteverdeson's group, where the captain had experienced, on a previous occasion, the most treacherous conduct; but he and his men thought it best, under these circumstances, to conciliate the islanders, who, in their turn, put on an appearance of the sincerest friendship. The captain, however, was not deceived by this tranquillity, but took the necessary precautions against an attack, and, had he been imprudent enough not to have done so, he would have met a dreadful fate. About three hundred of the natives attacked the ship from their canoes, just as the sun was setting, but they were received in such a manner as almost petrified them with terror; for when the smoke disappeared, they were seen like so many porpoises tumbling about, their canoes in fragments, and their war weapons floating in every direction. Pity for their ignorance and depravity would not allow him to repeat the fire, particularly as he saw every reason to believe that the savages were in no disposition to renew the onset.

At last the Antarctic came to an anchor directly opposite the village where the dreadful massacre had taken place. Her course was vigilantly marked by the islanders, who, flushed with their former victory, concluded that the crew was in the same state of weakness in which they found it at the last visit, and therefore they lost but little time in acting upon that belief. A flotilla speedily presented itself, which must have been contributed to by the whole of the group of islands, and the savages having taken their stations, commenced by a shower of arrows. The captain now gave the word, and a brisk fire of cannons, swivels, and musketry was kept up for ten minutes; and a pause ensuing, to let the smoke pass off, the wretched natives were seen scattered, and all that survived making the best of their way to the shore. Captain Morrell's chief object in returning to these islands, was, to give an opportunity to any of the crew who might be still living as prisoners with the savages, to return to the ship, and he adopted the plan of getting nearer to the shore, in order to fire on the town, for then it was likely they would make use of such a person as a mediator. The anticipation proved to be correct; for, shortly after a well-directed broadside, which shivered the houses to their foundations, a small canoe was seen to put out from the shore; it contained a painted creature, perfectly naked, but who eagerly made for the Antarctic. This was one of the missed, named Shaw, who, by the merest chance, was kept alive by the savages, who had destined him to die and to be afterwards eaten by his executioners. It is needless to say how Shaw was received; and, from his account, which is given at full length by the captain, it appears that he underwent the severest privations and petty persecutions from the natives, who beat and mocked him. He was enabled in this forced visit to confirm by his own observation the horrible fact that the natives were cannibals. The men on board, on hearing the description from Shaw of the treatment which he and his comrades had met with, became wound up to desperation, and it required the greatest skill and address of the captain to prevent them rushing in a body upon the island, and putting every man and woman in it to death. Shaw not only bore testimony to the fact that these savages were cannibals, but he remarked, that, during his residence on the island, he never saw any children. From this he concluded that infanticide was a general practice.

The chastisement which the natives had now received was sufficient to shew them the necessity of humbling their tone; and, as there appeared to be a facility opened for procuring terms from them, Captain Morrell then formed a plan of taking one of the islands, small, and then uninhabited, for the purpose of catching the delicious fish which happened to be very abundant about those islands. A regular negotiation was concluded between him and the chiefs; and, after having delivered to the latter the specified number of axes, hatchets, adzes, chisels, plane-irons, gimlets, spoke-shaves, knives, scissors, razors, looking-glasses, and beads of different kinds, the captain took possession of the island. Here, a series of buildings was soon raised for the curing of the fish, and above that again was erected a sort of wooden fort, which was made arrow-proof, for the permanent defence of the works. The time of the captain's men, he now saw, was nearly lost, in consequence of the necessity they were under of every moment repelling the attacks of their treacherous enemies, whom they baffled frequently, with the greatest skill. Thus, Thomas Holmes, one of the crew, being on shore at the Massacre Island, filling some water-casks from a spring, was suddenly surprised by fifteen of the natives, all of whom instantly aimed their pointed arrows at his breast. At the same moment Holmes presented his musket, which caused them all to drop down upon their haunches. Perceiving that this manœuvre produced the desired effect, he held his fire, slowly retreating backwards towards the shore, with his piece still ready for an aim. The natives continued to follow him, and several times attempted to discharge a volley of arrows; but, he as often presented his piece, which invariably caused them to squat upon the ground. In this manner Holmes continued manœuvring, without discharging his piece, or giving them

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

an opportunity of notching their arrows, until he reached the edge of the beach; when, fearful of his eluding them entirely and effecting his escape, they made a furious rush upon him, which compelled him to pull the trigger, and their leader fell, just as he was on the point of discharging an arrow. This was the brother of the treacherous Henneen, whose death he was thus seeking to avenge. A buckshot entered his heart, and two others, who were wounded by the same discharge, fell to the ground. The gallant tar then retreated as fast as possible; but, before he had got beyond bowshot distance, he found that the remaining twelve were aiming their arrows at his body; upon which he again presented his musket, which produced the same effect as before; and ere they could recover themselves, he was beyond the reach of their arrows, being taken up by a boat sent to his assistance from Wallace's island. Had he discharged his musket when first surprised at the spring in the forest, he must inevitably have fallen a prey to those ferocious cannibals. His presence of mind was fortunately equal to the emergency, and the Antarctic was not deprived of the services of this brave British seaman.

Experience had now sufficiently shewn to the captain that the perseverance of the natives was likely to last longer than his own capability of resistance; he wisely considered the reasons which might prompt him to remain, as compared with those which tempted him to depart His decision was in favour of the latter measure; and, after sacrificing the works which the crew had erected on the island, named, from one of the party who had been massacred, Wallace's island, the captain bade a final adieu to the barbarous race, whom he had so much reason to dislike. Shaw, in his narrative, adds, that nothing which can be called religion appeared to be known to these islanders. The chiefs alone indulge in polygamy, every other male being contented with one wife. The females, in their reserved and modest demeanour, presented a most favourable contrast with the men.

We now arrive at the termination of the last of Captain Morrell's voyages; and it is with deep regret that we part with him at a moment, when we have reason to fear that his generous enterprise was unsuccessful. It is fortunate, however, that untoward events could never, in their visitation, fall upon a mind more able to resist their pressure than his: for it never was our lot to peruse a record of personal adventures which exhibits a nobler or more heroic spirit than that manifested by Captain Morrell. Deeply fraught as our naval annals are with stories of distress, and familiar as most of our readers are with those graphic scenes, still to the British public we strongly recommend the present volume, as calculated to fix the interest of the most indifferent amongst them, and to awaken in their minds reflections such as will not speedily be forgotten.

CORRESPONDENCE.

THE NEW MARKET, &c

[We are inclined to agree with our Correspondent in sequel, that the proposed cost of the New Market is too insignificant for the purposes of convenience and duration. There is one point of great consideration—water: this should be laid on the premises in various directions according to the method adopted in the New Market of Covent Garden. We are quite aware that this magnificent affair, built by the Duke of Bedford in 1827, does not come within our means at the Cape; still many useful hints may be taken from the description of it by Mr. Louden, (with embellishments) in the Gardener's Magazine for 1831, p. 265]

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—It is with pleasure I learn that the Committee in charge of the intended New Market are actually in earnest at last, and that tenders are to be supplied for the work. A few words of advice on the subject of tenders may not be amiss in these times, when the public buildings are falling about our ears in all directions, or are in a state of dilapidation. The price specified for the New Market is, I believe, £1600. But surely nothing very durable or ornamental can be raised for such a sum. Now as to the tenders. Contract is undoubtedly, according to all experience, when conducted on proper regulations, the surest way of securing the superiority of the proposed work. A contractor of known skill and integrity may always be preferred to any other person who may be the most deserving in respect of cheapness, in case that a competition is raised: but if such a contractor cannot be obtained, then an advertisement must be had recourse to.

But when tenders are delivered in, it is very important to take care to act upon right principles in making a selection from them. The preference should invariably be decided on by taking into consideration the skill, integrity, and capital, of the persons who make the tenders, as well as the prices which they offer; for if a contractor be selected without skill, or integrity, or capital, merely because his tender is for the smallest sum, the consequence will inevitably be imperfect work, every kind of trouble and disappointment, and frequently expensive litigation. The true principle to go upon in selecting a contractor is to lean in favour of liberal terms; and rather to overpay than underpay him. He should be made quite confident by his bargain, that he will receive a fair profit for his time and labour; he will then embark in his work with spirit, and be led by a desire to gain reputation to perform his agreement to the satisfaction of all parties; but when, in following an opposite principle, a contractor is led by competition to undertake a work for a price that is too low, he starts, from the commencement, by having recourse to every species of contrivance for avoiding the fair fulfilment of what he is required to perform; every thing is done in an imperfect way; sub-contracts are made at inadequate prices, a continual contest is carried on between the contractor and the inspector, and most commonly the whole concludes in a law suit, the ruin of the contractor and his securities, and great loss to tradesmen and others by debts due by the contractor and his workmen.

An Observer.

ON ROADS.

(Wretched state of the Interior Roads.—Sir Henry Parnell's Treatise on Roads, Bridges, Fences, Toll-Gates, &c.)

A Gentleman on whose veracity we can rely, reports to us that the public roads of the colony from Cape Town to the Frontier, were never in so wretched a state as at the present moment. And he points out "the remarkable indifference of the public Authorities in the country districts, to the subject."

We do not know the character in which a public man deserves more to be respected and admired, when he directs his abilities to the promotion of some purpose connected with the domestic economy of the people. In this point of view Sir Henry Parnell interrupts the tranquillity of a life which fortune had rendered easy, in order to serve, by his voluntary labours, the interest of his fellow men. Sir Henry's Treatise on Roads is worth attention, and we take leave to select a few notices from the volume which has just issued from the press.

After an introduction, which is chiefly occupied with historical matter, the author commences by laying down rules for tracing the line of a new road. He insists upon the propriety of always having recourse, in the first instance, to an actual survey by instruments of the country, and not to trust to the eye alone. A surveyor should, therefore, be employed, and he should take the levels of all the various lines that appear most favourable. A map should then be made, and so shaded as to show the exact nature of the country in respect of high grounds and valleys, streams, ponds, houses, churches, &c. A section of the soil should also be made, for the purpose of exhibiting the nature of the strata. The golden rule in the formation of a road is to take the line between two points—that is, the shortest has the greatest level, and which demands the smallest amount of expense. But the nature of the country must always be considered, and the numerous obstructions to be surmounted in many places constitute an important part of the science of road-making. Sir Henry accordingly has a long chapter on hills, and gives some curious information on the descent of those of certain heights by common vehicles. He shows that an inclination of 1 in 35 is found by experience to be just such an inclination as admits of horses being driven in a stage coach with perfect safety, when descending in as fast a trot as they can go; because, in such case, the coachman can preserve his command over them, and guide and stop them as he pleases. A practical illustration that this rate of inclination is not too great, may be seen on a part of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the Holyhead road, lately made by the Parliamentary Commissioners, to the north of the city of Coventry, where the inclinations are at this rate, and are found to present no difficulty to fast driving, either in ascending or descending. For this reason it may be taken as a general rule, in laying out the line of new road, never, if possible, to have a greater inclination than that of 1 in 35.

Sir Henry, with good reason, complains that the great mistake of road-making in hilly countries has been this—that after the roads ascend a considerable height on one side, they are sure to descend again on the other side, before they gain the summit of the country through which they pass; so that the ascent is greatly multiplied, and the delay of the traveller is in proportion Thus, on the London and Barnet road, the number of perpendicular feet which the horses must ascend is upwards of 1300, though Barnet is only 500 feet higher than London; but then in coming from Barnet to London—that is to say, making a total descent, of 500 feet—it actually happens that a horse has to make an ascent of nearly 800 feet. Sir Henry concludes that several hundred feet might be saved by judicious improvements in these roads

He next considers the necessity of surmounting the obstacles of rivers, and appears to be of opinion that a great deal too much timidity is felt about the expense of bridges, when the line of a road would naturally be shortened by them. People do not imagine, when they are called on to pay for the building of a bridge, for the purpose just mentioned, how much they may save in time, and in the cost of materials and repair for many years to come.

In reference to bogs and marshy ground, Sir Henry is of opinion that it is always best to avoid them; for let the artificial road be ever so well constructed, still it is upon a soft foundation, which yields; and in another chapter, the author shows how much the burden of horses is increased by carrying loads over an elastic road. If, however, it be unavoidable to carry the course of the road over such soil, then the expense of proper drainage must be incurred; and a high embankment, in order to compress the porous sub-soil, is a measure of absolute economy. In all cases a good indication for the line of a road will be afforded by existence of proper materials in a given locality; and another general rule is, that a road should be so directed as to secure to it an uninterrupted exposure to two atmospheric influences, namely—the sun and the wind. Water allowed to remain on the materials of roads wears them away very rapidly, particularly when they are crushed by vehicles.

In the second chapter, Sir Henry enters at large into the principles of the art of constructing roads, and he commences by stating that the first and most obvious principle of all, is that which is most commonly violated. The quantity of hard materials at present employed never exceeds scarcely a thickness of five or six inches; where that very depth of small stone, to make a good road, should be laid on a regular foundation constructed of large stones, and set as a rough pavement; and in the illustration of his views, he applies the mechanical principle of Sir Isaac Newton to roads. He then considers and estimates the kinds of external force which operate against the momentum or tendency to move in a straight line by carriages travelling over those roads.

The next class of roads is that called paved roads, which Sir Henry shows, when made on proper principles, are much superior to common roads in enabling horses to draw very large burdens. Sir Henry complains that the London pavements, up to a recent period, were constructed with a great degree of negligence as to the important principle of a solid foundation, and as the bottom of these pavements was formed of all sorts of rotten materials, some portions of the surface necessarily gave way before others. A little more attention has lately been paid to the pavements in London, and lately, Fleet Street has been paved with considerable care; the stones were properly shaped and dressed, and evenly laid: the ground was dug out twelve or eighteen inches deep, and a body of broken stones was put into the space thus cleared out for a foundation, and the joints of the paving stones, when set, were grouted with liquid lime. Yet, notwithstanding all this, the pavement soon got out of order, and became uneven and extremely defective in a few months after it was made. The cause of this failure was the stones for the foundation having been thrown in loosely, by cart loads at a time, and merely levelled before the paving stones were laid on. The great defects in the London pavement, with respect to the shape of the paving stones, and to proper bottoming, are, in a great measure, to be attributed to the errors committed by the persons who have had the management of making contracts for it.

The manner, too, in which the contracts were effected may be considered as leading, in a great measure, to the imperfection of the London pavements; Sir Henry thus lays down a complete plan for paving London, in which the directions are very copious and detailed. An allusion to the practice of Macadamization is made, by Sir Henry, for the purpose of showing the folly and expense of the attempts made to render it applicable to London.

The author then proceeds to the full consideration of roads partly paved, and partly made with broken stones, and of roads with a foundation of pavement, and a surface of broken stones: the value of the latter sort of road, is illustrated by the history of the proceedings, which took place for the formation of the Highgate Archway road. Several attempts, which cost a vast deal of money, were made, but ineffectually, to secure a good way, by that great northern thoroughfare. At length Mr. Telford's plan, of a foundation comprised of Roman cement and gravel, was adopted with the happiest results. The baronet proceeds to lay down a plan, forming a road, which shall consist of a foundation of rubble stones, and a surface of broken stones; for cheapness, and for durability, particularly when employed for cross turnpike roads; this formation is preferable to the next plan, which he describes, of a road exclusively composed of broken stones. Such roads as the latter are not fit at all for thoroughfares, and they are the roads on which the greatest havock is made by hard frosts and thaws. Gravel roads should be thought of in localities only, where stone materials for roads cannot easily be procured, and, even then a good gravel road can only be formed, by making a convex surface, of which the middle portion shall be of the depth of sixteen inches, while the borders shall be only ten inches, and further by taking the greatest care to drain effectually, the sub-soil on which the gravel is laid.

Of the appendages necessary to roads, fences are of the first importance, and our authority states, that the stone fences are not only cheaper and better, but they are much neater on road sides, than hedges. Nevertheless, he gives copious directions for the raising of quick fences

Such is the classification of the sort of roads, which it is useful to make known, with a view to the application of the useful principles which it embraces, and which by their adoption, may not only save public money, but greatly add to public convenience. In the next division of this work, Sir Henry enters into the particular details of the execution of his general plans. He begins, with noticing those more complicated operations, connected with roads, which are of a nature to demand the skill of the stone masons. The construction of bridges, then is an important branch of these, and the principal object the building of them, in the view of the road makers should be;—first, the most eligible situation, as regards direction of the road;—secondly, the proper width for the roadway;—thirdly, the inclination of the roadway over the bridge;—and fourthly,—the number and span of the arches. In the next place, the building of walls for supporting roads, such as breast walls and retaining walls, will require the mason, who will likewise have to give his attention to cross-drains, inlets, outlets, depots for holding the materials used for repairs of roads, toll-houses, lamps, and mile-stones. The directions respecting the toll gates and bar show, in a remarkable manner, the minute attention Sir Henry has paid to all departments of the great subject; a toll-gate, he tells us, should never be placed on a hill or at bottom of one. When carriages are going up hill, the horses must make a great exertion to put a carriage into motion after being stopped at a toll gate. Many fatal accidents have occurred from having toll gates just at the bottom of hills. When circumstances render it unavoidable that a toll-gate should be placed at the bottom of a hill, the gateway should be very wide. If a single gate be used, it should not be less than fifteen feet in the clear: but, in such a situation it is much better to make double gates, meeting in the middle, without a centre-post; by these means an opening may easily be had of from twenty-four to thirty feet in the clear. Toll-gates should be painted white, to make them more easily seen in the night time They are frequently made too high. When this is the case, they are more expensive and unsightly than low gates, and their additional weight acts as a powerful leverage in straining and pulling the hanging post out of its place.

ODDS AND ENDS FROM A
SETTLER'S SCRAP BOOK.

DESCRIBING A MODERN SETTLEMENT.

Vital Spark.

It is very annoying to myself, as well as to all the multitudinous chroniclers of modern settlements, that we are debarred the advantages of our elder brethren, the Historians of Antiquity, in the possession of those distant and dusky periods called the Fabulous Ages. Bless ye, courteous readers, if these were our birthright, which, alas! they are not! how we would plunge into the mists of obscurity, and dive into the unfathomable depths of past centuries, and bring up shapes and shades of all by-gone times to amuse and instruct ye! how we would revel in the twilight of those remote times! with what ecstasy we

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

would ramble and gambol, antic and riot in those imaginative periods, what a story of gods, heroes, giants, dwarfs, genii, and demons we would weave in this our present tale, in which we would put to shame Berosus, Manetho, Sanconiathon, and the whole host of papyri scribblers, laugh to scorn old Herodotus, the father of history, stare out of countenance the Mammoths and Mastodontes themselves, make "Leviathan, that huge beast," glad to scramble away for fear of a stroke of our critical pen in remarks upon his obesity, knock down the ancient Cyclops with their own hammers, or their each remaining eye out with some of those huge stones they have the credit of piling up in various parts of this globe, for no use whatever; in short, it is impossible to say, had we their advantages, what we would have done or dared. Alas! alas!! this may not be, we must content ourselves as we are, remembering the sublime lines of the mighty moralist of "Broad Grins," the saintly Colman the Elder, that

"——— What's impossible cannot be,
And never, never, comes to pass."

It is not alone that we sorrow over the loss of the fertile period just glanced at, but we have also the other misery of remembering that we have adopted a country discovered and inhabited so long after the second fabulous reign, the times emphatically denominated the *Dark Ages*, which would otherwise have given us food enough for embellishment; for have we not the *materiel?* in glittering streams, fitted to be sung by any water-bibbing poetaster or wandering minstrel; umbrageous woods, gloomy enough to shelter any midnight murderer "by your leaf;" caverns calculated to cover any "hole-and-corner-gentlemen" banditti; defiles yet to be polluted by invading forces; crags upon which Baronial Castles ought to be perched, and over which stupid serfs might be scragged and dangled in mid-air—"gallows high;" have we not all these favors of providence to make our land illustrious like those of Europe? and yet, why have we not improved these advantages? Out upon the genius of this age! Out upon THE SCHOOLMASTER ABROAD! Who, with a grain of generous feeling, a scruple of conscience, or a dram of spirit in his composition, would live in a vile, nasty, spick-and-span new country like this, along with people—one half of whose very scalps are covered with wool—and the other whose heads are stuffed, instead of brains, with wool,—who are intent upon nothing else than wool-gathering; aye, but it *is* great cry and little of the commodity, as a certain old gentleman muttered to himself in his shearing season, and there's some comfort in that!!

The Schoolmaster abroad.

TALES EMBELLISHED WITH WOOD-CUTS!

Devoid of the blessings to which we have drawn the gentle reader's attention, we must therefore date the brief anecdote we are about to rescue from oblivion, some fourteen or twelve years back, the era of the formation of the South-Eastern Settlement by the wandering Sons of Japhet, the founder of which—and that's another source of regret—cannot in after years even be alluded to metaphorically as the CECROPS of his time, inasmuch as he did not *see crops* for many years after his arrival. Woe-worth-the-while, it is evident that we cannot negotiate a loan from fiction, but that truth — hateful, undisguised, unadorned, simple, naked, shameless truth, (fie upon it, I wish it had even a fig-leaf,) must be our guide, and we must commence our modern Genesis even at the eleventh hour, would it were our Exodus instead, from this parvenu land of parvenus.

"In the beginning," then, that is in the ancient days of the Albany Settlement somewhere about the 5824th year of this globe, the 2582d of the era of Nabonasser, and the 1198th of the Hegira, —we come down with extreme hesitation, you see, to this lower point,—or the year of grace 1820 or 1823, that District could boast of two extraordinary Heralds or Messengers: one was *civilly* attached to the Landdrost, in his capacity of Lord-Lieutenant of the province, to "do his spiriting gently," and the other as a sort of Belgo African, "two single gentlemen rolled into one" personification of those British Court-of-King's Bench heroes y'clept John Doe and Richard Roe, whose existence the lawyers swear is one of the many legal *fictions*, so well known to themselves, but of whose bodily *reality* there are too many to bear *tangible* evidence.

Christopher Clericus, generally called "*peculiar*" Clericus, from his frequent use of the term, for he always spoke of the peculiar circumstances of every case coming under his review, was the "Mercurius" most immediately attendant upon the Landdrost; he was, however, no Ariel, and whatever levity the accusing angel may hereafter tax him with, it will not be with lightness—on the contrary, sub Luna, he was imposing in weight, imposing in size, imposing in speech, imposing in figure, and how farther imposing this chronicler has no present means of knowing.

Jan Crooked-wood was his official coadjutor, and as we have expressed somewise strongly, and somewise longly, our love of antiquity, we should do violence to our principles if we left out of sight that Jan was the *elder* appointed functionary of the two messengers. Who, brother Immigrants, can forget Messenger Jan's first Avatar on our astonished senses at our arrival? with his blossoming countenance, his then portly figure, his new suit of sables sheen, his massy silver chain and Gorget, on which an attempt had been made (evidently in fear of transgressing the second commandment) to represent the British Arms and Supporters, and the awe-inspiring inscription as a terror to evil doers, especially to ourselves so ignorant of the Dutch Laws and the Dutch Language, "GERECTS BODE;" that is, had it been interpreted, "*Messenger of the Court of Justice.*" His one-fifth English, two-fifths Dutch, and remainder Patois, the last proportion a composition of Kaffer, Hottentot, and "the thousand and one" other dialects, not most euphonius, used in this colony; who can forget? Can any one of you, my brother Settlers?

Heaven bless the mark! but in these by-gone reminiscences I am almost forgetting the very story which I intended to tell at the outset, and of which Peculiar Clericus and Jan Crooked-wood were the Dramatis Personæ. Well, then, an unfortunate Settler, whose name has not survived his catastrophe, and which it is now unnecessary to rake up from his long-buried ashes, had been taken suddenly and violently ill, under circumstances of considerable distress. A report was made by some of his neighbours to the then Landdrost, who dispatched a commission consisting of the worthies already mentioned, Clericus and Crooked-wood, to minister the relief

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

required, and to report the result of their mission. After a short absence they returned, and Christopher Clericus, and his coadjutor Jan, having been admitted into the Landdrost's presence, the former, bowing most reverentially, made the following grandiloquent speech: "Sir, I regrets to report——that before ve arrived at the location of the unfortunite hobjeck of your umane solicitude—ve found the wital spark *extinct*——." "Ya, Mynheer!" instantly vociferated Crooked-wood, "Ya, Mynheer! dat's waar—de arme, de poor man vas dood, ——en—*he stink vary mooch!!*"

Antiquity.

"THERE WERE GIANTS IN THOSE DAYS."

LITERARY EXTRACTS.

COBBETT.

IT is seldom that we obtain a sight of the writings of Cobbett. A few stray numbers of his Register have, however, fallen into our hands in the course of the month; as also a number of his Monthly Magazine, a new undertaking on the part of the Member for Oldham. We discover no change of tone in any of these productions, but the same perseverance put forth in *calling names*, abusing the Whigs and the Clergy, and recommending his Indian Corn, Garden-seeds, and list of Books of his own production. In one of the Registers we find him highly indignant at the *Morning Chronicle*, and, after a plentiful bestowment of Billingsgate phraseology in a letter written to the "Base Editor," concluding thus: (it is pleasantly written, and affords a fair bird's-eye view of the whole system of rural economy.)

"In desiring you to take some *honest* labour, as I told you before, there are always kennels to rake and stones to crack; but, besides these, there is weeding the corn in the summer; in harvest time, there is carrying the victuals and drink to the fields for the reapers and the mowers; there is raking after at barley and oat-harvest, there is tending pigs in the stubbles and keeping off rooks when the wheat is sown. It might not be safe to trust you at that, but there are thistles to cut off in the meadows and new great roads, collecting the horse-dung for manure, and carrying it off into heaps in your cap. You might, when they are at dung-cart, help to shovel up, and the under-carter will show you how to keep from under the horses' feet, and, above all, out of the reach of his whip: for if you do not, you will then be made sensible, I can tell you, to a real, corporeal "lash." In the winter time, there will be stone-picking and backing out bavins and rods, after the copsers. So that there is an abundance of occupations, not only innocent in themselves, but *useful* and healthful at the same time. You might here put in full practice the doctrine of "*utility*," and assist to contribute to that *accumulation*, which is the very soul of the Broughamite system, and which, when applied to *dung*, is of vast importance in the country.

"In this favoured county, you would find boundless scope for your enterprise. In the fall of the year, hopping; not hopping on one leg, but with *both hands*; that is to say, *picking the hops* off the bines, and putting them into baskets or bins. How many hundreds of men, beyond all measure your superiors, have I seen within these two days, returning home from this useful employment! At one place, where the work is not over, I could not help experiencing some disappointment, at not seeing you stuck up at the side of a bin. After the hopping, comes the stripping of the poles, another pleasant and blood-stirring occupation. Red and black is better than black and yellow; and the former is the colour which you would, I trust, very soon begin to assume; or, if you be unchangeable, then you must acknowledge yourself, that the sooner you disappear from this world the better. In the spring of the year, having passed a part of the winter in chopping rags for the hop-gardens, but with a sharper instrument than you use upon the neck of the poor old *Chronicle*; in the spring of the year, there is the opening of the hills, and taking off the cuttings; then, in the month of May, comes that delightful employment, for which you seem destined by nature, namely, trampling green rushes till they be pliant, and then using them in tying the rising shoots to the poles. After this comes the weeding in the corn, and picking the caterpillars off from cabbages.

"Now, as there are all these really useful employments, and as you have strength and mental capacity sufficient for them all, what ground have you for saying, that, in order to be able to eat, you must slander me. "Ah," say you, "eat, but, what sort of things am I "to eat?" *Sort*, indeed! As much variety as you please, amongst the different sorts of patoes; but, the devil is in it if you, who want a "rural police" to compel the people to eat Brougham's potatoes, can be unprincipled enough to put forward a claim to anything beyond that "*nutritious root!*" However, I do not positively say, that great diligence on your part; that an active and judicious use of your fingers and thumb in hop-picking, or in destroying the miscreant caterpillars, might not bring you, in addition, a pound of good pork, in the course of the week. To be sure, you would have no sofas and carpets, thinking yourself happy as a prince with a stool to sit upon, and a clean brick-floor upon which you would not drop many crumbs, I'll warrant you.

"What a happy life! What innocence, what *utility*, what time for meditation and philosophic reflection; what sweet sleep, and, with all these almost at your command, have you the audacity to say, that in order to be able to live, you must slander me!"

HISTORY OF A PURITAN'S SERMON.

STUDIED in a jail, preached in a barn, printed in a garret, sold at a pedler's stall, uttered by a bishop, and ordered to the press by a bench of Justices.

PROGRESSIVE DEGENERACY OF THE HUMAN RACE.

M. HEURIEN, Mem. de l'Academie des Belles Lettres, has favoured the world, tom. i. p. 125, with a chronological scale of the different stature of the human race in various ages. This ingenious calculator, after surmounting many difficulties, with a patience worthy of one who labours in the cause of his fellow-creatures, at last fixes the average height of mankind at successive periods, as follows:

	Ft.	In.
Adam, ...	123	9
Eve, ...	118	9
Noah, ...	103	6½
Abraham, ...	28	0⅜
Moses, ...	13	0
Hercules, ...	10	3¾
Man in the days of Romulus,	8	0
Ditto at the birth of Christ,	7	2½

FREE MASONRY.

UNDER the head *Alibenistics; or, Freemasonic Philosophemes*, there is in *Fraser* for November, a remarkable paper of interest as well as curiosity. The writer observes, that all writings that enter deepest into the spirit of God's Scriptures, are dearest beloved of Freemasons. Such names as Selden, Grotius, Milton, Foster, Chalmers, Douglas, the romantic Chateaubriand, and the inspiring author of the Natural History of Enthusiasm. After many eulogies in praise of Masonry, the writer makes the following observations:

"We, of course, allude to Freemasons initiated into the deep spirit of divine philosophy, and not mere nominal professors. True masons,—those who are made *free* by their free devotion to God's spiritual service, and *accepted* by emulating the self-immolation of their celestial prototype of heaven and earth for just and disciplined worthies,—we would discourse of these, and these alone. It would be as unfair to judge of Freemasonry in its hidden sanctuary within the veil, by its irregular members, as to judge of its religious illustration without the veil by merely nominal Christians.

But for true, or free, or speculative masons. These are the men who, attached to their celestial Saviour with filial enthusiasm incommunicable, and to each other by fraternal sympathies that melt them into beautiful unanimity of immortal emulation; these are the men who feel a more especial and endearing interest in the whole history of mankind. To them, whatever is "wisest, virtuousest, discreetest, best" in all the records of humanity, hath a kind of kindred familiarity of association unknown to others; for in all true men they recognise their ancestry or their brotherhood, and they watch the broad line of their genealogical descent with the reverent fondness of a lineal and loyal progeny. In their history, they love to contemplate the magnificent economy of Providence for the gradual per-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

fectionising of all lapsed intelligences. In this they view every variation of churches and states with tranquil and unbroken satisfaction, and from it they look forward to the future with that fine, free, and fearless confidence which Christian Philosophy alone inspires.

In the present times, these relations to society have assumed a somewhat deeper and still more thrilling intensity; they know well enough that old age hath come upon the earth, and that the latter day is at hand; and that the prophecies relating to her dissolution and bright regeneration are, ere long, to be accomplished in their fulness.

They confess, with rejoicing, the vast spread of intellectual light and freedom that now gilds the concluding pages of our planet's history. They believe, that the true and venerable principles of church and state will be confirmed and illustrated in their breadth, and length, and height, and depth, by the last and prophetic experience of pious and patriot sages, ere the kindling judgment breaks out upon the astonished world."

PLANTING TREES.

Dr. JOHNSON *(writing in this very room in which I am now sitting)** says Cobbett, in some sort advised his readers not to plant trees; for that, the moment a man planted a tree *"he began to think about dying."* Never was there a more cowardly or more pernicious observation. Let the opinion prevail, and there never can be a tree planted in the country for children. What! Base wretch! Rake money together to give to them; but not plant a tree to grow up for them! And yet the melancholy rubbish of this man is admired. There is a coffee-house which I see out of my window, bearing the name of the Dr. JOHNSON, whom I always call Dr. DREAD-DEVIL. How much better the sentiment of SHAKSPEARE, or the sentiment which he puts into the mouth of JULIUS CÆSAR:—

"Of all the wonders that I yet have heard,
"It seems to me most strange, that men
"should fear!
"Seeing that death, a necessary end,
"Will come, when it will come."

Cobbett then proceeds to recommend the immense importance of planting the *Locust Tree*, and details some interesting proofs of its utility, (far above that of the oak, which is all spine,)—the locust tree producing no sap, and never perishing in any situation whatsoever.

ATHENS AND ITS PILFERERS.

THE whole city, says Mr. Milne, in his recently-published "Memorials of Greece," is one mighty ruin, in which the destructive power of time, cannon-balls, and great and petty pillages, are visible. The smaller temples, particularly, have incurred damage from these petty pillages, and English midshipmen have the doubtful credit of doing most in that way, and they come armed with chisel for the purpose, as may be seen by the mutilations of the exquisite friezes and capitals of the smaller columns. The author gives the copy of a note which was dropped by one of these youthful Goths, which forms quite a curiosity in its way. It seems to be addressed by one of the young plunderers to another, and exhibits a marvellous indifference to the nature of the contemplated offence:

"Dear James,—I have lost the *ear* that I took away from the one of those *stone women* on the top of the hill; Smith has got the other, so as I don't like his having a prize which I have lost, will you have the goodness, as you are going there to-morrow, to *chip me off the nose* neatly, and let me have it before we sail.

Yours ever."

* Bolt Court.

HOFWYL.

(From Mr. Dyke's Travelling Mems. 2 vols. 8vo. 1834.)

From Berne the distance to Hofwyl is trifling, and Mr. Dyke made a visit to this latter place. It is almost superfluous to remind the reader that Hofwyl is the seat of the famous seminary of Fellenburg, where agriculture, amongst other practical sciences, is taught. Mr. Dyke's account of this establishment is highly interesting.

There are schools for the superior and inferior classes of society, both male and female. The number of *Pensionnaires* is bout 400, among which may be found, English, Danes, Germans, Spaniards, Russians, French, Italians, &c. &c. There are twenty tutors to each agriculture, the languages, natural philosophy, belles lettres, botany, and in short, every other useful and polite knowledge. Music, drawing, sculpture, singing, &c. have also their separate masters. The gymnastic school is on a large scale: here we saw balancing poles, wooden horses, ropes, and all the necessary apparatus. There were also several fine horses for the Riding Academy. M. Fellenberg has fixed his college in the centre of two beautiful farms, where his eleves become practically acquainted with the different modes of agriculture. One of these is intended as a model of what farms ought to be, and the other is used for experiments. There are also at Hofwyl a swimming pond, with convenient dressing-rooms on its verge; and, adjoining the farm-yard, a repository of almost every known implements of husbandry, models of agricultural instruments, &c. We saw, too, a variety of workshops for the manufacture of any implement required. In the stalls were 66 head of cattle, which are regularly curried, and fed with potatoes and green provender. The pigs are confined in byres, and fed from troughs.

Among other things, we visited the dairy, where the milk is kept in a deliciously cool state; the kitchen, where cooking was going on in a wholesale way; and the washing house, a place in which a dozen people are regularly occupied in tending the apparel of the students. In the principal college we walked through the school-rooms and sleeping apartments, in the dining room there is an apparatus, by means of which the dishes are conveyed up from the kitchen beneath. The same chapel is used alternately for Protestant and Catholic; the paraphernalia of the latter being enclosed in a recess during the hours of the former worship. In the musical saloon were pianos, harps, an organ, violoncellos, &c. One thing must not be omitted: M. Fellenberg, more happy in his philosophic views than Mr. Owen (who derived his idea from Hofwyl, where his two sons were educated), has succeeded in his plans and endeavours to combine instruction, religion, and recreation. There are no prizes or humiliating punishments. A judicious praise or well-timed rebuke he has found to be quite sufficient; consequently, there are fewer unamiable feelings engendered at Hofwyl than at most other seminaries. As to music forming a part of education, the worthy philosopher says it is "precious, as softening the character, and calming the passions; fortifying the love of order, and of the beautiful; strengthening the bonds that attach man to his country, and raising his imagination and his wishes towards heaven."

RAFTS ON THE RHINE.

The rafts have the appearance of floating villages, from the wooden houses erected on them by the crew. Cattle and sheep are conveyed for the use of the men during the voyage. These extraordinary rafts consist of pine-trees fastened to each other, and, nearer Switzerland, are composed of a few trees only: as the navagation becomes less obstructed, they receive at various places numerous additions, until the raft becomes the enormous machine we witnessed. They are often upwards of a quarter of a mile long, and seventy and eighty feet broad, having a draught of seven feet water. The crew is as numerous as that of a man-of-war, varying from 500 to 800 men, who guide the course of the raft by rowing at the end. The consumption of provisions on a raft, from its original starting place to its destination, is 45,000lbs. weight of bread, 20,000lbs. of fresh meat, 10 cwt. of dried ditto, 12,000lbs, of cheese, 12 cwt. of butter, 35 large sacks of vegetables, 500 olims of beer, each holding 180 bottles, and six or eight butts of wine, of seven and a half olims each. The live stock is butchered on the voyage, in addition to this. A capital of 400,000 florins is requisite for its equipment.

STRUGGLES FOR LIFE BY A BRITISH SOLDIER.

It happened, during the last war between the United States and Great Britain, (may there never be another contest so unnatural) that a British soldier upon a raft of palisades, which had been cut on the margin of this basin for the fortifications at Queenston, was sent adrift into this whirlpool by the parting of a rope connected with the shore, in the attempt to float the raft out of the basin into the river below. The force of the currents not being duly estimated, as the raft approached the vortex, drawn by the hands of other soldiers on shore, and claiming a passage at what was deemed a prudent distance, the too feeble cord snapped asunder to the amazement and horror, not only of the unfortunate man afloat, but equally of his comrades, who were compelled, without any means or hope of extending relief, to witness the unhappy fate of the devoted victim. In a moment the raft was seen careering with increased rapidity towards the visible and open centre of the whirling waters, where its immediate and total wreck was justly deemed inevitable; and down it went, and the man upon it, with "convulsive splash," and now nothing was seen. The spectators shrieked in sympathy. A soldier has his fellow feeling. For he is a man. Had their

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

comrade fallen in battle, they might have trampled on his carcass in the onset of a charge, in disregard of his sufferings. And when they should come to bury him, they might say: "Thou hast died nobly." But that he should be thus unexpectedly and fearfully swallowed up by the flood, their nerves were ill-prepared for the shock. He was gone, and with his disappearance disappeared all hope. But what was their surprise, while, with vacant stare and every feeling astounded, their feet fixed immoveably to the earth, they gazed upon the scene, the raft entire, and their comrade clinging to it, suddenly shot up on the surface of the waters, and seemed to be floating back to their embrace. "Well done! bravo!" they cried, rending the vault up region with their gratulations, and clapping their hands and leaping for joy. Alas! instead of making towards the shore, or coming within reach of the throw of a line, (for every one was now in stretch of all his powers to afford relief, and the unfortunate man crying for help,) the raft was borne irresistibly along the current before described, and in a few moments began again its rapid sweep towards the vortex. Again the men on shore were thrilled with horror in expectancy of the fate of their companion—and he, smiting his breast in despair, fell upon his knees, lifting his face towards heaven, and seemed to be making his last commendations of himself to the mercy of God, and the next moment down again he plunged, and was swallowed up in the deep. His comrades stood still, and gazed upon the vacant waters, awaiting in breathless anxiety the emergence of the severed fragments of the raft. For notwithstanding it had been firmly bound together to conflict with the violent forces of the passage, there was little reason to expect that it would sustain unbroken the second shock of such encounter, as that to which it was now doomed; much less, that their luckless comrade would appear again adhering to its parts. Nevertheless, to their unspeakable joy, the raft and the man emerged as before. The welcome of this second preservation for a moment rekindled hope, and suggested every possible expedient to accomplish a connexion between the shore and the raft. But all in vain. The unfortunate man, in the agony of despair, supplicated their aid. But what could they do? Again, the raft and its yet living tenant were on their wheeling and rapid circuit toward the fearful vortex. Again he fell on his knees—and again he plunged into the deep, and disappeared. Who now could hope in such a case?—Even if he should emerge again, it would only be to make the same round, and fall again into the power of the same merciless and insatiate appetite. Yet he did emerge, and bade farewell to his comrades, and they bade farewell to him: "God bless you!" said he. "God have mercy on you!" said they, in broken accents. "God have mercy on me!" he cried—and again he disappeared in the whirl of the waters.

Death took him into his embrace, inflicted on him all its pangs, and then threw him back, as if in vengeance, only to draw one breath of life; and then grasped and tortured him again, then threw him back to life; and then stretched forth his hand, and seized him again. And at every approach, Death seemed to say: Behold, how terrible I am!

Did he rise again?—Aye, he did, and the raft and the man continued this perpetual round, until the intelligence was conveyed to Queenston, some three miles below, and a boat drawn out of the river, and transported on wheels, and launched from the lofty bank of two hundred feet, down through the trees upon the basin, and the man was taken off to serve yet longer, and fight the battles of his king. And for aught that is known by us, he is still in his regiment. Scores of times he faced the frowning terrors of the scene,—made the deep plunge as many times,—took breath at every interval—and was saved at last.—*(Colton's American Lakes.)*

THE BRAVE AMERICAN INDIAN.

At the age of twenty-one, his heroic deeds had acquired for him in his nation, the rank of "*the bravest of the Braves.*" The savage practice of torturing and burning to death their prisoners, existed in this nation. An unfortunate female, taken in war, of the Paduca nation, was destinated to this horrible death. The fatal hour had arrived. The trembling victim, far from her home and her friends, was fastened to the stake. The whole tribe was assembled on the surrounding plain to witness the awful scene. Just when the funeral pile was to be kindled, and the whole multitude of spectators were on the tiptoe of expectation, this young warrior, having unnoticed prepared two fleet horses, with the necessary provisions, sprang from his seat, rushed through the crowd, liberated the victim, seized her in his arms, placed her on one of the horses, and mounting the other himself, he made the utmost speed towards the nation and friends of the captive. The multitude, dumb and nerveless with amazement at the daring deed, made no effort to rescue their victim from her deliverer. They viewed it as the immediate act of the Great Spirit, submitted to it without a murmur, and quietly retired to their village. The released captive was accompanied three days through the wilderness towards her home. He then gave her the horse, on which she rode, with the necessary provisions for the remainder of the journey, and they parted. On his return to the village, such was his popularity, no inquiry was made into his conduct, no censure was passed upon it. And since this transaction, no human sacrafice has been offered in this, or in any other of the Pawnee tribes. The practice is abandoned. *Of what influence is one bold act in a good cause!—Colton.*

AN OXFORD STREET (LONDON) REMINISCENCE.

SOME few years ago, a shabby looking gentleman, carrying in his hand a fiddle, enclosed in a green bag, entered the shop of an eminent hosier in Oxford street.

"I want," said he, addressing himself to the obsequious man of hose, "a pair of silk stockings."

"Here are a dozen pair," replied the shopkeeper, "of such a quality as no other house in London can offer. They are cheaper than dirt, and more durable than iron, and when they are worn out, they will cut down into capital socks; but that will not be for many years."

"Excellent qualities!" replied the shabby gentleman, with the fiddle; "but what is the price?"

"A trifle," returned the seller; "only twelve shillings a pair."

"Then put up one pair for me," said he of the green bag, "and I'll pay for them." At the same moment his right hand dived into the extreme recesses of his breeches pocket, as though he were endeavouring to select something underneath. He was not successful.

"Gracious Goodness!" cried he, "I have either lost my purse, or left it at home, and I know not how I can possibly do without the stockings; for you must understand, that I am going to play at a celebrated concert to night, and must have them to wear."

"Well, sir," replied the hosier, "that shall not trouble you; we'll send them to your house."

"Unfortunately," whimpered the man of sweet sounds, screwing up his features to the dimension of a dried codling, "I am not going home; but I will, by your kind permission, leave my fiddle as a security for the twelve shillings, only requesting that you be careful of it, and hang it up (for it is a valuable instrument,) on that nail, which I see disengaged over the chimney of your back parlour."

"With all my heart," replied the hosier and immediately conducted the musician into the parlour, where he hung up the fiddle, and having received the stockings, left the shop.

About two days after this event, a person entered the shop, and bought two or three trifling articles. Being suddenly seized with a spasmodic indisposition of stomach, he requested permission to recover himself in an arm-chair of the parlour. The hosier's humanity and civility were equal to his industry. He attended his customer with much assiduity, and by help of a little brandy, rubbing, and chafing, restored the gentleman. As soon as he was well, he began to look about the room; to admire the pictures; to compliment the hosier on his taste, when his eyes rested on the fiddle.

"What! my friend," he exclaimed, "are you a musician?"

"No, sir," said the hosier; "that fiddle belongs to a poor fellow who bought a pair of stockings of me two days back, and probably has not yet been able to raise money enough to pay for them, and redeem his fiddle."

"Allow me," said the gentleman, "to look at it—I am a judge of these matters." The fiddle being delivered to him, he drew it from the bag, and having examined it said, as though to himself, "This is really a prodigious fine fiddle!" He then placed it to his shoulder, and negligently passing the bow across the strings, produced a few notes, which appeared to the hosier of such exquisite delicacy, that the passion of gain was for a few seconds suspended.

"This fiddle," said the stranger, "appears to be a Cremonæ of the best tune—Mr. Nottingham," he continued, looking up at the hosier, "I have known you some years, and have dealt always with you—I know you are an honest man—I will not inform you what is my opinion of the worth of this instrument; but here is a thirty pound note, for which you will give me a receipt; and if, when the wretched musician again makes his appearance, you can purchase it for fifty pounds, this note, which I have now put into your hands, shall be your own." When he had thus spoken, he gave him the note, together with his card; and having received an acknowledgment for the note, departed.

He had scarcely been gone from the shop above an hour, when the musician, in a great hurry, and much worse clothed than before, ran hastily into the shop, and, putting down the twelve shillings on the counter, requested to have his fiddle.

"Ah!" quoth the man of yarn, "I'm delighted to see you, I wish to have a few moments' conversation with you;" and, taking him into the back parlour, informed him of the liberal offer which the gentleman had made who had been there in the morning.

"With respect to the fiddle," said the musician, "I am well aware that it even exceeds in value what you have offered; nor would I think of selling it, but that my distresses are great, and customers are difficult to procure. To tell you the truth, I am now under arrest, an officer is with me outside, and I have only been allowed a few moments to fetch my fiddle, in order to carry it to a friend, who is ready to advance me upon it a certain sum of money sufficient to relieve me from arrest." The hosier saw that such was the fact.

"I will go with you, said he, "to the gentleman's house, and receive the fifty."—"Impossible!" replied the musician. "He may be from home, or otherwise; I cannot take the risk. The person I allude to is waiting my return."

The wily hosier now began to suspect that the fiddle would escape, and that the thirty pounds commission would be lost. He therefore resolved on a bold venture, and added twenty pounds of his own.

"Wait one moment, said he to the musician, "and you shall receive the fifty pounds." The musician hesitated, as if reluctant to part with

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

his fiddle for the price: he surveyed it with tenderness, and said, "'Tis my necessities alone which induce me to part with thee, thou cheerful companion of my life—the better portion of my existence. But we must separate; and having been a long time the delight of thy master, thou must become his support."

Tears were visible in the eyes of the wretched musician, and, with a trembling hand, he delivered the instrument to the hosier, and having received the fifty pounds, hurried away from the shop in a very distressed state of mind. The hosier almost repented making such a gain from so poor a man But "business is business."

As soon as the fiddle became the property of the hosier, he ordered a coach, and repaired to the house of the gentleman whose card he possessed. The servants informed him that their master was at home, and he was soon introduced into the library. He found himself in the presence of a gentleman very different in appearance from him whom he had seen in the morning. However, he produced the fiddle, a receipt for the money he had paid, and the card, and begged to know when he could see the owner. The gentleman appeared surprised, and, indeed, the man of stockings very soon became convinced that there must be some mistake. The gentleman acknowledged the card to be his, but declared himself quite ignorant of the transaction. The hosier was struck with dismay, and returned home in a most disconsolate state, yet not without hopes that the person who had advanced the money would soon make his appearance to claim the fiddle he had so much coveted. At all events, the instrument was valuable, and he might, after all, make a handsome profit. He was relieved from all suspense by the arrival of a customer, who was a musical instrument maker; who, having examined the instrument, declared it to be a Dutch fiddle, value about eighteen and sixpence! The sound of a fiddle, ever after, threw the hosier into fits!

O'CONNELL's CHARGE AGAINST THE DUTCH.

THERE is a curious illustration of the Protestant propensity to act with abhorrence of Catholicity, to be found in the history of the Dutch in Ceylon. They (the Dutch,) when they became masters of the sea coasts of Ceylon, found within their territories about half a million of native Christians, all, of course, Catholics, who had been converted principally by the Jesuits, the companions and successors of the great St. Francis Xavier; but instead of encouraging them, they commenced a most cruel and unrelenting persecution of all the Ceylonese Christians, who refused to embrace Calvinism. They invented or adopted part of the Irish penal code, by rendering it impossible for Catholic children to inherit any of the property of their Catholic parents, besides using more direct force and personal punishments for professing Catholicity, but without being able to extirpate that religion. They, therefore, resorted to another and still more atrocious proceeding.

The species of Gentooism professed by the native Ceylonese was the religion of Buddha, an obscene and horrid religion, which had organized itself into a faint resemblance of the Christian hierarchy In fact, that religion could not subsist for any length of time without the regular gradation or orders of their priesthood Such, however, was the success of the Jesuits and other Catholic missionaries, that the hierarchy of the Buddhists in Ceylon was broken up, and the religion itself was nearly extinguished at the period of the Dutch conquest. What did the Dutch do? When they found that they could not put down Catholicity otherwise, they actually entered into an arrangement with the King of Candy, who reigned in the interior of the island, and lent him a frigate, and fitted out for him an embassy, which they conveyed to the Isle of Java for a fresh college of Buddhist priests. They brought these priests back to Ceylon, and thus actually re established the Buddhist hierarchy, to preserve the natives from Catholicity! Perhaps nothing in the history of man was ever more revolting.

ROSSIANA.

Captain Ross since his return, as may be supposed, is quite a lion. He is, if not "the glass of fashion and the mould of form," at least "the observed of all observers;" and many are the mansions anxious to be honoured with the presence of the Polar hero. Like the Chinese in Goldsmith's "Citizen of the World," he is expected to say and do wonderful things—and great surprise has been occasioned by the fact of his acting much the same as he used to do. A certain dilettante dame hearing that the Captain had declared he considered an Arctic fox a dainty, actually got a cub from Leicestershire dressed for his dinner on a recent invite; and was quite astonished to see him work away at a haunch of venison instead.

"Pray, Captain Ross, (asked a city lady at dinner in Portland place,) did you not *take* any cold *out* in these inclement regions?" "No, madam, (replied Ross, who is a wag,) I *found* enough there on my arrival, I can assure you."

"Is it a fact (inquired Sir Clod) that the whales weep?" "Not that I know of!" answered the navigator. "Bless my soul, then, (replied the civic luminary,) what do they mean by saying they have so much *blubber* about them?"

"I suppose (said Tom Macauley, cracking an old joke), you used *icy*-coals for *cool*-inary purposes." "Yes (rejoined Ross); and, moreover, we had nothing else to drink." "That's odd enough (said Tom, rather smartly), for by all accounts you had plenty of *brwn* (brewing) out there." There is no *bearing* Tom's fun. It was well known that the expedition was fitted out at the expense of Felix Booth, the distiller, who was Sheriff at the period of Ross's departure. In compliment to his liberal patron, Ross called the land near the Pole, "Boothia." The chief of the natives discovered in that quarter he christened "Old Tom" The abori*gines* Ross describes as being a *spirited* race in some instances, but generally speaking, dull; in fact, says he, "I never met a *rum* fellow amongst them."

"Pray (asked a clergyman), have they any religion or idea of the Deity?" "They have two (replied Ross); *Thaw-r* is worshipped in the summer, and *Ice-is* (Isis) in the winter."

"I should think an Esquimaux would make a capital assessor at an election," said Sam Rogers. "How so?" asked the Captain. "Why who are better judges of the *state* of the *Poles?*" answered Sam

But, however, this is all mere *badinage*. Seriously speaking, Ross declares that the discoveries he is daily making of the altered state of affairs at home, quite exceed all he made at the North Pole. His recollection of the dreadful *icebergs* are quite obliterated by the contemplation of the changed state of the *Scotch burghs*. In fact, the remembrance of his woes and troubles in the dismal Arctic regions, he assures us, are lost in the feelings of horror with which he contemplates the awful changes in the character and constitution, political and economical, of England

"The Esquimaux, (emphatically says the Captain,) if the measures of the anarchists be persisted in, will be happier in his clime of cold and darkness, than the Englishman in this, his once boasted land of freedom and prosperity."

We believe him. The Captain has not gone "so far north" for nothing.

DIALOGUE BETWEEN CAPTAIN ROSS AND CAPTAIN HUMPHREYS,

ON THEIR FIRST MEETING.

Capt. Ross: I have been thinking, Humphreys, what Lord Melville, and Croker, and my old enemy, Barrow, will say to my discoveries. I have prepared despatches for the Admiralty at least ten times, sealed them firmly, and enclosed them in a small wooden box, in the hope that that might be found if I perished.

Capt. Humphreys: Lord Melville and Croker! why, man, they are out long since; don't you know Sir James Graham is First Lord now.

Capt. R. What Sir James Graham? Of course it is not the radical member for Cumberland, who makes the motions about sinecures.

Capt. H The very same, and as stingy in office as he was snarling out. Even the King, though so fond of the service, can't stop his pruning and lopping.

Capt. R. The King! why I thought he preferred the army, and neglected the navy.

Capt. H. Ah! I forgot to tell you. Old George is gone. We've got William IV. now,—the Duke of Clarence that was.

Capt. R. Indeed! what sort of a king does he make? Is he a strict disciplinarian? I hope he has not infringed on the liberties of the people, nor ordered Brougham and Denman, who abused him so at the Queen's trial, to be strung up at the yard-arm? Why, what a horrible renegade Sir James Graham must be! I wonder the Duke would take him.

Capt. H. The Duke! Brougham and Denman? Renegade? Strict disciplinarian! Ah, my good fellow, I see you are a thousand leagues out of your reckoning: we've changed the poles of the earth since you left us.

Capt. R. I hope you've not had a revolution.

Capt. H. Oh no, but we've had Reform,

Capt. R. What! Has Lord John Russell carried his motion to give Members to Manchester, Leeds, and Birmingham? Did the Duke and Peel consent?

Capt. H. The Duke has been turned to the right-about three years since. Earl Grey and the Whigs are now in office.

Capt. R. Is it possible? Grey is a fine fellow, but rather proud of his order: however, you say reform is carried: how do Grey and the borough-mongers go on together?

Capt. H. Just as the dog Billy and the hundred rats did; he has worried them every one; there is no such thing as a boroughmonger in the kingdom—they are all gone to Davy's Locker.

Capt. R. Nonsense, you make game of me. Why, what has become of the Tory majorities of Parliament?

Capt. H. Reduced to a miserable minority in the Commons, and kept in decent order in the Lords. All the large towns have representatives; the rotton boroughs are annihilated. The king turned reformer, and then it was up with the Tories. The Reformed Parliament has emancipated the West India slaves, opened the China trade, and reformed the Irish Church.

Capt. R. What! why these are miracles! Pray have the Whigs found out a way to pay off the National Debt?

Capt. H. No, that and the North-West passage will be discovered together.

Capt. R. But tell me, has the King forgiven Brougham and Denman?

Capt. H. Judge for yourself: the first is a Lord, and keeps the King's conscience; the second is Lord Chief Justice of the King's Bench.

Capt. R. Good Humphreys, tell me next, do people walk on their hands or their feet now in England?

Capt. H. The fashion had not changed in that respect when I sailed; but what think you of their travelling at the rate of thirty knots an hour—a hundred people are so drawn by one engine?

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Capt. R. Now, Humphreys, don't bounce; no tricks upon travellers; you at home are turning Munchausens now.

Capt. H. As I live, it's true; the Duke of Orleans went the other day from Liverpool to Manchester in an hour and five minutes.

Capt. R. The Duke of Orleans! I hope the French have not invaded us; yet old Charles X. must have hated the English Reform.

Capt. H. To be sure he did; he was running as fast as possible the other way, that is, towards pure despotism; so the French capsized him, and put his cousin the Duke of Orleans at the helm. They call him Louis Philip, and he makes a moderately good King, and keeps the French quiet, though the liberals say he does not go far enough. His daughter married Leopold.

Capt. R. Prince Leopold, you mean; do they live in England then?

Capt H. Prince Leopold! No, lack-a day, one has to teach you the whole alphabet over again. King Leopold—King of Belgium; that is a new kingdom sprung up, separated from Holland; the Belgians did not like playing second fiddle to the Dutchmen, so they mutinied, and chose a Captain of their own, and they've got our Prince Leopold.

Capt. R. And what said the Holy Alliance to that?

Capt. H. Said! Why, Nic was beginning to be saucy, and talked of sending an army to France; but the Poles revolted, and it took a twelvemonth to lick them; they fought like lions, but what signifies, when they were surrounded by such a set of devils? At last Nic got them down, and then he cut their throats. As to Austria and Prussia, they did not like the look of things, as the Frenchmen were clearing for action, and calling all hands on deck. So they thought it better to sheer off.

Capt. R. Why, Humphreys, you stop my breath; I can't receive all this at once, and I fear you're bouncing, Humphreys, or else the world is turned topsy-turvy, whilst I have been locked up in ice these four years, almost as fast as a toad in a block of free-stone. I thought if any body had climbed to the top of the tree in England, it would have been Huskisson.

Capt. H. Poor Huskisson, he's gone; he was run down by an engine at the opening of the Liverpool railway, and killed.

Capt. R. What? Oh! horrible! I am almost afraid to ask who is alive. But tell me, how is my old neighbour ——, and his daughter, a pretty little girl just left school.

Capt. H. Little girl! She is Mrs. ——, and has a fine boy a year old.

Capt. R. You don't say so: the chit. Well, I see the world's going on upon the old principles still; but every thing seems to be done quicker in England than it used to be. What is Walter Scott's last tale?

Capt. H. Ah! he has told his last; we have got to the *Finis;* the bright star has set. But I have news for you, the course of the Niger has been discovered.

Capt. R. The Niger? Who is the lucky man?

Capt. H. Two young chaps called Lander; one of them was the attendant of poor Clapperton. They are well-behaved steady lads, and they have done what so many fine fellows perished in attempting. They have traced the river to the Bight of Benin. One of them has gone out again; and it will be well if the dysentry does not catch him this time.

Capt. R. (sighing) I was not born under so fortunate a star. But I have done what man could do, and suffered more than most. Even Barrow will confess that.

Capt. H. Every body will confess it. Cheer up, man, you have solved the problem one way at least: you could not find a passage where there was none. Four winters in the ice is what no man ever endured before. The world will give you every credit for bravery, perseverence, and skill, not to be outdone.

Capt. R. Do you think so?

SCOTTISH CHURCH IN ENGLAND.

Liverpool, 31st January, 1834.—The following testimony is thus declared:

"We, the undersigned ministers, elders, and others, members of the Established Presbyterian Church of Scotland, residing in this town and neighbourhood, consider it an imperative duty, at the present crisis of public affairs, to make the following declaration:

"That, differing more or less in our religious doctrines with the English Dissenters of all denominations, and holding in great abhorrence the tenets of the sect generally styled English Presbyterians, whether Unitarians, Socinians, or Arians, we particularly disagree with the whole of them; by upholding, as we do, the vital importance of a National Establishment for the maintenance and increase of pure and undefiled religion.

"That we consider the Established Church of England, in doctrine, as one of the most pure and undefiled of the Christian Churches.

"That we regard her as the noblest ally of our own National Church, in the defence of the bulwarks of Protestantism, against our impure, insatiable, common adversary.

"That we reverence her, as having furnished more than any Church whatever, in her authors, the most successful champions of the cross of Christ, against infidel writers.

"And that we should account as a calamity to the whole christian world, the spoliation of the Church of England, or its overthrow, as the National Church of the greatest portion of the British Empire."

LINES
FROM COTTAGE SAMPLERS.

(Copied in Westmoreland.)

HERE reigns content
And Nature's child Simplicity:
— Long since exiled from
Polished realms.

ANOTHER:—
'TIS Industry supplies
The little Temperance wants;
And rosy Health sits
Smiling at the board.

EXCUSES.

Dr. FRANKLIN had a servant who was *never in the wrong.* At length the master's patience became exhausted. "My good fellow," said he, "you and I must part. I never knew a person good at excuses, good at any thing else."

REFORMING A SCOLD.

In the early period of the history of Methodism, some of Mr. Wesley's opponents, in the excess of their zeal, took up a whole wagon-load of methodists, and carried them before a justice. When they were asked what these persons had done, there was an awkward silence; at last one of the accusers said, "Why, they pretended to be better than other people; and besides, they prayed from morning to night." The magistrate asked if they had done any thing else? "Yes, sir," said an old man, "an't please your worship; they convarted my wife. Till she went among them, she had such a tongue! and now she is as quiet as a lamb." "Carry them back, carry them back," said the magistrate, "and let them convert all the scolds in the town."

OLD FULLER,
The Church Historian of 1608.

THE following pious thoughts, with many others, were found among this good man's papers soon after his decease:

LORD! Teach me the art of patience whilst I am well, and give me the use of it when I am sick.

LORD! Be pleased to shake my clay cottage before thou throwest it down. May it totter awhile before it doth tumble. Let me be summoned before I am surprised. Deliver me from sudden death. Not from sudden death in respect of itself: for I care not how short my passage may be, so it be safe. Never any weary traveller complained that he came too soon to his journey's end. But let it not be sudden in respect of *me.* Make me always ready so as to receive death. Thus no guest comes unawares to him who keeps a constant table.

SELECT NOTICES.

Hayti.—Boyer, the present President of Hayti, is a dark mulatto, of the middle size, and about 45 years of age. His troops are well clothed, disciplined, and placed on a respectable footing. The uniform is blue, that of the officers adorned with gold, and white trousers. The naval force consists of three ships thus named—the *Wilberforce,* the *Abolitionist,* the *Philanthropist.*——*Cologne.*—No less than 50 manufactories of Eau de Cologne are in activity in this city.——*Zurich.*—Theatres or balls are not admitted within the precincts of Zurich. Concerts, however, are common.——*New York.*—There are now 76 Omnibuses in New York, besides 200 licensed Hackney Coaches.——*The Clergy.*—From the Parliamentary Returns, we extract the following:

Total number of resident Clergy, - - -	4,649.
Non-resident by exemption, - - - - -	2,506.
Non-resident by licenses, - - - - - - -	1,968.
Cases not included among exemptions and licenses, - - - - - - - - - -	33.
Total number of benefices, - - - - - -	10,560.

Temperance Meeting.—Twelve hundred members of the Preston Temperance Society, recently met together in the Exchange Rooms to take tea. A band of music attended. The tea-kettle held 200 gallons. Forty reformed drunkards officiated as waiters.——*The Dissenters.*—Lord Jno. Russell is to bring before Parliament a bill for the relief of Dissenters.——*Impressment.*—A Petition to Parliament against the impressment of seamen for manning the Navy, has been numerously signed by the merchants, bankers, ship owners, and traders of London.——*The London Churches.*—It would appear that it is determined to take down

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

many of these beautiful edifices in the City of London. At a Court of Common Council, one of the speakers voted for their destruction on the plea that scarcely 25 persons attended some of the Churches. Sir Peter Laurie said, that he thought if popular preachers could be obtained, the churches would be filled. Mr. Figgins observed, that one of the now empty churches used to be crowded to excess, even two hours before the commencement of the service. The clergyman was the Rev. Mr. Gunn. The question for pulling down was carried! ——*Dunkirk.*—The price of the quartern English loaf at Dunkirk is 4½. Butcher's meat of all sorts, 4¾ per lb. English weight. Pork, 4d. Good ale, 2d. per quart.——*Vaccination.*—The immense benefits of vaccination are clearly unfolded in a recently published Report of the Select Committee of the House of Commons on the subject. It is a curious fact, as stated in the Report, that the children of poor persons are altogether unfit to furnish healthy lymph for the purposes of vaccination, and very seldom do they shew a fine vericle. When wanted in the country, lymph is sent from London in tubes hermetically sealed; but experience has shewn that lymph collected in any great quantity, or exposed to warmth, will ferment and become *effete*, and, of course, inefficient. The source from which the Vaccine Board derived their original lymph, was a patient of Dr. Jenner's in 1799. The disease was taken from cows.——*Eton School.*—It is singular, that the study of mathematics should not be recognized at Eton, as a part of its public business.—— *Aged Peers.*—There are no fewer at present than seventy peers, all holding seats in the Upper House, who are between 70 and 80 years of age. Among the most aged are —Lord Wodehouse, 93; Lord Lynedoch, 84; Lord Scarsdale, 83; Lord Stowell, 89; Lord St. Helens, 81; Earl of Eldon, 83; Earl Fortescue, 81; Earl of Ranfurly, 80; Lord Carrington, 82; Earl Powis, 80; Lord Middleton, 80.——At a late fire in the shop of Mr. Richardson, the bookbinder, in the Adelphi, the MS. of the *School for Scandal*, in the hand writing of the late R. B. Sheridan, which had been left the day previous for binding, was destroyed.—— The dispute between the government and the bank of the United States embarrasses commerce to a high degree. At the Havannah, the trade of which is chiefly with the union, great distress at present prevails.——The demand for wool is so great that, according to an Oxford paper, sheep have been shorn, and sent to London market in *flannel waistcoats*, in order to prevent the flesh from being deteriorated by the cold.——It has been determined at a general session of the county of Devon, that the grand juries shall be in future chosen by ballot.——The late H. E. Gosling, Esq., has bequeathed 1000*l.* in aid of the funds of King's College, which is to be expended in completing the river front of that building.——A Russian vessel lately brought to Cronstadt the skeletons of three mammoths, found in a subterranean cavern in the island of Podrese, one of which, it is said, the Emperor Nicholas has signified his intention to the French ambassador of sending to Paris, to be placed in the Gallery of Natural History at the Garden of Plants.—*French paper.*——Sir T. Telford, the engineer, has presented to Parliament his report for a more healthy and efficient supply of water to the metropolis. The survey, it will be remembered, was undertaken by government at the suggestion of Sir F. Burdett. The estimate of the expense is calculated by Sir T. Telford at 800,000*l.*——Captain Ross has placed his petition, claiming remuneration for the expenses of his late expedition, in the hands of Mr. Cutlar Fergusson. It is understood that the government will not offer any opposition to a grant. ——A large steam-ship, built for the King of Naples, was launched last week at Limehouse, in the presence of the Neapolitan ambassador. ——Literary and scientific institutions, for the cultivation of the mental faculties, are every where advancing—even in London, where the extreme application of the industrious classes appear least favourable for the purpose. One for the city of London has been flourishing for a considerable time, and now includes a great number of the young shopmen of that part of the metropolis. Its funds are in so prosperous a state, that it has been able to erect a theatre for scientific lectures, and to engage men of considerable eminence as lecturers. The members publish a little monthly miscellany; which shows some literary talent. Another called the Marylebone Literary and Scientific Institution, though of more recent formation, is also going on well. Classes for natural philosophy, languages, and music, have already been formed; and a theatre, with library, laboratory, and museum, is fitting up. The mechanics of this great district have also an institute, under the name of the Marylebone Society for the Diffusion of Useful Knowledge. The drapers of the city have still more recently (Jan. 23) formed an association called the Drapers' Institution, to provide, by voluntary contributions from the drapers themselves and the public, reading-rooms, scientific lectures, libraries, and temporary assistances to such of the members as may, by unavoidable circumstances, be brought into a state of distress. In all these societies, one grand saving principle is observed—the exclusion of all political and theological controversy.——The London and Westminster Bank is to commence business during the present month *(March).*—— The establishment of the South Sea House is to be broken up, by which a considerable saving will be effected.——The new trustees to Lady Hewley's charity are already appointed; they are all Independents, with the exception of one Baptist.——The political unions, which not long since exercised so much influence, are generally described as in a declining state.——Incendiary conflagrations continue in several districts of England.

NEW INVENTION.

THE ANDROMETER.

The andrometer (literally the man-measurer) is an instrument which has lately been invented, for the purpose of taking an exact measurement of the various proportions of the human figure. The inventor, Mr. James M'Donald, tailor, West Register Street, Edinburgh, has obtained for it the approbation of the Society of Arts in this city, and has taken out a caveat with the view of protecting it by a patent. Till the latter object is fully accomplished, or till the ingenious mechanist has obtained the notice and patronage of government, it would be improper to describe it minutely; but we may state, that, as far as Mr. M'Donald's plans have already gone, he is able, by one experiment, to give measurements of the whole height, of the length of limb, the length of body, the length of arm, the height of the crown above the shoulders, the breadth of the shoulders, the breadth of haunch, and, what is most curious of all, of the flexure of the spine, of any individual, whatever be his shape or stature. He anticipates that his engine (for so it may be called) will be of direct and material service in the cutting of clothes, in ascertaining the proportions of soldiers with a view to the detection of deserters, and aiding the exertions of painters and sculptors. The most important purpose, however, to which it may be applied, is the calculation of the relative strength of men. Strength, as some of our readers must be aware, and still more the capability of enduring fatigue, depend greatly upon proportion of parts. No man, perhaps, is exactly proportioned; at least, out of more than two hundred whom Mr. M'Donald has measured, not one has been found to tally with a certain standard of relative measurements which may be called *perfection.* Perfection, alas, is not to be found in man—no, nor in women either, though the poets have occasionally, by their flattery, seemed to say so. More than this, no man is found whose arms are exactly of a length, or who has not one shoulder and one haunch a little lower than the other. As the nearer that men approach to the standard, the greater is their strength, it obviously may be of great importance in many departments of civil life, and also in the army, to have an engine by which the approximation of individuals to that standard may be calculated. For instance, a military commander might thus assort his men in parties of nearly equal physical power for various duties, so that none might fail before the rest, and the whole object might be with certainty accomplished. It is our earnest hope that Mr. McDonald will succeed in turning his ingenious contrivance to some account for his own benefit; for labours such as his are but too apt to prove of service to every one but the individual principally concerned.

MORTALITY IN VARIOUS COUNTRIES.

THE results, then, the tables of Mr. de Jonnes, may be stated as follows:—That 1 out of every 28 inhabitants dies yearly in the Roman States, &c.; 1 in 30 in Italy generally, in Greece and Turkey; 1 in 39 in the Netherlands, France, and Prussia; 1 in 40 in Switzerland, Austria, Portugal, and Spain; 1 in 44 in European Russia and Poland; 1 in 45 in Germany, Denmark, and Sweden; 1 in 48 in Norway; 1 in 53 in Ireland; 1 in 58 in England; and 1 in 59 in Scotland and Iceland. Thus we see that the fewest chances of life, and its shortest duration in Europe, are not, as might be supposed, dependent on the influence of a severe climate, such as that of Norway, or a marshy soil like that of Ireland; and it will be at once seen that the duration of life is brought to its very minimum upon the site over which the beautiful climate of Italy is suspended. On the other hand, experience, contradicting the suggestions of our judgment, fixes the seat of that salubrity which confers old age on the human being, on the rocks of the ice bound regions of Iceland, and amid the fogs of Scotland.

The British Islands, of all countries in Europe, are the most favourably endowed in this respect: the yearly loss by death in those islands does not exceed 18,200 in every million of the inhabitants, or 1 in every 55; whilst in those countries whose shores are bathed by the Mediterranean sea, the proportion of deaths to population is nearly double the amount.

The countries next in succession are those of Norway and Sweden, as, *ceteris paribus*, for three persons that die in the south of Europe, scarcely two die in old Scandinavia; and the same comparative advantages are enjoyed also by Denmark and Germany. But for countries so imperfectly supplied with the necessaries of life as Russia and Poland, the blessing of longevity which they enjoy is quite unaccountable. The population of those two States form together a population of sixty millions of men, whose lives most commonly are prolonged nearly half as long again as the extent of those of Italy, and exactly double that which is assigned for human existence in Vienna.

The medium amount of the duration of life, that in which the proportion exists of 1 death to 40 inhabitants, is to be found in the cantons of Switzerland, in the provincial districts of Austria, in the peninsula of Spain, all of which are under the influence of a dry atmosphere and soil. Both France, the Netherlands, and Prussia, approximate closely to this proportion; and these countries will, undoubtedly, surpass it, unless war, or some other devastating scourge, suspends the progress of ameliorations which are going forward in these countries. Throughout the rest of Europe, the mortality amounts to a thirtieth of the population, and often it increases more and more, in consequence of causes which have for a long time put the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

prosperity of the communities on the coast of the Mediterranean in considerable danger. Upon the whole, then, the just calculation is, that the yearly mean average in Europe, on more than two hundred and ten millions of inhabitants, is five millions two hundred and fifty-six thousand deaths—a mortality of one-fortieth part of the whole, distributed unequally between the inhabitants of the northern and those of the southern division of Europe. The first division has only 1 death in 44 of its population; in the second, the mortality is 1 in 36. In the countries situated to the north of France, twenty two thousand seven hundred individuals, out of every million of the population, are yearly consigned to death. The proportion is twenty seven thousand eight hundred in those territories which lie in the south—a difference of more than five thousand, which is equivalent to a two hundredth part of the population.

Now, if we carefully consider these numbers, as well as the figures of the tables from which these numbers are drawn, we shall see in operation two great causes which preside over the rest, in determining the relation of mortality just described, or, in other words, which fix the number of chances of the continuation of human life. The first of these causes is the nature of the climate: and the second is the presence or absence of civilization. With respect to climate, it may always be regarded as favourable to health, when it is cold, and even when it is severely so, or when the humidity resulting from the proximity of the sea is combined with a low temperature. The least proportion of mortality in Europe occurs in maritime countries which are in the vicinity of the polar circle, as, for example, Sweden, Norway, and Iceland; it is likewise found in those countries in which, as in Russia, for instance, the influence of the climate is not promoted by the influence of civilization, and is of itself sufficient to secure long life to the inhabitants. In temperate latitudes it is not found, as we should be disposed to expect, that life is particularly exempted from mortality; even with the best climate, moral improvement on a high scale is is essential. In those southern countries where the climate would seem so congenial to the human frame, it happens, on the contrary, that it is subject to the greatest number of accidents. Thus, in the smiling plains of Italy, more than half again the chances of death are to be found than are in the wintry cold regions of Scotland; and beneath the beautiful skies of Greece, life is not half so secure as to its continuance, as it is, surrounded with ice in Iceland.

RELIGIOUS INSTRUCTION IN THE WESTERN STATES OF AMERICA.

Nine tenths of the religious instruction of the country is given by the people who itinerate, and who are, with very few exceptions, not, withstanding all that has been said to the contrary, men of great zeal and sincerity.—(*England and America.*)

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By Vivian.

THE PENSION LIST.

Most heartily do we wish that the present shaking of the frame-work of the olden Governments of Europe, may "teach brutish man to know wisdom;" that it may turn many to the righteousness of industrious habits, and, by removing from under them the *public crutch* on which they now walk, learn them the happy art of *going alone.*

To very many pensioned individuals the signs of the times must be awful, and it is no wonder that it should be so. Witness by the late arrivals the debates in Parliament on the Pension List. "Something fell from the Ministers in debate," observes the *Morning Herald,* "about the *propriety* of having a fund out of which *Men of Science and Letters* might be rewarded or provided for above the reach of want."

Ah! how few of such meritorious individuals have ever adorned the pension list of England. A Government has sometimes placed a political writer on that list, not because of superior talents and superior merits, but because he had a claim on their party for the venal assistance of his pen, or because it was thought proper to retain him for future services. In a country where Otway, and even Butler, perished for want of bread; where the bones of the glorious John Dryden could scarcely obtain a funeral; where Goldsmith only escaped from bailiffs to the tomb; where, in fact, poets, moralists, wits, philosophers — men whose genius enriched the language, purified the taste, elevated the morals, and made new accessions to the science of their native land; the instructors and the civilizers not only of the English people, but of mankind;—in a country where numbers of such men have been left to struggle with the sordid anxieties of life, and to perish in the obscurity of neglect, or amid the horrors of a prison; in such a country, we say, the rich feast of the public bounty has been, and is, sumptuously spread for the children of indolence who flutter in the sunshine of Court favour—the butterflies of the hour—or the more dangerous tribe of worthless characters who minister to the vices of the great, and the example of whose prosperity has a demoralising effect upon the public mind.

What a boast was made of the pension to Dr. Johnson! But, as the lawyers say, *exceptio probat regulam.* And when some additional to the economical stipend was asked for to prolong the life of the great moralist and lexicographer, by allowing him to take a continental journey, in compliance with medical advice, it was refused. Yet the memory and the works of that man shall live, and we trust the morals which he inculcated will flourish long after many generations of Cabinet Ministers, ambitious of power for themselves alone, and armies of vulgar, but overpaid politicians, shall have passed from the scenes and the recollections of men.

THE ABORIGINES.

The true lords of the soil, the Hottentots at the various Missionary Institutions in the Colony, are, from the various testimonies of disinterested travellers, doing well, and making rapid progress in civilization and religion. Various public meetings of the Hottentot nation have taken place at several places, and Hottentots have argued well, and unanswerably, on the advantages of Education, Infant Schools, Temperance Societies, and the Public Worship of Almighty God. The same may be said of a large body of Caffres, at whose public Meetings a great interest has been excited.

At Gnadendal an Organ has been introduced in the Hottentot Church; and, moreover, *a Printing Press* has just been added to the Institution. Taking the growing improvement of the Missionary Institutions into consideration in all parts of the Colony, together with that of the Hottentot settlement on the Kat River, it will be readily enough seen that the aborigines will have so progressed in knowledge, that they have now the start of the Boers by fifty years.

Relative to the Printing Press, we contemplate much good to be done by it. At Kat River there are many intelligent Hottentots quite capable of conducting the Press, and maintaining their just pretensions and rights. Let them follow the example of the North American Indians, and let those who wish to see an example of the editorial labours of Indians, take up a most powerful book in two volumes, (8vo. 1833,) by Mr. Colton. It is entitled a Tour to the American Lakes, and discloses the character and prospects of the Indian race. The *Cherokees* are a cruelly persecuted people from the avaricious cupidity of some of the surrounding American States. But the civilized world might be challenged for an exhibition, from the files of its literary records, of a more vigorous and manly composition than that maintained by the Indian Editor of the *Cherokee Phœnix.*

We take this opportunity of recommending most earnestly Mr. Colton's book to all those who wish well to their fellow men. And let the reader take up the second volume, pages 202, 203, and those consecutive, and let him disguise or stifle his emotions *if he can!*

IMMIGRATION TO THE CAPE.

A public writer observes, (1833) "this year the English government is making, to use the expression of Lord Goderich, 'another experiment,' *by providing the funds* wherewith to convey to South Africa a number of destitute children: the prodigious number of twenty! Considering that the population of England is fourteen millions, this experiment may justly be called child's play.—*England and America.*

ATTEMPT TO IMPEDE THE MARCH OF LETTERS.

(*The proposed Ordinance for regulating the Post Office.*)

We take some degree of credit to ourselves, for being the first in the field to sound the tocsin on this subject, and probably to have accomplished some partial benefit to the community at large.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

But our gratification would have been complete, had Council in its wisdom thrown out the Bill altogether. It was, in the first place, an ill-advised introduction, and we pity those in the back ground, (apart from Council,) whose small brains suggested the discussion of the subject. Even in the modified state of the Bill, the inhabitants of the country districts, in reference to the periodical literature of Europe, will be seriously affected. It is altogether a plan for levying *a fine* on the *Moral Government* of the colony,—it is a *tax* on the philosophy of the human mind, it is an *embargo* laid on the *capital* of the learning, skill, and industry of the literary character; it is an *impost* on *the necessaries of life*,—for Books, Pamphlets, Magazines, and Newspapers, may now be reckoned as such.

Again, our regret is, that the draft of the Ordinance in question should be considered as a *Government measure*. So far as is practicable, a government ought to be to a people, what a judicious parent is to a family and neighbourhood—not merely the ruler, but the Guide,—the *Instructor*,—the *Schoolmaster abroad*.

But further, we trust the day is not far distant, when the enlightened Governments of Europe will discover it to be the truest wisdom and policy to defray the whole cost of national postage. What! extend to all the privilege of franking? Yes: and because for one reason you would destroy the privilege by extending it. Is it not dreadful to think of the many thousands of our poor and over-worked peasantry at home, who cannot enjoy any *lettered* communication with their widely-scattered friends, because of their inability to pay the postage? We think much would be gained to the Government of a country in the way of promoting domestic happiness and contentment, could poor people afford to carry on an interchange of communication by letters. We are for the UNIVERSAL FREEDOM OF POSTAGE.

THE EXECUTOR'S GUIDE.

As most of our readers are aware, the old Orphan Chamber administration has dropped into

"The oblivious pool,"

and the legal division of the personal property of intestates is placed by an Ordinance of the Government of the Country, under the management of the Master of the Supreme Court. To afford every information on the subject of the new *Law* relating to registration of Wills and the administration of Estates, Mr. Burton has, with much zeal and ability, compiled and published *(gratis)* for the Country Districts, THE EXECUTOR'S GUIDE, containing a complete abstract of the Law in the form of plain instructions.

But "the recent abolition of the Orphan Chamber Jurisdiction," to adopt the words of an association for the administration and settlement of Estates, which has been set on foot during the last month, (irrespective of Government,) "having at once thrown the management of intestate Estates into a *new channel* of administration, has caused so great a *concussion* and *surprise* in the colony, at least among a *certain* portion of its inhabitants, as to have led to the formation of an establishment by *private* [!!!] association, &c."

Then follow certain rules with a list of names—Mr. Daniel Denyssen,* President.

Now all this may be well enough, but is there any real objection to the "new channel?" or its connection with *Government?* But we put the question in the language of our good friend Mr. Jones, of Bloemhoff, which was written in reference to the Government Bank and Commercial Exchange Annual Report. (See *Advertiser*, No. 726.)

"If the connection leads to any evil, why not declare it? Why plunge the uninitiated in the horrors of a mistrust and apprehension, when their confidence is most essential?"

GAME LAWS OF THE CAPE.

IN such a boundless extent of territory as Southern Africa presents, the very idea of *Game Laws* is enough to make the *Horse-jaws* which adorn the battlements of *Bloemhof Castle* burst into a *horse-laugh*. However, as such game laws do actually exist here, we propose to Council, that, should its famous *Vagrant Law* pass, it be imperative on all *Field*-Cornets, and other *petty sovereigns armed* with despotic power, to take out licenses to *kill*. This will be turning the penny at any rate, and in these hard times we must do business at all hazards.

But on the subject of game laws we have a code of our own to present, quite distinct from that of the existing legislature. The task has been, we confess, most difficult to us, because we have always detested the idea of popping at swallows, sparrows, or partridges. We prefer a more extensive field, and are delighted with the good taste of Mr. Gisbourne, (now M. P) who, some three or four years since, landed on our shores from England *expressly* to shoot lions, run down tigers, entrap elephants, and bag buffaloes. But as our duty calls us to legislate in a small way, we beg leave to introduce the following regulations, solely for the benefit of the gentlemen sportsmen whose misfortune it is to have been born in Cape Town.

RULE 1.—*Always load your gun when on the cock*, by which you lose no time in bringing your piece to your shoulder, a great advantage; and if you possess *common caution*, you run no risk of blowing your head off while ramming down your charge.

RULE 2.—*When a covey gets up, always fire bang into the middle of it.*—It is all nonsense about singling out a particular bird; take my word, it is easier to miss one bird than to miss a dozen.

RULE 3.—*When you are very desirous of game, instead of shot, fire your ramrod.*—By this plan you may spit three brace at one shot.

RULE 4.—*When you scramble through a hedge, by all means let your gun be at the full cock.*—Caution should be the characteristic of a good sportsman; if you shoot your friend, you will be cautious for life.

RULE 5.—*If a single bird gets up on your friend's side, shoot at it by all means.*—The old system is only to fire at those on your own side, which I hold to be a losing game; for if your friend brings down his bird, *he bags it;* whereas, if you fire also, you have the benefit of the doubt, which is settled by tossing up. Never mind the old gag of it being unfair—the *ardour* of a sportsman is a good excuse.

RULE 6.—*When you meet with a hare on her form, kill it if you can.*—It is all stuff about being *unsportsmanlike*—don't attend to such rubbish. My advice is, *fill your bag*, after the manner of the old Court of Circuit.

RULE 7.—*Never brag of being a good shot.* Hold this as a maxim; if, for example, you have leave to shoot over a gentleman's grounds, and are successful, which you are pretty sure to be, if you follow my rules, and are anything of a shot, send your man home with the game, then call at the house and leave a brace of birds, being the *whole contents of your bag*—you will be condoled with, and have unlimited leave to shoot.

RULE 8.—*When you enter a field, holloa and bawl as loud as you can.*—It will save you much trouble, for you will see at once whether there are any birds there.

RULE 9.—*Always train your dog to chop his bird from each covey.*—With a good brace of dogs, so trained, and a double-barrelled gun, I would bag more game than any man in town.

RULE 10.—*Choose your dogs of the highest possible courage.*—By this precaution you can gratify yourself by thrashing your dog whenever you miss, without fear of spoiling him.

RULE 11.—*The instant a pheasant rises blaze away at him.*—My reason for this innovation, is, that if you miss, you will have time to pitch your hat at him.

RULE 12.—*Never omit to prime your piece;* this is a most important point, and involves consequences not at first apparent. I once remember to have accompanied two gentlemen (Government clerks,) on a shooting excursion; one received Rds. 20 per month, the other Rds. 35. They were both cronies of mine, though from want of practice they had made but indifferent progress. Well, up got a fine cock pheasant, and, according to my system, both pieces were levelled, and down came the bird, though I verily believe, such was the eagerness of both sportsmen to have the start, that neither had time to bring his gun to his shoulder. Then came on the dispute; 20 Rds. swore he covered the bird, while 35 Rds. declared he could tell the spot where he touched him. It was referred to me, and without tossing up, I gave it against 35. The fact was that I did not carry a gun that day, thinking I should have enough to do to take care of myself, which, indeed, the sequel proved, for I went home minus the skirt of my coat; I was, therefore, the better enabled to watch the proceedings. 35 demurred at my promptness, and proposed the toss; I, however, referred him to the pan of his piece, which, on examination, he found he had forgotten *to prime!* He lost his chance of his friend's bird: therefore, I would say, however you manage about the charge, *never forget the priming.*

* Mr. Denyssen, we understand, draws a pension from *Government* amounting to £400 per annum.

CORRESPONDENCE.

COLONIAL JOBBING.

To Massi Fifian,

Massi bery good Man—give de Dielogue van Primo and Unforwagt—in

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Literate Peppello*—Now Primo vil de Inglis spreak—nada mas Portogese—Primo kan vortell plenty tings—first, vat is dat Vendutie van de land in de Strand Straat—Plenty Peoples berry surry—vor de Inglis Governament no give more much plenty money vor alle de grote Gentilmen in de Kantore—Massi tell, plenty Bass plenty Clarke Bedanke—Ingland berry Povri—Mi no bilive; vat vor de Governore make Presant van de Money van de land an de Gentilman van Rondebosh? Vat vor!—Blenty Speake—blenty Vind—blenty constaat—no blenty Vorstand—no blenty Money—blenty bankrupt—blenty no good wine—blenty peoples no pay. PRIMO.

We thank *Primo* for directing our attention to this subject. We learn from the transaction, that the privilege of *jobbing*, in the disposal of waste land, is not yet removed from the colony. The influence of the "*red-tape school*" still prevails. In olden times, 'tis true, the thing was done upon a scale of magnitude—every Boer applicant for waste land, was allowed to take a hundred times more land than he could possibly cultivate. He had only to subdue a portion of this, and cry out, *all the rest is barren*. The object of these immense grants was, to keep *down* population, to keep *up* prices, to throw just *so much* in the market as suited the views of the *Town Granary* monopolists, or the *bread-regulating* Burgher Senate:—to prevent any influx of new Settlers, to enhance the value of Slave-property, to save the Colonial Office from being over-worked by the *botheration* of new-comers, and to separate the Boers from each other by a distance equal to the diameter of the circles. The motive for this latter object was fear, lest, if the colonists were not so separated, they might, as union is force, be induced to think, and argue, and reason, and disturb the *decent order of things*. And what has all this led to? Why that the Boer's farming doctrines and views of men and things, are just the same as they were in the days of his great, great, great grandfather.

That the small portion of land he cultivates, *bit by bit*, from amidst extensive and almost boundless resources, is performed according to a system—wretched, yet expensive. And that if he *reads*, it is a weekly paper, which must shut out from its editorial columns all reference to the spread of knowledge, march of intellect, philanthropic exertions, missionary enterprises; nay, it must exclude all reference to the planting of trees, garden and rural economy, village schools, improvements in agriculture, *advantages of a certain new plough*, or other husbandry implements. And further, (monstrous slaves to habit!) not one jot, tittle, or modicum of information must be given relative to any degree of improvement in the wines of the Cape, which, in truth, are getting worse—worser than ever.*

Taking an estimate of the progress of civilization all over the world, up to the present day, and very extensive has as been the progress and prosperity of the British settlers in Albany, as well as the improving intellectual condition of the Towns and Villages, and Missionary Institutions of the Colony, truth compels us to observe, that elsewhere among the white colonists in the distance,—"gross darkness covers the people."†

Reader! we plead guilty to the heinous charge of digression; without intending it, we find that we have dipped into subjects that would supply *materiel* for a whole year of leading articles to a weekly newspaper. We especially beg pardon to our correspondent *Primo*—his question is,—disposing of *crown reserves* for the purposes of private emolument.

The public was astounded this month by the sale of that most valuable portion of crown land situate in Strand-street, in contiguity with the Custom House, the Port Office, and the private mansions leading to the Shambles and Commissariat. This ground was of immense importance to the Custom House and other public buildings. A sale has been now effected, and the premises (formerly the old Navy Yard, by the bye,) have fallen into private hands on building speculation. We find no fault with the purchasers—the thing was in the market; but we do enter our protest against that abuse of power which has divested so much of the town property for the use of a private individual, who sacks by the transaction, about a *thousand pounds sterling*. The same individual,—(we find no fault with *it*) enjoys at the same time, a handsome pension from the colonial funds. In many instances this property was demanded on public grounds, but always refused. St. George's Church was for years delayed for want of a piece of land similar to this, and St. Andrew's Church was driven out of town, (as it now turns out to be the fact) to suit the exigences of a temporal pocket. The transaction may be fairly classed with other jobs, that are famous in colonial history,—forming a *dark picture* in its annals. But there is a *bright side* which must not be overlooked. The public mind is beginning to *disallow* every shilling of mal-appropriation of the public money. The period is fast dying away for this kind of imposition: and, like the baseless fabric of a vision, will leave not

"A *wretch* behind."

Much more might be said on this subject; but as we understand the whole of the matter will come before Parliament, *we add no more.*

CHEAP CORN!—AND DEAR BREAD!

THE farmers are selling us good and cheap corn, and the bakers are dealing out dear bread. This ought not to be, and something should be done forthwith for the establishment of a cheap bread company, or some spirited individual should take the matter into his own hand. Our neighbours of Hobart Town are in similar position with ourselves, but they are providing a remedy—hence the following advertisement from the *Tasmanian* of November.

CHEAP BREAD MANUFACTORY.

SEVERAL gentlemen having taken into consideration, the enormous price charged for

* Literate Pappello April 1834.

* Let not the foreign importer *crow* because of this. Excellent, excellent Cape Wines are to be obtained in Cape Town at proper prices. But unfortunately, many are they, who think that Cape Wines ought to be obtained for the value of an old song. Bring good money into the market, and you may have your equivalent in good, and wholesome, and *generous* Cape Wine. No thanks, however, to the farmer for all this. It is the better sort of the Town Wine Merchants, who, perfectly distinct from adulteration and sophistication, that *matures* and purifies the article, and renders it befitting the table.

† The truth is, that an uncivilized farmer prefers the life of a *squatter*. Now, such a man is naturally *cruel* from his *flesh-eating* propensities. Humboldt says, that he invariably found the farmers of the new continent of Spanish America, who fed exclusively on animal flesh, to be scarcely a remove in their savage notions from the lion and the tiger! The farmer *squatters* on the boundaries of this colony are much more numerous than some men imagine. These people lead a completely vagrant life—their cattle being both bread and meat. But does not our African *squatter* sometimes sow the seed? Yes, he procures a few crops from a virgin soil, and then removes for the purpose of using another spot of virgin soil. In times of distress by drought, &c. he trespasses upon the native tribes; hence the murders, retaliations, and commandoes.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Bread by the Hobart Town Bakers, have resolved to start a *Full Weight Bread Manufactory*.

It is proposed that shares of £5 each shall be issued, and with the amount thus collected, an establishment, similar to those in the Mother Country started. A house in the central part of the town will be selected, and Bread, sold, *for cash only*, at a most moderate rate.

Such persons as are inclined to become Proprietors, will, before the 1st December, forward their names to Mr. HOLLAND, Brougham Cottage, or the *Trumpeter* Office.

A Committee will forthwith be appointed, to further the intentions of the society, and arrange other preliminary matters.

Proprietors of shares will be allowed to purchase Bread at cost price, and other parties at a very moderate profit.

*** A good practical Baker is required, (a Scotchman will be preferred,) who will be paid a most liberal salary, to superintend the same.

Nov. 22, 1833.

A REPLY OF THE TOWN TO THE COUNTRY CALL.

TRUCE! truce to your dreaming! you move but our pity,
Go, clod-pole, and dig and assort all your grains,
'Tis our *lamps*, not the moon, that enlightens the city,
D'ye think your Dame Nature could build our *Exchange?*

A *fig* for fine *sentiment!*—Uti-li-tarians,
Can't admit such false maxims on any pretence,
With Macculloch and Mill, so completely at variance,
All sense is utility—*give me the pence!*

Saving only to painters, and poets, and dreamers,
Your rocks are a nuisance that every one blames;
Say—What were the rivers, deprived of trade's steamers?
And what is the ocean compared with the Thames?

Sweet, sweet bloom our bow-pots, in balconies blowing!
Resplendent is Strand-street, with *lantern-light* made;
Oh! dear are our *heeregrachts* with *sweet waters* flowing,
And *charming* the fir-trees on Grand Parade!

How soothing the hum of the busy crowd swarming,
Harmonious the sounds of the rix-dollar yell,
With its musical falls and its cadences—charming,
And touching the tone of the Baron's cart bell!

What have you that we have not, sad sentimentalist!
We've Government Garden and *forage* to boot,
And as a vernal retreat for any enthusiast,
Green-point is reserved for the town's men *to shoot*.

But what are your roses and lilies, so sickly,
Your ague-ish fountains, that cracked poet's love—
Your quivering aspens, and brambles so prickly,
Say, chopstick philosopher! what do they *prove?*

Cease, then, somnambulist! cease your monotony!
'Twere pity, perchance, from your dreams to disburb ye!
Still dose in your cottage and stick to your botany!
Leave me at peace at my own *rus in urbe!*

NEW TAX.

RUMOUR'S pipe, (blown by conjecture, probably,) asserts, that an Honorable Member of Council is about to bring in a bill for a tax on Dogs.

[WE are sorry to find, that some ridiculous allusion to the *Verre Kykers* in our last, has created a few *black looks* among certain of our fair friends. We shall endeavour to make amends by presenting them with a *Translation*, in language, from a branch of the great Teutonic stock, the purest and least understood (probably) of the descendants of the Gothic root.]

HET LAATSTE ROOSJE VAN DEN ZOMER.

A TRANSLATION
FROM MOORE'S MELODIES.

1.

't Laatste roosje van den zomer
Staat nog bloeyend hier alleen;
Al haar zusters en vriendinnen
Zyn verwelkt en vloden heen;
Zelfs geen bloempje van haar maagschap,
Zelfs geen teeder knopje meer;
Vruchtloos spreidt zy 't lieflyk blosje;
't Zuchtje vindt geen zuchtje weer.

2.

'k Wil u arme! niet verlaten,
Op uw' stengel dra verdord;
Als de schoonsten zyn gaan rusten,
Dat ook u die rust geword'!
'k Zal uw blaadjes zachtkens strooyen,
Nog zoo gloeyend, nog zoo rood,
Om het geurig graf te sieren
Van uw lieven in den dood.

3.

Schielyk, schielyk moge ik volgen,
Als de vriendschap my ontwykt,
En aan liefdes kuischen boezem
Parel noch juweel meer prykt!
Als de trouwe harten breken.
En de laatste liefde vleidt,
Zoek dan op deez' droeve wereld,
Zoek dan daar uw woonplaats niet!

GOVERNMENT GARDEN.

WE have great pleasure in extracting the following from Mr. Louden's excellent work, the *Gardener's Magazine*. The information is quite new to us who live on the spot. Thanks to those afar off, who know our concerns much better than we do ourselves.

CAPE OF GOOD HOPE.

The Government Garden is undergoing various improvements, which, when completed, I shall send you some account of. In general, it may be observed, that a new stimulus to gardening and agricultural improvements has been given throughout the colony since the present governor came into office. Something also must be attributed to the increasing prosperity of Sydney and Van Diemen's Land, which are our principal foreign markets for cattle, sheep, and various descriptions of agricultural produce. (*Extract from a private Letter to D. B., dated Cape Town, Sept.* 18, 1833.)

COTTAGE AND OTHER ARCHITECTURE.

A public holiday the other day, enabled us to rusticate a little in the environs of Wynberg, Plumstead, &c. What havock is made on every side by the falling in of roofs, and the tumbling down of gables. It is really distressing to witness the universality of these disasters—whether church or chapel, mansion, cottage, or hut,—all, all seem alike to perish and to proclaim the absence of science, skill, and good management.

On the subject of buildings and designs, we are glad that Mr. Louden's admirable work—*Encyclopedia of Cottage, Farm, and Villa Architecture*, is creating among us a due attention. At the same time, we think in reference to our climate, the S. E. winds, and importance of flat roofs, a particular chapter by Mr. Louden for our particular guidance and instruction, would be exceedingly acceptable to the community at large.

On the subject of the *Cottage, Farm, and Villa Architecture* by Mr. Louden, we are happy to find in the *Gardener's Magazine* for February of the present year, the following communication from the Cape of Good Hope, with remarks by the Editor. It is gratifying to find that there are among us individuals to identify themselves with the improvements of the age in which they live.

Encyclopædia of Cottage, Farm and Villa Architecture.—Sir, I have perused your *Encyc. of Cottage Arch.* with great pleasure. It is a book which has long been wanted. What would I have given for such a book when I first started in life: even now, at the eleventh hour, I am delighted with it. I regret that I was not in England at the time your work was in progress. If I had, I should have sent you one or two designs for small cottages, which I have been in the habit of thinking nearly perfect in their kind. One of them was very similar in its general plan to Sir Robert Taylor's beautiful villa at Richmond, only on a smaller scale. [We shall feel much obliged to Colonel Thomson for plans and elevations of small cottages such as he mentions, and to any of our readers, to whom an opportunity offers, for ground plans and elevations of Sir Robert Taylor's villa: both would be exceedingly suitable for our *Architectural Magazine*. Colonel Thomson next describes an improved roasting-oven, which will form an article in the first number of our *Architectural Magazine;* and one which, we think, will be of very great value to the public. He then concludes his letter with the following paragraph:—]

If you should deem these details useful to your numerous readers, you are at liberty to insert them in any future edition of your work; for there will no doubt be many. [The work is stereotyped; and, consequently, the number of impressions which may be taken being unlimited, no new edition is required. All corrections, additions, and improvements to the work will be given in our *Architectural Magazine*, which is intended to serve as a perpetual supplement to the *Encyclopædia of Architecture*, in the same manner as the *Gardener's Magazine* is a perpetual supplement to the *Encyclopædia of the Gardening, E. of Plants*, &c.] My object [continues Col. Thomson] is general utility; and I know of no subject which will contribute so largely to the comfort and happiness of Englishmen all over the world, as a practical improvement in this branch of domestic economy, which may have the effect of overcoming in some degree that rooted prejudice in favour of long open kitchen ranges, which roast the poor cook as well as the meat, and consume as much coals in one day as would do the work of ten properly con-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

structed furnaces. Wishing you every success in your useful career, I am, Sir, yours, &c.—*Robert Thomson, Lieut.-Col. Royal Engineers. Cape Town, Oct.* 30, 1833.

CAPE FLATS.

SOME very worthy individuals seem to be highly indignant at the proposed Ordinance respecting the preservation of the bushes, &c. on the Cape Flats. The draft of the Ordinance does, perhaps, comprehend in its provisions too great an extent of country, but we submit that without something of the kind passing into law, the people will never think it worth while to improve the roads or plant trees. Who would think of planting timber or sowing seeds, for the simple advantage of feeding stray cattle, or heating the baker's oven? Let the Bill pass, and men will turn their attention to planting: at present, the system fosters idleness and robbery, and it is a complete drawback to the progress of civilization and rural economy. The out-cry in Cape Town against the measure is chiefly among the Bakers; in their appeals we find the truth come out, that they are obliged to destroy the bush-wood, else what could they do? Do? Use coals, far cheaper than wood,—promote the shipping interests —and by so doing, in reference to coals, you will not only save in the article of fuel, but much greater in reference to servant-hire, wagons, and horses. But coals won't do for our ovens. Won't they? Then introduce the London ovens, in which coals *are* used, *and down with the wood.* Improve with the times, and cease from the inquiry—*What will Mrs. Grandy say?*

CAPE OF GOOD HOPE ASSOCIATION FOR EXPLORING CENTRAL AFRICA.

THE Expedition, under the direction of Dr. A. Smith, is now very nearly ready for its important start, and may be expected to be on its march in the course of the present month. There is one happy circumstance in all the numerous meetings of the Committee in Cape Town for the furtherance of this grand object, and that is, a remarkable spirit of union, or oneness of sentiment, which has invariably prevailed.

An extraordinary meeting took place in the Committee Room of the Public Library on the 30th, (that of the Commercial Exchange being too small for the audience.) The Hon. Col. Wade was called to the chair. On this occasion, the Rev. Dr. Burrow, (Secretary Correspondence) tendered his resignation, being on the eve of departure for Europe. A vote of thanks was voted to the Rev. Doctor by acclamation, and the resolution embodied in it the grateful acknowledgments of the Association for the uniform and disinterested exertions of Dr. B. in facilitating the important objects which the Association has in view. The greatest proof of solemn devotedness to this great cause on the part of Dr. Burrow, is, that he parts with his only son, a youth of promise, who is to accompany the expedition, and is enrolled as one of its members.

WHIMS AND ODDITIES

Of the GRAHAM'S TOWN JOURNAL, 29th May.

1.

Mr. Cowderoy announces a prosecution against all persons taking *Bees'* nests on his estate, and Messrs. W. and F. Lee, in the same paper, inform the public that prime salt *Bees* will be kept always on hand. We trust the Messrs. Lee are not guitly of taking the nests of Mr. Cowderoy.

2.

The "*Cargo*" of the Urania is stated in the shipping intelligence of Port Elizabeth to be—"Mr. Searight, master De Villiers, 4 Artillery Men."—*Passengers,* "3 steerage passengers."

3.

At Port Elizabeth, Mr. Churchwarden John Cobley Welsford, is tried and condemned in £100 penalty in Court, for selling without license the pews of that litigious and never-to-be-finished affair—the Port Elizabeth Church. One of the witnesses for the prosecution swore that the sale in question took place after the manner which he had been in the habit "*of selling himself in the public market!*"

THE ORTHODOX PROTESTANT DISSENTERS.

THIS christian body, we are happy to observe, by the March communications, has commenced a general and *liberal* subscription for seconding the efforts of "Missions to the Negroes in the British Colonies."

Again, a day of thanksgiving to Almighty God is to be observed by the Dissenters on the 1st day of August next, the day on which the glorious Abolition Act will come into operation. —"A day to render devout thanksgiving to the Most High for benefits secured, and to implore His benediction on the efforts of His people, for the moral and spiritual emancipation of those who will then receive their civil freedom."

This *ransom* by the people of England will now for the *first time,* introduce a *free people* to the *freedom* of our common christianity. An immense work is at hand, not only in the West Indies, but at the Cape, for the christian minister and pious missionary. Unless, indeed, we are resolved still to slumber at our posts, and allow the imbecile creatures of Mahomet to thrust the sickle into the harvest-field. Unless we are still disposed to cry "peace, peace! when there is no peace!"

Again, we discover, that the Protestant Dissenters have resolved on sending a deputation to America. Its clerical members are the Rev. A. Reed of London, and Rev. J. Matheson of Durham.

CHINA TRADE—The ANNA ROBERTSON.

THIS extremely beautiful and admirably-adapted ship (Capt. Nairn,) put into Simon's Bay the other day, as a free trader for China. Her captain and officers were formerly in the service of the H. E. I. Company: they now act for themselves, We believe this to be the first ship that has arrived on our shores on *free trade principles,* and as Capt. Nairn is to pay us a visit on his *homeward-bound* voyage, we trust that the Cape will enjoy the taste of a cup of improved souchong. We learn from this vessel that many others are starting for the East, and that two beautiful ships are about to proceed to China from the shores of England on *temperance principles,* i. e. without a drop of spirituous liquors on board.

THE PANEIDOLON.

WE tried hard the other day to prevail on a visitor to leave behind him this useful invention—but in vain. A few particulars respecting it may gratify the curious.

This exceedingly clever, newly-invented instrument, the most silent—the most faithful—and one of the most entertaining *compagnons de voyage* which any traveller can desire, consists of a small box, in which can be packed anything it is capable of holding. On being emptied for use, all that is necessary is to put one's head into one side, and then trace with a pencil the objects which are instantly seen most beautifully delineated at the other.

Whether the perspective be complicated or simple—whether the figures be human or inhuman, it is all the same, for they are traced with equal facility, rain not even retarding the operation. The Paneidolon also possesses an advantage which all very modest people will appreciate, for the operator's face being (like Jack's) "in a box," no person can stare at it or the drawing; whereas, while sketching with the camera lucida, everybody must have observed that the country people in crowds, not only watch every line of the pencil, but laugh outright at the contortion of countenance with which the poor Syntax, in search of the picturesque, having one optic closed, squints with the other through a hole scarcely bigger than the head of a pin, standing all the time in the comical attitude of a young magpie looking into a marrow-bone.

COLONIAL SKETCHES.

IN SEVEN CHAPTERS.

Contents:

[Old Prejudices—Rising Light—Reading habits—Throne of Mammon—A narrow Soul—Afar in the Desert—Uitenhage—Elephant's Bush—Jan Andries van Wyk—The Scottish Schoolmaster—The *teachable* Spirit—The Indian Traveller—The *Advertiser* Press—Small Beginnings—Who is the Great Man—Village of Glenburnie—The *Laportes*, the *Retiefs*, the *Zeilers*, and *Van Donders*—A good Wife—Dutiful Sons and Daughters—*Tea-water* minnies—Evil Tempers—*Vagrant* Boers—Chumie—Caffer Worship—*Property* in Human Beings—Settlers in Albany—Apathy of the Cape-born—Scottish independence—Magic of Industry—Improvements at Elephant's Bush—Deviations from the *gude auld gaits*—Hydraulics—*Merino Sheep*—Hopes and Fears—Journey to Uitenhage—Charms of Nature—The Market—Triumphs of Merino Wool.]

CHAPTER THE FIRST.

The prejudices and deep-rooted aversion of many of the old colonists in the far distant parts of the country towards improvements in agriculture, are but too well known. The same may be said of their general habits of life, and their comparatively Turkish acquiescence in *things as they are.* Hard and unmalleable, positive and stubborn, they cling with most provoking stupidity to

"Opinions made by *habit*, not by thought."

It is *ignorance* that gives a sort of eternity to prejudice, and perpetuity to darkness. Nevertheless, the day is dawning, and the shadows are fleeing away. A *light* hath arisen, the properties of which are *penetration* and *universality.* As the sun kindles and preserves a principle of vitality in the material world—this light communicates and renders permanent the life of the moral world. Whatever the sun exhales, it changes. Does it imbibe the dark wave of a putrid lake? It refines—it converts it into a pure, transparent vapour. Just so the qualities of moral light. It gives a new tone to the feelings—a new light to the judgment—a new direction to the will.

It would be extravagant to hope that the mere perusal of this, or any other narrative or paper, should effect any immediate reformation in many of the dark places of the colony; yet, when we know that a strong current of improvement runs at present in very many of its widely-scattered parts, we trust that the day is not far distant when the "little leaven" shall "leaven the whole lump." One of the good signs towards improvement is, that there is a *reading* and a *reasoning* spirit abroad. That many are removing from old habits by the hints and suggestions of books, pamphlets, and newspapers, is quite certain. Knowledge in general expands the mind, exalts the faculties, refines the taste, and stimulates to inquiry and thoughtfulness. On the subject of *reading*, the late Robert Hall made the following just observation:

'The man who has gained a taste for good books, will in all likelihood become *thoughtful;* and when you have created the *habit* of thinking, you have conferred on him a much greater favour than by the gift of a large sum of money, since you have put him in possession of the *principle* of all legitimate prosperity.' But we would "a tale unfold." Perfectly distinct, be it told, from

'Power's fantastic, fairy, sylph and fay;'

apart from

'Bogles, brownies, gyre carlinges, and ghaists'—

wholly unconnected with bloody feats, and such like delectable *commando* ingredients, which, like cayenne and spices, give a triumphant zest to literary and other entertainments. Nor is ours an imaginative affair—a weave from fiction's web—a figment of the brain—a day-dream. No: it is a plain, humble narrative from rural life, and will probably afford some illustration to the preceding observations.

CHAPTER SECOND.

Now, then, gentle reader, we must bid adieu to town and yonder time-killers spelling over the hand-bills on the wall. We must leave the heart of the busiest haunts, where Mammon sits enthroned in tyrannic state, and deals out favours to those who grovel round his foot-stool, in willing, though degraded homage. Do but take a farewell glance. There, there they go,—their whole hearts, hopes, wishes, powers, faculties—all cast upon the same object. Look, do look upon that particular countenance. The heart within that carcase is dry, cold, and callous. The coffers of the man are richer than any other of his neighbours—but he wears a narrow soul. He is just now in ill-humour with everybody and everything, because he was invited to subscribe towards the Expedition to Central Africa! And yet he wears the *strut* of independent worth, and is not borne down by decrepitude. Thus has he lived—thus will he live; and when his bones shall be carried to their last home, will the mourning of his *paid* bearers and professed friends go deeper than the color of the clothes they wear? But, reader, we can be thy *cicerone* no longer. We must away—

There is rapture to vault on the champing steed,
And to bound away with eagle's speed;—
Away, away from the dwellings of men
By the wild deer's haunt and the buffalo's glen;
By valleys remote, where the oribi plays;
Where the gnoo, the gazelle, and the hartebeest graze;
And the gemsbok and eland unhunted recline,
By the skirts of gray forests o'ergrown with wild vine;
And the elephant browses at peace in his wood,
And the river-horse gambols unscared in the flood.

CHAPTER THIRD.

We are now in the district of Uitenhage, in which much of the zoology as described in the above lines by the poet Pringle, is welcomed by the traveller: and we hasten to introduce some three or four characters of the genus in the first order of the Mammalia.

At some considerable distance to the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

left of the Sunday's River, forty-five miles from the village of Uitenhage, and thirty from the celebrated Moravian establishment at Enon, stands, amid nature's solitude, the almost inaccessible Farm-house dwelling of Jan Andries van Wyk, termed *Elephant's Bush.* The farmer was born and bred on the premises, and, until about the year 1828, had contented himself with pursuing the same system in husbandry and household economy, as that practised by his father and grand-father. But in his earlier years he had been fortunately placed in the hands of the *schoolmaster abroad*,—a *stranger*, a Scotchman, a man of information, who had wandered to the farm-house, and abode on the spot four years. The library of the stranger was small, but it was select; and happily, from this humble store, young Van Wyk found enough to awaken his curiosity, and incline him to reading habits. These, with the kind and affectionate attentions of the master for the improvement of his pupil, laid the foundation for future progress, and above all, implanted in him that important temper of the mind, and fore-runner of knowledge—the *teachable* spirit. But on the departure of the teacher, and Van Wyk becoming possessor of the estate, and the father of a family, the affairs of the farm remained stationary. An accidental circumstance aroused the farmer from his lethargy. His hospitalities towards an Indian traveller, procured for him, in grateful return, the weekly supplies of the *Advertiser* press of the colony. These presentation copies were continued for one year, and greatly did they open a new world to his enraptured mind. The constant reference in this press to the improvements in the arts, sciences, domestic manners of the world in general, and more especially the interesting facts respecting the importance of *Merino wool* to the colonists, could not fail to awaken a profound attention on the part of him in whose mind the seeds of improvement had been already planted.

From this visit, we shall discover a new era to have commenced in this sequestered part of the district of Uitenhage. How much is realized to a family, a village, a world, from small beginnings! From a source which the traveller might dry up with his foot, the mightiest rivers have arisen, and while their spring might lie in the hollow of the hand, swollen by ten thousand tributary streams, have rolled a flood, which fertilized and enriched with commerce a mighty empire. The celebrated river which was to Egypt in the place of rain and of dew, buries her seven tides in three obscure fountains, which the man who had travelled inhospitable deserts, and carried his life in his hand to unveil her source, overstepped with ease. Who that had seen Rome a mean and paltry village with a few huts, tenanted by savage and brutal inhabitants, could have conceived that he beheld there the future seat of learning, and the germ of an empire co-extended with the world?

Let it not be supposed that we wish to *beggar* "pomp and circumstance" by connecting it in reference to the ploddings of a country farmer. No, we do not: but we want to tell "pomp and circumstance" that they had once *a beginning.* That there is nothing *little*, even in the history of humble life; and that in such history, there is much more to attract the thinking mind, than the conquests of Alexander or Napoleon: for, in the comparison, the revolutions effected by the devastations of the conqueror, are coarse and vulgar matters. Men err in nothing so much as they do in the estimate which they make of human greatness. The hero, the great *man of the world*, is he that makes a bustle,—that dines with an emperor or a king,—that makes the road smoke under his coach-and-six,—that raises a dust about him,—that rattles through the towns and villages with all the dogs barking at his heels.

CHAPTER FOURTH.

When some of the cottagers of Glenburnie, a village in Scotland, first began to discover the rising light of improvement, great was the vexation and lamentations of a class of people who stood up for the customs of what they termed, the *gude auld gaits.* And when Willie Morrison, a cottar, had the courage to grow sweet-brier, crocuses, primroses, violets, and pot-herbs, at the instigation of a benevolent lady, "Eh!" cried Mrs. MacClarty, to her neighbours, "I wonder what the world will come to at last, since nothing can serve the pride o' William Morrison, but to hae a flower-garden whar' gude Mr. Brown's midden-stead stood sappy for mony a day!" Then, again, when reform commenced in the household management of a village family, Mrs. MacClarty railed at the parties, and hinted, that some folk "were sae saucy as to pretend that they cou'dna sit down in comfort in a house that was na clean soopet." !And so it was with the Laportes, the Retiefs, the Van Donders, and the Zeilers,—the farmers and their families who, however greatly separated as they were from the Van Wyks, yet were their nearest neighbours. Their occasional visits to the latter, caused no small commotion in their own family circles. They beheld strange doings at the *Elephant's Bush*, and they did not fail to proclaim in all directions, that Jan van Wyk and his wife were not only slaves themselves, but had placed the yoke on the necks of their sons and daughters. The truth is, none were *idle* at *Elephant's Bush.* The farmer himself was a bright example of *early rising* and active industry. He had no time for the *everlasting pipe* of some people, much less could he afford to be the mere *overseer* of his workmen, or to indulge in the inglorious and sensual habit of after-dinner naps. And as for Mrs. van Wyk, her hours were *happily* spent, because *hours of idleness* were not her hours. She was, in fact, a real helpmate to her husband. And who that has ever known the blessing of a modest, tender, cheerful, sensible helpmate and companion, amid the flowers of youth, the fruits of manhood, and even the yellow leaves of declining age, but will recognize the truth of one inspired, when he said—*A virtuous woman is a crown to her husband.* And the four daughters were trained in their mother's steps, hence they were *operatives* in the family, assisted largely in its domestic offices, plied the needle, tended the poultry, watched the bee-hives, and every evening of the day instructed the slaves in reading and writing, and the principles of the christian religion. And the three sons—they could follow the plough, cultivate the garden, bend their backs to the sickle, and take their share in the labours of the brick-field. Just the reverse were the offspring of the Retiefs, and others in the district. The young men of these circles would loiter away their years of existence in lolling about the premises, in a state of idleness, poverty, and mental imbecility. If they were in the least excited, it was when any of the neighbouring families met together; and then, over the cups of *tea-water* with their *minnies*, the Van Wyks and the government of the country were rated with the utmost vehemence. These evil passions were generally fiercest, whenever it happened (as it was now and then the case) that a stray copy of a disreputable Cape newspaper fired their tempers. Then it was that they vent their spleen on the rulers of the land, and declaimed against Missionaries, Hottentots, Settlers, and the English. But if the grumblers were active in any pursuit, it was to wander

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

far away in the course of the year, with their long guns, without any definite object except that, probably, which used in the dark times to tempt the borderers of England and Scotland to ride forth into each other's country "to catch a prey."* These half civilized of the North of Uitenhage would sometimes stray to the far distant lands of Caffraria, and great would be their mortification on witnessing the improvements of that fine race of people, the Caffers, at the Missionary Institutions. We were present ourselves at the Chumie (Glasgow Institution), when, during the church service on the Sabbath, and just as the Caffers had sang in beautiful melody a hymn of praise, Retief and a party of his troopers presented themselves at the door of the church. To have entered within, would have been a degradation to these white-skinned people. They stared with all the stupidity of idiotic vacancy. They grounded their arms, and having eyed the congregation, the elder Retief muttered certain words indicative of his contempt for these swarthy sons of Africa. In fact, they wished to retain a *property* in these human beings, and considered it an intolerable hardship that these men should not be *forced* to work for them, and become their bondsmen.† They viewed the objects of this peaceful scene as mere *materials* for their own selfish purposes, just as the celebrated Arthur Young, (but with more justice on his part,) who, looking upon the volcanic fire in Italy, said, "I wish I had it at Bradfield, (his farm,) I would use it for boiling potatos for the bullocks."

CHAPTER FIFTH.

But if the regenerated condition of the swarthy sons of Africa vexed the degraded souls of these VAGRANT Boers, nothing was more unwelcome to their views of things than the enterprise and growing prosperity of the British Settlers. In this respect, Van Wyk and many of his countrymen were at issue. This good farmer was always wont, in the course of his disputations, to argue thus:—"How is it, that whilst our families are multiplying in all directions, there is no disposition to seek out new homes and new abodes—no anxiety to *cast off* our swarms? Happy would it be for us of Cape birth, to possess half the courage and perseverance of the brave settlers in Albany. What have they not done by perseverance! The desert and the solitary places have been cheered by their presence; to make room for them, the very beasts of the field deserted their ancient haunts; houses rose, and villages, and churches, and schools sprang into existence, as if by magic; thousands of acres which had for ages lain untilled, were disturbed by their plough; *the shout of harvest* was heard in the desert,—the lowing of kine and the bleating of flocks."

And here, we pause for a moment, in order to moot an inquiry into the why and the wherefore of the singular apathy on the part of the *Cape Colonists* in general, towards improving their condition by any *legitimate* course of immigration or otherwise. And we would direct the attention of the reader to the strange stupor in this respect, which is manifested by the large groups of rising and unprovided manhood which assail us on every hand, not only in the country districts, but especially in Cape Town and its vicinity. Families multiply and crowd on each other, with no disposition, as Van Wyk justly observed, to *cast off their swarms*. How different the case with the Scottish people. Like the young partridge, the Scotchman is scarcely hatched, ere he sets out with his shell still clinging to his downy wing in search of a new region, where he will not be a burthen to himself or others. Assuredly the attachment to home, the ties of kindred, the chains of custom, and the habits of youth, exercise a wholesome influence in softening and humanizing mankind. Yet still they ought never to be indulged at the sacrifice of the higher qualities and more inflexible duties of the human race. To be a useless idler at the parental home, a dead-weight on the shoulders of kindred, or a dependent on the kindness or bounty of friends, rather than burst these ties and attachments, however amiable it may be, sinks us below, far below the level of the generous manly spirit, which scorns the indulgence of such a weakness at such a price, and dashes forth into the stormy ocean of life, trusting in his own well directed exertions and his Maker's blessing, whether he shall sink or swim. Let the Cape-born subject of Great Britain take these hints in good part. Let him look to his standing in society. The Britons, whether in this metropolis, or as settlers in Albany, have by their activity, rendered it absolutely necessary that every body should be as stirring as themselves; for though an ignorant community may do very well by itself, the moment it comes in contact or in rivalry with one that is active and industrious, it must go the way of all flesh, or accommodate itself to the *language* of the ruling dynasty, and the circumstances of the times, and exert all its energies to prevent falling in the rear of the rest of the community.

CHAPTER SIXTH.

The knowledge and the power of man over inanimate nature, has been increased ten fold in the course of the last half century, and we fully believe that what has hitherto been done in extending this prowess, is but a small part of what yet remains to be accomplished. This triumph over the intricacies, wilds and wastes of nature, is of recent date in Southern Africa. Such is the magic of industry and enterprise directed by the arts of civilized life, that, directing our eyes towards Albany, we behold all those changes which have reclaimed the wilderness, and produced the rich redundant blessings of cultivated fields and comfortable abodes. And what it has done for a town, a village, a community, it will accomplish for a single family. And we are reminded by the latter reference that our tale is yet unfinished—we proceed, therefore, to its continuation and conclusion.

Elephant's Bush Farm continued, under the Van Wyks, to be progressing monthly in produce and property. The planting system, vigorously pursued, had overcome those difficulties which had formerly been deemed insurmountable. The digging of a well, and abundant supplies of water according to the principles of hydraulics recommended at Enon, rewarded the toil of the farmer, but the crowning work was the introduction of some *Merino sheep*. This circumstance set up the bristles of the neighbouring farmers more than ever. Their rage knew no bounds. This deviation from the *gude auld gaits* was not to be borne; hence every attempt was made to mock, and jeer, and scoff at Van Wyk's new introduction. It requires a hardy virtue in some constituted minds to repel a sneer. In the christian scriptures we read of the *trials* of the early christians from "cruel mockings." These things too often deter the mind from pursuing with unflinching firmness the path of duty. It cannot be denied that Van Wyk was, with all his christian principle, too sensitive on this head—hence he had at times his misgivings, and was almost inclined to suspect that the wool-speculation would turn out as his neighbours predicted—a losing concern. But the day of trial was at hand, the shearing season arrived, the first fruits of the fleece seemed, according to the farmer's inexperienced judgment, to be a fair sample,—it was housed, packed, and on the morning of May day *anno domino* 1834, the surprising wagon spectacle of an immense pile of *Merino wool* was seen leaving Elephant's Bush, and journeying towards the market of Uitenhage.

The farmer rode at the head of his load of wool in somewhat pensive mood; but his mind resumed its elasticity from the salubrity of one of the finest of African days. There are those who complain of times, seasons, and climates, from one year's end to another. But beshrew such pestilent humgruffians! Who can imbibe the blessed air of heaven, contemplate the bright shining of the sun, cast his eye o'er the boundless seas, or glorious mountains blue, without awful recognition of Infinite Power and Goodness?

Here our worthy farmer contemplated before him even in the midst of weary Karoo roads, and apart from the things of man's dominion, all that could attract the attention and gratify the senses. Seldom (at this late season of the Cape year,) had he beheld the flowers, the heaths, the shrubs, in all their boundless variety more delightful than on this May-day. The forests of Mimosa teemed with the warbling of birds in all their gorgeous displays of diversified plumage. And then to greet the passing traveller, there was the huge elephant seen amidst the jungles of his favorite Speckboom. There was beheld in various directions, the zebra, with flowing mane, the fleet-footed ostrich, the timorous quagha and the gnoo, the gazelle, and the hartebeest, either grazing among the pathless fields of nature, or bounding with timid step from the sound of man's approach. But if these things gratified the eye and the ear of Van Wyk, he was in possession of *that* whose glorious visions far exceed all that the May of life ever realized. The richest gifts showered on the *earth;* her diamonds, gold, and carpets of flowers; her power of renewing all her youthful charms at each revolving year, are nothing to those bestowed on man—his HOPE—his reason—his immortality.

CHAPTER SEVENTH.

This life is a checquered scene: there is no pleasure without some accompanying alloy. The brightest morning is often overcast with clouds. So in some *minor* sense, Van Wyk experienced a degree of mortification on finding a party of his uncouth neighbours at *vit-span* on their way to Uitenhage market. They set up a loud laugh on the nearer approach of the hugely-laden wagon of wool. They prophecied evil as heretofore, on the results of the sale. They pronounced the sample to be not worth 2d. per pound, and they insisted with much vehemence, the importance of sticking to the

* It fell about the Lammas tide,
When the muir-men win their hay;
The doughty Earl of Douglas rode
Into England *to catch a prey.*
He chose the Gordon's and the Græmes,
With them the Lindsays, light and gay;
But the Jardines wald not with him ride,
And they rue it to this day.
(Scott's Minstrelsy of the Border.)

† As subsequently admitted by Retief to the writer.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Jude auld gaits. Their own produce for the market, was composed of a desultory mass of odds and ends, that might realize, probably, from 100 to 120 Rds. They left Van Wyk to pursue his journey, and made haste with their cargoes to the market. They did not fail to announce on their arrival, the coming of their neighbour. The market was crowded on his approach; the people gazed in the streets as the load passed by. It seemed a thing incredible that Northern Uitenhage should produce Saxon wool. Worthy Mr. Fleming left his desk, to cry "well done" to Van Wyk; the truly apostolic minister of the parish, Mr. Smith, gave a hearty shake of the hand to the farmer, and Capt. Cornelius Bolton Alcock bowed a nod of *quiet* approbation.

Van Wyk's sale now commenced: the good man seemed on the rack between hope and fear. He stood at some distance from the busy scene, on a small point of eminence which enabled him to overlook the proceedings.

"Come," said the auctioneer or market-master, (a very respectable man,) "come, who offers *one skilling* a-pound for this excellent lot of real wool—it weighs eighteen hundred pounds."

"I do," "I do," exclaimed several voices.

"Gentlemen," said the salesman, "proceed, it will be positively sold to the highest bidder." *Two skillings* were offered—*three skillings*—*four skillings*.

"Hold," said Van Wyk, overjoyed at the price—"that's quite enough!"

"*Five skillings*," cried a bye-stander.

"Enough, enough!" repeated Van Wyk.

Six skillings and *seven skillings* were the biddings in succession. The hammer fell at *one rix-dollar* the pound, and there was a shout of triumph in the market.*

CONCLUSION.

On the evening of the second of May, there was an evident anxiety at Elephant's Bush for the return of Farmer Van Wyk. At length the horn from a height in the neighbourhood, at which was posted a Bechuana sentinel, announced the approach of the party. The premises were deserted, and the whole family were on the look-out on the tip-toe of expectation. The fate of the Merino flock was now to be decided. The evening was beautiful, and nature seemed to hail Van Wyk's return. The birds twitted an evening song from the mulberry trees, the crickets chirped, and the grasshoppers flitted their circumscribed flights, the geese gabbled, the lambs bleated, and Jowler and Pincher barked with delight. Cupido, the wagon-driver, had communicated the success of the wool sale to his fellows, and the good news soon spread to the family. That gentlest, tenderest portion of the human race, whose good-will is untiring, whose goodness never dies, need we say, (the women) of the house, including the wife, the daughters, and the maids, shed tears of joy, when, to their astonishment, Van Wyk threw down *One thousand eight hundred Dollars* on the bright shining table. That night was a happy one at the farm. The language of gratitude was poured forth at the hour of evening sacrifice, and in thankful remembrance of the never-to-be-forgotten schoolmaster, the Scottish version of the 23d Psalm, concluded the household devotions of the inmates at Elephant's Bush.

THE BENEFITS OF VACCINATION.

A Committee of the House of Commons was appointed in May, 1833, to enquire into the expediency of continuing the Vaccine Board. The views of the Committee appear to be decidedly in favour of continuing the Board. The Report of the Inquiry has been printed, and is most satisfactory to humanity, and should be diffused in every quarter of the earth.

It appears that prejudices against vaccination are by no means clearly got rid of, even by medical men.

In former days, the famous Dr. Mosely was the great and avowed enemy to vaccination, and writes in one of his Books as follows:

"Among the numerous shocking cases of cow-pox which I have heard of, I know not if the most horrible of all has yet been published, viz. of a child at Peckham, who, after being inoculated with the cow-pox, had its former natural disposition absolutely changed to *the brutal;* so that it run upon all fours, like a BEAST, bellowing like a cow, and butting with its head like a bull. For my part, (it is added, with philosophical scepticism,) I can scarcely think it possible, *having had no time to ascertain the truth!*"

In reference to this passage, and the various publications of Mosely, a wag thus addresses him:

O Mosely! thy books nightly fantasies rousing,
Full oft make me quake for my heart's dearest treasures:
For fancy, in dreams, oft presents them all browsing
On commons, just like little Nebuchadnezzars.
There, nibbling at thistles, stand Jem, Joe, and and Mary;
On their foreheads—oh, horrible!—crumpled horns bud;
Here Tom with a tail, and poor William all hairy,
Reclin'd in a corner, are chewing the cud.

THE BEACON OF HISTORY.

1665—1834.

"*Oh, what a preacher is calamity, my brother!*"

THE attentive reader of history, and he especially who compares the past with the present, and watches the "signs of the times," will scarcely overlook those days of church contendings and angry controversies, which in the reign of Charles the II. distracted the realm of England. It would seem that no earthly power could appease the animosities of the various religious bodies of men. But can we overlook those means which an over-ruling Providence (Lord Bacon has an expression in one of his Essays, "the history of Providence,") effected in His displeasure, to teach men their own impotence and mortality? It were well, that now-a-days, when *fierce* and *angry* polemics in a spirit wholly inconsistent with the genius of christianity is abroad, that the *Great Plague* of 1665 should be borne in remembrance. This Plague raged with such violence, that in one year, 90,000 inhabitants of the City of London perished from amidst the people. But it had this effect—it made man recognize a brotherhood in the human species,—it made him *forget and forgive. Oh, what a preacher is calamity*, in softening, subduing, humanizing the proud heart of man. The *morale* to be attached to these introductory remarks, will be found in connection with a document of *one*, who lived in London during the time of the Plague, and whose MS. papers just brought to light, thus testify. They are extracts of a letter from a gentleman in London, under date August 25th, 1665, to his brother in Oxfordshire. They are in unison with the representations of the faithful historic records of the above period.

"Oh, what a preacher is calamity, my brother! The first impulse of most, however scoffing, or vain, or profligate before, was to go to the churches. They went in crowds: and to thousands whom the churches could not hold, the *silenced*, and other Puritan ministers, preached in the open air to the living, often with the unburied dead around. Great numbers of the regular clergy having fled or died, many of these ministers preached also in the churches, often by invitation from the proper officers, and always without opposition or hindrance from them. In these congregations the people mingle without discrimination. No man seems much to care if he knows the person next him has the plague; and no man stirs from his place if, as often happens, his next neighbour falls down dying or dead beside him. May God grant these terrible visitations, and the tears and groans with which they listen to the strong words of these holy and devoted men, may have an abidingly useful effect on the minds of the survivors; but it is to be feared that the feelings of the time will pass away with the sorrows thereof, and be lost in the returning cares and bustle of life.

"The gay Jack Dinford went forth like the rest, and, for the first time since the Restoration, designed to go to church; but St. Giles's was full to the threshold, so was St. Clement's, and so were St. Dunstan's and St. Bride's. Going on, I beheld, near Fleet ditch, a crowd listening to a man who held forth to them from the highest step before the door of a house. I afterwards learned that this was Master Ephraim Jenkin, the silenced minister of St. Stephen's. His text was, "*I will plead against him with pestilence!*" and while he considered the plague as the Lord's strong and awakening plea with us as a notoriously sinful people, he in conclusion spoke in such a manner as doth, I trust, make my own prospect beyond that grave in which I must soon lie down, more cheerful than they were before I heard him. During this sermon three men and two women fell down dead, or dying, but no stir took place in consequence thereof.

"Yes, my well-beloved Thomas, I *might* certainly come to you if I would, but it would be of no use; and as I feel *my* time now drawing very near."

This presentiment of the writer seems to have been correct. He breaks off abruptly. Just on the point

* It is but justice to Van Donder and one of the Retiefs, to observe, that at the close of the sale, they immediately proceeded to the farm of Mr. Daniels, on the high road to Graham's Town, to bargain for Merino sheep.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of becoming the victim of this awful visitation, he writes—

"Well-beloved Thomas, my task is partly done—I feel the symptoms of plague. I must lie down to rise no more. Well, God bless you, Thomas! *He* is all my blessing now. May He be— * * * *—Farewell! you only are left—take care of our dear Mother—I——I——"

Mrs. JONES and her LODGERS.

A REMINISCENCE.

My lodging many years since, in London, was not in the most fashionable part of the town, as it approximated much more closely to Fleet-street, than was desirable; yet I had a partiality for it, because it was in it that I located on my first arrival from the North; and it was, moreover, in the neighbourhood of some chosen friends, who, after evidencing their capabilities in truly English fashion, by a quarterly display of their appetites, had been deemed worthy to be permitted to advocate and defend his Majesty's lieges. My landlady, from long intimacy, had for many years regarded me as a familiar, and had frequently made me the depository of her confidence. On the occasion of the stay I am speaking of, she had been complaining to me of the pecuniary irregularities of one of her lodgers, a young gentleman, who had adventured upon the perilous trade of authorship, and who seemed to be sharing plentifully the most usual earnings of his callings.

"Seven weeks' rent of that handsome airy attic due, Sir," said Mrs. Jones, "and nothing but promises, for he's mighty fair spoken; but fine words don't butter no bread, you know, Sir, as my old man, poor dear soul, used to say. T'other day, that's a week ago, says he to me, says he, 'Mrs. Jones, I expects daily to see a relation, what will put me in a way to settle with you;' and more nor that, says he, 'Mrs. Jones, I've just got a play nigh ready, as it is to be acted at Drury Lane, and I expects a hundred pounds for it;' and then you know, Sir, when this here hundred pounds comes, I'm to be paid, supposing this here relation don't give him the money? But I an't got much faith in any thing as depends on the players."

"Well, but, Mrs. Jones," I said, "this young gentleman is very young, and money you know, is very scarce in all quarters; his representations, probably, are true, and yet he may be pushed for cash; in the mean time—I am sure it is not your disposition to be harsh with any body—suppose you try another week, and see what patience will do."

"Ah!" replied Mrs Jones, "that's exactly what he says; but, as I said afore, you know, Sir, 'Patience don't butter no bread no more nor fair words does,' as my poor old man used to say; but howsomever, Sir, as you advises it, I'll wait another week; it an't in my nature to hurt nobody; but then I'm a lone widdy-'oman, and I don't like to be taken advantage of."

"Certainly not, Mrs. Jones," I said; "but, however, you'll see what the next week will do, and, I hope, it will favour both you and the young gentleman."

"Well, Sir," answered Mrs. Jones; "I'll tell him in the morning, as I'll wait another week, and no longer—nor I won't neither, Sir;" and after taking a thimble-full of whiskey, the old lady left me, happy to think that I had won a respite for my fellow lodger.

In the morning Mrs. Jones informed me that she had intimated to her attic friend the determination she had come to, and I heard no more of the affair until a week afterwards. I had been out late, and came in about five in the morning. As I was entering my bed-room, the old lady accosted me in great haste, and in a deshabille that would hardly have become one of her sex of less holy years, and told me in manifest trepidation that her lodger above had been stirring all night, and that from some words spoken to himself, but overheard by her, she thought it was his intention to *bolt*, as she elegantly expressed it.

"Eight weeks, Sir; two pounds sixteen, besides four and three-pence for postages, seven shillings for firing, and three-and-sixpence for cleaning o' shoes; altogether three pun ten and ninepence. As I'm an honest 'oman," said Mrs. Jones, "I can't afford it, Sir—I can't—indeed, Mister."

"But," I said, "you have only to look sharp after the door."

"Ah, but then them ere rumpuses, I can't abear em; think o' the other lodgers, Sir. There—there he goes again—I knows he's arter summat. Just come up, Sir; you know, Sir," she added, in a coaxing protection-seeking tone—"you know, Sir, there an't nobody as I can ax assistance on but you." There was no resisting this appeal to my chivalry, and so I followed my fair guide to the landing place of the fourth story, when she disposed me and herself so that we could overhear a portion, at least, of what passed in the room occupied by her defaulter. We had not long remained thus sentinelled, when we heard the youth exclaim—

"Yes! I must try my uncle!"

"There's a villain!" cried Mrs. Jones, whom I could scarcely restrain—"I knowed it—he's going to pledge my property, he's got none himself but an ink-bottle." I motioned her imperatively to be silent, and he continued:

"These sheets will surely bring me something?"

"A pair o' my best Russia—the swindler!" observed Mrs. J. in agony; "only think o' that, Sir, I'll never give them chaps in the garrets anything nor calico again."

"But how to proceed," cried the lodger; "the pillows have been too often used—they are common;—no, the blankets are the thing."

"Real Whitney!" exclaimed my companion, horror struck—"cost me five-and forty shillings last Midsummer was a twelvemonth, as I'm a living 'oman!"

"And then I must manage the sacking!" continued the author.

"Oh, dear!" cried the old lady, "he's going to pledge my sacking and all."

"If I should succeed," he continued, "it's three to one."

"Ah, three to one, indeed," said Mrs. Jones, "to me; but we'll take care he don't get 'em to that shop, howsomever." Here some words, spoken in a lower tone, escaped us; the next we heard was—

"But how to manage the escape!—ay, the window—the window—they can go through the window, and be received below, and so borne off in safety."

"Oh, the infernal robber!" groaned Mrs. Jones; "my Whitney blankets and Russia sheets to be pitched out o' window, like so much rubbishing hooks; but I'll have all them 'ere garret windows nailed down arter this."

"It's resolved," said the youth, "I shall have a run; and then how I'll astonish Mother Jones!"

"Mother Jones! indeed," said mine hostess, indignantly, "Mother Jones!—but Mother Jones will put a stop to your run, young gentleman." The soliloquy ceased—we listened, and heard the window thrown up.—"There goes my goods into the yard," said the old lady; "but he shall take a voyage for it, the rascal; I'll teach him to call me Mother Jones, and chuck my Whitney blankets into the mud!" A rustling noise was heard, and my landlady, in a guise that would have become a great grandmamma bacchante, rushed forward, as her lodger, opening his door, exultingly exclaimed, "And now I'm off!"

"No you a'nt, tho'—no you a'nt!" she vociferated, catching him fast in an embrace, that her prisoner would have pitched himself from his window to obtain from one of the sex gifted with an inverse ratio of temptation.—"Where's my rent, mister? and where's my bedding? them ere good Russia sheets, and Whitney blankets!—Oh, you willain! you willain!"

"Your sheets and blankets!" cried the youngster, evidently taken aback, and endeavouring to escape from her bear-like hug.—"What do you mean, woman? let me go."

"Not till I gets my property," said Mrs. Jones.

"If you mean your rent," answered her prisoner, "I promise you——"

"Ah, I've had promises enough," replied the inexorable dame; "where's my property, you willain?"

"A fig for your property; let me go," rejoined the lodger, as he shook her off. I then made my appearance—"I'm happy to see a reasonable being," said the young gentleman, as he approached me; "pray, can you explain to me, what is meant by this strange conduct?"

"Why, sir," I said, after quieting Mrs. Jones, "this good lady has some idea, not altogether unwarranted, it seems, that you were about to leave her house, and in company with her bedding."

"To leave her house, and in company with her bedding!" he said, in evident amazement, "I don't understand you, sir,—I certainly was about to go out, as she knows I always do at this time; but what was I to do with her bedding?"

"Do with it!" cried Mrs. Jones, "why, what did we hear you just now say about your uncle? eh! what, you're diskivered, are you?"

"My uncle! why, I believe, I said I should apply to him, to enable me to satisfy you."

"Oh, then, you confesses it!" said Mrs. Jones, "didn't you say, sir, as my sheets would fetch summat?"

"Good Gracious! is it possible," cried the young man, "that you can suppose I meant to rob you of your sheets? I meant my own sheets, the sheets of the work I am engaged on."

"Oh! ah, I dare say," answered she; "but we knows the work you was engaged on—didn't you say you'd take the blankets, 'cause the pillows were too much used? I knows they warn't new; but they was too good for such varmint as you." The young man burst into an immoderate fit of laughing.

"I did say so," said he; "I meant to have smothered my heroine with the pillows; but recollecting Shakspeare had used them in two plays, I chose the blankets."

"That won't do, mister," answered the unpoetical fair, "didn't we hear you say you'd do summat with the sacking?"

"Why, foolish woman, my play ends with the sacking of a town!"

"Ah! I an't no doubt as you'd take the sacking of all the town, if you could get it; and didn't you say, you'd have a run for it, and astonish Mother Jones?—There, Sir!"

"Why, the woman's mad," he answered; "I meant my Piece would have a run; in which case I should have astonished you, by paying you your bill."

"Don't believe a word of it as I'm a living 'oman—where's my property?" she cried, rushing into the room; when, to her surprise, she found sheets, blankets, and sacking in *statu quo*. I now saw the absurd mistake; and having appeased the old lady, *pro tempore*, I tendered to my acquaintance an explanation and apology for her, which were received in good part; and I commenced a friendship with an amiable and talented man, that lasted many years:—Poor *George Crabbe!*

He *was*, but words are wanting to say what,
Think what a poet ought to be—and he was *that*.

LITERATURE.

THE DOCTOR. 2 *vols.* 8*vo.* 1834.

This is a strange production—a work of great eccentricity. It con-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tains much that is amusing, much that is desultory, much that is quaint —very irregularly arranged, and very frequently unintelligible.

The author, it is but justice to remember, seems well acquainted with the literature of the middle ages, and most of the languages of Europe. He informs us for example, that Guy, the master of young Dove, (the Hero of the Work,) put into the hands of the young scholar, the Dialogues of Johannes Textor. This book was, for many years, the text work for the teaching of Latin, and was principally used in the schools. The production to which we allude, was a singularly curious one, and was calculated from its simplicity, to have a prodigious effect on the infant mind. The first of the Dialogues of Textor may be described for the gratification of the reader.

"Earth opens the first of these curious compositions with a bitter complaint for the misfortunes which it is her lot to witness. Age overhears the lamentation and enquires the cause; and after a dialogue in which the author makes the most liberal use of his own common-places, it appears that the perishable nature of all sublunary things is cause of this mourning. Age endeavours to persuade Earth that her grief is altogether unreasonable by such brief and cogent observations as The Fates will have it so:—it so pleases the gods. Earth asks the name of her philosophic consoler, but upon discovering it, calls her a false virago and harlot, and abuses her as being the author of all the evils that distress her. However Age succeeds in talking Earth into better humour, advises her to exhort man that he should not set his heart upon perishable things, and takes her leave as Man enters. After a recognition between mother and son, Earth proceeds to warn Man against all the ordinary pursuits of this world. To convince him of the vanity of glory she calls up in succession the ghosts of Hector, Achilles, Alexander, and Samson, who tell their tales and admonish him that valor and renown afford no protection against Death. To exemplify the vanity of beauty, Helen, Lais, Thisbe and Lucretia are summoned, relate in like manner their respective fortunes, and remind him that we are merely dust and shadows. Virgil preaches to him upon the emptiness of literary fame. Xerxes tells him that there is no avail in power, Nero that there is none in tyranny, Sardanapulus that there is none in voluptuousness. But the application which he makes of all this, is the very reverse to what his mother intended: he infers that seeing he must die at last, live how he will, the best thing he can do is to make a merry life of it, so away he goes to dance and revel and enjoy himself: and Earth concludes with the mournful observation that men will still pursue their bane, unmindful of their latter end."—Vol. i. pp. 139—141.

There is another of these dialogues, in which the first scene discloses three worldlings talking in great glee, on the pleasure of a profligate life. Whilst in the midst of their discourse, Death enters, and asks the party if they do not remember that such a personage exists? They reply in the affirmative, but then they say that they are young, rich, and active, and that they set all advice at defiance. Death listens very patiently to all this, and is by no means angry at seeing the foolish youths take to dancing, but she (Death is of the female sex, in these dialogues), calls upon Human Nature, another female of the Dramatis Personæ, who has been in an inglorious slumber all this time, and indignantly demands from her, how she can sleep, whilst her sons are thus dissipating their time in debauchery. Human Nature, with some surprize, asks Death, why her sons should not have what enjoyment they chose? Then Death tells her that the reason is that they shall all have to go to the infernal regions. Upon this, Nature expressed a strong doubt, that any soul ever went really to such a place. Death, however, soon settles the point, for he calls up a soul, who figures as Damnatus from Hell, and he gives a true and full account of his sufferings below: he mentions particularly, that most of his tortured colleagues are kings, popes, senators, and particularly schoolmasters. At this decisive proof, Nature is satisfied, and she asks of Death, what she herself is to do in such a crisis. Death tells her that her only chance is to send a Son of Thunder around the world, in order to carry just reproof throughout the whole sinful community. Peregrinus is the apostle sent on this difficult errand. After performing his mission, he returns to report progress. and his account is quite desperate. With respect to the kings of the earth, he stated, that he dare not say how they were occupied; the popes were like pilots intoxicated, for they submitted the precious vessel entrusted to them, to every wind that blew. Senators were guided in their conduct by gold alone; doctors spread their nets in the temples for prey; lawyers were deprived of their speech as if struck dumb, the only specific cure of which their disease was susceptible, being money, which generally operated like a talisman. The faithful missionary concludes, that every where he met with an abundant harvest of vices, and that all his attempts at correction, were just as likely to be permanent as a plough share on the sandy beach of the sea.

In this extremity, Nature again applies to Death, who said that no chance remained but to call up justice and send her forth with her scourge to repress the wicked. Nature did as she was advised, but what was her astonishment, when she found that Justice was merged in a profound slumber when she called: she then proceeds, by Death's recommendation, to Truth, whom she finds on the point of death, and who implores her to send for a confessor with all possible dispatch. Then the dialogue goes on as follows:—

"But who shall be applied to?—Kings? They will not come.—Nobles? *Veritas* is a hateful personage to them—Bishops, or mitred Abbots? They have no regard for Truth.—Some Saint from the desert? Nature knows not where to find one! Poor *Veritas* therefore dies "unhouseled, disappointed, unanealed;" and forthwith three Demons enter rejoicing that Human Nature is left with none to help her, and that they are Kings of this world. They call in their Ministers, *Caro* and *Voluptas* and *Vitium*, and send them to do their work among mankind. These successful missionaries return, and relate how well they have sped every where; and the Demons being by this time hungry, after washing in due form, and many ceremonious compliments among themselves, sit down to a repast which their ministers have provided. The bill of fare was one which Belzebub's Court of Aldermen might have approved. There were the brains of a fat monk,—a roasted Doctor of Divinity who afforded great satisfaction,—a King's sirloin,—some broiled Pope's flesh, and part of a Schoolmaster; the joint is not specified, but I suppose it to have been the rump. Then came a Senator's lights and a Lawyer's tongue." Vol. i. pp. 145, 146.

This is all very amusing, because it is so foolish, yet it was once the staple substance of which the education of our youths consisted.

RUSSIA
AS IT IS REPORTED TO BE IN 1833.

FIRST NOTICE.

A work under the auspices of a respectable Publisher (at least), Hatchard, of London, and entitled *Russia as it is, and not as it has been represented, &c.* has recently appeared. It is but just that we listen to the two sides of every question; and certainly we confess that we have discovered some *new light* in the perusal of this book, which has illumined our conceptions in no small degree. All we trust is, that 'tis not

"A light that leads astray."

There is great reason to believe that our knowledge of Russia, its people and its manners, is extremely limited; a fact which, by itself, would amply account for the prejudices which are still so strong as to make us retain the impression that they still constitute a barbarian race. Travellers from England very rarely visit Russia, and even of those who do venture into that region, how few are there who are capable of understanding its language! From the very unfavourable circumstances with which British communica-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tions with Russia have always taken place, it is not by any means trespassing against probability, to suppose that we are extremely ignorant of, and extremely unjust to the Russian character. The writer of the present account of these dominions seems to be well acquainted with the country and the people, and his conviction of the misconception of the English mind in relation to the Russians, has induced him to undertake their vindication. This is the object of the work before us, which as a picture of manners and national peculiarities, cannot fail to amuse our readers.

Upon the subject of the constitution of the Russian government, the author presents us with some very agreeable intelligence. He states, that there is no foundation whatever for designating the government as an "absolute monarchy," and from the obstacles which are in existence, by means of the laws and customs of the empire, to the unbounded exercise of imperial authority, it happens that the Russian monarchy in effect, becomes a mixed form of government. The monarch is considerably limited in his power, and in none of his actions is there any thing like an assumption of irresponsible authority. There are no hereditary offices in the state, there are no generations of parasites under the title of noble families, continuing age after age to seek their nutrition from the vitals of the community. The whole of the noblemen of Russia habitually serve the crown in some way or another, and there is scarcely one of them to be met with who has not seen service in the capacity of a military or civil servant.

The author states that the Russian community is separated into five great divisions. The first is that of the Nobles—

"1st Class.—The nobles: composed of princes, counts, barons, and gentlemen, *all* styled *dvorianee* or noblemen, who are entitled to buy or sell lands with peasants attached to them. The only distinctions amongst the nobles are ranks and titles; in all other respects they are equal. All the children of noblemen enjoy the same title as their parents, there being no established law of promigeniture in Russia. At the death of the father, the law gives his widow one-seventh part of all his immoveable property, such as lands, houses, peasants, &c., and one-fourth part of all the personal or moveable estate. After the widow's claims are satisfied, the daughters each take a fourteenth part; the residue is then equally divided amongst the sons. [This must be understood to be the arrangement made by the law, when the father dies intestate, and where there is no entailed estate, which could not be alienated even by will, he can only dispose of what he has himself acquired, or inherited free of entail.] A free man, not born of noble parents, must obtain the rank of lieutenant in the military service, or major in the civil service, before he is accounted noble; but if he be born of noble parents, though he should be a common soldier, he may enjoy the rank and privileges of a nobleman. No nobleman, however high his rank, can treat his peasants cruelly or extort illegal labour and taxes from them with impunity! For high crimes and misdemeanors he is as much amenable to the laws as the vassal. He is, however, exempted from corporeal punishment, and must be tried by his peers. After being degraded by a court of his peers, the common court passes sentence upon him of exile to Siberia, either to colonise and work the ground as a peasant, or else to hard labour in the mines for life. High treason is the only crime in Russia punishable with death, and that very seldom. In every province the nobles elect their own marshals, who are in fact, their representatives, and are empowered to settle all affairs between them and the government. Each district chooses a marshal, and the province elects a marshal-in-chief, who resides at the capital town in order to be near the governor and other local authorities, with whom he can more freely communicate. The nobles have the right of meeting together, and forming an assembly, for the purpose of deliberating on all affairs of importance. They choose a president from among themselves, and they have also the right of petitioning the Emperor, through the governor of the province. In those assemblies they elect their own judges for the courts of justice, as well as the justices of the peace. They have also the right of petitioning the high senate, are permitted to collect and employ funds for the encouragement and advancement of all useful objects without controul, and are not amenable to any court of justice. There is a register kept by them, of the names of all the nobles of the province, and they are bound to pay a certain tax to assist the service of the post, and to keep the roads in good repair. Should any of those assemblies address a petition to the high senate that is illegal, or in other words contrary to the existing laws of the empire, they are liable to a fine of two hundred roubles."—pp. 11, 12.

The Russian empire consists of about fifty provinces, including, we presume, the conquered territories on almost every side of it; each of these provinces, it is calculated, contains, on the average, a million of inhabitants. Each is governed by a lieutenant, and in some there are, in addition, military governors. An executive council is also established in each province, and a public advocate, whose duty it is to examine the acts of government, with a view to have any injudicious or inapplicable laws repealed or modified, and to oppose all illegal proceedings. The existence of such a functionary as this in a country, is a very peculiar manifestation indeed of a love of justice, for this advocate, it appears, is totally independent of the authorities of the province: he acts as a check against partiality and corrupt influence, so that he prevents acts of oppression and injustice even in the remotest corners of Russia.

Law-suits are utterly exempt in Russia from any inordinate expense. A subject of the Czar obtains justice in the courts of his country on terms the cheapest in the world, with the single exception of Prussia. In every province there is a distribution of the whole of it into districts, in each of which a distinct court of justice exists: the assessors who preside are chosen partly by the nobles, and partly by the citizens. There is likewise a court of administration for the property of widows, and orphans of noblemen. There is a subsidiary court, over which the justice of the peace presides: the person filling this office is appointed by the nobles, but he is assisted by two assessors, who are elected by the crown peasants. The regulations respecting the police are peculiar: a police-master is appointed in every town, and he holds a sort of permanent court where cases are decided at once: here also all causes are tried, which may arise between the citizens in the particular town. Besides other courts, there is one called in the Russian language the Court of Conscience; but the author does not inform us as to the nature of the causes, whether debt or crime, which it takes under its cognizance. The tribunal in this court is made up of a judge and two deputies, who are chosen by the nobles; also two other deputies, appointed by the citizens; and lastly, two other deputies, who are elected by the peasants. The appointment of the higher judges must be confirmed by the Emperor. The elections are renewed every three years, as is the case in some States of America. Appeals against decisions of the inferior courts may be carried to several series of superior courts, and at last it may reach the King himself in council.

There is a very curious privilege enjoyed by the crown peasants: they have the power of choosing in their villages their own magistrates, or *Starostas,* who decide in all matters of minor importance, with such integrity, that the system is likely to be perpetuated by general consent.

(To be concluded in our next.)

AGRICULTURE.

The Use and Advantages of Pearson's Draining Plough. By T. L. HODGES, Esq. M.P.

IT appears from Mr. Hodges' Pamphlet, that about six years since, Mr. Pearson hired a farm in the parish of Frittenden, in Kent, and, after the first year's occupation, discovered that the soil generally was wet and stiff, having throughout,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

with very partial exceptions, a strong clay subsoil. Having a very limited capital, to undertake the draining of his farm was not in his power. Mr. Pearson, nevertheless, applied his mind to the discovery of some cheaper method than that hitherto practised, and succeeded ultimately in forming this plough, the use and advantages of which Mr. Hodges, pointing out in his communication to the Society for the Encouragement of Arts, submits to their notice. When Pearson first entered upon his farm, the produce of the wheat crops varied from two to three quarters per acre; since it has been underdrained by the plough in question, his average has exceeded four quarters per acre—not unfrequently getting five.

"This invention consists in having applied to the common foot-plough a certain share, which he calls a torn share, together with certain other irons, by which he cuts out the drain to a sufficient depth, with an accuracy and celerity hitherto unattained, and gives a principle of duration and effect to the drain, when finished, equal to the best work of the same kind hitherto entirely performed, and at so great a cost, by hand labour; thereby accomplishing what has been so long and so much desired by all who are interested in improving wet and stiff soils—namely, a method of effectually and permanently draining such lands, and at a charge not exceeding one-sixth of the price which the best underdraining of such land has hitherto cost."

THE AMERICAN WHALE FISHERY.

One of the most eloquent passages to be found in the works of Edmund Burke, is a burst of panegyric on the enterprizes of the New England Whale Fishery Ships. The language and the occasion of it are too remarkable not to fix the attention of the reader.

"Look at the manner in which the people of New England have of late carried on the Whale Fishery. Whilst we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay, and Davis's Straits, whilst we are looking for them beneath the arctic circle, we hear that they have pierced into the opposite region of polar cold, that they are at the antipodes, and engaged under the frozen serpent of the south. Falkland Islands, which seemed too remote and romantic an object for the grasp of national ambition, is but a stage and resting place in the progress of their victorious industry. Nor is the equinoctial heat more discouraging to them, than the accumulated winter of both the poles. We know, that while some of them draw the line, and strike the harpoon on the coast of Africa, others run the longitude, and pursue their gigantic game along the coast of Brazil. No sea but what is vexed by their fisheries. No climate that is not witness to their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise, ever carried this perilous mode of hardy industry to the extent to which it has been pushed by this recent people,—a people who are still, as it were, but in the gristle, and not yet hardened into the bone of manhood."—p. 101.

The Whale Fishery of America is divided into the *Sperm* and the *Whale* Fisheries. The number of ships employed in the first or Sperm Fishery, is about two hundred and fifty, being considerably the largest proportion. The voyage of these ships continues for thirty months on the average, and the sums involved in them and their outfits, is calculated at thirty-five thousand dollars. The number of ships which are occupied in the common Whale Fishery, is about one hundred and fifty, and the capital involved in each, amounts to about eighteen thousand dollars. The length of the voyage is about ten months for these ships. Here then we have a total capital employed which amounts to no less than twelve millions of dollars, and the amount of the materials obtained from the whales for commercial purposes, for two recent years, is as follows:

	1831	1832
Barrels of whale oil,..	118,000—	175,000
Ditto sperm oil,..	110,000—	80,000
Pounds of whalebone,..	1,000,000—	1,350,000

The annual income from the Fishery on the average of the last four years, amounts to the sum of four millions and a half of dollars. The sperm is used in the United States for lamp oil, and for candles. The whale oil and whalebone are mostly exported to Europe, particularly to its northern part.

The following account of an accident to an American ship on a whaling excursion, is related by Mr. Owen Clave, the mate of the ship Essex, Captain G. Pollard, of Nantucket.

"I observed a very large spermaceti whale, as well as I could judge about eighty-five feet (?) in length. He broke water about twenty rods off our weather bow, and was lying quietly with his head in a direction for the ship. He spouted two or three times, and then disappeared. In less than three minutes he came up again, about the length of the ship off, and made directly for us, at the rate of about three knots. The ship was then going with about the same velocity. His appearance and attitude gave us at first no alarm, but while we stood watching his movements and observing him, but a ship's length off, coming down for us with celerity, I voluntarily ordered the boy at the helm to pull it hard up, intending to sheer off and avoid him. The words were scarcely out of my mouth before he came down upon us at full speed, and struck the ship with his head just forward of the fore chains. He gave us such an appalling and tremendous jar as nearly threw us all on our faces. The ship brought up as suddenly and violently as if she had struck a rock, and trembled for a few moments like a leaf. We looked at each other in perfect amazement, deprived almost of the power of speech. Many minutes elapsed before we were able to realize the dreadful accident, during which time he passed under the ship, grazing her keel as he went along, came up alongside her to leeward, and lay on the top of the water, apparently stunned with the violence of the blow, for the space of a minute. He then suddenly started off in a direction to leeward. After a few moments' reflection, and recovering in some measure from the sudden consternation that had seized us, I, of course, concluded that he had stove a hole in the ship, and that it would be necessary to set the pumps going. Accordingly they were rigged, but had not been in operation more than one minute, before I perceived the head of the ship to be gradually settling down in the water. I then ordered the signal to be set for the other boats, (at that time in pursuit of whales, which I had scarcely despatched, before I again discovered the whale apparently in convulsions on the top of the water about an hundred rods to leeward. He was enveloped in the foam, that his continual and violent threshing about in the water had created around him, and I could distinctly see him smite his jaws together as if distracted with rage and fury. He remained a short time in this situation, and then started off with great velocity across the bows of the ship to windward. By this time the ship had settled down a considerable distance in the water, and I gave her up as lost. I however, ordered the pumps to be kept constantly going, and endeavoured to collect my thoughts for the occasion. I turned to the boats, two of which we then had with the ship, with an intention of clearing them away and getting all things ready to embark in them, if there should be no other resource left. While my attention was thus engaged for a moment, I was roused by the cry of the man at the hatchway, "here he is,—he is making for us again." I turned round, and saw him about one hundred rods directly ahead of us, coming down with apparently twice his ordinary speed, and to me it appeared with tenfold fury and vengeance in his aspect. The surf flew in all directions, and his course towards us was marked by a white foam of a rod in width, which he made with a continual violent threshing of his tail. His head was about half out of water, and in that way he came upon, and again struck the ship. I was in hopes when I descried him making for us, that by putting the ship away immediately, I should be able to cross the line of his approach, before he could get up to us, and thus avoid, what I knew if he should strike us again, would be our inevitable destruction. I called out to the helmsman "hard up," but she had not fallen off more than a point before we took the second shock. I should judge the speed of the ship at this time, to have been about three knots, and that of the whale about six. He struck her to windward, directly under the cat-head, and completely stove in her bows. He passed under the ship again, went off to leeward, and we saw no more of him." pp. 110, 111.

It now appears that the settlers of New South Wales have engaged in the Whale Fishery, which is about fifty miles distant: in 1832 there where no less than sixteen vessels actively engaged in catching whales, and at that time nine new ones were on the stocks. The settlers can make three voyages, whilst two are the most which the English or Americans can accomplish in the season, and finally, it is more than probable, that they will monopolize the whole, and already British ships are gone to engage in this fishery under the direction of the sealers.

It seems, that the French are at present engaged in the Whale Fishery, as also the German Navy. The amount of vessels employed by France is estimated at forty sail, the great proportion of which depart from Havre. Between Germany, England, France, and America, the whole number of ships now annually employed in the capture

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of whales, amounts up to the sum of seven hundred, so mighty is the abundance of nature's creation.*

LITERARY EXTRACTS.

CONVERSATION BETWEEN A WEATHER-GLASS AND A WEATHER-COCK.

"GOOD morning," said the Weather-glass to the Weather-cock, "you don't look well this morning."

"No wonder," said the Weather-cock, "for I've had nothing but *wind* in my teeth all night, and I don't see, Mr. Weather-glass, that you have much reason to boast, for you look rather *down* this morning."

"Do I?" said the Weather-glass. "At all events I'm *up* to you;—*up* to *you* indeed! now I look at myself, I'm up to *sixty*. You give yourself too many *airs*, Mr. Weather-cock. 'Tis true you are at the *top* of this establishment, of which you are not a little *vain*."

"Little *vane!*" said the Weather-cock, "no, indeed, I don't see a larger or handsomer one than myself for miles round, except the church, and there we generally find more *vane* than *useful;* and as to my being the top of this establishment, you've always had the *reins* of the family in your hands, and I should have very little objection to change places with you."

"Change *places!*" said the Weather-glass, "I never knew you to *keep* one a minute together!"

"That's my misfortune," says the Weather-cock; but yesterday evening I engaged myself to sweet Miss Zephyr, and went south about to meet her. I had not been with her more than five minutes, when old Boreas made me rudely turn my back towards her, and look at him all night, while he amused himself with spitting hail and sleet in my face. If I am thus to be disturbed in my pleasure, I'll turn *rusty* about it, and then I'll stick where I please."

"Ah!" said the Weather-glass, "we all have our complaints: you know my existence depends on my telling the truth:—now I marked '*much rain*' yesterday as plain as could be, but my young mistress being promised a holiday if it were *fine*, screw'd me up to '*set fair*,' so they *set out* and the wet *set in*, and I had nearly been discharged for this; but on my master carefully examining me he found out the trick, which put him in a *thundering* passion, and I fell down to '*stormy*.'"

"Ah! well," said the Weather-cock, "I was a little alarmed when I was first put up here, for when I was fixed and duly regulated by the compass (which, by the bye, I consider must be rather a SHARP instrument, for I heard it had a needle and thirty-two *points!*) I was declared by all present 'to stand completely *square*,' when to my dismay, in two minutes afterwards, the wind blew me completely *round;* but since we've been talking, Mr. Weather-glass, I perceive, by your face, you're not many degrees from being *very dry;* what say you to a glass of something?"

"With all my heart," says the Weather-glass, "if you'll *stand* it."

"I stand it?" said the Weather cock, "did you ever know me *stand* to any thing?"—here he turn'd half round, and look'd the other way.

"Just like you, you shabby rascal," says the Weather glass, "there's no trusting you."

"Save your abuse, save your abuse!" said the Weather-cock, speaking with his head turn'd away! "tho' I'm used to *blows*, they must be given in a round-about manner; and of all *blows*, the *least* I care about is a BLOW UP!"—(*Miss Sheridan.*)

Note.—And of the *most* importance, we suspect many of our Cape readers would add, *a good blow out.*

* It should be noted that the encounter with the whale, as noticed in this Article, was near the equator, and distant from land 1000 miles. Twenty of the crew were enabled to man three boats. One of the boats was never heard of. Great were the sufferings of the survivors, who, after three months of distress, were picked up at sea by an English brig.

A FARMER'S WIFE.

Mrs. Stubble is the model of a farmer's wife; the most notable woman in the county. Like the butterfly, she has two states; the one so entirely different from the other, that a person who has not seen her in both, would have some difficulty in recognizing the identity. In her chrysalis state, which occupies from about cock-crow till about three o'clock in the afternoon, the good lady is habited in a dark cotton gown, at eight-pence a yard, a checked apron, and black worsted stockings; the whole surmounted by a cap, which is neither a day-cap nor a night-cap, but a sort of cross between both. During this period, Mrs. Stubble is in a continual bustle of hands, and feet, and eyes, and ears, and tongue, and thought; running here, hurrying there; commanding this, countermanding that, feeding the chickens, cramming the turkeys, rolling the butter, pressing the cheese, shelling the peas, paring the apples, scolding the maid, beating the cat, pickling walnuts, preserving pears, drawing the beer, kneading the dough, *et cætera, et cætera*, the particulars of which I have not power to recollect, nor time to enumerate. But, in the afternoon, how different a person is Mrs. Stubble! The very maids perceive and acknowledge the alteration; and those who were hail fellow-well-met with her in the morning are now *pénétrées* with deference. She is the butterfly that was the pupa—the Columbine that was the Cinderella. Her cotton gown has given place to a silk *dress*, fitted up with patent bustle, buckram sleeves, and all those other little elegancies with which the ladies know so well how to beautify nature. Her black worsted stockings have been exchanged for white cotton, or perhaps silk ones, and are tastefully criss-crossed with black silk riband at two-pence a yard. A halo of lace encircles her neck, scallop over scallop, vandyke over vandyke, eyelet-hole over eyelet-hole, wonderful to behold! Her cap—but who shall describe that cap? Who shall attempt to picture in verbs and adjectives, nouns and participles, those towers of blond lace, those labyrinths of bobbin net, those rouleaux and nœuds of white satin or rose de Parnasse; those bides (brides, Mrs. Stubble calls them) of gauze riband bobbing into all the tea-cups, and the gravy at supper, and furnishing Mr. Stubble with many a boisterous joke; those roses, and lilies, and major-convolvoluses, and ears of barley, interspersed with leaves of silver and green? Not we indeed.

WHISKERS AND GLORY.

The protracted struggle in Portugal has had the effect of setting the small wits of our martial-minded scapegraces in a ferment for "glory." We want some such philosopher as "Crack," the cobbler, to cool their ardour. Not a few, however, have been effectually cured of their military mania by the smell of powder; and we consequently see in every coffee house, among the new arrivals, sundry hairy-faced Hectors from Lisbon and Oporto, having retired from the service in "disgust." The numbers of these "elegant extracts" have converted the appearance of our peaceful capital into a huge crimping shop We cannot turn a corner without risking our eyesight from the sharp-pointed moustache of some whiskered Bobadil. The thirst for "glory" has been great beyond all precedent Undismayed by the return-accounts of the ill-treated Pistols, who are now basking in the glory of their six months' scampering, there appears to be an encreasing rush of the valorous public towards the transports of Donna Maria. The consequence will be, that some few months hence, when the thing will be finished in Portugal, and "valour" consequently at a considerable discount—when, in fact, stabbers and cutters are no longer in demand, and glory at a shilling a-day unattainable—our streets will be crowded with whiskered desperadoes, and our sympathies and purses put into active exercise in favour of "brave men" and "patriots." We would seriously admonish those who have honest callings to pause ere they exchange them for a most precarious livelihood, and one in which it is very probable they will obtain "monkey's allowance" for their services—more kicks than coin.—*Monthly Magazine.*

THE OLD BACHELOR'S WILL.

THIS is the last will and testament of me, Fickle Dotage Oddity, of Celibacy Cottage, in High Street, in the town of Single Life, castle-builder, which I do make, publish, and ordain, in manner and form following, that is to say, Whereas I am possessed of the said dwelling-house, cottage, or tenement, called or known by the name of Celibacy Cottage, together with the fair prospect and view before the same, and a large number of windows in the front thereof, and other appurtenances thereunto belonging, I do hereby give and devise the same, and every part thereof, unto my first cousin, Bashful Bachelor, of Self Love House, Esquire, subject to, and upon this especial condition, that he do keep the said windows in proper repair and condition, and not diminish, but increase the same, and to have and to hold the same, with the appurtenances, until the day of his marriage, and no longer. I also give and bequeath unto my said cousin, Bashful Bachelor, all my interest, share, and estate in the vain and forlorn state, or condition, of celibacy, with all rights and appurtenances thereunto belonging. I give and devise unto the said Bashful Bachelor, and my friends, William, alias Billy Button, tailor, and Don Quixote, Esquire, all my estates, manors, and woodlands, situate and being in the counties of Imagination and Vain Hopes, consisting of divers messuages, or tenements, farms, and lands, being principally waste and barren grounds, and soil, together with the briars, thorns, thistles, thickets, and brakes, growing and being thereon, and upon the sides thereof, and all the castles erected and built thereon. And lastly, as to all my personal estate and effects, I give and bequeath all my bachelor goods and chattels, consisting of divers doubts, changes, fears, ficklenesses, irresolutions, quirks, quibbles, oddities, whims, fancies, meagrims, reveries, projects, and schemes, also all my papers and writings, particularly a very rare collection of love letters, and other precious epistles, which I direct may be carefully preserved, and other property of various descriptions, natures, and names, unto my said friends, Bashful Bachelor, William, alias Billy Button, and Don Quixote, to be equally divided between them, share and share alike, after payment of my funeral, testamentary, and other expenses: whom I constitute and appoint joint executors of this my will, which I do publish and declare to be my last will and testament, hereby revoking all former wills, devises, testamentary or other dispositions, by me at any time, or in any manner and form, heretofore made and ordained. In witness, &c. F. H. N.

PUFFING BURLESQUED.

The following whimsical account of Mrs. Siddons's first appearance in Dublin, is extracted from an old Irish newspaper:—"On Saturday, Mrs. Siddons, about whom all the world has been talking, exposed her beautiful, adamantine, soft, and lovely person, for the first time, at Smock-Alley Theatre, in the bewitching, melting, and all-tearful character of Isabella. From the repeated panegyrics in the impartial London newspapers, we were taught to expect

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the sight of a heavenly angel; but how were we supernaturally surprised into the most awful joy, at beholding a mortal goddess. The house was crowded with hundreds more than it could hold, with thousands of admiring spectators, that went away without a sight. This extraordinary phenomenon of tragic excellence! this star of Melpomene! this comet of the stage! this sun of the firmament of the Muses! this moon of blank verse! this queen and princess of tears! this Donnellan of the poisoned bowl! this empress of the pistol and dagger! this chaos of Shakspeare! this world of weeping clouds! this Juno of commanding aspects! this Terpsichore of the curtains and scenes! this Proserpine of fire and earthquake! this Katterfelto of wonders! exceeded expectation, went beyond belief, and soared above all the natural powers of description! She was nature itself! She was the most exquisite work of art! She was the very daisy, primrose, tuberose, sweetbrier, furze-blosson, gilliflower, wallflower, cauliflower, aurica, and rosemary! In short, she was the bouquet of Parnassus! Where expectation was raised so high, it was thought she would be injured by her appearance; but it was the audience who were injured: several fainted before the curtain drew up! but, when she came to the scene of parting with her wedding-ring, ah! what a sight was there! the very fiddlers in the orchestra, "albeit unused to the melting mood," blubbered like hungry children crying for their bread and butter; and when the bell rang for music between the acts, the tears ran from the bassoon player's eyes in such plentiful showers, that they choked the finger-stops, and, making a spout of the instrument, poured in such torrents on the first fiddler's book, that, not seeing the overture was in two sharps, the leader of the band actually played in one flat. But the sobs and sighs of the groaning audience, and the noise of corks drawn from the smelling-bottles, prevented the mistake between the flats and sharps being discovered. One hundred and nine ladies fainted! forty six went into fits! and ninety-five had strong hysterics! The world will scarcely credit the truth, when they are told that fourteen children, five old women, one hundred tailors, and six common-councilmen, were actually drowned in the inundation of tears that flowed from the galleries, the slips, and the boxes, to increase the briny pond in the pit; the water was three feet deep, and the people that were obliged to stand upon the benches, were in that position up to their ankles in tears! An act of parliament against her playing any more will certainly pass," &c. &c. &c. This *jeu d'esprit*, which was written by the facetious Peter Seguin, is said to have given vast offence to the lady's friends at the time; why, we cannot see. The ridicule is fairly levelled, not at Mrs. S., whose merits no one could deny, or did deny, but at the insatiable appetite of the public mind for puff!

LONDON LOCALITIES.

Lord Byron wrote the "Siege of Corinth" in No. 13, Piccadilly, which overlooks the Green Park. Gibbons, the celebrated carver, was born in Spur-alley, in the Strand, and resided in Belle Sauvage-yard, Ludgate-hill, where he carved a pot of flowers so exquisitely, that they shook in the wind. The Baptist Head public-house, in St. John's-lane, Clerkenwell, was one of the resorts of Dr Johnson, Goldsmith and others, who used to call in here on their way to and from Cave's house and St. John's Gate. In Clerkenwell close, near Newcastle-place, is the house of Colonel Titus, and the place of conference between Cromwell, Ireton, and other republicans. At the place called King's Cross, was fought the battle in which Queen Boadicea so distinguised herself against the Romans, whence its former name of Battle-bridge, and here the original Roman north road began. In a house which looks into Fetter-lane, and Fleur-de-lys-Court, lived Elizabeth Brownrigg, executed in the year 1767, for cruelty and murder of her apprentice. Dryden resided in Fetter-lane, in a house which stands at the corner of Fleur-de-lys-court; it was then a genteel neighbourhood, it has also an entrance from Holborn, between Nos. 22 and 23. No. 3, Ivy-lane, formerly a tavern, was frequented by the literati of the days of Goldsmith and Johnson; here, according to the "Spectator," was held the Humdrum Club, who used to sit together, smoke their pipes, and say nothing till midnight. In the garden of his friend Alderman Bridger, in Lovell's-court, Paternoster-row, now belonging to Messrs. Rivington, Richardson wrote his novels of Pamela and Grandison. At the Bell Inn, Warwick-lane, Arch-bishop Leighton died. Gray, the poet, was born at the house now 41, Cornhill; the original house was destroyed by fire in 1748. Defoe kept a hosier's shop in Cornhill, and stood in the pillory there, for writing a pamphlet entitled, "The shortest way with the Dissenters." The shop of Sir Thomas Gresham was in Lombard-street, on the site of the house No. 68. The old King's Head Tavern, in Leadenhall-street, was the house where Guy Fawkes and his city adherents assembled; it escaped the great fire. Stowe lived and died on the site now occupied as No. 71, Leadenhall-street; the remains of a little Norman chapel are still to be seen under it. In Fenchurch-street, Denmark-house, was lodged, according to Hollingshed, the first embassador sent here from the "emperor of Cathaie, Muscovia, and Russeland." In Seething-lane, in the reign of Elizabeth, were the residences of Sir Francis Walsingham, secretary of state; the Earl of Essex, and other eminent personages. The sign of the Goose and Gridiron, on the north side of St. Paul's Church-yard, was intended as a satire upon the Academy of Ancient Music, when a separation followed a dispute among the members. Dr. Franklin worked at Wall's printing-house, in Portugal-street, in 1725, and lodged at an Italian warehouse, facing the Roman Catholic Chapel in Duke-street. Lord William Russell and Algernon Sidney were both beheaded on the site of the present Lincoln's inn-fields. At No. 436, Strand, was Wimbledon-house, a large mansion built and inhabited by Sir Edward Cecil. The chapel in Oxenden-street, Haymarket, was first used for religious purposes by Richard Baxter. Hogarth resided in what is now the Sabloniere Hotel, Leicester-square; and there, when lately in town, the Countess Guicoli also resided. Sir I. Newton's house, in St. Martin's-street, Leicester-fields, is still in perfect preservation; it stands between the chapel and Long's-court. Thomson wrote his "Winter," in a house in Whitehall, opposite the Admiralty. John Bunyan, when in town, used to preach in the chapel in Union-street, Borough, the oldest dissenting meeting-house in London. The Flying Horse public house, in Bishopsgate-street, opposite Widegate-street, was the residence of Sir Paul Pindar; its ancient Gothic front still remains. The only places in which the ancient London wall can be seen to any extent are in Little Bride-street, a passage running in a parallel line behind Ludgate-hill from Great Bridge street, through Saint Martin's court, into the Broadway; next on the south-side of the church-yard of St. Botolph, Aldergate, where this wall forms a barrier to the yards of the houses on the north side of Bull and Mouth-street; and the third is on the south side of Cripplegate church-yard, where are the remains of the only one of the round towers which used to crown the wall at given distances.

WHO IS DEAD?

What a moving question, and how much may hang upon it! What a leveller! What an uncompromising distributor!—The lord of ten thousand acres stops another lord of twenty thousand acres, at the corner of the Palace Yard, and asks how it fares with a third lord of thirty thousand acres—"Oh, my lord," quoth he that is questioned, "he is dead!"—A sinister, swivel-eyed, shabby-genteel looking youth stops another of like fortune and degree, at the corner of the Almonry (only some hundred yards removed from their lordships' scene of action), and asks how it fares with a third gentleman, that once graced the fraternity to which the two communicants belonged—"Poor fellow," is the reply, "he is dead!"—What a leveller! The lord and thief are both dead; that is their record—that is the conclusion of the pampered existence of the one, and of the alley-diving, police-shunning life of the other—"They are dead!"—But there has been worse levelling still. My lord of thirty thousand acres expired on a couch of down—the light softened to his aching eyes through festooning curtains of embroidered silk, and each moment of fluctuating existence watched by an obsequious practitioner, "licensed to kill," whose trade is to assuage the pangs of death for a con-si-de-ra-ti-on: the thief has expiated the mingled crime of poverty and guilt upon the scaffold; a wretched coil of rope has swung him into eternity, with none around him but the hardened annihilators of man—also "licensed to kill." But such distinctions have now become invidious—"They are dead!" and that tells us all. In that single phrase of balance and account, the haughty pride of the one, and the sneaking villain-craft of the other, are summed up.—*Blackwood's Magazine.*

ESTIMATE OF THE CHARACTER OF GEORGE THE IV.

In the events and achievements which give interest and lustre to his regency and reign, George IV. had personally no share. He was but contemporary with them. To the progress of science, of literature, of legislation, he was a stranger. The jealous limitations of the regal power,—the independence, enterprise, and social advancement of the nation, would account and afford excuse for this: but were he absolute as Louis XIV.,—obeyed and imitated with the same implicit servility,—the higher purposes of intellectual being were beyond his range. With the fine arts his relations were more close and personal. The progress of architecture was sudden and astonishing, during the epoch which will bear his name. London, before his accession to the executive power, was a rich, populous, elegantly-built capital, but without a due proportion of prominent structures characterised by architectural grandeur, beauty, or curiosity. In a few years magnificent lines and masses of building were begun and completed; but they were mainly the growth of wealth, vanity, speculation, and peace. Where his influence was directly felt it proved unfortunate. He lavished millions in creating vicious models, and fantastic styles of architecture, and brought into fashion artists without capacity or taste. There was not in his kingdom a more discerning judge of painting; but he had no imagination for the higher class of art. He preferred the exquisite and humorous realities of the Dutch painters to the poetic or historic schools of Italy; and, though a studious collector, he gave no great impulse to native talent. In music he had both taste and skill: he encouraged an art which formed one of his enjoyments; and if his patronage has brought forth no composer of the first order, the cause may exist in some circumstances of national inaptitude.

It is necessary to go back some centuries for an English king to whom he bears the nearest likeness in *ensemble* of character. The parallel at first sight may be thought injurious, but the likeness will upon consideration be found striking and complete. George IV. had in his youth the éclat of personal endowment, education, and accomplishment,—of success in the fashion-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

able exercises and graces of his age, — and of that reckless prodigality which obtains popular homage and applause in a prince. Henry VIII. in his youth was one of the most brilliant personages of Europe. A fine person,—the accomplishments of his time in literature and the arts,—the display of gorgeous prodigality,—raised him to a sort of chivalrous rivalry with Francis I. In mental culture he excelled George IV., who owes much of his reputation for capacity and acquirement to an imposing manner, and the eagerness to applaud a prince: stripped of this charm, his ideas and language appeared worse than common when he put them on paper. Both had the same dominant ambition to be distinguished and imitated, as the arbiters of fashion in dress for the costliness, splendour, or novelty of their toilet. Henry VIII. and George IV. surrounded themselves with the men most distinguished for wit and talent, with a remarkable coincidence of motive, as ministering to their vanity or pleasures; but as soon as they became troublesome or useless, both cast them off with the same careless indifference. Henry VIII., it is true, sacrificed to his own caprices, or to court intrigue, the lives of those whom he had chosen for his social familiarity;—whilst George IV. merely turned off his so-called friends, and thought of them no more. But such is the difference between barbarism and tyranny on the one side, and civilisation and freedom on the other: that which was death in the former, is but court disgrace in the latter. George IV. was not cruel—he had even a certain susceptibility; the spectacle of human suffering revolted him: but suffering to affect him must have been present to his sense. Was Henry VIII. gratuitously cruel? That does not appear. He took no pleasure for itself in shedding blood, and avoided being a witness of it. Had he been obliged to look on whilst Anne Boleyn and Sir Thomas More were bleeding, he probably would have spared them. He sacrificed them to his impulses from mere selfish indifference. With their wives and mistresses Henry VIII. and George IV. were governed by the same self-indulgent despotism — the same animal disgusts. Henry VIII. had six wives, and sent one to the scaffold as the prelude to his marriage with another. George IV. had only one wife, but she suffered the persecutions of six; and if she escaped decapitation or divorce, it was from no failure of inclination or instruments. Henry VIII. was the tyrant of his people, and George IV. was not: yet is there even here a similitude. Both surrendered their understandings to their ministers, upon the condition of subserviency to their personal desires. What George would have been in the age of Henry it might be ungracious to suppose; but it may be asserted that Henry, had he been reserved for the close of the eighteenth century, would have a very different place in opinion and history as a king and as a man,—such are the beneficent, humanising influences of knowledge, civilisation, the spirit of religious tolerance, and laws mutually guarding and guarded by public liberty.—*Lardner's Cabinet Library.*

ANECDOTE.

A Portuguese surgeon relates the following fact:—A Moor came one day to him from the country, and said "*Christian Barberos*, give me some drugs to poison my father, I will pay thee handsomely for them." The Portuguese was at first astonished, and remained silent for a moment, but quickly composing himself, replied with a coolness equal to that of the Moor, "What, are you not on good terms with your father?" "On the best possible terms," replied the Moor, "He is an excellent man, he acquired a fortune, and has given me a wife, together with all the property he possessed, but he is now beyond labour on account of his great age, and yet persists in refusing to die!" "You do right to poison him," replied the surgeon, "I will give you something which will soon put him in the humour of dying," So saying, the surgeon prepared a cordial, rather calculated to comfort the stomach of the old man than to kill him, and giving it the dutiful son, received his money, and the Moor departed rejoicing. In a week's time, the peasant returned, exclaiming, "That his father was not yet dead!" "Not dead," said the disciple of *Machaon*, "well, he *shall* die." Another cordial was given,—paid for—and, of course, with the same effect. In a fortnight the Moor returned again to the point, and informed the surgeon with infinite simplicity, that instead of dying, the old fellow appeared to thrive upon the poison; "however, we must not be discouraged," added this affectionate son, "you must give me another dose, and exert all your skill to render it effectual." After this the Moor returned no more, but the surgeon meeting him one day in the street, inquired how the poison had operated? "It had no effect whatever," replied the man, "my father is still in good health. God has caused him to live in spite of all we gave him, and there can now be no doubt that he is a *Marabout*, or Saint."

COPY OF A PLAY BILL
In the Reign of Queen Anne.

"At Crawley's Booth, over against the Crown Tavern in Smithfield, during the time of Bartholomew Fair, will be presented a little Opera, called the Old Creation of the World, yet newly revived; with the addition of Noah's flood. Also several fountains playing water during the time of the play. The last scene does present Noah and his family coming out of the Ark, with all the beasts two and two, and all the fowls of the air seen in a prospect sitting upon trees. Likewise over the Ark is seen the Sun rising in a most glorious manner. Moreover a multitude of Angels will be seen in a double rank, which presents a double prospect, one for the Sun, the other for a palace, where will be seen six Angels, ringing of bells. Likewise machines descend from above double and treble, with Dives rising out of Hell, and Lazarus seen in Abraham's bosom; besides several figures dancing jigs, sarabands and country dances, to the admiration of the spectators; with the merry conceits of Squire Punch, and Sir John Spendall."

But we should not call such exhibitions as these profanations, when we find that so late as the year 1816, the sacrifice of Isaac was performed in Paris at the theatre. Samson was the subject of the ballet; the unshorn son of Manoah astonished the spectators by his agility as a dancer before the gates of Gaza: and it was during one of the intervals of a jig, that Dalilah clipped his hair. The Phillistines surrounded and captured him in a country dance.

COL. TORRENS ON WAGES.

THE author of this Pamphlet, after shewing to demonstration, that no increase of wages can be possibly expected so long as the Corn Laws exist, proceeds further to contend that the hours of labour of the operatives cannot be reduced on the same account, so that his ultimate conclusion is (and we think that of every honest man) that the very *first* step towards national improvement, must be the abolition of the Corn Laws. Our humble opinion is, that on this question hinges the peace and safety of the British empire.

LETTERS FROM INDIA.

Two octavo volumes by the late *V. Jacquemont* have been published in France, which appear to have created much interest. Their contents relate to British India, which country the enterprising Frenchman visited as a Naturalist in 1830—32.

The chief value of the present publication rests in the account it gives of our Indian possessions, the effects of our government on the native population, the result of recent efforts to diffuse the elements of civilization, and the future prospects of Hindústan. On behalf of England, Jacquemont is a witness above suspicion; his prejudices, which never wholly disappeared, were all against the British government; and it is sometimes amusing to see how slowly and reluctantly, in the early part of his career, he yielded to the strong evidence of facts, while in some of his more recent letters he rallies his correspondents unmercifully for repeating opinions, which he had himself entertained a few months before.

The process of Jacquemont's conversion began at the first English settlement he visited, the Cape of Good Hope; there he discovers how honestly the British government had acted in the abolition of the slave trade, and how other powers had connived at its continuance. For this connivance indeed, he makes rather a lame apology; but "liberal" as he was, we shall too often see that Jacquemont was willing to sacrifice justice to expediency.

"The abolition of the (slave) trade, which, according to the terms of treaties, should cease in a year, but which the configuration of the coasts of Brazil will long protect against the vigilance of the English cruizers, will be the extinction of the (Brazilian) empire. I saw this horrible traffic close to me at Rio, where it is conducted on an immense scale. The sight produced in me feelings of horror, which will with difficulty be effaced from my revolted mind. But he who wills the end, wills the means. Slavery is the *sine quâ non* of the existence of Brazil, as well as of European rule over all the intertropical parts of America that are not greatly elevated above the level of the sea.

"As for our parts, if Cayenne and Bourbon have prospered a little during late years, it is due solely to the connivance of the rulers of these colonies, not to say the avowed protection given to introducing cargoes of slaves. If I was in your place, my friend (Mr. V. de Tracy), I would endeavour to make my position subservient to the repression of crime You do not fear extreme parties in a good cause. Say, then, that the general cry of public opinion accuses our colonial government of criminal connivance in this trade. Say, you are convinced our colonies could not prosper withou this trade, and that their actual prosperity is the strongest proof against the colonial administration. If it compelled obedience to the law,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

if it prevented the introduction of slaves, the negroes would diminish progressively, and these colonies, so far from improving, would fall into decay. The law which has prohibited the trade has condemned the sugar islands to ruin. They are not perishing; on the contrary, they flourish; consequently, the law is not put in execution.

"*The colossal extension of the British power is really a blessing to humanity;* there are, beyond a doubt, many iniquities, many odious frauds in its national and colonial administration; but it every where proscribes gross horrors. It has especially waged war against this trade with good faith. Since the British became masters of the Cape, not a single slave has been imported. The consideration due to the fortunes of the Dutch settlers, who form the great majority of the population of this colony, have as yet prevented the establishment of regulations for the final extinction of slavery, and the emancipation of the children of the actual slaves; but they impose so many charges on the possession of slaves, that their support becomes too expensive for the proprietors to derive any profit from their original outlay. Slave-labour, therefore, becomes *too dear to be lucrative*, and it is their interest that induces the colonists not to regret much this HORRIBLE SPECIES OF PROPERTY."

Jacquemont was happily perfectly master of the English language, and in his collection of letters many are written with great facility of expression. After acknowledging in one of his communications that the *British Government* in India is an *immense blessing* to the provinces, he describes the efficacy of *gentle means* in accomplishing the work of civilization in a savage country. How distinct are Jacquemont's views from the *commando* ball and powder gentlemen of this colony. We recommend the following extract to the reader's attention:

"I have seen since the superb Jeypore, and delightful Adjmû. And during my very short stay in the latter, I have contrived to visit Mhairwarrah, the former Abruzzi of Rajpootanah. It was well worth eighty miles riding in little more than twenty four hours. I saw a country, whose inhabitants since an immemorial time had never had any other means of existence but plunder in the adjacent plains of Marhwar and Meywar, a people of murderers, now changed into a quiet, industrious, happy people of shepherds and cultivators. No Rajpoot, no Mogul emperors had ever been able to subdue them; fourteen years ago every thing was to be done with them, and since six or seven years every thing is done already. A single man has worked that wonderful miracle of civilization: Major Henry Hall, the son-in-law of Colonel Fagan, of whom I have written to you at Delhi. As I know it will be gratifying to your feelings, and to your opinion on the subject, I shall add, my dear friend, that Major Hall has accomplished this admirable social experiment *without taking a single life.*

"The very worst characters of Mhairwarrah, he secured them, confined them, or put them in irons at work on the roads. Those who had lived long by the sword without becoming notorious for wanton cruelty, he made them soldiers; they became in that capacity the keepers of their former associates, and often of their former chiefs; and the rest of the population was gained to the plough. Female infanticide was a prevalent practice with the Mhairs, and generally throughout Rajpootanah; and now, female casualties amongst infants exceed not male casualties: a proof that the bloody practice has been abandoned; and scarcely has a man been punished for it. Major Hall did not punish the offenders; he removed the cause of the crime, and made the crime useless, even injurious, to the offender; and it is never more committed.

"M. Hall has shown to me on the field the corps which he has raised from amongst those former savages. And I have seen none in the Indian army in a higher state of discipline. He was justly proud of his good work, and spared no trouble to himself that I might see it thoroughly, in the few hours I had to spend with him. Upwards of a hundred villagers were summoned from the neighbouring villages and hamlets; I conversed with them of their former mode of life, and of their present avocations. Most of them had shed blood. They told me they knew no other mode of life. It was a most miserable one by their account. They were naked and starving. Now, poor as is the soil of their small valleys, and barren their hills, every hand being set at work, there is plenty of clothes, and of food; and so sensible are they of the immense benefit conferred upon them by the British government, that willingly they pay to it a tribute of 500,000 francs, which they increase every year as their national wealth admits of it.

"Often I had thought that gentle means would prove inadequate to the task of breaking in populations addicted for ages to a most unruly, savage life, such as the Greeks, for instance. Yet the Klephtes were but lambs compared to the Mhairs; and the Mhairs in a few years have become an industrious, laborious, well-behaved people. I see by the Bombay papers, that M. Capo d'Istrias has been murdered. I wish Major Hall were his successor. For now I have the greatest confidence in the efficiency of *gentle means*. But a peculiar talent too, which is a gift of nature, is required in the ruler, without which, the most benevolent intentions would prove useless."

BRITISH COLONIES.

Ceylon, Penang, Singapore, &c.

Mr. MARTIN, in his new work on this subject, dwells at length on the immense advantages to be gained by settlers in the island of *Ceylon*. He is an advocate for a steam-packet to India.

To facilitate the intercourse between Europe and Asia, Mr. Martin proposes a steam-packet post office communication, via the Cape of Good Hope. The motive of his preferring this route instead of that by the Red Sea, is, that by the former we should be able to bring into closer and speedier acquaintance, the whole of the Asiatic and African Colonies, whereas by the Red Sea route, (if it were ever so practicable) only a portion of our Eastern Settlements would be benefited. Mr. Porthius proposed to build a steam-ship of 1000 tons, carrying 800 ton of coal, to make no stop between London and Calcutta, and perform the voyage in 60 days. This would be a brilliant exploit indeed, since the distance is 13,700 miles. Mr. Martin enters into the details of the calculation which an establishment of this description would cost, and seems to be pretty sanguine as to the result.

Penang or Prince of Wales's Island, is a settlement near the Malayan Peninsular, very healthy, and abounding with valuable productions. This island with Malacca and Singapore, are subordinate to the Bengal government: Penang is remarkable for its advantages as a station: serving as a rendezvous for our naval station in the Indian seas. Malacca is next described: this settlement forms a part of the Malayan Peninsular, and abounds with productions of various sorts, which are extremely valuable. These include vegetables, fruits, and minerals, the export of tin being one of the most important of the commercial branches in the station. The mines are worked according to the Chinese fashion. The Maltese people use a chain pump to raise the water out of the mine pit, in the following manner:—

"The apparatus is simple, consisting of a common water-wheel, a circular wooden chain about forty feet in circumference, and a long square box or trough, through which it runs in ascending. The wheel and chain, I think, revolve on a common axis, so that the motion of the former necessarily put the latter into action. The chain consists of square wooden floats, a foot distant from each other, and strung as it were upon a continuous flexible axis, having a moveable joint between each pair. As the float-boards of the chain successively enter the lower part of the box or trough (immersed in water), a portion of water is constantly forced up by each, and discharged at the top. At one of the mines we were much struck with the simple but efficient mode of its application. There were three distinct planes, or terraces, rising above each other. On the middle one was the wheel; the lower one was the pit of the mine: from the higher a stream of water fell and turned the wheel, which putting the whole machine into motion, brought up another stream from the pit; these two streams, from above and below, uniting on the middle plane, run off in a sluice, by which the ore was washed."—Vol. i. p. 424.

Singapore is a British station, on the same Peninsula, and a most thriving place, being all the creation of our government. In 1820, the population consisted of 150 Malays, all pirates and fishermen, now the number is 20,978; there are here also, 550 convicts, and the military with their followers make a great many more. The leading merchants, agents, and shopkeepers are English; the most wealthy are Chinese of Chines, nearly five thousand emigrate, nearly on the Malayan coast. The harvest of Singapore is limited to a single sea weed, which is however, very productive. This is the greatest mart of commerce in those seas, and the imports and exports amount yearly to over three millions and a half. The trade which it carries on with Siam, is one of its most important resources; the junks from Siam bring sugar, rice, salt and oil, the sugar being chiefly cultivated in the latter place by Chinese. All travellers speak in splendid terms of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

this very remarkable station, and there is no question that it will form the principal port for the trade with China. The Chinese come in great numbers to trade with the people of Singapore, and are generally able, by taking advantage of the monsoons, to sail to the port with great expedition; with Cochin China, Singapore also maintains commercial relations. Our printed cotton goods are sought after very particularly by the Cochin China people.

EARTHQUAKE AT MANILLA.

We have already given some copious outline of Capt. Morrell's Voyages of Discovery. A new volume has appeared from the pen of Mrs M. and will be read with interest. Whilst in Manilla, Mrs. Morrell had the *satisfaction* of witnessing an earthquake. The first thing, she observes, which struck her was the appearance of the people in the street, kneeling and saying their prayers wherever they could see a crucifix, or an image of the Blessed Virgin. The Chinese was looking around with his little twinkling eye, half amazed, yet unwilling to retire from the scene of business while any remained to buy or sell. The Christians were seen flocking to the churches, where mass was being celebrated; men, women, and children hurried to prostrate themselves before the altar, thinking that the prayers of the clergyman could avert the Divine decree. I went, says Mrs. Morrell, with my English friends to visit the churches, which were full to overflowing, all prostrate before their favourite saint, imploring him or her to interfere with the Saviour to assist them. It was a solemn scene; the sobs and sighs broke upon the ear, and were indeed distressing. From the convents could be heard a low and solemn chant, and then it died away again. There was not a word of courtesy spoken in the streets, except what passed between the English and American people. As yet there was no noise or rumbling, but a frightful stillness in the air; the birds were silent, and the whole animal world seemed to partake of the terror. The fishing families took to their boats, but I could not see a single line thrown out for fish; they made the most melancholy spectacle of all. At first there was no motion of the water; it wore the glassy surface that seemed immoveable. At length a gentle agitation took place in the water, as if a heavy shower of rain was falling upon it, and shortly after a rumbling was heard, resembling the movements of heavy-laden carriages at a distance on frozen ground. This increased, and the feet as well as ears were affected with a motion something like that felt by a galvanic battery, or a slight shock from an electric jar. The leaves of the trees had a tremulous motion like that described of the aspen; the ground began to tremble, and some buildings at a distance were toppling down; but the one in which I stood was only severely shaken, the wall did not crack nor give way. The great mass of the people preferred being in the streets to keeping in their houses; they thought that there would be less danger of being swallowed up in the streets than of being crushed by the falling of walls in their houses. There was no screaming, that I heard; every one was too much terrified to scream. Some few were killed by the falling of houses, even while in the street. The rumbling noise ceased, and the shocks that followed made a noise more like the blowing up of a magazine of powder than of the movements of carriages on frozen ground. Fire, it is said, was seen to burst from the earth in several places. The agony was not entirely gone for nearly two days; all business was suspended, and men, women, and children looked at each other as if it were the last time they were ever to see each other's faces. Sometimes a tear stood in their eyes, but generally they were tearless as a marble statue. The great agitations of life, like its great griefs, are not relieved by tears. The Chinese are predestinarians, and I was informed that they were quite unmoved, though still and solemn while nature was in such throes and agonies.

The next day, after all was over, cheerfulness took the place of dismay, and one just arrived could not have known that the people had ever felt a moment's anxiety: so are we constituted. I was alarmed, but not dismayed; and perhaps, as a stranger, I was in some small degree relieved, from not having any connexions in the city, and from watching the movements of others in such perilous moments. I saw some of the places from which it is said the flames issued at certain periods of the alarm. The governor was constantly in the streets, on horseback, and saw that no confusion took place; and the priests did not take occasion to alarm the sinner, but soothed him by teaching him to trust in his merciful Creator.

THE SHEFFIELD POET.

Elliot, of Sheffield, a man of humble life, and the well-known author of *Hymns on the Corn Laws*, still continues his lucubrations. He is a powerful writer, the Cobbett of verse, and equally radical in sentiment. The following article, just published by Elliot in a small volume, entitled *The Village Patriarch*, displays much intellectual ability. The conclusion, however, is a *naughty* specimen of charitable feeling.

"*Hymn written for the Printers of Sheffield.*"

"Lord! taught by Thee, when Caxton bade
His silent words for ever speak;
A grave for tyrants then was made,
Then crack'd the chain which yet shall break.

For bread, for bread, the all-scorn'd man,
With study worn, his press prepared;
And knew not, Lord, thy wonderous plan,
Nor what he did, nor what he dared.

When first the might of deathless thought
Impress'd his all-instructing page,
Unconscious giant! how he smote
The fraud and force of many an age!

Pale wax'd the harlot, fear'd of thrones,
And they who bought her harlotry:
He shook the throned on dead men's bones,
He shakes—all evil yet to be!

The pow'r he grasp'd let none disdain;
It conquer'd once, and conquers still;
By fraud and force assail'd in vain,
It conquer'd erst, and ever will.

It conquers here! the fight is won!
We thank thee, Lord, with many a tear,
For many a not unworthy son
Of Caxton does thy bidding here.

We help ourselves, thy cause we aid;
We build for Heav'n, beneath the skies:
And bless thee, Lord, that thou hast made
Our daily bread of tyrants' sighs."

THE WONDERFUL CLOCK.

This clock has been put into complete repair by a self-taught mechanist of Exeter, and has been opened to the public in Regent-street, London. It is certainly an astonishing piece of mechanism. The movements are thirteen in number. We cannot give a more accurate and concise account of them, than by adopting (with some slight alterations), the description by the proprietor. These movements, then, are—

1. A moving panorama, descriptive of day and night. Day is represented by Apollo in his car, drawn by four coursers, accompanied by the twelve hours; and Diana, in her car drawn by stags, attended by the twelve hours, represents night.—2. Two gilt figures in Roman costume, who turn their heads and salute with their swords as the panorama revolves; and also move in the same manner while the bells are ringing.—3. A perpetual almanac, shewing the day of the month on a semicircular plate; the index returning to the first day of every month, on the close of each month, without alteration even in leap-years: regulated only once in 130 years.—4. A circle, the index of which shews the day of the week, with its appropriate planet.—5. A perpetual almanac, shewing the days of the month weekly, and the equation of time.—6. A circle, shewing the leap-year, the index revolving only once in four years.—7. A time-piece, that strikes the hours and chimes the quarters; on the face of which the whole twenty-four hours (twelve day and twelve night) are shewn and regulated. Within this circle the sun is seen in his course, with the time of rising and setting, by a horizon receding or advancing as the days lengthen or shorten; and underneath appears the moon, shewing her different quarters, phases, age, &c.—8. Two female figures, one on each side of the dial-plate, representing Fame and Terpsichore, who move in time while the organ plays.—9. A movement regulating the clock as a repeater to strike or be silent.—10. Saturn, the god of time, who beats in movement while the organ plays.—11. A circle on the face shews the names of ten celebrated ancient tunes, played by the organ in the interior of the cabinet every four hours.—12. A belfry with six ringers, who ring a lively peal *ad libitum*. The interior of this part of the cabinet is ornamented with paintings, representing some of the principal ancient buildings of the city of Exeter.—13. Connected with the organ there is a bird organ, which plays when required.

This complicated and surprising specimen of horology was constructed in the latter part of the seventeenth century, by a native of Exeter, named Jacob Lovelace, whom it took thirty-four years to bring it to perfection. Lovelace was evidently a man of singular ingenuity and talents; it is, therefore, scarcely necessary to add, that he died in great poverty—according to some reports, in a workhouse.—*(London Paper.)*

SELECT NOTICES.

Old Pictures.——It is said that the two celebrated Correggies in the collection of Lord Londonderry, have been purchased at the price of £11,000 or £12,000, for the National Gallery. ——*Dry Rot.*—The spread of the *dry rot* has at length been checked by the discovery of Mr. Kyan, who has obtained a Patent, and the warm approbation of the Admiralty, and men of science and others for his invention. (See *Times*, 8th April.)——*Cambridge.*—The University of Cambridge has petitioned Parliament for relief to the Dissenters, and admitting them to Degrees.—— *Deaths.*—Governor Farquharson of St. Lucia; Mrs. Burns, relict of Robert Burns, the Poet. ——*St. Helena* is to remain under the government of the E. I. Company.——*Holy Orders.*—

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The Bishop of Salisbury requires in Candidates for Holy Orders, a knowledge of the Hebrew Language.——*Deaf and Dumb.*—It is an ascertained fact, that at least one in every 2,000 of our fellow creatures, is born deaf and dumb.——*Scotland.*—A new statistical account of Scotland is in the course of publication.——*Missions in India.*—A general collection for the Missions in India, connected with the Kirk of Scotland, was made in all the churches in Scotland in the month of April.——*The Rhinoceros.*—The arrival of a Rhinoceros in the Zoological Gardens of London, has created no small sensation among the Naturlists. It was taken in the Birman empire, and the charge of its conveyance is £1,000. The creature is reported to be young, strong, and healthy.——*Earl Grey* completed his 70th year, 13th March.——*Temperance Societies.*—In Preston, the *Temperance Society* has been the means of diminishing crime in a great degree; at the last Lancaster Assizes there was not a single case from Preston.——*Coals.*—This article appears to he selling in the English market at 24s. per chaldron.——*More Shame.*—Lord Lowther writes to a friend in London, that Florence, Milan, Verona, Rome, and Naples, during the promenade each day, resemble Regent street, London; the crowds in each place are immense, and the people *nearly all English.*——*Modern Miracles.*—Prince Hohenlohe was lately requested by letter to say four masses for a young lady who was unfortunate in having one of her legs exactly that number of inches shorter than its fellow. The writing being indistinct, the Prince mistook the figure, and in stead of four, said eight masses. The consequence was, that the young lady's limb became precisely as much too long, as it had formerly been too short. It had grown an inch at every mass!!! (*Hampshire Chronicle.*)——*Clerical Appointment.*—The Vicar of Chobham (the Rev. C. Jerram, M. A.) the uncle of a gentleman late of this colony, has been appointed by the excellent Bishop of Winchester, to the Vicarage of Witney, Oxen. Mr. Jerram is the author of several admirable treatises on Religion, and has been for 20 years Vicar of Chobham, the annual income of which did not exceed £100 per annum. Chobham is the Parish in which that truly eminent divine, the Rev. R. Cecil, exercised his ministry.

ROYAL GEOGRAPHICAL SOCIETY.

At a late meeting of the Society in London, an interesting paper was read, entitled "Notes of Excursions into Caffraria, by Lieut. Rogers, 90th Light Infantry." The manners and customs of the Caffers are detailed with much ability, and the notices on Natural History are highly creditable to the author.

A NOTE
ON A PASSAGE FROM HOMER.

"It is observed by Homer," says Dr. Whately, the present Archbishop of Dublin, "in the person of one of his characters in the Odyssey, that a man loses half his virtue the day he becomes a slave:" he might have added, with truth, that he is likely to lose *more than half* when he becomes a SLAVE MASTER!!

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By Vivian.

POPULATION—BIRTH AND MORTALITY REGISTERS.

THE return of a new Census of population at the Cape is loudly called for. Nothing exists of the kind at present that can afford any adequate idea of the aggregate of the people. We leave that proportion of the community hitherto placed in slavery out of the question. Self-interest was always wary enough to count *its* numbers.

Again, whose business is it to register the births, baptisms, marriages, deaths, and burials of the colony, in such manner as a reliance can be placed in the returns? So strict is the law in Austria respecting the registry of births, that midwives and accoucheurs must notify all births with which they become acquainted in the course of their professional employments; and in case of neglect to do so, the penalty is to suspend them from the exercise of their calling. In these registers, the maiden names of the mother is inserted; and in the register of mortality, the date of the death, the age of the deceased, and the malady and mode of death, are also set forth; and there is either an inspection of the dead, or the physicians in ordinary and local surgeons are bound to inform the minister, in writing, of the distemper of each patient whom they have attended. The bishops, during their visitations throughout their dioceses, are required to call for the production of these registers from the inferior clergy. This is not all, for at the end of every year the registrar must extract from his books an account for the previous year; divided into columns, and in regular forms: this he must transmit to the Office of Conscriptions, as it is called, and to the Office of the Circle.

The most interesting of the systems of registration which has fallen under our notice, is that of Prussia; in that kingdom the marriages, births, and deaths of persons belonging to the Christian religion, are all registered under the jurisdiction of the ecclesiastical authorities, and this appears very natural, inasmuch as all these ceremonies, marriage, baptism, and burial, requires the presence of the clergyman who is invested with ecclesiastical power in any given place. The extract made from these registers is the only legal proof admitted in the courts of what they record. The Jews, being the only persons who are not Christians inhabiting Prussia, have registers which are regularly kept by their rabbins in places where synagogues exist; but in those parts where there are no synagogues, the Jewish registers are kept by the local police. In all the other places the elders keep the registers of those people. The custody of the registers of the general parochial population, is entrusted to the pastor of the parish. The duty of having the children baptised, very properly devolves altogether on the parents, and the penalty inflicted upon them for a neglect of their duty, is not a little singular. Should a parent in Prussia neglect to have his child baptised within the term of six weeks after its birth, the unhappy man is absolutely set down as a madman; his neglect is contemplated by the law as an overt act of insanity, and legal proceedings are forthwith taken to appoint a guardian over him!

In Belgium, the child must, in all instances, be seen by the authorities within twenty-four hours after the birth, the law requires, that it should be brought to the Hotel de Ville, but the practice is for the officer to go to the house.

During the whole course of the late investigation by the Parliamentary Committee in England on this important subject, they had repeated proofs of the perfect astonishment with which all reasonable persons, particularly travellers and foreigners, were struck at finding how utterly destitute of any thing like an adequate system of registration England continues to be. It is to be hoped that the exposure which has now taken place will prove the harbinger of reform, for it is impossible for any reader to peruse the contents of the Parliamentary Inquiry, without being satisfied of the truth of the Committee's resolution, viz: "That the existing law is imperfect and unjust, and requires not merely partial amendment, but real fundamental reform." They describe the present plan of registration as exclusive and intolerant, for it does not include in its regulations a considerable portion of the reflecting, intelligent, influential population of the country—Protestant and Catholic dissenters, one thousand one hundred congregations who disapprove of infant baptism. This exclusion may be regarded as a species of prosecution for those who only claim the rights of conscience, and believe what their judgments direct. Besides, the existing registers are merely records of baptisms, not births, and burials instead of deaths. They supply no adequate evidence that can be recognized in courts of justice on questions of pedigree, they being often falsified, burnt, stolen, or negligently described: they have only been very partially returned from the different parishes, although the clergy were directed by Act of Parliament universally to make registers, and deposit them with the diocesans. From these and other considerations, the committee have come to the determination of proposing to government the establishment of a *National Civil Establishment of*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Births, Marriages, and Deaths, to include all ranks of religionists, to be conducted by means of simple forms, which would be sufficient to direct inquiries to the parents or last ancestor of each person registered, and assist medical and statistical inquiries in such researches as must prove generally useful. They propose that a parochial arrangement should be made, that a duplicate should be formed of each register, and that such duplicates should be periodically transmitted to the metropolis, where a National General Office should be opened, with a superintending authority, and alphabetical and accurate indexes, and abstracts, should be prepared: that the parochial charges should be defrayed by moderate salaries or small fees, payable by respectable inhabitants, and out of the rates for persons in more indigent circumstances, or receiving relief; while the metropolitan office would be supported by payments on searches, and an allowance of 1*d.* on every entry sent by the parishes. All parochial registers now existing, it is suggested, should be sent to this office.

THE LATE FANCY BALL.

A YOUNG LADY'S EPISTLE.

So warmly we met! and so closely were jumbled,
Like pigeons in pies (for the rooms were too small,)
I was fearful my new satin dress would be tumbled
As I rambled about at the *late Fancy Ball.*

Some attempted to dance! but ran 'gainst each other;
Some flirted — some sickened; — but *this* agreed all,
They had ne'er before witnessed a crowd or a smother,
Like the running to *eat* at the *late Fancy Ball.*

A dance! how delightsome! if a girl's not neglected,
And has plenty of partners to come at her call!
And many a mirror's bright surface reflected
Soft smiles and warm blushes at the *late Fancy Ball.*

Mrs. Q. sat aside—for the young men a-looking,
Her daughters have beauty but *no cash* at all;
But the lads in their *thought* were a few thousands *booking*
Of those girls who had fortunes at the *late Fancy Ball.*

And some they were waltzing, and others quadrilling,
All "PAIRED BUT NOT MATCH'D"—young and old—short and tall;
While some in the corners were *secrets* revealing
With a *wee* bit of scandal at the *late Fancy Ball.*

Thus Fashion's gay crowd goes on flirting and whirling
And they mingle together the great and the *small,*
And what's LIFE but a dance, too, where, *twisting* and twirling
We jostle each other to get thro' *the Ball.*

RURAL ECONOMY IN HOLLAND.

THE DAIRY.

WE recommend to the notice of the Agricultural Society, and all others in any way possessed of pasture-lands, an article in the *Quarterly Journal of Agriculture,* No. XXI. for June, 1833 It describes, in detail, the present Dairy Husbandry of Holland. The making of butter is no where better understood, or conducted with greater propriety, than in the Dutch provinces. The trade with England in this article is very great. There are seven or eight ships constantly employed in conveying butter from Harlingen to England. There is no part of Britain, or probably in the world, where butter is of a richer quality, or a finer taste, and more free from impurities, than that made in Holland.

Mr. Aiton, who has published the article in question, visited Holland expressly to inspect the Dutch system of cheese and butter making. He says (and we wish we could say as much of the Cape-Dutch,) that he saw "*every operation of dairy husbandry performed by the industrious* boers and their virtuous *Vrouws.*"

SHE IS GOING.

For their elder sister's hair
Martha does a wreath prepare
Of bridal rose, ornate and gay:
To-morrow is the wedding-day:
She is going.

Mary, youngest of the three,
Laughing idler, full of glee,
Arm in arm does fondly chain her,
Thinking, poor trifler, to detain her.
But she's going.

Vex not, maidens, nor regret
Thus to part with Margaret.
Charms like yours can never stay
Long within doors; and one day
You'll be going.

THOUGHTS BY AN OLD MAID IN REPLY.

Well, never mind, though you may laugh,
And point as we go by,
An old maid's life's the happiest,
That no one can deny,
And though you scorn and call us names,
We show no signs of woe;
For if we seem neglected now,
It was not always so.

But as for me, I little care
For aught that others say,
They only wish they were as free
As I am every day;
I heard a married dame remark,
I'm mistress to be sure,
But I'd rather be a simple Miss,
Than tyranny endure.

And then she'd say, ah! you were wise,
You never would be wed,
And though 'tis useless talking now,
I'd quite as soon be dead.
I really pity married folks,
And fain would give relief,
Though had they been as wise as I,
They ne'er had cause for grief.

For freely I aver I love
An independent life,
No marital control for me,
No matrimonial strife,
I would not be a young man's slave,
Nor yet an old man's dear;
All kinds of slavery I hate,
And gouty feet I fear.

So cease your jests, nor think that all
Old maids must be the same,
For I'm not stiff and starched I'm sure,
And therefore 'tis a shame
To make one suffer for the faults
Of two perhaps or three,
Though still we have the laugh at you,
For *we,* yes *we,* are FREE.

PUNCH AND JUDY.

What is that shrill, inimitable cry,
With joyous shouts of idle urchins blended,
With that strange curtained box, well poised on high,
With four long poles, by which its sides are ended?
What should it be but Punch?

Oh, Punch! no vulgar mountebank art thou,
That used to split our ears at holiday or fair;
Thou dost not bring a frown upon the brow,
By pains inflicted upon dog or bear;
I love to recollect thy merry mood of mirth,
Thine unelaborate and itinerant worth.

Thou art the child of cities, and art found
A wandering orb, with hundred satellites;—
Where streets and congregated men abound,
And listless gazers seek whate'er excites
Them most; for no *ennui* dare haunt the ground
Which thou hast charmed from all the gloomier sprites,
And in famed London, thou art always there,—
Thou mak'st one carnival throughout the year.

The above is a simple heading to a very important subject. It is said that *Punch* may be daily expected at the Cape of Good Hope. This is great news for the gazing part of the community. It is further reported, that the recently-created wooden erections on each front of the Commercial Exchange Building, are intended for the exhibitions of Mr. Punch and Mrs. Judy.

THE GRAPES ARE SOUR;

OR, SOMETHING VERY SHOCKING.

Extract of a letter which appeared in the *Zuid-Afrikaan* on the 20th instant:

——— "I am sorry for Jacobs, a man seventy-nine years old; who, in consequence of living among several of these so called Burghers [Hottentots], and not being able to obtain any of them in his service, has been *obliged* to have *his cattle herded by his son!*"

Then follow some remarks respecting the "*good old law*" of *compulsion.* This small paragraph speaks a volume: in it is contained the whole of the history and mystery of the present proposed Ordinance respecting what is called Vagrancy, and which is nothing more or less than a *scheme for the suppression of Free Labour.*

BABOONERY AT UITENHAGE RACES.

THE following precious morsel of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

intelligence is taken from one of the Cape Town papers:— "*Mr. Fredrick Rex's* r. h. *Doctor,* rode by a Baboon, dressed up in a jockey uniform, excited considerable laughter." Delightsome! How great the march of civilization at Uitenhage! But the racers have laid hold of a rhymster to plead their cause; and, according to his song, there was a disposition in some people to deprive the prancers of their *innocent sports!*

For miles around our races stood most high
In estimation,—
Were held so *dear,* they caused to business a
Complete *stag*-nation!

Oh! beings strange there are, it seems to be
Found in some places;
It has been tried a *side,* to put an *end*
To our fam'd races.

To try to rob us of our fun, on them it
A slur must be, sure!
For those who'd rob men of their *pleasure* there
Can be no *plea, sure!*

Such fell attempts do, in my estimation,
Rank next to crimes:
We've lost too many of the *pastimes* of
The good *past-times!*

OLD Mr. PROLIX; OR, THE ART OF TELLING A STORY.

THE art of relating stories or anecdotes in a rapid and skilful manner, so as to excite pleasurable sensations in the bosoms of those who hear, requires no mean exertion of taste and humour. You shall meet fifty clever and able men of business in society for one entertaining companion; a circumstance which is to be attributed to the great disinclination which the people of a commercial country have to exert themselves from any other cause than the acquisition of wealth. The mere pleasure of pleasing is an impulse not sufficiently strong to stimulate the powers of men, who think life happy and enviable only in proportion as it is wealthy. Hence we find, in this colony at least, that the entertaining and agreeable companions are to be found among those persons, whose life being somewhat irregular and idle, presents them with opportunities of seeing and hearing much variety of adventure, and abundance of time to devote to acquirements, which the more solid, grave, and discreet part of society consider as trivial. The gay soldier, who dines every day at a different table, and changes his quarters ever and anon, from the interesting Simon's Bay and Robben Island; the young man of property and *enlarged* education, whom no necessity or difficulty enchain; the pliable parasite, the hireling writer, the characters which often in society yield us amusement by their convivial qualities and anecdotal skill.

The teller of good stories ought to be a man of the true epic cast, who dashes immediately, *in medias res,* without any prolixity or long prefacial preparation. He should have the judgment to select the most striking parts of his anecdote, and the art to embellish them. He should be rapid and forcible in narration; and if he have a talent for mimickry, a flexible voice, and a countenance susceptible of variety of expression, he will be able to throw into his story a theatrical effect, and captivate the eyes as well as the ears of his auditors. Horace says, "*Segnier irritant animos demissa per aurer, quam quæ sunt oculis subjecta fedelibus.*" The teller of stories or anecdotes should, above all things, avoid an injudicious introduction of them. They should be always told as illustrative of the matter in discussion, and appear to grow out of the conversation. The person relating them should avoid all hesitation, or episode, or a too frequent use of conjunctions, but hasten on to the pith and marrow of his circumstance, and terminate his anecdote with the peculiar incident or remark which forms the point, the zest, the soul of it. Let him introduce no after observation, no comment on his own anecdote, no moral, but leave the effect entirely to the matter itself, and the manner in which he has related it.

But to Mr. Prolix. Our neighbour Z. is a worthy kind of personage, but a tedious old gentleman who has amassed an immensity of the Rix, and considers himself fully entitled, like Farmer Flamborough, in the Vicar of Wakefield, to speak always about himself. I met him the other day on the Grand Parade, and in such a position, that there was unfortunately no escaping from his volubility. We talked about the weather, and agreed on the fineness of the day and salubrity of the Cape climate. "Yes," said he, "delightful weather, just such weather as I remember to have witnessed in the year seventeen hundred and eighty-three, or eighty-four; I am not quite certain which, though my good lady who has a good memory, has often assured me, (contrary to the opinion of my daughter,) at all events, it was in the year 1784, that hearing the report of a gun very near our house, (we then lived in Berg-street now called St. George's street,) by the bye, is it not shameful that this now, what I call handsome street, should possess no lamps and be as dark as pitch,—well, as I was saying, I was awoke by a gun, and I immediately called for water to shave. I always shave with cold water, because hot water makes the face tender, at least, so says my barber Canterbury, though I have heard Dr. Jalip tell a very different story about the matter. I rose at eight in the morning as I was saying, and looking out of the window saw the sun. It is really a remarkably fine object—a fine morning so revives one—nothing like early rising, Sir, nothing—nothing! I had no sooner put on my things, than I said to myself—'I'll take a good walk to-day; it will do me a pound's worth of service.' Well! we were all up and down to breakfast by nine o'clock. My good lady made tea, and I well remember that I ate two eggs, which is a most unusual thing for me to do. They were, however, boiled too hard. This is the fault of our cook. Cooks, by the bye, in this colony, are incorrigibly bad fellows. Servants are great plagues; I really wish Council would introduce some wholesome law on this subject. We are in a sad plight, and the worst of it is, that you can't thrash your servant or knock him down, without being amenable to some guardian or public officer. *But to proceed*—Breakfast being over, I said to January—who still lives with me—and probably, with all his faults, will live with me till I die.—"January," said I, "bring me my stick and gloves," which was no sooner said than done. I then put on one glove, and then I put on the other. This is invariably my custom. I then took my hat in my left hand, and my stick in my right, and walked towards the hall, but turned round to my wife as I left the room, and said—"My heart," I shall be home to dinner at four." January opened the street door for me, and shut it after me. I walked down the steps until I came into the street, (we then lived in Long street) when I said to myself, 'shall I go to the right or the left? shall I walk towards Green-point or in the Government garden?' I decided on walking to the top of Strand-street, and if not too fatigued, to pay a visit to the steam works and brewery, and if possible, to reach the whale fishery. Well! off I went—right through Castle-street, (generally a dirty street in regard to the heaps of filth before each door) and just as I was turning the corner leading to Bree-street, (now comes the curious part of my story) who should I meet but the Hon. Mr. ———, member of council. He walked up to me and politely bowed, (he is really a man of true breeding, of the *first class,* and is not spoiled by being placed in the legislature of the country.) He politely *bowed,* and I *bowed,* we *bowed* together, and positively the dogs cried

bow! wow! wow!

Now, was not this a very singular incident? 'Tis fact, upon my honour.

"CUT DOWN" AT LAST.

A HALF-PAY LAY.

'This Indian weed now withered quite,
Tho' green at noon, *cut down* at night
Shews thy decay—all flesh is hay—
Thus think and smoke tobacco.'
(RALPH ERSKINE.)

Reft of rank, and joy cut short all—
Poor, lost Subs!
Each a luckless undone mortal—
Poor, lost Subs!
Ne'er, oh! ne'er, the sweets of messing
More to taste, sirs! How distressing,
Wretched, weary, poor and needy,
Poor, lost Subs!

Joyous once, we plough'd life's ocean—
Ah! happy Subs!
But base *Peace* our prospects blasting,
Brought us Duns and their *compelling,*
Prisons yawning, watches selling—
Poor, lost Subs!

Depths of woe! *sans* grub or rhino—
Poor, lost Subs!
Where will all this end? Ah! I know—
Poor, lost Subs!
Despairing, we'll cast off life's *onus*—
Suicide—and Bailey's *bone-house;*
Pale, distended, *care all ended,*
Happy, happy Subs!

BIBLIOGRAPHICAL RESEARCHES IN THE SOUTH AFRICAN PUBLIC LIBRARY.

No. II. *

If (as we take the fact to be) the source of all moral excellence and well-being of society is to be sought for in the truths and consolations of Religion, we offer the young reader our assistance and guidance in his researches connected with the Public Library, and we introduce him in the first place to the left hand corner of the entrance. This is the Divinity Hall department, (1) or the "Paternoster Row," or as a humourist often calls it, the "*Amen Corner*" of the Library. But independently of the importance of an examination into books which contain truths affecting human happiness, the most judicious Bibliographists justify this *first order* of inquiry. There are extant a great number of systems for the classification of a Library; the chief of which, M. Peignot, in the second volume of his *Dictionnaire Raisonnè de Bibliologie*, where he has shewn his own preference of the scheme originally traced by Lord Bacon. That profound philosopher refers the subject of our knowledge to three primary classes, viz: *Memory*, whence results history; *Imagination*, whence results poetry; and *Reason*, whence results philosophy; and these classes are branched out into very numerous divisions and sub-divisions. The method of Bacon was adopted, and ingeniously commented upon, by D'Alembert, in his preface to the French Encyclopédie, yet he placed *reason* before *imagination*, though on what grounds it would be difficult now to ascertain. To Bacon we are first indebted for the idea of a philosophical arrangement of the different branches of knowledge; his scheme, greatly improved, has been adopted by M. Peignot, Mr. Dibdin, and others. Seeing, therefore, we are in such good company, and conformably with the systematical classification of the South African Public Library Catalogue, we hasten to remark, that although our first department in this public collection is not very abundantly stored, it nevertheless presents a most respectable and judicious selection.

As to the Sacred Text, for we must begin at the beginning, we find, 1st, one copy of the Bible—*Biblia Hebraica*, in 2 vols. 4to. by Mr. Boothroyd, without points, and accompanied by critical and explanatory notes in the English language. It is peculiarly interesting to the Hebrew scholar and critie, as it contains in a condensed form, the substance of the most valuable and expensive works. 2d.—A copy of the *Greek Testament*, 2 vols. 8vo. by Griesbach. This *new edition* is considered preferable to most others, not so much for its philosophical notes as for the establishment of the text on the purest critical principles. 3d.—A version of the Bible in *Latin*, by Francis Junius and Immanuel Tremellius, (1602.) It is held in great esteem for its simplicity, perspicuity, and fidelity. 4th.—The New Testament in *Latin* and *French*, 4 vols. 8vo. (1793) a beautiful edition, enriched with handsome engravings. It is curious enough, that the dedication of this copy of the Scriptures is to the *National Assembly*, by its permission. 5th.—We now approach our *English* version of the Sacred Text. Here we find Barker's edition of 1610—famous for the singularity of many of its interpreted passages, (2) and appended to the edition, a remarkable tract, entitled "The Way to true Happiness; by Questions and Answers, opening briefly the meaning of every several Booke and Chapter of the Bible, from the beginning of Genesis to the end of Revelation." 6th.—The next copy is the English *authorized version*—the glory of the 17th century. (3) The highest eulogiums have been passed upon this version, by the most competent critics, and "indeed," says Dr. Geddes, "if accuracy, fidelity, and the strictest attention to the letter of the text, be supposed to constitute the qualities of an excellent version, this of all versions must, in general, be accounted the most excellent. Every sentence, every word, every syllable, every letter and point seem to have been weighed with the nicest exactitude, and expressed either in the text, or margin, with the greatest precision."

The origin of this version is worth keeping in remembrance. On the accession of James VI. of Scotland, to the crown of England, under the title of James I. March 24th, 1602, he was petitioned by the Puritans, on the subject of ecclesiastical affairs; and so far acceded to their wishes, as to appoint a conference, which was held at Hampton Court between their leading men and several Bishops and Deans. The meeting of this famous council took place on the 12th January, 1603. The proceedings are extremely interesting, as recorded in the 2d vol. of Howell's State Trials, page 70. King James was chosen Moderator, and seems in some things to have been a tolerably good casuist. On one or two occasions it would appear that he lost his temper in debate, and observed of the Puritans,—'*I will make them conform themselves, or else I will harrie them out of the land, or else do worse.*"

* Continued from page 169, vol. I.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The Archbishop of Canterbury thought during the sitting, that His Majesty spoke "by the special assistance of God's spirit!" And the Bishop of London exclaimed, "God's goodness be blessed for your Majesty, your gracious Queen, the young Prince, and all the Royal issue." On the question of a new translation of the Bible, Dr Reynolds, a Puritan divine said, "May your Majesty be pleased that the Bible be new translated, such as is extant not answering the original," and he instanced the particulars.

Bancroft, Bishop of London. "If every man's humour might be followed, there would be no end of translating."

The King. "I profess I could never yet see a Bible well translated in English. I wish some special pains were taken for a uniform translation."

The question was carried, and in 1604, the King commissioned fifty-four learned men of the two Universities and of other places to confer together, in order to make a new and more correct translation of the Bible into English. These distributed into six classes, and were to meet at Westminster, Cambridge, and Oxford. Certain rules were prescribed by the King for the direction of the translators, which display much sound judgment highly creditable to the talents of His Majesty.* In nine months the translators completed their important task, and during that time received £30 weekly from the Stationer's Company.†

Among the varied *critical* editions of the English Bible subsequently to King James' version, it is singular, that the Cape collection can only boast of that published in 3 vols. 4to. by the Doctors D'Oyly and Mant, under the superintendence of the Episcopal "Society for Promoting Christian Knowledge." This is a beautiful copy, with maps and engravings from the best masters. Of the labour attending this publication some idea may be formed, when it is stated that during the work upwards of 160 authors have been consulted for it, amounting to several hundred volumes.

That the commentary on this Bible, represents the peculiarities of a particular school is well enough understood, and orthodox and respectable as its promoters are, the day will probably arrive, when the Committee of the Public Library may be induced to enlarge its Biblical department, by the introduction of other impressions of the sacred text, for instance:—those of Scott and Clarke. The Rev. Thos Scott lived to superintend four large editions of his Bible, and subsequently to his decease, the circulation has been immense, being in every part of the globe wherever the English language is spoken. It is in fact, the comment of our age, presenting many of the last lights which history casts on the interpretation of prophecy. In Dr. Clarke's Commentary, the whole of the text has been collated with the Hebrew and Greek originals, and all the ancient versions. This Bible has proven most acceptable to the literary world in general, and biblical students in particular. (4)

* These may be seen in *Fuller's Church History. Lewis's History of English Translations, Newcome's Historical View,* or in *Dr. A. Clarke's Commentary.*

† The names of the Translators are recorded in Townley's Biblical Literature. Vol III, p 289.

NOTES, &c.

(1) In the affairs of taste, this department of the Library is too obscured, too much hid in a corner. It is the same with the classes of books on the right hand entrance. The truth is, the Library room is greatly deficient in one grand essential—a vestibule or lobby. The collection is too crowded near the entrance door, and the visitor all at once bursts from the street into the room. Again, the Library is rapidly accumulating its stock, and a question will be forthcoming as to its future arrangement and disposal. It may one day or other be deemed expedient to build a room *expressly for the Library;* and this might be done by the outlay of the capital now in the Savings' Bank, and a loan of about £300. In this case the rental would be,—say £20 per annum instead of £80,—the present annual charge.

(2) Barker's Bible thus renders Genesis iii. v. 7th. "Then the eyes of them both were opened, and they knew that they were naked, and they sewed fig-leaves together and made themselves breeches."

(3) It is curious enough that for many years subsequently to the foundation of the Cape Library, no translation of the Scriptures in the English language held a place in the collection. The Press at length *hinted* the subject, and a copy was instantly purchased. This dearth of an English version, was not the fault of the two Protestant, English and Lutheran clergymen, who were the Librarians at that time of day. But the Library was under the complete *surveillance* of the Colonial Office. And it may serve to illustrate a period of former rule, when the fact is stated, that every book introduced into the Library must first receive a *licence* from Government. And no longer since than 1827, when a list of books was submitted for introduction, the answer from the Lieut.-Governor was,—that the document should be forwarded to Earl Bathurst in London, for his Lordship's approval!

(4) The biblical character of the Library must not be weighed by any exclusive reference to the department now under consideration. The Dessinian Collection to be noticed hereafter, presents a rich mine of theological treasure, well worthy the research of the intellectual inquirer. It may, however, stagger some few who penetrate beyond the surface of things, that the Library presents no Polyglot edition of the Bible—the foundation stone of a theological collection. But this hiatus has not escaped the discernment of the Trustees of the Dessinian department. It has been resolved by the Rev. Mr. Faure and his colleagues, to introduce a copy of Walton's famous "Biblia Polyglotta." This rare work was published in London in 1657, in 6 vols. folio; wherein the sacred text was by the singular care and industry of Dr. Walton, printed not only in the vulgar Latin, but also in the Hebrew, Syriac, Chaldee, Samaritan, Arabic, Æthiopic, Persic and Greek languages. Nine languages it will be observed are here introduced, yet there is no book in the whole Bible printed in so many. In the New Testament, the four Evangelists are in six languages; the others only in five.

INDIAN EXPORTS.

THERE are few things on earth I love more dearly than the prompt, but quiet reply, which, cutting through and through, and right athwart a dull matter, puzzles the propounder with some unexpected anomaly or pertinent paradox, and arrests by his own consent the worse than pressing to death which a proser will so mercilessly inflict on enduring auditors. I love it, I say, beyond all earthly love; and withal so honestly, as well as so sincerely, that, if I am convicted of prosing myself, I beg to be thus gently let down from my stilts, and forthwith laughed into silence and good humor.

"And pray, sir!" said a young aspirant, just landed in Bombay, to the Jupiter tonans of the cotton market, "pray, sir! what are those square things tied up in sack-cloth, which appear to cover a couple of acres of ground there, and seem piled as high nearly as the neighbouring flag-staff?" "Those, sir!" replied Mr. G. "are cotton bales,—cotton, sir! called by the natives Kopaus; the best from Tankaria Bunder and the Nerbudda; second quality Surats and Bownuggars; and the worst Dekkans and Koukans, the former brought by bottillas and patimars from Gazerât; the latter on gharries and poties to Panwell,—our chief export, sir! to China and Liverpool: but Mr. B. is coming, excuse me, excuse me; Dr. L. will explain to you further particulars respecting Kopaus; good morning, good morning." The string of un-English words which had rushed like a cataract in the tympanum of the tyro, had so thoroughly perplexed him, that he gravely entered in his note book, "Cotton and China, chief exports from Bombay to Liverpool," and repeating the same to Dr. L. begged to be informed respecting the site of the potteries; and that he might complete his memorandum, added, "and what may be your other exports from Bombay?" "Why, sir!" said Dr. L.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

with due solemnity, "we export a great many little boys and girls, which, notwithstanding the heat of the climate within the Tropics, are annually produced here in considerable numbers, and in great perfection; we also export a great many widows, which the sun of this country makes very expeditiously, and generally very young; and we also export to Europe and the Cape a great many death-struck invalids, with yellow soapy complexions and worm-eaten livers! O, sir! our exports in these articles are prodigious, and even exceed in importance the China which we send to Liverpool."

My subject matter being Indian Exports, I must still, however, declare at the outset, my utter ignorance respecting Kopaus, save and except that a cotton field is splendid cover for grey partridge and button quail; and cotton ground as treacherous as the very devil to follow a hog over; all beyond this is terra incognita to me, an admission which even a 'Senior Merchant' may adventure, since one of the Honorable Company's Supercargoes in China frankly acknowledges he knew nothing about tea, and that having collected valuable samples, he incontinently killed with kindness, and destroyed by treasuring them in glass stopper bottles! a degree of ignorance which Perronet Thompson, in the Westminster, avers would have been scouted as disgrace by Jeremy Bentham's kitchen scullion! But though Kopaus affects me not, I find, on having become a Bombay Export myself, that our sun-flower-visaged tribe of exhausted invalids form a race on whose comforts I deeply ruminate, and for whose sakes I would solicit attention. We will pass that ticklish period during which the Doctor looks fidgetty—friends amazed—wife blear-eyed and anxious,—juniors amiably interested in the sick man's well-being! And let us suppose the destined Export fairly entered in the good ship's manifest;—that is to say, the Government Order duly published, that "A. B. C. Esq. has permission to proceed to the Cape of Good Hope, on leave of absence for two years, for the benefit of his health." Suppose his establishment broken up, his passage taken, and his whole soul concentrated into inquiries respecting the Cape and Constantia, and George's Hotel, and the successors to Dr Barry, and the Hottentot Venus, with the transfer of Rupees into Rix-dollars, and all the minutiæ of his intended domicile.

"I do assure you, said one of my friends, that a more ruinously-expensive place than the Cape exists not on the world's surface: I went thither resolved to be economical, so I limited my plans and my preparations to £100 per month, and in spite of the strictest guardedness, without the least show, or excess, or imprudence that I know of, my outlay far exceeded my anticipations: I could not on any consideration advise you to rely on the Cape for a single article of your comfort or your establishment,—the servants are abominable, the cooks detestable, the lodging-houses not to be endured, and the shop prices cent. per cent. beyond even Indian extortion:—take your plate, your glass, your crockery, your table and bed-linen, and even your bed, for every bed in Cape Town swarms with entomological specimens which politeness would forbid to name, if Mrs. Trollop had not been bitten by *Chintses* in Cincinnatus; take your wines, your cook, your servants;—leave none—leave nothing; you will bemoan and regret the absence of whatever your inadvertence may have left behind." "But this would freight a ship, or thereabouts," said I, "and though to you with your thirty-five hundred rupees per month income, this roughing it on £100 per month might be monstrously natural, it would be anything but agreeable to me."

Staggered and confounded, I turned to Mackshift, a thrifty manager, the care-crazed father of ten children, born in nine years, a case of twins having made up the complement; he, on hearing the above, first opened his right eye, and then his left, to a goggle and a leer, and kindly laying his hand on my shoulder, assured me that the Cape was the paradise of paupers! that he, with his wife, and babes and sucklings, and servants, found 300 rupees per month abundant provision! that the lodging-houses were furnished with the strictest attention to Dutch cleanliness, and English comfort! and every want to be supplied at a wish on the most reasonable terms, and in the most perfect manner! Go," said he, "as I went, unembarrassed—unencumbered; and rely on finding, as I found, that every thing you can reasonably require will be ready to your hand at a tenth part of what it will cost to convey your own establishment and chattels."

Verily, these antipodical advices were somewhat bewildering; but as it cost the least trouble to follow the latter, I left Bombay for the Cape as free as the migratory swallow, with only my apparel and my purse, and trusted to Providence and the Cape for the remainder. How far both of my friends were in error, and in what they erred, and the very different opinion which I have myself formed, I may, perchance, endeavour to expatiate upon hereafter, should the good sense of the public, by applauding this article to the echo, encourage the production of a lengthy dissertation upon the Cape and the appurtenances thereof; but the first brush of my experience impinges on other matter, and having already, like the worthy Dogberry, "sustained losses," I would register them for the benefit of those who follow me.

I enter the more readily on this subject, because it strikes me that the caste, the body politic of Indian visitors, forms no inconsiderable part of the colonial imports, and as their annual expenditure and matrimonial propensities must have at least a fractional effect on the prosperity of the Colony, there seems no harm in an attempt to make the natives and visitors better acquainted with one another.

The first thing which strikes an Indian here, or anywhere, except in India, is, that he has suddenly, and to him unaccountably, become nobody—utterly nothing! In vain he sighs for any degree of that consideration to which he has been accustomed, and which he is tempted to imagine is due to him as an integral portion of his well-being: in vain he looks for any portion of that warm undistinguishing hospitality which operates so extensively, so naturally in India—a liberality which includes all classes of society, and to such an extent that, in Bombay itself, the Capital of a Presidency which has its own army of 5 Royal and 31 Company's Regiments, 4 Battalions of Artillery, and 2 of Engineers; which, with the Indian Navy and the Civil and Medical Servants, forms a total of upwards of 2000 individuals ranking as Gentlemen; there is not, I say, in Bombay itself, the name or shadow of a family hotel, or lodging-house, or boarding-house, of any sort or description whatsoever: there are few who would not prefer availing themselves of the independence and self-command enjoyed in a decent hotel, to trenching on the kindness of friends, or hazarding the dubious endurance of good-natured acquaintances; but still the fact is such, and speaks for itself, that every attempt which has been made to establish an hotel at Bombay has failed, and failed solely, because strangers were otherwise, and sufficiently provided for—of these two grievances, I am not one to regret the existence of the first; an Indian magnate is seldom the worse for being stript of his dignity; the plucking off of a little of his plumage very generally improves him; for though a right good fellow in the main, he is too apt, with the weakness so natural to frail humanity, to fancy he is made of better clay than other men, because he has the luck to enjoy a better income. It is, however, in nine cases out of ten, a mere error of judgment, and no vice

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of the heart; and if those who scout the sublimity of an Indian dignitary were to see the same party in his palace in India, they would in most cases see so little of the pride of place, and so much of the warmth of right feeling and gentlemanly liberality in speech and act, as would leave a favorable impression towards the Caste: but still, as notwithstanding the goodness of God to all his creatures, we cannot all be dignitaries, and the great majority of us neither have, nor make pretensions to superiority, nor yet assume the strut or stride of the Colossus, we have a right, I trow, to claim exemption from any sweeping condemnation.

As respects the tone of hospitality, by which a far more estimable virtue is meant than John Bull's dinner-giving propensity! I do not presume to set up the standard of Indian practice as the perfection of propriety, nor yet for the imitation of otherwise constituted forms of society: hospitality, sociability, gaiety, and liberal intercourse depend on so many contingencies, which are relevant to both parties, that I am far from presuming to state it as a reproach, that, if they exist at all at the Cape, the Indian visitors in general are not so much familiarized, as might be, perhaps, with advantage to both parties, in the pleasing circle: this must not be misunderstood, no offence is intended, and it would be unfortunate should offence be taken. A bachelor, with a good address, and an easy purse, finds himself at home anywhere, and if he has not as much of society as is agreeable to his habits, the fault must be his own; it is not for him that this is written: but a lady from India, unless assisted by adventitious circumstances, finds it no easy matter, or rather a process of very slow operation, to amalgamate with the Cape world of fashion, and as her residence here is necessarily limited to a prescribed and often very short period, this becomes an evil, which deserves the inquiry—whence it is? and are there no means of remedy? To this it may be replied, that the spirit and excellence of the Amateur Theatre, and the good taste and liberality in contribution displayed at the charitable Bazaar, most clearly prove that a sociable feeling exists if it were but encouraged, and were opportunities afforded for its being brought more prominently forward; and perhaps the shortest and readiest way for its further developement, would be the establishment of a Society like Almacks, for the gathering together of all who delight in pleasurable association; what possible objection could there be to an Assembly and Subscription Ball twice a month, when there are such noble rooms available for the purpose, and when the Society is so fortunate in the distinguished person whose character and spirit, as well as station, so well qualify her to preside amid its gaieties, as well as over its benevolence?

The admission tickets would pay for illuminating the rooms and for the supply of music and suitable light refreshments; whilst the rules of Almacks, so modified as to apply to a colonial circle, would still exclude all who had no pretensions to intrude on good society. An evening party so constituted, would have all the pleasure, without the restraint of private hospitality; the performance of a full military band betwixt the dances, and the assembling of the whole society at once in one room would insure a delightful meeting, and would give the most agreeable opportunity possible of bringing out young people, as well as form the most eligible neutral ground in which strangers might find themselves imperceptibly mingled with the gay world, and made acquainted with its votaries of fashion. Visitors who look for courtesy, are of course prepared to repay the kindness, and the assertion may be boldly ventured, that the body of Indian visitors would be found the ready and happy supporters of the Cape Town Almacks.

The Wine Market and Horse-flesh, and other matters of like nature, must not be discussed under the same head as Almacks; the patience of the gentle reader shall therefore be spared a further trial, and the remaining matter may lie over for another article, which shall be upon the means of improving the intercourse betwixt this Colony and India, and the advantages which might result to both countries thereby.

MOUNTAINS.

A country destitute of mountains may be rich, well cultivated, and even beautiful, but it can in no instance be sublime or transporting: and to what a degree boldness of scenery has the power of elevating the fancy, may be in some measure conceived from an anecdote recorded of an epic and descriptive poet. When Thomson heard of Glover's intention of writing an epic poem, the subject of which should be Leonidas of Sparta, "Impossible," said he, "Glover can never be idle enough to attempt an epic! He never saw a mountain in his life."

Mountains have had a sacred character attached to them. Upon their summits the Jews, the Persians, the Bythynians, the Druids of Gaul, Britain, and Germany, were accustomed to sacrifice; and while the Celts conceived that the spirit of their heroes resided among the clefts of the rocks, and on the tops and sides of the mountains, the natives of Greenland believed them to be the immediate residence of their deities. The Christian Scriptures present many instances of mountain scenery as selected by devout sojourners. It was on Mount Tabor, near the city of Tiberias, that Peter said "It is good for us to be here." Moses received the law on the top of Sinai; and so holy was that mountain esteemed, that no one but himself was permitted to touch it. The Messiah frequently took His disciples up to the top of a high mountain to pray; there it was He was transfigured before them, and many of the incidents recorded in Holy Writ took place on the Mountain of Olives. The Scripture writers frequently call high mountains "The Mountains of God," vide Joel iii. v. 17, Obadiah v. 17, Micah, ch. iv. v. 2. The Sermon on the Mount was delivered on the hill now called the "Mount of the Beatitudes." And our immortal Cowper, in adverting to those anticipated times when the garden shall fear no blight and need no fence,—when antipathies are none,—when in the heart no passion shall touch a discordant string,—observes with his usual poetic force

——————"The Mountain tops
From distant Mountains catch the flying joy;
Till nation after nation catch the strain,
Earth rolls the rapturous Hosanna round."

If, at the Cape of Good Hope, we cannot boast with the Switzer of his Mont Blanc; with the American of his Allegany, Cordilleras, and Andes; with the Scotchman of his Ben Lomond; the Welshman of his glorious Snowden; the Grecian of his Ossa and Pelion, we can point out as unique and self characterized, our far-famed Table Mountain, and many others. We have often met with persons dying with ennui for want of what they call a *change;* and they invariably advert to the *sameness* of a town life. The truth is, they have ears, but hear not; eyes, but see not; feet, but walk not. Perhaps in no country is there so little *pedestrianism* as in this colony. We must except, however, that useful class—a numerous people—the *Hottentot* drovers and their families. A very little personal trouble would convince many in-door grumblers of the extreme beauty, variety, and health-inspiring nature of the mountains which surround them. Let a pilgrimage be made to Table Mountain, and its venerable compeers right and left, and let a journal be kept of all that was seen, heard, and felt in these journies. It would describe the existence of grottos, waterfalls, woods, groves,—the glories of botany, geology, and the pictorial, in all their matchless displays and boundless varieties. For our own part, we should consider it a moral misfortune, as well as a moral disgrace, not to be a mountain rambler, not to love scenes worthy the pen of Virgil, and the pencil of Lorrain.

We are indebted to a Correspondent for the following invocation

TO THE TABLE MOUNTAIN.

One parting lay, ere fortune bear him from thy shores,
An humble sojourner, to thee and nature pours,
Around thy sides, majestic mountain! memory tells
Of striking natural beauties, and of magic spells;
Of grandeur, softened by repose, of gloom unbroken,
Where sheds the living orb of day, no gladdening token;
A humid twilight there pervades the tearful scene,
And nature's self in sadness wears a sombre green.
A thousand fairy regions deck thy ample form,
Enlivened now by sunshine, now obscured by storm,
Which thrifty mortals plodding in the vale below,
Intent on selfish ends, nor value neither know.
Monarch of mountains! well thy sov'reign title given,
Thy noble head upreared invades the sphere of heaven;
A Table land of rock, and pool, and grassy waste,
And field of fertile soil, with mellow foliage graced
Baboons sport on thy summit and thy craggy side,
And in thy dark recesses foul hyenas hide.
Oft has he wandered o'er thy furrowed surface led
By passionate love of nature to the torrent's bed,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Where fallen rocks and trees in wild confusion lay,
Denoting nature's force on many a fearful day:
There, dense primeval forests spread from side to side,
Cimmerian gloom and darkness o'er a surface wide;
The fat and teeming soil upon its bosom bearing
A thriving growth, but for its offspring little caring;
Bramble and fern, and sugar-bush, and sapling oak
Struggling to meet the light, each other rudely choke;
And many a shining flower is born to blush unseen
Amidst those tangled wilds of nature's forest green.
Caverns and caves are there which never see the light,
And yawning fissures fill the gazer with affright.
Here bubbling waters steal along their rocky course,
Which soon shall rush and foam beneath with headlong force.
And he has rested near these stony rippling streams,
And given his feelings to the vagrancy of dreams,
Till happiness has seemed no more a painful fiction,
As we should fain believe it from the preacher's diction.
And he has rambled o'er the mountain scenes around
Until each feature has become familiar ground:
The Lion's Head, begirt with triple wall of stone,
Has yielded to his zeal, though feeble and alone;
The labour of ascent has never failed to meet
A rich reward in objects which the vision greet;
Description were in vain to paint the glorious show
Which oft awaits the weary climber from below:
Out-stretching plains, commingling with the mountain chain,
Whose misty outlines vanish in the distant main;
The still and boundless ocean, blending with the sky,
These faintly shadow forth the pow'r of the Most High.
Are there who heed not scenes of such unrivall'd grace,
And nature, up to nature's God, list not to trace?

B.

MATERIEL FOR THOSE WHO THINK.

THERE are many advantages in a variety of conditions, one of which we recollect to have been the boast of a worthy divine, that between two classes all the holidays of the Church are properly kept; since the rich observe the *feasts*, and the poor observe the *fasts!*

Mr. BURKE says truly, "The people maintain the government, and not the government the people." Let governments look to this ere it be too late.

"NEXT to the calamity of losing a battle, is that of gaining a *victory*," is reported to have been said by a great commander, on the evening of the bloody day of Waterloo.

IN one of Foote's farces, Dr. Last asks boastingly, "Have you heard of my *black powder*?" as if he had been the discoverer of so famous a medicine, though all the state quacks since the invention of artillery, and the institution of *commandoes*, have been as fond, and as proud too, of the doctor's prescription.

WE can only tolerate fox-hunting, on the plea that there is a degree of heroism in galloping over those innumerable traps, the mole-holes, which so abound in this colony, and that in these *pleasures* something is *earned*, something *done*. *Efforts* (for we like a *moral* to everything), it must not be forgotten, are as indispensable as desires. The globe is not to be circumnavigated by one wind. The toils, as well as the risks of an active life, are commonly over-rated, so much may be done by the diligent use of ordinary opportunities; but they must not always be waited for. We must not only strike the iron while it is hot, but strike it *till it is made hot*. It is unwholesome as well as unpleasant, to stand shivering on the brink of a cold-bath; don't you feel a *glow* of self-satisfaction when you have plunged, and are resuming your gown and cap?

HE who is *everything* is nothing, is as true of our sensitive as of our intellectual nature. He is rather a bundle of little likings than a compact and energetic individual.

TEMPER—CIVILITY.

We read the other day in one of the papers, something about the want of civility on the part of many of the Cape shop-keepers. Perhaps the following narrative on the subject of an accommodating temper, may contain a *moral* which all would do well to study.

Two gentlemen, brothers, called at the coach office to take seats for the following morning, in the Edinburgh coach; there were *fortunately* two inside places vacant, as the elder brother was, from his appearance, obviously suffering under some oppressive ailment, and the other in rather a delicate state of health. Between the two there happened not to be more cash than was sufficient to pay for one passenger; the second brother said he would bring the fare with him in the morning, and went away. In a short time after, another person came into the office, asked for a seat in the same coach, tendered his money, insisted on the strict rule being observed, and was booked accordingly. The next morning an hour before day, the brothers arrived; the invalid got in, and the other putting down his fare was told that the place was filled by one who had paid his money, and threatened that if refused his place, he would hire a chaise for the whole journey to Glasgow, at the expense of the coach proprietors. The young man looked into the coach, and finding all the seats occupied, begged, and strenuously supported by his brother, to be admitted as a fifth, even for a stage or two, as he was not in good health, and the rain poured down in a tremendous deluge.

The rest of the coach company seemed to yield, but the stiff gentleman was con—tra—ry, as will sometimes happen, and with his former menace silenced the agent (who was leaning to the side of mercy), and insisted with increased vehemence, that the rules of the office should be observed.

The *strict* person was owner of a great flour mill; he was any thing but a *jolly* miller, not resembling* his professional predecessor of the river Dee, in the gaiety of his independence, but adhering literally and morosely to the principle of "caring for nobody," not because "nobody cared for him," but because it was the habit of his life to make every liberal thought or kind intention, which accidentally arose in his mind, like worldly charity, to begin at home, and centre in himself; he was wrapped up in his milling operations, and eyed his bags of flour with the same avidity as a miser would those of the Rix; he was that sort of selfish and self-sufficient person that would not take any moderate boot between the prime minister and himself, and thought the machinery of the state of little importance, compared with that of his own mill. He ordered the coachman to get forward, with some further menace if he did not.

The young man after a little altercation, took his seat beside the guard, and the coachman drove off. It was still dark; the rain was intense, the voices ceased, and the invalid, if a gentle snore was any indication, had fallen asleep.

As the coach passed through Kirkliston, a barking cur assailed the horses, and was apparently responded to by a low growl from the interior of the vehicle. "Is there a dog in the coach," asked the miller, for it was yet pitch dark. Those who were awake said, they could not tell: the invalid breathed hard and snored—in a few minutes the growl was heard again, advancing to a sharper snarl. "Have you a got dog in the coach?" asked the miller—"it is contrary to all rule—the agent is incorrect, and shall be fined—it shall be looked to when the coach stops." A renewed snarl and a few chopping barks from the opposite seat where the invalid was placed, made the miller certain that the dog belonged to him, and lay behind his legs; not wishing, however, to put out his hand, or even his foot, to make the trial, he waited for daylight impatiently, and one or two succeeding growls from the same quarter, confirmed him in this surmise. At length a tedious dawn gave way to the slowly increasing light of a gloomy morning; the miller had his eye fixed upon the spot, and as objects became less enveloped in shade, he chuckled at having ocular proof of the nuisance which he determined to complain and get rid of at the next stage.

There lay the dog, as he conceived, behind his master's legs: but what was

* Vide old song of the "Jolly Miller."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

his disappointment and chagrin when through the breaking clouds, a strong gleam of light fell upon—not the dog of his imagination—but on a small portmanteau belonging to the invalid, who at the sudden burst of light which had surprised and disappointed the miller, opened his eyes, keen, sharp, and penetrating, but sunk deep in a pale and emaciated countenance. "You have been asleep," said the miller—"have I?" was the reply. "Have you a dog in the coach?"—"No." "Did you not hear any growling or snarling in the coach?" "I did at *setting* off." "From what quarter did you hear it?" "From yourself, growling about strict rules." "You are satirical, but we have heard a dog in the coach, and it shall not remain—you were asleep."—"So you say." "You snored in your sleep." "May be so." "Do you ever growl, or snarl, or bark in your sleep?" "It is not improbable—I have not been very well; but Doctor Munro tells me I am cured." "Do you say Munro, that's the mad doctor." "He's a very good doctor, and I'll thank him the longest day I live." The miller in some little alarm, asked in a milder tone, "were you in his house?" "I was, for three months, and he performed a great cure for me." "May I ask," said the now subdued miller, "what was the nature of your malady?" "Why, if you must know," replied the invalid, "it was neither more nor less than the bite of a mad dog."—"Save us," said the miller, "and did the doctor effect a perfect cure?" "He did, and sent me out yesterday to return to my native air, saying that the trifling symptom of snarling like a dog, which, perhaps, may have annoyed you in my sleep, will gradually wear away, and does not signify, as I have done no mischief for the last month, and he was sure that going back to my family would quiet my mind and set all right." The miller's countenance now exhibited a strong expression of terror; he looked wistfully out of the window, and lamented the teeming rain which prevented him from enjoying a seat outside. At this moment the invalid was affected by a tremendous fit of snarling and barking, resembling so perfectly the canine expression of the most furious irritation, that the miller under the strongest alarm was about to get out of the coach, when the invalid seized him by the lapelles of his coat, grinned at him, and exhibited a set of deformed teeth, barking vehemently for some minutes, and then subsiding into a perfect calm, entreated the terrified miller not to be in the least alarm, that it was all over, and that he might depend on there being no danger whatever; for though he was affected from time to time in this unpleasant way, he had not bitten any one for the last six weeks. He then brightened up, was extremely agreeable in conversation, in which the now silent miller was not moved to join, and exhibited less the appearance of any oppressive malady.

By this time the coach had arrived at Linlithgow; the rain was rather heavier, and more perpendicular in its descent; during the change of horses the feverish miller called for a glass of spring water, which when presented to him at the carriage window, was instantly dashed to pieces by the sufferer under hydrophobia, who recommenced the most terrific barkings and snarlings, accompanied by grinnings and gestures the most frightful, through all of which he roared to the miller to be under no alarm, that it would not signify, that Doctor Munro had told him so, that he had bitten no one for six weeks, and that he would be quiet again in a few minutes.

But the trembling miller determined not to trust him, Dr. Munro, or the nature of his disorder, jumped out of the coach, called for a chaise, and posted on alone. As he drove off, the invalid putting his head out of the window, invited his brother into the vacant seat, which (leaving his wet cloak with the guard) he enjoyed for the remainder of a drenching day, to the infinite mirth of the passengers, (previously made acquainted with the trick,) and to the still further annoyance of the miller, whom they passed on the road, and who was saluted by both brothers, with a familiar nod of humorous and wicked sarcasm, and an exclamation from both, "you should observe strict rules."

MORAL.

In every rank of life let a disobliging temper be avoided. Be accommodating in every way that religion and duty will sanction—"Do as you would be done unto," recollecting that it is a divine maxim, and that, so blended are the wants and dependencies of the human race in all its gradations, you cannot tell the moment that a kind action done, may not be recompensed tenfold, or that a sulky, surly, unaccommodating temper may not meet, as in the miller's case, if not a more galling return, at least that of ridicule, contempt, and disappointment.

SKETCHES OF THE CAPE.

It is somewhat amusing to read from time to time, the sketches which are constantly recurring in the English periodicals on Cape manners and society. But it is altogether singular, that the writers, almost all of them, invariably follow each other in one eternal beaten track. In general instances we believe, the Indian visitor, or the gentlemen clad in the honorable livery of the British army, indulge themselves at the Cape expense. Not that we would deprecate fair and liberal criticism—on the contrary, we hail it as the great promoter of civilization, and up-rooter of ignorance, prejudice, and folly. But what we regret is, the absence of all real information—the constant fiddle-faddle about pretty girls—expensive lodging houses—dirty inns—rough roads—hot weather—infrequency of *invites*—want of carpets—bad wines—government balls—Dutch stoeps—and the everlasting reference to the black Mosambique—dusky Hindoo—fair European, or Dutch-descended Africander.

In the United Service Journal of May, there is a paper, No. 1, entitled *Sketches of the Cape*. There is nothing original in the Sketches; but our readers will be perhaps anxious to hear the last thing said of them; good, bad, or indifferent. We pass over the notices on the voyage to the Cape, the luxuries on board a free trader, the table mountain, the parade, government gardens, and the Cape Villas; and just submit a few extracts as specimens of the author's method of description. We must acknowledge at the same time, that we conceive the following gleanings to be of the *highest order* in the whole article before us.

"By turning to the right, instead of entering Long-street, you pass down a broad walk through the Government House gardens—gardens that were, not *are*, shaded over by double rows of thick and lofty oaks, and about half a mile long. This, in summer, is delightfully sheltered from the sun, and is the only agreeable walk. The four or five sentries at intervals down the walk are furnished from the main guard at the lower gate (the only officer's guard) and their duty consists in "protecting" the cabbages, &c. of a small garden in front of Government House, and saluting all military men that pass. The officer's guard room is in fact the Porter's lodge; and the occupation in summer, I know by tolerable experience of that luxury, subjects the victim to a continued process of stewing, or what Mrs. Glasse denominates "simmering gently," for the greater part of his twenty-four hours, in addition to the pleasure of being kept from his mess, and of being, as Lord Byron says, the "focus" of ten

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

millions of concentrating mosquitoes at night, the wet ditch close by being their head-quarters."

"It may be well to state that starvation is not to be dreaded where beef and mutton may be bought for three farthings the pound, and though not quite equal to English meat, still very good. Fowls and turkeys abundant, and particularly fine. Of fish abundance and great variety, though but a few kinds are more than eatable; the best, the kingklip and stokfish. The markets are or were abundantly supplied with fruit, and but indifferently with vegetables, neither of the best quality; but both are grown in abundance in the neighbourhood as fine as can be in the world, and, by a proper contract with the owners of some of the numerous gardens, the messes might be independent of the ill-managed markets. Some tropical and most of the fruits grown in England bear in profusion at the Cape. Grapes of delicious flavour are plentiful for three months of the year; and oranges, peaches, apples, pears, quinces, plums, or loquats in abundance."

"In addition to the immense quality of inferior and low-priced wine, there is another more pernicious article manufactured from the grape —brandy, the curse of the colony. The military man will have its destructive effects brought under his eye but too soon, in the constant intoxication more or less prevalent among the private soldiers, and which the means at present in the hands of a commanding officer are quite inadequate to suppress or effectually restrain; nor is it to be wondered at, when one considers the temptation of such prices as twopence or threepence the quart-bottle of brandy to a man destitute of other amusements to fill the few idle hours of the evening, and who receives a small *daily* supply of money; a man, too, taken in most cases from the very lowest class of the populace, as is now the case, owing to the system of recruiting, and still more to the present operation of the English Poor Laws. Who, that knows the constant restraint and occasional hardship of the soldier's life, the little hope of advancement, and the length of time he must serve before he can obtain the most trifling pension, can wonder at the repugnance of the lower orders in England to enlist, and so give up what they consider their legal right to a maintenance independent of industry. In truth, it more naturally strikes one with surprise and at the same time but little respect for the judgment of those whom one hears so clamorously mixing in the outcry for a reduction of the Army, that these petitioners for an imaginary relief have so little attended to the fact that they are constantly paying a higher rate to the idle and often profligate disturbers of the peace and destroyers of ther property, the rick burners and machine-breakers*, than that which they grudge to their protectors, the hard-worked soldiers; and that they have so little contemplated the (as it seems to me) inevitable consequence of a compliance with their wish, namely, that of the disbanded men, the English would return to their parishes to increase the already grievous burden on the rate-payers, and the Irish, whom we may reckon fully one-half, would not, I fear, be considered an acquisition in a country where they are so incensed at the influx of Irish labourers.

"To drop a subject which deserves, and would require, a far more able hand to treat with the force and accuracy that it deserves, I should mention, that this constant habit of drinking an ardent and unwholesome spirit, of course, eventually destroys the best constitution, and not always slowly, though surely. It is said that a regiment does not seem to suffer for the first two years, but after that, the effects of the habit are marked; and certainly, from observation I can state, that of two regiments in garrison together at Cape Town, the number of deaths in that which had arrived nearly three years before the other, was about four times as great. An additional proof, if any further were wanting, would be found in the *wretched state* of the last regiments that were sent on from the Cape to India; as also of the egregious error of the notion formerly entertained, that the climate of the Cape seasoned troops for that of India. At least, whatever effects the climate might have are far overbalanced by the insidious brandy."

* Let him who doubts this assertion glance at the published evidence before the Poor Law Committee, and let him compare the allowace of food to the following classes: the soldier, the parish pauper, the *suspected* thief, the *convicted* thief, and the *transported* thief: the allowance continually increasing, and the last much the greatest.

"The English are not all on the best terms among themselves; and one is surprised to find them divided by petty jealousies and coolnesses worthy of a country village, and still more disgusted by envious sneers and ill-natured stories, and all Mrs. Candour's amiable shrugs and hints; or possibly, one may see an idle or malicious rumour creeping on into the daring and full-fledged falsehood or atrocious calumny. But enough of a subject that must have been remarked by any resident at the Cape of late years. I am happy to say that I have found examples of liberality of sentiment, untinctured by aught of this meanness, and of the greatest hospitality united together,—and that among the military."

"The Government House being, "ex officio," at the head of colonial society, it is proper, in alluding to the subject, to give it the precedence. With a salary of 7000*l.* a year, and such advantages as the Government House in town, the power of having a large number of soldiers for servants, orderlies, and fatigue men,—servants being the most expensive and troublesome of all conveniences, in Cape Town, one might have supposed that a liberal and extended system of hospitality would be kept up, on a scale befitting the representative of royalty; and nowhere is it more called for than at the Cape, where strangers, from India, are constantly arriving, for a temporary or permanent residence, and where military men of every rank are constantly stopping on their way to and from the East Indies and New South Wales.

"The public entertainments at Government House, during the six winter months, consisted of four balls; and during one month, there were weekly "at homes," where the "inducements" were tea and coffee, and the band of one of the regiments, and a cold and vapid formality that was quite infectious.

"The public balls being much better attended, and having the stir and bustle of dancing, were more agreeable; and though occasionally diversified by odd and grotesque figures, they were very similar, and not inferior to, most provincial assemblies, gayer, indeed, from the number and variety of uniforms of the garison, and the Indian officers and staff. At the largest and least select of these balls, that on the King's birth day, about three hundred compose the assemblage; and waltzing and quadrilling were, in newspaper phrase, "carried on with much spirit." But, alas! they were incapable of, and dead to, the charms of the galoppe, graceful or romping, and to the Eleusinian mysteries of the mazurka.

"There are various opinions as to the claims of the Dutch girls to beauty. It seems to me, that a certain degree of *prettiness* is very generally shared by them; the points of good complexions, fine eyes, and hair, and among the young, an attractive roundness and *embonpoint* of figure, being nearly universal. But generally, a want of expression, and an irregularity of features, deprive them of that higher grade of female loveliness, of which one certainly sees much more in England and Ireland. In Scotland, if Edinburgh may be taken as a specimen, there is, perhaps, less in proportion than at Cape Town, where there are not wanting occasional specimens of this rarer beauty. To particularize would be indelicate, and useless to those who have been there.

"The number of matches that have taken place between the fair Africanders (the general term for natives of European descent, as that of "*Creole*" in the Mauritius and West Indian Islands) and "*Indians*," proves that their attractions are appreciated; and the latter are happy in having such resort as the Cape, where they can at once recruit their health, retain their allowances, and, if so inclined, provide themselves with partners for the rest of their sojourn in the 'land of rupees.'"

"The Indian may be easily recognized by his sallow complexion, his "peripatetic" propensity, and, in summer, generally by the white cotton jacket, that "*ne plus ultra*" of raiment under a burning sun. Many Indians have complained of a want of hospitality and attention to strangers at the Cape; but, in reality, the English residents have not the means of exercising an indiscriminate hospitality among so numerous a class; and where the example in a higher quarter, and the opportunity of meeting them in society first are wanting, it is scarcely to be expected that they should seek out any of whom they have not some previous acquaintance. Nor (as a class) are they agreeable members of English society, though allowance must be made for the effects of ill health, which brings them to the Cape. In general their minds seem to be affected by the lassitude and languor that their frames suffer from the climate; and the great mass having left England young, and their ideas and thoughts ever after directed in new and different channels, have comparatively few topics of conversation in common with those who write not H.E.I.C.S. after their names, and perhaps find the "talk" of the latter as uninteresting as *their* perpetual recurrence to the three presidencies and rupees is to the others. To these general remarks there are of course frequent exceptions, and, as is but natural among a class almost exclusively composed of gentlemen closely connected with the gentry and aristocracy of the United Kingdom, there are many very superior men of high attainments and refined manners, and universally of a liberality perhaps too closely bordering on extravagance."

"As there are many military men who care not for these vanities, to whom a ball is an abomination, and dancing a rock of offence, I can assure them that they too will find amusement and occupation to their tastes. In the Exchange, the handsome building at one end of the parade, the centre is a public news-room, well supplied with the latest English papers, and, on each arrival from home, thronged with a busy and eager crowd; adjoining it, one wing contains the public library, an establishment of which Cape Town may well be proud, and altogether the greatest advantage she possesses for the stranger. The collection of books is large and various, and continually supplied with all the new publications from England, and with every periodical of merit.

"During the burning heats of summer, and in the occasional gloomy and wet days of winter, its spacious and lofty rooms offer an agreeable lounge, and certain antidote to ennui. The books are so arranged in classes, on shelves, all round the rooms, that one can readily lay hands on any book one wishes; and the tables in the centre, after each arrival from England, are surrounded by visitants snatching a look at the magazines, or last caricatures by H. B.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The books are lent out, and these advantages, superior to what any circulating library in England can offer, (the collection being so much finer,) are obtained for various rates of subscription—the highest three guineas, and the lowest but half-a-guinea."

LITERATURE.

Life of Sir John Moore. By his Brother. 2 *vols.* 8*vo.* 1834.

THOUGH too long delayed, still it was with great pleasure that we hailed the appearance of the personal Memoirs of one, whose memory is yet fresh in the hearts of Englishmen, and of whom it is was finely said by Sheridan, that

"A loftier spirit never dwelt
In a gentler breast."

We cannot afford time to inform our readers of the reason of our disappointment on the perusal of the work before us: we leave this matter to their own independent judgment; suffice it to say, that we consider almost every *reflection* of the author, distinct from official document, to be the offspring of *party-spirit*, and unworthy of one who entitles himself the brother of the gallant Sir John Moore. We proceed, however, to notice a few of the prominent and more unexceptionable parts of this biographical memoir.

Sir John Moore was born at Glasgow, 1761. His father was the celebrated Dr. J. Moore, so renowned for his account of the French Revolution, Travels in France, and Zelucco. John Moore was educated in the High School of Glasgow, and in early life attended his father, as a companion, on a tour and residence on the continent. At fifteen years of age, while the travelling party where at Naples, Moore received intelligence of his appointment as Ensign in the 31st Regt. His leave of absence enabled him to remain in Italy to learn the Italian language, when the party repassed the Alps, and after some stay at Geneva proceeded to Paris. His biographer details his various stations in the army, at Minorca, Boston, Halifax, New York, until the peace of 1783. Moore was placed on half-pay, lived with his family, resumed his studies, and through the interest of the Duke of Hamilton, obtained a seat in Parliament in the Pitt administration. We can only *advert* to the subsequent changes in Moore's life. His appointment in 1787, as Major to the 60th Regt. and subsequently its successful commander. We have not space for the details of his services at Gibraltar, Toulon, the West Indies, Ireland, Holland, Egypt, Corsica, and Portugal. His career in the two latter countries deserve, however, more lengthened consideration. In 1794, Col. Moore and Major Koehlar landed as a deputation in Corsica, to examine how far an attack by the British could be made on that island. The conference with the famous General Paoli was an interesting one. The British troops under Sir David Dundas, performed many brilliant exploits on landing; but a misunderstanding took place between Sir David and the obstinate Lord Hood, the British Admiral. The enemy's garrison, 6000 men in arms, surrendered. Sir David retired, and was succeeded by Sir C. Stuart.

The further details of the war which followed between the French against the English, and Corsicans are given by the biographer; but we shall not follow him, as the subject has been already illustrated sufficiently in history. It was an unlucky accident that Sir Gilbert Elliott, the King's Commissioner, and Sir C. Stuart could not agree. The former treading in the unworthy footsteps of Lord Hood, sought to lord it over the military man, and, though a complete stranger to military matters, still assumed the power of dictating to the commander. Sir C. Stuart could not brook such treatment, and so returned home Elliott took the lead in directing the British troops in Corsica, and in order to satisfy the world of the nature of his character, he absolutely constructed the plan of a Constitution for Corsica. Such a plan as it was! He proposed to establish for the Corsican savages nothing short of the *letter* of the British Constitution, as if every human being before him in the island, and every law, and every custom and habit of the people was not directly opposed to such a system. Blind vanity—the *insolence which official rank* sometimes generates, amply account for the conduct of this privileged blockhead. Another of his judicious regulations was to transfer the seat of government from its immemorial locality, Corte, in the centre of the island, to Bastia, on the sea coast, the roads to which latter place were perfectly execrable.

The Corsicans are described by the present writer as the most uncultivated people in Europe, those of Sardinia excepted; they are represented as being generally well made, but short of stature, ill-favoured and pallid. The inhabitants all live in villages, as it would be unsafe for any to live in single houses, so extensive and deep-rooted are the mutual hostilities of this people. Revenge is regarded as an obligation by them, and many years may elapse before a party finds a proper opportunity of exhibiting his resentment. Every Corsican carries a musket on his shoulder, even when he goes out to till his farm or tend his flock. The tradespeople are presented as being very dishonest, making high demands in comparison with the just price of the article.

In the meantime, Colonel Moore had made himself particularly popular with the Corsicans, and thus excited the jealous feelings of Elliott, who, having been quite in favour with the ministry, was allowed to do as he pleased. He was made Viceroy of Corsica, and finding that Moore was an object of much greater esteem in Corsica, he charged the latter with opposing his measures, and stimulating those who were discontented with his policy. He made an express complaint to the government of Moore without letting the latter known anything about the accusation, but Moore called him to account, and an interview took place. Moore denied that he had taken any part whatever in the politics of the country, and defied the Viceroy to substantiate a single fact against him. Elliott said he would think no more of the matter if Moore would promise to be no longer connected with his (Elliott's) opponents, and never to express sentiments of disapprobation of any acts of his government, but on the contrary, give him his support. Elliott told him by way of warning that he had the authority direct from government to send away Moore from the island. The latter, however, with that unbounded contempt which such a mind as his must have felt, told him boldly, that neither he nor any other man had a right to exact from him (Moore) a promise to approve of measures of which he was ignorant, and that were to be brought forward in future, and he declared that no interested motive should induce him to agree to such an engagement, which he deemed to be altogether unbecoming. The result was, that Elliott gave Moore 48 hours to stay on the island. The latter, however, remained a week, and then set out

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

amidst the lamentations of the whole island, but especially the regiments. The *ruffian* who decreed this act of banishment did not stop here; he caused poor old Paoli to be exiled also; the monster had the ferocity to tear the aged patriot from that hearth which he had cherished from his birth, and send him adrift on a perilous world. But the God of Justice allowed him to receive the chastisement which he had so amply earned. The people became impatient of such a cold and contemptible tyrant; the coward was obliged at last to fly from the just vengeance of the islanders, and the whole of their allegiance being alienated from England and thrown into the scale of the French, a mere handful of the latter completely succeeded in getting permanent possession of an island which might have been ours to this day. It will be a monstrous crime against humanity in the historian who does not exhibit the crimes of this infamous character in all their glaring dimensions. Such men are terrific instruments of a government, because destitute of mind, malignity has the range of the whole intellectual empire to herself, and then she prompts to such villianies as deservedly render the name of perpetrator, a sign for perpetual execration.

Moore returned home and waited on several of the Ministers, from whom he concealed nothing whatever of the sentiments which he entertained towards Sir Gilbert Elliott. But he was amply repaid for the humiliation inflicted on him, and he was forthwith appointed to the rank of Brigadier-General, in the West Indies.

The station which was assigned to Sir John Moore in the expedition to Portugal, caused him to express his mind with great firmness to the wily and un-English minister Lord Castlereagh. Sir John Moore subsequently obtained the chief command. It would be quite superfluous in us to go over the history of the Spanish campaign in which Sir John Moore was engaged; nor shall we even touch on the merits of the celebrated retreat of Corunna. The whole of the details in the most authentic form, have been already before the public, and few are now unacquainted with them. We cannot, however, part with these volumes, without giving the reader an opportunity of sharing with us the melancholy pleasure of contemplating this illustrious man in his last moments.—It appears, that in the fiercest part of the battle, Sir Henry Hardinge rode up to Moore, to tell him that the guards were coming up.

"As he spoke, Sir John Moore was struck to the ground by a cannon ball, which lacerated his left shoulder and chest.

"He half-raised himself, when Hardinge having dismounted, caught his hand: and the General grasped him strongly, and gazed with anxiety at the Highlanders, who were fighting courageously: and when Hardinge said, 'they are advancing,' his countenance lighted.

"Colonel Graham now came up, and imagined, from the composure of the General's features, that he had only fallen accidently, until he saw blood welling from his wound. Shocked at the sight, he rode off for surgeons. Hardinge tried in vain to stop the effusion of blood with his sash: then, by the help of some Highlanders and guardsmen, he placed the General upon a blanket. In lifting him, his sword became entangled, and Hardinge endeavoured to unbuckle the belt to take it off; when he said with soldierly feelings, 'It is as well as it is; I had rather it should go out of the field with me.'"

Sir Henry seeing that his friend began to hope, concluded that the wound was not mortal, and expressed himself to that effect. But

"Sir John turned his head, and cast his eyes steadily on the wounded part, and then replied, 'No, Hardinge, I feel that to be impossible—You need not go with me; report to General Hope, that I am wounded and carried to the rear.' He was then raised from the ground by a Highland serjeant and three soldiers, and slowly conveyed towards Corunna."

"The soldiers had not carried Sir John Moore far, when two surgeons came running to his aid. They had been employed in dressing the shattered arm of Sir David Baird; who, hearing of the disaster which had occurred to the commander, generously ordered them to desist and hasten to give him help. But Moore, who was bleeding fast, said to them: 'You can be of no service to me: go to the wounded soldiers, to whom you may be useful; and he ordered the bearers to move on. But as they proceeded, he repeatedly made them turn round to view the battle, and to listen to the firing; the sound of which, becoming gradually fainter, indicated that the French were retreating.

"Before he reached Corunna, it was almost dark, and Colonel Anderson met him; who, seeing his general borne from the field of battle for the third and last time, and steeped in blood, became speechless with anguish. Moore pressed his hand, and said in a low tone: 'Anderson don't leave me.' As he was carried into the house, his faithful servant François came out, and stood aghast with horror: but his master, to console him, said smiling, 'my friend, this is nothing.' "—vol. ii. pp 225, 226.

"He then continued, 'I have made my will, and have remembered my servants. Colborne has my will, and all my papers.' As he spoke these words, Major Colborne, his military secretary, entered the room. He addressed him with his wonted kindness; then, turning to Anderson, said, 'Remember you go to Willoughby Gordon, and tell him it is my request, and that I expect he will give a Lieutenant-Colonelcy to Major Colborne;—he has been long with me—and I know him to be most worthy of it.'

"He then asked the Major, who had come last from the field, 'Have the French been beaten?' He assured him they had on every point. 'It's a great satisfaction,' he said, 'for me to know that we have beat the French. Is Paget in the room?' On being told he was not, he resumed, 'Remember me to him; he is a fine fellow.'

"Though visibly sinking, he then said, 'I feel myself so strong——I fear I shall be long dying.——It's great uneasiness——it's great pain!'——

"'Everything François says is right.—I have great confidence in him.' He thanked the surgeons for their attendance. Then seeing Captains Percy and Stanhope, two of his aides-de-camp, enter, he spoke to them kindly, and repeated to them the question, 'If all his aides-de-camp were safe;' and was pleased on being told they were.

"After a pause, Stanhope caught his eye, and he said to him, 'Stanhope! remember me to your sister.' He then became silent. Death, undreaded, approached; and the spirit departed; leaving the bleeding body an oblation offered up to his country."—vol. ii. pp. 228—230.

A considerable number of letters by Sir John are added, all containing accumulated evidence of the goodness of his heart, and the soundness of his judgment.

RUSSIA
AS IT IS REPORTED TO BE IN 1833.

SECOND NOTICE.

In our last Number we inserted a Picture of Russia, comprehending in it a short detail of the first class of society. We now advert to other classes, with a few particulars of Russian life, derived from the same sources as mentioned in our first Notice.

The merchants chiefly constitute the second class of the Russian state. They are corporate bodies, and include citizens and mechanics: these corporations elect the magistrates, and they have the full powers, like our corporations, of acting as a corporate body. With respect to the third class, the peasants, the author gives us the following account:—

"These are composed of crown peasants, or free farmers, and vassals. The free farmers, or crown peasants, amount to about fifty or sixty thousand; men who have obtained their freedom by mutual agreement between them and their lords, and whose rights have been confirmed to them by the crown. They occupy lands, which have been given or sold to them, and of which they are the owners, having the power to sell or dispose of them in any way they think proper. A crown peasant pays no land tax, nor any but a capitation tax, and he is subject to none but the public authorities of the province where he resides. Vassals cultivate the lands belonging to their lords, are attached to the glebe, and cannot be alienated from it. All descriptions of peasants are bound to furnish recruits; the free farmers do it by turns, and the vassals by the nomination of their starostas, with the consent of their lords. The law obliges every proprietor of vassals to furnish them with a sufficient quantity of land for their own use: they work three days for the lord and three days for themselves. Others, by their own desire, are put upon *Obrok*, as it is termed; that is, to pay the lord so much a head per annum, instead of working for him. Those who have been taught a trade of any sort pay him a higher obrok than a mere cultivator, and he receives a passport to go and reside where he pleases. The peasants who become traders also pay a very high obrok; sometimes the lord takes out a gild for them, and they acquire large fortunes by commerce. Many lords permit all their vassals to pay obrok; then, should they cultivate any portion of land for him, he pays them for their labour, unless there should be an agree-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ment made to the contrary, in consequence of the smallness of the obrok. The obrok, throughout Russia, generally speaking, is about twelve or fifteen roubles per annum, and even on the best land, rarely exceeds twenty-five roubles a-head per annum, including the government taxes and all other expenses. Those who pay a higher obrok, must be either mechanics, traders, or merchants, who have the means of acquiring money, more easily than the cultivator of the soil. A peasant who has served as a soldier for twenty years then becomes a freeman, and is exempted from all sorts of taxation. Should he have conducted himself with bravery and probity during his service, he retires with the rank of sergeant. If he chooses to prolong his service twelve years, as sergeant, he then becomes an officer and a nobleman:—he cannot, however, transmit the rights of nobility to his children, except to those born after he has been ennobled."—pp. 16, 17.

In the church of Russia it is singular enough there is no endowment, no rich livings, no prebends, no opulent benefices. The clergy subsist on the voluntary contributions of their flock. They receive some small portion, however, of their income from funds charitably set apart by pious individuals, for the double purpose of building or repairing churches, and contributing to the support of the pastor. Most of the Russian churches have been built by private liberality. The author further tells us—

"Every priest who does duty at a village church receives as much land as is commonly allotted to two peasants, or even more should he demand it, and the peasants frequently assist him to cultivate it. Indeed, throughout Russia, most of the landed proprietors allow a small salary to the priest who do duty in their villages. The clergy are certainly not sumptuously provided for, but they are, nevertheless, well furnished with all the necessaries of life, and the means to live comfortably. This dependance on their parishioners has the effect of making them more attentive to their duty, and at the present day the character of a Russian priest has assumed a tone of respectability and piety, not always met with in older countries. This disposition, the Russians, who are religious, from feeling and principle, encourage, by paying proper deference to those, whose conduct is distinguished by a rigid observance of good morals and strict attention to the sacred duties of their profession. The clergy who serve in the remote parts of Siberia, receive pay and rations of flour from the Government; indeed, I ought to say, from the Emperor's private purse. His Imperial Majesty having heard that the clergy of Kamchatka were extremely poor and unable to buy bread, immediately ordered them to be furnished with flour, and their salaries increased from his own funds; one of the strongest proofs of his parternal care; for in some of those distant places, the number of Russians are so few, it would be a sufficient pretext, for a government less protective, to refuse them a Church Establishment. But to the honour and eternal glory of the Emperor, be it said, that throughout his Empire, wherever there are a handful of Christians collected together, there will you find a church, a clergyman, and all the consolatory associations of religion. In this, his Imperial Majesty has strictly fulfilled the words of the gospel, and has 'laid up for himself treasures in heaven, where moth and rust cannot corrupt, and where thieves cannot break through and steal.'"—pp. 18, 19.

The author assures us that he presents his account of the Russian dominions, not from hearsay, nor from the authority of books, but from actual personal experience during the period of twenty years. He declares unhesitatingly, that the Russians are, without any exception, the best fed, best clothed, the most contented, and intrinsically the happiest people on the face of the earth; that they are by nature, mild and generous, possessing intelligence, good-nature, and charity, joined to great hospitality. One great proof of the truth of this account is, that such a calamity as an individual dying of starvation is utterly unknown in Russia; and mendicants, even, are a very rare species of nuisance there, and generally prove to be victims of drunkenness or disease, or cultivators of an idle life. The necessaries of life are so cheap, that a man who brings only industry and character to any branch of business, may be so successful as to acquire a rapid fortune. In their personal conduct, particularly towards strangers, the Russians equal even the Chinese, the most celebrated in the world for genuine politeness.

The author next presents us with a sketch of Russian life, as it is seen in the humblest of the people. The meanest labourer, he says, can earn two roubles a day, and there are eating-houses particularly suited to the humble classes. For twenty kopels a labourer can have at one of these places, plenty of black bread, cabbage, soup with beef in it, and *casha* (grits boiled in oil or butter). After this the labourer may enjoy a glass of rye brandy, or a bottle of beer; and in the evening a cup of izbitjn, a sort of tea made from herbs and leaves. The whole of the evening's expenses, including dinner and drink, stand him only in sixty kopels. Now his daily wages are two roubles, or two hundred kopels, and then allowing for his washing and lodging (which the author declares are never more than three roubles a month), we shall find that the Russian labourer is able to save money every month, which, at the end of the year, forms a considerable sum. So that after paying his *obrok*, or tax, and after clothing himself comfortably, which he can do very well for seventy roubles a year, there remain, as clear profit, at the end of the twelvemonth, about one hundred and twenty roubles. The author declares that the above computation is founded on calculations the least favourable to the labourer, for he has made them on the lowest rate of wages, and the highest rate of clothing and food. He says, that black bread generally costs about three kopels the pound, and is never higher than five kopels, whilst the price of white bread is from eight to ten kopels; but the Russian prefers rye bread to his dinner, that being the most substantial. The very common labourer in the provinces, who is unmarried, is generally satisfied with a small pie, with either fish or meat in it, and which he can purchase for about four kopels; but when the cottages of the labourers are examined, the scene is quite delightful, and we shall allow the author to describe not only the domestic comforts of this people, but their religious and moral character:—

"He has his own beef, butter, eggs, milk, &c. The clothing of his family is all made at home, from his own wool and flax, when winter covers the ground with snow, and agricultural labours are suspended. He has no delicacies, but he certainly wants for nothing that is wholesome, good, and nourishing. Should he feel inclined, he makes beer and mead, for hops and honey are abundant throughout Russia. His garden is well stocked with potatoes, turnips, carrots, onions, and cabbages. Of the latter he always lays in a large stock salted for winter, cured after the Dutch manner, and is a very healthy food. Thus far for his physical wants. From his childhood he is brought up in the fear of God, with sentiments of respect and love for all the sacred bonds of civilised society, obedience to his sovereign, and the laws of the land. He therefore becomes industrious, economical, moral, and charitable, and is particularly dutiful to his parents. The common Russian has been charged with being 'a religionist, from habit and ignorance, and of being so stupid as to "*pray to the picture of a saint, as if it were God.*"' I can assure my readers, he is religious from principle, feeling, and sentiment. He is no bigot. His tolerance of all religions, and the little pains he takes to bias other sects, is the strongest proof in support of my assertion. I have never met a Russian who did not perfectly understand, that when he said his prayers before the picture of a saint, it was to God he prayed, and to the saint, as intercessor or mediator. Having taken particular pains to satisfy myself of this fact, I here subjoin an extract, taken from the common prayer-book, out of which children of all classes are taught their prayers. Those who cannot read and write, have them repeated to them by their parents or the priests, from the moment they can lisp, and therefore all have them by heart. One of the first things, almost, is an injunction concerning the respect due to the saints. 'The saints are to be reverenced, not as we revere God, but as the servants of God, who are to convey our prayers to him and find us grace in his sight, and for this we should ask their assistance.' This being found in every common prayer-book, and enjoined by the priests to those who appear ignorant of the duties of their religion, it will now be seen that it is impossible for the most uneducated Russian, to think that the picture of his saint, generally placed in the eastern corner of his room, *is his God.* I once thought of translating all the Russian church service, many of the prayers, being almost word for word those of the church of England, but when I came to examine the pile before me, I found it would be an Herculean task. They have prayers, not only for every day in the year, but for all the fasts, which are five in number, and all the holydays apart."—pp. 40, 41.

The author mentions a fact which seems to us to be worth the whole of his affirmations (which, however, we do not mean to under-rate), in support of his view of the Russian character—it is,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

that the number of crimes committed in Russia is, in the proportion of them to the population, the smallest of any on the face of the earth; and so true is this, that during the whole of the reign of Alexander, there was not *a single instance in which capital* punishment was inflicted!

There are in Russia, and particularly at St. Petersburgh, many regulations relating to the health and comfort of the different orders of society, which appear to us to indicate a very high degree indeed of social refinement. From time immemorial the Russians have been celebrated for the perfection to which they have brought that great engine of health, and a source too of luxury, the bath, particularly the vapour bath. At St. Petersburgh the public baths are on a splendid scale, and the whole of the apparatus and the process are contrived and pursued on principles which the most exact acquaintance with science could alone enable the Russians to discover. The person about to bathe is first seated in an ante-room, where the temperature is so high, that he feels very unpleasant sensations; but soon a perspiration takes place, and he goes into the bath-room. Here the temperature is still warmer, and the bather ascends several benches, where he sits, and the temperature is increased. The poorer Russians generally rush out of the bath when very hot, and roll themselves in the snow.

Then in vain do we look around to those nations which boast of the advance they have made in civilization, for any thing like such a manifestation of paternal care on the part of the government as is to be found in Russia. The regulations for the protection of the public from the mischiefs which pretended medical men, quacks, and all persons not properly qualified, may inflict, are perfectly admirable. It is the special duty of the Minister of the Home Department in Russia, to inquire into the state of the medical profession in all its branches: he is assisted by a medical council, and he takes especial care that *no person shall practice who is not duly educated,* and who has not *proved on examination that he is so.* Quacks, therefore, are not tolerated in Russia, as the means for getting rid of them by the law are tolerably severe, and always promptly applied.

We own that the contents of this brief work has very agreeably surprised us: it has very successfully dissipated much of the impressions, or rather, what we now deem to be prejudices, against Russia. We should say, that a larger and more elaborate work on Russia, by the same author, would be a very valuable contribution to our literature.

COOK'S SKETCHES IN SPAIN. 8vo. 1834.

In his account of the manners of the people of Spain, the author almost uniformly employs the language of eulogy. He says, that in all the social relations of life, in discharge of the duties imposed on men, as Christians and members of civilized society, they are excelled by no people on earth. In all their tastes and habits, no nation is more thoroughly domestic. The author praises their hospitality, their delicate attention to guests. With respect to the state of morals in Spain, the author complains, that hitherto the custom of travellers from different countries has been to misrepresent, and grossly libel the Spanish character. No woman in the world, he contends, deserve an imputation against their honour less than those of Spain; and no where are better examples of domestic and connubial happiness. The author then proceeds:

"The young women are brought up, in better families, entirely with a view to their becoming mistresses of houses, and they possess all the talents natural to their sex, in a degree excelled by no other. In the provinces they are accustomed from childhood to trot after their mothers to the bazaars; and in the Moorish cities, may be still seen in Mantilla, perfect miniatures of the stately matron whom they follow. As soon as they are able, they are intrusted with the management of business on their own account, and may be seen, while very young, bargaining and reasoning and wheedling the dealers. Their education is almost entirely managed at home. Strong prejudices exist against seminaries, and there are scarcely any religious societies for the purpose, as in other Catholic countries. So great is the dislike to these places that, even in these disastrous times, few families allow their daughters to be placed in them. The younger girls are taught by the elder, and they may be constantly seen, after dancing all night, working indefatigably all day, without languor or ennui, at household work or embroidery, which is their constant occupation. They are consummate mistresses of economy and management, at least the better class of them. In the interior their houses are in general admirably conducted with perfect skill and regularity. So well is every thing managed, in which they are concerned, that some zealots have asserted that if the reins of government were in their hands it would be much better. In many respects there is the most complete contrast in the character and manners of these people from the Italians, who might be supposed the most to resemble them. In Tuscany, which is one of the best parts of Italy, a patriotic and most laudable society of ladies was formed, to instruct the young women in the arts of housekeeping and domestic management as practised in the north of Europe, with the idea of improving their social and moral condition. In Spain this would have been a complete work of supererogation. Every house, especially in the south, could have furnished individuals capable of instructing or directing any who might require it. I believe the metropolis, in the upper classes of society, must be exempted from this rule. I was at an inn in a large town in the south of France, where, on asked for a needle, they were obliged to send out to purchase one, not a female in the house possessing such a thing. In Spain it would have been impossible to find such a case. In the south especially, women of the highest rank may be seen sitting in the interior of their houses, in the plainest attire, with their maidens arranged around them, engaged in household work in the ancient style."

A PICTURE OF TRADES' UNIONS.

THE following revolting form of initiation of a new member by the Woolcombers' Union has been laid before Parliament. It reminds us of the horrible freaks of the worst excesses of the French Revolution.

DRAMATIS PERSONÆ.

Outside Tiler*—*a member of the Union who keeps guard on the outside of the room in which the members are assembled.*
Inside Tiler—*ditto on the inside.*
Principal Conductor—*the person who conducts to the Lodge those who are to be initiated into the mysteries of the Union.*
President.
Vice-President.
Warden.
Secretary.
Members of the Union.
Workmen about to be made members.

The scene is usually the first floor of a tavern, which is doubly planked throughout, and the interstices filled with wood shavings, in order to prevent any one overhearing the ceremonies. The time is eight or nine in the evening, at which hour the above-named *dramatis personæ,* with the exception of the principal conductor, and those who are about to enter the Union, are supposed to be collected together for the performance of the following drama. On one side of the apartment is a skeleton, above which is a drawn sword and a battle-axe, and in front stands a table, upon which lies a Bible. The principal officers of the Union are clothed in surplices.

(Members say the following prayer.)

O God, who art the author of peace and lover of concord, defend us in our undertaking, that we may not fear the power of our adversaries, through the merits of Jesus Christ our Lord. *Amen.*

(Outside Tiler knocks at the door.)

Inside Tiler.—Who comes here to disturb the peace and harmony of this our most worthy and honourable order?

Principal Conductor from without.

I am not come here to disturb the peace and harmony of this your most worthy and honourable order. I am a brother with strangers, who wish to be admitted into your most worthy and honourable order.

Inside Tiler.—Most worthy President, Vice, Secretary, and brothers all, a brother stands at the door with strangers, who wish to be admitted into this your most worthy and honourable order.

President.—In the name of the Lord admit him.

(Enter Principal Conductor, followed by the strangers with their eyes bandaged. Members salute, and then sing a hymn)

Principal Conductor.

Strangers, within our secret walls we have admitted you,
Hoping you will prove honest, faithful, just and true,

* "Tiler" is technically a Masonic term, which originated in the circumstance, that on the first establishment of Freemasonry, those who were employed to guard the door, were really the working tilers, who had joined the confederacy.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

If you cannot keep the secrets we require,
Go hence, you are at liberty to retire.
Are your motives pure?
Strangers.—Yes.
Principal Conductor.—Do you declare they are?
Strangers.—Yes.
Principal Conductor.
Then, brethren, to initiate these strangers we will now proceed,
And our most worthy master may proceed to read.

(*Members sing a hymn.*)

Warden.

Stand ye presumptuous mortals, stranger's steps I hear,
And I must know your trade and business here.
By my great power, there's nothing can from vengeance stay us,
If you come here intending to betray us.

President.

Most worthy guardian of our sacred laws,
They are wool-combers, and wishful to protect the united cause.

Warden.—Then all is well.

Vice-President.

Strangers you are welcome, and if you prove sincere,
You'll not repent your pains and labour here.
We have one common interest, and one common soul,
Which should by virtue guide and actuate the whole.
Our trade requires protection, by experience sad we know;
Our duty is to prevent recurrence of our former woe.
Our commonwealth was like some savage land,
Where the weak are slaves, and strongest bear command,
Where tyrants rule with uncontrolled sway,
And degraded subjects do their will obey,
Such was our domestic lot. Our suffering and our care
Enraged our minds with sadness and despair.
And when we had united and our rights obtained,
We found that only half our point was gained,
Our interests were so many and so various,
The tenure of our rights so frail and so precarious,
That had we not invented Lodges our protection to ensure,
All, all would have come to nought, as it had done before.
Strangers, the design of all our lodges is love and unity,
With self-protection founded on the laws of equity,
And when you have our mystic rights gone through,
Our secrets all will be disclosed to you.
We deem you worthy our friendship, trust and confidence to share,
See that you make the prosperity of our cause your constant care.
Let your tongue be always faithful, your heart conceal its trust,
Woe, woe and dishonour attend the faithless and unjust.
Guard, give the strangers sight.

(*The bandages are removed from the eyes of the strangers, and they are placed opposite the skeleton.*)

President, pointing to the skeleton.

Strangers, mark well this shadow, which you see,
It is the faithful emblem of man's destiny.
Behold that head once filled with pregnant wit,
These hollow holes once sparkling eyes did fit,
This empty mouth nor lips nor tongue contains,
Of a once well furnished head, see all that now remains,
Behold this breast, where a generous heart once moved,
Filled with affection, loving and beloved,
Mark well these bones, the flesh hath left its place;
These arms could once a tender wife embrace.
Those legs in gay activity could roam,
But, alas! the spirit's dead, the life is gone.
O death! O death! thy terrors strike us with dismay,
Only the spirit just, which hath left its empty clay,
Can set thee at defiance and in triumph say,
O death, where is thy sting?—O grave, where is thy victory?
The sting of death is sin—are we not sinners all?
Then upon us one day the heavy stroke of death must fall.

Vice-President.

Strangers, hear me; and mark well what I say,
Be faithful to your trust, or you may rue this day.
You are now within our secret walls, and I must know if you can keep a secret.
Strangers.—Yes.

Vice-President.

Then amongst you, you will shortly be entitled to the endearing name of a brother,
And what you hear or see here done, you must not disclose to any other;
We are uniting to cultivate friendship, as well as to protect our trade,
And due respect must to all our laws be paid.
Hoping you will prove faithful, and all encroachments on our rights withstand,
As a token of your alliance,—give me your hand.

And now, shouldst thou ever prove deceitful, remember thy end, remember. Guards, put these strangers into darkness, and conduct them to our most worthy master, to be further instructed in this our most worthy and honourable order.

(*The eyes of the strangers are again bandaged, and they are then made to walk several times round the room, while the members stamp on the floor with their feet. They are then led to the table, upon which the Bible is placed; the right hand of each is laid upon the sacred volume, the bandages are then removed from their eyes, and they take the following oath:*)—

I, A. B., Woolcomber, being in the awful presence of Almighty God, do voluntarily declare that I will persevere in endeavouring to support a brotherhood, known by the name of the Friendly Society of Operative Stuff Manufacturers, and other Industrious Operatives, and I solemnly declare and promise that I will never act in opposition to the brotherhood in any of their attempts to support wages, but will to the utmost of my power assist them in all lawful and just occasions, to obtain a fair remuneration for our labour. And I call upon God to witness this my most solemn declaration, that neither hopes, fears, rewards, punishments, nor even death itself, shall ever induce me directly or indirectly, to give any information respecting any thing contained in this Lodge, or any similar Lodge connected with the Society; and I will neither write, or cause to be written, upon paper, wood, sand, stone, or any thing else, whereby it may be known, unless allowed to do so by the proper authorities of the Society. And I will never give my consent to have any money belonging to the Society divided or appropriated to any other purpose than the use of the Society and support of the trade, so help me God, and keep me steadfast in this my most solemn obligation; and if ever I reveal either part or parts of this my most solemn obligation, may all the Society I am about to belong to, and all that is just, disgrace me so long as I live; and may what is now before me plunge my soul into the everlasting pit of misery. Amen.

Vice-President.—Guards, put these strangers into darkness. Rise and stand (*to the strangers*).

(*The strangers having been blindfolded, the members sing a hymn, and then salute. The strangers are then let out. Members then say the following prayer:*)—

O God who art the author of peace, &c. (*same as at the commencement*)

President.—In the name of King Edward the Third,* I declare this Lodge to be now duly closed, and so it is.

God save our noble King,
William the Fourth let's sing,
Brethren, ere we depart, let us join hand and heart
In this our cause;
May our next meeting be blest with sweet harmony,
Honour, and secrecy in the Mechanic's cause.

(*Exeunt.*

SCIENCE, &c.

"CIRCUMSPICE: *Look around you*, is all that need be said to him who doubts the advantages which science is ever conferring on the world."

QUICK COMMUNICATION WITH THE CONTINENT.

Railway speculations appear to be every day becoming more popular. Amongst the great number of new plans of the kind, that of the "London, Brighton, and Shoreham Railway" appears not the least prominent. Its importance, of course, will be immensely increased should the railroad from Paris be brought to Dieppo (the most direct course between the French and British capitals), as there is little doubt it will be. A trip to Paris will then be a mere trifle—a single morning's journey; while the reader of the "Times" will expect to have "yesterday's debate in the chamber of Deputies" presented to him at the breakfast table! It is not unworthy of remark, that while our share in producing these wonders is to be achieved by means of private capital, directed by public spirit, our neighbours are to be indebted for theirs to the interference of the government, directed by "the Minister of Public Works."—Is not this a whole commentary in itself?

THE NEW SMITHFIELD.

The building in the Islington Lower Road, which was referred to in a recent Note, is now avowedly intended to become the London cattle-market, notice having been given of an intended application to Parliament next session for an Act to enable the proprietor to make use of it for that purpose, and *to levy the necessary tolls.* The City will, of course, strongly oppose the intended Act, which would operate to transfer a large portion of their funds from the corporation treasury to that of the "humane individual" who has embarked in the speculation with so much apparent recklessness. The accounts which have appeared of the wonders of the place are founded more on the imagination of the reporters than on the real state of things. It is, indeed, very extensive, but at present the only erection are a range of cattle sheds, surrounding a large quadrangle, and an unfinished market-house. The "sheep pens on a new principle," grand "tavern and stabling," and, above all, the, "abattoirs," and other conveniences for slaughtering, as yet exist only in the columns of the newspapers.

THE UNIVERSAL MAGAZINE.

A translation of the "Penny Magazine" is regularly issued to the German public at Leipsic, embellished with wood cuts by "the first English, French, and German artists," under the title of "Das Pfennig Magazin." According to the Useful Knowledge Society, imitations of their most successful publication are also printed in France, Belgium, North America, *Poland*, and *Russia!*

* In this king's reign the woollen manufacture was introduced into England.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

PEDOMOTIVE CARRIAGE.

A person from Romford traversed the streets of Chelmsford yesterday with a locomotive carriage, which is said to be his own invention. It has three wheels; one in front to steer with. The propelling power is applied by the feet, which work upon three foot boards connected with the axletree of the vehicle; and, on the right side, a wheel, worked by the hand, furnishes the additional power necessary to get up a hill, or over a rough road. Some idea may be formed of its simplicity, from the price asked by the inventor—forty shillings. The maximum speed appeared to be about seven miles an hour, which rate he accomplished with apparent ease. As a plaything it is not, like the velocipedes which appeared some years since, calculated to injure the traveller. The man said he was making one to enable his wife to travel with him.—*Ipswich Journal.*

STEAM COMMUNICATION BETWEEN AMERICA AND ENGLAND.

The keel of a splendid steam packet, with four engines, to ply between New York and Liverpool, will be laid this week. She will be of a large size; and, as the enterprise is undertaken by gentlemen of capital, no expense will be spared to make the experiment in the best possible manner, so that there can be but little doubt of its success—*Boston (U. S.) Transcript.*

'TIS A BAD WIND, ETC.

The Rev. Thomas Tryon, of Bulwick, Northamptonshire, says, in a letter to the Editor of the *Lincolnshire Chronicle*, "I made an attempt *last stormy Saturday* (Aug. 31.), to trisect a rectilineal angle, and succeeded beyond my expectation; and I shall hereafter be ready to impart the discovery to any body of mathematicians or learned men for the *trifling* remuneration of 500*l.* It will open a fountain of new scientific and mathematical knowledge. Euclid has not even trisected for us a straight angle, nor a segment of a circle, nor an angle. I will trisect an angle for 500*l.*, and a segment for a further 500*l.*, and a straight line for less."

WATER.

Boring for water has been prosecuted with singular success in the south of France, by a M. de Gouzée, civil engineer. Three years ago, the town of Tours was supplied by fountains, which were often dry in summer; at present four bored wells yield each such a volume of water (one of them no less than 1,500,000 litres in twenty-four hours) that there is an average supply to each inhabitant of 149 litres per day. The water issues with such force as to eject balls of from four to eight pounds weight.

METEOROLOGY.

THE WEATHER—BAROMETER—DIRECTIONS ENGRAVED UPON THE COMMON WEATHER GLASSES ABSURD.

The five rules for ascertaining the atmospheric changes introduced in the following articles, were pointed out to us by Capt. Robb, of the *Leda*, as being in his experience extremely trustworthy.

The barometer has been called a *weather glass*. Rules are attempted to be established, by which, from the height of the mercury, the coming state of the weather may be predicted, and we accordingly find the words "Rain," "Fair," "Changeable," "Frost," &c., engraved on the scale attached to common domestic barometers, as if, when the mercury stands at the height marked by these words, the weather is always subject to the vicissitudes expressed by them. These marks are, however, entitled to no attention; and it is only surprising to find their use continued in the present times, when knowledge is so widely diffused. They are, in fact, to be ranked scarcely above the *vox stellarum*, or astrological almanac.

Two barometers, one near the level of the River Thames, and the other on the heights of Hampstead, will differ by half an inch; the latter being always half an inch lower than the former. If the words, therefore, engraved upon the plates are to be relied on, similar changes of weather could never happen at these two situations. But what is even more absurd, such a scale would inform us that the weather at the foot of a high building, such as St. Paul's, must always be different from the weather at the top of it.

It is observed that the changes of weather are indicated, not by the actual height of the mercury, but by its *change* of height. One of the most general, though not absolutely invariable, rules is, that when the mercury is very low, and therefore the atmosphere very light, high winds and storms may be expected.

The following rules may generally be relied upon, at least to a certain extent:

1. *Generally* the rising of the mercury indicates the approach of fair weather; the falling of it shows the approach of foul weather.

2. In sultry weather the fall of the mercury indicates coming thunder. In winter, the rise of the mercury indicates cold.

3. Whatever change of weather suddenly follows a change in the barometer, may be expected to last but a short time. Thus, if fair weather follow immediately the rise of the mercury, there will be very little of it; and, in the same way if foul weather follow the fall of the mercury, it will last but a short time.

4. If fair weather continue for several days, during which the mercury continually falls, a long continuance of foul weather will probably ensue; and again, if foul weather continue for several days, while the mercury continually rises, a long succession of fair weather will probably succeed.

5. A fluctuating and unsettled state in the mercurial column indicates changeable weather.

The domestic barometer would become a much more useful instrument, if, instead of the words usually engraved on the plate, a short list of the best established rules, such as the above, accompanied it, which might be either engraved on the plate, or printed on a card. It would be right, however, to express the rules only with that degree of probability which observation of past phenomena has justified. There is no rule respecting these effects which will hold good with perfect certainty in every case.

MAGAZINE OF NATURAL HISTORY.

LORD BROUGHAM.

The reader will recollect the curious dispute of last year between Lord Brougham and his application of the word *Bug* to a certain Law Member of Parliament. The following *insect* communication appears in the Magazine of Natural History of May, 1834.

A Profile of the Human Face is observable upon the upper Side of the Primary Wings of Colias Edusa, female A Profile of Chancellor Brougham is observable on the Reverse of Hipparchia Janira.—It is observed, in vol. i. p. 518, of the *Entomological Magazine*, "that on the reverse of Hipparchia Janira may be traced a very tolerably defined profile, in some specimens no very bad likeness, of the Lord Chancellor Brougham." This is not very evident in the specimens I have examined. A much stronger resemblance of the human profile (I do not say portrait of the chancellor) is exhibited on the upper side of the primary wings of the female of Colias Edusa. In some specimens, which, I need hardly observe, vary very much the face is so conspicuous, as at once to catch the eye of the beholder on the first inspection of the insect. The black spot towards the centre of the wing forms the eye of the profile; the profile itself being yellow upon a black ground, and fronting the tip of the wing.—*W. T. Bree, Allesley Rectory, Dec.* 4. 1833.

SUPPLIES AT TRISTAN D'ACUNHA.

To the Editor of the Nautical Magazine.

SIR—In your number for September last, you insert some useful information respecting Tristan d'Acunha, furnished by Captain J. Herd, of the barque Rosanna: your numerous nautical friends may rely on it as being substantially correct. That gentleman, however, has omitted to mention the "one thing needful," viz. the market prices at Tristan d'Acunha. Mr. Glass furnished me with the following in March last, at the same time assuring me that a plentiful supply might be had:

Milk Cow, and Calf,	£8.
Sucking Pigs.....	2s. 6d.
Potatoes.....	8s. cwt.
Grown Pigs	10s. & 12s.
Beef.....	3d. per lb.
Sheep.....	15s. to 20s.
Fowls.....	18s. per dozen.
Geese.....	5s. each.

Mr. Glass has cut a trench from the run of water that forms the "Cascade," from which a hose is attached, and fills the water in the cove (See Captain J Herd's remarks about an additional hose.) However, if there be any swell running, the best way is to *raft* it, as there is no inconvenience arising from the seaweed, beyond an oar fouling occasionally. Observe, also, that the current generally sets to the E. N. E. The ship ought to keep the cascade to the eastward of south, to enable the boat to fetch the cove with the raft, (supposing the wind westwardly;) and when the boat is returning, and has got a sufficient offing to run down inside of her, and receive the raft with the head off shore. The people on the island will cheerfully render all the assistance in their power. Yours, &c.

Liverpool, Nov. 18, 1833. ALBERT.

NATURAL HISTORY.

THE WHALE.

The great whale which was exhibited last year in London, is now in Ireland. The following is an account of it.

This whale, commonly called, in English, the Greenland whale, (or *Balæna Mysticetus*, in Latin,) was found dead, floating on the coast off Belgium, at the distance of twelve miles from Ostend, on the 3d of November, 1827, by a crew of fishermen; their boat being too weak of tonnage and sail, to move such an enormous mass, hailed two other boats to their assistance, and the three together, towed the whale on shore, and arrived in sight of Ostend Harbour at four o'clock next morning, being then high water. At the moment the whale was just going to enter the harbour the cable with which it was fastened to the boats broke, and it was cast on the sands on the east side of the harbour. It was there that all the preparatory operations were made for the dissection of the animal.

THE FOLLOWING ARE THE DIMENSIONS OF THE WHALE.

Length of the animal, 95 feet; height, 18; length of the head, 22; height of the cranium, 4½; length of the vertebral column, 69½; number of the vertebræ, 62; number of the ribs, 28; length of the ribs, 9 feet; length of the fins, 12½; length of the fingers, 4½; width of the tail, 22½;

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

length of the tail, 3; weight of the animal when found, 240 tons, or 480,000lbs.; weight of the skeleton only, 35 tons, or 70,000lbs.; quantity of oil extracted from the blubber, 4,000 gallons, or 40,000lbs.; weight of the rotten flesh buried in the sand, 85 tons, or 170,000lbs.

There are many species of whales, differing from each other in size, in power, and in habits; but they have all this in common, that their blood is warm, that their breathings are by means of lungs, and must come to the surface to breathe, that they bring forth their young alive, and suckle them with milk. These whales are arranged in four classes:—1, Those that have no teeth in either jaw; 2, those that have teeth in the lower jaw; 3, those that have teeth only in the upper jaw; and 4, those that have teeth in both jaws. The toothless whales are probably the largest, next to them those with teeth below, and those with teeth in both jaws are the smallest of the tribe. In common language, the toothless whales are called "Greenland whales," or "whale bone whales," or "oil whales." They get the first of these appellations from the part of the world in which they are caught, the second from the plates in their mouths by means of which they catch their food; and the third from the consistency of their fat, which boils into a liquid oil. All the whales, when in good condition, are covered with a copious layer of fat all over their bodies. The fat answers two very important purposes in the economy of their natures; it helps to preserve the uniformity of the heat, and it enables them to perform their rapid motions through the water. The whales that have teeth in their lower jaw, are called "*spermaceti* whales," because their fat consists more of *stearine*, or of the crystallizable part of the fat, than of the oil. All animal fat contains stearine; but in the fat of the common whale, the quantity is so small that the oil holds it in the liquid state. Stearine may be melted into oil, and into a much purer oil than that which is obtained from the common whale by simple boiling. The latter contains a quantity of membrane, or the substance (or skin) of the cells in which the fat is contained; and that putrifies and gives an offensive smell to the oil. Fats which contain the greatest quantity of stearine are the best adapted for making candles. Of the fat of domestic animals, that of the sheep is best; and, in common temperatures, the fat of a hog cannot be made into candles. Lighting the streets with gas, obtained from coal, has very much lessened the demand for the oil obtained from whales; and the discovery was a valuable one, as whales are not so abundant, or of so large a size as they were formerly.

In the early days of the Greenland fishery, whales of from one hundred and twenty to one hundred and fifty feet in length were met with; but now it is rare to meet with one seventy feet long, or exceeding half the length of those giants of the earlier ages. The bodies of similar animals are as the cubes of their lengths; and thus the old whales were eight times as large as those now to be met with. The quantity of fat is in proportion to the size of the whale; and a modern one is worth £1000, so that one of the old ones would have now been worth £8000, which greatly exceeds that of any land animal.

PRUSSIC ACID FIRST EMPLOYED FOR KILLING WHALES.

To the Editor of the Nautical Magazine.

SIR—In page 741 of the second volume of the Nautical Magazine, you have inserted a paper on the Whale Fishery, wherein you have given Captain Petrie, of the ship Betsey, credit for the invention of introducing Prussic acid in a cavity of the harpoon, in order that it might flow into the wound, and accelerate the death of the whale. Allow me, sir, to inform your readers, that I consider the priority of the invention due to me; the idea occurred to me in the year 1828, and in order to give the experiment a fair trial, I communicated my ideas on the subject to Dr. Faraday, and other scientific friends; who encouraged me to go on. I, therefore, immediately intrusted the invention to a very scientific engineer, who made me six harpoons, on a new principle, for the purpose; and as fortunately, at the time, my brother-in-law, Captain Kendrew, of the bark Ann Elizabeth, was on the point of sailing on a whaling voyage to the South Seas, and engaged to give the experiment a fair trial, I furnished him with the six harpoons, and several bottles of highly concentrated prussic acid, made expressly for the purpose. As he had himself inspected the construction of the harpoons, as well as, with me, frequently visited the laboratory of the chemist who made the acid, in order that he should be acquainted with its nature and strength; I had no doubt about the success of the experiment.

Captain Kendrew sailed from London about August, 1828; and in February, 1830, I received a letter from him, dated Mahe, October 5th, 1829, wherein he states, having tried the experiment upon a whale, and had every reason to expect it would succeed by giving a larger dose: the fish I am now speaking of, he adds, "was paralysed for a few minutes, and when opened; the blood about the harpoon was white and partially curdled." It may appear extraordinary to your readers, that an experiment of so much importance should have laid dormant for five years without further trial, but it must be acknowledged by every one that the proposition is one that cannot be put to the test by a person living ashore, and I have, ever since February, 1830, been anxiously waiting for letters, or his arrival, in order, that should we have considered it prudent to lay it before the public, we should have been enabled to have done it with such degree of confidence, and in such a mode as would have, in some measure, compensated us for the great expense and trouble we were at in perfecting the harpoon.

I am Sir, yours, &c.
JOHN LEWTHWAITE.
23, *Princes-street, Rotherhithe,*
December 10th, 1833.

HEAT.

In speaking of the sources of light and heat, Dr. Prout, in his Bridgewater Treatise, has the following passage in which a degree of comprehension is given to the definition, which we believe to be entirely new.

"The principal and obvious sources of heat and light are the sun, electricity, mechanical action, change of physical condition, change of chemical condition, and organic action.

"The sun is the most obvious and unvarying source from which both heat and light are communicated to our earth. The nature of the sun, however, and the mode in which that wonderful supply of heat and light is maintained are quite unknown to us, and will probably always remain so. Electricity is another source of heat and light which are developed at the moment of the equilibrium of the two energies; and some of the most intense degrees of heat and light that have been produced, have sprung from a galvanic apparatus. The sudden condensation of air is likewise a source from which heat and light are often both extricated, on principles that it will not perhaps be difficult to understand from what has been stated. The extrication of heat by percussion and condensation appear to be limited, but its extrication by friction seems to be boundless; that is to say, so long as friction is kept up, will heat continue to be extricated, but whence the heat is derived does not appear to be capable of satisfactory explanation, unless we suppose a perpetual decomposition and recomposition to take place, which is not improbable. Another fertile source from which heat is derived, is the physical change of condition which bodies are constantly undergoing in nature, as for example, the conversion of gases into liquids, of liquids into solids, &c. by taking advantage of which conversions we can accumulate heat at will, as for instance by the condensation of steam. When these physical changes, however, are associated with chemical changes, as is very often the case, the most striking effects are produced. Of this kind are all the phenomena of combustion, the most common source of artificial heat; and which consists of nothing more than the rapid chemical union of certain bodies with others, and generally with the principle termed *oxygen*. Nearly allied to chemical action, and perhaps identical with it, is the extrication of heat by organic changes, or what is termed *animal* heat; a subject we shall have to consider in a future part of this volume."—pp. 80, 81

LITERARY EXTRACTS.

THE GLASGOW LOTTERY.

THE existence of this Lottery has come before Parliament, on the motion of Sir Robert Inglis, and a select Committee has been appointed to inquire into its origin. Mr. E. Romilly said in debate—

"I think we have enough before us to warrant the most searching inquiry we can institute. Look at the peculiar situation in which we are placed. Here is a lottery drawn in open day, under the alleged authority of an Act of Parliament, which the best lawyers say gives no such authority."

Mr. Sinclair said—

"Whatever may be our financial difficulties, I trust that neither the Government nor the Legislature will ever act on the principle, that

"Lucri bonus est ordor ex re
Qualibet ——"

Mr. BISH, M P. and Contractor of the Glasgow Lottery, defended the Lottery, and argued that all joint stock companies for churches, meeting-houses, colleges, universities, &c. were simply Lotteries, *i. e. games of chance.*

We were astonished that Mr. *Gulley*, M. P. did not rise and complain of the *liberties* of the United Service Journal, in denouncing with no unsparing hand, the gentlemanly *game of chance —Prize Fighting!*

BUNYAN'S PILGRIM.

Mr. T. Dibdin has just published a metrical paraphrase of Bunyan's inimitable Pilgrim's Progress in six cantos. There are wood-cuts, and the volume is handsomely got up in all the accessories of printing, gilding, binding, &c.

Politeness of the Press in America.—A Kentucky paper thus speaks to and of a contemporary and neighbour:—"Is he waiting for an excuse to call us to the field? We can furnish him with none whatever, farther than to pronounce him, as we do most sincerely, and with an especial regard to the meaning of our words, a drunkard, a liar, a puppy, and a most redemptionless scoundrel."

WANT OF POINT, A NICE POINT.

An ingenious expedient was devised to save a prisoner charged with robbery, in the Criminal Court at Dublin The principal thing that appeared in evidence against him was a confession alleged to have been made by him at the police office. The document purporting to contain this self-criminating acknowledgment, was produced by the officer, and the following passage was read from it.

"Mangan said he never robbed but twice
Said it was Crawford."

This it will be observed has no mark of the writer's having any notion of punctuation, but the meaning he attached to it was that

"Mangan said he never robbed but twice:
Said it was Crawford."

Mr. O'Gorman, the counsel for the prisoner, begged to look at the paper. He perused it, and rather astonished the peace officer by asserting, that so far from its proving the man's guilt, it established his innocence. "This," said the learned gentleman, "is the fair and obvious reading of the sentence:

"Mangan said he never robbed;
But twice said it was Crawford."

This interpretation had its effect on the jury, and the man was acquitted.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

By Vivian.

EXPEDITION into CENTRAL AFRICA.

DEPARTURE OF THE EXPEDITION—INSTRUCTIONS FROM THE COMMITTEE—FETE IN HONOUR OF DR. SMITH, ETC.

This enterprising Expedition has at length started, carrying with it the sanguine hopes and hearty good wishes of its friends and promoters. The travellers left town early on Thursday morning, the 3d instant, amidst the cheering of a large number of spectators who witnessed the departure. After taking breakfast at the Royal Observatory, the party, consisting of Dr. Smith, its Director; Capt. Edye, of the 98th; Mr. Charles Bell, nephew of the Hon. Col. Bell; Mr. Burrow, son of the Rev. Dr. Burrow, &c. &c. proceeded on their journey. They are accompanied as far as *Lattakoo* by several gentlemen, visitors from India.* Sir John Herschel, Baron von Ludwig, Mr. McLear, Mr. Meadows, R. N. escorted the Expedition for some distance on the Cape Flats, and when the parting took place a salute was given, followed by three hearty cheers.

Appended to the present Number of this Journal, is a copy of the judicious Instructions for the Expedition, addressed to its Director by the Committee in Cape Town, which we have taken the liberty of re-printing. Preparatory to Dr. Smith's departure, we must not forget to notice, that a sumptuous banquet was given by Mr. von Ludwig, in honour of Dr. Smith, to a numerous company of the Members of the South African Institution, and Subscribers to the Central Expedition. It would be unjust to pass over in silence the disinterested zeal on the part of Mr. Von Ludwig for the prosperity of the S. A. Institution, the Expedition now on its march, and all objects at the Cape of Good Hope, whether botanical, horticultural, literary, or those having in view the civilization and general instruction of all classes of the people.

* A part of the Expedition had previously sailed from Table Bay to Port Elizabeth.

At the splendid dinner given by Baron Ludwig, which has been seldom surpassed at the Cape of Good Hope, or elsewhere, the following guests were present:

Sir John F. W. Herschel, A.M. late Fellow of St. John's College, Cambridge, F.R.S. L. & E., M.R.I.A., F.G.S, F.Z.S., &c. &c. &c.

Supreme Court of the Colony—Hon. Mr. Justice Menzies; Hon. A. Oliphant, His Majesty's Attorney General; Mr. Clerke Burton, Master; and Mr. P. B. Borcherds, Resident Magistrate, &c.

Members of Council—Hon. J. G. Brink, Acting Secretary to Government; Hon. M. van Breda; Hon. C. S. Pillans.

The Church—Rev. Doctors Okes, Adamson, and Philip.

The Army—Hon. Lieut.-Col. Wade, Commandant of Cape Castle, and Member of Council; Major Cloete; and Capt. Edye, 98th Regt.

The Navy—J. Bance, R.N., Port Captain.

The Medical Profession—Dr. Murray, Deputy Inspector General of the Forces, &c.; Drs. Smith and Liesching, and Mr. Bailey.

The South African College—J. R. Innes, A.M. Professor.

The Royal Observatory—T. Maclear, Astronomer Royal.

Messieurs—Members of the S. A. Institution or Subscribers to the Expedition.—P. A. Breda, A. Chiappini, E. Christian, J. C. Chase, J. C. Gie, W. Gadney, G. Greig, A. J. Jardine, W. Liesching, W. J. Mackrill, J. W. Prince, J. H. Tredgold, G. Thompson, J. Verreaux, F. S. Watermeyer, J. Burrow, J. T. Buck, F. Collison, W. Harding, J. Hutton, F. Korsten, F. Poleman, A. Thomson, M. Thalwitzer, R. Waters.

A Highland Piper, and the Band of the 98th Regiment, enlivened this distinguished festival.

SABBATH DAYS.

Types of eternal rest—fair buds of bliss,
In heavenly flowers unfolding week by week;
The next world's gladness imaged forth in this,
Days in whose worth the christian's heart can speak!

Eternity in Time—the steps by which
We climb to future ages—lamps that light
Man thro' his darker days, and thought enrich
Yielding redemption for the week's dull flight.

Wakeners of prayer in man,—his resting bowers,
As on he journies on the narrow way;
Where, Eden-like, Jehovah's walking hours
Are waited for as in the cool of day.

Days fixed by God for intercourse with dust,
To raise our thoughts and purify our powers;
Periods appointed to renew our trust;
A gleam of glory after six days' showers!

A milky-way marked out thro' skies else drear,
By radiant suns that warm as well as shine;
A clue which he who follows knows no fear,
Tho' briars and thorns around his path way twine.

Foretastes of heaven on earth; pledges of joy,
Surpassing fancy's flights, and fiction's story;
The preludes of a feast that cannot cloy,
And the bright out-courts of immortal glory!

A SABBATH AMONG THE MOUNTAINS.

FROM A CORRESPONDENT IN THE ADVERTISER, JULY 19th, 1834.

Worcester, July 15th, 1834.

On Sunday, Sir John Wylde, Chief Justice of this Colony, arrived, accompanied by his son, as Registrar, to open the Circuit Court this day; he was met near the river by an immense number of gentlemen on horse-back, carrying arms, who accompanied His Honor to the usual residence of the Judges; on his arrival, the gentlemen gave a salute and three hearty cheers; which, no doubt, was very gratifying to his feelings. In the evening, Sir John dined with Sir E. Ryan and Mr, Ross.

THE COLLOQUISTS.

CHERUBINA—HER MAMMA—MR. SOUTHEY—FANCY FAIRS, ETC.

Mamma.—My dear Cherubina, why fill your head with those nonsensical novels?

Cherubina.—La, Mamma! what is one to do?

M.—Read useful books, my love, to improve your mind.

C.—Well, then, Mamma, give me a book of your own selection.

M.—There, dearest—take this volume of the great Poet-Laureate, Mr. Southey. It is on "The Progress and Prospects of Society."

(Miss Cherubina takes up the volume, and turns over the pages in a careless manner. At page 307, vol. 2d, she pauses, and then screams a scream.)

C.—O, Mamma! how could you be so cruel? In the name of *reticule*, penny-ribbon, and thread-paper! how could you put into my hand the writings of such a Goth?

M.—Has my child lost her senses? what is meant by these loud exclamations?

C.—Only let me read the following passage, Mamma, and then say if Mr. Southey does not deserve to be ducked in a horse-pond?

(Reads.)—"I wish," says a correspondent "you would bestow some remarks upon the Ladies' Bazaars, Repositories, Fairs, &c. for (to say nothing of their detestable exhibitory character,) you cannot think the mischief they are doing to little toy-shop-keepers, and poor women who get their bread by those knicknacks, the sale of which is now monopolized by the ladies. A friend of mine went into a shop in Burlington Arcade lately, to purchase some trifle, and on her remarking how little choice there was, the shop-keeper said, that all in her way of business were half ruined by "the *charitable* ladies," who came and bought the first of any pretty new invented toy, set to work themselves, and so spoiled the tradesman's market.

"There!" said a young lady of rank to one of her acquaintance, pointing to a young mustachioed lancer, who had just turned from the booth where she was selling her wares;.... "there,—I have just made him pay me fifteen

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

shillings for a pair of garters!" How should you like to see a daughter of yours acting charity in that style?—*(Southey's Colloquies, p. 307, vol. 2.)*

M.—Well! I confess, my love, that I was not aware of such a passage in Southey's book. To say the least of it, it is very disrespectful, and shews a great want of gallantry towards the ladies.

C.—Yes, Mamma, Mrs. Negotie was only saying the other day, that the Press took by far too great liberties, and she trusted that council would put it under proper restriction. And where the community was so small and select as it is at the Cape, it was a shame, as she said, for the papers to *take off* people in the way they did.

M.—Very true, my dear; but there are honourable exceptions, and many praise-worthy people connected with the papers who would scorn to write, as Mr. Southey has done, in dispraise of our Fancy Bazaars. And I think Mr. Greig deserves commendation for his great civility in making those polite remarks which he has done in the *Advertiser*, which I am now looking over.

C.—Do read them, Mamma! Heigh ho! what a head-ache from reading that Southey!

(*Reads.*)—"The sale of Fancy Work, &c. which took place on Thursday last, was, in every sense of the word, most *beautifully* attended."

C.—Delightful, Mamma! my head is considerably better.

(*Reads.*)—There is something inexpressibly softening in perfect *Elegance*. Sublimity for *heroes* and *heroic* occasions, &c. Elegance never fails. In youth and in old age; in hours of deep meditation, and in our most buoyant and airy flights; alone or in crowds; at home or abroad. Elegance seen, remembered, or imagined, rises upon us like an Eve, and Paradise is restored!"

C.—Beautiful indeed, Mamma! Beautiful, beautiful! My head is quite well.

M.—But, patience, love! let me proceed.

(*Reads.*)— * * * * * * * *

C.—La! what pretty ideas, Mamma! I shall certainly copy them into my album. Augustus will be delighted with them.

A REASONING CHATTEL.

A farmer came to Town with his black slave, an excellent mechanic, who had not received any pocket money for upwards of 10 months. The slave was desirous of purchasing a couple of night-caps in Hottentot-square; he was, besides, wishing something *to eat*. The man on asking his master for a little advance of cash, received for reply—that he had no money. "*No hab money,*" said the black man, "*den somebody who no hab corn, no hab business for keep fowl!*" "Have patience," said the master. "*Hab patience,*" retorted the man, "*patience wid full belly; me no tell hungry belly—keep good heart.*"

ALBANIAN ANECDOTE.

FROM A TRAVELLER'S NOTE-BOOK.

I once met with a dandied *kid glove* settler in Albany, whose whole knowledge of farming was derived from the *Encyclopedia Britannica*. He had been one of the "*ninety thousand* that besieged Earl Bathurst's office in London with their applications." He was of the troop of ladies and gentlemen who subsequently searched our African jungles for apricots and oranges, which were expected to grow wild in the woods like Old England's hips and haws. Well, after reverses of fortune, he succeeded in doing well, and turning his flocks to account; but, like all farmers, he was an inveterate grumbler; his eternal cuckoo-note was against the Hottentots. They would not work for *him* either for love or money—hence they *were*, they *must* be the greatest thieves in the world! His fine Merinos were the objects of their constant and toothsome search! I visited this man's farm on one occasion, and as we perambulated the grounds, the settler expatiated in the bitterest and loudest terms on the rascalities of Hottentots. A fine athletic Bechuana shepherd, who had the care of a flock of Merino sheep, overheard all the hard language with dignified watchful silence. Towards the evening, when the flocks had been herded, and the Bechuana saw that the coast was pretty clear, he gently beckoned me towards a hut, at the door of which he was standing. The poor fellow looked upwards as I entered, and pointing to an immense cluster of *jackal-skins*, significantly exclaimed—"*Hottentot, Hottentot!*"

MOST ALARMING.

BULLETIN EXTRAORDINARY.

We are much concerned to state, that considerable dissatisfaction appears to prevail in Cape Town among that interesting body of the people the Clerks, and that *a strike* is hourly expected. We trust, however, that all will be tranquil, and that these misguided young men will return to their duties, and take into consideration that *half a loaf is better than no bread.*

Two o'Clock.—We have just heard that the Clerks have been so ill-advised as to protest against the use of *bak*-fish, sasatjes and rice, and to denounce *snoek* as an *unscaly fish*, and to be food contrary to the law of Moses.

Three o'Clock.—It is now understood that a *Clerks' Union* has been formed, the members of which are bound to reject the use of thread-bare coats and double-breasted waistcoats.

Caution.—We consider it our duty to inform all persons, especially masters who have apprentices, that any three persons conversing together in the streets, is *High Treason according to Dutch Law!*

Military Discipline.—We have to announce to the public, that the troops have been in extraordinary training for the last three weeks, and much is expected from them, notwithstanding the *awful failure* of our unfortunate *countrymen* on the afternoon of the 30th.

Latest Intelligence.—We have the unspeakable satisfaction to assure our country readers that tranquillity has been restored, and that there is no necessity to organize a local militia. Some little compromise has, however, taken place between the masters and their servants. The former are to add five rix-dollars *per mensem* to the salaries, and the latter are to be out of bed by eight o'clock in the morning.

CAPE RIDERS.

READER! I dare say you recollect that useful class of people at home who are *employed* as *riders*, or bag men, or as some of the village shop-keepers call them,—*caterpillars?* Well, then, there are *riders* who have been lately *employed* at the Cape, under the direction of *certain houses*. But, innocent reader! do not suppose for a moment, that these *gentlemen travellers* have been taking orders for baby-linen or pullicat handkerchiefs, flannels, shirtings, punjums, or *shipping!* No, no; these riders have been *dealing in signatures*, i. e. seeking by hook and by crook, i. e. by *all manner of means*, the procuring of signatures to petition the Council to compel the Hottentot population to fall a sacrifice to an enactment which shall deprive them of their locomotive rights and privileges, and place *them* in an odious and degrading footing, distinct from *all others of His Majesty's British subjects!*

In some cases these signature-*riders* have met with instances of good old English independence. *Ex gra.* With compliments in their looks, and making sure of their game, the *riders* arrived at the house of a country gentleman of no common standing at the Cape,—one whose very failings

'Lean on virtue's side.'

On learning the object of the visit, and beholding the *shew* of autographs, the worthy 'Squire uplifted his stick with an awful flourish, exclaiming—"odd's, my life! how did ye pass old *growler?* 'tis a thousand to one he did not sniff your dirty work, and make no bones of opening a vein. Come, come! away, away! a retreat down yonder road is your best escape."

But against this anecdote we must place a *per contra.* The *riders* met with great success at another 'Squire's. "My name, gentlemen? Certainly, certainly—* * * * * * to h—ll with all these Hottentots; they disturb all the foxes in the country, and prevent the gentlemanly sports of the field."

RURAL CRITICISM.

IT is not long since an honest countryman, in a rural parish, complained to the clergyman that he used too much Latin in his sermons. The divine replied, that he was sorry to hear that, as he had been quite unconscious of using Latin in the pulpit at all; but says he, you may hold up your hand the next Latin word I use. The very next Sunday, the hand was held up at the word *annihilate!*

We may learn from this Anecdote that a speaker ought to have a constant regard to the quality of his audience.

A GLANCE AT THE PRESENT NUMBER.

WE have just stolen a glance at the Editor's *melange* of the present month, in the back columns of his Journal, and we suspect that a *new pen* has been put forth from a hand that can handle the anatomist's knife as well as the artist's pencil. We allude to the Article entitled *Indian Exports.* We look forward with intense anxiety for the promised *budget* of this writer, which shall unfold a plan for making the Cape people charmed with each other, and produce showers of flattering notes, compliment cards, and pressing invitations.

In reference to another Article in the present Number—*Sketches of the Cape,* they appear to us to involve many weighty considerations Is it really true that the troops here are such devotees at the shrine of Bacchus? The writer of the *Sketches*, an officer of the 75th Regiment, would scarcely libel his brethren in arms; and yet the other day, when the thing was repeated by a civilian in the *hearing* of one who wears the king's uniform, many fine airs were affected, &c. &c. &c.

If so much wretchedness prevails among the soldiery, as the *Sketcher* intimates, perhaps it would become the duty of the commanding officers to attempt something on the *Temperance* principles.

SOUTH AFRICAN COLLEGE.

A Discourse held by the Rev. G. W. VAN DER LINGEN, *at the opening of the fifth Session of the South African College, and translated into English by* A. N. E. CHANGUION, *Phil Theor. Mag. & Lit. Hum. Doct. Professor of Classical and Dutch Literature at the said College.* Cape Town: Printed at P. A. BRAND'S, 1834.

THE Oration of the Rev. Van der Lingen, which was delivered, or as the Professor of Classical and Dutch Literature translates it, '*held*' at the opening of the fifth Session of the South African College, would hardly appear to fall within the pale of regular criticism, were it not that its having been translated and published, and dedicated, withal, to Lady D'Urban, and moreover, most exquisitely prefaced and illustrated with notes of appalling depth of research, give it an unquestionable place among the classics of the Cape press, and as such entitle it to at least a passing notice.

The Professor of Classical Literature most certainly deserves the thanks of the community, for though he may not, perhaps, be aware of what that particular excellence is compounded, which the courtesy of the English language emphatically terms a "right good thing;" and, moreover, that his preface and notes are egregious examples of the same, yet, the sober sadness of his eulogy, the undisguised earnestness of his admiration, the pathos of his illustratory matter, and the courage of his assertions, give him no humble place in the list of aspirants to the applause of brilliant enterprize; let him, however, speak for himself: no language but his own can adequately convey his meaning.

"The auditors, as is common here on such occasions, were partly English and partly South Africans, and it struck me at the time that it *was* a pity *so many good things* should be lost to such as were but partially acquainted with the languages then spoken: for not to mention that *many individuals* present on the occasion *were wholly ignorant of either Dutch or English*, I think I may venture to affirm, that the same degree of proficiency in a language that will bear a man out in a familiar colloquy, will leave him very much at a loss to follow an orator through the *elaborate periods of a scientific discourse.* It may be *music to his ears*, but, like music, it leaves but a vague impression on his mind. He feels dissatisfied, *like a child who has been allowed to smell at a pine-apple*, or some other *odoriferous fruit*, and sees it *cruelly* placed out of his reach, the moment when his eager appetite is craving further enjoyment."—*Preface.*

The circumstance of "many of the auditors being wholly ignorant of either Dutch or English," the vernacular dialects of the two orators, must have occasioned their oratory, with its "elaborate periods of scientific discourse," to have been most abundantly edifying, as well as entertaining! To them, alas! the *pine-apple* must have been utterly devoid of even its *odoriferous smell*, and it behoves the Professor to seek out some translator to impart to them in their native tongue the electrifying beauties which they have as yet to understand.

The conclusion of the Preface is, however, of such astounding humility, that we cannot refrain from another quotation. "And now, gentle Reader! should you find anything in the language of the following pages *what* you do not relish, you are at liberty to alter it to your own fancy:"—a degree of reasonableness and consideration for the gentle reader, which could only be expected from a Doctor of Humanity. Heaven forbid that we should tamper with a syllable; and this being said, let us proceed to the matter in consideration.

The first paragraph of the Oration may have been delivered or "held" in intelligible Dutch, but it is rendered into unintelligible English; we consequently drop it,—and, moreover, make no further remark upon the second, but that it was probably as brilliant in Dutch as it reads in English: we would merely opine that mere words, tall opaque words alone, do not constitute "elaborate periods or scientific discourse;" nor do they savour, under our nostrils, like the "odoriferous smell of a pine-apple:"—on the contrary we aver, and maintain, if necessary, in the language of Luther, *contra homines et dæmones*, that brevity, in order to be remembered; simplicity, in order to be understood; and profitable matter, to enlighten the understanding, form the three requisites of oratory; and it is lamentable to think that when a minister of the Gospel had such an opportunity of conveying instruction, he should have allowed the vanity of self-display, to have led him into bombast which so few could have understood, and none could have been either wiser or better for the hearing.

The third paragraph opens with the startling declaration that Cape Town is the very navel of the round globe itself—"the centre of the sublunary world;" let the Rev. Van der Lingen incontinently demonstrate that the tip of a cat's tail is the centre of feline attraction, and we may peradventure join issue, and admit that 35 south latitude, and 19 east of Greenwich may be considered "as yet situated nearer to most of the inhabited parts of the globe than any other region;" but this extraordinary assumption is, in the following sentence, outstripped by the bolder declaration, that—

"This advantageous situation may likewise effect an assimilation of the character, habits, and morals of the people to those, I do not say of other countries, but of other quarters of the globe; a medium, as it were, between extremes —*an amalgamation of whatever is best in its kind in every part of the world. And, in fact, is not all this gradually developing itself to every attentive observer?* Is not a well-bred South African equally remote from the carelessness of the east, and the formality of the north? Does he not combine the liberality and easy demeanor of the Asiatic, with the domestic frugality and decorous deportment of the European? *Nor is it difficult to account for this phenomenon!* Visitors from all parts exhibit their national character in the midst of us, and exemplify the virtues and vices peculiar to their countrymen. *The doors of social intercourse are thrown open to them; they are not, as in other countries, exposed to the derision and petulance of a hooting*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

populace; they discern features of analogy between us and their countrymen, and are well nigh induced to mistake us for emigrants from their native homes."—p. 9.

A Cockney dandy would lisp that the 'Gem'man was unkimmonly strong;' we much fear that, if the ballot were taken, an overwhelming majority of the visitors who "exhibit their characters, and exemplify their virtues and vices" in this colony, would vote that the South of Africa neither is, nor is likely to be, the Utopian home of a race "the medium between extremes—an amalgamation of whatever is best in its kind in every part of the world." Man that is born of woman is, we fear, as frail a being in South Africa as on the shores of the Zuyder-zee; nor is the clay of which the juvenile South African is compounded, endowed with any self-regulating power by which it shall resist the impression of vices, and retain only the characters of virtue. Visitors have uniformly complained of the want of hospitality at the Cape;—"*the doors of social intercourse are thrown open,*" it is true, but at the rate of five dollars per diem for each, and the more liberal spirit is not the rule, but the exception. As for "the derision and petulance of a hooting populace," we greatly marvel where, and among whom, the Rev. Van der Lingen could have sojourned all his day; whether in the moon, or in this centre of the sublunary world, that he should picture to himself such an image of Elysium, because an unoffending stranger, who hazards being run over by every boer's wagon and eight which shoots the corner from the Heeregracht to Hottentot-square, is not subjected to the further inconvenience of being obliged to send the teeth of every puppy that he meets in the street, in a cluster too, down his clownish throat for unprovoked and grinning hooting petulance on the King's Highway; verily, the hazards which the lieges in general, and strangers in particular, encounter from the recklessness of drivers, and the want of foot-ways, is risk enough: a hooting populace, forsooth! let it occur twice, and we shall find it settled by very different and more cogent arguments than the intense love of *good order* which is inherent in the South Africans, "remote though they be from the carelessness of the east, and the formality of the north!" 'Defend me from my friends,' said a wise man, and the worthy residents in Cape Town, when they see so preposterous a proof adduced of their ultra-civilization, may feel themselves fortunate that strangers can judge for themselves, and will not require to be told that we consider our moral character *a phenomenon,* and ourselves the world's wonder, because we are not so utterly brutalized as to insult our visitors in mere *gaieté de cœur* for the exquisite pleasure which brutality affords to savages

We shall not follow the orator through his eulogy of the climate and the soil, nor the vivacious hopes which he cherishes therefrom: but lest the South African *phenomenon* should be too vehemently puffed up, and lest the oratory which was '*music to his ears,*' should, '*like music, leave but a vague impression,*' we must rehearse the orator's notions of the requirements to perfect this "*amalgamation of whatever is best*"—this phenomenon of the centre of the sublunary world."

"That arts and sciences may be *held in estimation,* and cultivated with success, the South Africans are required to be *full of energy, diligent and eager in their pursuits, not satisfied with mere mediocrity, studious, intelligent, endowed with a memory capable of receiving and retaining impressions; ingenious, acute, profound, judging of the appearance of things with discriminating penetration.*"—Page 11.

There has seldom fallen under our observation a more amusing specimen of dulness than the manner in which the term *Ophirites* is applied by the Rev. Van der Lingen to the Hottentot South Africans, as the imagined representatives or descendants of the ancient inhabitants of the supposed land of Ophir!! The whole of the notes at pages 11 and 14, are incomparable: "Sophala, the negro pronunciation for Ophir," and the four tribes of Hottentots, out-herods most of the rhapsodies which dreamers have dreamt in their ignorance, or published in their folly.

But as we are threatened with the annotator's return to this subject, and as he avers that his "arguments are more plausible than those which the most eminent historians of our day are able to muster in defence of their assumption—"that the ancient Germans can be traced to a common origin with the ancient Persians and even the Hindoos," page 12, we may as well endeavour to stave off the evil by an article upon the probable site of Ophir, which the kindness of a friend supplies for our next Number The question is not only important as a riddle that has often perplexed the learned, but also as it implicates the bare possibility of the recovery of the mines. Bruce, by an ingenious theory founded on the monsoons, did much to fix the attention of the learned upon the African coast as the probable site of Ophir, and Heren considers that the name was indiscriminately applied to both the Asiatic and African shores of the Arabian Sea, but the monsoon argument of Bruce cuts both ways, and the Edinburgh Review as well said of Heren, that he is no Sanscrit Scholar, and that the rising tide of Eastern lore has already overtopt his high-water-mark. As respects, however, the ridicule attempted to be cast on the new theories respecting the origin of nations which have grown out of an improved knowledge of languages and their roots, we can only beg the Rev. Van der Lingen, or his translator, to be sparing of their sneers, and to take heed lest the fancied superiority assumed may not be the unadvised betrayal of lengthy ears!

But though the similarity of the roots of their languages does not suffice for the Rev. Van der Lingen, or his translator, to allow the Germanic, Greek, Persian, and Hindoo nations a common origin, yet he has no hesitation to believe that the Carthaginians colonized Ireland; and the Jews, Madagascar; that the Welsh, under Prince Madoc Gwyneth, peopled America, and the Ischelschukes—who, in the name of wonder, were they?—emigrated into and have been lost in Arabia and Abyssinia, page 14; but let us pass this tissue of extravagances, merely expressing our dissent from the morality which is avowed with singular *sang froid* in the note, page 14: "Nothing is more common in a discourse that has not instruction but persuasion for its object than to refer to narratives of questionable authority, as to well-attested facts;" such may be the annotator's experience, or perhaps he judges of others by his own practice; we can hardly believe that the translator would have ventured this extraordinary assertion, and until it is disavowed, we shall consider it to be the sentiment of the orator himself, and we wish him joy of his creed; we beg, moreover, to assure him, that a laxity so reprehensible, is not justified by the ends sought, and that an argument which does not admit the truth, the whole truth, and nothing but the truth, were better dropped than bolstered into ephemeral importance by garbled extracts or false colouring:—and this, then, is the end of the matter —"the elaborate periods of this scientific discourse" had not instruction but persuasion for their object! persuasion! for what? why verily, for aught we can see, the Rev. Van der Lingen's breath might have been as profitably employed in whistling "Polly put the kettle on," or any South African melody!

The very apposite and home questions which the orator puts at page 17, are most feebly controverted in the two

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

following paragraphs; were our vote solicited, we should say the opponent had the best of it, and the orator, we fear, must rely upon questionable narratives, rather than upon facts, to bear him out even in the application of his truisms. Alas! we grievously dubitate the proposition that "South Africa is preparing to be the abode of arts and learning, that she is called upon to hold *a distinguished place among the nations, and is ready to obey the summons!* Nor is this the vain boast of *juvenile presumption*. The muses, whatever opposition they may have to encounter at first, will make this country *their dwelling-place*, and that, too, at no distant period." Well done, the juvenile and Rev. Van der Lingen! Poetry has fallen upon evil days, and is at a long discount in Europe, and Murray prefers a stinging article for the Quarterly, and Colbourne and Bentley a May Fair novel, to a score of Epics:— woe, woe that such should be the case; yet true it is, and a sorrow it is so: the orator may, therefore, have private information, and, for aught we know, the next arrival of the Thomas *Snoek* may bring Appollo and the Muses as passengers; a neat half score of parish emigrants from Parnassus, to take their perch upon the Lion's Rump or on Table Mountain!

We have done: had the orator or his translator been content with what the "English and the South Africans, and the wholly ignorant of either Dutch or English" who were present at the delivery of the oration, enjoyed of its sweets; and had the smoke of the oratory, or in the poetical verbiage of the preface, the "smell of the pine-apple" been left to be forgotten amid the more interesting matter which has subsequently occupied the public attention, we should not have given them a moment of our consideration: the harangues which are worthy of the toasts at tavern dinners, and the average spoutings of *minor* meetings, have their sufficient immortality in the next week's paper! but this translation and publication, and preface and notes, appear to indicate a lofty pretension, and the sooner it is discountenanced the better for all parties. The noodle race of scribblers have two sins to answer for; they not only vitiate the taste of the vast majority who have not brains to judge and think for themselves, but they disgust their betters into silence, and deter them from addressing the public they might delight and edify, from the natural apprehension that the public ear which is open to their rivals, must be deaf to them. The conclusion of the note at page 18, describes in South African English the tribe in which the orator and the translator must be content to be included, and there we leave them.

THE EMIGRANT.

EARLY RECOLLECTIONS—AND BROTHERLY APPEAL.

One dear look back to early home
My much-loved Native Land,
Its verdant vales and cheerful streams
And high blue mountains grand;
My Village Church with stunted spire,
That o'er the copse-wood smiled
As sunk the sun in golden west
So charmed me when a child.

Let's paint our mother's face again,
(Ah, me! she's gone to rest,)
As she o'er brother's cradle hung,
Or pressed him to her breast:
And when in tears I bade farewell
When bound for Afric's shore,
I turned on father's hill and waved—
She waved—I saw no more.

Of fellow scholars many a one
Alas! is in his grave,
Some died when young, some venturous went
To realms beyond the wave;
And some have climbed the slippery height
Where Fame's proud temple stands,
Their genius radiant as the light
Is seen in distant lands.

To Emigrant from Europe's shores
How glorious is the past,
The splendid scenes of Native Land
Their lengthened shadows cast;
Ah! never on thy ear again
Shall sounds of glory roll,
As mid magnificence of scene
They tranced the enraptured soul.

And never to thy wondering eye
Shall splendid visions rise,
Of Bridges, Palaces, Canals,
And Towers that reach the skies;
And never shall thy *Sabbath* dawn
Upon a world at *rest*,
Where *dance* and *chase* were never known
To ruffle thy calm breast.

And never shall thy bounding step
Press proud Plynlimmon's side,
Or voice the sleeping echoes wake,
Where Severn rolls his tide,
Yet that were nought if once again
Thou couldst devoutly say—
"Up Israel to the Temple haste
And keep your Festal Day." *

The Tribes of Savages go up
In congregated Powers,
The sons of Holland *sit in rank*
In Salem's sacred Towers;
One Tribe alone must not draw nigh
Nor join in Sion's song,—
The Tribe that fenced her highest Towers,
And built her Bulwarks strong.

On Sion's heaven-capt hill to them
Low'rs a dark awful night,
They hear a sound but know it not,
Nor beams from Salem light.
Poor Emigrant from Albion's isle
Wert thou a Hottentot,
Some Mission'ry from England sent
Had cheered thy happier lot.

Then rouse ye, rouse ye, British-born,
You're shut without the Wall,
Approach in strength and Sion's gates
Must open at your call.

Say, can your families live for years
Without the Faith once sent,
The Faith for which *your Father's blea,*
Or went in banishment?

Country District, AN EMIGRANT.

THOUGHTS AND REMINISCENCES.—No. I.

IT is Cotton Mather, I think, that has written some such declaration as the following. Were a man able to write in seven languages; could he daily converse with the sweets of all the liberal sciences to which the most accomplished men make pretensions; were he to entertain himself with all ancient and modern history; and could he feast continually on the curiosities which the different branches of learning may discover to him; all this would not afford the delightful satisfaction which he might find in relieving the distress, and affording mental light to a poor miserable neighbourhood.

Coming in the coach from Glasgow to Edinburgh once, I had for a fellow-traveller Mr. Wilson, a venerable minister of the old school of the Church of Scotland. "Do you see," said the reverend gentleman, as we passed a ruin, "that auld kirk-yaird there?" on answering yes, the minister continued, "That minds me o' a man that was ta'en up for howking up a dead body there. He was apprehended, but *in thae days* folk didna tak ill-doers to a magistrat, they tuik him afore the session. The session says.—'John man, O—hat's this ye hae been about? What is it the catechism says o' the bodies o' believers? So John had to confess that "they rest in their graves till the resurrection." True, said the session, and was it no then very ill done in you to meddle wi' that honest man's body?' And sae *they rebukit him.*"

"You charge me fifty sequins," said a Venetian nobleman to a sculptor, "for a bust that cost you only ten days' labour." "You forget," replied the artist, "that I have been thirty years learning to make that bust in ten days." Those persons who begrudge payment to professional men, should pay attention to this anecdote."

There are few commotions without some grievance. Jupiter, says Lucian, seldom has recourse to his thunder but when he is in the wrong.

Much is said and much has been written about *moderation*. Question!—what has it ever effected in the political, scientific, moral, and religious world? On the Exclusion Bill being opposed in the House of Commons, Col. Titus exclaims both wisely and eloquently—"We are advised to be moderate; but I do not take moderation to be a prudential virtue in all cases. If I were flying from thieves, should I ride moderately, lest my horse should chance to fall? If I were defending my own life, or the lives of my wife and children, should I strike moderately, lest I put myself out of breath? And if, Mr Speaker, we were in a sinking ship, (no unapt representation of our decaying commonwealth,) ought we to pump moderately, lest we bring on a fever?"

There are great lessons taught in the natural, as well as in the moral world, which suggest to us *never to despair*, but to go forth as industrious husbandmen sowing *precious seed*, being assured that in due time *we shall reap if we faint not.* Let us take one or two illustrations in proof. Seeds of various plants and flowers which have

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

laid dormant through a succession of years, have at length vegetated and come to perfection. Mr. Jessie, in his *Gleanings in Natural History*, tells us that in trenching for a plantation in a part of Bushy Park in 1832, its hidden stores were revealed. The plot of ground had been undisturbed by the spade or plough since the reign of Charles I. The year following the spade husbandry of 1832, the ground was covered with a profusion of the tree mignionette, pansies, and the raspberry, plants which are nowhere else found in a wild state in the neighbourhood.

Again, there are few events more curious in the moral world, than that it should be reserved for Lord Grey to carry into effect, in his advanced age, the principles of his early youth, after the awful lapse of forty years over his head. And in like manner Sir Jas. Mackintosh was borne back to the principles of his Vindiciæ Gallicæ, and of his youth, after a forty years' pilgrimage in this lower world.

HYDROGRAPHY.

MAPS OF SOUTH AFRICA.

1. *Cape of Good Hope. By* J. ARROWSMITH. *Copied from the original MSS. Drawing in the Colonial Office. Compiled by Mr.* HERBERT, Senior.

2. *South Africa. Compiled from the MSS. Maps in the Colonial Office. Capt.* OWEN'S *Survey, &c. Published by the Society for Diffusion of Useful Knowledge.*

THAT great desideratum, a good map of the colony and surrounding regions, has at length been obtained. Two new works of the kind, whose names are at the head of this article, have lately been received.

The *first* by Arrowsmith, is chiefly confined to the colony, and the country to the north beyond the boundaries, traversed by Messrs. Campbell and Mr. Burchell, between the years 1812 and 1820, is well engraven, with a few trivial mistakes, principally in the names.

The *second* is published by the Society for the Diffusion of Useful Knowledge, in the series of maps, and forms part of the 46th Number.

The execution is very beautiful; and that part which regards the colony being derived from the same sources as Arrowsmith, partakes of its faults and excellencies.

But the most interesting circumstances of this map, and that which surprised us chiefly is, the great accession of information it supplies over all its predecessors, with respect to the extra-colonial countries, those which have lately yielded up their hitherto-long concealed treasures of geographical knowledge to colonial enterprise. For instance, if reference be made to all the charts prior to this last publication, it will be perceived, that from the Great Fish River, which bounds the Albany Settlement, to Delagoa Bay, there appears nothing but one enormous blank, interspersed here and there with the names of about nine or ten rivers at their mouths along the coast, where positions are incorrect, and these very names not now recognizable. The sketch before us, fills up the whole of this interesting hiatus, extending over a length of 500 geographical miles, and of 60 miles in depth. In short, it includes the whole country watered by all the streams situated between the two points already named, the Great Fish River and Delagoa Bay, and which find their sources in the great range of mountains skirting the coast of Southern Africa, at a distance varying from 60 to 90 miles from its shores. On the North we have the most distant arm of the Gariep or Orange River, traced up to its very source in the highlands, overhanging the beautiful but unhealthy slopes which run down to the eastern coast of Delagoa. We have also the route of the traders, Messrs. Bain and Biddulph in 1826, to a distance of 150 miles beyond Burchell, or within 49 miles of the Tropic; of Messrs. Scoon and McLuckie in 1829, to a point below Kurechane, besides innumerable stations between the Orange River, Gariep, and the territories on the north, now constantly traversed by our Traders and Missionaries.

In the publication of that part of this map just alluded to, we must confess ourselves somewhat astonished. We were personally aware, that the original materials had been collected by one of our colonists with considerable expense, after more than two years' anxious attention to the subject of our Interior Geography, on several extensive and costly journies made by him, from manuscript notes and sketches entrusted to his care; those of Messrs. Cowie and Green, Bain and Biddulph, Scoon and McLuckie, and many others, and with the intention to embellish and exemplify a work of his own on the progress of discovery from the Cape of Good Hope, and which he is engaged in publishing. How the advantage of the labours of this gentleman, (Mr. J. C Chase, the Secretary to the Expedition for Exploring Central Africa just despatched,) came to be anticipated and employed by *The Society for the Diffusion of Useful Knowledge* in their superb Atlas, without acknowledgement or permission; or why the Colonial Office at home has *surrendered* the private copies transmitted by Mr. C. from feelings of gratitude as a British subject, and confidentially entrusted to its care, as we understand they were, we are not informed; probably Mr. C. has been satisfied on this subject, but of that we have not yet heard. Be this, however, as it may, the public are benefitted, as an interesting sketch of the regions adjacent to the Colony has been printed, and the late journies from the Cape can now be distinctly traced, especially those of our unfortunate countrymen Green and Cowie, some particulars of whose travels have appeared in Mr. Greig's Almanac for 1829, and the South African Journal, and the paper of Mr. Chase alluded to in our Number for will now be better understood.

LITERATURE.

SOUTHERN AFRICA.

African Sketches, and Narrative of a Residence in South Africa. By THOS. PRINGLE.

[We have had no opportunity as yet of perusing this new publication by Mr. Pringle, and must, therefore, content ourselves and our readers, by that review of it which the *Spectator* of the 17th of May presents to the public notice.]

In pursuance of a plan by the Home Government of 1819, to colonize the Caffer frontier of the Hottentot territory, a free passage was offered to emigrants upon certain conditions, and some contingent advantages were promised on their arrival. Among the intended settlers was the family of the Pringles. The father and the brothers, our author excepted, were agriculturists. Thomas, the poet and littérateur, went out with the final intention of procuring a situation under Government, or assisting in forwarding the march of intellect among the Cape colonists. His first object, however, was to see his friends and family safely located. It argues a good deal in favour of his sagacity and practical shrewdness, to find that a body of cautious Scotchmen selected him as their representative—in Colonial language, the "head of a party"—to arrange their embarkation and passage with the Home Government, agree with the local authorities as to their grant of land, marshal them on their route, and settle them in their new country; all of which he successfully accomplished.

After remaining about two years in the wilderness, acting all the parts that men have to act who separate themselves from civilized society and trust to their own resources, with the task of ruler and diplomatist superadded, Thomas Pringle and his helpmate departed for Cape Town, travelling seven hundred miles in the wagon of the country. On his arrival, he was, through the exertions in England of Sir Walter Scott, appointed Government librarian; established an academy; started a magazine, having procured permission from Lord Bathurst after the Colonial Government had refused it; became the editor of a weekly newspaper; and flattered himself that he was engaged in a sphere of usefulness towards the public and of profit to himself. But the far-famed scion of the house of Beaufort then ruled the Cape. Except in appealing from his decision to Downing-street, it does not appear that Mr. Pringle had given any cause of offence; but the establishment of a press was a crime of the deepest dye in the eyes of Lord Charles Somerset; to entertain a liberal opinion upon any subject—to attempt to enlighten the public mind even upon matters of science—was the unpardonable sin of Toryism. With mingled feelings of rage and fear, the African Verres and his creatures set to work to effect Mr. Pringle's ruin; and accomplished it, so far as a Government could accomplish it. His spirit had induced him to resign his librarianship: his paper and magazine were virtually suppressed; the frown of the petty court, and the publicly expressed wishes of its head, induced the majority of his friends to shun him, and many parents to withdraw their children from his school; till, in short, he was left overwhelmed with pecuniary engagements, at the mercy of his creditors, and found it prudent if not obligatory to return for a while to the bosom of that society he had founded in the desert; though even here the enmity of the Governor may be said to have pursued him.

Such is a meagre outline of the leading events which befel our author in South Africa. A description of a newly-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

settled country, an account of the shifts and difficulties attendant upon founding a new community, a book of travels, and an autobiographical sketch of a man of talent, is not all that this little volume contains. We have, in addition, some views of Colonial manners, excellent bits of landscape painting, some interesting anecdotes of natural history, an historical sketch of the aborigines, and above a hundred pages of pleasing and characteristic poetry. The whole is done with spirit and elegance,—only dashed by an occasional air of partisanship.

In founding this colony, the Government plan, though not maturely considered, and not very well managed in its details, was perhaps one of the best colonial schemes ever undertaken by a modern government. It is true, the settlement was at first very unfortunate; but the country, after all that has been said of it, was not the best that might have been selected; the colony itself was afflicted for the first years with blights, and other unforeseen natural evils; the measure was injured in its working by the mischievous interference of the Governor; and many of the emigrants themselves were ill adapted for the task they had undertaken. The following exhibits them on their first arrival.

I then strolled along the beach to survey more closely the camp of the settlers, which had looked so picturesque from the sea. On my way, I passed two or three pavilion-tents, pitched apart among the evergreen bushes which were scattered between the sand-hills and the heights behind. These were the encampments of some of the higher class of settlers, and evinced the taste of the occupants by the pleasant situations in which they were placed, and by the neatness and order of every thing about them. Ladies and gentlemen, elegantly dressed, were seated in some of them with books in their hands; others were rambling among the shrubbery and over the little eminences, looking down upon the bustling beach and bay. One or two handsome carriages were standing in the open air, exhibiting some tokens of aristocratic rank or pretension in the proprietors. It was obvious that several of these families had been accustomed to enjoy the luxurious accommodations of refined society in England. How far they had acted wisely in embarking their property and the happiness of their families in an enterprize like the present, and in leading their respective bands of adventurers to colonize the wilds of Southern Africa, were questions yet to be determined. Foreseeing, as I did in some degree (although certainly by no means to the full extent), the difficulties and privations inevitable in such circumstances, I could not view this class of emigrants, with their elegant arrangements and appliances, without some melancholy misgivings as to their future fate; for they appeared utterly unfitted by former habits, especially the females, for *roughing it* (to use the expressive phraseology of the camp) through the first trying period of the settlement.

A little way beyond, I entered the Settlers' Camp. It consisted of several hundred tents, pitched in regular rows or streets, and occupied by the middling and lower classes of emigrants. These consisted of various descriptions of people: and the air, aspects, and array of their persons and temporary residences, were equally various. There were respectable tradesmen and jolly farmers, with every appearance of substance and snug English comfort about them. There were watermen, fishermen, and sailors, from the Thames and English sea-ports, with the reckless and weather-beaten look usual in persons of their perilous and precarious professions. There were numerous groups of pale-visaged artisans and operative manufacturers, from London and other large towns; of whom doubtless a certain proportion were persons of highly reputable character and steady habits; but a far larger portion were squalid in their aspect, slovenly in their attire and domestic arrangements, and discontented and uncourteous in their demeanor. Lastly, there were parties of pauper agricultural labourers, sent out by the aid of their respective parishes, healthier perhaps than the class just mentioned, but not apparently happier in mind, nor less generally demoralized by the untoward influence of their former social condition. On the whole, they formed a motley and unprepossessing collection of people. Guessing vaguely from my observations on this occasion and on subsequent rambles through their locations, I should say that probably about a third part were persons of real respectability of character, and possessed of some worldly substance; but that the remaining two-thirds were for the most part composed of individuals of a very unpromising description,—persons who had hung loose upon society, low in morals or desperate in circumstances. Enterprize many of these doubtlessly possessed in an eminent degree; but too many appear to be idle, insolent, and drunken, and mutinously disposed towards their masters and superiors. And with such qualities, it was not possible to augur very favourably of their future conduct and destiny, or of the welfare of those who had collected them in England, and whose success in occupying the country depended entirely on their steady industry.

Here is a colony gaol—

The condition of this gaol was dreadful. On the door being opened, the clergyman requested me to wait a few minutes until a freer ventilation had somewhat purified the noisome atmosphere within,—for the effluvia, on the first opening of the door, was too horrible to be encountered. This I can well believe; for when, after this precaution, we did enter, the odour was still more than I could well endure; and it was only by coming frequently to the open door to inhale a renovating draught of wholesome air that I could accomplish such an examination of this dismal den as the aspect and condition of its inmates urgently claimed from humanity. Whether there was at this time an unusual number of prisoners, or with whom lay the fault of not more effectually providing for their accommodation and cleanliness, I cannot say; but if it was owing to the negligence of the local functionaries, it was the duty of the Circuit Court to call them to account for it, and to see that adequate funds were appropriated to erect a decent gaol for the district. But this was not a singular case; at that time, the gaols for the coloured classes throughout the Colony, with the exception of that of Graaff-Reinet, and perhaps one or two others, were a disgrace to humanity. How far they have been improved since I cannot pretend to say.

The prisoners being desired to range themselves around the walls, exhibited a strange array of wild and swarthy visages, squalid with neglect and misery, and sickly with confinement. There were runaway slaves, standing with shackled limbs and lowering looks, sullenly awaiting their awarded punishment, and the arrival of their owners to drag them back to the house of bondage. There were Hottentots, clothed in a costume half-native, half-European,—the sheep-skin caross of their forefathers, and the leathern trousers of the boor. Some of these were complainants at the drostdy against the fraud or oppression of the colonists to whom (agreeably to colonial *law*) they were bound in servitude; and they were immured (agreeably to colonial *practice*) in this vile tronk, until their masters found it convenient to answer their accusations, and probably to get them well flogged for daring to complain—such, at least, was then the usual result. Others were merely Hottentots out of service, who had been apprehended by the field-cornets, and sent here until some white man should apply to have them *given out* to him on contract.

There were wild Bushmen, too, with aspect, dress, and demeanour, yet more barbarous and bizarre than the rudest of the colonial Hottentots. The whole raiment of the females, besides caross, or sheep-skin mantle, consisted of a piece of leather cut into narrow thongs, and bound like an apron or small petticoat round the loins. The dress of the males was still more scanty. Their woolly hair, growing in separate tufts, fell natural into spiral curls, and hung, matted with grease and iron ore, dangling like a bunch of tobacco-twist, over their narrow, black, and piercing eyes; while their cheeks (at least those of the younger females) were ornamented with alternate streaks of red and white ochre. The offence for which they were in general confined was absconding from the service of the farmers, after having, under the pressure of famine, sold themselves and their children to thraldom for a mess of pottage. Some, however, of these Bushmen, as well as of the slaves and Hottentot prisoners, were accused of more heinous crimes, and were awaiting the arrival of the annual Circuit Court to stand their trial. But all castes and grades, the innocent and the guilty, and the injured complainant equally with the convicted and hardened malefactor, were crowded together without distinction into this narrow and noisome dungeon.

There was yet another group, more interesting, perhaps, than any of the others It was a family of Caffers, consisting of two men, a woman, and child, and a youth of about sixteen. The men were seated, naked, on the clay floor, heavily ironed, and having their ankles fixed to a huge iron ring, which confined them like stocks in a recumbent posture. One of them displayed a frame of herculean size and strength; but his countenance, though free from ferocity, was unanimated by intelligence. The calm and thoughtful features of his comrade, a man of middle age, expressed nothing of mere animal or savage passion, but were marked by a certain air of mental dignity and reflection. The female was said to be the wife of the latter; and she had an infant encircled in the warm folds of her mantle. Her dress consisted of the ordinary caross of ox or antelope hide, dressed with the hair upon it, together with a short petticoat of similar materials, and a kerchief of finer leather (from the skin, I believe, of the weasel or wild-cat) drawn like a veil, over the bosom—indicating, altogether, feelings of womanly modesty and decorum, pleasing to meet with amidst so much wretchedness and barbarism, and forming a favourable contrast to the disgusting nudity of most of the other females around her. Her deportment was quiet and subdued, and her features, if not handsome to European eyes, were yet expressive of gentleness and simplicity of character. But the Caffer youth who stood beside this female, and who looked like her younger brother, was truly a model of juvenile beauty. His figure, which was almost entirely naked, displayed graceful ease and great symmetry of proportion. His high broad forehead and handsome nose and mouth approached the European standard; and the mild, yet manly expression of his full black eyes and ingenuous open brow, bespoke confidence and good will at the first sight.

Two important points which Mr.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Pringle dwells upon at some length, are the doings of my Lord and the conduct of the colonists and the Colonial Government and settlers towards the Caffres. The first, though a very limited and a very subdued statement, is withal a rich picture of an incompetent and arbitrary aristocrat wielding what he thinks an irresponsible power, inflated with ideas of his own importance, treating difference or even freedom of opinion as a personal offence, and confidently relying on family interest and home favour as a shield against the consequence of his oppressions, or of insolence more galling than oppression. Ampler details of his misdeeds and incapacity may perhaps be found elsewhere, but here we are presented with a character of the man. We see faintly, but distinctly, his violence of temper, his despotic disposition, and, when offended, his insolent and over-bearing manners. He was a Tory of the true-breed—a family-jobber in grain, and possessing the convenient "pride that licks the dust." When the complaints at home had succeeded in rousing attention and forcing a commission of inquiry to be sent out, he adopted the soothing system; finding this unsuccessful with the more high-minded of the new settlers, he formed an underhanded league with the frontier boors, the semi-savage Dutch Africans; winking at murder, permitting predatory excursions to harass the natives and plunder their property, finally, expelling a tribe from their possessions, and bestowing the lands (the Tory mode of rewarding people) upon his friends. Thoroughly to appreciate his character, requires a careful perusal of Mr. Pringle's Narrative; but take a piece of him.

Lord Charles summoned me to appear immediately before him at his audience-room in the Colonial Office. I found him with the Chief Justice, Sir John Truter, seated on his right hand, and the second number of our *South African Journal* lying open before him. There was a storm on his brow, and it burst forth at once upon me like a long-gathered south-easter from Table Mountain. "So, Sir!" he began, "you are one of those who dare to insult me, and oppose my government!" And then he launched forth into a long tirade of abuse; scolding, upbraiding, and taunting me, with all the domineering arrogance of mien and sneering insolence of expression of which he was so great a master, reproaching me above all for my *ingratitude* for his personal favours. While he thus addressed me, in the most insulting style, I felt my frame tremble with indignation; but I saw that the Chief Justice* was placed there for a witness of my demeanour, and that my destruction was sealed if I gave way to my feelings, and was not wary in my words. I stood up, however, and confronted this most arrogant man with a look under which his haughty eye instantly sunk, and replied to him with a calmness of which I had not, a few minutes before, thought myself capable. I told him that I was quite sensible of the position in which I stood,—a very humble individual before the representative of my Sovereign; but I also knew what was due to myself as a British subject and a gentleman, and that I would not submit to be *rated*, in the style he had assumed, by any man, whatever were his station or his rank. I repelled his charges of having acted unworthily of my character as a Government servant and a loyal subject; I defended my conduct in regard to the press, and the character of our magazine, which he said was full of "calumny and falsehood;" I asserted my right to petition the King for the extension of the freedom of the press to the colony; and I denied altogether the "personal obligations" with which he upbraided me, having never asked nor received from him the slightest personal favour, unless the lands allotted to my party, and my own appointment to the Government Library, were considered such, though the latter was, in fact, a public duty assigned to me, in compliance with the recommendations of the Home Government. This situation, however, I now begged to resign, since I would not compromise my free agency for that or for any appointment his Lordship could bestow.

Lord Charles then saw he had gone a step too far. He had, in fact, misapprehended my character, and had made a not uncommon mistake in taking certain bashfulness of manner (*mauvaise honte*) for timidity of spirit. And as his object *then* was not absolutely to quarrel with, but merely to intimidate me, and thus render me subservient to his views, he immediately lowered his tone, and had the singular meanness, after the insulting terms he had used, to attempt to coax me by a little flattery, and by throwing out hints of his disposition to promote my personal views, if I would conduct myself "discreetly." He wished the magazine, he said, still to go on; and even alleged that the Fiscal had in some points exceeded his instructions in regard to us. But this attempt to cajole, when he found he could not bully me, disgusted me even more than his insolence. I saw the motive, and despised it: I saw the peril too, and feared it—"*timeo Danaos!*" I resolutely declined, therefore, his repeated invitations (to which he called the Chief Justice formally to bear witness) to recommence the magazine, unless *legal protection* were granted to the press.

The narrative relating to the treatment of the Caffer tribes is one of painful interest, and cannot be read without feelings of disgust and indignation. By the stroke of a Governor's pen, they are deprived of large tracts of land, with their growing crops, and driven forth to destitution or starvation. For any real or any fancied injury (such as the loss of cattle), it is in the power of the pettiest magistrate to send forth a *commando*, surprise and plunder the villages, burn the hovels, massacre the men, and carry the women and children into captivity, frequently shooting them on the road out of wantonness, or impatience at their foot-sore pace. Their chieftains are grossly insulted, their envoys have been murdered, and the lives of Caffer travellers are by no means safe; yet even all these things are *now* submitted to, for the tribes are too well aware of the British power to attempt reprisals; and unless some change of system should be enforced by the Government at home, the nation will gradually perish by murders, by massacres, and by want. The treatment of the aborigines by colonists is one of the darkest and bloodiest stains upon the page of history; and scarcely any are equal in atrocity to the conduct of the Dutch boors,—ably seconded of late, according to Mr. Pringle, by some of the more degraded of the English settlers. If the volume contained nothing more than the account of this worse than slave-trade and the suggestions for its remedy, it would be worthy of national perusal.

* We take upon ourselves to assert, that the presence of the Chief Justice on this occasion was, on his part, accidental.—ED.

INDIAN EXPORTS.—PART II.

No man could look upon the build and stature of Sergeant John Rowbotham, of the Bombay Artillery, without feeling a sentiment of respect for the aristocracy of limbs, as indicated by six feet three, as erect as poplar; thirty inches across the shoulders, and twelve stone weight of absolute bone and sinew, and no tallow; but a change came o'er the spirit of the man, or rather it was his ill luck to change his spirits. My very heart ached within me when the Sergeant, after a short absence in hospital, appeared at the orderly hour the very opposite of his former self,—lank, lean, and sallow; his roseate gills transformed into wrinkled suet-coloured skinny appendages to his jaws; and his cheery whistle, which was wont to make the barrack ring to its melody, becalmed into a fluttering twitter, which it would not have puzzled a tom-tit to have out-chirped fasting.

"Good heavens, Sergeant!" said I, "what the deuce have you been after? this won't do, my good fellow! it won't, indeed, if we can mend it; what ails you? what ails you?"

"O, Sir!" said the Sergeant, "I thank you kindly, very kindly, Sir! but I hope its all right now; only, Sir! that my *intervals*, as you see, Sir! saving your honor's presence, my poor *intervals* couldn't stand the Lisbores and the Tenreefs, and so you see, Sir! they floored me, and sarved me out, afore as how I could say Jack Robinson! but the Doctor, God bless him! has righted me, as you see, Sir! and he warns me now, please your honor, against Lisbores and Tenreefs, and to be careful of the liquor I venture on."

My knowledge of the Sergeant had been to this effect:—that whistle-pig alone was the nectar, the ambrosia

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of his daily dreams, and of his nightly visions, and that even paradise without whistlepig might be a fine thing for "the women she creatures, poor things as drinks the tea-water;" but such were not the quarters which John Rowbotham would chalk his mark for: I therefore observed, that I hoped the Sergeant would follow the Doctor's advice, and for his own sake, as well as for the sake of example, endeavour to abstain from arrack, and as far as in him lay, would establish for himself and Mrs. Rowbotham, and their friends in the Patchery, a modified system upon Temperance principles. O! that Wilkie could have seen the astonishment and stare of the worthy non-commissioned! he would have immortalized the halberdier upon canvass, as he stood amazed when admonished to abstain from his beloved whistlepig! "Dear me, Sir!" said he, "as long as ever I took the wholesome spirits neat, so long, as you well know, Sir, and nobody better, so long I never missed a roll-call; but when Doctor Death-in-the-Pot would have us water our arrack, and put us upon Lisbores and Tenreefs, bless ye, Sir! it just brought the murrain into the barrack, and we're pretty nigh done for, unless your honor sees us righted; them there Lisbores and Tenreefs, and such like detrimentals, be just so much horrid rot, saving your presence, and not at all fit, by any manner of means, for a christian man's intervals."

The truth was now apparent; from my reminiscence that the worthy Sergeant had been a voyage or two in the Marine; and from my own naval recollections enabling me to understand that three reefs constitute close reefing, I had interpreted ten reefs to be the *nom de caresse* of something nearer to aqua fortis than whistlepig; that is, than an infusion of pounded chillies in arrack; and which an Indian bombardier will swallow without winking at a maximum of inflammability which would skin the throat of a Johnny Newcome—but the very opposite to this, was the head and front of the plaintiff's indiscretion; poor devil! he had been inveigled by his coaxing wife and the Doctor's plausibilities, into a total abstinence from his customary potations! decoyed in fact into *drinking wine,* as he called it, *like a gentleman,* from the canteen; and the wine which suited his coin being *Lisbon and Teneriffe*, their effect had been as described; and no wonder, for in the homely language of the Sergeant, those detrimentals are horrid rot.

I upbraided my friend, the Doctor, and his reply was—"I won't venture to say much for the Lisbon—it won't do, I fear, within the Tropics; but Teneriffe, at an average of 300 or 350 rupees per pipe, may be bought, a right sterling liquor,—generous, wholesome, palatable tipple; but the canteen rot, as the Sergeant terms it, is bought at half that price; and no wonder, poor fellow! that it should sour upon his, or any interva's that had pith or energy beyond the trail of a Jack Snipe! However, as you are going to the Cape, pray let us know what sort of stuff the Cape wine is; report fully upon the qualities and prices thereof, and on the capabilities of the Cape vineyards: there can be no doubt but that if the Cape wines be drinkable, they ought to drive that wretched mixture of vinegar, sugar, and brandy, called Lisbon, out of the market, and obtain a sale of some thousands of pipes per annum, to the benefit of the Cape as well as of the Indian market."

My knowledge of the Cape wines has not much improved since my exportation; nor am I disposed to hazard a prediction that the vineyards of South Africa are advancing in rivalry to those of South France; but I have no hesitation in saying that, to the best of my judgment, the Cape wine of an average quality, is superior to the average Lisbon, not only in flavor, but in body and quality, and ought to supercede it in the Indian market. As respects the quantity of Lisbon consumed in India, and the probable demand for Kaapstad to supply its place, I venture no conjecture; but a fair field is open to the Cape merchant; the necessary information is easily to be obtained; the demand would be great, and were any ordinary degree of care bestowed in the vintage process, and common honesty and common cleanliness in the wine press, and in the casking and shipment of the article, it would soon increase to an extent which would tell upon the prosperity of the colony generally, and more especially in favor of the port and shipping interest. But let it be distinctly understood, that strict supervision, cleanliness, and honesty, are indispensable. Out of the first half-dozen of Constantia, purchased from a supposed respectable store, which I opened here, two had been bottled in unwashed fish-sauce bottles! and were as beastly as such lepourous distilment could make them: this, I would hope, is an extreme case, but it is a fact in my own experience; and others, I presume, have had occasion to bemoan the filthy propensities of the swinish race of Cape servants, since one of my friends, a bit of a humourist, amused himself, for want of better occupation, with bottling and corking his Constantia himself, as his only security for its cleanliness!

The Lisbon wine to which I have alluded, is imported from Portugal by the Goa merchants, and is sold at Goa at the rate of 30 or 40 rupees per quarter cask of ten dozen; it is thence transferred by sea, to Bombay, where it pays 60 per cent. duties, as having been brought from Europe in a foreign bottom, and is there drawn off and bottled, and retailed at 8 rupees per dozen; and forms the fascinating link of *"wine on the table,"* which binds the very numerous tribe of half-castes, and inferior order of Europeans to gentility, it being their weakness to fancy it incumbent upon their breeding to *"drink their wine,"* like their betters: these would be good customers for Cape wine, without making mention of the Parsees, a wealthy and jolly race of wine-bibbers, the descendants of the Fire-worshippers, and faithful adherents to the ancient creed; but O! how unpoetical their names and natures! how opposite in every thing is Hafujee of Bombay to the Hafuz of Lalla Rookh!!

There appeared in one of the Bengal Mofussil papers, the Delhi or the Agra, I forget which, a facetious paper on the old times as contrasted with the new; the difference, to wit, betwixt 1811 and 1833, the period of the writer's Indian experience. The points of contrast which were exhibited were abundantly amusing in themselves, and were most whimsically stated, one item being delivered in the following terms: "In those days, every man pretending to the character of a gentleman, had his prime bit of blood in the stable for gala day exhibition, and a sturdy serviceable hack for wear and tear, the damage of the two, at a fair average, rating a good thousand rupees, or double that at modern prices; and the ill-mounted Yahoo who showed himself for a varmint on a tattoo, was very properly accounted a thundering snob at the least, if not more of a beast than the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

garrison under him; but now! the seapoy lines and pettah bazaars are ransacked as the flash horse-markets; and a three stalled stable is fitted in cattle, clothing, and furniture for a hundred rupees!!" This is perfectly true; the racing mania began about 1811, and has continued to the present date, to the outrageous advancement of the price of horse-flesh: since on it all the cups, plates, purses, and other turf matches are calculated for the sizes and powers of the Arab breed, where fourteen-two makes a tall horse; the good ones of that caste are proportionably enhanced in price, and any fourfooted thing imported from the Gulf, which has the least possible likelihood of being brought to the post, is beyond the military purse of any grade below field-officer, or lucky gentleman on the staff: thus the Arabs have obtained a complete monopoly, and are utterly indifferent to ordinary purchasers: whence it follows, that as the man who cannot gratify his pride and indulge his taste, may soothe his feelings by the affectation of eccentricity; the roughest, raggedest brutes of tattoos, or poneys the size of asses, are purchased at from 15 to 20 rupees each, and a three-stalled stable is often enough filled under 100 rupees, furniture and all. I am quite unable to say what number of horses are imported into Bombay yearly from the coast of Arabia, nor have I any grounds for a safe conjecture as to what they cost there, or to what amount per cent. the original price is increased by the voyage and insurance; but these are points very easily to be ascertained in Bombay. A considerable number of horses are brought from Belochishtan and Caubul across the desert of Jessulmere, a land journey of perhaps 1500 or 2000 miles; and these, a larger breed than the Arab, have an average value of about 500 rupees, but they are rough, unsightly monsters, and most frequently vicious, the too common characteristics of country horses; these are chiefly bought up for the cavalry and for harness, and having more weight, and better height, are fitter for the purpose than the Arabs:—whether, or not, the Cape farmers could profitably export horses to India, is a question I could not possibly attempt to answer; but I will state all the information I possess, and leave the reader to judge for himself.

The Bombay mounted force consists of four troops of horse artillery, a regiment of dragoons, and 3 regiments of native cavalry, a total of about 3,500 horses; the annual re-mount may, perhaps, be estimated at about 400; purchased as opportunities offer by the Commissariate, under the inspection of Cavalry Committees; in addition, however, to the 400 horses or thereabouts, annually required for the Bombay cavalry, the Madras Government has an agent in Bombay, for the sole purpose of purchasing horses for their cavalry, and as this agent enjoys a very liberal staff salary, his agency duties should have some proportion to his salary; let us suppose that he sends 400 horses annually to Madras. The horses thus purchased for the cavalry, are averaged in the lot, not to exceed, to the best of my recollection, 500 rupees each for the European dragoons, and 450 for the native trooper, say an average of 450 rupees, which, on 800 horses, gives a total of 360,000 rupees, or about £36,000 per annum. The question is, could that sum purchase at the Cape, and convey to Bombay, 800 horses fit for cavalry duties, and leave a remunerating profit? I certainly think it would; the charges and freight for a single horse, or on one stable of three or four, forms no criterion, the point is to estimate the average upon a grand scale. Take the best time of the year for the shortest passage, and the outlay on the fitting up of a vessel, as cavalry transports were equipped, during the war, and thence deduce the average on 800 horses; it exceeds my knowledge to state the rates of stowage, and at what the terms of insurance should be estimated; but these are all queries which are most easy of solution, and as far as I am able of judging, the result would be private gain as well as public benefit. The simple advantage of promoting the intercourse betwixt such important British dependencies deserves the attention of both Governments; the first trial should be liberally assisted, and the Indian and Cape authorities should meet each other half-way, since the result, if successful, would be an incalculable advantage to both.

I have made no distinct reference to the importance of the Cape horses for single or double harness in India; they are in my estimate superior in blood, bone, height, power, and temper, to the average dragoon or cavalry horse used on the Bombay side; and they loom like elephants when compared to the diminutive Arabs, which look like rats as they toil and labour, poor creatures! with lumbering vehicles at their tails, which the builders in Long-acre little dreamt should ever have such dwarfish cattle yoked before them. From my own experience, I should say a pair of horses estimated here at £60, would be cheap in Bombay at 1200 rupees; that is to say, you could not there purchase carriage horses of equal power under that sum.

As respects the return trade, I am no merchant, and cannot recite off hand the manner and matter of all that appertains to merchandize; but I will say as much as I can. First, I was asked in a shop in the Heeregracht, by a small man, who knew me for an Indian at a glance, and set me down for fair game accordingly,—I was modestly asked, I say, the sum of two shillings for a small bottle of arrowroot, containing, perhaps, the quarter of a pound! I expostulated, and my little friend, with an air which was intended to assure me that it had never occurred to him that I was an Indian, and that from the acuteness of my physiognomy, I might most easily have been mistaken for a South African, said that, I had no ground for complaint; the bottle and its contents were *cheap at the price;* if so, the merchants of Kaapstad should lose no time in importing arrowroot from India; it is a most nutritious and wholesome article of luxurious food, as well as an invaluable diet for invalids, and is manufactured to such an abundant extent in Malabar and Canara, as to be sold in boxes of 100 pounds each for ten and twelve rupees per box. Secondly, wax candles cost here, apparently, about three shillings per pound; they may be obtained at Goa, from the Portugueze, at 12½ rupees per maund of 25 pounds, the Goa rupee not being worth 1*s.* 9*d.* Thirdly, the sperm oil procurable here at 9*s.* and 10*s.* 6*d* per gallon, is treble the price of cocoa-nut oil which is purchased on the coast of the best quality at 4 and 4½ rupees per maund of 28 pounds; and these are the retail prices, any wholesale speculation would no doubt secure a considerable discount.

Furniture in Bombay is fifty per cent. cheaper than at the Cape, a pair of sofas would there cost one hundred rupees, which would be cheap here at £20; tables and chests of drawers might be brought with advan-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tage; the latter, well secured, being employed as packing cases for light goods.

The miserable state of Mocha, and its dependencies, has nearly destroyed the coffee trade of the Red Sea, and very little genuine Mocha coffee is brought to market; this has served the Java and Bourbon plantations, whilst those who insisted on paying the Mocha price have been indulged with selected samples of Java, and been charged three hundred per cent. for their whim and folly. The Indian plantations from the Mocha seeds are, however, becoming yearly of greater importance; we purchased in the Southern Marhatta country in 1832, in the village bazaars, fourteen seers, or seven pounds of the best new coffee for a rupee, and the period, I hope, is not far distant, when this will be the average price, and the crop sufficient for the Indian market.

The sugar and coffee, however, of Indian growth, have not as yet the place they ought to hold in the market and it is hard to say whether or not they are likely to attain it: one thing however is certain that, if they do not, the fault lies in government, and the fiscal system. The climate and the soil are the fittest in the world for the crops, and such is the state of the population, that any number of agricultural operatives could be procured for from eight to nine shillings each per month board wages! whilst a Kooly hired for a journey of 90 miles, carries 50 pounds, and travels 14 miles a day for two rupees, Dekkan currency; which, supposing him to go over the ground in $6\frac{1}{2}$ days, loaded, and to return it in $3\frac{1}{2}$, makes ten days' tolerably hard labour for about three and sixpence. The Earl of Clare having declared Bombay a free port, it will be the nearest and best resort for the Cape traders for all articles of Indian and China produce; and it may be fairly asserted, that the luxuries of the east ought to be soon as plentiful and as easy of access here as in India.

To conclude these dry and prosing observations, if I am asked why I trouble myself and the readers of the Literary Gazette with such dusty matter, I reply, that I lived all the days of my life as merry and gay withal, as a grasshopper in summer, until it was found one day, that I was not up to my daily chirp, and that I, who had weathered it so long, was spavined at last, and "had got the liver;" my fate was soon determined, and sentence of exportation was speedily past upon me—the medical decree was, that I should be exported to the Cape, and strictly limited to Cape Wine, which, with boarding-house cookery, such as my worthy friend had himself found it, formed in his mind a regimen which involved a pretty considerable certainty of no inordinate excess. But to remove myself hither, required a payment of 1,500 rupees for my passage, which, if the trade betwixt the Cape and India were what it ought to be, would not cost me 1000; and as matters are not likely to improve much for two years, I shall no doubt, when I return, be another 500 rupees out of pocket; a dead loss, as I guess, to me and my heirs for ever, of a cool hundred sterling, more or less, without particularizing the sundry minutiæ which render an Indian export's trip to the Cape some 50 per cent. of a weightier matter than most probably might be, if the William Shands, and the Flying Dutchman, made each two trips a year to Bombay as regular traders.

I have occupied too much space already, to be allowed to trespass further on the patience of the gentle reader. I shall, therefore, defer for the present, my cogitations upon sundry matters which have found me an abundant occupation in thinking, and shall reserve them for another opportunity.

NEW SOUTH WALES.

AN interesting Book has been written and published at Calcutta, by Mr. John Henderson, entitled *Observations on the Colonies of New South Wales.*

Speaking of the general character of the convicts, the author observes that the representatives of the three kingdoms are nearly in the proportion of their respective populations, with the exception that the convicts from Scotland are less, and those from Ireland more than the natural proportion would be, England being the scale. The distinguishing marks by which they are known are as follows.

Irish; reckless of crime and its consequences, careless, abandoned, unsteady, better workers than the English, ever ready to enter into any plot, however absurd, still never held together by any common tie, and therefore are ever ready to sacrifice friend or brother without the slightest remorse.

English; remarkable for mutual attachment: more dangerous to the state on that account: very idle but turn out under ordinary circumstances the steadiest in the end.

Scotch; characterised by being the best workers, and by far the most depraved characters of the whole.

And such is precisely the difference which we should expect between the convicts of the three countries, and we only wonder that Mr. Henderson did not notice the very curious connexion between the cause and effect. It will be remembered, that the three set of convicts assembled in New South Wales, are sent there by order of the three distinct tribunals of Justice which have no communication whatever with each other. The tribunal in Ireland exhibited at all times a very ardent disposition to exile the delinquents convicted by it, which readily accounts for the superiority of the number of convicts from Ireland. In Scotland, on the contrary, none but enormous crimes are regarded as justifying the sentence of transportation. Hence, the Scotch convicts would necessarily be the most abandoned of characters. England is about a mean between the two, and the proportions therefore are regulated in the most exact manner to correspond with the influence which distributes them.

But a fact of the deepest importance is announced by Mr. Henderson in reference to this body. He has had opportunities of making an examination himself into their character, habits, &c., and he has found that by far the majority can neither read nor write. Here is a powerful battering ram at once placed at the discretion of the advocates for education, to crumble to atoms the citadel of fanatic ignorance. Mr. Henderson gives a further statement which abounds with the elements of most useful information.

SYSTEM OF NATIONAL EDUCATION IN PRUSSIA.

The following are the Regulations to be enforced in all the National Schools of Prussia:

1. "Religion and morals.
2. "The German language, and at the same time the language of the country in the provinces not German; reading, composition, exercises in style, study of the national classics. In all the German part of the country, the modern foreign languages are an accessory branch of study.
3. "Latin is taught to all the children, within certain limits, as a means of exercising their faculties and their judgment, whether they be or be not to enter the higher schools.
4. "The elements of mathematics, and especially a thorough course of practical arithmetic.
5. "Physical science, as far as is sufficient to explain the most remarkable phenomena of nature.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

6. "Geography and history combined, in order to give some knowledge of the earth, of the general history of the world, of the people who inhabit it, and the empires into which it is divided. Prussia, its history, laws, and constitution, shall form the subject of a special study.

7. "The principles of drawing shall be taught to all, concurrently with the lessons in physics, natural history, and geometry.

8. "Writing must be carefully attended to, and the hand trained to write distinctly and neatly.

9. "The singing lessons shall be attended by all the pupils, not only with a view to form them to that art, but to qualify them to assist in the services of the church, with propriety and solemnity, by singing the psalms or choral music with correctness and judgment.

10. "Gymnastic exercises, adapted to the age and strength of the scholars."

There are, then, means provided whereby the character and conduct of a boy at school may influence the whole of his life afterwards. Masters are required to take every pains to know the particular qualities of every one of their pupils; every scholar obtains a certificate stating his capacity, his dispositions, moral, and religious, and these certificates are afterwards to be employed in the service of the boys when they negociate for commencing any business for life. The greatest liberty of inquiry,—and of remonstrance, in case of necessity, is granted to parents who send their children to the schools, and the laws are peremptory and solemn in denouncing the slightest delay on the part of the authorities in listening to, and not duly investigating such complaints. The greatest possible publicity is also enjoined to be given, in order that public attention might be directed to the progress of the school; for this purpose the masters are required to have examinations of the boys in public; and further, to make out reports from time to time of the state of education. But, in the case of female schools, the regulations state that, as girls are destined by nature for a quiet and retired life, these exercises and trials shall take place only in the presence of their masters and parents, but are never to be made public in schools. The portion of them which concludes by a general recommendation, has the following important passage:—

"In all the parishes of the kingdom, without exception, the clergymen of every Christian communion shall seize every occasion, whether at church, or during their visits to schools, or in their sermons at the opening of classes, of reminding the schools of their high and holy mission, and the people of their duties towards the schools. The authorities, the clergy, and the masters shall unite their efforts to strengthen the ties of respect and attachment between the people and the school, so that the people may accustom themselves more and more to regard education as one of the essential conditions of public life, and may daily take a deeper interest in its progress."

JAVA.

In the Java Trade it appears from the Singapore Chronicle, that the King of Holland is at the head of the Monopoly. The great bulk of the Exports in 1833, were all *on account of the King of Holland in Coffee and Sugar*. The attempt to *force* a certain portion of the Malay population to labour has failed. But the following historical *morceaux* of Batavian legislation, is too precious not to be gathered up.

The Dutch were reinstated in the possession of Java in 1816. Previously to that year, and until 1821, there might have been exported from the port of Samarang, averaging about 80,000 pls. of Sugar annually. The returns one year shewed upwards of 84,000 piculs. Instead of rejoicing at the prosperity of the cultivators, and the growing wealth of the country, which must have in an equal rate enriched the Government, it became jealous of them, and not only conceived the idea of dispossessing them, that Government might enjoy the whole, but actually attempted and did the deed. Never was the fable of the Boy, the Goose, and the Golden Egg more clearly exemplified;—Members of a Government, formerly famed for its sagacity, entertaining notions that the interests of the Agriculturists would become too important, and their influence too great—that individuals in a Colony had no right to acquire such wealth, which belonged to the state, and that it should be collected henceforth without the intervention of Agriculturists with capital! It may scarcely be credited; for even those who from lamentable ignorance, unfortunately uttered such pitiable sentiments, might, when the results are contemplated, and pointed out, be ashamed to acknowledge or avow such, yet from the formation of their minds, and their cramped and narrow views, people of that school cannot now refrain from acting on and propping the miserable old system, so long as abler men are wanting in their Councils to instil and to uphold loftier ideas.

The consequences that ensued, must not, and cannot be long dwelt on. Numerous respectable, opulent and industrious people were ruined,—their families beggared. Chinese in the Samarang and Japara districts worth from ten to seventy Thousand Dollars and upwards, reduced it may be said to hold the plough—work as labourers, or procure a livelihood in any way they could.

Before the lapse of three years, instead of exporting Sugar, it was required for consumption in and about Samarang. In 1824-25 it was brought there from Batavia by the traders, and sold at a profit.—What sayest thou of carrying coals to Newcastle? But let the tale be concluded, for it may appear to be one more of fancy, than actually belonging to the annals of Java.

About the same time (1823) the time of devastation—the time of the killing of the Java Goose—which in the course of one year would have supplied 365 large golden Eggs, besides what her numerous progeny would have given—let the Board of Finance, or the Kiken Kamer, calculate the number of doits—about the same time were all the European Agriculturists expelled, at four months warning, from the Native provinces.—Men who, sanctioned by Government, had laid out what they possessed, and who borrowed largely from their friends, had all invested in the soil—in laudable undertakings from which they already had fair prospects of ample remuneration.—It was swept from them entirely, although the then Governor General had visited their establishments, encouraged the Coffee Planters personally to go on, and wishing them success, not six weeks previously to the fatal intimation being conveyed to them, to leave the interior, and to retire to the coast within four months—it was fatal, because it involved the best interests of the country. The poor and needy Javanese Princes, who had expended the amount of compensation for the leases granted to the Europeans, were ordered to take back their lands, to cultivate and improve those themselves, and to repay what they had received.

LITERARY EXTRACTS.

INDIVIDUAL EXERTION.

IRELAND UNDER OBLIGATIONS TO AN ITALIAN.

Individual exertion is often far more beneficial in contributing to the welfare of a country than either national expense or legislative bounty. If inquiry be made into the cause of England's prosperity, it will be found that single-handed and individual activity has had a prodigious share in promoting it; and the ingenuity of a Watt and an Arkwright has discovered new sources of wealth, and cut a channel for that current of enterprise which, swelling into a mighty torrent, has enabled Britain to rise far above the nations of the earth. Really, when we hear people complain of the want of national support, we are apt to think that the fable of the Wagoner might be quoted not inappropriately, and "put your shoulder to the wheel," might be whispered in many a murmurer's ear.

There is an individual in Ireland, who, though a foreigner, has "done the state some service," and exemplifies in his person what an individual by persevering exertion may do. This gentleman is Mr. Charles Bianconi, a native of Italy. He came into that country as a *print-seller*, and in travelling from village to village, and from town to town, exercising his vocation, he felt, as many a man has felt before him, and may after, how toilsome it is to trudge on foot under a burning sun, or amid the storms of winter; so he shrewdly bethought him, that if he had a *jaunting-car*, and, of course, an animal to draw it, he might not only save his own body corporate some fatigue, and carry his wares with speed and ease, but by occasionally picking up pedestrians at a small charge, contribute not a little to defray the expenses of his vehicle. For three months his speculation did not display itself as a peculiarly happy one; but by-and-bye he became known, his car became in request, he started a second one, then a third, and so on, until he has covered all the roads in the south of Ireland with his cars, which radiating from CLONMEL, as a centre, connect the following towns:

Ballinasloe,	Eyrecourt,	Parsonstown,
Ballyhale,	Fermoy,	Ratcormuck,
Banagher,	Fethard,	Roscrea,
Burrosoleigh,	Freshford,	Ross,
Burrosakane,	Foulk's-mill,	Shinrone,
Caher,	Kilkenny,	Strangford,
Cashel,	Knocktopher,	Stonepound,
Carlow,	Kilmacthomas,	Taghmon,
Carrick,	Kildorrery,	Thurles,
Clogheen,	Limerick,	Tipperary,
Cork,	Littleton,	Templemore,
Dungarvan,	Mallow,	Orlingford,
Doneraile,	Mitchelstown,	Watergrass-hill,
Enniscorthy,	Nenagh,	Wexford.

In travelling to these towns Mr. Bianconi has upwards of three hundred horses, gives employment to upwards of one hundred and twenty families, causes a consumption of above nine hundred tons of hay, and twelve hundred barrels of oats, annually, and his cars travel above eighteen hundred miles daily. He is now principal contractor in the South of Ireland for

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

conveying His Majesty's mails on cross roads by cars.

Before Mr. Bianconi established his cars, the travelling vehicles in use where only four horse coaches, confined to what are termed the mail-coach roads, and the fares were too high for the humbler class of farmers and tradesmen, whose business often calls them from home. Now this enterprising and spirited foreigner has laid open the entire south, and done more good than a host of half resident landlords. A few years ago, to travel in the south of Ireland was an adventure not to be rashly made: now there is free, and easy, and rapid intercourse, and the numerous cross roads are all rendered available, and turned to good account.

Not long ago, in entering Mr. Bianconi's office in Clonmel, in order to procure a seat in one of his cars for Cashel, we were surprised to see the walls covered, not with the glaring advertisements, notices of auctions and sheriff's sales, but with some of the very best prints taken from the works of the great masters. "Why," we muttered to ourselves, "this *carman* must be a man of taste!" By-and-bye a very comely dark-eyed person came in, and seemed to take an active interest in the affairs of the establishment. This was Mr. Bianconi, and having occasion to address him, we found him polite and affable, and could have wagered a guinea to a *groat*, that he was born to be a gentleman.

Many stories are told of Mr. Bianconi, which reflect great credit on his head and his heart. For instance, it is said that his drivers have a general order to pick up, free of all charge, all pedestrians who evidently cannot pay for a whirl, and who seem to be travelling with pain to themselves. In giving this order, he has shewn the gallantry of his country, by especially directing that any female travelling with a child in her arms, should be accommodated with a seat. Moreover, the slightest hint of misconduct on the part of a driver—the least whisper of an accusation, if well-founded—subjects the delinquent to instant dismissal; and so aware are they of this, that the drivers of Bianconi's cars are as civil a set of fellows as you would wish to see handle a whip.

Again, all his horses have names, and these names are regularly inserted in his way bills. In fact, his "dumb brutes" are his pet children; he knows each of them familiarly, and it would not, perhaps, be going too far, to say, *that they know him!* He can tell where they are, whether they are well or sick, how they are behaving themselves, and every thing relative to these "dear children," which the father of so numerous and so well-regulated a family ought to know.

Bravo, Mr. Bianconi, thou art an enterprising, sensible, discreet, and proper person; and if Ireland had many more such, foreigner as thou art, she would bless the day they landed on her shores. He has lately obtained letters of naturalization from the government. —"CEAD MILLE FAILTE.—*(Dublin Penny Journal.)*

PERSEVERANCE.

The following anecdote has been often told, but it is necessary in this colony to repeat good advice—*line upon line—precept upon precept.*

"I recollect," says Sir Jonah Barrington, "in the Queen's County, to have seen a Mr. Clerk, who had been a working carpenter, and when making a bench for the session justices at the Court-house, was laughed at for taking peculiar pains in planing and smoothing the seat of it. He smilingly observed, 'that he did so *to make it easy for himself*, as he was resolved he would never die till he had a right to sit thereupon,' and he kept his word. He was an industrious man—honest, respectable and kindhearted. He succeeded in all his afforts to accumulate an independence—he did accumulate it, and uprightly.—His character kept pace with the increase of his property, and he lived to sit, as a magistrate, on that very bench that he sawed and planed."

COBBETT'S
BULLETIN OF HIS OWN SICKNESS.

THE British public, whom this veteran author and politician has so long amused, and as often instructed, when no inveterate crotchet crossed his mind, will be sorry to learn that he has been indisposed, and unable to attend to his duty in Parliament. His complaint, he says, is a bad cough, attended with general languor, and loss of appetite; but he is getting better by rusticating in the country, and is determined to abjure the din and smoke of London, court the healing influences of green fields and still waters, until his health is finally and completely restored. We approve of his resolution, particularly as his habit of rising with the lark, and going to bed with the sun, incapacitates him from attending the evening sittings, where alone important questions are discussed and carried. Mr. Cobbett, in fact, is far more efficient as a writer than as a speaker; and now that he has a little leisure, we trust he will employ it in putting the last hand to his promised autobiography. His fame ultimately will rest on his Cottage Economy, Advice to Young Men, English and French Grammars, Contributions to Horticulture, Agriculture, &c., and not on his political writings, powerful and original as many of them are. He is now an old man, and when he departs, as depart he must in the course of nature, no one will dare to allege that he ever in his life ate the bread of idleness, was a cumberer of the ground or unuseful in his day and generation. Indeed it may be questioned whether a more industrious man ever existed. His writings, if collected, would form a large library by themselves; and in this respect he far eclipses even the Author of the Waverley Novels. It is true he is to a great extent unimaginative, and that quality with him does not always equal quantity; but, considering his talent for rendering every thing interesting, he possesses powers, some of which are undoubtedly "rare in their separate excellence, and wonderful in their combination." The following amusing passage is from one of the latest *Registers*:—

"My state, at present, is this: my cough is gradually leaving me; but I have to suffer a degree of lassitude and want of appetite, more difficult to get rid of than the cough. I think, however, that that is beginning to go. I have been able to day to think about dining upon a sucking pig on Sunday next; and to think about it without loathing. I have tried very nice young chickens, very nicely roasted; and though I ate of them it has been without relish. The only meat that I eat with anything worthy of being called an appetite, is a rasher of bacon, all fat, toasted before the fire, and laid upon a thin bit of bread. Five or six times a day I have half a pint of very nicely made beef tea, which has been the main stay. Upon the whole, I think I am much better, and I feel stronger than four days ago.

"It is a very curious thing that I have not had the the smallest degree of headache; and, indeed, I cannot recollect the day when I had; it would seem as if this top part of me were wholly disconnected with all the rest."

WHO IS THE WISEST STATESMAN?

In a very eloquent speech delivered by Mr. E. L. Bulwer to his friends and constituents at Lincoln, the following happy illustration occurs:—"Yes, the time has come when (though Mr. Stanley thundered against the doctrine) 'the wisest statesman is the boldest.' In the ancient ages of the world, before the compass was discovered, and the principles of navigation known, they who undertook the peril of a voyage were obliged to skulk along the shore afraid to put out to sea—trembling at every wind—imagining themselves lost if the land disappeared from their view; but were they on that account more free from shipwreck? No; it was on the rocks and shoals that their timidity drove them, and their caution was often their destruction. But when the compass was discovered—when the sublime science which measures the great deeps was attained—then the boldest mariner became the wisest. It was the wisdom of courage to lessen the voyage, to diminish the danger, to penetrate the silence of oceans untracked, to plant the flag of civilization on barbarian lands, and to bring before the astonished eyes of the old world, the wealth and wonders of the new. It is the same with principles of government, as with those of navigation—we have discovered the compass and the loadstone—we have worked out the principles of national liberty—we may put forth to sea. He now is the worst statesman who creeps along the rocks and quicksands of the shore; he is the best statesman who guides the good vessel of the state upon her voyage of commerce and of glory, bravely along the vast seas of human improvement—not rashly, not blindly; but making a skilful and sagacious use of the discoveries of science, and the guiding principles of progressive enlightenment."

PRACTICAL ADVICE.

Under this head, *addressed to Irishmen*, we find in a Dublin periodical the following modest hints:

We are sure that our friends will not despise a little advice; and we therefore wish to call their attention to a few things not unworthy the observation of rational men.

One grand objection, until of late, to Irishmen, was their want of *business habits*. It is owing to this that the English have imbibed the idea that nothing good can come out of Ireland, and it is owing to this too that our shops and our warehouses are filled with Scotchmen. We do not mention this for the sake of invidious comparison; all we mean by it is, that Irishmen may be stimulated to rival them in what is assuredly merely an *educational* habit. To our young men we would say, never *undervalue your situation*. Whatever it may be, fulfil its duties well; and if you think it unworthy of your abilities, the surest way to get a better, is to *deserve* it. Never let a horse race, a review, or a regatta, draw you from your business at unseasonable times. Value it *more* than any thing else; be assiduous, attentive, and painstaking; and when you do take a day of pleasure (for who with any spark of feeling could bear to be shut up perpetually in town?) let that day be such as will not interfere with your more important duties.

Endeavour to acquire solid, useful and substantial knowledge. Unfortunately for poor Ireland, though her children are apt, inquisitive, acute and intelligent, yet their faculties have never been rightly directed. There are *three* senses in which the people of the *three* kingdoms may be termed *knowing*. The English are *knowing*, so far as regards their *comfort*, and the promotion of it; the Scotch are *knowing*, as far as regards that careful attention to *interest* which secures their situations, and the means of keeping them; but Paddy, poor Paddy, though he can give a wittier reply, a shrewder observation, a more humourous retort, and is therefore more intellectually *knowing* than either English or Scotch, fails in the grand point of knowingness as to *comfort* and *interest*. It is a positive fact that the tone of an Irish publication must be more elevated than an

6. "Geography and history combined, in order to give some knowledge of the earth, of the general history of the world, of the people who inhabit it, and the empires into which it is divided. Prussia, its history, laws, and constitution, shall form the subject of a special study.

7. "The principles of drawing shall be taught to all, concurrently with the lessons in physics, natural history, and geometry.

8. "Writing must be carefully attended to, and the hand trained to write distinctly and neatly.

9. "The singing lessons shall be attended by all the pupils, not only with a view to form them to that art, but to qualify them to assist in the services of the church, with propriety and solemnity, by singing the psalms or choral music with correctness and judgment.

10. "Gymnastic exercises, adapted to the age and strength of the scholars."

There are, then, means provided whereby the character and conduct of a boy at school may influence the whole of his life afterwards. Masters are required to take every pains to know the particular qualities of every one of their pupils; every scholar obtains a certificate stating his capacity, his dispositions, moral, and religious, and these certificates are afterwards to be employed in the service of the boys when they negociate for commencing any business for life. The greatest liberty of inquiry,—and of remonstrance, in case of necessity, is granted to parents who send their children to the schools, and the laws are peremptory and solemn in denouncing the slightest delay on the part of the authorities in listening to, and not duly investigating such complaints. The greatest possible publicity is also enjoined to be given, in order that public attention might be directed to the progress of the school; for this purpose the masters are required to have examinations of the boys in public; and further, to make out reports from time to time of the state of education. But, in the case of female schools, the regulations state that, as girls are destined by nature for a quiet and retired life, these exercises and trials shall take place only in the presence of their masters and parents, but are never to be made public in schools. The portion of them which concludes by a general recommendation, has the following important passage:—

"In all the parishes of the kingdom, without exception, the clergymen of every Christian communion shall seize every occasion, whether at church, or during their visits to schools, or in their sermons at the opening of classes, of reminding the schools of their high and holy mission, and the people of their duties towards the schools. The authorities, the clergy, and the masters shall unite their efforts to strengthen the ties of respect and attachment between the people and the school, so that the people may accustom themselves more and more to regard education as one of the essential conditions of public life, and may daily take a deeper interest in its progress."

JAVA.

In the Java Trade it appears from the Singapore Chronicle, that the King of Holland is at the head of the Monopoly. The great bulk of the Exports in 1833, were all *on account of the King of Holland in Coffee and Sugar*. The attempt to *force* a certain portion of the Malay population to labour has failed. But the following historical *morceaux* of Batavian legislation, is too precious not to be gathered up.

The Dutch were reinstated in the possession of Java in 1816. Previously to that year, and until 1821, there might have been exported from the port of Samarang, averaging about 80,000 pls. of Sugar annually. The returns one year shewed upwards of 84,000 piculs. Instead of rejoicing at the prosperity of the cultivators, and the growing wealth of the country, which must have in an equal rate enriched the Government, it became jealous of them, and not only conceived the idea of dispossessing them, that Government might enjoy the whole, but actually attempted and did the deed. Never was the fable of the Boy, the Goose, and the Golden Egg more clearly exemplified;—Members of a Government, formerly famed for its sagacity, entertaining notions that the interests of the Agriculturists would become too important, and their influence too great—that individuals in a Colony had no right to acquire such wealth, which belonged to the state, and that it should be collected henceforth without the intervention of Agriculturists with capital! It may scarcely be credited; for even those who from lamentable ignorance, unfortunately uttered such pitiable sentiments, might, when the results are contemplated, and pointed out, be ashamed to acknowledge or avow such, yet from the formation of their minds, and their cramped and narrow views, people of that school cannot now refrain from acting on and propping the miserable old system, so long as abler men are wanting in their Councils to instil and to uphold loftier ideas.

The consequences that ensued, must not, and cannot be long dwelt on. Numerous respectable, opulent and industrious people were ruined,—their families beggared. Chinese in the Samarang and Japara districts worth from ten to seventy Thousand Dollars and upwards, reduced it may be said to hold the plough—work as labourers, or procure a livelihood in any way they could.

Before the lapse of three years, instead of exporting Sugar, it was required for consumption in and about Samarang. In 1824-25 it was brought there from Batavia by the traders, and sold at a profit.—What sayest thou of carrying coals to Newcastle? But let the tale be concluded, for it may appear to be one more of fancy, than actually belonging to the annals of Java.

About the same time (1823) the time of devastation—the time of the killing of the Java Goose—which in the course of one year would have supplied 365 large golden Eggs, besides what her numerous progeny would have given—let the Board of Finance, or the Kiken Kamer, calculate the number of doits—about the same time were all the European Agriculturists expelled, at four months warning, from the Native provinces.—Men who, sanctioned by Government, had laid out what they possessed, and who borrowed largely from their friends, had all invested in the soil—in laudable undertakings from which they already had fair prospects of ample remuneration.—It was swept from them entirely, although the then Governor General had visited their establishments, encouraged the Coffee Planters personally to go on, and wishing them success, not six weeks previously to the fatal intimation being conveyed to them, to leave the interior, and to retire to the coast within four months—it was fatal, because it involved the best interests of the country. The poor and needy Javanese Princes, who had expended the amount of compensation for the leases granted to the Europeans, were ordered to take back their lands, to cultivate and improve those themselves, and to repay what they had received.

LITERARY EXTRACTS.

INDIVIDUAL EXERTION.

IRELAND UNDER OBLIGATIONS TO AN ITALIAN.

Individual exertion is often far more beneficial in contributing to the welfare of a country than either national expense or legislative bounty. If inquiry be made into the cause of England's prosperity, it will be found that single-handed and individual activity has had a prodigious share in promoting it; and the ingenuity of a Watt and an Arkwright has discovered new sources of wealth, and cut a channel for that current of enterprise which, swelling into a mighty torrent, has enabled Britain to rise far above the nations of the earth. Really, when we hear people complain of the want of national support, we are apt to think that the fable of the Wagoner might be quoted not inappropriately, and "put your shoulder to the wheel," might be whispered in many a murmurer's ear.

There is an individual in Ireland, who, though a foreigner, has "done the state some service," and exemplifies in his person what an individual by persevering exertion may do. This gentleman is Mr. Charles Bianconi, a native of Italy. He came into that country as a *print-seller*, and in travelling from village to village, and from town to town, exercising his vocation, he felt, as many a man has felt before him, and may after, how toilsome it is to trudge on foot under a burning sun, or amid the storms of winter; so he shrewdly bethought him, that if he had a *jaunting-car*, and, of course, an animal to draw it, he might not only save his own body corporate some fatigue, and carry his wares with speed and ease, but by occasionally picking up pedestrians at a small charge, contribute not a little to defray the expenses of his vehicle. For three months his speculation did not display itself as a peculiarly happy one; but by-and-bye he became known, his car became in request, he started a second one, then a third, and so on, until he has covered all the roads in the south of Ireland with his cars, which radiating from CLONMEL, as a centre, connect the following towns:

Ballinasloe,	Eyrecourt,	Parsonstown,
Ballyhale,	Fermoy,	Ratcormuck,
Banagher,	Fethard,	Roscrea,
Burrosoleigh,	Freshford,	Ross,
Burrosakane,	Foulk's-mill,	Shinrone,
Caher,	Kilkenny,	Strangford,
Cashel,	Knocktopher,	Stonepound,
Carlow,	Kilmacthomas,	Taghmon,
Carrick,	Kildorrery,	Thurles,
Clogheen,	Limerick,	Tipperary,
Cork,	Littleton,	Templemore,
Dungarvan,	Mallow,	Orlingford,
Doneraile,	Mitchelstown,	Watergrass-hill,
Enniscorthy,	Nenagh,	Wexford.

In travelling to these towns Mr. Bianconi has upwards of three hundred horses, gives employment to upwards of one hundred and twenty families, causes a consumption of above nine hundred tons of hay, and twelve hundred barrels of oats, annually, and his cars travel above eighteen hundred miles daily. He is now principal contractor in the South of Ireland for

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

conveying His Majesty's mails on cross roads by cars.

Before Mr. Bianconi established his cars, the travelling vehicles in use where only four horse coaches, confined to what are termed the mail-coach roads, and the fares were too high for the humbler class of farmers and tradesmen, whose business often calls them from home. Now this enterprising and spirited foreigner has laid open the entire south, and done more good than a host of half resident landlords. A few years ago, to travel in the south of Ireland was an adventure not to be rashly made: now there is free, and easy, and rapid intercourse, and the numerous cross roads are all rendered available, and turned to good account.

Not long ago, in entering Mr. Bianconi's office in Clonmel, in order to procure a seat in one of his cars for Cashel, we were surprised to see the walls covered, not with the glaring advertisements, notices of auctions and sheriff's sales, but with some of the very best prints taken from the works of the great masters. "Why," we muttered to ourselves, "this *carman* must be a man of taste!" By-and-bye a very comely dark-eyed person came in, and seemed to take an active interest in the affairs of the establishment. This was Mr. Bianconi, and having occasion to address him, we found him polite and affable, and could have wagered a guinea to a *groat*, that he was born to be a gentleman.

Many stories are told of Mr. Bianconi, which reflect great credit on his head and his heart. For instance, it is said that his drivers have a general order to pick up, free of all charge, all pedestrians who evidently cannot pay for a whirl, and who seem to be travelling with pain to themselves. In giving this order, he has shewn the gallantry of his country, by especially directing that any female travelling with a child in her arms, should be accommodated with a seat. Moreover, the slightest hint of misconduct on the part of a driver—the least whisper of an accusation, if well-founded—subjects the delinquent to instant dismissal; and so aware are they of this, that the drivers of Bianconi's cars are as civil a set of fellows as you would wish to see handle a whip.

Again, all his horses have names, and these names are regularly inserted in his way bills. In fact, his "dumb brutes" are his pet children; he knows each of them familiarly, and it would not, perhaps, be going too far, to say, *that they know him!* He can tell where they are, whether they are well or sick, how they are behaving themselves, and every thing relative to these "dear children," which the father of so numerous and so well-regulated a family ought to know.

Bravo, Mr. Bianconi, thou art an enterprising, sensible, discreet, and proper person; and if Ireland had many more such, foreigner as thou art, she would bless the day they landed on her shores. He has lately obtained letters of naturalization from the government. —"CEAD MILLE FAILTE.—*(Dublin Penny Journal.)*

PERSEVERANCE.

The following anecdote has been often told, but it is necessary in this colony to repeat good advice—*line upon line—precept upon precept.*

"I recollect," says Sir Jonah Barrington, "in the Queen's County, to have seen a Mr. Clerk, who had been a working carpenter, and when making a bench for the session justices at the Court-house, was laughed at for taking peculiar pains in planing and smoothing the seat of it. He smilingly observed, 'that he did so *to make it easy for himself*, as he was resolved he would never die till he had a right to sit thereupon,' and be kept his word. He was an industrious man—honest, respectable and kindhearted. He succeeded in all his efforts to accumulate an independence—he did accumulate it, and uprightly.—His character kept pace with the increase of his property, and he lived to sit, as a magistrate, on that very bench that he sawed and planed."

COBBETT'S
BULLETIN OF HIS OWN SICKNESS.

THE British public, whom this veteran author and politician has so long amused, and as often instructed, when no inveterate crotchet crossed his mind, will be sorry to learn that he has been indisposed, and unable to attend to his duty in Parliament. His complaint, he says, is a bad cough, attended with general languor, and loss of appetite; but he is getting better by rusticating in the country, and is determined to abjure the din and smoke of London, court the healing influences of green fields and still waters, until his health is finally and completely restored. We approve of his resolution, particularly as his habit of rising with the lark, and going to bed with the sun, incapacitates him from attending the evening sittings, where alone important questions are discussed and carried. Mr. Cobbett, in fact, is far more efficient as a writer than as a speaker; and now that he has a little leisure, we trust he will employ it in putting the last hand to his promised autobiography. His fame ultimately will rest on his Cottage Economy, Advice to Young Men, English and French Grammars, Contributions to Horticulture, Agriculture, &c., and not on his political writings, powerful and original as many of them are. He is now an old man, and when he departs, as depart he must in the course of nature, no one will dare to allege that he ever in his life ate the bread of idleness, was a cumberer of the ground or unuseful in his day and generation. Indeed it may be questioned whether a more industrious man ever existed. His writings, if collected, would form a large library by themselves; and in this respect he far eclipses even the Author of the Waverley Novels. It is true he is to a great extent unimaginative, and that quality with him does not always equal quantity; but, considering his talent for rendering every thing interesting, he possesses powers, some of which are undoubtedly "rare in their separate excellence, and wonderful in their combination." The following amusing passage is from one of the latest *Registers*:—

"My state, at present, is this: my cough is gradually leaving me; but I have to suffer a degree of lassitude and want of appetite, more difficult to get rid of than the cough. I think, however, that that is beginning to go. I have been able to day to think about dining upon a sucking pig on Sunday next; and to think about it without loathing. I have tried very nice young chickens, very nicely roasted; and though I ate of them it has been without relish. The only meat that I eat with anything worthy of being called an appetite, is a rasher of bacon, all fat, toasted before the fire, and laid upon a thin bit of bread. Five or six times a day I have half a pint of very nicely made beef tea, which has been the main stay. Upon the whole, I think I am much better, and I feel stronger than four days ago.

"It is a very curious thing that I have not had the the smallest degree of headache; and, indeed, I cannot recollect the day when I had; it would seem as if this top part of me were wholly disconnected with all the rest."

WHO IS THE WISEST STATESMAN?

In a very eloquent speech delivered by Mr. E. L. Bulwer to his friends and constituents at Lincoln, the following happy illustration occurs:—"Yes, the time has come when (though Mr. Stanley thundered against the doctrine) 'the wisest statesman is the boldest.' In the ancient ages of the world, before the compass was discovered, and the principles of navigation known, they who undertook the peril of a voyage were obliged to skulk along the shore afraid to put out to sea—trembling at every wind—imagining themselves lost if the land disappeared from their view; but were they on that account more free from shipwreck? No; it was on the rocks and shoals that their timidity drove them, and their caution was often their destruction. But when the compass was discovered—when the sublime science which measures the great deeps was attained—then the boldest mariner became the wisest. It was the wisdom of courage to lessen the voyage, to diminish the danger, to penetrate the silence of oceans untracked, to plant the flag of civilization on barbarian lands, and to bring before the astonished eyes of the old world, the wealth and wonders of the new. It is the same with principles of government, as with those of navigation—we have discovered the compass and the loadstone—we have worked out the principles of national liberty—we may put forth to sea. He now is the worst statesman who creeps along the rocks and quicksands of the shore; he is the best statesman who guides the good vessel of the state upon her voyage of commerce and of glory, bravely along the vast seas of human improvement—not rashly, not blindly; but making a skilful and sagacious use of the discoveries of science, and the guiding principles of progressive enlightenment."

PRACTICAL ADVICE.

Under this head, *addressed to Irishmen,* we find in a Dublin periodical the following modest hints:

We are sure that our friends will not despise a little advice; and we therefore wish to call their attention to a few things not unworthy the observation of rational men.

One grand objection, until of late, to Irishmen, was their want of *business habits.* It is owing to this that the English have imbibed the idea that nothing good can come out of Ireland, and it is owing to this too that our shops and our warehouses are filled with Scotchmen. We do not mention this for the sake of invidious comparison; all we mean by it is, that Irishmen may be stimulated to rival them in what is assuredly merely an *educational* habit. To our young men we would say, never *undervalue your situation.* Whatever it may be, fulfil its duties well; and if you think it unworthy of your abilities, the surest way to get a better, is to *deserve* it. Never let a horse race, a review, or a regatta, draw you from your business at unseasonable times. Value it *more* than any thing else; be assiduous, attentive, and painstaking; and when you do take a day of pleasure (for who with any spark of feeling could bear to be shut up perpetually in town?) let that day be such as will not interfere with your more important duties.

Endeavour to acquire solid, useful and substantial knowledge. Unfortunately for poor Ireland, though her children are apt, inquisitive, acute and intelligent, yet their faculties have never been rightly directed. There are *three* senses in which the people of the *three* kingdoms may be termed *knowing.* The English are *knowing*, so far as regards their *comfort*, and the promotion of it; the Scotch are *knowing*, as far as regards that careful attention to *interest* which secures their situations, and the means of keeping them; but Paddy, poor Paddy, though he can give a wittier reply, a shrewder observation, a more humourous retort, and is therefore more intellectually *knowing* than either English or Scotch, fails in the grand point of knowingness as to *comfort* and *interest.* It is a positive fact that the tone of an Irish publication must be more elevated than an

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

English one, because the lower classes of the Irish are more intelligent than the English. At the same time the Irish have not acquired that PATIENT HABIT of reading which characterizes the Scotch. We say *habit;* for it is owing to *education*. Let our friends then endeavour to diffuse around them a taste for wholesome manly reading. Let them endeavour to diffuse knowledge, and to *guide* the demand for it; let them encourage it in their children and relatives; and Ireland will soon present a cheering scene.

"CREDIT PERNICIOUS."

We advise all, who are in the practice of either giving or taking credit, to send to Hatchard's for a small pamphlet with the above title. It is several years since it was published, but has (unfortunately) as close an application to existing circumstances as if it had appeared only yesterday. It is indebted, we understand for its resuscitation at the present time, to the spontaneous recommendation of a noble and learned lord, who has taken the reform of the law of debtor and creditor under his special protection, and who has expressed a firm conviction that all reform in this quarter must be comparatively useless, which is not accompanied with such a rectification of the habits of commercial dealing, as it is the business of this pamphlet to inculcate. The title of the production would lead one to infer that the author thought *all* "Credit Pernicious." The fact, however, is not so; for it is only to such credit as neither necessity calls for, nor prudence can approve, that the object—admitting, unreservedly, that credit, "when well regulated, gives room for an extension of commerce, which would be unattainable without it." The author would have indicated the purpose of his pamphlet better, had he entitled it "Abuse of Credit the Cause of Individual Suffering and Public Injury." The cases which he considers most signalised by this abuse, are those of persons with fixed and certain incomes, getting into tradesmen's books for articles of personal and household use. He protests that he "cannot imagine" (as neither can we) "any plausible reason why persons of this class should pay at a future time rather than at the present;" and expatiates, with great earnestness and ability, on the manifold evils to which this considerate and vicious practice gives rise—causing to the individuals themselves, constant accumulation of embarrassment and difficulty, terminated but too frequently by utter insolvency and ruin—and raising to the public at large the prices of all commodities, in an exact ratio to the losses sustained by tradesmen from their bad debts We regret that our limits do not permit of our illustrating these positions by some of the many shrewd observations by which they are enforced in the pages before us; but this is of the less consequence, as we presume there are few, who take an active interest in the commercial welfare of their country, who will not speedily have recourse to the work itself.—*Mechanics' Mag.*

WHAT IS TO BECOME OF MAN?

After an able representation, by Dr. Prout, that the world could not possibly have existed by *chance*, and establishing, beyond all shadow of doubt, that creation is the work of a voluntary and *intelligent* Being, he proceeds to the inquiry—"*What is to become of Man?*" "Is the being," asks the animated writer, "who surveying

"Nature, recognises to a certain extent, the great scheme of the universe; but who sees infinitely more which he does *not* comprehend, and which he ardently desires to know;—is he to perish like a mere brute—all his knowledge useless; all his most earnest wishes ungratified? How are we to reconcile such a fate with the wisdom—the goodness,—the impartial justice—so strikingly displayed throughout the world by its Creator? Is it consistent with any one of these attributes, thus to raise hopes in a dependent being, which are never to be realized? thus to lift, as it were, a corner of the veil—to show this being a glimpse of the splendour beyond—and after all, to annihilate him? With the character and attributes of the benevolent Author of the universe, as deduced from His works such conceptions are absolutely incompatible. The question then recurs—What is to become of man? That he is mortal, like his fellow creatures, sad experience teaches him; but does he, like them, die *entirely!* Is there no part of him, that, surviving the general wreck, is reserved for a higher destiny? Can that, within man, which reasons like his immortal Creator—which sees and acknowledges His wisdom, and approves of His designs, be mortal like the rest? Is it probable, nay, is it possible, that what can thus comprehend the operations of an immortal Agent, *is not itself immortal?*

"Thus has reasoned man in all ages; and his desires and his feelings, his hopes and his fears, have all conspired with his reason, to strengthen the conviction, that there is something within him which *cannot die*. That he is destined, in short for a future state of existence, where his nature will be exalted, and his knowledge perfected; and where the GREAT DESIGN of his Creator, commenced and left imperfect here below, WILL BE COMPLETED."

ORIGIN OF WAR.

(*From the Ettrick Shepherd's Lay Sermons.*)

It would appear from history, that the rulers of kingdoms have often kindled up the flames of war, they scarcely knew why or wherefore; so that upon a retrospective view, historians and politicians have been quite at a loss how to account for it. The history of every war is very like a scene I once saw in Nithsdale. Two boys from different schools met one fine day upon the ice. They eyed each other with rather jealous and indignant looks, and with defiance on each brow.

"What are ye glowrin' at, Billy?"

"What's that to you? I'll look where I have a mind, an' hinder me if ye daur."

A hearty blow was the return to this, and then such a battle began. It being Saturday, all the boys of both schools were on the ice; and the fight instantly became general and desperate. At one time they fought with missile weapons, such as stones and snow-balls; but at length they coped in a rage, and many bloody raps were liberally given and received. I went up to try if I could pacify them; for by this time a number of little girls had joined the affray, and I was afraid they would be killed; so, addressing the one party, I asked what they were pelting the others for? What they had done to them?

"O, naething at a', man; we just want to gie them a good thrashin'."

After fighting till they were quite exhausted, one of the principal heroes stepped forth between, covered with blood, and his clothes to tatters, and addressed the belligerent parties thus:

"Weel; I'll tell you what we'll do wi' ye: if ye'll let us alane, we'll let you alane." There was no more of it; the war was at an end, and the boys scattered away to their play. I thought at the time, and have often thought since, that that trivial affray was the best epitome of war in general, that I had ever seen. Kings and ministers of state are just a set of grown-up children, exactly like the children I speak of, with only this material difference, that instead of fighting out the needless quarrels they have raised, they sit in safety and look on, hound out their innocent but servile subjects to battle, and then, after a waste of blood and treasure, are glad to make the boy's conditions, "If ye'll let us alane, we'll let you alane."

THE COUNTRYMAN PUZZLED.

"What a 'nation cramp hand our 'squire do write, surely good lawk a marcy! I can't make un out! Wou'd you, zur, please," said a real Dorchester peasant to a passer-by. He thrust the paper into the hand of the stranger, and taking off his round-crowned hat, garnished with turnpike tickets, stood smoothing down his raven black hair, waiting in respectful attitude to hear the response of the oracle. "Not make it out," exclaimed the reader; "why it is as plain as p int!" "O! be it," replied the raw, "that accounts for it—*I can't read print, zur!*"

A ROWLAND FOR AN OLIVER.

A witty Hibernian, just arrived in London, and wandering about, perceived a blanket at a shop door with this inscription on it, "This superior blanket for half price" Pat walked in, and demanded the price "Just *five* shillings, Sir," replied the smooth and polished shopkeeper. "By my sowl, and that's chape enough!" and so folding the blanket up, and putting it under his arm, he laid down two shillings and sixpence, and was walking off. The shopkeeper intercepted him, and demanded the other two and sixpence. "Did'nt you say, you spalpeen, that the *price* of the blanket was five shillings, and sure hav'nt I given you the half of it! By this and that, I won't give up my bargain!" A scuffle ensued, and Pat was taken to Bow-street; but when there, he pleaded his cause so ably, that the magistrate dismissed the complaint, and advised the shopkeeper never again to ticket his goods with "*half price.*"

Origin of the word Dollar.—The derivation suggested for this word in Todd's edition of Johnson is confirmed by the particular explanations of later lexicographers. In 1516 a silver mine was discovered at Joachimsthal (St. Joachim's *Dale*), in Bohemia; and the proprietors in the following year issued a great number of silver pieces, of about the value of the Spanish *peso duro*, which bore the name of Joachimsthaler, subsequently abbreviated into *thaler*. Thus the dollar, like the guinea, commemorates the locality of the metal from which it was originally coined.—*Conversations Lexicon.*

The Industrious Fleas.—Our friends, the industrious fleas, observes the London Literary Gazette, seem to march with the times, and to be not only more industrious, but more enterprising than ever. M. Bertolatto has now made one of them the best whip for a four-in-claw drag that can be imagined. The cannonier is a fearful fellow. Then the ex-sovereigns, &c. all mounted on their separate fleas! It is an amusing spectacle; yet the classical spectator cannot view it without feeling that *pro tanto flebit.*

A Glorious Victory.—Archbishop Tillotson says, "a more glorious victory cannot be gained over another man than this,—that when the injury began on his part, the kindness should begin on ours."

ROMAN LAW OF LIBEL.

The Emperor Augustus, whose clemency has been so much celebrated by historians, was the first to extend the crime of *læese-majesty*. Shortly before his death he ordained that the authors of all lampoons and satirical writings, which had for their object the attacking or blackening the reputation of others, should be punished with *death!* Though checked for a moment, the law of libel was much violated in after times, and succeeding tyrants were enabled to avail themselves of a blood-thirsty enactment to wreak their vengeance on those they hated or had occasion to dread. The severity of the sentence arrested the prosecutions, and deterred the magistrates from inflicting the penalty. Tiberius mounted the throne soon afterwards, and immediately revived the obnoxious law It was, however, detested by all parties, and the Prætor even asked the Emperor whether he should proceed against the authors of libels as traitors; upon which Tiberius replied, that *the law* must be executed. But notwithstanding this, life could not be so wantonly sacrificed on the sudden. The Emperor forgave all the first convicts, and it was *not until he had gained a character for clemency through his dissimulation*, that he ventured to spill blood *for libel* The fates of Drusus, of Priscus, and of the unfortunate jester, are sufficient examples of the Emperor's subsequent rigour. Caligula and Nero were not backward in enforcing this savage law of their predecessors, and the former had the hypocrisy to execute some who had spoken ill of Tiberius At length the tide changed, and the sword of vengeance was directed against those persons who had assisted in supporting this law. ***** Tiberius abrogated it, and would neither suffer a prosecution for words spoken of himself nor of his predecessors. At the same time he caused informers to be publicly whipped, and then sold for slaves, or banished. The accession of Domitian was a signal for a temporary revival of the sanguinary ordinance, by which many persons perished, but Nerva again abolished it by an edict as soon as he had been invested with the purple; and we find another condemnatory edict against this law in the time of the great Theodosius.—*Woolrych's History and Results of the present Capital Punishments in England, p.* 21.

ATTACK OF A CORPORAL'S GUARD UPON A SNAKE.

Before we left Dindigul a circumstance occurred to an English officer commanding a small out-station in this district which may be considered not undeserving of record. He was early one morning taking his customary ramble, before the sun had attained a sufficient elevation in the heavens to drink up the freshness of the dews which glittered around, when, upon passing a small ruined building, his attention was suddenly arrested by the appearance of something with which his eye did not seem to be at all familiar, moving in a deep recess of the ruin. He approached it cautiously, fearing, as he could not distinguish the object very clearly, that it might be a tiger, or some other animal equally dangerous. Upon close inspection he discovered it to be an immense snake filling with its voluminous folds the whole recess. Determined at once upon its destruction, but knowing that he could do nothing single handed against a creature at once so active and so powerful, he made the best of his way to the guard house, and ordered half a dozen soldiers to the spot, armed with their muskets, and having the bayonets fixed. They were six strong, determined Englishmen. They made no objection to encounter so unusual an enemy, on the contrary, they were pleased at the thought of the sport, and, being formed in line, advanced steadily to the attack as soon as the word of command was given, and simultaneously transfixed the monster with their bayonets, firmly pinning it against the wall. Being so roughly disturbed from its slumbers, the enormous creature uncoiled itself in a few seconds, and such was his prodigious strength that with one mighty sweep of the tail it dashed five of its assailants to the earth The sixth, who was near its head, maintained his position, and still kept his terrific adversary against the wall, adroitly avoiding the lashings of his ponderous tail by stooping or dodging, as circumstances required, until the animal, exhausted with pain and exertion, lay extended at full length upon the earth almost motionless By this time the five soldiers who had been struck down having recovered their feet, wounded the vanquished snake with the butt-end of their muskets upon the extremity of the tail, where the inosculation of the vertebræ is less firm, thus disabling it so completely, that it was soon despatched. It measured upwards of 50 feet in length, and was full three in circumference.—*Oriental Annual.*

SELECT NOTICES.

Brown Bess —In the early part of the present century, a great deal of the time of the soldier was occupied in keeping up the polish of his barrel; but the Duke of Wellington, a remarkable economist of his time, gave a dispensation from this duty to the army in Spain, and allowed the barrel to be browned; hence the familiar title of "Brown Bess." The browning is produced by the application of a mixture, which consists of half an ounce of nitric acid, half an ounce of sweet spirit of nitre; one ounce of spirit of wine, two ounces of blue vitriol, and one ounce of tincture of steel It is applied several times, until the barrel is brown with hard rubbing.——*Munich.*—A Sunday school at Munich contains 1629 scholars, taught by sixteen teachers ——*American Failures.*—The commercial distresses of the United States, in consequence of the removal of the public money from the National Bank, have reached a crisis. It is understood, that the houses that failed were in general those which *existed from discounts*—insecure and speculating houses. Altogether about eighty bankers have failed in the provinces.——*John's sympathy with Jonathan.*—To meet in part the want of specie in America, a *million and a half* has been shipped off from Britain.——*The Revenue.*—In this year (ending 5th April, 1834,) there is a rise of £34,023. the quarter ending on the same day. ——*New Society* —A society has been started in London, under the denomination of the *Statistical Society*. It is supported by distinguished characters The idea was first suggested by Mr Quebelet, a scientific Belgian. It has for its object the collection and classification of all facts illustrative of the condition and prospects of society.——*The Protestant Dissenters.*—A grand general meeting of delegates from the Dissenting communities of England, Wales, Scotland, and Ireland, took place in the month of May in London ——*March of Letters.* —There are now seven periods of daily delivery of letters in Paris.

SCIENCE, &c.

EDINBURGH, APRIL 19.

THE SCREW LOCK.—If we cannot designate the present era the "Golden Age," it may at least with truth be denominated the Age of Science and Mechanism We are led to form the above conclusion from almost daily observation. No later than Wednesday last, while conversing with a gentleman in Hunter Square, our attention was attracted on seeing two huge wagons,—the one containing three tons weight of coals, and the other two tons, each drawn by a single horse. The one of these wagons, viz., the largest, weighed one ton weight, the other nearly the same, independent of the coals. Notwithstanding of this enormous and almost incredible load, the horses appeared to move forward with great ease; and, in corroboration of the fact, we did not observe a "turned hair" on either of them. How, then, is this apparent enigma to be solved? Simply on the principle of 'the Screw Lock,' first introduced into Great Britain by that ingenious and enterprising gentleman, C G Stuart Menteath, Esq. of Closeburn, the proprietor of the wagons and horses in question; and which he has had in active operation, both at Closeburn and Mansfield, for a considerable time. It may be proper to remark, that the coals were brought in the manner described from near Dalkeith (with the exception of using a trace horse to one of the wagons up Newington Brae,) to Mr Menteath's town residence in Abercromby Place. The Screw Lock is placed at the back of the wagon, for the purpose of either partially or wholly locking the wheels, as necessity may require, in going down a declivity,—thus superseding that clumsy and dangerous invention, the common drag. This, however, is not its only use—as, for instance, in ascending an aclivity, it can be instantly locked; thereby enabling the horse to rest at ease for any length of time—and thus answering a two fold purpose It must, therefore, appear conclusively evident, even to the most superficial observer, that the application of the Screw Lock to mail and stage coaches would be of immense advantage, both as regards the safety of the passengers and the ease of the poor horses. It could easily be so constructed that the guard might use it conveniently without having occasion to leave his seat.—*Scotsman.*

ST. HELENA.

IN the Mechanic's Magazine for March, there is an account with a wood-cut of Ladder Hill Railway at St. Helena. It appears that after its construction in 1832, certain difficulties had occurred in the working of so steep an inclined plane, so as to render it of little advantage to the inhabitants. The arrival of a gentleman on a visit to St. Helena (Mr. Hoar, of London) happily set the affair in motion. He invented the very ingenious and secure method of transit which is now in exercise at St. Helena at its Ladder Hill. It has been now in successful operation at St. Helena for two years, and is deservedly shewn to all passing strangers as one of the wonders of the place. A model of the contrivance is now exhibited in the National Gallery of Practical Science in London, and is creating considerable attention.

CAPT. ROSS'S CHRONOMETERS.

AN AMUSING PERPLEXITY.

When Captain Ross was about to start from London in 1829, on his voyage, an eminent Chronometer maker in Cornhill, requested him to take out with him four of his best made chronometers, in order to ascertain their goodness, by subjecting them to the trial of the intense climate of the north. Captain Ross

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

accordingly took the chronometers out with him, and in order to guard against casualties, the owner of the instruments took the precaution to insure them at Lloyd's, they being of great value; but he did not deem it necessary to insure, as we understad, to the full amount for which they were even then saleable at home, not considering that the hazard of losing them was very great. The long unaccounted for absence of Captain Ross, without any communication being had with him for nearly four years, excited alarm for the safety of himself and crew, and indeed left but little doubt that they had perished. In these circumstances, the period having elapsed without hearing any thing of the property insured, when by law the owner is entitled to the sum insured, the chronometer-maker claimed and received of Lloyd's the amount of the insurance of his instruments, which were given up by all parties as lost. Since then Captain Ross happily returned in safety, and with him the four chronometers, which proved, in the severe trial to which they had been submitted, to be of an all-but-perfect construction, as to the regulation of time; and of course the value now, considering all those adventures, and their avowed goodness, is scarcely to be named. It is not to be wondered, then, that the original owner should be most desirous to possess them again; but unfortunately for him, other owners are now substituted, for Lloyd's have claimed the chronometers as being their property, having paid the sum insured on them. In vain has the maker offered to return the amount insured with interest; for so great is the estimation in which the chronometers are held by Lloyd's, that on no conditions would the establishment part with them to other hands.—*Blackburn Gazette.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

[Exordium,—a Rambling article,—Cape Babyism weaned by the Press,—English Language,—Want of it in the Reformed Church,—Its great progress among *the People*,—A Note on the Good Old Times,—English Correspondence by the *Boers*,—The advantages of the British Press,—The old Fiscal, the Devil, and Martin Luther,—People wiser than their Teachers,—The consequences of the "March,"—*Schools for all*, and the *School-master abroad*.—The coercive system of the Dutch against the Belgians,—French Travellers declared *Vagrants* by Holland,—National Antipathies,—Bilderdyke, &c —Orthography of the Dutch Language not yet fixed, &c.]

"READER! My compliments to you." We meet once more in the free, salubrious, Salisbury-plain-like department of our *lease-hold* share of the *Cape Literary*. No connection, be it observed, with the Editor next door! We know well enough he would get rid of us if he could, and is most terribly alarmed at our monthly discussions at the "Free and Easy." He would enclose our *right of common*, or set up fences and landmarks to the serious injury of our free natures and darling rights and "liberties." But vain attempt; we are not to be *mummied yet*, or dragooned into the stiffness and straightness of a Prussian grenadier.

Reader! Take notice, this is very likely to prove a very rambling article, for we have been taking a holyday, and have obtained some true notions of *style*, in our zig-zag rural walks, quite apart from the vile old Dutch custom of straight lines and reciprocal ratios. And, by-the-bye, in these walks we met with a *sensitive plant* of the precisian order, a friendly good creature who thought that in our critical observations in general, we went a *leetel* too far! Nonsense! the Cape people are no longer in swaddling clothes or the go-cart. The press has weaned them from babes-milk and they are now fairly on their legs, and *all alone*, bless their hearts!*

Again, in our *walks abroad*, we entered into some discussion with another less sensitive friend, and took a view of the arguments *pro and con* which have been advanced in the papers of late relative to the progress of the English Language in the Colony. Of the propriety of its subsidiary introduction in the Pulpits of the Reformed Church, there can be little doubt. And now that Cape Town is very nearly *all English*—in manners, customs, costumes, shops, schools, books, libraries, &c. it would argue a singular indifference to the times in which we live, did not the Church in question, so liberally supported as it is, by a kind and paternal government, bestow a becoming portion of its attention to the just claims of the language of the British nation, and thus bring about a completer bond of union with all classes of the citizens—one community of reciprocal identity and interest. Indeed, it has been hitherto a sad reflection on many of the worthy gentlemen holding spiritual rule in this portion of the British Church, that whilst all their hearers are learning English, and it is now so readily cultivated in France, Germany, and other parts of the world, our religious Institutions of the Cape of Good Hope, so intimately connected with government as they are, should be in the back-ground in this affair. That some arrangement will shortly be made which shall determine that no clerical appointment shall take place without a previous knowledge of English, as well as Dutch, is, we believe, pretty certain. The Government School-masters, as the rule now is, must possess the above qualifications, and the pulpit should surely be equal in its appointments. The sooner our language is set about in real earnest, the better; the sooner will unison in feeling, good-will, and loyalty approximate among all classes of His Majesty's faithful subjects. Yet we would not advocate the adoption of any coercive measures in the case before us. We would say to all parties, (of course such as are distinct from those *paid* by Government in church and state matters,)—Ladies and Gentlemen! Make this affair of learning, speaking, and reading our language quite agreeable to yourselves. Do not in the least degree inconvenience your mental powers if you think the question of inferior moment. If you think its study would mar your progress in the world, subject you to persecution, deprive you of your goods, become a drag-chain to your business speculations, rob you of your other accomplishments, dim your intellect, destroy your peace of mind,—why, then, by all means, stick to Low Dutch *(Nederduitsch,)* and in doing so, never fear the expenes of keeping up a standing army of sworn translators; never mind what is going on in all the world, which you might chance to find in the well garnished feasts of English Literature through the English Press, or of losing a good livelihood for your sons, by place or appointment, in the English Service at home or abroad.

We have heard it observed in objecto the usage of our language, that the colonists are not ripe for its general introduction. This is certainly a mistake, and we produce our proofs. Look for instance at the state of Mercantile affairs. Not a single Dutch Merchant's House remains at the Cape of Good Hope! But what is still of greater weight, examine the weekly correspondence in a paper entitled the *Zuid Afrikaan*. Therein read the epistolatory correspondence from the Boers in some parts of the country districts, and who will dare to say that the English language has made no progress, when those hitherto *supposed* dark places—Beaufort, Hantam, the Bokkevelds and even *Zwart*land and *Tygerberg* exhibit such animated displays of penmanship. And these communications express a freedom of thought formerly unknown to the colony. Thanks, by-the-bye, to British law, British courage, and the British press, which "fought and won" these things for the people. Time was, (ah! well and a-lack-a-day!) some ten years agone, when pens and paper and *Reading Easy's* were scarcely tolerated affairs; and as for the *black liquid*, the

Some few years since any published critique of the Cape Press, that displeased the parties concerned, by its freedom, was deemed worthy of *Fiscal* interference, and on a certain occasion a few lines of *jeu d'esprit* on a Cape Magazine, produced memorials to the Governor, congregational meetings, and addresses of sympathy to the worthy editor.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

good old Fiscal (peace to his memory!) entertained the same scruples of conscience towards it, as the Devil, when he was posed in debate with Martin Luther, and felt the smart of the ink-bottle which the uncourtly Reformer unceremoniously hurled at his Satanic Majesty's head. * * * * * * * * * * * *

But are not the people becoming wiser than their teachers? Aye, there's the rub! "There ban't a doubt on't," as Farmer Gubbins observes in the farce of *The Modern Village*. And just look well to the thing. Here we find the Hantam people, and those of the Bokkevelds, &c. *undecently* taking the lead of the reverend the minister of the Paarl, and passing by their *betters*, and instead of ordering themselves *lowly and reverently*, daring to write for the newspapers, and *marry-come-up*, writing in English too. This is stealing a march on the Government minister of the Paarl with a vengeance. But this comes of the *March of Intellect*. The worthy minister was, however, prepared for this; for in his recently-published "Discourse," *done* into English by another hand, he mourns over the signs of the times—the means employed of

"Making knowledge accessible to all!!"
(Page 17.)

It must be confessed, that a man who has not kept pace with the march of intelligence, must be astounded when, as an Hibernian would say, the *rear* is before the *van*. "Knowledge accessible to all!" Oh, shocking! as Dr. Folliot in Crotchet Castle exclaims, in reference to *The March*, when over his *third* of old Port.—"Yes, yes! this comes of reading; there's Dobson's hen-roast robbed last night—so much for Sir Walter Scott and his Novels. I knew how it would be. These "Schools for all" have marched into my rick-yard and set my stacks on fire, with *chemical* materials. The *Intellect* has marched up to the door of my vicarage, a hundred and fifty strong; ordered me to surrender half my tithes; consumed all the provisions I had provided for my audit feast, and drunk up my old October. It has marched in through my back-parlour shutters, and out again with my silver-spoons, in the dead of night. The Policeman who has been down to examine, says my house has been broken open on the most scientific principle; all that comes of giving *Knowledge to all*, sending the *School-master abroad*, and subscribing to steam intellect societies."

But to return to the importance of the English Language to the Cape, it must, if we are to keep moving in the progress of society, make a part and parcel of the law and conscience of *the people;* it must modify authority and sanction obedience; it must be rooted in their daily convictions, and strengthened by their familiar sympathies. But as we have already said, no means of force must be resorted to in its promulgation. Here lay the error of the Government of Holland in her treatment of Belgium In the latter country, notaries, advocates, agents d'affairs, employés of the provisional governments, had their bread snatched from them before they had time to learn the Dutch language, which was arbitrarily imposed on the people.* When the union of Holland and Belgium took place, entire towns, arrondisments, even entire provinces understood no other tongue than French, it was then cruel and impolitic on the part of the Dutch, to attempt the putting down by suspension or proclamation a language so long familiar to the Belgians. Now, subsequently to the Revolution, there are few feelings stronger in Holland than that of hatred of the French and their language According to the latest news, the Dutch King has interdicted all Frenchmen from entering Holland by way of Belgium. Like our Hottentots, all Frenchmen are considered Vagrants, and a law has passed for their apprehension should they pass the boundary. Of course, the doctrines of reprisal are understood by the other party. Of the abhorrence with which the Dutch regard that beautiful language of refinement and diplomacy†—the French tongue,—the following lines of Bilderdyke are an amusing example:

Maar weg met u, ô spraak van basterd klanken,
Waarin Hyeen en valsche schakals janken;
Verloochnares van afkomst en geslacht,
Gevormd voor spot die met de waarheid lacht:
Wier stamlary by eeuwig woord verbreken
In 't neusgehuil zich zelf niet uit durft spreeken:
Verfoeilyk Fransch! aleen den duivel waard,
Die met uw aapgegryns zich meester maakt van de aard.

Begone, thou bastard tongue! so base—so broken
By human jackals and hyenas spoken;
Formed for a race of infidels, and fit
To laugh at truth—and scepticize in wit;
What stammering, snivelling sounds, which scarcely dare,
Bravely through nasal channels meet the ear—
Yet helped by apes' grimaces—and the devil,
Have ruled the world, and ruled the world for evil.

We had intended to have submitted a few philological notices on the language at present spoken by a people forming the *hundred and fifteenth part of Europe*, (the Dutch,) but we have gone far enough at present, and had better wait awhile till our good friends have determined the standard of orthodoxy. Though much has been done, the orthography of the Dutch language can hardly be considered as positively fixed.

A humourous writer, (Geysbeek,) and one who has *biographized* the Dutch poets, in reference to the Dutch philologists, says—

Spel Wereld eischt de wet door Siegenbeek gegeven;
En Wareld wordt door Bilderdyk,
Als de echte spelling voorgeschreven,
Wie ongelyk hebbe of gelyk,
Is me onverschillig. 'K wil met beiden vrienden blyven,
'K neem beider aan, en zal dus "Waereld" schryven.

Spell "Wereld"—so sets up Siegenbeek, and then
Comes Bilderdyk, and flings it down again,
He will have "Wareld."—'Tis a pretty quarrel—
Shall I determine who shall wear the laurel?
Not I!—I like them both—and so I'll say
"Waereld"—and each shall have his own dear way.

* We are fully aware that, up to a certain period, the languages of Holland, and *a part* of Flanders, were very nearly similiar. Their English affinity is also apparent from the following not unamusing epitaph in Flemish:

Hier *liet* Her Jan Macarius,
Was publicus notarius,
Mar *seine lieve* Sophey,
was noch publicker *as hey*.

Here lies John Macarius—he
Was a public notary,
And his wife Sophia, she—
Was more public e'en than he.

† The English language is now spoken in all the Courts of Europe, and the Government official communications of England to Foreign Powers, are written in the English language. This measure was introduced by the late Mr. Canning.

THE PHRASEOLOGIST.

He doesn't meddle with Politics.—Used in reference to a man whose sefishness is so intense, that it prevents him from seeing that the good of the public is the benefit of the individual; or who, like the ——— tide-waiter, holds out his open hands—while he closely shuts his eye-lids.

She'll have at least Five Thousand Rix-dollars.—A climax in the description of South African beauty—the amount to be paid on the day of marriage in bonds, a third mortgage, slaves, a span of oxen, and half-a-hundred Cape-bred Sheep.

He is a good soul.—Said of one whose mind is of too small a calibre to fire off impulses, either good or bad; but who is harmless merely from being inefficient.

He is so friendly—One who would do anything to oblige, "but really—and it gives me pain to refuse"—words in constant reserve, like a ready charged cannon, the match of which a request will always light.

Good Order.—Alias, Field-Cornet-*Neroism.*—dealing in human-flesh,—forced labour,—roed-pole, and 39 lashes,—the prison-house,—chains, and slaves! Vide the term in the Boers' Petitions "*Good Order,*" (such vile cant!)

COLONIAL APPOINTMENTS, NOTICES, ETC.

Mr. K. B. Hamilton has been appointed Acting Secretary to Government, until the return of Col. Bell; Mr. J. G. Brink, as Treasurer and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Accountant General; Mr. W. Fleming to be Justice of the Peace at Uitenhage; Mr. E. Bergh to be Justice of the Peace for the Sub district of George. According to Government Advertisement, all papers, of whatever description, addressed to Government, must be written in the ENGLISH LANGUAGE.

The Rev Messrs. Shand and Reid may be shortly expected from Europe, as Ministers of the Reformed Church,—qualified to perform Divine Service in English and Dutch.

SOUTH AFRICAN LITERARY AND SCIENTIFIC INSTITUTION.

The Annual Meeting of the Members and friends of this Institution, took place on the 2nd instant. The Hon Lieut.-Col Wade presided. The Report, which was read by the Rev. Dr. Adamson, was ordered to be printed. Sir E. Ryan, Doctors Kennedy, Bousfield, and Searle, and many other Indian visitors were present at the Meeting. Dr. K. was elected a Member, and Mr. Chase appointed one of the Secretaries, in the absence of Dr. A. Smith. Sir John Herschel was elected President of the Institution.

THE POPULAR LIBRARY.

This Library for the issue of Books of Useful and Entertaining Knowledge to Subscribers, at the rate of *One Penny a Week*, has been opened in the course of the Month. Books are sought for by crowds of subscribers with a zeal hitherto unknown in Cape Town. It is hoped that all persons will encourage this valuable Institution in assisting towards its permanence by subscriptions, in Books, or otherwise.

THE FANCY BALL.

[In the absence of a 'Court Journal,' 'Morning Post,' or 'World of Fashion' at the Cape, we cheerfully give publicity to the following Communication.]

The *Literary Gazette* is not so exclusively absorbed in the thrilling interest of Colonial Literature, nor yet so hopelessly overwhelmed with the mass of original matter which is contributed to its pages, as to be utterly unable to cast at times a furtive glance on the gay delights, the transient ebullitions of the lighter spirits of the social circle: Lady Ryan's Fancy Ball, which was given in the Assembly Rooms of George's Hotel on the evening of Thursday, the 28th, deserves a record, having crowned the gaieties of a Cape August, with one of the most enchanting fêtes of the season. The young, the gay, the happy "crew of mirth," are rapturous in their unbounded descriptions of enjoyment, and in their expressions of gratitude to her Ladyship for an entertainment so planned with oriental magnificense, and so executed with the perfect simplicity of unostentatious old English hospitality.

The party began to assemble at 9 o'clock, and the rooms were filled, not crowded, in less than half an hour after. The guests were received at the outer door by Sir Edward Ryan, in the full dress of the Court of St. James'; and to one who saw him on the same spot, not three months ago, on his arrival—a pallid invalid from India, it was most gratifying to observe the altered appearance he exhibited.

A more fascinating scene than the noble ballroom, could not easily be imagined; but we must bemoan our utter ignorance of the set terms, and technical phraseology required, to give the characters and costumes their fitting record. All nations contributed their peculiar garb; all ages their distinguished characters, or caprices of fashions; the spirit stirring recollections of past generations were mingled with the more homely matter of fact of our radical days of reformed parliament. But how are we to endeavour to describe them: a pageant of all that is fluttering—twinkling—shining—graceful—gay, and beautiful, glides before us; and not one sweet angel figure deigns to pause even for the little moment that is requisite for the most sketchy outline. "Of a surety," said Obadiah Broadbrim, "the maidens be gloriously apparelled, and of surpassing comeliness." Rich and elegant fancy ball dresses were, however, the prevailing taste; it was thus Lady Ryan received her guests with that easy grace of unaffected benevolence, which forms the last accomplishment of perfect refinement. We are told that it would not be considered altogether good taste to register the names, as reported to us, of the interesting groupes which formed the party. The first, a lady who, in a fancy ball dress, ushered in two Turkish Belles, most admirably correct in costume, excited a lively admiration; her young charge, fluttered in white sparkling robes of muslin and silver, with open jackets and eezars of deep crimson silk, their profusion of ringlets surmounted with the little national cap of the Ottoman females. A sweet young beauty of King Charles' Court was as dazzling as one of the sirens of Grammont, and with her sister, whose character we did not ascertain, appeared to attract the most marked attention. A court dress and train of brocaded silk and suitable head tier, as contrasted with another of antique garb of the Stuart belles, were very good; the picturesque peasant garbs of the Pyrennees and the Alps; the Cantons and the Rhine; the belles of France, and Spain, and Italy, and the Levant, had all their representatives; whilst a bewitching creature, a lovely Quakeress, seemed the more sprightly, and the more delighted, as having escaped from her sect, and from feeling herself at home in a more congenial circle.

The male characters were more numerous and more in contrast, and were abundantly diversified; the stately step of the red cross Knight, in sable armour, with barred helmet, and the starched prim gait of the Lancashire Quaker, constrasted with the freakish gambols of the light-hearted Spanish Guerillas, unmatched in the Bolero; Hamlet, Prince of Denmark, an Hungarian Hussar, two magnificently dressed cavaliers of the Stuart dynasty, were jostled in terms by a rough Sheerness smuggler: a Tyrolese hunter, as tall and straight as a May-pole, looked down upon a decrepid Lombard Jew, whose wardrobe seemed inexhaustible in head gear; a Courtier of Queen Anne's, who exhibited a salmon-coloured suit, which would have thrown the belles immortalized by the spectator into ecstacies, stalked through a butterfly group of fine boys in fantastic garbs of brilliant colours, habited as pages and boudoir pets of the Plantagenet period: the orientals were splendid; a Persian Shahzada was magnificently attired, but, alas, alas! the absent honours of the beard and the change it occasioned; an Abshee Mogul in plain white turban and robes, was inimitable in costume, and air, and manner, suited to the quiet and unobtrusive, but not humble character of his tribe; a Levantine dandy of the first water, an exquisite Albanian in red jacket and cap, and marvellously well stockinged and gaitered, with sundry others, were all arrayed in wonderfully good keeping, as the painters term it, with their prototypes.

The band of the 72d enlivened the pauses betwixt the dances with their matchless performance; and an hour after midnight, our kind host led the way with Lady D'Urban to the splendidly furnished supper table, where upwards of 100 guests were amply and most comfortably accommodated; nothing was wanting; abundance, taste, and elegance adorned the tables, and the most unbounded exuberance of joyous spirits reigned around. When the ladies were moving to retire, Sir Edward begged them to wait until he proposed a toast, the only one he meant to give, but it was one which, he felt sure, they would delight in joining: he proposed the health of one who was endeared to all by the kindness of his manner and the goodness of his heart—Sir Benjamin D'Urban: he pretended no capabilities of appreciating the peculiar distinctions of military qualities, nor could he allude to the distinguished career of the gallant soldier; the actions in which he had shared, and his share in them, had obtained their well-earned rewards, and their conspicuous place in history; nor did he presume to refer to the high character of the Civil Governor—His Excellency enjoyed in his present appointment, the flattering reward of long and useful services in a Government in the West Indies, the best pledge of the esteem and approbation of his Sovereign; with these points, Sir Edward said, he felt that he had no pretension to interfere—they were already decided by the highest authorities; but as an Indian visitor—driven by sickness to seek relief from the scorching sun of the tropics, in the milder climate of the colony, he claimed for himself and his fellow sufferers from India, the right to express, in the strongest terms, a very grateful sense of the urbanity—the courtesy—the kindness which Sir Benjamin and Lady D'Urban have ever evinced towards strangers; those milder virtues, said Sir Edward, hallowed, though they could not exalt their high characters, and fixed their names in the hearts and memories of all their visitors; he gave the health of Sir Benjamin D'Urban.

The toast was received with a thunder of applause—the Indian visitors more especially evincing, by their enthusiastic reception of it, their just sense of His Excellency's benevolent and hospitable disposition—their was no disguise, and no restraint—the heart spoke, and its language was loud, and prompt, and honest.

The Governor's reply was short, but to the purpose: his kind good heart was evidently touched by the rapturous expression of esteem which the company had given him. He thanked his friends—warmly thanked them; he was not blessed with the gift of oratory—he could only feel their very flattering warmth of regard, and thanked them; after a few minutes, however, His Excellency rose again, and said, he had only that instant learnt that it was Sir Edward Ryan's birth-day—he was glad to hear it; and sure that the party would join him in drinking a hearty and a heartfelt toast to their worthy host—his health—his perfect restoration to health—and that he might return to India in the full enjoyment of his strength to serve his king and country as he had hitherto done, in the high and important situation which he had the honor to hold; and that he and his amiable family might enjoy many—very many happy returns of the day, was, he was perfectly sure, the sincerest wish of all present.

This was a sentiment which spoke home to every bosom—it was loudly cheered, and added to the conviviality and good feeling of the scene, and most sincere was the wish of all, that this delightful and distinguished family may continue to enjoy the gifts of fortune, they so liberally share with the world around them.

A country dance and quadrilles after supper, kept up the merriment of the scene to a late hour, and the party broke up with one unmingled feeling of gratification, without a single shade in their enjoyments, but the regret, that they could not hope to have the pleasure of dancing at Lady Ryan's ball on Sir Edward's next birth-day.

INDIAN EXPORTS.

In another part of this Journal, our commercial readers will, we think, discover under the above head, some considerations well deserving a more than ordinary attention.

FIRST OF DECEMBER.

"SLAVERY IS NO MORE."

Body and soul in skilful union joined
One human being made—immortal *this*—
An emanation of the Eternal Mind,
And capable of never-ending bliss.
At first created pure as holy kiss
Of unfallen Cherubim, and clothed with powers
To count the stars or fathom the abyss,
Was wedded to its mate as golden hours
Were struck by new-born Time in Eden's happy bowers.

Such was the black man's origin;—say, ye *white*,
Was yours more noble, was your soul more pure
At first than his, that you long claimed the right
This race in triple darkness to immure;
In moral dungeon deep there to endure
Whole centuries of bondage—not to have
A right in wife or child?—Poor blackamoor
Had no right to himself—not to a grave—
The *thing* was *bought and sold*—a *piece of goods* —*a* SLAVE!!

O LIBERTY! the soul of every joy—
That beams in rapture in the stripling's eye
Escaped the bondage of austere employ—
That nerves the wing of all the birds that fly;—
The midnight senate in contention high
Proclaim thy worth,—and hosts for thee have striven
On the blood-bolstered field where the war's cry
Is heard in death—and men for thee have given
Possessions, Kindred, Friendship, and the Light of Heaven!

I stood on the old continent of *Slaves*
Where Indian and Atlantic oceans roar,
And saw where heaven's azure meets the waves
A ship rise out the deep and near the shore,
And heard a voice cry—"SLAVERY IS NO MORE!"
The city caught the *new* but joyful sound—
The village from the city—door from door—
Like a projected star it swept the ground
From mountain and from plain reverberated round!

* *

THY CHAINS ARE BROKEN! *AFRICA IS FREE!*

First of December, 1834.

THIS DAY there is no longer a SLAVE at the Cape of Good Hope! This day has brought with it, under God's good blessing, and the exertions of the Christian People of England, the blessed gift of LIBERTY.

"On such a theme 'twere
Impious to be cold."

'The tongue of the dumb should speak, and the lame man rejoice and leap as an hart.'

Thus has ended one of the most glorious contests, after a continuance for ages, of any, ever carried on in any period of a country's history. A contest between those who felt deeply for the happiness and honour of their fellow creatures, and those who, through vicious custom, and the impulse of avarice, had trampled under foot the sacred rights of their nature, and had even attempted to efface all title to the divine image from their minds. Even the very agitation of the question which it involved, has been highly important. Never was the heart of man so expanded. Never were its generous sympathies so generally and so perseveringly excited. These sympathies thus called into existence, have been useful in the preservation of a national virtue. For anything we know, they may have contributed greatly to form a counteracting balance against the malignant spirit of War. It has been useful, also, in the discrimination of character. In private life it has enabled us to distinguish the virtuous from the vicious. It has afforded the same knowledge in public life. It has separated the moral statesman from the cold-blooded politician. It has shewn us who, in the legislative and executive offices of our country, are fit to save and govern, and who to destroy a nation.

Reader! Thou art by this time well acquainted with the History of this great Act of Redemption. Rejoice in the manner of its termination! And if thou feelest grateful for the event, retire within thy closet, or pay thy vows in public. Go up with thanksgivings to the Temple of Christianity, and with songs of joy, return HIM your devout homage "from whom all holy desires, all good counsels, and all just works do proceed," and whatever you do in testimony of this mighty act of deliverance, whether "you eat or drink," do all in the spirit of *Venite, exultemus Domino*. And

TO

The Government

AND

PEOPLE OF ENGLAND!

TO WHOSE UNWEARIED ZEAL AND GENEROUS SACRIFICE BELONGS THE UNPARALLELED

AND ETERNAL GLORY

OF THE ANNIHILATION

OF ONE OF THE GREATEST SOURCES OF CRIMES AND SUFFERINGS EVER RECORDED IN THE ANNALS OF

MANKIND,

WE DESIRE TO INSCRIBE OUR SINCERE AND GRATEFUL THANKS.

INDIAN EXPORTS.—No. III.

To the Editor of the Cape of Good Literary Gazette.

SIR,—I shall feel obliged by your doing me the favour to forward the enclosed to your Correspondent, the Author of Indian Exports.

X. X—— X. X——.

Sir,—I think the Cape public are under great obligation to you; at least, I wish to convey my individual thanks for your two papers, and to express my hopes that we may be favored with further communications conveying your ideas on the present state of the Colony, and the anticipations which you think we may be justified in indulging for the future. The subject is not easily exhausted, and none can be more appropriate for a provincial periodical than the local statistics and local interests. I would first suggest, that the terms 'Indians' and 'Cape Visitors,' adopted by the 'Exports,' are not to my taste; India is not your *home;* the heartfelt name of HOME is applied by you solely to the land of our fathers; and English gentlemen, in an English dependancy, might be contented with their native character, without degenerating into 'caste,' or being otherwise classed, than

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

as is due to their birth and station; my object in this letter is, to endeavor to prevail on you to regard the Cape of Good Hope with some proportion of the patriotic affection which we all bear to the HOME of our birth. It has been well observed that England has conquered the Cape, as well as paid for it; it is confirmed to us by general treaties for ever; that is, until we are not strong enough to hold our own, which we may confidently trust is not likely to befall, without, at least, a century of decay, as a prelude to our national catastrophe; moreover, we have as much right to the land of the Hottentot as the Dutch: thence, an English gentleman, whether from India or Great Britain, should look on this British Colony as a British Shire, not certainly equal to Rutland in wealth and consideration, but perhaps not much inferior to Nairn or Selkirk, in the north.

English gentlemen at Cape Town or Albany, can have little conception of the privations endured by their countrymen residing in the intermediate districts, surrounded by an ignorant and superstitious population; it is our misfortune that we have no hope but to wear out our days in this situation, and our only chance of relief is, if we could strengthen our lines by inducing others to join our ranks. The kind object of your second paper, is to point out the advantages which would accrue to Cape commerce by an increased exportation of wine and horses to the East, receiving your Indian productions in return; let me suggest the possibility of your sharing these advantages, and reaping a benefit to yourselves, whilst imparting to us the incalculable benefit of capital, and enlightened members to our society, by your joining us when your service is completed in India; your worn-out veterans would find the climate of the Cape more congenial to the declining years of life, than the autumnal and early vernal months of even the best parts of England; and if they have families to settle, and circumscribed means, they could not be more advantageously placed, nor at a more moderate outlay, than as yeomenry families in this cheap country. I shall not detain you by particularizing prices: you have no doubt yourself witnessed that the value of estates is little more than the cost of the buildings upon them; I have purchased near six thousand acres, without a house, for one hundred pounds sterling; and as it is said that land in America sells, at first hand, for five shillings per acre, which is also the government minimum price for new grants throughout Australia, the extreme cheapness of estates here might certainly bring in purchasers, were capitalists better informed of our want of them, and were encouragements afforded to woo them to this Colony. As respects our seasons and culture, I can state from personal observation, that our droughts do not occur until after the corn is ripe; consequently, the dry weather that so uniformly succeeds, is in reality favorable for harvesting and stacking; I feel doubly at a loss in addressing you, as I am not sure whether the subject is in any degree interesting, and I am perfectly satisfied of my own incompetency to explain myself as I could wish, from want of books for reference, and from being unaccustomed to writing: but I will be brief. Cobbett says that "tillage will supply the place of manure; but "the tillage makes the plants keep on growing to a much later period than when they stand thickly all over the ground, and have no tillage while growing;" he then says that the disadvantage of sowing in rows, and horse-hoeing, which is felt in England, arises from the lateness which it causes in the reaping,—an evil unknown in hot countries. Now, our chief expense is in manuring for grain, and as land is so cheap, we can allow spaces between the drills with little less, and it appears to me that the grain crops, which could be produced by this method of culture, would exceed expectation; as respects the high price of labour, which is now so serious a check upon improvement, I am such a heretic against the good old Cape notions, as to believe, that if instead of commandoes against our frontier neighbours, the right hand of fellowship were honestly extended to them, they might prove useful free labourers, and be conducted into the middle districts without any hazard; at all events, they would assuredly be less likely to be joined by hostile native nations here, than in the desert which they now inhabit with wild beasts, scarcely less human than the state to which the tender mercies of Dutch administration have reduced them. The English gentlemen in Cape Town and Albany should travel across and through the middle districts, where alone the true character of the descendants of the ancient colonists may be ascertained, and our lamentably stationary position, amid the universal advance of improvement in all the rest of the world besides, may be understood. Devil doctors! witchcraft, and charms for the recovery of the sick, are our philosophers, and their philosophy! and excite no comment; and I am afflicted by a separation from the worthy and the well-informed, to a degree which makes the arrival of the Advertiser an event, and the Cape Literary Gazette a blessing; all this evil will end, whenever a practicable communication is opened through the district, and capitalists are induced to settle in it

As respects the first, the Breede River, which intersects the centrical and best part of the colony, is utterly neglected; yet it is navigable for armed vessels upwards of eighty miles, and will, I think, be found capable of admitting first-class merchantmen of upwards of 500 tons; if a boat navigation could be formed up to where it is approached by the French Hoek Road, the expense of 200 miles of land carriage for heavy goods might be saved: a leaguer of wine would not fetch the price of the land carriage from hence to the Cape Town market; but were the Breede River made navigable, or even its present capabilities made the proper use of, the fertile districts of Swellendam, George, and Worcester, could supply wines of the best Cape quality for exportation. Any amount of grain that could possibly be needed for any part of the colony, or for exportation, would readily be brought by the farmers to a navigable river, a distance of two days' journey over hard road, when it would not pay them to convey the same to Cape Town, a journey of seven days, the two last being through the deep and almost impassable sands of the Cape Flats; as respects horses, our breed, the Potsberg, is justly esteemed one of the best in the colony, and we are happily free from any endemic disease among our cattle; we have stone kraals (enclosures), where we could confine horses as on ship-board, until within an hour of their being embarked; the deep anchorage before my door is not ten minutes sail from the ocean, and ships can lie within about fifty yards of the shore, in a land-locked harbour; contrast this with the expense, and risk, and trouble of shipping horses from Table Bay, without taking into consideration the very important additional advantage that the same wind which takes a vessel out of this river, carries her on upon her route to India; whilst the ship that leaves Table Bay requires another slant of wind to carry her round L'Agullas. These circumstances being duly considered, it will be apparent that at least the mouth of such a river should be defended by a fort and garrison, and that surveys should be made to ascertain

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

its capabilities for inland navigation. Secondly, the temptations to capitalists to settle among us are, that money only is needed here; we have no Bushmen, and are within an easy communication with the capital of the colony, should our means be equal to establishing one. I have lived at Algoa Bay and Cape Town, and consider the climate of this place superior to either; whilst I am very sincere in my belief that the same outlay would, in a few years, secure a far superior return here to what could be obtained for it at either of the extremes of the colony, more especially if government could be induced to disperse their troops in small detachments through the districts, instead of keeping them quartered in Cape Town; even a pleasant summer resort for gentlemen from India might be advantageously established here; we have the means of enjoying aquatic excursions on our bay and river, superior to the Southampton Water; our sea-bathing is safe and retired; the neighbouring Potsberg mountains are more picturesque than the Malvern Hills, and there are natural caverns which may rival those of the Congo; finally, the fisheries might be carried on as advantageously here as on any part of the coast; natural salt is formed on the rocks, and the construction of Salt-pans would be easy and profitable; our cattle are considered superior to those of Algoa Bay, and the salting business for shipping, and St. Helena, might answer better here than at any other place in the colony; our pasturage for sheep is inexhaustible, and our soil for vineyards, orchards, and kitchen-gardens, at least equal to any in the colony; these things should be known to your Indian veterans; many whose health makes removal from India indispensable, but whose means are inadequate to comfortable settlement in Great Britain, are apt to despond and wear out the miserable dregs of life in struggling against circumstances; to such as these who have not strength of body, or resources of mind equal to an Australian voyage, and joining a new settlement on the frontier of advancing civilization, our centre districts offer a safe, a comfortable, and cheap asylum; an association of four or five Indian families, establishing themselves within an hour's walk of one another, might enjoy society, and command resources, as yet unknown here, and would be amply and almost immediately repaid; a retiring pension of about £300 per annum, and a capital of from £2000 to £5000, is the ordinary lot of every Indian officer who has served nearly 30 years in India; such a man, under 50 years of age, and with a rising family, cannot do more than barely exist in Great Britain, and where are his hopes for a suitable provision for his widow and children on his decease? here he would know no anxiety, either for his daily enjoyments or for their future expectations, and whilst he would be a blessing to the new home of his adoption, it would repay him a thousand fold in innumerable blessings in return. Age and domestic sufferings are against my personal exertions, but I am still equal to a struggle, and if your friends will augment the number of settled Englishmen, I want only to be joined by those who will hold up my feeble hands.

I am, &c. &c.

X. X—— X. X——.

PS. Pray oblige me by examining the enclosed; it may possibly be a species of cotton capable of profitable culture I am led to attach an idea of possible value to it, from the American term—Sea Island Cotton: this grows wild in the grey sea-sand.

The Cape newspaper an event! and the Cape of Good Hope Literary Gazette a blessing! hear this, O Fairbairn! and give ear, O J—! your labours have not been in vain, if but one kind soul has yearned toward you in the desert, and breathed kind thoughts of you from the advancing frontiers of civilization; man, thank God, was not utterly lost at the fall, and there is a spark of generosity in the human heart which kindness calls forth, which recognizes the friends of humanity, and mingles itself with them wherever they advance in the grand cause of the whole family of man. Our poor friend, amid the devil-doctors and wizards of the central districts, must have known too much of the world to have ever expected better of his neighbours, than such philosophers and such philosophy; he had no doubt read the sayings of the Son of Sirach—"How can he get wisdom," saith the wise man, "that holdeth the plough, and that glorieth in the goad; that driveth oxen, and is occupied in their labours, and whose talk is of bullocks? He giveth his mind to make furrows; and is diligent to give the kine fodder. Such shall not be sought for in public counsel, nor sit high in the congregation: they shall not sit on the judge's seat, they understand not the sentence of judgment: they cannot declare justice and wisdom; and they shall not be found where parables are spoken." These are simple, self-evident truths: the Son of Sirach has well said, that "The wisdom of a learned man cometh by opportunity of leisure; and he that hath little business shall become wise;" which means, that when a colonist in the valley of the Breede River has to work seventeen hours out of the twenty-four for the necessaries of life, he would rather sleep the remaining seven than read the *Zuid-Afrikaan!* and no wonder!! Our friend must have known all this, and he only states the grievance to seek a remedy; but such being the '*Darkness to be felt*,' in which it is his evil destiny to be enshrouded, and such the accompaniments of his purchase of 6000 acres for £100, it requires time and fitness for the work to constitute the same a good business-like bargain. It was not my intention to have troubled the readers of the *Literary Gazette* with another Indian Export, but as I conceive that my excellent friend's address is not solely to me, but to the community at large, of which I am but a very insignificant member, I owe it to them and to him, that it should have all the publicity I can give it, and I have added the following observations, which I must beg that my correspondent will be pleased to consider as my reply.

And first I would hope, that the English-born, and the English-descended, of every parish of the old world and of the new, whether American or Australian, have the good sense, and the good taste, to cherish with a filial affection, the memorials, and the language of their fathers. The "Pilgrims," who fled from Wentworth, and Laud's mad notions of Church and State, during the period that they and their King were ripening for the public executioner! have bequeathed to their generous descendants in New England, their concentrated abhorrence of all tyrants and all tyrranies, and their adoration of that holy cause, for which they hailed the wilderness as a city of refuge; the cause for which their own Hampden died in the field, and Sydney and Russell on the scaffold: those sacred names are the link of brotherhood for the English descended, of all races; and when England herself, which in their dark day was not worthy of them, shall have asserted her right to bear them honestly upon her escutcheon, all who learn from the cradle the language of Shakspear, and Bacon, and Milton, and the Translators of the Bible; all who read, and who does not? the language of Walter Scott, must necessarily be one people. Our excellent friend, when reminding the 'Indians,' that India was not their *home*, was not aware, that of the whole order of exiles, none acquire less local attachment than the Indian functionaries; and even their children, the Indian born, seem as little afflicted with the maladie du pay, as any race in existence! our hearts contract no portion of the weight which is substracted from our livers, when absent from our dear Rice-and Curry-Land: on the contrary, my complaint has ever been, that the best hearted and most easily contented creature that ever breathed, the very counterpart of Joh himself in meek endurance, could not, if he wished it, set up his staff and his household Gods, and say, India, be thou my Home! he had better say, 'Evil be thou my Good!' he would be feared at least, and, perhaps, respected, if direfully consistent; but in the former case, he would be sneered at as a low-souled vulgarism, or rather as a vulgarism without soul at all. This discontent originates in domestic patriotism, and would be laudable, if it did not destroy the peace, and often injure the health, of silly women, and simpletons with kind hearts, but weak heads, whose destiny it is to spend a large portion of their lives in India. But though we hail the English-descended of all races, and have a particular regard for the Yankies, from their having sent us a ship load of ice from Boston to Calcutta, a proof of their kindness for us; yet, it is purely for the English language—English feeling—and English associations, to which our hearts bound with their best sympathies; our wildest flight of fancy cannot metamorphose this part, at at least, of the Cape colony into an English country: we can only express our astonishment at the slow advance which the colony has made in assimilating with England—every thing that is English, seems eschewed and shunned as if it were an evil; even our newspapers half Dutch—the currency and measures are Dutch, and so little as this place the air of an English colony, that I know a gentleman from India, who has seriously occupied his leisure with learning Dutch. As respects the streets, no man thinks of St. George's street, without wishing the Heeregracht and Buitenkant! had more pronounceable appellations attached to them; the remedy is as easy for the whole, as for the last; the English public need but say with one voice,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

'let it end,' and it would end: the fault is their own, their good natured apathy in what they consider trifles, but which in reality are not trifles.

An Indian functionary of 30 years residence in the East, is singularly ill qualified for a Colonist: he has been accustomed to be lamentably dependent upon servants, and is, generally speaking, the most helpless of human beings, in all that relates to personal exertion. The average means of the Military class, after nearly, or about 30 years service, is correctly stated, at about £270 or £365 per annum pension, and a capital of between two and five thousand pounds. An individual of this class would be utterly lost; but if four or five such could be found, who having large families, and few ties at home, would prefer easy circumstances at the Cape, to a stinted meagre existence in Great Britain; the union of their resources, and the relics of their personal capabilities, might possibly command an eligible settlement for themselves, and an adequate provision for their families: a track of land of 12,300 acres, extends over 18 square miles, five families might, therefore reside within two miles of each other; and dividing about 400 acres each of arable, and 2,000 acres each of pasture, might with such a principal in money, and such an income by way of pension, establish something more than yeomanry families: whilst, instead of suffering any apprehension for the fate of their children, they would recognize in every season, the visible proofs of an improving position for their representatives, in an improving society. The village in which my early years *were* spent, was a manor of about 6,000 acres, and was estimated to produce, without mines, a clear rental of £3,000 quarterly, to the noble Lord who was the sole owner of the demesne: it would be a curious mental exercise to follow its supposed history in one's imagination, through the changes and chances of eighteen centuries, to its original purchase for £100 sterling, Roman currency, by a Centurion of Agricola's legion, or a Camp Sutler. A similar lapse of ages will not be required to increase the value of Cape acres many thousand fold: one object alone requires to be kept in view: the present capital cannot long continue so, *inasmuch* as the site and the capabilities of Algoa Bay, are in every respect superior, and capable, at a small expense, of being made a perfect harbour, and *more especially*, as the colonists at Port Elizabeth and Graham's Town understand the importance and value of modern improvement, and of being English!

The American and Australian prices of new land are considered too high, and the Sydney colonists complain that the influx of respectable emigrants has been checked by the discontinuance of free grants, to parties giving security to sink a certain amount upon the grant; this must palpably appear a correct deduction: a new country must first be valuable almost solely for pasturage; a free grant of 2500 acres could be well stocked and occupied for the sum now required for the purchase of such a waste, and for want of which the lot remains a desert; it is worse than idle, it is mischievous to begrudge to the industrious the open field for industry, and to envy them the enjoyment of that property which is created solely by their industry. A pastoral farm of vast extent requires little capital; its buildings, enclosures, and the shepherds' hire, are easily compassed, and the gradual extension of the kitchen garden, and the introduction of the plough, are the work of time, and the pleasing developement of resources; but an arable farm of even 400 acres would require at least £1500 or £2000 to be sunk at once in wagons, ploughs, harrows, and other implements of husbandry, whilst the buildings, including stables and granaries, would be double in the first cost, and the enclosures a hundred fold, besides an average expense of 25 shillings per acre for manuring: the slightest glance at such an outlay, and its items, will suffice to show that the outskirts of civilization cannot be arable.

I was not aware that so good an authority as Cobbett had pronounced that "tillage would supply the place of manure." Sir Humphrey Davy says, "Manure acts on the principle that plants require something more than pure water for their food, and actually imbibe elementary substances presented to their roots; neither vegetables, nor animals form, but imbibe the earths formed in them." Again, "fallowing does not enable the soil to absorb any thing beneficial from the atmosphere;" again, "the fundamental practices of good farming in England, are draining, manuring, weeding, and the rotation of crops; one crop for man, and another for beasts; duly apportioning meadow and pasture to arable land; manuring with crops ploughed in; Tullian husbandry and deep ploughing; fallow crops for fallows, and never taking two grain crops together; and this will always sustain fertility." But this is not in my own line; I write under correction, and advance the opinions of others, not my own; suffice it to say, that drill husbandry, with horse-hoeing, or rather bullock-hoeing, for horses are not agriculturists in India, is the universal practise in the East, and is shown by experience, as supposed by my correspondent, to be best adapted for a hot climate, where vegetation is rank and rapid, and weeds almost invincible.

The price of labour is indeed a most serious obstacle to improvement, and anything that checks the influx of labourers, cannot be too severely reprobated: the generous and truly christian denunciation of the old Cape system of commandoes by Mr. Buxton, in his place in Parliament, was worthy of his high character, and Mr. Rice may probably retract a part, at least, of his advocacy of the present generation, when the Vagrant Act appears in the Colonial Office; in striking contrast with the opinions and feelings respecting the unhappy natives, expressed by the supporters of that un-English enactment, we have here a respectable old English gentleman, residing in the district, who abhors slavery and slave labour, and who, in utter disregard, or courageous defiance, of all the raw-head-and-bloody-bone stories of the *Zuid-Afrikaan* concerning vagrants! would soothe and conciliate, and invite the natives from the frontier, to earn the bread of honest industry in the heart of the colony. Let us pause to compare these poor creatures with what their fathers were, when Van Riebeek found them, in 1652, the herdsmen of '*thousands of cattle and sheep;*' when his brutal eye coveted, and his fiendish heart conceived, and deliberately suggested the project, that "*with* 150 *men*, 10,000 *or* 11,000 *head of black cattle might be obtained, without danger of losing one man, and many savages might be taken, without resistance, in order to be sent as slaves to India, as they still always come to us unarmed.*" Coward as well as villain! does history, in all its cruel pages, bear a more revolting picture? Let this be remembered; and let such men as my correspondent have the means of trial afforded them, to shew whether kindness and honesty may not make these vagrants faithful labourers, without other compulsion than gentle treatment and fair payment.

Mr. Buxton will, no doubt, call on Mr. Rice to communicate, for the satisfaction of the house, what measures Governmeut shall feel themselves compelled to take toward our vagrant act majority! and what those measures must be, may more easily be conjectured than now stated; suffice it to say, that the day is not far distant, when the Parliament of Great Britain will not permit such virtuous dispositions, as are here manifested by my correspondent, to be defeated by any relic of the old slave-trading or commando propensities of the colony: in the meanwhile, let the kind good man live on in hope; though like Gideon's fleece, he only, of all around him, has felt the heavenly dew of philanthropy towards his suffering fellow creatures; a better day is coming, and probably, his gray hairs may not go down to the grave without his witnessing the downfall of Devil Doctors and their Philosophy.

I am utterly unable to offer any observations respecting the Breede River and its capabilities; the East India Company have had two of their sloops of war employed for several years past in surveying the Red Sea! The survey of the colonial coast seems a more important measure than foreign waters: the facts stated by my correspondent, should be scientifically examined and reported on: some professional objection of which he knows nothing, may nullify all the supposed advantages:—but inland water carriage and steam boats, require no lengthened commendations; the simple and only quæry being, are they practicable? and will they pay? if the expense of such navigation, exceeds the value of the freight, all hopes of the river canal and of coasting steam boats ceases for the present: the fact, however, of the existence of such capabilities, should be known for the guidance of emigrants.

The stationing of small garrisons in the district, involves a part of the system of colonial policy, which it does not become me to enter upon:—yet still, I may state, that it is for the colonists to inquire whether the troops could not be more usefully employed than at present? whether they would not be more beneficial to the colony if detached as out-posts of companies through the districts, than as now quartered in the barracks? whether the captains, who would command such companies, are not a far more enlightened class of public functionaries than the present Drostdys and Commissioners? and whether a suitable official salary to such captains commanding small districts, as a remuneration for their superintendance of police, and acting as justices of the peace, would not be the cheapest and most efficient municipal administration?—something of this kind exists in Australia, and works well; military law does not follow, because administered by military; the point at issue is simply, that a body of well educated and accomplished gentlemen have leisure, and could employ it with benefit to the state and to themselves, if judiciously authorized.

The actual local expenditure of a Regiment of 8 companies, and perhaps 500 men, cannot be much short of £20,000 per annum: supposing that it approached £2500 on each company, the circulation of such a sum of ready money would, of itself, constitute the certain prosperity of each out-post station; and the presence of such detachments would serve to secure the peace of the colony, which is the sole object for which the Regiments are now required at the Cape: the arguments against the out post, and small garrison system, are all military—discipline and the commissariat, and the pomp, pride, and circumstance of glorious war, forbid the dispersion of a Regiment into detachments.

I had nearly left my correspondent's postscript to be answered in postscript also:—the specimen of cotton he sent me, is the fuzzy seed of the Eriocephalus Africanus, a sea sand weed, and not applicable, that I know of, to any purpose whatever:—it should not, however, be destroyed; the police should protect the shrubs which cover, and partially bind, the sand hills of these coasts: they cost nothing, and are of more use than some well-paid placemen: I allude to the cart-loads of green heath I see driving into the town, and which I never meet without regret; were those beautiful shrubs allowed to grow, the fall of their leaves, blossoms, and seeds, and the spread of their roots, would bind the sand and slowly form a more valuable soil

In conclusion, there can be little doubt but that the Cape affords a more advantageous, and more desirable location! for the retirement of our Indian veterans, than any part of France or Italy, in which foreign countries they have

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

so frequently been seen to resort: and if my poor voice could have any effect, I would not spare its earnest and honest exertion, to induce those, whose health or means render a residence in Great Britain an unattainable blessing, to seek in this colony, a Home, more suited to English habits and English feelings, than any part of the continent: they must be exiles and strangers there, and their children will cease to be English; whilst here, they at once become component parts of a rising community; and good hope! and the coming day, are theirs, for them and for their children.

As my sobriquet has been used by another, and I should not like to answer for all the nonsense that might be so written, I hereby make known, that this will be my last under the designation of INDIAN EXPORT.

THOUGHTS AND REMINISCENCES.

No. IV.

THERE is a great want of *character* in this colony—i. e. *decision of character*. Men are one thing to-day, and another thing to-morrow. There is a great want of *fixed principle*. In this respect, many minds are too like a child's garden, where the flowers are planted without the roots.

Hence, in reference to the subject contained in the above paragraph, a celebrated German writer* observes—"I am often out of humour with the English, because they are so great, and yet so little." He then proceeds to point out some of their inconsistencies, but soon arrives at the brighter side of the picture. "Hail to you," he observes, "noble people of England, who in so many things have lighted on the rest of the world to improvement, and have now laid the axe to the root of tyranny Yours in the destruction of Slavery, is a beautiful final victory of humanity and justice, held up as an example to all the ends of the earth!"

The proper rest for man is change of occupation. "It is better to wear out than to rust out," says Bishop Cumberland. "There will be time enough for repose in the grave," said Nicole to Pascal. The mental and bodily powers are much more frequently impaired by idleness, than by excessive labour The saying of the late Dr. E. D. Clarke, the traveller, is worthy of notice. "I have lived to know that the great secret of human happiness is this—Never suffer your energies to stagnate. The old adage of *too many irons in the fire*, conveys an abominable lie; you cannot have too many; poker, tongs, and all—keep them all going."

Dr. Mason Good's translation of Lucretius was not penned in the silence and solitude of the study. It was composed IN THE STREETS OF LONDON, DURING THE TRANSLATOR'S EXTENSIVE WALKS TO VISIT HIS NUMEROUS PATIENTS! This is perhaps the finest instance of the valuable art of economizing time of which we have either read or heard.

The faculties modify each other, but the *general* character is fixed. The irascible man of to-day was so twenty years ago; so was the selfish;—though higher feelings, cultivated, render the *conduct* of the one milder, and the other more liberal.

If we dissect the world and its friendships, how much of heartlessness do we find! The people of modern times are charmed with each other, just so long as it is amusing or *interesting* to meet,—but not an hour longer. The friendships of the world lie chiefly in frequent visits, and in joint subscriptions to a play, a ball, a club, a fancy fair, or a race-course,—but as for the mutual self-sacrifices so delicious to heart-felt affection, it is perfectly ridiculous to rely upon such things from such persons, or to cry out when they are refused. Who does not know how much, or how little is meant, when a correspondent signs himself

Your humble servant,
Your very humble servant,

Yours, truly,
Yours, sincerely,
Yours, ever.

* Prince Puckler-Muskau.

RELIGION WITHOUT SOUL.

THE characteristic features of the times in which we live are knowledge and activity; and it is in the shape of science, and of practical beneficence, that the leaven of true religion must diffuse itself through the social mass. It is the age of utility: religion must commend itself as the most useful of all things. It is the age of legislation: religion must be seen to be at once above all legislation, and yet the basis of all. It is an age of general education: religion must be made not *a condition* of education, nor its end, but 'part and parcel' of the knowledge which educates.

On this subject, Dr. Howison, in his recently-published Work — *European Colonies*, 2 vols. 8vo. makes a few observations which are worthy of notice. The sayings are hard—they describe the inefficacy of a Religion without Soul—we sincerely hope they are not of general application.

When a system of religion ceases to affect externally the manners and domestic habits of those who profess it, we may safely conclude that its proper influence is nearly unfelt, or is rapidly declining. Such seems to be the case with Christianity at present, and more particularly in Protestant countries, where, in so far as the mass of society is concerned, its doctrines are received as a matter of FORM, and assented to merely in *compliance* with the *customs* of the day. Religion has long ceased to be a subject of enthusiasm in the more civilised states of Europe; and any mark or badge indicative of its influence is rejected by the people as a symbol of ignorance and superstition. They are ashamed to allow it to interfere in the remotest degree with their habits of life; and every one furnishes himself with arguments in proof of the uselessness and nullity of external observances. It is pleasing to hear our clergymen weekly thanking God from the pulpit that we do not live in times of persecution. Nothing can be more in harmony with the spirit of the age than this. For who among us would willingly suffer any thing for the sake of Christianity? Who would die for it? Were a crusade preached, who would join its standard *without pay?* Fasting has long since become unfashionable amongst clergy and laity; and when money is required for the erection of a church, no one will give it unless he be assured of receiving a fair *per-centage*.

Military Rule.—The military mind is generally supposed to want the power of nice discrimination. The jurisdiction of the camp is little solicitous about forms and subtle reasoning; military law is blunt and summary, and when its decisions resolves all difficulties, doctrines of humanity are not contemplated. —*Tacitus.*

THEIR WORSHIPS ON THE BENCH.

Scene:—SOUTH BOLTON.

(From a Traveller's Note Book.)

THERE was a full attendance of magistrates; and the court was crowded chiefly in consequence of the expectation of the case of an Irish pauper, which had excited much interest from the animosities to which it had given rise between two neighbouring parishes, in contesting the law of settlement. The parochial officers attended, accompanied by their attorneys, who brought with them so many law-books, that one of the magistrates inquired if they had got the Statutes at Large. Several minor cases being first disposed of, the pauper himself, (who was dreadfully emaciated, and had but one leg,) with all the parties interested, were ranged before the Bench. The two attorneys appeared to consult with each other in the most familiar manner; while great bitterness of feeling was manifested between the overseers of the two parishes, North and South Bolton. One of the overseers was eager to address the Bench, but was soon silenced by the attorney, who begged to be informed why his attendance was required if he was not permitted to state the case. He then stepped forward, with a book under his arm and a large nosegay in his coat, and addressed the magistrates as follows:—

"The case to which I have the honour of directing your Worships' attention is that of a pauper, Peter MacDuffy."—"That's not my name," exclaimed the pauper; "my dear name is Paddy." "Silence!" exclaimed a magistrate. "This pauper," continued the attorney, "presented a pass and applied for relief to the overseers of our parish; but I have credible witnesses to prove that he has obtained a settlement in the parish of South Bolton, by the occupation of a house on the Heath, and is liable to pay scot and lot; and although he may come under the denomination of *medicæ et infinæ manus homines*, yet I am convinced that he is not extra-parochial.—I know not what defence is intended to be set up by my learned brother, but I cannot conceive that there can be any valid plea for rejecting the claim of settlement; or in short, that the opposing party can by any possibility have a leg to stand upon."

MacDuffy.—My left leg is left on the plains of Talavera, but my right leg is left.

Magistrate.—Peace, fellow! he is not speaking of your leg, but the lameness of the cause.

MacDuffy.—The cause of the lameness, your Honour, was a six-and-thirty pounder.

Magistrate.—Will you be silent!

MacDuffy.—I'll not spake another word, your Honour.

The magistrate now desired the overseer of the parish where the pauper resided, to state why he had refused to grant him relief, and had attempted to pass him to another parish.—The overseer replied, that the shed which the pauper had occupied did not entitle him to be considered as a householder; but as their lawyer was present, he would lay down the law.

A young man about thirty years of age, dressed in shabby black and in substance the very reverse of his corpulent competitor, stood forward. He held in his hand a white pocket-handkerchief, which, notwithstanding his endeavours at concealment, betrayed the ravages of time. This tattered article of dress would probably have reposed unmolested in his pocket, had not the pretence of using it afforded an opportunity for the display of a brilliant ring. His face shone with a polish that indicated a recent ablution, to which it was rarely accustomed. After two loud hems, he thus began:—

"Bred in the shades of Academus, mine has been the 'delightful task to teach the young idea how to shoot;' to watch with trembling

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

solicitude the developement of mind; to conduct the young aspirant along the thorny paths and up the steep ascents of science; to soothe the fainting spirits of the intensely studious, encourage rising talent, and crown with never-fading chaplets the triumphant genius. But, alas! those halcyon days are fled. I, who anon have culled the choicest flowers in the verdant fields of literature, must now plod the rugged roads of jurisprudence, and search for precedents among dusty and ponderous folios. I, who have been fanned by cooling zephyrs, and courted the Muses on the summit of Parnassus, am now doomed to sojourn with Coke and Littleton in Nisi Prius. Farewell, ye sylvian joys,—delicious meads, and winding streams, farewell! For, behold, I enter upon a dreary course, so interminable as to have confounded the learning of Seldon; so desolate as to have chilled the philosophy of Blackstone; and abounding in postulates so involved and perplexing, that even an Eldon doubts. Not more intricate than the painful labyrinths of the law was the far-famed web of the fair Penelope, dear to classic reminiscence;—not more—

Magistrate.—Will you have the goodness to inform us, Sir, what connexion there is between Penelope's web, cooling zephyrs, and sylvan joys, and this case of Patrick MacDuffy?

Lawyer.—This being the first cause entrusted to my care since the ferula was laid aside, in the hope of one day wielding the rod of justice, I deemed a preliminary explanation necessary, to account for those technical errors incident to young and incipient practitioners. But, to proceed,—if in the faithful discharge of my professional duties I should drop one word repugnant to your delicate sensibilities, or obtrude objects repulsive to nerves finely attenuated, I trust you will not attribute it to any deficiency in profound respect on my part, but to that complexity in society through which, notwithstanding the most strenuous efforts to separate the rich from the poor, plebeian misery will sometimes interfere with patrician pleasure, and elicit in the collision a striking antithesis.

Magistrate.—Really, Sir, unless you come to the point, we shall not finish this cause to-day.

Lawyer.—The pauper whose case is before your Worships, was engaged, employed, directed, instigated, or impelled by an inhabitant of, or dweller in, this part of the country or island, commonly called England, formerly Britain, which inhabitant or dweller was deeply interested in the cultivation or tilling of the soil, and in superintending the processes of vegetation:—I say, MacDuffy was engaged by this tiller, to sever, cut, or crop certain grasses growing together in a meadow, field, or paddock. Of what kind the grasses consisted,—whether *Poa pratensis, Festuca duriuscula, Festuca pratensis, Lolium perenne,* or *Alopecurus pratensis,*—may not be an inquiry material to our purpose, and too tedious to enter upon. Suffice it to say, that there were many kinds of grasses, accurately described by Linnæus under the head of—Really I forget the class.

Magistrate.—Never mind the class, Sir; but proceed, and that with less circumlocution.

Lawyer.—During the time of his engagement, the shatered Hibernian took up his abode in a cart-shed on the Heath, and which, not being claimed, belongs of right to the lord of the manor,—*terræ dominicales.* Now I will defy the most profound and erudite lawyer to prove that this shed can come under any of the denominations expressed in the Acts of Parliament on the law of settlement, it being neither messuage, tenement, homestall, hut, or hovel. It is true that part of an old window frame has been inserted in the roof to form a skylight; but still the shed is open on all sides, and "pervious to every wind that blows." Time was when the vassal who followed his lord to the field was rewarded for his service by grants of land;—that was in the darker ages; but in this enlightened period, the old and worn-out soldier has got no stake in the country.

MacDuffy.—Only this little shillaly, your Honour; I ha'rn't space enough for the smallest potatoe to sprout.*

Magistrate.—A skylight to a cart-shed! Did Patrick MacDuffy place it there?

MacDuffy.—He did;—and I'll give your Honour a small historical account. You see before your Honour a bit of an astronomer. Father O'Rourke, our priest, had a taste that way: I was no higher than your Honour's knee when I carried milk to his house. "Paddy," said he, "look to the stars:" and then, your Honour, he showed me all the consternations, the great big Bear, the small Bear, and Mister Orion. My father had no larning, and he told me to look to the potatoes; but, your Honour, I always loved to gaze upon those sparkling and beautiful jewels when I could get a sly peep, for my father watched me and shook his shillaly. We had two beds in our mud cabin,—which was small to be sure, for there were twelve in a family, father and mother, six children, and four pigs;—the pigs reclined, your Honour, between the two beds. In dry weather I contrived to remove a bundle of straw from the roof, so that while the rest were snoring I looked up with delight. One night, when all was still, I was just closing my peepers, when I thought I saw Mr. Orion's head: "By the powers," said I, "there he is sure enough!" I was so happy to see his Honour, that I forgot it was night, and called out "Look at his sword and his pike,—for all the world like Captain Rock!" The whole family, pigs and all, instantly jumped up and ran out. I run too, your Honour, to see what was the row. "Where are the sword, and the pike, and Captain Rock?" said my brother, "My dear," said I, "it is Mr. Orion, that beautiful and calm consternation!"—"No more of your consternations for me," said my father; "for to morrow you shall leave my domains." So they all went growling and grunting to bed.—When the morning came, your Honour, myself, Patrick MacDuffy, departed. My father gave me three thirteeners, and my pockets full of potatoes, for a separate maintenance; so I worked my way over land and water to London. When I got there, your Honour, I had only one thirteener left; and this wreck of my fortune was lifted out of my pocket while I was looking through a long pole after the man in the moon. "Never fear," said a gentleman in a scarlet jacket and with a feather in his cap, "money you shall have, if you will fight for King George."—"Sir," said I, "fighting is only a love-matter in sweet Ireland; so I'm the man for your money." Then we marched over into Spain, and my leg was blown off in the battle of Talavera. They told me I was covered with glory; but, your Honour, it was all blood and dust; and I suppose my leg and the glory went somewhere together, for I have seen nothing of either since.

Lawyer of North Bolton.—Should your Worships decide that no settlement was made in the neighbouring parish, sufficient has transpired, in the course of this investigation, to relieve my clients from the claim of MacDuffy. The acts of parliament on the law of settlement, however contradictory and perplexing in some respects, refer exclusively to the claims of paupers. Sir Thomas Smith, in his "Commonwealth of England," book i. chapter 20. says, "As for gentlemen, they be made good cheap in this kingdom: for whoever studieth in the universities, who professeth the liberal sciences, and (to be short) who can live idly, and without manual labour, and will bear the port, charge, and countenance of a gentleman, he shall be called Master, and shall be taken for a gentleman."* Now, unless it is maintained (which, saving your worships' presence, I think impossible,) that a gentleman and a pauper are synonymous, I think it is clear that the description given by MacDuffy of some of his pursuits, accords with the characteristics of a gentleman, as herein set forth; for, although he may not "bear the port, charge, and countenance of a gentleman," yet he "can live idly:" and, inasmuch as he studies astronomy, he professes the liberal sciences.

MacDuffy.—Plase your Worship, I am sartinly a jontleman; but I makes no professions.

Among the magistrates there sat one at the end of the bench, who appeared to be a clergyman.—Early in the day his venerable, mild, and intelligent countenance arrested my attention, and formed a remarkable contrast to the convivial complexions of his brother magistrates. He saw that the case might be dismissed without a final decision, and that the sufferings of the pauper might be prolonged; he therefore evinced a disposition to speak,—upon which the whole Court observed the most profound silence.

"The case you have brought before us appears to be one of some legal difficulty, and I have no doubt that you respectively have been induced to try the question from a desire to adminster with fidelity the funds entrusted to your care. But whatever may be the defects in the law, I should hope, in the present instance at least, that they will be repaired by humanity. Rather than incur the expense or be disturbed by the hostility of litigation, share between you the charge, and the honour of succouring the wounded soldier. While you were enjoying at your fire-side domestic comforts, he may have been deprived of food and rest, harassed by forced marches, and exposed to continual danger:—you cannot evince your gratitude more strongly than by sustaining, in their declining years, those to whose sufferings and bravery you are indebted for the preservation of your liberties.—It is probably owing to some eccentricity or thoughtlessness, that this poor man has neglected to avail himself of those comfortable and magnificent asylums which the Government has provided for the defenders of our country, and which reflect so much honour upon our character as a nation. For his indiscretion and heedlessness you will make due allowance by reflecting, that if you had been exposed to the influence of similar untoward circumstances, your own conduct might have been equally indiscreet. That which the law has left undefined, let the principles of justice and equity supply; and by consulting the dictates of that best of all monitors, your own heart, the path of duty will be easily discovered. By following this rule, you will distribute justice, and secure the approbation of all good citizens

* "If there be a nation that exports its beef and linen to pay for the importation of claret and porter, while a greater part of its people live upon potatoes and wear no shirts,—wherein does it differ from the sot, who lets his family starve, and sells his clothes to buy drink?"—FRANKLIN.

* "No condition passes for servitude that is accompanied with great riches, with honours, and with the service of many inferiors. This is but a deception of the sight through a false medium; for if a groom serve a gentleman in his chamber, that gentleman a lord, and that lord a prince,—the groom, the gentleman, and the lord, are as much servants as the other: the circumstantial difference of the one's getting only his bread and wages, the second a plentiful, and the third a superfluous estate, is no more intrinsical to this matter, than the difference between a plain, a rich, and a gaudy livery. I do not say that he who sells his whole time and his own will for one hundred thousand, is not a wiser merchant than he who does it for one hundred pounds; but I will swear they are both merchants, and that he is happier than both, who can live contentedly without selling that estate to which he is born."—COWLEY.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and of all good Christians; but, what is still more to be desired, you will enjoy the greatest of all pleasures, that of an approving conscience."

The overseers of North and South Bolton complied with the recommendation to bear the burden of supporting Patrick Mac Duffy between them, rather than incur any further litigation.

THE TALENT OF EXAMINING WITNESSES.

A WRITER in the *Liverpool Journal*, a very ably conducted paper, has given, and is giving, a series of what he calls "Pen and Ink Sketches," illustrative of the characters, talents, and standing of the leading men in Ireland. The said sketches are full of graphic power, and evince something very like the hand of a master. That the writer is an Irishman we have no doubt whatever—and one too, who is not only favored with access to the best circles of society, but is thoroughly acquainted with the past and present history of his native country. The subject of his last essay is the great O'Connell, who combines, we are told, as a lawyer, qualities the most opposite—"all of them rare in their separate excellences, and wonderful in their combination." His great forte, however, seems to lie in the examination of witnesses; and the writer says expressly "there is no power so strong as that of good cross-examination; and I never knew any man possess that power in a more eminent degree than O'Connell." In proof of this, and the Agitator's talents generally, he records the following striking anecdotes.

One of his earliest displays of acuteness was at Tralee, in the year 1799, shortly after he had been called to the bar In the intricate case where he was junior council (having got the brief more as a family compliment than from any other cause,) the question in dispute was as to the validity of a will, which had been made, almost in *articulo mortis*. The instrument was drawn up with proper form: the witnesses were examined, and gave ample confirmation that the deed had been legally executed. One of them was an old servant, possessed of a strong passion for speaking. It fell to O'Connell to cross examine him, and the young barrister allowed him to speak on, in the hope that he might say too much. Nor was this hope disappointed. The witness had already sworn that he saw the deceased sign the will. "Yes," continued he, with all the garrulousness of old age, "I saw him sign it, and surely *there was life in him at the time*." The expression, frequently repeated, led O'Connell, to conjecture that it had a peculiar meaning. Fixing his eye upon the old man, he said,—"you have taken a solemn oath before God and man to speak the truth, and the *whole* truth: the eye of God is upon you; the eyes of your neighbours are fixed upon you also. Answer me, by the virtue of that sacred and solemn oath which has passed your lips, *was the testator alive when he signed the will?*" The witness was struck with the solemn manner in which he was addressed, his colour changed—his lips quivered—his limbs trembled, and he faltered out the reply—"*there was life in him.*" The questioned was repeated in a more impressive manner, and the result was that O'Connell half compelled, half cajoled him to admit that, after life was extinct, a pen had been put into the testator's hand,—that one of the party guided it to sign his name, while, as a salvo for the consciences of all concerned, a living fly was put into the dead man's mouth, to qualify the witnesses to bear testimony that "there was life in him" when he signed that will. This fact, literally dragged from the witness, preserved a large property in a respectable and worthy family, and was the first occurrence, in O'Connell's legal career, worth mentioning. Miss Edgeworth, in her "Patronage," has an incident not much different from this; perhaps it was suggested by it. The plaintiffs in this case were two sisters named Langton, both of whom still enjoy the property miraculously preserved to them by the ingenuity of O'Connell; and the writer of this sketch has often heard them relate the manner in which he had contrived to elicit the truth.

Again—One of the most remarkable personages in Cork, for a series of years, was a sharp witted little fellow named John Boyle, who published a periodical called the "Freeholder." As Boyle did not see that any peculiar dignity hedged the corporation of Cork, his "Freeholder" was remarkable for severe and satirical remarks upon its members, collectively and personally. Owing to the very great precautions as to the mode of publication, it was next to impossible for the corporation to proceed against him for libel;—if they could have done so, his punishment was certain, for, in those days there was none but corporation juries, and the fact that Boyle was hostile to the municipal *clique*, was quite enough for these worthy administrators of justice. It happened on the occasion of a crowded benefit, that Boyle and one of the Sheriffs were coming out of the pit of the theatre, at the same moment. A sudden crush drove the scribe against the Sheriff, and the concussion was so great that the latter had two of his ribs broken.—There could be no doubt that the whole was accidental; but it was too lucky not to be taken advantage of. Mr. Boyle was prosecuted for assault. O'Connell (who was personally inimical to the corporation) scarcely cross examined a witness, and called none in defence. He proceeded to reply. After some hyperbolical compliments on the "well-known impartiality, independence, and justice of a Cork jury," he proceeded to address them thus:—"I had no notion that the case is what it is; therefore I call no witnesses. As I have received a brief, and its accompaniment,—a fee, I must address you. I am not in the vein for making a speech, so, gentlemen, instead of it, I shall tell you a story. Some years ago, I went, specially, to Clonmell assizes, and accidentally witnessed a trial which I never shall forget. A wretched man, a native of that county, was charged with the murder of his neighbour. It seemed that an ancient feud existed between them. They had met at a fair and exchanged blows: again, that evening, they met at a low pot-house, and the bodily interference of friends alone prevented a fight between them. The prisoner was heard to vow vengeance against his rival. The wretched victim left the house, followed soon after by the prisoner, and was found next day on the roadside.—murdered, and his face so barbarously beaten in by a stone, that he could only be identified by his dress. The facts were strongly against the prisoner—in fact, it was the strongest case of circumstantial evidence I ever met with.—As a matter of form—for of his guilt there was no doubt—the prisoner was called on for his defence. He called, to the surprise of every one,—the murdered man. And the murdered man came forward. It seemed that another man had been murdered,—that the identification by dress was vague, for all the peasantry of Tipperary wear the same description of clothes,—that the presumed victim had got a hint that he would be arrested under the whiteboy act,—had fled,—and only returned with a noble and Irish feeling of justice, when he found that his ancient foe was in jeopardy, on his account. The case was clear; the prisoner was innocent. The judge told the jury that it was unnecessary to charge them. They requested permission to retire; they returned in about two hours, when the foreman, with a long face, handed in the verdict 'guilty.' Every one was astonished. 'Good God!' said the judge, 'of what is he guilty? Not of murder, surely?' 'No, my Lord,' said the foreman; 'but if he did not murder that man, sure he stole my grey mare three years ago.'" The Cork jurors laughed heartily at this anecdote, and, ere their mirth had time to cool, O'Connell continued, with marked emphasis, "So, gentlemen of the jury, if Mr. Boyle did not wilfully assault the Sheriff, he has libelled the corporation—find him guilty, by all means!" The application was so severe, that the jury, shamed into justice, instantly acquitted Mr. Boyle.

REBELLION OF THE FRONTIER BOERS IN 1815.

[THE good feeling of the English writers at the Cape of Good Hope towards their fellow colonists, has induced them to draw a veil over some of the darker shades of the colonial character. But as our History would be unfaithful without a correct record of passing events, we are glad to find after a becoming lapse of years, the hiatus filled up by a detail of the interesting facts of a bye-gone period. The following is a reprint of Chapter V. in the *African Sketches*, by Mr. Pringle.]

Insurrection of Frontier Boors in 1815—*Case of the Hottentot, Booy—Oppression of the Native Race—Conduct and Fate of Frederick Bezuidenhout—Views of the Insurgents—Failure of their Schemes—Their Surrender—Pursuit of the Fugitives—Desperate Resistance of the Bezuidenhouts—Trial and Punishment of the Prisoners.*

I HAVE previously alluded to an insurrection of Dutch-African Boors which broke out in 1815, and of which the sub-district *(Field-Cornetcy)* of Bavian's River was the focus. As our location consisted of lands which had been forfeited by some of these insurgents, and as the facts of the case will illustrate in a striking manner the character of the frontier colonists, and the civil condition both of this class and of their coloured dependents, only a few years before our arrival, I shall here briefly relate the history of the affair. I collected the authentic details partly from the printed report, in Dutch, of a Special Commission appointed to try the criminals, and partly from the accounts I received from the magistrates of the district, and from several of the boors themselves who had been implicated in the conspiracy.

Some time in 1814, a Hottentot, named Booy, appeared at the Magistrate's office at Cradock, and complained of the oppressive conduct of Frederick Bezuidenhout, a Dutch African colonist, who resided at the place now called Cameron's Cleugh, on Bavian's River. Booy, it appeared, had been for several years in the service of this Boor; but when the term of his contract had expired, Bezuidenhout peremptorily refused to permit him either to depart, or to remove what little property he had on the place Captain Stockenstrom, who at that time filled the office of deputy-landdrost of the sub-district of Cradock, gave the complainant a letter to Opperman, the field cornet of Bavian's River, directing that officer to inquire into the case: and in the event of the Hottentot's statement proving correct, to take care that his property was delivered to him, and that he was allowed to remove unmolested The field-cornet having gone to Bezuidenhout's place with Booy, found the Hottentot's statement to be perfectly correct The Boor at once admitted the facts; but instead of yielding obedience to the magistrate's orders, he boldly declared that he considered this interference between him (a free burgher) and *his* Hottentot, to be a presumptuous innovation upon his *rights*, and an intolerable usurpation of tyrannical authority.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

He told the field-cornet that he set at defiance both himself and the magistrate who had sent him on this officious errand; and, to give farther emphasis to his words, he fell violently upon poor Booy, gave him a severe beating, and then bade him go and tell the civil authorities that he would treat them in the same manner if they should dare to come upon his grounds to claim the property of a Hottentot.

In elucidation of Bezuidenhout's conduct on this occasion, it is to be remarked that, up to a comparatively recent period, the Hottentot population within the limits of the colony had been universally subject to a state of the most degraded thraldom, under the African Boors. The laws of Holland had, indeed, from the earliest occupation of the country, prohibited the aborigines from being legally sold; and in public documents they were occasionally spoken of as a 'free people.' But colonial laws, usages, and prejudices, had long combined to reduce this unfortunate race to a state of actual bondage, in several respects even more wretched than negro slavery itself. They were, in fact, left entirely in the power of the white colonists; and in the remoter districts, their own limbs and lives, as well as the disposal of their children, were practically altogether at their masters' mercy. In 1809, the Earl of Caledon, who at that time administered the Government of the Cape, had made a benevolent attempt to rescue this class of men from their abject and unprotected condition, by issuing a proclamation, which, by one of its provisions, deprived the colonists of the power, so long exercised as a legal and unquestionable *right*, of retaining the children of the Hottentots in bondage, under the name of apprenticeship, until their twenty-fifth year, and the adults, under other pretexts, often for life. This proclamation contained several other clauses, framed unquestionably with an anxious desire to improve the condition and protect the persons and property of this people. Considering the state of the public feeling, and the progress of just views on such subjects, perhaps Lord Caledon's proclamation was, *at that period*, an effort in the cause of justice and humanity, nearly as great as the noble ordinance issued by General Bourke nineteen years afterwards. But, unhappily for the Hottentots and for the colony, many of the best provisions of Lord Caledon's enactments were neutralized by coercive clauses admitted at the suggestion of certain provincial functionaries, to conciliate the feelings and serve the selfish views of the privileged classes, and which had a practical operation which his lordship most undoubtedly never intended to sanction. What was still more deplorable, Sir John Cradock, who succeeded Lord Caledon in the government, permitted himself to be so far influenced by the representations of the colonists that he rescinded, by another proclamation in 1812, the most important clause of Lord Caledon's enactment—that, namely, which secured to the oppressed natives a right to their own children; and thus re established the iniquitous claim of the colonists to force them into apprenticed servitude, and sealed for sixteen years longer the degradation of the race.

In this state of things, and with provincial functionaries in general deeply imbued with the feelings of the other colonists, the protection of the native race from oppression was out of the question. When the local magistrate happened to be, as in the present case, a man of enlightened views and determined character, a vigorous attempt might occasionally be made to interfere in defence of the natives, so far as the colonial law extended its feeble and faltering arm. But the indignant resentment with which such interference was repelled, clearly evinces how seldom it had hitherto been efficiently exerted. In regard to Bezuidenhout it is, moreover, to be recollected that, ever since the earlier days of colonial anarchy, which Mr. Barrow has so forcibly depicted, when the Boors used to murder and mutilate the Hottentots at discretion, he and his comrade had resided on this wild and secluded part of the frontier, where colonial legislation in regard to the aborigines had reached them only by hearsay, and where such terms as the 'rights of the natives' were still treated with unqualified contempt. The angry defiance, therefore, with which this rude back-settler met the magistrate's intervention in behalf of Booy, and the warmth with which his resentful feelings, *as an insulted free burgher*, were sympathised with by a large portion of the neighbouring colonists, exhibits, in a light equally striking and instructive, the frightful perversion of moral sentiment in the dominant class by the uncontrolled exercise of arbitrary power, and the deplorable condition of the natives who lay prostrate under their feet.

Upon receiving the field-cornet's report of Bezuidenhout's outrageous conduct, the magistrate instituted legal proceedings against him before the local court. But the Boor treated the regular summonses that were delivered to him with the same audacious contempt with which he had repelled the monitory intervention of the field cornet; even threatening with personal violence the judicial messengers. The case was thus brought regularly before the Judges of Circuit, at Graaff Reinet, in 1815; when the defendant maintaining the same contumacy, and refusing to appear, he was sentenced to imprisonment for contempt of court.

It now became necessary to act with vigour, or else to expose the laws and courts of justice to the utter contempt of the colonists The under-sheriff was therefore despatched by Captain Stockenstrom, who had recently been appointed chief magistrate (landdrost) of the district, to take Bezuidenhout into custody; and as this audacious burgher had sworn never to surrender himself, the officer of justice was accompanied by a military escort to protect him in the execution of his duty. As soon as Bezuidenhout saw this party approching his house, he, with a coolness and determination worthy of a better cause, betook himself to a cave in a huge rock overhanging the river, into which he had previously conveyed a large quantity of powder and ball, together with a supply of provisions, to stand a siege; and, compelling two young men, who lived with him, to accompany him with their arms, he commenced a brisk fire upon the under-sheriff and the military. The place was then surrounded; and, as the desperate boor would listen to no parley, but continued to shoot resolutely at every man who came within reach of his long barrelled elephant gun (*roer*), a fire of musketry was opened against the garrison of the cavern; the besiegers ensconcing themselves as well as they could behind the large stones and hedges of rock that lay around. At length, in Bezuidenhout's eagerness to get a good aim at one of the assailants, his person became so much exposed that a ball, fired by one of the Hottentot soldiers from the opposite side of the river, took effect, and killed him on the spot. Upon this, his two companions (one of whom was a *Bastaard* or Mulatto) surrendered themselves. They were carried to Graaff-Reinet, and committed to gaol, but discharged after a short imprisonment.

This affair excited a very great sensation in the country. A numerous assemblage of the Dutch-African colonists of Bavian's River, Tarka, and the adjoining sub-districts, was held at the funeral of the deceased burgher. Great excesses of inebriety took place; inflammatory speeches were delivered; and several of the most violent of these Colonial 'Patriots,' as they termed themselves, took a solemn oath over the corpse of Bezuidenhout to revenge his death. They swore to hang Landdrost Stockenstrom, and the Field-Cornet Opperman whom he had first sent to interfere on behalf of the Hottentot, Booy; and to drive the English troops and English laws over Bruintjes-hoogte. Nor did these feelings of animosity and these insane boastings evaporate with the fumes of the brandy with which, in appropriate libations, they had celebrated the obsequies of the hero. Soon afterwards, a meeting of the disaffected took place on the Tarka, under the direction of a man named Hendrik Prinslo, at which their *grievances* under the laws enacted for the protection of the native race, and the practicability of throwing off the yoke, were more fully discussed A conspiracy was then entered into to bring about a general insurrection, and to call in the aid of the Caffers to assist them in expelling the English from th eastern parts of the colony. The recollection which many of these men retained of the state of anarchy in which this part of the country had been kept for several years at the commencement, to restore at least a similar state of affairs, if not to achieve their entire independence of the English government.

These points having been agreed upon, a letter was drawn up at this meeting, and addressed to one Krugel, residing at Rhinosterberg in the northern part of the colony, on whom great reliance was placed by them, calling upon him to excite the inhabitants of that frontier to take up arms. This letter was drawn up by one Bothma, who had formerly been banished the colony for forgery. It was then signed by Prinslo, and confided to the charge of two brothers of the name of Muller, who had been admitted to the meeting. The Mullers, however, instead of conveying the letter to Krugel, proceeded with it to the Field-Comandant Van Wyk, a man of decided loyalty, who, upon ascertaining the nature of its contents, hastened to Cradock, and placed it in the hands of the deputy-landdrost, Mr. Van de Graaff. An express was despatched by this magistrate to the nearest military officer, Captain Andrews, at Van Aard's Post, on the Great Fish River, who immediately sent a party of dragoons to seize Hendrik Prinslo They succeeded in surprising and arresting him in his father's house, near the site of the present village of Somerset, before he or any of his party had the least suspicion that their proceedings had become known to the authorities.

The conspirators, though greatly disconcerted by the arrest of their principal leader, did not, however, abandon their enterprise. A deputation was sent to the Caffer chief Gaika, with instructions to propose an alliance between him and the insurgents, for the purpose of expelling the English from the eastern districts. As a bait to tempt the cupidity of the African magnate, they offered, in the event of success, to leave in his possession the Zureveld (Albany), and other tracts of territory west of the Great Fish River, from which the Caffers had been recently expelled by the British troops; whilst they (the Boors) would occupy the country on the Kat and Koonap streams, to the eastward. Gaika, however, showed himself too good a politician to be thus cajoled by his old antagonists. He told the deputies that he could not believe the colonists were serious in their proposal; that he suspected their design was merely to decoy the Caffers into the open plains, with the view of more effectually destroying them; but that, if they really meant what they said, he considered them to be very foolish men, as there was no probability of their succeeding in such an attempt; and that, finally, for his own part, he had no inclination to place himself, like a silly deer, between a lion on the one side and a wolf on the other (the English and the Dutch). He absolutely refused, therefore, to take any part in the quarrel.

This was not the only quarter in which the anticipations of the insurgents were doomed to be disappointed. Their design to raise the northern frontier through the means of Krugel, had miscarried. In their own vicinity they were scarcely more successful. The Field-Commandant Van Wyk, a man of talent and intrepidity, and of great influence in the district, called out the burghers of his division

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

(the Tarka) on military duty, in order to have them under his own eye. While thus assembled, Landdrost Stockenstrom, who, on the first intelligence of the intended revolt, had posted to the disturbed district, appeared in the midst of them, and harangued them with so much effect on the madness as well as the criminality of those who were treasonably attempting to organize an armed resistance to the government, that the evil-disposed (if any were present) were daunted, and the wavering confirmed in their loyalty.

Such was the effect of these combined causes, the premature discovery of their designs, the arrest of their principal leader, the refusal of Gaika to co-operate, and the energy of the local authorities, that the insurgents, when they drew together, could not muster more than sixty burghers; and of these the greater proportion were inexperienced hot-headed young men, too ignorant to be able to form any adequate conception of the power of the government which they had thus dared to defy, but which they were totally incompetent to resist.

This band rode down to Van-Aard's, the nearest military post, and demanded the release of their captured leader, Prinslo; but as Captain Andrews did not think fit to comply, they retired without venturing upon an assault, and took possession of a pass which commands the valley of the Great Fish River, at the eastern termination of the Boschberg range, immediately below the influx of the Bavian's River. Here they were met, a few days afterwards, by a detachment of British troops, hastily collected by Colonel Cuyler from the frontier garrisons, accompanied by a body of their own countrymen, the burgher militia, under their local officers. As Colonel Cuyler's force advanced up the hill called Slaghters-nek, on the brow of which the insurgents were posted, the latter were seen shaking hands together, as a mutual pledge to fight to the last; and there were doubtless men among them, and especially some of the near relatives of the deceased Bezuidenhout, of a character sufficiently resolute and desperate to dare any extremity. But while they were levelling their long guns to take deadly aim at the leaders of the advancing troops, and voices were heard loudly calling out in Dutch to the loyalist burghers to separate themselves from the military, in order to prevent bloodshed between brethren, Captain (afterwards Colonel) Fraser, ordered his men to halt, advanced alone to hold a parley with the rebels. A gun was levelled, and a finger was on the trigger, to seal the fate of this brave and generous officer; but the weapon was struck down by William Prinslo—my future acquaintance *Groot Willem*. Fraser called to their leaders and others whom he knew personally, and who loved and respected him. They gathered around him. He addressed them with energy on the folly of their attempting to resist the overwhelming force which, from more than one quarter, was advancing towards them; and on the insanity of shutting themselves out from all hope of mercy by the fruitless shedding of blood. They were touched and convinced by his address. They wavered in their resolution; and, after a brief consultation, all agreed to surrender,—with the exception of five of the more desperate delinquents, who, seeing that 'the game was up,' mounted their horses, and fled up the Bavian's River. These men were, Hans Bezuidenhout, brother to the deceased Frederick; Cornelius Faber, his brother-in-law; Theunis de Klerk; and Stephanus and Abraham Bothma; all deeply concerned in organising the insurrection. The rest of the band delivered themselves up to Colonel Cuyler, who disarmed them, and marched them down to Uitenhage, to wait the orders of the Government.

Meanwhile, Captain Fraser was despatched with a party of Hottentot dragoons, to arrest the rebels who had fled. Bezuidenhout and Faber, who resided near the source of the Bavian's River,* yoked their wagons, and putting their families and valuables into them, drove out of the valley and across the upland country towards the frontier, accompanied by the two Bothmas, and carrying with them their flocks and herds. Captain Fraser overtook them on the northern side of the Winterberg, upon one of the sources of the Tarka River; and, before they were aware of his approach, had placed his men in such a position as to intercept and surround them. Faber, who was riding in advance of his friends, in search of a convenient path for the wagons, first perceived the troops, and turned to give the alarm; but another detachment appearing behind, the unhappy fugitives saw that escape was impossible. Faber then alighted, and coolly levelled his gun to fire on the party nearest him—but received at that moment a ball through both shoulders, and was taken prisoner. The Bothmas were also seized without offering any serious resistance. But Hans Bezuidenhout, with a desperate courage, similar to that of his brother Frederick, deliberately placed himself by the side of his wagons, and opposed, single-handed, the whole force that surrounded him. He was repeatedly and urgently invited to surrender, but obstinately rejected all parley; and a soldier who approached him with a message was laid dead on the spot. His wife, a sister of Faber's, was an Amazon worthy of such a mate. Assisted by her son (a lad of fourteen years of age) she loaded seven muskets as fast as her husband could fire them off against the enemy, exclaiming, "Let us never be taken alive! let us die here together!" After the soldier fell, a volley was poured in upon them, which severely wounded both Bezuidenhout and his wife; but they still continued to fight with undiminished obstinacy, until at last a mortal shot finished the career of the former, and the wife, faint from fatigue and the loss of blood, was incapable of farther resistance. The conduct of this woman astonished every one present. Though desperately wounded, such was her fury and firmness that she pertinaciously rejected all assistance from the military surgeon, who had come to dress Captain Fraser's arm, which had been accidentally fractured just before the skirmish. Her son, a bold spirited lad, who had most courageously assisted his father in the conflict, was also severely wounded; but both he and the Amazonian mother ultimately recovered.

The sequel of the affair may be told in a few words. A Special Commission of the Court of Justice was sent up to Uitenhage to try the prisoners. Thirty-nine were capitally convicted; six were condemned to death; and the rest to minor punishments. Five were executed on the 9th of March, 1816, at Van-Aard's Post, where they had first appeared in open rebellion; namely Hendrik Prinslo, Stephanus Bothma, Faber, De Klerk, and Abraham Bothma. The sixth prisoner, Krugel, was transported for life. The rest were condemned to witness the execution of their comrades; after which some of them were set at liberty; and the others were punished by fine, forfeiture, imprisonment, or banishment from the frontier districts, according to their less or greater share of criminality in these transactions.

The Dutch-African inhabitants of the Tarka and of the lower part of Bavian's River, by whom our location was on three sides environed consisted, in a great measure, of the persons who had been engaged in this wicked and foolish rebellion, or their family connections, of the names of Erasmus, Prinslo, Vandernest, Bezuidenhout, Labuscagné, Engelbrecht, Bothma, Klopper, Malan, De Klerk, Van Dyk, &c.

* They occupied lands afterwards included in the Scotch Location. Bezuidenhout resided at the spot now called Craig-Rennie; and Faber had his kraal alternately at Clifton and Sildon. They lived in rude reed huts, and, excepting a small vineyard planted by Bezuidenhout, had scarcely made any attempt to cultivate the soil.

LITERATURE.

The Book of Etiquette; a Compendium of the whole Art of Politeness. 18mo. pp. 36. London, 1834. Griffiths.

DISCOVERING this matchless tome upon the drawing-room table of a fair lady, we could not help fancying that it must be the true code of good and fashionable manners; otherwise it could not form the study of so accomplished a person. The "*whole Art* of Politeness," said we internally, within so small a compass, must be invaluable; and, such is the infirmity of human nature, that, not content with partial plagiarism from it allowable to a reviewer, we absolutely made free and *borrowed* the whole book!

Having thus secured the precepts of our modern Chesterfield, we hastened, at our first leisure moment, to become master of the indispensable information, which, as the title-page assured us, is "absolutely requisite *to* the formation of a complete lady and gentleman,"—man and wife we presume, being conjuctively spoken of as an individual, or one flesh. Nor had we read a page before we found how great an improvement had been made since the preceding Chesterfield wrote. The march of intellect, and the spirit of the age, could not be more distinctly illustrated; and so different are the precepts, that you can hardly imagine them to pertain to the same century, country, and people.

Much pondering on these things, we feel it to be our duty to do our best towards elevating our friends to the present exalted standard of elegant life. Passing by the high philosophical principles unfolded by the incomparable author in his opening pages, we come at once, with this design, to his practical instructions. And first on the behaviour fitting for the dinner-table, whither you are to conduct the lady with whom you have been conversing. So—"In offering your arm, curve it outward, gracefully. For I once, (adds the author, as a striking warning,) heard of a tall, bony gentleman, who thrust out his elbow so suddenly (it was extremely sharp), that it hit the lady in the side, cut open her silk dress, and caused her to scream violently, fearing she had been stabbed! You SEE," he continues, impressing the subject, "how dangerous these angular sort of movements are!" No doubt they are, when men are such sharp fellows. We would advise the unfortunates who are exposed to be conveyed to dinner by such *monsters*, to put on at least two pair of stays or corsets with double ribs of whalebone, as a protection. But we proceed. "If you sit near the lady of the house, you must select an early period of the dinner at which to take wine with her. Bowing your head, you should smile *blandly, and half reaching to the decanter, utter in a soft tone* 'Shall I have the pleasure,——?'"

Nothing can be more *insinivating*, and we are quite prepared for the consequences. "She will bow politely in return; when you must about half fill her glass, and then your own; you then make another very slight obeisance before taking the glass to your lips."

Upon part of this advice we shall only notice, that it differs from that of another uncommonly clever and genteel writer, who says, you ought never to fill a lady's glass only half full, but invariably a bumper; because, says he, if she wants a whole glass she can have it, and if she wants only a half glass, says he, she can leave it: which reasoning doth appear to be consistent with the fact.

"Silver forks," we are informed, "are now common at every respectable table; and for my part, I cannot see how it is possible to eat a dinner comfortably without them. The fin-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

gers are the natural forks, and the best—but they are not fashionable." What a pity! "And next to them is the capacious fork of silver. You should divide your viands, and then use the fork exclusively, holding in the left hand a pellet of bread close to the plate, as a sort of assistant. Always use the napkin before drinking wine; and if you are intent upon the latter with a lady opposite you, desire the gentleman next her with simply, '*may I trouble you?*'—to fill her glass." If there are no napkins, perhaps it would be proper, "always before drinking wine," to use the table-cloth, or, if the lady nearest you wear one of those large inconvenient gigot sleeves, which keep flapping in your face, it might not be amiss to give your mouth a sly wipe or two with *that*. *Verbum sat.*

Then, as one good turn deserves another, "When the dessert appears, you should make an offer to the lady of the various kinds of fruit. You should crack the nuts for her, and deposit the kernels on her plate." [Keeping the shells for your trouble:] and "oranges should be peeled, and then cut in slices extremely thin, and powdered over with white sugar." Because "it is impossible for a lady to eat an orange in any other way without stretching her mouth—spirting the juice over her dress and into other people's eyes—and staining her delicate skin the colour of a frog's!" Pray attend to this, for the sake of your own eyes, if not for the sake of the lady's mouth, dress, or skin. You may take our word for it, that acid orange-juice is a monstrous disagreeable eye-water, even though squirted at you from sweet lips.

On behaviour at the tea-table, our Mentor is equally instructive. "Half the company generally consist of ladies, full of smiles! how delightful! Now you must be on the *qui vive*, my young friend, to supply the ladies with muffin, crumpet, toast, or bread-and-butter, by handing these delicacies round to them (unless there be a servant in the room, waiting upon the company). Also, you must keep a sharp eye upon their cups, and the moment they are empty, convey them to the tea-table. N. B. Mention the name of the lady as you put her tea cup and saucer down; and say (to the presiding lady) whether she will take more tea or not."

Having thus far got through your visiting devoirs with credit to yourself, another important occasion is about to occur, on which it is expedient to be excessively careful. "Music very often comes after tea, when you must be ready to turn over the leaves of the music book. You must do this without scrubbing your coat against the lady's cheek—knocking out her combs—smashing the candles—or cutting her finger ends off, by leaning on the lid of the piano, and forcing it down with a crash!"

In the latter case, it is evident that you would render it extremely inconvenient to the lady to play any more, since it has ever been observed, that musicians without tips to their fingers, had by no means that fine touch which is so essential to melody. "You smile," adds our authority, "but these things are often done, nevertheless." It has not happened where we have been, to be sure, but we see no cause for doubting the assertion of so respectable and refined a person; and we dare believe that he has witnessed four or five hundred sets of fingers so demolished: the ten digits tipped as if they were nine-pins. Again: "If you take part in a duet, be sure your voice is in order; for I have known a whole company afflicted by a pain in the stomach, through some screech-owl of a fellow pretending to sing!"

The danger, in these cholera times, is greatly increased; and every man possessed of bowels of compassion will guardedly abstain from falling into this afflicting error. Consider the condition of a whole company rendered uneasy at the same time, from the same cause!—reflect on the consequences that might ensue, and do moderate the rancour of your tongue. Screech-owls unquestionably, love to hear themselves screech; but we never met with any one, however fond of music, who preferred them to the thrush or nightingale. Besides, they produce a bad nocturnal effect upon the nerves of sick or delicate people; and in the very select and fastidious society for whose sphere alone the *Book of Etiquette* can be intended, there may be invalids of both classes—the very poorly, and the very affected.

The ball-room comes in its turn to be described, and the conduct becoming in those who frequent it is as clearly pointed out as if it were done with the toe in a pirouette.

"A ball room should exhibit the *ne plus ultra* of elegance and fashionable ease. The least deviation from grace—the least want of polite attention—is there remarked, and laid open to ridicule. I cannot, therefore, do better than recommend you to pay the most implicit regard to your dancing-master; and I also advise you to attend his public balls."

The author mentions a particular friend of his in this line, who, he tells us, is a very Apollo for the elegancies; and he adds, "For want of such advantages as he offers, I have known young men tumble about like pigs let loose—kicking the ladies' shins, treading on their toes, tearing their dresses, &c.! Really it is shocking to think that people will *dare* to dance (*dance*, forsooth!) in a quadrille under such circumstances."

This is, indeed, very shocking, and ought to be reformed altogether; but there are other things almost as bad. "How many people," observes our *arbiter elegantiarum*, "in other respects extremely amiable, have certain unaccountable habits! Some are perpetually hitching up their clothes [this is not in the ladies' chapter particularly]; others have a kind of snort, like a young elephant; and others, again, 'make faces,' as if for a wager!—all very, *very* bad habits. Putting the feet upon the fender is an offence not to be tolerated; clumsily knocking down the fire-irons is another; as, also, is blowing the nose hard without turning the head away. Keeping your thumb and finger for any length of time in another person's snuff box, is highly improper. As to seizing any one by the button-hole, that is now exploded; I would as soon that a person seized me by the nose." This, we think (and we venture the remark with profound deference), is going a *leetle* too far. The nose is a delicate and sensitve member to be handled; and no man, except, a barber, can be allowed to pull it with impunity,—at least, this is the doctrine which has been held by a considerable number of persons accustomed to wear their own noses; and, indeed, even taliocotians might be expected to object to have that rudely assailed when transplanted, when they would not suffer to be kicked in its original, though lower, situation.

In respect to conversation, the author is, on the other hand, unusually correct and intelligent. "As a general rule, it is well not to interrupt those who are talking to you. * * There are some, who, when they hear a word wrongly pronounced, immediately set the person right: this is very faulty. * * In the present day, *puns* are much in vogue. I am extremely sorrow for it; I think them only fit for the parterre of a Yankey theatre. They are Goths, that overrun the empire of conversation to lay it in ruins! [Why call them Goths? *Huns* would have been nearer the mark.] * * As to *small-talk*, I am happy to say that it is now-a-days held in utter disrepute. What is it but another name for idiotic twaddle? * * I will conclude this part of my subject, by enjoining you to pay an unswerving attention to the persons who address you, and to look them in the face, not staringly, but with earnestness."

The ensuing chapter (XII.) is rather a ticklish one; but our author has great tact. It is "Advice to young ladies on the art of pleasing,"—as if young ladies could help pleasing! To be natural is strongly recommended; and whispering as strenuously condemned. Young ladies ought not to play at whist or chess; but, if they like a round game, or a bit at backgammon, these are 'admirable.' They ought not to sit "lolloping" upon their seats; and "cleanliness," is declared to be a positive virtue. At court, on levee days, the appearance of such as observe these excellent rules fills the author with tooseousyism. "I cannot (he exclaims) better describe their appearance, crowded together on the staircase before-named, than by supposing the presence of a million of humming-birds. The effect is indescribably heightened by their being seen through high balustrades, now appearing and now vanishing, like so many *peris!* The *hoop* is laid aside, which I am sorry for, as, after all, it was a beautiful relic of the olden time. To see a charming young lady *rise out of her hoop*, was the prettiest sight in the world; it look like a gilded barricade containing an angel."

Dear angels! we invoke you, come with a hoop; behave yourselves as instructed by this consummate master of the whole art of politeness, and be our birds of paradise, compared to which, all the humming-birds in the world are mere humbugs.—*London Literary Gazette.*

SCIENCE.

GRAND DISCOVERY.

CONVERSION OF SALT INTO FRESH WATER.

On Monday we witnessed a completely successful and a very important experiment, made by Mr. Wells, the patentee, in the conversion of salt sea water into a perfectly fresh and pure liquid, fit for every purpose of domestic use and economy. A barge was moored in the Thames near Westminster Bridge, and a number of naval officers and scientific gentlemen were invited to inspect the process. The sea-water was brought from off Ramsgate, and fully impregnated with the saline principle: some of it was in a very impure and dirty condition.

The apparatus invented by Mr. Wells consisted of a cast-iron cooking machine; a cube on a comparatively small scale, especially when we looked to the extraordinary utility of its operation. It seemed about four feet in height and the same in width; and contained ovens, roasting-fire, pots, pans, kettles, &c &c sufficient to dress a dinner for seventy or eighty men. The consumption of fuel is very small—about two bushels, we were told, in twenty four hours; and yet, by the internal application of the heated air, by means of spiral and circular tubes surrounding the various parts of the machine, roasting, boiling, and baking were carried on with the utmost regularity and precision.

Here, alone, would be a valuable addition to the conveniencies and comforts of life, whether ashore or afloat; and, but for the far greater improvement yet remaining to be described, would entitle Mr. Wells' invention to high encomium and general adoption.

Whilst the cooking is proceeding, the sea-water is gradually supplied fom a cask, or tank, as may be most ready, and, passing into the interior of the machine, is there submitted to distillation. In its distilled state it then flows into a pipe of cast iron, or of copper tinned, which pipe is led over the bow of the vessel and along the cut-water into the sea; and thence along the bottom of the ship till it returns into the hold, with a common stop cock to draw off the water. The grand improvement in this is the making the element in which the vessel floats the condenser of the altered liquid; which runs off at the rate of above a quart in a minute, perfectly fit for drinking, for washing, and for every other purpose for which fresh water is employed. We tasted it both before and after undergoing

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the process, and we used soap in washing our hands with it; and we can truly declare, that in the first instance it was sweet and palatable, in the second soft and pleasing.

The patentee, however, proceeds to filter it through charcoal, in order to restore the carbon which is lost in the distilling; and you have the pure and sparkling element, equal in every respect to spring water.

We have thus minutely stated what we saw and tested; and we do so with very great satisfaction, since it is hardly possible to imagine any economic discovery of such vast importance to the navy and to the nation. All the watering of ships rendered unnecessary, and the ocean itself converted into one abundant and everlasting fountain of supply, forms, indeed, an epoch in the history of navigation. We need hear no more of the sufferings of brave and hardy sailors from the want of this essential article of human subsistence. The room required in merchantmen for the stowage of water for the voyage, may now be filled with goods of any kind. In fine, it would be difficult to over rate the value of this admirable invention, which, there can be no doubt, will be speedily and universally adopted, and will, we also trust, amply reward the inventor of a benefit to his country and fellow-creatures, the worth of which can hardly be excelled in the annals of useful humanity.

The sea-water around a ship is incessantly converted into excellent fresh water fit for every purpose; and the ocean itself is made the chief agent in this metamorphosis. It is a great and wonderful achievement.

New Invention: the Proverb realised—the Cart before the Horse.—Heidelberg, 15 *August*.—In the month of May last, there was seen in the streets of Mannheim a horse pushing before him a carriage, guided with much address by Baron Drais, the author of this new invention, which is attended with great advantages. 1. the horse cannot run away; 2. the carriage is not exposed to the dust and dirt generally thrown up by the horse; 3. the prospect is not interrupted by the coachman and the horse; 4. the conversation of the travellers cannot be heard by the coachman; 5. the travellers are not incommoded by the fumes of the tobacco, &c. The coach-box will be placed on the roof of the carriage, behind, and by means of a looking-glass the driver is able to guide the vehicle. This invention is applicable to carriages drawn by four horses. Baron Drais also exhibited, a few days ago, his machine called *Draisienne Velocipede*, greatly improved, which gave entire satisfaction.

THE IMPORTANCE OF THE CAMEL TO SOUTH AFRICA.

From Howison's European Colonies, 2 vols. 8vo. 1834.

It has often been proposed to naturalize the camel in South Africa, and the character of the soil and climate there would seem to ensure the success of any experiment of the kind. The chief difficulty would be in the conveyance of the camels from India, which is the country where they could most easily be obtained. It would be necessary to fit up a vessel expressly for their accommodation, having at least nine feet between decks; nor would this alone suffice for their security and comfort, for these animals being very long legged, and rather sluggish in their movements, they would be constantly liable to be overthrown by the rolling of the ship, unless some effectual means of assisting them to maintain equilibrium were adopted The camel would be a valuable gift to South Africa, whether for the transport of goods or the convenience of travellers. Nine thousand pounds' weight is considered a full load for twelve oxen, exclusive of the wagon which contains it; and with this they cannot well travel for a continuance more than eighteen miles a day. A moderate sized camel will carry a weight of eight or nine hundred pounds with ease, and travel thirty miles a day In supporting hunger and thirst, he far surpasses the ox, great as that animal's powers of endurance in this respect are; and no herbage is so coarse or acrid as to be rejected by him in times of necessity. The use of the camel would also obviate the present difficulty or impossibility of travelling on horse back through many parts of the colony, tracts of which afford no kind of pasture suitable for horses, and no habitations where a supply of grain can be obtained. But a single camel could carry grain sufficient for the subsistence of many horses for weeks together, and moreover make daily journeys of as great length as the latter could do for a continuance. Grandpré, in his Voyage in the Indian Ocean, makes the following remarks relative to the transportation of camels:—"I had one on board my vessel, which did not drink during the whole passage from Socotra to Pondicherry, which was seventeen days; nor did it eat in that time more than twenty pounds of millet straw. After the fourth day it seemed to ruminate but little; about a quarter of an hour a day, as nearly as I could observe. As soon as it was landed, it ran to a spring and drank plentifully; and it appeared in as good condition as if it had suffered no want; though its thirst was great, its desire of food was by no means so. It still ate moderately, and with no more eagerness than usual!"

ODDS AND ENDS.

Extracted from late English Papers, &c. with Notes.

EXTRAORDINARY SUPERSTITIONS.

An Antwerp Journal states that, on the preceding Sunday, an old custom, that of *blessing the sea*, which had been discontinued for the last forty years, was revived at Ostend with great pomp. A very numerous procession, consisting of priests, and a great number of inhabitants, with lighted tapers, fuming censers and banners, and attended by the civic guard, and the troop of the garrison, marched to the shore, where, after the prayers proper on the occasion, the chief clergyman gave his benediction to the ocean.

THE MARCH OF INTELLECT.

An Inquest was held on Monday, at Bromley, Middlesex, on the body of Ellen Donovan, a child, three years old, who, having been bitten by a dog, in a rabid state, died of hydrophobia; and it was gravely given in evidence by the parents and friends of the deceased, that though they had not called in a doctor so soon as they might have done, yet they had endeavoured to effect a cure by roasting the liver and lights of the mad dog, and compelling the child to eat a portion of them!

A few weeks since, a gentleman's servant was driving a piebald horse in a stanhope along the western roads near Newbury, when he was accosted by a young woman of very respectable appearance, who asked him what she should take to cure her of the hooping cough? The man very honestly said he did not know. The young woman then said, "If a person that has the hooping cough takes anything that is directed to be taken by a man who is driving a pied horse, it will be a certain cure." The man, on the strength of his piebald diploma, prescribed gin and water, and the parties separated Last week, the young woman again saw the servant with the piebald horse, when she informed him, that she had taken the gin and water as he had directed, and it had cured her of the hooping cough in a few days. Such a thing is faith!

These are from the *Southampton Advertiser*, extracted from London papers; the difference occasioned by the '*March of Intellect*,' is, that instead of a pauper child eating the dog's liver to cure hydrophobia, we should have His Most Gracious Majesty, King William IV., God bless him! *touching* as many of his scrophulous liege subjects as had faith in the royal manipulation to be cured of their white swellings! We have heard, but forget the authority, that Sam. Johnson, the lexicographer, was touched when a child, by Queen Anne; and is the last recorded instance of this piece of superstitious folly—the relic of the wisdom of our forefathers! Our 'march of intellect' has at all events outmarched "lighted tapers, fuming censers and banners, and the civic guard and the troops of the garrison, to attend the chief clergyman to the shore, to give his benediction to the ocean!"

PORT OF LONDON.

The improvement of the Port of London is now in active progress, and will be soon restored to that state which, from the earliest days of our commercial history, established it as one of the finest in Europe. The tonnage duty on shipping, which amounted to 84 or £85,000 a year, is reduced to about £5000. The Board of Admiralty have been nearly six years engaged on a new hydrographical survey of its surface from the Foreland to London Bridge, under the scientific direction of Capt. Bullock, R N.; and the Thames Navigation and Port of London Improvement Committee, are also engaged in a survey of all its shoals from Woolwich to London Bridge, with a view to their removal, under the direction and personal trigonometrical surveys of the Harbour Master and the Surveyor of the Port of London, who have been now nearly six weeks engaged in this laborious and highly useful work.—*Times.*

It seems the proper time to reduce the port duties, and otherwise improve the Thames navigation! when the Vauxhall and Southampton Railway is in progress, and will go far to render the Thames navigation a diminished interest! We confess we should have preferred that Bristol, and not Southampton, should have become the new London out-port; the vicinity of Bristol has a vast commercial and manufactnring interest, which would have been essentially benefited, whilst betwixt Southampton and London no such interest exists, and it not being a coal country the same cannot be created.

THE BLUE AND BUFF!

From the 1st January, 1833, to the 30th June, 1834, (eighteen months,) 36 Midshipmen were promoted to the rank of Lieutenant. The senior had served *twenty six* years (J. Elwin), and was then promoted for exertions in the Coast Guard Service; the junior Mid. (Hon. K. Stewart), had served six years. From January 1 to June 30, five Midshipmen were promoted; the senior of whom (J B. Englefue) had served

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

seventeen years, the junior (J. Richardson) six years.—*Herald.*

The Hon. K. Stewart, for being son of a lord, is promoted in 6 years! but Mr. Elwin after 26 years' service, and as a pecial grace for good behaviour!! *Nisi Dominus frustra* should be a naval motto, for being interpreted, it means that unless a Middy is a lord's son, he has no chance for promotion! All right, very right, the evil requires to be properly known before it can be properly seen to; the Editors who bring these matters prominently before the public are the best modern patriots.

AN ISLAND FOR SALE.

An entire island (Eday, in Orkney), containing 700 inhabitants, a parish church, school-house, and other signs and tokens of civilization, is offered for sale. To a man ambitious of becoming, like honest Sancho Panza, Governor of an Island, and who has money enough to purchase such a "gem of the ocean," this little remote dominion offers a chance of conferring much happiness on his fellow creatures.—*Inverness Paper.*

Another Beckford, instead of fooling away £100,000 on another Fonthill, might indeed confer an incalculable degree of happiness in this wind-swept islet of the north: but he had better spend it in the formation of a colony in Australia; his 700 dependants in Eday would not be in an improveable region, and their children after them would be no better off than the Eday Isle's men now are; were they, or any other 140 families, transplanted to Van Diemen's Land, and spread over 200,000 acres of the average land of that colony, the next generation would be rich and happy, and doubled in number, and protecting double their number of emigrants obtained from other islands.

EFFECTS OF SCHEDULE A.

There are two estates in the market at present, which formerly gave the power of returning six Members to Parliament, but which, having been deprived of that privilege, by schedule A, are now no longer thought worth keeping by their noble owners. These estates are Aldborough, in Yorkshire, the possession of which enabled the Duke of Newcastle to return two Members for Aldborough, and two for Boroughbridge: and Stockbridge, in Hampshire, which gave the Marquis of Westminster the control of that Borough. The Noble Duke's estate will probably produce 50,000*l.* or 60,000*l.* less than it would have done five years ago, and that of the Noble Marquis about half that sum. —*Leeds Mercury.*

A rotten Borough, or, to use the phraseology of Sir Pertinax, 'an *impleecit* Borough,' was estimated to be worth £50,000, over and above the lands and houses which confined the right to return two Members to Parliament. Old Sarum, Gatton ,&c. were thus frequently sold, the estates a few hundreds a-year, at 30 years' purchase, more or less, and for the Borough right £50,000! The Duke of Newcastle fought stoutly for *his right to do what he would with his own!* and well he might! his share of the fruits of corruption was worth the contest. A reformed Parliament, when peop'es' eyes are open, may perhaps retort upon his Grace, and the other Boroughmongers, and inquire what they gained by their Boroughs, and what they did with the proceeds; the Nottingham mob, incensed at the Duke's conduct to his tenants at Newark, and generally at his intemperate opposition to public rights, so far forgot good sense and obedience to the law of the land, as to burn his castle near Nottingham, for which the Duke sued the county, and obtained upwards of £20,000 damages; but this house had been assessed about £100, which, at 30 years' purchase, is £3,000; what right had the Duke to value his house at £3,000, when paying taxes as a land-owner in the county, and to demand £20,000 for the same property when burnt by a county mob! These discrepancies will not pass unnoticed in the next generation.

REPORT OF THE COMMISSIONERS OF ECCLESIASTICAL REVENUE INQUIRY.

The total amount of the gross annual revenues of the several archiepiscopal and episcopal sees in England and Wales is 180,462*l.* affording an average of 6,683*l.*; and the total amount of the net annual revenues of the same is 160,114*l.* affording an average of 5,930*l.*

The total amount of the gross annual revenues of the several cathedral and collegiate churches in England and Wales, together with the separate gross annual revenues of the several dignitaries and other spiritual persons, members of cathedrals or collegiate churches, is 350,852*l.* and the total amount of the net annual revenues of the same is 272,828*l.*

The total number of benefices with and without cure of souls, the incumbents whereof have made returns to our inquiries, omitting those which are permanently or accustomably annexed to superior preferments, and which are included in the statements respecting those preferments, is 10,498; the total amount of the gross annual revenues of which benefices is 3,191,950*l.*; affording an average of 304*l.*; and the total amount of the net annual revenues of the same is 3,000,393*l.*, affording an average of 285*l.*

The total number of benefices with and without cure of souls in England and Wales, including those not returned to us, is 10,071; the total gross income of which, calculated from the average of those returned, will be 3,253,662*l.* and the total net income thereof will be 3,058,248*l.*

The total number of curates employed both by resident and non resident incumbents returned to us, is 5,282, whose annual stipends in the aggregate amount to 424,796*l.* affording an average annual stipend of 80*l.*; and the total amount of the stipends of curates, if 102 be assumed as the proportionate number on the benefices not returned, and the same be calculated on the average of those returned to us, will be 432,956*l.*

From a scale which we have prepared of the benefices with cure of souls returned to us, it appears that there are 294, the incomes of which are respectively under 50*l.*; 1,621 of 50*l.* and under 100*l.*; 1,591 of 100*l.* and under 150*l.*; 1,355 of 150*l.* and under 200*l.*; 1,964 of 200*l.* and under 300*l.*; 1,317 of 300*l.* and under 400*l.*; 830 of 400*l.* and under 500*l.*; 504 of 500*l.* and under 600*l.*; 337 of 600*l.* and under 700*l.*; 247 of 700*l.* and under 800*l.*; 129 of 800*l.* and under 900*l.*; 91 of 900*l.* and under 1,000*l.*; 137 of 1,000*l.* and under 1,500*l.*; 31 of 1,500*l.* and under 2,000*l.*; and 18 of 2,000*l.* and upwards.

The number of sinecure rectories returned to us, and which sinecure rectories are included in the number of benefices above stated is 62; the aggregate gross annual revenues of which amount to 18,622*l.*, affording an average of 300*l.*, and the aggregate net annual revenues of the same amount to 17,095*l.* affording an average of 275*l.*

We regret that it is not at present practicable to offer a full explanation of the various items which compose the difference between the gross and net amounts; but, to prevent misapprehension, we think it advisable to observe, that no deduction is made from income on account of payments to curates, nor for the reparations of episcopal residences or of glebe houses and offices, nor on account of payments of rates and taxes for the same, nor has any deduction been made on account of arrears due at the time of making the returns, or of any payments not being of a compulsory nature.

The returns of income have been generally made upon an average of three years, ending Dec. 31, 1831.

It has been said, and we believe truly, that the richest Church in Europe is the Irish episcopal, the same being also the worst in its administration and adaptation to the wants of the people; the poorest and purest, the best governed and best administered hierarchy is said, and we believe with justice, to be the Scottish Presbytery. An average income of £285 per annum, it seems, might be secured to the working clergy of the English Church, if the Church property could be equally divided; and the signs of the times appear to indicate that the day of division is not far distant. John Bull's taste for the Corinthian capital of the social pillar has out-run his means so woefully, or rather, poor fellow, his friends, the Boroughmongers, have contrived to make it so disproportionate to the support below, that we fear some mischief like a fall may occur before the diminution of it can be effected. Oliver Cromwell turned the Bishopric of Durham into a college for the northern counties, and perhaps a better hint could not be taken; the working clergy in England are shamefully ill provided for, their education at Oxford and Cambridge is beyond the means of the class which can mingle with the poor, as the Scottish clergy and the clergy of the dissenters are wont to associate, with so much usefulness; and when they take orders, unless fortunate beyond all hope, or assured of simoniacal provision, they eat the bitter bread of penury and discontent in a state of pecuniary destitution to be met with in no other line of life; had there been a college at York for the northern counties, and another

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

at Gloucester for the west, to provide cheap education for the clergy for the poor, and had there been a modest provision for a parish priest resident in every parish through the kingdom, we should not have had the English Church out-numbered by Dissenters: we are much of the same way of thinking as the Editor of the *Herald*, and reprint the following, with the hope that it may soon be practise and not theory.

CHURCH "ORNAMENTS."

The Bishop of London, who we suspect to be rather a Reformer from necessity than choice, has, in his late charge delivered to the Clergy in St. Paul's Cathedral, pointed out one of the main evils under which the Established Church labours, and has delicately hinted at a partial remedy. The part of the charge to which we allude is as follows:—"The great defect of the Church," says his Lordship, "is its deficiency in churches. In the north-eastern parts of the metropolis, containing a population of 353,000 souls, there are only 18 churches and 24 chapels, when at least 100 are required; and in many parts of Lancashire, Yorkshire, &c. the same deficiency exists: in fact, the machinery originally constructed for 11,000,000 of population, is now applied to 14,000,000. The resources of the Church for supplying some of these deficiencies are subjects for consideration, and the *application of some of its ornamental parts* ought not to stand in the way of improvement; but this should be done after careful and minute inquiry, without breaking up the ancient framework of the hierarchy.' Though the Bishop's ideas are not clothed in the plainest language, we gather from the suggestion which we have printed in italics, that his Lordship is at length a convert to a species of Church Reform which we have frequently advocated, viz: the erection of several free churches in the populous parts of the metropolis, the service of which should be provided for by the appropriation of a certain number of the stalls and minor canonries of the two metropolitan cathedrals to that purpose.

This is, at least, what we understand by "the application of some of its ornamental parts" towards lessening the grievous want of church rooms; a method which we are convinced might, with much propriety, be had recourse to, not only in the metropolis, but in such other parts of the kingdom wherein the population has greatly outgrown the present means of supplying its spiritual wants. There is no reason upon earth why some of the "golden" ornaments of Durham should not be appropriated in this way; or why Canterbury and York;—why Winchester, Ely, Gloucester, Lichfield, Worcester, and most of our cathedrals, should not contribute "both in men and money," to this laudable end. This, indeed, would be Church Reform in its truest and most practical sense. And for the Bishop of London's alarm lest it should "break up the ancient framework of the hierarchy," we entertain no fears on that head; but, on the contrary, feel persuaded that nothing could tend to strengthen, not only the framework, but the whole edifice itself, more than extending and diffusing its utility amongst the thousands (we might say millions) who, for want of it, are now drawn off to the paths of dissent, and ultimately of hostility. Bishop Watson suggested a similar application of some of the "ornaments" more than half a century ago; but his suggestion had no other effect than that of consigning their author to courtly disgrace. The times are now different, and the wants of the people infinitely more urgent and extensive. Though the Bishop of London's language, as to the remedy, is somewhat obscure, of the nature and extent of the disease he speaks both knowingly and undisguisedly, and we therefore earnestly call upon him to discharge his conscience of the vast weight which this knowledge loads it with by openly proposing in Parliament the remedy which he points out.—*Herald.*

RETIREMENT OF SIR D. K. SANDFORD.

Sir D. K. Sandford, in a letter dated Tighanrudh, Rothsay, August 29, addressed to the Faculty of the College of Glasgow, declares his intention to retire. "I have," he says, "no doubt that a serious and formidable attack awaits the principles of our Constitution and those establishments which have hitherto flourished under their protection; and I would gladly and fondly have contributed to their defence all the aid which a seat in the Legislature, and such degree of popularity as still belongs to one who has ever been willing to reform proved abuses, might have enabled me to render. But even when accepting the Representation of Paisley, I entertained and expressed fears that the irregular hours, the severe labours, and the trying anxieties of a Parliamentary career, might be too much for my health and strength to support. The event has realised those apprehensions. My nervous system has received a great shock. Extreme disorder and debility of stomach have manifested themselves by some very decisive symptoms. I have, therefore, no choice. I shall resume the functions of my Chair, and resign my seat in Parliament."

This is just as it should be; it requires nerve to serve in Parliament now-a-days; the men who will in future be found there will be no milk-sops but giant sons of Anak, who can be wide awake at all times, and have a hand and a heart and "mind to work." "I have no doubt," says this nervous-system-shocked-parliamentarian, who has been done up by half a session, "I have no doubt that a serious and formidable attack awaits the principles of our Constitution, and those establishments which have hitherto flourished under their protection;" this is brilliant, really, from the representative of the Paisley weavers; the principles they know most about are the power-loom and spinning-jennies, and with clear heads and honest hearts they want justice from Parliament, not chaffy-logic and fine speeches The services and formidable attack, which such men as this nervous Greek professor apprehend, does not, however, menace the "principles of our constitution;" but the principles of Tory taxation, by which the weight and burthen of the public income has been wrung from the industry of the country, and not from property; by which the working classes have paid from their hard-earned pittance, whilst the oligarchy who made the laws have taken the best possible care that their own aristocratic shoulders shall remain ungalled; the Excise was essentially a Tory invention to protect the property of the rich; it has had its day; and a *legion* of such "reformers of proved abuses," as this Glasgow Professor, with the firmest nerves and the stoutest stomachs, in Scotland, would find themselves sorely puzzled to keep up the present system of taxation much longer; as respects establishments:—what establishments has a Glasgow Professor and a representative of Paisley a right to prate about? The Church of Scotland deserves and enjoys the unmingled, unalterable affection of its children, and the Paisley weavers are not so far degenerate from their fathers who burnt the 'Kist fu' o' whistles,' as to care for the Irish or even the English hierarchy; were their votes taken, they would subscribe to a man to an earnest prayer to Parliament that the English poor, like the Scottish poor, might have the gospel preached to them; that pluralities should be utterly abolished, and that every parish should have a resident minister sufficiently endowed, in that happy medium betwixt wealth and poverty, which leaves the mind unburthened with vulgar cares, but does not pamper the proud spirit into disregard for the opinions and feelings of the poor: this cannot be effected without reducing the cathedral sinecures, and why should they not be reduced? If there be an outrage to decency more abhorrent than another, peculiarly felt in Scotland, it is a fox-hunting galliard of a parson receiving his thousand a-year from a family living, and paying a poor curate £100 a-year for performing his duty; these are the hirelings that care not for the sheep, and the sooner the establishment is revised which permits such vermin—the better.

ADMIRAL BYNG.

Walpole's Letters to Sir Horace Mann, Letter 296, March 17, 1757.—"Admiral Byng's tragedy was completed on Monday,—a perfect tragedy, for there were a variety of incidents—villainy, murder, and a hero. His sufferings, persecutions, aspersions, disturbances, nay, the volutions of his fate had not in the least unhinged his mind: his whole behaviour was natural and firm. A few days before, one of his friends standing by him, said 'which of us is tallest?' he replied 'why this ceremony? I know what it means; let the man come and measure me for my coffin." He said, that being acquitted of cowardice, and being persuaded on the coolest reflection that he had acted for the best, and should act so again, he was not unwilling to suffer. He desired to be shot on the quarter deck, not where common malefactors are. Came out at twelve, sat down in a chair, for he would not kneel, and refused to have his face covered, that his countenance might show whether he feared death; but being told that it might frighten his executioners, he submitted, gave the fatal signal at once, received one shot through the head, another through the heart, and fell. Do cowards live or die thus? can that man want spirit, who only fears to terrify his executioners? has the aspen Duke of Newcastle lived thus? would my Lord Hardwicke die thus, even supposing he had nothing on his conscience? The scene is over! what will be the next is matter of great uncertainty.

The affecting story of poor Byng has

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

done much for rendering unfashionable the proper curb to official authority;—not only Admirals and Generals, but Ministers, should have the wholesome check upon them of a very lively sense of liability to be "measured, standing, for their coffins;" we should not have had 800 millions of debt if the "aspen Duke of Newcastle" and "my Lord Hardwicke" had been treated as they served poor Byng. The Epitaph on Byng's tomb says very briefly, and in classical language, that he fell a victim to popular clamor! the poor people must always bear the blame! let us hear what Walpole, no inattentive observer, says—"I never knew poor Byng enough to bow to; but the great doubtfulness of his crime, and the extraordinariness of his sentence, *the persecution of his enemies, who sacrifice him for their own guilt,* and the rage of a *blinded nation,* have called forth all my pity for him. His enemies triumph, but who can envy the triumph of murder?" Again—"this storm, which *Lord Anson's creatures and protection have conjured up,* may choose itself employment when Byng is dead."

One more extract from Walpole—Letter 211, Feb. 25th, 1750. "We have been sitting this fortnight on the African Company: *we,* the British Senate, that temple of liberty, and bulwark of Protestant Christianity, have this fortnight been pondering methods to make more effectual that horrid traffic of selling negroes. It has appeared to us that *six-and-forty thousand* of these wretches are sold every year to our plantations alone!—it chills one's blood. I would not have to say that I voted in it, for the continent of America! The destruction of the miserable inhabitants by the Spaniards, was but a momentary misfortune that flowed from the discovery of the new world, compared to this lasting havoc which it brought upon Africa. We reproach Spain, and yet do not even pretend the nonsense of butchering these poor creatures for the good of their souls!" It is refreshing to think that the same ministry who murdered Byng, established the slave trade; there is no knowing what their follies and what their wickedness may have cost us, but, at least, we have Twenty Millions of dead weight on our necks for that one fortnight's discussion, and we shall be let off cheaply, if it end there; but the "galling, brutalizing yoke of bitter bondage" must have brutalized its unhappy victims; and though the Twenty Millions of British money can emancipate the poor slaves, it cannot elevate the crushed spirit, nor humanize the 'heirs to stripes, chains, and hopeless bondage!' O! that God in his mercy would change the course of nature, and work a miracle for their sakes!

LITERARY EXTRACTS.

March of the Human Mind.—The human mind carries on a perpetual and glorious commerce. The mighty waters of thought are never still. "Deep calleth unto deep, and one sea answereth to another." Genius, a starry traveller, goes from world to world, and alike from each "in its turn draws golden light." The past pays tribute to the present; that which is being not only wondrous and beautiful in itself, but still more wondrous and beautiful as originating that which is to be. Every great work is the promise of another, and that not in the cold, faint sense of imitation, but in the diviner one of inspiration.—*London Literary Gazette.*

Fire Insurances.—The sums paid into the Stamp Office for duty on Insurance, from some of the Fire Offices in London for 1833:—

Sun,	£124,681 : 16 : 3
Phœnix,	73,336 : 1 : 2
Protector,	57,558 : 3 : 8
Royal Exchange,	55,716 : 7 : 7
Imperial,	27,154 : 11 : 7
Alliance,	23,428 : 10 : 11

Public Petitions.—The following petitions were presented during the last Session of Parliament:—

	Signatures.
For Relief of Protestant Dissenters,	344,592
Against,	26,823
For Separation of Church and State,	55,109
Against Separation,	23,951
For Repeal of the Corn Laws,	149,842
Against Alteration,	28,919

Philanthropy.—Annual Receipt of the following British Institutions, 1833—4:

Church Missionary Society,	£52,922
Society for Promoting Christian Knowledge,	68,371
Wesleyan Missionary Society,	57,977
London Missionary Society,	53,726

In aid of the latter Society, the following extraordinary Subscriptions were made in Manchester, in the first week in June, 1834:

Grosvenor Chapel after Sermon,	£500 : 0 : 0
Mosley street, ditto,	500 : 0 : 0
Rusholme-street, ditto,	100 : 0 . 0
Other Chapels,	100 : 0 : 0
Public Breakfast,	140 : 0 : 0
Anniversary Sermon,	160 : 0 : 0
Second Breakfast,	800 : 0 : 0
Juvenile Societies,	250 : 0 : 0
	£2,750 : 0 : 0
Additions,	250 : 0 : 0
	£3,000 : 0 : 0

Dreams.—A remarkable circumstance, connected with the philosophy of *dreaming,* occurred a week ago. Mr. Dalziel, a respectable and intelligent writer to the Signet, was required to give evidence in a cause respecting the Fife Bank; when he stated, upon oath, that certain important papers relative to the suit had been mislaid, and could not be discovered on the most diligent search. But on the night preceding the trial he dreamed of the place where they were deposited, and actually found them there in time to be brought forward in the court. This singular operation of mind, independent of waking volition, resting on such unquestionable authority, affords matter for curious speculation in the theories of sleep and of dreams.

Hint to Teachers.—One practice, however, can be reformed, that of giving prizes and commendations only to those that get on the fastest. 'Tis the endeavour, the struggle, the obedience, that should be praised and rewarded. Then a child will not be disheartened by difficulties, nor humiliated by failure; because, when he does his best, he will be sure of approbation. Otherwise, as soon as he is passed in the race by his competitors, he will be inclined to lie down in the dust, with his little heart full of despair, and perhaps full of envy too.—*Sharp's Letters and Essays.*

Curious Custom.—I witnessed a peculiar trait of the customs of the Himalayan peasants, the putting an infant to sleep by the action of water. The successful issue of the experiment I had quietly made up my mind not to believe in, until convinced by occular proof. The method was as follows:—The child, whose age might be a year or two, was laid by its mother, who was employed in bruising grain, on a charpoy (low bed or stretcher,) placed on a sloping green bank, along the top of which ran a small stream. A piece of bark introduced through the embankment conducted a slender spout of water, which fell, at the height of about half a foot, on the crown of the infant's head. It was fast asleep when I witnessed this process.—*Mundy's Sketches of India.*

ANECDOTES.

Dr. Thomas, chaplain to the British factory at Hamburgh, hearing that a Lutheran parson refused interment to a Calvinist, called on him to argue the point, but found the parson inflexible. At length the doctor gained by ridicule what he had failed to accomplish by force of reason. 'You remind me, said the doctor to the intolerant priest, of a circumstance which once happened to myself when I was curate of a church in Thames-street; I was burying a corpse, when a woman came and pulled me by the sleeve in the middle of service. 'Sir, sir, I want to speak to you.' 'Prythee,' said I, 'wait till I have done.' 'No, sir, I must speak to you immediately!' 'Why, then, what is the matter?' 'Why, sir, said she, you are burying a man who died of the small pox next my poor husband who never had it.' This story had the desired effect, and the curate permited the bones of the poor Calvinist to be laid in the Lutheran church yard.—*The Doctor, Vol.* 1.

Sir Bayle Roach had a servant who was as great an original as his master. Two days after the death of the baronet, this man waited upon

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a gentleman who had been a most intimate friend of Sir Bayle, for the purpose of telling him that the time at which the funeral was to have taken place had been changed.—'Sir,' said he, 'my master sends his compliments to you, and he won't be buried till to-morrow evening.'—*Ibid*

ANCIENT LEGISLATION.

In England, by the laws of Ina, about 688, if a slave work on a Sunday, by his lord's command, he shall be free, and his lord forfeit 30*s*.; if he work without his lord's testimony, he shall lose his *hide*.* If a freeman work on the Lord's Day, he shall lose his freedom.

EDINBURGH AND GLASGOW.

In the evening of the day when the passing of the Reform Bill was commemorated in Edinburgh, I perambulated the streets of that city for two or three hours. It seemed as if all the wynds, closes, nay, beds of sickness, had disgorged their tenants. Yet, throughout this incalculable mass of human beings, I did not witness a single symptom of disturbance, or hear an angry expression. In every countenance that we contemplate in Glasgow, we see *calculation*—in every feature some rule of arithmetic, (especially addition and multiplication) as legible as in the pages of Cocker. In Edinburgh, each physiognomy is characterised by the lineaments of either law, physics, metaphysics, or divinity In Glasgow, there is also mind in every face; but it is "*mind* the main chance."—*A Tour to the Hebrides.*

EPISTLE FROM A SLAVE LORD TO A COTTON LORD.

Alas, my friend! what a state of affairs!
How unjustly we both are despoil'd of our rights!
Not a pound of black flesh shall I leave to my heirs,
Nor must you any more work to death little whites.

But forced to submit to that general controller
Of king, lords, and cotton mills—public opinion;
No more shall you beat with a big billy roller,
Nor I with a cart whip assert my dominion.

Whereas, were we suffered to do as we please,
With our blacks and our whites, as of yore we were let,
We might range them alternate, like harpsicords keys,
And between us thump out a good piebald duet.

But this fun is all over;—farewell to the gest
Which Slavery now lends to each tea cup we sip,
Which makes still the cruellest coffee the best,
And that sugar the sweetest which smacks of the whip.

Farewell, too, the Factory's white pickaninnies,
Small, living machines, which, if flogg'd, do their tasks,
Mix so well with their namesakes, the billies and jennies,
That which have got souls in 'em nobody asks;

Little maids of the mill, who, themselves but ill fed,
Are oblig'd, 'mong their other benevolent cares,
To keep—"feeding the scribblers,"*—and better, 'tis said,
Than old Blackwood or Fraser have ever fed theirs.

All this is now o'er, and so dismal my loss is,
So hard 'tis to part from the smack of the thong,
That I mean (from pure love for the whipping process,)
To take to whipt syllabub all my life long.

* *i. e.* be severely whipped.

* One of the operations in cotton-mills usually performed by children.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

THE POPULAR LIBRARY.

The Popular Library is still running its tide of usefulness in Cape Town. Considerable additions have been made to the stock of books, and crowds of reading applicants resort to the large hall of the Commercial Exchange on the Monday Evenings in each week, with a zeal which is altogether indescribable.

THE SAVINGS' BANK.

This admirable foundation is progressing in its silent quiet course of doing good. It will be seen to be now more than ever important to a freed people. We recommend all Masters to urge their servants (hitherto held as Slaves,) to commemorate Dec. 1st, by deposits in the Savings' Bank—and to give them every encouragement to persevere in making them weekly. We feel persuaded that a little exertion on the part of the inhabitants, would very sensibly enlarge the fund of the Savings' Bank. We are acquainted with several instances of the immense benefit which this institution has already conferred on individual character. It has reformed drunkards—it has led to frugality and habits of industry—and it has taught *self-respect* to many a depositor. We know a lady who has a female servant that was incorrigibly idle, extravagant, careless, and vicious. She had been induced, however, by the perseverance of her mistress, to make periodical payments to the Savings' Bank. The amount, including interest, having been shewn by the book to be upwards of £10, the servant was astonished to find, that small savings had produced so much. She became prudent and thoughtful from the moment of this discovery, and she continues to hold out an example to others of faithful obedience and good character.

THE COUNTRY DISTRICTS.

Travellers and others describe the fine appearances of the crops in all quarters of the colony. Every where "the kindly fruits of the earth" are expected to present abundance to man and beast. And the Graham's Town Journal of the 6th, says—"Should his Excellency visit us at this season, he will see the country throughout this and the adjoining districts in the finest possible state, both as regards the luxuriance of vegetation, and the healthiness of the crops in general."

DECLINE OF INTEMPERANCE.

Having pursued some inquiries on this subject from the best sources of authority, we have great pleasure in finding that our own deductions were correct—Drunkeness has considerably decreased in Cape Town. The Temperance Society performed thus much of good—it stirred up men's minds on the subject of drunkenness it threw abroad many interesting facts on the evils of intoxication,—it set men to *think*. In the mean time, other institutions sprang up in Town, which, perhaps, enlarged these degrees of good. If we aid as much as we can in disseminating a taste for intellectual pleasures of a pure kind, then the taste for rude and tipsy sociality cannot fail to decline. Amusement, be it observed, *will* be had: the great object is to ensure that it be of a harmless, or if possible, of an useful kind. The calm satisfaction which *Books* afford, has a tendency to deaden the sensitive appetites for gross pleasures.

STELLENBOSCH.

We are glad to find, that a Popular Library has been established at Stellenbosch, and that the supplies of Books are numerous, and of the best character.

BEDSTEADS AND BUGS.

A Correspondent complains, "that many of the houses in Cape Town are greatly infested with *bugs*, and solicits

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

information as to the best preventive measures for their destruction."

We suggest the general use of iron bed-frames, especially in those houses or cellars in which a great number of persons dwell together. Excellent iron bed-frames are manufactured in London at 25*s.* and 30*s.* each.

BULLS AND EPICURES.

FROM the great size of the Bull, the word in reference to the animal, when formed into a comparative composition, means of larger bulk than usual; as bull-rush, bull-head, bull-trout, bull-finch, bull-frog, bull-weed, bull-wark, &c.; so in Greek, *boopis*, from its circular shape, a round central spot in the target of archers, and a small aperture, covered with glass, in the deck of a ship, for the admission of light below, are called the bull's-eye. Bull-baiting and cock-fighting were the sports of darker ages—hence any tedious or confused relation is still called a cock and a bull story. A bull or blunder is said to have originated in the simplicity of a countrymen, who took a pail to milk the bull.

It has been jocularly remarked, that the clown in every country is nicknamed from the favourite dish of the people; as the Englishman, *Jack Pudding* and *John Bull;* the Frenchman, *Jean Pottage;* the Italian, *Macaroni;* the German, *Hans Sausage;* and the Dutchman, *Pickle Herring*. The Welshman, in his pride of genealogy, and his love of *Cheese*, traces the cow to the line of Adam:—

"Cheese was akin to Adam from hur birth;
Ap curds, ap milk, ap cow, ap grass, ap earth."

Our Dutch Africander may be termed *Jan Snoek*, from his extreme fondness for *Snoek*, a queer kind of fish, which is connected with Table Bay. It is curious enough—the introduction of this *unscaly* animal into our dietetic system. The Capenaars, have always attempted to justify the holding human flesh in bondage by appeals to Scripture, at the same time, they seem to shut their eyes against that statue which expressly condemns *Snoek*-feeding.

"All that have not fins and scales in the sea and in the rivers, of all that move on the waters, and of any living thing which is in the waters, they shall be even an abomination unto you; ye shall not eat their flesh, but ye shall have their carcases in abomination."—Lev. xi. v. 10. 11.

GOOD HOME-BREWED,—AND CALLS FOR GRATITUDE.

Mr. Cobbett, in a recent number of his Register, concentrates a great deal of wisdom in a line or two, when he says—"They may talk of the spirit of the age as long as they like; but the spirit of this age in England is, what is meant in all other ages—an appetite for plenty of bread and meat, and a thirst for *good beer*."

We give our unqualified assent to the truth of this proposition. Beef is beneficial in a moral and intellectual point of view. Good beer also is irreproachable in itself, and engendereth much active thought. We speak from experience. And as our worthy English episcopal clergy invariably proclaim of their establishment—"Our excellent Church," we think it would be an affectation of modesty to deny similar encomium to our own *excellent* Journal. But let us be grateful and tell the truth. Reader! do you demand how it is that our Journal has become so vigorous and *excellent* of late? We honestly tell you, that it is all entirely owing to Mr. Collison's excellent home-brew of malt and hops. And wishing well, as we heartily do, to those influential organs of the public mind—the *digestive organs*, we do most sincerely recommend all His Majesty's lieges to take into use Mr. Collison's wholesome beverage of real malt and hops. We cannot help it, that Mr. C. is a monopolist. He carried away the prize gold medal for the best wine, and the prize silver cup for the best brandy, and now he *walks over the course* in his approach towards the prize for the best beer. Well, really the natives of this colony ought to be exceedingly thankful to the English, for the many *good things* the "noble Britons" have done for them. Bread, we know, is the staff of life; and only in 1806, the poor Cape people had no bread to eat,* and even water was a costly provision. As for beef, it was out of the question—who ever saw a good bullock, or a part of one, in steaks, aitch-bone, round, or rump, in 1806? And good shoes and stockings, spoons, knives and forks, plates and dishes, and other important utensils, were as rare as salt in Western Africa, or a Queen Ann's farthing in old England. Then, again, our wines having been made drinkable by the English, became a staple article of British colonial trade. And as for fuel, and the delights of the *ingle-side*, the family circle around it—"the fairy ring of bliss." Who created our fire-side delights? The English with their *coal*-trade—thus superseding the old Dutch custom of disrobing the hills of their foliage, and the vallies of their verdure. But we might go on enumerating in this way, *ad infinitum*, besides we have strangely digressed; our subject was—"O good ale, thou art my darling."

* General Janssen's Despatch.

GREAT BRITAIN.

LET us take a glance homewards. The latest papers are cheering as regards the Harvest—of unprecedented plenty. London and the cities of the Empire are rising in grandeur,—*above all Greek, above all Roman fame*. The public voice is becoming tranquil, and trade and commerce looking up. As to money, there seems to be no lack. England is lending to all the world. Hence, her foreign loans to Austria, Russia, Spain, Portugal, Holland, Belgium, Brazils, Peru, Denmark, Naples, Greece, Columbia, &c. amounting to upwards of Fifty-six Millions of Sterling money, (£56,694,571.) And her imperishable acts were never more conspicuous than during the months of July, August, and beginning of September. She is determined that the whole of her colonial subjects ransomed from slavery, shall be educated. Important plans are in progress for this object by His Majesty's Government, to carry into effect the Resolutions of Parliament. But the colour of this education, and the whole tone of mind and character to be given to the enfranchised population, will depend in a great degree, upon the voluntary agency of the PEOPLE OF ENGLAND. Nor do they appear to shrink from the task. The Society for Promoting Christian Knowledge, the Bible Society, the Tract Society, the British and Foreign School Society, the London Missionary Society, the Wesleyans, the Baptists, the Moravians, have held extraordinary meetings, and devised liberal things—true Scriptural liberality.—"Good measure, pressed down, and running over." What can we do for this great cause at the Cape of Good Hope?

Printed and published by W. BRIDEHIRK, at the Gazette Office, No 2, Church-street.

LITERATURE, CRITICISM, SCIENCE,

AND THE ADVANCEMENT OF USEFUL KNOWLEDGE.

No. 12. Vol. IV.] CAPE TOWN: DECEMBER, 1834. PRICE, { 20 *Shillings* per *Annum*.

THE COLONY OF THE CAPE OF GOOD HOPE.

1. *European Colonies in various parts of the World, viewed in their social, moral, and physical Conditions, &c. By* John Howison, &c. &c. London: 1834.
2. *African Sketches. By* Thomas Pringle. London: 1834.
3. *Advantages of Emigration to Algoa Bay and Albany, South Africa. By* Thomas Phillips. London: 1834.

Mr. Pringle's Work has been so well received by the public, and has been so pleasingly analyzed by the periodical press, particularly in Tait's Magazine, that there remains nothing for us but to register the gratification we have derived from its perusal, and to recommend it, right warmly, to the attention of those who may be pleased to value our judgment in such matters: to such we would briefly say, that we seldom remember to have felt more deeply interested in the most artfully constructed narrative of fictitious adventures, than in this touching and simple history of the unpretending household virtues. The excellent people of Glen Lynden were crushed to the earth in their native land, by the necessary and uncontrollable consequences of the wretched misgovernment of the Boroughmongers: the pressure of evils which they could not have foreseen, and which came at once upon their humble resources, overwhelmingly and destroying, left them no remedy but flight: "The flowers of the forest were 'a weed awa;'" but happily they obtained by flight, as here described, an honorable, peaceful, and sufficient provision in another hemisphere. Sad was their parting from pleasant Tividale, and hard were their toils, their privations, and even *their persecutions*, ere their humble homes became familiar to their feelings; but that period of trial and sorrow is now over; they have transplanted Scottish hearts and Scottish names, and have created in Glen Lynden, an interest which is hallowed by all the dearest recollections of youth, and the most blessed enjoyment of declining age, the virtuous happiness of "dwelling among one's own people." To the venerable patriarch of Glen Lynden, and his family, we would say, in the language of Shakespear,—

The benediction of these covering heavens
Fall on your heads like dew, for ye are worthy.

Mr. Howison has appeared before the public with some success, and his present work has not been ill received; his later productions are, however, exceedingly inferior to the first, on which his reputation is founded; and if the report be true which assigns to him the authorship of Makanna, we must insist that it is a lamentable failure. In examining the book before us, we shall confine our observations to the four chapters on South Africa, and shall compare them with the more practical and more valuable, though less ostentatious work of Mr. Phillips; there can be little dispute as to which of these authors deserves most of our consideration, since their opposite characters may be ascertained at a glance. Mr. Phillips is no casual observer, nor accidental visitor; he has planted himself and family on the spot, and embarked his all in the new country of his adoption; and if prejudice should be supposed to warp his judgment, the simple admission that such a prejudice exists, proves that there must be some ground for the existence of such a feeling: an intense attachment is seldom cherished for a worthless object; in plain sober truth, we do not require a prophet to rise from his sepulchre to inform us, that the hastily formed and crude opinions of an imaginative and somewhat visionary author, whose South African novel Makanna, so unquestionably betrays incompetence to write on South African localities an character, are not to be weighed against the deliberate and cautious deductions which Mr. Phillips has made from facts which have passed, or are passing, under his personal observation.

We would on no account allow it to be supposed, that we charge Mr. Howison with hostility to the best interests of his countrymen in Albany: cold and hard must that heart be, which could read the affecting history of the first sabbath in Glen Lynden, without a thrill of generous sympathy; or admit a thought that even tended towards ill-will to their humble and virtuous community. Howison, we know, is not such; and we must give our dissent from the errors into which he has fallen, with every expression of personal respect for the man, though we so widely differ from the author.

The points on which we are at issue are,—his unqualified declaration of the unredeemable sterility of the country; his denouncement of the missionary labours; and his almost admitted approbation of slavery: on some minor points we shall differ guardedly; but on these heads we are at utter and irreconcilable variance, and shall deliver our condemnation as undisguisedly as he has advanced his opinions.

'The object of this work,' says Dr. Howison, 'is to communicate a vivid and accurate idea of those general impressions, which a visit to the respective colonies comprehended in it, is calculated to produce in the mind of a disinterested observer. All political, commercial, and statistical details have been avoided, and nature and human life, conjoined with a few historical notices, are the subjects to which the author has exclusively devoted his pages.'—Preface. We shall shortly show how far we consider Mr. Howison to have redeemed his pledge of accuracy, and why we regard the omission of "political, commercial, and statistical details," to be positive evils: "nature and human life," are fine words, but ideas, and matter, and not mere words, are the grand desiderata now sought for in a work of two volumes, and 900 pages large octavo, on European Colonies; poetry, whether in rhyme or not, requires one talent; and, to take sound philosophical views of men and things, another: Mr Howison's forte is in the former; he should have confined himself to the Cape Town small-talk, and in small octavo, as a second series of his travelling recreations, if he meant only to skim the surface of his subject; his attempt to go deeper, has only proved his unfitness for the task, and we recommend him to leave the depths of all science, whether physical or moral, to sounder

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and clearer heads, or at least, to more industrious and keener-sighted investigators, than he has proved himself. The four chapters on the South African Colony, are upon the ocean, the general physical character, the aborigines, and the European Society; we shall examine them in that order after first premising, that if the author had pruned down his two bulky volumes into one, by the unrelenting erasure of all his most favorite specimens of fancied fine writing, he would have found his work, like the Sibyls, improved in value by the reduction of quantity.

In the first chapter we are told, that there is as much physical difficulty in navigating the South Seas, as formerly; and that the facilities of modern navigation, arise out of an improved naval architecture, and naval skill,—the marine climate remaining unaltered; that "the general aspect of the South African ocean is monotonous and unpleasing,"—that "continual turbulence is unfavorable to the developement of animal and vegetable life,"—that "few parts of the ocean are more solitary and less serene,"—and that "though situated in the neighbourhood of the tropics, they enjoy little of that tranquillity and productiveness, which they might be expected to derive from their proximity to the sun." To all which we shall reply, that a naval officer, who had commanded a cruizer for years, on both stations, and who spoke from personal experience, assured us, that the roughest weather he had ever known off the Cape at any season, and he had seen the worst, was not more trying, than average winter off the west coast of Ireland; that the banks of Newfoundland excepted, there are no seas whose waters are more prolific of fish, or more covered with birds.

Three pages are dedicated to prove, that the ancients never circumnavigated Africa; this should have been omitted altogether, or better handled. Mr Howison says, that the question is undecided, and that "in the opinion of some, the Phœnicians, and of others, the Carthagians," had performed the voyage; and that "it is *insisted* that *notices* of such voyages are to be found in the works of *various* ancient authors." Has this professional man of letters!—this author of seven or eight volumes! never heard of the fourth book of Herodotus? is he literally unaware of the existence of that memorable passage, in which the father of history gives a circumstantial relation of the voyage that was performed from the red sea round Africa? the passage, we admit, has been disputed; but we gather from the work before us, that Mr. Howison is ignorant of its existence: as respects the historical truth and authenticity of the narrative, we shall unhesitatingly declare our firm belief in it. The first edition of Herodotus was printed twenty-three years before the voyage of De Gama, consequently, existed in its present form, before the modern knowledge was acquired, which could have enabled any one to forge and interpolate so extraordinary an assertion; further, the narrative is so peremptory, yet withal, so entirely dependant upon the context, that being discussed singly, without examining the whole, it is liable to be misunderstood, from its proceeding too much upon supposed knowledge in the reader: this being kept in view, let us examine it: Herodotus is giving a geographical sketch of the three grand divisions of the globe, and coming to Africa, says, "Lybya shows itself surrounded by the ocean, except in the very narrow space when it joins Asia in Egypt." How was this to be known, except by circumnavigation? the occasion of the circumnavigation is then stated: Necho, who had been employed for many years in endeavouring to dig a ship canal from the Nile to the Red Sea, and had desisted at the command of an oracle; that is to say, because his means were unequal to accomplish it, endeavoured to ascertain if he could not get his ships from the Red Sea to the Nile by another route, and sent a fleet of *large* ships, *ploioisi*, manned by Phœnicians, commanding them that they should sail on until they returned to Egypt, betwixt the pillars of Hercules, and by the Mediterranean Sea. The Phœnicians thereon departed from the Red Sea, and proceeded through the southern ocean,—and here follows a singular assertion, which, from not being *carefully read*, has thrown a shade of doubt on the narrative. Herodotus states, that when *autumn came on*, the navigators secured their ships on shore, "*in the usual place where traders to Africa were wont to winter;*" *sowed grain*, reaped a harvest, and proceeded; and having consumed two years, turned the pillars of Hercules in the third year, and returned to Egypt. The sowing grain and reaping a harvest, has been ridiculed; but this, on examination, will prove the truth of the narrative,—and a good deal more: it has nearly told us how far the African traders had extended their voyages down the coast. The points overlooked by the learned commentators, are, the declaration that *the navigators wintered and sowed grain precisely in the same manner as African traders were wont to do.—Hina hecastote tes Libyes pleontes genoiato:* this was natural enough—but where is the country, except somewhere near the 30th degree south, somewhere, in fact, about Cape Natal, where they would winter from the sea, and yet have seed time and harvest on the shore; where the westerly winds would forbid navigation beyond Algoa Bay, and yet the climate permit agricultural labour; where the natives were incapable of supplying navigators with grain; but where, as was found on the west coast by the voyagers from the Mediterranean, it may be supposed, they had abundance of cattle; finally, where, at the period of reaping, the adverse winds would cease, and the south east winds commence, which would carry them round the Cape, and almost into those regions of the west coast of Africa, which it is ascertained were well known to their countrymen:—let us suppose the haven, where the navigators wintered, to be at the point where the north-west and south east winds are periodical, which it is reasonable to suppose must have been the case, and all difficulty ceases. Herodotus, however, was not satisfied; he remarks, that the navigators on their return, stated, that as they "*circumnavigated* Africa, they had the sun on their right hand," which, says he, "I cannot bring myself to believe, though probably, it may not appear improbable to others." Vincent, in his Periplus of the Erythræan sea, objects to this, that only a very short period of their voyage, a *mere point*,—the rounding of the Cape in fact, and that, as if it were the sharp end of a wedge, would present the sun on the right hand: but it will be seen that the base of Africa is not such a mere point on the map; and secondly, it may be supposed from the word *circumnavigate* being used, that it applied solely to that part of the voyage which lay betwixt what was known on the east coast, to the first ascertained part on the west; during all which period they would unquestionably have had the sun in a position, which the inhabitants of the north might easily have considered unnatural, and refused credit to the description. To proceed: upon the successful issue of this voyage, another was attempted to sail from the pillars of Hercules, and return by the Red Sea. A different character is given to the second voyage—it was a punishment to a disgraced court minion; and not, as the first, a subject of royal anxiety. The navigators proceeded beyond Gibralter, turned the promontory of Africa, named Soloes, and advanced to the south; and after many months immense labour, through many seas, they returned to Egypt, and stated, that in the extreme point to which they had reached, they found the natives a diminutive race of men, clothed with palm leaves, who left the sea coast and their villages on the approach of these strangers, and fled, abandoning their cattle, which the voyagers used discreetly, as they needed them, without injuring the people: and, moreover, they stated as their reason for not going further, that they could not; their ships would not move further, but were held. Let us examine any hydrographical work, and we see that these bold navigators must, in fact, have attained the limit of coast navigation; for that, at the 14th or 15th south degree, the wind is perpetually south-east, and the current sets north, and is cumbered by sea weeds; whilst the coast from thence to Saldanha Bay, has no shelter and no watering place. Nature verifies the truth of the history: the facts could not have been invented; the parties who stated them must have witnessed what they narrated: their ships would not proceed further—they were held—the wind and current were unchangeably against them.

The arguments against the fact, founded on the supposed difficulties, and the absence of any important result, indicate only a limited knowledge. The connection betwixt Sabæa and the land of cinnamon, must have been antecedent to the foundation of Sidon; and that establishes, beyond controversy, the existence of a greater degree of naval skill, at the period in question, viz. 600 years before Christ, than would be required for the performance of a coasting voyage round Africa: and as for the want of a defined result, the voyage along the western coast from 5 south to the River Gambia, must have been one of such incessant labour at the oar, as could have offered no temptation to repeat the passage round the Cape. But those who dwell so much on the want of result from the discovery, seem unaware, that even when Gama had visited India by the Cape route, the idea, which for many years was most indulged by the Portugueze, was to dislodge the Venetians from Egypt. The history of Venice at that period, which was in all other respects so fatal to the republic, will prove, that no such momentous result was anticipated: their memorable treaty with the Mamelukes, and their arrangements to defend the desert against the Portugueze, who were expected to advance from the Red Sea, are singular facts not sufficiently remembered: nor is it kept in view, as it ought to be, by the historians of Indian trade, that until Sultan Selim conquered Egypt in 1512, and commenced a severe system of taxation on the commerce of the Venetians, the full importance of the discovery of De Gama was not ascertained; and that its decisive results came progressively into operation, as Mahomedan avarice increased, and naval skill improved.

Long sea navigation was then in that position which steam navigation now holds: the ships were equal to the long voyage, but could not stow both provisions and cargo; had the grand event of turning the chief trade of the world into a new channel, been expected beforehand, or had it been supposed to have commenced, we may safely conjecture that the Cape would not have been left neglected for 160 years, nor allowed to fall as a casual waif to the Dutch republic.

One word respecting Ethiopia, for our author is, here at least, a little learned: he quotes the passage from Diodorus Siculus, that a "vessel could sail in ten days from Alexandria, up the Nile, into Ethiopia;" the frontier of Ethiopia commenced below the first cataract, or at Syene, which is six miles from it, and was in ancient times below the Tropic; but though Essouan is now 24° 8' 6" north, the difference can be explained by astronomy, and requires no observation here; the remark we would make is simply this, that Syene, or the Tropic, being the frontier of western Ethiopia, there being also an eastern Ethiopia, whose natives had slender forms and silken long hair, as well as the western, inhabited by curly-haired negroes, it goes far to show us the derivation of the word Aithiopeia, which in Sanscrit means "Land of the Sun," or "torrid zone;" and our tracing Sanscrit in such ancient nomenclature, goes a long way to prove that knowledge did not begin in Egypt, and that the communication betwixt

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Egypt and India, may be traced to a period beyond record.

We have not quite done with the subject:—our passing allusion to the well of Syene, which when dug, was under the Tropic, but is now 40' 25" north, was also intended to remind the reader, that it is not impossible but that, judging from the very accurate knowledge in astronomy possessed by the ancients, they may have possessed an infinitely greater degree of nautical enterprize and skill than we are inclined to allow them. Mr. Howison, at page 10, vol. 2, has mentioned the Hindoo knowledge of astronomy, extending to a period which is proved by modern observations, and by the most accurate arithmetic, to have occurred Feb. 18th, 3102 before Christ, or 754 years before the Flood, by our estimate; this gives 254 years of greater antiquity than the Egyptian calculation; there is nothing heterodoxical in this; we may admit the world a thousand years older without any blasphemy: the catholic church, apparently for the sake of round numbers, fixed the creation, arbitrarily, at 4000 before Christ; and the deluge at 2348: but as a proof of their infallibility! having fixed the miraculous birth inaccurately, as compared to an event in the reign of Augustus, they were obliged, subsequently, to add 4 years; but the Samaritan Pentateuch dates the creation 4700; the Septuagint 5872; the Talmud 5344; Hales calculates, and allows for all, and fixes a medium of 5411; the modern Jews count only 3761; and the modern Greek church 5508; with such variations of good ecclesiastical authorities, a man need not be burnt for a heretic who calculates astronomical periods, and grounds an argument in history on the procession of the Perihelion.

To conclude our observations on this chapter, we will merely say, that it ends with some *fine writing* about the southern cross and the stars, which we recommend, as specimens of the sublime and beautiful, to the astronomical juveniles in the South African College! or in the several excellent establishments for young ladies in Cape Town; the whole as it stands may do for them; but what are we to think of this startling declaration? had they, the Phœnicians and Carthaginians, ever sailed beyond the Straits of Gibralter, *and reached even the Tropic of Cancer*, the new appearance presented by the heavens must have strongly excited their attention, and been regarded as the most important and interesting record of their voyage." His quotation from Diodorus Siculus, shows that he knew, or at least that he could transcribe a passage, proving that the ancients *could reach* the Tropic of Cancer: but it is clear that he is totally ignorant on the subject of ancient navigation. The exact position of the ports on the east coast of Africa resorted to by the African traders, alluded to by Herodotus, lies of course in doubt; but that the trade existed, that the coast was frequented, and that Rhaptum, the southern ascertained port, lay about 10° south, and Prasum somewhere beyond it, but not ascertained, though laid down by Ptolemy at 15°, and by Marinus at 23°, are as well known and as well proved facts in ancient history, and ancient geography, as have come to our knowledge; and the singular ignorance of our author on such commonplace matter, suggests that he had better have confined his observations to "nature and human life" singly, and not "conjoined with a few *historical* notices."

The second chapter begins with the assertion that neither Diaz, nor De Gama, nor Cabral, nor many of their successors, could have entered Table Bay; and that Saldanha Bay was, more likely, the first resort of the early voyagers; for in most of the old charts of South Africa it is called Table Bay,—from whence we may suppose that it was frequented under that name, till Van Riebeek *landed in Table Bay in* 1650, *and discovered* and pointed out its general superiority." In comparing this with Van Riebeek's journal, we find that he landed the first party of colonists April 6th and 7th, 1652; that having employed the first five months in housing themselves, and fortifying their position, they began in September to survey the country, and Van Riebeek having *walked* 4½ *miles from the fort*, to examine the forests behind Table Mountain, found abundance of excellent and large timber, with the dates 1604, 1620, and 1624 cut upon the trees, indicating the prior visits of Europeans: also, that on the 24th Sept. the same year, it was resolved in council to send a yacht on *a voyage of discovery to Saldanha and St. Helena Bays*, that their "information respecting those places, and the coast, might be increased; and that they might judge what could be done in more distant parts for the service of the company." This looks very much as if the facts were the very reverse of the author's assumption, without laying too much stress on the record in Van Riebeek's journal, that the English took some Dutch sailors, who had been left there as a punishment, from Robben Island, and conveyed them to Europe in 1642; and the still more striking fact, that Van Riebeek's interpreter, a Hottentot, was only capable of communicating betwixt the Dutch and his countrymen, from his understanding *English*. Again,—let us compare Van Riebeek's account of these venerable woods,—which bore their legend of half a century, and which, in another place, are described to be "as fine woods as *could be found in the world!* the trees being as long, thick, and straight as *could be wished!*" with the following "historical notice" at page 194. "All the trees above enumerated have been imported by the Dutch, who, on taking possession of the Cape, found that it produced no plant or vegetable worthy of cultivation, *or of any use to civilized man*, unless the aloe and the mimosa should be considered an exception." The whole context is to this purpose; and from the naked assertion, at page 189, that "South Africa seems to be a worn-out and emaciated country," to the winding up, at page 225, that "the traveller sees decay and desolation on every side," and must "consider the country doomed *for ever* to form a blank spot in the inhabited world,"—the whole purport of the essay is to convince the reader that the colony is, and ever has been, cursed with the bitter blight of unreclaimable barrenness.

In this spirit we are told, p. 196, that "the extreme part of the peninsula of South Africa, is separated from the rest of the country by a chain of mountains," that "several of the first Dutch Governors were of opinion, that the settlement should be confined to the territory in question; *for their judgment was sound enough* to enable them to perceive, that the Cape of Good Hope would never be of *any value* to Holland, or to any other nation, except as a place of refreshment for ships engaged in the Indian or China trade; as has *since been fully verified*. And it would be well for Great Britain, were the colony concentrated upon the extremity of South Africa, instead of being scattered over many thousand square miles, as it is at present. In the former case, indeed, the population would necessarily be very small, from the narrowness of the territory assigned to it. But of what *use* to the parent country is a large population in South Africa? on the contrary, it *is injurious:* because it entails upon her the inconvenience and expense of supporting a great military, civil, and judicial establishment, which the trade of the colony is too inconsiderable and unimportant to re-pay."

It is somewhat amusing, that the author refutes himself in the same paragraph: "none of the Dutch," says he, "ventured to settle beyond the mountains for a considerable time, but *population encreasing*, the emigrants at length, *found it necessary to extend themselves* into the back country:" what becomes of the 'sound judgment' of the early Dutch Governors? are we to sigh over the single imperfection of their enlightened colonial policy, and lament that infanticide was not resorted to, in order to confine the "small population" in its narrow territory?"

Now let us compare the productiveness of this "worn out and emaciated country," this land "of decay and desolation, doomed *for ever* to form a blank spot in the inhabited world," with happier countries. Mr. Phillips says, p. 23, that the general rate of the market at Algoa Bay is—beef, 1d. per pound; mutton, 1½d.; bread, 1½d.; wine, 2s. 3d.; and brandy, 1s. 9d. per gallon,—retail: cows, £1; sheep 2s. each. We, who are on the spot, know that this is true, and hope that the British public will not deny credence to the descriptions of Pringle—Phillips—Kay—and Thompson, whom it is useless to quote in direct opposition to Howison, since common sense must show, that a country cannot be a desert so utterly to be abhorred, when all the agricultural produce is to be found of the first quality, in boundless abundance, and at the lowest prices.

As respects the "concentration of the colony upon the extremity of South Africa," independant of the simple fact of "*population encreasing*," and the "emigrants finding it *necessary* to spread," would agricultural produce be raised in such 'narrow territory,' in sufficient abundance to supply the market, at such moderate prices? The declaration, respecting expense to the parent state, is answered by a reference to facts; if the Tory Government were pleased to consider the colonies as milch kine to suckle their Honorable Misters, the husbands of their Ladies Augusta, &c. or their other humble dependants, the colonies are not to be cursed for evils which they have felt, in a ten-fold proportion, beyond even what the parent state, which inflicted the evil, could possibly be supposed to suffer. If the Cape be worth preserving at all, a garrison must be maintained to defend the military post, depôt, and naval station: this forms a charge for which the colony is in no respect answerable; and cannot in justice be called upon to defray, but, as respects the civil and judicial establishments of this colony, being beyond its means to repay, the assertion is more correct in theory, than in application: the colonial revenue of about £140,000, meets an expenditure of about the same amount, and England will shortly have no cause of complaint against the Cape as a state burthen. But Mr. Advocate De Wet, at a public meeting, has denounced the local establishments, disbursed by the colony, as unnecessarily large and overpaid; and their needs little examination of the localities and resources of this worn-out and emaciated country," to agree in this patriotic opinion: this does not, however, belong to the present discussion, further, than to remark, that it shows how small an amount of accurate local information appears to be considered sufficient for the noble art of book-making. Is there really, no advantage to England from a large population in South Africa? It is calculated, that upwards of three hundred sail of shipping, touch here annually, for refreshments and repairs, occasioning an expenditure of about £75,000 per annum. The insalubrity of the Indian climate, occasions a great resort of invalids from thence, to seek convalescence in this delightful climate; and these, being generally possessed of liberal official incomes, are calculated to spend among them, £50,000 per annum. The three regiments, and artillery, and engineers of the garrison; the ordnance and naval depôts, with the Government expenditure for the fleet and troops, may average beyond £150,000 per annum. Here, then, we have a regular circulation of no less a sum than near £300,000 per annum; which alone, without reference to the exported colonial productions, aloes, hides, horns, ivory, wines, besides stock of every kind to Mauritius and St. Helena, and the hope of wool, would assuredly suffice to maintain, in comfortable

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

abundance, a really large population; whilst, without anticipating the increase and improvement which may be looked for of all colonial productions, their present amount alone would easily support quadruple the present population, whose wants would occasion no injurious! import of British manufactures into the colony; and are these advantages of civilization planted, and intercourse with Europe increased, to be recklessly rejected, because a cynic who refutes himself in the same sentence where he ventures the assertion, is pleased to pronounce that the country is "doomed for ever to form a blank spot in the habitable world?" The incalculable importance of India, and the hourly increasing value of Australia, render the Cape indispensible to the British shipping and colonial interest: and, when the eastern trade increases upon the extinction of the monopoly, and as Australia doubles its population, its productions, and its commerce,—so must this commanding position become more important, more wealthy, and more populous: nor should any thing be omitted, which can honestly be effected, to secure the whole coast, from the Orange River on the western coast, to Delagoa Bay on the east: this, which could easily be acomplished as a precautionary measure now, may be a task of almost insuperable difficulty, when it is found indispensibly necessary.

To conclude this part of the subject, we must make a brief allusion to the author's commendation of the camel. "Nine thousand pounds' weight," says he, "is considered a full load for twelve oxen, exclusive of the wagon which contains it; and with this they cannot travel for a continuance more than 18 miles a day. A *moderate sized* camel will carry a weight of *eight or nine hundred pounds with ease, and travel thirty miles a day*," page 223. If Mr. Howison ever saw a camel capable of performing the above, he should have noted the fact on his personal authority: the largest and best camel which the writer of this ever saw, and he has some experience, was considered to be overloaded with two six dozen boxes of wine, which may be estimated short of 500 pounds; and instead of travelling 30 miles a day with such a load, would have broken down if urged to go half the distance, daily, for a week. The Indian maximum for loading cattle, is under 150 pounds for a bullock—three bullock loads for a camel, and three camel loads for an elephant; but no one thinks of stages of thirty miles a day for loaded cattle, nor ventures to proceed even 15 miles a day, for any distance, without the most guarded attention to the forage and lading: the artillery park bullocks, on a march, carry only six eighteen pound shot; and it is considered severe marching to go over 150 miles in ten days. The camel is valuable only in his native Arabia, where no other beast could exist; in a stony, hilly, or rainy country, it would be useless: the idea of suggesting the introduction of camels, as an *improvement*, into a country, where twelve oxen can drag nine thousand pounds weight of lading, independant of the wagon, at the rate of eighteen miles a day, is absurd! and the retrograde step in civilization, which it implicates, of giving up wheel carriages to return to pack cattle! could only be expected from savages.

The third chapter, upon the aborigines of the colony, states, that "None of the earlier writers on the Cape, attempt to give us any idea of the amount of the Hottentot population there, when the Dutch first civilized; but judging from the number of kraals, and chief of kraals, described, or alluded to in their journals, we may reasonably suppose that it was very considerable." It may be asked, how *a region consisting of unwatered deserts like South Africa*, could support a large population of any kind? But it is very certain, that the character of the country in that respect, has changed much for the worse within the last century, and that it still continues to do so." Further, that "there is little difficulty in believing that their country once *abounded* with *large* communities of people," page 234. There can only be one way of explaining this physical change, if the fact be undisputed, and that is, by supposing a great destruction of trees and bushes for firewood to have denuded the country, and by encreasing evaporation, to have dried the sources of the small springs. We have seen from Van Riebeek's journal, that ancient forests existed where no natural timber is now to be seen, and we may safely conjecture, that the indiscreet destruction of native woods, and even brush-wood and heather, may have operated powerfully on the state of the atmosphere. The 29th Letter, 2d part of White's Natural History of Selburn, is well worthy the attention of the colonists; as well as Mr. Bowie's excellent paper in the South African Journal, page 160, vol. 1829—30. The advantages to be derived form plantations are there so well described, that nothing need be said here. A tree is so beautiful an object, and groves, or avenues, form such delightful ornaments to country residences, that, independant of the view to profit from timber and fire-wood, and the improvement of the soil by the fall of leaves, the mere gratification of the eye, should be supposed sufficient reward to repay the very trifling outlay incurred by the most liberal plantation. The salutary effect of cooling and moistening the air, and feeding springs, might be attained, though in a minor degree, by orchards of fruit, as well as forests of timber; and there seems no limit to the growth of the orange, peach, apricot, plum, pear, and apple in this colony, but the mere wish to possess them.

The Horticultural Society of the Cape, and such generous public spirited and liberal patriots, as the excellent Baron Von Ludwig, should impress on the colonists the important advantage, and almost indispensible necessity, for planting on a large scale, not only orchards, but woods, round their country residences: even the bare sites near Cape Town and the Cape Flats, might produce, at least, an abundance of fire-wood, to the great improvement of the soil, as well as immediate benefit to the planter: nor is this a subject beneath the notice of government; but how that notice should operate, it does not lie in our province to discuss.

We shall now proceed to the second head; the disapprobation our author expresses of the missionary labours: on this point we are so utterly at issue, that we should be disposed to carry our reply to some length: but as our pages are not likely to meet the eye of the generality of those, who may probably form the majority of Mr. Howison's readers, we shall endeavour to refute him from his own data, and leave the rest to the good sense of the public.

Our first observation must be on the facetious, epigramatic effort at page 308, that "the Dutch took possession of the Cape of Good Hope, by the same authority that has served other European nations in similar cases, viz: the power and the inclination to form a settlement. However there are *two points* in the proceedings of the Hollanders which we *cannot but admire*. They neither asked the *Pope to give* them South Africa, nor did they assure its natives that their *sole object* in coming among them, was *to instruct them in religion*." If this be meant for wit, it is a very silly effort; if for an historical fact, it is not a faithful narrative The Hollanders did not ask the Pope, because, with Queen Elizabeth's assistance, they had shaken off the Papal yoke some seventy years before; and though they certainly did not declare, that the religious instruction of the natives, was their *sole object*, yet Mr. Howison would have spared us his sarcasm, had he known, that the *avowed* objects of the Dutch in forming the 'fort and garden,' were not only that their ships might "refresh and be enable to pass St. Helena," but that "*the children of the natives might be educated in the christian faith;* and, should the Almighty grant his blessing, *many souls might be brought to a knowledge of religion*, and saved to God; therefore, the formation of the said fort and garden, will not only tend to the advantage of the Company, *but what is of more consequence*, may also be the means of *preserving many souls* to the praise of God's most holy name, and to *the propagation of his holy gospel*." Whilst, to show that Van Riebeek was in no respect superior to the Spaniards in South America; the first page of his journal contains a beautiful prayer, in which he tells his Maker, that he, and his fellow colonists, assemble in Council, "to advise, and take such measures, as might best tend to promote the interests of the General Chartered East India Company; to maintain justice; and if possible, *to plant and propagate the true reformed christian doctrine, amongst these wild and savage people*." Had Mr. Howison reserved his sneers, and discharged his indignation on such missionaries as these, who landed with religion on their lips and pistols in their girdles, and who, not only plundered the inoffensive aborigines of their vast herds, but kidnapt as many of these wild and savage people themselves, as they could seize, and transported them for slaves to their eastern colonies, he would have shown more sense, and some accuracy.

The above is, however, trifling compared with the following, page 306:—"I am aware that many persons, who coutribute largely to the support of missionary associations, will condemn my opinions on this subject; considering it a *matter of indifference, how poor, destitute, and miserable the christian converts may be*, provided they are able *to crawl to church* two or three times a week, and to repeat a few psalms and prayers; but, unfortunately, the Hottentots and Boschmen have little taste for *a system of spirituality;* and the sight of cultivated lands, and of abundance of cattle, would do more in *alluring them to adopt* a settled mode of life, than super-human eloquence, or even the performance of miracles on the part of their instructors." How is a farrago like this, intruded into a book which commences with a flourish about "nature and human life," and a boast of "being accurate as well as vivid," to be applied to?

Fortunately, the context conveys its own refutation: the station of Gnadendal is described: therefore, without appealing to friendly witnesses, let us content ourselves with Mr. Howison's very guarded description of the benefit it has conferred, and is conferring, on the colony generally, and more particularly, upon the poor outcasts of its abject population; true, some of the missionary stations have been injudiciously located, and have not prospered; but is the history of political, military, and commercial enterprize, so perfectly free from similar failures, as to occasion any great surprise at the occurrence of so ordinary an event? Under any circumstances, each individual experiment is not a very expensive, nor, except of the poor missionary's life, a very hazardous undertaking: the miner who has toiled in darkness and uncertainty, through the bowels of the earth, may have laboured with little reward for many seasons, and may yet think himself amply repaid by one vein: and thus, the missionary may have drooped, desponded, and almost despaired, over the failure of many Pellas, and many Bethelsdorps, may surely revive his hopes, when he sees the success of Gnadendal, Enon, Theopolis, Kat River, &c. this is not poetry! it is nature and human life; life, which is a checquered scene of success and disappointment at the best; and in which, those best discharge their solemn account to the great Master, who,—while it is yet day, work! and leave to-morrow to the God of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to-morrow; and the harvest of their toils to the Lord of the harvest.

Gnadendal, or, as we like to hear it called, Glenatendale, for we love home sounds, is described by Mr. Howison, as "presenting a scene of rustic animation, calculated to delight the beholder," p 295; as "about a mile long, and half a mile broad, and invested with a character of serenity, calmness, seclusion, and repose, such as belongs to few other inhabited spots with which the author is acquainted," and as "containing thirteen hundred souls:" p. 296, further, that "the Moravian missionaries never *invite any one* to settle in Glenatendale; on the contrary, they say, that they are *troubled* with *daily* applications to that effect; and no one is admitted as a resident, except with the *consent* of a certain number of Hottentot censors, *chosen* by the Hottentots themselves, to decide upon that, and similar affairs. These censors *represent the* people, as it were, and are *elected* by vote. All kinds of trade, such as those of shoemaker, tailor, wagon-maker, blacksmith, cutler, &c. are carried on in the village," p. 297. "Every house has a garden:" "and most of these are in a state of high cultivation:" "the settlement appears, at first view, a monstrosity in the wilderness: and the traveller immediately asks how its population subsist? a reply to this question will show, that the same *objections* apply to Glenatendale, as to *all other institutions of the kind* in South Africa. At the beginning of summer, half of the inhabitants *desert* the village, and *wander about* the country in want of work; and when the harvest is done, they return home with the *little* money they may have earned, and continue to *exist* upon it, and the produce of their gardens, till the ensuing season Those who remain in the village, all the year through, are chiefly tradesmen. They are supported by the sale of their handiwork, *for which there is a considerable demand;* because, the country lying thirty or forty miles beyond Glenatendale, on every side, is very populous, and its boors," the Dutch farmers, "obtain cutlery, farming utensils, and even wagons, from the Hottentots, instead of sending for them to Cape Town," p. 299.

Is a man in his senses, who, having looked on such a scene as this, can yet, in the teeth of his own personal observation, still taunt the missionary advocates with nauseating the 'Hottentots and Boschmen' with a "*system of spirituality?*" is not the creation of such a community as Glenatendale, with its free representative village government, something intelligible to the most ordinary understanding? and is the education of honest, hard working artisans, who can supply a populous district of 'thirty or forty miles beyond, on every side,' that is to say upwards of 1500 square miles, with cutlery, farming utensils, and even wagons, to be advanced as one of the proofs that the missionaries have actually effected nothing in South Africa; and that a perseverance in their labours, is more likely 'to injure than to benefit' the native races, as asserted at page 291?

But we have now done:—had Mr. Howison described the natives as incapable of instruction, and the missionaries as employed in secular gains, and unfit to teach, we should have had to refer to other authorities to contravert his assertions; but his just sense of honor has drawn from him the most creditable testimony. 'The Hottentots,' he says, 'are considered to have an excellent capacity, which enables them to learn anything; and their children possess *greater quickness and acuteness than those of Europeans*, and soon excel in most of the mechanical arts," p 297. At page 291, he distinctly disavows all intention to reflect upon "the conduct and qualifications of the missionaries, many of whom are distinguished for the *greatest* zeal and *disinterestedness*, in labouring to accomplish the hopeless task that has been allotted them." Again, at page 306, "The missionaries of South Africa, doubtless, *feel* severely the disadvantages of their situation, the *hopelessness* of the labours imposed upon them, and the many hardships to which they are exposed; but they are *too good* men to *wish* to abandon their posts, and *too zealous* in the cause of *religion and civilization* to be *discouraged* by the physical and moral difficulties which surround them." Men who feel their labour to be hopeless, and yet are not discouraged, must be individuals of an unknown species, and of a most extraordinary temperament! But to proceed:

Mr. Howison thus declares, upon his personal knowledge and observation as an eye witness, that 'the children of the natives possess the quickness and acuteness of Europeans" in learning, and that their missionary teachers are good, zealous, and not to be discouraged in teaching; this testimony to the point, being remembered, and the statements of such excellent men as these missionaries are shewn to be, being unquestionable, let us refer to their reports, and see if they themselves consider their prospects discouraging, and their exertions unprofitable. The report of the Wesleyan Society for the year ending April, 1834, exhibits an expenditure upon the Albany missions for "ten stations and twelve missionaries, and return of Mr. and Mrs. Shaw and family to England, £4018:4:7." This is contributing largely, no doubt, but it is a voluntary donation, bestowed in small sums by a vast number of kind individuals, any one of whom might, beyond all question, have made a less beneficent use of the trifling contribution: nor will they think it ill bestowed, when they learn that a vast district has so far acknowledged christianity as to have adopted, by a national enactment, the religious observance of the Sabbath-day, 'to keep it holy;' and Mr Howison himself, and every man who has a spark of philanthropy, must be delighted to hear that these twelve good, and zealous, and not-to-be-discouraged labourers in the cause of religion and civilization, have established schools which are attended by no less than 2134 scholars, eager and willing to be taught, 'quick and acute' at learning, and capable, when taught, of diffusing the blessings of light and industry through the regions of 'decay and desolation' which they inhabit.

But are they merely taught a system of spirituality? no, the religion of the missionaries is combined with the practical industry which leads to religion, as well as to civilization: all kinds of trades, says Howison himself, are practised at Glenatendale

One more quotation on this head, and we have done:—"The Jesuits of Paraguay would not allow a stranger, visiting their missionary stations, to remain more than two days and two nights at any one of them, lest, as they said, he should corrupt the neophytes, and teach them European vices: an *admirable* regulation, which *unfortunately* cannot be adopted at Glenatendale, where an influx of travellers and visitors to purchase its manufactures is encouraged, as essential to the prosperity and even existence of the institution," page 299 And this from a writer of the nineteenth century! who would prefer the Jesuit, and La Trappe, to the free representative village government of Glenatendale. The Dutch, in their day, have been bad enough on the frontier; and the Tories, in theirs, have played some fearful pranks; but fortunately, they never dreamt of this curfew policy: true, they forbade all intercourse with the natives beyond the border, and denied the unhappy dependants on their capricious, and obstinate self-willedness, the immense advantages of foreign trade; but the Jesuit's vagrant act of forty-eight hours' domicile, could not certainly have been adopted in the colony. Whilst on the subject, we cannot repress the observation, that we should much like to hear Mr. Howison's opinion of our Colonial *Vagrant Act* of last August; he will probably hail it as a pledge of our improvement, and as close an approach to Jesuitical perfection as modern taste permits even in this colony! Let the reader examine from page 197 to 200, vol. 2, and at 233, where we are told, that "general education is the wolf Fenris" of the Scandinavian mythology! and he will see that our author is born half a century too late.

We shall not detain the reader with Mr. Howison's notions, see pages 370 to 376, vol. 1. and 337 to 341 of vol. 2, respecting the great and glorious act of negro emancipation, which has extinguished the odious name of slave, and has gladdened the heart of every right-minded christian in the British dependencies: we have perused them with unmingled sorrow, and some astonishment. We consider them to form, beyond measure, the poorest, and most pitiful advocacy of the wretched cause, that we have ever stumbled on; and did not the context prove the sober sadness, and waking reality, of the author's meaning and intention, we should have been strongly inclined to suspect that the waggery of an ill-conducted defence had been practised, as the deadliest blow which concentrated scorn and contempt, and uncompromising abhorrence, could inflict upon the demoralizing curse of the colonial slave trade. But this is not the case: Mr. Howison is quite serious, and his belief sincere and firm, that the negro emancipation, is the result of a "vapid, fire-side philanthropy." The day is past, when such sentiments required to be refuted; and we register them merely to show the value of this author as an authority in matter of colonial interest, and colonial policy.

It now remains that we return to the practical tract of Mr. Phillips, which has condensed into thirty pages of unambitious, but excellent matter, a clear and distinct outline of what is required to be known respecting the colony; its present position and future prospects; and whilst we express our hopes that a writer, so perfectly qualified to enlarge upon the subject, will not remain satisfied with giving us the mere abstract of the information which he possesses, we shall conclude with strongly recommending his concluding paragraph to the notice of the influential members of our community, and earnestly soliciting their co-operation to obtain the patronage and sanction of government, for the encouragement of public joint stock companies, for the advancement of public works and institutions of acknowledged utility; which, though in the present state of the colony, they exceed the ability of the colonists, will, it may be safely hoped, repay ten-fold in the next generation

Finally, we would very humbly suggest that the harbours of Natal and Delagoa should, if possible, be garrisoned, and arrangements commenced for including, in a quiet, and beneficial way, to the native population, the whole of the coast, from the Orange River to Delagoa, within the boundaries of the colony. No violence is needed now to effect this important measure; no outrage, no bloodshed; but, as respects the future, the colony cannot be considered safe, so long as such adjacent harbours remain open to any occupying naval power; and no one can venture to predict what to-morrow may bring forth. A vast extent of the finest land in South Africa might be purchased now at nominal prices from the Caffer chiefs, whose tribes are so thinly scattered over some thousand times the space which is required for their own uses, and who would hail the establishment of missionary institutions among them as national blessings. A new Albany and a new Glenatendale, might spring up in the wilderness; and thousands more might be added, to the thousands of natives now enjoying the blessings of instruction from "zealous and good men, who are not to be discouraged by any difficulties, physical or moral," in their pious labours for the promotion of religion and civilization.

QUESTION FOR THE CONSIDERATION OF THE *ADVERTISER.*

I would ask what indispensable necessity is there for one half of the *Commercial Advertiser* being in Dutch? If some few of the old inhabitants wish to have a Dutch paper, let one be printed for their special use, or let them have the *Zuid-Afrikaan* most exclusively to themselves; un-English in everything, as well as in sentiments.—Ultra-Dutch! heavy as cheese, thick as butter, and muddy as the sluice at the cabbage-quay in Rotterdam! God forbid that I should put down anything to offend; I do not intend it; yet I must say that even these aged gentry of the past century are grievously in error as respects the present and future welfare and happiness of their families, if they endeavour to dutchify the tastes of the rising generation: yet still, if they wish it, and will pay a price to disqualify their sons from mingling on equal terms with the party which fate has doomed shall rule, and consequently lead the fashion in South Africa, they have the power to act unwisely: let them do so; but this does not apply to us who have no Dutch predilections to gratify: surely, a British Dependancy like this could support an English paper. The local interests, it is true, are not very thrilling; but still, the merest outline of the English and Indian papers, judiciously selected, might afford matter for a very ordinary genius to furbish up into six pages a week, allowing two for advertisements. Let the *Advertiser* seriously consider the matter, and give me one earthly reason that is worth the value of a mouldy biscuit, as an argument why I am to pay 36 dollars per annum for 52 sheets of English, and 52 sheets of Dutch matter. I deliver my stumpy for the former, though it is no doubt estimated only as half, since the latter must of course require a Dutch translator, as well as all the expenditure of printing and paper; but let it cost the Editor what it may, it is not worth a stiver to me; he shall have the whole of my 104 half-sheets back for a *young dubbeltje*, and be thanked for his liberality. Let not Mr. Editor become exceeding wroth at the freedom of discussion which he himself is so ready to advocate and practice; to use an oriental phraseology, "he is no ass, nor the son of an ass, nor the grandson of an ass, nor is he likely to be the "grandfather of asses." Why, then, should he disappoint the just expectations we have a right to form from the specimens of his capabilities which he has given us? If he says the public would not support a better paper, be it so; he knows his public better than I do: suffice it to say, that if such be the case, his public is two centuries behind any other public of which I have any knowledge.

Q. Q.

ODDS AND ENDS, WITH NOTES.

A MEDLEY.

How to Smuggle Soap.—Last year a very good joke was spoiled. The wits who made it laughed in their sleeves as long as it went on; and when it came out, every body else laughed, the excise and all, though the crime is really as great as robbing the widow of her mite, since the widow's mite must go to make up for the fraud. There is no duty on soap in Ireland; and some cunning Englishmen who had made soap without paying the just duty, packed it up for Ireland, got the drawback of 28*l.* a ton, just as if they had paid the duty, and sent it off, smuggled it back again, packed it afresh, got the drawback again, and sent it off, and again smuggled it back again; and so on four times over. Now, for the idea of this cheat, for the lies that were told, for the false oaths that were taken in carrying it on, and for the making a sordid crime into a joke, the excise is answerable. And this is what the excise does for morality. "And this is the way the money of the people is managed," observed Le Brocq; "wrenched from the honest working man with one hand, that it might be given away to the fraudulent great trader with the other."—*Miss Martineau.*

"Wrenching from the honest working man to bestow upon the fraudulent great trader," is one of the masterpieces of the sublime intelligence of our venerable ancestors of revered antiquity! A singular instance of the working of their wisdom was shown of late in our harbour, two schooners having cargoes of tea arrived from London, landed their cargoes, and reshipt them, and in an incredibly short space of time returned to the Thames—as tea, unluckily does not, like Madeira and jack birds! and sick Indians, improve by going to sea! the sagacity which had thus hedged in the China monopoly, will not only raise the price of the tea, which it was requisite should be brought from London to the Cape, to be taken back again, full fifty per cent.! but it will occasion this encreased price to be paid by the honest working man, the consumer! for an operation which must have materially injured the quality and real value of the tea, as well as enhanced its costs:—when will people open their eyes, and consider government to be an art which may be conducted on the simple rules of common sense and common honesty?

COMING IT STRONG.

The *Philadelphia Gazette* gives the following description of the western superlative:—A Kentucky steam-boat captain dilating in a strain of exuberant commendation on the excellence of his craft, says—'She trots off like a horse: all boiler: full of pressure; hard work to hold her in at the wharfs and landings. I could run her up a cataract. She draws eight inches of water—goes at three knots a minute,—and jumps all the snags and sand banks.'"

The Americans are not blind to their own position, nor to their own peculiarities, they laugh at a rhodomontade, whether American or English; but let us contrast the following:

AMERICAN WHIP.

"You were capsized the other day, Mr. Driver," said a passenger. "Yes, Jackson, I was; but nobody was hurt. The tongue of the pole broke in going down a hill, and I was afraid of running to the bottom of it; so I told the passengers to sit still, for I was only going to upset them! They sat quiet, and I turned them over a bank, and stopped the horses; I'm hanged, if I didn't."

LOVE TO THE LAST.

American sea-serpents, and other marvels, have often been the cause of mirth on this side the Atlantic, but few circumstances ever exceeded the following:—At the recent explosion of a steam vessel, a witness related the melancholy fate of two lovers who were seated together when the accident happened. They were blown high into the air, when the gentleman threw his arm round the fair one's neck and snatched one hasty kiss; within twenty seconds both their bodies descended into the river in a shower of atoms.

The following are examples of the difference in the cost of English and American editions of new works:

	Eng. Ed.	Amer.
Chalmers' Bridgewater Treatise, about	dol. 5 25c.	dol. 0 75c.
James' History of Charlemagne, ...	5 00	0 50
New Novels are usually published at about,.	7 00	0 87½
Cooper's Headsman is sold in London at	31s. 6d.	(7 dol.)

In the United States 275 original works have been published during the year 1833. Of these 23 have already been announced as re-printed in England.—*New York Advertiser.*

The two first are extracts from the Morning Herald; there are hundreds such, in the Trollop! papers; the third speaks for itself; "to point a moral or adorn a tale," was considered by the great moralist as the last sad use of fallen greatness; the sole use of 'America and the Americans,' to witlings on "this side of the Atlantic," seems to be to garnish their periodical Joe Miller's with absurd extravagances; yet one would think, that the signs of the times were apparent to the simplest child—and that the shadows which coming events are casting before them, might strike the most ordinary observer:—these purblind gentry worship the "great Napoleon," and are utterly dazzled by the "Star of the Legion of Honor." Let us see what has become of the "radiant and adored deceit."

RELICS OF NAPOLEON'S ARMY.

Between 200 and 300 tons of the bones of the horses, and amongst them some of those of the men, which were lost in Napoleon's retreat from Moscow, have arrived and are arriving at Grimsby. These are the remains of the 30,000 almost famished horses, and the miserable men, who, as history relates, perished through cold in one night, almost at the commencement of his retreat from that city which the flames, kindled by the hands of the Russians, had reduced to ruins and desolation.—*Stamford News.*

"Imperious Cæsar dead and turned to clay,
Might stop a hole to keep the wind away,
O! that the earth which kept the world in awe,
Should patch a wall to 'expel the winter's flaw.

The manuring of the Lincolnshire fields with the bones of Napoleon's wretched tools and miserable victims, seems a nearer approach to the literal realization of Hamlet's apprehension than could reasonably have been looked for! The Russian campaign was bad enough; there was not wanted to complete the disgusting details of its horrors, that the bones of these doughty legionaries should be carted, and shipped, and pounded, and spread with dunghill filth for manure on the very fens which their arch instigator to mischief, the devil, is said to look over from his lofty perch in Lincoln!

POETICAL DESCRIPTION OF A SNEEZE.

An Italian wit has written a poem on tobacco, (La Tabaccheide,) in which, with the animal spirits of his countrymen, he has ventured upon describing a *sneeze*. We shall be bolder than he, considering the less enthusiastic noses of the north, and venture to give a free version of the passage:

What a moment! What a doubt!
All my nose, inside and out,
All my thrilling, tickling, caustic,
Pyramid rhinocerostic
Wants to sneeze and cannot do it!
Now it yearns me, thrills me, stings me,
Now with rapturous torment wrings me.
Now says "Sneeze, you fool, get through it;"
Shee—shee—Oh, 'tis most del-*ishi*—
Ishi—ishi—most del-*ishi*—
(Hang it! I shall sneeze till spring)—
Snuff's a most delicious thing!
Leigh Hunt's London Journal.

Leigh Hunt's friend, Charles Lamb, has tenderly apostrophized beloved tobacco in his farewell ode.

No scent to match the rich perfume,
Did ever chemic art presume,
Through her alembic quaint to strain—
None so sovereign to the brain.—
Nature, that did in thee excel,
Framed again no second smell:
Roses and violets are but toys,
For the smaller sort of boys,
Or for our greener damsels meant,—
Thou art the only manly scent.

The conclusion is exquisite, when he bemoans the mandate of the sour physicians, and resolves at least, to sit among 'the tobacco boys,' and enjoy the perfumes, though denied the whiff—their's no accounting for taste; at all events, poetry and Virginia are not necessarily cognate. Cowper anathematizes the weed right stoutly, and in very homely phraseology. Beckford's letters from Italy, assign a most unanswerable reason for the love of the weed in the United Provinces—the odour of tobacco, to say the least for it, may be rightly accounted a legitimate perfume by the side of a putrid green canal, exhaling the noisome vapours of every stench a canal can furnish to poison the air in its vicinity.

HOLLAND.

Every flower that wealth can purchase diffuses its perfume on one side; while every stench a canal can exhale poisons the air on the other. These sluggish puddles defy all the powers of the United Provinces, and retain the freedom of stinking in spite of any endeavour to conquer their filthiness. But, perhaps, I am too bold in my assertion; for I have no authority to mention any attempts to purify these noxious pools. Who knows but their odour is congenial to a Dutch constitution? One should be inclined to this supposition by the numerous banquetting-rooms and pleasure-houses which hang directly above their surface, and seem calculated on purpose to enjoy them. If frogs were not excluded from the magistrature of their country (and I cannot but think it a little hard that they are) one should not wonder at this choice. Such burgomasters might erect their pavilions in such situations; but, after all, I am not greatly surprised at the filthiness of their site, since very slight authority would persuade me there was a period when Holland was all water, and the ancestors of the present inhabitants fish. A certain oysterishness of eye and flabbiness of complexion are almost proofs of this aquatic descent; and pray tell me, for what purpose are such galligaskins as the Dutch burdened themselves with contrived, but to tuck up a flouncing tail, and thus cloak the deformity of a dolphin-like termination?—*Beckford's Letters from Italy, &c.*

ENGLISH PARTIES.

In England, a Tory means an oligarchist; a Whig is merely an aristocrat; a Liberal is one who wishes rational feelings, founded on the basis of the people; a Radical is one who is for overturning everthing and beginning *de novo*. *Cooper's Letter to his Countrymen.*

Many thanks to Mr. Cooper for his correct delineation of the change of relative position in English parties; the old Jacobite worshippers of divine and indefeasible rights are extinct, but supplying their place, we find the venerable old women, the Conservatives, calling themselves Tories; their creed has but two articles—they verily believe that they are born to be the glory and delight of the whole earth! and that the low vulgar! exist only to feed them with the choicest dainties, and clothe them with the pleasantest apparel; primogeniture is the breath of their nostrils, and titles, ribbons, sinecures, and pensions on a large scale for the first-born of Egypt! and colonial government office with as little duty as possible, and pensions for their younger fry of Lord Charleses and Honorable Misters! is as the staff in their right hands.—Lord Grey stifled this ORDER by the Reform Act. The place of the old Tories is now supplied by the Whigs, who, like Sir James Mackintosh, are woefully astray for a suitable classification, and would call themselves Whigs of the Revolution of 1689! anything but honest, hearty friends of the commonwealth, anything but assertors of equal rights and equal taxation—of the greatest good to the greatest number; they would willingly extinguish the Jacobite oligarchy, but they would do it for their individual benefit; they think the breath of the commons a foul vapour! they would endure as little of it as possible; they are for the 'landed interest' and 'corn laws,' and join issue with the declaration that 'Ireland was only half conquered!' These, like the former dogs, will have their day; the others are *effete*, and they are in their autumnal yellows! Mr. Cooper has given us Liberals and Radicals—a distinction without a difference—the Benthams, with the Westminster at their head, are daily growing in strength, and spreading their tenets more and more influentially on the face of the country, and among its representatives in Parliament; and as education operates to raise the poorer classes to an equality with the richer, as the vast majority improve in capability of thinking so, they will learn the importance of union in trifles, as well as in essentials, and we shall have Common's-wealth-men of the proper ORDER; men who will laugh to utter derision the tinsel trumperies of the conservatives on the one hand; and on the other, instead of crushing repealers, and fighting for tithes with the red hand of unrelenting, unfeeling authority, will endeavour to spread knowledge, and to build upon the good sense of the community; and this done, they may let the praters talk themselves hoarse, in the perfect certainty that equal laws, justly administered, will have the support and assistance of the great majority, and that the clamor of the agitators will only tell upon the noodles. Let the people know that they can't have the gratification of agitation for nothing, that it costs money raised by taxes, and taken out of their pockets to pay troops and constables, and so forth; and agitation, for the pure love of agitation, will soon

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cease to be the meat, drink, and clothing of rabble leaders! "*The* overturners of everything, to begin *de novo*," owe their importance solely to the conviction in the breasts of the "liberal rational feeling" party, that the poor agitators, though wrong in manner, are right in matter: let them lose that protection, and their utter insignificance in a thinking, reasoning community, will appear in a moment. If, however, we are to believe the Joe Millers, it will require a century to create a thinking, reasoning community in the 'emerald gem of the western world,'—here is a specimen:

THREE CHEERS.

A story is told (a true one, we believe,) of the celebrated Father Prout, the eccentric P. P. Watergrass hill, whose memory a writer in *Fraser's Magazine* is rendering immortal to the following effect:—Three ladies of a travelling party *en route* to the Lakes of Killarney, walked while the horses were being changed across from the little inn in the little village aforesaid, and wherein Father Prout had set up his tabernacle, to the chapel of which he was the functionary, and which was directly opposite. It happened to be on some festival commanded by the Roman Catholic Church to be kept holy—the rev. father was celebrating mass at the altar, and the edifice was thronged with such a congregation as the miserable parish even to this day supplies. Prout's keen eye soon discovered the quality, at least, however he might have been mistaken in the religion, of his fair visitants, and anxious to provide them with such accommodation as his unpretending temple was capable of affording, and never imagining that they had merely strayed in from motives so *unusual* with the sex—those of idle curiosity—beckoned them within the sanctuary, and suspending for the instant some important part of the solemn sacrifice in which he was engaged, roared out with lungs and in accents that must have been heard to have been either appreciated or understood, "Stand out iv the way, ye spalpeens yez—don't you see the leedies—God bless em! Three cheer's for the leedies."—The congregation delighted at the proposition—Pat rejoices in a noise as the ordinary preliminary to a row—set up with a tremendous shout—three distinct cheers.—"Holy Mary," shouted Prout, in a rage that convulsed his frame—"Salve regina!—Blessed St. Bridget!—O ye spaulpeens—O ye miscreants—and yeu, Darby Monyahan, from the Bog of Kildman, who ought to have betther manners, seeing that you've come of such dacent people, to be entherupting the Holy sacrifice iv the mass this a day—shure its three cheers to set down upon, ye ignoramushes, and not three cheers out of your ugly throttles, I'm wanting for the leedies, and they're in the secristy and not down your throats, that the breath of yez stinks—God pardon me for using such a word, of whishkey this blessed holly-day.

A congregation fully prepared *either to pray or play,—to join the holy sacrifice of the mass, or to give three cheers*, whichever the priest should feel disposed to suggest, appears exactly the audience suited for any sort of excitement that any sort of incendiary might be pleased to conceive or execute.

BUSH-RANGING IN VAN DIEMEN'S LAND.

The *Sydney Gazette* of the 13th February says:—"The Launceston Papers contain the most alarming accounts of the state of that part of Van Diemen's Land, from the almost daily outrages committed by armed bushrangers. The outrages of these desperate banditti are not confined to nocturnal attacks on the lonely settlers, but are frequently committed in the open day, and in populous places; even in the very town of Launceston, armed robbers show themselves in the streets—walk into people's houses, tie the inmates to chairs or tables, and then deliberately sit down to regale themselves in their presence! Why, in the worst days of bush-ranging here, we have had nothing like this; and yet, if the public journals at Launceston are to be credited, the authorities seem to be all but quietly looking on"

How happens this! have they not wit enough to devise a Vagrant Act, nor force to secure its operation? what are these Launceston worthies dreaming of? we can solve a part of the difficulty, because we can explain one cause of the supposed necessity of a vagrant act here. Avarice—greediness of gain—anxiety to become rich, faster than ordinary honest industry allows accumulation of property. Parties who in Europe had not a foot of mother earth which they could call their own, nor the shadow of a hope of ever possessing one, could not be content with moderate and manageable grants of lands in the colonies, and without anything like proportionate capital, would greedily appropriate their thousands of acres, and behold the consequence! their property is scattered unprotected over vast ranges of country, a tempting booty to the idle and unprincipled: would thousands of sheep, attended by only a couple of shepherd-boys, range untouched over any common in the United Kingdom? or if farm-houses were miles apart, would they be left undisturbed? We suspect not. The poor Hottentot herdsmen of 1652, found Van Riebeek, and his Dutchmen, worse neighbours than even the Bushmen; he made root and branch work of it—to steal 10,000 head of cattle was nothing, without kidnapping the poor herdsmen too, and sending the '*savages*' for slaves to India. A few weeks ago, we had a sanguinary story, which, without one word of truth, was gravely narrated in all companies. Wherever two or three met together, this lie was sure to be in the midst of them, and the wisest noodle of the party would incontinently observe—"doesn't this show the necessity of a vagrant act?" The story was, that some farmers going into the country were murdered by a gang of Hottentots; who, elated with their success, immediately attacked the brandy in the wagons of the deceased, became brutally drunk, and were in that state surprized and captured: the whole a wicked falsehood; but were any steps taken for tracing it to its author?

A SUITOR TO ROYALTY.

A good deal of talk and merriment have been created in Kensington, in consequence of the eccentricities of a gentleman said to hold a rank of some importance in the army, who has fallen desperately in love with the youthful charms of Princess Victoria, and who, for some months past, has taken every opportunity of manifesting the ardour of his passion to her Royal Highness, and of making her a formal tender of his hand and heart. For some time the proposals and the epistles of this aspiring lover were treated as the effusions of a distempered intellect, and no notice was taken of them, but his efforts to obtain an interview became so persevering, and it became known that he generally stationed himself in those portions of Kensington-gardens where her Royal Highness most frequently indulged in the recreation of walking, that it was found expedient to give some directions to the gate-keepers on the subject.

From what can be gathered of the eccentric gentleman's movments, it appears that about the beginning of last spring he made some very particular inquiries of the keeper at the Mount Gate, Kensington-gardens, as to the Princess; wishing, in particular, to know the best way in which he could obtain an introduction, and whether it was most likely an interview would be granted at Kensington Palace. The gate-keeper referred the gentleman to the proper authorities at the palace, after which he received three cards, containing as the gentleman said, his titles and dignity, with a request that they should be immediately forwarded to her Royal Highness, the Princess Victoria, who, he added, would see that by an alliance with him her Royal Highness would require an Imperial title of superior pretensions to the comparatively insignificant distinction of Queen of Great Britain and Ireland. On the cards were writen "The King of Rome"—"The Emperor of the Austrias"—and "The Grand Lama of Thibet." Several letters were forwarded to the palace by this tripartite potentate, who was constantly seen promenading before the palace and in the gardens, waiting to obtain the desired interview with the Princess. For five or six days after this the individual disappeared; but one day, while the gate-keepers were at dinner, he contrived to gain admission into the gardens, when he took that opportunity, unobserved, to jump over the palings into the shrubbery, and there plant a laurel, to which was annexed another letter to the Princess Victoria, which of course, when discovered, was speedly removed. The next morning, the aspirant to royalty came to the gate, and inquired for the Princess, on being informed her royal highness was gone to Claremont, he immediately jumped into a cab, and made a bargain with the driver to take him there for a sovereign, which was paid. In the evening the gentleman returned, and told the gate-keeper he had been to Claremont and had been shown over the house, but he had been unable to catch a view of the Princess. From that time this gentleman continued to pursue the same system of eccentricity, and on Wednesday morning, having made some further inquiries of the gate-keeper respecting her royal highness, who had just taken an airing in a pony-chaise, the gate-keeper considered it to be the most prudent course to inform Sir John Conroy of the perseverering conduct of the enamoured suitor. The gate-keeper having received his instructions, proceeded to the station-house, and returned to the garden, accompanied by inspector M'Manus of the T division The gate-keeper and the inspector then proceeded towards a bench in the garden, where the individual in question had taken a seat. As soon as he saw them, probably guessing their mission, he rose up with the intention of walking away, but he was stopped by the inspector, who explained to him the autho-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

rity on which he acted, and told him he must take him into custody unless he would pledge his honour to abstain in future from the ridiculous system of annoyance he had practised. The individual, after some demur, gave the required promise, and was allowed to leave the garden, after having given a card which contained, as was presumed, his real name and rank. The latter of which was stated to be Lieut.-Colonel. He was a tall military looking man, with an umbrella and a bunch of lavender, apparently about 45 years of age.—*Devonport Telegraph.*

This poor lunatic, whose 'umbrella and bunch of lavender' are 'apparently about 45 years of age,' may be considered fortunate that he has fallen upon the 'march of intellect' days; three centuries ago the same insanity led the luckless Chatelard to the scaffold, it would now merely consign such a maniac to custody in the next lunatic asylum. Chatelard 'was a gentleman of good family and fortune,' and by the mother's side, grand nephew to the Chevalier Bayard "the good knight without fear and without reproach." "The manly beauty of his person was not unlike that of his grand uncle," the pride of chivalry, whom he seems in some respects to have resembled; "and besides being well versed in all the more active accomplishments of the day, he had softened and refined his manners by an ardent cultivation of every species of belles lettres;" his history is sufficiently known—there are two sides to every picture in which Mary Stuart appears—let us adopt Sir Walter Scott's in this transaction. 'The queen used to amuse herself with this adventurer's eccentricity, by which ill-judged familiarity he was encouraged to conceal himself one night in her apartment. Being detected, he was dismissed with severe censure, which did not hinder a man of such ill-regulated understanding from renewing his attempt, for which he was tried and executed. His death suited his extravagant character. He refused ghostly consolation, prepared himself for his end with the verses of Ronsard, a French poet; and as he kneeled down to the block, exclaimed as his last words,—"Farewell to the most beautiful and most cruel queen that ever lived." '

The use of the phrase adventurer, applied to the nephew of Bayard, appears intentional, to fix a more unquestionable stamp of insanity over Chatelard or Chastellar, and to screen the memory of the queen: Randolph's letters to Cecil, dated 15th and 28th Feb. one the day after the crime, and the other six days after the execution, and Knox's Contemporary History, distinctly reflect upon her as having first tempted, and then betrayed him. To return to our modern Chastellar, with his umbrella and sprig of lavender: we are glad to see that the unhappy man's misfortune has not subjected him to any additional evil beyond the sad calamity of mental aberration.

CORN LAWS.

The operations of this monopoly should be kept in view: so long as the feeding of our manufacturers costs upwards of 91 per cent. more than the provender for the continental operatives, it must follow that British produce is likely to be undersold; the landlords should recollect that 100 acres of land in Poland yield as much wheat, or more, than 100 acres in the vicinity of Manchester; but the former do not yield £20 a-year rent, whilst the latter are moderately let at £100; the difference, of course, depends on the commercial wealth of the country; let the landlords effect, what they are labouring to accomplish, the removal of British capital and enterprize to foreign parts, and they will soon find their rents at a Polish minimum.

PRICE OF WHEAT ON THE CONTINENT.

White, of first quality at Hamburgh, 85 rix dollars (or 27s. 6d. English,) the quarter 98 bushels; highest, of red at the same place, 24s. 6d; white, wheat, at Amsterdam, first quality 180 florins the last, or 29s. the quarter; first quality, red, at Antwerp, 7½ florins the hectolitre, or 31s. 2d. the quarter; red, first quality, at Stettin 36 dollars per wisper, answering to 24s. 6d. the quarter. The average price of wheat of first quality at Hamburgh, Amsterdam, Antwerp, and Sittin, is 27s. 8d. the quarter, making the London price 91⅝ per cent. or nearly twice as dear over the mean of these four places. The present duty on foreign wheat imported into England is 38s. 8d. the quarter.—*Southampton, Aug. 4th.*

In the meanwhile, to show that our continental neighbours are not idle, here is a specimen of their proceedings:

The great canal in Burgandy, which was begun in 1775, is at last open to navigation. The sums expended are 1,600,000*l.* sterling. Its length is forty-eight French leagues, and a line of interior navigation of 300 leagues is now thus assured to trade. There are 189 *edicies*, and a subterranean gallery, pierced through a mountain to the extent of about one-third of a league.

Another canal between the Rhine and the Rhone is opened to trade within the last few weeks. It is supplied with water by the Saone at St. Synphonien, and in the Rhine at Kilstet, a small village near Strasburg.

LONDON AND SOUTHAMPTON RAILWAY.

Capital, One Million.—Shares, £50 each. Deposit, £2 per Share.

ENGINEER. Francis Giles, Esq. SECRETARY. Rich. Heathfield, Esq.

The expense of the proposed railway, according to the estimate of Mr. Giles, the engineer, supported fully and satisfactory by evidence before the two Houses of Parliament, is One Million. The evidence as to the Income is as follows:

Annual Income from the present traffic estimated at Railway prices,.....	£195,216 8 8	
Cost of maintenace of way and of locomotive, power.....	£ 87,798 11 5	
		£107,417 17 3
Annual Income from prospective traffic additional to the actual traffic,.....	£152,068 2 0	
Cost of maintenance of way and locomotive power upon such increased trade,.....	£ 52,000 0 0	
		£100,068 2 0
Total or supposed profit,.....		£207,485 19 3

Nothing is assumed in the above calculations for an increase of passengers by private carriages, post-chaises, or coach parcels, nor is any revenue assumed for the carriage of cargoes which may be discharged in the Southampton Water; for passengers travelling in gigs, an increase of the Torbay Fishery, or for the transport of agricultural, diary, or garden produce, timber, building materials, chalk and other manure. Neither is any thing assumed for the passengers from the West of England who may come by way of Southampton, instead of joining the line at Basingstoke, giving an increase of 32½ miles for each passenger. It may be observed further, that the intercourse by Steam-vessels, between Falmouth, Plymouth, and Portsmouth, is now considerable, and that the passengers by these vessels, so far as respects those to and from London and its vicinity, will of course proceed by way of Southampton, on the completion of the Railway, and in increased numbers.

The Act of Parliament which has been obtained, expressly provides, that no call shall be made exceeding 5*l.* per Share, and that three months, at least, shall intervene between every two calls, nor does the liability of a Shareholder exceed the amount subscribed. Two pounds per Share is to be paid at the time of subscribing.

It is expected that the Railway will be in use, for the distance of at least twenty miles out of London, in the course of two years, and that the whole work will be completed within three years.

No application for Shares will be received after Tuesday the 19th of August instant.

Office, 7, Portland-street, Southampton.

We wish for the sake of Ireland, as well as for the commercial interest of the west of England, that this rail-road had been to Bristol. The distance from Southampton to London being 75 miles, and the rate of rail-road travelling, making it a journey of less than 4 hours—or say 5 hours for such cars as will convey ship's cargoes; it follows, that if the freight does not exceed the charge of shipping and insurance round Dover Head, and if the Southampton water admits of suitable facilities for loading and unloading, then a large portion of the trade of the port of London will be through Southampton and on this rail-road. As a contrast to rail-road speed of 30 miles an hour! the following is a good specimen of the superiority of our ancestors not 50 years ago!! and ought to rejoice the heart of a thorough going conservative!

COACHING IN THE OLDEN TIME.

We marvel much what some of the antiquarian fellows, the Jonathan Oldbucks of the present day, would give to see a set-out of the following description. The novelty of it induces us to give the account as extracted from a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Shrewsbury Paper of 1785:—"Queen's Head, Mardol.—The original London and Shrewsbury Fly, in thirty hours, steel springs, with chairs on the top, by way of Coventry three times a week during the summer season, sets out from the above inn every Monday, Wednesday, and Friday morning; breakfasts at the Red Lion, Shiffnal; sets out from thence at seven o'clock, to the Swan Inn, Wolverhampton, where it arrives by nine o'clock, and will arrive at the George-inn, in Digbeth, Birmingham, at twelve o'clock, where it will dine, and set out for London at three o'clock, and will arrive at the Blossom-inn, Lawrence-lane, Cheapside, London, the next day to dinner. Fare inside to Shiffnal, 5*s.*: Wolverhampton, 9*s.*; Birmingham, 13*s.*; London, 1*l.* 18*s.* Children on lap and outside as usual. The proprietors return thanks to the public, &c. for all former favours, and beg to assure them that no expense will be spared to render the performance of these carriages satisfactory and safe. Performed (if GOD permits) by the public's most obedient humble servants,

"ANN DUNN, Birmingham.
"BENJAMIN RAWLINS, Towcester.
"STAINTON and HOLBROOK, London."

The distance from Shrewsbury to London is 158 miles, and the mail travels it now under 15 hours!! The longest mail-coach distance is to Thurso, 785 miles. It starts at 8 in the evening from the General Post Office, reaches Thirske, 219 miles, at 8 the next evening; Queen's Ferry, 413, before 8 the second evening; Nairn, 623 miles, about 8 the third evening, and arrives at Thurso about 8 the fourth evening; and this is the daily rate of communication betwixt the capital and the most northern extremity of Scotland. Let the same union be established with the extremities of Ireland—and let London, and not Dublin, be the centre—let the Vice-regal folly of wasting £200,000 in playing at kingship in little be abolished, as it ought to be, and a great source of Irish unsettledness and party spirit will cease; we shall have no repealers when the protestant minority are not supported by English bayonets to ride the catholic majority, and when the Irish poor are supported, as they ought to be, by Irish landlords instead of by the English.

* * *

LOSS OF THE SHIP "ELDON," Capt. EDWARD THEAKER.

Destroyed by Fire in the Indian Ocean, Sept. 27th, 1834.

THE inscrutable dispensations of Providence, by which our lives are checquered with such varieties of fortune, will, no doubt, have their full and sufficient explanation in another and a better world: the veil is not to be removed here, and we can only submit to whatever befalls; too happy! if able to exercise those virtues which adorn human nature, and mingle with its infirmities some faint traces of its divine origin, and its destined immortality.

The destruction of the ship *Eldon* by fire, in the midst of the Indian Ocean, at the tempestuous period of the equinox, and upwards of a thousand miles from the nearest attainable land, was a calamity which no ordinary foresight or care could have prevented: the singular preservation of every individual of the crew and passengers, of whom four were females, and one a child of five months, was almost a miraculous instance of what the human frame is capable of enduring, and also of what it is capable of performing, when aided by unbroken spirits, good sense, and firm virtuous determination to hope, and work to the last. Under the mercy of God, it was solely accomplished by the exemplary conduct of every individual of the party, and the unshaken nerve, self-possession, and skill of the worthy captain, an English sailor of the true British class; quiet, conciliatory, and kind to his men, when all was well; and firm, active, keen, intelligent, and not to be dispirited, when the occasion required unusual exertion. What might have occurred had any single individual forgotten his duty, or had the excellent head been unequal to his, would be frightful to contemplate: happily, these evils were spared to the poor sufferers, and their eventful history conveys the instructive lesson of what may be performed by virtuous energy, struggling against all dangers and overcoming all difficulties—even in their worst form, and most strange combinations. It is indeed a lesson which should not be lost; it forms a bright passage in the delineation of character, and in the history of mind; and is an example and beacon for future sufferers how to hope, and how to labour, that they may not only survive to recite another like history of energy and success; but may deserve and enjoy the approbation of their own consciences, and the admiration and applause of their friends and countrymen.

The *Eldon*, Capt. Edward Theaker, sailed from Bombay on the 24th August, 1834, bound to the Cape of Good Hope and London: her burthen was rated under 600 tons admeasurement; but she was actually laden with nearly 1000 tons of miscellaneous cargo, consisting of Bombay black wood, ebony, gums, drugs, rice, and cotton: the heavy goods below, and the cotton above, piled up to, and touching the main deck, and crouded to the utmost she could stow; her crew consisted of the Captain, three mates, the surgeon, and twenty-eight men and apprentices, total 33; with thirteen passengers: Major Hart, Deputy Quarter Master General, Bombay Army, and Mrs. Hart, proceeding to the Cape of Good Hope for the benefit of Major Hart's health; Capt. Hewitt, 5th Regt. Bombay Native Infantry, and Mrs. Hewitt; Lieut. Marsh, 10th Regt. Bombay Native Infantry, and Mrs. Marsh, with an infant of five months; Lieuts. Starke, Ashton, and Hobart; a female servant in the employ of Mrs. Marsh, and two male servants in the service of Major Hart and Capt. Hewitt; a total of 46 souls.

They had experienced light and variable winds, and on the morning of the 27th September were in latitude 9° 30' south, and 76° east, with fine weather, having that morning found themselves in the south-east trades, to the steady course of which their eventual preservation is to be attributed.

A disagreeable smell, and unusual heat below, had occasioned for some time before a considerable degree of inconvenience; but they were crossing the line, with the sun vertical; and it did not decidedly indicate the smell of fire, so that no alarm occurred, since it was reasonably enough referred to a large quantity of Safflower on board, which was supposed to be fermenting in the intense heat of the weather.

At four o'clock in the morning of the 27th September, the officer of the watch reported to the captain, that faint lines of smoke were seen occasionally issuing from the fore-hatches; a discovery which does not appear to have occasioned the least apprehension of what was to be the result. A portion of the cotton had been embarked in a wet state, the *Eldon* having loaded in Bombay in the rains, and Captain Theaker appears to have at once adopted, and acted on the impression, that it was merely a chemical process in the injured cotton, of damp rot, and self-combustion; and as he had heard of such cases, in which the "*affected bales*" had been promptly discovered and flung overboard; and as he naturally imagined that any such occurrence would always betray itself in time, no degree of alarm whatever was felt; the fore-hatches were closed, and arrangements made for an accurate and thorough examination of the cargo. When two conflicting duties are to be performed, the responsible party is not to be blamed if it should subsequently appear, that facts with which it was not likely he should be previously acquainted, would have suggested a different proceeding. The safety of the cargo alone seems to have occurred to Capt. Theaker: had he imagined that the safety of the ship was compromised, the hold would no doubt have been deluged with water, before the admission of the current of air to the smothered fire, which gave it, so instantaneously, that head and strength, which no human power was capable of controlling.

The first tier of cotton bales which could be got up, were perfectly clean and untouched, and were piled upon the decks; but during this process, the smoke was increasing, and at half-past seven Capt. Theaker sent to request Major Hart and the passengers to assemble on the quarter deck, and made them acquainted with the situation of the cargo: no alarm whatever was expressed or felt; his appearance and manners were in no respects altered: a very laborious examination of the cargo was the worst that he apprehended, and his communication with the passengers was to prevent alarm; not to warn them of danger. So perfectly cool and collected were all parties, that they went to breakfast as quietly as usual, the men, however, requested by the Captain, to make the most of the present opportunity, as they had a hard day's work before them, and many hours might elapse, ere they could enjoy another 'comfortable meal:' he little dreamt of the prophetic truth of the warning, which his natural and usual kindness induced him to deliver as the men were proceeding to their food.

After breakfast, the fore hatches were opened, and the cotton removed with great expedition to the deck; but in about an hour and a half, the smoke, which from the first had continued rapidly increasing, became so dense, that the men could no longer work below, and the after-hatches were opened to permit its escape. At this period, the Captain crept in as far as was practicable, betwixt the bales and lading, in the direction where the smoke issued, and appears to have then first conjectured the extent of the mischief, and its possible consequences. All the hatches were closed down to prevent the current of air: a hole was cut through the deck near the main-mast, and water poured down; and orders were quietly given to prepare the boats, as *a precautionary measure*, should the worst befall them.

About twelve o'clock, when the boats were partly prepared, the Captain resumed the now dangerous task of subduing the fire: the main hatch was first opened, which, on removing its cover of tarpauling, was discovered to be lifted up four inches by the force of the steam: on approaching the fire in this direction, the extent to which it had proceeded, and the length of time it must have been in progress, were ascertained. On attempting to remove the burning bales of cotton, it was found that all the lashings were consumed, and any handling of them, only increased the evil by shaking them loose; others again were totally burnt through, and were a mere mass of tinder, into which the men could thrust their arms unopposed: during this hour, the heat and smoke continued increasing, and the urgent duty of procuring provisions, water, and other necessaries for the boats, became a painful and hazardous labour. At one o'clock, the female passengers were removed to the boat, *again as*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a precautionary measure, though still encouraged to indulge a hope, that the destruction of the vessel might be averted: but though every possible exertion was persisted in, Major Hart, exhausted and feeble by long illness, and Capt. Hewitt and the other passengers having toiled with the crew throughout,—the fire, most perceptibly, gained a head every moment, burning most intensely near the main-mast, where the main-deck even was now perceived to be on fire, and the heat had become so scorching, that the men were no longer able to work, so that all hope of saving the ship was at last resigned.

The Captain, in communication with Major Hart, now made his arrangements for the boats, apportioning the crews for each; and such was the coolness and precision with which all was provided for, that even arms, as a last resource, should the crew unhappily forget their duty in some future extremity of suffering and privation, and become mutinous and unmanageable, were not forgotten. Major Hart discharged the melancholy duty of ordering the destruction of his favorite horse, which he was taking with him to the Cape; and the live stock, sheep, goats, pigs, turkeys, fowls, geese, and ducks, were humanely thrown overboard as an easier destruction than by fire: when the boats were adrift from the ship, the sea was covered with these poor creatures, of whom the geese and ducks, by a happy blindness to their fate, were screaming and frantic with joy at being loose on the water, diving, and floating, and flying about in an ecstacy of enjoyment! their appearance formed a strange contrast to the spectacle of human suffering they surrounded.

The risk of explosion, from the fire reaching the spirits and gunpowder, became now very imminent, and as the heat had become almost intolerable, the work was hurried, but not confused; until, at 3 o'clock, it was impossible to remain in the ship, and all quitted her, the Captain himself the last. The first and second mates were appointed to command the two small boats, with a compass, and a crew of nine men to each; the spars and stores for rigging were apportioned, and such arrangements completed as their situation allowed. The Captain, third mate, surgeon, and ten men, with the twelve passengers and child, 26 souls, were in the long boat, with all the water and provisions, except two kegs of water, and about a couple of days' consumption of biscuit to each of the small boats, which was all that they could stow with safety: they were light and manageable, and easily sailed round the larger boat; a light was displayed for their guidance by night; they were ordered to keep as close on each quarter as safety would permit; and approached daily for their supply of provisions.

On quitting the ship, her helm was lashed a'lee, and the sails put partially aback, to keep her steady; as the large boat, without mast or sails fitted, required to be towed off by the smaller boats to attain a safe distance; this was happily accomplished without any accident, and the poor fugitives on the ocean, had a moment of leisure to contemplate the melancholy scene.

The appearance of the burning ship was sublimely appalling! whilst the mingled feelings of remembered comforts so recently enjoyed, and so unexpectedly and painfully snatched from them, contrasted with bitter forebodings of sufferings and almost certain destruction, must necessarily have filled every heart, and subdued the stoutest spirit into sadness. The Captain and passengers, particularly Major Hart, whose loss, by a combination of unfortunate circumstances, was unusually heavy, saw valuable property destroyed, which years of privation and industry would not serve to re-place; and even the humblest of the crew lost all they had to lose, and saw in the future, one common danger, and probably, one common fate for all. The fire soon reached the poop, where its progress, from the airy, open space of the large cabins, was frightfully rapid: the mizen-mast first fell; but the destruction of the sails, more particularly, presented a singular spectacle, and awful proof of the vast force of fire when in a mass; the progress of the flame, from the heel of the main-sail to the royal head, was almost as instantaneous as the flash of gunpowder; it flew upwards with a crackling, whizzing report; the canvass disappeared as if by magic; the ashes and blazing fragments were blown away, and the fires were seen running down the rigging; and in an incredibly short space of time, the masts went crashing over the side; all was now a bright blaze, and the vessel finally exploded and disappeared about 9 o'clock.

The ship being utterly abandoned, Capt. Theaker's first care was to explain to his fellow-sufferers the plan he proposed to adopt, and his reasons for so doing; the nearest point of land was the island of Diego Garcia, which was short of 400 miles, but to have gone back into uncertain winds, was to hazard the risk of calms and squally weather, and on the whole, the longer voyage: whilst to sail towards Rodrigues, was to use the trade wind, which, under average circumstances, might be expected to drive them thither in a reasonable time; the distance was calculated to be 1050 miles, which, with a fair wind, is certainly less than 400 with uncertain weather. Nor was the hope of falling in with vessels bound to the Isles of France or Bourbon, altogether overlooked; a relief less probable, had they diverged from the usual track of the trades. Thus calmly and deliberately weighing the plans which presented themselves, the Captain resolved to steer for Rodrigues. It may seem singular, but being a fact, should be stated, that so equally balanced were the good and evil in either alternative, that the Captain made it appear as though he sought the opinions of all, and was guided by their decision. The moon was in her last quarter; and when night closed upon the sea, the sad feelings of the party defy description—the carpenter, and such as could assist, were busied preparing the rough spars for masts and yards; the sail-maker in shaping sails; all else had to occupy their thoughts with hopes or fears, and to imagine visionary sources of comfort, denied by the revolting reality. The mind follows them in their long and dreary pilgrimage over the waters, and sees the glazed eye brighten, as the white wing of the distant sea-bird on the skirt of their horizon, may have been frequently mistaken for a sail; no false hopes, however, of land deceived them; the cautious foresight of Capt Theaker had provided every necessary for skilful navigation, and their precise position was regularly and accurately ascertained.

The long boat had appeared sufficiently loaded when quitting the ship; it was only 22 feet long, and 7½ broad, and was, in fact, crowded; but on the second day, the jolly-boat, in a pitch against a heavy sea, split open at the bows, and was reported in danger; she was brought alongside, and after a very careful and minute examination by the captain and carpenter, she was found unmanageable: her compass and stores, and crew, were received into the long-boat, and she abandoned. This unfortunate occurrence cast a shade of gloom over every countenance: crowded before, they were now literally wedged together in a space which permitted no motion to any one, but those employed in working the boat; no one dreamt of lying down, any change of limb even being hardly possible, and whoever reclined for rest, had to press upon some accommodating neighbour; whilst, the fearful probability which it brought to their apprehension, of the other small boat being found equally incompetent to such a sea, and for such a distance, and the consequent necessity of receiving her crew also, which involved the certain destruction of all, showed in a still stronger view upon how frail a thread their hopes depended.

Their sufferings surpass description: the intense heat of a tropical sun, then vertical at the equinox, when exposed, unshaded, on the sea, within ten degrees of the Line, scorched them through the day, and left them exhausted to shiver under the chilling night winds, uncovered: they were never dry; the splashing spray washed over them in heavy showers, which required constant baleing, and masses of water were frequently shipped, which required the most active exertions of all on board to relieve the boat.

Two heavy gales of wind occurred, and added to their perils and sufferings; in one of these, Capt. Theaker for forty-eight hours never quitted the thwart on which he had posted himself, nor ever relaxed his vigilance; watching the waves and giving his orders as coolly as if no particular emergency existed: and such was the sense of respect and duty, that not a voice was heard save his, nor was he ever obeyed with more willing alacrity. Even when once, and it was the crisis of their fate, a sea rolled bodily over the boat, and seemed to swallow them up in instant and unavoidable destruction,—not a word escaped from any one; the involuntary gasping for breath, from being so suddenly overwhelmed by such a suffocating mass of water, was all that followed; and the captain's cheerful exclamation and command of—"All right again; bale away!" was obeyed with hearty alacrity; and in a few moments the boat was cleared and righted.

But the wind, though tempestuous, was favourable, and a blessing: had it fallen a calm in such a temperature, and at such a distance from land, their escape would have been more difficult, and their sufferings more painful: they had consequently no option but to make the most of the wind whilst they had it, and to brave some hazards to save time. The poor precaution of a canvass breast work, was carried, as strongly as could be done, along the gunnel, and a sloping kind of awning, designated a spray-cloth, was propped up to windward, declining from the mast to the gunnel, and a crutch in the stern; thereby forming a pent roof, which served to break the force of the worst spray, and to drain off the heavy falls of water, which would otherwise have often filled and swamped the boat.

The wisdom and cool forethought with which all preparations had been made, and the perfect science and good discipline with which their little skiff of six tons' burthen was navigated, enabling them to calculate almost to an hour when and where they were to land, preserved the poor sufferers from the last horrors of famine: still, their supply of food was most limited: two biscuits, and a dram of brandy, and a quart of water daily, was all that could be spared to each of the crew: nor was there any difference in favor of the passengers; on the contrary, they contented themselves with less liquor. They were spared the knowledge of the near prospect of famine which impended, for, on landing at Roderigues, it was found that the remainder of the last bag of biscuit was so damaged by sea-water, as to be utterly unfit for use, and that they literally had not another day's provision left.

The sufferings of three ladies, young women, who had been accustomed from infancy to every comfort and indulgence; to whom any sort of privation had been an idea unthought of; one, too, with a child of five months at the breast, and her servant, four delicate females, exceed description: they must be left to imagination, and reference made only to the pious resignation, and firm fortitude with which they bore their bitter lot; setting an example which was not without its cheering and supporting effect on their protectors: their conduct throughout was honorable to themselves, and an honor to their sex.

The steadiness, good conduct, and moderation of the men, surpassed all praise: there were not only no murmurs, no mutinous spirit

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of repining, no unwillingness to make every necessary exertion: but a cheerful alacrity and good-will, a firm reliance on their captain, and eagerness to do their duty. From the first alarm, on the morning of the 27th September, to the landing at Roderigues, about noon of October 10th, notwithstanding extreme bodily sufferings, from which the strongest were not exempt; swollen legs, and scorbutic boils to the most distressing and painful degree, from confinement; incessant wet, and bad and deficient food; with all these accumulated afflictions, thirteen days and nights' exposure in open boats in tempestuous weather, under a vertical sun, and on stinted provisions, was borne with the devotion and heroism of the good old British seamanship; and the Captain was as respectfully heard and obeyed as under the best circumstances.

And these, or such as these, are the People! whom our late Tory Rulers, our Church-and-State-men! were wont to declare are only to be ruled by the bayonet in civil jurisdiction; and the last in their grand engine of military discipline! may the measure which they meted to others be repaid to them. The advocates for rotten boroughs! for taxation upon industry, rather than upon property; for pensions, and sinecures, and livings, and colonial good things for themselves, or their children, or their dependants; for a church which has its Bishop Peers and Cathedral sinecures! of boundless wealth and its *seven thousand working clergy*, educated at Oxford or Cambridge! whose incomes average *under ninety pounds per annum!* The advocates for these, and emanations of these, are the fitting parties to maintain the decent propriety of corporal punishments!—the indispensable necessity for the lash! They have ceased to rule; but they have left a code of legislation, by which a petty tyrant may "goad to undutifulness," and then appeal to unjust laws, to punish the natural effects of his own badness of heart, or incompetency in conduct. The *Eldon's* crew were ruled by kindness and considerateness; and the regard which was shown for them, they re-paid by a cordial display of respect, zeal, and moderation, which no brutality of force, however dexterously or legally managed, could have extorted from them: may their history be known! and let the example of these good men operate beneficially in favor of their countrymen.

There is an eloquent passage in Sir John Herschell's invaluable "Discourse on the Study of Natural Philosophy,"—part of paragraph 21, which pleasingly illustrates, and may adorn this narrative: "That a man, by merely measuring the moon's apparent distance from a star, with a little portable instrument held in his hand, and applied to his eye, even with so unstable a footing as the deck of a ship, shall say positively, within five miles, where he is, on a boundless ocean, cannot but appear to persons ignorant of physical astronomy, an approach to the miraculous." It is so: so perfectly certain, under all disadvantages, was Capt. Theaker of their situation, that on the evening of the 9th October, he shortened sail, and lay-to, during the night; and saw land the north-east side of the Island of Roderignes, as was expected, with the dawning of the day: their feelings may be imagined, but cannot be described; they were worn out and exhausted by hunger and thirst; by exposure to heat and wet; their skin, under their clothes, by anxiety, confinement, and want of rest and sleep, which were now rotting on their bodies, was stuccoed with encrusted salt, and was breaking out in scorbutic boils and sores, which, with every touch of salt water, smarted to agony: but all was forgotten:—the haven was before them!

They were first descried by a black fisherman, who kindly put out to sea to assist them, and pilot them through the narrow channels of the coral reefs; and having guided them to the shore, sent of his comrades to apprize the residents on the island of the occurrence. This poor fellow's description of their appearance when first seen, may serve to convey an idea of their situation: "they were," said he, "as close packed into the boat, and wedged together, as the little fishes in a box of Sardignes!"

The only two residents in that part of the Island, Mons. Endes and Mons. Verterre, came immediately to their relief, and welcomed them to their houses, and gave them all they had to give with the most eager cordiality: they clothed, lodged, and fed the whole party, 45 persons, for nine days, in a manner, and with a cheerful alacrity of kindness and sympathy in their misfortunes, which deserve a grateful and faithful remembrance. Major Hart brought the names of these excellent citizens and good men to the particular notice of the Hon'ble the Governor of Port Louis; and it may confidently be hoped, that their virtue and charity may not pass without reward.

The party so miraculously preserved, without the loss of a single individual, proceeded in a schooner to Port Louis, where they landed on the 23d October. They were received with the most consolatory and gratifying attention: the Hon'ble the Governor, Sir W. Nicolay, was pleased to offer the hospitality of Government House to Major and Mrs. Hart; and the most respectable inhabitants of the place immediately left cards of inquiry, and offers of service of every description, sending them at once, unasked, the most liberal supplies of linen and clothes to relieve their immediate wants: the Regimental Messes of H.M. 9th and 29th Regts. sent invitations to their military brethren, offering the accommodation of their mess tables, and whatever else lay in their power, to assist them in their distress: finally, Government most kindly guaranteed the bills they required to draw to supply their wants, that they might feel no pecuniary embarrassment; in fact, nothing that condescension or goodness could suggest, on the part of Sir W. and Lady Nicolay; nothing that sympathy in their sufferings could call forth from the community at large, was omitted: and Capt. Theaker, his crew and passengers, were soon able to proceed in different vessels to England, and Major and Mrs. Hart to the Cape of Good Hope. They did not part from their late captain without becoming acknowledgments; and their interesting letter, with his reply, form a suitable conclusion to this narrative.

One word in conclusion, respecting what is called the 'heating of cotton,' that is to say, the supposed capability of vegetable substances, such as hay, clover, cotton, &c. to ignite and create fire by self-combustion, under the chemical process of decomposition, through damp and heat. The point is disputed; and whilst some allow the possibility of such self-ignition, it is stoutly denied by others. The heat generated by fermentation, of which a specimen may be seen in a manure heap, is not supposed, under any conceivable circumstances, adequate to ignition. The slow progress of fire, so long as it remains pent up, and until air is admitted, has however removed from most minds, the idea of its being other than a chemical process in the cargo itself, when fire has been found to break out, after smouldering for weeks in a ship's hold, among the close-screwed cotton-bales: but those who argue thus, should remember that air, as well as fuel, are wanted for fire; and that the consumption of the former, without a sufficient supply of the latter, is an exceedingly slow and creeping process; prolonged to an extent of which no estimate can be formed, without an accurate knowledge of the precise degree to which the stowage and closing down of the hold have approached to hermetically sealing. In the meanwhile, though it may be disputed whether actual self-combustion can occur, it can never be denied that a spark or grain of hot charcoal, dropped from a kooly's hooka, and sticking to a cotton-bale, if screwed unquenched into a cotton-hold, is not likely to "go out of itself!" but may, and most probably will burn on until it makes a vacuum, which must and will be filled, for no ship's hold can be air-tight; it will then create, by its own action, a limited current of air, and increase in strength in proportion to the means of increasing that current, until it is betrayed; this betrayal of the fire, under whatever circumstances it may have originated, has in some cases occurred in time to permit of remedy in others, like the *Eldon*, when no exertions could subdue the conflagration.

The power of cotton, when once lighted, to burn slowly on until it is all consumed, is exemplified in the touch-cord of the Indian and Arab matchlocks: it is merely a thin hard twisted cotton rope, coiled to the trigger near the touch-hole; when once lighted, it never goes out of itself, but smoulders on, and is always glowing hot by a breath, when required to fire the matchlock. The very quality which it possesses of slow and inextinguishable burning, makes it the more dangerous, and no rigour could be too great to prohibit cooking or smoking on board the shore boats employed in taking off cotton to ships loading in Bombay Harbour; nor any vigilance too strict, to prevent the smoking of tobacco in the ship, whilst taking in such an inflammable cargo: every bale should be minutely overlooked as it passes down into the hold, that no embers or sparks may be carried with it; and the captain and his officers are responsible that no fire, under any pretext whatever, is introduced below decks; the carelessness of natives of India, with their clumsy cocoa nut shell hookas and beehries, exceeds belief, and the use of such dangerous indulgence, when loading, or in fact, at any time, cannot be too peremptorily prohibited. These excessive precautions may be troublesome, and perhaps, even at first, a little expensive; but the insurers should demand them as a duty to their constituents; and rate insurance, from risk of fire, in proportion, for those ships in which smoking is practised. The use of tobacco, in any shape, is an uncleanly and an unwholesome practice; and on board ship a dangerous one: the writer of this narrative can state from experience, that it is carried even in otherwise well-regulated ships, to most hazardous lengths: he has often almost shuddered to see half a dozen cigars at a time, burning red and glowing, and sparks flying about in all directions, from dusk to near midnight, on the quarter-deck of a free trader, in a seven-knot breeze, and all sail set; and when the mizen chains and bulwarks were heaped up and close packed with huge bales of hay for the stock, and a horse on board: this, to say the least, was dangerous; and if, with the modern fashion of cigar-smoking, it is difficult for the skipper of a free-trader to forbid their enjoyment!! to his "equality passengers;" and if, through the force of their example, and the enticing *perfume!* of their operations, he loses his own power of forbearance, and inclination to check his crew; then, as a remedy for such cases, the committee at Lloyds should relieve him from the irksomeness of enforcing discipline, and make it an indispensable article in an insurance policy, that no *unnecessary fires* should be lighted in the ship at any time; but most especially when loading with hemp or cotton.

The force and the mode of action of fire are, as yet, mysteries to the best informed philosophers; and all that is known, serves only to inculcate the wisdom of the most rigid precaution.

The narrative is now concluded. Captain Theaker and his gallant crew, and the passengers of the *Eldon*, have shown what may be done, and what can be borne; and their history will not have been written in vain, should it ever occur to the recollection of sufferers in any similar misfortune: and should this noble example of patient endurance, and consummate skill, enliven their despondency, and encourage exertion to accomplish the same happy deliverance.

LETTER FROM THE PASSENGERS OF THE "ELDON" TO CAPTAIN THEAKER, AND HIS REPLY.

Port-Louis, 29th October, 1834.

To Captain EDWARD THEAKER, *late Commander of the Ship 'Earl of Eldon.'*

Dear Sir,—Having by the blessing of Providence reached this place in safety, and all of us being about to separate as opportunities offer, we cannot take leave of you without publicly expressing our cordial thanks mingled with admiration, at your able, firm, and judicious conduct throughout the whole of the unfortunate accident which lately befel the fine vessel you so recently commanded; and that under divine protection we attribute our preservation during thirteen days of imminent peril, and almost unexampled hardship, to which we were exposed in an open boat, across nearly 1050 miles of ocean, to your firm, steady, skilful, and experienced proceedings.

This testimony and expression of your conduct and ability can add but little to your already well established *professional* reputation; but it may add in some degree to the satisfaction you must feel in your own breast from the consciousness of having done your duty, and of having been able to perform it to the last, in so perfect a manner. But we owe it to ourselves and to the world at large to state our opinions thus publicly, as a stimulus to similar exertions and conduct in *others* who may hereafter be placed in such trying and unfortunate situations as ours has lately been; showing them what *may* be done by the skill, cool courage, and self-possession of a Commander, and that when your ship was destroyed by fire in the midst of the Indian Ocean, you safely conducted the Crew and Passengers amounting in number to forty five persons, in two boats (one a long boat about 22 feet by 7½, loaded to the water's edge with 35 persons, bread, water, and provisions, charts, compass, &c. &c; the other a jolly boat containing ten persons) across a space of Ocean frightful to contemplate; of nearly 1050 miles, weathering two storms, and bringing them in thirteen days safely into Port, without the loss of a single life, or any *real extremity of suffering beyond that inseparable from their situation.*

In now taking leave of you, allow us, one and all, heartily and sincerely, to wish you many years of health and happiness; and to hope that what may at present *appear* misfortune, may, from the manner in which, under such trying circumstances, you conducted yourself, be the means of your future advancement, and enable you to pass the remainder of your days with comfort in the bosom of your family.

With these feelings we take leave of you, and beg leave to subscribe ourselves,

Your obliged friends and well wishers,

(Signed,)—Eliza Hart, Caroline C. Hewitt, Jane Inglis Marsh; C. F. Hart, Major, 10th Regiment, Deputy Quarter-Master General of the Bombay Army; William Hewitt, Captain Bombay Army; J. Stark, Lieut. Bombay Army; Ed. Marsh, Lieut Bombay Army; J. T. Ashton, Lieut. Madras Horse Artillery; C. R. Hobart, Lieut. Madras Army,

Late Passengers by the *Earl of Eldon.*

Port Louis, 29th Oct. 1834.

To the Ladies and Gentlemen, late Passengers in the Ship "Earl of Eldon," Port Louis.

My dear Friends and Fellow Sufferers,—In acknowledging the receipt of your very kind and flattering letter, I am sorry to say I cannot find language sufficient to express my feelings in the manner I could wish; it was satisfactory to know I had those with me who knew how to appreciate my conduct, and gratifying to find them thus express their sentiments; and it is also pleasing to contemplate the hand of Providence in our deliverance through so perilous a situation as we were placed in, for five or six days of tempestuous weather. And I must say, you give me too much credit in saying so much as you have done; for I do assure you, that rather than to my humble exertions in doing that duty to which I was called, I ascribe our safety entirely to the protecting hand of Him, without whose aid we could do nothing, as well as to the excellent conduct and ready obedience of the crew, on all occasions during the trying circumstances under which we were placed.

I must here take the liberty of returning the gentlemen Passengers my sincere thanks for their assistance and advice in endeavoring to save our beautiful ship, and the readiness with which they at all times agreed to my proposals for the general good: and I must also be permitted to express my high estimation of the conduct of the ladies in so trying a situation, who, with heroic courage, submitted at once with cheerfulness and resignation to the will of the Almighty, and although being accustomed from their infancy to every comfort and luxury, were pleased at the time our accident happened to abandon the whole of their valuable property on board, and embark in an open boat, with no other covering than that which chance had provided them with at the moment, and the fortitude and calmness with which they for 13 days bore all their sufferings, call forth more praise and admiration than my humble pen is able to do justice to.

In concluding this reply, allow me to say, I sincerely wish you all many years of health and happiness, and after the required period of your professional services, you may have the great pleasure and satisfaction of spending the remainder of your days in comfort in your native land, which appears to be the ultimate wish of every British born subject.

With these feelings, I beg to subscribe myself the sincere friend and well wisher of you all,

EDW. THEAKER.

LITERARY EXTRACTS.

BULWER'S ADDRESS TO THE PEOPLE OF ENGLAND.

To make your ministers love the people, show that you love the people yourselves. Pluck from your hearts your adoration of the rich; legislate for the poor—not for their relief from taxes only, but their relief from harsh laws and their own errors. Do you fear their violence? so do I. Then curb that violence by educating, harmonising, refining them. To destroy a mob, you must inspire a people. Interfere not with their relaxations. Trust me, whatever amuses men innocently is a great civiliser; and, above all, recollect that severe punishments brutalise the nature; you fit the nature to the punishment. Read the following extract from the pages of a great man. Among the blessings which the pursuits of literature have afforded me, I rank this as not the least, that the statesman-author of the work I refer to, unknown to me but in name and fame, sent me his code of laws as a token of esteem. But to the extract. 'History presents to us the magic glass on which, by looking at past, we may discern future events. It is folly not to read: it is perversity not to follow its lessons. If the hemlock had not been brewed for felons in Athens, would the fatal cup have been drained by Socrates? If the people had not been familiarized to scenes of judicial homicide, would France or England have been disgraced by the useless murder of Louis or of Charles? If the punishment of death had not been sanctioned by the ordinary laws of those kingdoms, would the one have been deluged with the blood of innocence, of worth, of patriotism, and science, in her revolution? Would the best and noblest lives of the other have been lost on the scaffold, in her civil broils? Would her lovely and calumniated queen, the virtuous Malsherbes, the learned Condorcet,—would religion, personified in the pious ministers of the altar,—courage and honour, in the host of the high-minded nobles,—and science, in its worthy representative Lavoisier,—would the daily hecatomb of loyalty and worth—would all have been immolated by the stroke of the guillotine? or Russell and Sydney, and the long succession of victims of party and tyranny, by the axe? The fires of Smithfield would not have blazed; nor, after the lapse of ages, would we yet shudder at the name of St. Batholomew, if the ordinary ecclesiastical law had not usurped the attributes of Divine vengeance, and by the sacrilegious and absurd doctrine, that offences against the Deity were to be punished with death, given a pretext to these atrocities. Nor, in the awful and mysterious scene on Mount Calvary, would that agony have been inflicted, if by the daily sight of the cross, as an instrument of justice, the Jews had not been prepared to make it one of their sacrilegious rage. But there is no end of the examples which crowd upon the memory, to show the length to which the exercise of this power, by the law, has carried the dreadful abuse of it, under the semblance of justice. Every nation has wept over the graves of patriots, heroes, and martyrs, sacrificed by its own fury. Every age has had its annals of blood'.* Is not this true as eloquent? But do not imagine that capital punishments are alone to be mitigated; penal enactments may be as harsh from their number as from their severity. That man breathes not freely who lives in an atmosphere of law."

SENSITIVITY OF THE SOUTH AFRICANS.

The South Africans are highly impatient of the censure of foreigners, whether it may relate to their personal habits or to the colony in general; and every one is inclined to resent it as an affront offered to himself individually. The traveller who happens to express his disapprobation of any of the customs of the country, or of the mode of life or style of thinking of its people, is at once accused of *malignity* and misrepresentation; for their ideas not being expanded by an acquaintance with other parts of the world, they naturally enough suppose that the things appertaining to themselves are unobjectionable, and that these neither require improvement, nor are susceptible of it.—*Howison.*

HANNAH MORE' CORRESPONDENCE.

EXTRACTS.

Rev. J. Scott.—I hope you are as much delighted as I am with the Life of Scott; I always highly honoured and loved the man, and often walked four miles on a Sunday to hear him at the Lock. With the worst voice, the most northern accent, very plain manners, sound sense and sound piety were yet so predominant, that like Aaron's serpent, they swallowed up all the rest.

Works of Fiction.—I pass over the mere loose and amatory novels, and take my stand on what is said to be safe ground—the novels of that unparalleled genius, Walter Scott. They gratify the taste without vitiating the imagination.

Country Farmers.—The opposition I have met with in endeavouring to establish an institution for the religious instruction of these people, would excite your astonishment. The principal adversary is a farmer of £1000 a year, who says, the lower class are fated to be wicked and ignorant, and that as wise as I am, I cannot alter what is decreed. He has laboured to ruin the poor curate for favouring our cause, and says, he shall not have a workman to obey

* "Livingstone's System of Penal Laws, p. 125."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

him, for I shall make them all as wise as himself.

Consulting a Fortune Teller.—Some farmers in a parish adjoining, where there is also a school, have been to the *Fortune Teller*, to know if we are Methodists, and if our school is methodistical. The oracle returned an ambiguous answer, and desired to know what reason they had for suspecting it; the farmers replied, it was because we sung Watt's Hymns. The sage returned for answer, this was no proof; had they no better reason? 'Yes,' they answered, 'for if the hymns were not methodistical, the tunes were.' The Pythian asked why they were so, the reply was, 'because they were not in Farmer Clap's book.'

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

THE CURSE REMOVED.

DECEMBER THE FIRST AT THE CAPE.

DECEMBER the First was a great day at the Cape of Good Hope. Under the benign influence of the Christian Faith, and undying benevolence of the People of England, Slavery died the death, and thousands of our brethren went forth "redeemed, regenerated, disenthralled," in all the majesty of Freedom.

The sound of the church clock striking the hour of twelve, and announcing a new day, was the first signal for rejoicing. And next to this, was a *feu de joie* from the mountain, N. E. of Table Bay, which was answered by shouts from the Town in the valley. The morning light beheld great numbers of the freed men and women in their Sunday dresses, congratulating each other on the felicities of personal freedom. The same welcomes took place among the British inhabitants, and at a public school of high character, the Master shook hands with all his pupils, and congratulated each one, that they had met for the *first time* in a land of freedom. In various parts of the Town and vicinity, and in Table Bay, flags and banners were displayed, with appropriate inscriptions, and on the noble Hall of the Merchants, the Union Flag of England was for the *first time* unfurled.

In the course of the morning, large groups walked abroad with a silence that was remarkable. Under the trees of the grand parade, numbers were seated in quiet unspeaking contemplation. It was an "expressive silence," the sabbath of the soul. We put a few questions to some of these persons. One said, he was thinking where the King of England got all his money to buy so much freedom. Another, how does the King of England know any thing about me and my children. A third said, he was thinking how many dollars it would cost to visit England, just to see what sort of people the Parliament men were. And a fourth declared, that he had great doubts about the matter—he could not as yet bring his mind to the belief, that after so many thousand years of slavery, *now* it should all at once pass away.

In all parts of the town a generous hospitality prevailed, and *roast beef and plum-pudding*, in honour of *John Bull*, became the order of the day. Various festive parties assembled in the suburbs, and Mr. Rutherfoord entertained upwards of six hundred children of the Sunday and Infant Schools, who spent the day in innocent recreation. In the evening, the

"Minstrels lows'd Appollo's bag,"

and, with a cheering multitude, paid their especial devoirs to Government House, George's Hotel, Mr. Fairbairn, Mr. Greig, the Commercial Exchange, and the Public Library.

A most respectable body of gentlemen, chiefly merchants, dined together at George's Hotel. It was the Feast of Freedom, and the flow of soul. Mr. Francis Collison presided, and was most happy in the discharge of his official duties. Mr. Merrington was equally successful as croupier. The following toasts were drank in the course of the evening:

1. The *King and the People* of England.
2. The *Governor and People* of this Colony.
3. LIBERTY!
4. Equal Rights, and the union of all Classes in this Colony on sound Principles.
5. The Army and Navy.
6. Lady D'Urban, and Ladies of the Colony.
7. Our Friends of the Eastern Division, and Success to their Enterprize.*
8. The London Cape-Trade Society.
9. Capt. Waterboer, and peace and friendly intercourse with the Native Tribes beyond the Frontier.
10. The British Parliament.
11. The Champions of Emancipation.
12. The British Press.
13. The Immortal Memory of Wilberforce.

All the toasts were hailed with harmonious enthusiasm, and drank

"In magnum-bonum glasses,
Wi' ruffs and dads."

Among the company was Waterboer, the Griqua Chief. In the course of a speech of unparalleled pathos and simplicity, this faithful Hottentot was most loudly cheered.* We can only offer one extract. In allusion to the bursting forth of a new Spirit in the Colony, he said—

"He greatly rejoiced in the new Spirit which he found gradually making ground against old Prejudices, and the old, selfish, and oppressive state of things; and he considered it the greatest honour of his life to be one of the present company, whom he considered as the Representatives of all those in the colony who were the Friends of Freedom, and of Justice, and of the Improvement and Happiness of their fellow-men of all classes and colours.

"The Spirit they manifested, he called an ENGLISH SPIRIT:—a Spirit which he loved; a Spirit which was rapidly diffusing itself in this colony; a Spirit that carries with it the germ of life, improvement, and happiness wherever it obtained;—a Spirit which he foresaw, would ere long regenerate the world!

"Formerly, he said, in this land we were covered with darkness—involved in a dark cloud. The English came. The Missionaries went forth. The cloud began to melt and dissolve. The light shone upon us. But Light alone will not give Life. The Heat, the genial warmth of Benevolence and Charity and universal Love—these revive, invigorate, cheer! Knowledge with Goodness, with Religion, make men to live, and opens up all our nature to view!

"I foresee the diffusion, said he, of this living, this life giving Spirit of the English. It is a fire that cannot be confined amid the dry materials of the field or the forest. It will spread from sea to sea. It will reach to the ends of the Earth. Men say that England is far to the West But England I say is also far to the East. We are in the midst of England. We are every where surrounded by her sons. May her Spirit be in us. May we be worthy of her name! My mouth is too small—my tongue is too small to express what I think on this subject,—to speak my gratitude! Could I but convey what I feel in my heart, I would sit down happy."

Mr. Fairbairn's speech, on proposing *The Champions of Emancipation*, was well deserving that rapturous applause which attended its delivery. Our limits forbid any other than one short extract. Mr. F. after enumerating the long-protracted and unwearied efforts of Historians, Moralists, Philosophers, and Statesmen in the cause of Freedom, said—

"We have to add another illustrious division, to whose presence in the laurelled field we owe much of the glory of this day. I mean the "POETS OF GREAT BRITAIN!" The Nobler Muses have ever been the Ministers of LIBERTY. Some—the frailer of the sisterhood, have indeed yielded to the seductions of power, or of external grandeur. But the high Heroic Brood, from Homer who stamped one withering sentence on Slavery in every shape, when he declared that the "day that saw man a Slave, took half his worth away,"—through Milton, who, with a Prophet's power, in a strain sweet as an Angel's voice, but terrible as the rushing of a mighty wind, denounced the wrath of God on every son of man who should thus aspire above his Brethren—to Cowper, who, while pouring out at the Altar of LIBERTY, the whole soul of adoration, vowed to the Eternal, that

* Mr. Prince was most loudly cheered in proposing this toast; more so, in alluding to the success and enterprize of the British Settlers, without the aid of Slave labour.

* Waterboer has had the honour of dining with His Excellency the Governor, Sir John Herschel, and many other gentlemen of Cape Town, during his visit to this Metropolis.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

he would rather wear the chain and the collar himself than fasten them on a fellow man—to Campbell, who saw the day coming, and was glad, when Heaven's unerring arm would vindicate the divine origin of the Human Soul, and restore the image of God, which tyranny had effaced—all, all the inspired sons of Song have exulted in LIBERTY, as the Bridegroom rejoices in the Bride—as the Earth with all her fruits and flowers expands her beauty and her magnificence a tribute to the influences of the Sun! And to their fervid strains, imbibed in our tender years, we owe, in no small measure, the lofty sentiments of the present Generation. For where and when, sir, did the words of FREEDOM, breathed in music, enter our minds first, and become a part of our being? In the very cradle, and in the nursery, and in the frank and fearless days of boyhood, when the soul was open, and the heart pliant to receive the impress of the Almighty's image—the tender, the sublime, the impassioned feelings of LOVE, PATRIOTISM, LIBERTY, glided into our spirits, wrapped in language and in imagery worthy of the pure and lofty burden of the Lay. There and then, at least, I first felt the stirrings of a Sentiment, which did I not now give it utterance, would consume me—I mean

—"My plain, sworn, downright DETESTATION OF EVERY DESPOTISM IN EVERY NATION!"

"To these master Spirits, then, gentlemen; to one and all of them that are, or have been; —dead or alive; now in Heaven, or still on Earth,—let us pay ALL THE HONOURS—for they were—"THE CHAMPIONS OF EMANCIPATION!"

The company separated by 10 o'Clock. Order and sobriety prevailed all over the town. It was a Jubilee with the Police. The freed and other inhabitants retired to rest with thanksgivings, at an early hour, and not a single occurrence took place on this happy *First of December*, to disturb that blessed happiness and harmony which reigned in the bosoms of a grateful people.

And in other parts of the Colony the downfall of Slavery was recognized as a public blessing. At Graham's Town the people opened their Churches and Chapels, and offered their devout homage to Almighty God for the Great Deliverance. They held other meetings for philanthropic purposes, and great joy was heard among all people. At Uitenhage it was a public holiday; the Public Offices were closed, everything was calm and peaceful, a new Place of Worship, which had been built for the Hottentots, was open for Divine Worship. The Magistrates and principal inhabitants, with their families, attended the service. The Rev. Dr. Philip delivered an appropriate discourse in the morning, and the Rev. Mr. Kitchingman conducted the services of the evening.

UNPAIRING AND PAIRING.

This is one of the most convenient countries in the world for the parting of lovers; nay, more, for cutting the nuptial tie. Here is a Mrs. Muller, without any other assigned rhyme or reason than the good pleasure of her will, takes leave of "dearly beloved" in the following manner:

"The undersigned, not wishing to cohabit any longer with her Husband, Christiaan Willem Schreen, hereby gives notice that she has separated from him, with knowledge of the Magistrates." J. A MULLER.

(Zuid-Afrikaan, 7th Nov.)

Now, as a *per-contra* to this ready way of breaking the silken bonds, Hymen exhibits a freak of a different, but equally facile, order.

"On Sunday last, while the congregation were assembling in the church of Old Machar, a young weaver took his station, with a fair damsel at his side, and proclaimed aloud his own name, and that of his companion, signifying, at the same time, his desire that they should be united in wedlock. He repeated this proclamation thrice, with all due solemnity, asked if any one objected, then took her by the hand, and declared that they were man and wife."—*(Glasgow Herald, 1st Sept.)*

STATISTICS OF THE CAPE, &c.

(Read before the South African Institution.)

No statistical details of any value have come under the notice of the Council, but a system of inquiry of great extent and importance has been under its review, and a sub-committee has been entrusted with the revisal of the inquiries formerly proposed by the Literary Society, and the preparation of another set to be printed and circulated, either altogether or in sections, among those persons in the community who are likely to possess or acquire such information It does not seem that any records of much trust or value exist in the colony, tending to elucidate the great questions respecting the population, or the medium duration of life in it, so as to mark and determine the influence exercised upon these by the circumstance of the people and by the variations which their condition is rapidly undergoing. It should surely be kept in mind that no statistical experiment of a character more majestic and extensive has perhaps ever been made, than that now proceeding in the British colonies, by the abolition of slavery. It is an effort of political strength, which, for its magnitude and promise of great results, is worthy to consolidate such an empire. It brings all within the compass of one peculiar distinction of lofty moral character and abounding resources; and, as to its many economic results, ought to be studied every where with close and uninterrupted attention. It seems likely to afford an *instantia crucis*, as to some interesting controversies in political economy. No country, perhaps, ever received in so short a period so great an extension of Capital as this colony is about to experience, and the result therefore cannot fail to have some effect in deciding the celebrated question—whether the profits of capital vary only with its abundance, or have their measures determined by the quality of the land which the circumstances of society retains in cultivation.

It should then throw some light on the influence exercised by change of circumstances, upon the condition and duration of life, upon our knowledge of which, it is now seen, every estimate of the prosperity and strength of a people ought to depend. A nation's resources ought to be estimated not according to the number of people it can muster, but according to the strength of its united mass; and the efficiency of a population arises not from the number of human beings in it, but from the number of beings of matured strength; or their comparative power should be reckoned in some ratio, compounded of their number and the duration of their life; hence the necessity and advantage of accuracy and minuteness in recording the changes which time produces on the numbers ushered into life, and hence it is seen, that a country may advance in population, though the annual number introduced into it be stationary, by the increase of the life of each; and the wealth and comfort of a society may be estimated from the number which remain alive at the maturer years of life.

The result of the great introduction of capital will be also an interesting object of observation; but it is not easy to estimate either the exact kind or amount of its influence. It will affect considerably trade, property, and population. Wealth cannot leave a country except in the shape of the things it contains or produces, and though there may be intermediate exchanges betwixt its transaction of bestowing and the transaction of another in receiving, the end is simply the deposition of property of some sort or other in the object of its bounty. It must be remembered that money is the instrument and not the object of exchanges, and the possession of it, or of the obligation entitling to it, merely confers on the holder a deliberative power as to the nature of that exchange which he individually desires to encourage or facilitate. The instant, therefore, that the pecuniary obligation betwixt Britain and this country is contracted and ratified, or can be acted on as a certain thing, that instant do the operations of commerce commence, which are to diffuse abroad the resources of the giver and land property of some kind or other, in a tangible and material shape, upon our shores. Much of that which thus reaches us, may afford only the means of augmented comfort or luxury, and extend the present consumption of the community. We may remark, that where immigration is possible, this effect has some influence on population; for it is precisely a superiority in the comparative rates of comfort or luxury offered by different countries, which induces men to leave their homes. It may, however, be inferred, that the greater part of the property transferred, will be of that nature which directly facilitates production, or composes the machinery by which national resources are more extensively worked, and afford a greater amount of net profits and by this result it is, that the controversy between the theories of Smith and Ricardo will be determined, if as is more likely, it do not turn out that they are reconcileable, and merely present different views of the same state of things.

INVASION OF THE EASTERN DISTRICTS OF THE COLONY.

WE scarcely need remind our readers of the constant reference in this Journal, to the skill and enterprise of the British Settlers in Albany.* The effects of these increased exertions, were becoming every day more extensively visible; and those glorious lands of the eastern division, presented abodes of abundance, and the "cattle upon a thousand hills." Now we lament to say, this prosperity, and these hitherto peaceful scenes, present a distressing aspect. The wild savage of Caffraria hath invaded the land, carrying death and destruction in his march, depopulating the country, and burn-

* Many of these Notices have been frequently copied in the Home Journals, and that one in particular of Dec. 1833, entitled "*The British Settlers*," has, we find, found its way to the Secretary of State, and has been extensively circulated as a Tract.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ing the farms. We need not descend to particulars; these have been so unsparingly supplied with great promptitude from the Office of the *Advertiser*, (being Extracts from the Graham's Town Journal, and other Correspondence,) that the whole body of our people seem to be in possession of the state of things in Albany. This has contributed to awaken our sympathies, and stir up our souls in behalf of our suffering fellow-colonists. At the Colonial Office there is much energy, and every suggestion is welcomed and acknowledged by the Hon. Col. Bell, with immediate despatch. The Hon. Col. Smith was the first to take the field. After a journey of surprising speed, he appears to have arrived at the scene of action. The whole Regt. of 72d Highlanders is advancing by sea and land. Supplies of stores and ammunition have been consigned to various vessels now on their progress, and His Excellency the Governor Sir Benj. D'Urban, &c. has sailed in H. M. S. *Trinculo*, Capt. Booth, for Algoa Bay. Many commandoes from the contiguous districts are on their march to Albany; the Hottentots prove valuable defenders in this the day of adversity, and a troop of their nation from Bethelsdorp has arrived most seasonably to the relief of Graham's Town. This Town, (the metropolis of Albany,) is the refuge of innumerable families who have lost their homes. All business is suspended, and every man under arms. Martial Law has been proclaimed: and for the assembling, conducting, and supplying his Majesty's forces, and the inhabitants who shall be embodied for the purpose of repelling the murderous invaders, who are mighty in numbers and furious in strength,—*Martial Law* has been proclaimed at this end of the colony.

All these things are a sad drawback to the satisfaction otherwise experienced in the colony, in the late abundant harvest, the progress of knowledge, and quiet commencement of new-born Freedom.

We take the liberty of suggesting at this awful moment, that all feuds, animosities, recriminations, and party-spirit do now pass away. "If we cannot reconcile all differences, let us unite all hearts." And, perhaps, it may not *just now* be out of place, to point to scenes in which British emigrants have smarted under the rod in other lands, and to mark the becoming spirit which the early settlers of New England displayed on the destruction of their abodes, and murder of their children by the North American savages. Cooper, the American writer, tells a tale, and Colton, in his Tour to the American Lakes, has corroborated the statement narrated in the "Borderers," as facts of sober history. The sufferer is Mark Heathcote, of *singular bravery*, and moreover, a man of piety, the patriarch of his family, the remnant of which stand before him after a horrible conflict with the savages. An oaken chair saved from the flames, is the seat of the father, and two parallel benches, formed of planks placed on stones, hold the other members of his family. Heathcote conducts his address in detached sentences.

"The bands of the heathen have fallen upon my herds; the brand hath been kindled within my dwellings; and my people have died by the violence of the unenlightened."

"He that hath given freely, hath taken away; and One that hath long smiled on our endeavours, hath now veiled His face in anger."

"I have known Him in His power to bless; it was meet that I should see Him in His displeasure."

"A heart that was waxing confident would have hardened in its pride. At that which hath befallen, let no man murmur against His righteous dispensations."

"There is a fearful mystery in One who sitteth on high. We have nought but the canopy of the stars for a roof—the sons of Belial have been loosened upon us—but the path of the faithful, though full of thorns, leadeth to quiet; and the final rest of the just man can never know alarm."

"He that made the wilderness blossom, hath caused the ignorant and the barbarous to be the instruments of His will. He hath arrested the season of our prosperity, that we may know Him and the power of His might. He hath spoken in the whirlwind, but His mercy granteth that our ears shall know His voice."

"Good shall come out of this evil, and the song of praise grow louder than the whoop of the savage."

But why multiply these pious sayings—the subject will no doubt be suitably handled by the Frontier ministers of Religion, whose privileged calling it is to turn a deaf ear to all other concerns than those of healing and "binding up."

THE CENTRAL EXPEDITION.

LETTERS have been received from Dr. A. Smith, dated Philopolis, 25th Dec. The source of the Caledon River had been explored, and the country around. The Expedition was proceeding to Latakoo, at which place it will be decided as to the most favorable route to the centre.

SEAT OF WAR.

CONSIDERABLE interest has been created in town, by the exhibition in the Public Library of Mr. Chase's M.SS. Maps of the Eastern division, and Plan of Graham's Town. These documents, beautifully drawn, exhibit with perfect accuracy, the name of every inhabitant, and the location of every family.

THE CAPE OF GOOD HOPE LITERARY GAZETTE for 1834.

OUR Volume (the 4th,) for this year, has been greatly enriched by the varied and powerful contributions of an esteemed Subscriber. The same talented pen will be found conspicuous in the present Number, more especially in reference to the *Review*, and *Loss of the Eldon, &c.*

The burning of this ship, and the eventful history of the passengers, captain, and crew, are beautifully described. It appears to us to exceed any thing on record in the annals of *Perils at Sea*. The narrative should be read by all classes, and those more immediately connected with the great ocean. It contains a noble example of patient endurance, consummate skill, and rare presence of mind. Major and Mrs. Hart, sufferers in the scenes of the *Eldon*, are, we understand, now residing in Cape Town.

IN bidding adieu to our Readers of 1834, we beg to remind them that it is our intention to meet them again in 1835. And

If we be successful in being supported, we hope to be successful in being useful,—that will be our profit. As a community, we possess a position almost unrivalled for facilities in securing information or extending it. Placed on the highway of common communication, betwixt the world's nations, whether aged in wisdom or in ignorance, or yet little more than the half-formed germ of prospective empires, who can never feel the lack of information from others:—canopied by a sky of strange and unsearched splendour; and nourished by a land of unrivalled interest; with fantastic mountains immersing their foundations in the seas, and their summits in the vapours of a hemisphere almost unknown, it will be long indeed before the means of investigation correspond to the variety and importance of the objects submitted to them: and ere we attain the great end of conceiving adequately the wisdom of their Author, many and lofty indeed must be the stages of information we ascend.

THE

CAPE OF GOOD HOPE

Literary Gazette.

VOL V. 1835.

WITHOUT the aid of Printing, learning never could have become accessible to the bulk of the people, and without the aid of books and periodical publications which learning and reading occasions, the art of printing itself might to this day have been classed among the useless contrivances invented by ingenious visionaries. Printing has made books infinitely more accessible *to all classes* of persons in point of expense and variety,—causes them to be more easily read and apprehended,—and enables information to be circulated with a degree of rapidity of which, in former times, there is no example. Like the water we drink, or the air we breathe, the use of printing is so constant, that it requires an effort to recollect what the state of the country was, before its introduction; and how deeply we are indebted to it for our constant convenience and gratification.—*(Quarterly Review)*

SOCIETY grants to no Author, Writer, or Publisher, a charter of protection, but has decided that Reviewers and Critics may range and skirmish as they like. Public criticism must, therefore, be confronted with reasonable firmness, and all its varieties must be tranquilly endured. The most unfriendly censures may be made to produce many compensatory advantages. It will be a personal gratification of a lasting nature to read them without the perturbation of comfort or retaliating animosity.—*(Sharon Turner.)*

LEGISLATION.*

Mr. Mundell, an old friend of ours, is, we believe, the first who has attempted to treat legislation as an abstract science, and with what justice and propriety he undertakes the high task of originating such inquiry, will be understood at once by a reference to his qualifications, as derived from the pursuits of his life. He received the education of a Writer to the Signet in Scotland, and he is now a member of that society. Since he arrived at manhood, however, he has been employed in conducting private bills in Parliament, and for several years in attending to public bills in Scotland, besides appeals to the House of Lords, and to the Privy Council. Having spent half a century with men and things in Parliament, it is utterly impossible but that he must have derived from such experience the most copious and useful information. The reader, before he applies his mind to the study of this work, is bound to recollect that it is the result of actual facts, personally observed, and we may add, observed with great acuteness, discretion, ability, and perseverance. It is impossible for us to afford any lengthened detail of the work before us, but we may supply a few hints from it, as we think they will be seasonable at the present moment, and because, perhaps, our Members of the Legislative Council may derive some degree of benefit from their perusal. None of us are too wise or too learned, and few, perhaps, of our legislators have gone through the toilsome gradations of a senator's study, or have obtained the ripened experience of sages who had grown pale over the mid-night lamp in collating and digesting all the treasures of ancient and modern wisdom.

The common practice of writers who seek to trace the original principle of things, is to reason on man in his savage state as it is called. But this is evidently a fallacious mode of argument, because man has always been found in a civilized as well as a savage state, in different stages of advancement.* One generation hands down its improvements to another, and each adds something to what it thus derives from its predecessors, and transmits the whole to its successors. It follows then that the powers of man's mind ultimately become by this process much superior to his powers of body, and thence arises a moral force which is far more powerful than physical force; the rules as well as the springs of action multiply. Now a writer who deals with those rules ought to take them as he finds them at the moment he begins their investigation, and if he alters at all the direction of his mind towards the past, it ought to be merely for the purpose of informing himself how things past bear upon things present, and how the united result of things past and present should be applied to things of the future.

Mr. Mundell, convinced by the influence of this reasoning, proceeds accordingly to treat man in his civilized state, and though Britain is the sphere to which attention is particularly directed, yet the principles inculcated by him in the course of the work are quite general in their application to every state and form of government. He commences by defining legislation as "the exercise of the supreme power of the state in making or enforcing rules of action," and this exercise, he says, has, or at least ought to have, rules of action. The rules for its general guidance ought to be—

1. To be ripely advised, before it acts.

2. To know exactly when it ought to act, and when it ought to refrain from acting.

3. It ought to be cautious and never too precipitate in acting.

Such are the laws by which its general guidance may be regulated, but there are other laws necessary to be observed which are produced by the present circumstances. The legislature, supreme as it is in reference to the community, under its jurisdiction is yet itself subject to the laws of God, and hence it should be a fundamental regulation, being law IV, that the acts of the legislature should never interfere with the laws of God, which are paramount; and therefore all legislative acts must be in conformity with them. The following regulations are evidently in conformity with the laws of God, and are essential to be observed by the legislature

5. No hinderance of any man from freely exerting his labour.

* The Philosophy of Legislation: an Essay. By Alexander Mundell, Esq. 8vo. 1834.

* Ferguson on Civil Society developes this idea in the following elegant manner:—"we are asked where the state of nature is to be found, we may answer, It is here: and it matters not, whether we are understood to speak in the island of Great Britain, or the Cape of Good Hope, or the Sraits of Magellan. While this active being is in the train of employing his talents, and of operating on the subjects around him, all situations are equally natural. If we are told, that vice at least is contrary to nature; we may answer, It is worse; it is folly and wretchedness. But, if nature is only opposed to art, in what situation of the human race are the footsteps of art unknown? In the condition of the savage, as well as that of the citizen, are many proofs of human invention; and, in either, is not in any permanent station, but a mere stage through which this travelling being is destined to pass. If the palace be unnatural, the cottage is so no less; and the highest refinements of political and moral apprehension are not more artificial in their kind than the first operations of sentiments and reason."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the House of Commons must be immediately directed.

"Every private bill is sent to a committee up stairs. Every public bill, brought in by any individual Member of Parliament, should be sent to a committee up stairs also. If that committee does not think fit to report the bill to the house, then there is an end of it, at least, for that session. If the committee to whom any such bill shall be referred shall report it to the house, then, and then only, it comes to be discussed by either house of Parliament, upon the report, or upon the third reading of the bill: whereas, at present, either house has a debate upon the motion to bring a bill, which it may negative; or upon the bill itself, when it shall be brought in, which it may throw out; or upon clauses in it, which can be much better discussed, at least in the first instance, in a committee up stairs.

"Neither house of Parliament would in this way, part with any sound discussion upon, or any deliberate consideration, which it ought to give to every legislative measure. But both houses would be saved long speeches upon motions which fall to the ground, and discussions which lead to no result. The measure, whatever it might be, if it was fit to be discussed and deliberated upon by the whole house, would thus be matured, and put in a proper shape for its consideration.

"But the constitution of committees up stairs ought to be altered, both with reference to public and to private bills; to which last I shall advert first.

"Formerly, when any private bill was opposed, it was customary to move, and to allow, that all should have voices who came to the committee; that is, that the whole house might attend the committee, though eight only were required to constitute it. This practice still obtains in the House of Lords; but now, in the House of Commons, at the commencement of every session of Parliament, lists are prepared, under the direction of the Speaker, of so many counties and boroughs, the members for which, varying from 120 to 130, compose the committee, of whom any five form a quorum The constitution of committees has not been thereby improved; though five form a quorum, and few more can be prevailed upon to attend regularly."—pp. 196, 197.

Here we close this valuable book, which in consequence of its chief merit consisting in details, we have been utterly unable in this review to place adequately before the public. Enough however has been now given to ease our minds as to the fear that we have failed to provoke the reader to peruse the book for himself. It will be discovered in the course of that perusal, that Parliament, towards the last session, adopted many of Mr. Mundell's suggestions.

A TRANSLATION,
From the Italian of METASTASIO.

Though waters from the mighty deep
May bathe the mountain;
In streams their course meandering keep,
Or fill the fountain:
Yet if at *freedom*, or enchained they be,
Murmuring, they languish for their native sea.

That troubled sea which gave them birth,
When waves were swelling;
And bade them go, and wander forth,
Far from her dwelling;
But the cloud breaks—the river *bursts its chain*,
That the vast deep may take its own again!

COMMERCIAL ADVERTISER,
And its Three Hundred and odd Friends! at Graham's Town.

[COMMUNICATED.]

COMBINATIONS of numbers against ONE, let the circumstances be what they may, whether cold-blooded, undermining, manœuvring; or hot blooded, fire-and-faggot persecution; no matter which; seldom affect the party intended to be crushed. The age is over ripe for that sort of clumsy malevolence which has been displayed against the Editor of the *Commercial Advertiser;* and the native bias of cultivated minds, and of sensible men, which is ever in favor of the aggrieved party, occasions the unprejudiced to be more scandalized by the indecent outrage which has been committed under the cloak of party zeal, than interested in the discussion, whatever it may be, which has excited it.

The three hundred and odd worthies in Graham's Town must have been woefully beside themselves from too much passion, or too little wit, when they put forth their lamentably silly placard: their intemperate folly has called forth two counter declarations in Cape Town, one of which we think it our duty to place in juxtaposition with theirs, that the articles may speak for themselves, and that the public may judge of them as they read, in comparison. The Editor of the *Commercial Advertiser* is no pigmy to be trampled under foot, or gobbled by the first flock of geese which may be driven past to stubble: the donkey that would attempt such a thistle will find him a troublesome customer! a most unpalatable morsel: but as he can fight his own battles, and will do so in good time, we shall proceed as Journalists to record the most singular and ill-judged announcement of party malevolence and vulgar spite, that ever came under our observation:

ADVERTISEMENT.

Graham's Town, Jan. 1*st*, 1835.

"The Editor of the *South African Commercial Advertiser* having already misrepresented an occurrence connected with the invasion of the colony, and commented upon his own false statement, in a manner calculated to affect our hopes of succour from other quarters; and as there is an impression abroad that former misrepresentations in that paper, as well as the visit of its Editor to the Frontier, are among the causes of a confederacy among the Caffer chiefs, which threatens the total ruin of a large portion of the Colony, we consider it our duty to call upon all well-wishers to their country—to implore all who would not wilfully be made instrumental in stifling the cries of the widow and the fatherless for protection,—to use their best endeavours to suppress circulation of that paper, during the continuance of the present awful crisis."

This being precisely suited to the low taste of the parties, was re-published in the *Zuid-Afrikaan!* and for some days we were told that the proprietors and admirers of that un-English journal, were exciting the brilliant intellects which showed off on the 8th October! to put forth a similar enunciation of the sentiments of Kaapstad!! These would-be legislators! these Rip van Winkels! these only-qualified to rule the colony, with English money for Van Winkel's pockets! these, and such as these, exhibited on the 8th of October! that memorable day of betrayal of their un-English character! their just sense of Mr. Fairbairn's English spirit and English feelings. He was not the man for them; nor would such as he is be permitted to exist in the colony, had the old Bathurst leaven continued operating, or could the colonial spirit and local politics obtain an ascendancy: but *Zuid-Afrikanism*, thank God, is not to be the future fashion; and it is as much to Mr. Fairbairn's advantage and honor to be hated by that faction, as it is to be admired by those who have come forward in his favor. The *Zuid-Afrikaan* and the *Graham's Town Journal* would, no doubt, sell more copies and obtain more advertisements, if they could succeed in damping out the *Commercial Advertiser* with their wet blankets. They are merely laboring in their vocation; further, their utter feebleness, their vapid tameness, their unredeemable barrenness, might appear to less disadvantage, if not contrasted with the energy of the master-spirit whom they childishly imagined their paltry combinations could have insulted out of their way.

No sooner, however, had people ceased to laugh at the Graham's Town placard, and its approvers in Kaapstad! than a counter-declaration was prepared, and signed by 104 of the English and English feeling community; some, however, objected to it, that it contained an erroneous view of the three hundred and odd Graham's Town "public safety" signatures! since it included them all under one head '*respectable;*' some of these 'public safety' wights were men who had *never read* the *Commercial Advertiser,* because neither the poor little crazed school-master, who is raving in the *Graham's Town Journal* against Mr. Pringle and his poetry! nor any other pedagogue, has ever taught them the love of letters! and who did not in reality sign their names which appear attached, but pawed their marks, it is said, to the placard! How marvellous is the effrontery of humbug! The worse than folly of putting forth such a document as a public instrument, cannot be reprehended too

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

severely, nor would we mince our terms in demolishing it.

A paper which did not strongly express disapprobation of the "awful crisis" gentry, could not of course be admitted by the enlightened part of our community, as the declaration of their sentiments; and it was immediately followed by a second, which one of the first philosophers of this, or any other age, did not think it unworthy of his exalted talents to compose, and to which his name, illustrious in literature, is attached, to mark his disapprobation of all low party intrigue and interested maliciousness; and his high opinion of Mr. Fairbairn's honor, talents, and integrity. His single name—"the revered, the honored name" of HERSCHELL, out-weighs "*myriads*" of such trashy libels as the Graham's Town placard; the declaration in favor of Mr. Fairbairn is simple, clear, and unqualified; and we delight to publish the paper as a *chef d'œuvre* of composition; whilst its sentiments adorn and exalt humanity: it appears in the dusky, dingy atmosphere of Kaapstad politics, as a pledge of the dawning of a better day; and we hail it with enthusiasm, and print it with every heart-felt expression of gratitude to the distinguished author:

CAPE OF GOOD HOPE,
16*th January*, 1835.

We, the undersigned, residents in this colony, having read with grief, pain, and disapprobation, a Resolution published in the *Graham's Town Journal* of the 2d instant, as that of 336 individuals, more or fewer, whose signatures are thereto attached, calling upon all well-wishers to their country to use their best endeavours to suppress the circulation of the *South African Commercial Advertiser* during the continuance of the present awful crisis, consider it incumbent on us thus publicly to express our high sense of the importance of this Colony, and to the general interests of society, of the continued and extended circulation of the last-mentioned most valuable Journal.

Differing, as some of us perhaps do, from the talented, ardent, and fearless individual from whose pen the Leading Articles in that Journal are understood to proceed, in our own views of particular points of policy, or in matters of a local and personal nature, we are unanimous in our admiration of the rectitude of principle and honesty of purpose, which we believe to have actuated him throughout his conduct of it. This belief we ground on the internal evidence which every succeeding number, as it issues from the Press, abundantly affords.

The pure and lofty standard of moral excellence, and the high tone of thought and feeling which the *South African Commercial Advertiser* holds forward, its unwearied advocacy of the great principles of mutual justice, forbearance, and kindness between man and man, and between nation and nation, its determined and uncompromising hostility to abuses of every kind, so soon as they can be shown to be such, suffice to justify to us in our own minds this admiration, and we should most deeply regret that any circumstances arising out of the present distressing state of the Eastern Provinces of this colony, should have a tendency to diminish the circulation, and thereby possibly determine the cessation of a Journal, which, so long as it continues to be conducted in the spirit it now is, we can regard in no other light than that of a blessing to the community in which it exists.

(Here follows a list of names of gentlemen of the highest character and consideration.)

Thus the "public safety" worthies of Graham's Town, the *private* enemies of Mr. Fairbairn, have succeeded in placing him in a position far more gratifying to his friends and to himself, than that from which they vainly endeavored to degrade him. *Magna est veritas et prevalebit:* humbug and folly have no chance in the contest. For his own sake, and for the good cause, we really regret Mr. Fairbairn's presence in this colony: *he was made for a wider field and more extended usefulness:* and seems to us to be lost in the contemptible squabbles and drivelling interests of this obscure and petty society, when he might have had *nations for his audience, and the great field of Europe for his scene of action.* Alas! and may we not sigh to say the same of another Master Spirit of the age, who seems, to our humble judgement, otherwise than he might be;—Science is noble, and the devotion of wealth, leisure, and transcendant talent, to the abstract cultivation of science, must be admitted to be the most noble of all occupations: but there is a something still more important than science; it consists in that order of things which permits science, and whatever else is good, to benefit the many: the combat betwixt the right and the wrong in governments is now fought hand to hand! and these are not the times when we can afford to miss one gigantic mind; since, however it may be adorning science, its voice of thunder would tell more usefully, to the thousands yet unborn, if its ardent and overpowering energies were directed to assert the great and glorious truth, that Princes and other Public Officers are born for the People, not the people for oligarchs; than if it should startle the age with the most unexpected discoveries of hidden matter.

There is no society too paltry to be exempted from the curse of its pigmy oligarchy, and our unlucky colony has exhibited a more exuberant progeny of such vermin, than any other society, as we believe, on the world's surface; the Editor of the *Commercial Advertiser* has rung some most disagreeable truths in their ears, and has most ruthlessly stripped the lion's hide, and shown the natural calf's-skin it concealed, to the woeful discomfiture of their high-blown aspirations: that their rage should be unbounded; their malice beyond concealment and beyond controul, is no marvel; happily, it is innocuous! let the viper gnaw the file, and break its fangs on the impassible steel; its bleeding gums can do us no injury!

We offer no comment on the elevated tone of the *Advertiser's* reply to the Graham's Town placard: the inward consciousness of worth is ever indicated by the calm composure of unruffled temper; it rises superior to the vindictive feelings of the weak, the ignorant, the *crafty*, and the designing. Had Mr. Fairbairn forgotten himself in reply, he would not have been what his friends, and the enlightened part of the British Public have considered him: but it was more than could have been looked for, even by those who knew him best, that he should repay insults with commiseration, and the most deadly thrust of bitter malice with forgiveness: let the utter impotence of that malice be its proper punishment: and wherever a spark of generous feeling exists in the breast of any one of the parties concerned, let them read, with shame and sorrow over their folly, the generous exertions which the Editor of the *Commercial Advertiser* has ever made, and is now unremittingly continuing to make in their behalf, for the good of the colony generally, and more particularly for their benefit.

One word, in conclusion, to the Reverend Gentlemen, the Missionaries of the Wesleyan *persuasion*, who so far *forgot* their own duties, and the purposes for which the zeal and the charity of the British religious public sent them to Albany, and maintains them there, as to lend their names to a contemptible party libel; is their capacity so limited, that they have not discovered the simple fact that the world seems to have come almost unanimously to the conclusion, that the less our clergy follow the example of the Jesuits in intermeddling with politics, the more they adapt themselves to their proper sphere of usefulness. Do Messrs. Shrewsbury, Young, and Haddy seriously believe that Mr. Pringle's poetry was translated by their fellow Missionaries, to instigate the savages to outrage? and that this Caffer invasion has been the result of Mr. Fairbairn's visit, five years ago, to the Caffer frontier? Do they join issue with all that is said by the crazy schoolmaster? who, by the way, half lunatic that he is, is still the best writer in the *Graham's Town Journal!* Do they admit that Missionaries and Missionary settlements are the curse of the frontier, and that there will be no peace there until the good old system of Commandoes shall be re-established, and the aboriginal tribes extirpated, instead of instructed? If they do, they are not only not

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

fit to hold their present situations, but also unfit to be trusted to range the streets without a keeper! If they do not, what are we to think of their discretion in lending their names to such a purpose, and in leagueing themselves with those who do? but it is enough: the subject is stale, and nothing but the justice that is due to Mr. Fairbairn, would have induced us to dwell so long upon it.

[We devoutly trust there will be no commotion among the wild besats on the publication of the following bagatelle. But there is no saying what may happen; savages, it would appear of late, are great poetasters.]

LINES

Written on hearing that the Lion in the Government Menagerie was to be sold.

To arms! to arms! ye brute creation,
Defend the honour of your nation,
Submit not to such degradation—
Let not your King be sold.
Can ye stand by and calmly view,
Such treachery of the darkest hue,
Be called a base degraded crew,
Exchange your King for gold?

Come from your native forests' shade,
Fly to your suffering Monarch's aid,
To shed your blood be not afraid,
Fight for your sovereign King.
Brave Rhinoceros, march with your clan,
And valiantly lead on the van,
Toss to the clouds presumptuous man,
And make the welkin ring.

March forward, too, Hippopotamus,
For strength and courage ever famous,
Whose boast is—"man shall never tame us;"
Come 'from the Rivers' deep.
Leave for a while your watery bed,
Where you repose your mighty head,
And to the field your warriors lead,
These are not times to sleep.

Gigantic Elephant arise,
Strike terror by thy ponderous size,
Lift thy proboscis to the skies,
Deal death at every blow.
Delay not, but to battle rush,
Thy powerful foot will thousands crush,
And tho' life's blood in streams may gush,
Yield never to the foe.

Stately Giraffe, thy towering form,
Erect above the battle's storm,
Be thou the beacon of alarm,—
Come from your verdant banks.
Swift-foot Gazelle, bear thou the tale,
Speed thee o'er mountain and o'er dale,
Say that your Sovereign is for sale:
Tell it throughout the ranks.

Base Slavery be your portion all,
If ye permit your King to fall,
And heed not honour's sacred call,
To vindicate his right.
March quickly, then, 'ere 'tis too late,
Or man will shortly seal his fate,
His life and honour now await
The issue of the fight. G. P.

ODDS AND ENDS: A MEDLEY.

(Communicated.)

THE VOTE OF CENSURE, ETC.

In our last we drew a contrast betwixt the temper and taste manifested by a portion of the London periodical press toward our brethren in America, and the simple fact of their admitted advance in prosperity: the following from the *Globe* is in a better spirit, and the passage quoted deserves the high encomiums it has received, "a plain system, void of pomp,—protecting all and granting favors to none,"—dispensing its blessings like the dews of heaven, unseen and unfelt,—"seems a vision of Utopian government! the Americans are 'blessed' if they enjoy it, and 'fortunate' if they know the extent of their happiness! we much fear the possibility of an election system, carried to the American extent, continuing to work well. Our own hereditary responsible head so long as the people have their legitimate control over Parliament, is unquestionably the safer theory. Time must show the American Election System is as yet but an experiment! but how grand the scale! how exalted the principles!

Our attention has been called to the concluding passage of the protest of the President of the United States against the vote of censure which was passed upon his conduct by the Senate of that country. No one can fail to admire the beautiful eloquence of that part of the protest which relates to the President himself, and which, from its noble simplicity, its touching pathos, its dignity of feeling, and its elevation of sentiment, may be regarded as one of the most striking passages that ever proceeded from the lips or from the pen of patriot and statesman.

"The resolution of the Senate contains an imputation upon my private as well as upon my public character; and as it must stand for ever on their journals, I cannot close this substitute for that defence which I have not been allowed to present in the ordinary form, without remarking that I have lived in vain, if it be necessary to enter into a formal vindication of my character and purposes from such an imputation. In vain do I bear upon my person enduring memorials of that contest in which American liberty was purchased—in vain have I since periled property, fame, and life, in defence of the rights and privileges so dearly bought—in vain am I now, without a personal aspiration, or the hope of individual advantage, encountering responsibilities and dangers, from which, by mere inactivity in relation to a single point, I might have been exempt, if any serious doubt can be entertained as to the purity of my purposes and motives. If I had been ambitious, I should have sought an alliance with that powerful institution which even now aspires to no divided empire. If I had been venal, I should have sold myself to its designs—had I preferred personal comfort and official ease to the performance of my arduous duty, I should have ceased to molest it. In the history of conquerors and usurpers, never, in the fire of youth, nor in the vigor of manhood, could I find an attraction to lure me from the path of duty; and now I shall scarcely find an inducement to commence their career of ambition, when grey hairs and a decaying frame, instead of inviting to toil and battle, call me to the contemplation of other worlds, where conquerors cease to be honoured, and usurpers expiate their crimes.

"The only ambition I can feel, is to acquit myself to Him to whom I must soon render an account of my stewardship, to serve my fellow-men and live respected and honoured in the history of my country. No, the ambition which leads me on is an anxious desire, and a fixed determination to return to the people unimpaired, the sacred trust they have confided to my charge—to heal the wounds of the constitution and preserve it from further violation; to persuade my countrymen so far as I may, that it is not in a splendid government, supported by powerful monopolies and aristocratical establishments, that they will find happiness, or their liberties protection; but in a plain system, void of pomp—protecting all and granting favors to none—dispensing its blessings like the dews of Heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce. It is such a government that the genius of our people requires—such a one only under which our States may remain for ages to come, united, prosperous, and free. If the Almighty Being who has hitherto sustained and protected me will but vouchsafe to make my feeble powers instrumental to such a result, I shall anticipate with pleasure the place to be assigned me in the history of my country, and die contented with the belief that I have contributed, in some small degree, to increase the value and prolong the duration of American liberty.

"April 15, 1834." "Andrew Jackson."
—*Globe.*

It is almost distressing to think that a post of such anxious and awful responsibility should with its theory crown, and circumscribed sensual enjoyment, be still a sufficiently tempting bait to unruly ambition to hazard anarchical confusion at each returning election. As a contrast to the President's disavowal of all "personal aspiration" or "hope of individual advantage," let us turn our thoughts to that illustrious person whom we shall still designate as Prince Leopold. His career has been what the world calls "singularly lucky:" Cobbett said he had received in a few years from the British people, a larger sum than the Americans had paid their President since their original declaration of independence. We know nothing of court scandal, and can vouch for no anecdote, so shall forbear to repeat what may be vulgarity and exaggeration; but what is printed in a shape that the "great and noble" must have seen, may be referred to.

A splendid work in royal quarto was published by Colbourn last year, entitled "Beauties of the Court of King Charles the Second," the preface states, that "Mr. Murphy, from whose minatures the portraits have been engraved, was appointed painter in ordinary to Her Royal Highness Princess Charlotte, *to whose household he had been attached from her childhood.* He having, while at Windsor, made copies of one or two of the most striking of "Lely's Windsor Beauties," Her Royal Highness, on seeing them, expressed her admiration, and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

in her usual off-hand gracious manner, desired that the whole set might be completed for her." After this follows the arrangements made for copying the portraits, a room was allotted to the artist in Windsor Castle, and the Royal Family are described as interested in the work; then follows, "Before the whole set of portraits was completed, the Princess Charlotte died; and with that fine hearted and right-minded being, died the hopes, fortunes, and happiness of many individuals, as well as the hope of many nations. Mr. Murphy was among those unfortunate individuals, whose personal affliction was for a time swallowed up in the general grief, had lost a kind friend and patroness—had lost his appointment, *and had received no payment for a work which had occupied all his time during three years!* and was now near its completion. After the lapse of a certain time, he sent in the pictures with a written statement of his claims, duly authenticated to the proper quarter. *But in a few weeks afterwards the pictures were returned to the artist!*"

——— O, how wretched
Is that poor man, that hangs on princes' favors!

The people of England had paid enough to secure the poor Princess Charlotte from having unpaid bills stuck upon her hearse. On this occasion the pride of the British nation seems to have been saved a wound by the munificence of Sir Gerard Noel, who purchased the portraits; but what are we to think of "the proper quarter?" Mrs. Trollope should lash the vices at home, they are worse than the follies abroad; the old world has more of the former than the new world has as yet exhibited.

HOSTILITY TO PERIODICALS.

We have been both grieved, and let us add, also amused at the strange advertisements against the *Commercial Advertiser;* we subjoin a London one against the *Times* and *Globe*, which is more pithy and more pointed; if the *Zuid Afrikaan*, and its Joint Stock Company want a lesson, here it is;

The following amusing piece of blackguardism appears in an evening paper of Saturday:—*The Times*.—Sir,—I have been, within these few days, at a coffee-house in Greville-street, and at a coffee-house, in Tottenham-court-road (the University coffee-house) and at a coffee-house in Little Queen street, Holborn, in all of which I rejoice to find the proprietors have refused to receive the now really b—— old *Times*, that urged the spilling of the people's blood at Monday's procession. In Little Queen-street a bill is in the window, thus,—'*The Times* and *Globe* not taken in here.' Bravo! This is glorious! I will never enter a coffee-house where *The Times* murder journal is taken in. Yours, &c.,
Times, May 5. "GEORGE EDMONDS."

Noxious insects and vermin used to be hunted to the death, rooted-out as George Edmonds would extirpate the *Times* and *Globe*, and the *Zuid Afrikaan* would the *Commercial Advertiser*! but now-a-days they are at a premium.

CONTRACT FOR FLEAS.—A celebrated exhibitor of educated fleas in this town, gave notice on Saturday, that he was willing to contract for a certain number of live fleas, at the rate of one penny per flea, with a proviso, that no cat, dog, or pigeon flea would be accepted, and that none but real bed fleas must be offered; several breeders sent in their tenders, and the fancier purchased a lot consisting of eight fleas for five pence.—*(Edinburgh Paper.)*

Lives there at the Cape any one who ever knew Dr. Isaac Milner, Dean of Carlise, and Master of Queen's College, Cambridge? Isaac, when travelling, had reposed in a village hotel in the Yorkshire wold, and awoke in the morning grievously flea bitten! on making his complaint, the landlord, honest Boniface, cut the plaintiff short. "Sur! I haz lived here, in this here place, man and boy, a matter of fifty years, and these here fleas never boited me, and I thinks as how they niver touches aught az iz wholesome!" the reply was final! poor Isaac pleaded guilty! he weighed twenty stone!—and his portly figure did justice to the renown of "Queen's Ale." But the point of our anecdote is to contrast our Yorkshire hosts notion of flea-biting with that of the flea fancier, in the Edinbro' paper. Isaac was a most undaunted humourist; he was not to be frightened from a joke! he had some where in some gentleman's garden, sat on a garden chair, the carved hollow of which adapted itself so miraculously to his glutia, that his heart yearned to have them at all times indulged with such an enchanting accommodation: it is a fact, that he procured some pounds of soft putty, and laid the mass on a bench, and sat thereon, until a sure and accurate model was made of the parts requiring casement, and this done, had the same most carefully imitated in wood and leather, until he declared that he had reached the *ne plus ultra* of solace to the nether man! and did not envy the king his throne, nor his pupil Pitt, the seat of Premier.

THE POONA THUGS.

To the Editor of the Bombay Courier.

SIR,—The recent murder by Thugs in the neighbourhood of Poona having caused some consternation, from the casual circumstance of the delinquents having been detected almost in the fact, and thereby proved the existence of a practise which by many is supposed to have ceased in the Company's provinces, the accompanying abstracts of evidence given by members of the fraternity of Thugs who have been seized, and have confessed, may not prove uninteresting, as they tend to show that this diabolical trade of murder has been more extensively practised in the Bombay territories than is generally imagined. It is far from being a proof of the exemption from the horrors of Thuggee in any country, that is seldom heard of and generally discredited. This can only be considered as an evidence of the dexterity with which these miscreants manage to hide their crimes from the world. Their deeds of death are usually done with such extraordinary secrecy, and such skilful precautions are adopted both before and after the murder, that detection is rendered most difficult. Had not a judicious use been made of confessions by some of the Thugs first seized, and the most persevering exertions been employed by the authorities who were entrusted with the duty of their seizures, to follow up the disclosures that were elicited, it is probable that the horrors and outrages that have been discovered would never have been brought to light, and Government and the public would never have become acquainted with circumstances that still appear almost incredible. It will hardly be believed, had it not been most satisfactorily established, that the Thugs had the audacity to make a military cantonment their Head Quarters:—to have almost always been in force in it, or its immediate vicinity:—to have had associates who by engaging in trade or other occupations in the Military Bazaars, have acted as the decoyers of unsuspecting travellers who have been led out to be strangled by the gangs who were lying in wait for them:—that they have strangled and buried their victims almost within hail of the habitations in the Cantonment:—and that the murders they have perpetrated within a few miles around the place, and which have been substantiated, amount to hundreds. There can be little doubt but that a dread of seizure has driven many of the Thugs to the westward, and it is to be feared, that the Poona murder has not been a solitary one in those parts. Once a Thug and always a Thug, is the motto of these insidious enemies of their fellow creatures; for go where they will, they make their own livelihood on the death of others; and by charging their iniquities to the score of their destiny and indulging in the still more horrible belief that the immolations of their victims is an acceptable offering to Kalie or Bhowanee, (the goddess of worship with both Mussulman and Hindoo Thugs) they feel none of those compunctions visitings of conscience which other murderers are supposed to suffer under. Your's &c. RUFUS.

DEPOSITIONS.

Baleah, Thug, approver, an inhabitant of Nizam's country, confesses that he generally went on Thuggee with Dawood Khan Jemadar and Myan Khan, Jemadar of Sholapoor, who usually frequent the roads about Sedasheopeth, Hoomnabad, Tooljapoor, Punderpoor, and Sholapoor, and sometimes went as far as Poonah. Has also committed murders on the road from Kurnool to Sholapoor.

In the year 1833, joined a gang of Thugs and committed many murders. First strangled five persons in the Nizam's country, and then proceeded to Sholapoor. Met with five travellers, two Musselmen and three Hindoos, and strangled them one day's journey beyond Sholapoor, on the Poonah road; obtained between 40 and 50 Rupees' worth of property. Then went to Punderpoor. Met a man and woman, by caste Hindoos, going to Seroor; strangled them one stage from Punderpoor, and got 100 Rupees and their clothes. Next went to Ahmednugger, and fell in with three Hindoo labourers from

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Poonah, going to Aurungabad; strangled them a stage from Nuggar, and got 100 Rupees. Went towards Aurungabad, and near the Godavery; fell in with a Telingah from Poonah, strangled him and got 30 Rupees' worth of property.

In the year 1831, joined another gang of Thugs who intended to proceed towards the Bombay frontier. First strangled 12 men and 5 women at various places in the Nizam's country; then went to Goolburgah and met Buhleem Burreh Sahib, Thug Jemadar and 30 Thugs from the neighbourhood of Sholapoor, bringing ten bullocks and ponies laden with booty for sale. Left Goolburgah and strangled a Musselman near Turkul; got 5 Rupees, a sword and shield. Went to Shustoor; met a Hindoo man and woman from Punderpoor; strangled them and got about 100 Rupees' worth of property. Went to Toojapoor, met two Brahmins; strangled them and got about 85 Rupees and clothes. The gang then divided, and Lungotea Jemadar and 20 Thugs went towards Sholapoor. Deponent went home.

In the month of February, 1834, a gang of Thugs while going from Hoomnabad to Sholapoor, fell in with five Arabs and a woman going to Bombay; strangled them, and obtained gold worth 1,600 Rupees, and about 200 Rupees' worth of other property.

In the month of February, 1834, three Arabs, from Hyderabad going to Bombay, were murdered between Sholapoor and Poonah. They had with them 1,200 Rupees; some silver ornaments; a mare and two ponies, some cooking utensils and wearing apparel. Their relations have since made search after them in vain.

Peer Khan, inhabitant of the Hyderabad country, a Thug approver, confesses that he has for the last ten years been in the practice of going on Thuggee towards Sholapoor; went on one occasion as far as Dharwar. The gang of Thugs went by Sungesoor, Miraitch, Tazgaon, and Sattarah, to Poonah; then returned by Punderpoor to the vicinity of Sholapoor. They committed many murders during this trip.

Eighteen months ago, in the hot weather of 1833, joined a gang of Thugs from the vicinity of Sholapoor, and strangled seven persons in various places near the borders of the Shalapore and Ahmednuggur districts. The Jemadar of the gang told deponent that many Thugs were then residing about Sholapoor and Beejapoor.

Surwur and Nunhee Khan, Thug approvers, confess that during the last year or two they have usually met gangs of Thugs on the roads leading from Hydrabad to Sholapoor and Punderpoor; know that many Jemadars with gangs of Thugs constantly traverse those roads; and deponents have committed murders in their company. Have also within the last four years met gangs of Thugs from the Carnatic, who came from the Southern Mahratta Country. Went on an expedition to Punderpoor with Hoosain Sahid, Jemadar. Near Wyraug strangled four Moghuls, and their two servants, got 200 Rupees of property, a large horse, three ponies, and weapons. At Tarapoor, near Punderpoor, strangled three Telingahs from Bombay, and got 150 Rupees' worth of property.

Mohna, Hindustanee Thug approver, confesses that in the year 1831, he accompanied a gang of Thugs into the Bombay country. First committed several murders about Aurungabad; then went to Poonah, where they were detained on suspicion, but were released. Came to Lonee and fell in with two Hajees from Bombay, going to Hyderabad. Were joined there by Hoosain Sahib, Jemadar and eight Thugs; and next day strangled the Hajees. Got a pony and a few other articles. Went on towards Sholapoor and strangled four Mahratta travellers, who came from that place. Obtained a pony, and about 150 Rupees' worth of property from them.

Heera, Hindustanee Thug approver—confesses that four years ago he went with a gang of Thugs from Aurungabad to Ahmednugger. Fell in with three Sepoys going to Dwarka. Took them twelve koss beyond Nugger, and strangled them between two hills. Buried the bodies and got 250 Rupees. Went to Seroor and then to Korygaum. Rested under the Mangoe trees near the Traveller's bungalow. Decoyed two Mahratta Brahmins out of the town, who put up with us, and strangled them during the night. The bodies were buried near the Mangoe trees. We got 15 Rupees. Went towards Poonah, and seeing an unfavorable omen, did not enter the city, but took the road to Nassuck. Conducted a traveller from Poonaah to the distance of 19 koss, and then strangled him; got 10 Rupees. The body was buried. Two koss from Nassick strangled two Palkee bearers, and buried their bodies. Got only 7 Rupees and cooking utensils. Went beyond Nassick and strangled two Sepoys, at the distance of two koss; got 50 Rupees' worth of property from them.

The cold-blooded murders perpetrated by Burke and the other "resurrection men," exceeded in horror all ordinary details of atrocious crime; but the sect of Thugs scattered over all India, and ready for the most trifling booty to destroy the inoffensive traveller, presents a spectacle which must startle those who imagine the native character in India to be a plastic compound, soft and manageable in the fingers of British authority to be moulded into whatever shape those parties please, who consider 10½ per cent. on six millions, a legitimate demand on Hindostan. The following is a specimen of the mild Asiatic! As it is not stated that the man was insane or drunk when he paralyzed the President and Court, we presume he was both sane and sober; and if so, we question if the records of any criminal court, in any civilized country, can present such a scene,—a Havildar ranks as serjeant, and is, generally speaking, a soldier of merit and respectability: the narration does not state what had occurred to madden this unhappy man to such an outrageous extremity.

A laughably serious circumstance took place about a fortnight or so ago at Arcot, upon the trial of a Havildar of the 2d Regiment Light Cavalry.—This man having been charged with some minor offence, was warned of a Regimental Court Martial convened to investigate into his case, when he appealed from a Native Regimental to an European General Court Martial, under a late provision.—The Court accordingly assembled, and the proceedings were entered upon—but fearing from the turn matters appeared to take, that things were going against him, the Havildar deliberately spat in the face of the officers sitting nearest to him!—The members of the Court stared at one another, paralyzed by astonishment—and the Havildar making the most of his time, regularly *served* them all out, throwing his turban at the President—giving one of the members a punch in his victualling office, and spitting in the faces of the rest.—The members of the Court recovering from their reverie of wonder, drew their swords, and in a moment afterwards, half a dozen sabre points were presented at the prisoner. The President, however, immediately desired their swords to be returned to their sheaths—when the Havildar made a dash for the sword of a Cavalry Officer, who was one of the members of the Court. He seized the hilt, and had partly drawn the blade from the scabbard, when he was seized. The man was then handcuffed, and is to be tried for the mutiny,—but he declares his intention to die—and swears he will starve himself to death. Down to the date of our intelligence, he had been nearly three days without food. A remarkable feature in this case is, that when he has given his choice of a Native or an European Court to try him for the mutiny, he again preferred to be tried by European officers. This, we believe, is the first instance of such conduct ever known among Sepoys. Mutiny in our native army is

——a monster
To be slaughtered in the birth—

and however fearful the consequence may be to the unhappy man himself, the affair cannot be passed over, and policy as well as the spirit of the times, calls for some severe example.—*Madras Gazette, August 9.*

HINDOO RELIGIOUS MURDERS.

The practice of Suttee and Infanticide has been put down by legal enactment in the British Territories: but not more than one-half of India is officially recognized as subject to regulations of Government—for instance, the southern shore of Bombay Harbour is subject to the Chief who represents the Angria family, and who reigns a Sovereign Autocrat, entitled to the full power of burning widows in his paltry dominions—the reader must keep in view that there are two Colobahs, one a small islet, half-a-mile long, and a quarter broad, joining Bombay Island and Angriah's Colobah on the opposite side of the harbour. The following from the *Bombay Gazette*, are worthy of a serious perusal. The national character in India is not rightly estimated; it has a dark side, which is fearful to contemplate.

A FEMALE TAKEN OFF BY HER RELATIONS FROM BOMBAY, TO PERFORM SUTTEE IN ANGRIAH'S COLOBAH.

To the Editor of the Bombay Gazette.

SIR,—I have just heard that a party of Hindoos, taking with them a relation in a dying state, and his wife—or she may be his widow—have this day sailed hence, for Angria's Coloba, for the avowed purpose of sacrificing the wretched woman, as a Suttee, on her husband's funeral pile.

The public are aware, that this practice, so abhorrent to every feeling of humanity and civilization, has been through the philanthropic exertions of the present Governor General of India, Lord William Bentinck, some years since proscribed, and effectually suppressed throughout the British Territories in India.

Under these circumstances, as the Rajah of Coloba is the merest dependant on the British Government, holding his possessions by its sufferance, and paying an annual tribute for the same, a word from the Bombay authorities would at once be the means of abolishing, in his insignificant domain, this revolting and cruel practice.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

I therefore trouble you with this short communication, in the hopes that the Government will see the necessity of its interposition to prevent in future Suttees being performed in actual view of its presidency.

I may add, that the present is not a solitary instance of the perpetration of these atrocities, by Hindoos proceeding to Angria's Colaba from Bombay for the purpose—a similar occurrence having taken place between two and three years ago. I remain Sir, your obedient servant,

Bombay, 2d Sept. 1834. A. B.

We would earnestly call the attention of Government to the letter of our Correspondent A. B, the truth of whose statement is matter of public notoriety on the island. The name of the individual whose widow was taken over the water for self immolation. was Bhawoo Narain Khutry, a wealthy banker of Bombay. That she was forced or even persuaded to this line of conduct by any of her relatives or attendant Bramhins we will not assert; but that she was *permitted* and *assisted* by a whole posse of persons there can be no doubt—and that she has since been burnt as a Suttee within sight of our flag is equally certain. The assertion of our correspondent that this is not a solitary case is most true; we have called public attention to the fact more than once in this paper, and were led to do so from the conviction left upon our minds that fair play is not always used; that unnatural measures are resorted to, in order to stupify and intoxicate the parties, who have so consented to become Suttee, perhaps, in a moment of rashness—in order to bear them thro' the terrors of the scene. To the case which happened two or three years ago, referred to by our correspondent, we were ourselves witnesses: and we can declare that the infatuated female was, while hurried along the streets of Bombay, absolutely *insane* from the effects of drugs administered to her. To describe the loathsome but yet pitiable state of that poor creature, her starting and blood shot eyes—her slavering lips—her outrageous behaviour—mad gesticulations, and yet madder cries, would be here useless—but the fact should never be lost sight of, that women are to be taken from this island *in a state of stupefaction*, if not of more active madness, to commit self murder, *while in that condition*, within sight of Bombay castle.

There are two practical points, to which, if the attention of the authorities be directed, a repetition of scenes like this may be prevented. 1st, the prevention of parties from taking away females to Colobah for this purpose—2d, the extinction of the practice of Suttee *there*. Since the abolition of Suttee within the British dominions, we believe all those who *assist* in any way its commission *in* these dominions, become seriously involved as accessories to murder. Now, we ask, where (as in this instance) a British subject is taken across the water for the avowed purpose of Suttee—though it be performed out of the jurisdiction—does not the assistance *given here* by the relatives, the permission even to go when the purpose is known—the accompanying on such an errand—the provision of the sea carriage and other necessaries—do not all these constitute the parties concerned accessories before the fact in this crime—do they not constitute them guilty of assisting in the breach of a Government regulation and subject them to penalties?

For our own part we conceive that the permission left to the Native Courts to follow their own usages, extends only to those who are *bona fide* under their jurisdiction; and that parties who have been all their lives British subjects, and claim that jurisdiction only for a single hour, and the commission of single act, which would be criminal in their own, have violated at least the spirit of the regulations, and should be dealt with accordingly Be it recollected that the life sacrificed is in this case that of a British subject—that it is often sacrificed while the party is under the influence of Majoom or opium—that though the act is consummated in Colabah, the plan, the counsel, the preparations all have place in Bombay. So, that, before the boat has put off from the shore, the parties have committed Suttee in their heart, and the measure of accessory guilt is full. Under this view of the case, we think Government might do much to put an end to the practice, acting simply upon the principle of cutting off and punishing all assistance, counsel and accompaniment to the act, given either here or on the sea, after the purpose of Suttee had been once avowed. With regard to the extinctions of the practice in Colobah itself, considering its vicinity, its dependence on the British Government, and the high character which its minister, Babajee, deservedly enjoys, we conceive little more would be requisite to effect this object than a friendly suggestion from the Government, accompanied by a translation of those parts of the Governor-General's proclamation, which show that the practice is not only *not ordered*, but is in many cases *forbidden* by the Hindu Shasters.

Our paper is a medley; let us now turn to the son of Ishmael. The prophet has been sorely traduced by the Europeans. He introduced into Arabia a new and certainly a better creed; for the Koran is, without doubt, better than any thing which had preceded it in the East; but let us leave his defence to Sismondi. The writer of this paper was once most painfully shocked on the death of a friend in India, to find that the poor fellow, a hot brained visionary and unstable minded, though otherwise, a most amiable and really a talented man, had in secret professed Mahomedanism; our English Socinians had better turn Mahomedans at once, than waver as they now do betwixt the divinity and humanity of his Redeemer. The Mahomedans really give the Saviour, son of the Virgin, a holier character than our Socinians do: they admit his sacred and inspired Church, and quote his promise of the Comforter, as a prediction of Mahomed. See John, chap. 16, v. 7 to 11, with its parallel passages.

MAHOMET.

It would be an act of extreme injustice to persist in regarding as a mere imposter, and not as a reformer, the man who urged a whole nation onwards in the most important of all steps in the knowledge of truth; who led it from an absurd and degrading idolatry, from a priestly slavery which compromised morality and opened a market for the redemption of every vice by expiations, to the knowledge of an omnipotent, omnipresent, and supremely good Being—of the true God, in short; for since his attributes are the same, and he is acknowledged the sole object of worship, the God of the Mussulmans is the God of the Christians. The profession of faith which Mahommed taught to his disciples, and which has been preserved unaltered to this day, is, that there is but one God, and that Mahommed is his prophet. Was he an imposter because he called himself a prophet? Even on this head, a melancholy experience of human weakness—of that mixture of enthusiasm and artifice which in all ages has characterised leaders of sects, and which we might, perhaps, find it in our own time, and at no great distance from us, in men whose persuasion is undoubtedly sincere, and whose zeal is ardent, yet who assert or insinuate, a claim to supernatural gifts which they do not possess—ought to teach us indulgence. An intense persuasion is easily confounded with an eternal revelation; the dreams of an excited imagination become sensible appearances; faith in a future event seems to us like a prophecy; we hesitate to remove an error which has arisen spontaneously within the mind of a true believer, when we think it favorable to his salvation; after sparing his illusions, the next thing is to encourage them, and thus we arrive at pious frauds, which we fancy justified by their end, and by their effect. We easily persuade ourselves of what we have persuaded others; and we believe in ourselves when those we love believe in us. Mohammed never pretended to the gift of miracles; we need not go far to find preachers of our own days, who have founded no empires and yet are not as modest.—*Sismondi's Empire.*

CORRESPONDENCE.

THE COMET OF 1835.

To the Editor of the Cape of Good Hope Literary Gazette.

The celestial machinery is created for eternity. Nothing can destroy the least part of it, but that Almighty fiat which first created it. The heavenly bodies, notwithstanding their number, and the intricacy of their movements, revolve, and pursue their course through the immensity of space, without the least danger of clashing against each other. They obey the same laws, and to whatever temporary derangement they may be subject, recover their direction, and proclaim, as they triumphantly roll along, the unerring wisdom of that hand which first projected them. To the untutored eye "The heavens declare the Glory of God, and the firmament sheweth his handy works." But the more the works of God are examined, the more wonderful they appear. Human science is so far from discovering any defect in them, that the farther it advances, the more it is startled at its own weakness and insufficiency. New wonders are opened to its view, and it perceives, after the labors of a thousand years, that the knowledge it has attained is only in part, and even imperfect. "I behold," says Solomon, "all the works of God, that a man cannot find out the work that is done under the sun: because, though a man may labor to seek it out, yet he shall not find it; yea, farther, though a wise man think to know it, yet shall he not be able to find it."

I have been led to these reflections, from observing the minuteness and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and nicety of the calculations in the *Nautical Almanack* for the present year. The calculations in this extensive work, while they prove the accuracy of the motions of the heavenly bodies, and the unerring wisdom of the Creator, overpower the minds, not only of those who possess a popular, but even what is generally considered a scientific knowledge of Astronomy. It shews the places of the sun, moon, and planets, and their distances from certain fixed stars, for every day in the year, and other matters of the greatest benefit to the navigator and the astronomer to the fraction of a second!

That astronomers should trace in the heavens the future motions of the planets, might be imagined; but who would expect to find the apparent path of a Comet anticipated? Who would expect that the place of a body, whose velocity almost exceeds the power of numbers, could be ascertained with the least degree of precision? To those of your readers, of whom I acknowledge myself to be one, who do not pretend to have any extensive knowledge of astronomy, the announcement of the apparent track of such a visitant must appear to be a most extraordinary effort of the human mind. The labor of calculating the orbit, and the probable appearance of the eccentric phenomenon, must be regarded as not less surprising than the declaration of Thales of an approaching eclipse of the sun.

The Comet announced in the *Nautical Almanack*, usually denominated 'Halley's Comet,' from his having observed the periodic time of its revolution in its orbit round the sun to be nearly 75½ years, is expected to appear about the beginning of August, 1835, and to continue visible until the middle of February, 1836. The earliest notice of this Comet was in 1305, when it was described to be *Cometa horrenda magnitudinis*. There is no record of its reappearance until 1456, when Pope Cellistus was so terrified that he excommunicated it, together with the Turks. It appeared A. D. 1531, 1607, 1682, 1759, and is expected 1835. Its tail, which was once *horrendo magnitudinis*, has become gradually diminished; and probably, on its visit to the centre of our system, may not easily be distinguished from a star, but who can say that it will not then display itself with renewed splendour?

Should this be the case, it will be sufficient briefly to inform the general reader that this phenomenon, in its approach towards the sun, will rise *August* 3*d*, 1835, between three and four in the morning, above the horizon of Cape Town, when its place will be between the tips of the horns of Taurus, but invisible without a telescope.

Sept. 28*th*, it will be to the north of Castor, and rise early in the morning, soon after this period, it will for a considerable time be invisible, in consequence of the presence of the sun, although it will be above our horizon during the day.

Oct. 10*th*, it will be between Mirach and Corona Borealis, directing its course towards the head of Serpens, in the constellation Ophincus.

Oct. 18*th*, it will cross the Equator [R. A 16h. 30' nearly.]

Nov. 4*th*, it will make its Perihelion passage [R. A. 16h. 45' Dec. S. 13° nearly.]

On the 10th of October, it will set between 6 and 7, in the evening; and, as it will approach the western edge of the horizon later every day, it may be expected to increse in brightness until Nov. 4th, when it will set about 9 in the evening. It will then commence its course from the sun towards the opposite side of the heavens, and decrease in splendour.

Dec 9*th*, it will be north of Antares, and will rise about 4 in the morning.

The Comet will continue to be an object of interest to astronomers until Feb. 11th, 1836; after which it will disappear a few degrees from the shield of Centaurus.

CIGARS AND THE SMOKERS.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—It is no part of my intention at present to animadvert on the prevailing practice of *Snuff-taking* in Cape Town, because if I did, many a one would, I suppose, "turn up his nose." But Sir, I wish to have a slap at that rapidly increasing race of beings, the *cigar-smokers*. You cannot enter a room now-a-days or a public office, you cannot take up a book or paper, you cannot ride in a carriage, or walk out to take the fresh air, without being perfumed by the tobacco-boys. The plague of cigars seems to have fallen upon all ranks and ages; and it was only the other evening, that I popped my head into the Penny Library, when I witnessed a little urchin about six years of age, approach the table with his cigar, demanding at the same time, "Pray Sir, have you got Tasso's Jerusalem Delivered?"* But, as I apprehend no complaint of mine would act as a preventive to this crying evil, I would just propose to the men of science, that it might by their endeavours be considerably mitigated. Pray Sir, cannot you prevail on these gentlemen to contrive a plan by which our walking chimnies may be made to consume their own smoke?

Your's,

SNIFF.

LITERATURE.

VOYAGE OF DISCOVERY.

Voyage of H. M. S. CHANTICLEER, *by Order of the Lords of the Admiralty, under the command of the late Captain* FOSTER. *By* W. H. B. WEBSTER, *Surgeon of the Vessel.* 2 *vols.* 8*vo.* 1834.

We have just seen this work announced in the London Journals, several of which contain copious extracts. Dr. Webster, it will be recollected, spent some time at the Cape, in 1831. We glean one or two remarkable paragraphs, especially one relative to the fatal event which put an end to the Expedition.

"About five in the afternoon, the canoe having passsd a rapid, Captain Foster suddenly rose up from the party, saying he would go and see what the man abaft was about. They were reclining beneath the awning of the canoe in conversation, as Captain Foster crept out at the after part of it. Being outside of it, with his feet resting on the gunwale, he incautiously seated himself on the awning, which had no sooner received his weight than it gave way, and he was precipitated into the river. The noise of his fall was heard, and Mr. Fox and his coxswain, Peter Veitch, instantly plunged after him. But their noble efforts were of no avail. The current swept the canoe rapidly from the spot where the accident had occurred, and before she could be turned round to regain it, Captain Foster was seen sinking, with uplifted hands, to rise no more! Thus perished our unfortunate commander."

We add one remarkable paragraph more:—

"The circumstance was known in the village directly, and the people came flocking in numbers to the house to hear the particulars from our host. I wished to settle my bill with him, but he said it was against his religion to receive money after hearing of a death."

In civilised and Christian England, we have seen the very corpse arrested on its way to the grave, to satisfy the cupidity of a creditor, by a savage extortion on the lacerated feelings of

* The demand was a good one at any rate. But we witnessed on one occasion in the *Popular Library*, a beautiful little boy under six years of age, who was anxiously looking over the volumes on the tables. His countenance and demeanour were worthy the painter's pencil or the poet's pen; he seemed to be of unearthly kind, and if we were forcibly struck by his outward appearance, how much more were we impressed when he exclaimed, I wish to have "Dying Thoughts." This Book was written by Baxter, and a delightful little Treatise it is. ED.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

mourning friends and deprived relatives. In the wilds of America this delicate and beautiful trait occurred—ought we not to blush for our country?

THE PELICAN AND FISHERMEN OF TABLE BAY.

Poor Dr. Webster very gravely tells the following most entertaining account of the Pelican: he says nothing about the *gull*.

"The large white pelican parades about the beach at Cape Town, generally near the fish stalls. Frequently he takes his flight over the bay and fishes for himself. Sometimes he is fed with corn, which, however, is not exactly to his taste, and he has recourse *to a capital artifice* to get what he likes better than such hard stuff. He carefully gathers up all the corn that is given him and carries it off in his pouch, till he meets with a brood of chickens in his walks. On seeing them, *he most sagaciously scatters the corn about, and by pecking it up in his clumsy fashion here and there, attracts the attention of the unwary chicks.* These immediately hasten to join him in his meal, being quite ready for such good fare. *When he sees them all busily employed in picking it up, he watches his opportunity and snaps up the first he can get hold of.* Away he flies with the poor chick to make a meal of him instead of the corn."

COOKERY.

Careme's Royal Parisian Pastry-Cook and Confectioner. 12mo. pp. 394. London, Mason.
The Cook, Part I. 8vo. pp. 40. London. Bucknall.

CAREME, man of taste, of dishes, of *gout*, of all the pleasant varieties of feeling—the mere English reader, plodder and spoiler of good victuals, is infinitely indebted to Mr. John Porter for editing thee! Illustrated with *plates*.

Abundance abounds in Careme, and even in what of him is rendered into English. Hundreds of dishes, never made, are prescribed in these pages; for, after all, there is a sad routine in cookery, confined to few sorts, and though we look over these many recipes, we still confine ourselves to the common courses, and never think of trying the rarities so temptingly described.

That man is a cooking animal, can never be too often repeated. In civilization we think of little else; and savages in the lowest state of nature half roast their fellow-savages after their fashion of cannibal cookery.

Food well cooked never hurts man, woman, or child. It is only when those parts which ought to be removed are left in dishes, that they disagree with the system. A superior cook is, indeed, an immortalizing mortal. Still, we think M. Careme goes too far when he asserts that "our (*i. e.* French) modern cookery has become the model of whatever is really beautiful in the culinary art. It has for ever eclipsed all that the sensual nations of antiquity were able to devise towards promoting the luxury of the table; and the art of French cookery, as practised in the nineteenth century, will be the pattern for future ages."

We are not so selfish. We hope that our posterity may improve in this as in all else, and eat such things as we have never dreamt of in our days.

We will not go into his wonders of paste, but add a few amusing hints and extracts from the *Cook*:—

"*Aphorism.*—To eat well, *you must think but little*: idleness of the mind is necessary to the activity of the stomach. * * *

"Amongst the great misfortunes which have proceeded from political vicissitudes, Careme quotes, with an emotion truly heart-rending, that of Napoleon when at St. Helena. No writer, not even Messrs. De Las Casas, Montholon, O'Meara, or Antomarchi, has more feelingly described the horrible position of the illustrious captain, reduced to the sad alimentary resources of that barren island. What could Chandelier, the celebrated and devoted head-cook of the exile, do with a shoulder of lean beef, the egotist governor having reserved for his own use the hind, and of course the best part? To what use could he put fowls, or rather skeletons of fowls, turkeys, ducks, &c, which had not attained that rich *embonpoint* that distinguishes them in our happy climate? Sheep alone were passable; but how far were they from the delicate and savoury sheep of the Ardennes and of Presale. To heighten the disgust and horror of the lonely captive, the garnish, such as truffles, mushrooms, and olives, arrived without aroma, and without any culinary virtue, in preserve-bottles. But shall I describe all the horror of that captivity? No ice at St. Helena; consequently no *feuilletage*, no *gelées d'entrée*, or *entremets!* and the wretched Chandelier, his eyes dim, his head cast down before his pans, remembering all the *éclat* of the imperial kitchens at the Tuileries, at Vienna, at Berlin, and even at Moscow, seemed to conform himself to the sad thoughts of the great man, revolving in his mind a past replete with glory. There was no game in the island, says the historian: nevertheless, two or three times a year there arrived pattridges and pheasants; but the governor monopolised them, and sent a few, very few, to the emperor. 'O, base gastronome!' exclaims Careme, 'what a blot in thy history!' * * *

"*Consumption of Food, &c. in London*—The annual consumption of oxen in London is 150,000; calves, 50,000; sheep, 700,000; lambs, 250,000; hogs and pigs, 200,000; the total value of butcher's meat consumed in a year is estimated at 8,500,000*l*. There are 8,500 cargoes of fish, of 40 tons each, brought annually to Billingsgate, besides 20,000 tons by land carriage; 1,000,000 quarters of wheat; about 80,000*l*. in value of poultry; 21,000,000 lbs of butter; 25,000,000 lbs. of cheese; vegetables and spirits to the value of 1,000,000*l*.; 2,000,000 barrels of ale and porter, of 36 gallons each; 11,000,000 gallons of spirits and compounds; 65,000 pipes of wine; 7,900,000 gallons of milk, the produce of 9,600 cows; and 2,000 tons of coals, are annually consumed."

Eheu! jam satis!

LITERARY EXTRACTS.

TAM O'SHANTER, SOUTER JOHNNY, AND OLD MORTALITY.

Mr. THOM'S well-known statues, as exhibited in London, illustrative of Burn's greatest Poem, is well-known to have excited a universal interest. A similar popularity is now attending the labours of his matchless chissel by the exhibition of his *Old Mortality*, the dear old Covenanter of Sir Walter Scott. The following lively sketch of a visitor to the first of Mr. Thom's productions is taken from that excellent paper the *Dumfries Courier*: it is highly characteristic of a certain portion of the English community.

"Passing along Bond-street I saw certain placards, and at once embraced the opportunity of paying my respects to Tam O'Shanter and his *drouthy* crony. The company at this time was very small—say from six to eight persons; but their looks, compounded of smirking and smiling, formed a treat in itself not often met with, and testified, beyond the power of words, how keenly they entered into the humour of the thing. And no wonder—for the twain are really glorious, and embody so strikingly the poet's description, that you grieve he was not spared to see them, and thus share, though in a different form, the pleasure which the late Sir Walter Scott derived from witnessing Mackay's personation of Pailie Nicol Jarvie. The bare conception of effigies so unique, apart from the execution, stamps Thom as a man of genius; and you begin to wonder why the representation should have been so long reserved to be done into stone, and figure conspicuously as the laurelled inheritance of an Ayrshire mason. In place of London I fancied myself in an ale house pretty near the confines of Alloway Kirk; and if there be such a thing as internal laughter I laughed as heartily as man or woman could well do. At length I took leave, and in moving out encountered at the door a sleek, rosy, round, little Englishman, such as I had often seen before, and as fit a representative of the trading part of John Bull's busy family as 'Tam' was of the olden class of Carrick farmers. The visitor paid his shilling, and pointing to the upper part of the room, exclaimed to the door keeper, 'Ah that's the show; is it?' 'Yes, sir,' said the canny Scot, 'that's joust it.' 'And this is the little book that tells all about it?' Yes, Sir—it's sixpence.' 'Ah, Tam O'Shanter; which is Tam?' 'That's him on the right, Sir, and the ither ane beside him's Souter Jonny.' 'Shanter! Shanter! what's Shanter; 'Ou, Sir, ye maun ken that Tam, Thom. or Thomas was the man's name, and Shanter the name o' his farm—a sort o' mailin or pendicle—an' so they joust caa'd him Tam O'Shanter—a thing common eneuch in Scotland.'—'Mailin, pendicle! why that's all Arabic to me; and since I can't make Tam out, who or what's Souter?' 'Ou, Sir, that's very easily explained; a souter in Scotland is what you call a cobbler in London—a man, Sir, that mends his customers' shoes.' 'Ah, well I declare I thought he was a cobbler: but that's very common, and so are farmers, and what the deuce is the thing all about?' 'About, Sir! did ye never hear o' Burns, the great Ayrshire poet—these are the principal characters in his grandest poem.' 'Burns! Burns! never heard of him—know nothing about him—who was Burns?' This question astonished the door-keeper, who, perceiving that a long explanation was necessary, placed himself forthwith into an expounding attitude, and endeavoured, with great tact and address, to illuminate the querist's ignorance. But his eloquence was completely thrown away, and all he got for his pains was another question—"Well, then, you must be making a sight of money; arn't you—eh?' This was an unexpected thrust; but Saunders parried it in his own way—'As to that, Sir, I dinna joust ken; London's no Ayr, and I can assure ye, Sir, we pay verra dear for our room. And with this the cockney pocketed his little book, and took his departure without moving a step nearer the figures, or wasting a single additional thought on Tam O'Shanter and Souter Johnny. As he said himself, the whole concern was Arabic to him, with Burns into the bargain, and had therefore some reason for muttering 'that the Scotch knew how to turn the penny—that he had been done for once—and all but diddled out of eighteen pence for the liberty of looking at a parcel of baubles.'"

DESCRIPTION OF OLD MORTALITY.

SOME notion of Mr. Thom's present work may be entertained by quoting in the first place, a passage from Sir Walter Scott's description in the first series of *Tales of My Landlord*:

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"An old man was seated upon the monument of the slaughtered presbyterians, and busily employed in deepening, with his chissel, the letters of the inscription, which, announcing in scriptural language the promised blessings of futurity to be the lot of the slain, anathematised the murderers with corresponding violence. A blue bonnet, of unusual dimensions, covered the grey hairs of the pious workman. His dress was a large old-fashioned coat of the coarse cloth called *hoddingrey*, usually worn by the elder peasants, with waistcoat and breeches of the same; and the whole suit, though still in decent repair, had obviously seen a train of long service. Strong clouted shoes, studded with hobnails, and *gramoches* or *leggins*, made of thick black cloth, completed his equipment. Beside him fed among the graves, a pony, the companion of his journey, whose extreme whiteness, as well as its projecting bones and hollow eyes, indicated its antiquity. It was harnessed in the most simple manner, with a pair of branks, a hair tether, or halter, and a *sunk*, or cushion of straw, instead of bridle and saddle. A canvass pouch hung round the neck of the animal, for the purpose, probably, of containing the rider's tools, and any thing that he might have occasion to carry with him."

The gravestone on which Old Mortality reclines, is an exact copy of one in Ayr-Moss, which was placed there in memory of the martyrs, and which is inscribed with their names. He is represented as having suspended his operations for a moment; and, having thrown down his mallet and other tools, as looking up to answer the inquiries of some curious passer-by. An open Bible, with the verse from Proverbs, "The memory of the just is blessed, the name of the wicked shall rot," lies near him. The figure is easy and well proportioned, and countenance expressive, exhibiting that hardness of feature and character which powerful and inveterate prejudices of any kind, and more especially of a religious kind, are calculated to produce. The texture of the flesh, and of the different articles of dress, has that imitative quality by which Mr. Thom's former works were distinguished; and, like them too, the material of the statue is a grey freestone The hue of the pony, who is regarding his venerable and enthusiastic master with a look of more than animal intelligence and affection, approaches to white.

HOLLAND.

Extracted from Belgium and Holland. 2 vols. By PRYSE GORDON.

DUTCH CUSTOMS.—"We cannot refrain from mentioning a few trifling but characteristic customs. The stranger will seldom walk far in a Dutch town without meeting a man in a long black gown and a low cocked hat, with a black crape depending behind. This is a public officer—the *Clansprecher*. His office is, on the death of any person, to inform all the friends and acquaintances of the melancholy event. The funeral of a Dutchman is expensive according to the time of the day. If the interment is after two o'clock, the charge is 25 florins; after three, 100 florins; and if later, double that sum. The cause of this singular custom we have not been able to learn. Every person who could claim the slightest acquaintance with the deceased follows him to the grave. The ceremony being over, the mourners pay their compliments to the widow or nearest relation, who provides liquor, and the glass circulates three or four times; all then depart, except the near relations and particular friends of the family, who are especially invited to a feast. The nearest akin to the defunct takes the direction of it; bumpers are drank to the memory of their departed friend and prosperity to those he has left behind him, until their grief is completely drowned in wine or Scheidam. Songs then succeed; the musicians are called in; the widow leads off the first dance, and the festivities continue until daylight separates the merry mourners! These strange festivities were carried to such excess, that they were expressly forbid in the province of Oveyssel. When a person is sick, instead of tying up his *rapper*, as in England, a small board is placed before the door, containing, on a written paper, a daily *bulletin* of the state of the invalid. When there is an *accouchement*, the placard is tastefully ornamented with lace. By these ingenious expedients the anxious inquiries of the friends of the families are satisfied, while the sick person is not disturbed, nor the domestics harassed by the continual racket of the knocker, or ringing of the bell; some have a refinement on this mode, by placing a box to the board, into which inquirers throw their names. On the celebration of a marriage, instead of the bride-cake which is distributed in England, it is customary for the newly married couple to send their particular friends two bottles of wine, generally the best old Hock, spiced and sugared, and decorated with a profusion of ribands in true lovers' knots!"

CAPTAIN BACK'S EXPEDITION.

Letters have been received in London from that excellent and enterprising man, Captain Back, they are dated 29th of April last, when the surprising intelligence had just reached him of Capt. Ross's safe return. We are quite sure the following particulars of Capt Back will be read with interest. The contents of his letters are of a mixed character. He and his party were all well, with the exception of Augustus, the Esquimaux interpreter, who had accompanied Sir John Franklin in both his journeys, and was now despatched by the Hudson's Bay Company to join this third enterprise, but perished by the way. The winter had indeed been extraordinarily severe. "We had," says Captain Back, "a most distressing winter in this more than Siberian solitude, where desolation reigns in unbroken repose. Even the animals have fled from us, as it were by instinct, and many, very many, of the unhappy natives have fallen victims to famine in situations the most revolting to human nature. The fish also, on which I in some measure relied, left us; in places which we were told never before failed, we have not caught a fish; and during the whole season scarcely a living creature has been seen, except on one occasion a raven, which, in wheeling over the house, startled me with his croak—so uniform was the silence around us. I ran out, but when it saw me it screamed, and again made off to the western mountains, in the dark shade of which it was speedily lost. My party has been thus much dispersed in quest of food, and every message has brought me tidings of their encountering severe privations Mr. M'Leod (an agent of the Hudson's Bay company attached to the party) and his young family are at this moment somewhere on the lake fishing, and you may imagine what it costs me to see them also exposed to the rigours of this severest of all winters, for the mean of three thermometers has been far below the lowest we ever registered in our former expeditions After this narrative, you may believe that, in spite of all my care and economy, some part of the provision laid up for our voyage has been necessarily consumed. The most experienced man in the country could not have foreseen this; nor was there any possibility of avoiding it. My anxiety is immeasurable on account of it; but I still hope that the Indians may be enabled to procure us dry food, or in short something that may afford sustenance, so that the fondest wishes of my heart may not be frustrated. Of that, however, in one sense, there is no danger; for come the worst, I can always reduce my men, and go in one boat. Do not, therefore, let this affect you, for I feel confident of overcoming it. Another misfortune is, that, pinched as we are for provisions, we must drag our boats and luggage almost 100 miles over rock and ice before we can reach open water. This we have ascertained through the winter; but never mind, this also shall be done, and it will be a new feature in discovery. In our former expeditions we had none of these tremendous obstructions to contend with, though we had to take our bark canoes some distance in sledges But I have perfect confidence in my men, and they, good fellows, think that I cannot err."

The above was written before the arrival of the express announcing Captain Ross's return; and, pressed for time, only a few lines are added subsequent to that event. They are, however, so characteristic of the gallant writer, that they ought not to be omitted:—"I have this moment received your despatch, with an account of Ross's return. I am all gratitude and happiness. My heart is too full to write; but I shall pay attention to all that is recommended to me—of this assure the committee. What a triumph is this return of Ross's to us all, who 'hoped against hope!' And what do the croakers say? Will they acknowledge the lesson afforded by it of the power of stubborn perseverance?" &c.

From a private letter which we have seen, it may be interesting to some to add the following scrap:—"My day is chiefly spent thus—before breakfast I read a portion of Scripture, and afterwards attend to my observations, study, draw (I have plenty of pencil sketches), work up my survey, take notes on Aurora, &c. At the same time I keep my eye upon whatever duty is going on, have an evening school twice a-week, and read the service in French and English every Sunday. My guitar is cracked and jars abominably; but you will not be surprised at this when I add that I have been obliged to grease my hands daily to prevent their cracking also; for such is the dryness of the atmosphere that nothing can stand it."

MOST ALARMING.

Preserve us! the following extract from the Reverend W. Sewell Fellow's printed letter to Earl Grey, makes the very powder shake from our wig.

"Every hour in which the House of Commons is sitting, is now an hour of peril. The whole country must feel it. The very ground beneath our feet is not safe. God knows where it is all to end. There will be a terrible *crash!*"

And then, still further to make us quake, comes the Curate of Romaldkirk with his *Ecclesia Anglicana*, a poem. He dates the ruin of the country to the passing of the Catholic Relief Bill, and thus alludes to its great author, the Duke of Wellington:

"Oh! mystery vast! the chieftain by whose hand
Heaven pour'd its vengeance on the papal land;
Whose name once honour'd and regreited still,
Or Minstrel's harp, or Patriot's heart could thrill;
The warrior crown'd with victory's choicest wreaths,
Whose splendid triumphs, wandering envy breathes;
Blush human greatness! ah! his glory see!
His country's saviour, WELLINGTON 'tis he
Yields her palladium, and "at one fell *swoop*"
Her safe-guards *crash*; his thousand laurels droop!"

No sooner does the Catholic bill pass, than behold the basket of plagues which the Reverend author mentions

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

as immediately in succession. The Ottoman Empire trembles before Russia,—the Bourbon is banished from the Gallic throne,—King George the 4th "loved Monarch of the Brunswick line" is consigned to the tomb—Belgium becomes revolutionary—Poland rises in rebellion—destructive fires blaze about the agricultural districts, fierce tornadoes tear up the produce of the sugar-canes, and the wild-cry of Refrom is shouted from crowded street to echoing glen.

This crashing and tumbling-down system so reprobated by these authors, remind us of the rolling-down of the thick walls of a town, as described by Dr. Macartney at the conclusion of one of his Lectures.

The ponderous walls that *circum-rock* the town,
Slow, grumbling, stumbling, tumbling, rumble jumble down,
Heav'd by the writhing earth the towers creak crack,
Then with a crash slap-dash, smash helter-skelter *whack!*

CHURCHES OF ENGLAND AND SCOTLAND.

(*From the Scottish Guardian*)

We recur to the subject of the ecclesiastical revenues of England, and the proportion of her clergy to her population—not that we would abridge either her revenues or her ecclesiastical staff—but because her sufficiency for all the purposes of a learned and a pious Church present a contrast too memorable to be forgotten, with the insufficiency of our own Establishment for upholding and extending the learning & piety of Scotland.—The Ecclesiastical Commissioners of England have announced, that were its revenues equally distributed, £6000 a year would remain to each of its Bishops; £300 a year to its parochial clergy, and £300,000 per annum of cathedral wealth to sustain, in common with the Universities, the literature and science of the English Church. More unexpected and surprising still—after the population of England has doubled its numbers, and the hand of reform is about to be once more applied to her institutions—she is found to be possessed of an ecclesiastical staff ample enough to provide a resident parish minister to every 1308 souls of her population; and were the whole territory of England, 55,000 square miles in extent, to be divided amongst her 10,702 parochial clergy, a district of not more than *five square miles* would fall to the lot of each. Such are the sufficient, yet not more than sufficient, resources which Providence has still left at the service of the Christian piety and learning of England, and which await but a better direction, and more faithful application, to render, by the Divine blessing, that national establishment the most efficient for christianizing and elevating an entire nation which the world has ever seen. Let us now reverse the picture—for, unfortunaly, it is to reverse the picture to turn our eyes to Scotland—a tract of country containing 27,794 square miles, 2,365,809 souls, and only 940 parochial clergy, with an income of less than £200—that is, Scotland assigns *twenty-nine square miles* of territory, and a cure of 2464 souls to every parochial minister. Scotland has but two Universities. Their entire revenue does not much exceed that of one of the twenty colleges composing the University of Oxford. Fellowships she has none. The designs of Knox and his coadjutors for the maintenance of learning in Scotland were frustrated by the pillage of the Church—and no succeeding statesmen, or Scottish patriot, has ever attempted to complete his noble designs. Such is the condition in which the nineteenth century finds the Church of Scotland, in which she has been suffered to remain unheeded amidst the ever-increasing opulence and population of Scotland. As her parochial churches have fared, so have her parochial schools. We have praised and starved the schoolmaster, and left our schools, like our churches, stationary, whilst every thing else moved forward. Strange as these things may appear, they are as true as they are strange; but stranger still will it be, if, when known, they remain unredressed. Is it to be borne, that when the revenues of Scotland have increased to five millions sterling annually, and her population more than doubled, her churches and schools, to which Scotland owes all her distinction amongst nations, should remain the same as when her revenues were only £200,000 a-year, and her population a million souls? If the national spirit of Scotland has not quite died away—if the memory of her best patriots be not yet forgotten—if the love of what is pure and elevated amongst nations be not extinct amongst us—if the honour of having had precedence amongst educated and Christian kingdoms has not ceased to be felt by us as an honour—if we would prefer the reality to the fame of being a wise and understanding people, these things cannot long remain as they are. The Christian electors of Scotland, in every parish, must bestir themselves—speak their minds one to another—take counsel one of another—do what they can by private, and what by public efforts to redress them. They will seek out their representatives, and unfold to them the simple but eloquent statistics of our neglected institutions—inform them that herein they will not have their country any longer neglected—that the time for apathy is past—that they expect each member for Scotland to understand her interests, and do his duty. In this cause they must speak as one man to the Government of the day; and in spite of the long and gross neglect of Scottish affairs, they must speak with a pertinacity of purpose that will make the Legislature and government to grant their prayer, that the churches and schools of Scotland may be once more meted out to the population. This is the first, the greatest, and the best reform which they can gather from those political changes from which others seek to reap national mischiefs and disorders; and if it be true that the people of Scotland are not easily moved, let it be also true, that when moved by a just cause, they will not lay down the weapons of their wise and intelligent agitation until the evils which roused them shall be wholly redressed.

COLERIDGE.

In a lecture delivered upwards of twenty years ago, at some Hall in Fetter Lane, he divided readers into four classes. The first he compared to an hour-glass, their reading being as the sand—it runs in and it runs out, and leaves not a vestige behind. A second class, he said, resembled a sponge—which imbibes every thing, and returns it in nearly the same state, only a little dirtier. A third class he likened to a jelly-bag—which allows all that is pure to pass away, and retains only the refuse and the dregs. The fourth class, of which he trusted, there were many among his auditors, he compared to the slaves in the diamond-mines of Golconda,—who, casting aside all that is worthless, preserved only the pure gem.

Burke.—This celebrated Statesman had a great objection to closed Book-cases, and used to say—"I don't like this *Lock* on the human understanding."

Copyrights.—Mr. Effingham Wilson has given Mr. Campbell £400 for the copyright of his Life of Mrs. Siddons, just published. Allan Cunningham has received from Messrs. Cochrane and M'Crone £600, for his Edition of the Life and Works of Burns, being £100 per volume. The same gentlemen gave Mr. Galt £250 for the copyright of his Autobiography. Messrs. Smith, Elder, and Co., gave £150 for the copyright of each of the works forming their admirable "Library of Romance;" and Mr. Murray gave from £100 to £200 for each of the volumes of his excellent "Family Library." Mrs. C. Hall gets, we understand, £300 from Mr. S. Bentley for the forthcoming novel in three volumes, to be called "The Outlaw." But perhaps the highest price given for literary labour since the death of Lord Byron and Sir Walter Scott, is the sum which Hogg, the Ettrick Shepherd, has received for his "Recollections of the Great Scottish Novelist." These recollections fill only about ten or twelve sheets of folio paper, and yet the Shepherd has received from an extensive publishing house in New York, the handsome sum of £100 for it. It is expected very shortly to appear in this country, and contains some very extraordinary statements, for the accuracy of which the Shepherd pledges himself, respecting the private opinions and habits of Sir Walter.

A CATHOLIC BREW HOUSE.

In Mrs. Trollope's *Belgium in* 1833, the following is described under the head *Bruges:*

There is a very grotesque group, and well worth looking at, in alto relievo, over the door of a brew-house; but I cannot instruct any traveller where to find it, as I totally forget the name of the street. It represents, in a very catholic manner, the process of brewing. There are several figures employed in mashing and cooling, and putting the beer into casks, while winged seraphs are seen tasting it; and the Virgin Mary, with the infant Jesus in her arms, sits apart, to superintend the whole.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

THE EXPEDITION INTO CENTRAL AFRICA.

THE LATEST ACCOUNTS OF THE EXPEDITION.

Phillipolis, 23d Dec. 1834.

Sir,—On our reaching the sources of the Caledon River, and the district in which the Nu Gareep has its origin, I found it necessary on various accounts to abandon the idea of completing the circuit projected in my letter of 23d September, a circumstance which caused me comparatively little annoyance, inasmuch as the most interesting information connected with the country in that direction had been previously acquired, which, in my estimation, was sufficient to repay the trouble and expense incurred in obtaining it. The easting we found it convenient to make, enabled us to visit the principal tribes residing between Phillipolis and the source of the Vaal River, to ascertain the character and direction of the great moun tain range which divides the territory of the Coast Kafirs from the more interior districts; to trace the streams of emigration towards the most southern parts of the continent, and to discover the natural causes which had led those to flow in different directions. During our return, we examined the country in which the Modder and Riet Rivers have their origins, and found their sources to be much more to the eastward than they are represented in any of the maps of

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

South Africa. The direction in which those streams have been ascertained to flow, and their relative position in regard to each other furnish materials calculated to supply what is necessary towards forming an accurate idea of the external character of the country between the mountain range already mentioned, and the high grounds to the north of the Vaal River. If the next twelve months during which we are to be occupied in investigations connected with the objects of the Expedition, supply information in the same proportion as the last three have done, no one of the Members of the Association will have much reason to lament the share he has taken in the enterprise.

Information, however, is almost the only return we can yet boast of; little else of value has yet been obtained, and no articles fitted for general trade have hitherto come within our reach. The ignorance which exists in relation to countries even in the immediate vicinity of the colony, is well calculated to excite surprise: the absurd statements which are circulated in relation to those are most incomprehensible; and if they are not propagated merely to deceive, it is scarcely possible to imagine how they can have originated. The little that has been obtained as productions of the countries we have visited, has been placed in charge of Captain Edie (vide Document No. 2,) for the purpose of being conveyed to Cape Town, and I think the portion thereof, (marked Nos. 1, 2, 3, 4, 5, 6, 7, 8,) if sold on their arrival, ought to realize at least Rds. 1000. The packages Nos. 9, 10, and 11, ought certainly to be carefully preserved till the return of the Expedition, as their contents will be required in furtherance of the publication which may be required after the termination of the Expedition.

The Document marked No. 1, sets forth the only untoward occurrences which we have yet had to encounter; and as Captain Edie, who has been the subject of one of them, and who leaves the party at my recommendation, will probably arrive in Cape Town nearly as soon as this communication, I beg to refer the committee to him for a more detailed account of the circumstances. The unfortunate loss of Corporal McKenzie caused me much grief; a misfortune of such a nature is to be always lamented, happen to whom it will; but it is doubly painful when it deprives society of a character like the one we have to deplore. His conduct, during the short time he was fated to form one of the party, was of the most exemplary description, and in him the Expedition lost a most useful and effective member.

The wagons proceed to-morrow morning on the route to Lattakoo, but it is impossible even to surmise what may be the course pursued upon reaching that station. The country, if we are to credit the reports in circulation here, is not likely to furnish a field well fitted at present for advancing the objects of our undertaking; yet, as nothing certain is known of the real state of affairs, I shall abstain from conjecture, and patiently wait till a closer examination shall supply what will enable me to put the committee in possession of the grounds for hope or fear.

I have the honor to be,
SIR,
Your most obedient
Humble Servant,
ANDREW SMITH,
Director of the Expedition.

To
J. C. CHASE, Esq.
Secretary to the Association.

List of Articles left at Phillipolis, in Charge of Captain EDIE.

491 Birds,
59 Quadrupeds,
31 Leather Aprons,
1 Do. do.
7 Whistles,
9 Pair of Ear rings,
5 Handkerchiefs,
9 Earthen Pots, (Kafirs')
2 Wooden do. (Corannas')
2 Front'ets, (Ama Chlobie)
2 Needles,
16 Necklaces,
4 Bracelets,
6 Finger Rings,
2 Straw Hats, (Mantatees')
1 C. L. ditto,
2 Battle Axes,
1 Churn,
24 Wood and Horn Spoons,
1 Bundle,
211 Geological Specimens,
188 Specimens of Reptiles,
131 Drawings.

24th Sept. 1834.—Left Verheult, a station of the French Missionary Society, Latitude 30°, 31; Longitude .

25th Sept.—Corporal McKenzie, whilst endeavouring to procure a bird which he had shot on the waters of the Stikspruit, a branch of the Caledon River, was drowned. According to the statement of Hastwell, who was present when the accident occurred, he suddenly sunk in the water, and never appeared again. Every possible search was made for the body, as soon as assistance could be obtained, but without success. It was supposed that his limbs had got entangled in the weeds which were found to be very abundant under the water, and that he dived to liberate himself, and that in the attempt the same thing happened to his body.

4th Oct.—Crossed for the first time the Caledon River.

8th Oct.—Hunted a lion; one of the party nearly killed by him.

12th Oct.—Reached Moriah, a station of the French Missionary Society, in the Basuta country. Lat. 29° 31' 44"; Lon.

14th Oct.—Towards evening, Mosheush, the Chief of the Basuta Tribe, arrived at our encampment, and welcomed us by a volley of musquetry.

20th Oct.—Left Moriah for the capital of the Basuta Tribe.

21st Oct.—Towards evening reached the base of the hill upon which is situated the said capital. The Chief, Mosheush, who had previously returned home, evinced a second time a satisfaction with our visit; he is the most intelligent Kafir I ever met with; he has been induced to fix upon this hill in order to be able effectually to protect himself against the numerous enemies with which he is surrounded. Lat. 29°, 23"; Long.

25th Oct.—Left the residence of Mosheush.

27th Oct.—Crossed to the north of the Caledon River.

29th Oct.—Reached Lishuanie, a station of the Wesleyan Missionary Society.

5th Nov.—Reached Umpokanie, a station of the same society.

6th Nov.—Late in the evening arrived at the residence of the Mandatee king, which is also upon a hill like that of the Basuta chief.

9th Nov.—Left the capital of the Mandatees, and proceeded to the eastward; after travelling about 14 miles, reached and crossed the Caledon River; rained very heavily during the night.

10th Nov.—The Caledon flooded; our guide stated that we should not be able to re cross it for at least 12 days. Examined the country with a view to ascertain in what direction we could advance; found the country so broken that it would not be possible to get the wagons further to the eastward. At this station Capt. Edie met with the accident which has led to his return to the colony.

11th Nov.—Proceeded on foot to observe the sources of the Caledon River. River still rising; which led me to determine upon proceeding towards the lofty mountain range which lay to the south of us, in order to ascend and examine it.

15th Nov.—After surmounting many difficulties, reached the base of said range.

18th Nov.—At 4 A M. commenced the ascent, and at about a quarter before one reached the summit of one of the loftiest peaks, about 2500 feet above the level, where we left the wagons; from thence we had a most extensive view of the country in that direction, and ascertained that the mountains extended at least 40 miles to the south of us. The waters of the Black River flow along the vallies of this range, and the principal sources thereof were about 50 miles to the eastward. The Caledon receives also the most of its supplies from the northern edge of the same range. To the east of the sources of the Black River, the waters of this range flow into the Vaal River.

27th Nov.—Reached Thaba Unchu, the residence of the survivors of the Borolong Tribe, about 5000 in number; all resident in one kraal. In the afternoon of this day, the gun of Private James Ferry, of the 98th Regiment, was discharged by accident, and the shot passed through his left hand, just behind the point of union of the fore and middle fingers: accident not of a serious description.

4th Dec.—Left Thaba Unchu and descended the Vaal Modder River.

9th Dec.—Crossed said River, and proceeded in a southerly direction towards the Black Modder River.

12th Dec.—Crossed the Black Modder River.

13th Dec.—Crossed the Riet River.

17th Dec.—Reached Phillipolis.

HUMBLE ADDRESS

To Baron von Ludwig, the Honorable A. Oliphant, the Honorable J. B. Ebden, the Honorable M. van Breda, and Mr. Advocate de Wet, &c. &c. &c. &c. &c. &c. &c. &c., whose honoured names, with many others, stand conspicuous in the *Cape Directory* for 1835, as *Conservatives* for building a Market-house, in Green-market-house-square,

Gentlemen! When do you intend commencing operations! are you in earnest, or are you really playing off a joke? Do tell us all about it!

THE LOCK-UP SYSTEM.

THE corruption of a fish, says a Turkish proverb, begins at the head; *i. e.* bad masters make bad servants, and they who are over-working their apprentices, without the least compensation, they who are doling out only half a belly-full of victuals to their ser-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

vants, who are distributing clothes not fit for convicts, and refusing to give the smallest particle of soap, are doing their best to promote disaffection, and encourage theft. We know many masters, and worse than all, mistresses, who do these things. We trust the Magistrates for the Protection of the Apprentices, will do their duty in these cases. But to the *lock-up system*. Mr. Oliphant, His Majesty's Attorney General, has won our right good will; he has made in Council the following honest declaration :—

"It is your accursed *lock-up system* that leads to theft and robbery. Every trifling article is put away and locked up, and if a grain of tea and sugar be left out, it is considered safe game, and snapt up immediately. Daily experience proves this fact, that every slave in the Colony who steals, has been made a thief by his master!"

MARCH OF THE SQUIREARCHY.

The elevation of a great many Van Winkels, Lodging-house-keepers, Canteen-keepers, and other personages, to the dignity of squires, as notified in the *Government Gazette*, in their appointments as 'Prentice 'Praisers, has turned the heads of many of the same grade. *Ex gra.*

HOW TO SELL YOUR PUNJUMS.

Loudly proclaim that the Compensation Money will never arrive, and that you are to be cheated, pilfered, robbed, plundered, and the British Government is a parcel of rogues—

And that's the way to sell your Punjums.

Stick to it with might and main, that old England is going head-long to perdition; that the King is henpecked and the people mad—

And that's the way to sell your Punjums.

Be sure to make it known that Scotland is immeasurably more wicked, base, and disloyal than England; and that a glorious revolution awaits Great Britain.—

And that's the way to sell your Punjums.

But above all, protest in such a manner, that your voice shall be heard in every Dutch circle—that Holland is the most prosperous, delightful, generous country in the world; and *Koning Willem* the most beloved and wisest of Monarchs, and all other kings are *obstinate* blockheads,—

And that's the way to sell your Punjums.

TRUE COURAGE.

There is something that, like the ligatures which one class of the Olympic combatants bound on their hands and wrists, braces around and compresses the powers of the mind, giving them a steady forcible spring and re-action, which they would presently lose, if they could be transferred into a constitution ot soft, yielding, treacherous debility. But Foster, the most powerful writer in the English language, thus describes the characteristics of a man who advocating not the *partial* interests, but that of the *whole* of the brotherhood of the human species, is assailed by the selfish, the depraved, and the ignorant. He says—

A man endowed with the complete character, says, with a sober consciousness as remote from the spirit of bravado as it is from timidity. Thus, and thus, is my conviction and my determination; now for the phantoms of fear; let me look them in the face; they will find I am not made of trembling materials: "I dare do all that may become a man." I shall firmly confront every thing that threatens me in the prosecution of my purpose, and I am prepared to meet the consequences of it when it is accomplished. I should despise a being, though it were myself, whose agency could be held enslaved by the gloomy shapes of imagination, by the haunting recollections of a dream, by the whistling or the howling of winds, by the shriek of owls, by the shades of midnight, or by the threats or frowns of man. I should be indignant to feel that in the commencement of an adventure I could think of nothing but the deep pit by the side of the way where I must walk, into which I may slide, the mad animal which it is not impossible that I may meet, or the assassin who may lurk in the thicket of yonder wood. And I disdain to compromise the interests that rouse me to action, for the privilege of a disgraceful security.

As the conduct of a decisive man is always *individual, and often singular*, he may expect some serious trials of courage. For one thing, he may be encountered by the strongest disapprobation of many of his connexions, and the censure of the greater part of the society, and *professing* friends where he is known. In this case, it is not a man of common spirit that can shew himself just as at other times, and meet their anger in the same undisturbed manner as he would meet some ordinary inclemency of weather; that can, without harshness or violence, continue to effect every moment some part of his design, coolly replying to each ungracious look and indignant voice, I am sorry to oppose you: I am not unfriendly to you, while thus persisting in what excites your displeasure; it would please me to have your approbation and concurrence, and I think I should have them if you would seriously consider my reasons; but meanwhile, I am superior to opinion, I am not to be intimidated by reproaches, nor would your favour and applause be any reward for the sacrifice of my object. As you can do without my approbation, I can certainly do without yours; it is enough that I can approve myself, it is enough that I can appeal to the last authority in the creation. Amuse yourselves, as you may, by continuing to censure or to rail; *I* must continue to act.*

THE FITNESS OF A COLONIAL PLANT FOR CORDAGE.

The making of cordage has been always recognized as an object of national importance. Hence we are desirous of directing the Colonists to one great object among many others, apparently neglected as being fairly attached to the resources of this extensive Colony.

Besides Hemp, there are other fibres the growth of nature, which are applicable to cordage. The Aloe (*Agave Americana*) which so frequently forms our hedges, and presents an impregnable barrier to cattle, and even to men, may be advantageously applied to the production of cordage. Its fibres (from the thick fleshy leaves) are stronger than hemp, and when made into ropes, are extremely tenacious and durable. How important is this fact to our country-people, in all their rural arrangements of building, thatching, fishing, and netting. Some excellent specimens of *flax*, *rope*, and *cordage*, made from the Aloe,† are now before us, and will be placed in care of Mr. Rose, Commercial Exchange for examination. As far as we recollect, (having witnessed the progress) the fibres are obtained after the leaf has remained steeped in water for some eight or ten days, exposed to the sun in the open air. The pulpy parts of the leaf are then scraped away, and beautiful fibres appear in filaments similar to skeins of straw-coloured silk. These are combed into straight threads, dried in the sun, and are immediately fit for use. A portion of the juice of the leaf is understood to be an excellent substitute for soap.

FISH COMMOTION.

During the partial thunder-storm of the 21st instant, there was great agitation among the piscatorial tribes of Table Bay and Green Point. Shoals of the smaller kinds of fish were heaved on shore; and near Captain Smith's residence, could be gathered up in wagon loads. This circumstance has been attributed to the peals of thunder. We think otherwise. The very next day, to the great joy of our

* This passage is worth the consideration of all persons who may be panic struck, and are tardy in "following to the field."

† By Captain Surflet, who manufactured these specimens with great facility.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

piscivorous inhabitants, arrived in the fishing boats, immense quantities of the *snoek* family, and we imagine the smaller fry of fishes to have left their native beds solely on account of the *snoek* cannibals.

VERY MUCH OFFENDED.

A kind-hearted generous lady of our acquaintance, is frequently in the habit of giving bountiful entertainments to her friends, in which case there is often an abundance of good things, which remain untouched, and these are often presented the next day to her various neighbours. One of them turned out an old surly, and on the receipt of a delicious cake, and half a dozen custards, returned the whole with a note as follows:—

"Mr. —— presents his compliments to Mrs. ——, and returns the *articles* sent to him, as he is never in the habit of receiving *remnants* from a table at which he was not welcome."

As we take it, the offended gentleman must be a linen-draper, from one or two of his expressions.

A FEW PLAIN THOUGHTS ON HORTICULTURE.

Poets and philosophers of all ages and nations, have lamented the progress of physical and moral deterioration. This retrocession is, we think, strikingly apparent in many of the vegetables brought to market. Nothing, perhaps, is more agreeable than the sight of a cleanly and well garnished vegetable market. The mere perusal of the Covent Garden lists of fruits makes one long to be there. And the accounts in the papers and magazines of the progress of the Horticultural Societies at home, only so much the more adds to our disappointment here. With such a glorious climate, and nature so prolific, we have no Horticultural Society, and our fruits and vegetables are often tiny and insipid. But we had an Horticultural Society some seven years ago. But it died away like many other ephemeral institutions. Why did it die? Just because its founders went the wrong way to work. It had no practical men among its members—no working gardeners. It was a very dignified society—it knew nothing of the humble classes, or the cottage garden, and was guarded by two secretaries, who wore long swords and cocked hats.

But now, as to the present state of things. Our potatoes are good, bad, and indifferent. For one good boiling, you get three bad ones. This was formerly the case with Cape beer—until Mr. Collison taught the way of producing invariably good batches. Nobody thinks about introducing any thing new in seed potato. We want to witness in our gardens, the early Champion, the Lancashire Pink, the Dumfriesshire Kidney, and the Oxnoble. As to the *Pea* lately in season, wretched rancid supplies were sent to market. In a great many instances, our tables have been furnished with the common *hog-pea* of the fields, instead of the early Charlton, the Blue Prussian, or the Marrowfat. The changes produced on the pea by the effects of climate, soil, and culture, are very great. It degenerates like all other vegetables, and requires constant renewal, selection, and correct cultivation. Our printer cries hold, enough!

A SHORT TREATISE ON SKULLS,
Taken in Short-hand from the Lectures of Mr. Cranium, in London.

It appears to me, that man may be correctly defined an animal, which without any peculiar or distinguishing faculty of its own, is, as it were, a bundle or compound of the faculties of other animals, by a distinct enumeration of which, any individual of the species may be satisfactorily described. This is manifest, even in the ordinary language of conversation, when, in summing up, for example, the qualities of an accomplished courtier, we say he has the vanity of a peacock, the cunning of a fox, the treachery of an hyæna, the cold-heartedness of a cat, and the civility of a jackall. That this is perfectly consentaneous to scientific truth, will appear in the further progress of these observations.

Every particular faculty of the mind has its corresponding organ in the brain. In proportion as any particular faculty or propensity acquires paramount activity in any individual, these organs develope themselves, and their developement becomes externally obvious by corresponding lumps and bumps, exuberances and protuberances, on the osseous compages of the occiput and sinciput. In all animals but man, the same organ is equally developed in every individual of the species: for instance, that of migration in the swallow—that of destruction in the tiger—that of architecture in the beaver—and that of parental affection in the bear. The human brain, however, consists, as I have said, of a bundle or compound of all the faculties of all other animals, and from the greater developement of one or more of these, in the infinite varieties of combination, result all the peculiarities of individual character.

Here is the skull of a beaver; and that of Sir Christopher Wren. You observe, in both these specimens, the prodigious developement of the organ of constructiveness.

Here is the skull of a bullfinch; and that of an eminent fiddler. You may compare the organ of music.

Here is the skull of a tiger. You observe the organ of carnage. Here is the skull of a fox. You observe the organ of plunder. Here is the skull of a peacock. You observe the organ of vanity. Here is the skull of an illustrious robber, who, after a long and triumphant process of depredation and murder, was suddenly checked in his career by means of a certain quality inherent in preparations of hemp, which, for the sake of perspicuity, I shall call *suspensiveness*. Here is the skull of a conqueror, who, after over running several kingdoms, burning a number of cities, and causing the deaths of two or three millions of men, women, and children, was entombed with all the pageantry of public lamentations, and figured as the hero of several thousand odes and a round dozen of epics; while the poor highwayman was twice executed,

'At the gallows first, and after in a ballad,
'Sung to a villainous tune.'

You observe, in both these skulls, the combined developement of the organs of carnage, plunder, and vanity, which I have just pointed out in the tiger, the fox, and the peacock. The greater enlargement of the organ of vanity in the hero, is the only criterion by which I can distinguish them from each other. Born with the same faculties, and the same propensities, these two men were formed by nature to run the same career: the different combinations of external circumstances decided the difference of their destinies.

Here is the skull of a Newfoundland dog. You observe the organ of benevolence, and that of attachment. Here is a human skull, in which you may observe a very striking negation of both these organs; and an equally striking developement of those of destruction, cunning, avarice, and self-love. This was one of the most illustrious statesmen that ever flourished in the page of history.

Here is the skull of a turnspit, which, after a wretched life of *dirty work*, was turned out of doors to die on a dunghill. I have been induced to preserve it, in consequence of its remarkable similarity to this, which belonged to a courtly poet, who, having grown grey in flattering the great, was cast off in the same manner, to perish by the same catastrophe.

After these and several other illustrations, during which the skulls were handed round for the inspection of the company, Mr. Cranium proceeded thus:

It is obvious, from what I have said, that no man can hope for worldly honour or advancement, who is not placed in such a relation to external circumstances, as may be consentaneous to his peculiar cerebral organs; and I would advise every parent who has the welfare of his son at heart, to procure as extensive a collection as possible of the skulls of animals, and, before determining on the choice of a profession, to compare with the utmost nicety their bumps and protuberances with those of the skull of his son. If the developement of the organ of destruction point out a similarity between the youth and the tiger, let him be brought to some profession (whether that of a butcher, a soldier, or a physician, may be regulated by circumstances), in which he may be furnished with a license to kill: as, without such license, the indulgence of his natural propensity may lead to the untimely rescission of his vital thread, 'with edge of penny cord and vile reproach.' If he trace an analogy with the jackall, let all possible influence be used to procure him a place at court, where he will infallibly thrive. If his skull bear a marked resemblance to that of a magpie, it cannot be doubted that he will prove an admirable lawyer; and if with this advantageous conformation be combined any similitude to that of an owl, very confident hopes may be formed of his becoming a judge.

NOTICE.—Whatever profits arise from the *Literary Gazette* of the present year, will be cheerfully devoted to the Fund for relieving the distresses on the Frontier.

THE PORT AND COLONY.

A Correspondent of the *Commercial Advertiser,* some weeks ago, made an allusion to the possibility of burning sea-weed for the manufacture of alkali, and endeavored to attract attention to the sources of profit which he conceived might be still unexplored, or overlooked, and which he suggested, might repay scientific industry, if strenuously and soberly attempted.

Such virtuous anxiety for the common good deserves acknowledgment; and it will no doubt show itself further in those acts of patriotic benevolence which will obtain the author of that letter the respect and regard of those who wish well to their neighbours, and are willing to occupy their leisure in honest, though humble endeavors, to leave the world better than they found it.

The question propounded was,—whether it were practicable to burn sea-weed, and extract kelp here, as is done on the west coast of Scotland: to which we shall reply, that, until capital has ceased to be invested in human flesh; until it has ceased to be a trade to let out slaves to hire, and for their owners to live on the wages of the miserable wretches so let out, as horse-dealers job cattle! so long will it be the interest of a party to make labour too expensive for any speculation which aims at only a moderate percentage of profit: the marvel is, how the colonial shipping can be manned, since the lowest of the class of menials and street koolies in Cape Town, can earn a higher rate of wages than the pay of the best able-bodied seaman in the British Navy! So long, therefore, as apprenticed slavery exists, there will be a double check on industry: it will have to compete, first, with the tax upon labour, which must be paid to the slave-owner; and, secondly, with the odium in which bodily labour must be held by ignorant free-men, from its being considered by them as a sort of badge of slavery; or from their being mixed with slaves in their manual occupations. Thus, with these impediments to improvement, advance must of necessity be slow and uncertain, and every experimental speculation most hazardous.

The difference betwixt the "old country" and this colony, cannot be better exemplified than by reference to the fact, that in England it was last year a remunerating process to ship *several hundreds of tons of dry bones of horses and men from the shores of the Baltic, to land them at Grimsby, for manure for the Lincolnshire fens;* here, though the sandy soil appears to lack bone manure as much as any part of Great Britain can need it, the relics of whales and cattle are not only unappropriated, but *a cart-load of bullocks' heads may be any day seen emptied into the sea, as refuse offal not worth the trouble of cleansing for cookery!* Where that which is most welcome food in any other country, is disdained as offal; the market price of food, as compared to the market price of manual labor, has not reached the natural level; and there need be no question but that the period is fast approaching when either the price of food must rise, or the rate of wages, for mere manual labor, must fall.

A scheme for a new colony, to be planted in Australia on a very grand scale, is now in progress in London; but the projectors have started with the idea, that the inconveniences of new colonies overbalance their advantages: they therefore resolve that their colonists shall carry with them to Kangaroo Island as much as is possible of the good old 'order' of things! including, of course, poverty for the present and for the future for themselves and for their children: they undertake to expatriate themselves and families, and are content to quit their native country, and plant themselves and their families in a desert at the antipodes, with scarcely the hope of a better return than what the same capital, and industry, and privation would obtain them at home. Their whole scheme is based on error; in the first place, Old England is not utterly worn-out—it is certainly becoming an exhausted ground for the *squirearchy,* and for the race that prefer living on the labor of others, to earning their own bread by their own honest industry: still, notwithstanding this admitted decay of 'the order,' those who are contented to 'rise early, and late take rest,' and who can eat the coarse bread of niggard carefulness, will find in any part of Great Britain, that honest industry is repaid by as much comfort and as much independence, as these Projectors even venture to promise to their colonists. Secondly, they imagine that they are to understand, to the letter, the whole melancholy wailing of the nervous and the timid, or the designing, among their predecessor colonists; great and manifold, indeed, are the evils to which colonists are subjected in a new country; but when all that has been borne in Australia, from its first settlement to this date, is compared with any single page of the early history of the Pilgrims, and their New England in North America, the whole sinks into insignificance. A colonist who occupies ten thousand acres of land, sixteen square miles! appropriates to his single self a territory which forms a sufficient space in England for three villages, and about three thousand inhabitants; such a man, on such a field of operation, has no sinecure task before him: his per-

sonal superintendence is unequal to the controul of such an area, even if his purse be equal to the proper equipment of his establishment; but he obtains the land for nothing, or next to nothing; the bare idea of property calls out his latent energies, or creates them for the occasion: he toils in a manner that he would never have dreamt of elsewhere, and lives on hope; in the meanwhile, a good and useful commonwealth's-man is formed out of what was originally a very bad one, his cattle breed in a way that amply overpays the accidents of flood and field, of disease and bushrangers; and in process of time, and not unfrequently by a quicker progress than is now common in England, he finds himself really rich: his vast property has become a well-stocked farm of incalculable value; and his children, who have grown up in the hardy pursuits of colonial back-wood's-men, are comfortably independent; and have the promise of better things in the progress of advancing improvement, as an inheritance for their children; they, at least, enjoy the fruits of that trying period of labour and privation which their parents endured with cheerfulness, from knowing that it was the ploughing of the unreclaimed soil, the seed-time and sowing of that future expected harvest.

Such cannot be the case in the new colony of Southern Australia; the projectors have the means of ascertaining that land sells heavily at 5 shillings per acre in the old Australian colony, and they imagine that they have made a wonderful discovery of a 'Mare's Nest!' that it is too cheap! and that by a string of fine phrases, they can continue to manufacture a new state, of several millions of acres, worth 12 shillings per acre at the out-set; they are grievously mistaken; but good will result: the first speculators, the dreamers and castle-builders, will suffer; but the next swarm of practical men will benefit by their labours, and by their outlay.

Estates of ten thousand acres occupied by proprietors whose capital would be unequal to the proper management of farms of a hundred acres, are no injury to a colony: the property is created merely by their occupation, and the labour they bestow upon it; and if such bold adventurers did not settle there, no one else would; and the wilderness would remain a desert; but these hardy pioneers, who clear the way on the outskirts of advancing civilization, and bear the first brunt of the contest with savage nature, are a rough, and often a rude, unnurtured generation: they require to be kept in their proper place, and to have their statements carefully sifted; nor should they be encouraged to demand a protection, or be allowed an influence, utterly incommensurate with their claims upon the public, or on government. Their cattle, spread over downs and wolds of many square miles, instead of being sheltered by enclosures, or safe in the vicinity of civilized communities, must of course be liable to be plundered; but the liability forms part of the price paid for the advantages of such boundless extent of grazing ground, and the vast benefit which will eventually accrue to the party, or his heirs, when property becomes settled, and land attains its natural value. Thence, though this very nakedness of the land, this defenceless state of property, is a sore temptation to the idle and the unprincipled, to live upon the industry of others; still, the colonists have no right to demand Vagrant Acts, like ours of August last; nay, more; such legislation! would not only prove no remedy, but would, unquestionably, increase the evil: the remedy is only in the slow progress of time; and is promoted by whatever tends to encourage free population, and to lay the foundations of those villages of industrious free men, which the next century will probably find on every one of these wild and desolate properties. But Vagrant Acts, which needlessly and arbitrarily interfere with the liberty of the labouring man, are obstacles to the creation of such a class, and irritate those into irregularities, who might be reclaimed from savage life, or undisciplined habits, by more rational treatment.

Fugitives from their native land intend to escape positive evils, and must please themselves with the hope of positive good: there is not one, in any class of those who are likely to be decoyed to Kangaroo Island, who would not do better to remove himself to this colony. The small capitalist might find here those means of cheap enjoyment, which the present generation will not create for them in Australia; and the labouring class, an abundance and a cheapness of food, and a rate of wages, which their present patrons dare not even venture to dream of for their followers in Southern Australia; whilst, in addition to these advantages, the more hardy, the intrepid, and the energetic, have an open field on the frontier to try their fortunes, if they wish it, as the reclaimers of the desert.

Having thus briefly adverted to the grand causes, which, in our opinion, must occasion any field of industry, involving small returns, to be altogether unavailable for this colony; we will remark, that when a better day has dawned; when Zuid Afrikaanism is exploded, and a British feeling of manly independence is established in its stead; when the British community have asserted their proper place in a British colony, and, scouting those local peculiarities, which are worse than useless, in being mischievous, have obtained their rights to be ruled only by British law; when the slave-owners' monopoly in the labour-market is at an end; and when the price of labor shall bear a just proportion to the price of food;—finally, when every individual in the employ of government, thinks and acts like the kind, good man, who is now a blessing to the colony, at the head of government; when the law shall afford no protection to individuals, considered as the rich, to the prejudice of the poor; and when Mr. Advocate De Wet has cleared the colonial offices of all useless appointments, and has reduced the stipends of all officials to a standard that is suited to the means of the colony;—then—but not until then—will the capabilities of this colony be developed, and its importance to England and India be ascertained.

We can venture no conjecture on what may then prove the most valuable source of colonial prosperity; whether the South African vintage may ever rival the wines of Gascony or the Rhine; or whether Natal and Delagoa, being first garrisoned, and made safe ports, the inland trade may thence pour ivory and gold from some hitherto undiscovered cornucopia in exchange for British manufactures: but for the present, it is clear, that "supplies to shipping," the sole purpose for which the colony was founded, remains the staple of the Cape colony. Thence, whatever tends to encourage the resort of merchant ships to the port, and whatever can simplify and economize the port charges, and can reduce all the expenses incident to their touching here, to the lowest possible standard, is more deserving of immediate attention than any new fields of industry.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Let us but reduce the port expenses to such an extent, that every vessel leaving England for Bengal and China, and returning thence; or passing eastward to Australia, shall, as a matter of course, take on board, when sailing, no greater supply of water or provisions than what is requisite for the voyage to the Cape; and shall rely for filling up here, as a cheaper and better place for victualling, than either Europe or the East, which might probably be effected; and then we shall have a constantly crowded port, and our agricultural productions at all times a brisk market. Our farmers, graziers, gardeners, retail dealers, and licensed victuallers, might perhaps reap a richer harvest, if their attention were more earnestly fixed on their best market, and if their arrangements were expressly suited to the convenience and wants of the shipping interest. Much remains to be done; for it cannot be disputed, but that the advantages derivable to British trade from this port, and to this colony from British trade, are limited at present by circumstances, which are overlooked from their supposed insignificance; but which, however trifling, when taken individually, operate united, in a manner that is very prejudical to the best interests of the Port and Colony.

JOURNAL OF A TRAVELLER.

Communicated to C. Chasey, Esq. the Secretary of the Society for Exploring Central Africa.

[The Author accompanies the Expedition under Dr. Smith, as far as Philippolis,—Estimate of the value of the Party composing the Expedition,—Manner of living,—The Sabbath,—Indian Visitors,—Boers in the Griqua country in search of pasture,—Griqua and Hottentot servants,—The Modder River,—The Vaal River,—Platberg,—Poccana,—Beauty of the Country,—Kraals of Coranas,—Hart River,—The Chief Makhatla,—The party augmented by Coranas,—*Seechagholie* River,—Hunting and its successes,—Description of the inhabitants of the country,—Maloppo River,—Preparation to meet an expected enemy,—Some of the Author's people abscond to steal cattle from Masilikatsie,—A Tribe of the Matebely avenge themselves,—A Battle; four of the Natives killed,—The Traveller routed with the loss of his wagons, and rich collection of natural curiosities,—Sufferings of the party in returning to the Colony,—Missionary hospitalities, &c.]

Graaff-Reinet, December 18th, 1834.

My dear Sir,

Knowing the interest you have always taken in every thing connected with the Expedition for exploring Central Africa, and having just returned from that part of the Continent through which it must necessarily pass, I have hastily drawn up some details of my unfortunate journey for your perusal, leaving it entirely to yourself to extract such parts as you may think will be interesting to the Committee of the Association for exploring Central Africa.

You are aware that I accompanied the Expedition under Dr. Smith, as far as Philippolis, and if the testimony of such a humble individual as myself could avail any thing, I can scarcely let this opporunity pass of congratulating the Committee on the happy and judicious choice they have made of the persons composing the party. Every one, from the highest to the lowest, seemed to know his duty, and to do it. Dr. Smith is the most indefatigable man I ever met with; nothing comes amiss to him. He sees every thing done himself, and trusts nothing to others. He seemed sometimes even to be ubiquous, and seldom went to bed before 1 or 2 o'clock in the morning. He is, I think, in every respect the very man fitted to lead such an Expedition. Capt Edie would have a good deal to do to *drill* all the party, and teach them their various military evolutions. Kift is a most useful fellow, and a great favorite of the Doctor. The graphic and Cruikshankian labors of Mr. Bell, with the delicate and minute products of Mr. Ford's pencil, were the subjects of daily admiration to us all. The *Astronomer*, by which familiar appellation that promising young gentleman, Mr. Burnett, was known, had no sinecure situation. He will, I think, be a bright fellow.

The men also, in more subordinate grades, are an orderly, well behaved set of people, and some of them very clever and well educated. Indeed, nothing can surpass the good order and harmony that prevails throughout the whole party, and if they do not ultimately succeed in all their undertakings, I do not think it will be the blame of any one composing the Expedition.

Their manner of living was also exceedingly simple:—

"Nae kickshaws or puddins or tarts were seen there!"

But at 10 o'clock, when the bell rung for breakfast, we* entered the tent, each armed with his knife and fork, where we found the table (I beg pardon, the mat, I mean,) spread on the floor, on which was placed a hearty meal of beef or mutton, or what game the day produced, cooked in the plainest manner; which, with bread or rice, and a tin pint of tea, baled out of a camp kettle, formed the homely but substantial repast. Around the inside of the tent we all squatted in the true oriental style, and every one ate with an excellent appetite. At sun-set we had a repetition of the same fare, and sometimes (let not the Temperance Society startle,) when there was nothing particular doing, we indulged in a cup of punch, and songs and glees frequently concluded the labors of the day.

Every Sabbath, during the time that the German Missionaries remained with us, divine service was held twice a day.

After remaining about a fortnight at Philippolis, the Doctor, in the mean time, having come to the resolution of proceeding up the Caledon River, we (Messrs. Malcolm and Cotton, the Indian gentlemen that accompanied the Expedition from Cape Town, with Mr. Granot of the 98th, and myself) prepared to start in the direction of Lattakoo; Mr. Moodie, who accompanied us from Graaff-Reinet, having returned a few days before. Mr. Malcolm had engaged a Griqua guide to accompany us as far as Lattakoo, but when we were ready to start the fellow was not to be found. On our departure, every man of the Expedition turned out in line and honored us with a grand salute. Big Harry, the butcher, was on the right of the line with his large elephant gun, which gave a report like a cannon, and his appearance alone would, I think, frighten a host of Kaffirs. On the whole, the party on this occasion had a very noble and formidable appearance, and seemed perfectly capable of defending themselves against any number of enemies they might have to encounter for some time. Three cheers followed the salute, and the worthy Dr. and Capt. Edie were pleased to accompany us about a couple of miles on our way, and after a mutual passing of hearty good wishes for one another's welfare and success, we stammered out the sorrowful "Farewell!"

Four days' travelling brought us to the Riet River, but the country through which we passed, not only from Philippolis, but all the way from Graaff-Reinet, was in such a miserable condition from the long continued droughts, that our cattle were in the greatest danger of perishing, as not a blade of vegetation was any where to be seen.

Here we found a number of Boers from the Colony, in search of pasturage for their cattle. These poor people were dreadfully dejected, as their flocks and herds were diminishing every day in considerable numbers, and they knew not which way to turn themselves to save their only means of subsistence. To return to their places ruin stared them in the face, and to remain where they now were was little better, so that if Providence did not soon send rains, their losses must be very considerable indeed. *It has been reported of those people, that they have fled from the Colony with the double view of dispossessing the Griquas of their places, and of evading the Government measures for the emancipation of their slaves.* Nothing can be more untrue. The majority of those crossing the boundaries are of the poor class, not possessing a slave, or the younger branches of richer families who take charge of their flocks while their elders and slaves remain at home to cultivate their places; very few slaves comparatively being used as herdsmen.

As regards the other charge, instead of the boers oppressing the Griquas or Bastards, their arrival in the country of the latter, is hailed by the generality of those people as an event fraught with good fortune to them; for having large places, and little or no cattle to graze there, and as "They plough not, neither do they sow;" they take care to make the Boers pay a good price for every privilege they enjoy the moment they cross their boundaries.

That there may be single instances of the boers maltreating the Griquas, I will readily allow, but the majority of them treat them with kindness and humanity, being often the means of saving whole families from starvation, when the indolent parents are too lazy to exert themselves on behalf of their own offspring. That there are instances of industry among those people, I am also ready to admit, but they are "few and far between:" the great body of them loitering their time away in their filthy hovels, which swarm with vermin, living in the most abject state of squalid poverty, supported solely by the exertions of a few wretched Bechuanas or Bushmen, who drag out a most miserable existence under the most intolerable *slavery*, in procuring for the subsistence of their indolent and supercilious masters, roots, locusts, or honey. This is a species of slavery that the Abolitionists are probably unacquainted with, and exists to a considerable degree through all the Griqua country. They obtain them when out on hunting, or on predatory excursions in the interior, and I have more than once been eye witness to the cruel and degrading manner in which they treat the unfortunate Bechuanas.

As my Indian friends were bound to Lattakoo by the way of Campbell, and as you are aware of the engagement I was under to procure Giraffes, Rhinoceroses, &c. I was here reluctantly obliged to part with these amiable and worthy gentlemen; my nearest route to the country where such animals could be procured being by Bootchaap, where, I was also informed, I should procure better grazing for my cattle.

* The gentlemen above named, the Indians, familiarly termed *the Lattakoo Expedition*, the German Missionaries, and myself.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Some days after we parted, two of my Hottentots absconded, when I was under the necessity of hiring a good-for-nothing fellow of a Griqua in their stead; but he did not annoy me long, for after a few days' good feeding, he followed the example of his predecessors, by running away. I afterwards had the good fortune to meet with a Bastard from Camiesberg, called Hendrik Klaas, who obligingly offered to drive one of my wagons, until I could supply myself with another driver. This man was on his way to the same country that I intended visiting, on a hunting excursion, and his wagon was two days farther down the Riet River, at which place he expected to be joined by a large party of Griquas with several wagons, and as there was a number of spare people, he had no doubt that I should be able to procure as many as I wanted for the journey. This I considered a very fortunate circumstance for me, as I should be enabled at an easy rate to purchase any skins of rare animals which they might shoot along the road.

We did not, however, meet all the party till we reached the Modder River, where the Griquas mustered two wagons in addition to the one of Hendrik Klaas, so we were in all, with my two, five wagons. I hired also one man, Barend Barends, (not the Chief of that name,) with his three riding horses, in the capacity of a hunter and mark's-man, and his brother, Hans Barends, as a leader, so that I promoted one of my Hottentots to the driver-ship.

We then jogged merrily on, the country improving as we reached the Vaal River, which we crossed a little below the forsaken Missionary Station of Platberg. Here I obtained some splendid additions to my ornithological collections. The country we found completely uninhabited all the way from Modder River to Poccanna, only having found two or three Griquas and a few Bechuanas at Bootchaap. Poccanna is a beautiful place, the country around it abounding in game of all sorts, with an abundance of fine grass, and the plains and hills covered with beautiful clumps of camel-thorns, and other trees of the mimosa family. Here we found several kraals of Corannas, who appeared to have a good stock of cattle, and plenty of milk. The kaross among them appeared to have given place to leather jackets and trousers, and some even enjoyed the luxury of a shirt, but which is never washed from the time it is put on till worn out. Most of them possess fire arms and horses, which they not only use in the chace, but, like their Griqua neighbours, occasionally in their predatory excursions against the Bechuanas and other unprotected tribes. One day's journey from Poccanna is a place called Towné, situated on the Hart River, at present the residence of a once powerful Baharutsu chief, called Makhatla, with a few of his tribe. This man was once, I am told, very rich, and resided in the capital of his kingdom, called by Campbell Kurrechane, but was driven thence some time ago, by the all-conquering Zoola chief Masilikatsie, who has now made that place his head quarters. Leaving the Hart River, we passed the ruins of a very extensive Bechuana town, its numerous stone kraals being still in a good state of repair, though it was forsaken by its inhabitants on the irruption of the Mantatees, about 12 years ago. Near to this place we found two other kraals of Corannas, under a chief called Tatema, who being, as the Griquas informed me, an excellent marksman and shot, I hired, along with three of his people, to accompany me in that capacity. Two days afterwards I was surprised to find that we had been joined by upwards of 20 more Corannas, with a number of horses, pack-oxen, &c. all followers of Capt. Tatema, and as they had so much the appearance of banditti, I dreaded that if their object was not to rob me, they might at least cause suspicions of hostile intentions to the tribes through whose country we had to pass. However, they behaved themselves very well, and I never had the least cause of complaint against my Coranna auxiliaries.

After travelling from Towné nine days, in a north-easterly direction, through a country only remarkable for its great sameness of appearance, consisting generally of immense flats, studded with camelthorn trees, a sandy soil with a substratum of lime, plenty of grass, but no streams or fountains, only a few miserable pools, scarcely sufficient to supply the few straggling wild beasts and quaggas, which we occasionally saw, with water, we reached what is dignified with name of the *Seechagholie River*, where I may say our operations of hunting only commenced.

Our first day's hunt was very successful, having bagged amongst us 14 cameleopards and 2 elands, and caught 1 cameleopard calf, so that I had a great choice of skins and skeletons for preservation, for I never preserved any but the finest specimens. Our second day's sport was varied by the accession of some white and black rhinoceroses, and the capture of a half-grown giraffe. This beautiful creature had two large sores on its shoulder, evidently caused by the paws of a lion, which latter brute, from their situation, must have been on the back of this gigantic but harmless creature. It unfortunately stumbled as we were pulling it to the wagons, and in its fall broke its neck. But I must not trouble you with all the particulars of our *jagt;* suffice it to say, that shortly after leaving the Seechagholie, the two Griqua wagons, with all the Corannas, returned homewards, being afraid of approaching nearer to the country of Masilikatsie. Taking a westerly course from the Seechagholie, we hunted some time at a *dry* river, called the Malybana, down which we travelled two days, till where it empties itself into the before-mentioned river. Our course was again north-easterly, and after re-crossing the Seechagholie, near its junction with the Meritzan, all of which rivers empty themselves a few days' journey lower down into the Malappo.

I have hitherto said nothing about the inhabitants of the country through which we passed since leaving the Hart, for until we first reached the Seechagholie, we had scarcely ever seen any, except a straggling Bushman or Bechuana, but after we had shot such abundance of game, we got plenty of company. The natives scattered about this part of the country are the remains of various Bechuana tribes, such as the Baharutsie, Wanketzie, and Barolongs, all of whose countries Masilikatsie has conquered. These poor people live in very small communities, scattered over the face of the country, but have not a single head of cattle to live by, their whole dependance and only food being locusts, or such game as chance may direct into their pitfalls. I met among them some Wanketzie people, who recognized me, as having visited their country about 8 years ago. They told me that the once powerful king Sibigho, was now nearly reduced to beggary by Masilikatsie, and had taken refuge beyond the Kaliharry desert.

My party now consisted of Jan Saver, a colonial youth, myself, three colonial Hottentots, and two Griquas, with my two wagons, three horses, besides the three which I had hired from B. Barends. There was also Hendrik Klaas' wagon and party, which consisted of himself and Piet Barends, an adult Griqua, with several lads, three boys, and two women.

As we were travelling along the south bank of the Meritzan, we observed the fresh spoor of some cattle, which must have crossed our route that very morning. This being such an unusual circumstance, as I have before mentioned that the people inhabiting that country possessed no cattle, it caused as much surprise and conjecture among us as the print of a man's foot in the sand did to Robinson Crusoe, and as we were still debating on the subject, some of the natives came up and told us that a small commando from Makhatla, the Baharutsie chief, had that very morning returned from Masilikatsie, and having killed the herdsman, succeeded in carrying away 17 head of cattle, with which they were now on their way home. This was bad news for us, as we guessed that Masilikatsie's people, in following the spoor of the stolen cattle, would come upon our wagons, and naturally suppose that we were connected with the thieves. When we reached the out-span place, we immediately began to make a sort of fortification of bushes around our wagons, in which we could keep our cattle and horses, in case of an attack during the night. We put our arms in order, and I gave to each man about 30 rounds of powder and ball, and took every other precaution that our circumstances would admit of. But we were attacked by nothing during the night but a tremendous thunder-storm, with plenty of rain, which was much more acceptable to us than Masilikatsie's soldiers would have been. The Griqua, Piet Barends, who very coolly told me that he had been frequently into Masilikatsie's country to *steal cattle*, said, he thought we had nothing to fear now, as that chief would think it below his dignity to send in pursuit of such a trifling number as 17 head of cattle.

We continued our journey still in a north-easterly direction, till we reached the Maloppo, which was only 6 hours, on horseback, from the residence of Masilikatsie, but I could not induce the Griquas to advance one step farther. I tried every thing in my power to get one to accompany me on horseback, as interpreter, but to no purpose, as I guessed that that powerful chief would not be pleased if he heard of our being so close to him, without paying him a visit. After remaining at the Maloppo three days, in which time we had bagged a good number of rhinoceroses, &c. and caught 6 beautifully striped quaggas, we made preparations for returning, on which I missed my Griqua leader, Hans Barend. On making enquiry about him, nobody knew where he was, and as he was a lazy sleepy fellow at best, I paid little attention to the circumstance at the time, but spanned in and started, thinking that he might be asleep behind some bush, and would follow, as he had frequently done before. However, after we had travelled about an hour, Jan Saver came and informed me, to my utter astonishment, that Hans had absconded along with Piet Barends, and two Griqua lads, to steal cattle from Masilikatsie. I immediately ran to Hendrik Klaas, and upbraided him with a knowledge of the fact, blaming him for concealing it from me. He excused himself by saying that he had done every thing in his power to dissuade him from going, but he would not listen to his advice, nor did he think that I should have been able to have dissuaded him. He also denied strenuously any pre-knowledge of Hans Barends' intended elopement, or of his taking his brother Barend's horse with him, which was the fact I was now, to use a homely expression, completely put to my shifts, for here were four people who had actually left my wagons for the purpose of plundering one of the most formidable chiefs in Southern Africa, and should they succeed, and return on my wagon tract, there could be little doubt as to what the consequences would be. Hendrik Klaas, however, in some measure comforted me, by saying that Piet Barends would never be so foolish as to return on our track, as he had left his son, a boy of 8 years old, with the wagon. His opinion was, that Barends would take quite a different route, and consequently the wagons would be in no danger of being overtaken by his pursuers. I felt myself, however, in a very unpleasant situation, and that my safest plan was to hasten homewards with as little delay as possible.

After 3 days good riding on this side the Maloppo, thinking ourselves out of reach of Masilikatsie, we rested at a beautiful place, where there was abundance of fine grass and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

water, for the purpose of commencing fresh hostilities against the cameleopards and rhinoceroses; and having heard nothing of Piet Barends and his band in all that time, we concluded that they must have been all murdered by Masilikatsie, which would have been their just deserts.

As I now draw near to the catastrophe which was the result of this marauding expedition, I must be particular in stating every circumstance as it happened. Jan Saver, and my Griqua huntsman, Barend Barends, along with Hendrik Klaas, went out a hunting on the 17th November; the two latter returned in the afternoon without success; having lost Saver, who galloped off after a herd of quaggas, which they did not think it worth while to pursue. A little before sun-set, I sent a Hottentot out on horseback in quest of him, as I was uneasy at his long stay; but the Hottentot returned without any tidings of him. We kept firing signals all the evening, but still no sign of Saver. Next morning, the 18th, I despatched Hendrik Klaas and Barend Barends in quest of him, with orders to follow his horse's spoor from the place they had last seen him, as I dreaded that he might have fallen into one of the numerous pitfalls which the natives make for catching game. Saver, however, returned about 9 o'clock, and told me that he had lost his way last night, and finding a pool of water, and good grazing for his horse, he tied the latter to a tree, under which he himself slept, and this morning had much difficulty in finding the wagons, on account of there being no hills or other conspicuous objects to guide the bewildered traveller to any fixed point. About an hour after Saver's arrival, the weather being extremely hot, I was sitting without my jacket, reading in my wagon, when looking up the valley, I perceived Hendrik Klaas coming down at full gallop, all the way making signs to us, which I could not comprehend; but thinking probably that he had caught some giraffes, and wanted assistance, I ordered the horses, which were fortunately close at hand, to be caught and saddled. The next moment he was with us, vociferating as loud as he could, "Get your guns and horses ready, for here is Masilikatsie close upon us." I looked up the valley, and saw a dense black body of men moving furiously down upon us. No time was to be lost, I snatched my double-barrel from the side of the wagon, and girt on my bandalier, cast a hurried glance into my front chest in search of my money and papers, in case of the worst, but did not find them in the hurry. Barend Barends followed close at the heels of Hendrik Klaas, and quickly *shipped* the two Griqua women on his spare horse. My Hottentot Piet took to his heels, along with the women and Griqua boys, and escaped into the adjoining wood. Klaas, a cowardly fellow, also one of my Hottentots, got on horseback and fled, so that we had left to protect the wagons, and fight against about 200 of the most formidable savages in South Africa, Jan Saver, Hendrik Klaas, Barend Barends, and myself. Old Prins, a little dwarfish Hottentot, was the only one of my people that did not run away, and being on foot, had a very narrow escape from being taken by the savages.

We were now all mounted, and at that critical moment, when the Matebely (for that is the name of Masilikatsie's tribe,) were within 200 yards of us, I perceived the villain, Piet Barends, making the best of his way towards the wagons, but coming in an opposite direction to the Kaffirs; his horse completely knocked-up, and his face as pale as death. I had scarcely time to upbraid the monster with his base conduct, when the Matebely were close upon us; for it was all done quicker than you can read this description. They now spread out to surround the wagons, seeing which, I rode up closer to their line, making signs to them to come to a parley, but without avail. A shower of assegaais made me seek safety in a retreat. Their right wing seized our cattle and sheep, and as they had nearly surrounded us, our little band burst through the weakest part of the circle, when we turned round and fired upon them. They succeeded, however, in driving us away from the wagons, and forced us into a wood of camel-thorns, which was far from being advantageous ground for our small party, so that I considered it good generalship to retreat to a more open and rising ground, on this side the Seechagholie. In the running fire which we kept up on them during our retreat, we killed three, and wounded one. They seemed to be aware of the advantage we had gained by our retreat, and few crossed the river to follow us, although a great number got into its bed, no doubt with the view of being protected from our fire by its banks, and of having an opportunity of surrounding us on both sides, without our perceiving it. At one of the boldest fellows we fired, I think, six shots, neither of which struck him, although one ball went through his shield, and another struck the ground just between his feet. On the other wing, however, Hendrik Klaas shot one dead, which, whether from the circumstance, probably, of his being a chief, I am unable to say, but after that they seemed to have no further inclination to advance. Those that were on this side the river, recrossed it, and then the whole body turned their shields on their backs, and quietly returned to our wagons. We now drew together, my Hottentot Klaas also getting courage to join us, and resolved to go in search of the Hottentot Piet, and the Griqua women and boys. In pursuance of this intention, we had proceeded down the left bank of the river but a little way, when a dense smoke arising from the spot where our wagons stood, made us fear that they had set fire to them. A little more careful attention to that subject, convinced us of the truth of our suspicions, for the three different fires answered exactly to the relative position of our three wagons. On reaching a Bechuana kraal about 4 miles below where our skirmish had taken place, we found the miserable inhabitants in great consternation preparing to flee, for to be found there by the Matebely, they knew would be certain death; those cruel wretches murdering every tribe through whose country they may carry their arms. These people confirmed our suspicions with regard to their burning the wagons, as one of them had just returned from the wood, in whose vicinity they stood. Here we, with difficulty, each obtained a mouthful of dirty water, and got the pleasing tidings that our *infantry* had passed that kraal only a little before us; we soon found their spoor, and in an hour came up with the poor creatures, resting themselves under a tree. The women told us that the villain Barends, the cause of all our misfortune, had taken the horse that they were mounted on from them, and getting upon it himself, along with his little son, galloped off and left them to their fate. Two of the Griqua boys were still missing, nor have I ever been able to learn what became of them.

As I had now no chance of ever obtaining any thing more from my wagons, I resolved on making the best of our way homewards, the fruits of all my labors for many months being lost at one blow, as my splendid collection of natural history, a great part of which would have been quite new to the cabinets of the curious, was now, without doubt, consigned to the flames, However, to repine at one's fate, avails nothing; besides, I think it unmanly, so

"I whistled up Lord Lennox' March,
To keep my spirits cheerie."

My loss in wagons, cattle, books, instruments, and many other valuable articles I had with me, cannot be less estimated than at Rds. 6000, and as I had every prospect of making a profitable journey, I cannot compute my total loss at less than 11 or 12,000 Rds. No trifle for a poor devil like myself!

We commenced our homeward journey walking and riding alternately, as we had not near sufficient horses for the whole party, and we jogged on as merrily as our unfortunate circumstances would admit of. We had no guide or track to lead us to any place of rest, but taking a south westerly course, trusted to Providence to lead us to Mateto, the nearest missionary station.

The day was excessively hot, but the sun set upon us without any appearance of water, and now in the strictest silence we pursued our dreary way through the long grass and low thorny busnes with which this country is covered, not knowing but our enemies might be close behind us. About 10 o'clock we saw a light which we approached with great caution, being ignorant whether it was made by friend or foe. Having first reconnoitred, we found to our joy that it was a Bechuana Kraal; to our eager cries of "*Se weitoe*!" "Give us some water;" the women stowed themselves away in their huts, and the men flew to their assagais and battle axes, for they knew not what to think of our untimely visit and picturesque appearance. But after some explanation of our mishap, some dirty ostrich egg-shells were handed to us, containing a mixture of mud and water, which had it been Hudson's *pale ale*, could not have been sucked out quicker or with more relish. These poor people on hearing of the Matebely, prepared immediately to decamp, and one of them shewed us a small dirty pool about a mile from their huts, which supplied them with water. Here we *saddled off* for a few minutes (keeping a good look out all the time,) to let our poor horses drink, as they had had no water all day.

The moon getting up, we resumed our monotonous journey, and after travelling many a weary mile, we frequently stood still to listen for the cheering strains of some amorous frog, which in our present forlorn situation was likely to be our only index to water; for our thirst was still unassuaged, notwithstanding the copious draughts we had inhaled from the Bechuana egg-shells and the dirty contents of the pool. The sweet music of the frogs, however, never reached our ears, and at dawn of day we laid down under a bush completely exhausted from fatigue and thirst. Half an hour's nap revived us a little, and we again proceeded, but whither, we scarcely knew ourselves. We were just debating upon which way we should steer our course, when to our astonishment we heard the crack of a wagon whip. Gracious heaven! I cried, the hand of Providence is in this! I jumped upon my horse and gallopped off in the direction of the sound, although as yet I saw nothing, but I fired my gun to make them *lay to*, as they had evidently gone far past us. At last I got a glimpse of two wagons, and made sure it was my friends of the African Expedition. In that I was, however, mistaken; for it turned out to be a Mr. Gibson, a trader, on his way to Masilikatsie. Glad of an opportunity of saving a fellow creature's life, I in a few words explained our situation to him and the danger he was in of proceeding any farther in the present state of things. He heard me coolly out, and then said, that Masilikatsie must certainly have thought that we were all Griquas, for he knew that chief, and could not suppose for a moment that he would otherwise have attacked white people. Mr. G. had also 3 of the Matebely with him, one of whom had been in the colony with him, and they were all of the same opinion as their master. I replied, that they probably might at first have mistaken us for Griquas, but to obviate that mistake, Jan Saver and myself purposely exposed our persons in front of their line, before the attack commenced Gibson, however, persisted in his determination to go in, at all risks, making sure that they would never attack him while he had their countrymen in his wagons.

As there was still no sign of water, we accompanied the wagons to the place where they intended spanning out, which was still two hours

Vol. II. R 2.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

farther, that we might obtain some refreshments, having had nothing to eat the whole of the preceding day and night. On our reaching the out-span place, however, not a drop of water was to be found! Mr. G. then insisted on us going with him, as far as the upper-part of the Seechagholie, where we would be sure to find water, but I could not think of going so far out of our way. A small sheep was hastily killed for my party, and one for the Griquas, a part of which we grilled without salt, as that would only increase our thirst. Of the little drop of water that still remained in his keg, Mr. G. made us a cup of coffee, so that we had a breakfast as sumptuous as it was unexpected. He then gave us some important directions regarding the road to Mateto, without which we never should have found our way thither.

As Gibson's oxen had now travelled twenty-eight hours without water, and as no time was to be lost by either party, we each prepared for resuming our journey. I had the mutton put into the skin of the sheep, and then fastened on one of the horses, as I did not intend riding to day, but spare the poor animals for the journey across the desert, which yet lay between us and Mateto.

About 9 o'clock in the morning we parted,* and although the night had been cold and chilly, which I felt the more as being without a jacket, the sun began already to be unsufferably hot. Barend and Klaas rode on in advance to the Great Chue, which is the name of the fountain where we would first find water, as they could not stand against the thirst any longer. Jan Saver, and myself were the foremost of our pedestrian band, and as my spirits were quite elated at our good fortune in having met with Gibson, and getting such timely refreshments, that I could not resist the impulse of beguiling some heavy hours in crossing the dreary plain, we were now upon by singing some of our sprightliest Scottish songs. I soon found, however, that my vocal exertions were not well adapted for assuaging my thirst, which now began to be rather pressing, so I changed that amusement, some time after, for the more uncongenial one of chewing some of the leaden ball which remained in my girdle pouch, as I had often heard that lead is a great palliation for thirst. Our journey still continued over an extensive sandy plain which left the horizon as level and unbroken as on the bosom of the trackless ocean, and its natural dreariness was greatly enhanced by the myriads of young locusts which literally covered it, and completely changed its color. Not a bush or other object could we see to protect us for a moment from the scorching rays of a vertical sun, but the *mirage* flickering in the distance, shewed us extensive lakes of clear blue water which, ever and anon, as we approached, vanished, and "Left not a wreck behind!"

Our situation now became any thing but enviable, and I would have given any thing to have got rid of the burden of my gun and bandalier. Our feet began to get completely toasted in the burning sand, cracked and bled profusely, while our mouths became as dry as a *furnace*, rendering it rather dangerous to converse with one another. We were surprised that the Griquas who had rode out before us, did not come to our assistance with some water, as they had promised to fill the sheep's paunch with that valuable element, and meet us on the way. However, on at last reaching the Spring, more dead than alive, we found that they had only arrived but a few minutes before us; their horses being quite spent. One of them was just filling the paunch with water and immediately trudged off with it on his shoulder to the aid of the poor woman and Hottentots, still about an hour behind us. I was afraid that we should have injured ourselves with the immense quantity of water which we drank; but no evil effects followed. We found the springs here so small, that no more than one horse could drink at a time; after which we were obliged to let it fill again before another could be supplied. About an hour's rest under a small bush considerably revived us, and after eating a small *carbonatje*, we again proposed to resume our journey. Gibson had informed us that after leaving this plain, we should find no water for 24 hours, so I filled our sheep's paunch, which I balanced across one of my horses' backs with the mutton still remaining in the sheep skin. An empty bottle which we also got from Mr. G. was filled, and with that supply, I trusted, that by travelling all night, to be able to cross the desert without danger. Saver and my Hottentots were very much opposed to crossing this desert, wishing by all means to continue with the Griquas, who were bent upon returning by the same way they had come, which was by the Hart River; but I was well aware of the danger of going that way, knowing, that by that route we would find nobody for some weeks but Bechuanas, Corannas, or Griquas, from whom I am convinced we would have obtained no food, deprived as we were of the means of purchasing it from those who might have it; but the most of them have nothing but locusts, a sort of food I had not much relish for; whereas, if we took the way to Mateto, with the exertion of two days and nights' hard travelling, we would be certain to find *christian missionaries*, by whom I was sure all our wants would be bountifully supplied.

Our horses were all ready saddled, when on looking in the direction whence we had come, we saw a person slowly advancing on horseback. — It was Cobus, the son of the villain Barend, who had just effected his escape from the country of Masilikatsie. The lad looked dreadfully emaciated, and had suffered incredibly from hunger and thirst. His horse was also completely knocked up. He told us that he had been separated from his father, and the rest of the gang, the same night that they attacked Masilikatsies cattle-kraal, and he had never seen or heard any thing of them since. How he escaped, appears to be a miracle, as he informed us that a large commando, in addition to the one that attacked us, had been sent out after them, and they were now following up the traces of our wagons, as we had *entered* the country, doubtless, with the intention of discovering the place where we came, which in all probability would lead them to attack some of the kraals about Poccana or Towné.

The sun was now set, and it was time for us to march. We wished the Griquas a prosperous journey, and Saver, myself, and the three Hottentots commenced our dreary task. We had but just emerged from a bushy height which bounds the Great Chue on the west, when we were overtaken by one of the most terrible thunder-storms, that ever poor sinners were out in. We were on an immense naked plain, the complete counter-part to that we had suffered so much on in the former part of the day from heat and thirst, but we pushed on in hopes of soon finding a bush to shelter ourselves under. The vivid flashes of lightning, which followed one another in quick succession, shewed us something on the verge of the horizon, that appeared to be a thick bush, and to it we hurried with all speed, but found that, like the *mirage* in the morning, it had vanished at our approach, for it was nothing more than some low scrubby thorns not above six inches in height; which, on account of the darkness of the color compared to the grassy plains, had given them in the bright blaze of the lightning, the appearance of a thick and comfortable bush. We still advanced, and were frequently deceived in the same manner, but the rain continuing to fall in such torrents, and the wind being right *a-head* of us, the Hottentots positively refused advancing any farther; so I was forced to sit down with them on the bleak exposed heath, holding the bridles of our horses in our hands, there being no place to tie them to, and allow the rain to fall upon us without the least protection in the world. The thunder and lightning became actually terrific, and it frequently appeared as if the earth would have split under us; but, as I am no hand at description, I shall leave it to your own imagination to paint what our sufferings must have been that night. After sitting in that position till our limbs became quite stiff, we huddled together as close as we could, and laid down in the mire. The "windows of heaven" were still open, and the "heavens of the great deep" seemed to be let down upon us. About two hours before day-light, I with much difficulty got upon my legs again, and finding that the rain did not in the least abate, I insisted upon my fellow-sufferers also rising, which they did with great reluctance, apparently preferring to die there to the fatiguing exertions of marching forward in the rain. It was a fortunate circumstance that I insisted on their moving when I did, or they must all inevitably have perished from stoppage of the circulation of blood. They all found themselves in the same predicament as myself, which was, being unable to stand upright, and our legs refusing to perform their accustomed functions. However, our case was desperate, and we tottered, rather than walked forward, leading our horses behind us. Every dozen of paces we stopped to breathe, and although the rain still fell in torrents, and had scarcely proceeded half a mile, when we found the blood beginning to resume its circulation, and we began to walk with much more ease to ourselves. It was a dreary journey, but with the dawn, the rain began to abate a little, and we had the cheering prospect at the extremity of the plain to see what we were convined was a *real* bush. This put "life and mettle in our heels," and we had soon the unspeakable satisfaction to find that it was actually two large *Karee* trees, with large pools of rain water around them, and plenty of firewood. But how to strike a light seemed to be the next difficulty, for none of us had a tinder-box. Our guns would have answered that purpose tolerably well, but to find a dry rag that would ignite in the pan puzzled us. I tried a bit of my shirt ~~tail~~, but it was as wet as every thing else about our persons, but by the greatest good luck one of our Hottentots had preserved a small bag of gunpowder in his girdle quite dry, a bit of which answered our purpose extremely well, and after a good deal of puffing and blowing we had the pleasure once more of seeing a fire. The sight of the bright blaze made us in a great measure forget our sufferings of the past night, though it did not remove the pain from our bones, which continued many days after, and which, in all probability, will frequently return in the shape of rheumatisms, to remind us in our old days of the hardships we have undergone in crossing the Chue desert.

After a refreshing sleep under the Karee trees, we resumed our journey, but one of our horses *giving up*, we were obliged to leave him behind; sorry indeed to leave such a trusty and faithful servant who had saved my life, to its certain fate of being devoured by the lions. We rode and walked by turns all this day, our progress being very slow, on account of the stiffness of our limbs. Indeed, I had forgotten to say, that when day-light appeared, our skins presented the same appearance that those of drowned persons have after lying several hours under water, and were consequently exceedingly tender. This day turned out to be as hot as yesterday; but as we had plenty of rain-water on the road, and bushes where we could occasionally shelter ourselves from the burning rays of the sun, our sufferings were but trifling in comparison.

As the heavy watery clouds seemed to portend another rainy night, we chose for ourselves a

* Mr. Gibson was kind enough to offer us various other articles of refreshment, besides the mutton mentioned above, but which we had neither the means of cooking or carrying with us.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

comfortable bush at sun-set, that we might not be exposed to a repetition of the hardships of the preceding night. We felt hungry, and on rummaging our larder, found to our dismay, that the skin bag containing the meat, having been carelessly tied, its contents had been lost on the way; all but a piece of the sheep's neck bones. This was quickly consigned to the embers and devoured amongst us. We then *turned in*, as the sailor's say, intending to start again, should the weather permit, as soon as the moon got up, which would be about midnight. However, we oversiept ourselves, and in all probability should have slept till daylight, had not three or four lions, who were amusing themselves, gave us a *hail*. It might be about two o'clock, for I had no watch, having left that useful instrument in the wagon when attacked, and it probably now dangles at the ear of the mightiest of South African kings. It soon after commenced raining, as we had expected; but we took shelter in the nearest bush, where we lay about two hours, when the rain abating a little we jogged on again, but soon lost our road among some large pools of water, which we looked for in vain till daylight appeared. We discovered that we had gone a good deal too much to the right, and in looking for our way (Providence again!) we found an ostrich egg. What a glorious prize for poor creatures in our condition! A little afterwards we saw some fresh traces of cattle, which we followed till they led us to a Bechuana Kraal in a very secluded situation. Seeing here a lot of calves we expected to have got some milk, which would have been to us the greatest luxury.

On begging for some, for we could not buy it, they all denied having any, but I searched several of their huts till I found one, in which were suspended from the roof, three large skin sacks of milk. I seized upon one of them without ceremony, and was about helping myself, when the owner flew at me with the savageness of a tiger, and wrenched the bag out of my hands, refusing to give me a drop without payment. This was a specimen of African hospitality, of which I have seen several more in the course of my travels, and the very thing I dreaded would befal me by going by the Hart River. However, they were kind enough to lend us a small earthen pot to boil our ostrich egg in, and on it we made an excellent breakfast, although without bread or salt.

Near to this kraal we found the track of Gibson's wagons, on which we continued till we reached the Little Chue, which is like the other place of the same name, a periodical lake, having all the appearance of a salt pan, but almost always without water, except some small springs on one side.

Here we left our Hottentots behind and rode on to Mateto, which was still distant about 30 miles. At sun-set we reached the extensive Bechuana town of Litakoon, the residence of the Batlapee Chief Mahura, who is brother to Matabee, the king of that tribe, whose former residence, you know, was in Kuruman, or as it is commonly called Lattakoo. Here we procured a guide to Mateto, which we reached about 10 o'clock at night; and from the very warm and hospitable reception which we received from the Missionaries, Messrs. Lemue and Rolland, and their kind-hearted ladies, I guessed that our sufferings on this journey were drawing to a close.

During the four days that I remained with those worthy people, we received every attention to our comforts and wants that children could expect from their parents under such circumstances; Mr. Lemue kindly supplying us from his wardrobe with every thing that our distressed situation required; and when we left them, they would not suffer us to fatigue our horses to Kuruman, but sent their wagons with us to that place, which is two days journey from Mateto.

To the excellent and intelligent Missionary, the Rev. Mr. Moffat, of Kuruman, and his lady, I am also under the greatest obligations for a repetition of the hospitalities that I received at Mateto, and also for sending their wagon along with me to Campbell, a distance of four long days' journey.

The improvements at Kuruman since my last visit, are truly astonishing; there I found a printing-press in full activity, with a *native* compositor, taught by Mr. Moffat, who, you know, is an adept at every thing. The Mission-houses and gardens are extremely neat, comfortable, and unassuming; but the new church is a stupendous work for the means they have had of building it, and would do honor to any christian community of much longer standing than the Missionary town of Kuruman. What pleased me much, both here and at Moteto, was to see large fields of yellow wheat belonging to the natives, vieing with the crops of the Missionaries, having been well cultivated and irrigated.

This is one grand step towards civilization, and would my time permit, I could tell you many more. What a pity if Masilikatsie, or any such powerful chief, should one day compel them to leave that delightful station; for if things go on as they have now done for some time, by allowing the Griquas to plunder, not only Masilikatsie's but from every one whom they can steal a single cow, the consequence is not difficult to foresee.

When I reached Campbell, I wrote a few hurried lines to Dr. Smith, informing him of the danger of at present penetrating to the northward, as he must pass through Masilikatsie's territories before he can go the northward of the Maloppo, except he goes by the coast of Natal, as the Kalihafry Desert will prevent his approach to the westward.

My friends are of opinion that if a full statement of my unfortunate case was laid before the Committee of the "Association," and by them submitted to Government, that something might be done, which would be the means of obtaining restitution of my property, wantonly seized by the chief Masilikatsie; and insure to the "Expedition" a safe passage through his immense territories, and also to put a stop to that maranding disposition of the Griquas, which must ultimately end to the disadvantage of the colony.

With that view I have hastily drawn up the above details, as well as the want of my journal will allow, and trust that the Committee will do something in it, were it only to insure, as I have said before, a safe passage to the "Expedition."

It would be presumption in me to suggest what steps Government should take, but should they consider my misfortune, and the safety of the Expedition worthy of notice, I think a small embassy under a skillful officer, demanding restitution of my property, and protection to any other colonists who may reach that country, would have the desired effect.

The Griqua chief Cornelis Kok, of Campbell, said that if Government did so, he would give an escort of 100 men. Adam Kok would, no doubt, give as many; and Waterboer, as a matter of course, would assist the Government. Besides, assistance might also be obtained from the Bechuana chief Mahura, as the missionaries assured me.

My case I now leave in your hands; well knowing that no exertions will be spared on your part to render every assistance in your power.

From Cs. and Abram Kok, of Campbell, I got two horses as far as this side the Vaal River, and afterwards, with the aid of my own poor brutes, and some kind farmers on the road, I reached Graaff-Reinet in 5 days, where I found it confidently reported that I had been murdered. I had been absent from home 4 months, and had been travelling 3 weeks from the time that the accident happened.

I have not heard a word of the Expedition since we parted, which a good deal surprises me; but we are anxiously looking for information every day. When you write to the Doctor, impress on his mind the necessity of having a few more horses with the Expedition, as they are absolutely necessary, not only in case of a misfortune such as mine, but for the procuring a regular supply of game. I told the Doctor this before we parted, but from a praiseworthy motive of putting the Association to as little expence as possible, he had not, when I left him, purchased a single horse.

I trust you will overlook the manifold faults of this very lengthy epistle, should you ever reach the end of it, as I was so pushed for time that I had not time to read it over and correct it.

I shall probably write you next week on another subject, and in the mean time remain,

My dear Sir,
Your much obliged
and obedient Servant,
A. G. Bain.

To
J. C. Chase, Esq.
Secretary to the Association for exploring Central Africa.

ODDS AND ENDS: A MEDLEY.

(Communicated.)

Travellers see strange sights, hear strange things, and tell strange tales; our position in the very 'centre' of the civilized world, and our happy elevation beyond the inferior attainments of European, American, and Asiatic refinement, has often made our colonial polish and peculiarities the surprize and delight of travellers! but we did not think we were quite so well off as it appears we are. George's Hotel seems beyond question a century in advance of the Red Deer Inn, in Munich.

CONTINENTAL REFINEMENT.

The discomforts endured in travelling in many parts of the Continent, have frequently been made the subject of satirical remark: for an immense number of conveniences and luxuries which an Englishman is accustomed to at home, are not to be found in any of the inns, and, indeed, never were heard of by the natives. It is only since the peace of 1814 that the use of forks at meals has become common in France; and even yet, at some stages on the roads, the only fork to be found is perhaps one which the postilion carries in his pocket for general accommodation. If such useful instruments as table-forks be of so recent introduction into France, what must still be the case with respect to many less important domestic utensils! A laughable instance of the ignorance of the conveniences of the English was lately told us by a gentleman who had been some time in France. In the course of his journey, he had occasion to visit the house or chateau of a landed proprietor, one of the inferior noblesse, by whom he was kindly entertained for some days. During his stay, his host took occasion to mention that he had received a present of a packet of stoneware articles from his son, who was at the time on a visit to England. "But," said he, "there is one article which we can make nothing of; its use seems a mystery; it has appeared to us that it must be some way employed in making tea, but this we have tried, and it does not seem to answer the purpose." "Let me see it," answered the Englishman, "and I shall try to discover its uses." The mysterious little article of stoneware was accordingly produced, and turned out to be—what will our readers imagine?—a soap box! a thing with a lid, which is to be found on almost every wash-stand in Great Britain; and which from the pierced sole in the inside, to allow the liquid to drain from the soap, had given the notion to the family of the Frenchman, that it must have been a new species of teapot.

The author of a work entitled "Private Anecdotes of Foreign Courts," presents the fol-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

owing sketch of the progress of refinement in Germany, which in some places is much behind France in its civilized usages:—"In some of the most refined cities of Germany, civilization does not seem to have made the slightest progress during the last seven centuries. At Munich, for instance, the capital of Bavaria, at the principal hotel (the Red Deer) frequented by citizens of the first respectability, as well as by officers, both civil and military, of his majesty's household, they bring you, if you ask for a towel in the morning, a piece of linen fit only for a razor-rag, if you require water to wash yourself, a small *wine glassful* is presented on a saucer! An Italian gentleman, who had been accustomed in his own country to wash in a Christian-like manner, with a sufficiency of water, having desired the waiter at the said hotel to bring him some, and seeing the man approach with a *glass and saucer*, very innocently said, 'I don't want it *to drink*, but to wash with.' 'Well!' answered the fellow, pertly enough, 'and *there it is*!' Why! how the deuce, rejoined the other, 'is a man to wash himself in a spoonful of water?' 'Ah, bless you, sir,' exclaimed the waiter, taking the fluid into his mouth, and then spitting it on his hands and rubbing his face therewith, 'that's the way for any man to wash his face."

In the chief inns of Vienna—and, in short, throughout Austria generally—instead of a bolster at the head of the bed, you find a sack, either of oats, corn, or chopped hay. The bedstead itself is not unlike the boxes wherein the poor are conveyed, when dead, to be buried by the parish—just big enough to hold one small sized person, and certainly *not* sufficiently large to accommodate a moderately-sized man. The consequence is, that an individual of six feet or so, must knock out the footboard, and place the half of his legs upon a chair, in order to stretch himself *at his ease* which the savages of the country say is only necessary *after a man is dead.* The coverlid of this horror, which they absurdly term a bedstead, is only large and long enough to lay upon the surface of the machine, and the upper sheet is commonly sewed all round it; so that when inside this *bed*, the air obtrudes itself on all sides, unless you have a pair of sheets of your own to wrap round you. At Hanover, the coverlid is a linen bag filled with feathers, sufficient to smother those who have not been used to such a thing; and the sight of it reminds one of the cruel operation formerly practised upon poor wretches in the last stage of hydrophobia."—*Bombay Courier.*

When the schoolmaster has done his duty, and men know who are their best benefactors; when gold is distinguished from tinsel, and things are valued by their intrinsic worth, by their absolute utility, and not for their tawdry colouring or their euphonious appellation; some names which now fill the pages of history will dwindle into something like pigmy dimensions, and those which are now dispatched in sentences will have volumes devoted to the examination of the poor relics respecting them, which the bad taste, the false views, and the blind ignorance of their contemporaries have unintentionally preserved amid the chaff and rubbish which is now considered history! The Buonaparte brothers filled a fearful position in the world, and occupy a grand one in history. In all the Histories of Napoleon which we have seen, among which the best notice of him is Channing's, we have not found one more to our taste than in a letter of Paul Louis Courier, dated Plaisance, in May, 1804, giving a most pungent description of a military orderly-room scene on Napoleon's assumption of the Imperial Crown. It seems that a sort of military election was meditated, and that Commandants of Corps had instructions to assemble their officers, and put the matter to the vote. "We have just been employed in making an Emperor," says Courier, "voici l'histoire, this morning, d'Anthonard assembled us, and told us what he had in hand, but "bonnement, sans preambule, in peroraison. Un empereur, ou la republique, lequel est le plus de votre gout? comme ou dit roti ou bouilli, potage, ou soupe, que voulez vous?" this is untranslateable; the jest is infinite; it is the Imperial Majesty stript of its externals, indeed! The finish is in Courier's best style:—"A man like him, Buonaparte, Soldier—Chief of the army—the first Captain in the world! to wish that they should address him as 'His Majesty!' being Bonaparte, to wish to become "Sire!" *he aspires to descend;* but no, he fancies it is ascending, when degrading himself to the mere level of kings! he loves a title better than a name! Poor man, his ideas are lamentably below his fortune." "Cæsar understood these things better; but then he, I allow it, was another sort of man; he did not dizen himself with useless titles! but he made of his own mere name a title superior to that of king." The Useful Knowledge Society have published a great deal that is not read; we would recommend Courier's works to them; a free and serviceable translation of the "Simple Discours," and the "Petition a la Chambre des Deputes pour les villageois que l'on empeche de danser," published in a popular form, would do more good than their royal roads to science.

Had Napoleon called such men as his brother Lucien, and Paul Louis Courier to his Councils, instead of Talleyrand and Fouchè, the dignity of "The Buonaparte of France" might have outlived the Autocrats of the Holy Alliance gentry, or trampled them under foot: the following from Lucien is worthy of his spotless name, and should be cherished by every Englishman, and made the prayer of every Frenchman.

LUCIEN BONAPARTE'S RECENT TOAST.

At the dinner of the Literary Society, given at Freemason's Hall, on Saturday, June 7th, the Prince of Canino (Lucien Bonaparte), after returning thanks to the company present for the honour conferred on him in drinking his health, proposed the following toast, remarkable as emanating from the brother of Napoleon, but the constant and zealous advocate of republican principles, for the homage it renders to the excellence of British Institutions.

"To the political principles, sacred treasure of the British constitution! to the inviolability of the private dwelling, to the independence of the jury, to the freedom of the press, and to the imprescriptible right of association! May these precious liberties, gentlemen, continue to constitute your happiness! but may they also cease to be foreign to France, who for forty years has been fighting to obtain them. May the intellectual progress of political reform which agitates Europe be directed every where, as it is with you, by religious sentiments, and an inviolable respect for property! and may all nations become as free as the hospitable people of Old England!"—*Times.*

The *Herald* has a just remark on the following Bow-street scene; if the reporter thought that the foreigner's broken English was absurd enough to excite a laugh, he overlooked the absurdity of the scene itself, and the absurd part in which our titled aristocrats are sure to present themselves to the public, whenever they condescend to appear before them. Crockford's Club-house is notorious for worse irregularities than grouse out of season! The name of the once celebrated old Q. seems inherited by one who is as keen for game as old Q. himself; and as indifferent to public opinion as old Q. showed his wrinkled graces in Piccadilly! but the times are changed: the present Q. could not go the lengths of the old Q.; at all events he had better not try. Ude's '*noble friend*' would have shown more virtue and more sense had he attacked the Sparrowhawks that pluck the poor pigeons, and let the grouse alone!

GAME IN AND OUT OF SEASON.

Bow-street.—A few days since M. Ude, the celebrated French cook, appeared on a summons issued on the information of the Marquis of Queensberry, for having served game at Crockford's before the commencement of the season.

Sir Roger Gressley deposed that he was a member of Crockford's Club house, and one of the managing committee of that establishment. The defendant was cook there, and on the 19th of June witness dined at the club-house, and saw grouse served in the room, but did not partake of it.

M. Ude (with the genuine French shrug)—Vel, my dear Sare Rojer, vat is all dis to me? How de divil can I tell veder black game, or vite game, or rede game go up to the dining-room? Dere is plenty of game always go on in de house, but dat is noting to me."

Sir Roger Gressley—"I really don't know what in common justice M. Ude can have to do in the matter."

M. Ude—"Tank you my dare Sare Rojer; I knew you voud get me out of de scrape vot de

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

noble marquise has got me into dis time." (Great laughter.)

Charles, Marquis of Queensberry, sworn—"I was a member of the committee at Crockford's, but am not now; I was at Crockford's on the 19th, and dined, and grouse were served at the table.

M. Ude—"But my noble friend (great laughter), as I said to my friend Sare Roger, I know noting at all about vot vent into the room, I never sawed it at all."

Sir F. Roe—'Whether you know it or not, the act of Parliament makes you liable."

M. Ude—"Upon my honour dat is very hard. Ven I got de summons I remonstrated with my Lord Alvanley, and he say, 'Oh, never mind, Ude, say dey vere pigeons instead of grouse.

'Ah, my lord,' say I, I cannot do better dan call dem pigeons, because dat bird is so common in dis house." (Loud laughter.)

Sir F. Roe said he must convict the defendant, but he should certainly put the lowest penalty —namely 5*s*.

M. Ude—"Vell, I shall pay the money, but it is very hard (Laughter.) Ve have always game in our house, and de poor devil of a cook have to pay the penalty for it." (Great laughter,) [Ude's reproof was admirable. When members of the aristocracy come forward to prosecute cooks for serving grouse out of season, the public cannot help making a comparison between the two kinds of *game* touching which the cook and the lord commit themselves. Ude is fined for cooking grouse—what fine does the law annex to cooking pigeons?]

The Hells, we trust, are not likely to outlive another session of Parliament; our last news of a last chance for our friends, the Tories, seems to give the Hells also a chance of the short reprieve, of the short reign of the last Tory ministry.—We turn with disgust from this worthy representative of old Q. to the ideas of another Marquis:

THE MARQUIS OF WESTMINSTER'S WARNING TO THE PEERS AND THE MINISTRY.

The brief but emphatic speech of the Marquis of Westminster, on Wednesday, administered a seasonable warning and reproof to Ministers and the Peerage. With reference to the vote by proxy, the Marquis said—

"So convinced was he that this anomalous and absurd practice tended to make their Lordships unpopular in the country,—not only considering what had formerly occurred, but looking to what had happened even within a few days,—that he was more than ever confirmed in his opinion that this subject was not only worthy of, but demanded their serious attention; and, in truth, it appeared to him that it would be decorous if their Lordships would at once give up the privilege."

"Anomalous and absurd" is a mild term of reproach for this practice: it is mischievous—wicked: it commits the most sacred interests of legislation to something worse than the hazards of the gaming-table—it deprives of all moral sanction, of all claim to respect, the laws and resolves manufactured by such mechanism.

The Marquis proceeded to remind Ministers what was expected from them.

"He expected to see, both in the Ecclesiastical and Civil Departments, the most piercing, the most searching reform. He looked for the repeal of that disgraceful act, the Septennial Act. Unless questions of that nature were brought forward by Ministers with a determined design to act in a manner the most satisfactory to the inhabitants of this country—unless the Government were determined to act with vigour and sincerity—he feared that they would not long remain in those places where he was very glad to see them at present."

These are not sentiments of a "low Radical," or an unfledged Whigling, fresh from the perusal of Junius or Fox's ardent Opposition speeches. The Marquis of Westminster is a man of mature age, a politician of some forty years' standing, perhaps the wealthiest nobleman in England, and formerly among the most extensive of the Borough proprietors. He has experience, rank, wealth, and an unsullied character. Moreover, there is no Peer in the empire more sensible of the advantage of belonging to the "order," or less willing to bate one jot of the respect he conceives to be due to rank and station. But at the same time, his Lordship is a shrewd observer of what is passing around him. He sees that the time has arrived when the Peers must descend from their stilts, and give up some privileges to preserve the remainder. He has too much at stake to risk a collision between the people and the privileged orders: and is aware that no body of men retain power long after they have become odious.

It appears from the last paragraph cited, that Lord Westminster is of opinion that Reform has been as yet carried only a little way, and "piercing and searching reforms" are still necessary in the Ecclesiastical and Civil departments. Ministers may learn from this that the dissatisfied are not confined, as Lord Brougham would insinuate in the *Edinburgh Review*, to a few newspaper writers, inflamed with disappointment and personal spite.

What will become of the "Moderate" party, the disciples of the "Do-as little-as-possible-school," when such men as Lord Westminster urge upon the Government the necessity of repealing the "disgraceful" Septennial Act, and undertaking "piercing and searching reforms."—*Times*.

The Marquis of Westminster is said to enjoy an unembarrassed income of one thousand per diem! say that it is absolutely *only* half that sum, he has a stake in the country sufficient to fix his attention to the signs of the times; and enable him to see bugbears in their proper shape, and abuses in their proper bearing. Such a man as Lord Westminster has too much real business on hand, to waste a morning in badgering Ude, the Crockford Club cook, at Bow-street.

The *Examiner* is clever on the *Edinburgh Review!* how are the mighty fallen! we can remember the fearful days of the Quarterly and Edinburgh despotisms, when the whole race of scribblers, of every denomination, trembled and grew pale at the mere mention of the blue and yellow Edinburgh, or the cow-dung-coloured special pleadings of Mister Murray; the Edinburgh can now be slashed *ad libitum*, by any one who will take the trouble; and as for the brown back! who reads it? no one that we know of: Gibson, Lockhart, and Wilson were meant for Radicals; had they been men of the age, and not yoked themselves to the heavy drag of the age that is past, they might have led, and shone among the first, instead of being the sorrow of good men, and the laughing-stock of the majority. They have a racy originality, which, could they have given it play, would have made them great names; but who can employ native originality in furbishing up the obsolete and worn-out armoury of Despotism, and its abuses?

The marks of the labour of love will be recognized in an article in the *Edinburgh Review*, headed "Tory Proceedings and State of Parties." There we see, that so long as a man is minister he is all excellent, of the first talents and the purest purposes; but as soon as he goes out, it is found that there is no cause for regret, that a better man is appointed, and the country delighted with the change. The secession of the four members of the Grey Cabinet is described in p. 509 as "unfortunate," but in p. 515 we learn that "The vacant places in the "Cabinet were soon filled—and in a way to "give unusual satisfaction, with the exception "of Lord Auckland. But this temporary dis-"content arose from Lord Auckland not being "sufficiently known to the country. A mis-"taken rumour gained ground, that he was "a half-and-half reformer, *and resembled, in "some of his opinions, those ministers who had "quitted office.*" So that Lord Auckland suffered in opinion, because he was suspected of a resemblance to some of those Ministers whose resignation had, in a preceding "page, been lamented as unfortunate." This is a handsome compliment to the dear departed.

The retirement of Mr. Stanley is described as a lamentable loss to the Liberal Government, and he is said (p. 511) to unite the most happy talent for debate to the powers of a man of business in a rare degree of perfection. But we need not grieve, and wring our hands, and beat our breasts, and tear our hair, at the loss of such a paragon, for we have the consolation of finding, soon afterwards (p. 518) that Mr. Spring Rice will do quite as well—nay, that he is the equal of the late Colonial Secretary in talents and expertness. One of the Irish Novelists tells a story of a sportsman who, meeting a peasant with a fine woodcock (the first of the season) in his hand, begged to look at it, and stroking down the plumage of the bird as in admiration of its beauty, engaged the fellow in conversation, and slily slipped the woodcock into his pouch, and substituted a jacksnipe, which he continued stroking as he had stroked the woodcock. The peasant, when his story was out, observing with wonder and consternation the diminished size of the bird under the caressing hand of the sportsman, called out, "Arrah! be aisy, Master dear, or you'll be stroking him down into a wren." The *Edinburgh Review* will surely stroke its phœnix into a wren by its manner of handling substitutes. In the mid-process, however, Mr. Rice is about as like Mr. Stanley as a jacksnipe is to a woodcock. Upon the retirement of Lord Grey there is the same consolation. Earl Grey is described as all that is great; but Melbourne, who succeeds, has, in wondrous perfections, all the qualities for a statesman and a minister. So there is always balm in Gilead.

His natural abilities are of the first order, and his accomplishments are on the same scale —an impressive speaker, formed on the best and most classical models; a man of large and comprehensive views, matured by extensive reading; a functionary, whose habits of business, and capacity for despatching it, have no superior; in private life, one of the most amiable and universally beloved characters that ever appeared in society.

These changes are all tending to good: the Hydra has fifty heads, and unless the brand is used as well as the sword, the lopping of one gives us only a multiplication of monsters. The

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

advocates of religious liberty are our best friends, and the grand cause of political rights is fought under the banner of religious toleration; they are making head, and winning their way, steadily though slowly; every repulse shows them like the waves of the rising tide, gaining inch by inch, though every advancing wave seems beaten back with loss into the discomfited deep, yet still there is a perceptible encroachment upon the beach. The cause for which they and the public are contesting is not meant for such men as the Melbourne administration is, or was made of. The men for the age will appear when we have an elective House of Peers, amenable to public opinion; composed of men who must have some taste for business, some capabilities for business, and character to front electors, or they will never go up to an election; and when the Peers are divested of the stupid right of voting by proxy, a barbarism fit only for the parliaments of Owyhee and New Zealand! and which cannot be endured much longer. When this is gained, and it seems that the period of its accomplishment is not far distant, we shall have an upper house qualified to co-operate with the reformed House of Commons, and formed to enjoy the confidence of the people.

The bill for admitting Dissenters to the privileges of the English Universities, which passed the House of Commons on Monday, by a majority of 164 to 75, was thrown out last night in the house of Peers. The supporters of the measure, among whom were seven Cabinet Ministers, muster only 38 present and 17 proxy votes, against 85 present and 102 proxies. Thus the majority was 102. In the majority were the Bishops of Derry and Chichester—only two out of the thirty Right Reverend occupants of the Episcopal Bench. The Duke of Sussex, true to his principles, also supported the measure by his vote.

This result is not of much importance as regards the Dissenters; for the bill, if carried, would only have given them part of the privi leges they may fairly claim. They must not relax in their exertions, and their ultimate and perhaps speedy success is certain.

But as regards the Peers themselves, the consequences of last night's vote may be far more serious. Their decision affords an additional proof of their hostility to the general wishes of the Country, as testified by the votes of its Representatives, and their determination to resist the most moderate measures of justice to several millions of their fellow subjects. Were the Peers elected by the Nation, it will not be denied that the result would have been very different; it would have harmonized with that to which the House of Commons has arrived. This state of things must precipitate the remodelling of the House of Peers. In these days men proceed rapidly from thoughts and words to deeds; and it is not impossible that the question of the Hereditary Peerage may be seriously discussed in the next session of Parliament.—*Times.*

In the meanwhile, let us not be told that the wealth and property of the Peerage is such a mighty stake in the country; there are 426 members of the House of Lords, including 36 Scottish and 69 Irish Peers who hold British Peerages, and 26 English and 4 Irish Bishops, this leaves 291 Peers of England;—let us not compare the wealth and importance of these 291 English noblemen against the whole commercial interest of England; but let us refer to any one particular branch of English industry:

COTTON MANUFACTURE.

The Reports of the Factory Commissioners, just published, by order of the House of Commons, contain the following summary of persons employed in the Cotton Mills in England, in preparing, spinning, and weaving, including only such as work in mills moved by power. Number of persons above 18 years of age—males 60,393—females 56,774. Under 18 years of age—males 42,745—females 40,512. Persons whose age and sex are not stated in the returns, 3376 Total number, 212,800. Earnings for four weeks, ending May 4th, 1833, 444,484*l.* 1*s.* 1*d.* Thus it will be seen that a total of 212,800 persons earn annually the enormous sum of 5,777,434*l.*

Are we for one moment to suppose that the whole of the Peers of the three kingdoms—the 291 English, 85 Scotch, and 226 Irish, employ among them 212,300 persons, or enable them to earn anything like £5,777,434 per annum? We have no hesitation in declaring our belief that the Cotton Lords do ten times as much for the country as the titled aristocracy. The quantity of cotton imported in 1831, was no less than 288,708,453 pounds, and the declared value of the woven goods exported was £17,259,055, and the official value £39,577,724; let us reflect on the thousands that must be employed in the import and export, and other processes connected with the circulation of these millions in addition to the numbers shown to be dependant on the Cotton Lords, and let us ask ourselves seriously, what is their place in the productive and *benefacturing* class of the community, and what their share in the administration of the commonwealth, to whose resources they contribute so largely. We do not class the Peers as landlords; many of their number are almost paupers; without an acre! and *very many* cannot boast the possession of a single manor. Mr. Coke, of Norfolk, has more land than is possessed by perhaps fifty Peers, counting only the least endowed in landed property; thence their claim to arrest the progress of political reform, hinges purely on hereditary right of bygone days, of which it has been well said "that those who applaud the past, show that they only know the present!" they are blood-lords! admirably well qualified, like the Marquis of Queensberry or Lord Alvanley, to squabble with, or quibble for, the cook of a gaming-house at Bow-street; but woefully deficient in all that should qualify a body of senators in this age to dictate a line of policy to a free people. The great name of the Duke of Wellington is employed in propping up this party, but Schedule A. was the death-blow to the good old faction! and there is no chance, thank heaven, of their re establishment.

A correct list of such cases as the following should be printed in a popular form for the use of those who want spurring to activity in the cause of government for the good of the many; there are hundreds such, but they are not sufficiently known, nor sufficiently insisted on.

The Honourable Richard Fitzgibbon has enjoyed, since his infancy, the office of Usher of the Irish Court of Chancery; the emoluments of which arise principally from a most oppressive and spoliating source,—namely, a poundage of 2½ per cent on the money of the suitors paid out of Court. The business of the office is done by a clerk, at a salary of 120*l.* a year; and Mr. Fitzgibbon who resides in London, except during a few months in summer, which he generally passes at Mountshannon, near Limerick; received last year the enormous sum of 7,094*l.* as his share of the spoil!—*Morning Herald.*

This worthy placeman, and no doubt very energetic Conservative, or any thing, is about 45 years of age: suppose him to have held this appointment, averaging £7,000 per annum for about 43 years, here is a single Conservative, who has bagged the fearful sum of three hundred thousand of the people's money! from a sinecure office, the petty duties of which will have been discharged for him from his cradle, and will be to his grave, by a clerk on £120 per annum. And are these things never to end? Yes, the ministry which succeeds the Wellington and Peel! will make root and branch work of such outrageous abuses.

The following list of the last twenty British Premiers is from the *Globe;* in the whole list there is only one of shorter duration than the ephemeral dynasty of Melbourn; the list is worth printing for reference; it is, however, a melancholy reflection to consider how little "the greatest happiness of the greatest number" has ever entered the head of any one of the hundreds of slaves of these 20 Premiers, who have in succession rolled on the National Debt to its present unmanageable

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

amount, and crushed the country under its iron wheels of taxation.

THE LAST TWENTY BRITISH PREMIERS.

From the following table it appears, that the average duration of each Ministry for the last 80 years, 3 months, and 8 days, has been 4 years and 5 days. It is computed up to the 14th of July, 1834 (Lord Melbourne's then supposed appointment):—

Name.	Appointed.	Interval. Y.	M.	D.
Duke of Newcastle, .	April, 6, 1754	8	1	23
Earl of Bute, . . .	May, 29, 1762	0	10	18
George Grenville, (father to Lord Grenville)	April, 16, 1763	2	2	26
Marquis of Buckingham, ...	July, 12, 1765	1	0	21
Duke of Grafton, .	Aug. 2, 1766	3	5	26
Lord North (Earl of Guilford,) . . .	Jan. 28, 1770	12	2	2
Marquis of Rockingham, ...	March, 30, 1782	0	3	13
Earl Shelburn, . .	July, 3, 1782	0	8	23
Duke of Portland, .	April, 5, 1783	0	8	22
William Pitt, . .	Dec. 27, 1783	17	2	18
H. Addington, (Lord Sidmouth) . . .	March, 17, 1801	3	1	25
William Pitt, . .	May, 12, 1804	1	7	27
Lord Grenville, . .	Jan. 8, 1806	1	2	5
Duke of Portland, .	March, 18, 1807	3	3	10
Spencer Perceval, .	June, 23, 1810	1	11	16
Earl of Liverpool, .	June, 8, 1812	14	10	3
George Canning, .	April, 11, 1827	0	3	30
Viscount Goderich, (Earl of Ripon,) .	Aug. 10, 1827	0	11	1
Duke of Wellington,	July, 11, 1828	2	4	11
Earl Grey, . . .	Nov. 22, 1830	3	7	22
		80	3	8

The Melbourn ministry has been the scorn of opponents, and the pity of friends, from the first; the next ousting of the Tories will be to better purpose, and will not be long ere it is accomplished.

THE MELBOURNE MINISTRY.

In losing Lord Grey the Cabinet has lost the greater part of such weight of personal reputation as it possessed; it will now have little strength, save that which it may derive from its measures. We fear it has lost most of its real strength of character also: it will now be a mere straw on the surface of the waters; it will drift forward with the current, or backward with the eddy; it will be more afraid of the people, but also more afraid of the Peers. In Lord Grey, what seemed fear of the Peers was, we believe sincerely fear for the Peers; he could not bear that their obstinacy should ruin them; he threw himself between them and the people, and spared them the shock of a conflict with public opinion by bearing the brunt of it himself. The present Ministers will do nothing of this sort. Truckle to the Lord they may, if the people will let them; and (except Lord Lansdowne and perhaps one other at most) we doubt there is a man among them who, if he thought circumstances required it, would not turn the whole order out of doors without a pang.—The people, therefore, have their cause in their own hands. Let them make it less trouble to quarrel with the Lords than with them, and their object, whatever it may be, will quite surely be gained.—*Fox's Monthly Repository.*

Cælebs in search of a Wife.—It appears that thirty editions of Hannah More's *Cælebs* (1'000 each) have been published in America!

The Late Caffre Trade.

ORIGIN, PROGRESS, AND EFFECT OF THE TRADING INTERCOURSE WITH THE NATIVE TRIBES SURROUNDING THE COLONY OF THE CAPE OF GOOD HOPE.

By JOHN CENTLIVRES CHASE.

AMONG the injuries sustained by the lately flourishing, beautiful, and now totally devastated settlement of Albany, and, through it, by the mercantile, religious, and other communities of Great Britain, from an unexpected, treacherous, and most unprovoked invasion of the colonial frontier by the Native Tribes of our border, I believe that the loss of the prosperous commerce carried on with the Caffres and neighbouring clans will, when the final account of destruction, murder, and pillage actually inflicted shall have been estimated by the assessors, form no very inconsiderable item in their report of suffering and ruin—immediate and prospective—both to the savage assailants and their civilized victims.

The quite modern establishment and almost unprecedented progress of this trade—its nearly miraculous effects on the previously languishing settlement—its value as a gradually, but increasing outlet for British manufactures to an extent perfectly unimaginable, considering the vast field beyond this possession—nothing less than a rich and immense continent, rife with human existence—its importance as the most ready civilizer, and herald of missionary labors. And its last, but not least value, its capabilitiy of being made a real and secure—because *moral*—boundary between the barbarian and colonist, are points on which, I trust, I may be excused to venture an opinion, having had the advantages of fifteen years' observation and experience, and to exhibit, by shewing the nature and extent of our late commercial relations, how much we really have lost, and thereby to call public attention,—to direct profounder intellects and wiser heads than my own, to consider the best means for re-establishing a beneficial and humanizing traffic, destined, I hope, at no very distant period, to bring Caffre and Colonist together in the spirit of peace, acknowledging that they are fellow men and brethren, and, in the course of time, to the common profession of the same language and the same faith, and mutually to share the advantages of friendly and intimate intercourse.

In pursuance of this object I shall, therefore, intrude upon public notice an article written by myself as far back as the year 1829, and published in Mr. Greig's Directory for 1830, on the Trade in question, reserving to myself the right of making such remarks and amendments as an experience of five subsequent years shall have afforded, and adding the results of our intercourse with the natives up to the latest time previous to their present inroad.

"A system of policy, it might be supposed in imitation of that of the celestial empire, (originating with the Batavian government, and adopted, and as energetically enforced by the British,) for regulating the intercourse with the Caffer tribes, was, for a long series of years, rigidly adhered to, and almost mercilessly indulged in by both powers, who, without the means of erecting the effectual barrier of a stone wall, sought to build a paper rampart of exclusion around the Eastern Frontier of the Cape Colony, by interdicting "*all intercourse between the Colonists and the Caffer Tribes, as having a direct tendency to produce disputes and animosities, and to give the latter opportunities of acquiring a knowledge of the country, and of forming dangerous coalitions with the Hottentots.*" (a)

"By the various enactments to which the above extravagant alarms gave birth, the parties, destined eventually to come into collision, whatever might be the effect of temporary expedients, were for nearly a quarter of a century kept in as profound ignorance of each other's powers and resources, as of their relative means of aggression or defence. An invidious line of distinction was drawn between the Christian and Savage, and the natural consequence was, that they envied, they hated, and they dreaded each other. Throughout the whole period of their operation, the objects of the injunction were never for one instant realized; for "disputes" were multiplied, and "animosities" inflamed, while the open nature of the boundary itself, and the wildness of the entire country, permitted Caffers to enter and to penetrate into the very heart of the Colony, and the self-same facility afforded full opportunity to Hottentots of frequent (and "dangerous," as is supposed,) association with the Caffers: in short, the imposition of restraint was unjust, injudicious, and *impracticable*.

"The information, however, propagated from time to time by a few Missionaries and intelligent travellers, of the habits and real disposition of our savage neighbours; the important measure of the introduction of a fresh class of Colonists upon the immediate border; with an impression, at length begun to be entertained by the Colonial Government of the utter impossibility of maintaining this rigorous system, induced it, in 1822, to make some relaxations, and shortly afterwards to establish an unrestricted intercourse through the 'CAFFER FAIR,' of whose origin, progress, and effects, I presume to enter into the following detail:—

"At the period of the arrival of the British Settlers upon the Eastern Frontier, in 1820, from whence I date the decay of the system of exclusion, all intercourse was most strictly prohibited with the Caffers, who had, the preceding year, been exposed to one of the most devastating invasions from the Colony within its annals, in consequence of some atrocious depredations on their part, and a splendid, yet unsuccessful attack made by them on the head-quarters of the troops on the Frontier, (the new village of GRAHAM'S TOWN,) and the punishment of DEATH was prescribed, as regarded savages and Colonists, for violating the new line of demarcation between the two nations, which at the close of the war of 1819, was removed from the Great Fish-river to the Keisikamma

"The ground included between the old and new boundaries, then termed in the Colonial Office, indifferently, "*Ceded*," or "*Neutral*," and comprising about 2,000 square miles, or above a million and a quarter of acres, capable of grazing

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

200,000 head of cattle, was surrendered by GAIKA, the Chief, upon whom we had conferred an undeserved supremacy over less guilty and more powerful Captains; and he was given to understand that every Caffer would be shot *(b)* who crossed the new frontier, (a threat not vainly made,) and that it was our intention to guard our new acquisition by a Fort, which was soon erected by Lieut.-Col. Willshire, upon a scale more fitted to resist disciplined forces than the naked and inefficiently armed Kosa; at the same time Gaika was assured that the neutrality of this territory would be rigorously maintained, at all events, in as far as the Dutch Colonists were concerned, and the subsequent, and almost immediate, interposition of the British emigrants in one direction, on the westward banks of the Great Fish-river, and between the long conflicting and exasperated parties, gave some promise of punctuality to the recent arrangement. *(c)*

"The enterprising spirit of British subjects, as might easily have been foreseen, soon became impatient under the effects of these prohibitory fetters upon its energies, and quickly broke through restraints as ineffectually as impolitically attempted to be imposed, for the purpose of preventing an advantageous commerce between parties *new* to each other, consequently bearing no animosity, the English unprejudiced against, and indeed by their very education friendly disposed towards their *black* brethren, and both possessing property, naturally coveted: an illicit and extensive (because profitable) trade was therefore early established for cattle and ivory, in exchange for beads and iron, when the Acting Governor, General Sir Rufane S. Donkin, (*gratefully remembered and regretted as the best disposed friend to his emigrant countrymen*) perceiving that a servile adherence to the views of his predecessors was unsound, dangerous and inutile, and that by following them he would be encouraging the existence of a crime which, although it had a *legal*, had no *moral* existence, wisely issued his proclamation for the establishment of a Caffer Fair at Fort Willshire, on the Keisikamma, dated 20th July, 1821, of the credit of which his enemies have vainly attempted to rob him.

"The surrender of his office to Lord Charles Somerset, by the Acting Governor, was the signal of the complete reversal of his acts and views; and in the melancholy wreck of many wisely designed and well conducted improvements, *his* Caffer Fair, which had not proceeded beyond receiving the sanction of a public law, shared the effects of the common ruin.

"The consequence of Sir Rufane Donkin's proclamation remaining in abeyance (for it was never repealed) and the hostile spirit of the Government, was, therefore, a closer enforcement of the restrictive system, and the whole vengeance of government was threatened to be directed against the violators of the the old law, now increased by time, and a more intimate acquaintance with the Caffers themselves, their country and their produce.

"The impossibility, however, of restraining the illicit intercourse, along with the desire of participating in its fruits (evidently productive) induced the Colonial Government, early in 1822, to commence a singular kind of monopoly of this traffic, and Regulations were formed for a trade between "*the Caffer people and the Officers of the Colonial Government*," for RED CLAY, an article in some demand by the former, for the purpose of personal decoration, and which was abundant within the old boundary. The fair was ordered to be held every full moon, at the Clay Pits, on the *western* side of the Great Fish River, and on the 24th May, 1822, the first attempt was made under the immediate superintendance of the Secretary of the district of Albany. On this occasion a scene of much ludicrous and absurd haggling took place between the Kaffer Chief ENNO, and the Colonial Agent, rather derogatory to the dignity of a civilized government; when, about nightfall, after much discussion, twenty old women were permitted to carry away as much clay as they conveniently could, in exchange for *six small skins*. The ensuing day, after repeated and rather angry palavers with the government trader, the savages were allowed to dig and take off in quantity, about 3 wagon loads of this valuable article, for 40 small skins, two elephant's teeth, two buffalo's horns, and *half* a Buffalo's hide, value in all about £4 10. ENNO expressing himself that this sale of the white man's land was rather at an extravagant rate, and stating that he would rather take beads, buttons, and iron, instead *(d)*. This fair, which kept diminishing in its supplies of *produce*, and existing for three or four months only, was not only objectionable for the spirit of monopoly, in which it was instituted, nor for being a half measure of conciliation and intercourse, but by being held so far within the Colonial Boundary, and in the extensive jungles of the Great Fish-river, it gave a fatal opportunity to the ill-disposed Caffers to congregate and secrete themselves, the result of which was, that several murders were committed, and a greater number of cattle stolen than at any other period; so extensive were these depredations, that about the middle of the year the troops upon the Frontier were *officially* declared to be insufficient to repress these disorders, and it was considered necessary to establish a military enrolment of the inhabitants, under the name of '*The Albany Levy*,' a measure which, by the inconvenience it occasioned to the British Settlers, to whom it was *exclusively* confined—the arbitrary, indelicate, and illegal manner in which it was attempted to be enforced, and the expense it occasioned to the government of the country, increased the amount of the losses of the Colony, and added to the vexations of a newly-settled population, already severely visited by the dispensations of Providence, floods, rust, and droughts.

"The 'Government' Fair soon ceased to be visited by Caffers, because they saw the Agent *alone*, with a little *Red Bole* in his hand, abundant, and supplied by nature, requiring many Antelope skins in return, the acquirement of which demanded labor, skill, and agility; or Elephant's teeth and Buffalo's hides and horns, requiring labor, agility, skill, and courage combined. As these people were, therefore, not permitted to satisfy their wants by fair exchange, they also increased the number of plunderers, and the country was plunged into hostilities—Commandoes were numerous—patroles incessant, and blood on both sides was frequently shed, during which time the *illicit* traders pursued their traffic profitably and without danger!

"It was now laid to the charge of the individuals thus employed, that *their* intercourse led to the introduction of the Caffers and their consequent excesses; but the true cause for both must be sought for in the legal permission of entrée of large bodies into the Colony given by the institution of the '*Clay Pits Fair*,' and to the excitement it induced, and so suddenly disappointed, for the possession of European articles.

"To ripen public odium against these determined yet certainly culpable adventurers, portions of two Proclamations of Governors Plettenberg and Macartney, dated severally 5th April, 1774, and 14th July, 1798, declaring the eastern boundary of the Colony fixed at the Great Fish river, and enacting the punishment of death to such as should cross that stream, were re-published on the 28th Nov. 1823, with the expressed determination of the Governor to carry their draconic penalties into execution, and this singular document was allowed to escape into the Colonial Gazette, when a white population of above 2,000 persons, thus expatriated, were actually settled by authority of the Government beyond that River, in the subdrostdy of Cradock, holding grants, many signed by the same Governor, recognized by an abundance of public acts, paying public imposts, and placed under the superintendence of a Government Agent!

"Upon these newly-revived and vexatious authorities actions were commenced against what were termed the Illicit Traders, but the failure of the public prosecutor to substantiate his charge of illegality in a case (*e*) which had been selected from the clearness of the facts of trafficking, put an end to any further attempts to restrain the intercourse by legal proceedings—the accused parties pleading the non-repealment of a Proclamation of Sir R. S. Donkin's, fixing the Keisikamma-river, as the Colonial boundary, in bar to the prosecution; and very shortly afterwards the hitherto obnoxious measure of a Caffer Fair was ordered to be established by Proclamation bearing date the 23d July, 1824, under the authority of Lord C. Somerset himself. *(f)*

"The promulgation of the notice of this traffic having received the sanction of Goverment was received with satisfaction and astonishing avidity by the British Immigrants, who struggling under the pressure of a continued series of failures in their crops, rejoiced at the promise of this new field of speculation, and a large number immediately embarked in the trade, which was opened on the 18th of August following the Proclamation. *(g)*

"Ivory and Hides, for which were exchanged Beads, Buttons, and Brass Wire, were the principal articles of barter, and within the short period of 22 months, 112,943 lbs. of the first mentioned articles, and 46,575 hides, the value of which cannot be estimated at less than £27,623, passed through the metropolis of the new Settlement, and contributed to convert a slowly progressing and puny village at once, and as by miracle, into the *second* town of the colony, for Buildings, Population, and Commerce.

"The obvious success of the earliest adventurers in the Fair soon attracted additional speculators into its busy sphere, overstocking the market with traders, and by producing an injudicious and angry competition, a too minute division of its profits,—besides this the supply of ivory the most valuable and a money article of produce, from the rapid consumption of the native hoards of many years, suddenly fell off to one fourth of its usual quantity, while at the same time the taste of the Caffers, satiated with the old and cheap description of bead, became extraordinarily capricious, and required for its indulgence a more expensive kind of this sort of ornament, the shape, color, and size of which varied with almost every succeeding Fair. The consequence of these combined circumstances was the failure of most of the traders in 1826, who, without experience, laid in large stores of any particular kind of bead which appeared particularly to catch the fancy of the admiring savage, and they thus contracted ruinous debts to the merchants for an article which the Caffer speedily ceased to desire, and valueless to any other person. The number of traffickers frequenting the Fair therefore fell off almost immediately; those individuals among them who were able to weather the storm, thus taught prudence, however dearly, soon made the trade advantageous, and although the quantity of ivory is considerably diminished, the supply of other produce has continued large and steady, and the Caffer Fair may now be relied upon as one of the most important and certain resources of the Eastern Province. The value of the articles imported into the Colony through this channel since the 18th of August, 1824, to ultimo June, 1829, may fairly be averaged at no less than £50,000.

"In calculating the advantages gained in a pecuniary way to the Settlement, to the Colony at large, and even to the Mother Country by the creation of a new market for her manufactures, small as it however at present may be, the moral effects of the new and liberal system of intercourse (already experienced) ought certainly not to be overlooked, and among these (as a resident) I would from my own knowledge enumerate the decreased amount of depredations upon our cattle, and the entire cessation of murder by the Caffers within the boundary: these are established facts, which every inhabitant of Albany shows in the impunity with which he now exposes himself, unarmed, in the most retired jungles of the country, and in the ease of mind with which he now retires at night

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

from his formerly fearfully watched cattle fold. Beyond these however it may be expected that intercourse—and a trading one is the best of all suited to the purpose—may produce cordiality, cordiality confidence in the obvious purity of our motives, imitation of our manners and belief, and that civilization may be the gradual but certain harvest of our exertions.

"About the end of 1826, an extended right of trading was conceded by the Colonial Government, and private dealers were allowed to enter Caffraria and barter with the natives, restricted however from commencing their speculations until at such a distance from the Fair at Fort Willshire as to be beyond its influence. The route selected for the new adventurers was through the Tambookie country, along the sources of the Kei-river, and several individuals immediately engaged in this arduous undertaking. At the end of 1828 they had penetrated as far as PORT NATAL, a distance of above 350 miles, connecting that fine and interesting country with the colony; and from the number of persons that have since embarked in the traffic the road through Cafferland may be considered nearly as well known as that to Cape Town. The articles sold and received in exchange are the same as those at the Caffer Fair, and the returns from the date of the establishment of the *interior prviate trade* to the 30th of June, 1829 may be valued at £3,500 to £4,000.

"From the result of the Experiments made on the Caffer Boundary, the circumvallation of the Colony, which an unfortunate and erroneous policy had drawn around it, was destined to receive another and irreparable breach upon its northern extent, and within six months from the date of the Proclamation of Lord Charles Somerset, giving an authority for the Caffer Fair, another was issued, permitting the long sealed and interesting countries beyond the GARIEP or ORANGE RIVER, to be traversed by mercantile adventurers. As the history of their attempts at trade and exploration is not intended to form part of the present notice, it will be sufficient to observe, that the relaxation of the old system has called into activity about 50 adventurers into these new and distant regions; that the amount of produce they have brought into the Colony has exceeded £11,000; that they have reached the *tropical* regions, and to within 100 miles of the Portuguese Settlements on the Eastern Coast, *and established the undoubted fact, that under the ostensible appearance of Traders alone can Travellers of any description command success!* From the ease with which all the adventurers in this direction have been enabled to prosecute their journies, there seems little doubt but that A frican Discovery might be prosecuted with safety and success in a *healthy climate*, and through countries equally interesting with those of the too long celebrated but deadly Niger."

Such is the history of this interesting traffic to the end of July, 1829, and such were the then impressions of the present writer. *Since that period, the trade and its influence has extended into every corner of Caffraria.* The restriction as to the route through the Tambookie country having been abrogated, the traders penetrated along the coast in every direction, and settled themselves down with the consent of the Chiefs on the Caffer soil, building houses and opening stores, and such was the supply kept up in these Nuclei of Civilization, that travellers in the Caffer country declare that they found every want supplied with almost equal ease as if they had been within the Colonial boundary. From the Omzimvoboo, or St John's River, to the Colony, they could rest in a European establishment almost every night. It is supposed that more than one hundred of these trading stations were established, where European Manufactures were taken in barter for Hides, Horns, and Ivory.

Notwithstanding several misunderstandings which have taken place between the Caffers and Traders, as must be expected when the Colonist is *unrestrained*, and at the same time beyond the limits of his country's *protection*, the Trade has gradually increased, so much so, that its returns are stated for the year 1832, as equal in value to £34,000, while those for the following year are estimated as above £40,000 sterling.

Corroborative of the view I have taken of the importance and value of the Traffic, I shall close this article by quoting the words of the able and well-informed Editor of the *Graham's Town Journal*, which I extract from his annual bird's-eye view of the state of the Albany District, under date the 2d January, 1834, where he says—

"*With regard to our Traders, similar good fortune has, on the aggregate, attended them. The Caffer Trade has now settled into a steady matter of calculation. Its precarious and fluctuating character is rapidly disappearing, and instead of trading with beads, and other worthless baubles of that description, the demand is now for useful manufactured articles for clothing and culinary purposes. The fears entertained at one time, that the flood of wealth pouring into the colony from the interior, would speedily subside, are now forgotten, and it is clearly seen that the Frontier Trade is not only likely to continue steady, but also that by a* LIBERAL *and* WISE *policy towards the Caffers, and by the due encouragement and* PROTECTION *of the Traders, the traffic may be extended to a distance, the limit of which it is impossible to calculate.*"

Connected with this interesting and important subject, one great problem still remains to be reduced, and on its proper and judicious solution depends the future peace of this country, and the mode in which those similarly situated with ourselves shall be treated,—those, I mean, who are, like ourselves, surrounded by native uncivilized and ferocious tribes. The question, as it refers to late events, may be stated in the simplest form—*What shall we now do* WITH, *and what shall we do* FOR, *the Caffres?* which I leave for consideration.

May the spirit of wisdom descend upon our Government and our Councillors! and may they arrange the subject of difference in the safest and most honorable manner, giving liberal encouragement to those who merit it, and dealing out the full terrors of national indignation, tempered with mercy, to those who have either inflicted, or *caused* the infliction of past miseries.

Cape Town, 17th Feb. 1835.

NOTES.

(*a*) Vide Report of the Commissioners of Inquiry.

Proclamations prohibiting intercourse, 1729, 1739, 1770, 1774, 1794, 1798, 1803, 1823.

1798.—Terms of Treaty with Gaika:—"That none of his subjects should have any intercourse with the Colonists."

1803.—Governor Janssen's Treaty:—"The Governor recommended the Caffers to abstain from all traffic with the Colonists, and promised them, if they would do so, to send them from Cape Town whatever they should want of European manufactures at very moderate prices; *but they adhered to the proposition that it was better to trade with the Colonists, although it is proved, and is easily to be conceived, that they were almost always over-reached by them.—Luchtenstein, i.* 315.

(*b*) Gaika recommended the very treatment himself. "*Shoot them*, (said he to Sir Rufane Donkin,) for I cannot restrain them, and if you send them prisoners to me, I *dare* not punish them."

(*c*) CEDED TERRITORY.—Few subjects, and none more important as to our relations with the Caffer nation, have been so erroneously represented, as that of the question of the right of the Colony over the *Neutral* or *Ceded* Territory. The Local Government, and with them the best-informed Colonists, insisting upon the *justice* and *expediency* of their hold on this extensive and fertile portion of Southern Africa, while a Faction, nurtured within our own bosoms, taking advantage of credulous and hasty visitants to the Colony, and assisted by an abused, but philanthropic and powerful body in Britain, deny the colonial claim, denouncing those who support it as tyrants and oppressors of the colored race. The points for examination and discussion may be narrowed within very simple limits, and are, I submit, as follows:—

I. That the Neutral Territory, as well as a large portion of country beyond it to the eastward, is known, and admitted on all hands, to have belonged originally to the Hottentots.

II. That the Caffers having expelled the Hottentots, its aboriginal possessors, from this country, had the rights of conquest, and none other.

III. That the Caffer invasion of the Colony in the year 1819, gave the Colony the international right of reprisal for losses sustained, and of punishment for aggression; and that it acted *mildly*, and it is now to be regretted *unwisely*, in restricting its new boundary by the Keisikamma River, when it ought, for security sake, and for the sake of humanity to both parties, have taken in a much larger portion of the enemy's lands, in order to reach a more open frontier, where there was less jungle and chance of concealment, and that in possessing ourselves of the Neutral and Ceded Territory we had *equal* if not *better* rights than the Caffer;—EQUAL rights, those of conquest; and BETTER, because their forcible possession of the Hottentot country was the effect of cupidity, while ours was to punish past, and prevent future wrong.

IV. That the Treaty made with Gaika, in 1819, by Lord C. Somerset, for a *Neutral* Ground, was entirely changed and superseded by the subsequent Treaty with the *same Chief*, by Sir Rufane Donkin, in 1820, who established a semi-military and civil settlement in the very heart of the Territory in question, with pledges of extensive grants of lands, (during the existence of which it ought, en passant, to be remembered, the Colony remained free from plunder,) and that it then came under the *understood* and *actual* denomination of CEDED TERRITORY, *Gaika "saying," (I quote Mr. Fairbairn's, the Editor of the Commercial Advertiser, own quotation,) "that he had no objection, but rather wished its occupation."*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

V. That the present claimant "by force of arms" for restitution of these lands, is not any one of the Chiefs who have been reported according to Dr. Philip, Mr. Bannister, Mr. Bruce, Mr. Pringle, Mr. Kay, or Mr. Fairbairn, to have disclaimed the right of Gaika to dispossess or alienate these lands from the Caffer nation, but the Chief TYALI, *Gaika's own son*, who, of course, was bound up with, and ought to hold sacred the Treaty of his father.

Among many other of my notes on this subject, I find the following, taken from the mouth of a high official character, present, I believe, at the ratification of *both* Treaties with Gaika, those of Lord Somerset and Sir R. Donkin.

"Gaika agreed to the cession, but as the line desired by the Colony took in the Chumi, he requested that he might have the basin which that river fills, *as it was the place of his birth*; but it was proved on the spot that he was not born there, but far to the eastward; and, being taxed with the falsehood, he acknowledged the fact, coloring his previous assertion, that he had been *brought up* there, which was also disproved.

"One Müller gave evidence at the time, that until a few years before, the Caffers had not lived westward of the Keisikamma River, and at that period several persons were living who knew that formerly the Caffer Tribes occupied nothing westward of the 'Kneiba or 'Kei River. (70 miles east of the present boundary.)"

Consequently, their expulsion by the British Government in 1819, was not out of a Territory they could lay claim to, either by right of birth or long occupation, but by a temporarily-held conquest; however

"Ce qui vient par la flûte s'en retourne par le Tambour."

(*d*) The advidity of the Caffer for trade, alluded to in a former note (*a*), is still farther borne out by a report to Government by the then Landdrost of Albany, *nineteen years afterwards*, (23d July, 1822,) in which, referring to the Caffers, he says—"whose natural inclination for a friendly traffic will always induce them to embrace any opportunity that may be offered for *underhand* or *contraband* dealings."

It is extraordinary that the same officer, notwithstanding he saw on one hand a whole savage people *determined* to break through every restraint and danger for the purpose of a trading intercourse, and on the other, his own countrymen braving the terrors of the law for the same end, could add to the same despatch his advice conveyed to Government, and which seriously mislead it for a considerable time, "I do not think the trade should be yet extended to individuals."

(*e*) 28th January, 1824.

(*f*) On the 19th January, 1827, another Fair was instituted at the Chusie-river, in the neutral or ceded territory, but the small Returns caused its discontinuance at the end of 1828.

(*g*) To imitate the (now justly exploded) absurdities of more civilized countries than the Cape, in their interferences with trade, it was most gravely, sapiently, and I am certain, at the same time, with most humane intentions, *ordered*, that USEFUL ARTICLES should be sold to the Caffers, along with the only things then in demand by them, the paltry BEADS, which latter, like the Cowries of the western coast, is the circulating medium of the savages. This regulation was, in effect, to encumber them with sundry articles then of no use or value to them, and at the same time to entail a heavy and useless expence upon the trader. The amiable objects of the advisers of this mode to *force* civilization failed, the Caffers preferring beads to breeches, which they thought straitened their free limbs, and brass wire and iron ingots to red night caps and Manchester cotton pocket-handkerchiefs. After some years of non-interference, when the interior market had been satiated with beads, *useful articles* came *naturally* into demand; the stiff leathern mantle (Toga) or caross, was exchanged for the pliable, warmer, and cheaper European woollen blankets, and the caross found its way as an import into the colony, in the shape of a cured hide; native pottery was displaced for British iron-ware, and English duck and English hats now clothe the upper and nether extremities of many of the lately-naked barbarians.

SEVEN GREAT EVENTS.

The late Mr. Smith, of the British Museum, wrote in his Album as follows:

"I can boast of *seven events*, some of which great men would be proud of. I received a kiss, *when a boy*, from the beautiful Mrs. Robinson,—was patted on the head by Dr. Johnson,—have frequently held Sir Jos. Reynold's spectacles,—partook of a pot of porter with an elephant,—saved Lady Hamilton from falling, when the news arrived of Nelson's death,—three times conversed with King George the Third,—and was shut up in a room with Mr. Kean's lion."

GOOD OLD TIMES.

Died, at Carmarthen, Nov. 16th, aged 68, the Rev. J. Evans. Some years since he was imprisoned in Carmarthen Jail, by order of the clerical magistrates, for singing the Marseillois Hymn.—*Liverpool Paper*.

About the same time, the excellent James Montgomery was imprisoned in the Jail of Liverpool, for writing a Poem *On Liberty*.

BEAUTY AND LOVE.

In a certain grotto, once lived a maiden whose best description will be her name. She was called Beauty.

In front of the grot flowed a rivulet, whose gentle ripple forbade the approach of Melancholy, and tall trees (for ever green) threw over it a delightful shade. The birds here warbled their most melodious notes, and the zephyrs delighted to sport among the fragrant wild flowers which grew around.

One morn, as the last echo of Devotion's hymn died away on the breeze, a group assembled on the green bank before the grotto. Beauty, at the persuasion of Venus, was that day to renounce a life of celibacy, and the neighbouring swains had come, each with the hope of being chosen her partner; Music (whose cell was near at hand) sounded her sweetest note, at which Beauty, attended by Modesty and Pity, came from the inner to the outer apartment of her abode. She had been attired by Modesty, in virgin white, and held in her hand a garland of flowers, with which she was to signify the object of her choice.

She had scarcely appeared, when Desire rushed forward. His loose robe but half covered his deformed body, and his veins were swollen with the tainted blood which boiled in them. His flaming eyes seemed as they would scorch the lovely form they gazed on, and his tongue stammered forth some incoherent words as he offered his gift. This was a wine-cup, containing a bunch of grapes, in which lay concealed a scorpion. He would have embraced the maiden, who with closed eyes clasped the garland to her bosom, but Modesty threw over her a veil, which Desire no sooner perceived than he retired as suddenly as he came.

Next came Wealth. He was clothed in velvet and silk, and the tinkling of gold and jewels betrayed his slightest motion. He walked forward with head erect, and without bestowing a glance on either side. His offering was a casket of gems, whose lustre outshone every thing but Beauty's eyes. The casket he threw at Beauty's feet, and confidently held forth his hand for the garland which he doubted not, would be offered him. With a look of disdain the maiden bade him begone.

Avarice followed Wealth. His torn garments hardly concealed his emaciated form. He advanced with uneasy gait, and brought no gift. Bending on one knee, he stretched out one hand for the garland, while with the other, he gathered the gems which Wealth had scattered. A contemptuous glance told him his ill success, and he retired, gazing alternately at the maiden, and the riches he had picked up.

A youth of gentle mien now stepped forward, but his progress was arrested by the arrival of Glory from the field of battle. The rattle and clang of brass and steel, the rolling of wheels, and the tramp and neighing of horses, announced his approach. His chariot was drawn by four black horses, and TYRANNY held the reins. Glory dressed in complete armour, leaped proudly from his car, and advanced boldly towards Beauty, with one hand offering a crown, and with the other (which held a bloody sword) pointing to one of two empty seats in his chariot. Pity covered the maiden's eyes, and beckoned him to depart. Frowning he remounted: TYRANNY shook the reins; CRUELTY applied the lash to the blood spotted steeds, and GLORY disappeared.

The next who approached was Wisdom. He was plainly, though neatly, dressed, and his pace was slow and graceful. His high forehead, bright eyes, and gentle manner, charmed most beholders. His offering was a cup of water from the brook. Beauty sipped it and smiled; her fingers played with the garland, and she gazed she knew not where. At this moment her eye fell upon the youth whom Glory had interrupted. With downcast eyes she shook her head, and Wisdom with a sigh (which was echoed by Pity) slowly departed.

The youth (whose name was Love) now came near. His look was timid, but there was an expression in his eyes more pleasing, even than the glances of Wisdom. He advanced gracefully, but his step was lighter than Wisdom's, and his dress was gayer. His offerings were a lamb, and a rose, from which he had carefully plucked all the thorns. Beauty's eyes were still cast on the ground, and a blush overspread her cheek. As the youth went before her with his gifts, Pity, unresisted, placed the garland on his neck, and Beauty was the bride of Love*.—*Cal. Lit. Gaz.*

OOMED.

MADAME DE STAEL.

Shakspeare in the Drama, Milton in Poetry, Scott in Romance, are unapproached by female pens. We do not pretend to explain the reason, we only mean to state the fact, and to observe that to a body of instances so conclusive as might well suffice to constitute a rule, Madame de Stael is, perhaps, a solitary exception. She is, perhaps, the only woman who can claim admission to an equality with the first order of manly talent. She was one whom listening senates would have admired, as though it had been a Burke, a Chatham, a Fox, or a Mirabeau. She was one whom legislators might consult with profit. She was one whose voice and pen were feared, and, because feared, unrelentingly persecuted by the absolute master of the mightiest empire that the world has witnessed since the days of Charlemagne.—*Foreign Quarterly.*

Soame Jenyns.—A friend who called upon him one morning, was pressed by him to take a slice of cold meat, &c, but the servant on being rung for informed his master that there was not a morsel in the larder. When he had left the room, Mr. Jenyns said, "Now we had a large round of beef dressed yesterday; this is therefore rather unaccountable. But I expect these things, and that I may not be subject to lose my temper, I set down £300 a year to losses, and thus I obtain my composure."

Nationality.—I well remember Lord Elibank maintaining a very good argument, to shew

* The original idea of this belongs to Collins.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

our inconsistency in being angry with the Scots for their partiality of their country, when we applaud the Greeks and Romans, who carried their partiality to as great a length. Apropos, I cannot help telling you of an instance of it which was acknowledged in my presence. Two English gentleman and a Scotch one took a ride together in the summer to Tunbridge Wells, and on their arrival, the two English having been shaved by a barber of the place, asked their companion if he would not also be shaved; which he had no sooner declined, than the waiter whispered him, "Sir, I have found a *Scotch* barber," to which the other replied. "Oh! very good, let him walk in."—*Sir W. W. Pepys to Hannah More.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

THE INFANT SCHOOL SOCIETY.

THE Annual Meeting of this year, during the present month, was a most triumphant one as it regards the proofs of the admirable adaptation of the System for the education of the infant mind.

The large Hall of the Merchants was crowded by all orders and degrees of people among us. Lady D'Urban and family, Lady Herschel, with many other ladies of well-known benevolence, were present on the occasion. The chief Justice, Sir J. Wylde, presided, who addressed the Meeting, as did Sir Jno. Herschel, Rev. Dr. Philip, Rev. Dr. Adamson, Mr. Fairbairn, &c.

The children went through their evolutions, and gave such proofs of intellectual advancement, as astonished every beholder. If we were ever tardy before this Meeting, in coming forward to recognise the immense importance of this Institution, we take shame to ourselves, and pray to be forgiven.

We have somewhere read a remark to the following effect—we think it proceeded from Lord Brougham—our countrymen, forming the aggregate of the population, are certainly not *yet* fit for free admission into parks, gardens, and museums, and these, if they have been opened to them by way of experiment, have been speedily shut against their reckless destruction, and often disgusting abuse of the privilege. Infant-school-trained children, it is well known, may be trusted into the saloons of a palace, or amidst the temptations of a flower or fruit garden!

LICENSED HOUSES—HIGH DUTIES, &c.

THE licensed victuallers are complaining, through the papers, of the excessive charges of the Government licenses. Let us be cautious in this affair, nor suddenly lower these rates, lest we increase the number of those plague-spots of our town—the *Canteens*. Where it can be proven that victualling houses are really what they ought to be—respectable places of comfort for the weary, the sojourner, or the bachelor mechanic,—then, indeed, they might exist at a considerably lower rate than the government tariff demands for an annual license. But on no account should we lower the terms which are charged for the existence of those intolerable nuisances, the low canteens. To remedy these evils, we have read suggestions in the papers for a heavy duty on wines and spirituous liquors. Such proposals are made in ignorance. In 1736, England was going head-long to destruction from the drunkenness of the people. The government became justly alarmed, and imposed a duty of 20*s.* per gallon on British spirits. The energies of the smugglers were immediately aroused, and the respectable part of the spirit-trade, unable to meet the competition of the clandestine operators, withdrew from the trade. Informations loaded the tables of the revenue boards, fines, convictions, (12,000 in 6 months in London,) and committals to prison, exceeded all bounds, and the cause of the smuggler became that of the people. The very act of Walpole, then at the head of Government, became a dead letter, and Lord Cholmondeley stated in the House of Lords that 7,000,000 gallons of spirits were consumed in London, of which scarcely a gallon came to the charge of the revenue. In 1742, the Government retraced its steps, high duties were abolished, and moderate imposts levied. The consequences were—the trade returned to its accustomed channel; the illicit distiller curtailed his operations, and the smuggler had no business. In 1819, Mr. Vansittart, requiring money for his war measures, raised the duty from 11*s.* 4½*d.* per gallon to 13*s.* 2½*d.* Clandestine distillation commenced again, and the smuggler was every where on the alert. In 1825, on Mr. Robinson's (Lord Ripon) brilliant exposé of the financial condition of the state, the duty was lowered to 7*s.* per gallon. But why multiply historic facts? Let those who demand high duties on fermented spirits, as a check to drunkenness, consult the taxation and other parliamentary papers of the past years, and they will no longer waste their rhetoric or their ink in the attempt to urge high duties. Let them rather, adopting the advice of the profound Adam Smith, who, in speaking of the inclination of people for tippling, says, "the only way to eradicate this disposition is by giving them a better education, and thus inspire them with a taste for less grovelling enjoyments"

It is satisfactory to observe (referring to the estimate of Lord Cholmondeley during the last century,) that the consumption of spirits in England (according to parliamentary papers,) has immensely decreased in the face of a duplication of numbers, and a reduction of duty from 20*s.* to 7*s.* 6*d.* per gallon. This surely results from the improvement in the intellectual condition of society.

QUESTION AND ANSWER.

Q. In what respect is Mr. Haddy, the Wesleyan Missionary of sheep-calculating celebrity, equal to Homer and Virgil?

A. Because he is master of the power of *numbers*.

HORTICULTURE.—No. II.

How is it that the cultivation of the *parsnip* is not more attended to at the Cape? It is often as great a rarity as snow in harvest. It is an admirable esculent for the table, and all animals are fond of it. To milch cows it is eminently favourable, giving a flavour and richness to their milk, and increasing quantity. The cows of Jersey and Guernsey, fed with parsnips and hay, yield butter of as fine a tinge, as if they were fed in pastures. To horses it is equally suited as the carrot. Hogs are extremely fond of it; and when boiled, poultry feed on it.*

Once more:—Who produces the *Jerusalem Artichoke*? It was highly esteemed by our ancestors; it is one of the hardiest of cultivated plants, very productive, easily propagated, and growing on the poorest soils. On the continent of Europe the leaves and stems are of great use as green and dried fodder.

The tubers of this vegetable are eagerly eaten by animals, and they produce about 500 bushels per acre, without manure.

FRONTIER NEWS.

Extract of a Letter from a Settler's Servant, to his Mother in Cape Town.

"I have been a High Witness who seed every thing goin on in these here parts. The Gaffirs has riz against us for no cause whatsomever. Evvery thing his thrown into a pannikin. What a prospectus afore us. It is unpossible to ascribe the fritful Postur of haffairs.

I trembel to rite that Kousin Thomas is reporthed as assagyed—but it wants cobbobbo.

* We saw the other day, some noble samples of this root as produced by Mr. Upjohn. At the same time equally fine roots of the invaluable horse-radish.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ration. Our standin harmy is now on the move and all pints of the enemy will be hattached; I am not dubrious as to effex upon the foo. I think they shant—*leive a retch behinde.* Nues has comed in that 3 Cheefs are taken—they are to be kept as *Ostriches,*" [probably *hostages* is meant.]

I most forget to obsarve that some volks here say the rizin of the blacks has been owin to a Boem by won Mr. Bringle—it is sommut about *Ham a* Cow *So* who Dr. F. says was akin to *Ram-Mun Roy.*"

HOW TO GET RID OF YOURSELF.

ADMIT that you are poor, and the WORLD *condemns you to death,*—by permitting you to *die of hunger.*

RESPONDENTS;
OR, HOW TO OBTAIN AUTOGRAPHS.

In one of the late numbers of Fraser's Magazine is an account of an amusing hoax played off on most of the chief literary characters of England by a wag who, under the auspicious name of Miller, troubled them with pertinacious queries respecting a certain Sarah or Amelia Deacon, and William Roberts or Robert Jukes, &c. reported to have resided with said literary characters in capacity of servant. The author of this trick is still unknown, but his motive would appear to have been principally a desire to obtain autographs of these distinguished persons. The system was continued through a series of years and the several replies have been lately handed to Fraser, who has published about 40 of them in his Magazine, with a sort of running commentary on each. Some of these notes are strikingly characteristic, and the collection is curious enough as showing the diversity with which a very simple query may be answered.

The perusal of these letters reminded us that we had once seen a collection of notes in reply to "invitations to Government House" which are perhaps as curious in their way, as the notes above mentioned.

We have since been so fortunate as to obtain access to these documents, and have now the pleasure to present them for public inspection. To this we are actuated by two motives, first by a desire of feeding a very laudable curiosity in our reading public—and secondly by a hope that, as the polite Letter writer is somewhat scarce in this country, our friends may be enabled to accept "Right Hon'ble Invitations" after the most approved fashion.

We pledge ourselves that every one of the following communications is genuine, the autographs being at this moment in our possession. The names have alone been altered in order to avoide personality. We may some day treat our readers to a continuation of the series.—ED.

1.

"Mrs. Wiggins regrets that indisposition will prevent her from having the honor of waiting upon Mr. Leasherton on Tuesday evening.

Mr. Wiggins is gone to Palaveram but if He returns before 9 o'Clock He will do himself the honor of waiting upon Mr. Leasherton."

Here is a chance that the governor may see the *he* Wiggins, and with this he must console himself for the absence of *she.* But then, after all, the *possible* pleasure depends upon the return of Wiggins before 9 o'Clock, and who can say that a dark night or a vicious horse may not render the possibility impossible? Here we have family divisibility and the minutiæ of explanation.—ED.

2.

"Dr. Koskins Asst. Surgeon 104th Regt. will do himself the honor of *being* at His Excellency the Governor to night."

From which, tho' it is not so stated, it may be inferred that he will *go* there.—ED.

3.

"Miss Huskinson will do *himself* the honor of waiting upon the Right Honorable Mr. Leasherton, on Tuesday Evening, the 16th instant, at 9 o'Clock."

Feminine turned Masculine—we suppose on the principle of the Masculine being more worthy than the Feminine—vide Latin Grammar and out of compliment to the giver of the party, himself a male.—ED.

4.

"Luitenant Giles, of 125th Regt. will do *him* the honor of waiting on His Excellency the Governor to-morrow evening."

The especial beauty of this reply consists in its skilful use of the third personal pronoun—made applicable either to Giles or the Governor.—ED.

5.

"Captain Fiddlestick would be most happy to do himself the honor of waiting on the Right Honorable the Governor, &c. &c. on Friday Evening, the 5th instant at 9 o'Clock, but confined to his room by continued severe indisposition. *He is apprehensive that his strength will not allow of his doing so* and in which case He trusts that he will be excused."

Here the Governor is let into the maladies of the Fiddlestick, and is enabled to form an estimate of his strength - Probably after this He did not appoint F. to the Pioneers.—ED.

6.

"Sir, I am very sorry that the state of my health will not allow me to do myself the honor of waiting on the Right Honorable the Governor this evening. *I was so unwell on Sunday as to be unable to preach*—You will do me a favor by apologising for my absence to the Governor."

Here the Governor is consoled by the reflection that if *he* is to be disappointed on the Friday, the Parson's congregation were equally so on the Sunday—Affliction loses half its sting when we reflect that others are as wretched as ourselves.—ED.

7.

"Mr. & Mrs. Soapsuds regret that, *untoward circumstances* prevented their having the honor of accepting Mr. L 's invitation for last evening."

Gross imitation of the King's speech—

Navarino was a joke to this—Quere? was it a drunken Coachman, or a sulky husband?—ED.

8.

"Captain & Mrs. Scroggins will with pleasure have the honor of *spending Tuesday Evening next at Government House.*"

This is doing more than they were asked to do! Give an inch, he'll take an ell.—ED.

9.

"Mr. Parson has *mutch* pleasure in accepting Mr. Leasherton's invitation for Wednesday."

We always had our suspicion that Johnson was wrong in his orthography of this word—Mr. Parson has confirmed us.—ED.

10

"Mr. Josstick will do himself the honor to wait on Mr. L. to-morrow (Tuesday) evening at 9 o'Clock—if he can possibly do so—*But he fears his strength, recovering as he is from a very severe indisposition, will not permit him to have that pleasure on the present occasion.*"

Tantalizing reply—conditional acceptance! however it is inferred, for the Governor's consolation, that Josstick, if invited, will be both strong and willing on another occasion.—ED.

11.

"Mr. Styly presents his compliments to Mr. L. and regrets that indisposition *which confines him to his couch,* will prevent Mr. Styly from having the honor of waiting on Mr. L. this evening."

Glorious tautology—And how delightful it is to know that Styly is not so ill as to be confined to his *bed.*—ED.

12.

"Dr. Purge is extremely sorry he cannot do himself the honor of waiting upon Mr. L. this evening, being in too deep mourning to go out at present.—Mrs. Purge has not yet returned to Madras from which she has been absent for some months."

Sorrow and absence are the devil!—ED.

13.

"Captain Firelock would *feel most happy to do himself the honor* of waiting on the Right Honorable Mr. L. Governor, &c. &c. on the evening of the 18th instant, at 9 o'Clock, but confined by severe indisposition, he much regrets that he may not be able to avail himself of the honor intended him."

Beautiful analysis of Sensations! And then that cursed illness which prevents their full development. Poor Governor!—ED.

14.

"Mr and Mrs. Twig will have much pleasure in accepting the kind invitation of Mr. L. for Tuesday next and for which they return *their sincere thanks.*"

And understood not that a grateful mind
In owing owes not, but remains at once
Indebted and discharged.*—ED.

15.

"Mr and Mrs. Everkneeling request the Aide-de Camp in waiting will have the goodness to convey to the Right Honorable Mr L. their respectful acknowledgments of the honor conferred upon them by his invitation to Government House, and *their humble request* that he will permit them to decline availing themselves of it, *as they have for some years past thought it their duty not to go to dances.*"

As tho' they had said, "excuse our coming to dinner, for we don't eat."—The absurdity of cant is only matched by its humility. We wonder whether this *humble* request was complied with.—ED.

More we *might* subjoin, but the great diversity displayed in the foregoing, renders our doing so needless. You have variety of style, variety of description, variety of exculpation, variety of grammar. What more would you have most pensive public!—*Ed. Mad. Lit. Gaz.*

During the reign of Lord Charles Somerset at the Cape, there was much amusement at his Court, from the replies to the Ball, Soiree, and Dinner Invites. These would often be exhibited on some gloomy or rainy day, for the sake of provoking a good digestable laugh. Some two or three of these autographs have fallen into our hands. *Ex gra.*

1.

"Mr.——— as the honour of the receipt of a Card for Government House on Tuesday night next, but I humbly hope to be excused, intirely owing to rhumatiz."

2.

"Mrs.——— and daughter request to be excused from being present at Lady Charles Somerset's next At Home, at which they were obligingly invited, from the circumstance of having received letters from England of the illness of one of their family."

3.

"SIR,—I regret that I shall not have the felicity of doing myself the honour of becoming a happy guest at Government House on Thursday next, having now retired from public amusements, finding that the night air, after being in crowded and heated rooms, very much *disparages* my health. Have the goodness to offer my *condolence* to Lady C. and believe me,
Sir, Ever yours, &c.
To the Aide de-Camp A. S."
in Waiting."

4.

MONSIEUR,—You shall have the goodness to pay my very profound respects to Mi Lord and Mi Lady, and assure them that I will have the great considerable delight of meeting in their chambers on the day proposed for the charming society.

J'ai l'honneur de vous saluer,
"A Monsieur, &c." D."

No. 3. Vol. V.] CAPE TOWN: MARCH, 1835. PRICE, { 20 *Shillings* per *Annum*.

THE CAPE PRESS.

Observations on the Merino; containing a brief Account of the Methods by which that Animal has been brought to its present state of perfection in Germany, and intended for the consideration of Wool Growers at the Cape of Good Hope. By F. W. Reitz, *Member of the Agricultural Societies of Cape Town and Swellendam.* G. Greig, Cape Town, 1834.

Many circumstances of a local nature in this Colony, arising from national customs, prejudices,* and want of education, have tended greatly to retard the advancement of agriculture, the cultivation of plants, the husbandry of the domestic animals, and the whole economy of farming. At length, however, a large number of the colonists have hit the nail on the right head, and by the introduction of the Merino, have by their attention to wool-growing, opened up a mine of wealth to themselves and families.

The Sheep, independently of its intrinsic value as a *pecuniary* animal, is well entitled to demand from us a few zoological recollections. Sheep formed the wealth of the early children of Adam, and the earliest oblation of grateful acknowledgment in sacrifice; for the accepted offering of Abel consisted in the *firstlings* of his flocks; and a hundred and twenty thousand were sacrificed at the dedication of the temple by Solomon, (1 Kings, viii. 63) Of an animal so serviceable to man, and so constantly before his eyes, many allusions have become constantly popular and common. From his mild and unmeaning aspect, a vacant or silly look is said to be sheepish; and a swain, when he affects tender glances to a village maiden, is said to cast sheep's eyes at her; and we say of a man who has been unworthily tricked of his property, that he has been fleeced. A tyrant who exercises his cruelties under the garb of gentleness, is called a wolf in sheep's clothing. And so is a minister of religion, who *appears* to be what, in deed and reality, he *is not*. Again, *sheep-shanks* is applied to a man whose legs are of spindle size, without calves, and consequently cannot sport, with any effect, silk stockings and knee-breeches. When we hear the term *sheep-stealing*, we are immediately *transported* in idea to Botany Bay; and *sheep-shearing* is connected with our fondest recollections. Who can forget a *sheep-shearing* in merry old England? the gladness of that season, the jubilee, and hospitalities which then abound! And here (for our recollections are abounding,) we may record an anecdote in the Life of that true worthy of the English Episcopal Church, the late Thomas Scott, Rector of Ashton, and author of that immortal work—*A Commentary on the Bible.* In early life, his was the *Pursuit of Knowledge under Difficulties.* After having walked twenty miles to submit himself as a candidate for ordination, he met with a refusal from a Bishop. Scott then returned home, and writes with cheerfulness—"Having dined, I put off my clerical clothes, resumed my *shepherd's* dress, and sheared eleven large sheep."

Again:—The horn of the ram was an early instrument of martial and ceremonial music, at which the walls of Jericho fell down (Joshua vi.); and the jubilee of old (see Leviticus xxv.) was ushered in with the sound of rams' horns, or the jubilee trumpets; for the word jobul, or yobul, means a ram; so our curved and sonorous field-instrument is called a horn. The ram was chosen by the angel as a substitute for Isaac, when his father Abraham was commanded to sacrifice him, *to try his faith.* (Genesis xxii. 13.) Jacob, for a wife, kept sheep twice seven years (Genesis xxix.); and Moses kept the flock of his *schoonvader* Jethro, (Exodus iii. 1.) In all the immortal Bunyan's pictured page, there is not a more touching scene than that of the shepherd-boy tending his fleecy flocks.

"Hark, said Mr. Great-heart, (the Pilgrim's guide,) to what the shepherd saith, for he is singing:

He that is down needs fear no fall,
He that is low no pride;
He that is humble ever shall
Have God to be his guide.

Then said Great-heart, Do you hear him? I will dare to say this boy lives a happier life, and wears more of that herb, called Heart's Ease, in his bosom, than he that is clad in silk and velvet."

Again:—Jason is fabled to have carried away the golden fleece from Colchis, as representative of the extension of commerce, and the transfer of the arts; and the fleece of Gideon was the miraculous instrument of an assurance of victory over the Midianites. In the reign of Nero, the christian converts were sewn in sheep skins, and torn to pieces by dogs. In the ruins of Persepolis were found the statues and figures of rams, which formed one of the astronomical signs. The lamb is an emblem of spotless innocence and patience, the symbol of the passover, and the type of the Great Redeemer of Mankind. The Bachelors of Oxford, who determine their degrees at Lent, wear lamb-skin *hoods*, emblematical of the innocence of the calling they are about to adopt; for all learning, and all learned occupations, were formerly confined to the clergy. This hood is at present reduced into a strip of flannel.

The age of the sheep is known by the teeth; and an old ewe who has lost her teeth, is called a crone; a term applied

* The prejudice still exists in certain instances: this arises from sheer ignorance, and the absence of the thinking and reasoning faculties. Only last week we heard a Boer expatiate with great glee on the glories of sheep's-tail fat, and he demanded, with an air of triumph, "When will one of your Merino's produce six shillings by the sale of its tail, which sum I realized the other day." A by-stander inquired of the farmer *how many* tails his sheep produced? Of course, said he, only *one*. Then, said the other, *how many* fleeces can you procure from the Merino? This was a poser, and sheep's-tail was silent.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to a troublesome, ill-looking old woman. About the neck of the oldest wether (in England, especially,) is fastened a bell, to gather them together, or to conduct them to their place of pasture; whence, a noisy and brawling woman is called a bell-wether. The Romans used battering-rams in their sieges; and our terms ram and ramrod seem to have their origin from this source. Of a person of indifferent character, who may be suspected to corrupt his companions, we say that "one scabby sheep infects the flock."

By the Israelitsh women, the wool was spun into garments, and formed a part of their offering to the sanctuary. In the olden times, the maidens of the family spun the wool of their flocks; whence unmarried women are denominated spinsters; and, in heraldry, bear their arms not in warlike shield, like men, but in a lozenge, having a resemblance to the outline of a spindle or distaff, charged with worsted.

The celebrated Morocco leather is made of the skins of rams dyed red. With this was formed a covering for the tabernacle in the wilderness, in the days of Moses; and with this was decorated the celebrated shrine of Minerva, and with this are covered our most costly chairs, tables, and books. The wool of the sheep is considered of such inestimable importance to the comforts and commerce of Great Britain, that the Lord Chancellor of the realm sits on a woolsack in the House of Lords; and the funeral garments of deceased bodies are by law directed to be made exclusively of woollen.

From the occupation of collecting scattered flocks of wool from hedges and brakes, it is said of a person not settled in his ideas, that his wits are gone woolgathering. Its valuable uses in various garments, in flannels, in blannets, are sufficiently well known; the coarser lumps, called flock, are used to stuff mattresses. The skins of the sheep make parchment and covering for books; and the skins of lambs a finer kind of gloves.

But we owe our sincere acknowledgment of thanks to Mr Reitz for his interesting *Observations on Merino*,—for it is high time, after our lengthened remarks, that we should pay him that just tribute which is due to his meritorious exertions in promoting the interests of the wool-trade.

Mr. Reitz adverts to "the selfish or prejudiced notions" of many of the colonists who are adverse to the Merino system—but is himself justly alive to its merits; and, in reference to futurity, observes—"I hope we may one day or other be able to send rams to Saxony." In his *Introductory Remarks*, he informs us that Capt. Gordon was the first to introduce Merinos, and "upwards of forty years ago, those indefatigable agriculturists, the brothers Van Renen, had turned their attention to this branch of industry, for we find Joh. G. van Renen selling 4000 lbs. of wool to Mr. McDonald, in 1804."* The following statement of our Author will be read with interest:

"There are, from all accounts, upwards of three millions of Sheep in this colony; if they were more valuable, and better attended to, there is no doubt that five millions of the same breed might be kept on the same pasture; but if these five millions were converted into Merinos, I have not the smallest doubt that seven millions could feed where only three fed before. Supposing the produce of each sheep to average two lbs. and each pound to be worth half a rix-dollar, the Colony would then be enabled to export seven million rix-dollars worth of produce more than it does at present, —the *possibility* of attaining such an object is sufficient to call for the utmost exertions,—and I do not think the people of Europe have the slightest conception of there being the least grounds for such a glorious prospect."

Mr. Reitz compliments the exertions of the wool-growers "Messrs. Proctor, Daniel, Korsten, Breda, Van der Byl, Cloete," and when we contemplate the extent and superiority of the late Merino importations by Capt. Robb, Mr. Ebden, and Messrs. Dickson, Burnies, & Co. we think these gentlemen equally entitled to the thanks of the community.

In the course of his subsequent inquiries, Mr. Reitz confines himself exclusively to his subject, and as he is no theorist, all his observations on the Merino are well deserving the attention of the colonial farmers. The following is a synopsis of the order of his researches.

I. On Wool:—
- 1st, Its Fineness
- 2d, — Elasticity.
- 3d, — Pliancy.
- 4th, — Softness.
- 5th, — Assorting.
- 6th, — Packing.
- 7th, — Transportation and Sale.

II. On the Management of Merinos:—
- 1st, Classification, &c.
- 2d, Feeding, Pasture, &c.
- 3d, Sheds, Kraals &c.
- 4th, Shepherds.
- 5th, Management of Lambs.
- 6th, Washing and Shearing.

On the subject of *transport*, we learn from Mr. Reitz, that a Cape Wagon "will contain a couple of thousand pounds' weight of Wool; which, considering the value of the article, compared to wheat, butter, oats, or any other produce, is certainly a more economical material of transport than any that incumber the outspan place, or pay toll at Sir Lowry's Pass. Calculating the expense of a wagon for 100 miles at Rds. 40, it would bring it to about a stiver per pound; the freight to England, and other attendant expenses, are generally computed at from 1½ to 2¼d. per lb."

That all important appendage to a sheep Farm—the *Shepherd*, is noticed by Mr. Reitz in terms not very friendly to those who do not think proper to supply this calling in South Africa. He says—

"What a celebrated German writer has said of the necessity of having intelligent persons as shepherds, together with the account he gives of the political degradation and moral darkness in which the lower classes of Hungary are sunk, applies with equal truth to the Cape,—nothing is so difficult now-a-days as to fall in with some one who will undertake the task of being a shepherd—that patriarchal life is falling fast in the esteem of the aborigines,—high wages do not tempt them,—and unless some of the wards of the Children's Friend Society can be brought up to that profession, there is an alarming prospect of one most profitable branch of our rural economy being somewhat kept back, through the want of shepherds alone."

This picture of degradation is, we think, too highly coloured; we happen to know many of the aborigines who are zealously devoted to the shepherd's pastoral life—no small act of self-denial, by the bye, in the solitudes of this colony—

"Tending another's flock upon the fields,
His father's once, where the White Man builds
His home, and issues forth his proud commands."

And as to the wards of the Children's Friend Society, there can be little hope for the farmer. The born and bred of the city haunts seldom make good outdoor servants.

In conclusion, we think Mr. Reitz deserves well of the community; he has gone abroad and studied our language, and looked about him to some purpose. His Treatise deserves a wide distribution, and should a second edition be called for, we recommend the Author to notice the *disorders* incidental to the Cape flocks, and the specifics for recovery. Some advice might also be given as to the required amount of stock. In Argyleshire, the principal circumstances attended to by the most intelligent sheep-farmers, are these—to stock lightly, which will mend the size of the sheep, with the quantity and quality of the wool; and also render them less subject to diseases. In all these respects, it is allowed by good judges that 500 kept well, will return more profit than 600 kept indifferently.

* It is of no small importance to the Wool-grower, to find good and honorable purchasers, and it redounds to the credit of one of the Merchants, (Mr. John Thomas Buck,) that during a few past years he has distributed for Wool, upwards of one hundred and four thousand dollars.

If there be in the Treatise before us any slight imperfection in the grammatical construction of a few sentences, or errors typographical, we leave to others the invidious task of pointing them out.

THE REMINISCENT.---No. VII.

THE LUBBOCKS.

I recollect on one occasion dining with Sir John Lubbock, at his seat near Twickenham. Alderman Curtis, and several other celebrated feeders, were present, who one and all eulogised *the fish and good fare* of the worthy host. Sir John seemed proud of the compliment, and boasted of the great superiority of his woman-cook over the skill and vaunted abilities of men-cooks. Lady L. observed—"Yes, she is an excellent servant, but unfortunately very mercurial in her temper." This was fully illustrated soon afterwards, for we heard in the back-ground the voices of fury and choler. Smashing and breakage seemed to be the order of the day. Sir John and his lady behaved with remarkable equanimity of temper, the former simply demanding of an attendant, the reasons of the disturbance. "O, Sir, please ye," said the man, "its only the cook and the footman engaged in pitched battle." "Is that all?" said the good-humoured knight, "well—two to one on cookey, for she's *Cayenne to the back-bone.*" ***

No. VIII.
SANDIE BELL.

The late Earl Tyreconnel was fond of the scenery of middle and even cottage life. He had often witnessed in the course of years the approaches towards his house of one of the rarities of former days—a Travelling Scotchman. This man was Sandie Bell,* who

"Gained respect in simpler times,
When Squire and Priest, and they who round them dwelt
In rustic sequestration—all dependant
Upon the merchant's toil—supplied their wants,
Or pleased their fancies with the wares he brought."

Bell was an excellent creature, (well I knew the man,) and his travelling stock was extremely diversified, and, as the Earl knew, of a costly nature. On one occasion, the Earl of Tyreconnel made way for Bell, by alighting from his horse, and opening the gates of his park for the convenience of the o'er-wearied chapman. The Earl was in high good humour. "Bell," said he, "what's the price of your cargo? I'll make a bargain with you—a farthing a yard, and double it, for all your stock." "On the faith of a nobleman," replied Bell. "Yes," said the Earl. "Done!" cried Sandie Bell, and they proceeded to the Tyreconnel House. Here, on the great table of the hall, Bell commenced admeasuring from his stock—the Earl being engaged in registering the result. The wily Scot began, in the first place, to unfold an abundance of rich silks, fancy ribbons, and French cambricks. The Earl was in great glee. "Why, man," said he, "you are done up, ruined,—lost." Sandie Bell soon turned the tables, by exposing 155 packages of threads, tapes, and ball-cottons. The Earl looked aghast. "Ah, my Lord," exclaimed Bell, "you are done up, ruined,—lost." It is needless to say that the Earl and Lady T. amply repaid Bell for his trouble, by large purchases on the occasion.—*Ib.*

* A Juvenile Emigrant.

No. IX.
POPULAR IGNORANCE—DOROTHY GLYNN, ETC.

THE other day, a fine little fellow* was seated after a hard day's work of toil, on the height ajoining the Malay burial ground. But here his mind was in vigorous exercise—he was *reading* Robertson's History of Charles the V., being a subscriber to the "Popular Library" in Cape Town. But his studies were interrupted, by a voice crying out—"Why, I would'nt be so *mo-lon-cholly*, e'en if you was to *gie* me all the money in the *Savians Bank.*" This remark was made by a shopmate of the little reader's, unfortunately an Englishman, a native of Suffolk.

Now, this is by no means a solitary case, as it respects many of our illiterate countrymen. The sight of a book, or a reader of books, disturb their inmost soul. Why is this? Because they stupidly imagine, that the book must be a religious book; or, as they term it, a "Godly book."† I have seen much of the peasantry of England, in all the counties of the kingdom; and I have invariably discovered among the unlettered classes, this antipathy to a book. I have not forgotten the persecutions of a whole village, not excepting the "Church Warden and Overseers," against a youth, the son of a respectable tradesman, for spending his leisure hours in the fields, reading such works as Pope's Homer and Goldsmith's Vicar of Wakefield. "'Thusiast" and "Whitefieldite" were terms generally applied to him. Nay, I have seen a worshipful Clergyman on the Bench frequently "tear a passion to rags," whilst imputing the crime of his prisoner to the numerous publications of Sir Walter Scott! But the evils of Popular Ignorance are well enumerated in Foster's Book on that subject, and in Mrs. Hannah More's lately-published Memoirs. But no man experienced more of these evils, than the Philanthropist Wesley, and the mention of his venerable name brings me to the marrow of my Reminiscence.

Some years since, I met with a travelling companion,--the Vicar of St. Anthony, in Cornwall. He was a gentleman of great talent, as his numerous publications discover, and was moreover kind-hearted and generous in his nature. He would frequently describe the manners and customs of the people of Cornwall, and state, that, in religion and civilization, they were fifty years behind all others in England.* Wesley, during the prosecution of his mission of mercy found them to be not only grossly ignorant, but brutally inhospitable. He slept in the open air, using his saddle for his pillow, and eating bramble-berries for his breakfast. In one of his Journals he says, "I ought to be thankful that there are plenty of black-berries, for this is the best country I ever saw for getting a stomach, but the worst that ever I knew for filling the belly." Whenever he attempted to open his commission in the villages, he generally found "a rude, gaping, staring, stone-throwing rabble rout." But further to illustrate the ideas which an ignorant people entertain of a Book, I must immediately proceed to the Vicar's narrative.

In a sequestered nook, fifteen miles from the village of Newlyn, near Penzance, stood a small ale-house on the south sea, which had been kept for half a century by Dorothy Glynn. She was well fitted for her station—was never without guests, who, with herself, were ignorant, noisy, and profane. In fact, the whole community in the neighbourhood kept no divine appointments, and were shrouded in gross darkness. The lowering clouds of the heavens, on a certain occasion, predicted a coming storm. The *Marquis of Granby* public-house, was filled to excess, and Mistress Glynn was well pleased with this *ill-wind.* The canopy of nature became blacker, and towards evening the swelling of the sea, the roaring of the thunder, and flashings of lightning were frightful. The rain descended in torrents, but not to appease the electricity of the atmosphere as in ordinary cases. A loud crash was heard, a detached cottage was struck by the lightning, two small ricks of corn were in a blaze, and the windows and doors of the *Marquis of Granby* were shattered in pieces. Dorothy Glynn now cried out, "St. Michael save us! have mercy on us!" The guests threw away their pewters, and were in the extreme of terror and dismay.

† Much of this opposition may, also, and often does, proceed from sheer jealousy. Reading refines the taste to such a degree, that the *unread* cannot fail to witness a superiority of deportment in those who are conversant with books. Hence, their envy and wrath.

* Happily, this state of things has long passed away.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"Can nobody *lay* the storm?" said a travelling rat-catcher. "How?" said Mrs. Glynn, with eager inquiry. "By a few prayers," replied the man. "By all means," observed Mrs. Dorothy,—"free lodging for a month to he that can do it." A stentorian voice immediately struck up—

"The Sun, the Moon, and all the Stars,
The Sun the Moon,
The Sun the Moon,
The Sun, the Moon, and a-a-all the Stars."

And this was the burthen of his song. But the moon was sullen, the sun shone not,—and the stars unveiled not,—the storm was not *laid*. Its terrors increased; all around was devastation, and it seemed next to impossible that the *Marquis of Granby* could hold out the night. The crash of the kitchen chimney which now ensued, threw the company into desperation. "A Book! a Book!" cried Mrs. Glynn,"—where's Ned, the new ostler boy?—"*Misses*," replied a little urchin, "here I is."—"Fye upon't, you sinner," brawled the landlady, "on such a night to be a-mute. Where's your Book? bring the Book." "Lor, Mam—what book?"—said the respondent. "The Book, the Book!" vociferated some thirty voices. The lad stood aghast—"You infernal," exclaimed Dorothy, "did'nt I *cotch* you in the cow-house, in the stable, and the pig-stye with a book?" "O yes, Misses, it be very true, but it b'ant a prayer book." "Yes it is, you fool," rejoined Mrs. G. "It is, It is!" exclaimed the company. Ned was in a terrible minority, and all expostulation was out of the question. The elements of nature were now at the very height of their fury, when Ned proceeded to a corner of the kitchen, and from a leathern sack produced a well-thumbed volume. A holy awe seemed to pervade the pent house of each brow, and following the example of Dorothy Glynn, down went all her guests on their bended knees. Ned opened his book, and performed service by reading the first chapter of *Robinson Crusoe!* All the hearers arose apparently edified, the storm seemed to have been *laid*—towards morning all was calm serenity. This was Sunday morning, July 12th, 1747. The people were still congregated at the *Marquis of Granby*, their numbers having been augmented by country people who had come to report on the late storm. In the course of the day, a clerical-looking gentleman of imposing appearance, was announced as approaching on horseback—It was *John Wesley!* The whole of the inmates of the *Granby*, with Mrs. Glynn, were now on the green before the door. There was a marked silence when the venerable apostle came up, removed his hat, and said,—"let us pray." Many wept! But after sermon, from the text, "Behold, I bring you glad tidings," many, (to use the words of my friend, the Vicar,) were *converted*. Among these was Dorothy Glynn, whose after life exhibited every virtue. She died at an advanced age, in the faith and hope of a sincere christian.—(*Ib*)

ODDS AND ENDS: A MEDLEY.
WITH NOTES, ETC.

[COMMUNICATED.]

THE north is described in the historians of the lower Empire, as a sort of hive, which, in every succeeding generation, seemed to send forth a clustering swarm of surplus inhabitants, to carve themselves out a country, and to establish themselves by force of arms in the happier regions of the south; the same superfluity of inhabitants appears to continue, and to render emigration at least desirable, if not necessary, from the same regions: the mind is lost in reflection on what may be the eventual result of British colonization, for the German colonists are lost in the superior numbers and energy of character of the British. The spread of the British language and literature, and free institutions; trial by jury, and a government responsible to the governed, promises a new world of something better and something greater than what Spain created. The Editor of the Baltimore Gazette seems like most men of limited understanding and observation, to have a tolerably good opinion of his countrymen: the Americans are a noble people, but they owe their superiority over the Germans, if there be any, to their free institutions: all who have studied the German character, speak of it with esteem and admiration: how happy would it be for this colony if a few of these 30,000 who are waiting at Bremen to be transported to America, would seek cheap living, a fine climate, and liberal wages for labour in South Africa.

GERMAN EMIGRANTS.

By official returns it appears that there have arrived at this port from Germany, within the past three months, upwards of 2,000 emigrants. Many more have reached other of our Atlantic cities, and 20,000 or 30,000 are waiting in Bremen for a passage to our shores. It is a subject for curious if not an important speculation to inquire what influence the transplanting of this exotic species into our country may have upon our indigenous or native race, inasmuch as they may bring with them no habits positively evil—inasmuch, also, as an intermingling of races will take place. We may hope that whatever is cold or sordid in the foreign natures may be tempered into something better by sharing the excess of the courage, enterprise, and generosity of our own people. We feel obliged to confess, as the result of our observation, that many of these foreigners, being the veriest peasantry (if nothing worse) of their own land, bring with them a moral and mental organisation not calculated to give a favourable impression.—*Baltimore Gazette.*

A man does not fly poverty and the tax-gatherer, and seek a foreign soil, and land at Baltimore in his holiday clothes, with a nosegay in his button-hole, and himself on his best behavior! but our Baltimore friend thinks that the peasantry only are rough and uncorteous in their demeanor; the worthy American, probably, had never seen aristocrats; let him hear what the *Herald* says:

Don Pedro was the first Prince, either of Spain or Portugal, who introduced anything like sociable and gentlemanly manners and habits. Before his time every member of the Royal Family dined alone, and *seldom used a knife and fork*. For his innovations he was much disliked by all the old servants at the palaces, whom he used to call savages. He retained his faculties to the last, and in great pain and suffering made many domestic and other arrangements for the Queen's Government. Within a few hours of his death, he desired to be dressed in the uniform of Colonel of his regiment, the heroic 5th Caçadorçs, in which he breathed his last, without making any observation on the subject. With this anecdote the army are delighted.—*Morning Herald.*

And yet the Royal Houses of Bourbon and Braganza, among whom, it appears, our friend Don Pedro was the first who had the manners of a gentleman, and the first who could eat with more decency than a pig,—were the very prime nobility of Europe.

It is lamentable to think, however, how much the poor emigrants must go through. Charity and virtue cannot act more benevolently nor more beneficently than by instituting an Emigrant's Friend Society, to advise and aid these poor people, and protect them from their own imprudence, as well as from the knavery of others; the heavy calamities of shipwreck may probably be traced to the avarice of the ship-owners; over-crowding ill-found shipping, and reckless of any other consideration than the amount of freight and passage-money: humanity requires that these things should be looked to.

DREADFUL SHIPWRECK: MORE THAN THREE HUNDRED LIVES LOST.

The New York *Journal of Commerce* of the 1st instant, contains the following melancholy intelligence:—

"Extract of a letter from Picton, dated 11th September.—"We have just received accounts of the loss of the ship *Sybelle*, of Liverpool, from Cromarty for Quebec, with three hundred and sixteen emigrants, all of whom perished. Six of the crew saved themselves in the boat, four of whom arrived here this morning. Can nothing be done to erect a light-house on that fatal island? Surely means should be taken, if possible, to prevent such fatal shipwrecks."—*Halifax Paper.*

We may say, without fear of contradiction (says the above paper), that MORE THAN A THOUSAND of the emigrants who have left Great Britain and Ireland the present year for Quebec, have *perished by shipwreck on the passage*. This is a thirtieth part of the whole number of emigrants. Of a still greater number who have left the same countries for New York, *not one has perished by shipwreck*. These are facts worthy of being taken into consideration by emigrants and their friends.—*Times.*

Whilst we are allowing the ship-owners to drown one thousand emigrants for Quebec per annum, we are told that the school-master saves in England, France, and Germany, no less than 700,000 lives annually; this is refreshing, truly! and shews, therefore, that we can afford to people America and Australia, and let the ship-owners drown away, *ad libitum.*

LIFE PROLONGED BY CIVILIZATION.

If we collect England, Germany, and France, in one group, we find that the average term of mortality, which in that great and populous

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

region was formerly 1 in 30 annually, is not at present more than 1 in 38. This difference reduces the number of deaths throughout these countries from 1,900,000 to less than 1,200,000 persons; and 700,000 lives, or 1 in 83 annually owe their preservation to the social ameliorations effected in the three countries of Western Europe, whose efforts to obtain this object have been attended with the greatest success. The life of man is thus not only embellished in its course by the advancement of civilization, but is extended by it, and rendered less doubtful. The effects of the amelioration of the social condition are to restrain and diminish, in proportion to the population, the annual number of births, and in a still greater degree that of deaths; on the contrary, a great number of births, equalled or exceeded by that of deaths, is a characteristic sign of a state of barbarism.—*Philosophical Journal.*

The South Australian Colony seems progressing, though in the last accounts from England men's minds were much too full of the change of administration, to leave a space for minor matters: the *Herald* attaches great importance to the appointment of Colonel Napier to govern it: the query is, would not it have done better without a Governor at all? Colonists should be a rough and ready race; up to anything, and equal to anything, but paying for Governors: poverty drives them from home, and if they had been equal to paying for the Corinthian Capital! and had a taste for the decoration! they would have staid at home, or at least ought to have staid at home

By a provision of the South Australian Act, His Majesty is prevented from formally appointing the Governor of the province, until the colonists shall have made arrangements with the Commissioners for the purchase of lands to the amount of £35,000, and for the investment of £20,000, by way of security for money advanced on the Colonial Revenue Bonds, by the issue of which the expenses of colonial government are to be defrayed. The colonists, in short, must invest £55,000 in the undertaking, before the appointment of their Governor can appear in the *Gazette*. As, however, the early success of the colony must very much depend on the character of the first Governor, and as the assembled colonists require a leader now, almost as much as they will require one after their arrival in Australia, His Majesty's Government have elected the gentleman, who will be appointed Governor as soon as the Act shall allow. The choice is most creditable to Mr. Spring Rice's administration of the Colonial Department. We remember that our contemporary, *The Examiner*, in reviewing Colonel Charles James Napier's account of his proceedings as Governor of Cephalonia, said, "he has shown himself to be the fittest man in England to govern a colony, and, *therefore*, he is the last man to be chosen for such a purpose." This Colonel C. J. Napier is to be the Governor of South Australia.

Until now, indeed, if a colonial officer disagreed with his chief in Downing-street, and, above all, if he were so bold as to defend his own conduct by an appeal to the public, he was marked for neglect, if not persecution.

But, it seems, we have changed all that. Colonel Napier, who, for years, has been a sort of *bête noire* to the Tories yet nestling in Downing-street, who has published a book full of strong reflections on our colonial administration, and who is incapable of expressing a repentance which does not feel, is, nevertheless, selected to fill an important office under Government. This is one of the many good fruits of reform. Let us hope that, in time, all public servants will be chosen for their fitness.—*Chronicle.*

Public servants chosen for their fitness! when the Devil is once fairly chained, and the Millenium is really begun, the *Examiner* and *Chronicle* will have the extreme satisfaction of seenig the salaried officials of government acknowledge themselves "Public Servants," and the people will then exercise that controul over their representatives in Parliament, which shall insure their being "chosen for their fitness;" but the difficulty is to get the Devil chained.

THE REV. MR. GATHERCOLE.

Who is the Rev. Mr. Gathercoals, or Mr. Set-on-fire-coals! for the creature seems a termagant? his being praised for such outrageous vituperations is a bad sign of the times. The Devil was the first Whig! say the Tories; the Devil was the first Dissenter! say the High Churchmen! The Devil was the first who touched the tree of knowledge! say the Noodles! marvellous logic! "Dissent and monarchy can never coalesce or stand together;" if by monarchy, a very pretty word if not ill coupled, the Rev. Mr. Gathercole means Rotten Boroughs, and a Church with Bishops on £25,000 per annum, and 7000 working clergy, having cure of souls, whose average income falls short of £90 per annum; and such like sprigs and ramifications of the "monarchy" of his love, he is right; the sturdy spirit of dissent is awake and aroused, and not to be cajoled; and most certainly not to be abused and bullied into acquiescence with abuses, proved to be such, any longer; the Dissenters will ask for more than University privileges before they are many months older.

The Dissenters throughout the country are quite indignant at the praise bestowed by the Bishop of London, in a late charge on the Rev. Mr. Gathercole's Letters to a Dissenting Minister, in which the most virulent abuse is heaped on them as a body. It is not to be supposed that dissent can be approved of by a Bishop; but of speaking of opponents, something like decency of language ought to be observed, and the production with which the Right Rev. Father in God has identified himself, is beyond measure scurrilous. What apology can be offered for language like the following:—

"The principles of independency are indeed the principles of depraved human nature, instilled into man and fostered in him by his great enemy *the Devil—the first Dissenter!!* . . . Every Dissenter in choosing his own teacher despiseth and rejecteth God in despising and rejecting his regularly appointed ministers, who are his representatives, acting in his name, and in virtue of the authority which he has committed to them through a medium of his own appointment. . . . . In short 'the principles of dissent' or independency influence every son and daughter of Adam, more or less, and are the source of all the evil of every kind on earth. Drunkenness, adultery, robbery, and murder, and every species of iniquity and vice, proceed from those infernal principles of licentiousness, for which Dissenting teachers contend under the specious names of 'liberty of conscience' and liberalism. I know that they do not allow their principles to carry them to such lengths, but I also know that others do, and consistently so too; for some, alas! too many, claim and take liberty of conscience sufficient to allow them to practise deceit, falsehood, cheating, robbery, and even murder itself. And were it not for the wholesome restraints imposed upon the consciences of men, and their liberty circumscribed by ecclesiastical and civil laws, their numbers would be so much increased that the state of society would be intolerable. . . . Dissenters in dissenting and separating from the Church, commit the heinous sin of schism, which is, in my opinion, a greater sin than the sin of drunkenness, and, therefore, a great deal more spoken against in the Word of GOD. . . . I look upon schism, in fact, as tantamount to a renunciation of Christianity. What is it but a renouncing of the Church of CHRIST—a renouncing of her ministers, and, through them, a renouncing of CHRIST himself? Do not schismatics, in forsaking the Church of GOD, and thus abandoning that machine which GOD has placed upon earth for the accomplishment of his great work of redemption in the salvation of men, and inventing new schemes of salvation, prefer their own wisdom and their own ways to the wisdom and ways of GOD? And as schismatics forsake the Church, and cut themselves off from her, they ought to be the very first persons over whom the Church should refuse her burial service to be read."

"Dissent and monarchy can never coalesce or stand together. Dissent is naturally opposed to monarchy, and cannot be otherwise. Its very principles naturally generate, and ever must generate, disloyalty and disaffection to a king, and insubordination and rebellion to any form of Government that does not square with the dissenting notions of democracy. Dissenters do sometimes, to be sure, boast of their loyalty, but just as a criminal asserts his innocence—in such a way that the very manner of doing it is only calculated to excite suspicion."

It is true the Bishop of London does not stand alone in eulogising this precious tissue of abuse. Thanks were expressly voted to the Rev. Mr. Gathercole "for his book," at a numerous meeting of his brethren at Leversedge, in Yorkshire. But Dr. Blomfield ought to have considered the conduct of those clergymen as worthy of reprehension, and not imitation. Does the Right Reverend Father in GOD think that the Church is to be benefited at this time of day, by calling of names—by terming "the Devil the first Dissenter?" This piece of low abuse has not even the merit of originality—it is a parody on the well-known opprobrious saying, that "the Devil was the first Whig."*—*Times.*

The Devil was the first Dissenter, was he? is there a Devil-created, or

---

* In fairness to the Bishop of London, it should be known that his Lordship has confessed that "Mr. Gathercole was too severe in some things," and in his pastoral letter he is very complimentary to a proportion of the Dissenters.

The *British Critic*, the organ of High Church principles, is very indignant at Mr. Gathercole's attack. In an article *On Extremes in Religion*, it is intimated that Mr Gathercole has done injury to the Church, and should retire from it. (ED.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

instigated by the Devil, dissenting congregation in Great Britain, which would have permitted their devotions and divine service to be interrupted by such a piece of foolery as the following?

SINGULAR CELEBRATION OF MARRIAGE.

On Sunday morning last, a marriage was solemnized in the parish church, Cheltenham, much to the surprise of the congregation, during the morning service—the performance of which was suspended a short time for the purpose. The bridegroom was a gentleman's servant, who claimed his right to be married at that time, the banns having been thrice published—in consequence, as he said, of his being obliged to leave Cheltenham with his bride in the afternoon of Sunday. It appears that, by the ecclesiastical law, his claim could not be refused.—*Cheltenham Chronicle.*

HANOVER.

The legitimates are looking about, as usual, for means to be mischievous; there seems fire and fuel ready for a combustion in Hanover; and Prussia will not look idly on. The mouths of the Elbe, Ems, and Wesee would form an incalculable gain to that thing of shreds and patchwork which the military genius of Frederic made up into a kingdom out of the Electorate of Brandenburg, and the spoils of all its weak neighbours. Hanover, and Denmark, and Mecklenburgh, united to Brandenburg, would consolidate Prussia into a firm sovereignty, of which Berlin would be, as nearly as possible, the centre; but what will Russia say? as for poor M. d'Este, he would cut a sorry figure in the contest.

Frankfort, Sept. 22.—M. d'Este, son of the Duke of Sussex by Lady Augusta, daughter of the Earl of Dunmore, on the 23d August, presented a petition to the Chambers of Hanover, and to the Viceroy, wherein he endeavours to prove that he is issue of a legitimate marriage, not beneath the rank of his royal father, since the Earl of Dunmore was directly descended from a reigning family; he therefore prays to be admitted to all the rights and dignities belonging to a member of the royal family He supports himself on the opinion of Counsellor Klüber, one of the most celebrated lawyers of Germany. The heiress presumptive to the Crown of England is the Princess Victoria, daughter of the Duke of Kent. As females are excluded from the throne of Hanover, it will be separated from that of England on the accession of the Princess Victoria, daughter of the fourth son of George the Third. The heir presumptive to the throne of Hanover is the Duke of Cumberland, George the Third's fifth son. His son, born in 1819, is nearly blind, not of strong intellect, and in bad health. It is therefore evident that if M. d'Este were recognised as being the legitimate issue of the Duke of Sussex, he would have a good chance of succeeding to the throne of Hanover.

It was not until after the late conferences at Vienna that the idea of putting forth his pretensions was suggested to M. d'Este by an individual who resides in this country, and seems to keep aloof from public affairs, but who is, nevertheless, an agent of the northern powers, whenever any difficulties are to be raised in the way of the governments or persons not devoted to the system of those courts.

The Frankfort account of the young Prince of Cumberland is not very encouraging to the loyal hopes of the Ultra-Tories, who eat, and drink, and sleep, and live on the hopes of consigning the young Princess Victoria to this clear-sighted, strong-headed, and vigourous young gentleman.

COFFEE.

The island of Java appears to yield more Coffee than all the British West India Slave Islands united; the coffee-tree is a beautiful and most highly ornamental shrub, growing as much as twelve or fourteen feet high, of the most brilliant-coloured leaf, what Chaucer terms "a glad light green," and the blossoms snowy white; easily reared, producing fruit the fourth year, and lasting twenty years. The writer of this planted three hundred young trees as ornamental shrubbery in his garden in India, and hopes in the fifth year to supply his table from his own garden. The district in which he made this plantation is equal to the culture of very many thousand tons of coffee; and superior coffee to Java was sold there in the village bazaars, in 1831, for 14 seers, or $8\frac{1}{2}$ pounds, the rupee, or about 1s. 6d.; the rupee of that district being a bad one. Such are the capabilities of parts of India, utterly neglected! whilst the tea-trade and China occupied the conclaves of Leadenhall-street; they may now have leisure to think of India.

COFFEE CONSUMED THROUGHOUT THE WORLD.

The consumption of coffee in Great Britain is about 10,000 tons; France, 20,000 tons; in the Netherlands, 40,000 tons; Spain and Portugal, 10,000 tons; Germany and the Baltic, 32,000 tons; United States, 15,000 tons. Total consumption, *tons*, 127,000. Of this large quantity the British West-Indies does not produce more than 30,000,000lbs. or 13,392 tons; while the Island Java alone yields 20,000 tons; Cuba about 15,000 tons; St. Domingo, nearly 16,000 tons; the Dutch West-India colonies, 5,000 tons; the French ditto and Bourbon, 8,000 tons; and the Brasils and Spanish Main, fully 32,000 tons. Our East-India colonies are capable of yielding excellent coffee to an indefinite amount.—*Spectator.*

In the meanwhile, let us see what British capital and British energy is capable of creating: the Liverpool and Manchester Railway-rate of travelling being nearly half a mile in a minute, on an average! and exceeding that rate when needed. This stupendous work employs above two millions sterling, and upwards of three thousand operatives, and expedites the most important trade of the country in a manner that no human foresight or calculation would have dared to anticipate.

MANCHESTER AND LIVERPOOL RAILWAY.

The report of the fifth-yearly meeting of the company has been published, from which it appears that, compared with the corresponding six months of the previous year, the increase in merchandise conveyed along the line has been 7,727 tons, and in passengers 29,255 persons; and that a profit on the half-year's business has accrued of 34,621*l.* 16*s.* 4*d.* which enables the company to declare a dividend for that period of 4*l.* 10*s.* per 100*l.* share, leaving a reserved fund of upwards of 4000*l.* to meet contingencies. The total expenditure on the construction of the railway and works is stated at 1,132,075*l.*, and the net profit between July, 1833, and July, 1834, at 75,575*l.*, being at the rate of 6*l.* 13*s.* 6*d.* per cent. per annum.—*Liverpool Paper.*

The following curious experiment, if quite correctly stated, seems applicable to further use than the mere solving of a question of physical power; if the steady pressure of 107 tons does not exceed the force of one man's strength delivered in a blow, then the outcry that has been made respecting the supposed unscientific principles of ship-building, is senseless in the extreme; the strength of a ship compared with its weight, and the weight it has to stow in cargo, &c. far exceeds the above proportion of the supposed effect of 107 tons applied in steady pressure; let us do our best to improve in naval architecture; but let us beware lest we over-rate supposed defects; a little stronger than strong enough, and renewing before the good ship goes to pieces by decay, and the wooden walls of old England may float on, as they have hitherto floated, the joy and rejoicing of the boldest and the best sailors of any age or any nation.

HUMAN STRENGTH.

From the results of experiments made in Portsmouth dock-yard, in driving and pressing in large iron and copper bolts, a man of medium strength, striking with a mallet weighing 18 pounds, and the handle of which was 44 inches long, would *start* a bolt about one-eighth of an inch every blow. It required a pressure of 107 tons to press the same bolt down the same quantity of space; but a small additional weight pressed it completely home.

The following, as a match against time in aquatic exercise, appears to surpass ordinary feats of eccentric and gallant spirits, "indocile to endure inactivity." Such occurrences should be noted; and any thing that speaks out, characteristic of John Bullism, should be cheered and welcomed. We wish Capt. Kemp had not wasted his precious time over his cheroots at Hampton Bridge, and lost his wager for mere smoke! but so Fortune decreed, and it is not the first laurel that has been thrown away for something

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

equally vapoury. Let us compare the vices and the follies, and the expenditures of Newmarket, with that highly national and praiseworthy establishment, the Royal Yacht Club, and then let us consider how aristocratic tastes, by being good or bad, may benefit or injure a country.

AQUATICS.—MATCH AGAINST TIME.

A match which excited some interest in certain private circles, came off on Friday last. J. N. Kemp, Esq. an officer in a dragoon regiment quartered at Hampton, and we believe son of the Kemp, of Kemptown, had accepted a wager of 100*l.* to 70*l.* that he would not row from Westminister-bridge to Hampton-bridge and back, a distance of about 45 miles, several of which were in the teeth of a strong current, in seven hours. He had also another bet, that he could not perform the distance in 7½ hours. The boat in which he rowed the match was built expressly by Searle, the celebrated boat-builder, and is not only one of the most beautiful, but one of the lightest ever launched, being 27 feet long, and weighing only 82lbs. Mr. Kemp started from Westminster-bridge at 19 minutes to two, p m. about an hour before high water. He reached Putney in 31 minutes, and Hampton-bridge in three hours and 33 minutes, which, as in returning he would not have to contend with the current, gave him the fullest confidence of success. In this, however, he seems to have been too sanguine, as he wasted some time in smoking, and sending ashore for refreshment; these delays, added to the fog which came on at night, notwithstanding the most strenuous exertions on his part, cost him his wager, as he did not arrive at Westminister-bridge till 2½ minutes after the stipulated time. Having won his second bet, however, he is, we believe, no loser, and as he had previously, while practising, accomplished the distance within the nine hours, there can be little doubt that but for the circumstances to which we have alluded, he would have won the match. It is admitted to be a great feat even for a waterman, and such as perhaps very few could accomplish.

John Bull, and his brother Paddy, are strange contrasts; whoever ventures to laugh at John, runs a serious risk of feeling John's fist as an accompaniment to his indiscreet betrayal of merriment. Paddy, on the other hand, will be laughed at, rather than not attract attention, or deliver himself of one of his strange conceits which, generally speaking, exceed in wit and invention the utmost expectation of the listener. "Why do you not destroy these flies?" says the superlatively wise Mr. Carey, and he gives the reply as if it had been delivered in sober sadness!

IRISH FLIES.

When we came into the parlour of the inn, at Fermoy, we found it black with flies. "Why do you not destroy these flies?" we inquired of the landlord. "Bless you," he replied, "that would only make the matter worse; whenever we kill one, all his acquaintances come to the funeral."—*Letters from Ireland, by Carey.*

Every day is producing its changes every where, and no where more decidedly than in the green island. The tithe war is a contest which will give the Duke of Wellington more trouble than the whole of his glorious career from Roleia to Waterloo, and the value of the honor will be short of the price of a tithe pig! but, whilst the peasantry are year by year advancing in the knowledge of their strength, and of what may be effected even against military discipline by "agitation," Dublin, it seems, can correspond with America.

UNITED STATES—IRELAND.

Some idea may be obtained of the communication between persons resident in America and their connexions in this country when it was estimated by the clerks in the post-office that the postage upon the letters in the American post-bag, received one day last week, was upwards of 300*l.*—*Dublin Register.*

The Duke of Wellington was reported to say in Parliament, that poor Ireland had only been half conquered! it may be worthy of his consideration, before the idea of completing the good work occurs to him, to conjecture what may be contained in the American post-bags; and whether Paddy's cousins at Baltimore would merely twirl their thumbs whilst Paddy was cudgelled into submission to Orange lodges!

TYLER ON OATHS.

The appearance of a Quaker, and sundry Catholics in Parliament, must have been as astounding an event, as fearful a phenomenon indicative of the moral volcano then bursting, as Mons. Roland's shoe-*strings* in the Court of Louis 16th. We are, it may be hoped, rapidly advancing to the study of essentials, and the contempt of non-essentials. John Bull at sea, and John Bull on shore, are in absolute opposition; but whether our soldiers are ever to be dressed and equipt in a manner that will leave them the free use of their limbs, or whether our noble tars are to have their honest necks buckled into stocks, and their heads encumbered with weighty shakoes, remains for the future to develope; perhaps, as the old-order men are coming in again, we may have Jack belted and buckled, and fancy revels in the confusion he would make, poor fellow, in his drill-master's priggery! but what are we to say to the profane system of legalized swearing? every thing in England is on oath. The *Sun*, commenting on the *Edinburgh Review* of Tyler on Oaths, describes the Work as a curious, an able, but a sad record of English extravagance in the article of adjuration. Our annual consumption of oaths is truly enormous, and right glad are we to find that even at this late period of the world's existence, inquiries are being set on foot to diminish it. The great difficulty appears to be in fixing on some less awful, and in many cases, blasphemous means of obliging men to speak the truth. Yet this seems impossible without abolishing oaths altogether, unless men agree that there is an intrinsic holiness in certain sounds, or combinations of matter, independent of what is conceded to it by that common consent which raises it up an arbiter of truth.

The reviewer says—

"The oath was formerly a regular part of every treaty. Let jurists make out their lists of the broken faith of nations, and put the sworn treatise of the thirteenth, and the unsworn ones of the nineteenth century, in contrast, with each other. Modern diplomacy need not blush. Formerly, the entire male population was sworn to its allegiance. In England, boys, as soon as they were twelve years old, attended the Court Leet for that purpose. We do not know when this comedy was played for the last time. But there can be no doubt, that it would be a much more difficult thing to get a single village to turn out into rebellion now, than it would have been for party leaders to bring out the suitors of the Court Leets of half the kingdon into the field against the king."

And yet, notwithstanding this falling off in our national expenditure of oaths, a return laid before the House of Commons states the number taken before the Board of Customs in 1830, to be no fewer than 101,596! and before the Board of Excise 194,612! while the consumption at Chelsea only is estimated at 320,000!

Religion and common sense alike call for a change here.*

CORRESPONDENCE.

CLASSICAL DISCUSSION.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—I regret that your valuable Correspondent, in his Review of Howison's Work on European Colonies, in your last Number, has given a translation of a passage in Herodotus, which, on more careful examination, I think, he will not find defensible. He endeavours, on the authority of Herodotus, to establish his opinion, that the Phenicians who were sent by Necho to ascertain the circumnavigation of Southern Africa, stopped and wintered in parts resorted to "by African Traders." "Herodotus

* We believe the change has already taken place. (ED.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

states," says he, "that when autumn came on, the navigators secured their ships on shore, *in the usual place*, where traders to Africa were wont to winter; sowed grain, reaped a harvest, and proceeded; and having consumed two years, turned the pillars of Hercules in the third year, and returned to Egypt." Again: "The points overlooked by the learned commentators are, the declaration that the navigators wintered, and sowed grain, precisely *in the same manner* as African traders are wont to do, HINA HEKASTOTE TES LIBVES PLEONTES GINOIATO."

The Reviewer, by quoting the words of the original author, intends, doubtless, that a stress should be laid upon them, in supporting his charge against the Commentators; but surely "in the usual place," and "in the same manner," although translated from the same words, convey very different meanings. The statement of Herodotus has hitherto been considered, and, I believe, will still continue to be considered this,—"that the Phenicians, as often as autumn came, having brought their ships to shore, sowed the land, along whatever part of the Lybian coast they might be in their voyage, (literally, they sailing might be,) and waiting for the harvest." The old translators agree in the sense of the words HINA HEKASTOTE K. T. L. though with some variety of expression, namely, "in whatever part of Lybia they, the Phenicians, might be in their voyage," not, "where traders of Africa might be."

They have good authority for this translation; the words HINA HEKASTOTE, are used in the same sense by Herodotus, Lib. viii. 155, where, also, the uncertainty of place is expressed by the optative mood. But it may be asked, will not these words bear the meaning adduced by the Reviewer? No expression similar to TES LIBVES PLEONTES, with a meaning parallel to that of "African traders" has been adduced by Dr. Burney, who searched for examples to invalidate the rules on the use of the Greek article by Bishop Middleton. If the places in Africa, at which the Phenician navigators stopped, were determinate, the construction of GINOIATO with HINA, is contrary to the general usage, and to that of Herodotus.

It was to be expected that the Phenicians, in the first voyage round the southern extremity of Africa, should stop in unknown places. If it be conceded that Port Natal was the place in which they passed the autumn of the *first* year, it still remains an object of enquiry, where they passed the autumn of the *second* year. Was this, also, a place "where African traders were wont to winter?" That the Phenicians landed in two successive autumns to sow grain, and wait for a crop, appears from the account of Herodotus, who states that they passed between the pillars of Hercules on the third year of their voyage. The silence of Herodotus respecting any trade along the eastern or western coast of Africa, is an argument sufficiently decisive that none existed in his time, especially as he describes the course of trade in several countries, and particularly the route and stages of the traders along the northern parts of Africa. It may be further observed, if voyages as far as Port Natal had been familiar to African traders in the time of Necho, that the Phenicians, sent by his order, would not have reported the appearance of the sun on their right hand as a wonderful occurrence. H. O.

We doubt whether an antiquarian or Greek discussion would be relished by the generality of our readers, but circumstances, to which we need only refer, having drawn attention to the article under consideration, it becomes requisite to reply more fully to H. O. than would otherwise have been thought necessary.

To those who read Greek, a reference to the original will show, that if the Reviewer gave a free translation of the six words quoted from Herodotus; H. O., whilst reproving our freedom, has made equally free with the nine preceding words; and what is more, has argued as stoutly upon his error as we have on ours. There is, however, this difference betwixt us, that our error, if it be one, makes sense of the passage, and is very strongly supported, not refuted, as H. O. would insinuate, by ancient history: whilst H. O.'s version, if it is to be received as the meaning of Herodotus, supposes the 'Father of History' to deliver himself of a palpable absurdity.

As it may appear bad taste to bandy charges of inaccurate translation, backwards and forwards, we will give Wesseling's Latin version, and Beloe's English, of the whole passage, which is luckily a short one. Wesseling renders it—"Qui quum autumnus advenisset, applicitis ad terram navibus, sementem faciebant; ubi identidem navigantes in Africam forent." Beloe says "on the approach of autumn, they landed in Libya, and planted some corn in the place where they happened to find themselves." Let these be compared with H. O. who makes the passage: "as often as autumn came, having brought their ships to shore, they sowed the land along whatever part of the Lybian coast they might be in their voyage (literally, they sailing might be), &c." As all these three essentially vary, it is clear that all three cannot be right; therefore it is fortunate that common sense may be called in to arbitrate; for whatever makes nonsense of a passage, may be safely rejected as an inaccurate version.

Thus we may venture to suppose that the Greek words HOKOS DE GENOITO PHTHINOPORON PROSCHONTES AN SPEIRESKON TEEN GEEN, do not mean "as often as autumn came, having brought their ships to shore, they sowed the land;" first, because it has not been the usage of agriculturists in any country, or in any age, to sow in autumn! or to reap at the end of winter! secondly, because if they had stopt merely for harvest, and for no other reason, the corn consumed by the mariners of a fleet, whilst waiting for a harvest, would amount to as much as they were likely to gain by the increase of the seed corn they planted! thirdly, because the acts of digging and sowing, indicate a knowledge of the soil and climate, and the changes of season to be expected; the seed corn was too precious to have been cast upon the earth, unless they had the certainty of reaping, founded on former experience.

H. O. says—"If it be conceded that Port Natal was the place in which they passed the autumn of the first year, it still remains an object of inquiry where they passed the autumn of the second year. Was this also a place where African traders were wont to winter? That the Phœnicians landed in two successive autumns to sow grain, and wait for a crop, appears," &c. "The silence of Herodotus respecting any trade along the eastern or western coast of Africa, is an argument *sufficiently decisive that none existed*," &c. We should deny this conclusion, even if the hypothesis on which it is founded, were correct, which it is not. Herodotus *does mention* a trade on the western coast of Africa, and states the particulars; and it cannot surely be wonderful that the spirit of enterprize which carried the Phœnician ships north of the Pillar of Hercules to Britain, for tin, should have likewise carried them the same distance, coasting south, that is to say, beyond Sierra Leone, for gold and ivory: the absurdity lies, not in the belief, but in the doubt, of so natural an occurrence. Modern discovery has shown the impracticability of coasting down the west side of Africa below the 10th degree south: the wind and current are unchangeably from the south, and there is no watering place on the shore; this, though it may define the limit of Phœnician knowledge, does not disprove any knowledge at all. But as respects the fact of a remote foreign trade, long before the date of Herodotus, we hold it to be established, first, because Moses, supposed to have promulgated his law upwards of 1500 years before Christ, that is 1100 years, or thereabouts, before Herodotus, in the 30th chapter Exodus, and 23d verse, proves that a trade to the Cinnamon Country existed in that day; second, because Solomon is supposed to have sent his fleets to Ophir, 550 years, or thereabouts, before Herodotus; therefore, a trade to a country which yielded gold, ivory, apes, and peacocks, and some wood of more value than cedar, or it would not have been brought so far, must have existed. Should H. O. say that both the Cinnamon Country and Ophir are considered by him to lie in the east, we agree with him, and could support his opinion to that effect with better arguments than we suspect he himself possesses: but the voyage from the Egyptian coast of the Red Sea, coasting Arabia and Persia to India, is longer than the voyage to the 30th degree on the coast of Africa; therefore the practicability of the thing is established; the only question is, the probability. But Herodotus is not silent "respecting any trade on the western coast;" on the contrary, near the conclusion of the 4th Book, he describes, very particularly, the Carthaginian mode of intercourse with the Libyans, somewhere beyond the Pillars of Hercules, which Beloe supposes to be in Senegambia; but we would place it further south, supposing Cape Verd to be the Western Horn, and Cape Palmas the Southern Horn, of their ancient geography. Let H. O. refer to Wesseling's Edition in the Public Library, page 367; the passage, and the notes, are worth his perusal,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

if he has never read them, which it would seem that he has not.

Again:—H. O. says "it may be further observed, if voyages as far as Port Natal had been familiar to African traders in the time of Necho, that the Phœnicians, sent by his order, would not have reported the appearance of the sun on their right hand as a wonderful circumstance." Now, here is a man who ought to know better, and yet who will write nonsense, merely, as it seems, because he won't take the trouble to think on what he is writing about. The possibility of having the sun to the right hand, that is, of getting south of the sun, was surely known to those who built the observatory of Syene, on the tropic, where Herodotus himself was, and saw it, and must, had he been totally ignorant of the fact before, have had it explained to him when on the spot: the marvel is, not "the appearance of the sun on their right hand," but that it was there all the time they circumnavigated Africa: the wonder was, not that they reached and passed the Tropic of Cancer, a very ordinary occurrence, as in the journey from Egypt into Ethiopia, and down the Red Sea; but, that they reached the Tropic of Capricorn, and were beyond the Torrid Zone altogether. Wesseling translates the passage thus: "referentes quæ apud me fidem non habent, sed forte apud aliquem alium: circumnavigantes Africam se habuisse solem ad dextram;" it is not "they sailing," but "they circumnavigating." Baillie, on ancient astronomy, has well said, that the fragments of real knowledge scattered through the errors of the classic literature, resemble the demembrements of a former age of higher attainments, than what the Greeks and Romans ever reached. The circumstance may possibly be explained, should our knowledge of oriental literature ever enable us to trace the sources and channels through which the knowledge of the east was filtered through the Phœnicians to the Greeks. But, that the geographical fact of an inhabited region in the south temperate zone was known to the ancients, is incontestibly proved by Pomponius Mela, who says, cap. 1, "Hujus medio terra sublinus cingitur undique mari. Zonis quinque distinguitur: mediam æstas infestat, frigus ultima reliquæ habitabiles paria agunt anni tempora verum non paritur. Antichthones alteram, nos alteram incolunt:" the word, antichthones, meaning inhabitants of an opposite part of the earth, and as nearly as possible parallel with antipodes, though not so precisely opposite! No man could have invented such an accurate description; and therefore, as it is followed up by fiction, we must suppose that the knowledge of these facts had rolled from a far distant source, and become turbid in its course; and yet it is a curious circumstance, too, that the region where the pigmies fought the cranes,—a land of dwarf men and gigantic birds,—should be the southern limit of Africa, the region of the pigmy Hottentots, the smallest of men! and the giant crane, the ostrich, largest of birds! the fable appears with a foundation. But to return to Pomponius Mela: as no part of Asia lies south of the Line, and America was not known, there could not possibly be any antichthones, except the South Africans, then known to inhabit the southern temperate zone; and consequently, the utter ignorance respecting them, which H. O. has supposed and argued on, appears to be disproved. Further, the author of the African Periplus having first placed Prasum, the limit of the resort of the African traders on the eastern coast in 34º south; and having, apparently, after comparing his dead reckoning with the journals of others, corrected it to 24º, it is worthy of remark, that Ptolemy reduces it to 15º, for no other reason than that the natives are described as a race of small black men; and therefore, that their region cannot be so far from the Line as 24º south; an assertion which shows Ptolemy to be a theorist, correcting a practical man, who appears to have described from personal knowledge; and whose acquaintance with the current which set round the Cape from the Mozambique Channel, proves him to have been well informed of the peculiar characteristics of the southern ocean. The accuracy of the Periplus respecting Prasum, seems corroborated by Mela, who having described the known coast of Africa, concludes with the singular assertion "Cœterum oris *ad Eurum* sequentibus nihil memorabile occurrit: vasta omnia, &c." Now assuredly there is no part of the coast of Africa, whence it could be said "the rest of the coast *eastward*," that is to say, where an alteration in the direction of the line of coast could be thus distinctly indicated, except somewhere about the 24th degree south; and the *ad Eurum* may either be an error for *ad Hesperum*, or it may be confounding Madagascar with the African coast; or it may be the error of Ptolemy's Geography: but we are disposed to doubt the latter, as the above extracts indicate a superior knowledge than what Ptolemy possessed.

Again:—Herodotus cannot have considered this voyage as a wonderful achievement; nor does he describe it as such: the Persian army which marched to the Hesperides, to the shores of the Atlantic, TES LIBUES HEKASTATO ES HESPERIDAS, to the extremity of Africa, performed a far more arduous and toilsome expedition; and a longer march than it would be for a caravan of traders by land, to coast the eastern side of Africa from Egypt to Sofala.

The subject matter of these remarks having a local interest, we prosecute the discussion further than we should otherwise consider expedient. H. O. in translating the passage, uses the words, TEEN GEEN, twice; "they brought their ships *to shore*, sowed *the land*. He also overlooks the force of the word, PROSCHONTES, which used as a nautical technical word, means a great deal more, than "they brought their ships to shore;" or as Beloc blunders it, 'they landed.' Wesseling renders it, applicitis ad terram navibus, which is better than either; but is still unequal to the original.

This brings us to our next remark, that in translating from an ancient account of ancient manners, something more is wanted than what is to be learnt in a Lexicon: *fortunately* for our purpose, the inhabitants of the East remain unchanged through the lapse of three thousand years; and the oldest chronicles describe them in the first ages to have been such as they now are; nor is there a more faithful delineation of oriental character and manners, as they are now to be recognized in the East, than what is presented to us in the sacred volume: the reason is obvious; without the press, and without the schoolmaster, improvement, beyond a certain pitch, is almost impracticable; and Nature never changes: thence, many obscure passages in the two best books, the Bible and Homer, lose their obscurity to one conversant with the East. We will give an example. Let Iliad, p. 257 to 262, especially the concluding line, be compared with Deutoronomy, c. 11, v. 10, "watering with the foot like a garden of herbs:" the two passages cannot be accurately understood, without having seen the process of irrigation, as practised in Egypt and the East. And here let us pause to add our feeble testimony to the beauty and fidelity of the English version of the Holy Scripture: the wonderful accuracy with which the Hebrew text has been translated, appears almost miraculous to one who has tried and knows the difficulty of putting anything Oriental into an European garb of modern phraseology. But to return to Herodotus, we consider the obscurity of the passage under discussion, to be occasioned by the ignorance of modern Lexicographers of the precise import of PROSCHONTES, used as a naval technical: any one who has been in an Arab or Indian port, knows that their largest vessels, upwards of 500 tons, when they *winter*, as we call it, are totally stript of masts and rigging; and being floated thus light, as high on the beach as a spring tide will take them, are thence hauled by windlasses, and the whole population of the port, above high water mark, and are then *thatched over*, to lay up for the Mousum, (Anglice, Monsoon,) the season during which sailing is dangerous or inexpedient; and during which period, the mariners employ themselves in agricultural pursuits and fishing, as suits their inclination or convenience; for it is worthy of remembrance, that the winter months are their fine sea weather period; and their season of storm and rain, the agricultural months from May to September. The north-west Monsoon commences betwixt the middle of October and middle of November, the fleet taking its departure with the change of Monsoon, would reach Sofula, a distance of 3,500 miles, or thereabouts, at the average rate of 15 miles per diem, under eight months: from July to December, the winds are westerly, and would enforce their stay: and it being supposed that former experience and knowledge of the coast having instructed them in this necessity, they would be prepared for it, and the period is sufficient, and the season is suitable to get in a crop whilst they waited for a favorable change of wind. Should it be said they ought not to have set out so early, as to render such a long stay necessary, we reply, that from June to September are foul weather months from Egypt to the Line, and the navigators had no option, with their means, but to act as they did. After the middle of December, the south-east wind is steady, and would convey the voyagers round the Cape to the Congo River, in the 10th degree on the Western Coast, without their requiring to use the oar; a few weeks sufficing to carry them 3,000 miles of distance, with the favorable current and fair wind: whence their course by force of oar to Sierra Leone, would occupy them until May or June, the commencement of the hurricane and rainy period of that coast; where remaining until October, they could proceed thence, and passing the Straits of Gibralter, would return to Egypt in the third year.

The argument by H. O. that, if the places in Africa at which the Phœnician navigators stopped, "were determinate, the construction of GENOIATO with HINA, is contrary to general usage, &c." falls, because we have not said, that Herodotus spoke of the places as determinate; we gather from the context and sense of the passage, that the Phœnicians who guided the fleet, were aware of a certain wintering haven, and went thither; but that it was unknown to Herodotus.

Our reason for supposing that the word PLEONTES did not apply to the parties then sailing was, that when Heredotus speaks of them on their voyage, he uses the word PERIPLOONTES, they circumnavigating, not PLEONTES, they sailing. Further, with perfect deference to H. O's superior knowledge of the Greek language, we humbly suggest that if Herodotus had written "HINA TES LIBUES HEKASTATO," or "OI PERIPLOONTES TEEN LIBUEN," then our version would not have been *defensible;* but supported by the context, as it now stands, we think it so at present. The parallel passage referred to by H. O. is the example in Scapula's Lexicon, under the word TEKASTOTE, and the production of it, is not, consequently, any great proof of extensive reading! but though HINA and HEKASTOTE, occur together in both passages, we are far from agreeing that they bear the same meaning in both places; and we are borne out by Wesseling, who translates the words, "ubi identidem" in our case, and "ut in quamque" in Scapula's example, referred to by H. O.

We do not wish, in future, to renew discussions of this nature, which can interest so few of our readers; and though we shall always receive H. O's communications with grateful pleasure, we hope they may embrace subjects of a more popular character. We should, however, feel flattered should he consider our

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

pages as deserving of his commentary in any of the periodicals at home exclusively devoted to classical literature. Should he do so, we beg leave, in addition to the two interesting passages to which we solicited his attention, to point out a third, which is in Herodotus, and which, we think, is a curious historical hint, that has escaped observation.

H. O. will well know, that a certain class of unbelievers in the sacred books, have built an argument on the fact, that the first thirty-six chapters of Genesis are evidently, from the style and language, by different writers from those which follow: whence, and from some other circumstances, it has been contested that the early history, the rite of circumcision, and the Jewish ritual, were adopted from the Egyptians; and the latter not of divine institution. Now it would be a triumphant reply to such an argument, to prove that the Egyptians borrowed something from the Jews; and we think Herodotus unwittingly establishes it in the following passage, which, our apprehension of being again charged with fanciful translation, induces us to transcribe from Wesseling, as Beloe's English version is not worth quoting. After describing sundry peculiarities, which he conceives that the Greeks had borrowed from Ethiopia, he adds: "Quinctiam hinc primum mihi videtur ululatus ('ololugè) in templis extitisse, quod eo Africanæ mulieres utuntur ac utuntur belle," (kalos.)

As Hololugè very clearly appears to have been the burthen of a sacred song used by the Ethiopians, and chanted *sweetly* by their women in their temples; and to have been received by the Greeks from them, through the Egyptians; our recognizing in it the Hebrew Halelu Jah—Praise ye the Lord, the chorus of the Hebrew psalms and sacred melodies, indicates the Hebrew origin of the song; as the word has no meaning in Greek, but has become corrupted from its Hebrew original of sacred melody, to the howl of funeral lamentation. Neither the Ethiopic nor Coptic languages are dialects of the Arabic and Hebrew root; consequently, the word being so little altered in sound one thousand years after the departure of the Hebrews from Egypt! and retained for its original purport of the chorus of a psalm, proves its Hebrew derivation: the subject deserves an essay, and H. O. should give us one thereon.

* * *

HORTICULTURE.

[We have been long attempting to bring out the practical gardeners from their retreats—to stir them up from a sort of inglorious inactivity which we suspected had laid hold of their native energies. We have *thrown the line* for the last two years without a single bite,—at length we have been successful.

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—In your "Few plain Thoughts on Horticulture," you appear to think that the vegetables of the Cape gardens might be improved if there was an active Horticultural Society established here. You deplore the death of a former society, and seem to ascribe its decease to the want of working-gardeners among the members. I rather presume that it was the want of an experimental garden in the vicinity of Cape Town, which caused the *melancholy* demise.

In England it is not necessary that a Horticultural Society should possess an experimental garden; there, gardens are (as they ought to be) considered as the most ornamental and *moral* appendage to the Palace, to the Villa, and to the Cottage; the possessors of which cannot be expected to be either professional or practical gardeners. Still, however, we find that, from the prince to the humble cottager, of either sex, all take an interest in the garden; and, if the higher classes of English society do not perform the manual labour, (their minds, during the retirement from other pursuits are not quiescent,) they disdain not to suggest ideas which the mere empirick gardener could never surmise.

In this colony there are scarcely two gardens alike, however near they may be placed in locality; hence, any improvement in practice and results, as ascertained by their respective owners, would be of little benefit to the colony at large, but if the various methods were brought into notice, and shewn in one garden only, and under the management of a skilful gardener, the experiments would speak for themselves, and consequently the most successful method would be adopted by those who chose to perform their duty. Duty, say you? Yes, Duty! Man was a gardener from the first, he was commanded by his Creator to improve the fruits of the earth, and the infinite variety of form and colour, together with the various properties of the vegetable kingdom, prove that it was not for punishment that this command was given, but rather that man might observe the power and presence of his Maker, in the book of nature unfolded to his view—this ought to teach the gentry of South Africa, that, in despising the garden and the field-labour as being too humble for their practice, they are surely neglecting a most essential duty to God and themselves.

"Our potatoes are good, bad, and indifferent. For one good boiling you get three bad ones." I must congratulate you upon having these three chances; but as to the boiling, your *artiste*, or in plain English your cook, may spoil the best potato that can be produced, in the cooking. Your list of sorts of potatoes, I must not meddle with at present, neither that of your peas; but I think that if you will take the trouble to look over the Cape Calendar for the present year, you will find that in the month "August," instructions are given for the production of the *too frequently despised pome de terre*, with several other matters worth your notice. How the Cape Directory for 1835 has escaped your critical pen, is best known to yourself; on former occasions, the *Commercial Advertiser* particularly noted any alterations in the compilation, this year he is silent;—What is the secret of this? The title-page of the Calendar alone informs us that it is "Written expressly for the Cape Directory for the present year;" upon a cursory reading, I find that it is so, and that an appendix is also attached. I must regret that a larger Colonial Calendar does not seem likely to appear, the appendix recommending English publications for farther intelligence. A note to the appendix (whether from the printer, or printer's devil, it does not appear,) states that the works mentioned are useless to the country farmers, in consequence of their ignorance of the English language. Mr. Greig *helps* those persons *greatly;* I have been informed that he has not given a Dutch translation this year! although it is expressly written for the use of those very persons.

As it does not seem adviseable to form an Horticultural Society in Cape Town, it is recommended that the Agricultural Society should extend their operations, the two arts (?) being so intimately connected with each other; pray do any of the Societies already formed publish, or intend to publish their transactions? some parts of which would surely be of general utility.

You complain of the quality of the vegetables brought into the Cape market; many complain of the prices charged for such produce. A short time since a correspondent of the *S. A. Commercial Advertiser* complained of the high price of cauliflower in the market, and to shew the profits of the *poor* gardener, produced a statement which appeared pretty enough on paper, but false in practice, it went to shew that the profits on one acre of cauliflower was somewhat above £209 sterling, (I quote from memory.) I should like to know in what part of this colony a compact acre of ground is to be found that is capable of bearing an average crop of cauliflower.

Upon a piece of ground—a rood, or perhaps less—an industrious practical

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

gardener lost no less than four thousand cauliflower plants from blight, drought, and the depredations of insects; persevering, however, in a succession of young plants, he at last produced an average crop, and would have been happy and content if he could have realised sixpence each for the cauliflower sent to market. It is not the grower that realises a large profit, nor very frequently a remunerating one; it is the vender who reaps the fruits of the husbandman's labor; much of this is occasioned by the common practice now in operation; the domestic vender is despatched in the morning with fruit, vegetables, &c. some of which are necessarily put up in bunches; he proceeds to the most convenient spot for his purpose, and commences his operations by sub-dividing the bunches; of two he makes three, and so on The next description of vender is one who goes at once to the grower, makes the best bargain he can, and paying the amount, gives the grower no farther trouble. The last, though not least, is the vender *en chef*, the regular *smouch*, who, attending the market, purchases by wholesale, either on speculation or on commission; his real profits are large, and he is truly a monopolist, having full command in the market.

How far those, and many other connected evils may be remedied, or altogether removed, by the establishment of the proposed Fruit and Vegetable Market, remains for proof; but if the establishment takes place, I beg leave to recommend to all good housewives, to visit the vegetable market themselves, the exercise of a morning walk will prove beneficial to their health; in some, it will correct the obesity which at present defies the united power of whalebone, steel, and cordage to control, or keep within reasonable (or rather fashionable) bounds; in others, it will restore the healthy tone of the stomach; and, to all economical housewives, it will confer the power of abolishing a most nefarious tax which has been too long exacted, by their domestics charging considerably more than the actual payment they have made in the purchases with which they have been intrusted.

It now remains with me to apologise for my intrusion upon your Editorship, and you must receive my excuses as I make them, whether agreeable or not. E. J.

LITERARY EXTRACTS.

ON THE SOCIETY ISLANDS.

The following interesting particulars are selected from the *Nautical Magazine* for September last. The communication is made by an Officer lately of H. M. Sloop *Zebra*.

The following is an account of the population and produce of Tahiti and Eimeo, at the time of our visit:—Number of persons, 10,000, increasing since the abolition of infanticide, and the destruction of the stills. Imports—hardware, cotton, and cloth, by the European whalers; New England rum, by the Americans. Exports—rope, from the fibre of the cocoa-nut, (price 5 dollars per 100 lbs;) sugar, of which twenty tons was made in 1831, (and almost any quantity can be made,) price 27*s.* per cwt.; cocoa-nut oil, arrow-root, tortoise-shell, pigs, bullocks, and poultry, in abundance; also goats. A very fine breed of horses and horned cattle; wood and water very plentiful. The natives make straw bonnets and plat, principally for their own use. The native cloth is disappearing, and European cottons are becoming general The religion is under the guidance of the London Missionary Society, which has twelve European preachers, sixteen teachers, or exhorters, a church and school at each station, and the SOUTH SEA ACADEMY at Eimeo, for the children of Europeans and Americans, and Natives. The following will shew the course of education adopted:—

Boys' Classes.

1st.—English language, grammar, and composition.
Latin ditto ditto.
Greek ditto ditto.
Arithmetic, the square and cube roots.
Trigonometry, plain and spherical, navigation, and the first branches of theology.
2d.—English language, and grammar.
Rudiments of the Latin tongue, and grammar.
Arithmetic, as far as the single and double rule of three direct.
Writing, geography, and mental philosophy.
3d.—English reading, and orthography; English writing, and arithmetic, as far as compound addition.

Girls' Classes.

1st.—English language, grammar, and composition; geography, chronology, ancient history, biography, arithmetic, needle-work, &c.
2d.—English reading, grammar, and writing; orthography, arithmetic, needle-work, &c.
3d.—English reading, orthography, needle-work, &c.

The Head Master of the School is Mr Simpson. The average expence to each pupil is £4:3:2 per annum, *i. e.* for educating, board, washing, books, and paper.

There is also belonging to the academy a library, to which the charitably disposed are invited to contribute. Captain Macmurdo presented Langhorne's Plutarch, 6 vols.

I went to the native school, previous to the divine service on Sunday morning, and was gratified in seeing about 180 adults and children of both sexes, separate from each other, under the immediate guidance of a native exhorter. We put several questions to them, on scriptural subjects, which they answered with much readiness, and to the point. Their conduct was more decorous than I have witnessed at Sunday schools even in England From the school room they walked to church, in the most quiet and orderly manner. Divine service was then performed in the native language, and hymns were sung with much musical propriety. The queen, her mother, and aunt, arrived previous to the commencement of the service: we met them at the door, and had the honour of handing them to their seats; availing ourselves afterwards of their pew They were neatly dressed, in the European style; and the attentive and decorous conduct of a native congregation of nearly 700 persons, would have put many an European congregation to the blush. After the termination of the service, they retired in the same orderly and quiet way, and their behaviour generally seemed to imply a desire "to keep the sabbath holy." Mr. Pritchard afterwards read the prayers of the established church to a congregation of about twenty Europeans and Americans. Many natives remained also, I suppose from curiosity. There is a good printing-press, from which many portions of the scriptures have been published. These consist of several elementary works, the Assembly's catechism, a collection of 236 hymns, the Gospels of St. Mark and John, the Epistles and the Revelation, and most part of the Psalms.

The odium thrown upon the moral and religious habits of these interesting people by a celebrated naval officer as far as I have been enabled to judge, is unfounded; his conclusions are too hastily formed, and his censures too general; in which opinion I am borne out by the officers of the Zebra, as well as by Captain Waldegrave, of his Majesty's ship Seringapatam, who visited Tahita in May, 1830. He says, "I made the tour of Eimeo and Tahita, and had the pleasure of finding every missionary at his post, and of visiting every school, and entering every church, in the island; and I can truly state, that what I witnessed there gave me, and every officer who had the opportunity of seeing it, the most sincere gratification. The population of those islands was at one time most dissolute; the triumph of Christianity is now seen in the outward decorum observed in the general conduct of the natives. I never saw the sabbath passed with more propriety; I will not say that I did not also witness improper conduct; for it is impossible for any person to live long in any country without witnessing vice: I can, however, truly state, that the influence of the missionary must have been very great, to have formed the inhabitants to the degree of outward decorum which I witnessed; it should be remembered, that they worked alone; they had nothing but the strong religious principle of God to support them. They had also much to contend with, because every European, and, I regret to say, American whaler, brought with it a contamination, the effects of which was frightful to witness; and were it not for the power of the Holy Spirit, working with the missionaries, it would have been impossible that the native should be impressed with religion, because at every instant one or other of these ships was introducing every excitement to immoral conduct. King Pomare destroyed the spirit stills, but these whalers introduced ardent spirits, and continued to import them for the purpose of attaining those base objects, which, without the aid of intoxication, they could not attain.

"One thing made a great impression upon my mind—the missionaries were treated with the greatest respect by the natives. What could be the reason of this, but the uniform character of their lives. They were surrounded by every opportunity of gratifying any base propensity; but I can truly say, that I never saw any body of men more correct in deportment, nor any treated with more respect. They appeared not indeed the persons who ruled, but the friends of the king and the church. When differences arose, the missionaries were applied to, not as judges, but as councillors. I never saw a missionary lose his temper, whoever came, although they might interrupt him in his particular engagements"

This opinion, from a man of Captain Waldegrave's rank and character is decisive, but in regard to the importation of ardent spirits, which is the greatest curse which can be in

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

flicted on these people; I know not how it can be prevented Interest will prevail, and, while the Americans can procure a good-sized pig for a gallon of New England rum, which costs about 6d, this demoralizing traffic will be carried on. The natives, however, of the Bow and Chain Islands, are the principal purchasers, for there are generally a great number passing backwards and forwards

The Royal Mission Chapel, built by Pomare the First, was originally 712 feet long, when it was first opened. It contained three pulpits, and separate congregations of about 2,000 natives. The length of it is now reduced 300 feet.

During our stay, the queen, accompanied by her mother, aunt, and a large party of nobles, came on board the Zebra. She was received with a salute, and military honours, and partook of as sumptuous a repast as our limited stock could furnish And, as the Colonial Government had liberally supplied Captain Macmurdo with European articles of all descriptions, to the value of £80, as presents to the chiefs of the different islands, a selection was made, and presented to the queen and her attendants, differing in value according to their rank. The females were elegantly dressed, in the European style; but the queen-mother, and aunt, had forgotten their shoes and stockings! A formal visit was made in return; and, with the hospitality of the missionaries, the twenty days we remained in this delightful island passed very pleasantly. When getting under weigh, it being nearly calm, the boats from three American whalers came alongside, unsolicited, towed us through the reefs out into the offing; and I believe they were very glad to get rid of us, for there is very little doubt that our presence had been unwelcome to them.

LIFE IN THE WILDS.

AN ENGLISH SETTLER IN CANADA.

'*Paisley Block, Guelph.*

'My dear Cousin,—It is with pleasure I sit myself down on the bare floor, as I have nothing else to sit upon, to write a few lines to you. I shall not trouble you with a lengthened prologue or preface; I shall therefore, as my paper is so small, proceed to inform you of what I think you are most anxious to know, in as concise a manner as possible. I do not think it would be at all interesting were I to enumerate all our privations and hardships from the time we left England to our arrival here: I will therefore pass over that part of our history, and confine myself to what we at present are, and what we at present enjoy. When we got to Guelph we opened our eyes and gained information before we located; and the property that we have purchased we considered to be of all that we had seen the most likely to suit us; we have 108 acres of good land, fifteen acres of which are cleared; we have five acres of wheat, which is looking as well as can be wished, and which I believe will be ripe for the sickle about the middle of August: we have five acres of oats and nearly two acres of potatoes, the greater part of which we have planted ourselves; for this we have given £175 currency; £100 we paid to the man whom it belonged, which paid him reasonably for the clearance and crop, and an instalment that he had paid to the Canada Company on purchasing; we paid an instalment of £15, so that we have £60 to pay in five years, viz. £15 in two years, £15 in three years, £15 in four years, and £15 in five years. We have about eight acres of swamp. We have a fine spring of water, which rises in and runs through our lot. We have bought two good cows with their calves; the calves we are rearing, the cows yield us a most plentiful supply of milk, they give on an average eighteen quarts a day; we gave for them fifty three dollars; a dollar here is 5*s.* 0*d.* currency, (or 4*s.* 6*d* sterling); they live entirely in the woods, and cost us nothing keeping; they come up to be milked morning and evening regularly, for which we reward them with a trifle of bran We have a lot of fowls which my wife has had given her; we have also four dogs; we are busy getting in some turnips for winter fodder; we are about buying a yoke of oxen, they are about seventy dollars a yoke; we intend having a couple of horses in the spring; horses are on an average eighty dollars each, good ones. We are erecting a beautiful frame house, which will be the finest in this part of the country; we contracted with a carpenter to do the wood work for £85. The house will be built entirely of wood after the fashion of the country, but I do assure you they look much more neat and respectable than brick houses do. The length of it is thirty-two feet, the breadth twenty feet, five sash windows to the front and four to the back; a passage runs through the centre, with a door front and back, and the stairs go up in the passage; the roof will project over twelve inches, and the outside will be painted white; there will also be a chimney at each end. We lads have dug a cellar twenty by fourteen and six feet deep. I expect the house will be finished in a short time, or as brother Jonathan says, "right off." We have got all the stone ourselves, and done a variety of jobs that has saved us a great deal of money. I should have mentioned that we have sown our five acres of wheat with grass seeds. We live at the present in places called shanties, which are mere temporary cobblements put up in a rough manner, viz. boards piled up and a hole in the side to creep in at. Now in such a duck hull as this, myself and wife contrive to live; we have our bed on the floor, and whenever we have a fire we are nearly poisoned with smoke; when it rains, also, it comes into bed to us delightfully; but never mind that, I do not care a fig. My father and brothers live in a much better place; it consists of four poles driven into the earth and boarded at the sides, and is in every respect genteel compared to mine.

'It now remains for me to say something of the country, and how we like it, &c Now this I apprehend is what you want to know most about; then, to tell you in one word, we are all perfectly satisfied; we have not hopped out of a frying-pan into a fire, but out of a fire into a frying-pan. I have found things as I expected I should do; and what I read at home concerning Canada has proved to be correct; in this I am not mistaken, it is a solid fact. My father's property at home, which was doing us no good, has here purchased for us a maintenance for life, as well as put us in possession of independence and comfort. We have exchanged a life fraught with care and anxiety, a life of bubble bubble, toil, and never-ceasing trouble, for one in connexion with which there is no care, no anxiety, and no dismal forebodings as to the future, for to morrow here taketh care for itself. My father says, he would never mind encountering the same privations over again to put us in possession of the same independence; he feels more than satisfied; he says, moreover, that he never felt rich in his life, and never knew what riches were until now. We feel rich; we are little kings, and do enjoy such health as we perhaps never did before. We can here work a day beneath the rays of a burning sun; we can in turn be wet to the skin three times a day, and still enjoy it all. We live here as the patriarchs of old, on plain and homely fare; whilst the lowing of the cattle, and other rural sounds, impress my mind with a conviction that these are such times as they experienced, and which I have impatiently and ardently longed and hoped for. We are here farmers to all intents and purposes; the land appears to me to bring forth its increase abundantly, and will continue to do so to the end of time. We do not go about here soliciting orders, and bowing and endeavouring to please and serve this man or the other; no, no; the scene has changed altogether; we are all rich people here, and all independent; we feel here our importance as men, as rational beings endowed with the power of thinking and acting; we do as we like, for there is none to control us We have here the wild woods in which to rove at will, together with the advantage of shooting what we like, as here is game of all sorts, bears, wolves, foxes, pheasants, deer, partridges, and nobody knows what besides, and nobody cares; I would not exchange the life that I lead with the best mechanic that ever breathed, or ever will do. Canada, as I have said before, is a land of peace and plenty, blest with everything that can render it delightful to an independent spirit; there is no poverty here, a beggar was never known. "Plenty to eat and nought to pay, this is the land we live in."

'In a short time, if Providence continue to bless us with health, we shall have herds of cattle of all kinds; in another year, all being well, I hope to have my expectations fulfilled or realized, as by that time we shall have some out buildings finished, together with barns, stables, &c. It is, as I said before, the best place for the industrious of all classes to come unto, for according to the extent of their labour will be the extent of their riches, and these riches will not merely consist of cleared farms, and flocks, and herds, but of money too, for here is a market for every commodity that the farmer can raise, and a good market too: potatoes are selling now at 2*s.* 6*d* per bushel; wheat 5*s.* per bushel; it is all humbug to suppose there is no money market, for if the farmer should not feel disposed to sell in Guelph, he can take his produce to Hamilton or Dundas, and get money for it there too, so that, whenever you hear any one speak contrary to this, contradict them, and do not let them be led away with such folly. There is another thing I will just set you right in, and that is the *tree-stumps;* it is said that these require twenty or thirty years to destroy them; now know from me that five years will destroy some of the largest stumps, and some will rot out in three years. Our clearance is not a year old, and a number of our stumps are already so far decayed that I have pulled them up myself. Out of the number of instances that I could bring forward of persons getting rich in this country I will only mention one, and that is our neighbour, a Yorkshireman; he came here three years ago; he then had but 2*s.* 6*d.*, and an axe: well, he set to work mightily, and now he has 100 acres of land, a herd of cattle, fine crops, &c., and what he has done at his land is worth 375*l.*, and he has cleared this last year 100*l.*; now this has been done in this short time—where now is there a man in England that can do or get one-fourth of this? We, in like manner, must get rich, for we save all our wages, our cattle will continually increase, and thus every thing will go on progressively and prosperously; but as fine a country as this is, I would never advise any individual to come here, on account of so many coming and find themselves disappointed, and who never would be satisfied with any thing in nature. Now here is a man in Guelph employed by a gentleman who related to me the story, who, when in England, could only get 12*s.* per week, and this gentleman was giving him 10*s.* a day, yet the man grumbled: the fact is, the country cannot suit all, and for the reason already given, I should never advise any person to come for fear they should feel disappointed. There is another little matter I wish to set you right in, and that is society here; now I would not have you think that there are none here but pauper lunatics, for when we first reached Guelph we were agreeably surprised to see a number of gentlemen dressed in white trousers, flannel jackets, and straw hats, playing at cricket on the green, and they were quite adepts at the game; they meet to play every Saturday. And then again the people are all civil and well

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

behaved. more so than ever I found them at home; even in the most remote townships you will find them quite polite and agreeable. A Scotch church is already built at Guelph, as well as a Catholic church, an English church is building; and when things get put to rights we intend having a light wagon to take us to town; the Scotch, the Church of England, and the Methodist, all at present preach and worship in our place by turns.

'I can now tell you how hot it has been since we have been here. Once my thermometer stood at 88, but the average heat is 82 to 84, and sometimes it will drop to 50 in the night, and sometimes to 40, yet it is all right and all comfortable, we feel nothing of these great changes. We intended making a dam on our stream for water fowl, &c; we go here without stockings, handkerchief, coat, and waistcoat, and this altogether through choice, and we are just as comfortable with only trousers, shoes, and straw hats, as you with all your clothing on. I see now that I must be bringing matters to a conclusion; you must tell Mr. D., that if ever he thinks of coming here, he had better do so as soon as possible, or else for ever be nothing more, and his children after him, than humble obedient slaves; my reason for saying so is, land is getting dearer every succeeding year, and in a few years there will be no purchasing land but at an enormous price; if, therefore, he should ever think of coming, it would be well for him not to do so without first receiving from me a letter of instructions.

'Your affectionate cousin,
(Signed) 'JOHN NEWTON.'

'P.S.—When a person comes to Canada, it requires great resolution in order to prevent himself from being heartbroken at the sight of such a number of big trees, which are all to be tumbled to the earth by his arm alone. I have seen a tree three yards in diameter.

'To Mr. Joseph Mappin,
Far Gate, Sheffield, Yorkshire.'

THE MAN OF COLOUR: A FACT.

The morning arose unusually calm and bright, not a single cloud was visible in the sky, the threatening aspect the elements had worn yesterday, had entirely disappeared. It was towards the end of the Monsoon, or rainy season, and the air as usual at this period of the year, in the Upper Provinces, was keen and chill. It was about six o'clock that the Officers of the Cantonment of J —— began to assemble, for the purpose of paying the last earthly rites to the remains of the late Captain W. who had expired after a lingering illness the day before. He was a man who had been universally respected both in his public and private character. His unassuming gentlemanly manners had rendered him respected by every one, while his talents, and general information made him a fitting ornament to that society to which he was now lost for ever. During his life he was passionately fond of the pencil, and as a draughtsman, probably, was excelled by few in India; a fortnight before his death he had painted two beautiful scenes for an Amateur performance, that was about to take place at the Theatre of the Station! The performance took place three weeks after his death, and when they were exhibited, my thoughts inwardly recurred to *him* who had painted them. And where was he? Mouldering in his grave, disregarded, and forgotten, like the many who had gone before him! Such are the vicissitudes of a soldier's life; a subject may occupy the attention in the morning, and call forth all the feelings of the heart, while in the evening, one, probable of a lighter nature succeeds, and the incident of the morning is forgotten. The body lay in a tent pitched for the purpose on the general Parade, and from thence the procession was to move to the burial ground, situated about five hundred yards distant!

There are probably few incidents in life, so affecting as a military funeral: the splendor of the uniforms, the plumed helmets, and caps, contrasted with the black or white scarves, as the case may happen, and the solemnity of the music, accompanied by the deep toll of the muffled drum, all conspire to render the scene at once impressive and affecting. In a short time all were assembled, and the procession began to move, the band playing the beautiful Portuguese hymn of '*Ad este fideles*' On the arrival at the burial ground, during the reading of the funeral service, I cast my eyes on the countenances of those around, and endeavoured to trace the feelings they depicted. In most indifference predominated, while some there were, especially those of his own Regiment, whose countenances exhibited traces of real, though not lasting sorrow, and to whom with great justice might be applied the words of our immortal poet:

"The tears though *few, sincerely* shed."

But among the concourse of people assembled, was there not *one* who for a more lasting period would feel his loss? Now that he was so far distant from his parents, wife, and country, was there not found *one*, who would give a thought towards his memory, after a few short days! Yes; there *was* one! And who was he?

Close beside the grave, indifferent to every object but the coffin that lay before him, stood an old native weeping like a child: the roar of the musquetry that now marked the conclusion of the ceremony, fell unheeded on his ear, he stood motionless, wrapt in contemplation of the object before him, till the filling up of the grave shut it from his view: he then turned away.

"You were a servant of Captain W.'s I suppose," said an Officer, who having observed him from the commencement, now stepped forward, and addressed him.

"I was, Sir," said the old man, turning round, and salaaming respectfully, "I was his Lascar, and had been in his service for the last twenty years." "He was probably a kind master to you," said the Soldier, "you seem to feel his loss so deeply, should you have any objection to enter my service?" The old man shook his head, as he mournfully replied, "my service in this life is ended; my good and kind master is gone, and I shall not long survive. I knew him, Sir," he added, "when he first arrived in this country from his native land, he was then a boy of sixteen years of age. He engaged me in his service, in which I remained for eleven years; at the end of which period he returned to Europe. I left him with regret, for he was ever a kind and indulgent master; but as he was to return to this country at the end of three years, I waited for him at Madras, and on his arrival, I again entered his service! He is now gone, Sir," he added, his voice faltering with agitation, "and I could not feel greater regret, if I had lost my own son. I am obliged to you for your kind offer of providing for me, but I shall not long survive my master: as he said this, he cast one more look at the grave, and walked slowly away!

"Can this be affectation?" said the Soldier, as he mounted his horse, and rode homewards—"no,—it *cannot*,—is *not*, and yet I have heard (and thought so too,) that gratitude was a feeling totally unknown in India; here at least is an exception to it!"

On the following day he dispatched a servant with some money in search of the old man. In the lines he was not to be found, and at length was traced to the grave of his late master. For five successive days, this was the place of his constant resort; on the sixth he was not there, nor had any one seen him throughout the day. In the evening some people entered his hut, to ascertain if he was there, and there he was found a corpse, having literally died the victim of a broken heart.—*(Madras Lit Gazette.)*

JACK KETCH.

THE fact cannot be concealed, that Mr. Ketch is no longer what he was—no longer the bustling, active functionary—his place is not the value of a rope's-end—his occupation's gone. The schoolmaster has filched his rod, and he is now on the list with titled sinecurists, and public pensioners. How, in this most unprosperous period, must his recollection carry him back to the good "good old times" of Billy Pitt, when a mighty slender qualification made a man eligible for "Tyburn Tree," when the *maladroit* conveyance of a £2 note made him intimate with the natural history of flax. With what an artist-like eye, on a Monday morning, must he have surveyed the beam when some three or four of these forty shilling freeholders were cooling their heels outside the debtors' door for an hour at a stretch! Those *were* days of business—Jack Ketch had no time to write books then—the utmost he could do was to favour his friends with a *line*. Now we have before us an Autobiography of Ketch, with fourteen illustrations from Meadows It is one of the recently-received books in the Colony. It presents in many instances some shuddering scenes, but in many of the chapters there is wit lurking in every line. One extract will discover that Mr. Ketch is a great stickler for the honour of his calling.

"With all due respect, however, to the prejudices and weakness of mankind, I must still consider this repugnance to our truly national and natural mode of dying singular, if not absurd. For what possible difference can it make to any person, I should be glad to be resolved, whether he die in a perpendicular or a horizontal position?—whether he lie or hang?—whether he be suspended or extended?—What possible choice can there be, in a wise man's estimation, between giving up the ghost, as is the chamber usage, or giving in to the ghost, which is the custom of the forewarned? To pay the debt of nature in one's bed is to do the thing lazily and reluctantly which must be done at last; to discharge the amount betimes of a morning, well dressed (I admire a neat and respectable apparel on such occasions), is not only to wipe off the score, but to satisfy it strictly according to law. You have witnesses to prove the payment. You carry away a receipt for all demands. You are out of her books, at all events, even though you 'stand aye accursed in the Calendar.' Besides, and in addition, the death itself is an honourable one. You meet and satisfy the justice of the case: no man has the slightest claim against you:—you are absolved from every thing. Who can say he is wronged? who is not redressed? What personal wrong have you committed for which your death does not amply atone? Look, on the other hand, on those who are unhappily hurried away before their maturity of years or wisdom brought them to the gallows. How different is this picture! Here we see long existing debts, outstanding feuds, unaccounted and unaccountable hostilities, hungry relatives, expecting legatees, joyful heirs; grief at three-and-sixpence a day, called mutes: extract of onion, called tears; white handkerchief, otherwise mouth stop-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

per, or nose-propper, or both, called mourning. Be assured, therefore, my dear reader, that 'the drop' is the drop of all others best calculated to prove a cordial to your sinking spirits. Believe me, it is far better that your personal property should be taken possession of by the considerate executioner, than by the rapacious executor. Rest satisfied that it is more gratifying and honourable to be cut down, than to be cut off in the prime of existence; be assured that the thread of life is more handsomely terminated by a few yards of rope, than by the lengthiest yarn that was ever penned by the panegyrist, or paid for to the poet; and, finally, that they who boast of having been descended from a long line of ancestors, have not half the cause of triumph which you will possess, who may justly claim the merit of descending from a long line, without any assistance from your ancestors whatever. Need I say more, intelligent reader, to prove the surpassing superiority of this method of demise over all others? Nor let the vulgar prejudice of ignorance bias you against the truly noble and excellent contrivance which, let me trust, you are one day to test in your own person. You do not die and make no sign; on the contrary, although it is said that 'good wine needs no bush,' yet, let me tell you, without such intimation we should not know where good wine was to be had. You are an emphatic sign, therefore, hanging forth for the purpose of catching the eye of the passenger, that he may learn where better accommodation is to be found than this vile tavern called the Globe pleases to afford. Was not the coffin of Mohamet suspended between heaven and earth, and does it not retain its impartial situation to this day? Does not the earth itself hang in the infinity of space? What does the moon? Hang. What does the sun? Hang. The stars? Hang. They are all hanged. Hang it, then! why can't you hang likewise? Let it not be said that I do not 'do unto others as I would they should do unto me.' My time is not yet come; besides, I can do it for myself. Look, then, upon the summons to hanging as the calling of Nature. The ties of Nature are strong; she yearns for her children; she will have them come and see her; she invites them to an ordinary at eight o'clock; she wishes them to take the air for an hour. At length she dismisses them to their beds, which, whatever way they had chanced to prefer, they must come to at last. I am the chamberlain—*I tuck them all up.*"

THE REDEEMED SLAVE.

AMONG the interesting details brought to light by the operation of Britain's Law for the ransom of the slaves in the West Indies, there is one singularly striking. Abon Bekir was apprenticed in the month of August last, to Mr. Anderson, of Kingston, island of Jamaica; but in progress of the business before Dr. Madden, one of the special Magistrates (a gentleman of great benevolence, and who takes an unwearied interest in behalf of his constituents, the apprentices,) it appeared that the poor slave was an Arabic scholar, and though he had been 40 years in bondage, that he still wrote that language. Dr. Madden immediately displayed a humane concern for his fate, and succeeded in declaring to him—"You are now absolutely FREE." "He is," says Dr. Madden, "a scheriffe by rank, a title equivalent to that of noble. He came to the country at an early age, and during the many years of his thraldom he has managed not only to make for himself, but to maintain a character for probity, industry, and surprising intelligence. His knowledge of his own language, and his ability as a penman, have enabled him to keep the books of his employer for some years past." Dr. M. opened a subscription list for the benefit of Abon Bekir Jadiki, to which the most respectable persons have attached their names. Some gentlemen of Liverpool have joined in this good work, and as Abon Bekir is a sincere christian, it is believed he will visit his own country (the great wish of his heart,) either as a missionary, or in any other capacity, in the noble work of the civilization of the interior of Africa. Abon Bekir was born at Timbuctoo, and a narrative of his own life, written by himself, appears in the London Literary Gazette for December last.

SCIENCE.

THE SUCCESSFUL APPLICATION OF AN IMPORTANT DISCOVERY.

VALUE OF READING.

Every body is familiar with that noble series of paintings, by Barry, which has so long adorned the walls of the great room, at the house of the Society of Arts; and which, in spite of one or two little incongruities and absurdities (such, for instance, as the introduction of Dr. Burney, with his hair full-dressed and powdered, swimming among a group of Nereids in the Thames) must be generally acknowledged to convey an admirable illustration of the progress of the human faculties, from "what is called a state of nature" to the highest degree of cultivation which they have hitherto reached. About twenty years ago, these paintings having become somewhat dull and absorbed, on the recommendation of the late Mr. West, a coat of linseed oil was laid over them, which had the effect of nourishing the colours, and, for a time, of renewing their original brilliancy. As, however, we confess we think might have naturally been expected, after a while the impurities of the oil exuded, and the surface became covered with a thin veil of yellow and horny matter, that especially stained and obscured the lighter parts of the paintings. It so happened, during last summer, that in the private apartments of the highly respectable and worthy lady who has so long and so satisfactorily discharged the duties of the housekeeper of the institution, there was a carpet much soiled by use. A servant girl proposed to clean it: "it cannot be done, Betty," said the mistress; "it can be done, Ma'am," said Betty; and Betty next morning proved that she was in the right, by exultingly producing the carpet, in a condition of freshness and splendour that would not have disgraced the warehouse of a Dowbiggen or a Waugh. On being questioned as to her process, she owned that she had learnt it from a book—we believe a volume of the Transactions of the Society of Arts—which was lying on her mistress's table. It occurred to some one that the same process might be safely and advantageously applied to the pictures in the great room. After several prudent and successful experiments, it was so applied; and the result is, that, without having suffered the slightest injury, those pictures are in a state of clearness and purity, which is "the admiration of all beholders." They alone who have had opportunities of witnessing the sad havoc frequently occasioned in cleaning pictures, by the use of means that bring away the delicate "glazings," in which all the beauty of some finely-coloured works consists, can fully appreciate the importance of the discovery of an abstergent, at once powerful and innocuous.

"But the process?"—Well, we believe we must tell it. After the fashion of the old magazine writers, who invariably broke off their stories at the most critical moment with a "*To be continued in our next*;" we had entertained some malicious thoughts of tantalising those of our readers who take an interest in such matters, by postponing the disclosure. But "we are not stocks and stones;" our hearts relent. The process then is as follows:

Scrape a pound of raw potatoes into a gallon of water: let the pulp steep all night, and it will be fit for use. With flannels and sponges rub it over the surface of the picture, until the dirt and impurities disappear.—*London Literary Gazette.*

SELECT NOTICES.

MR. COBBETT has been lecturing in Ireland on Political Economy, with great pecuniary success. His receipts in Dublin amounted to £150—expenses £20. He appears to be as furious as ever against what he calls *an infernal root—the Potato.*——*Antipathies.*—There was till lately only one Brewer at Rathdrum, in Ireland, the property of the Catholics'. Some disputes arose with the Protestants, and they set up a *Protestant Brewery.* It is called by the Catholics—"*The Boyne Waters.*" Could not the several drinkers mingle their ales in peace?——*Rev. R. Hill.*—The sum annually raised for charitable purposes at Surry Chapel, by its lamented Minister, Mr. Hill, was from £1,500 to £2,000.——*English and French Languages.*—"What nonsense, said the old Highlander," Capt. G. "all this learning of languages! I'd go over the world with one phrase out of each. I travelled through France with "*Combien?*" and through England with "*How much?*"——*The Landers.*—A column is to be erected at Truro, 71 feet high, in honour of their important discoveries.——*Runcorn.*—At this place the chimney of a soap manufactory has been erected, 72 feet higher than the monument of London!——*Oriental Memoirs.*—This splendid work in 4 vols. 4to. by the late Jas. Forbes, Esq. containing a narrative of 17 years' residence in India, and which cost about 20 guineas, is now republished by his daughter, the Countess de Montalembert, 2 vols. 8vo. ——*Immense value of Insects.*—It was stated at the last meeting of the Entomological Society in London, that 700,000 persons were at the present time occupied in the silk trade.

Most Wonderful.—In the London Literary Gazette of December 18th, it is thus recorded:—"A common fly, in full vigour, is at this late season of the year resting upon our writing-table."

QUICK TANNING.—*New Discovery.*—Take a common fulling-mill, put the hides into the trough along with the ooze or tanning liquor, beat them as you do woollen cloths while there immersed, renew the liquor as it becomes exhausted, and in a few hours the hides will be tanned.—*New York Paper.*

Public Calamities.—National afflictions sent by Providence, melt the constancy of the noble-minded, but confirm the obduracy of the vile. The same furnace that hardens *clay*, liquifies gold; and in the strong manifestations of Divine power, Pharoah found his punishment, and David his pardon.—*Colton.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

A GLANCE HOMEWARDS.

THE MEN OF MIDDLESEX

THE men of Middlesex, we are told in a London paper, (the *Standard*,) are "animals:" but they are ruminating animals, we suspect; and sometimes while they chew the cud of politics, they cannot be made to understand why John Bull should not be the best judge of what is good for himself.

THE TWO *IFS*.

THESE look a little awkward in Sir Rob. Peel's Letter to his Constituents. "If," says Sir Robert, "by an improved distribution of the revenues of the Church, its just influence *can* be extended, then all other considerations should be made subordinate; and again, if possible the question of tithe should be satisfactorily settled." Dryden has told us, that

"Two *ifs* scarce make a possibility."

Dr. WEBSTER'S NARRATIVE

Of the Voyage of H. M. S. CHANTICLEER, 2 vols. 8vo. 1835.

CAPE OF GOOD HOPE.

Bounce the 1st.

"Pot houses and gin-shops, are by no means common in Cape Town."—(page 241)

Bounce the 2nd.

"A Merchant has generally two sales every week, the goods are disposed of before the door in the open street, he being his own Auctioneer." (*Ib.*)

Bounce the 3rd.

"Although the wheat is so good, yet the flour is not so. This, however, arises from the mixture of sand with it brought by the heavy S. E. winds, which fill every crevice, so that at times both corn and flour are injured by it. The soft *sand-stone* by which the wheat is ground, also adds a portion of sand."—(p. 253)

Bounce the 4th.

"No one can stay too long at the house of a Dutchman, nor can he ever wear out his blunt hospitality. When you talk of leaving, the boor is distressed, and immediately asks—'An't I nice?—An't wife nice?—An't slaves?"—He expects no other acknowledgement of his attention than a pinch of snuff to each of his slaves."—(p. 261.)

Bounce the 5th.

"If their wagon should stick fast in a *kloof*, as the *morass* is called in the colony, or in the sand, the Dutchman betrays no impatience."—(p. 262.)

Bounce the 6th.

"On visiting the cattle of my friend, to my great astonishment I found them champing bones, and relics of their own species, with avidity."—(p. 268.)

Bounce the 7th.

"I passed a restless night at the farm, which day light accounted for, in discovering to my astonishment a host of fleas. My face and body was in a condition resembling that of a person with the scarlet fever. Their number was such that my clothes were darkened by them.—(p. 271.)

Bounce the 8th.

"The Hottentots grease their bodies all over to protect them from the scorching sun: scent themselves with buchu; and employ the feathers of the ostrich as a parasol. They are careless as to what they eat; and devour alike snakes, ants, or lizards."—(p. 281.)

Bounce the 9th.

"The Hottentots use their bows and arrows with great dexterity—they shoot their arrows with great force, sending them sometimes through the body of an ox."—(p. 282)

Bounce the 10th.

"Sometimes persons may be seen at Greenpoint riding the Zebras, which are brought from the interior, and generally kept at livery."—(p. 245.)

Oh! oh! oh!

In the evening we returned home in my favourite bullock-wagon, and on our arrival, found the house to our astonishment filled with a *most agreeable perfume*. We soon discovered that the slaves had been celebrating their Sabbath, for it was Friday. They burn sweet scents to drive away, according to their idea, the Devil and his imps.—(p. 278.)

MORE NUTS TO CRACK.

CHURCH IN DANGER.

"As has been maliciously represented" by a *pretender*—"Lover of Justice," in the two Cape papers, we never asserted that the Dutch Reformed Congregation was *confined to the village of Wynberg*. We simply referred to the clerical appointment *at Wynberg*, in the terms adopted by Government and Mr. Greig's Almanack. Of course it would be taken for granted that the Church comprehended within its pale the neighbourhood of the Village. The Rev. "Mr. Justice," and his Professor, assert that the Dutch Reformed Congregation extends from Roodebloem and Salt River to Kuyls River, Hout Bay, and Simon's Town* district." But we can tell the Co, in the words of a Correspondent, that

"An English Missionary of well known worth and probity, has from time to time visited *Papendorp*, near *Zonnebloem*, the *Salt River, Cape Flats, Cape Downs, even* beyond *Kuyls River, Rondebosch, Diep River, Baas Hermans Kraal, Steenberg, Muizenberg, Kalk Bay, Elsjes Bay, Klavervallei*, on the *Simon's Town Mountains*, preaching in *both languages*, but he never met with a *Reformed* minister, and he verily believes that since the beginning of the world, no such description of person ever visited these places, and taught the people the way of salvation."

WHIMS AND ODDITIES.

AMUSEMENTS—CAMP GROUND—CAFFRARIA.

No. 1.—Why is a towel that has been wrung out in soap suds, like a glass of brandy?

No. 2.—Why is that species of spider which makes its nest in the leaves of the quarry-tree, like an officer in His Majesty's Service?

No. 3.—Why can a drunkard never be a fat man? or an honest man?

No 4.—Why does a kettle always sing out of time?

No. 5.—Why is a man that's yawning, like a bedstead?

No. 6.—Why is putting a man in the stocks like depriving him of victuals?

The Wigs.—As soon as the news arrived that the King had thrown off the Whigs, many gentlemen of Cape Town, in compliment to His Most Gracious Majesty, laid aside their *perukes*.

Not at Home.—You may always discover *guilt* stamped on the countenance of that servant who *denies* the master or mistress of the house, and declares *Not at Home*, when the contrary is the fact. The slightest glance can detect the deceit. Sometimes the unfortunate servant halts between two opinions, and can scarcely afford a direct answer. Barry Cornwall describes one of these characters "I recollect calling one day with Basil Montagu, to visit a friend. The servant-maid who opened the door, replied to our question of 'Is home,' that she did—not—know—but—that—if—we were—so—kind—as—to—wait—for—the—shortest—portion—of—time—she would—inquire."

Advantages of Wooden Legs.—A man with one leg, has a leg the less for gout and rheumatism to play their pranks upon, than the man who has two. A man with two legs may get them *both* broken or put out of joint. A one legged man cannot. Two legs require two stockings; one leg only one stocking, one shoe, one boot; consequently, shoe makers and hosiers' bills are just the latter case, than they are in the former. This is a great matter for an economical character. Again—consider the money saved in blacking; no shoe-blacks to pay, no *Warren* expenses. Had General Moreau possessed wooden legs, he might have been still living the glory of France. Had all men wooden legs there would be no accursed wars, no Caffer irruptions, no horse-racing, no cruel amusements of any kind. Lastly, what an honour to have a wooden leg! Everybody looks at you. Every door and window in England is instantly opened for gazers when the spectacle of a wooden-legged man passes by. And the sight is at once attributed to some glorious act of Mr. Timber-toe. Waterloo and Trafalgar are brought instantly to recollection. Best of all—a wooden legged man is sure to get married. Don't know how it is—but who ever heard of a wooden-legged bachelor?

THE ALOE PLANT.

SINCE our recent notice of the value of this plant for cordage, we have read the following in the *National* paper of Toulon:

Toulon, November 26th.—A superior Commission was present yesterday at a series of trials made here to ascertain the comparative strength of cables made of hemp and of aloe from Algiers. These trials all turned to the advantage of aloe. Of cables of equal size, that made of aloe raised a weight of 2,000 killogrames; that made of hemp, a weight of only 400 killogrames.

GEORGE.

WE have several communications from George Town on the subject of alleged grievances affecting the English community—both in *spirituals* as well as *temporals*. We should think in these better days of colonial legislation, a respectful Memorial addressed to Government would bring about a change of measures at George. We know well enough that there are many of our countrymen in that town and district who are entitled to the full confidence and esteem of the community. And the day will shortly arrive, we trust, when there shall be two services in the church on each revolving sacred day—the one in English, and the other in Dutch. And this should be the case in all the Reformed Churches in the colony. Else, wherefore does the British Government pay the stipends of the ministers and school-

* Simon's Town is well off in religious instruction, and the ordinances of religion are faithfully administered. The *Reformed* should go forth to the Heathen. *The fields are white unto harvest*. The Church that stagnates—*dies*.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

masters? At present we behold the glaring inconsistency—English taught in the schools, and Dutch in the pulpits! If it be observed by some Dutch ministers in reply—

"MYNHEER!—Wy verstaat geen Engelsch;"

Well, then, set about learning English; do not be a hundred years behind all other professions. Qualify yourself immediately for the work as all others do who feel their own deficiencies.

Again:—As to the *Magistracy* of George, we may observe, as it regards all Magistrates, that they who are not imbued from on High with an awful sense of the responsibility of the trust reposed in them, cease to become conservators of the public good. In a public journal, the other day, we read a letter from a Clerical Magistrate, who, from scruples of conscience, resigned his office. Here is an extract from it—may it lead our Magistrates to ponder well the matter.

"The duties, habits, and associations of a Magistrate, have a tendency to divest him of that mild, unassuming, unostentatious disposition and manner, without which he cannot advantageously maintain a pastoral intercourse with his flock. The very possession of power and office contributes to foster a feeling of pride and overweening sense of personal importance, which too often, and almost imperceptibly, steals into the heart. The exercise, also, of legal authority, commonly produces a haughty demeanour, a habit of dictation, and a desire to command, altogether foreign to the servant of the Lord, who must not strive, but be gentle unto all: apt to teach, and patient in meekness; instructing those that oppose themselves."—(2 Tim. ii. 24.)

GREAT BRITAIN AND HER *FREE* PEOPLE.

"A precious stone set in the silver sea."

"Proud Freedom's home, when slavery's ills impend,
The exile's hope, the way-worn wanderer's friend:
The beacon light, to which the nations steer'd,
When tempests beat, that even proud hearts feared;
The rainbow smiling, o'er the clouds of war,
And heralding the ray of peace afar."

"Britannia needs no bulwarks, no towers along the steep,
Her march is on the mountain wave, her home is on the deep."

The *small* domestic and *vast* transmarine empire of Great Britain may be thus seen:—

Divisions.	Area in Sq. Miles.	British Subjects.

* George Town and its vicinity is extremely interesting, and deserves every encouragement. There has been hitherto a good manly feeling abroad, and the habits of reading have been greatly cultivated. The inhabitants have also maintained much independence of character, and have not suffered themselves to be carried away by feud or faction. The late Magistrate, Mr Wentzel, greatly contributed towards the growth of this good feeling.

DEATHS.

MR. MALTHUS.

Few men have obtained greater celebrity than the Rev. Mr. Malthus, the Political Economist. His work on population took a strong hold on the public. He has in our opinion uniformly placed the tendency of our species to increase beyond the means of their subsistence, under a singularly gloomy aspect. Mr Malthus was beloved by all who had the advantage of knowing him. He was in truth a most amiable and accomplished gentleman.

MR CHARLES LAMB,

The *Elia* of the Magazines.

MR. COLERIDGE.

A great light has passed away from this earth.

REV E. IRVING.

He was to the latest hour of his life the eloquent, the enthusiastic, the learned, the honest, the honourable, the good. He was never heard to speak an unkind word of any of his numerous opponents, far less of any of his friends: he found something to commend in every child of Adam. He opened his heart, and with it his house and hand, to every one who came in his way. At no time or place, or company, or circumstance, was he otherwise than as a minister of God: he entered into the full importance of being an ambassador from heaven, and never was asleep on his post. His conversation and presence threw a sanctity over every society into which he entered; and none could cease to be conscious that there was a servant of God in the midst of them.

Irving was 42 years and some months old. Scotland sent him forth a Herculean man; our mad Babylon wore him and wasted him with all her strength: and it took her twelve years. He sleeps with his fathers in his loved birth-land. His last words were "In life or death, I am the Lord's."—(*Fraser.*)

MR. PRINGLE.

We regret to have to announce the death of this amiable and excellent man. Mr. Pringle was born in Tiviotdale, a romantic pastoral district in the south of Scotland, of which he has left some pleasing remembrances, in the poetry which from time to time he gave to the public. Mr. Pringle applied himself early in life to literature, as a profession; and was concerned in the establishment and early management of "Blackwood's Magazine;" shortly after, however, he chose to follow the fortunes of his family, who became settlers in South Africa. There, after a time, Mr. Pringle entered into some literary speculations in Cape Town, which, however, he was speedily forced to relinquish, by the government, at a pecuniary loss of little less than 1000*l*. Upon the failure of these speculations, Mr. Pringle returned to England; and his services were soon after engaged by the Anti-Slavery Society, as secretary to that body, a situation which he continued to hold until within these few months, when the object of the society was accomplished; and the duties of which responsible office, he discharged, not merely as one expected to labour for hire, but as one whose heart was in the cause of humanity and justice. Mr. Pringle is also favourably known to the public as a sweet and graceful poet. His "Ephemerides" abound in graphic picture of African scenery; and are rich in evidences of the kind and Christian spirit which accompanied the writer, in all that he did or wrote. As the editor of "Friendship's Offering," too, Mr. Pringle brought to his task a sound judgment and a refined taste. The last work in which he was engaged, and which he finished only a month or two ago, was the revision of his volume entitled "African Sketches," with a view to a second edition, which, we believe, will soon appear. Early last summer, the rupture of a blood-vessel confined Mr. Pringle to a sick bed, and greatly reduced the energies of a naturally strong constitution; and towards the autumn it became apparent, that, for the preservation of life, a removal to a warmer climate was indispensable. Mr Pringle's circumstances not permitting a trial of the south of Europe, he again turned his thoughts towards the Cape; the necessary preparations were hastily completed; the passage-money was paid; and it wanted but three days of the time appointed for sailing, when a diarrhœa began to show itself, under which the powers of nature, already enfeebled by confinement, speedily sank. He died peacefully, and without a struggle; exhibiting to the end that moral courage for which he had ever been remarkable and supported by the recollections of a well-spent life, and by the hopes that spring from religion. Few men were richer in friends than Mr. Pringle; among their number we might enumerate most of the literary men of the day, and very many of those public men, who have made philanthropy the beacon of their political career: and although Mr. Pringle discharged, during many years, with a fearless and honest zeal, the duties of an office which exposed him to the bitterness of party spirit, no man, perhaps, ever had fewer enemies, or descended into the grave with fewer animosities.—*Athenæum.*

LITERATURE, CRITICISM, SCIENCE,

AND THE ADVANCEMENT OF USEFUL KNOWLEDGE.

No. 4. Vol. V.] CAPE TOWN: APRIL, 1835. PRICE, { 20 *Shillings* per *Annum*.

GREAT BRITAIN AND ITS ADMINISTRATIONS.

"You are too political," said a Governor of the Cape, to the Editor, in 1823. "*Earl Bathurst* is much averse to any discussion in this colony on political matters. Our system of Government works well enough here, and the old colonists, the Dutch, are equally opposed to what you may call the *Liberty of the Press*." Yes,—such things were at the Cape during the darkness of the by-gone days. It was a darkness similar to that of the *middle ages*, which were remarkable for two things; the extreme ignorance that prevailed, and an excessive veneration for received opinions. Every question in those times was subject to restraint; every new opinion was looked upon as dangerous. To affirm the globe we inhabit to be round, was deemed to be heresy, and for asserting it, the immortal Galileo was confined in the prisons of an inquisition. And in reference to political discussion, even in modern times, how shy do we find the periodical press of Great Britain in this matter. Twenty years since, who would dream of a discourse on the state of parties in any monthly magazine? Now we find Blackwood, and Fraser, and the Monthly, and Tait, and the Dublin, and the Metropolitan, up to the chin in politics. And why not? It were surely to be wished that every man had a competent acquaintance with the laws and constitution of the country to which he belongs. Patriotism is a blind and irrational impulse, unless it is founded on a knowledge of the blessings we are called to secure, and the privileges we propose to defend. Besides, this is peculiarly a political age, and a silent neutrality in a contest relating to particular men or measures affecting the commonwealth, exhibits little less than direct criminality. Solon, we are told, enacted a law for the capital punishment of every citizen of Athens who should continue neuter when parties ran high in the Republic. While we blame the rigour of this law, we must confess the principle on which it was founded, is just and solid. But without further preface or apology, we shall introduce to the notice of our readers a few historical notices on the *Policy* of our country in reference to its *Foreign Relations*. They may serve as aids to reflection to the readers of newspapers and other journals, in the course of their studies, in these times of more than ordinary interest. We shall commence first with the *Liverpool*, and then comprehend in our review the subsequent Administrations.

The Liverpool Administration.—With the exception of Canning's Administration, it has been the maxim of every Government (denominated Tory) to revert to the Treaty of Vienna as a master-piece of diplomatic wisdom; to trust to the securities it sought to provide against French aggression, as a sure pledge for the continuance of peace. In every attempt on the part of the people of Europe to free themselves from the trammels of political injustice, the British Government has remained a tacit observer; its conduct in the Austrian invasion of Naples, and in the French invasion of Spain, was remarkable for its lack of sympathy with the inhabitants of those countries. The legislative enactments of the Treaty of Vienna were made, as it were, in spite of natural principles. They were futile efforts to reconcile opposite natures, and blend, politically, people essentially distinct in habit, language, and national character. Of such a character were the incorporations of Belgium with Holland; Poland with Russia; Norway with Sweden; the Grand Duchy of the Rhine, and part of Saxony, with Prussia; the Lombard-Venetian States with Austria; the Genoese Territory with the States of the King of Sardinia; in fact, the Treaty apportioned to each Monarchy its unfortunate Ireland. Come we now to

Canning's System of Policy.—Canning, with great foresight, clearly saw that the Treaty of Vienna could not be maintained; that its very foundations were wrong in principle. "The war of opinion," he prophesied, will soon commence, and he immediately discovered the danger to which Britain was exposed by her connection with the "Holy Allies." His prompt measures in regard to Portugal, afforded a warning to absolutists as to the cause which Britain would espouse in the event of a continental interference. "While England has an arm to lift in her defence," observed Canning, in moving an address to His Majesty, "external force shall not be used to control the opinions of the Portuguese."

The Duke of Wellington's Administration.—The Duke's administration was predominantly Tory, with a slight admixture of the modified liberalism of Grant, Huskisson, &c. These were expelled through differences of opinion when the Duke's East Retford Reform Question was agitated. The Duke's plan of government was decidedly pacific. The conservative policy of Wellington, supported by his able colleague, so gifted in the science of European diplomacy, worked smoothly so long as the cause of freedom and liberal policy, founded on the enlarging sphere of human intelligence, was subservient to the confederate powers, who sought to perpetuate the views of the monkish ages; but when the first gun was fired, when the "war of opinions" commenced, the insecurity of the Duke's policy became apparent. His characteristic promptitude and discernment were never more strongly illustrated than on this occasion. He was immediately impressed with a *necessity of a change* in his system of foreign policy, and he did not hesitate to acknowledge the new order of things by the cordial reception of the political representatives of Louis Philippe.

Happy would it have been for the people of England, had the duke's views of the necessity of a change extended to the internal policy of Great Britain: he would then have added to his already well-earned laurels the honour of reforming our electoral law. But here his usual tact and discernment failed him—we do not mean as to the principle of reform, this is not the place to discuss that subject; but as to his estimate of the force of public opinion, reanimated by the passing events in France and Belgium. To refuse the just de-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

mand of a great majority of a nation, is but to add to its ardour and violence; and a government best consults its own safety and the national peace by ceding, with wisdom and good grace, that which is demanded with firmness and unanimity. The duke, though he admitted this principle in the discussion on the Catholic Relief Bill, seemed to deny its force in the demand for reform; and it is here, that whatever might be his private opinions as to the principle of the measure, we think he erred; and, indeed, the sequel proves that he did. But to return from this digression; on the duke's resignation, a change of measures was imperiously demanded by the nation; and the accession of lord Grey, a confirmed and consistent liberal, to office, promised a full compliance with the public requisition.

Change of measures concurrent with the accession of Lord Grey to office, and his system of Foreign Policy.—The first act of Lord Grey, after he became premier, was to respond to the *vox populi* by which he had been called to office, and by which liberal measures were to be supported. His prompt announcement that "peace, retrenchment, and reform," would be the fundamental objects of his government, was well received by the public as "a pledge of better times." The duke of Wellington and lord Grey were perfectly agreed as to the good policy of directing the influence of the British government to the maintenance of peace; but they differed essentially as to the means necessary to accomplish so desirable an end. Jealousy of French power, and a system of degrading intimidation towards France, by an unseemly deference to the dictates of the absolute courts, formed no part of lord Grey's system of foreign policy. He sought no coalition "to eat up freedom in detail;" but, on the contrary, desired to consolidate a political intimacy with constitutional France, as a sure preventive against such designs. His accession to office took place at a period of great difficulty. Europe was rapidly arming, and the elements of destruction gathering in the north and east seemed destined to burst over the free states of the west. France and Belgium were tempest-tost with the violence of revolution; and the "signs of the times" seemed to indicate an approaching dissolution of the peace of Europe. The attitude assumed by the British government baffled the calculations of the absolute courts; and the strong inclination manifested by Great Britain to defend the constitutionalists of Europe, powerfully contributed to protect France from the attacks of a continental confederacy, or, rather, to save Europe from the miseries of a general war. During lord Grey's administration, we have experienced no such "untoward event" as that of destroying the Turkish marine, and thus aiding the Russian czar in his Machiavelian designs; no such deceptive affair as that which outwitted "the ablest diplomatist in Europe;" deluged Portugal with her noblest blood, and loosened the satanic imp of royalty to progress in his libertici-dal machinations, and trample under foot the infant constitution which Canning had fostered; no such barbarity as that of expelling persecuted foreign patriots from the British shores, and firing into the ships of a friendly nation to aid and defend the usurpation of a tyrant. If lord Grey's foreign policy has not been all that could be wished; if it has been deficient in firmness, in permitting Prussia to aid Russia in her tragic and merciless crusade against unhappy Poland, and thus to favour the subjugation of a country whose independence we are bound by sacred treaty to protect; if it has been wanting in that well-directed energy by which the influence of reformed England can alone be maintained over the despotic courts of Europe; if it has unwarily permitted the Russian autocrat to cajole the Turkish sultan into treaties which impair British interests in the dominions of the Porte, it has at least been frank and conciliatory, and conducted, to excess, in the spirit of peace. Perhaps the points most open to censure in the Grey administration, are the tedious trifling evinced in the Dutch business, and the humble deference paid to Russia in renewing engagements cancelled, according to the letter of the bond, by the separation of Belgium from Holland. The latter measure, however, though unpopular, and seemingly derogatory to the British nation, is yet clearly defensible. The clause was designed to interest Russia in preventing the incorporation of Belgium with France. The sages assembled at Vienna never contemplated that Belgium would so speedily raise herself into an independent state; and when that event took place, we were bound by every principle of national honour to deal with the question upon the broad principle of doing that which conscience dictated to be just—to act according to the true *spirit*, and not the mere *wording* of the obligation: for as Addision, in his *Cato*, makes Juba say—

"Honour's a sacred tie, the law of kings,
And noble mind's distinguishing perfection,
That aids and strengthens Virtue when it meets her,
And imitates her actions where she is not.
It ought not to be sported with."

In our next we shall conclude this Article, by giving a concise view of that never-ending affair—*Dutch Negociations*. This protracted rigmarole, protocolling-business, requires some distinct explanation.

SPECIMEN OF WARFARE AGAINST PREDATORY MARAUDERS IN INDIA.

[COMMUNICATED.]

THE late "Caffer Irruption" has naturally awakened and fixed the attention of the public to the state of the Eastern Border. The invading force (bands of barbarian Caffers) was first represented by the *Graham's Town Journal* as ten thousand strong, which was ridiculed by the *Commercial Advertiser*, and the enemy computed at only one thousand; this, however, the *Graham's Town Journal* indignantly contradicts; and states that the official documents had given a return of upwards of 400 killed, which, being only a small proportion of the combatants, and without reckoning the wounded, indicated a far superior force to have been in the field than was imagined by the *Commercial Adver, tiser*. Both may be in some degree right, though alluding to different periods of the invasion; the first onset was probably by a comparatively small force, or the sounds of preparation could not have been so stealthy as to have escaped observation.

Unprofessional people not accustomed to see masses of men under arms, and not trained by military education to judge of numbers by the ground covered, can have no idea of the difficulty of estimating the force of an undisciplined mob; it is in fact almost impracticable, and the nearest approximation can only be a lucky guess; as, however, the whole population of Caffreland is rated very far below the population of the Colony, and as only a small proportion of that population is actively engaged in the present affair, it would seem that any thing like ten thousand for the enemy's numbers, must be a very extravagant exaggeration.

The whole of the evil, say the *Graham's Town Journal* and the *Zuid-Afrikaan*, an illustrious pair! may be traced to Dr. Philip and the Missionaries! to Mr Fairbairn and his visit to Caffreland five years ago! to Mr. Greig and the *Commercial Advertiser!* and to Mr. Pringle and his Poetry! precisely, no doubt, as the men of Kent tell us that Tenterden Church steeple was the occasion of the Goodwin Sands! Mr. Fairbairn, however, in the *Commercial Advertiser*, replies, that his readings in books, and his observations of men, have enabled him to judge of motives and actions somewhat differently: he shows that he had foreseen this melancholy catastrophe, and warned the public of the necessary consequences of injudicious measures. The public will no doubt hear more on this subject hereafter, when the excitements of the awful crisis have subsided: facts are stubborn things; the printed pages live, and may be quoted verbatim; though conversations may be forgotten or mis-stated, and fatal occurrences may be attributed to sources as wide of their proper origin, as Tenterden Church steeple is foreign to the formation of the Goodwin Sands! With this we intermeddle not at present; we are now purposing to borrow a page or two from our note book, to show the history of an irruption of savage freebooters into a Province of the Bombay Presidency, which may, perhaps, have some interest to our readers at this "awful crisis."

The city of Surat, which was once one of the most important sea ports in the oriental world, though now reduced to a very secondary consequence; and its population, once rated above half a million, to about 150,000 souls; is still a place of great wealth, and the centre of a very populous and most fertile province; being the southern division of Guzurat, one of the richest agricultural districts in India. This Province, generally known under the appellation of the Surat Attaveesy; though the latter appellation is only appropriate to a certain division of twenty-eight villages, which the word Attaveesy implies, is bounded on the west by the Indian Ocean; by the Broach Purgunnah north; by the Demaun River south; and on the east by the Raj Peempla and Kandeish Mountains, and dense forests along a frontier, forming an arc of an irregular circle; the chord of which, within the frontier, may be about 70 miles in length. The population of this district, including the immense town of Surat, may be about 500,000; and the revenue paid to the British Government about £200,000; and to the Guicowar, or native Sovereign of Baroda, for his share, about £80,000.

The Raj Peempla district, an alpine country of about 3000 square miles, includes the space betwixt the Nerbuddah and Tapty Rivers, its south-western angle being about 60 miles from Surat; is thinly peopled; and was in a state of anarchy, owing to a disputed succession in the period betwixt 1812 and 1820; which was only progressive, to greater and worse disorder, until the British Government was compelled, in self-defence, to send a detachment into the country; when, after the most patient investigation, and after the most judicious arrangements of Mr. Willoughby, of the Bombay Civil Service, the rightful heir was enthroned; and that interesting little principality was restored to peace and prosperity, in a manner not only highly creditable to the talented agent employed, but most honorable to the British Government.

The same period, or from 1813 to 1818, inclusive, was also memorable for the predatory campaigns of the Pindarries, a body of freebooters or land buccaneers, whose sword was against every man who had property to lose: their force was, at one time, estimated at nearly 100,000 horse: of course they had neither artillery nor forts; they were vast gangs of highwaymen, and their barbarities, their enterprize, and their capabilities of forced marches, are all alike unparalleled in history.

Their first attack upon any British Dependancy, was in February, 1813, when they meditated an attempt on a wealthy suburb of Surat, to plunder Nowsarry, a populous and rich town of about 20,000 inhabitants, 20 miles south of Surat and Gundavie, another town of about the same size and importance as Nowsarry, 12 miles further south; and this, which they estimated would be as much as they could effect, ere the garrison of Surat would be upon them, would no doubt have been an easy achievement, and a rich prey. The towns of Nowsarry and Gundavie, are the chief towns of the Guicowar's district, in the Attaveesy; his

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

territories there, as almost throughout all Guzurat, being intermingled with the British possessions, almost to the same degree that the black and white squares alternate on a chess-board. This first irruption of the Pindarries was providentially interrupted, and the district preserved, by the casual circumstance of a corps, the 2d battalion, 4th Regiment Native Infantry, then mustering a thousand firelocks on the effective war establishment, being on its march from Pallinad in Kattiwar, to Seroor, in the course of the annual reliefs. The battalion had halted the preceding day at Nowsarry, and marched southward for Gundavie, only two hours before the Pindarries arrived; thus their proceeding, as had been intended, was impracticable: and they had no remedy but to snatch such plunder as could be seized, whilst they halted to breathe and feed their horses; and this done, they retired as rapidly as they had come, having comparatively perpetrated very little mischief. Had not the 2d Bat. 4th Regt. been brought so happily to the spot at that critical moment, the slaughter and robbery in Nowsarry and Gundavie would have equalled the sanguinary and destructive horrors of the subsequent irruptions of the Pindarries into the southern districts of the Nizam's and Peishwa's countries, and into the Madras Presidency.

The Bombay government, then superintended by the Right Hon. Sir Evan Nepean, Bart. took the wisest precautionary measures to prevent the recurrence of such an outrage; and a force of 600 of the Guicowar's Marhatta horse, and a battalion of Native Infantry, were subsequently posted in the centre of the valley of the Taptee; the former being cantonned at Soughur, and the latter at Beearra; the first a Guicowar fort, 60 miles, and the other 45 miles due east of Surat.

The valley of the Taptee, betwixt Raj Peempla and Kandeish, from Songhur eastward for 60 miles is proverbially so unhealthy, as to be dangerous even for travellers to pass through; consequently, troops cannot be permanently stationed there; it was, therefore, unavoidable to withdraw the British force from Becarra during the rains; and they were consequently detached from Surat very early in November, and remained encamped at Becarra until June.

During some years previous to the irruption of the Pindarries, a detachment of about 200 men was usually dispersed through the frontier villages as police guards, in small parties of from 12 to 20 men, at suitable distances, to protect the country from the Bheels, inhabiting the Kandeish and Raj Peempla mountain forests. These Bheels are considered in their traditions, to be the descendants of those aborigines of the country who were dispossessed of the fertile country, and driven into the woods and mountains about two thousand years ago, by those, whose descendants were subjugated, about one thousand years after, in their turn, by the Mahomedans. Their peculiar rights in the frontier villages, and claims to a species of black mail, are admitted, and faithfully paid; and in the Raj Peempla district their aboriginal supremacy is acknowledged, by their being employed in the ceremonial of the inauguration, to lift the new sovereign in their arms, and place him on the Gaady, or cushion of state; and one of them imprints on the prince's forehead the Teeka, or symbol of Hindooism of his peculiar caste, with *his blood!* They are, in every respect, a singular race; thieves by profession, yet by no means despised by their countrymen; they are protected in their retreat by the unassailable nature of their country, which is as effectually defended by the demons of fever and dysentery, smiting every alien who dares to intrude, as by the absolute difficulties of almost inaccessible wildness. In the year 1814-15, a Bheel leader, named Jeewa Wassawa, had obtained to some influence in Raj Peempla; he was a bold and crafty man; an adept at obtaining intelligence, and in the art of managing such people as formed his following; and the outrage committed by those people during his sway, surpassed former excesses: among other feats of the like nature, in the rains of 1815, they attacked one of the best guarded British villages; and, mingling surprise with vive force, the sentinel was shot on his post; a volley upon the guard, as they flew to arms, annihilated them; and a fine village was plundered, and many lives lost. The arrangements which subsequently followed in 1820, of sending a detachment into Raj Peempla, would not have suited the policy of the day; consequently, nothing further was thought of than to increase the frontier guard; and an extra field detachment of 100 men of the 2d Bat. 3d Regt N.I. under the command of Lieut. Challon, were stationed at Bobary, which is nearly the centre of the extreme limit of the eastern border of the Province; and all the out-posts and village guards, were placed under his command.

Challon, then a Lieut. of the 3d Regt. was, what is called, a rough diamond: the roughness, however, originated in circumstances over which he had no controul; whilst the brilliancy was native, and his own: a clear-headed, indefatigable, and brave man; and a practically, and usefully, scientific officer: no one ever dreamt of finding him either at play or asleep when he was called for; he was, in fact, precisely one of those unpretending men of whom one never hears, until they are needed; or until some emergency brings them prominently to notice: he was well known to his immediate commanding officer, and was selected by him to command the out-posts, where an officer was wanted for the duty who could be relied on.

Challon's first care was to travel across the exposed frontier, and to take an accurate survey of the country; measuring very carefully the distances betwixt the villages; and ascertaining, accurately, the nature and direction of the routes to the fords of the Taptee into Raj Peempla on the one hand, and through the Ghauts into Kandeish, on the other. He instructed the people how to hedge in, and stocade their villages, and make the most of natural and available defences; and arranged a system of telegraph, that every hamlet, on any alarm, should dispatch a messenger with intelligence to the next, which should pass on the news to its neighbour, and thus onward to his head quarters; this, with other usual arrangements for communicating and spreading an alarm, secured that only one part of the frontier should be surprised at a time; and as the little villages are within very short distances of one another, in that rich and populous district, it was certain that the news of an invasion would reach the out-post head quarters in a very few hours. "I find," said Challon, in his report of his proceedings and plans, "that no force which could be spared, or so employed, could prevent the Raj Peempla people from entering the Purgunnah; but I hope that my arrangements will secure, that the next party of them who attempt an inroad, will either see that we are too well prepared, and so think it prudent to retire before they can commit any mischief; or should they pass the out-posts, and scour the Pergunnah as formerly, on my head be it, if any great proportion of those who cross the Taptee return with impunity."

The fair weather betwixt Nov. 1815, and June 1816, was a memorable period in Indian history; the grand Marhatta confederacy was then matured; and the Pindarries filled up the measure of their enormities by their wonderful march of nearly a thousand miles across India, without a halt, and by plundering Masulipatam in the heart of the Madras Presidency. Their first intention that year appears to have been, in concert with Jeewa Wassawa, of Raj Peempla, to have made another effort on the Surat districts; but Southern Guzurat was spared the cruel scourge by the wise precautions of Sir Evan Nepean's government. A brigade of two battalions of infantry, with a brigade of foot artillery, with detachments of H.M. 17th Dragoons and Native Cavalry, and a brigade of Horse Artillery, a total of 2400 sabres and firelocks, and 4 guns, were formed to be advanced upon the frontier, under the command of the late Gen. Kennedy, C.B. who died in command of the southern division of the Bombay army in 1831, and who was then Lieut.-Col. commanding the 2d Bat. 3d Regt. N. I.

Such a force, and so advanced, rendered it hazardous for the Pindarries to venture into a country accessible only by passes; they felt their way; and finding that all was too well secured for their purpose, they formed and executed their desperate plan of crossing the Nizam's country into Madras.

Before Jeewa Wassawa and his Raj Peempla Bheels had found that their friends, the Pindarries, were not likely to co-operate with them, they resolved to make an incursion into the province, ere the Beearra force should take the field; and in the end of October, 1815, they crossed the Taptee, in force about 500 strong; it being arranged, that Jeewa Wassawa, with half the party, should present the best front they could to the troops who might encounter them; and his nephew, Raewa Wassawa, was to spread the remainder over the country, for the purpose of plunder, and to secure and carry off the booty.

On crossing the frontier, they assailed Bardoly, the first village of importance they came to, in open day; but were beaten off with considerable loss; the entrance into the village being well stockaded, and the garrison of 12 men! being well supported by the villagers, alert and bold under cover, could not be overpowered Fighting, for the pleasure of giving and receiving hard blows, not being the Bheel taste, they passed onward into the Purgunnah, plundering some small hamlets, and driving off cattle as they proceeded. In the meanwhile, Challon had immediate information of their proceedings, and sent off expresses to Surat, that light detachments might move out to reinforce the villages, and support him; and, in conformity with his well-digested arrangements, hastened to place himself in the enemy's rear, to secure, that as few as possible of their party should return to Raj Peempla. At this time, the garrison of Surat consisted of H.M. 47th Regt., two battalions of Native Infantry, a strong corps of Artillery, and a squadron of Native Cavalry, a grand total of not less than 3000 fighting men; and Bardoly, the village attacked by Jeewa Wassawa, is not 25 miles distant from the city; whence, some idea may be formed of the courage of the enemy, and of the difficulty of covering an extensive frontier, with regular troops, against mere robbers. We much question whether any change of circumstances would ever enable Government to garrison Graham's Town as effectually as Surat was at this time garrisoned, and many centuries must elapse ere Albany equals Guzerat, in wealth and population, to pay the expenses of such protection; until which, the frontier farmers must rely, in a great measure, on their own sagacity or courage, and their own resources to meet danger, or to escape from it.

Challon's detachment consisted of 100 firelocks; his ammunition was musket grape; the best peppering for a loose horde of undisciplined savages, as it is desirable that your shot should spread, when the enemy have no intention of keeping together; it is very difficult, with a single ball, to pink a single man; but a dozen slugs, with common luck, make sure of him; and it is a grand object with these marauders, to mark as many as possible: the courtesy of combat being no part of the agreement! The police horse, whom the Bheels had most dreaded in their former inroads, on this occasion kept themselves unfatigued, and merely watched and reported their proceedings. The check at Bardoly, and the necessity of taking measures for their wounded, occasioned

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

a little delay; and before Jeewa Wassawa could resolve on further offensive movements, a strong detachment had moved from Surat to meet him; so that prompt retreat was his sole resource. They were thus retiring, encumbered with cattle, and the booty collected by Raewa Wassawa's party, when they fell into the trap laid for them by Challon: the surprize was complete, and the destruction of the enemy most effectual; upwards of 100 were left dead on the field, and somewhere near 100 taken prisoners: and the rest so entirely dispersed, that it could not afterwards *be ascertained* that even 50 of the party escaped; an immense number of the wounded, being only struck by such light shot, were able to escape to the forest, and die there; their corpses being afterwards discovered, in all the stages of putrefaction, in the jungle, on the routes to Raj Peempla, or in the ravines of the Taptee; whilst Challon's loss was very trifling, only two or three killed, and five or six wounded.

Sir Evan Nepean's government was not to be trifled with; the prisoners were arraigned as highway robbers before the civil court in Surat, and about 20 were sentenced to be hanged, and the remainder transported to the Eastern Isles; a punishment severer than death to a native of India. The sentence was executed without delay; the unhappy culprits were conveyed in carts to the frontier, and hanged on trees; one in every village along the Border; and the result was, as might be expected, that the Province was not disturbed for many years after.

Challon's merits were not left unrewarded: he was very shortly afterward provided for in the Quarter Master General's Department, and subsequently was Commandant of the Corps of Pioneers; continuing till his death, which was a loss to the service, one of the most energetic, and, in every way, one of the most efficient men of the Bombay army.

JACK RATTLIN AND NANCY WORTHY.

Captain ——, of H. M. S. ——, stationed some years since in Simon's Bay, was a famous hand in describing the peculiarities of the British sailor and the West Indians. We have heard a story of his telling, which, at the time of its delivery, is said to have made a considerable impression on his auditory.

The scene is laid in the West Indies. Jack Rattlin, a British sailor, had been employed on board a West Indiamen; but a few days previous to his ship's sailing, he was attacked by that inflammatory disease, known by the name of Yellow Fever. Having been brought on shore for medical advice, and his case appearing desperate, the ship sailed without him. Rattlin being of spare habit, recovered from his sickness, and his next care was to look out for employment; but as his stock of clean apparel was exhausted, and he had no money, he did not wish to go on board any vessel without that appearance of neatness for which an English sailor so much prides himself; these circumstances made him determine on washing a pair of his trousers himself, a job which sailors are in the practice of doing on ship-board. To accomplish this, he went about half a mile from the suburbs of the town, and commenced operations beside a stream (for washing-tubs are here unknown), wherein, and on the banks of which, stood some fifty or sixty yellow and diggy laundresses, thumping away with their beetles at the apparel of the inhabitants of the town. These ladies were shocked and scandalized at seeing a man attempting what they conceived to be their peculiar calling, and accordingly commenced a violent set of *philippics* against the unfortunate sailor. All the terms of reproach in their language, English, French, and Spanish, were exhausted by those dark declaimers, who may be classed among the most accomplished female orators in existence.

These diatribes were pouring out against him when he exclaimed, "Avast there—haul taut the slack of your jaws, or clap a tomkin on your muzzles, for your tongues are running fourteen knots an hour, spinning a yarn with your double Dutch coiled against the sun; what tho' I be a poor sailor, and am obliged to scrub my own trousers, because, d'ye see, I am hard up in the clinch, without never a knife to cut the seizing. I desires none of them here black squalls."

Of this speech the sooty laundresses scarcely understood one word; they knew it was in reply to their tirades, and concluded, naturally enough, that he was paying them back in their own coin; as, often, when spoken to in a language they do not understand, they conceive they are abused, or as they call it, "*cursed*." Jack's reply drew many a severe rejoinder from the sable ladies.

"Look he yie (look at his eyes), dem like two dollar," said one.

"And him nose, like one two barrel pistol," said another.

A French negress exclaimed, "Gardez le! le pas becca! le matelôt!"—That is, "look at him! he is not a white man, he is *only* a sailor!" For the French negroes never class sailors and soldiers as "beogées" (white men).*

"Why you 'buse poor sailor, 'cause him 'bliged for wash him own trousers, for? You no hab pity for him—you no saby (know) 'spose him hab mother, wife, or sister, such a handsome buckra neber hab for wash him own clothes," said a mild-looking mulatto girl; and the appeal to the sable damsels had the effect of silencing their din. She added, addressing herself to Jack:—

"Neber mind dem, massa, dem foolish too much; go in dat shed yonder, sit down there, and I go wash your trousers."

"Thank'ee, my good blackee," said the sailor, "I can scrub them myself, because I'm used to it; besides, I've no money to pay you, my lass"

The girl informed him that she required no payment; that she would conceive it a favour if he would allow her to perform the proposed trifling service, as those employed in washing were a little piqued at seeing a man rivaling them at what they conceived was their sex's peculiar employment. This was spoken, not in the most eloquent language, it is true, but with perfect natural politeness; for she possessed what was the first requisite of genuine politeness, namely, a kind heart and good sense.

The offer of Nancy was accepted by Rattlin, who retired to an *ajapa* (a shed). The girl finished her voluntary work, and hung the habiliments on a bamboo to dry; this, a tropical mid-day sun and a breeze that proceeded from the neighbouring mountains, shortly accomplished; but in the interim, Nancy came into the *ajapa*, and entered into conversation with the sailor

"How do *all* the people do in England, Massa?" said the brown damsel.—This is a friendly sort of interrogative generally asked of new-comers from "*Home*," as Creoles call Britain. Jack had been long enough in the West Indies to understand the question, which was, however, too comprehensive for him immediately to reply to. After a pause, he answered:—

"Why, since the war, seamen's wages have been more than 3*l.* 10*s.* out of England, my lass."

"Me mean, how your fambly, your father and mother do?" said the mulattress.

"I have neither father nor mother," said the mariner; they died ever since I first went to sea, which was when I was a little boy."

"Me 'sposed you no hab mother, or you no 'blige for wash your own clothes; but neber mind, poor massa, luck go change, and you go get plenty money. But wha' can I do to 'muse (amuse) you, till you trousers dry?—Yes, I go make one little dinna ge (for) you."

Rattlin, though not a man of keen penetration, had the sense to comprehend this delicate and hospitable proposal; and the state of his appetite and purse induced him to accede to it. In a few minutes, Nancy spread a little table with a cloth as white as snow, on which she laid a cake of cassava, a wholesome kind of food (extracted from a root, which, in its natural state, is a deadly poison), some pound plantains, fried eggs, a dish of *cascodoroes* (a small delicious kind of river fish,) and by way of beverage, a jug of water, a bottle of syrup, and some weak claret.* These viands, though her common fare, Jack surveyed as luxuries; but he could not prevail on his humane hostess to sit down and partake of them with him. No; she knew he was *but* a poor sailor, but yet he was a WHITE MAN;—consequently, *she* conceived him her superior: so that all he could say or do, could not induce her to join him in his repast. His meal being ended, Nancy brought him his trousers. She had smoothened them, but regretted that she had not the means of ironing them on the spot. While she was explaining this, a voice was heard outside, inquiring the way to town. Rattlin went to the entrance of the shed, and called out:—

"Bear down to leeward, gemmen; and when you get to yonder tall tree, tack to the larboard, and you'll be in parallel latitude with town."

"You give us our sailing directions like a seaman," said the querist, who, together with his companion, were two midshipmen belonging to a frigate lying in port. They had been up the country, shooting; but, being no ornithologists, had shot at the first birds they came within distance of—these happened to be three turkey-buzzards, or tropical vultures, which are most useful birds; insomuch, that there is here a heavy fine imposed on any one who destroys them, and, being protected by the law, their tameness is astonishing; of this, the middies were not aware, and bagged their carrion carcasses as excellent game.

"You give us sailing directions like a seaman." Jack replied that, until lately, he had been in the merchant service; but that at present, he was without a ship.

"A good-looking lad like you," replied the midshipmen, "should never need be in want of a ship, while his majesty's navy requires hands. Why don't you volunteer on board our frigate, The Bull Dog?"

Jack held down his head, brushed his napless hat with his ragged jacket sleeve, and, with a scrape of his left leg, that he intended for a bow, said, "He would be glad to volunteer, if any body would *press him*;" for, like many more sailors, he conceived it more degrading to enter freely on board a man o' war than to be impressed. The midshipmen smiled; and one of them said:—

"Well, Jack (he hit on his name by chance), since you appear to wish it, I'll press you." This settled, Rattlin took leave of his generous hostess.

"But, before I go, lass, tell me your name."

"Nancy, Sir."

"Nancy what?"

"My mistress' name is Worthy; and I call my second name after her."

"Nancy Worthy!—Can either of you gemmen lend me a pencil and a piece of paper?—thank you, Sir; and as my hand is rather better used to the narling spike than the pen, I'll thank you, Sir, to write down 'Nancy Worthy' for me; for, when I gets on board, I mean to mark it on my arm with indigo and gunpowder. But what's the use of a man writing the name of a good friend on the skin, when it is written already by gratitude here?" said the seaman, placing his hand on his breast.

* The French negro word *beguè*, and English term *buckra*, are, perhaps, both corruptions from the Spanish *blánco*.

* Vin de Côte is almost as cheap in the Colonies as porter is in London.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"My good fellow, you are quite sentimental!" said one of the midshipmen.

"*Sentry—sentrimental!* O no, your honour; I never stood sentry, or sarved as a marine, in all my life. I am a seaman as can hand, reef, steer, sound, and mend sails;—aye, I even know how to take a meridian altitude; only the numbers and round *o's* puzzles me a bit in the working of it—but all is one for that: the officer to his quadrant, the boatswain to his call, and the quarter-master to his helm. Good bye, my kind lass!—He who rules aloft will mark down your charity in his log-book—he'll reward you when we are all paid off for your goodness to a poor friendless seaman.—Good bye!"

"God bless you, massa!" said the kind-hearted girl, whimpering at Jack's address. "I'm sure you go come back."

"How are you sure of that, my lass?"

"Because you ha' eat cascadoroes," she replied; alluding to a common superstition of the island, which many believe, that any one who eats of the cascadoroes (mailed fish) and quits it, will return.

"Good bye, massa! I wish you may kill plenty rascal Frenchmen," she added; for poor Nancy, like most English colonial slaves, had a great hatred to the enemies of Britain. It is a fact that, when Sir Ralph Abercrombie made a descent on this island, much of the success of his enterprise was owing to the good guidance, and accurate information he obtained from an English negro, named Sharper.*

The parties left the hut—Nancy to her work; the midshipmen to carry their game to a gig waiting for them; and Jack to the same boat, to ask one of his future shipmates to help him down to the wharf with his chest.

Some years after this little event, and when Nancy had nearly forgotten it, her mistress was sitting in a kind of gallery, over a piazza, when in ran Buonaparte, a little, deformed negro, and what is called, "a pet" of his mistress; for Creole ladies often select from amongst their young domestics the ugliest they can find for their favourite, and allow it far more liberties than the spoilt son and heir of most European families. This urchin came in, and bawled out:

"Missis, missis, there is a sailor abottom (below) asking for you."

"A sailor!" said Mrs. Worthy; "what can he want with me?"

"Me no know; but he hab a *ribbin* round him neck, and a whistle tied to it. I axed him to gi' it to me; but he no been gi' me."

"Shew him in."

The black dwarf "vanished," and ushered in a good-looking sailor, clad in neat white drill trousers, fringed with blue, a white cotton jacket, with blue cuffs and collar, and white shirt, tastefully braided with a kind of blue cord; a black silk handkerchief was loosely thrown round his neck, and fastened to the edges of the opening of his shirt with blue tape; a silver call, or whistle, was suspended from his neck by a ribbon; a narrow-rimmed Panama hat, blue striped stockings, and long quartered pumps, completed his equipment, which set off to advantage a handsome, though rather weather beaten countenance, and a good figure, and withal accorded with his profession and the climate. The crooked urchin eyed him with some curiosity, not unmixed with childish fear. At first, he ran behind his mistress, and partly held her gown before him, while he stole a glance at the sailor; but his appearance soon made so favourable an impression upon the black letter of humanity that he ran between his legs, and put forth all his strength to lift one of them off the ground, exclaiming:—

"How do, massa sailor?"

"Come here, you imp of darkness!" said his mistress; "is that your manners?"

"Yes," said the boy, grinning like an ape.

"Have you any business with me, my good man?" asked Mrs. worthy.

The sailor doused his Panama, and made his best quarter-deck bow, and said:—

"I axes your pardon, ma'am, but is your name Worthy?"

"It is, Sir."

"Hadn't you a slave-girl, a yellow neger, called Nancy?"

"I have her still."

"Please Ma'am, I wants to buy her."—Mrs. Worthy was not a little astonished at the abruptness of the proposal.

"My good friend," said she, "if I wished to dispose of any of my slaves, Nancy is the last I would part with: she is the best conducted domestic I ever owned; but I hope never to sell any. I am a widow without children; and such of my servants as behave well to me during my life, shall never serve master or mistress after I am gone—I will bequeath them their freedom."

"God bless you, ma'am, for it—"that's what I call acting like a Christian."

"But, tell me, what can a man in your line of life want with a slave?"

"Why, ma'am, I doesn't want Nancy as a slave, I wish to buy her discharge."

"What can make you wish to do that?" said Mrs. Worthy, whose curiosity began to be excited.

Jack, who was not much of an orator, told as briefly as he could how poor Nancy had befriended him in his misfortunes; he also related his adventures after he entered on board his Majesty's frigate the Bull Dog; how he had been fortunate enough to be promoted after ten years' service to the rank of boatswain. He told her that lately the Bull Dog had taken three rich prizes out of Guadaloupe.

"And so you see, ma'am," said Jack, "we drew a good part of our prize money from the navy agents at Barbadoes; and as Nancy knew I must pass again through the Bocas,* because, do you see, I ate some *cask o' dollars*, as she called them.—'So,' says I to myself, I says, 'I may as well save my money as join the lads of our ship in their larks of frying watches."

"Frying watches!" ejaculated Mrs. Worthy.

"Yes, ma'am, in Carlisle Bay they broke up and fried two or three hundred watches in frying-pans that they bought in Bridge Town, and a good many of them ate bank notes between *soft-jack* (bread-and-butter); but I saved all my dollars, joes, and doubloons, 'because,' says I, 'I must pay the doctor and the old woman in Trinidad; besides, I'll see if I've enough left to buy poor Nancy.' Now, I find old Sall is dead, she as took care of me when I was sick with the yellow fever; and as to Dr. C.———, he would not touch a dollar, but squeezing my hand, said I was an honest tar, and an honour to my country. Howsomever, that's neither here nor there. I'll cut my yarn short; indeed I'm sorry you won't sell Nancy; but since that's the case, I'll give her the money, and she may do what she likes with it. Could I see her, ma'am?"

Mrs. Worthy sent the deformed boy to call Nancy, who happened to be a short distance from home. In the meantime she told Rattlin that, were she so inclined, she could not keep Nancy in slavery if any one offered her value for her manumission. Such was the decree of the Spanish colonial law, at that time in force in the island.

"However," she added, "it shall never be said of the widow of John Worthy, who was the kindest of masters, that any one had recourse to law to make her do justice to her slaves. I have frequently been offered 600 dollars for the girl Nancy, so well is she known for an excellent servant; but if you can give me 400 dollars she shall be free."

"I think I have about that 'ere sum, ma'am; let me see," said he, taking out a canvas purse, pretty well filled with Spanish gold; "how many dollars is this worth?" producing a doubloon.

"Sixteen," way the reply.

"Sixteen and sixteen——he paused—"yes, is thirty-two; and what is this?"

"A joe, eight dollars."

"Thank'e, ma'am—thirty-two and eight's—forty—no, I'm out in my deal reckoning—thirty and eight makes—I axes your pardon, ma'am, but I wish you'd count these yellow boys for me; if they were all the same size I could manage them, but some are little and others big. I wish all doubloons passed for ten dollars, and then I could manage to reckon them easy enough, as it would be all plain sailing."

She took the purse and counted twenty-six doubloons, a joe, and a two-dollar piece.—"There are twenty-six dollars over 400, and now, if you please, we'll send for Mr. Itchpalm, the lawyer, to draw up the manumission."

"No, no, ma'am," said Jack, "no land-sharks for me; for Jack, like most sailors, had an aversion to gentlemen of the profession; "besides," he added, "I've no time to stop, for the gig must be ashore by this; get the warrant of freedom made out yourself; I know by your good looks you wouldn't cheat a poor slave, or an honest sailor of the value of a bit of cakum.

"You are a generous man," said Mrs. Worthy, evidently pleased with the compliment, "and have too much honour yourself to suspect that others may want it; here take back seven doubloons, and now I only accept half what I was offered for my Nancy, and about one-tenth of her value to me." She gave him the seven doubloons; when Nancy entered, and without noticing the boatswain, inquiring of her mistress if she was wanted.

"What, my old friend, Nance! doesn't thee know me?" The brunette eyed him with some curiosity at first, then she seemed partially to recognize him. "I say, Nance, don't you recollect the poor sailor whose trousers you washed, and who you victualled when he was on short allowance?"

"Ah, is that you, Master Jack! I'm really glad to see you for true!" exclaimed Nancy, while a tear gathered in her eye. "How you're altered! you look older, but much better; you dress very pretty," examining him from head to foot, "I knew you would come back; I am very glad to see you once more."

Rattlin grasped her hand, and placed in it the seven doubloons that her mistress had returned—"Here, my lass, I've bought your freedom, and paid for you; here's a part of the price your mistress wants me to give you."

Nancy at first looked astounded, and when recovered a little, shewed as though she thought he was jesting. Her late mistress put an end to her incredulity by briefly informing her of the fact of Rattlin's assertion; when, overcome by her feelings, she let fall the money placed in her hands, burst into tears, and would have sunk on the floor, but Mrs. Worthy and her benefactor supported her.

"Oh, my dear mistress, and my dear master sailor, this too much kindness to a poor girl, only for doing what she ought for every body; but God bless you—bless you!"

"Holla, boatswain! is that you? I've been looking for you this half an hour; there's a signal for all hands to repair on board. But I'm sorry to spoil a scene—" said a voice in the street. Jack looked out from the gallery, and saw his lieutenant below; the same gentleman who, when a midshipman, induced Rattlin to enter on board the Bull Dog.

"Ay, ay, Lieutenant Quadrant, I'll be on the wharf before the boat can hoist her sail. Good bye, God bless you! I shall never see you any more, but shan't forget you; and when you say your prayers, put up a word or two by way of petition for poor Jack Rattlin!"

* This man is yet alive. Sir R. A. purchased his freedom on account of his services, and he is still allowed a small pension.

* *Bocas (mouths)*;—the different entrances of the Gulph of Paria are so called.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The boatswain then quitted the gallery, hastened to the wharf, and got on board, where his late grateful act was told much to his advantage, and got him into general favour with both officers and men. Mrs. Worthy instantly legally manumitted Nancy; the latter, however, would not quit her "*old*" mistress, by whom she was reared from her childhood, but remained with her as an humble friend to the day of her death. She never prayed without interceding for her benefactors. Her prayers seemed to be efficacious, for within a month the Bull Dog, cruizing off Porto Cabello, took an immensely rich prize; and after that, sailing through the Carribean Isles, they took three other vessels. Jack, whilst amassing money to manumit the mulatto girl, had learned prudence, so that he saved the whole of his prize money; and being wounded while cutting out a merchantman from under the batteries of St. Pierre Martinique, he obtained a pension, which, together with his savings, rendered his circumstances easy for life.

CORRESPONDENCE.

AFRICAN BOW-STRING HEMP.

[We have again to acknowledge, with much pleasure and thankfulness, another Communication from a practical agriculturist. It has been accompanied by a specimen of an indigenous plant of this colony, which the writer declares to be much better fitted for the manufacture of cordage than the Aloe (the *Agave Americana*,) as noticed in our No. 1 of this year.]

To the Editor of the Cape of Good Hope Literary Gazette.

Sir,—It is with pleasure that I observe the unwearied perseverance which you exercise to induce the colonists of the Cape to exert themselves, and bring forward to mercantile notice the various vegetable articles which this colony either does or might produce to a very great extent; I make this remark in consequence of the account you give of the *Agave* as a colonial plant; it is certainly common in various parts of the colony, but has not yet become a free denizen of South Africa: and I further have the pleasure to inform you, that the hemp-like properties of the Agave, are rivalled, if not indeed excelled, by an *indigenous* production of the colony, and of which I have procured the description accompanying this; to which I may add, that the plant in question can be manufactured with less trouble (as the specimen also sent will show,) than the Agave.

Your's, &c. &c. E.

SANSEVIERA Guineensis. African Bow-string Hemp.
Hexandria Monogynia,—*Linn.*
Natural Order, Hemorocallideæ.

Generic Character.—Carolla tubular, margin revolute, and divided into six segments, stamens slender, placed in the throat of the corolla. Berry three-celled, each cell containing one seed.

Specific Character.—Leaves uniformly broad-lanceolate, rigid, of a dark green color, marked with lighter coloured blotches in *fasciæ*; margin thready, red in color, the floral leaves one-third the length of the flower.

The flower is white, and after sun-set emits a pleasant perfume; overpowering if confined in a close room.

Inhabits, in great abundance, the various karoo soils of the colony.

HEDGE-FENCING.

We know nothing equal for security against cattle, equal to a hedge-fence now growing on the premises of the late Mr. Merckel, at the *Half Way House*. Independently of its protecting qualities, it is most remarkable for the distribution of its seed. When the fruit is ripe it opens, and borne on the breeze, two beautiful seedlings, in perfect appearance with the transparent wings of an insect, take their flight and become their own planters. Mr. Bowie has favoured us with the following scientific description of this plant. It is well worth the attention of all Landholders.

HAKEA Gibbosa, Gibbous-fruited Hakea.
Tetrandria Monogynia,—*Linn.*
Natural Order, Proteaceæ.

H. Leaves needle-shaped, terminated by a mucronate-spine; the upper part very slightly channelled, and together with the branches covered with down; peduncle hairy; calyx downy; capsule gibbous; inner part furrowed; wing of the seed half an ellipsis; nucleus furrowed, with a margin at the base.

This tree is a native of New South Wales, and was introduced to this colony some years since as a species of Banksia, from which genus it is now very properly separated.

In vegetable Geography, the above Natural Order forms a remarkable connection of the Botany of Australia and South Africa, the numerous species of either region appearing to rival each other in the singular formation of leaves, or the beauty of their flowers, and it must also be observed, that, in number of species, it would be difficult to decide which has the majority, as there are cultivated in the British gardens about 350 species, which number is almost equally divided between the before-mentioned rivals. J. B.

A PASSAGE IN VIRGIL EXPLAINED.

To the Editor of the Cape Good Hope Literary Gazette.

Sir,—There are doubtless many of your Subscribers who occasionally amuse themselves with Virgil; perhaps, therefore, the following attempt to explain a difficult passage which occurs Georg. IV. 232, will not be unacceptable to them.

Virgil mentions two seasons of making honey; the one at the heliacal rising, the other at the heliacal setting of the Pleiades.

Taygete simul os terris ostendit honestum
Pleias, et oceani spretos pede repulit amnes;
Aut eadem, sidus fugiens ubi Piscis aquosi,
Tristior hybernas cœlo descendit in undas.

Petavius, the celebrated Astronomer, (Rat. Temp. vol. iii. p. 51,) calls the two last lines "locum inextricabilem." Heyne in vain endeavours to explain them; Wakefield does not notice them.—*Piscis aquorus* has been supposed to mean the Southern Fish, the Dolphin, Hydra, or Scorpio; but neither of these Constellations can be substituted for the *Piscis aquosus* of Virgil.—It appears to me that the Poet intends the more Northern of the two Fish, which form the Constellation Pisces.

If we examine the sphere, we shall perceive that this Fish descends, or sets, before the Pleiades, but in *the same part* of the horizon; I imagine, therefore, that *ubi* refers, not to *time*, but to *place*.

The passage is usually translated—"Or *when* the same Pleiad *flying from* the constellation of the watery Fish," &c.

But if *ubi* be made an adverb of *place*, and the punctuation of the passage be admitted as above, the two lines may be thus translated; "Or the same Pleiad descends more gloomy from the sky into the wintery waves, *where* the flying, i. e. the setting, constellation of the watery Fish [descends.]

Cape Town, 15th April, 1835. H. O.

ODDS AND ENDS: A MEDLEY.

[communicated.]

The veracious and sage historian, Joe Miller, has recorded that our British Solomon, King James 1st, of Gun-powder-plot-discovering-blessed memory, insisted, on his first arrival in London, upon presiding in person in the Court of King's Bench. The counsel for the plaintiff being first heard, the royal judge pronounced that 'the honest chiel was i' the reete,' and would have proceeded to pronounce judgment; but being advised of the necessity of hearing the defendant also, he consented pro formâ, but was astonished to find that the other chiel was equally honest, and thereon declared them a couple of knaves, and left the Banco Regis in future to the usual judges. Such seems the bewilderment of the public on all questions involving the Corn Laws' question. There is no end of the mystification and the fallacies by which they are to be upheld: let us take the following, which has been published in the *South African Commercial Advertiser* without a comment.

RELATIVE WEIGHT OF EXISTING TAXATION.

Mr. Coke's estate consists of 40,000 acres of land, rented upon an average at 16*s.* per acre, and as the four-course system of husbandry is pursued in that country, one fourth part of this estate, or 10,000 acres, are annually sowed with barley, and which produces, on an average, five quarters per acre, or 50,000 quarters of barley annually. Now the duty paid (before the last repeal) to Government, on making five quarters of barley into malt and beer, of both sorts, was 14*l.* 3*s.* 4*d.* so that each acre pays, in direct taxes, more than 17 times the annual rent, these 10,000 acres yielding to Government 141,660*l.*, while they yield to Mr. Coke only 8,000*l.* Now the fundholders receive about three-fifths of all the taxes raised, whence it follows that they get from these 10,000 acres, 84,996*l.* 8*s.* *or above ten times as much as the landlord.* This sum, too, he it remembered, is exempt from all direct taxation, contributes nothing to the poor, nothing to the state, the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

church, army, navy, &c. while the landlord's share is burdened with heavy expenses towards them all, and by far the greater part of it ultimately finds its way into the pockets of the same fundholders. Does not the above statement show the ruinous effects of taxation, and evince the utter and absolute incompatibility of *free trade, dividends*, and *cheap bread*, with golden money?—*Birmingham Journal.*

Now, the first point to be considered, is, that the land-*lords!* were the lords of the old boroughmongers' Parliament, which made all the wars, which consumed all the money, which money the landlords borrowed, and which the fundholders lent on the security of the lands; therefore, the question of paying, or not paying the dividends, is not a matter of policy, but of common honesty; if we declare ourselves insolvent, and unable to pay, then, indeed, the question assumes another shape, and it comes to an investigation of the bankrupt's estate, in order that the creditors may have justice, and all the proceeds that can be realized! thank God, we have not come to that pass yet! let the reformed Parliament have fair play, and let the people but demand their just rights, and we may weather a rougher day than the present.

The second point to be considered is, how much of the rent of 16*s.* per acre realized by Mr. Coke; how much of the £84,000 of taxes is to be credited to the people, as indirect taxation upon the consumer, dependant upon the Corn Laws! did it never occur to the wiseacre who endited the above paragraph, that wheat in the valley of the Elbe sells at little more than half the price it bears in London? "Does not the following show the ruinous effects of taxation?"

The highest quotation of white wheat of the first quality at Hamburgh, is 85 rix-dollars current the last, which answers to 27*s.* 5*d.* the English quarter of eight bushels imperial measure, and the highest quotation of red wheat of the first quality is 80 rix-dollars current the last, which answers to 25*s.* 10*d.* the quarter, and therefore the mean price at Hamburgh of white and red wheat together is 26*s.* 7*d.* the quarter. The highest quotation of white wheat in Mark-lane is 54*s.* the quarter, and the highest quotation of red wheat is 46*s.* the quarter, and therefore the mean price in Mark lane of white and red wheat together is 50*s.* the quarter. It appears therefore that wheat is 88⅛ per cent. dearer in London than at Hamburgh, and with the sum of 2*l.* 10*s.* a man may buy 15 bushels of wheat at Hamburgh, whereas with the same sum he can buy only eight bushels in London.—*Times, 22d Dec.*

And yet the madness and wickedness of the party which has left to posterity this fearful legacy of incumbrances and embarrassments, does not appear to be altogether, nor every where, exploded. The venerable relics of the august Bourbons seem to leave lingering longing looks behind; but let us hope, in vain. Bulwer's France has an admirable history of Charles X. during the Three Days; never was a more wretched scene than what the royal coterie exhibited; the dauphin, for instance, scratching and cutting his own royal thumb and fingers! in snatching the Duke of Ragusa's sword! and the whole affair, from first to last, is below ridicule:

"O! that I were a mockery king of snow,
To melt before the sun of Bolingbroke."

This rampant mountebank, disarmer of the Duke of Ragusa, is admirably exhibited in the true history of his celebrated speech of "one Frenchman more," all Paris—all France, and all Europe echoed that happy apothegm, which, it appears now, was put in his mouth by Talleyrand: he is now, it seems, a confirmed imbecile! was he ever more? but they have a *star* it seems, "the harbinger of better days"—much good may it do them!

CHARLES X.

The negociations of the agent of Charles X., charged to purchase the grand domain of Nachod, situated on the frontier of the county of Glatz, encircling the magnificent Castle of Ratiborschutz, with all its treasures of the fine arts of Italy, are still in progress. This domain belonged to Wallenstein, and latterly to the Prince of Piccolomini. The exiled Monarch is in a state of great activity, and his countenance is serene. The arrival of several strangers of distinction has restored some hope to him and his attendants, who imagine that the ministerial crisis in two great states may exercise an influence advantageous for his cause, and bring about, if not immediately and ostensibly, at least indirectly, a desirable amelioration. The Duke of Bordeaux, a favourite of the intimate circle of Radschin, consoles the exiles by his graceful and amiable manners. The Prince seems like a star, the harbinger of happier days.—*German Paper.*

Charles X.—The imbecility of mind of the Duke of Angouleme appears to have increased since 1830, and this is the reason why it is so difficult to get access to him. Mademoiselle de Berri is really a most accomplished young princess: but the Duke of Bordeaux does not answer the character generally given of him in France. His constitution seems bad, and his mental powers are of the most ordinary nature. The monkish education which he is receiving has, in all probability, stopped the development of his faculties. He goes to mass every morning, confesses, and takes the sacrament twice a-month. Although he is 14 years of age, he has not yet been allowed to read any of the great French authors. He carries continually under his arm a small Jesuitical work, called "Reflect upon it," in which are painted, in the most frightful colours, the torments of the wicked; it is the vade-mecum of him who is destined, by a retrograde faction, to reign over a great people.

Charles X. is as difficult to be seen at Prague as he was at the Tuilleries. In order to be presented to him, it is necessary to write to M. de B——, and undergo all the formalities of the old etiquette. In other respects, misfortune has not taught him wisdom; he is still under the influence of the same fatal fanaticism which induced him to issue the fatal ordonnances. "It was rather to save religion than my crown," says he, "that I took that step; and I do not repent of it."

After having talked some time of the affairs of Europe, he added, with an air of haughtiness, "Our enemies say that I receive pecuniary supplies from the Duke of Orleans, and that I would consent to give my grand-daughter in marriage to his son. Tell our friends that there never will be anything in common between us; and a man who"——

The Duchess of Berri resides in retirement at a distance of several leagues from Prague, and is not allowed to see her children so often as she wishes.—*Le Bons Sens.*

George the 4th did not require speeches to be put in his mouth: his farewell to Louis 18th, at Dover, was a home-thrust, when he used the words which Louis 14th addressed to Charles Edward the Pretender, when he took leave on his adventurous and ruinous expedition of 1715: "The best wish I can address to your Majesty is, that we may not meet again." Louis 18th was returning in triumph and security, and the hint that the Bourbons deserved no grace from the House of Hanover, was then no insult to misfortune or weakness: their star was then in its zenith; let us hope that it was fully disposed of in the Three Days, and with it the disastrous principles of which it was the harbinger and the evil omen. The divine and indefeisible rights of pure legitimacy were thoroughly demolished in England in 1689, but an oligarchy usurped the power which they had torn from the crown; the people have at last proved too strong for the Boroughmongers, and the eventual result after some further struggling, will probably be, direct taxation upon property, instead of indirect taxation upon industry: the tax that pinches hardest is the best tax: the man who feels what he pays will be loath to vote in such a way as implicates the hazard of expenditure; and in due time, with God's blessing, we might all be Quakers! no wars, and no sinecure placemen! and then the Millenium!

The *Times*, like all turn-coats and rats, is sunk in tone as well as character, and never limped at a lamer rate than through the month of December; the following, however, shows that the doffing of the lion's hide has not been without a tickling of the palm.

A City correspondent says the offer for the advertising the names appended to the City address to His Majesty, which appears in *The Times* this day, was first made to the *Herald*. That paper asked 180 guineas, which being objected to, *The Times* was then applied to; that paper asked 100 guineas only, and obtained the enticing *morceau*.—*True Sun.*——We have no wish to speak harshly, but our contemporary should have made some inquiry before he published two falsehoods on the information of perhaps an anonymous correspondent. The advertisement was sent to *The Times*, not *after*, but *before* its communication to the *Herald*. What the *Herald* charged we have not any right to inquire; our charge, under the peculiar circumstances of the case, (which certainly was not one to excite selfish considerations,) was less than

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

our ordinary charge: but the sum charged was not 100 guineas, but 240 guineas.

The printing, as an advertisement, a list of six thousand signatures, is a notable specimen of Tory policy; the same, as a pamphlet, might have been printed and circulated to twenty times the extent, for a twentieth part of the expense, but *The Times* required a fee! Whether the six thousand signatures be *legitimate*, or, as is asserted, three-fourths be got up by humbug, it matters little; suffice it to remember, that the dry and rotten bones in all the old charnel-houses of despotism through Europe, are shaking for joy at the foul hopes which the "*Ministerial Crisis*" has awakened.

REFORM.—OPINION OF DR. ADAM CLARKE.

"Those who have nothing to lose, and to whom the state owes nothing, are the first to cry out of *wrongs*, and the first to disturb civil order that they may enrich themselves with the spoils of those who, by legal inheritance or honest industry, have obtained wealth. Wherever the spirit of disobedience and insubordination appears, it should be discountenanced and opposed by every honest man. The very *seeds* of it are dangerous; the *embryo* and *buds* of it are much more so; and the *fruit* ruinous."—*Newcastle Journal.*

Dr. Adam Clarke, no doubt, set up Gatton and Old Sarum as the Gods of his Idolatry, and such pensions as King Charles the 2d, of pious memory, conferred upon the Dukes of Richmond and Grafton, to be enjoyed through all ages by their descendants, as "civil order." There is a book published by Mr. Wells, on the Revenue, &c. of England, which deserves the serious examination of every man who pretends to give an opinion, or even to fancy that he holds one on public affairs; among other curious matters more clearly brought to view than we have before seen them, are sundry pensions enjoyed by the above illustrious personages, who derive their origin from what Thurlow termed 'the accident of an accident'—a well-turned phraseology, and worth preserving for the illustration of heraldry: but let their birth be what it may, their pensions are probably equally "accidents of accidents;" and if they out-last many sessions of reformed Parliaments, without being pruned into order, they will be fortunate accidents.

SINECURE PENSIONS

Inherited by the Duke of Grafton, and enjoyed by his ancestors since the Reign of Charles the Second, who died 5th Feb. 1685:

Pension from the Revenues of the Post Office, - - - - - - - - -	£4,700
Ditto ditto Excise,	9,000
Sinecure *hereditary Office* in the King's Bench! - - - - - - - - -	4,000
Do. do. do. Prisage of Wines,	6,870
Total exceeding	24,000!!

Admit the right, which we question, of King Charles 2d to grant away the Royal Demesnes to his illegitimates, we utterly deny his right to saddle posterity with pensions, payable for ever, out of the taxes and *annual grants!!* by Parliament!! Let us suppose that the Dukes of Grafton have only enjoyed one-third of the above, say £8,000 per annum, during the lapse of 150 years from 1685 to 1835 inclusive, the amount of the people's money, obtained by taxes upon the people's industry! which this one family has consumed, amounts, at compound interest, to more than one hundred and sixty millions! any objection thereto being, in the opinion of the *Newcastle Journal*-monger, "the spirit of disobedience and insubordination." This is just the proper person to exult in the Wellington Administration, and never was a more exquisite bit of foolery than the following:

Such, then, as far as it goes, is the New Ministry. We ask the sourest of the Whigs, and the most ranting of the Radicals, to compare it with the Ministry just gone to the right-about, and say on which side is the superiority. We will leave this to their candour. We are satisfied that *such* a question should be decided by the enemies of the New Government.

We say, without hesitation, that we are satisfied with the Ministry, as a whole. There are offices, undoubtedly, that *we* should have differently bestowed, if *we* had had the dealing of the cards.

But there is Sir Robert Peel—the 'fittest man of all this land' for the post he has assumed. We have now a man at the helm who can plan and execute; aye, and who can make himself intelligible in the House of Commons.—*Newcastle Journal.*

Pity! indeed, that the Journalist has not "the dealing of the cards;" but as *dealing cards* has always appeared to us to be chance work, and not dependant upon wise deliberation or fore-thought, we consider the selection of the Journalist metaphor a happy, though unintentional illustration of the Tory Band: we suspect that the Duke and Sir Robert have had bad hands dealt them, and that the four honors and the odd trick are with their opponents.

Let us contrast the notions of the Boroughmongers respecting pensions, with the provisions by the Reformed House:

It was, we find, erroneously stated a few days ago in most of the daily journals, that Sir James Graham, the late First Lord of the Admiralty, had declined to receive the pension of 2,000*l.* a-year to which he was entitled. The truth is, that by the act of Parliament brought into the House of Commons by Sir James himself, and passed on the 25th of July, 1834, pensions not exceeding 2,000*l.* a-year may be granted to persons who have served for a period not less than two years as First Lord of the Treasury, as one of the Principal Secretaries of State, Chancellor of the Exchequer, First Lord of the Admiralty, President of the Board of Control, or as President of the Board of Trade; but the act contains the following limitations—namely, that there shall be no greater number than four such pensions hereafter to be granted existing at the same time, and that when any individual shall seek to obtain any one of the pensions before-mentioned, his application to the Lords of the Treasury shall be made in writing, subscribed by himself, containing a statement not only of his services and his grounds for claiming the pension, but a specific declaration that the amount of his income from other sources is so limited that his private fortune is inadequate to maintain his station in life. The last limitation of course altogether prevents Sir James Graham from applying for, and obtaining, a pension, but he is entitled to credit for introducing that new provision in the act, which will, in all probability, exclude him when he is not employed from ever receiving any emolument or pension from the state.—*Courier.*

The vile system of large pensions to people of large fortunes, burthening the finances to enrich the already rich, with incomes raised by taxation, has had a dreadful effect in swelling the amount of the Eight Hundred Millions!

Among the atrocities committed by the Reformers' Ministry, is the following:

The late Ministers have granted to a Dr. Podding, Roman Catholic Bishop of *Hiero Cæsarea*, a sum of one thousand pounds sterling per annum, and one thousand acres of land, for the establishment of a Popish College in New South Wales, together with the expences of the outfit of the said most eminent Bishop and his suite.—*Newcastle Journal.*

But as Catholics pay taxes as well as Protestants, emigrate and help to make new colonies as well as Protestants, we cannot see the enormity of a grant for a Catholic College. If Protestants consider their creed founded on reason and sense, they show a strange ignorance of the effects of education in their favor; deny education, and keep the people ignorant, and you keep them the slaves of superstition: instruct them, and you teach them the difference betwixt good and evil, and when that difference is manifested, who doubts of the issue? but the late ministry were also guilty of another enormity; they hesitated to increase the hierarchy of India!

A letter from India says, "We are in the dark as to our Bishop. Mr. Macaulay says nothing was settled when he left England regarding Madras or Bombay. He adds, there was great difficulty in carrying the measure, and that it was only done by making sacrifices to Mr. O'Connell regarding the Catholic priests—at this price I would not have increased the sees.—*Newcastle Journal.*

The European population of all India, including 20,000 European troops, may be estimated about 40,000 souls, or under; that is to say, less than the population of one of the third-rate manufacturing towns of England! for this we have already one Bishop and three Archdeacons! to 68 Chaplains! and the Reformers' Ministry were not wrong in thinking such an establishment quite sufficient, and preferring to send out

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

twelve extra Chaplains instead of two more Bishops. Should the Peel Party exist through half a session, we may see an Archbishop and Bishops consecrated for India, to be paid out of the taxes levied on the natives. The Directors of the East India Company very properly opposed the multiplying of Bishoprics; and we do not believe one word of the expression which is attributed to Mr Macaulay.

One of the evils of monopolies, and the great scale of trading is, that the immensity of the operation renders all petty gains and diminutive branches of interchange of commodities too paltry to be taken into consideration. The East India Company would not have exported belts and buckles to New Zealand, nor imported 15,000 feet of flooring-boards from Canton; but the free-trade will do both; and when the majority of the people in either country see that the intercourse contributes to their well-being, we shall have an end of cannibals in New Zealand, and of non-intercourse with foreigners in China.

The last Papers from New York, reaching to the 2d instant, inform us that a new course of trade with China had been commenced by the American merchants; the ship *Commerce*, from Canton, being reported as having brought in a cargo, consisting of 15,000 feet of flooring-boards, and various articles not generally imported from that country.—*Times, Dec.*

NEW ZEALAND TRADE.

For many years past a rapidly increasing trade has been carried on between Sydney and New Zealand. We are now happy to find that a similar trade has at length commenced between that country and Hobart Town. Several vessels are now engaged in the trade, and more are on the stocks. Some of the articles of exchange are curious. One description which has been found productive is leather belts with buckles, which are used by the natives in fastening the mats, which they wear as clothing, round their bodies; the expense of these is not more than one shilling each; for each of which, it is said, they will readily give a pig, weighing 100 lbs.—*Chronicle.*

The future prospects of this colony, as respects the commerce with the interior, depend on so many contingencies, that it would be hazardous to conjecture whether the course of trade, on the pacification of Central Africa, by the extinction of the slave-traders' wars, will be hitherward, or to the eastern or western Coasts; still, under any circumstances, a portion of the trade must be through our ports, and as no part of Africa is so congenial to European constitutions as this climate, the new Carthage may be expected to rise here; thus it may be expected that any speculation investing capital in this colony, has a prospect of eventual success; and the question is, how far the parties can afford to wait for the slow and distant return? Joint-Stock Companies for a Bank here, for ship-building in the Knysna, for a sheep-walk on a scale of sufficient magnitude to include means of defence, as well as pastoral industry, and even for the formation of an establishment at Natal, somewhat similar to the new colony projected on the southern shores of Australia, would not in the end be losing speculations, though we question the probability of immediate or very gratifying returns in the present generation: those who embarked therein should act on the principle of one who plants acorns, and leaves the chances of the oaks to his children.

A village inquest on a suicide in the Yorkshire Wolds, brought in their verdict of *Luciny!* The case was something like the following, a cool, deliberate, and somewhat facetious "extinguishing of the vital principle," and the astonished coroner objected to the verdict; the honest clowns stuck to their opinion of *Luciny*, and maintained that "no man would make away with himself that was in his senses!" Were they right or wrong?

A few days ago, a man named Jean Guibert, about forty years of age, threw himself into the Seine, at Nogent, in a most singular manner. Have spent all his money at a public-house, without being as he conceived sufficiently drunk, he proceeded to the bridge, and said to a gentleman passing by, "Stop, Sir, and you shall see something." The gentleman stopped, expecting some mountebank tricks. The man then very deliberately divested himself of his hat, smock-frock, jacket, and waistcoat, and placed them on a stone post. He next mounted the parapet, which is 80 feet from the water, and exclaiming, "When a Frenchman has no longer a sous in his pocket, it is thus he should die!" immediately threw himself off. He had not reached the water, which is here eight feet deep, before the alarm was given by the astonished spectator of this mad act. A boat was almost as instantaneously launched, and the people in it were on the point of seizing the poor wretch, who had come to the top of the water, and appeared to be waiting for them; but whether from exhaustion, or from an obstinate determination to extinguish life, he again went down, and was not recovered till he was lifeless.—*Galignani.*

Some whose mania is not quite so desperate as to rush upon suicide, exhibit their wrong-headedness in funeral eccentricities as follows:

SINGULAR FUNERAL.

The beadle of St. Nicholas' Church, in Newcastle, was lately apprised that a corpse (at any rate a coffin) would be sent by the Ardincaple for interment; and accordingly, on Monday, the 24th ult, a box, directed "a Passenger," was taken to his house, containing a splendid coffin, which was interred at 9 o'clock next morning, in the most private manner, by going into the church by a back gate, and without the tolling of any bell. The entry made in the register is "Ellen Tatlock, Aberdeen." The only reason given for all this was, that the woman had requested not to be buried in Scotland.—*York Courant.*

We doubt the virtue of obeying such irreligious injunctions. Death and the Grave are solemn realities, and the echo of the jest that sounds in the damp vault, is "the fiend's arch mockery."

Our climate is the best adapted for orchards and kitchen-gardens, perhaps, in the world, and wherever there is shelter from the strong winds, and a command of water, the extent of capabilities depends entirely upon the area to be cultivated and the capital to be employed. A fine boundary-hedge of fir groves surrounding the homestead, and an orchard, with all its lower levels well manured for vegetables, would be as profitable as ornamental; and, if liberally conducted, might be of important advantage, even in a national point of view, to the colony. The noble exertions of such patriotic and zealous friends to the colony as the Baron von Ludwig and Mr. Breda, ought to be publicly and gratefully acknowledged. Whoever introduces a new fruit, or an improved species of the kind already possessed, renders a benefit to his neighbours. We should be glad to see the following:

EVER-BEARING RASPBERRY.

The fruit is very little known to agriculturists out of the state, and we suspect even those within our borders know scarce more. The only plants in this neighbourhood are in the garden of Nicholas Longworth, Esq., to whom we are indebted for the following description of the plant:—"In the latter part of October, 1832, I met in a garden in Warren county (among the Shakers) with raspberry plants in full bearing, and on inquiry learned they were a native fruit of the state, found near Lake Erie. The fruit resembles the common native blackberry, but is larger and finer. I introduced a few roots into my garden, and find them constant bearers from June until destroyed by frost. The fruit is produced in large clusters; the wood continuing to grow through the season, and the ends of the new shoots throwing out fresh blossoms. It is more decidedly a constant bearer than any kind of fruit I have seen. Our monthly strawberries are abundant bearers in June, but for the balance of the season their produce is so small as to be scarce worth the trouble of gathering. The raspberry is a constant and abundant bearer, except for two months in the summer, when, if the weather be very hot and dry, the produce is less."—*Cincinnati* (America) *Chronicle.*

Can the following be true? it is from the *Age*, July 27th; the circumstances of the case appear paradoxical, and yet it is given as fact:

SECRETS OF THE POST OFFICE.

The Duke of Richmond said, in his speech on the Punishment of Death Bill in the House of Lords on Friday last, that nearly 100,000 letters passed through the General Post Office in the course of the week, and 40,000 *per diem* through the Twopenny. The dead letters, or letters misdirected so as they could not be delivered, contained, *in money*, during the period while he was in office, upwards of £170,000; and in one year they contained £25,000. This, if true—and "we will take his

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Grace's word for a *thousand* pounds"—is an astounding secret. What becomes of *money*, we should like to know, when the clue is lost as to both parties, writer or sender, and the receiver?—*Age*.

Admitting that fourteen millions and a half of letters pass yearly by the Two-penny Post, and upwards of five millions through the General Post Office, still such a total amount as £170,000 to be sent, without any clue to either sender or sent-to, seems an "astounding secret" indeed.

We quote the following also from the *Age*, July 27th; first, as a specimen of the style of the Tory periodicals at that date; and secondly, to shew the signification, in English, of the signature which a correspondent of the *Zuid-Afrikaan* adopted in a scurrilous and vulgar attack on Mr. Fairbairn and his correspondents.

THE BALAAM HERD OF WHIGS.

By virtue of our high calling, we pres-AGE that the measures to be pursued by the present *patched-up* "lath and plaster" Cabinet will procure for their framers, by future historians, the appellation of the "*Balaam Herd*"—a cognomen, by the way, which it is their peculiar province to enjoy, from the circumstance of the initial letters of *ten* of the junta happening to compose that all-*significant* phrase; *ex. gr.*:

B-rougham,
A-lthorp,
L-ansdown,
A-uckland
A-bercrombie,
M-elbourn, } Balaam! { H-olland,
E llice,
R-ussel,
D-uncannon. } Herd!

"Balaam" is known by the veriest *jack-ass* in human intellect to imply a stupid dolt; and "Herd," quoth the Colossus of lexicography, "is a company of men held in the utmost contempt or detestation." We have given the signification of the component terms; it is for others to *blend* them as they may think proper.

Calling foul names, and using foul epithets, answers no other purpose than to demean the party so acting: but what are we to think of the party whose bad taste or ignorance shall select a term of opprobrium as a *nom de caresse?* The *Age* would honor them with a designation in something of their own language; but are we never to see the end of these vulgarities? Will the public never demand a periodical press unpolluted with personalities? We ventured a hint on the subject of one half of the papers being in Dutch, a language we do not read, nor wish to learn, and which the descendants of the Dutch colonists would do wisely to cease to read their politics in, even if their early associations should continue to make it more agreeable to worship God in Dutch. Those who can indulge in early recollections of domestic religion and religious habits from the nursery to their entrance into the world are fortunate, and they are wise if they persist in maintaining those solemn and sacred recollections through every variation of the "changes and chances" of their lives; to such, the language in which they were first taught prayer, will be the most hallowed for prayer, and they are right, if they wish it, to persist in using that language in their religious offices; but in politics they have become English, and the sooner they forget William van Holland, and begin to think and deliberate in Reformed Parliamentary English, the sooner they will rid themselves of their Balaams, and make vulgar scurrilities a losing speculation; the sooner, too, they will themselves become what they ought to be, as the chief landed proprietors of this interesting and most important colony.

ORIGINES ZOOLOGICÆ.

THE OX AND ITS USES.

In our last Number a few zoological recollections of the sheep were interspersed in our notice on Mr. Reitz's Pamphlet on *The Merino*. The following article on the Ox may not be unacceptable to many of our readers

In the earliest stages of society this valuable quadruped became an object of domestic care and regard; for we read in Genesis (xiii. 6, 7.) that "there was a strife between the herdsmen of Abram's cattle and the herdsmen of Lot's cattle;" the flocks of each of whom were so numerous "that the land was not able to bear them, and they could not dwell together." The ox was held sacred by the Egyptians, and elevated into one of the twelve signs of the zodiac (Taurus) A representation of the ox became an object of idolatrous worship, as in the golden calf erected by Aaron. (Exodus, xxxii.) At this day, in India, the sacred cow, as representing one of the transformations of the deity, is held in the highest veneration, and the flesh forbidden to be eaten. The ox became, from associations like these, an acceptable offering of propitiation or gratitude; as we find (Genesis, iv. 4) that Abel offered in sacrifice the firstlings of his flock: that Abram was directed (Genesis, xv. 9.) to sacrifice a heifer, of three years old, as an offering for the promise of a son; and that twenty-two thousand were sacrificed by Solomon at the dedication of the temple. (1 Kings, viii. 63.) The seven years of plenty and the seven years of want were typified by the fat and the lean kine of Pharaoh. (Genesis, xli.)

Veal, it appears, was the first dressed meat upon record: for when Abram entertained the three angels (Genesis, xviii. 7.), "he ran into the herd, and fetched a calf tender and good, and gave it to a young man, and he hasted to dress it." The ox and the ass, as the most valuable representatives of pastoral possessions, are expressly forbidden, in the Tenth Commandment (Exodus, xx. 17), to be unlawfully coveted from our neighbour: and the ox and sheep were pointed out to Moses, from Mount Sanai, as the chief subjects of sacrifice. (Exodus, xxix)

A white bull was the most acceptable sacrifice among the Romans; but a black ox was considered as the emblem of misfortune; as we say of one who has been unlucky in his pursuits, that the black ox has set his foot upon him. And a man who has been bribed to silence is said to have an ox in his tongue, *bos in linguâ*; because the figure of an ox was stamped upon the Roman coin: and for this reason the word *pecunia*, or money, was derived from *pecus*, or cattle. Europa was fabled to have been carried beyond sea by a bull, because Taurus, or the Bull, was the name of the ship by which she was conveyed. By the Roman law, the owner of a vicious bull was obliged to distinguish him by a bundle of hay tied to his horn; whence the expression, "he has hay on his horn," as spoken of a dangerous or litigious man: "fœnum habet in cornu; longè fuge." Of a bold adventurer we say, that he has taken the bull by the horns; and of a petulant woman, that the curst cow has taken the bull by the horns. [In Exodus, xxi. 28–36, there are various compensations appointed to be made for injuries received from oxen by human beings or other oxen, as well as for injuries occasioned by man to oxen.]

To plough with the heifer means, to make a friend of the female sex: for when Samson lost his wager to the Philistines by the treachery of his wife, "If," said he, "ye had not ploughed with my heifer, ye had not found out my riddle." (Judges, xiv. 18.) To chew the cud and ruminate, expressions figurative of deep and serious reflection, are taken from the placid and quiescent habits of this tribe of quadrupeds. To bully and to cow, meaning to intimidate and overbear, are probably words taken from the menacing attitudes of these animals when irritated: so coward, from them when in an opposite condition. Some, however, have supposed that the expression bully arose from the pope's bull, or threat of excommunication. And he who is compelled to retract unwarrantable pretensions is said to draw in his horns.

Bull feasts are probably remains of pagan sacrifice, or augurial rites; at present a national and favourite amusement in Spain.

> "So Spanish heroes with their lances
> At once wound bulls and ladies' fancies;
> And he acquires the noblest spouse,
> That widows greatest herd of cows"
> *(Hudibras.)*

Bull-baiting was first introduced into England in the time of King John, and is supposed to be commemorative of the persecutions of Christians under the emperor Nero Bull-baiting is now exploded in England, but the Bull fight is as popular in Spain as ever.

By the laws of the Cambro British legislator, Howel-dha, if a man betrayed a young woman, he was sentenced to place a bull in a stall with his tail soaped; and if the damsel could draw him out by the tail, she was to have the bull for her pains.

The arms of the city of Oxford are three oxen passing a ford, with the motto, "Ox on," underneath. This was formerly finely represented in sculpture upon the ancient water-conduit at Carfax; but which is now removed. And here it may not, perhaps, be impertinent to remark, that Carfax is a simple corruption of quatre vaux: it being the centre of four roads radiating in crossing directions.

The bones of cattle slaughtered in London were formerly of such huge accumulation that it became necessary to consume them from time to time. This process was reserved for some holiday or period of public rejoicing, when faggots and combustible materials were collected from the neighbours for the purpose of illumination; whence our term bonfire may mean either bone fire, from the materials to be consumed, or boon fire, from the gratuitous collections made for the purpose. Of a person whom it is intended not to encourage or spare, it is said, that we make no bones of him.

The stealers of cattle have an ingenious method of twisting the horns of these in a direction so contrary to their natural position as to make it impossible that they can be identified by their owners. The cattle are concealed in caves under ground, and hot loaves of bread fastened successively on the horns, the heat and moisture of which soon render them malleable, when they are turned in any direction,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and afterwards fixed and stiffened in their new position by cold water.

The age of a cow is known by the horns, reckoning three years for the first circular wrinkle, and one for every additional wrinkle. It is remarkable that the Comte de Buffon, generally so accurate, should assert that the cow sheds her horns every three years.

The ox, when alive, is the only horned quadruped which lends his labours to the service of man, except the rein-deer; furnishing him also with the substantial luxuries of milk, cream, butter, cheese, and whey: and, besides its national ["the roast beef of old England"] and nourishing food, when dead, almost every part is convertible into some useful purpose. The skin of the ox, has hitherto been a prime object of traffic with our Frontier Caffers,—a staple article of colonial export. The skin makes a durable leather, useful for shoes, boots, and numberless conveniences of life; and the fishermen of Wales, Scotland, and some parts of Ireland still make use of the ancient coracle, or leather boat, the ribs of which are made of osiers, and covered with the hide of a bull. Vellum is made of calves' skins; and Limerick gloves of the skin of such calves as are just dropped. The hair is mixed with lime as a necessary cement for mortar. The chippings of the hoofs, and fragments of the skin, make glue. Goldbeater's skin is made of the fine membrane which invests the larger intestines. Rennet for curdling the milk is made of the salted stomach of the calf. Of the horns are made combs, spoons, powder-flasks, boxes, the handles of knives, drinking cups called horns; * and when softened by steam or warm water, they are drawn into thin plates for lanterns; and, when scraped and properly compounded, were formerly used, like bezoar, as antidotes against poison.† The blood of oxen is useful in the manufacture of sugar, is an excellent manure for fruit trees [is an ingredient in the compost or soil used in the cultivation of auriculars,] and is the basis of Prussian blue. The bones, besides being useful to mechanics where ivory would be too expensive, produce, when crushed, an excellent manure; are essential in the formation of sal-ammoniac and phosphorus; produce an oil, much used by coach and harness makers, called neat's-foot oil; and, when calcined, give a valuable test to the smelter and refiner. The gall is serviceable to the chemist; the tallow contributes to give us light: and, above all, this noble quadruped has become sacred, as being the instrument of eradicating that loathsome disease the small pox. From the noble sirloin of beef, as being the prince of joints, we say of a man who predominates over his companions, that he rules the roast. The H bone of beef, the derivation of which is not generally known, is a corruption of isch bone, from *ischium*, the hip or huckle-bone; and is so spelt, I believe, by the venerable Mrs. Glasse.

It has been quaintly remarked, that most of our animals serving for food preserve their ancient Saxon names while living; but when they are dead and dressed their names immediately become French. Thus it is ox, calf, sheep, deer, pig, while alive; but beef, veal, mutton, venison, pork, when served at table. This might arise from our neighbours having introduced among us a more savoury and tasteful art of cookery.

* A fair, for the sale of horn ware, called Horn Fair, is held annually somewhere near London.

† The harvest horn, formerly blown at early dawn in harvest time in large farm establishments, and still in use in some, perhaps many, was, and doubtless is, mostly, I believe, a bullock's horn. Gray has, in his "Elegy written in a Country Churchyard," given record of this pleasing rural custom, and of some sweet associations of early morning which must ever keep it company.

"Beneath those rugged elms, that yew tree's shade,
Where heaves the turf in many a mouldering heap,
Each in his narrow cell for ever laid,
The rude forefathers of the hamlet sleep.

"The breezy call of incense breathing morn,
The swallow twittering from the straw-built shed,
The cock's shrill clarion, and the echoing horn,
No more shall rouse them from their lowly bed."

PROHIBITED FOOD.

MAHOMEDAN SUPERSTITIONS IN CAPE TOWN.—CUSTOMS OF THE JEWS.

The inhabitants of Cape Town have been long in the habit of bowing down to the superstitions of Mahomedanism in reference to animal food. They have tamely yielded to the customs of this people, and thus have tacitly compromised their christian principles. Hitherto it is well known, all meats are forbidden by the Mahometan Priests which do not undergo certain rites and ceremonies, by themselves or agents. It should be recollected that we live under a Christian Government and dwell among a christian people; but we have strangely added to the spiritual power of a Mahomedan Priesthood. At length we discover one of our butchers, Mr. Johnstone, has had the firmness to prepare his meat for the market apart from, distinct from the superstitions of the Malays.

On the subject of prohibited food, the following extract from the new work of D'Israeli, *The Genius of Judaism*, will, we think, be found extremely interesting.

The causes which led to the prohibition of certain aliments, and the distinctions observed of animals pure and impure among the Jews, have only been partially conjectured, but never satisfactorily accounted for.

These difficulties may be traced to a remote period. Aristeus, the envoy of Ptolemy Philadelphus, having been sent to the high priest Eliezer, to procure a copy of the Greek version of the Pentateuch, inquired, why Moses had prohibited certain animals from being eaten, and others from being sacrificed. The unexpected inquiry seems to have disconcerted the High Priest as much as it had puzzled the envoy, who himself was, probably, a Jew. The High Priest, however, proceeded to amuse the Egyptian ambassador, by assigning, as a reason, that the precepts concerning animals were enigmatical, like the symbols of Pythagoras and the hieroglyphics of the Egyptians. He described, with Æsopian fancy, how the hare represents libidinousness, the swine impurity, and the fox, craftiness; and with some occult conceit, how the ostrich was the representative of hypocrisy, because, though it mimicked the stork in the whiteness of its wings, it failed in its fleetness; while the chameleon, like the common flatterer, changed at will, reflecting a colour foreign to itself. These mystical fancies, in those puerile days, may have satisfied the too inquisitive envoy, but certainly they never assisted him in comprehending the Law of Moses.

This opinion, that the prohibited animals were symbolically expressive of moral purity and impurity, was a Platonic reverie which, among others, was current with the Fathers. Cardosa, when the principles of Judaism are not endangered by too acute and penetrating inquiries, is no unskilful reasoner. He has observed that some animals are declared to be clean which offer no doubtful symbols of vicious habits; as the goat for lasciviousness, while others condemned as unclean are symbolical of virtues, as the dog, eminent for fidelity. This zealous Jew, having collected all that his learning or ingenuity could discover, fairly spun the net in which he is himself caught, and it is only by appealing in his distress to Heaven that his Rabbinical genius can silence any human objection.

"It is the obligation of Jews," says the ardent Hebrew, "to observe these precepts as coming from God, although to us the reason may be impenetrable; God exacts obedience and not speculation. But since the human understanding pants with the desire of knowledge; and is but too prone to investigate causes, everywhere searching for apparent or probable reasons, although the right and the certain are often hid from us, we may be allowed to inquire into the causes of the precepts; but to observe them is a duty which precedes inquiry, and obedience is more acceptable than investigation." So reasons our Bramin.

Of these prohibited animals and aliments many have been ascertained not to be sanitive. In the hot climate of the East, the swine, the hare; the fat or suet particularly enjoined to be burnt in the sacrifices, and never eaten; the blood corrupting in the meat; the limb of a living animal; the meat of one which had died; the rank shell-fish, the fat oyster; birds of prey and carnivorous animals; all these would be of bad digestion, and some even noxious. But the reason of forbidding certain aliments to be eaten by the Israelites could not be for any pernicious effects they might produce on their health, for the truth is that many of these forbidden aliments are not unwholesome; Pagan and Gentile ate of them, and were not more sickly than the Israelite who so rigidly abstained. Among the prohibited animals are the rabbit, and some wild fowl, the moor-cock, and others which are more salutary than the flesh of the buffalo or wild ox, or the goat. The greater part of the prohibited food are noxious aliments, but all noxious aliments are not prohibited food. If the health of the Israelite had been the sole motive of these ordinances, a book of medical precepts had sufficiently warned the people. We are not told that these prohibted aliments are pernicious, but that they are impure; it was not commanded to avoid whatever is noxious, which would have left every one to decide for himself, but the aliments themselves are specified. Must we not therefore infer, asks the Jew Cardoso, that these injunctions are of divine institution for divine purposes? a learned Rabbin, at the time Napolean held the extraordinary Sanhedrim at Paris, was called on to reply to those who, with political wisdom, would have abolished the ritual of forbidden food. His illustration of this difficult inquiry was ingenious, but the result was the argument of Cardoso. "The Camel is an interdicted animal," replied the Chevalier de Cologna, Grand Rabbin, "and as we know that its flesh yields a nutritious and even delicate meat among the orientalists, the great legislator must have had some more important motive in prohibiting the use of these animals as food; and therefore we must infer that the distinction between clean and unclean animals must originate in a higher and more occult source."

NATURAL HISTORY.

INGENUITY OF RATS.

The rat, that "hateful and rapacious creature," as Goldsmith honestly designates it, formerly abounded in prodigious numbers in Inverness, and a traveller about the year 1730, describes his surprise at witnessing the flocks of them which used to sally out into the streets in the morning twilight after dry weather succeeded by a shower of rain. It is related that about this period, when the rats increased to a great degree in some small villages in the Highlands, and found it difficult to subsist, they used to creep into the manes and tails of the *garrons* or ponies (which were then generally matted and tangled, being seldom subjected to the comb) and in this way were transported to other places, to plant new colonies or find fresh quarters. This mode of conveyance was certainly dexterous and ingenious, but did our readers ever see or hear of a party of rats stealing eggs? The process is this. The roost being discovered and the rats mustered, one of the fraternity, generally of goodly port and dimensions, lies down on his back, and holds the egg within his four limbs, embracing it closely and cordially. His brethren then pull them off by the tail, each taking his turn in dragging the live machine, like the populace at the carriage of a "great man," who, it is probable, may be of a kindred species, the rat political. A gentleman in the country informed us the other day, that he was greatly amused at observing one morning the dexterity and perfect fairness with which a small band of these noxious intruders were feasting in his dairy. A pretty capacious dish of milk had been set out to cream, and the rats, finding the prize, immediately commenced superseding the labours of the dairy maid. One of them stood up against the dish, and another mounted his shoulders in due form like school boys preparing to plunder an apple-tree. He then whisked his tail over the luscious surface of the bowl, and turning round held it out to his expectant companions below, who stripped it of its milky treasure? This was repeated for some time; then another took his place occasionally shifting the position, and after they had all skimmed the dish and regaled their senses they scampered off in the morning sunshine to burrow in their holes and corners.—*Inverness Courier.*

THE HOG.

When we regard the numbers of mankind fed upon the flesh of this animal, it must be seen that he occupies an important place in the domestic economy of countries. His flesh is perfectly nutritive, and, from its ready reception of salt, it is better fitted for preservation than that of any other animal. It is thus eminently adapted for sea-voyages, for which purpose it is largely used. It forms a great part of the animal food of the labouring classes of Europe. The hog is truly the poor man's stock, since it may be raised by the cottager, as well as by the breeder on the larger scale. There is no animal which, in proportion to the food consumed, yields so great a quantity of muscle and fat. His flesh, indeed, may not be so profitable as that of the sheep and the ox, but this arises from the facility of production, and the consequent tendency of the market to be overstocked. To the settler in the new country the hog is the most valuable of all the larger domestic animals used as food. He is beyond every other, quickly multiplied, reared, and brought to the required maturity. The clearers of land in the American forests could hardly subsist during their first year of labour and danger without this creature. And in our own country, it is a great error for a farmer, however extended his concerns may be, to disregard this branch of farm stock; it is to him a source of household economy and comfort. He can raise the most delicate pork for use at all times, and with the greatest facility, and will always derive a sufficient profit, by the sale of the remainder, to pay him for his feeding, and induce him to give attention to this branch of economy.—*Professor Low's Elements of Practical Agriculture.*

ADVANTAGES OF DEEP PLOUGHING.

A farm and other lands on the estates of Broomhall, having falling into the landlord's possession, in a state of much dirt and exhaustion, it was found on examination, that this deterioration was greatly to be attributed to the practice of confining the labour to 6 or 8 inches of the surface, which a two horse plough could not more than effect in ordinary cases; and to the subsoil being rendered peculiarly retentive by the constant pressure of the plough upon it. At this time, attention had been much excited to experiments, in progress in East Lothian, of deep ploughing and deep delving, in imitation of the practice in Flanders, and also by the introduction of wedge drains, and the valuable suggestion of Mr. Smith of Deanston, near Doune, for combining that mode of draining and deep ploughing. Accordingly, the landlord proceeded to act upon these two unquestionable principles in good husbandry—that of draining the lands and deep ploughing—and the consequences have been:—1st, That, solely by the admixture of subsoil, and free use of the grubber, the dirt and exhaustion of the original surface have been got the better of, so that the seed has been at once sown without summer fallow. 2d, Any improvement which the quality of the subsoil is calculated to effect is obtained. 3d, The land is rendered pervious to rain to the full depth of the deep ploughing. And, accordingly, from the commencement of the operation, the crops have invariably been beyond comparison far better than ever were before produced on the same ground; and, in most instances, light land is improved, and a cold wet clay is now converted into essentially good turnip soil.—[This statement confirms the opinion of Martin Doyle.]—*Dumfries Courier.*

LITERARY EXTRACTS.

POPULAR EDUCATION.

(From the Edinburgh Courant)

Professor Pillans concluded on Tuesday his two lectures on the subject of education, and on the importance of classical knowledge as a branch of study. The necessity of diffusing instruction widely among the people is now generally admitted; and all the discussions and questions to which this subject has given rise, relate only to the best mode of attaining this desirable end. Professor Pillans commenced his lecture, which was listened to with deep attention by a very crowded audience, with contrasting the state of education and the condition of society in ancient and modern times. In the classic ages of antiquity, he observed that no idea was ever entertained by the enlightened men of that day of diffusing knowledge generally among the people. It was considered the peculiar privilege of the rich; while the great mass were left in their primeval ignorance. The glory of this improvement was reserved for modern times; and he particularly expatiated in terms of eloquent commendation on the example of Prussia, where, contrary to the genius of a despotic Government, the great work of educating the people is enforced by law; and where, being aided by the manners of the people, it is carried on with an order and intelligence that distinguishes Prussia to her advantage above most other countries. Mr. Pillans then adverted to the state of education in France, and pointed out the great defect of the system in both those countries to be the absence of monitorial teaching—a process by which knowledge is more rapidly, cheaply, and effectually communicated than by any other mode that has yet been devised.—Adverting to the great subject of his lecture, he distinguished between the system of education proper for that portion of society whose destiny is to labour with their hands, and that higher degree of culture which those ought to receive who are to move in a higher sphere, that enlightened body from whom society must take its peculiar aspect and colour; from whom not only all social refinement must proceed, but on whom in perilous times, when it becomes necessary to enforce a salutary controul on the stormy passions of irritated factions, society must depend for peace and safety. Mr. Pillans dwelt on this subject for some time, placing it in various lights, and enforcing and illustrating his opinions with an eloquence, force, and closeness of reasoning, which appeared deeply to impress his numerous audience. His views respecting classical learning appear to be, that though it should not be adopted as the exclusive object of education, as is the system in some of the English seminaries of Eton, Harrow, &c, of which he introduced a brief and interesting sketch, yet that it should still form an important branch of study to be prosecuted as in the High School and Academy of this city, along with other studies, such as geography, English literature, and other modern languages; and in due time when the faculties are more matured, the pupil to be initiated in the severer sciences. Mr. Pillans successfully ridiculed the modern process of *cramming the mind with premature knowledge;* and argued strongly in favour of the study of languages as being the proper nutriment for the faculties while they are yet in their progress to maturity. It is in this view that we have always considered classical study as the most valuable exercise that can be devised for boys *between the age of* 10 *and* 14. The pupil is then initiated in a general knowledge of grammar and the structure of language—his reason, his taste, his judgment are called into play; and thus the mental faculties are exercised without being overloaded with ideas that cannot be comprehended: for the mind must have time to grow as well as the body, and it cannot be forced prematurely forward. We have no doubt that by judicious training for that limited end, and by severe application, the memory of a boy may be loaded with a great store of knowledge, and that he may be even trained to some surprising feats of mental agility. *But we place no value on such acquisitions, or on such tricks.* It is only when knowledge takes root in the mind, and when it springs up spontaneously in the congenial soil of the matured intellect into an abundant crop of new and original ideas, that we consider its acquisition to be of any value; and this cannot take place at the age when boys usually attend schools.

LORD WILLIAM BENTINCK.

From JACQUEMONT, the French Traveller's Journey in India.

THE man who, perhaps, does most honour to Europe in Asia, is he who governs it. Lord W. Bentinck, on the throne of the Great Mogul, thinks and acts like a Pennsylvanian Quaker. You may easily imagine that there are people who talk loudly of the dissolution of the empire and of the world's end, when they behold the temporary ruler of Asia riding on horseback, plainly dressed, and without escort, or on his way into the country with his umbrella under his arm. Like you, he has mixed in scenes of tumult and bloodshed; and, like you, he has preserved pure and unsullied that flower of humanity which the habits of a military life so often wither, leaving in its stead nothing but good-nature. Having been tried also by the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

most corrupting of professions, that of diplomatist, he has issued from the ordeal with the upright mind, and the simple and sincere language of a Franklin, convinced that there is no cleverness in appearing worse than one is.

A Successful Appeal.—Bell, a Scotch bookseller in Philadelphia, who flourished during the revolutionary war, published a number of pamphlets, and some books, which he sold at exorbitant prices. A person came into his store one day, and asked for a pamphlet of less than one hundred pages, for which Bell asked a hard dollar; whereas a hard half a dollar would have been its full value. The person was surprised at the exorbitant demand, to which he made some objection. Bell took the pamphlet from the counter, and was about to place it on the shelf, saying, with a pompous and significant air, "Sir, this book was *made for gentlemen.*" This tickled the vanity of the purchaser, who, not to lose his claim to that proud title, threw down the dollar and took up the pamphlet.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

PUBLIC HEALTH.

It is gratifying to read the reports published in England and France on the preservation of health, and the means in zealous operation for its better extension all over the world. What is doing at the Cape, we know not. Except the periodical reports of the mere names of diseases in Somerset Hospital, and something in the shape of a *Monthly Inspection* in the Town Prison, we are all in the dark as to the science of *Hygiene* and *Therapeutics*. We have no Surgical Report, no Medical Journal, no Medical or Surgical Lectures, no communications through the Press. Not one, since last year, when the worthy American Surgeon, Mr. Jaleel Brooksbank, addressed us on this subject.* As to the science of Hygiene,† so much cultivated at home, it is not only directed to cure the diseased, but to preserve and improve the sound, both as individuals and communities. We may attribute our higher average of life over that of other nations, ancient and modern, (we are speaking of Great Britain,) to our feeding the hungry, clothing the naked, and helping the sick and broken-hearted; to our preventing the intercourse of the contagious with the healthy, and to our providing all the circumstances of cleanliness, warmth, ventilation, &c., by the neglect of which the health of communities always suffers. Besides what hospitals and legislators have done, we can boast of names whose patriotic philanthropy have bequeathed to the nation infinite blessings of a sanatory nature. Lady Mary Wortley Montague, whilst travelling with her husband to his embassy at Constantinople, witnessed inoculation, and, with all a mother's hopes, submitted her children to the operation, and the result, when known in Britain, was the means of saving many lives. Howard, who found our prisons hot-beds of disease, showed that cleanliness was compatible with security and punishment, and also with moral reform. The thirst for gain in pestilential and unhealthy climates brought many to an untimely grave, owing to the ignorance of the principles of naval Hygiéne. The early history of the English as well as the Spanish colonies, shows how deadly were the voyages to and from them. But, who now dreads a voyage to the West Indies? Military Hygiéne, too, is now well understood; during the last war the British army, under Sir James M'Grigor, being a perfect model with respect to attention to the preservation of the soldiers' health. Among the illustrious benefactors of mankind in the department referred to, is it necessary to mention Jenner? But we like a name next to the discoverer of vaccination, as pointing out one of the best friends to human health – it is that of Watt. For every stroke of the steam-piston, which is doing the work of ten or forty men, is adding nearly ten or forty times to the common welfare and good; since by how much the more cheaply and plentifully every necessary is procured, by so much is the public health improved.

Oppressively taxed and over-worked as they are at home, England is still the healthiest country of the world. The period of human life is greater in the town of Birmingham, with all its smoke and all its noxious vapours, and its close and hot manufactories, than in the city of Paris or Naples itself. Now these are ascertained facts, and proclaim consolatory conclusions.

* See Page 23, Vol. 4th.

† A Greek term, comprehending those things which are not part of the body, and yet essential to its existence: such as food, drink, air, motion and rest, sleep, watching, retentions and secretions, and passions of the mind.

POLITENESS.

A gentleman of well-known hospitality in Cape Town, invited the writer to dine with him on a certain occasion, at the hour of six. In the course of the day, two or three friends dropped in, and the salubrity of the sea breezes provoking an appetite, the party sat down to good fare at four o'clock. At six o'clock the bell rings, when the invited is announced. The worthy host and his lady immediately discover their forgetfulness, but with great presence of mind, receive the visitor with every cordiality, and make no excuses.

Scarcely half an hour transpires, when dinner is announced, and the whole party sit down and partake of the good cheer of a second well-spread table.

OBITUARY.

Died, in Cape Town, on the 27th instant, William Tulloh Robertson, Esq. aged 36 years, of the Bengal Civil Service. Mr. Robertson was distinguished for his literary accomplishments and great ability in the Oriental languages. Mr R. was the Author of a translation of *Roostum Zaboolee*, (from the Persian) into English verse, with the original text annexed. The work was published at Calcutta, in 1829, and is a volume most elegant in all its appointments.

Mr. Robertson favoured this Journal in 1830, with many valuable contributions.

COMMERCIAL EXCHANGE.

The Annual Meeting on the 30th, was respectably attended. D. W. Hertzog, Esq. in the Chair. The Annual Report is encouraging, and a handsome dividend on the cost of the original Shares in the Exchange, was declared.

Committee elected for 1835-6:

Messrs. Watson, Simpson, Dickson, Venning, Ebden, T. Tennant, and Prince.

Auditors:

Messrs. Waters and P. M. Brink.

THE SOUTH AFRICAN PUBLIC LIBRARY.

At the Annual General Meeting of the Subscribers, on the 27th instant,

Sir JOHN HERSCHEL presided.

The following other gentlemen took a share in forwarding the objects of the Institution.

Revds. George Hough, Dr. Okes, Dr. Philip, Rev. J. Pears.
Honorable Sir John Wylde,
Doctor Kennedy,
Mr. Advocate Cloete,
Captain Van Reenen,
Messrs. Eaton, Fairbairn, Buckton, and E. Christian.

Committee elected by Ballot for the present year:

Rev. G. Hough, Sir John Wylde, Mr. Sandford, Mr. Advocate Cloete, Mr. Gadney, Col. Thomson, Rev. Dr. Adamson, Mr. Marshall, Dr. Murray.

Treasurer,—Mr Gadney,
Auditor,—Mr. Lawson.

ANACREON,—Ode XI.

Tell me not Love! that age's snow,
Is whitening o'er my wrinkled brow,
Nor let that smothered laugh disclose,
What well my conscious spirit knows;
Oft hath it sighed o'er every sign,
Which warned me of my life's decline,
And registered each pleasure past,
With tears upon my tablet cast.

Yet, think not, Love! my blanching hair,
Is withering on the head of care;
With stern experience, anxious thought,
And sullen wisdom's follies fraught.
No, Love! my songs when twilight fades,
Ring blithely 'mid the myrtle shades;
Come thou with smiles, the festal bower,
Lacks love alone to bless the hour.

* * *

Cape Town, April 28, 1835.

BROTHER JONATHAN.

We have often thought that our Cape Advertisements are perfectly unique in their kind, but here are a couple of *out-and-outers*, from an American Paper, which beat us all to sticks:

"To be sold by the printer of this paper, the very best negro in this town; is as hearty as a horse, as brisk as a bird, and will work like a beaver.

"To be sold by the printer of this paper, a negro man about thirty years old, who can do both town and country business very well, but will suit the country best, where they have not so many dram shops as we have in Boston. He has worked at the printing business, can handle an axe, saw, spade, hoe, or other instrument of husbandry as well as most men, and values himself and is valued by others, for his skill in cookery and making of soap."—*Boston Gazette.*

AN APOLOGY FOR ROMPING, JUMPING, AND RUNNING.

Motion is a beautiful agent in the promotion of health and good humour. How crabbed, ill-natured, and snappish is our conduct towards each other, from being pent up without fresh air, and the wild-bliss exercise of mountain or hill-side rambles! The Infant School system has, we think, happily unfolded a correct view of the importance of motion in expanding the faculties of the human mind. How wearisome, what a task, to be confined in one position for many hours in the day at an old dame's school, and in default of bodily obedience, to be *pinned* in erect position to the old lady's apron! The Infant School system, we take the liberty of suggesting, should be engrafted on all systems of modern education. There should be regular days for active bodily exercise, and besides books and work, there should be

"Healthful play."

The importance of motion to health is shewn in the very construction of the body. When the brain is not receiving the motion of the blood, the lungs, that of the heart and diaphragm, then there is an end of thinking and living. Exercise is not advised by nature, but commanded; she has given almost the whole mass which covers the bones for motion, and made it capable of much more powerful motion than that which she herself keeps a-going. Her's are the finer and steadier movements, but she demands in us an accompaniment of the coarser and stronger ones. Broussais, after alluding to instinct, as leading imperiously to motion amongst all animals, places exercise as a passion affecting the young of the human race. Cheyne, speaking of the exercise of the young, gives us a good remark when he says: "Tis beautiful to observe that earnest *desire* planted by *nature* in the *young* persons, to *romp, jump, wrestle,* and *run,* and constantly to be pursuing *exercises* and bodily *diversions* that require labour, even till they are ready to drop down, especially the healthier sort of them, so that sitting or being *confined* seems to be the greatest *punishment* they can suffer; and imprisoning them for some time will much more readily correct them than *whipping*. This is a wise contrivance of nature, for thereby their joints are rendered *pliable* and *strong*, their blood continues sweet and proper for a full circulation; their perspiration is free, and their organs stretched out by due degrees to their proper extension.' Meditate on this, ye mothers, whose poor girls can scarcely walk, much less run and romp; and who procure for them crooked backs and pale cheeks. Meditate on it, ye parents who send your daughters to fashionable boarding-schools, in order that, in acquiring art, they may lose nature; and ye who are looking out for wives, say, will you take this deceptive creature with her pale cheeks, and distorted body—the victim of her mother and fashion—or her who comes bounding down the hill-side with her ringlets streaming in the wind, her face with the freshness and glow of health, and her kiss sweeter than

"Sabean odours from the spicy shore
Of Araby the blest."

WATER AND ITS DRINKERS.

Many thanks to Government for appointing a Committee of Water Works, reminding us of the many heavenly blessings around us, and hinting to us the necessity of husbanding these pelucid resources with a miser's care. It is a fact, that liquids are more necessary to the system than food, hence the necessity of a pure beverage. A few extended thoughts on water may not be worthy the attention of thirsty souls.

Water is the proper diluent, and the only liquid proper to appease thirst. It should contain as few foreign matters as possible. Distilled water is the purest, but it has a faded and vapid taste, from not containing air. By exposure to the atmosphere it absorbs air, and more especially fixed air or carbonic acid gas, and loses the vapid taste. Boiled water has the same taste as distilled water. The hard waters, or those containing some of the earthy salts, are by no means injurious to the health, unless these exist in them to a very large extent, when they are supposed by some to lay the foundation for stone in the bladder. Water containing any animal or vegetable substances in a state of decomposition, is unfit for drink. *Rain water* is very pure, at any rate, such of it as is collected in an open country, and after the rain has poured down for some hours—the first fall of rain containing any impurities that may have collected in the air. *Spring water* is by far the best for drink, when not containing much earthy salts; then *well water* which is raised from a silicious stratum; and lastly, *river water* which runs over a rocky bed. Water when cold, or when warm, removes thirst better than when merely tepid, and water which is only slightly or sensibly cold, refreshes much better than water which has been cooled very far down. Water drinkers are, in general, long livers, are less subject to decay of the faculties, have better teeth, more regular appetites, and less acrid evacuations, than those who indulge in a more stimulating diluent for their common drink.

We ask, should not mere satisfying of the thirst be allowed to every patient? Practitioners are much questioned by friends as to the drink to be given; and these friends have a great unwillingness to allow *cold* drinks, especially *cold water,* to patients. But is not this a great mistake? Where cold water is desired, is not cold water as good a refrigerant as can be given? The juices are sometimes added to water. They make the drink more agreeable to the palate, but as to the temperature it is the same as cold water. The friends give this drink to the patient because they consider it medicated. Dr. Saunders states it as corresponding with his experience, that tepid water is often of great advantage

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

in weak and delicate stomachs that are unable to digest the food properly, and especially in those subject to heart-burn.

THE NEW CHESTERFIELD'S ADVICE TO THE CAPE LADS.

1. Whenever you behold a stranger, stare at him with all your goggles at full stretch, and indicate by this gape from your bodily windows:

Who are you?
Where do you come from?
Where are you going?
What are you?

2. Never heed the exploded doctrine of keeping "your hands from *picking* and stealing." Touch and handle every thing you meet with in private houses, and in public institutions. All mantle-piece, table, and other ornaments, are fair game for your *paw*. If there be a watch hanging in a chamber, look well to its parts, examine whether the thing speaks or thinks; or if it be a manufactured article, or a hedge hog. And if there be duplicates—zoological, ornithological, geological, &c. weed the collection by a transfer to your pockets.

3. If you want to *raise the wind*, visit the *Mock-auctions*— the veriest child can get credit at the Cape. Buy Rds. 100, and retail at 60,—thus pay your way *on account*, and purchase again. Never mind the *final* settlement;—put that off, to a *more convenient season*.

4. When a bill is presented to you for settlement, be sure to be astonishingly surprised. Denounce the book-keepers as great rogues—say—"I never had these things; or tack about, and *promise* to produce receipts of payment.

5. Make a point of borrowing books and never returning them. And in all books but your own, scribble away in their margins, or tear out the blank leaves before and aft.

6. When you go to Church never heed the prayers, occupy your eyes and thoughts on other matters. Count the people, or the pews, examine the dresses of the worshippers, and return home with the important intelligence that Mr. and Mrs. wore no gloves!

7. Begin the accomplishments of Cape life as early as possible;—drink, smoke, join the club, gamble, wear long spurs, throw off your school jacket, wear a long tailed coat, and *keigh presto*——you are a man of the world,—nay, you are a 'Squire.

8. Now "live while you live,"—join every street broil, knock down the watch, demolish the lamps, and *bottle it away at the Canteens*.

9. Whenever you find a gentleman who is unwilling on account of your boy-hood, to chastise you for your impudence, proclaim him a coward, yourself a hero! a Van Spyk,—and then you'll be

"Loved by the women,
Cheered in the boxes,
Applauded by the pit, and
Clapped in the gallery.

Dear Cousin! is'nt he a charming creature?"

10. Put your name down as a subscriber to this and that, but consider it a mark of stupid propriety to put down the cash.

11. Strike out the word *Truth* from your vocabulary,—it is extremely unpleasant to the ears of a man of your consequence.

12. Shew great disdain to your country uncles, and thousand and one cousins when they come to town in their *duffles*. Give them the *cut* direct, and wonder, and be provoked at their familiar "*dag neef*,"—"*dag myn kint*." But mark you—when in the country, partaking of their hospitalities and bagging the game, be to them very courteous, very affable, and prodigiously polite!

THE LETTER HOME.

An original from a Juvenile Apprentice to his Friend in London.

Dear Sir Hapril 20th.

i have taken the hopenety of righten thease fue lines hopen to find you in good ealth as it relevese me at present i re turne you maney thanks For kindness Sir i have A got master and mises And so have Sister i Like the cape verey much the vetles verey cheape but clothen is verey deair And tel mester brion liksweks And hope heair frome you in A Short time We had A verey plesent voige And Tel my others frends if you pleaise Sir and if you Please Will you send this to me Ants She Leves Lambert wark Mrs. lasetman

Mr. Ayliffe's House,—Sir Benjamin D'Urban,—Large Fields of Caffer Corn,—The Fingo's, and their European appearance,—Hintza,—Crossing the Kei splendid and romantic.—The waters of the Kei.—A Highlander's remark,—Macomo's Kraal,—Pleasnt bed-fellows,—Scorpions, &c —Want of Medicines,—The Keiskamma,—Beauty of the Country,—Bothman's Kraal,—Picturesque approach to the Camp,—Luxuriant Country,—Major Cox,—Thunder-storm,—Capture of cattle,—Capt. Sutherland,—Caffer Library!!!—A Caffer Chief's hospitality, &c.]

Butterworth, Hintza's Territory, April 18th, 1835.
On the Koegha River.

My dear ———

I have a bad memory, and to that cause you must attribute my neglecting to answer the very many letters lately received from you; the last, I think, was dated some time about the centre of 1834!—*mais n'importe*—I'll write if you won't;—but I certainly *did* expect a FEW lines from you long before this; however, let that pass. Here, then, dear reader, I, the writer, am; enjoying what you learned call the "*otium cum dignitate*;" we are encamped in a most *delightful spot;* opposite me, about two hundred yards off, is the house (a very fine one) of the Rev. Mr. Ayliff, who has been obliged to desert it, and fly for protection into the Tambookie country. The Governor's tent is pitched under some lofty yellow-wood trees, beside the streamlet y'clept "Koegha," and is surrounded on all sides by large fields of Kafir corn, which is quite ripe, and *very luxuriant;* just below Ayliff's house is a large Kafir kraal, consisting of about 30 huts; and several groups of Fingo's are seated in different parts of the hill; these poor people have come to us for protection against their cruel masters, the Kafirs; they say they will follow the Camp, but it is not known what line of policy the good Sir Benjamin D'Urban intends to adopt with regard to them. They are quite a different race to the Kafirs; and, if white, most of them would be mistaken for Europeans; they have not got the flat noses and blubber lips that characterize the Kafir and Bechuana races; I saw several with large aquiline noses yesterday, and none with the flat nose; some had very sharp features, and they are in general well made; from what I can learn from their history, they were obliged to fly to the Kafirs for protection, when Chaka had nearly annihilated their tribes some time ago, and thus they became slaves to the Kafirs. We are at present in *a land of peace*, for war has not yet been declared against Hintza: he has been sent for, and is not to be found at his Kraal; if he come not very soon we shall commence operations. When we crossed the Kei, the opposite hills were covered with Kafirs, and the plains with cattle; now not a Kafir or a head of cattle is to be seen. On crossing the river they had a very formidable appearance, and we all thought they intended to attack us, and prevent our passing the river. They asked if we knew whose river it was, and what business we had in crossing it? The Governor had a palaver with them; but I dare say you will see the particulars at length, by some means or other, as the post leaves this evening for the colony. The scene in crossing the Kei was most splendid; such as *I* shall not attempt to describe. The mountains on the colony side break off abruptly at the river's edge, in a rocky precipice of many hundred feet high, and on the top you can indistinctly perceive a few tall aloes, amongst the stunted shrubbery, which have very much the appearance of Kafirs; when we crossed the river it was very shallow and stony; with some trouble, I dare say one might have crossed it dry, by jumping from stone to stone; the ascent on the other side (I mean this side) is steep and tiresome; it took us several hours in getting up, and we were obliged to yoke two spans of oxen to one wagon; I saw 24 oxen drawing one wagon up! Of course I had a swim in the Kei, and it was indeed a treat after several days' hot riding; the water is very hard; when washing, the soap all curdled; the alkali separating from the fat. I shall just give you a very short account of our march:

March 16th.—We left Graham's Town at 5 in the morning, and halted for breakfast near Botha's Hill; one of the Scotch soldiers observed, in the hearing of the officers, "Ecods, mon! I hoop the hassagais will be as AQUALLY divided as the wagons are—ALL *among the* OFFICERS!" We had then 100 wagons with us, one 6-pounder, and about 600 men of the 72d; stayed at Herman's Kraal that night; the next at Double Drift, on the Fish River; 18th, at the Camp, Macomo's Kraal, near Fort Wiltshire; killed one morning, a buck and 23 scorpions, some of them monstrously large; there were immense quantities of these beasts here, 2 were found in Capt. Murray's bed, and a large tarantula and centipede (ear-wig) in mine! pleasant bed-fellows! every day we killed great numbers of these reptiles. On the 22d, I went to Fort Wiltshire, to remain there whilst Chiappini (who is stationed there) went to town; there were a great many people very ill then, and no medicine at all! Dr. Sangrado's system was of course revived; nothing but "bleeding and hot water!" I remained at Fort Wiltshire till the 26th. On the 26th, Col. Smith went out with a party of Boers and some of the Cape Corps, and captured 800 head of cattle and 1000 goats; one of the Boers was wounded in the rump; a Kafir who lay concealed in a wolf hole, threw an assagai at him, which just went through his trousers above the thigh; seeing he had missed the Boer, the fellow ran up to him, and stabbed him with the whole bundle of assagais at once; had it been a single one, he would have run him through; but as it was, two or three assagais went in about half an inch. On the 24th, 5 Kafirs came to the Camp in the night; one stupid sentry challenged them, so they threw themselves on their bellies, and crawled away; 8 shots were fired but without effect. On the 28th, the Governor and suite arrived at the Camp. On the 31st we started from the Camp, and crossed the Keiskama, the country was very beautiful; *nothing like it in the colony*. The Kafir corn fields were most luxuriant; they were filled with water-melons, interspersed, or rather concealed, amongst the Kafir corn and melies: we bivouacked for the night at a kraal of Botman's. On the 1st of April we started at half-past 4, and when the sun broke upon us, which was on a beautiful green hill, about 4 miles from the Camp, the view was the most beautiful imaginable. Our route was distinctly marked by the towering columns of smoke issuing from the blazing huts, which had been fired by the rear guard. The army winding through the straggling mimosas on the plain below, for 2 or 3 miles, and the long train of wagons bringing up the rear, the last dwindled away to mere specks on the distant landscape; and the soldier's bayonets glittering in the rays of the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

rising sun, whilst the heavy morning mists were rising from the kloofs on the left, altogether it had a very picturesque appearance; in the fore-ground were His Excellency and staff, and a few yards off several large huts blazing beautifully bright, and sending up dense volumes of smoke; then the dense mass of cavalry that formed the advance guard, and front of the line of march; these were followed by the 72d Highlanders, with their bag-pipes playing, whose distant notes faintly caught the ear; next were the dark clad Provisional Battalion of Hottentots, and the rear was formed by an endless train of wagons; this, added to the luxuriant vegetation and mimosa-studded plains below, rendered the scene perfectly enchanting. The morning was delightful, and the country decidedly the finest in South Africa. We arrived at the Camp on the Debe early in the day, and several Kafirs were seen on the hills close by. On the 3d, (or rather the 2d, at midnight,) we started to attack Tyali; Major Cox went round on the left, and Somerset on the right; Van Wyk behind, and we advanced in front: our Division consisted of 1400 men, and 2 six-pounders. We ascended S'Lambi's Kop, and halted on the top to wait for day-light. Just before we started, Col. Somerset's Camp (which was a mile from ours,) was attacked, and there was a brisk hedge-fire for several minutes; we had a fine view of the whole affair, but were left in the dark as to the result; we afterwards learned that a few Kafirs had come there to steal horses; the sentries fired at them, and it being dark, the firing was carried quite round the Camp. One Kafir was found next morning dead, and one Hottentot sentry was shot by accident; he did not come in when the firing commenced, and so was shot; we have unfortunately had several men shot by our force, chiefly by those who obstinately cock their *hair-triggered* guns, and the least thing sets them off. At day-light we started from S'Lambi's Kop, and proceeded through country, if possible, much superior to that we passed through a few days ago; it was, however, quite a different scenery; large kloofs, well wooded with lofty trees (no brush-wood) on one side, and the other side perfectly free from bush or shrub of any sort—nothing but beautiful waving grass; you cannot conceive anything of the scenery here from that in the colony: there the grass, if there be any, is of a brownish hue, but here it is of the brightest green. At the bottom of the kloof ran a beautiful clear stream, completely shaded by the tall yellow-wood trees that grew in abundance on its left bank; the trees here are perfectly straight up, with scarcely any foliage till near the top, whereas those in the colony are crooked stems, and branches in every direction. I have never been at the Knysna, but they say that the scenery behind S'Lambi's Kop, and about the Amatoli, is very similar, only more splendid. It is very thickly inhabited, or rather *was*, for every hut is deserted now, and the *ripening corn stands ready for gathering*, but the owners are fled; some Kafir gardens are nearly perpendicular on the edge of the bush. The soldiers went into the corn-fields to look for melies, and really the two plants are so much alike, that I don't wonder at it. The chiefs' houses are very fine ones; some have 3 or 4 apartments, and are capable of holding 30 or 40 people. We were out all day, and saw scarcely a Kafir! only a few fellows here and there on the hills, and took a few goats; we got home just in time to get wet through. Major Cox was more successful; he took 2 or 3000 head of cattle. This morning, 3 Hottentot deserters came to us with their guns, they were traders' drivers, but had been obliged to join the Kafirs to save their lives, and this is the first opportunity they have had of escaping to us. A Kafir chief brought in a fat bullock yesterday as a present, in consequence (as he said) of our having kept our word, namely, what we said at the Kei, that we would not wage war, nor devastate, till we had seen Hintza. The post is going off, so I must end, although abruptly. Remember me to C. and *vrouw*, and believe me.

Ever yours, * *

P.S. We had a most dreadful thunder-storm last night; the General's tent was blown down, and all his papers scattered abroad; a great many of the officers' tents also shared the same fate; Capt. Sutherland's was moved altogether away, and he was seen by the sentry going about the Camp in sleeping trim, searching for his tent. I was sent to the rear with four wounded men from the Debe, and only joined the Head Quarter Division the day before yesterday. I had some famous adventures on my road back, which I will tell you of another time. We (I and Mr. Biddulph) captured 68 head of cattle, and 120 goats, and wounded 2 Kafirs!

N.B. Found Pringle's Ephemerides.* Akenside's Poems, Robinson Crusoe, &c. &c. in a Kafir hut!!! Pato and John Tzatzoe came with me from Wiltshire.

CHRISTIAN MISSIONS.

"HAIL, HOLY LIGHT!"

Light for the dreary vales
Of ice-bound Labrador!
Where the frost-king breathes on the slippery sails,
And the mariner wakes no more;
Lift high the lamp that never fails,
To that dark and sterile shore.

Light for the forest child!
An outcast though he be,
From the haunts where the sun of his childhood smiled,
And the country of the free;
Pour the hope of heaven o'er his desert wild,
For what home on earth has he?

Light for the hills of Greece!
Light for that trampled clime
Where the rage of the spoiler refused to cease
Ere it wrecked the boast of time;
If the Moslem hath dealt the gift of peace,
Can ye grudge your boon sublime?

Light on the Hindoo shed!
On the maddening idol-train,
The flame of the suttee is dire and red,
And the Fakir faints with pain,
And the dying moan on their cheerless bed,
By the Ganges laved in vain.

Light for the Persian sky!
The sophi's wisdom fades,
And the pearls of Ormus are poor to buy
Armor when death invades;
Hark! Hark!—'tis the sainted Martyn's sigh
From Ararat's mournful shades.

Light for the Burman vales!
For the islands of the sea!
For the coast where the slave-ship fills its sails
With sighs of agony,
And her kidnapped babes the mother wails
'Neath the loan banana-tree!

Light for the ancient race
Exiled from Zion's rest!
Homeless they roam from place to place,
Benighted and oppressed;
They shudder at Sinai's fearful base;
Guide them to Calvary's breast.

Light for the darkened earth!
Ye blessed, its beams who shed,
Shrink not, till the day spring hath its birth,
Till, wherever the footstep of man doth tread
Salvation's banner, spread broadly forth,
Shall gild the dream of the cradle-bed,
And clear the tomb
From its lingering gloom,
For the aged to rest his weary head.

AUSTRALIA.

By the late papers from Sydney, we find the spirit of enterprise on the alert. A scheme has been devised by Capt. Bannister and others, for an overland route from Sydney to Swan River. Liberal offers have been made at Sydney to encourage this arduous and meritorious task.

On the other hand, according to the *Sydney Herald*, villainy is on the increase, and villains multiply at so rapid a rate, that a *second* hulk is found necessary to hold in confinement the doubly and trebly-convicted felons sent out from Great Britain". So much for the Convict System.

THE LATE ARRIVAL.

Parliament.—The elections are over, and a new Parliament has met. The first trial of strength on the part of the liberal Reformers (for all men seem to be Reformers now,) was in the choice of a Speaker; and the result has been that the *thistle* has shaded the *rose*. Mr. Abercrombie, M. P. for Edinburgh, has been placed in the Chair; and Sir Charles Sutton, after 17 years of service, has been ousted. The thing was wholly unexpected by the Ministers, Sir Charles had always gained the confidence of the House, and was proposed in the last Reformed Parliament by Lord Morpeth, seconded by Sir F. Burdett.

The Elections.—After glancing over the papers, it would appear that never were the energies of ministry or opposition more intensely put in action for the invigoration of their *respective parties*. Never was the spacious talent of the Press more spendidly developed on either side of public feeling.

The Result.—Just as it should be. Opinion has resumed its empire, and vindicated its inestimable strength.

The Clergy.—The greater proportion of this respectable body fought well on the Conservative side, and were every where in the battle-field.

The Dissenters.—No less active were the Voluntary's. There was a manly and open course pursued by this influential body, which was conducted with good temper and feeling. Many Wesleyans *paired off*—some of their leading men took a decided Conservative side, and won many converts to the new Ministry. On the other hand, the Church of England, in a great many instances, was not backward in its avowal of liberal principles. The venerable Rev. Thos. Gisborne, A. M. of Yoxhall Lodge, (author of many deservedly celebrated works,) made a powerful speech on the hustings, on nominating a Reformer, Sir Oswald Mosley, as representative for North Staffordshire.

The King.—Very popular, and was hailed on his approach to Parliament House, by the cheers of thousands of his people. No hope of a revolution for the croakers!

The opening Debates.—Excellent! Lord Brougham's speech in the Lords, is beyond the adequacy of eulogium. He may shake the slanders of impertinence from his distinguished reputation, like—*dew drops from the Lion's mane.*

Blackwood turned Reformer.—In his Feb. Number, he pleads for freedom in the following extract. "Matters have at length come to a crisis. The cause of freedom; the 'cause for which Hampden bled in the field, and Sydney on the scaffold,' is now in jeopardy."

Courtesy of Sir Robert Peel.—He promises to reform all abuses, to relieve the Dissenters, and purify the Church. He has already conferred Church appointments on good men. At the suggestion of the inhabitants he has placed the Rev. Thos. Dale, of the London University, as parish Minister of St. Bride's, Fleet-street, London.

* We take it for granted that pages 52, 53, and 54, must have been well thumbed by the "bold sons of Kahabee". Won't this discovery arouse once more the *Gray*-goose-quill?

THE EXACT POSITION OF THE DUTCH NEGOCIATIONS.

HOLLAND V. BELGIUM.

It was quite natural that the King of the Dutch, and his ministers, should hail with rapture the fall of the Melbourne Administration, and sympathise with Mr Peel and his measures. The protocollers seem from the Hague papers, to be all on the *qui vive* in reference to the late change, and anticipate "a speedy redress of their grievances." Now, it appears to us, that the history of this question is but little known or fairly understood. We allude to many of the colonists here, who seem to be wholly unacquainted with the matter, or are wilfully blinded to its merits by national prejudices. We approach the subject without regard to the political principles of the men in office, or of their opponents, and hasten to give a free, but we trust an honest, representation of the real state of the case.

The original object of the interference of England in the affairs of Holland, was, first, to secure the Belgic provinces against French incorporation; and secondly, to arrange terms of separation which could not be agreed upon between themselves. The history of these protracted, rigmarole, protocolling negotiations, is too long and tedious to be given here. The question seems to have become more and more clogged with difficulties at every step This arises, in some measure, from the number and importance of the points at issue, and from the various and conflicting interests which require to be consulted at every stage of the proceedings. The settlement of the articles, on which the separation should be based, was the first difficulty; and here, the dogged obstinacy of Holland, the unsteadiness of Belgium, and the artful and shuffling policy of the three great powers, in turns, tended to delay and embarrass the arrangement. The plenipotentiaries agree, and declare it to be their "*irrevocable*" resolution, to execute terms of separation contained in the twenty-four articles, which they pronounce "*definitive*;" and further declare, "that either party refusing to accede to them, shall be deemed *contumacious*." These terms the Belgians accept, and the Dutch refuse. Then Russia, Austria, and Prussia, refuse to ratify what they had before agreed to; defer, demur, and shuffle, until, by entreaties, they are induced to ratify, with "*reservations*." Then they refuse to execute what they have ratified, and allow his Dutch majesty to mock all their wise resolves. At length, the French and British governments, justly indignant at this vacillating fickleness, determine to resort to "coercive measures;" and plainly tell the Dutch king, "that since he contumaciously defies every effort towards a pacific arrangement of affairs, they are determined to perform their engagements to Belgium, by force of arms." In pursuance of the convention concluded between the British and French governments, an embargo is laid on Dutch property in British and French ports; the Scheldt is blockaded by the combined squadrons of the two powers, and 80,000 French troops advance to dispossess the Dutch of the citadel of Antwerp.*

These measures put the question of hostile interference by the three despotic powers to a severe test. The challenge to Prussia, in particular, was full and fair; her doubtful policy throughout the Belgic negotiations, her contiguity to the scene of action, and the intimate family connexion between the houses of Brandenburg and Nassau, had excited suspicion that she would oppose the march of a French army into Belgium. Hence the *fortiter in re* which had succeeded to the *suaviter in modo*, was well calculated to elicit a distinct avowal of the views of the cabinet of Berlin. However, Prussia remained a passive spectator of the scene; and officially declared, she would not oppose the hostile movement, so long as its operation was confined to the avowed objects and principles of the convention:—viz. "the expulsion of the Dutch from Antwerp and its dependencies, and the adjustment of the terms of the political separation of Holland and Belgium."

These coercive measures were little in favour with a numerous and influential portion of the parliamentary opposition. "Holland is our ancient ally," said the Tories, "and must not be dealt with harshly." If it be true, that Holland was our "*ancient* ally," she may nevertheless be our "*modern* opponent:" but we deny the veracity of the prior proposition. In the 16th century, we assisted her with 800,000*l.* to free herself from the shackles of Spanish domination, and powerfully aided her to cement her political independence;* and how did she recompense our good offices? By driving us from the islands of Landoire and

* To have assented to the demands of Holland respecting the navigation of the Scheldt, would have virtually shut out Belgium from any share in a direct foreign trade. Antwerp is the very core of Belgium, the organ of circulation through which she maintains her feeble commerce with transmarine nations. From the mouth of the Scheldt to Dunkirk, her entire littoral, there is no naturally formed port, no embouchure of any considerable stream. Ostend, situated between the Scheldt and Dunkirk, is an inconsiderable port, that can only admit brigs which draw less than twelve feet of water, during about two or three hours of flood-tide; hence the navigation of the Scheldt, subject only to such fair charges as may be necessary to repair its banks, &c. was a *sine qua non* with the Belgians in their negotiations with the Dutch government. Thus, the Conference and the British ministers, although disposed to give Holland all that circumstances admitted of, could not yield this point to the demands of the Dutch king.

Pulo (1619), and by the horrible massacre of our defenceless countrymen on the island of Amboyna, 1623. This was her gracious return for our sacrifices on her behalf. We will not minute the horrors of that scene; it was a crime so foul, that the very idea,

"Fires the indignant soul, and revolting reason shocks."

Since she appeared as our ally in the last two campaigns of the war of Austrian Succession, Holland has never figured otherwise than as an avaricious neutral, or opponent of Great Britain. In the war of 1756, she affected neutrality, but readily granted to the French army under d'Estrées, a passage through Maestricht, to overrun the defenceless Duchies of Cleves, Vessel, and Hesse, to attack the British forces at Minden, and hence to invest Hanover. Prompted by her accustomed mercantile avarice, she employed her neutral flag to furnish our enemies with warlike stores and trans-marine produce; and on our just remonstrance against these open breaches of neutrality, she insulted us with menaces, and threatened to join the formidable coalition against us.† In the American contest, when Britain, cumbered with an incapable administration, distracted by internal dissensions, and attacked by a dangerous European confederacy, was in a more defenceless condition than at any period of her modern history, Holland was foremost in planning the maritime confederacy against her. In the war of the French revolution, she deserted our cause immediately it assumed a declining aspect. In the war of 1803, she made no resistance to the reception of Louis, the brother of Napoleon Buonaparte, as her king, to consolidate the power of our formidable foe: nay, she did not hesitate to surrender every vestige of her national independence, and become a mere province of France Where, then, is her title to British gratitude? An ancient ally, indeed! We know not to what era this word "*ancient*" may extend; but it is evident that for the last eighty years or thereabouts, she has uniformly figured as our opponent.

It is true, that in the last hour of the late struggle against France, Holland threw her weight into the scale against Napoleon; but this step arose from his incapacity to protect her territories with his legions against the merited vengeance of Great Britain, and hence entitles her to no commendation: and even at that time (1814) not a single Dutch regiment joined the allied forces; she left us the undivided honour of delivering her territories from foreign subjection. But when, in 1814, Holland lay postrate at the mercy of England, did the latter seek to punish her perfidious conduct during the war, by the imposition of penalties? On the contrary, with a zeal for Dutch interests, which blinded the better judgment of our rulers, England treated her as a constant, faithful, and "ancient ally;" raised her from a mean province of France to an independent powerful kingdom; extended her territory far beyond the utmost limits it had attained, even in the brightest days of her republic; gave her the extensive and rich island of Java, which cost so much British blood and treasure in its capture; allowed her to share in the trade with Surinam, Guiana, Demarara, and our possessions on that coast; ransomed her colonies from Sweden; raised, by British funds, fortresses on her southern and eastern frontier; and engaged the leading continental powers to protect her against the degradation of again becoming a French province.*

† Smollett, vol. ii.

THE MERCANTILE MARINE.

The great question of Sea Insurance to mercantile shipping has been warmly discussed in London, and it turns out that Sea Insurance is, in innumerable cases, the cause of shipwreck. The mercantile navy of Great Britain, including that of the plantations, consists at present of about 24,500 vessels, manned by about 160,000 seamen. The total burden of the registered vessels is about 2,650,000 tons; and valuing them, rigging and stores included, at a rough average, at £10 per ton, the entire aggregate value of our mercantile shipping will be no less than £26,500,000 But this great mass of property is hourly in jeopardy.

Every one who reads the newspapers—and who does not?—has every now and then his feelings painfully touched by accounts of shipwrecks. In point of fact, however, the details as to the greater number of these catastrophes never find their way into the public prints. Many ships founder at sea—many are wrecked on distant shores—and, with few exceptions, it is those only that are cast away on our coasts of the loss of which we ever hear. It might indeed have been supposed, seeing the vast improvements that have been made in astronomy, in the construction of chronometers, in the art af navigation, the accurate charts that have been published of most seas and places of general resort, the erection of lighthouses and beacons, and the various means and devices that have been fallen upon for lessening the dangers incident to navigation, that it would now be comparatively safe. But such, we regret to say, is not the case. In so far at least as England is concerned, shipwreck is at present more prevalent than ever, and has indeed grown to an excess that is quite frightful, and which has begun forcibly to excite the public attention. It appears from an examination of Lloyd's List from 1793 to 1829, that the losses in the British mercantile navy only, amounted, at an average of that period, to 557 vessels a year In 1829 the casualties were as follows:—'*On foreign* '*voyages*, 157 wrecked; 284 driven on shore, 'of which 224 are known to have been got off, 'some with more and some with less damage; 'twenty one foundered or sunk; one run down; 'thirty-five abandoned at sea, eight of which 'were afterwards carried into port; twelve con-'demned as unseaworthy; eight upset, one of 'them righted; twenty seven missing, one of 'them a packet, no doubt foundered. *Coasters* '*and colliers*, 109 wrecked; 297 driven on shore, 'of which 121 are known to have been got off, 'and probably more; sixty-seven foundered or 'sunk, four of them raised, six run down; 'thirteen abandoned, five of them afterwards 'brought into port; three upset, two of them 'righted; sixteen missing, no doubt foundered. 'During the year four steam vessels were 'wrecked; four driven on shore, but got off, 'and two sunk.'* This enormous loss has not diminished in the interval, but has gone on increasing In 1833, no fewer than 800 merchant ships, or a *thirtieth part* of the whole number of ships belonging to the British dominions, including the plantations, were either entirely lost or driven on shore! Of the prodigious number of ships that are thus annually engulfed many are laden with valuable cargoes; so that besides the loss of lives and of ships consequent to such an appalling extent of shipwreck, there is also a great loss of mercantile and other property.

Of the 800 shipwrecks that occurred in 1833, we have been well assured that not more than 200, or at most 250, can be fairly ascribed to natural causes. The remaining 550 or 600 shipwrecks are wholly owing to the absurd and vicious classification of our shipping; and to the ignorance, incapacity, and carelessness of the masters.—*See the last Edin. Review.*

* An account was presented to parliament, session 1832, of the sums of money contributed by Great Britain for the erection of fortifications in the Netherlands, and towards the defence and incorporation of the Belgic provinces with Holland, of which the following is a copy:—

Compensation to Sweden for rights in the colonies ceded by that country		£1,000,000
For the erection and repairs of fortifications in the Netherlands	1,999,999	
Paid out of the military chest of the British army in France and the Netherlands, in 1814 and 1816	223,669	
		2,223,688
On account of Russ-Dutch loan.	1,465,876	
,, Sinking fund for ditto	337,929	
		1,803,805
Total . . .		£5,027,493

PETER GOFF, THE MAN WITH HIS MOUTH OPEN.

A TALE OF A YANKEE LANDLORD.

(From a Traveller's MS.)

IT was one winter evening that I stopped to pass the night at the little village in the state of Massachusetts, where a tidy inn, kept by Colonel Solomon Shagbark, offering good entertainment for man and horse, had tempted me to suspend my wayfaring. 'Twas a cool evening, and I sat luxuriating over a blazing wood fire, big enough to roast an ox, while a knot of countrymen were convoked in the bar-room, guessing, question-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ing, calculating—drinking cider, and telling stories. I was particularly amused by the noise of one of these junketers, who kept up a continued chorus of laughter throughout all the variations of their harmony. He was a tall fellow, of wide mouth and India-rubber lungs, and sent forth every five minutes such a stentorian peal, that a nervous man would have given both his ears to have been an hundred miles off.

"Moderation! moderation!" cried one of the talkers; "say nothing, but laugh, and do that silly."

"Ha! ha! ha! ha!" continued the laugher.

"Have a care how you stretch your jaws," cried another; "remember poor Peter Goff!"

"Especially such a night as this," rejoined the first speaker, "for if your face should happen to freeze just as it is now——"

"The man with his mouth open," said the laugher. "Ha! ha! ha! ha!—I've heard the story. Ha! ha! ha! ha!"

"Come, now," replied another, "a man that won't believe anything old Uncle Josh used to say——"

"Pooh! old Uncle Josh never looked through a millstone but once, and then he peeped in at the hole."

"The story may be true, and it may not," said a third speaker; "but if you had heard what the deacon told me——"

"Ay, ay!" returned the laugher, "the deacon could always see more moons in the shade than any body else. Ha! ha! ha! ha!—the man with his mouth open!" and he roared ready to split.

I continued to listen, but could gather nothing more distinct of the subject in debate. The talk soon turned into another channel; the man with the lungs continued to laugh, but it was evidently subdued into something like a chuckle. Doubtless he had a lurking fear that the story *was* true.

"Landlord—Colonel," said I, as mine host of the Washington's Head stepped into the room; "it is a cold night, let us have something warm, and I must get you to tell me a story."

"A cold night you say, squire?" (a Yankee always calls you 'squire'—who dares say the Yankees are not civil?) "A *coldish* night, rather—that is, not so warm; but if you want to know what cold weather is, just stay here till the last of January, and you'll see a cold snap that will make you hum!"

"Why, Colonel, I have no curiosity in the matter of a cold snap, but I should like much to hear something of what they have been talking yonder—the man with his mouth open!"

"Ahem!" said the Colonel, with a sly sort of look, "we have some good gapers here in the neighbourhood. Now, there is Tom Take-a-bite, he has got a mouth like an alligator; but as to the real, genuine man with his mouth open—'tis only now and then one can get a peep at him."

After some little coquetry on the part of the landlord, to enhance the value of his narrative, I prevailed on him to sit down by the fire, and begin, but it was in the most approved fashion of story-telling, by a round affirmation of the truth of it:—

"'Twas a strange affair that part of it about his mouth," he commenced; "many is the time I have laughed to think of it, though, to be sure, 'tis no laughing matter for a man to have his mouth open, and not to be able to shut it. But it is just as true as I sit here. Some folks make more of it in telling the story, but it's founded on fact, as people say that write novels and such like. Well, this Peter Goff, you see was an odd chap, one of the oddest of all flesh; he would read his Bible upside downwards, just to be different from other folks. We paint our houses white, and Peter painted his house black, with red borders to the windows—ha! ha! such a sight!—it looked for all the world like a nigger with sore eyes! But it's all of another colour now, because Jerry Jones, one of Peter's creditors, who took possession the time that Peter went off in the fog, had it new painted, out of a neighbourly kindness to the deacon, for the deacon's wife used to have a regular fit of the hypochondriacs every time she went by; but the old woman never liked Peter, because he was so much given to laughing. 'What's that to you?' Peter used to say, 'I've a genius for it; every man has a genius for something, and I have a genius for laughing!' Sure enough so he had, if a body might judge by his looks, for he had a mouth big enough to take in half a cheese; but it was the ruin of Peter. Let all men take care of their mouths—but that is neither here nor there. Peter got into a sort of baddish way—he worked less and drank more. We gave him nothing but good advice, the deacon and I, hoping that he would lay it to heart. We talked to him in a fatherly way like; so did every body else. Pooh! what did he care for it; 'twas just like throwing apples into a bag without a bottom. Peter went on neglecting his farm; 'twould have made any man's heart grieve to see what a fine piece of land there was all going to destruction, and all for want of a good take-heed. As for Peter, he used to pass whole days idling and frolicking, and turning up jack, and laughing as loud as ever. Every body said he would come to no good, because his concarn was all wearing out and there was no money coming in. But the more his affairs went to ruin the louder Peter laughed! There was no knowing what possessed the creature to laugh so. His mouth, as I told you, was as wide as an oven, and when he set up a haw! haw! it was like the roar of a buffalo. The deacon and all of them took a great scandal at it, and quoted scripture, prophesying that Peter would come to a morsel of bread. But Peter said he hoped he should never come to worse, and then went on laughing and getting in debt till he had got through his cash and mortgaged his whole estate, so that it was as clear as preaching he must go to the dogs. Finally, the deacon undertook to give him a desperate sort of a lecture by way of a last trial; so he called upon him one Sunday evening—'Peter,' says he, 'you are little better than one of the wicked.'—'Have you any objection?' says Peter. 'Ah, Peter,' says the deacon, 'if you don't give over laughing, Old Nick will make you grin on the other side of your mouth,'—'Laugh and be fat,' says Peter. 'Not of a Saturday night,' says the deacon. 'May Old Nick scratch my jaws,' says Peter, 'but I am going to a frolic to-night, and I'll laugh a good stick if I laugh my everlasting one.' The deacon went away quite scared to see Peter so hardened, as he said, for the creature was determined to have it out; and it happened that very night."

"What happened?"

"Peter's catastrophe. It was a terrible cold night, and they sat over a rousing fire, drinking hot punch, and flip, and sangaree, and what not, and laughing, and singing, and roaring, and making such a halliballoo.—Hark! isn't that my wife?"

"What?"

"That voice I hear calling! No—never mind—it's only the deacon's pig got stuck in the gateway.—Well, they all went on drinking and making a tantarra that disturbed the whole neighbourhood. 'I wish,' says Peter, 'that the deacon was here to hear us.' Ha! ha! ha! ha! ha!—hickup! hick! hick!—*The clock struck midnight just at that moment!*—Hick! hick! hick! went Peter; and what do you think? he was in the midst of one of his most uproarious laughs, and had stretched his jaws wider than he was ever known to do before; and when he had laughed a regular peal that lasted a quarter of an hour, he tried to shut his mouth but could not! Strange enough, you'll say; but that is the fact. Hick! hick! hick! he went on.—'That's a long laugh,' said the other fellows. Hick! hick! hick!' says Peter. 'Stop, and let me take my turn,' says one. 'Hick! hick!' says Peter. 'You'll strain your lungs,' says another. 'Hick!' says Peter. Finally, he stood still gaping as wide as a barn-door. 'Shut your mouth,' said they. But O dear! he could not shut it to save him from going to the Old Harry! And how it happened—whether he had stretched his jaw-bones out of joint, and got them off the hinges; or whether it was a sort of witchcraft and judgment upon him, I don't pretend to say; but there he stood stiff as starch. Peter's companions thought him bewitched, so they took to their heels and ran off, frightened out of their wits. Peter was in a sad pickle; he tried to call for help, but how the dogs can a man speak without the use of his jaws? Well, after trying a long while, and finding he made no more noise than a mouse in a cheese, he gave it up for bad coffee. What could he do for himself? Nothing—so he mounted his horse, and set out to go for Dr. Drybones. It was one o'clock in the morning when he got to his house. Now the doctor was a mighty fretful, touchy, worrisome sort of a man, a good deal troubled with the hypo, and nervous complaints. He had got into a strange way about that time, imagining that somebody was going to eat him up alive. He could not abide any one with a large mouth, and whenever he saw Peter he used to feel a special fit of the horrors; so you may suppose it must have been a pretty considerable shock to his nerves, when in the dead of the night he was roused out of bed by a thundering knock at the door, and going down with a light to behold Peter with his big mouth stretched wide open to devour him. Mercy on us! he jumped back about a rod and a half, and then, in his desperation, catching up a broomstick, he went at him with such a mauling that he was glad to save himself at full gallop, and got off with an open mouth and a shirt full of sore bones! Well, his only course now was to make for the next town, where there was another doctor; so away he went, though it was a good distance. By and by the moon went down, and it was pitch dark. He lost his way, and wandering hither and thither without meeting a living soul. There was nobody abroad, and the only house he saw was inhabited by an old woman who was always afraid of seeing ghosts; and when Peter tried to get admission, the old woman was so frightened that she cried murder! thieves! hobgoblins! and Peter, fearing that he should be shot in the head for a robber or wizard, made his retreat as quick as he could."

"With his mouth open all the time?"

"Certainly.—So the story goes, and no doubt of the fact, for the night was so cold that it must have been hard work to move a man's jaw any way. Uncle Josh remembers the time; he was in the army that season, and many was the morning in camp that he could not get up for two hours after he was awake, because his old *queue* had froze fast to the ground!

"Well, Peter went on, but could not tell which way he was going. It was dark as pitch, as I said before, and he had got into a lonely part of the country; there was no fence to the road, and he soon found himself rambling over the fields, scaring the owls, and frightened himself with the expectation of breaking his neck among the ups and downs that gave him a jolt and a bounce every ten steps. After he had well battered the shins of his horse across the ditches and stone walls, he found himself upon the river. It was frozen pretty hard; but presently he came to an air-hole, and souse! he tumbled in. After floundering about some time, he was lucky enough to pick himself out, horse and all; indeed 'twas the horse that saved him, according to the best authorities. Peter and his horse got upon dry land again—which of them swallowed the most water during the accident I'll not say, as I was not there to see, but I rather think it was Peter. Well, they got upon dry land, as I said; but they were neither dry nor thirsty, you may suppose. It was terrible cold, as I said before, and Peter would have

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

froze to death if he had not been as tough as a pine knot. But uncle Josh always said there was no killing him. Peter and his horse were soaking wet, and so in less than half an hour he found every rag of clothes about him as hard as horn,—in short, he had frozen to the horse's back, and could not move a limb, any more than if he had been hewed out of a block of stone!—There he sat as stiff as a poker.—The horse galloped on. So the story goes,—and it stands to reason.—On he galloped up hill, and down hill, hither and thither, over field and over pasture, through the bogs, and the swamps, and the woods, and among all sorts of scarecrow places, for Peter could not move an arm to turn him to the right or to the left. In short, he made a regular circumbendibus all round Robin Hood's barn."

"Pray, Colonel,— I beg pardon for interrupting you,—but how are all these particulars known?"

The Colonel paused at this question and looked a little puzzled. He scratched his head and gave two or three hems.

"I can't exactly say, but they rest on good authority; there's Giles Godkin's will take his oath on the bible book, that he spied him about four o'clock the Sunday morning as he got up to fodder his cattle; Peter was going at a full canter down Break-neck hill into Dead man's hollow. Giles hallowed after him, but he kept cantering on till he was out of sight in the darkness. Giles did not know what to make of it, thinking it might be the witch of Endor on a broomstick, or the ghost of old Sagamore Saul, the Indian marauder, astride of a black bear. However, some days afterward the whole story came out, and Giles found that he had seen Peter Goff."

"And what became of Peter the next morning?"

"You shall hear. All night long, as I said, he was trampling about, snuffing the gentle gale that blew just then from the north-west about sixteen degrees below nothing. Many a man remembers that cold snap, the deacon in particular, for he kept a grocery-store there, and his whole stock of rum and brandy froze as hard as rock Dunder. But that was easily accounted for

"Well, it blew as I tell you, pretty considerably keen; and Peter was cool enough for comfort He was right glad when he saw the day break, so that he could find the road again; and just after sun rise he got into Firetown.

"Now Peter's horse stopped at the tavern, for that is a horse's trick, whether his rider wants to stop or not; but Peter of course could not get off; by-and-by somebody came out—now it happened that this was old Crusty Tim, that used to keep the Punch Bowl—Tim, I say, had just caught a terrible cold, which made him so hoarse that he could not utter a voice louder than a whisper, and, moreover, he was so stiff in the neck with the rheumatism, that he could not turn his head the hundredth part of an inch Well, Tim came to the door, and you may think he was pretty considerably surprised at the sight of Peter; for Peter, you may depend, made a horible bobgoblin appearance by broad daylight However, Tim was not a man to be frightened, for he had been in the old French wars, and, besides that, he was inspector-general of our brigade of militia, so that, you know, he was used to all sorts of scarecrow sights. Tim stared, without saying a word—for why, he was not able to speak—Peter neither spoke nor stirred, for the same reason. Tim looked at Peter, and Peter looked at Tim!

"There was little tale telling lost between them, I promise you, for both were as dumb as haddocks. Tim waited for Peter to speak, and Peter waited for Tim to do the same. Tim wondered why Peter did not dismount, but Peter sat as stiff as ever Tim wondered that Peter did not move, and Peter wondered ditto at Tim—so they took it out in staring. After a long while came out Simon Stumper, the stable-boy; but here was another crook in the lot. Simon stuttered, like a cat a-choking, so that he was little better off than Tim I'm blessed if they did not find it awkward enough. Simon was struck all of a heap when he saw the two figures throwing silent looks at one another like the compliments between the cow and the haystack. It was a long time before he found the use of his tongue; but by-and-by he stammered out, 'Wha—wha—wha—wha—wha—wha—wha—t's the ma—ma—ma—ma—mat—mat—matter?' And what said they; why—just nothing at all. Then Simon began to stare at Peter, and says he, 'But—but—but—but—who are you?' Peter gave a sort of a wink-like, but could not move his jaws. 'But—but—but—but—who are you?" says Simon, but Peter said nothing in reply. Whatever he thought is nothing at all to the purpose. Peter sat stiff, Tim stared, and Simon stuttered: but in the end, finding that Peter kept up such a horrible gaping, Simon concluded he was making mouths at him, so catching up a stick of wood, he let drive at him such a lick, that if it had hit him 'twould have smashed in his front teeth. I guess. Peter's horse took a start, and away he went.

"But its pretty near an end, for Peter never came back.

"But was nothing more heard of Peter?"

"Not very diretl: some say he's wandering now in the Alleghany mountains, though a great many people are positive they have seen him on dark nights flitting here and there, trying to shut his mouth. Several times they have spoken to him, but he never made answer, and that is natural. There is many opinions about it to this day; and to tell the truth, Squire, I have many times had a distant glimmering of something like suspicion as to the mystery and withcraft of the affair; for you must be informed that Peter left a good many debts behind him; and old Commodore Keelson said that he was struck with a lock-jaw very *appropos*, as he calls it, just in the nick of time, as one may say; for he would have been taken up for debt had he staid till Monday. In fact, I have been told there is a man still living in New Hampshire State, that has a strong resemblance to Peter Old Commodore Keelson always maintained it was quite a natural occurrence, and that Peter cleared out to escape the landsharks."

"But you say his ghost still walks—rides I mean?"

"Ay; so many a fellow thinks of a dark night, after telling stories of the 'Man with his Mouth open' But the Commodore says that can be nothing but the flying Dutchman with his landtacks abroad, and he has seen that himself."

WILLIAM CAREY,
OF SERAMPORE, BENGAL.

[WERE I in search of that fine union of grace and of greatness which I have now been insisting on, and, in virtue of which, the enlightened Christian can at once find room in his bosom for the concerns of universal humanity, and for the play of kindliness towards every individual he meets with—I could no where more readily expect to find it, than with the worthies of our own land—the Howard of a former generation, who paced over Europe in quest of the unseen wretchedness which abounds in it—or in such men of our present generation, as Wilberforce, who lifted his unwearied voice against the biggest outrage ever practised on our nature, till he wrought its extermination—and Clarkson, who plied his assiduous task at rearing the materials of its impressive history, and, at length carried, for this righteous cause, the mind of Parliament—and CAREY, from whose hand the generations of the East are now receiving the elements of their moral renovation—and, in fine, those holy and devoted men, who count not their lives dear unto them; but, going forth every year from the island of our habitation, carry the message of heaven over the face of the world; and, in the front of severest obloquy, are now labouring in remotest lands.—*Chalmers.*]

It is quite delightful to discover in the records of each revolving age, the means, the comparatively obscure means, which Divine Providence frequently employs to unfold the human intellect, and accomplish the exalted purposes of His Will. The page of history is repeatedly shewing that the humblest social condition, and the greatest penury, are no barriers against either mental or moral advancement. Who that knew Bunyan, the Tinker of Bedford, would ever have dreamed that he would have risen to an intellectual eminence and vigour that has never been surpassed; that he would have immortalized his name, and his country, by the production of the best Commentary on Holy Scripture extant—that his immortal *Pilgrim* should be, as it ever will, to the end of time—

"*Food for all* hours and every mood of man;"

and what master ever contemplated, that the Slaves—Æsop, Publius, Syrus, Terence, and Epictetus, of ancient times, would become Philosophers, and their works live in after ages to grace the classical collections of our private and public libraries?* But to descend to our own times, in connection with a subject of never-dying importance.

We can picture to ourselves no human being partaking more of moral grandeur, no human intellect more sublimely occupied in the view of "myriads of human spirits," than WILLIAM CAREY, the obscure shoemaker, the village teacher, conceiving the project of going forth, single-handed, into the very heart of the kingdom of darkness in the distant East. While yet a youth, struggling with penury, his mind was anxiously

* How boundless is the materiel for enlarging on this subject. The following individuals were thus employed, in early life: Prideaux was a scullery boy; Linnæus was a shoe-maker; Dr. Isaac Madox was a pastry cook;—the two Milners (Church Historians) were weavers; so was Dr. White, Professor of Arabic at Oxford; the celebrated John Hunter, the great anatomist, was a cabinet-maker; Shakspeare was a lamp-lighter;—Franklin was a tallow chandler; Whitfield, the distinguished preacher, assisted his father when a boy, in the business of Inn-keeping; Dr. Alex. Murray, the Professor of Oriental languages, was a shepherd boy; Crabbe, the delightful poet of the people, was a coolie-boy; Burns, the Ayrshire poet, was a ploughman; Bloomfield, the poet of the seasons, was a Farmer's boy;—Gifford, the poet, and Editor of the *Quarterly Review*, was a Shoemaker; and Drew, the celebrated author of the Immateriality of the Human Soul, was a Shoemaker.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

solicitous for the ignorant, and those that are "out of the way." If there is a call from Heaven, or "being moved, &c." as it is expressed by the Episcopal Church of England, conveyed not by audible sound, or by vision, but by an internal impression, of which the reason, not the imagination, is the subject—such language will most appropriately describe the formation of this strong heroic purpose in the mind of young Carey. Among other branches of elementary knowledge which he would employ himself in teaching to his village pupils, he was particularly fond of Geography; and as he pointed out to them the different countries on the map of the globe, he was led to mention the *religion* professed by the inhabitants. Going over these repeatedly, and having occasion to reiterate,—"These are Pagans, and these are Pagans,"—it occurred to him. "I am now telling these children as mere fact, what is truth of the most melancholy character." This led to a train of deep and anxious meditation, the result of which he afterwards embodied in the form of a pamphlet entitled, "Enquiry into the Obligations of Christians to use means for the Conversion of the Heathen." We shall not enter into the particulars of the immense difficulties and obstacles which this good and heroic man met with and overcame in the prosecution of his disinterested object—these will doubtless find a record in the forthcoming History of his Life. In the mean time we may just glance as to his birth, and a few particulars relative to the God-like errand which he prosecuted even unto death.

William Carey was born at Hackleton, in Leicestershire, on the 17th Aug. 1761. His parents were poor people, and he had few advantages of education except those which his own active and inquiring mind obtained for him. He was brought up as a journeyman shoemaker; and a boot made by him is still preserved by his friends as a valuable relic. We shall pass over his religious progress, which was marked by steady perseverance, until we find him becoming an ordained minister, at the instance of the Baptist Church, at Olney, in Bucks. In 1787, he was ordained Pastor over a small Church of the same order at Moulton, four miles from Northampton. His income there was under £20 per annum!! In 1789, he removed to Leicester, and was ordained to the Baptist Church, meeting in Harvey-lane, over which that distinguished man, the late ROBERT HALL, presided for so many years. Here his ministry was abundantly successful, but the Claims of the Heathen were continually before him, and he resolved, at length, to attempt "the largest measure of the greatest good"—*to forsake all* and go forward,—"giant like to save a World."

We know nothing in the page of history of an unshaken confidence in a Supreme Power, that hope which is an

"Anchor to the soul,"

equal to that which Carey manifested when he determined to go forth to the heathen world with £14,—the amount collected for his use at the formation of the Baptist Missionary Society. To this was added, when the expenses of the voyage was pointed out, the loan of £100 by Dr. Rippon, and a like sum by the late Mr. A. Booth.

On their arrival in India, they (Dr. Carey, and his colleague, Mr. Thomas,) immediately proceeded to act upon the intention they had avowed on quitting their own shores, of receiving no further pecuniary aid from the friends of the mission than might be necessary for their existence. In pursuance of this determination, therefore, they both engaged themselves in a secular employment, which enabled them, by constant intercourse with the natives, to become familiar with their vernacular language. Although Mr. Carey, who had obtained the superintendence of an indigo factory, at a considerable distance in the interior, was thus far removed from the observation of the ruling authorities in Calcutta, his frequent conversations with the natives on the subject of religion were soon reported there: he was immediately called to account, and, on his admitting that his design was to evangelize the heathen, he was told that the residence of Missionaries in India, of any denomination, would not be tolerated; and that he must forthwith re-embark for England. This cruel and impolitic proceeding drove Mr. Carey to seek refuge in the Danish settlement of Serampore, about 13 miles from Calcutta, where he was joined, in January 1800, by Ward, Marshman, and others; all of whom, except Dr. Marshman and his son, who joined his exertions to their's some years afterwards, have entered into their rest.

The first language to which Mr. Carey turned his attention was, the vernacular tongue of the people among whom he lived and died. But he soon perceived that the Sanskrit was the grand root of oriental literature, the key to all its treasures; and by the year 1796, he had begun to study both that language and the Hindoostanee. In Jan. 1800, he removed to Serampore, and, in the following year, was appointed professor in the new Government College of Fort William. Early in the same year, the Bengalee New Testament was finished at the Mission Press. This translation of the sacred Scriptures into the vernacular tongue of at least twenty-five millions, had been commenced by Mr. Carey as early as the spring of 1794; Mr. Thomas having, however, previously accomplished a translation of part of the New Testament. By the close of 1796, the translation of the New Testament was completed for revision. In July 1800, the Gospel by Matthew began to be distributed among the natives. At length, after being nine months in the press, the first edition of the Bengalee New Testament, (8vo. 900 pages) consisting of 2000 copies, was issued on the 7th of Feb. 1801. This was followed, in 1802, by the Pentateuch in the same language, and in 1803, by the Psalms and other portions of the Old Testament. A small impression of the Gospel of Matthew in Mahratta, was issued in 1805; and a second editon of the Bengalee New Testament in 1806. In 1809, the New Testament in Orissa, and in Sanskrit, were completed at press; and some portions of the Old Testament in Orissa had been issued, besides an edition of the Mahratta New Testament, of the Hindostanee New Testament, and the Four Gospels in Persian, when, on the 11th of March 1812, the printing office was destroyed by fire!

The circumstances which so greatly facilitated the translation of the Scriptures into the cognate dialects, after Mr. Carey had surmounted the first difficulties of acquiring the vernacular language and the sacred tongue of India, have been fully explained in our defence of the Translations against the base and ignorant calumnies of Dubois. The assembling of so many learned pundits from all parts of India in the College of Fort William, threw into the hands of Dr. Carey a living polyglot apparatus such as he could not otherwise have obtained; and the overruling hand of Divine Providence was strikingly manifested in the whole business. But how extraordinary must have been the energy of the mind which could grasp so vast a plan, and direct the movements of the subordinate instruments employed in this great work, upon which his soul was bent! Of Dr. Carey's indefatigable industry,—an industry the more extraordinary under the relaxing effects of a burning climate, the description of a single day affords a striking specimen. It occurs in a letter dated June 1806, and is given as an apology for not writing more frequently. At this time, he spent three days of every week at Calcutta, and the following describes one of his Calcutta days.

'I am extremely loth to let this opportunity pass without dropping a line, and yet scarcely can find time to write to any one. I give you a short view of my engagements for the present day, which is a specimen of the spending one-half of the week. I rose this morning at a quarter before six, read a chapter in the Hebrew Bible, and spent the time till seven in private addresses to God, and then attended family prayer with the servants in Bengalee. While tea was getting ready, I read a little in Persian with a Moonshi,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

who was waiting when I left my bed-room; read also before breakfast a portion of the Scripture in Hindoosthanee. The moment breakfast was over, sat down to the translation of the Ramayuna from Sungskrit, with a pundit, who was also waiting, and continued this translation till ten o'clock, at which hour I went to College, and attended the duties there till between one and two o'clock. When I returned home, I examined a proof sheet of the Bengalee translation of Jeremiah, which took till dinner time. I always, when down in Calcutta, dine at Mr. Rolt's, which is near. After dinner, translated, with the assistance of the chief Pundit of the College, the greatest part of the eighth chapter of Matthew into Sungskrit. This employed me till six o'clock. After six, sat down with a Telinga Pundit, (who is translating from the Sungskrit into the language of his country,) to learn that language. At seven I began to collect a few *previous* thoughts into the form of a sermon, and preached in English at half-past seven. About forty persons present, and among them one of the Puisne Judges of the Sudder Dewany Adawlut. After sermon I got a subscription from him of 5*0 rupees, (£63 10*s*) towards erecting our new place of worship; he is an exceedingly friendly man. Preaching was over and the congregation gone by nine o'clock. I then sat down and translated the eleventh of Ezekiel into Bengalee, and this lasted till near eleven, and now I sit down to write to you. After this I conclude the evening by reading a chapter in the Greek Testament, commending myself to God. I have never more time in a day than this, though the exercises vary. This is Thursday; to-morrow evening I return to Serampore. We have then a conference with our Native Brethren; after which Brother Marshman and I revise the Ramayuna till eleven. At six the next morning we begin again till eight. After breakfast and family prayer—revisal of proof-sheets and translations, and preparing for Sabbath. After tea, family consultations, and the temporal concerns of the mission till near midnight. Lord's day, exercises are various. Monday—the Ramayuna till breakfast. After which, proof sheets and translations till tea-time. After this a lecture on some *science* till nine. Tuesday at six, the Ramayuna. At seven, social prayer-meeting for the success of the gospel in Hindoosthan. After breakfast the same course as on Monday, till four. Then to Calcutta. Thus at present I spend my time.'

From his early youth, Dr. Carey discovered a fondness for botanical studies; and in his rural walks with his younger sister, he would often point out to her with vivid delight the beauty exhibited in the phenomena of vegetation. This admiration for nature accompanied him to the East; and his delight in the works of God has been considered as conducing in no small degree both to his health, and to that fine flow of spirits for which he was distinguished.

Rising before five in the morning, he rode out for an hour, and after this was to be found among his trees and plants. In process of time his garden became perhaps the first private garden belonging to any European in India; and when Dr. Roxburgh retired to this city, where he died, he said that Government could be at no loss in the meanwhile by committing the keys of the Government Botanic Gardens to Dr. Carey. The consequence of this was, the publication of the *Hortus Bengalensis*, or catalogue of the plants growing in the Honourable East India Company's Botanic Garden at Calcutta, which he printed at Serampore in 1812. The manuscripts of Roxburgh were also in part committed to his care, which he edited; *The Flora Indica*, first in two volumes, in 1821—24; and again in three volumes, from the Serampore press, in 1832. We shall only add here, that in the botany of India, two trees and an herb bear his name—the *Careya arborea*,—*spherica*,—and *herbacea*. The first of these, the Saul tree, is one of the woods of which Indian ships are built, and it was given by Dr. Roxburgh as a token of his respect, so long ago as the year 1797. Drawings of the *Careya arborea* and the *Careya herbacea* may be seen in Roxburgh's fasciculus of the plants of Coromandel.

The *Agricultural and Horticultural Society of India* owes its origin to Dr. Carey; the prospectus he published, dated "Mission-House, Serampore, 15th April, 1820," being the cause of its formation. What is rather singular, when the first meeting was called, no one appeared save Dr. Marshman and another gentleman; but nothing daunted, they considered the society as formed, on the 14th of September, 1821, and calling another meeting on the 21st of the following month, the plan was soon patronized by the Marquis and Marchioness of Hastings. Of this institution, of which Dr. Carey was for some time the secretary, the Governor-General is now the patron, and in 1830, 20,000 rupees, say about £2,000 was voted by Government to be bestowed in premiums for the most successful cultivation of sugar and tobacco, silk and cotton.

Nor was it to the vegetable world only that he directed his leisure moments, if leisure he ever knew; though he but seldom referred to these subjects when writing to his Christian correspondents. Now and then, however, he would glance at them, and in the present instance, you will observe the reason. "I have for a long time," says he to Dr. Ryland, so long ago as 1811, "been describing the birds of Asia, and have already accomplished almost one half of them, and some of the quadrupeds, and a few of the insects. I shall, perhaps, publish them in a series of papers in the Asiatic Researches, but have not yet determined. I have but little time to spare for these pursuits, for which I have a strong natural inclination; but I also find it very expensive, as nothing can be done without books and animals, as well as correspondents in different countries. These, I have in a good measure, but yet the work goes on very slowly. I notice this, because you mention a wish that our brethren might know something of natural history and geography. I certainly wish so too, and to shew that I do, I make this attempt to fill up this department.

In a few words, besides his valuable lectures on divinity, lectures on astronmy and geography, as well as natural history, and in Bengalee as well as English, were delivered by him for many years.

But his aptitude for acquiring languages was Dr. Carey's most wonderful natural endowment. Before he left his country for India, he had contrived, amid the pressure of poverty and the constant engagements of his school and pastoral office, to make himself sufficiently master of *six* languages, besides his native tongue, to read the Bible in each; viz, Latin, Greek, Hebrew, French, Italian, and Dutch. His knowledge of the last language was acquired, without the intervention of one elementary book, through some Dutch quarto obtained from an old woman.

As an authentic memoir of the life and labours of this great and good man is in preparation, it is not necessary for us to enlarge on the subject beyond one or two concluding notices. For a complete list of Dr. Carey's literary labours and of the publications issued from the Serampore Press, we must refer the reader to the forthcoming memoir. The entire Scriptures have been printed in six of the languages of India, besides that stupendous work of Carey's beloved and inseparable companion in labour, Dr. Marshman, the Chinese Bible; the New Testament has been printed in twenty-three languages, and portions of the Scriptures in ten others. In few words, 'God most graciously prolonged the years of his servant, till he lived to see more than 213,000 volumes of the divine word, in forty different languages, issued from the Serampore press.

There are some traits in the character of Carey, which must not be passed over. His exertions first led to the prevention of infanticide, and that of persons devoting themselves to death in the mouth of the Hooghly; and though the immolation of widows on the funeral pile went on (now suppressed,) it was through his influence that the Marquis of Wellesley left a minute, on his retiring from the Indian Government, declaring his conviction that Suttees *might and ought to be abolished*. In all works of public and private charity, Dr. Carey took an active interest. Disinterestedness and christian generosity were prominent features in the character of Carey and his brethren. The fact is history scarcely affords any parrallel example. They gave their earnings, amounting to about *eight thousand pounds* sterling, to the great cause of their mission.

Dr. Carey died in June last, of no disease, but of a gradual decay of nature. He was conscious of his approaching dissolution, and was much affected at the recollection of being permitted by Divine Providence to have laboured in India above forty years. The last cord that vibrated in his heart, was gratitude to God. It is a remarkable fact, and affords another proof of what can be done for the world we live in, that at Carey's death, the little church that he at first formed in India, has now branched out into *six and twenty churches*, in which the ordinances of religion are regularly administered.

ODDS AND ENDS: A MEDLEY.

[COMMUNICATED]

The history of a town, from the first squatter's log hut, to its Public Library, Town House, and Assembly Rooms, may be easily given in America and Australia. We can all remember when

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Graham's Town was not, and none of us dare conjecture what it may be; the following is very happy as the origin of a Highland Town. There are few more entertaining or more instructive books in the language than Macculloch's Highlands and Isles of Scotland, and its absence from our Public Library is an error of judgement in the Committee.

ORIGIN OF A HIGHLAND TOWN.

In the case of country towns, where a Highland laird or a speculating society has not interfered, it is a matter of analysis, for the fashionable science of political economy, to discover how one of them has grown, or by what cement it is united. There is a church; that is the ordinary foundation. Where there is a church, there must be a parson, a clerk, a sexton, and a midwife. Thus we account for four houses. An inn is required on the road. This produces a smith, a saddler, a butcher, and a brewer. The parson, the clerk, the sexton, the midwife, the butcher, the smith, the saddler, and the brewer, require a baker, a tailor, a shoemaker, and a carpenter. They soon learn to eat plum-pudding; and a grocer follows. The grocer's wife and parson's wife contend for superiority in dress; whence flows a milliner, and with the milliner, a mantuamaker. A barber is introduced to curl the parson's wig, and to shave the smith on Saturday nights: and a stationer to furnish the ladies with paper for their sentimental correspondence; an exciseman is sent to guage the casks and a schoolmaster discovers that the ladies cannot spell. A hatter, a hosier, and a linen-draper follow by degrees; and as children are born, they begin to cry out for rattles and ginger bread. The parson becomes idle and gouty, and gets a curate, and the curate gets twenty children and a wife; and thus it becomes necessary to have more shoemakers, and tailors, and grocers. In the mean time, a neighbouring apothecary, hearing with indignation that there is a community living without physic, places three blue bottles in a window; when, on a sudden, the parson, the butcher, the innkeeper, the grocer's wife, and the parson's wife, become bilious and nervous, and their children get water in the head, teeth, and convulsions. They are bled and blistered, till a physician finds it convenient to settle: the inhabitants become worse and worse every day, and an undertaker is established. The butcher having called the tailor pricklouse, over a pot of ale, Snip, to prove his manhood, knocks him down with his goose. Upon this plea, an action for assault is brought at the next sessions. The attorney sends his clerk over to take depositions and collect evidence: the clerk, finding a good opportunity, sets all the people by the ears, becomes a pettifogging attorney, and peace flies the village for ever. But the village becomes a town, acquires a bank, and a coterie of old maids; and should it have existed in happier days, might have gained a corporation, a mayor, a mace, a quarter sessions of its own, a county assembly, the assizes, and the gallows.—*Macculloch's Highlands.*

And yet, when the mind endeavors to travel through past ages, and rests its weary steps on the crumbling wall over which the young Remus could leap, to the infinite discomfiture of Romulus, the builder of Rome, what strange vicissitudes we recognize as we travel through the lapse of centuries, the varied fortunes of three thousand years. Australia has its mighty hopes, and its sublime futurity, and wants nothing that is needed for a great empire, and a sovereign people, but its century of establishment and growth; after which the language, and spirit, and character, and blood of Englishmen may overpower the feeble Asiatic characters, and rule the eastern and southern world unrivalled.

Who has not gazed in wonder and admiration at the strange hieroglyphics with which British manufactured plate is so wretchedly disfigured; and yet is it not true that we recognize these stamps as beauties, rather than disfigurement, from the knowledge of value which they impart? their precise meanings are worth knowing: but why is our plate to be so defaced? why cannot a becoming and ornamental stamp be used? better taste would not be more expensive: our present foul blotches are worthy of the good old days; let us hope that a better taste, as well as better things, are promised for the next generation.

STAMP MARKS ON GOLD AND SILVER.

Most of our readers have observed a sort of hieroglyphics stamped upon articles of plate, which only the initiated have been capable of decyphering. In a note to page 56 of the appendix in *Tate's Commercial Arithmetic*, we find this explanation of them: Standard purities of gold and silver are the purities of the coins of the kingdom, as determined from trial plates of the metals kept in the Exchequer, and all manufactured articles of these metals, except gold watch-cases, which are allowed to be made only 18 carats fine, and small articles of jewellery, must be of standard purity. To prove that they are of this fineness they are required to be tried at one of the Assay Offices, and they have the following marks stamped upon them, except they are articles that would be damaged by being stamped, and also watch-cases, with respect to the duty stamp. 1st. The maker's stamp, being the initials of his name or firm. 2d. The office stamp, to show where the assay has been made: the stamp of London or Goldsmith's Hall being a leopard's head crowned; of Sheffield, a crown; of Birmingham, an anchor; of Edinburgh, a thistle; of Dublin, a harp, &c. 3d. The date stamp, to show the year when it was stamped or made. This stamp is a letter of the alphabet, J being rejected. It extends as far as U, the alphabet being every twenty years.

Thus for 1795 the letter A; for 1806 L.
„ 1816 „ a; „ 1809 l.
„ 1836 is to be A; „ 1826 *L.*

4th. The standard stamp, which is a lion passant for the regular standards, and a crown, with the number 18, for gold watch cases only 18 carats fine. 5th. The duty stamp, which is the King's head, to show that the duty has been paid.—*Liverpool Journal, Aug.* 2.

Few men in such a humble sphere have figured more prominently before their generation, or made more noise in their day than Nash; he seems to have been a man of more merit and more talent than has been allowed him: such notoriety is not easily obtained by mere "mock importance and vulgar familiarity."

BEAU NASH.

A notice of Beau Nash, who is to figure as the hero of the new comedy at the Haymarket may not be unacceptable to our play going readers. A life of him, attributed, falsely we think, to Goldsmith, is now scarcely to be found, except on the shelves of the curious collector. The biographer styles the Beau, in the words of "Cicero," the little king of a little people. Certain it is, he raised Bath from comparative insignificance to importance. He founded the Pump room and Assembly-house, and was rewarded by the grateful corporation, whilst alive, with a statue, which was fixed, and yet remains, between the busts of Newton and Pope; and which circumstance drew from Chesterfield what Byron would call a "bone-cutting epigram." Nash was, however, a character, an extraordinary jumble of good and evil, of mock importance and vulgar familiarity. He ruled the costume of his subjects, and has been known on a ball night to strip the Duchess of Queensborough of her white apron. Indeed, to put down aprons, boots, and other external badges of slovenliness, he wrote a play for the puppets, which was enacted by Mr. Powell and his party, then flourishing at Bath. Musicians, poets, books, dancing-masters, nay, even reformed highwaymen, sought him for their patron, for one Jack Baxter, a notorious offender and blackleg, dedicated to him, from Taunton goal, his autobiography. Nash forbade the wearing of swords at Bath, to prevent mortal encounters; and sedulously checked slander among his female subjects. His equipage was sumptuous, appearing in a chariot and six greys, with footmen and French horns. He always wore a white hat, and to apologise for the singularity, said he did it purely to prevent it being stolen. It is reported of him, that whilst playing at picquet, and overhearing a man exclaim, "Heavens, how happy would all that money make me!" Nash, who won the sum, put the money into the man's hand, saying—"Go and be happy." It is this anecdote, differently related in the Spectator. Nash was honored with the confidence of the great. Princes and Lords gave him snuff-boxes, and even Sarah, Duchess of Marlborough, corresponded with him. Many are the instances of his philanthropy. Though he died comparatively neglected in 1761, at the age of 88, his qualities, good and questionable, were writ in English and Latin, by Drs. Oliver and King.—*Examiner, July* 15.*

Bath is no longer the emporium of fashion; Brighton has reaped its ripe honors, and Cheltenham gleaned the fallen ears of its past harvest. Still Nash lives in the cherished traditions of its venerable dowagers, and will not be forgotten so long as one survives who has seen one of the Georgian Æra!

The writer of this having travelled through Leicestershire in his early youth, was singularly struck on reading the Heart of Mid-Lothian, at the felicitous use made of the Leicestershire proverbs, when Jenny Deans is landed in the Staunton Rectory—the "thatching of Groby Pool with pancakes!" The "agreement of the thieves, like the men of Masham when they lost their common!" are so local and so happy, that the wonder was how this singular writer

* There is in one of the volume's of the excellent Hervey, formerly of Weston Flavel, an admirable letter addressed to Beau Nash. It breathes the spirit of the Christian and the Gentleman—quite apart from that malevolence of temper called *faithfulness*.—ED.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and made them promise never to change their religion, and always to remain united amongst themselves on 'Change. These promises have been religiously kept, and amply has the fable of the bundle of sticks been verified by the five brothers. Whenever they are about to undertake an affair of importance, all the united brethren invoke the memory of their father, which is venerated by them in a manner highly honourable to their filial feelings. Their great political operations commenced in 1813, and up to the present time it is computed their house has negotiated, in loans, subsidies, &c. upwards of 160,000 millions sterling, principally for the different monarchs of Europe; their profits have, of course, been immense. Their long and uninterrupted success was owing to their unanimity, and community of interests. Every proposition is decided by mutual deliberation. Each operation, of major or minor importance, is conducted upon a concerted and common plan; and all their individual, and combined energies, are employed to command success. Although, for several years, they have resided at a distance from each other, that circumstance has by no means caused a distance, or discord amongst them; on the contrary, it has proved a great advantage, in contributing towards the prosperity of their immense undertakings, by thus making them *au courant* of the state of the principal money markets of Europe, through a continual exchange of couriers, which generally precede the government-messengers; in this manner, each of the five brothers, from the point where he is placed, possesses a great facility for preparing and negotiating different affairs for the central establishment. It is but very recently that the tide of fortune has seemed to run less smooth for the house of Rothschild. The avidity with which they caught at the *Spanish* bonds, their calculating, and ever grasping ambition to become the financiers-in-chief of the queen's government, have caught the wary brothers at last, not in a petty mouse trap, but in a prodigious money trap, baited with reals, which, alas! are likely to turn up *unreal* mockeries. Their late losses have been estimated at from 1,200,000*l.* sterling to 2,000,000*l.* But it is not easy to fix the sum, for the following reasons. The Rothschilds' business at the Bourse is done by different agents, in such a way, that each is ignorant of the other's employer, consequently, the losses and gains cannot be fairly averaged by the public at large; except upon some great or particular purpose, the "Wondrous Five," choose not to appear on the great gambling stage, and publish their transactions in *propriâ personâ*. If rumour might be relied upon, a private pique had something to do with this first, and last, or rather latest reverse of the late golden purveyors of kings. A certain formerly proscribed count, and now, "by the vicissitudes of fate," a minister of a very critical department of the Spanish state, was refused by Rothschild a loan of 25,000*l* upon his sequestered property in Spain, when the Peninsula was under the sway of Ferdinand the Beloved. The Count de T—— was then a liberal in Paris. Baron Rothschild was then the sterling sheet anchor of the "blessed Bourbons," and had never been tainted with liberal notions in word or in deed. The quintuple firm, backed by the accredited Don A— had arranged a most *magnifique* bargain for themselves *bien entendu*; it was on the point of being legally validated, when, most unlucky *centre temps*, the erst banished count, on a certain fine morning, stepped into the national Spanish counting house at Madrid, as chief comptroller of finances. His first best step, was to annul the hopes of the Rothschilds, and, in so doing, there is no occasion to attribute personal malice, as the unlegalized contract was most unfair and disadvantageous to his country.

The *statistique* of the Wondrous Five is as follows:—

Amscha Anselmo, resides at Frankfort-sur-le Maine. He is the senior, and chief of the family, aged sixty-one years. At his house the general inventory is made out, from the private inventories furnished by the other four banks. It is there, also, that the congresses of the fraternity are generally held.

Solomon, the second brother, born September 9th, 1774, has passed his professional time, the last eighteen years, between Berlin and Vienna, chiefly at the latter.

Nathan, the third brother is in his fifty-seventh year. He is the London Rothschild.

Charles, the fourth of the five bankers, is forty-six years old. He has been established at Naples since 1821.

Jacob, the youngest in years, was born May the 5th, 1792. His consort, the baroness, is the daughter of his second brother, the Baron Solomon. Jacob has carried on his business since Anno Domini 1812, at Paris.

The Temperance Societies should attack all manner of strong drink, and every sort of narcotic and exhilarant in nature; the Vine and Tobacco should perish under their anathema, and John Barleycorn be confined to bannocks, and no longer strengthen as Double X. or stimulate as Glenlivet; but Kentucky has his own taste and his own phraseology, and we are strongly disposed to agree that the Temperance Societies are "off the trail:" put down the abuse by all means, if you can, but to deny the use is folly.

A KENTUCKIAN'S PRAISE OF TOBACCO.

"I am one of those who don't believe in the happy effects of either brandy or tobacco," replied Chevillere. "Then you are off the trail for once in your life, stranger, for I take tobacco to be one of God's mercies to the poor. Whether it came by a regular dispensation of Providence (as our parson used to say) or in a natural way, I can't tell; but hang me, if when I gets a quid of a real Kentuck twist or Maryland kite-foot into my mouth, if I ain't as proud a man as the grand Turk himself. It drives away the solemncholies, and makes a fellow feel so good natured and so comfortable; it turns the shillings in his pocket into dollars, and his wrath into fun and devilry. Let them talk about tobacco as they choose among the fine gals, and at theatres, and balls, and cotillions, and all them sort of things; but let one of 'em travel twenty miles deep into a Kentuck forest, and then see if a chew of the stuff ain't good for company and comfort."—*The Kentuckian in New-York.*

The Latin inscription over the Parisian Cook-shop, is only a Monkish maltreatment of Scripture; the fish shops and cook-shops are very commonly so decorated in Italy, particularly in Naples; it is a curious derivation:

PARISIAN RESTAURATEURS.

In the year 1756 only a few privileged persons in Paris were allowed to keep '*eating houses*.' In that year, however, an ingenious cook opened a room, elegantly furnished, with the inscription—'*Venite ad me omnes, qui stomacho laboratis et ego restaurabo vos*' over its entrance. Its novelty charmed the Parisians; public opinion established the cook, and the word *restaurabo* gave a name (*restaurant*) to the new eating-house. Places of the same description multiplied rapidly, and as suddenly revolutionised the domestic habits of the citizens. Previous to the era of *restaurateurs*, the people of Paris dined at home with their families, but since that period the great majority eat, drink, and enjoy themselves any where in preference to their respective domiciles.—*Simon's Letters to his Kinsfolk.*

The curiosities of derivation in English would be an amusing article. The word to saunter, for instance:—Saunter, (aller a la sainte terre,) from idle people who roved about the country visiting holy places or sacred shrines; to go a saincte terre-ing, was to go the round of all the Abbeys and Saints' tombs in the district.

STEAM NAVIGATION TO INDIA.

Three routes have been proposed for communicating with India by means of steam-packets: the first, by the Cape of Good Hope; the 2d, by the Mediterranean, Egypt, the River Euphrates, and the Persian Gulf. These three routes have their advantages and disadvantages, physical, political, and commercial; and these points are admirably represented and discussed in the Edinburgh Review for January. The route by the Cape has been the subject of one experiment—the voyage of the *Enterprise* in 1825. The time of her voyage to Calcutta was, in all, 113 days; the average voyage of a sailing vessel is 120 to 130 days to Calcutta. The most sanguine advocates for the renewal of this line of steam navigation, do not anticipate the probability of accomplishing the object in less than 70 days; but, be the time what it may, still it seems highly probable that half the distance can be done in half the time. The route of the Cape is clearly the route for sailing vessels with cargoes of merchandise. Politically, there are no obstacles to encounter; the ocean is our own high-way, and we have no one's leave to ask, and no one to conciliate on our route. We may deposit our coals at the Cape de Verd Islands, at St. Thomas's, at the Cape, and at Johanna or Mauritius, without fear of annoyance of any kind. The writer is clearly of opinion that it would be delightful if passengers and letters could be safely conveyed over 200 or 300 miles of land scenery, but he counterbalances the good by a reference to serious physical, political, and financial difficulties which stand in the way. The plague must not be forgotten in the comparison of the routes in India. It is not a small advantage of the Cape route, that it is free from this scourge. Egypt, and the cities of the Euphrates, are alike liable to it. The Egyptian plague might be avoided if there were a good harbour in the Mediterranean north of Suez, and the land transit were not to Cairo and Alexandria, but to lake Menzaleh. This

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

was considered impracticable by the British agents in Egypt, in reply to some questions asked in 1829; but some of the witnesses before the Committee speak more encouragingly to the point.

The plague cannot be avoided on the route of the Euphrates; but it is less formidable on this line than on the route through Egypt.

Summarily, and in conclusion, observes the Reviewer, reversing the order of our enquiry, and beginning our summary with the financial branch of the question,—we recommend, to borrow the words of a writer in a Calcutta paper, a very careful consideration of 'the 'means of converting steam into rupees,' before we recommend the 'conversion of rupees into steam.' This point being disposed of, and the choice of the three routes being next to be made, we certainly give the preference to that of the Persian Gulf; as being the easiest, the most certain throughout the year, the most in the line of all our Asiatic interests, and the most economical. And we would have, for the Persian Gulf, steam vessels of great power, and of the very best description, of 500 or 600 tons measurement, and not less than 200 horse power, built in England; experience having demonstrated that vessels built in India, with engines sent from England, would be twice as costly and half as efficient. We would send them out under steam to Bombay, having deposited coals at the Cape de Verde Islands, at St. Thomas's, and St. Helena, at the Cape, at Johanna, and at the Mauritius. If one or two experiments should be conclusive against steaming round the Cape, we would work out all following vessels under sail, but we would always build them in England. These vessels would go in one run from Bombay to Bussorah, and from Bussorah to Bombay; and we are satisfied that such vessels would, through the whole year round, run the 1600 miles each way, in a week or ten days. We would provide for contingencies, by having an intermediate depot of coals at Muscat or Bassadore; but we should not contemplate the necessity of often using it.

If it should be determined to adopt the route of the Red Sea, either for the whole year, if practicable, or for that part of the year during which there is no doubt of the practicability, we would do this also with vessels of great power, capable of running the voyage in two stages; but we would not send coals to Suez at all, seeing that they must be sent either by sailing vessels beating up against the wind, in the worst part of the Red Sea, or carried by barges from Alexandria to Cairo, and by camels from Cairo to Suez, involving in either case an enormous charge. We would not send coals to Suez at all, except a small quantity to provide for contingencies, but not to be used unless the contingencies arose. We would have depots at Socotra or Aden, (Socotra, if possible,) and again, either at the Arabian port of Camoran, or the Abyssinian port of Massooah: both are islands, and therefore out of the reach of molestation. From either of those ports such a steamer as we propose would carry coals sufficient to take her to Suez and back, and the chief difficulty and expense of providing fuel be got rid of.

We do not speak now of the south-west monsoon. We are not adventurous enough to recommend the experiment in that season.

We would try the experiment of the line of the Persian Gulf and the Euphrates throughout the year. At all events, 'the physical difficul- 'ties on the line of the Red Sea appearing to be 'confined to the months of June, July, August, 'and September, and those of the river 'Euphrates to the months of November, De- 'cember, January, and February, the effective 'trial of both lines would open a certain com- 'munication with the Mediterranean in every 'month of the year, changing the line of the 'steam vessels on both sides, according to the 'seasons.'—(Resolution 10 of the Committee's Report.)

We would use the Llangennech coals, which appear to carry greater power in the same bulk than any other kind of coals; and which are exported very economically direct from South Wales to India.

But both for the Persian Gulf and the Red Sea we should look only to Bombay. There would be no saving of time sufficient to counterbalance the great additional expense and difficulty of running a steamer, on either of those lines, to Calcutta. When a steamer from Calcutta is at Point de Galle, she may as well run on round the Cape of Good Hope, and get into the line of the south east trade-wind. It is not worth while, for so small a consideration as 3000 or 4000 miles, to run to the northward again, and encounter all the risks and inconveniences of the Red Sea and the plague. If we are to carry on steam communication with Calcutta, we should do so by the Cape of Good Hope: at least from Calcutta, though not from Bombay, we would give this line a fair trial. We would reject the idea of steam navigation to Calcutta altogether; but if it were determined to have it in some way, we would try it by the Cape. Whatever line we adopt, we would build the vessels in England, and work them to India; because by so doing we should get better vessels for half the cost. The cost of an Indian-built steamer, as it appears in the Evidence, is enough to alarm the most resolute advocates for Indian steam navigation. We would build the vessels for the Red Sea or the Persian Gulf in England, and work them out to Bombay; and if the object of steam navigation to Calcutta be kept in view, we would work them out by steam; and thus make them, though destined for other lines, conducive to a series of experiments of steam navigation round the Cape. For Bombay, we should not think of this route; for Calcutta, we should prefer it to the Red Sea; though we repeat, that in consideration of the great increase of expense, and the diminished saving of distance, we should reject the idea of steam communication with Calcutta altogether.

ZOOLOGICAL RECOLLECTIONS.

THE HOG.

The emblem of filth, sloth, obstinacy, gluttony, and brutality: abhorred by the natives of warm climates as unclean, and subject to scrofula and leprous disorders of the skin. Hogs are highly sensible of the approach of foul weather, and run about in great agitation before storms, screaming, grunting, and snuffing up the air; whence they are said to "see the wind." Hogs are of exceedingly rapid growth, and as, when killed, their flesh takes salt more readily than the flesh of other animals, they form a valuable part of the husbandman's stock, and one of the principal objects of sale in a country fair: so, when a man has made a successful bargain, he is said to have brought his hogs to a fair market. Stubborn and inflexible obstinacy is likened to the casting of pearls before swine; and of indocible stupidity it is said, "Ne sus Minervam," You cannot make a silken purse of a sow's ear.

In some parts of the East, they were, nevertheless, objects of pastoral care and attention, if not of commerce; for the herd of swine, into which the evil spirits were suffered to enter, were under the care of feeders. (Matthew, viii. 28—34. [So in the parable of the Prodigal Son. (Luke, xv. 15.)] They are very gregarious, and in the wild and vast forests of Germany collect together in great herds; and persons who are closely packed in society are said to pig together. Hogs, like many animals in a state of domestication, bring several litters in a year, and at all seasons, from the abundance of food and accommodation which can be afforded them, as may also be observed of dogs, cats, rabbits, poultry, doves, cows, and sheep. When caught, they are seized by the ear or leg, and make a most noisy outcry: whence of a person who has fastened his suspicions on a wrong object, it is said, that he has taken the wrong sow by the ear.

The side or flitch, when salted and dried, makes bacon; and as this savoury food too frequently becomes the plunder of rats, bats, and other vermin*, it is said of him who has barely escaped a loss or an injury, that he has just saved his bacon. The smoking of hams is as old as Horace, who considered a hock of bacon and greens, as fit food for a country farmer.

"——— Tu mere edi
Quidquam præter olus, fumosæ cum pede pernæ."

The boar, when in anger, foams at the mouth, gnashes his teeth, and whets his tusks.† We learn that, at the tables of the Roman epicures, the flesh of the boar, together with the turbot, or probably the halibut, was considered as rank, and not fit to be served up, till it had been kept a long time: "putet aper rhombusque recens;" and again, "rancidum aprum antiqui laudabant." [Brawn's flesh, skilfully prepared, is, at our own tables, an esteemed and somewhat expensive kind of food.]

St. Anthony was the patron of swine, and celebrated for curing such diseases of the skin as were considered to be of swinish origin or nature, as leprosy, scrofula, and erysipelas, or Saint Anthony's fire. His monks were thence called, in derision, St Anthony's pigs; and thence originated the ironical taunt of "please the pigs;" and, as the gambols of young swine are singularly awkward, any frolic more than usually ridiculous was compared to a "tantony pig," and a stupid rustic was called a tony. In the monkish legends, it is related, that, when St. Anthony was once sorely beset by the temptations of Satan, he defied him by commanding him to shear his hogs; who, finding them more clamorous and troublesome than productive, exclaimed, that there was great cry and little wool.

Swine, if they are fed on fermented grains, or the must of cider, are subject to fits of the gout; and in large distilleries get rapidly fat and bloated, by being kept in a state of constant intoxication. The hog, although apparently shapeless and unwieldy, is of considerable swiftness and agility: for the hind legs have two bones in each, whereas there is but one in horned cattle.

The hog, as a beast of chase, forms the armorial bearing of many families. It constituted the arms of King Richard the Third: and in his reign, when great enormities were committed by himself, Ratcliff, Catesby, and Lovel whose crest was a talbot or kind of hound, an unhappy wit was hanged for the following not inelegant pasquinade:—

"The rat, the cat, and Lovel the dog,
Govern all England under the hog."

In his reign the English coin was first introduced into Ireland, whence an English shilling is in the sister island still called a hog: and after his reign, the popular sign of the hog in armour probably originated, in allusion to his unshapely person and his arms or crest. The bristles are made into brushes; and the skin of the wild boar is used in Spain to hold wine, whence the origin of our word hogshead, a corruption of hog's hide.

In the casting of metallic ores, the red-hot fusion runs from the furnace down a straight groove, and branches on each side into shorter ones, supposed by the workmen to resemble a sow suckling her little; whence the longer piece is called the sow, and the shorter ones pig iron or pig lead.

A learned monk wrote a long poem in praise of

* One of these is the larva of the insect *Dermestes lardarius*.

† Æsop has taught wise instruction by his fable of the boar whetting his tusks in time of peace, that he might be prepared for the most sudden presentment of war.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

pigs, every word of which begins with the letter P:—

"Plaudite porcelli porcorum pigra propago."

Although the flesh of the hog is held in abhorrence by the Jew and the Turk, no other animal affords so large a series of savoury viands to the table of the Christian. Every part is in use, except the brains and the marrow, which, from ancient prejudice, are thought to create melancholy. The smaller intestines make chitterlings, and the ears are made into souse; as it was said of the fiddler Crowdero.—

"His warped ear hung o'er the strings,
Which was but souse to chitterlings;
For guts, some write, ere they are sodden,
Are fit for music or for pudden."
Hudibras.

The sides of the head are made into cheeks, and the tongue is pickled. The neck or collar makes brawn; whence anything strongly muscular is called brawny. Of the shoulders are made gammons and blade-bones; of the back bone are made the chine and the griskin; the thinner portion of the ribs forms the spareribs; the sides and the belly make the flitch and the rasher; the hind legs make the ham and the hock; the feet of the sucking pig make petit toes; of the heart, the liver, and the lights, with morsels from the throat, are made the harslet or fry; of the spare lean parts are made sausages; the larger intestines, stuffed with grits mixed with the blood make black-puddings.

"And fat black-puddings, proper food
For men that most delight in blood."
Hudibras.

The bristles are made into brushes, and point the waxed thread of the shoemaker.

LITERARY EXTRACTS.

EXTRAVAGANT FLATTERY CORRECTED.

HAYLEY, ANNA SEWARD, AND PORSON.

PERHAPS the vainest old maid that ever existed, was Miss Anna Seward, of Lichfield. She lived to little purpose except to write sentimental letters to Mr. Hayley, the poet, and others: a few birth-day odes and sonnets to the Moon, the Robin Red-breast, and Mr. Hayley. The latter gentleman and Miss Seward were long in the habit of playing double wickets in the compliment way, and it was difficult to discover who had the best of it in adulating each other. On the extravagant terms of flattery which Mr. Hayley and Miss Anna used in compliments to one another, Professor Porson frequently indulged much satirical observation. The following dialogue is supposed to take place between the parties:

Miss SEWARD *loquitor.*
Tuneful Poet, Britain's glory,
Mr. Hayley, that is you.

HAYLEY *respondet.*
Ma'am, you carry all before you.
Trust me, Lichfield Swan, you do.

Miss SEWARD.
Ode, dramatic, epic, sonnet,
Mr. Hayley, you're divine.

Mr. HAYLEY.
Ma'am, I'll take my oath upon it,
You, yourself, are all the Nine."

The Three Wives—A sitter came to Copley, father of the present Lord Lyndhurst, and had himself, his wife, and some children, all included in a family piece. "It wants something," said he, "and that is the portrait of my first wife—for this is my second." "But," said the artist, "she is dead, you know, Sir; what can I do? She is only to be admitted as an angel" "Oh no, not at all," answered the other, "she must come in as a woman—no angels for me."—The portrait was added, but some time elapsed before the person came back. When he returned he had a stranger lady on his arm. "I must have another cast of your hand, Copley," he said, "an accident befel my second wife: this lady is my third, and she is come to have her likeness included in the family picture." The painter complied; the likeness was introduced, and the husband looked with a glance of satisfaction on his three spouses; not so the lady—she remonstrated; never was such a thing heard of—out her predecessors must go. The artist painted them out accordingly, and had to bring an action at law to obtain payment for the portraits which he had obliterated.

Domestic Servants.—The number of female servants in Britain is upwards of 700,000; and if their ages were calculated, we do not doubt it would be found that two-thirds of all the British damsels between the ages of 15 and 25, are domestic servants. Yet, notwithstanding, this immense supply of female labourers, the demand is superior to it; their wages rise, and their prosperity is strikingly evinced by their elegant garments and costly decorations. Male servants are not so numerous, yet the demand is superior to the supply; and the services of a footman gratuitously educated at the parish school, already command an equal remuneration, and promise to command a higher price than the services of a curate, who has expended large sums in the acquirement of classic lore at the universities.—*Browning's Political and Domestic Condition of Great Britain.*

SELECT NOTICES.

American Regard to the Old Country.—It is a curious fact that American works are little read in America, until they have at least been stamped by English approval. We do not altogether like this want of *self-respect.*——*Rio, 1st June*, 1834.—The prison contains at present 627 prisoners. A traveller who recently visited this seat of iniquity, observes:—In the street four prisoners were chained by the neck to the wall, begging—they were asking justice. An opportunity was thus offered to those who were without money, to obtain means to pay for their trial, and *fee their Lawyers.*——*Making Butter.*—The primitive mode of churning butter, by putting the cream into large gourds or dry skins, placing them on a donkey's back, and making the animal trot round till the operation is completed, is still practised in Chili.——*What is Power?*—Power must be founded either on *property* or on *ability*, i. e. intellect.——*Rio.*—"At Rio," says Dr Webster, "two thirds of the population are in bondage, and numbers are to be seen linked together, drawing carts and sledges, like the brutes that perish." —*Monte Video*—The people of Monte Video are great riders; they do almost every thing on horse-back. The peasant (the gaucho,) for instance, seems to be nobody without his horse. If any thing is wanted from the most trifling distance he mounts. He sows his grain on horse-back; beggars have been known to follow their calling in the same state.——*The late Mr Sotheby, the Poet.*—He died recently, in the 77th year of his age. The Holy Scriptures were daily his study, and his hopes were founded upon what they teach.——*Ireland.*—Mr. Inglis, in his new work on Ireland, has ascertained that the greater proportion of the lower classes in Ireland, die prematurely of destitution.——*Monkeys.*—There are, it appears, two or three monkeys in the Zoological Gardens of London, whose passion for snuff affords much amusement to visitors. The Quarterly Review says, "a friend of ours, on visiting a monkey in Cheapside some time since, soon after his arrival from India, he found him in the act of finishing his mutton chop and potatoes, and about to begin his usual pipe, with the accompaniment of Madeira negus. He lighted the pipe, and filled the bowl for himself."

DAVID HUME A PROPHET.

The following prophetic vision by David Hume, of our present Reform Bill, and of the various points under discussion, connected therewith, cannot fail to be interesting as exhibiting the acuteness of the historian, and at the same time his political character in a different light from that in which it is generally viewed. We quote from volume 1st of an edition of his Essays, published 1788, from an Essay entitled, "Idea of a perfect Commonwealth," page 460.

"The chief alterations that could be made on the BRITISH Government, in order to bring it to the most perfect model of limited monarchy, seem to be the following. *First*, the plan of Cromwell's Parliament ought to be restored, by making the representation equal, and by allowing none to vote in the country elections who possess not a property of 200 pounds value. *Secondly*, As such a House of Commons would be too weighty, for a frail House of Lords, like the present, the Bishops and Scotch Peers ought to be removed. The number of the Upper House ought to be raised to three or four hundred: Their seats not hereditary, but during life: They ought to have the election of their own members; and no commoner should be allowed to refuse a seat that was offered to him. By this means the House of Lords would consist entirely of the men of chief credit, abilities, and interest in the nation; and every turbulent leader in the House of Commons might be taken off, and connected by interest with the House of Peers. Such an aristocracy would be an excellent barrier both to the Monarchy and against it. At present, the balance of our Government depends in some measure on the abilities and behaviour of the Sovereign, which are variable and uncertain circumstances.

This plan of limited monarchy, however corrected, seems still liable to three great inconveniences, *First*, It removes not entirely, though it may soften, the parties of *court* and *country*. *Secondly*, The King's personal character must still have great influence on the Government. *Thirdly*, The sword is in the hands of a single person, who will always neglect to discipline the militia, in order to have a pretence for keeping up a standing army.

ADVENTURE IN LOUISIANA.

From Audubon's "Ornithological Biography."

THOUGH we have scarcely opened the volume we have already come upon one of those sketches of wild life, the introduction of which into this paper must be acceptable to every reader. We can only make room for a part of it:—

Late in the afternoon of one of those saltry days which render the atmosphere of the Louisiana swamps pregnant with baneful effluvia, I directed my course towards my distant home, laden with a pack consisting of five or six Wood Ibises, and a heavy gun, the weight of which, even in those days when my natural powers were unimpaired, prevented me from moving with much speed. Reaching the banks of a miry bayou, only a few yards in breadth, but of which I could not ascertain the depth on account of the muddiness of its waters, I thought it might be dangerous to wade through it with my burden; for which reason, throwing to the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

opposite side each of my heavy birds in succession, together with my gun, powder flask, and shot-bag, and drawing my hunting-knife from its scabbard to defend myself, if need should be, against alligators, I entered the water, followed by my faithful dog. As I advanced carefully and slowly, Plato swam around me, enjoying the refreshing influence of the liquid element that cooled his fatigued and heated frame. The water deepened, as did the mire of its bed; but with a stroke or two I gained the shore.

Scarcely had I stood erect on the opposite shore when my dog ran to me exhibiting marks of terror, his eyes seeming ready to burst from their sockets, and his mouth grinning with the expression of hatred, while his feelings found vent in a stifled growl. Thinking that all this was produced by the scent of a wolf or a bear, I stooped to take up my gun, when a stentorial voice commanded me to 'stand still or die!' Such a *qui vive* in these woods was as unexpected as it was rare. I instantly raised and cocked my gun; and although I did not yet perceive the individual who had thus issued so peremptory a mandate, I felt determined to combat with him for the free passage of the grounds. Presently a tall firmly-built negro emerged from the bushy underwood, where, until that moment, he must have been crouched, and in a louder voice repeated his injunction. Had I pressed a trigger his life would have instantly terminated, but observing that the gun which he aimed at my breast was a wretched rusty piece, from which fire could not readily be produced, I felt little fear, and therefore did not think it necessary to proceed at once to extremities. I laid my gun at my side, tapped my dog quietly, and asked the man what he wanted.

My forbearance, and the stranger's long habit of submission, produced the most powerful effect on his mind. 'Master,' said he, 'I am a run-away. I might perhaps shoot you down; but God forbids it, for I feel just now as if I saw him just ready to pass his judgment against me for so foul a deed, and I ask mercy at your hands. For God's sake do not kill me, master!' And why, answered I, have you left your quarters, where certainly you must have fared better than in these unwholesome swamps? 'Master, my story is a short but a sorrowful one. My camp is close by, and as I know you cannot reach home this night, if you will follow me there, depend upon *my honor* you shall be safe until the morning, when I will carry your birds, if you choose, to the great road.'

After trudging along for some distance, and crossing several bayous, at all of which he threw his gun and knife to the opposite bank, and stood still until I got over, we came to the borders of an immense cane brake, from which I had, on former occasions, driven and killed several deer We entered, as I had frequently done before, now erect, then on 'all fours.' He regularly led the way; divided here and there the tangled stalks, and whenever he reached a fallen tree assisted me in getting over with all possible care. I saw that he was a perfect Indian in the knowledge of the woods, for he kept a direct course as precisely as any 'Redskin' I ever travelled with. All of a sudden he emitted a loud shriek, not unlike that of an owl, which so surprised me that I once more instantly levelled my gun. 'No harm, master; I only give notice to my wife and children that I am coming' A tremulous answer of the same nature gently echoed through the tree tops.

In the heart of the cane brake, I found a camp A small fire was lighted, and on its embers lay griddling some large slices of venison. A lad nine or ten years old was blowing the ashes from some fine sweet potatoes Various articles of household furniture were carefully disposed around, and a large pallet of bear and deer skins seemed to be the resting-place of the whole family. The wife raised not her eye towards mine, and the little ones, three in number, retired into a corner, like so many discomfited racoons; but the Runaway, bold and apparently happy, spoke to them in such cheering words that at once one and all of them seemed to regard me as one sent by Providence to relieve them from all their troubles. My clothes were hung up by them to dry, and the negro asked if he might grease and clean my gun, which I permitted him to do, while the wife threw a large piece of deer's flesh to my dog, which the children were already caressing.

Only think of my situation, reader! Here I was, ten miles at least from home, and four or five from the nearest plantation, in the camp of runaway slaves, and quite at their mercy. My eyes involuntarily followed their motions, but as I thought I perceived in them a strong desire to make me their confidant and friend, I gradually relinquished all suspicion. The venison and the potatoes looked quite tempting, and by this time I was in a condition to relish much less savoury fare; so, on being humbly asked to divide the viands before us, I partook of as hearty a meal as I had ever done in my life.

Supper over, the fire was completely extinguished, and a small lighted pine knot placed in a hollowed calabash. Seeing that both the husband and wife were desirous of communicating to me, I at once and fearlessly desired them to unburden their minds: when the Runaway told me a tale of which the following is the substance:—

About eighteen months before, a planter residing not very far off, having met with some losses, was obliged to expose his slaves at a public sale The value of his negroes was well known, and on the appointed day the auctioneer laid them out in small lots, or offered them singly, in the manner which he judged most advantageously to their owner. The Runaway, who was well known as being the most valuable next to his wife, was put up by himself for sale, and brought an immoderate price. For his wife, who came next, and alone, eight hundred dollars were bidden, and paid down. Then the children were exposed, and, on account of their breed, brought high prices. The rest of the slaves went off at rates corresponding to their qualifications.

The Runaway chanced to be purchased by the overseer of the plantation; the wife was bought by an individual residing about a hundred miles off, and the children went to different places along the river—the heart of the father and husband had failed him under this dire calamity. For a while he pined in deep sorrow under his new master; but having marked down in his memory the names of the different persons who had purchased each dear portion of his family, he feigned illness if, indeed, he whose affections had been so grievously blasted could be said to feign it, refrained from food for several days, and was little regarded by the overseer, who felt himself disappointed in what he considered a bargain.

On a stormy night, when the elements raged with all the fury of a hurricane, the poor Negro made his escape, and being well acquainted with all the neighbouring swamps, at once made directly for the cane brake, in the centre of which I found his camp. A few nights afterwards he gained the abode of his wife, and the very next after their meeting he led her away. The children one after another he succeeded in stealing, until at last the whole objects of his love were under his care.

To provide for five individuals was no easy task in those wilds, which after the first notice was given of the wonderful disappearance of this extraordinary family, were daily ransacked by armed planters.

We may conclude this interesting anecdote by telling the reader that the Runaways were, by the intervention of our author, placed in a state of comparative comfort under the protection of a Louisiana planter.

THE PROPHETIC ALMANACK.

(From Old Francis Moore, 1855.)

The present Parliament was called on the day when the moon was in conjuction with the sun, and in evil aspect to both Saturn and Mars, in moveable signs. I am confident that it will disappoint those who summoned it, and be of *very brief existence*. The sun and moon, on the 30th December, were in the 90th degree of Capricorn, a square aspect to the 9th degree of Libra, where evil Saturn was at the last birthday of his Majesty, a position always evil to the person then born, or who was born when the sun was in that place, &c. The planet Saturn, on the 7th inst., was in the 22 deg. 40 min. of the sign Libra, (*vide* "White's Ephemeris,") and that was where the moon was at 4 A.M. on the 21st of August, 1765, when the King was born. Now on that day, as I predicted, the King met with *vexation*, by the city election, &c. going against his ministry. This evil passage of Saturn over the moon's place (which can happen only once in about thirty years) proves that the King is now acting under evil influence.

In the King's nativity the moon came to the aspect of Mars (*sine latitudine*) in October last, which caused the change of ministry. In March and in April there are other aspects formed, which will produce some very *sudden and great changes and much violence in the nation*. There will be much evil about the 25th of February to the Government, as Saturn, falling retrograde, will again pass over the moon's place at the King's birth. I judge that a vote of the commons *hostile to the ministry* will on that day be recorded. And before April be over, changes again occur in the ministry. In May the affairs of the church will cause great excitement and trouble to the King; *a vast change begins*. In June *military proceedings* will draw much attention; and some tumult may be feared. In August the moon forms a sextile aspect with her own place at the King's birth, (*sine lat.*) which will bring beneficial changes and benefits to the nation; things appear more settled and the nation more prosperous.

If these predictions be fulfilled, of which I am confident, I will then offer you some observations on the remainder of the year. In the mean time I predict decidedly, that the *present ministry is destined to a very brief existence*; but that they will make a desperate struggle, in which the constitution will suffer a severe shock. The people will *eventually triumph*, but not without great turmoil and excitement, and I fear some blood shed.

A THEATRICAL REPRESENTATION

In the presence of the Emperors and Kings at Erfurth, in 1808 By Madame J. Schopenhaner, translated from the French.

What an extraordinary bustle prevailed within the little circuit of the town of Erfurth, now so deserted! What an epoch was that, when the all-powerful will of that extraordinary man (who for a number of years past has reposed on the rock of St. Helena from the wonderful dream of life) called around him there, as if by a magic wand, emperors, kings, and the most remarkable men of the times.

Napoleon had sent for the principal actors of the Theatre Francais to Erfurth; Talma, Madlle Duchesnois, Madlle. Mars, the beautiful Georges, the charming Burgoing, appeared several times a week in the first characters before that august assembly. A little theatre found in the old convent of the Jesuits, had been arranged for this purpose with a promptitude and elegance truly French.

I was fortunate enough to be placed with two of my friends in the front of a box near the stage, whence we could easily see every thing that went on in the parquet. We congratulated ourselves upon being so comfortable, but our hap-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

piness did not last long. Those boxes near us became by degrees full to overflowing. The door of ours flew violently open. How! cried an enraged soldier or gendarme, I do not know which, placed there to take care of us.—How is this? Three females upon three chairs! There is room for six, introducing at the same time between us two ladies, who were fortunately of our acquaintance.

All the other boxes were becoming more and more full as well as ours; we were dreadfully squeezed; we could scarcely move; the heat was enough to kill us, but we had no time for it.—The importance of the grand spectacle which was about to present itself to our view in the parquet so occupied our thoughts, that we forgot all the inconveniences of our situation.

Directly in front of the stage were placed two arm chairs for the two Emperors, and on each side of them common chairs for the Kings and reigning Princes. The space behind these seats began to be filled. Statesmen and Generals of most of the European Powers, men whose names were then celebrated, and are now become in a great degree historical, came in. Uniforms bedizzened with gold, and an air of vivacity and assurance, distinguished the French from the Germans, who were more serious and unassuming. There was Berthier, and Soult, and Caulincourt, and Savary, and Lannes, and Duroc, and many others equally celebrated. It seemed as if the greatness of their master was reflected upon all their countenances. We saw Goethe with his calm and dignified face and the venerable Wieland; the Grand Duke of Weimer had invited them to Erfurth. The Duke of Gotha and several reigning Princes and branches of the royal families of Germany were formed in a group round these veterans of German literature.

A roll of drums was heard without. That's the Emperor! said every one all through the streets. Simpletons, what are you thinking of? bawled out in a rage the commanding officer to the drummers; it is only a King! In fact one of the German Monarchs entered the house, and three other Kings appeared shortly afterwards. Then came the Kings of Saxony, Bavaria, and Wirtemberg, without noise and without eclat. The King of Westphalia, who arrived later, eclipsed them all by the brilliancy of his rich embroideries and precious stones. The Emperor Alexander, with his majesty's majestic figure, came in afterwards. The great box opposite the state dazzled our eyes with the glare that it threw into the house. The Queen of Westphalia, covered with diamonds, sat in the centre; by the side of her the charming Stephanie, Graad Duchess of Baden, was remarked for her grace, and still more for her style of dress. Some German Princesses were sitting near the two reigning Princesses; and the Lords and Ladies of their Courts occupied the back of the box.

At this time Talleyrand appeared in a small box contrived for him upon a level with the parquet near the state, for an infirmity in his feet would not allow of his standing in the parquet. The Emperor and Kings stood up before the box conversing with this Minister who was sitting at his ease. Every body was assembled: he alone who had been the cause of bringing all these great men together, was not yet come, and he made them wait some time.

At last, another and louder roll was heard. All eyes were directed with impatient curiosity to the entrance door. At length the most incomprehensible man of the most inconceivable period appeared. Dressed as usual in the most simple manner, he made a slight inclination to the Sovereigns present who had been kept waiting for him so long, and sat himself down in the arm chair to the right of the Emperor of Russia. His squat and rather shapeless figure was a contrast to the stately mien of Alexander. The four Kings took their seats upon the chairs without arms, and the play began. But in vain did Talma display all his art; as for us, we could neither see nor attend to any thing else than the parquet before us. The gendarmes in the mean time, at the door of our box, did all they could to make up for our want of manners, by teaching us between the acts the etiquette to be observed in the presence of the master of the world. Put down that opera glass—the Emperor will not have it, cried one of them, poking himself forward over the heads of the ladies sitting behind us. Sit upright, do not stretch forth your neck so—the Emperor does not like it, ejaculated the other.

This was a great impertinence truly; but we followed the example of the Kings and Princes before us, and supported impatiently from the French what we could not help.

Immediately after the performance of the tragedy, which he had perhaps seen a hundred times, Napoleon put himself in an easy position in his arm chair, and fell into a profound sleep. It is well known, that at any hour of the day or night he could go to sleep whenever he chose: ocular witnesses assure us, that in the middle of a decisive battle he would purposely give himself up to sleep for an hour or two, in order to collect fresh strength, and that he would always awake at a stated hour. On the day of this representation at Erfurth he had fatigued himself in exercising the troops in the field for several hours together.

THE WORKING BEES AN EXAMPLE TO THE DRONES.

DUTCH PREACHING.

Divine Worship is held five times a-day in the Reformed Churches of Amsterdam; at 7, 10, 12, 2, and 5 o'clock. Besides this, says the Rev. Theodore Fliedner, in his collection-tour in Holland, there is a peculiar kind of service held in several of the large cities such as Rotterdam, the Hague, Leyden, called Poors-preachings, intended for the very poorest class of the people, who, from want of decent clothes, are ashamed to attend the ordinary services, and who cannot easily understand connected and systematic preaching. These are held in particular localities, in school-houses, small churches, &c. on Sunday, from two to three o'clock, or, in summer, from five to six in the evening.

'I attended such a poors-preaching at Leyden, and was deeply affected by it. The large hall of the Latin school was the place of meeting,—I came rather late. The preacher, (the young, faithful, and rejoicing Verwey,) was standing in the pulpit, engaged in the introductory prayer. To the very door, and on the steps, stood the poor, crowded together, with bent heads and listening ears, catching every word. I followed their example, and remained standing on the stair until prayer was ended, and then a death-like stillness permitted every word to be heard. I then urged my way forwards with more force through the crowd of heads that besieged the entrance, and took my stance amid the crowd in the fore part of the hall, holding down my three-crowned clerical hat, in order to escape observation, and that all might have their attention undisturbed. The hall was well suited to those who filled it. It was lofty and unadorned; the colours of the walls and furniture were faded; long ranges of benches and chairs stood on the back part up to the middle of the apartment, so that about two-thirds could sit while the remainder stood. In the back wall, there was a huge half-decayed fire-place, around and even within which there were men placed for want of room elsewhere. Even the narrow intervals between the benches and chairs were fully occupied. The teacher's chair, at the other end, served for the pulpit, old and plain, but raised a few steps. Those very steps were filled with people up to the very place where the preacher stood. Four grey headed men stood next him on both sides with ear-horns, to catch the words as they fell from his lips. In a circle around him, betwixt myself and the pulpit, I beheld a motley assemblage of men, women, and children, with threadbare coats, tattered waist-coats, patched aprons, and wooden shoes.

'The preacher read out a hymn with a stronger and fuller voice, as at the time they had no psalm and hymn books, and they sung with full hearts the word of thanksgiving and trust, [illegible] He then gave out as his text the conversion of the heathen centurion, Cornelius, in the Acts of the Apostles, chap. x. ver. 34—43; and having read the whole narrative, he gave, in his own way, the meaning and application of the whole. All are attention. He advances into his subject, pictures the great grace that was the portion of Cornelius, as the reward of his quiet domestic piety, and proposes him as an example for the fathers and mothers of families [illegible] why they are less importunate than this heathen was in prayer and entreaty for that grace which was daily offered to them; draws the curtains of their hearts, and they seem ashamed of the iniquity of their doings. With lively eloquence he points mourners to the inexhaustible fountain of consolation,—to the blood of Jesus Christ. He explains every thing from the text, reading, opening up, and applying it verse by verse. His full heart cannot cease pouring forth its consolations and admonitions: new weighty considerations rush into his mind; new, weighty circumstances in the condition of his hearers, rise before his spirit. He reasons, and powerfully reasons with them. Were his hearers wearied? O look now at the assemblage! How one, with head unmoved, gazes at the pulpit, as if he looked towards God's Zion, whence his salvation cometh! How earnestly these look at their Bibles, reading over and over again what the preacher has expounded! There sits a mother, her arms folded round the babe at her breast, but her eyes and ears are intently fixed on the messenger of God's word. In a corner sit some less manageable and stronger children,—you look at them; their carnal nature might well tempt them to leave the crowded room for the open air, but the spirit triumphs over the flesh. They are, as it were, rooted in their place by the word. Many are wearied with the long standing, but not with hearing. There the old mother who has been sitting, makes way for the old father, who has been standing,—the child gives his seat to the boy; and thus you see many, though strangers to each other, exchange seats for standing-room from mere brotherly kindness. Behind a long bench lies a woman, sunk down upon her knees, but intently looking and listening. Well may these aged knees have failed from the fatigue of long standing, but man sees with the outward eye; her still more lowly spirit harmonises with her body. Heavy lies the air above the crowded assemblage in the dampened room. The perspiration burst from my forehead, and my chest feels oppressed. From more than one fresh countenance the colour departs, but they still hold out. Others of weaker constitution, find they must draw a few breaths of fresh air out of doors, but soon return to their places, so as to lose as little as possible. An aged pair sat near me, the very picture of the most deplorable poverty. Their cheeks were wan and sunken,—grief had deeply furrowed their bleached foreheads: on these you might read the questions which, for years, they had daily put for themselves and their children,—What shall we eat? What shall we drink? Wherewithal shall we be clothed? Their bodies threaten to give way under the weary labours and scanty nourishment of the week, and the unsympathizing world will not refresh and reinvigorate them. They have hastened to the house to which a more compassionate friend had directed them, to revive their wearied souls, to raise their heads for awhile above the dust, and to transplant themselves, though but for a moment, into a land of peace, where the voice of the taskmaster is no more heard, and where they shall hunger and thirst no more. But how can they leave their young children? They do not leave them,—they have taken them with them to the house of God, as their dearest treasure, and fond

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

objects of their care; one little thing lies at its mother's breast, another is on her lap, a third stands between its father's knees, and thoughtfully holds his cap in his hands. The longer the preacher speaks, their straitened heart feels more enlarged. Their looks of distress clear away, like the clouds from the sky after a heavy storm. They behold here, aye, that even in answer to a gentile's prayers, the most precious of all treasures, the saving grace of God in Christ was imparted, and that God is not a respecter of persons; they listen as the preacher with holy warmth proclaims:—'God so loved the world that he gaved his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life:' that all kinds of people who feared him are accepted with him in the beloved. Even they, poor common people, even they should have eternal life, if so they believed. Even for this world, they should receive all that was needful. Why did they doubt, people of little faith? He who hath given for us the highest proof of love, the most precious gift that heaven or earth could furnish, even his only begotten Son, how shall he not with him give us all things? As a mother forgets not her little one, so the Lord will not forget thee. And though the mother forget her little one, yet will I not forget thee, saith the Lord that hath mercy on thee. At these words, the mother who had forgotten the child at her breast gives it a silent look, and presses it to her bosom. 'Behold the flowers of the field, O ye of little faith;' they clothe themselves not, and yet are they clothed; they provide not for themselves, yet are they provided for. Behold the ravens at the brook cry to me for food and I refuse them not. Are not ye then much more than they? Is not the life more than meat, and the body than raiment? Is not the body more than clothing, and the soul more than the body? Behold the message of salvation is declared to you, 'I have compassion on your souls, shall I not then compassionate your bodies also?' So speaks the compassionate God, who is faithful, and will you not believe, because you are poor, because you are in a state of suffering? Oh it is good for you that you are poor, that you are lowly, that you suffer! Behold, since the world neglects you, lift up your eyes unto me. Since all your running and toiling brings you not this world's happiness, pray for a blessing from me. The horse that is glutted with oats and clover, is not the most indefatigable in labour, nor the strongest at pulling, nor the fleetest in running. So must every one among men, that would obtain an unfading crown, learn to endure and to struggle. Therefore now, my friends, ever pressing forwards be your foot, and ever upwards be your eye! There, there gleams the prize!

'And is then the glory above not worth the toil and the sufferings of this world? Yonder shines over against us the heavenly Jerusalem, the city of the living God! There our heart shall no more sigh; there our feet no more shall weary. Yonder is the peace of God provided for those who labour here below according to his will. There, there shall be no more suffering, no more crying, no more sorrow. There, there shall be reaped in joy what here is sown in tears. Without sowing there can be no reaping. Therefore, dear people, sow cheerfully! Soon will the seed-time be past, and you shall know the rejoicing of the reaper, the harvest-song, yea, the hallelujahs of the reaper and of the harvest-bands, who there surround the throne of God and of the Lamb with praises day and night, and who stretch forth their hands towards you that they may receive you into their circle.

'The preacher concludes. He desires for all this peace of God, this dawn of the eternal day, and pronounces 'Amen.' And all hearts respond —Amen!

'Happy, thought I, as I returned, happy he who thus preaches the Gospel to the poor. Blessed, also, are the poor in spirit, for they shall be rich.

'As I went out I remarked that many, almost the greater number, put some money into the poor's-box which was fastened to the wall. They did not reckon themselves so poor, as that they might not give something from their poverty when receiving such riches. I returned home much moved.'

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

(BY VIVIAN.)

SUN-RISE AT THE CAPE,—LIGHT, AND SOME OF ITS PROPERTIES.

We have often at this season of the year, thought it late ere morning dawned upon our Cape world. Ere the shutters of heaven were unbarred, and light dawned upon us, and the sun rejoiced to run "the business of the day." But what reason have we to complain? nay, how grateful should we be for our cup of privileges!—"good measure, pressed down, and running over." How should we like to exchange places with the native of the polar circles? The tract of land lying within the boundaries of these circles, during *six months* in the year, feels no day to visit it. The shivering inhabitant of these desolate regions, when he has sighed his last farewell to the sun, and seen the lingering twilight fade from his horizon, descends forlorn and cheerless to crouch over the fire, and to kindle his oil to pour a little artificial day over his gloomy cavern, concealed from the horrors of winter beneath the surface of the earth. But how glorious are our Cape mornings of sun-rising! Reader, did you ever look out to watch the sublime spectacle? We put the question, because the other day we happened to fall in with a group, consisting of six individuals, who all candidly acknowledged that they had never witnessed a sun-rise. To those commanding a view of Table Bay, how magnificent the burst of the sun's morning splendour upon this arm of the sea! Here the contemplative at once enter into the spirit of calm magnificence, religious veneration, and devotional composure. And then, at these seasons, is it not reasonable to ask—by what inconceivable magic is this ancient luminary which we saw a few hours before retiring to rest weary, and glowing in the evening, the same youthful orb that awakes bathed in dew, and rises from behind the grey curtains of the dawn? But there is another grand agent of the Creator, antecedent to that of the sun. We allude to LIGHT, and it is to a few of the qualities of this atmospheric emanation we invite the reader's attention.

Light exercises a very great influence on living animal matter, as well as upon vegetable. The action of the rays of light upon colour is sufficiently well known. The parts exposed to them are always of a deeper tint than those which are covered, and the union of the two is distinct; they never shade into each other. It is the same with vegetables as with animals. A flower will spring from a plant kept in total darkness, but it is perfectly white; whilst, again, the flowers of the tropics are all distinguished by the extreme brilliancy and depth of their colours. By the continued exposure to the light, not only does the skin get darker, but it likewise gets thicker, coarser, and harder. It would seem as if, in warm climates, nature, in some measure, balanced the heat with the light; and that the latter was the preventive of the too great perspiration and relaxation produced by the former. The light increases likewise the solidity and tension of the muscular fibre, and it is owing to these circumstances that one sweats more in the shade than under the direct rays of the sun, and that the labourer is, comparatively with the idler, as hardy in the tropics as in the temperate regions. In no way is the influence of light better distinguished from that of heat, than by what we find in warm countries, where we perceive that the man who lives in the shade, covered with garments, is of a soft and flaccid habit of body, inactive and lazy; whilst he again who is obliged to labour almost entirely unclothed, in the face of the burning sun, is strong, active, and vigorous. Witness the Chinese Mandarin, and the Arab. When light, especially accompanied with heat, is very intense, it excites inflammation under the form of erysipelas; and when it strikes suddenly it occasions inflammation of the brain, and sometimes death, as in the well known instance of the *coup de soleil*. It is frequently, likewise, the exciting cause of mania. Esquirol* states, that the greatest number of cases of madness occur in summer, fewer in spring, fewer still in autumn, and the least in winter. Deformity, and more especially that arising from rickets in young children, has been ascribed to the deficiency of light. It is well known to medical men that scrofula, in all its varieties, is most frequently met with amongst the inhabitants of narrow streets and lanes.

But light is not solely a stimulant or a tonic in consequence of its rays falling on the body. It acts likewise as such by its application to the eye. This organ is exercised by it, in the same way as the limbs are exercised by walking, and the benefit of this exercise is distributed over the whole body. A person gets as much fatigued, and perhaps more painfully wearied, by too long exercise of light, as by too long walking. The eye too of a person accustomed to examine minute objects becomes stronger from this constant exercise, as the right arm of the blacksmith becomes much more vigorous by the constant use of the sledge hammer. In the cell which, to the man who has just quitted the blaze of heaven's day, appears filled with impenetrable darkness, the wretched and miserable prisoner can distinguish every object, and can watch the labours of the spider, or follow, with his eye, the track of the loathsome worm.

After every operation on the eye, or in every case of acute disease of that organ, the light is carefully excluded. And this, it may be said, is right, because the light affects the organ directly. But have we not the darkened chamber, in every acute disease? And what is the reason of this? It is because the light affecting the eye becomes, indirectly, as much a stimulant, and consequently highly injurious, as heat applied to the body, or brandy taken into the stomach.†

A Correspondent inquires — 'How does it happen at the Cape that Religion, Law, and Physic is without a single Paper, Journal, or Pamphlet devoted to any of these learned departments?'

SIGN PAINTERS, &c.

Sign Painters, Caricaturists, and Quizzers, are known to be the greatest rogues imaginable. Many of the former are well known to indulge in the humourous and the ridiculous. Some from sheer amusement, others from ignorance. We all know well enough the corruption of the *Belle Sauvage* Inn, London, to *Bell and Savage*, and of the *Bulougne Mouth* to *Bull and Mouth*.

The Inn at Rondebosch bears the sign of three drinking cups, it is called the *Three Cups Inn*. This is an English sign-painter's interpretation of *De Drie Koppen*. (*Three heads* being for a long time attached to the spot on a pole as a warning to murderers.) The other day a vessel was sold at the Commercial Exchange, by Mr. J. M. Maynard. Her name was the *Siroc*, but the painter re-christened it, and wrote on her *Shylock*. Messrs. Sinclair, not long since, ordered their new vessel to be called, very properly, after their own good name, *The Sinclair*. The painter hit upon an abbreviation, and changed the whole into *St. Clair*. But De J——, in the Cape olden time, was a great wag at sign-painting. A man and his vrouw, who had set up a house of entertainment in Cape Town, sent for the painter to adjust the terms of a *Bear* for a sign-board, to be affixed over the door. "What sort of a Bear do you want?" inquired de J——, "a *loose* Bear, or a *fastened* Bear?" "What's the difference?" asked Mynheer. "Why, rejoined de J——, "for a loose Bear I charge Rds. 50; for a fastened Bear Rds. 100." "Nonsense," observed the wife, "Rds. 50 is quite enough, what signifies the bit of chain and pole." The loose Bear is accordingly represented, and placed in front of the house. Three weeks scarcely transpire, when after a night of heavy rain, a neighbour runs into the house of mine Host, and exclaims—"Why, your Bear is off." "Off, off! what do you mean?" replies the publican. On examination it turns out that the rain had banished the Bear from the board. The painter is sent for, and in defence pleads that the party would not allow of a *fastened* Bear, but chose rather a *loose* one. The truth is, that the latter was simply done in chalk and water, and the former would have been *fastened* by *oil colour*.

---

the *white-washed* houses. And there stand the Commercial Exchange and the Public Library, the very focus of the evil—always renewing the glare by their eternal *white-washing*. Why not change the colour after the admirable manner of Deane & Johnson's premises over the way, and Dr. Murray's, near at hand? Not, by the bye, as it regards the architectural masonry of the latter, but simply as it relates to colour.

ADVERTISEMENT EXTRAORDINARY.

FOR BEAUTIFYING THE SKIN AND COMPLEXION.

Rowland's Kalydor,

Patronised by her Majesty, the Royal Family, the Prince and Princess Esterhazy, and the Nobility.

WARRANTED perfectly innocent, yet possessing properties of surprising energy, it eradicates all CUTANEOUS ERUPTIONS, PIMPLES, SPOTS, REDNESS, &c. gradually producing a delicate, clear and soft Skin: transforms even the most SALLOW COMPLEXION into RADIANT WHITENESS, realizing delicate

White NECK, HANDS, and ARMS,
and imparting a BEAUTIFUL JUVENILE BLOOM to the COMPLEXION.

Successfully render HARSH and ROUGH SKIN, beautifully soft, smooth and even; imparts to the FACE, NECK, and ARMS, a healthy and juvenile Bloom; and to the Skin a pleasing COOLNESS, truly comfortable and refreshing. It is equally indispensable at the Nursery as at the Toilet, perfectly innoxious, it is recommended by the first Physicians to the most delicate Lady or Infant with the assurance of safety and efficacy; possessing softening and healing properties, and gives, in cases of incidental inflammation, immediate relief.

GENTLEMEN whose Faces are tender after SHAVING, will find it excellent beyond precedent in ameliorating and allaying that most unpleasant sensation, the irritability of the skin.

Sold in Half Pints at 4s. 6d. each, and Pints at 8s. 6d. each.

The intelligence from our Agents at the Cape is of the most gratifying description, as will be seen in the sequel. The wonderful efficacy of our delicious liquid is such, that we find our friends in the country districts of South Africa, swallow it "like winking," and it has proved singularly useful, not only as an external wash, but as a stomachic of the most essential character. Ever grateful for the extensive patronage bestowed on our *sovereign* remedy, we feel it our duty to recommend it to all people and tongues throughout the globe. The following are selected out of several millions of cases furnished by our various Agents, to prove the never-to-be-enough-wondered-at wonderful efficacy of Rowland's Kalydor.

Long Kloof, 31st Sept. 1834.

LIEVE MYNHEER,

Do me the pleasure to send 20 dozen of your Calydor. The last did me a deal of good. Always squeamish in my stomach, and craving brandy, I took a glass of your composition, which produced a delicious sleep for 24 hours. The very thing I wanted. Next time shall take a double quantity, supposing that will double the effects. If you have two sorts, send me the strongest.

Yours truly,
A. FERRRARRRA.

Stellenbosch, 30th Feb. 1835.

DEAR SIR,

As in duty bound, I must declare my thankfulness on behalf of my daughter for the use of your delightful Kalydor. She is a young lady of 15 years, and her marriage was put off 6 months, owing to two large pimples on her cheek as big as Bokkeveld cherries. I have nothing to say against our regular doctors here, who are very clever gentlemen, yet it so happened that the pimples baffled their skill. Six bottles of Kalydor, however, reduced the unpleasant appearances, and has left no *mark* behind, except the *mark* of gratitude which beams in my daughter's eye.

Yours respectfully,
X. Y. Z.

Stellenbosch, 31st Feb. 1835.

SIR,

I hasten to inform you that a poor man was blown high-sky-high, owing to an explosion of our 500-horse power steam-engine, used by the *Spirit Association*. His affectionate wife, who happened to be passing at the time, carefully picked up his poor fragments, and placed them together; and by administering a dose of Mr. Rowland's Kalydor, happening to have no other specific by her, he was able to walk home and eat a hearty dinner of mutton and cabbage.

If any person should doubt the truth of the above statement, I beg you will refer them to me, when I will satisfy all inquiries. *I am easily found out,—as every body knows me.*

Your obedient servant,
GILES GAMMON.

MOST RESPECTED SIR,

Being clearly convinced, from a proper use of my reasoning faculties, that it is perfectly consistent with probability and good sense, to believe, that one medicine made of I don't know what, by I don't know who, is certain to cure every disorder, and is equally efficacious in all inside and outside complaints; and, being moreover equally convinced, that it is quite unreasonable to place any sort of trust or dependence on the prescriptions of men of scientific education, who have *merely* devoted their whole lives to the medical profession; and further, being struck with the astounding fact and exceeding likelihood, that an universal panacea could only be reserved for those who are quite innocent of all medical knowledge, and whose perfect disinterestedness is manifested by their being contented with the trifling remuneration derived from the amiable credulity of the public,—I say, Sir, for all these reasons, I have become a zealous advocate of the Kalydor.

As your Agent, I am doing a deal of business here, and as I argue that if six bottles do a certain quantity of good, it follows as a natural consequence that 60 times 6 *must* do 60 times as much good. Please, therefore, to send 6 wagon loads as soon as possible.

Yours, ever to command,
JASPER FLEECE'EM.

N. B. I hand you the following interesting case:

To the Haygent for the Callydore.

ONERR'T SUR,

This hear kums 2 akwaint you that havein lost my happy-tight, i tuk to takein havin no glob Bur saults in houce, youre stuf has maid by Doctor Rowland. I begun with takein fife tee cups full, witch had the blessed defect of turnin me inside-out, and I felt in a wery pekooliar citywation witch discurraged me 2 parsewere and I took 7 bottels full, by witch I was turned outside in, by witch my happytight was kwite discuvvered witch was a grate blessin for my whife and 12 smal childern, with grate happytights, an I am now Abel to work and yarn my 7 dollers a weak.

So no more hat preasant from your
Umbel sarvant,
GODFREY GUDGEON.

QUESTION AND ANSWER,

On witnessing a huge pair of Spittoons in a Cape Town Church.

Q. Why is man very nearly allied to a toad?
A. Because he is a *spitting* animal.

No. 6. Vol. V.] CAPE TOWN: JUNE, 1835. PRICE, { 20 *Shillings* / *per Annum.*

THE GRAHAM's TOWN PRESS.

NOTICE OF

"Introductory Remarks to a Narrative of the irruption of the Kafir Hordes into the Eastern Province of the Cape of Good Hope, A.D. 1834--35." Graham's Town: Printed by Meurant and Godlonton. 1835.

Ex pede Hercules! This Introduction, which we owe in its present form to the 'momentous crisis' is, no doubt, a fair specimen of the "Narrative" with which we are threatened, and we may consequently venture to conjecture, from the glance we have given it, that our Graham's Town Sallust may, peradventure, be read and admired when Hume, and Gibbon, and Robertson are forgotten! but very possibly not much sooner! the subject is worthy of the masterly handling it has received, and the style, overflowing with cockneyisms, is worthy of the subject matter: let Graham's Town rejoice, and the Great Fish River shout for joy, and let the Neutral Territory and Fort Wiltshire clap their hands, at their unparalleled good fortune in being so stoutly championized, at their utmost need, when so grievously bested by Kafirs, as ruthless, as innumerable, and encouraged by Pringle's poetry and Fairbairn's prose; by Dr. Philip's sermons in Cape Town, and Mr. Fowell Buxton's speeches in the Reformed Parliament.

But the Author has disarmed criticism by his Introduction to the Introduction, which he calls an Advertisement; this, though not quite equal to Sam. Johnson's preface to his Dictionary, is the next best to it, no doubt, in Graham's Town estimation! we confess we differ from that opinion, but let it pass; he says—

"The seeker after truth does not hunt for blemishes, but for facts. The air-bubble floating down the stream may amuse the listless vacant mind of the idler, but the man of worth must have his time occupied by employment more congenial and useful."

This is a marvellous truism, indeed! for since truth is not, we believe, generally accounted a blemish, we shall suppose that those who seek the former, do not hunt for the latter; at least, not upon the same scent! But let it be granted that what the Author considers his truth, may adorn the forthcoming Narrative, without any admixture whatever of, what he considers, party statement, interested speculation, and local prejudice; without any ingenious twisting of what has been said of one class and one period, to apply to another class and another period; still, our search for truth may discover sundry blemishes among his facts, precisely to the extent that our notions of what is truth, and what are blemishes, may be totally opposite to the cherished opinions of the Graham's Town Committee of Public Safety! Without, however, being very outrageous at blemish or 'bubble hunting,' for in good sooth the work is not worth the perusal, we shall take the trouble to fix the public attention to pages 43—46, as a notable specimen of the extent to which keeping evil company may corrupt good manners! We can believe it very possible that even our Introductionist, before his evil destiny consigned him to the life of a squatter; before he took to squatting, and learned the moralities and habits of a back-wood's-man! would have spurned the prophet who should have told him that Time, "whose gentle progress makes a calf an ox," would have matured him into such a commentator as he has shown himself, on such a legal opinion as Mr. Oliphant's. How distorted must the imagination have become, ere truth could thus appear a blemish, and the blot on human nature be exhibited for truth!

We shall quote the detestable paragraph at length, for the benefit of the British public, and in order that those who do not understand what is meant in this colony by local knowledge! may have, from the parties themselves, their own edition of their way of thinking; whence a shrewd guess may be made of their probable way of acting, whenever strongly driven by the devil, or too tenderly invited by their own inclinations.

The British public will be at no loss to decide betwixt the Graham's Town Introductionist and Mr. Oliphant, and will think that the latter may justly pride himself on the very points selected for his condemnation: "the fool hath said in his heart there is no God!" says Scripture, and none but a fool would say so; it is abstract folly, and folly alone, that makes truth a lie, and a lie, truth! in like manner, when twenty-one lines of excellent sound sense are selected, for three pages of shallow witlingism, and bitter vituperation, one may safely adjudge the epithet of folly to the trashy compound.

"On recurring to this period, it is clearly apparent that General Bourke arrived in the colony with special instructions to adopt in his frontier policy the soothing system; to treat the natives with the utmost mildness, and to prohibit most scrupulously every thing like severity towards them, or undue interference with their affairs on the part of the colonists. A powerful impression had evidently been made on the government at home that hitherto the colonists had presented an attitude far too warlike, and that the Kafirs were an ill-used and calumniated people. Impressed with these feelings, and possessing himself a truly benevolent disposition, the Lieut.-Governor entered upon his duty by using every means to conciliate and acquire the good-will of the frontier chiefs. Presents were made to them, and permission granted to their people to pass with produce for sale to Graham's Town and Somerset. But notwithstanding all these measures the frontier inhabitants were still plundered as before, and murder and devastation still marked the footsteps of these incorrigible marauders. His Excellency himself visited the frontier,—examined on the spot into every allegation for and against the Kafirs, and endeavoured by all means in his power to preserve the inhabitants from pillage, and to repress any feeling of enmity which might lurk in their minds against these active despoilers *

* Notwithstanding the strenuous endeavours of Major General Bourke to live at peace with the Kafirs, and his dislike to Commandos, yet he was ultimately compelled to admit their

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

"Unfortunately for the colonists the Lieutenant-Governor was totally ignorant of the real character of the Kafir, and consequently all his measures failed to answer the purposes for which they were intended. Major Dundas—then Landdrost of Albany—who possessed great experience, as well as extensive local knowledge, and who was a man of shrewd observation, talent, and decision, judged more accurately, and did not fail to apprise the government that the encrease of depredations might in part be attributed to the injudicious mode of distributing presents to the chiefs,—who were thereby led to incite their people to commit theft, in order that they might claim merit for returning part of the stolen property, and receive a reward for their apparent honesty. Still the system was adhered to; and notwithstanding the Kafirs perpetrated at this period two cruel murders—one at no greater distance than six miles from Graham's Town, and likewise carried off a very large amount in cattle and horses—yet the government were content to have recourse to measures which went directly to encourage rather than suppress the existing disorders.

"To such an absurd excess was the system of forbearance carried at this period, that it became a matter of doubt whether the owner of property would be legally justified in recovering it by force from the hands of the robber. Preposterous as this may appear, yet a question to this effect was actually proposed by government to the Attorney General of the colony, and the reply of that officer will shew the length to which principles that are in themselves humane and benevolent may be carried when persons lose sight of the maxims of common sense for refined and new-fangled utopian notions. To those who know the Kafir, and his methods of conducting his plundering expedition, the reply in question will appear most extravagantly ridiculous. The following extract will sufficiently prove this:*—The learned attorney commences with becoming gravity by premising that 'no general rule can be laid down applicable to all cases;' but that 'when any theft or other serious crime has been committed by these savages, or when they are seen with arms in any considerable numbers, they may be pursued with hue and cry† The best way,' he continues, 'of proceeding in such cases is to give immediate information to the nearest Field-cornet, whose duty it is then to raise all the neighbouring inhabitants, or at least such a number of them as, from the information given to him, he may deem sufficient for the purpose of apprehending them without bloodshed

"'Should the parties succeed in overtaking the marauders, the person commanding the party should adopt such measures and give such directions as are best calculated for their apprehension without loss of life on either side. In no case should fire-arms or other deadly weapons be used, until all other means have proved abortive.

"'Should the life of a Kafir be lost in the affray, it will be the duty of the Clerk of the Peace to institute a preparatory examination; and the duty of the Resident Magistrate to commit or discharge, according as upon the evidence adduced, it shall appear to him that unnecessary or premature violence was used, or the contrary.

"'With submission,' adds the learned gentleman, 'to those who may be better informed on the subject, I do not see there can be much danger or difficulty in apprehending these people when in small numbers, as they usually are, were that patience and forbearance used, which surely ought always to be exercised when the life of a fellow creature is at stake.'

"There is scarcely a sentence in this document which does not betray utter ignorance of the subject on which the writer gives his opinion; the last paragraph borders on the ridiculous. How, indeed, should the Attorney-General, in his office at Cape Town, see much danger or difficulty in apprehending bands of active expert robbers, 600 miles distant? How should he know that they generally choose the hour of darkness to plunder their victims? How should he know that before morning light they are far beyond the colonial boundary? how should he be acquainted with the localities of the country, or with the scattered state of the population? All these queries will admit of an easy solution; the Attorney-General knew nothing of the subject on which he wrote, and might, therefore, well have spared that unnecessary caution and that affectation of humanity with which he closes his subject."—pp. 43—46.

The tissue of trash of which this would-be witty commentary on Mr. Oliphant's legal opinion is composed, is in admirable contrast to the opinion itself, which is exceedingly well expressed, and is as correct in its theory, as humane in its tendency; and the pitiful sneer which the Introductionist presumes to indulge in, at one who is as much his superior in capabilities, as he is in every other respect, indicates a weak head, a worse heart, and a still worse education. As for the latter, it is true, that though a whole forest of birch had been expended on the nether end of this Introductionist, it would not have "whipped the offending devil out of him;" for this is worse than folly, and is engrained, but it might have scourged a better style into him, which would have been an advantage to the good cause, by dressing his pamphlet in a more inviting garb. The light of truth has beamed, thank God, into the dark corners of the earth, and no sophistry now, can veil a down right error: it therefore only requires to be dragged prominently forward, either by a bold uncompromising writer, like Fairbairn, or involuntarily betrayed by some weak-headed, ill-judging friend, like our Introductionist, to receive the due reward of its merits.

And what is the amount of Mr. Oliphant's opinion, which is so vehemently reprobated by this Draco of Graham's Town? simply, that being placed here to administer British Law, within the British Frontier, he conceives it incumbent upon him to recommend an adherence to the spirit and forms of that legislation, of which he is the local official: his duties are defined, his powers circumscribed, and his means limited: it is not for him to proclaim military law; to "cry havoc, and let slip the dogs of war;" it is not for him to proclaim Albany a new Kentucky, and the Albanese a race of Back-wood's-men and Yankee squatters, with the blunderbuss and long rifle for their title-deeds of territorial possession; and the good old squatters' law for their royal road to prosperity—

> That those may take who have the power,
> And those may keep who can.

Mr. Oliphant cannot twist Acts of Parliament to suit the wish or the interests of the Introductionist's admirers, or the party of which he is the organ; and it is to his honor, that when years of active administration, of such peculiar duties, have passed over his head, that the only subject which interested men can produce for railing, shall be hailed by every good and honest man, as a remarkable proof of his intellectual and moral fitness for his situation.

The subject, divested of extraneous matter, resolves itself into this:—The Border law must be administered either by the Supreme Court, and its legal officer, Mr. Oliphant, as British Law; or by the Commander in Chief, and Courts Martial by him appointed, as Military Law; or the whole be left to Providence, and Back-wood's-manism: for the first, Mr. Oliphant is responsible, and has shown himself perfectly qualified for his duties; with the second he has nothing to do; and the less the colony ventures upon the third, with the unknown myriads of the native races, by no means receding from the frontier, the better. There is no national reward for aggression in South Africa; no encouragement to advance the frontier into the wilderness, and increase the burthen of the state, by spreading forth this comparatively poor and ill-peopled colony. It is most valuable as a port of refreshment for Indian shipping, and contains certain capabilities, to a certain extent, but they are too dearly purchased, if they are to be enjoyed only under the protection of a barrier of bayonets. No improvement, which reason can suggest as probable, is to be looked for, to repay the British government, for the expense of such a garrison, as would be indispensably necessary, for the sufficient military protection of the eastern frontier, on a line of upwards of three hundred miles of desert; and, therefore, we have no resource, but a judicious and mild system of management towards the Border Chiefs, supporting their authority in the controul of their own people,

necessity. Accordingly on the 7th Sept 1827, the Secretary to Government writes officially—"I am directed by the Lieut. Governor to desire you will make known to the Field-Commandants and Field-Cornets, and inhabitants of the district of Albany called out upon the late Commandos, the high sense which he entertains of their loyalty and spirit, and his entire approbation of their orderly and regular behaviour whilst under command.

* This document is dated June 20, 1828.

† There is nothing on record quite analagous to this, except it be the time out of mind plan of '*belling* the cat,' or bird-catching by 'salt on the tail.'

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and giving them an object for personal exertion, and personal responsibility, for the conduct of their people; or, the utter ruin and abandonment of the Eastern Province.

The Introductionist must either be a most disingenuous historian of what is passing on the frontier, or he must be ignorant to a degree that is most discreditable to one who pretends to be an historian, to have bolstered up such a story as he makes at pages 82—83:

"One instance of the plausible way in which such injurious statements were got up at this time may serve to give a sufficient illustration of this remark. We refer the reader to Mr. Pringle's '*African Sketches*,' where, at page 372, he will find the following narration:—'In November, 1829, a commando went out against a horde of Bushmen near the Sak River, who were reported to have been guilty of *some* depredations. The party did not, however, find the horde they were in search of, but in returning they came upon another horde who were at that time living in peace with the colonists, and who were not accused or suspected of having been guilty of any offence. This kraal they thought fit to surprise, and shot seven of the unsuspecting and unresisting people in cold blood. As the party returned from this doughty exploit, a Bushwoman was observed lying in the path, wrapped up in her caross, apparently asleep. The commander, without uttering a word or asking a question, levelled his musket and fired. The caross heaved up, and an aged female, in the agonies of death, rolled out of it, and the party rode on without considering the matter worthy even of a passing remark!' Now the facts of this horrid murder have been substantiated upon the oaths of several of the persons present; and the official documents, I am assured upon authority which it is impossible for me to doubt, are now, or at least were very lately, in the possession of Mr. Oliphant, the Attorney General at Cape Town; but for reasons of which I am ignorant, no punishment whatever has been inflicted upon the persons implicated in these transactions.

"This case has been selected because it details one of the greatest atrocities recorded against the colonists—even by Mr. Pringle; and because, since its publication, it has attracted considerable notice, and Mr. Oliphant has been called on, through the public papers at Cape Town, to declare whether the allegations are well founded or not,—but to which that gentleman has not thought proper to make the required reply. The scene of this imputed atrocity is too distant, (about 400 miles) for the inhabitants in this part of the frontier to be acquainted with the circumstances of the case; but it has been brought forward to shew the injustice done to the colonists by the publication of such *ex parte* statements, directly tending to render infamous in the eyes of the world the people who could perpetrate them, and the government that could permit them to pass without bringing the criminals to condign punishment. Had Mr. Pringle been a faithful historian, he would in justice have shewn both sides of the question, in which case he would not have been at any loss in finding that the colonists on the northern boundary were goaded to desperation by the horrible cruelties and plunders of the Bushmen in that neighbourhood."—pp. 82—83.

The fact is, that Mr. Oliphant being called upon to explain his non-interference in the matter of the charge against the Commando in Nov. 1829, he, not being much disposed to bandy compliments with the Balaams of the *Zuid-Afrikaan*, distinctly replied in the public paper, that any one wishing information, and applying for it, at his office, in office hours, might have it. Had any one applied, they would have been told that the occurrence took place fifty miles beyond the jurisdiction of the Court; the Attorney-General, therefore, could not interfere, further than to report the knowledge which he had of the occurrence to government.

Sir B. D'Urban is introduced as supporting by his "altered tone" the view which our Introductionist has taken of the Colonial policy: let the sapient chronicler of the Great Fish Riverland, take all the benefit he can from the annexation of the new Province to the Colony; greatly indeed shall we be surprized, if those sanguine expectations which he and his party have formed of grants in *Adelaideshire*, be not woefully disappointed. We esteem the character of the good Sir B. D'Urban almost to veneration, and quote the following to show, that his measures, to the present date, have been lauded and exulted in, by those, who will, we doubt not, be as virulent in condemning, as they are now outrageous in applauding, when they find that like Gideon's fleece in the second miracle, they only are unbene fitted by the dewy shower of the good Governor's benevolence, which we firmly believe is not forgetful of the just claims of the natives.

"We do not denounce men, but measures and principles; let the friends of those to whom we have adverted take credit for all those talents and virtues which they claim on their behalf, and the case is not altered one jot or tittle. It has been well said, that names may give a sanction to opinions, but that the true merits of a question are not to be thus determined, nor truth confounded and driven from the field by the 'whistling of a name' Here, then, we take our stand; we have brought forward our charge of misrepresentation openly and fairly; and we have supported it by such proof as will, we are assured, commend itself to the understanding of every impartial, candid, and honest mind.

"Nothing, however, can shew more clearly the decidedly false impressions under which the best disposed persons might labour, than the altered tone of our present Governor, occasioned by a few months residence on the frontier, and after having acquired a thorough knowledge of the duplicity of the Kafir character, by personal experience and indubitable proof.

"Sir Benjamin D'Urban requires no panegyrick from us, and we shall offer none. His character is fixed upon too solid a basis to require support, or to fear the shocks of those who may attack it; whilst his motives in reference to *his* opinions of the natives, must indeed be far beyond the reach of suspicion itself. When, therefore, we find His Excellency supporting by a public act the position we have taken in the foregoing pages—and which, be it remembered, had emanated from the press before the publication of the official documents referred to—we may surely without the charge of presumption, take credit for having fully made out our case, and *proved* the injurious misrepresentations, which have been so industriously circulated in the mother country with regard to this colony."—pp. 119—120.

We have done with this exquisite Introduction; nor can we venture to hope that the forthcoming Narrative will be worthy of even this slight consideration. We should not even have noticed this specimen of its qualities, had we not regarded it our duty, as Journalists, to record our opinion, that, however unpalatable the Attorney-General's notions of equity and humanity may be to the sapient would-be legislators of the eastern frontier, the very passage which they have selected for their puny reprobation, is honorable to his character and feelings, and indicates a mind better adapted for the functions of colonial administration, than most of those which, in our belief, this misruled colony has been hitherto favored with in its high places; and we sincerely hope that the spirit he has hitherto manifested, and the regard for the subjects' rights which he has always exhibited, on every occasion which has offered for its display, may continue to benefit this colony, and deserve the applause of the good and right-minded of the British public in every part of the British dominions.

The world is too wise now, for the Club Law of the old frontier policy to be tolerated when it can be prevented, or to be sanctioned wherever it can be put down by a wholesome legal provision; and we doubt not, but that the next accounts from England will show us that the Reformed Parliament has taken a very opposite view of our frontier policy, past, present, and future, than that which would have been congenial to the tastes of our Introductionist; but he has not written in vain, he has shown what the measures are which they would recommend, by his unqualified condemnation of what is humane and equitable; and the consummation he would ambitionate, is to be imagined from the policy which he would approve: thus his work will, probably, serve as a beacon, to show the rocks and quicksands which Mr. Oliphant, and such men as he is, would conscientiously, and most strenuously, labour to avoid.

One point requires particularly to be cleared up for the benefit of those who will not take the trouble to think, or who have not the means of inquiry; let it not be supposed that the errors, the follies, the passions, or the vices of the borderers on the extreme limits of the colony, are, or have been at any time, attributed to the inland residents, the commercial interests of the towns,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

or the shipping interests of the coast; surely these parties are not to suppose themselves implicated in the condemnation, which those who advocate mildness to the natives, have cast on those alone, who have been in collision with the frontier tribes, and by whose ill-judged policy it has been declared that a very large proportion of these lamentable occurrences have been occasioned. Let those who are blamed, defend themselves, and enjoy the advantages they have a claim to in the argument, from the painful peculiarities of their situation, and the infirmities of temper incidental to our natures. There has nothing occurred on the colonial borders which is in any respect worse than what was the every-day history of the English and Scottish borders three centuries ago, and it is truly grievous that the more enlightened class of society, who are so deeply interested in the suppression of these irregularities, should allow their temper to be inflamed into partizanship, and their zeal to be excited against their best friends.

Let us conclude: we regret that the incapacity of this Introductionist to hash up a readable Narrative, will, in all probability, deprive us of the vast assistance which a naked display of the mode of thinking and reasoning that can exist in South Africa, would be calculated to afford us; it would enlighten the British public on a subject which has not hitherto been quite so clearly betrayed by the confession of an accomplice, as seem promised to us in this forthcoming Narrative. It is ridiculous to say that this Introduction of 120 pages, has been "hurriedly written," &c. a single evening, enlivened by half-a-dozen cheroots, and two tumblers of gin and water! would suffice to re-peruse it for revision and correction; and six days would afford abundant leisure to re-write the whole, a period at the author's disposal, since it must have required double that at Graham's Town to set up the press; and consequently, however hurried the Public Safety Committee-man may have been betwixt his meals, and his drills, and the overwhelming solicitudes of the press, and the public safety, and inquiries respecting grants of land in the neutral territory! still he might have re-composed the pamphlet, had he not considered his Introduction a *chef d'œuvre*, and his maiden blush apology a flourish of trumpets. The fact is, that such excuses are generally as shallow as the wits that advance them, and we are, seriously speaking, much concerned to think that we cannot expect any thing better from the Narrative, than what we have met in the Introduction.

TRIUMPHS OF HUMANITY IN THE WEST INDIES.

We especially call the attention of our readers to the following copy of an official document, under the head Papers from *Demerara*, in the *Times* of March last.

Let all Magistrates of this colony, and more especially the Individuals sent out from England by the Philanthropy of her Sons, as Special Magistrates under the new *Act for the Abolition of Slavery*, peruse it with that attention which the subject demands. And if, on reflection, it shall suggest to any one of the Magistrates* that it is contrary to the spirit of the Act—to Humanity, to Christianity, to all the finer feelings of our nature, as "man born of woman," to *confine* females in a prison shackled with *irons*, and exhibit other *females* in the stocks by the side of the high road on the bare ground, with a burning sun over-head, —then this appeal will not have been made in vain.

"His Excellency Sir James Carmichael Smyth, having received and carefully examined the reports from the twelve judicial districts for the month of December, has directed that the public should be informed that their contents are *highly gratifying and satisfactory*, showing not only the prevalence of perfect tranquillity, but the *cheerfulness, subordination, industry*, and general good conduct of the labouring population throughout the whole of this province. His Excellency, in desiring that his congratulations may be offered to all those interested in the welfare of this colony, not only at the present state of their affairs, but at their future prospects, has thought proper that their attention should be particularly directed to the fact, that not *one single police station has* been established, nor *one single police sergeant* or policeman has as yet been engaged for the judicial districts. The ordinance for the government of the apprenticed labourers, directed the formation of twelve police stations, at each of which one sergeant and ten policemen were to be quartered. The place of the latter has been supplied by the *apprenticed labourers themselves*. Constables selected from amongst the labourers, (*armed with no other weapon than a short painted staff*, and distinguished from their *comrades* merely by a red scarf worn over the shoulder,) afford their unpaid services in maintaining order, and in executing (at all hours) the directions of the special justices. *Unassisted by policemen, and without the intervention of a single soldier* (whether from the regulars or the militia), the laws have been upheld and maintained during the last four months (and are at this moment upheld and maintained) by the labourers themselves. It would be difficult in the annals of the most civilized and best informed countries of Europe to select stronger proofs of the respect and obedience paid to the laws than are here daily afforded by the untaught and uneducated labourers who have so lately been released from the bonds of slavery.

* In fairness to the majority of the Magistrates, it must be observed that these transactions have taken place at the Paarl.

MOODIE AND HIS BOOK.

Ten Years in South Africa. By Lieut. Moodie. 2 vols. 8vo. London, 1835. Bentley.

We have lately been amused, we dare not say *instructed*, by the researches on our Cape society, by Howison, Webster, and Holman. Now appears Lieut. Moodie, who may, *probably*, belong to the same school, or, as we suspect, much worse. We say probably, because we have not read the work, and know nothing of its character, except from a few extracts which we propose to follow these remarks, from the *London Literary Gazette*. We suspect from these samples that the Cape colonists will still be inclined to make

"Wry faces,"

but they should by this time look upon their critics as dispensers of medicine for their sole use and benefit. Happy will it be if any of them in a diseased state become restored to soundness and vigour. That a few *alteratives* have been long required, has always been our favourite axiom; but alas, and a-lack-a-day, it is up-hill work for their advisers. Howison, quite in love with the Caffers—their persons, their intellect, their heroism, turns round upon the South African Boers with no ray of hope in his soul, and pronounces them "irreclaimable." "There is," says he, "every chance of their remaining unchanged for a long period, or perhaps *as long as they exist at all!*" We now proceed with our extracts:—

I.

WHO THE AUTHOR IS.

"Lieut. Moodie (according to our London cotemporary,) belongs to an ancient family in the Orkneys, but its fortunes having somewhat declined, his elder brother determined to plant a settlement in another land; and he went to join him at Swellendam."

II.

The Hottentots,—Their rich possessions,—Their oppressions,—Their deliverance,—Their sincerity,—Their vices,—Dutch and English partiality to Hottentot ladies.

The poor Hottentots were looked upon by the ignorant colonists as a people incapable by nature of improvement, and were treated like horses and oxen, as a part of the property of their conquerors. They originally were possessed of cattle and sheep in abundance, and the country teemed with game of all kinds, which together afforded them a subsistence proportionate to their habits and necessities. They have gradually been robbed or cheated of flocks and pasture grounds. And what have they got in return? Three words answer this question—vice, poverty, oppression. Not contented with the possession of every thing that was valuable which originally belonged to this unhappy people, and, as if for the purpose of cutting off every avenue by which they might arrive at independence, the Hottentots were considered by the colonial laws as incapable of holding lands in the country of their fathers.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

They were thus consigned to hopeless poverty and degradation. What could be expected from such an execrable system but moral and intellectual debasement? Happily for this much-injured race, a new order of things has, within these few years, dawned on this colony, and lands have, for the first time, been granted to the Hottentots; and it may confidently be expected that their industry will be increased, and their morals improved, in proportion to the inducements holds out to exertion.

The Hottentots are possessed of acute though not very powerful or durable feelings. Their character is one of singular weakness, joined to the most lively perceptions and observation of external things. Their reasoning powers are of a mean order. They have not a little cunning when their suspicious are excited: but they are habitually honest, sincere, and confiding; and will rather steal than cheat. They are quick in noting peculiarities of character and manner, but are incapable of forming a chain of deductions from their observations. They are also peculiarly ignorant of relative value and numbers. Out of a dozen Hottentots, I found only one or two able to count to the number of twenty; and I remember one of them, who was by no means inferior in other respects, refusing to serve me for ten rix-dollars a month, telling me he had always got *five* from the Dutch. After vainly attempting to shew him his mistake, I was at last obliged to take him on his own terms. The Hottentots are fickle in the extreme; quitting on a sudden whim a place where they have been well fed and well treated for months, for another where they know they will be much worse off. If you ask them why they leave you, their usual answer is, 'Almagtig! mynheer, ik heb hier geweest voor een heien jaar.'—'Almighty! sir, I have been here for a whole year.' If they have liked their situation, they will readily return to you again after they have had their ramble, and admit that they were great fools to change it, but that they were tired, and wanted to roam a little. The Hottentots are generous in the extreme to their friends and acquaintances, and can refuse them a share of nothing they possess. This is one cause of their general poverty, and that so few of them acquire any considerable property of any kind. Oppression has drawn the bonds of union closer between them, as is always the case in such circumstances. A Cape-Dutchman's sympathies are confined to his own family: he knows not the feeling of friendship beyond the circle of his immediate relatives. But the Hottentots are like one large family, bound together by common injuries, common feelings, and common interest. This union constitutes their happiness; and of this comfort tyranny cannot deprive them. Theft is very uncommon among them, and they may safely be entrusted with anything but intoxicating liquors, which they are not able to resist * * *

The most amiable trait in the character of these people is their sincerity. It is a well-known fact that a Hottentot, when he is examined before a court of justice, generally tells the whole truth without disguise, though he is certain that his own conviction and punishment will immediately follow his confession. So often have I observed this noble trait in their character, that I would at any time attach more credit to the assertion of a Hottentot regarding any simple matter of fact, than to the oath of one of the lower classes of our own countrymen in the colony when they have any object to serve by deception. I now come to the vices of the Hottentots. Though incapable of lasting resentment, they are passionate, savage, and cruel to their women and children on the slighest provocation. The men hardly ever come to blows in their quarrels; but the unhappy wife generally has to suffer for every temporary resentment of the husband, whether she has been the cause of it or not. On these occasions, the brutal husband often beats his wife in the most cruel manner, treads her under foot, and uses her in a way that would be death to a more delicate female. The wife, on her part, is by no means deficient in the artillery of her sex, and uses her other natural weapons with great effect, scratching, biting, and tearing the hair with the most undaunted courage, until she sinks to the ground with exhaustion; but the tongue still wags with unabated volubility in an overwhelming torrent of oaths and contumelious terms, which aggravates her punishment, until the infuriated husband is driven half frantic with disappointed rage. Contrary to the well-established maxim applied to such cases, I have sometimes interfered to prevent fatal consequences; but, finding that only tended to increase the evil, I was reluctantly compelled to allow them to belabour each other in their own way. These shocking scenes are generally occasioned by drinking, to which vice they are very much addicted. Intoxication seems to have a much more infuriating effect on savages than on civilised men, which is simply because they are less habituated to self-restraint. It is for the same reason that a vulgar person may easily be distinguished from a gentleman under the like circumstances, and that the effects of intemperance are more pernicious to the former than to the latter. There is, however, nothing rude in the manners of the Hottentots on ordinary occasions: they are extremely affectionate, and are very delicate in avoiding causes of offence, never contradicting or interrupting each other in conversation, unless they are excited by violent passions. Their conversation is at the same time coarse and unrefined, though less so than that of the Cape-Dutch. Polygamy seems never to have been in use among them; and I have often been told by aged Hottentots that illicit correspondence between the sexes was formerly very rare, and severely punished by their laws. The superstitious respect which savages entertain for men of a different colour has been made a powerful engine of corruption against them; and European nations, instead of improving their morals, have become the active agents of their debasement. Most of the Hottentots within the boundaries of the colony are more or less of a mixed race, arising chiefly from the connexion of white men with Hottentot women. The older Hottentots are, however, generally of a purer race; which shews that their corruption has been gradually increasing since the first settlement of the colony. The women seldom repel the advances of white men, for whom they have a decided personal preference, and they are generally faithful to them while the connexion subsists: they are so proud of these temporary engagements, that they seldom consent to live with one of their own nation afterwards. It may seem somewhat extraordinary to Europeans, but it is nevertheless true, that the colonists, both Dutch and English, are very partial to the female Hottentots. This, of course, is carefully concealed by the Dutchmen from their wives; and they apply the most opprobrious epithets and affect the greatest disgust to the persons of the Hottentots on all occasions. Some of the features of these people do not certainly agree with the commonly received ideas of beauty; but they have expressive eyes and a liveliness and grace of carriage that render them far from being unattractive. The colonial female Hottentots, indeed, are often strikingly elegant in their proportions, and they have all that lightness and ease in their motions for which all savages are remarkable: we need not therefore wonder that they are often preferred to the clumsy, torpid, and insensible Dutchwomen, with their stony eyes and jealous domineering manners. The offspring of the Dutch by the Hottentot women are distinguished for uniting in their persons the vices of both races. In point of understanding, they are superior to the Hottentots; and, by what I have seen of them, I should think them, under other circumstances, many of them would shew a decided superiority over the Dutch; they assume it over the Hottentots with whom they live, and hate the white population, to whose society they can never aspire: they are also a taller and stouter race than the Hottentots, and share, in some degree, in the constitutional tendency of the Dutch to corpulence. The intermixture of races seems to improve the intellectual powers as much as it does the bodily proportions. The true Hottentots are a small and slight race, with acute senses and lively irritable tempers. People of this description seldom become corpulent; and I have never seen an instance of a Hottentot man becoming absolutely fat, though it is not at all rare among the females.

III.

The Cape Dutch,—Coarse Manners,—Improved by intercourse with the English,—Torpid and phlegmatic women,—A monster of obesity,—Groot Vaders Bosch,—Journeying for a Coffin,—Mynheer Botha,—Can Hottentots and Blacks be received in Heaven?

"Of all people I have ever seen, the Cape-Dutch are the coarsest and least polished in their manners. The conversation of both sexes is marked by an almost total absence of common decency: the most disgusting oaths are used on all occasions by the men: and the women do not even feel ashamed to talk on the most indelicate subjects, hardly condescending to use any circumlocution. In this respect, indeed, they are even less refined than the Hottentots. Wherever they have had more intercourse with the English, however, a gradual improvement is observable. The females, though often handsome when very young, are from this coarseness of manners exceedingly distasteful to the English, and few even of the lower classes of our countrymen can bring themselves to marry into a Dutch family. The moment a Dutchwoman enters into the conjugal state, she takes her seat by a little table in the hall, from which she never stirs if she can help it; and they often laugh at the folly of the Englishwomen, in going about the house to attend to their domestic concerns, when they might have every thing done by calling to their servants, without quitting their places. When the Dutch ladies marry, they become exceedingly torpid and phlegmatic in their manners and habits, dirty and slovenly in their dress; and, from their cold constitution and freedom from care, like the men, they generally at an early age grow to an unwieldy size."

Of one fat fellow there is a whimsical picture. He was one of those monsters of obesity who are so often to be seen in this colony, and of whose appearance we can form but a faint conception from any common instance of the kind in England. He was literally a martyr to corpulence, his prodigious powers of digestion having nearly destroyed the exercise of his mental faculties. For several years Martinus Botha had not been able to lie down in his bed for fear of suffocation, and the only way he could get any sleep was by leaning his head on the table before him: in this manner he could procure a little rest, which was only for a few minutes at a time. It is difficult to describe his person, for shape he had hardly any. A huge bag of fat hung below his chin, and the flesh of his ankles hung down till it touched his shoes. Notwithstanding his enormous size, he was a great *gourmand*, and thought little of devouring several pounds of mutton at a meal; after which he could sometimes drink a bottle of brandy without being affected by it. He was at this period beginning to feel some alarm at his increasing dimensions, and took from time to time a journey in his wagon to Swellendam to consult the medical practitioner on his case. On these occasions he would call on his way at Groot Vaders Bosch; but the doctor, who had killed many men without intending it, could not succeed by any means in checking the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

growth of his unwieldy patient, who began to fancy that he was afflicted with dropsy; and he was confirmed in the idea by the opinions of his family and neighbours. In a county where it is found most convenient to bury the dead as speedily as possible, it is common for elderly people to keep a coffin in their houses ready for their own use, or to lend to any of their neighbours who may chance to die before them. In travelling through this part of the colony, if you cast your eyes upwards in a 'boar's' house, this rather melancholy object may be often seen lying across the beams; and so far from exciting any unpleasant feelings, it has often been pointed out to me by the old farmers with great self-complacency, as a proof of their good management in being beforehand with time. Our bulky friend arrived one day at Groot Vaders Bosch in his wagon, accompanied by two of his sons. After sitting for some time, and drinking a glass of brandy, he informed us that he had come to get a coffin made for his own use, as he had the 'water' (dropsy), and did not expect to live long, and had, moreover, grown to such a size that none of his neighbours had any large enough to hold him. 'That's true, father, what you say,' replied one of the young men, without altering a muscle of his countenance. My brother had two carpenters in an adjoining outhouse, employed in making up various articles of furniture for sale among the farmers; and to their workshop I accompanied our visitor. Jamie Learmouth, a little, sly, drunken body, was hard at work at his bench, and singing one of our favourite Scotch songs, in a manner that shewed he was more occupied with the words and the recollections to which they gave rise, than the modulation of his notes. He had just come to the words of Burns,—

'We twa hae paidled in the burn
When simmer days were fine,'

when we entered his shop. Observing the lusty customer who darkened his door, Jamie quitted his plane, and addressed him, with a sly twinkle, in a jargon in which Dutch and broad Scotch were curiously intermingled. 'Goe'n dag, Mynheer Botha; hoo faar you the day?' 'I come,' answered Botha in his own language, 'to have a coffin made.' 'I can shune do that for ye,' replied Jamie; 'but is't for yersel?' 'Yes, certainly.' 'Faith, ye'll need a gude big ane,' said the carpenter; 'but if ye'll joost lay yersel' oot on the bed there, I'll shune tak yer measure.' Jamie cast a sly look at me as he made this proposal; for he knew it was easier said than done. However, with the assistance of his sons, the old farmer, who had seated himself on the side of the bed, was gradually lowered down on his back, to the great danger of the conscious bedstead, which uttered sundry discontented creaks at the unusual weight imposed on it, which seemed to excite Jamie's fears not a little for his hastily-constructed couch. Poor Botha's sufferings in this position were so great, that if the carpenter had not completed his measurements with expedition, he must infallibly have died of suffocation on the spot. His respiration ceased almost entirely as long as he lay in a horizontal position; and it was not until he was again raised up that the air pent up in his lungs found a passage, when it rushed out like the blowing of a porpoise when he comes to the surface of the water. When Martinus could collect his thoughts, he again addressed the workman. 'Hear, James, you must make my coffin roomy enough, for I'll swell up very much when I am dead. While he was retiring to his wagon, his son took Jamie by the arm and begged him to make the coffin close in the joints; 'for,' he added, 'father will, perhaps, *run out* after he is dead.' The perfect apathy and *sang froid* with which these serious arrangements were made, were highly characteristic of the people. This kind of indifference to death is generally to be observed among ignorant people; but, in addition to their extreme ignorance on all subjects unconnected with their peculiar mode of life, the Dutch colonists entertain rather extravagant notions of the privileges of Christians, and are in general firmly persuaded that all who have been sprinkled with a little water go to Heaven when they die, as a matter of course. One thing, however, puzzles them sadly—how the baptised Hottentots and slaves are to be disposed of after death; for they think it quite impossible that an order of beings whom they are accustomed to regard with such contempt should be placed on an equality with themselves. The more enlightened among them are considerably relieved from their perplexity by the passage of Scripture which tells us that there are many mansions in the kingdom of Heaven, in which case they trust that the black and white Christians will be kept separate.

IV.

Graham's Town Merchants,—Republicans,—Dissenting Chapels and Dissenters.

The merchants, who, with only *one* or *two* exceptions, are all retailers from the middle class in Graham's Town. Some of them are men of education; but the greater number are persons who have raised themselves by their industry from the working classes Where wealth is quickly gained, extravagance generally keeps pace with it. All the lower classes in colonies are Republicans in principle, and feeling their consequence in the community, are eager to be considered on an equality with the higher classes. The same circumstance also accounts for the number of Dissenting Chapels and Dissenters in Graham's Town. Dissenters are generally republicans in feeling, if not in principle.

Missionaries,—Dutch Manners,—Roasting a Slave to Death.

The Missionaries are themselves but the mere slaves of a party—half religious, half political. Many of them are men of good natural talent, but they are generally uneducated; their minds are over run by narrow prejudices and fanatical zeal. One peculiarity in the manners of the Dutch at Cape Town, and which marks more strongly the low state of morals, is, that it is generally *after* marriage that both sexes are most noted for their laxity of conduct. No crime, however heinous or disgraceful, excludes a man from society in this country, provided he conforms to its usual observances. I have often seen a man walking about the streets of Cape Town, who, several years ago, deliberately roasted a slave to death in an oven, for presuming to smile at his master.

From these extracts, our readers will, no doubt, characterise Moodie's Book as a calumnious production, a disgrace to the author, the press, and the British name.

BED AND *BOARD*

As our readers must be fully aware by this time, we have always contended that the law of population has never exceeded that of the productive power of vegetative life.* And that cultivated produce has hitherto outran population in every country, unless marred by the Charlatans of the Malthus school. These theorists have shut their eyes to the fact, that the tenets—"Be fruitful and multiply; replenish the earth and subdue it," were first propounded in Paradise. They were breathed out in the form of a blessing upon the human race; and, that they might never be forgotten, they have been laid up in the archives of *The Truth* in sacred writ, which records the dealings of the Almighty with mankind, for instruction and government.

But we are not just now inclined to sermonize, unless it be to *return thanks*. And that, for having been introduced to a new source of supply,—a source that can supply—

"Although the fig-tree shall not blossom, neither shall fruit be in the vines; the labour of the olive shall fail, and the fields shall yield no meat; the flock shall be cut off from the fold, and there shall be no herd in the stalls."

And this supply is scattered around us in all directions, and little did we think that the piles of timber at Mr. Jones' end of the Commercial Exchange, was only so much bread in embryo. While in a musing mood the other day, and contemplating the suspension of the water-mills and the wind mills from long draught and suitable gales, we dwelt with much composure on the ready facilities and decided public advantages of Mr. Prince's steam flour-mill. But then, again, what is prospective we know not. The harvests may utterly fail. What then? Why we are to look to Mr. 's Sawing Machine, for our aid is in *wood*-flour; and here is the recipe, extracted from no less an authority than the *Quarterly Review*, (No. 104.)

HOW TO MAKE A QUARTERN LOAF OUT OF A DEAL BOARD.

To make wood-flour in perfection, according to Professor Autenreith, the wood, after being thoroughly stripped of its bark, is to be sawed transversely into disks, of about an inch in diameter. The saw-dust is to be preserved, and the disks are to be beaten to fibres, in a pounding mill. The fibres and saw-dust, mixed together, are next to be deprived of every thing harsh and bitter which is soluble in water, by boiling them, where fuel is abundant, or by subjecting them for a longer time to the action of cold water, which is easily done by enclosing them in a sling sack, which they only half fill, and beating the sack with a stick, or treading it with the feet in a rivulet The whole is then to be completely dried, either in the sun, or by fire, and repeatedly ground in a flour-mill. The ground wood is next baked into small flat cakes, with water, rendered slightly mucilaginous by the addition of some decoction of linseed, mallow stalks and leaves, lime-tree bark, or any other such substance. Professor Autenreith prefers marsh mallow roots, of which one ounce renders eighteen quarts of water sufficiently mucilaginous, and these serve to form four pounds and a half of wood-flour into cakes. These cakes are baked until they are brown on the surface. After this, they are broken to pieces, and again ground, until the flour pass through a fine-boulting-cloth; and upon the fineness of the flour does its fitness to make bread depend. The flour of a *hard wood* such as beech, requires the

* See *Lectures on Natural Philosophy*, vol. ii and an Article entitled *Supply and Demand*, page 371, vol. ii. *Literary Gazette*.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

process of baking and grinding to be repeated. Wood flour does not ferment so readily as wheaten flour; but the Professor found fifteen pounds of birch-wood flour, with three pounds of sour wheat-leaven, and two pounds of wheat-flour, mixed up with eight measures of new milk, yielded thirty-six pounds of *very good bread.* The learned Professor tried the nutritious properties of wood-flour, in the first instance, upon a young dog; afterwards he fed two pigs upon it; and then, taking courage from the success of the experiment, he attacked it himself. His family party, he says, ate it in the form of gruel or soup, dumplings and pancakes, all made with as little of any other ingredient as possible; and found them palatable, and quite wholesome. Are we, then, instead of looking upon a human being stretched upon a bare plank, as the picture of extreme want and wretchedness, to regard him as reposing in the lap of abundance, and consider henceforth, the common phrase, "*bed and board,*" as compounded of synonymous terms?

CORRESPONDENCE.

Cape Town, 13th June, 1835.

SIR,—Originality, whether in prose or verse, is so rarely to be met with at the Cape, that I am induced, on the score of *novelty,* to forward you the following trifle, my first attempt at poetry, which is "really, truly, and *bona fide,*" the production of a person "at, in, and within" the colony of the Cape of Good Hope.

I trust you will review this with a lenient eye, for you I look upon as the foster-father of any sprig of literature, which, (otherwise) may germinate on this our adopted neglected, but frequently abounding sterile soil.

I am, Sir,
Your obedient Servant,
I. T. P.

THE TOMB.

View yonder shape of manly pride,
Blooming with youth and beauty fair,
Another week may scarcely glide,
Ere that fine form is doom'd to share,
Though young, and gay, and free from care—
The Tomb.

See yonder form of heavenly mould,
Observe her lively, buoyant pace;
Perhaps, another summer told,
That beauteous being too, may grace,
Though roseate bloom bedeck her face—
The Tomb.

Gaze on yon little innocent,
So calmly slumb'ring at the breast;
Death may this very night be sent,
When that dear babe will find its rest,
Though harmless, pure, and all that's best,
The Tomb.

Reader, if thou with thoughtless care,
Review the present and the past,
Repent,—for death thy soul prepare,
As even now, thy doom is cast,
If not to day, to seek at last—
The Tomb.

I. T. P.

[We readily enough give insertion to the above Lines of I. T. P., because we apprehend periodical Journals are frequently the first steps to knowledge, and should always become the means of setting afloat the young *buccaneers* of literature. If we may be allowed to offer an opinion, we think the "Tomb" of I. T. P. is by far too cold and cheerless. In this respect it belongs to the "*Blair's-Grave*" *school.* There is no representation of a bright scene beyond it—no ray of light athwart the dark valley. By way of improvement to this subject, and to

"Point a moral,"

we think an apology is scarcely necessary for the introduction of the following extremely beautiful—

"*Lines written in the Church-yard of Richmond, Yorkshire, by* HERBERT KNOWLES, *who died, Æ. xix. 17th Feb.* 1817.*

"It is good for us to be here;
"if thou wilt, let us make here three Tabernacles;
"one for thee, and one for Moses, and one for Elias."—MATT. xvii, 4.

Methinks it is good to be here:
If thou wilt, let us build—but for whom?
Nor ELIAS nor MOSES appear,
But the shadows of eve, that encompass the gloom,
The abode of the dead, and the place of the tomb.

Shall we build to ambition? oh, no!
Affrighted he shrinketh away;
For, see! they would pin him below,
In a small narrow cave, and begirt with cold clay,
To the meanest of reptiles a peer and a prey!

To beauty? ah, no!—she forgets
The charms which she wielded before—
Nor knows the foul worm, that he frets
The skin which but yesterday fools could adore,
For the smoothness it held, or the tint which it wore.

Shall we build to the purple of pride—
The trappings which dizen the proud;
Alas! they are all laid aside—
And here's neither dress nor adornment allow'd,
But the long-winding sheet and the fringe of the shroud!

To riches? alas! 'tis in vain—
Who hid, in their turns, have been hid—
The treasures are squander'd again—
And here in the grave are all metals forbid,
But the tinsel that shone on the dark coffin lid.

To the pleasures which mirth can afford—
The revel, the laugh, and the jeer?
Ah! here is a plentiful board!
But the guests are all mute as their pitiful cheer,
And none but the worm is a reveller here!

Shall we build to affection and love?
Ah, no! they have wither'd and died,
Or fled with the spirit above—
Friends, brothers, and sisters, are laid side by side,
Yet, none have saluted and none have replied!

Unto sorrow?—the dead cannot grieve—
Not a sob, not a sigh meets mine ear,
Which compassion itself could relieve!
Ah! sweetly they slumber, nor hope, love, or fear—
Peace, Peace, is the watchword, the only one here!

Unto Death, to whom monarchs must bow?
Ah, no! for his empire is known,
And here there are trophies enow!
Beneath, the cold dead! and around, the dark stone!
Are the signs of a sceptre that none may disown!

The first tabernacle to HOPE we will build!—
And look for the sleepers around us, to rise!
The second, to FAITH, which ensures it fulfill'd—
And the third to the LAMB of the great sacrifice,
Who bequeath'd us them both, when he rose to the skies!

* Herbert Knowles was a youthful artillery-driver at Canterbury. His talents attracted the attention of his officers, and they subscribed a handsome sum for his education, and placed him at a distinguished public school at Richmond, in Yorkshire.—(ED.)

THE JUST COMPLAINT OF THE ENGLISH AT BEAUFORT.

Beaufort, May, 1835.
To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—That the inhabitants of this Colony are deeply indebted to you for the constant interest you pay both to their intellectual wants and religious instruction, cannot be denied, particularly to the improvement of the rising generation; I am imperatively called to make these remarks from noticing in your Number for March last, the comments you made on communications from George Town, particularly as regards the want of religious instruction in both languages: but I much fear that the English inhabitants of this *rising village* have as great, if not greater cause of complaint than our countrymen at George. I can assure you, as a fact, that often a period of two months elapses without our being blessed by hearing the word of God in our native tongue; there are thirteen or fourteen heads of families, exclusive of unmarried men, residing in this village, (one of these families alone consists of no less than nineteen in number,) and of all these families I do not think one of them would intentionally absent themselves from Divine Service, was it regularly to take place *even* every second Sunday. I am creditably informed that in the villages of Somerset and Uitenhage, where the English inhabitants do not much exceed the number we have here, that Divine Service is regularly performed *once* every Sabbath; I have further to observe, that in one respect we are highly favoured in having in the village two very eminent English schools; one established by Government, and the other by a private individual.

It was some short time past reported that the cause of our not being favoured with English Service more regularly, arose from doubts the Synod had whether it was the duty of the Government Clergyman to officiate in both languages. Was this the case, why, then, should Somerset and Uitenhage be an exception to this rule? By inserting the above in your very valuable Publication, you

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

will not only oblige the majority of the English inhabitants at Beaufort, but lso your constant reader, and

AN ENGLISHMAN.

[We trust the insertion of the above Communication will meet the eye of the minister of Beaufort, or some other religious teacher. In one of the country villages a few weeks ago, the religious destitution of a large portion of the English inhabitants was pointed out to the minister of the Reformed Church, who confines himself exclusively to preaching *in Dutch!* The answer of the reverend gentleman was, that he did not think the English to be any part of his charge!!! that Synod would not allow of his adopting the English language.

This is not the fact. At the last meeting of that body in Cape Town, the instructions of Government were promulgated on this head, and the English language declared essential, *in part*, to the right distribution of religious service. How shall we account for it, that, in many of the villages, there are those who eat the flesh, and clothe themselves with the wool, while

"The hungry sheep look up, and are not fed?"]

(ED.)

[WE have thought proper to expunge three or four passages from the original of the following letter, from the circumstance of their personal tendency. With the private affairs, history, or opinions of any person or party, we can have no concern. But when men enter into public discussion, either *vive voce* or by the pen, then we are free to canvass their published opinions.

As it regards the Wesleyan Missionaries, we have hitherto considered them a useful body of men. We can speak with certainty, when we declare of one whom we have the pleasure to know, that we consider him (the Rev. B. Shaw) to be an honour to the christian name and profession.]

DEFENCE OF MR. SHREWSBURY, AND SOME OF HIS FRIENDS.

To the Editor of the Cape of Good Hope Literary Gazette.

Graham's Town, 10th July, 1835.

SIR,—There has been much irreligious allusion in the *Advertiser*, to some of our worthy Missionaries of the Wesleyan persuasion, — particularly Mr. Shrewsbury and Mr. Haddy. And against the last-mentioned gentleman, Sir, you yourself made some cruel remarks in one of your Gazettes, about his calculating powers. I am sorry for it, Sir, for I don't know one teaching the King's English with true *proun-ciation*, so capable as he of throwing light upon all matters in these quarters. But again, as to Mr. Shrewsbury. That gentleman is much respected here, and has discovered his error, now that he is in Albany, of not having become all things to all men when he was in Barbadoes. *There* he was carried away, it is true, with morbid notions of philanthropy; there he opposed the opinions of the majority of the worthy slave proprietors, and their clerks, and agents, and overseers. Now, this was bad policy; because I hold it to be sound policy—when we are at Rome, to do as Rome does, and wherever we are, under whatever government, to repeat with the majority.

"Great is Diana of the Ephesians."

But Mr. S. *felt* his error, alas! when it was too late. The voice of the people, by a large majority, pulled down his meeting-house, and destroyed his goods. And then all men forsook him and fled, and a placard was signed against him. He was happily delivered from the fury of the majority, and is now actively employed in Albany. He has been led to witness the success of his prophetic mission. He went, according to the good old Jewish custom, in the days of that Priesthood, and proclaimed Woe! Woe! Woe! to the late King Hintza—crying out "blood for blood"* The philanthropic passage in The New Testament — "He came to seek and to save them that were lost," did not then suit the purposes of his mission. Well! the denunciation is declared, and Brother Southey speeds the prophecy, and executes the deed. Weak persons blame Mr. Shrewsbury in this call for blood; but how futile! Was our reverend Brother to preach repentance, I ask, to a savage? to cast pearls before swine?

It's not much to be wondered at that the *Advertiser* got angry with Mr. S. and some others of our Missionaries. They signed a paper against that paper, it is true, but then they could do no more than their numerous friends and acquaintance advised and commanded. Was it to be expected that they would run counter to the opinions of the majority, and offend their own Methodist brethren, the Editor and Printer of our "Journal," and Brother Cock, and others? Was it likely they would oppose them, over whom they have the spiritual charge? As for the Missionaries of the other societies, only witness what they suffer for their non-compliance with the order of the day here! See what they *gain* for being *righteous over-much*,—a thing condemned by scripture; and only think what poor work it is not to have the applause of the world with you, and not to be well spoken of—to see old friends giving you the cut direct! What makes Mr. S. respected, is, that he is not political, as it is greatly to be feared those of other denominations are shockingly so,—which is evidently against the christian calling. Now, our society at home are wise in enjoining, as Mr. S. and others have been equally wise in obeying, what follows:—

"The Committee (Wesleyan Missionary Society at home) caution you against engaging in any of the civil disputes or local politics of the colony to which you may be appointed, either verbally or by correspondence, with any person at home, or in the colonies. The whole period of your residence in the colony is to be filled up with the proper work of your mission, you are not to become parties in any civil quarrel, but are to *please all men* for their good, edification," &c.*

I would just here remark, by the way, that it is true that the letter of our dear brethren, signed Shrewsbury, Young, and Haddy, has found its way in the Cape papers, being extracted from the London "*Watchman*" newspaper. But there is an error somewhere. That letter was not *intended* for this colony, and should only have been made use of by Conference at home. A good many people in Albany are much hurt at the letter, because it insinuates their cowardice, yielding their goods and cattle to the enemy, as the letter says, "*without resistance.*" But it should be remembered, this letter was written in a hurry, and it was not fair for our secretaries at home to publish it in the London papers, seeing it was confidential. But on the other hand, our good friends here will discover that the worthy writers did not say a word about other Missionaries— the suspected ones, I mean—nothing about their losses and alleged sufferings. This was all good policy, for to have expressed the least sympathy for them, would only have exposed our dear people to persecution and loss of custom.

Another thing in our favour is, and what makes us so beloved, is, that we are not Dissenters,—that we belong to the church; that we are, in fact, the true church of England. And to make good this assertion, I appeal to dear Mr. Shrewsbury, who, in a printed discourse, says;

"Every Church-of-England-man, who observes his baptismal vow, is to all intents and purposes a Methodist; for according to the true original application of the term, a Methodist is nothing more than *an improved Churchman*.†

Again:—we are a very loyal people, and that gravels some people. We presented a loyal and affectionate address to Lord C. Somerset, on his departure, and thanked him for his good, mild, and paternal rule in the colony. And did we not make a handsome present of Wesley's Hymns, in Morrocco and gilt, to Col. S. our worthy commandant, with a suitable address? Who then dare call us radicals in the teeth of these substantial proofs to the contrary? It may be argued by the sneering and ill-disposed, that some of our Mission-

† Quoted from Shrewsbury's Sermons, entitled *Methodism Explained.* (page 245.)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

aries did, in 1825, sign the declaration in favour of a *Free Press*. At first sight this may appear political—but our system of *pleasing all men*, allows each of our members to act for himself. And, perhaps, in signing the document aforesaid, our beloved brethren defended themselves by a reference to the Bishops, who preside in the political House of Lords, and the subordinate ministers, who, as magistrates of parishes and counties, enter minutely into the secular cases of poaching and bastardy. In respect to *pleasing all men*, several of our worthy West India Missionaries did not scruple to declare before the Committee of the House of Commons of 1833, that Slavery was a right good thing, and that the Blackamoors liked the cart-whip system above all others of fancied privilege. Some of our divines, it is true, took another side of the question, and this was all right, for these worthy make-weights balanced the scale, and we were not found wanting

I shall conclude, Sir, with giving you, for the benefit of the rising generation, and all settlers and rulers in foreign lands, a few extracts from the writings of my own great ancestor.

'He who becomes master of a country, habituated to freedom, and does not destroy it, must expect to be destroyed by it.'—*Machiavelli.*

'He who resolves on all occasions to adhere to what is virtuous, may be destroyed by the many who are virtuous.'—*Ib.*

'There are two ways of acting:—one by law, and the other by force; the one for men, and the other for animals; but, when the first does not succeed, recourse must be had to the second; and a ruler ought *to know how to put the animal to good use*.'—*Ib.*

'Injuries ought to be done at once, because they are less felt and offendless; but benefits ought to bestowed gradually, that they may produce a profounder impression.'—*Ib.*

'Those men have best succeeded according to the page of history, who held truth in small esteem.'—*Ib.*

'A sovereign or a subject need not possess all the cardinal virtues, but it is necessary they should appear to do so.'—*Ib.*

'Do not openly oppose the current of human opinions, but contrive to be in unison with it. At the same time always look to the end, as the best criterion whereby to judge of the means. Act conscientiously when you can; but, when obliged, the expediency of the case should prompt otherwise.'—*Ib.*

I must now conclude by wishing you well, and trusting in your well-known impartiality to give all parties a fair hearing.

I am, Sir, your obedt. Servant,
JABEZ MACHIAVELLI.

BRITISH INDIA.

We have great pleasure in submitting to our readers Lord William Bentinck's Reply to an Address presented to him by the Natives, on the eve of his departure for Europe. We have no time to say more upon it than that the sentiments expressed reflect honour upon his Lordship's heart and understanding, and that they are expressed in clear and energetic language. Lord William has, throughout the whole course of his public life, advocated the policy, and acted up to the principles of *moral government*, instead of those of *brute force*—whips, scourges, tread-mills, and prisons. And he has invariably won the most noble victories in the cause of "Immortal Truth."

THE ADDRESS OF LORD WILLIAM BENTINCK, IN REPLY TO THE NATIVES.

The extreme kindness of your address towards myself—the cordial *spirit of brotherhood* that it breathes towards *my native country* specially entitle me to salute you as *affectionate friends and brethren*.

You alone can accurately judge of the effects of our administration; you best can decide upon its failure or success; and your gratifying testimony upon this occasion encourages me to hope that we have *not* lost sight of *the great end* and purpose of British Government in India, as laid down for our guidance by the Legislature and the Home Authorities, and so eloquently and justly described in your address to be these, —"to establish *a community of feeling* and of interest between races separate by almost every conceivable circumstances of alienation,—to efface *all distinction* between conquerors and conquered,—and to make all in heart and mind, in hopes and aspirations, ONE WITH ENGLISHMEN." It is the consummation of this great truth, that is to be devoutly prayed for. This foundation once solidly laid, the greatness and honor of Britain, the happiness, prosperity and independence of India can never be impaired.

But it would ill become me, in my position, to conceal the unpleasant fact, that during my course I have seen too much of this conqueror spirit, of *the pride of domination*, of the *abuse of power, and of the too general oppression of the strong over the weak*, to be able to pronounce that this wished-for time is arrived. These evils still require the strong hand of authority to put them down,—the establishment of a more simple code of laws, and what is of great importance, *a more efficacious administration of them* But the dawn of that day, under other influences than ours, has long appeared and the day itself is rapidly advancing. The same spirit of *enlightened* and *benevolent* improvement which is *reforming* the European world, has established its powerful sway over India, and even the present generation may, I hope, live to see more than a partial realization of those blessings, which the dispensation of a kind Providence seems to have intended for India, when she permitted her almost miraculous union with a nation, the most distant from her, but alone able by her insular situation, *her mighty power, and liberal institutions* to perform effectually towards her the joint offices of guardianship and of regeneration.

I have read with peculiar satisfaction in your address, the large expression of approbation passed by those best able to form a judgment upon the measure of the Government ABOLISHING CORPORAL PUNISHMENT from the *Native Penal Code*. I am glad to see the unanimous opinion of the Supreme Council, confirmed by your own greater knowledge of the character of your countrymen, viz. "*That this ignominious punishment tended to perpetuate the degradation of the natives*, and afforded occasion for new and enormous *abuses*." We all believed further in its uselessness, either to check crime or to reform the offender. It may be of advantage to state, that the Council consisted at that time, of Sir C. Metcalfe, Messrs. Blunt and Ross—names to which deference and respect are particularly due, and that their conviction long previously formed, and resulted from their great experience in the judical and every other branch of the Indian administration.

But the subject of the highest congratulation with all those whose hearts are with India, is that enactment of the Legislature, which, in harmony with the injunctions of the Home Authorities for the more extensive employment of Native Agency, has abolished *all distinction* in respect to eligibility for office. This measure is as wise as it is just, for there can be really no good government till the spirit of it is brought into full operation. The two races are indispensable to each other, the labours of each are imperfect without the aid of the other. The European brings to India, *his higher education, his superior knowledge, his greater energy, and his active valour*. The Native contributes the collective talents of his vast numbers, his local information and sympathies,—his aptitude for business, his subordination and patient courage. The most complete administrative system ought to be created out of this union of various merits. But to arrive at this end, it is necessary on your part to advance the *elevation of the native mind* and character to the highest possible standard of perfection, while the ruling authority on theirs must give the utmost encouragement to the attainment of the necessary qualifications by throwing wide open the doors to distinction, and by granting a full participation in all the honors and emoluments of the state.

I will now conclude. *I part from you with sincere regret*. I should most willingly have devoted a further portion of my life to your service, but it has been otherwise ruled; and it only remains for me to bid you a most affectionate farewell.

MADRAS.

SPIRIT OF ENTERPRISE.

The India Papers furnish interesting details of the happy results of a public Meeting in the Town Hall, on the propriety of erecting a Breakwater at the Port of Madras Great union prevailed, and a true public spirit was clearly developed.

The following extracts happily discover the share which some of the ministers of religion took in the proceedings.

The Venerable Archdeacon informed the Meeting that he held in hand a letter from the Lord Bishop of Calcutta, who regretted that his early departure prevented his Lordship's attendance at a Meeting held for so desirable and beneficial a purpose. The letter ran as follows:

To Captain DALRYMPLE, &c &c. &c.

DEAR SIR,—I am truly sorry that I am compelled to leave the Presidency before the Meeting takes place, for considering the practicability of erecting a Breakwater in the Madras Roads I cannot refrain however from assuring you that I heartily wish success to so useful and important an undertaking. If upon mature consultation any plan should be resolved upon, you may put me down as a Subscriber for 1,000 Rupees I should, however, venture to recommend great care in framing your calculations, and preparing for expecting difficulties from the first If you look every thing fairly in the face, and obtain the concurrent approbation of the leading Nautical and Scientific Gentlemen of the Presidency, to some definite project, I

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

should have very little doubt of the ultimate success of the Subscriptions. The Roads of Madras are famous, I might say with Virgil, infamous throughout the civilized world. The moment is surely, then, peculiarly favorable for removing the danger and inconvenience, when the gates of commerce are thrown open, when colonization is inviting Science and the Arts to your shores, and when the diffusion of knowledge is tending to raise the native mind to the efforts of commercial enterprize, nor can Britain appear in a more becoming attitude than when she is thus distributing those advantages of the Western world, and accumulating those benefits of civilization in her Eastern Empire, which she has herself derived from her Religion and Laws, and which go to commend those foundations of her own prosperity, to the enquiring minds of the Inhabitants of Hindoostan.

I remain, dear Sir,
Your most obedient and faithful,
DANIEL CALCUTTA.

Government House, Madras, 21st Feb. 1835.

It was perused amidst warm applause from all parts of the room

The Venerable Archdeacon then rose to propose the first resolution, and spoke in the following terms:

Sir,—Having read the letter of the Bishop of Calcutta, whose representative I have the honor to be, I might have contented myself with assuring the Meeting of my entire concurrence with the sentiments expressed by his Lordship; but, I gladly avail myself of the opportunity which has been thus kindly offered me of submitting to this numerous and respectable assembly the first general proposition of the subject before us. And I am the more anxious to offer myself thus early to your notice, because I stand altogether unconnected with the immediate interests of the measure we are met to advocate. My ignorance of the specific plans to be proposed, my inability to enter into the details or to grapple with any of the practical difficulties, and the circumstances of the profession to which I belong might appear at first sight to mark me out as the last person to take any share in the discussion; but it is important for us to shew that in this and in all similiar plans of public improvement, all professions and classes of the community join hand and heart as in one great and common cause. It is true that the measure now to be considered is one chiefly of commercial enterprize, and the proximate and immediate benefits we anticipate are those of mercantile speculations, but we know little of the true interests of our country and its colonies, if we imagine that all of us—whether civil, military, or ecclesiastical, are not deeply interested in its success England is a commercial nation. Commerce is the salient living spring from which all its power and pre-eminence among the nations of Europe is derived, and by which its moral power is transferred to every quarter of the habitable world. When, therefore, we aid its commerce we extend its power, and whether at Home or in her distant colonies, every measure of improvement, though immediately bearing only on her mercantile prosperity, is an instrument of raising the civil and moral grandeur of our native country. It is impossible for any of her children, especially when new sources of improvement are opening upon us by the late political arrangements for India, to be indifferent to the success of schemes so important as this,—the more important because it is one of a primary and elementary character What would England now have been, with all the beauty of her rivers and the majesty of her shores, without her Piers and breakwaters to secure and defend her trade, and to enable her to receive into her bosom the wealth of the civilized world. Without them it would have still remained the haunt of the half-naked savage: and it was by seizing every opportunity within her reach of progressive improvement which the skill, industry and enterprize of her sons individually as well as nationally, furnished, in short by steps of advance similar to that we now advocate, that she has attained the high and commanding station she now holds in the western world. If we would share and perpetuate her triumph we must aid her commerce, nor must we narrow our prospects of success. It is not the present generation only that will receive the benefits resulting from such improvements as this, but future years, and the future colonists of India in an infinitely greater degree than we can hope to do; and we are only following up the true principle of the commercial spirit of our country, by uniting to effect a measure which, if effected, must inevitably produce results of immense, though distant benefit

SCIENCE, RURAL ECONOMY, &c

ST. MICHAEL ORANGES.

Methods of Orange Cultivation.

The orange plantations or quintas of St. Michael's, are of large extent, always encircled by a wall from fifteen to twenty feet high, and within a thick plantation belt of the faya, cedar-tree, fern, birch, &c. to protect the orange-trees from the sea breezes. The trees are propagated from shoots or layers, which are bent at the lower end into the ground, and covered with soil until the roots begin to strike, when they are separated from the parent stem, and transplanted into a small excavated well about three feet deep (lined with pieces of lava, and surrounded at the top by plantations of laurel, young faya, and broom), until the tender orange plants are sufficiently strong, at which period the plantations immediately round them are removed, and each plant begins to shoot up and flourish, after which no further care is taken of it, beyond tarring occasionally the stem to prevent injury by insects; and it in time spreads out with the majestic luxuriance of a chesnut-tree. In this country it only requires seven years to bring an orange plantation to good bearing; and each tree, on arriving at full growth, a few years after, will then annually, upon an average, produce from 12,000 to 16,000 oranges. A gentleman told me he had once gathered 26,000. —The crops are purchased previous to their arriving at a state of maturity by the merchants, who ascertain the value of the probable year's produce, through the medium of experienced men, and then make their offer accordingly. The men thus employed to value orange crops, gain a livlihood thereby; and such is the skill whereto they attain, that, by walking once through a plantation, and giving a general glance at the trees, they are enabled to state, with the most astonishing accuracy, on what number of boxes the merchants may calculate. It becomes, however, quite a matter of speculation to the purchaser, as orange crops are a very uncertain property, and subject to various casualties between the time they are thus valued and the gathering. For instance, a continuance of cold north or north-easterly wind will cut them off;—a violent storm will sometimes lay the whole crop on the ground in a night, or it may be entirely destroyed by insects.—Nothing can exceed the rich luxuriant appearance of these Hesperian gardens during the principal fruit months, namely, from November to March, when the emerald tints of the unripe and golden hue of the mature fruit mingle their beauties with the thick dark foliage of the trees; and the bright odoriferous blossom which diffuses a sweetness through the surrounding neighbourhood is quite delicious.—The present amount of oranges and lemons exported, is upwards of 120,000 boxes, and nearly seventy or eighty vessels are sometimes seen lying in the roads, waiting to carry them to Europe. Besides these, a large quantity of the sweet lemon is cultivated for the consumption of the inhabitants: it is produced by grafting the sour lemon on the orange, but it is tasteless and vapid, though esteemed salutary and refreshing by the natives—There is a species of epicurism peculiar to the Azores with respect to oranges, particularly observed by the higher classes, who only eat that side which has been most exposed to the sun, and is, of course, in its fresh state, easily distinguished by the tint—a refinement we are unable to emulate, the colour being rendered uniform by age—*Boid's Western Islands.*

EXPERIMENT TO PRODUCE LIGHT IN WATER.

To illuminate the depths of the ocean, and observe from the etheral air above, the monsters of the deep, and the countless myriads of the finny tribe disporting in happy ignorance, or attacking one another to satisfy their craving appetite, the greater fish devouring those that are less, like the lords of the creation, may now, perhaps, be considered an amusement quite practicable, supplying naturalists and men of science with new and boundless sources of knowledge, wonder, and delight.

How truly has the great Apostle said, "We know in part, and we see in part!" When we are lightly skimming over the heaving surface of the deep, with nothing but a frail plank between us and eternity,—immensity above, around, and below,—how little do we think, how little do we know, what strange scenes may be taking place at that instant beneath our feet: yet this, which has been lying for so many ages before us, like a sealed volume, is now likely to be opened to our eyes, disclosing to our searching gaze a new and interesting page in the wonderful book of nature.

An experiment, to ascertain at what depth a white object might be visible in the sea, has just been made by a gentleman who has devoted much time and attention to extend the bounds of science. Having let down a metal plate, painted with white lead, he was able to distinguish it by moonlight at the depth of forty feet; while, by that of the sun, he lost sight of it at about eighty feet deep. This difference must seem surprising when we compare the intensity of the two lights—that of the sun being, according to Bouguer, *three hundred thousand* times stronger than that of the moon; but the dazzling which affects the eyes by the coruscation of the solar rays, does not allow us to be sensible to feeble impressions on the visual organs. Any instrument, therefore, which should enable us to see at great depths under water, would be exceedingly useful, either in recovering any object that might be lost, or in constructing submarine works in sea-ports. A method used by fishermen to obtain this advantage consists in pouring oil upon the water to make it more transparent. In the Bay of Naples it is constantly practised by the fishermen at night. Their boats are provided with a composition which gives an intensely vivid flame, and is placed out at the stern. Attracted by the light, the fish follow it from every direction, keeping near the surface, and hovering around it like moths. They are then easily captured, after being struck or harpooned by four pronged spears. Those who search for shell-fish *(frutti di mare)* in the day-time, near the shore, employ the same method, throwing little pebbles steeped in oil before them. The gentleman, who was acquainted with this simple contrivance, wishing to ascertain its efficacy, poured a small quantity of oil on the sea, and was thereby enabled to distinguish shells and other objects, which had not been visible to him before. When oil is thrown on the surface of water which is not confined by banks, the coat extends itself to a great distance, becoming thinner and thinner, until it can no longer be

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

distinguished separate from the water. The effect of the oil is, apparently, to draw off as it spreads, those little objects which prevent the transparency of the water by floating on its surface. All the experiments hitherto made tend to corroborate this assertion; one of them in particular is very conclusive. Half a spoonful of olive-oil having been poured near the edge of a large oval sheet of water, on which the wind had blown a quantity of acacia flowers, it was observed, that in a few seconds afterwards, one half of the surface was completely swept of these floating flowers, and that they were all collected on the opposite part. Similar experiments are still in progress. If they prove successful, we may hope to discover

"Full many a gem of purest ray serene,"

and see with our eyes *Doris* and her fifty daughters reposing in some coral cave; *Proteus* and his flock; *Triton* sounding his hollow conch; and Father *Neptune* himself, though not as in the days of Homer, when rising above the surface—

"From isle to isle three ample strides he took,
And at the fourth the distant Ægæ shook;"

but driving his dolphins with the speed of lightning through the immensity of his watery realm.

NATURALISTS' CLUB DINNER.

THE anniversary dinner of this Club took place on the 12th of March in London. It was numerously attended; yet several members were absent. The cause of Mr. Rennie's absence was the *rainy* weather; of Mr Mudie's the *muddy* state of the roads, and of Mr. Spence's the *expense* of carriage, though 'tis but *sixpence*, per omnibus. The *mammalogists* came driving *unicorns;* the *ornithologists* riding in the *dickey;* the *entomologists* in *flies* and *buggies;* the *botanists* in *cabs*, thus shewing a preference for a *cab-age;* and the *ichthyologist* came by water, *roe-ing* so fast, that they made the *boat fly*. Mr. Bracy Clark did not ride in his own vehicle, but in *Bree's fly*. The dinner consisted of all orders of animals and vegetables, in such abundance, that an entomologist, on entering the room, exclaimed with astonishment, "My eye! what a lot of *grub!*" The dishes were arranged according to the *septenary system*, under the entire management of Mr. Newman. The meats were carved by gentlemen distinguished as dissectors; and it deserves notice that the *John Dory* was cut up according to the *Quin*-ary system. The company seemed to relish heartily both the eatables and drinkables—save Mr. Sowerby, who railed against what he termed *sour beer*. Mr. Knight reproved the last gentleman for drinking out of the pewter, declaring such an act peculiarly offensive to his sight, he being a *pot-hater*. Mr. Blyth displayed his powers as a *bottle*-tit. The *botanists* drank deeply of *shrub;* the *conchologists* of *purl;* and the *ornithologists* of *canary* and *egghot*. After dinner several excellent speeches were delivered, and the healths of the *King and Queen Bee, Emperor Moth, Lady Bird, Alderman Butterfly Cardinal Beetle, Jenny Wren*, and *Jack Daw*, were drunk with enthusiasm. Then followed the toasts, "Our *cabinet;*" "The indissoluble union of the *animal, vegetable, and mineral kingdoms;*" "Good order among all *classes;*" and "*Everlasting-peas (peace).*" Some excellent songs were sung, among which were, "I'd be a *butterfly;*" "Fly away, pretty *moth;*" and "The *flea!* the *flea!* the ocean *flea!*" When the singing was over, *Hope* "told a flattering tale;" at the conclusion of which the party broke up.

JEMMY F-NN-LL.

LITERARY EXTRACTS.

GOOD LIVING.

A GERMAN TABLE D'HOTE.

WE do declare, after reading the following narrative, extracted from the *Baths of Pfeffers*, just published by that talented physician, Dr. Jas. Johnson, we shall be quite reconciled to our *sheep's-tail* in all its oily varieties. Nay, our country friends may continue to dust the potatoes with nutmeg, powder the cabbage and pumpkin with cinnamon, and bake the chickens to rags, just as it suits their convenience.

Among the "miseries of human life" might be ranked that of dining, or rather starving, at a German *table d'hôte*—and that, too, in the midst of plenty! It is in such a place that the paradox is explained—*inopem me copia fecit*. Sir F. Head has remarked, that "that the dish that is not acid is sure to be oily." If this were all, we should have small reason to complain. The misfortune is, that not only oils and acids are liberally distributed among his messes, by that infernal agent, the *Maitre de Cuisine*, but every loathsome ingredient that the three kingdoms of Nature can furnish, is crammed into every pot and saucepan in his subterranean dominion. Some philosophers have endeavoured to distinguish man from other animals, and elevate him on the scale of created beings, on account of his *cooking* propensities. I think they entitle him to an additional seven years in purgatory, if there be such a place, as our Catholic brethren affirm there is! One thing is clear, however,—that he is punished here below for the crimes which he commits against Nature, by "torturing dishes from their native taste," and mingling all unutterable things in that box of Pandora—his accursed culinary cauldron!

The succession is not less abhorrent to the English palate than the composition of continental dishes. It is generally believed that animal and vegetable food is designed to be eaten together; otherwise Nature would have furnished one side of the mouth with incisors and the other with grinders. In the "continental system" they take a very different view of things. When the vegetables (rather less than half-boiled, and swimming in oil) are on the table, there is no animal food—none, at least, that has not undergone more transubstantiations than Vishnou, and more metamorphoses than are recorded by Ovid. When meat smokes on the board, the vegetables have disappeared! The animal that was browsing or bleating on the mountains the preceding day, and slaughtered in the night, is burnt to a cinder, or boiled till little more than bones and sinews are left:—in either case, it is some degrees harder and tougher than well tanned sole leather. As for poor chanticleer, his oblation from the roost—decapitation in the court-yard—*auto da fé* in the kitchen—dissection in the *salle à manger*—and sepultre in some dark recess of a German stomach, occupy about three quarters of an hour—the five acts of the tragedy being often enacted *after* the soup has gone its round of the *table d'hôte!* If the uninitiated Briton sometimes screws his courage up to make an attack on one of those petty fortresses of filth, called "MADE DISHES"—or if he endeavours to stifle the cravings of Nature on sour bread, sour krout, or sour wine, he stands a fair chance to be visited with colic, if not cholera, before the day is over. Placed thus between Scylla and Chyrybdis—between the tortures of hunger and the terrors of poison, an oasis in the desert does sometimes greet his eye—a good substantial dish of capon, veal, or mutton. By an instinctive impulse, he brandishes his couteau, or solicits to be *helped* by a brother guest. But the fate of Tantalus is his doom. Just as the prize appears to be within his grasp, it vanishes with as much celerity as the dishes of poor Sancho did by the conjuror's wand, in the Island of Pandataria! The malicious waiter, aware of John Bull's propensities, never takes his eye from the savoury viand till he snatches it off the table, for dissection at the side board! it is two to one that John Bull never tastes the desired fare. It is handed round to every one, before the *rejecta membra*, reach him—if they ever do reach him, which is very problematical! Many a time have I seized the dish at the same moment with the waiter, and captured the prize by an unequivocal threat to chop off two or three of his fingers with my knife, if he persisted in his unhallowed "abduction."

Long experience has taught me, that the best plan for an Englishman whose stomach does not measure three feet in circumference, and who does not possess some secret antidote against all kinds of poisons, is to secure his place at the *table d'hôte*, and, when the soup comes in, to take a walk of full an hour round the town, and then come back to his place—when he may probably find a dish of some kind of animal food, biped or quadruned, with sour bread, on which he may dine. The "vin ordinaire" is, of course, ordinary destruction to all stomachs which have not the capacity for a pint of oil to qualify a quart of acid.

The foregoing sketch is not drawn from the ordinary of the Pfeffers—where, indeed, we had better fare than in many places of higher pretensions—but will apply very generally to the Continent. I am well aware that great numbers of my countrymen have become *acclimatè* (if I may use the expression) to foreign cookery—or, more properly speaking, *denaturalized*, as to every thing which they put into their stomachs. By such folks I have been often asked—"how is it that the people of the Continent live and thrive on the provender which you condemn?" My answer has been very short—and I have never received a satisfactory rejoinder. They do *not* live and thrive on the cookery which they use. On the contrary, they wither and die on it. The bills of mortality, in the most favoured parts on the Continent, as compared with the same gloomy registers in England, prove, beyond contradiction, the shortest range of existence enjoyed by the inhabitants of the former, notwithstanding their advantages in respect of climate: while the unhealthy aspects, the stunted growth, and the large proportion of deformities, that meet the eye and attract the notice of English travellers in every part of Europe, attest the deleterious agency of some general cause on the human frame. As that agency can hardly be sought either wholly, or even principally, in the climate, the soil, the air, or the water, (excepting, of course, certain malarious and goitrous localities in Italy and the Alps,) we have fair reason to attribute much of the curtailment of life and deterioration of health to the denaturalization of their food by complicated cookery—to their inordinate addiction to tobacco—to *malpropre* habits—and to the quality of their drink. If oily, acid, or rancid dishes, elaborated "de omnibus rebus et *quibusdem aliis*,"—half-boiled vegetables—meat just killed and then cinderized—with sour wine, be wholesome and nutritious, then the people of the Continent ought to live to the age of the Antediluvians

Another fallacious argument has been adduced in favour of continental cookery and continental habits: namely, that the English enjoy good health while travelling, or even sojourning there. This may be true to the full extent, without invalidating the arguments adduced above. The English owe this improvement of health to climate, to change of air and scene, to the exercise of travelling, to earlier hours than they kept at home—and perhaps, in some degree, to the excitement resulting from novelty, and intercourse with strangers. I

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

maintain that their health is neither improved nor sustained by the adoption of continental habits in eating, drinking, smoking, and some others which I shall not describe.

GOING FORWARD.

"Looking neither to the right hand nor to the left."

THE members of the Marylebone Literary and Scientific Institution assembled at the Lecture Room in Edward Street, Portman Square, on Wednesday evening. LORD BROUGHAM, Patron of the Institution, was in the chair. After the business of the evening had been gone through, a vote of thanks to Lord Brougham for his patronage and services was passed. His Lordship delivered a long address in reply, the conclusion of which was as follows:—"I have often been told that I went about voluntarily attending meetings of the public, and that I was wrong in doing so. This is not the case. The story of my attending meetings voluntarily on my journey in Scotland is a positive fiction. I have attended but two of my own accord—one for the purpose of meeting my friend Earl Grey, at Edinburgh; and the other to meet my friend Mr. Bannerman, at Aberdeen. It has happened that in various towns the people have assembled, whom I had served by contributing to afford them the freedom of election, and I could not refuse to acknowledge them, when fatigue would have impelled me to decline; but I have come here voluntarily to-day, and any man that pleases may stigmatize the act as unworthy. It was understood to be the business of a public man to meet the people sometimes; but I have been told that I have done so for self-glorification; but I will say that if I have done some public service with my name, I have accomplished much more privately, and in a manner that no one knows, in periods stolen from my professional avocations. Not the thousandth part of what I have written upon subjects calculated to be of public benefit is known or suspected to be mine. Ten or twelve years ago I wrote courses of lectures which were then delivered, and are now delivering over the country, but which were anonymous, and the author was known but to one individual, the person who directed their distribution. People may work in a good cause for the love of employment; they may be actuated by enthusiasm; but it does not follow that the motive is a selfish one. I merely state this in consequence of the allusion that has been made as to the expence of lectures, and to show the possibility of my being able to lecture anonymously, perhaps, for the next twenty-five years. This may be deemed to be fanaticism, but I shall never mind what any man or set of men please to say of me; I shall just go on as usual, in the path I conceive to be the right, looking neither to the right nor to the left."—*Sun.*

SELECT NOTICES.

Cottage Lectures.—The Bishops of Chester and Winchester, are most active in giving every encouragement to Cottage Lectures. For this purpose their expositions on the sacred writings are circulated in a cheap form.——*A Blooming old Lady.*—An American gentleman who was lately introduced at the British Court says, in an American publication, "I saw quite an elderly lady on the Queen's right hand, whose *paint* laid upon her cheeks, reminded me of nothing so impressively as the wife of a Winnebago Chief, in the N. W. territory of America, whom I have frequently seen, as she came from her toilet over the mirror surface of Fox River, with the aid of an abundance of vermillion."——*National School Society.*—Great complaints have been made against the alleged apathy of the Episcopalians, that a general collection throughout England, extending to "our Town of Berwick-upon-Tweed," and "Flint, Denby, and Radnor in Wales," under authority of the King's letter, only produced to the Society £23,490.—— *National Intercourse.*— A Post Office has been established at Damascus, for the transmission of letters every twenty days between that city and Bagdad; every fortnight with Aleppo; and twice a week with Beirant.——*Cowper's Life and Poems.*—The Revd. Mr. Grimshaw is publishing monthly volumes, after the manner of the new editions of Crabbe, Johnson, and Burns, the Life and Poems of the immortal Cowper, with original notes. On this subject a paper war has commenced among the publishers. Mr. Grimshaw having stolen a march on Dr. Southey, who had prepared a work precisely on the plan of the reverend divine.——*Honours and Remarks to Literary Men.*—The complaints of the neglect paid to genius and talent has been attended to. Many knighthoods have taken place; and the restoration of the pension of the associates of the Royal Society, has been hailed with applause. Mr. John Barrow has obtained a baronetage, and Croly has been presented the living of St. Stephen's, Walbrook. Good old Dr. Jamieson, the Scottish Burgher minister, with Mr. Dalton and others, have also had their pensions restored; and Professor Airy has obtained from Government an annuity of £300, in consideration of his eminent services to the cause of general science; and Mr. Bennett has been appointed, by Government, Naturalist at New South Wales.——*Russian Clergy.*—The number of the Clergy of all ranks in Russia, is about 215,000, and they are mostly dependent on the free will offerings of their people for support. Their subsistence is often scanty, on which account many of the village clergy cultivate the fields with their own hands.—*Pinkerton.*

HARD SAYINGS.

EUROPEAN SETTLERS.

(*From Howson's South Africa, p. 235, vol. 1*)

I am aware that many persons will ask if the extermination of savages, of barbarians, is at any time to be regretted, and least of all when their place is to be supplied by Europeans and civilized beings? and as this objection may appear plausible, it will be well to submit it to examination; and, in the first place, it is proper to remark that when we talk of peopling a country with civilized beings, it is always taken for granted by the mass of society, that persons of education and refinement are to be transported there at once, and that the wilderness or desert is suddenly to become the abode of a virtuous and intelligent community, and the seat of arts, elegancies, and domestic enjoyment. There are dreams produced by ignorance and delusion. In every instance, the emigrants who first flock to a new country, are inferior to its aborigines, in virtue, intelligence, usefulness, and respectability.

The dregs of the population of large towns; a peasant rendered desperate by the pressure of hopeless poverty; debauchees and spendthrifts, destitute of friends and credit; such are the materials which form the foundation of the anticipated structure of civilized life; such are the beings who are let loose to play pranks in the wilderness, and commit ravages upon its simple and uncorrupted inhabitants. Transported into a new land, freed from the terrors of laws and police, and independent of their superiors, they rush into all kinds of excesses, and feel a particular delight in frightening, oppressing, and enslaving the aborigines of the country. These, if they attempt to assert their rights, are maltreated and massacred as insulting and dangerous barbarians; and if they quietly submit to the tyranny of their invaders, they are counted as beasts destitute of spirit, and unworthy of mercy and commiseration.

HANNAH MORE

AT A DISSENTING COMMUNION.

Dr. Valpy, whose lamp is still burning brightly in old age, has published Reminiscences of that distinguished lady, the late Hannah More. Dr. V. once said to her, "is it true what the Anti-Jacobin Review says of you, that you received the communion in Mr. Jay's Meeting House, in Bath? She told me that it was true—the facts, she said, were these. On her appearance in the meeting, she was led from aisle to aisle to the very highest seat: she did not know that the Lord's Supper was to be administered; but after the ordinary service she saw all the persons remain around her, and apparently every person in the congregation remaining to receive it; and she wanted nerve to leave the place alone or unattended. (The bread and wine were brought to her to the pew, as is the custom among the Dissenters.) "The front, therefore," she said, "of her offending, had this extent—no more," and her peace of conscience, she added, had never been interrupted by the recollection of that circumstance."*

* In selecting this extract, we are reminded of two circumstances somewhat similar to the particulars recorded. We were gallery spectators on one occasion of a communion among Dissenters in a county village. A stranger entered, and took his seat in what was called the *Tabled Pew.* This was reserved for Communicants, and it was Sacrament Sunday. The Deacon was about passing the stranger, when the latter arose, and extended his hand to the cup. He partook of the Ordinance. The unbidden guest was that worthy man, John Marten Cripps, M. A., of Jesus' College, Cambridge, the cause and companion of Dr. E. D. Clarke's Travels.

On another occasion, at the same Meeting House, a stranger entered and partook of the Sacrament, and this was that upright and distinguished man, James Forbes, F. R. S., Author of the *Oriental Memoirs, &c.*—ED.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

HOLIDAYS, — WYNBERG, — DUTCH CHURCH,—EPISCOPAL RUINS,—THE SUBLIME AND BEAUTIFUL.

WHO is there among us, that does not hail the return of those few Cape holidays, which now and then set us free from the world's strife and all its "carking cares." We have always thought the notices of these returns in Mr. Greig's Almanack, were the best part of that Annual. Viewing these days as drawing us away from our pent-up streets, with no health in the breeze, where the sun-shines so scantily and flowers are never seen, we rejoice, we say, in their return, and generally rusticate among the groves of Wynberg and its vicinity, whenever these opportunities occur.

Wynberg is truly a British Village, and right glad are we to discover a growing interest taken by its British Inhabitants, Mr. High Sheriff Steuart, Mr. Bird, Mr. Carey, Major Rogers, Capt. Hare, Mr. Hamilton, Mr. Marshall, Rev. Dr. Okes, and the Indian Visitors, to establish and support Institutions of a benevolent nature, for the good of the whole Community. Among these, we would class the foundation of a Benefit Club. It appears to us, that this Institution is calculated to bring about incalculable good, and we recommend it as a model-club to the colony at large.

As it regards the village of Wynberg itself, its beauteous site is disfigured by a couple of objects. The new Dutch Reformed Church wears the appearance of a Pack or a Wine House; and, the unfortunate Episcopal Church, fell down just at the moment of the completion of its roof. It is now a heap of *ruins*. Ruins, do we say? Well, doubtless, some of the neighbouring gentry, or Mr. Skirrow, intended that it should be so. Many a Nobleman has laid out costly sums to procure a heap of *ruins* on his estate. Such are picturesque, and convey correct ideas of the *Sublime and Beautiful*. The historian of John Knox, (Mc'Crie,) archly, apologizes for the Reformer's Knight errantry against cathedrals and monuments, and considers that the men of *taste* should less deplore their destruction than they do, seeing they cultivate the *taste*,—afford so much pleasure to the painter's pencil, the poet's eye, and vary the landscape scenery.

But seriously, we trust the people of Wynberg will again all strive together to build up the walls of their own Jerusalem. It is really a disgrace for a people to live destitute of a christian temple. Let one more appeal be made to the public for Wynberg, and we think the call will not be in vain. It redounds to the immortal honour and glory of an Englishman, that all the world concedes to him the point of being foremost in the ranks of christian philanthropy. Let the people of Wynberg and their friends think of this; and when the scriptural question is put in this colony —"What do *ye* more than others?" we trust ere long the inhabitants may point to their English Church, and say:—

> Let strangers walk abroad,
> The Village where we dwell,
> Compass and view the holy ground,
> And mark the Building well!

EXPEDITIONS INTO THE INTERIOR OF SOUTH AFRICA.

Intelligence has just been received from the Cape Expedition under Dr. Smith, dated 28th April, *Kuruman* or *New Lattakoo*. Everything was going on well, and the Expedition was in communication with, and preparing to visit the powerful Chief *Masilikatzee*. Dr. Smith has made valuable additions to Natural History, speaks highly of the London Missionary Society's station at New Lattakoo, under the superintendence of the Rev. Mr. Moffat, where, observes Dr. S. "religion and civilization go hand in hand with rapid strides."

EXPEDITION DIRECTED BY CAPTAIN ALEXANDER,

Under the Patronage of the Royal Geographical Society.

This Expedition consists of only one adventurous traveller, Captain Alexander, furnished, however, with the means of equipping a suitable party to accompany him from the Cape; and his object is purely that of a pioneer, to push beyond previous lines, and collect information for other travellers.

On Capt. Alexander's arrival in this colony in the *Thalia*, in Jan. last, he was introduced to His Excellency the Governor, and, according to letters of recommendation, placed on the Staff. In this situation, Capt. Alexander's services were required on the Frontier in the suite of His Excellency, from the unfortunate breaking out of the Caffer Irruption. Thus circumstanced, a necessary delay has taken place as it regards the Expedition. The following is a copy of the Instructions addressed to Capt. Alexander.

"SIR,—The council of the Royal Geographical Society of London having intrusted to you the conduct of an expedition of discovery in South Africa, furnish you with the following instructions relating to it, confining themselves therein to the more important and essential conditions of the undertaking, and leaving the minor arrangements to your own discretion. They will, however, transmit to you hereafter such memoranda and notes of information, or advice, as may seem likely to be useful for your further guidance.

"The interval of seven or eight months which will be spent in the voyage out, or in residing at the Cape, may be advantageously employed in acquiring expertness in the use of the astronomical and other instruments, and in studying the Sichuana language.

"It is hoped that you will be conveyed in one of his Majesty's ships of war to Delagoa Bay, where it is not desirable that you should arrive before the termination of the rains, or the beginning of May, 1835.

"The general object of the proposed expedition, is to explore the river Manice, which flows into Delagoa Bay, (and which is named by the English King George's River, by the Portuguese and other nations Rio del Espiritu Santa), so as to ascertain whether or not it be indentical with the river of the interior which the Bechuana call the Mariqua.

"The farthest point of this river explored by Captain Owen, is in lat. 25° 21' 10" S., and about long. 32° 51 E.; being about fifty miles from the mouth along its course, but not more than eight from the nearest point of the sea-shore. It may, therefore, be advisable to land on the coast in about lat. 25° 27' S., and then to strike in towards the river, so as to avoid the labour of making up against the stream, as well as abridge materially that part of the journey which would conduct through a low alluvial soil.

"On your arrival in the bay, your first care will be to select a guide and interpreter, from among the chiefs if possible: this business, with the procuring of bullocks to carry your baggage, the choice of a place of debarkation, &c., may occasion a delay of a few days; but promptitude in the selection of your plans, which will materially result from previous diligence in collecting information, and the most despatchful execution of them, consistent with prudence, are especially recommended to you, as delay on the coast is likely to give rise to numerous unforeseen difficulties.

"The most northern point of the river Mariqua seen by Messrs. Scoon and Leckie, is, probably, in lat. 40° 50' S., long. 28° 30' E., and, consequently, about 300 miles in a straight line from the farthest explored point of the Manice. If the former of these rivers communicates with the latter, the unexplored portion of the connected stream may possibly form a circuitous course of 360 miles, or six week's journey; but how far it may be advisable to shorten the route by leaving the circuits of the river, and proceeding directly to its upper reaches, as they may be indicated by the natives, will be best determined by the circumstances which arise in your progress. It would, indeed, be highly desirable to learn the character of the river, and to what extent and in what manner it is navigable; but this consideration must be held subordinate to that of safety, in providing for which, it will, perhaps, be found expedient to follow the most frequented routes, and the line of densest population. The Mariqua once reached, the difficulties of the journey may be considered overcome, and a few days' march southward will conduct to a missionary station.

"The council expect that you will keep an exact register of all astronomical and meteorological observations, and that you will note carefully the variations of the compass, and the bearings

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and estimated distances of every remarkable object in view.

"In your intercourse with the natives, you are recommended to maintain a deportment at once resolute and confiding, to avoid associating with any but chiefs, and to accept, and even press them to an exercise of that hospitality which they regard as a moral obligation.

"You are requested not to neglect any opportunity which may arise, in the course of your journey, of despatching to the Society's correspondent at the Cape, to be forwarded to the Society, an assurance of your safety, and an account of your proceedings.

"The council place at your disposal a letter of credit on Messrs. Borradaile and Thompson, at the Cape, for 300*l.*, which sum it is expected will be sufficient to defray the expenses of guides, interpreters, the journey through the colony, and the passage home to England, as well as to purchase such small additions as may hereafter appear necessary to be made to the stock of merchandise with which you are already provided.

(Signed,) W. D. COOLEY, Hon. Sec.

To the Committee appointed to organize the Expedition.

GEORGE.

A remarkable instance of good feeling, which, we trust, is a prelude to its enlargement throughout the Colony, has been recently displayed at George. The Rev. R. Nesbit, of the Church of Scotland, (a resident at present in the Colony from India,) was requested, during a country excursion, to occupy the pulpit of the Reformed Church at George, during the absence of the stated minister. Here Mr. Nisbet found a willing people, Dutch and English, paying devout attention to his earnest and pathetic appeals in the English language, and the young in particular are described as being greatly attached to the good minister. And no wonder, for to them he paid peculiar regard.

On the eve of the departure of Mr. Nesbit, a grateful Address was presented to him, which was acknowledged by a suitable reply. (See the documents in the *Commercial Advertiser*, June 17th.) The following are the names of the Inhabitants of George who signed the Address:

W. H. Hulme
S. J. Schoonraad
Sophia Smith
Widow Harding
Susan Douglas
Jemima Johnson

SUPPLY OF WATER.

THE Superintendent and Committee of Waterworks, are still actively at work for the public good. We have become so habituated to the blessings of a large supply of pure water, at this extremity of the colony, that it has hitherto caused no more surprise than the regularly returning light of day, or warmth of summer. But a retrospect into past times may still awaken us to a sense of our obligations to advancing art and science. How often formerly, did periodical pestilence in Europe, arise from a deficiency of water, and how often has fire devoured whole cities, which a timely supply of water might have saved. Kings have often been accounted worthy of divine honors, for having constructed aqueducts to lead pure streams from the mountains into the peopled towns.

For a long period, the inhabitants of this town were supplied with water from the springs in and under Table Mountain. These springs in the Dutch time, flowed into two Reservoirs in the lowest part of the town, and to carry water for the bare supply of a family, was an expensive and serious affair. Lord Caledon laid down iron pipes imported from England, conveying a plentiful stream to pumps in almost every street. The Government of Sir Lowry Cole effected much in husbanding the water resources, and conveying it through pipes to the dwelling houses of the Inhabitants, thus conferring additional benefits to the community.

The Establishment of a Committee of Waterworks by the late Governor, has conferred on the inhabitants a boon of no small importance. The springs were found greatly to withhold their accustomed supplies during the last summer, and down to the present time. And this, too, at a time of increased demand from a growing population, the establishment of manufactories, distilleries, and the extension of our shipping interests. As it regards the latter, a single ship in the Bay, during last month, took in 750 tons of water in one week; and others have been known to proceed to St. Helena to secure a full stock. The existence of this state of things would naturally cause alarm; hence the Government warnings to the Inhabitants. But thanks to the Committee, their inquiries and exertions have opened up another resource to meet the exigency of the case. A spring at Newlands (6 miles from town,) bestows freely 700,000 gallons of water *per diem*, and plans are now in vigorous operation to lead this supply to town. Independently of trade, commerce, and domestic arrangements, we may expect from this happy result cleaner and sweeter streets; the dust laid in summer, and the canals purified from filth, rats, frogs, and musquitoes. We may also lose the sight of an *unwashed* proportion of the population.*

CAPTAIN SWORD AND CAPTAIN PEN.

UNDER the above title, Leigh Hunt has published a Poem. The object of the work is to point out the horrors and cold-heartedness of all the "pride, pomp, and circumstance of glorious war," and to use the words of the author in his preface, "to shew the false ideas of power produced in the minds of its leaders; and, by inference, the unfitness of these leaders for the Government of the world." The Poem constructed with this end in view, is an allegory, wherein Capt. Sword is the embodied idea of a military hero, and Capt. Pen represents the Press. The Poem opens with a picture of the grand march of the army for the field; the next scene takes us to a battle; the third to a Ball given to Capt. Sword after his victory; whence, as a contrast, we are carried back to the inconceivable horrors of the abandoned battle-field. The military gentleman is then shewn drunk with success and power; and Capt. Pen appears upon the stage.—*Spectator.*

* The horrible stench from the canal at the upper part of the Heeregracht has been intolerable during the present month.

WINDOW MUSINGS.

BLESS me, how fine that old lady is! So it is—as a woman advances in life she increases in finery,—so the cow's age can be accurately known by her rings.

OUR little patriots, those who change sides *now* and *then*, like little birds, only open their mouths for something to put in to stop them.

WHAT a fuss about Caffer ingratitude, baseness, rascality, and treachery; but dear me! what were formerly called cannibals in Europe, are now called *Cousins*.

SEE, there goes the rich Mr.———, how fat he is growing;—the rich man's merits we mete out by the *pound*.

LOOK there!—how polite that gentleman is; there is always an alchymy in manner which can convert every thing into gold.

WHAT a hustle that man is in,—he always appears to me to resemble a watch which is always faster than others; and, consequently, always wrong.

POOR fellow, there he goes—nothing left but Hope. And what is Hope? Why, like Paganini, Hope draws her sweetest sounds when she has only one string left to play upon.

HEART-BURNINGS IN CAFFRARIA.

A Correspondent writes—"There's been a kick-up between O— and R—, with some others, on the score of precedency in the army. The former was gazetted "*Gentleman*," and the other "*Esquire*." Now, the '*Squire* contends that he is the best man, the other denies it poz., but neither can explain the matter."

Well, then, we shall do it for them. In St. Mary's Parish, Lichfield, the baptism of the great Samuel Johnson is recorded in the Church books. "His father is there styled *Gentleman*, a circumstance of which an ignorant panegyrist has praised him for not being proud; when the truth is, that the appellation of Gentleman, though now lost in the indiscriminate assumption of *Esquire* by butchers, bakers, and others, was commonly taken by those who could not boast of *gentility*.*

After this explanation, we trust that all the new-made 'Squires will doff the cock's-tail feathers.

* See Croker's Johnson.

EDITORIAL AND PRINTING CHANGES.

The *Advertiser* is happily rescued from all negotie winkel concerns, and has become exclusively the property of Mr. Fairbairn, sole Proprietor and Editor. We augur the best things from this change, the *Advertiser* having now become, in the true sense of the term, *a Free Press*. We now hope to witness a reduction in the charges for advertisements.

Mr. Greig having rented the *Government* Gazette, is employing his talents in the collection and editorship of its advertisements, for to the latter branch of dealing it is exclusively confined.

Mr. Bridekirk has retired from public life, to enjoy the *otium cum dignitate* of his country villa.

Mr. Pike, so long the faithful and honourable Printer and Superintendent of Mr Bridekirk's Office, is now the Proprietor of the Business, associated with Mr. Richert. We take the liberty of recommending Mr. Pike's Printing Office to the public in general. No *sleeping partners* have the least interest in the concern, the Proprietors are *working*, but not party men; and, as perfectly distinct from trade and merchandize, they are not influenced by *Rise or Fall*,—the prices of "dry goods and tobacco's."

SCRAMBLING.

It is inconceivable—the anxiety and watchfulness on the part of very many persons to be in government employ. The applications to the Home Government for places were never more numerous (according to the papers) than during the month of January last. The people of England (*Scotland* more so), of every rank, from a peer's son to an exciseman's, are drawn aside from a praiseworthy exertion in honest callings, by having their eyes directed to the public treasure. The rewards of persevering industry are too slow for them, too small, and too stupid. They fondly trust to the great lottery, although the wheel contains so many blanks and so few prizes; hoping that their ticket may be drawn a place, a pension, or a contract, a living or a stall, a ship or a regiment, a seat on the bench, or a stool at a *pink-tape* office. As far as we can judge, the army, it would appear, generally contrives to ensure a prize.

But, is it not humiliating to witness the indecent scramble that is always going on for these prizes? even the sons of nobility, many of the highest born, and others the best educated, rolling in the dirt to pick them up, just as the lowest of the mob do for the Tory shillings or Whig pennies thrown among them by a successful candidate at a contested election?

INTELLECT IN THE HOUSE.

On the authority of the Westminster Review for April, it would appear that during the debate in the House of Commons on the Irish Church, many members were heard to pronounce the words—"spoliation and robbery." We hope better things of our Graham's Town orators.

THE RABBLE.

"Who made the rabble?" inquires the author of "Illustrations of Social Depravity," a monthly periodical published at home. "Was it themselves? Was it an absolute and tyrannic law of nature? Was it the Almighty? Speak out;—Who made the rabble? Why, the Game-keeper and the Squire, the Clerical Magistrates, the Church-wardens and Overseers, and the Exciseman." Now this is too bad—sweeping conclusions drawn from scanty premises. Not that we would be apologists for the culpable treatment of the poor people of England during the last century. We recollect Sheridan stating in his day, and during the time of the threatened invasion by Buonaparte, the deep concern which Pitt felt as minister, at not arousing the people to a sense of their presumed danger. It was in vain that good Mrs. Hannah More published her loyal Tracts, and Mr. Ackerman his caricature representations of the "Corsican Demon." The people were sunk in careless apathy, and indifferent as to a change of Government. Sheridan would always attribute the cause of making the rabble, to precisely the same causes as above stated.

BOUNCES BY THUNBERG.

THE HYÆNA.

The Hyæna is a bold and ravenous animal, which frequently *eats the saddle from under the traveller's head*," and the shoes from off his feet while he *lies* sleeping in the open air.—*Thunberg's Travels at the Cape, vol.* ii, p. 57.

THE LION.

The Lion is possessed of such immense strength, that he will not only attack an ox of the largest size, but will very nimbly throw it over his shoulders, and leap over a fence four feet high with it, although at the same time the ox's legs hang dangling on the ground.—*ib.* page 70.

THE NAMES OF THE REJECTED

AT THE HUNDRED AND NINETIETH SITTING OF THE BALL TRIBUNAL, CAPE TOWN.

(Extract from the Minutes, page 75,621.)

A. lives in lodgings; *B.* has but one coat for Sundays and work-a-days; *C.* uses wafers instead of wax, and neither dots his *i*'s, nor crosses his *t*'s; *D.* has been seen eating at a trades-man's table; *E.* married his wife at Gretna Green; *F.* has no silver forks at table; *G.* was born in a baggage-wagon; *H.* won't take a hand at cards; *I.* is opposed to field-sports; *J.* is a down-right radical; *K.* won't go with the stream; *L.* kissed his wife before marriage; *M.* keeps no horse or carriage; *N.* drinks *colonial* beer; *O* eats hashed mutton; *P.* refused invites to Government House; *Q.* is too much of a Quiz; *R.* never subscribes to the Race Course or Club Dinner; *S* is *censorious*; *T* makes a ham last five weeks, and grows parsley in a hat-box; *U.* is only a Liverpool trader, or *agent* for other people; *V.* is a whig radical; *W.* has a shabby look; *X.* (late Capt.) is a Destructive; *Y.* vends *parritch* pots and chamber utensils; *Z.* is a nobody-knows-who, and deals in *sneeze-'m, 'bacca, sheroots,* and Newcastle grind-stones.

A HINT FOR MORE MACASSAR IMPORTATIONS.

Q.—Our students are many, our schools abound, and the College was set up to take the lead in the march of intellect.—why don't we see the fruits of the *midnight oil?*

A.—Alas! that *oil* is all expended on the heads of our young men!

HEROIC BRAVERY.

On the 18th instant, a party of Gentlemen went on a sailing excursion in the recently launched vessel the *James*. Off Robben Island, in a sea by no means smooth, Mr. Zastron, of the office for the Registry of Deeds, one of the company, fell over-board and must have perished, but for the undaunted courage of Captain Herbert, (of the firm Herbert & Thornhill,) also of the party, who threw himself into the sea, and rescued Mr. Zastron from his perilous situation.

PLUMSTEAD VILLAGE.

A beautiful and costly monument of white marble has just been placed over the remains of the late Mr. Batt, formerly of that village. It bears the Inscription—

"Ob. 21st May, 1833,
Æ. 55.
Henry Batt, Esq. Plumstead Village.
For all flesh is as grass, &c. 1 Peter, i. c. 24 v.
So teach us to number our days, &c. 90 Psalm, 12 verse."

PUBLIC MEETING.

A good humoured Meeting took place in the Commercial Exchange on the 30th,—Col. Bird in the Chair. The object of the Meeting was to address His Excellency Sir Ben. D'Urban, on the success of his measures in Caffraria, and approving the same. An amendment was proposed and seconded by some gentlemen of well known independence, in reference to the *extension of the Colony*, which they, with many others, greatly deplored. The Address was of course carried. This better spirit of the meeting on the 30th, may be attributed to two causes. 1st, The wholesome lessons taught by a handful of independent men on the 8th of October last. And 2ndly, the judicious conduct of Col. Bird the Chairman. But for the latter, probably, some one or other might have attempted the pouring forth of *the 11th phial.*

"HE WENT THE WHOLE HOG."

"Mr. Secretary Cecil told the other members, if you stand upon law and dispute of the prerogative, hark ye what Bracton says;—*Prærogativam nostrum nemo audeat disputare.* Mr. Francis Bacon, *a whole hog man*, Sir, said, as to the prerogatives royal, he never questioned them, and he hoped they would never be discussed; this gentleman, Mr. President, *went the whole hog.*"—*(Irving's History of the United States' Senate.)*

Public opinion is too often in a vacillating state between right and wrong: it is convinced of its error, but has not courage enough and decision enough to adopt a decided course; *i. e.* as the Americans say—to go *the whole hog.* In that country, they observe of a bold uncompromising friend of civil and religious liberty, an unflinching philanthropist, who is not impeded in his course by pens dipped in liquid venom, or tongues imprecating fire and faggot, or is

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

not turned aside by "the world's dread laugh,"—

"HE GOES THE WHOLE HOG!"

That is, as we take it, he goes the whole length of his principles; he does not conceal them, or let them rust in oblivion; he takes a sincere interest in those concerns which effect the general, not the partial good. He is not discouraged by the wagging of heads, the ha, ha! so would WE have it; the shiftings of false friends, the haltings of the Timids, the Pliables, the Ready-to Halts, the scruples of the bit-by-bit reformers or philanthropists—*He goes the whole hog*,

He beholds men forgiving great injuries, but contemning great services; an excess of desert turned into a kind of demerit, profaneness, buffoonery, libels, lampoons, and satires, all opposed to his course, but—*He goes the whole hog*.

He finds his principles tried (and confesses, that *principles are nothing* until they *are tried*); he discovers many an old acquaintance passing by like the Priest and the Levite on *the other side;* he witnesses the scowl of the wordly eye, the upbraiding of the scorner's lip, the shoutings, the clamours, the treacheries of a "Mr. Hate-Good," a "Mr. Pickthank," "Mr. Blindman," "Mr. Hate-Light," "Mr. Implacable," "Mr. Demas," "Mr. Enmity," "Mr. No-Good," "Mr. Malice, "Mr. Live-Loose," "Mr. High-Mind," "Mr. Heady,"*—but he endures; he holds on,—*He goes the whole hog*.

He is not ignorant of the voice of the multitude which is set against him,—he beholds it as a flock of sheep, merely led or driven by the call of the herdsmen; but these things do not move him; he knows well enough, that a single mind at issue with all the world has effected the most glorious revolutions in political and religious society. He admires the lofty intellectual decision of an Alfieri, the mighty struggles of a Dante, the undaunted perseverance of a Milton, a Hampden, a Howard, a Wilberforce, and a Carey; and, he goes forward with doubled strength in spite of the World's opposition, and the barking of its curs; in a word,—*He goes the whole hog*.

* Names of the Jurymen who tried John Bunyan, the author of the Pilgrim's Progress.

OUR COUNTRY.

"Its gude to be wise, to be honest, and true,
And bide by the bonnets so blue!"

'WHEN a Ministry,' said Burke, 'stands upon private humour, its structure is of stubble, and its foundation is on a quick-sand! and so has it turned out with the choice of His Most Gracious Majesty, King William IV.

This great event we learn by the late arrival of the Sesostris, Captain Yates, bringing papers to the 13th of April. After a series of defeats on great questions of public interest, more especially that on the Irish Church, Sir Robert Peel and his colleagues laid down their office; and when the accounts came away, His Majesty was in conference with Lord Grey, Lord Melbourne, and the Marquis of Lansdowne. Thus, that active body of the movement party, which carried into execution the following principal measures during the last four years, are once more directing the councils of the Empire:—

I. Reform of Parliament.
II. Abolition of Colonial Slavery.
III. Reduction of Taxation. (The amount nearly *Six Millions*.
IV. The Retrenchment effected in the different Departments of the State.
V. The Law Reforms.
VI. The Poor Law Amendment Act.
VII. The Burgh or Corporation Reform. (Scotland.)
VIII. The opening of the China Trade.
IX. The Irish Church Temporalities Bill.
X. Reduction of Bishopricks, &c.
XI. The Plan of Education. (Ireland.)
XII. Grand Jury Bill. (Ireland, &c.)

This list will doubtless extend its dimensions, when all the measures contemplated by the passing of the Reform Bill shall have been carried. Several great questions are yet to be settled—The Church Rates,—Pluralities,—Irish Church,— Universities,—Dissenters' Marriage,—Registration,—Universal Education, and the Penal Laws, &c. will all undergo solemn review.

The men recently in office, with Sir Robert Peel at their head; let the reader not forget in reviewing this change in the national Councils, (as an historical fact,) were opposed to all real Reform. They comprised the foremost and most determined opponents of any Reform in the Representation,—were the vehement opposers of the Abolition of Slavery,—the protesters against providing for the moral and religious instruction of the negroes, 'on liberal and comprehensive principles,'— the subsidizers of Don Miguel, and the supporters of the Roman Catholic religion every where, but in poor Ireland. And now, whatever be the worldly politics of those at present in office, or those who may succeed them, it must be apparent that the religious interests of the British Empire are very unlikely much longer to repose where hitherto they have rested: the powers of change must be met and directed. Nor is it possible that a greater stake should be at hazard among any people; for the welfare of Britain, momentous as we must think it, is not all that is in question; since, with the religious and civil well-being of our own country, the moral and spiritual renovation of all countries in the great globe is involved. No national vanity is implied in saying so; for, none can look at the course of events during the last forty years, or anticipate those almost certain movements of the moral world which awaits us, without confessing that the brightest and fondest hopes we entertain on behalf of mankind at large, hang upon the auspicious or the ominous aspect of ENGLISH CHRISTIANITY,—of CIVIL AND RELIGIOUS LIBERTY.

QUESTION.

What is the reason that more deaths take place during the night than during the day?

ANOTHER.

What is the reason that the married gentlemen from India, "our Indian Visitors" in general, look squeamish, walk limpy, and exhibit symptoms of premature decay, while their ladies are as sprightly as larks, and happily preserve the rind of their countenances with undiminished lustre?

SCIENCE.

COOKING APPARATUS.

IN the Mechanics' Magazine for March, or, still better in the Gardeners' Magazine for the same month; our readers will discover much useful information, with embellishments, describing the Patent Cooking Apparatus invented by Mr. Weeks:—

1st. A Tradesman's kitchen range.
2nd. A Cottager's or a poorman's cooking range.
3rd. A Gentleman's kitchen range.
4th. An Hotel or Club house range.

We should think as it regards the three first, they require only to be known to be generally adopted.

CORRESPONDENCE.

Petreus van Wriggle won't do. The writer bears hard upon a highly respectable individual in trade, who has been made the victim of persecution from his manly avowal of attachment to the British nation. The author is, however, capable of affording innocent amusement, if he will be pleased to employ his pen for that purpose.

B. is completely in error as it respects Sir Lowry Cole and a public establishment of the colony. So far from being opposed to it, Sir Lowry was its warm and earnest supporter; and, if the writer is desirous of *facts*, and will pay us a visit, we will convince him of his unjust remarks in the twinkling of an eye.

WHAT IS EDUCATION?

No. 1.

It is most important for us all to be aware that much intellectual and moral darkness broods upon our land; that "Ignorance," to use the words of Lord Brougham at the commencement of the present year, "prevails to a horrible extent". None are safe, most certainly, in the centre of pestilence, in daily contact with evil passions, demoralization, and ignorance. But we must not sit down folding our hands and venting our regrets in unavailing sadness. Our fears are but inferior impulses, and are not adequate to generous purposes; of these purposes, higher motives are the fitting guides, noble faculties the ministers. The best selfishness (we address ourselves in this clause more especially to the Albanian Settlers), the best selfishness is *justice,* and higher yet, an unselfish benevolence, overflowing in its own disinterested remembrance. The Creator will not bless any lower motive to do good, or His system is arranged upon the unalterable supremacy of justice and benevolence in Creation; and Christianity, (not its *counterfeit*), is mainly addressed to these faculties in man. Till we ourselves have light, and truth, and love enough to see and feel that our own good flows as a *secondary* but invariable consequence, from our efforts exerted, *primarily,*—and in their *motives,* exclusively, for our fellow men, of whatever complexion, we shall in vain attempt to improve them,—we must first improve ourselves.

Besides being actuated by a powerful impulse to increase the general happiness, we must arrive at just notions as to the true nature of that happiness. It is an error springing from human capabilities to rest satisfied with the *physical* weal of our fellow men.

"Man shall not live by bread alone."

The benevolence of Henry IV. of France, yearned for the happiness of his people, but his ambition was satisfied with wishing that there was "a fowl in the pot of every peasant in his Kingdom." Had he directed his utmost Kingly power to achieve this physical object, he would have failed. It is by operating on the moral and intellectual man, or the men whose intellects are chained down by ignorance or government misrule.

It is in this way only that the only steady and permanent provision is made for his physical wants. The man must be capacitated to provide his own fowl, if he is to enjoy it often. The kind-hearted Monarch would have *given* the fowl, if he could, and often repeated the dole; but he would thereby have degraded the whole character of his people, and unfitted them for the attainment of substantial permanent prosperity. The only true channel of physical comfort will be found in cultivating intellectual and moral power. Besides attaining the self-denying, benevolently co-operating. and industrious habits, which live in the very atmosphere of an improved morality; an enlightened intellect looks before and after, observes relations, calculates *consequences,* according to the nature of things, avoids evils, and secures good. But this is not all; it is the humblest office of an elevated moral and intellectual character to improve the physical condition; when it has established bodily comfort, and what is a new contemplation for the thinking few, reasonable leisure from reasonable toil,—*an indispensable element* of human weal, physical and moral,—it is in itself a positive good, a source of direct enjoyment, far above the richest material possessions. The Creator, let it be remembered, has done His part. He has placed in the human bosom, without respect to persons, an intellectual *materiel*—which we are to light up—those of us who have the Talent committed to our trust. And woe be to us, if knowing our Lord's will, we hide the light, or put it out, or refuse to apply it. Like the torches that were carried by those who engaged in some of the ancient Grecian races, and that were rapidly transmitted, with undiminished brightness, from one competitor to another, as they moved along the course, knowledge must pass from hand to hand. It is given for the purpose of transmission: and alas! for him who arrests it in its progress, or in whose hands it is allowed to become dim.

If education shall elevate, as it will be shewn that education alone can, the intellectual and moral, and, by necessary consequence, improve the physical condition of man. Education is the human means which must greatly aid in *preparing* him to receive religious impressions in their genuine spirit, and to apply them to their intended practical ends. *Before* the Sower went forth to sow, the soil was prepared. This previous preparation is so plainly pointed out in the parable, that it is surprising any one can lose sight of it. He was on his way to the prepared ground, when some seed fell by the uncultivated way. He did not expect to prepare the soil by the act of sowing the seed, else the seed would have taken root by its own virtue by the bare wayside, and risen and ripened even among the thorns. We shall have occasion to return in the progress of this discussion to the important subject of a legitimate use of human means; these are, in truth, God's means, for they are

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the working of the faculties which He hath bestowed, that they may be employed. Let us not in the mean time be misunderstood, nor let it be supposed that we subscribe to the doctrines of Lardner and others, that—"Men must be rational and civilized before they can be Christians;" and again—"Make them good mechanics, and then make them good Christians." "On this principle," observes a distinguished modern author and traveller, (Dr. Lang,)

"A number of missionary-artisans, of various handicrafts, were duly forwarded to New Zealand, where the missionary carpenter accordingly built a specimen-house, as like an English house as possible, expecting, of course, that every New Zealander who saw it would immediately build himself a house on the same plan; but the New Zealander, who had looked on with perfect indifference during the operation, preferred a hut after the fashion of his rude forefathers, and continued to live as before. The missionary boat-builder was still less successful; for the New Zealand war canoe, impelled with the speed of an arrow by fifty paddles, could sail round and round his clinker-built wherry, to the infinite satisfaction of the islanders, let her do her best. The missionary rope-spinner was absolutely laughed to scorn for his awkward attempts at the application of British machinery to the dressing and manufacture of the native flax, which the New Zealander could already manufacture into nets, lines, and mats for clothing, both useful and ornamental. The missionary blacksmith was doubtless a personage of more importance; but it was only because he could mend the lock of the crazy old musket, which the New Zealander had purchased from some English or American whaler, for a large quantity of pigs and potatoes, and with which he was only anxious to shoot his countrymen of some distant tribe, unacquainted with the use of fire-arms. And, although the stout missionary-ploughman turned up in one year, as he actually told me himself, no fewer than eleven acres of land which he had previously cleared, and which he afterwards sowed with wheat with his own hands, not a single New Zealander cared either for his plough, or his harrow, his crop, or himself. In short, for ten or twelve successive years the missionary-artisans and farmers cleared land, ploughed and sowed, sawed timber and built houses, plied the forehammer and spun ropes to *the dry bones* of New Zealand, without perceiving the least symptom of animation. They did every thing, in fact, but what God had himself commanded them to do two thousand years ago."

But once more we inquire, What is Education? What is understood by educating the people, according to the modern acceptation of the term? Is it of a kind to impart useful practical knowledge for resource in life—does it communicate to the pupil any light upon the important subject of his own nature and place in the Creation—on the conditions of his physical welfare, and his intellectual and moral happiness; does it, above all, make an attempt to regulate his passions, and train and *exercise* his moral feelings, to prevent his self-conceit, vanity, impracticability, destructiveness, cruelty, and sensuality? Alas! No. It teaches him to READ, WRITE, and CYPHER, and leaves him to pick up all the rest as he may! Now—reading, writing, and cyphering are mere instruments; when attained, as they rarely or never are, after all, by the working classes, to a reasonable perfection, they *leave* the pupil exactly in the situation where he would find himself, were we to put tools in his hands, the use of which, however, he may learn as he may. We shall come to our proofs on this point hereafter, and shall simply inquire (as it relates to intellectual Education)—How does it happen that mankind at the Cape think so little, except on any *given subject*, which excites—not their sensibilities, their intellect,—but their wrathy tempers and malignant passions. On any *given subject* we say!—Yes

"The hounds will gather to their hunt's-man's halloo,
And where he leads the duteous pack will follow."

No matter what the question be, provided the readers of the mass, or common herd, sit in hole and-corner, and devise the measures of action.

If we were asked what would prove the greatest effort of humanity, we should reply, to arouse men to the exertion of *Thought, i. e.* to THINK FOR THEMSELVES. Man has been defined as a cooking animal—a tool-making animal—a talking animal—and recently, by the Political Economists—an animal that makes exchanges; but the worst definition ever given (as applied to man at the Cape of Good Hope,) is that of a reasoning animal.

Man, *here,* is *not* a reasonable animal. It is by no means his characteristic. He is essentially the creature of *habit,* not reflection. Hence he has not the *ruminating* intelligence of the cow or the hare. *Here,* man is the creature of feeling, not of principle. He takes his opinions on trust, and resigns himself to the guidance of others, and therefore we still find him what he has ever been—the slave of prejudice and credulity. Much of the business of the Cape world, and nearly all its pleasures, are laborious efforts to escape thought. *Time* and *thought* are the grand enemies which are attempted to be hurled down, and if possible to be destroyed, as preservatives from listlessness and vacuity. Independent thought, and a generous espousal of the common rights of humanity are to be suppressed—now, not by Fiscal oppression, by the sealing of types and presses, and the banishment of printers, but—Oh! the world we live in!—by placard conspiracies even among those, who assume the aspect of sincerity, and have long affected a regard for the liberty of the press.

Here let us pause—there are honourable exceptions—"the noble few" who dare to be singular,—the

"Faithful among the faithless,"

who consider the Will of God as the Rule of their Conduct. To this small, but, happily, increasing number, we submit a few words of encouragement. Painful as it is to contemplate the existence of malignant detraction and party virulence and misconception,—those engaged in the righteous cause of Humanity and Justice, ought not only to feel no discouragement at being so assailed, but to congratulate themselves on finding such weapons employed against them, rather than on their side. And in particular, every one who is engaged in exposing and endeavouring to rectify any existing evils, should be prepared to encounter from those whose interest or prejudices enlist them on its side, with opposition the more strenuous in proportion as his efforts are the more likely to succeed. So far, therefore, from being intimidated, he ought rather to be encouraged by such opposition, as being a most favourable sign. Whitfield used to say, no good was done until the Devil began to roar.

Lastly:—To him who is engaged in the cause of Truth, it is one of the rewards of unflinching, undeviating, unwearied, patient perseverance in it, that he will obtain more and more of a full and calm confidence in its ultimate success: he will be more and more satisfied that though sophistry and calumny will often, for a time, overlay and disguise the truth, as the snow-drifts of the Boggeveids do the surface of the earth in that part of the colony, they are no less certain to melt away, and open up scenes of vernal beauty and delight.

What is Education? Second Part, in our next.

A FRAGMENT;
OR, HEEREGRACHT RECOLLECTIONS.

BEAUTIFUL was the night; a cooling freshness floated through the air; speckless of cloud or dingy mist was the whole expanse of the heavens; the twinkling stars alone threw out their flickering light; the stilly calmness

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

spread its wooing charms, and blest Serenity held unruffled sway. On such a night my three quondam chums had spent their evening with me joyously, and left me without a single regret but that of parting too soon! Their half-and-half short step, with the shouldering jostle, gave proof of their approach to that sort of obliviousness which should never be got beyond. Proceeding by the light of these twinkling luminaries which so kindly lend their aid to light this comparative foot-ball of a world of ours, they found themselves in the Heeregracht, where the ceremony of parting was about to take place, when Will Masquequeue, with somewhat astonishment in his manner, threw himself in the favourite attitude of the Wolf Song, and

Silence! Silence! Silence!

was never better given in any of Will's happiest attempts.

"What are you now at, Will?" exclaimed Peter, "got into the Heroics again?"

Will, stretching out his neck, whispered out—

"That sound again, it had a dying fall."

"De'il take the man," remarked Nathan Puller, "that music of yours will make you mad, Will."

——— "Hear ye nothing,"

gentlemen?

"Never a bit of anything do I hear but the he-frogs in the ditch, rehearsing amorous ditties to their Ladies' Eyebrows."

"O, it came o'er my ear like the sweet south
That breathes upon a bank of violets,—
Stealing and giving odour."

"For my part," said Peter, "I hear nothing but the low moaning of the waves on the beach of Table Bay."

"The man who hath no music in himself
Nor is not moved with concord of sweet sounds,
Is fit for treason, stratagem, and spoils."

"Go it," said Nathan, "we'll have something out by and by. O, I have it, Will; the sound you hear must come from our worthy Scottish friend at the corner touching his Highland notes, though I confess I hear as little music as my friend does."

"Or an Æolian harp in the pastry-cook's window," replied Peter.

"Or Ashen, of fiddle-celebrity," responded Nathan; "trying the abilities of some decayed instrument picked up at public sale to-day."

Will threw out a look of scorn at his friends, and pitching one of his B flat minor keys rather higher than necessary for common hearing, exclaimed—

"Preposterous ass! who never read so far,
To know the cause why music was ordained;
Was it not to refresh the mind of man
After his studies or his usual pain?"

"There it goes; I have it now, by jingo!" bawled out Peter, "a brace of tom-cats settling an old grudge in the back gang there; don't you hear them, Will?"

"Once I sat upon a Promontory,
And heard a mermaid on a dolphin's back,
Uttering such dulcet and harmonious breath
That the rude sea grew civil at her song,
And certain stars shot madly from their spheres—
To hear the sea-maid's music."

"Why, man, your own glimmers are starting," exclaimed Nathan; "see, you've dropped your spectacles."

"And only look," remarked Peter, "the front of his wig is perched frowningly over his left ear. Stars shooting spears, eh!"

"This must be the music of the *spears*, for I'm blowed if each note of it does not run through one, as Tom Moore says; there's quotation for you."

Will adjusted his wig and picked up his spectacles; and, with one of his soft insinuating looks, said—"My friends, bear with me for a little space, and follow me, you shall both hear and see."

He led the way to the Parade with stealthy step, almost afraid that the sound of his own foot-fall would cause a discord; when, to the amazement of the trio, the cause of the deception on Will's quick musical ear lay stretched before them, which was nothing in the shape of Highland pipes, or the appearance of a mermaid riding a dolphin, nor even a brace of wrangling cats, but, in propria personæ, a couple of our *trusty guardians of the night* stretched on the top of a pile of timber intended for public sale at Mr. Jones' next morning, and snoring in concert as lustily as though they had tried it on for a wager.

Poor Will was never more out in his life; quite chop-fallen with the issue of the concord of sweet sounds; his first impulse was to kick them soundly, but being restrained, he bawled at the very extent of his voice—

"You miscreant rascals! say, what do you here?
Is this a time for sluggish, soft indulgence,
When the approaches are beset with enemies,
And all we have entrusted to your care?
Up! up! I say; or ——— ———
——— ——— I will do you injury."

The vigilant protectors gathered themselves the quickest way they could, and marched slowly off, muttering something not to be understood. Will followed their example without uttering a word; Peter took his arm, and walked in mock solemnity by his side; Nathan followed, whistling—"Croppies lie down," "We are na'e fou," and "The Dead March in Saul."

REPORTER.

ON THE RADICAL TENDENCY OF SIR WALTER SCOTT'S WRITINGS.

"ALL TRUTH IS RADICAL."—*(Howitt).*

William Howitt, the Poet, and Mary Howitt his wife, are alike distinguished for their unbounded attachment to the great cause of the World's Freedom. In a series of monthly articles by W. Howitt, entitled—THE GREAT MODERN POETS GREAT REFORMERS," he has, to the surprise of the many who merely read with the eye of the body, rather than that of the mind, *i. e.* the superficial and unthinking people, placed Sir Walter Scott's writings in their proper light. It has been said, that Sir Walter Scott was the very champion of royalty and aristocracy; that rank, knighthood, feudalism, all that sanctioned *caste*, and the subjection of the interests of the multitude to the interests of the few,—were his favorite topics, and breathed through all he wrote. This is altogether a mistake. Look through all his more than half-a-hundred volumes of romances and poetry, and what are his subjects? Almost without exception, the whole of them that can be considered as having any political connection at all, celebrate the efforts of those, who struggle for their freedom against the despotism of existing governments; the people of Scotland against the aggressions of England; Protestant Reformers against the bigotry of the Church of Rome; the dear old Covenanters against the monstrous tyranny and aggressions of the English Church; and the Jacobites of the vile old Stuart dynasty against the present reigning one. If there be no political connexion, it is still always the oppressed against the oppressor, man groaning under the tyranny of his fellow man. The fact is, Sir Walter was a man of the highest genius; and genius, when it retires from the consideration of every-day subjects, from the *party topic* and feeling of the passing moment, into its closet, and gives itself up to its own glorious visions and emotions, is too noble to see any thing but the *broad light of everlasting Truth*, to feel any

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

thing but the majestic presence of Nature, and the quickest sympathies with struggling humanity. Like Shakespeare, he drew alone after the reality of life and action; and whoever draws so, draws suffering virtue—weeping truth—wisdom and knowledge, and honour contending with the perpetual assailments of *tyrant selfishness, false views of society*, and the barbarous maxims and institutions of dark times. He draws merit as belonging to every gradation of rank; and *cruelty and intolerance* odious in all. Whoever writes and feels this, may call himself what he will; he is a man of the true stamp; HE WRITES FOR MAN; and the spirit of man will respond to his call, with an energy that has in it perpetual increase of intelligence and freedom. Such a man cannot be Tory. If he calls himself so in the street, at the dinner-table, or even in the hall of public meeting, he goes into his study and gives himself a glorious contradiction. There humanity cries to him from the depths of its sorrows and its wrongs, and his great heart throbs at the sound; there the *sighs of the widow and the fatherless are brought to him on the winds of God's providence and his whole frame burns and trembles to assert their cause;* there in his ear sounds the clanking chain of those held in captivity; there, he beholds the poor exile, *his beard grown white* by sorrow; the tear of him who is scorned by the lifted-up and buffeted by the strong, falls and glitters before him, and he starts up and cries—"I, TOO, AM A MAN, AND WILL NOT BROOK THE INJURIES OF MY FELLOWS!"

Than Sir Walter Scott, there never existed an author to the hollow arts of Priestcraft, in all its varied shapes and modified relations. But we leave Sir Walter's church politics—a far wider field is before us, and one thickly strewn with the evidences of a free-born and freedom-breathing spirit. Let William Howitt speak for himself.

Who is the true hero of "WAVERLEY?" It is Vich Ian Vhor. It is the young, ardent, heroic chieftain, with all his romantic and faithful Highlanders about him, setting out on the fond but hopeless expedition to restore a faithful king to his throne. It is, to use the author's own words, "Fergus, the bold, the chivalrous, the free-minded, the lofty chieftain of a tribe devoted to him; it is he that led the chase, and headed the attack; the brave, the active, the young, the noble, the love of ladies, and the theme of song." It is he—now forming, with his beautiful and devoted sister, Flora MacIvor, amid their wild mountains, in their own mountain tower, high and generous, but fatal dreams of loyalty; now collecting around him the enthusiastic tribes of the Gael; now marching with the prince of their devotion to the battles, scattering in their bravery the troops of a mighty monarch before them; and it is he, now ironed like a malefactor, dragged to the common gallows, to die a lingering and cruel death, and to be mangled by the hands of the most outcast of wretches." He is the hero of this impressive story—his sister the heroine. Waverley and Rose Bradwardine are very amiable, and we sympathise in their fortunes, and rejoice in their triumph; but they are, after all, secondary personages. It is about the young chief and his heroic sister that our enthusiasm gathers; it is at the contemplation of their noble natures and high aspirations that our hearts beat quickly; it is at the bloody tragedy of Carlisle that we stand stunned and confounded. The same interest is revived in "ROB ROY" and "REDGAUNTLET;" and, in "OLD MORTALITY," it is not the crown and the Cavaliers, but the persecuted and resisting Covenanters, that are presented to our admiration. It has been said by the descendants of the Covenanters that Scott has caricatured them * He has certainly made ample use of that portion of fanaticism, of that rude enthusiasm, and that wild application of Scripture language, which characterizes them, along with their *high principles and righteous zeal*; but it cannot be denied that he has strongly made us feel that theirs was the *just cause*; that it was the Crown which was oppressive; and that theirs was only the alternative of dying a physical or moral death—of being cut down like sheep in the very moment of their worship, or of fighting like men for hearth and altar. It has been said, too, that he delights to paint Cavaliers and men of rank in flattering colours. Where? Has he made Claverhouse very attractive? He is polished, polite—but arbitrary and bloody. Nothing strikes me so much as the impartiality with which he describes all parties, and leaves the merits of the cause to speak to the heart of every intelligent man. He says himself—"Upon the whole, I can hardly fear, that at this time, in describing the operations which their opposite principles produced upon the good and bad men of both parties, I can hardly be suspected of meaning insult or injustice to either. If recollection of former injuries, extra-loyalty, and contempt and hatred of their adversaries, produced *rigour and tyranny* in the one party, it will hardly be denied on the other hand, that, if the zeal of God's house did not eat up the conventiclers, it devoured, at least—to imitate the phrase of Dryden—no small portion of their loyalty, sober sense, and good feeling. We may safely hope that the souls of the brave and sincere on either side, have long looked down with surprise and pity upon the ill-appreciated motives which caused their mutual hatred and hostility while in this valley of darkness, blood, and tears." Nothing appears more just. If the Covenanters are described with some extravagances about them—which *naturally clung to men pursued with fire and sword*, for those very principles which they felt to be their very best possessions—which present themselves most attractively to the spirit of the reader?—they, in their rude poverty and natural excitement—or the cold and tiger-like Claverhouse, or the Lords of the Council, armed with their thumb-screws and iron-boot? And where, indeed, shall we look, in the whole wonderful series of his works, for those portraitures of kings and rulers that are to make us in love with royalty and rank? Is it in the character of Elizabeth, as displayed in Kenilworth—capricious, arbitrary, jealous, and unjust? Is it in Leicester—ambitious, yet any thing but noble; haughty and treacherous? Is it he whom we are to adore, while we are filled with indignation at his treatment of Amy Robsart? Is it in King James—that old and ridiculous *pedant, dupe, and despot*, whom no one has hit off more deliciously than Scott? Is it the licentious and unprincipled Buckingham? Or can it be Lady Ashton in "THE BRIDE OF LAMMERMOOR?" For my part, I should as soon suspect him of a design to make cheap both royalty and nobility, by the awful display of their mischievous influence on human nature. Who so fond of a fling at overstrained loyalty and pride of rank? What can be more amusing than his perpetual banner upon poor Lady Bellenden for her vanity and passion for etiquette? When do we hear the last of the chair in which his sacred Majesty sate when he breakfasted at Tillietudlem? Who does not admire the calm pertinacity with which that rare character, old Touchwood, puts to route all the *fashionable hauteur* and *assumed superiority* of Captain Jekyl, in "ST. RONAN'S WELL?" Scott continually puts into the mouths of his actors sly jeers, and *naiveties* that would make us think him a professed Radical. Provost Crosbie, in "REDGAUNTLET," says to Alan Fairford—"Well, now, you see one may love the Kirk, and yet not ride on the rigging of it; and one may love the King, and yet not be cramming him eternally down the throats of the unhappy folk that may chance to like another King better." And, in the same volume, he represents Nicholas Faggot, the justice's clerk, as one "who, having some *petty provincial situation, deemed himself bound to be zealous for government.*" And what Radical could have drawn such characters as Justice Foxley and old Sir Hildebrand Osbaldistone, without being charged with an intention to bring all the *squirearchy* and knighthood of the country into contempt? So far from maintaining that jealous intention to caste which a true Tory should, he has made a *hero out of a blacksmith* in "THE FAIR MAID OF PERTH," and raised Sir Halbert Glendinning out of the son of a conventual vassal. In a hundred places in his romances, he places *a high nature in a low situation*, and brings its possessors into contact with the *haughtiness of rank*, that you may feel the very insolence of worldly assumption, and the degradation of *God's true nobility* of merit. To take one instance out of numbers that will occur to the reader:—When Halbert Glendinning is introduced to the Lord Abbot and his company, to be installed in the office of park-ranger, the pompous parade made by the Abbot of the benefit to be conferred on the humble youth—the declaration of that fop, Sir Piercie Shafton, "That men do not look for gallant leaders and national deliverers in the hovels of the mean common people"—and the author's own assertion, that the greater part of the company were disposed to consider him with hauteur, if not absolute contempt—make us feel strongly the indignity of "the proud man's contumely;" while the high, yet becoming bearing of the youth himself contrasts finely with the servile spirit of the abbey retainers, whose base and subservient education have brought them to see no good, except in plenty of belly-and-back cheer. "What!" they keep crying out in astonishment—"What! refuse a green-gown and leathern galligaskins every Penticost; four merks by the year at Candlemas; an hogshead of ale at Martlemas, of the double strike, and single ale at pleasure, as he shall agree with the cellarer; a mess of broth, and a dole of mutton or beef at the kitchener's, at each high holyday!"

Now, this is not the way to teach passive obedience. To make your readers contemn the base-minded, and to sympathize with the generous aspirant after bettering his condition, is to accelerate that great movement amongst the people which has so much, of late years, alarmed the advocates of the *status quo*. If there be one of Sir Walter's historical novels that seems at all, at the first glance, to favour the supremacy of kings and the old right divine, it must be the "LEGEND OF MONTROSE," in which the gallant Earl of that name is seen, for a time, successfully prosecuting the Royal cause, without the bloodiness of Claverhouse, and without the trodden rights of

* A masterly defence of the Covenanters by Dr. McCrie, the Church Historian, is in our possession. The article (now scarce) is much at the service of any inquirer. The defence is contained in a Review of *The Tales of My Landlord.*—(ED)

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the people being brought so strongly into view. But even here the interest turns upon the adventures of Dalgetty in the dungeon of Argyle, and the grand poetical justice done upon that base nobleman, (if two such terms can come together,) and in the outraged feelings of the CHILDREN OF THE MIST.

These sons of the mountains—who have a wild grandeur about them, who like THE AMERICAN INDIANS, HAVE BEEN DRIVEN BACK AND BACK FROM THEIR ANCIENT HAUNTS by their enemies, have been hunted and *extirpated like wild beasts*, and, indeed, resemble the American Indians in many points of their character, in their unconquerable love of freedom; in their strong attachments and fiery spirit of vengeance—he has sketched with an inimitable hand. There is not, in all the wide round of literature, a more living, impassioned burst of eloquence than the death-charge of Ranald MacEagh to his grandson:—"'Kenneth," said the old outlaw, 'hear the last words of the sire of thy father. A Saxon soldier and Allan of the Red-hand, left this camp, within these few hours, to travel to the country of Caberfae. Pursue them as the blood hound pursues the hurt deer—swim the lake—climb the mountain—thread the forest—tarry not until you join them;' and then the countenance of the lad darkened as his grandfather spoke, and he laid his hand upon a knife which stuck in the thong of leather that confined his scanty plaid. 'No,' said the old man; 'it is not by thy hand he must fall. They will ask the news of the camp—say to them that Annot Lyle of the Harp is discovered to be the daughter of Duncan of Ardenvohr; that the Thane of Menteith is to wed her before the priest; and that you are sent to bid guests to the bridal. Tarry not their answer, but vanish like the lightning when the black cloud swallows it. And, now, depart, beloved son of my best beloved. I shall never more see thy face, nor hear the light sound of thy footstep—yet tarry an instant and hear my last charge. Remember the fate of the Children of the Mist. *We are now a straggling handful driven from every vale by the sword* of every clan, who rule in the possessions where their forefathers hewed the wood and drew the water for ours. But, in the thickest of the wilderness, and in the mist of the mountains, Kenneth, son of Eracht, keep thou unsoiled the freedom which I leave thee as a birthright. Barter it not; neither for the rich garment, nor for the stone-roof, nor for the covered board, nor for the couch of down; on the rock or in the valley—in abundance or in famine—in the leafy summer, and in the days of the iron winter.—Son of the Mist, *be free as thy fathers*. Own no lord—receive no law—take no hire—give no stipend—build no hut—enclose no pasture—sow no grain;—let the deer of the mountain be thy flocks and herds—if these fail thee, prey upon the goods of our oppressors—of the Saxons, and of such Gael as are Saxons in their souls, valuing herds and flocks more than honour and freedom. Well for us that they do so—it affords the broader scope for our revenge. Remember those who have done kindness to our race, and pay their services with thy blood, should the hour require it. If a MacIan shall come to thee with the head of the king's son in his hand, shelter him, though the avenging army of the father were behind him; for, in Glencoe, and Ardnamurchan, we have dwelt in peace in the years that have gone by. The sons of Diarmid, the race of Darnlinvarach, the riders of Menteith—my curse upon thy head, Child of the Mist, if thou spare one of those names, when the time shall offer for cutting them off. Once more, begone—shake the dust from thy feet against the inhabitants of men, whether banded together for peace or for war. Farewell, beloved; and mayst thou die like thy forefathers, ere infirmity, disease, or age, shall break thy spirit. Begone, begone,—live free—requite kindness—*avenge the injuries of thy race!*"

This is the language of a soul that felt the strength and the beauty, and could not avoid sowing the seeds of freedom. 'Tis the one pervading spirit of his works. Where neither contending crowns nor contending churches are concerned, in every lesser scene and character of life, it is still the cause of the weak against the strong. In "GUY MANNERING," it is the orphan youth that is made to triumph over the grasping *arts of the lawyer*—Glossin. In "ROB ROY," the chief of a proscribed race, is the object of our admiration and sympathy. In the "BRIDE OF LAMMERMOOR," the interest arises from the tyrannous sacrifice of woman, in her youth and beauty, on the altar of family pride; and the horrors of that sacrifice are held aloft as an immortal lesson. In "IVANHOE," the oppressions of the Saxons and Jews are the food of our kindlier feelings—and so on. There is scarcely a form of despotism which has ground the people during the wide range of years over which his narratives extend, whether royal, aristocratic, or even popular, but he has exhibited it to our gaze and indignation. In "QUENTIN DURWARD," the terrors of arbitrary monarchy—in "ANNE OF GEIRSTEIN," those of the Secret Tribunal. And while he has with one hand boldly displayed the repulsive features of those great powers, whether regal, militant, or ecclesiastical, that have, from age to age, abused humanity, how beautifully has he drawn together, with the other, the bonds of our common nature? To say nothing of the numerous models of female beauty and worth that he has given us—in themselves no mean boon, since in them he has taught his youthful readers (and who shall number them?) what is really estimable in the female character, what is really worth loving and admiring; for his women are not like those of many novelists, clad in spurious and meretricious charms, but beings whose likeness may be found in actual life, and whose healthful tastes and domestic natures will be sure to bless it; this I say, is of itself worth a great deal, but it is far from the whole of his praise. The sound mind and true heart of Scott found such stores of worth in every rank and abode of humanity, as forcibly open our eyes to a wider acknowledgement of goodness and feeling of kindliness. It is this lover of rank, as he has been called, who has given us the simple attachment of Dominie Sampson; the rough and hearty generosity of Dandie Dinmont, the sisterly devotion of Jennie Deans; the imperturbable pertinacity of Caleb Balderston, in striving to maintain the credit of a fallen house; the fountain of the noblest feelings welling up in the heart of the deformed misanthrope—the BLACK DWARF. It is he who has given us the most affecting examples of fidelity and devotion, even to death, in the simple forms of servants and followers—that has evinced such sympathy with shepherds, troopers, gaberlunyies, smugglers, gipsies, and even jailors, and custom-house officers, in their several vocations; shewing us honour where we did not look for it—the traces of good in what would otherwise have seemed a moral ruin; marking the boundaries of selfishness and crime, even in minds where everything ethereal seemed quenched. Thus our hopes of humanity are kept alive; and, even while we are learning caution against the evils of life, we are taught the most important caution of all—not to utterly despair of man, in his lowest fall and most lamentable distortions.

Such was Scott. As to Shakespeare so to him Nature appeared without disguise—in all her glory, and all her weakness; and he drew her as he beheld her—warmly, vividly, but most faithfully; and whoever draws her faithfully, breaks down the artificial ice-mounds between man and man—restores fellowship—opens the heart of the high to the low, and, still better, of the low to the high, too often shut in that direction by oppression—gives at once knowledge of the good and evil of our social condition, and confidence in the powers of our nature to renovate our social laws.

Consider but the healthful, and, indeed, Christian tone of Scott's writings, the immense knowledge embodied in them, the accuracy of their costumes, the life of their characters,—the eloquence and the humour, and, above all, the free spirit that lives throughout them,—and then imagine the innumerable multitude of their readers, and it cannot be doubted that he will prove one of the most effective fathers of human liberty—one of the most genuine friends of men.

CORRESPONDENCE.

THE "MERE GUEST FROM THE EAST;"

OR, ONE "RECKLESS PLUNGE" MADE, AND ANOTHER SUGGESTED!

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—My review of the wondrous "Introduction" which has issued from the Graham's Town Press, to harbinger the forthcoming "Narrative" with which the said Press is pregnant, and labouring to be delivered of! has occasioned me the honorable notice of one of the *Zuid-Afrikaan* Balaams, and of the Introductionist himself. The former is far too astute to require more than the notice, that a needy and a very silly Balaam, who judges of others by himself, may stumble into an error. The Balaam race is below contempt; how little, poor devils! are they aware of the field of honorable usefulness which is open to their peculiar talents, and precisely suited to their imaginative powers and enlarged capacity, if they would but turn their attention to the laurels they might reap, and the pudding they might eat! by eulogizing Patent Blacking and Macassar Oil; it is well known that both Warren and Rowland are far more liberal paymasters to scribblers of any degree, than the "Powers that be" in this Colony. But though I dismiss the Balaams as canaille, I must have "a free and gentle passage of arms" with our Introductionist; he looms larger in the distance, and moreover figures, as the Historian to be, of the age we live in; and I am ready to confess, that I think he has more brains than *are* requisite to trundle a wheel-barrow, and cry "cat's-meat and dog's-meat" with becoming propriety; which is more than I would venture to asseverate of the Balaams.

But let the Introductionist first speak for himself, since King Cambyses is a chicken to him.

"This is pretty well from a writer who is now-a-day content to figure as the '*miserable tail*' of this apologist, and even—as he has himself proclaimed,—fabricator, of falsehood and foul slander. Truly these gentry prove their own cases so effectually, that they leave us nothing to do; but still we cannot quit our subject without remarking on the ridiculous and fulsome verbiage of the *Advertiser*, when blazoning forth the merits or qualifications of his adherents, however feeble or ridiculous they may appear to others. Thus, in his last week's paper, a certain mischievous busy-body from the East, who, a mere guest, a transient visitor, plunges recklessly into the arena of politics, and employs his leisure—*A la Bruce*, in

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

officious meddling with affairs of which he is utterly ignorant—this person, in the cant phraseology of the *Advertiser*, 'assumes a lofty moral tone,—vindicates,' of course, 'justice and mercy,' &c., as well as the conduct of the Attorney General—which, by the-bye, as far as we know, has never been impugned; and performs to the delight of the veracious editor many other exploits equally marvellous and edifying."—*Graham's Town Journal, July* 16, 1835.

Admirable indeed! is it not? What will Mrs. Grundy say? These audacious Easterns, who *plunge recklessly*, and headlong, into the puzzling, perplexing complexities of colonial *politics!* are "fearful wild-fowl;" what, in the name of wonder, is to be done with them? Balaam has kicked and brayed in vain; and others of his kidney have done their worst to no purpose; they have all been as innocuous as the pecking of *the* dove! and we Easterns are all alive and joyous; nay, if report say true, there is nothing thought of among us but eating, drinking, dancing, marrying and giving in marriage; every fiddler in Cape Town, gravelled with rheumatic elbow, and the merry wedding chimes are practising, and rehearsing to be pealed from St. George's Tower! There's news for you, Mr. Introductionist! not one of us disposed to try hanging or drowning, to please such farthing rushlight meteors of colonial literature as yourself and the Balaams.

But let me ask this historical old gentlewoman in small clothes, at Graham's Town, what he means when he designates, "a certain mischievous busy body from the East, *a mere guest!*" Guests are wont to enjoy hospitality, and not to pay for it! and are generally grateful, to the extent that they are well or ill treated, or their hearts are capable of feeling gratitude! But when the said parties pay money down for every thing in the shape of money's worth, and generally speaking, some *trifle* per cent. more than the average of what the Colonists themselves pay for the same articles, it becomes a queerish sort of a hoax upon the gentle reader to call them *guests!* These 'Guests from the East' generally prepare from £30 to £100 per month for their expenditure here, as the case may be, of their being Bachelors or Benedicts, and after a year's residence with their munificent and high-born hosts, they generally find that every shilling has been required to satisfy the hospitable thoughts of the said hosts! Thus the extravagant appellation of *mere guest* resolves itself into the query, of what is the real amount of obligation actually due for the generous exercise of all that, which 'mere guests' are wont to enjoy, when they really are *mere guests.* Verily, the Cape of Good Hope is the last place where the mere guests from the East need be taunted with their undervaluing of the prodigious mass of courtesies, with which they are overwhelmed from their arrival to their departure!

True; the Cape is not without its duly-estimated, and most excellent society, in which the social, liberal, and friendly feelings, and warm hearts, display their amiable attractiveness to meet congenial spirits, whether "mere guests from the East" or from the West; but their worth, their kindness, and their hospitality are the exception, and not the rule, in this Colony; and, generally speaking, when the stranger has recorded his acknowledgments to Sir Benjamin and Lady D'Urban, the rest of his obligations may be screwed into a parenthesis, and have abundant elbow-room! let me not be misunderstood; we advance no claims; we are not querulous on supposed neglect: all I insist on is, that we are not to be taunted as 'mere guests,' when we pay fully its worth for all we get, and get nothing, from a horse to a tooth-pick! that we do not pay fully its value for.

As respects the perplexities of Colonial Politics and the *reckless plunge!*—the Colony contains a population of about 150,000 souls,—pays a revenue of about the same number of pounds sterling, and requires an expenditure of about the same amount, with a garrison of three regiments and the Cape Corps paid by the British Government. There is not a clerk in any slop-shop in Thames-street, though his education may have never flourished in any other academic grove than a Sunday-school, whose comprehensive cockney mind could not grapple with and embrace all the gigantic outlines and smallest minutiæ of Colonial Politics, as well as that world's wonder—our Graham's Town Introductionist.

But the mighty truths of colonial privileges or international rights: the mutual duties which bind, or ought to bind man to man, and nation to nation; the solemn reciprocal obligations betwixt Government and the Governed over the whole surface of the round world, require a clear head and honest heart to be rightly comprehended; and are something beyond what is meant by the Introductionist, as his "*arena of politics:*" and no doubt they surpass the Balaam capabilities, either here or in Graham's Town.

But such rubbish as Balaam's and the Introductionist's, is honored by the notice, and should be passed unregarded, did it not *serve* to show, that even their rhinoceros' hides are not insensible to the well merited castigation which, from time to time, has been inflicted on them. Let them rail till their throats ache, they disturb not the object of their spleen: on the contrary, I am so far from being wounded by their thrusts, that I publicly avow myself eager to recommend them to the notice of "the Powers that be," whose gratitude I deserve for belauding them, as I have done, so stoutly,—and I solemnly protest, that I shall consider myself sufficiently rewarded for all my merits, if I can but procure them, by my patronage, the sufficient reward of their's. But my recommendation is something more than mere patronage; it includes an object of the greatest possible public utility on the Eastern Frontier. I would suggest to Mr. Oliphant, that he should move in Council, as an economical measure for the protection of the frontier, that the Editors of the *Zuid-Afrikaan* and the Graham's Town Journal should be "*plunged recklessly*"—head over heels—the one into the Keiskamma, and the other into the Great Fish River: they are monstrously inflammatory; and as sure as those boundary streams roll downwards from their mountain springs to their ocean limits, so certainly would they be set on fire, a guardian fire for the Colony, by engulphing each one Editor! Let Mr. Oliphant then, but pause to imagine the quiet security and perfect safety of the Colony, behind these rivers of glowing fire; and as he is a classic, he will be forcibly reminded of the "flammantia mœnia mundi" of Lucretius, and will agree with me in thinking, that the Poet of Nature must have borrowed the idea and the brilliant epithet from the woeful catastrophe of some Roman Editor in the Tiber. *Vale—si vales bene est—ego valeo!*

I am, Sir,
Your very obedient Servant,
THE MERE GUEST.

P. S. In the thrilling interest of suggesting so efficacious and economical a plan for fortifying the Eastern frontier! I had nearly overlooked that a certain Mister Tim charges me with the murder of his Grandmother! a more foul, atrocious, and wanton slander was never fabricated, for, luckily, it is true that Dr. K. was called in: and it was distinctly sworn to before the Coroner, at the Inquest, that the old lady came by her death, entirely through Tim and his brother Balaam! a pretty pair of 'em! having worn her out, poor soul, by their unrelenting pertinacity in *teach-*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ing her to suck eggs!! Mr. O. is not ignorant of the fact; but declines interference, in the idea that the poor wretches were labouring in their vocation, *and exercising the only talent they possess;* he even wishes they had another Grandmother to practise on, if it would only keep them from bothering us with long speeches at public meetings. But all this, and sundry other delectable matter, shall be fully detailed in my *Journal of a Year's Residence in Cape Town,* now preparing for publication, and which will give Tim and Balaam their due, before they are a year older.

A HINT TO YOUNG LADIES.

[J. T. P. is under some misapprehension. If he will dispassionately examine our remarks on his late poetic production—*The Tomb*—he will find that they convey no insinuation whatever that the writer "had pillaged Blair's Grave" of its *materiel.* The following are additional contributions by J. T. P.]

The Cape Town belles, I do declare,
Are lively, handsome, charming, fair,
Prattling, engaging, and so forth,
Modest or bold—(nay, some are both.)
But notwithstanding all the grace
Expressed by every winning face,
There is a something in their dressing
That is not quite so prepossessing—
And which, with certainty 'tis said,
Oftimes prevent them being wed.
The part we so dislike the look is—
What the Dutch, methinks, call "*broekjes,*"
Seeming to hide with jealous fear
Each little foot enveloped there.
Ladies! I speak with reverence,
Can you not with the same dispense?
For beaux advance with cautious care
To all fair ones who trousers wear,
The cause of which on this fact hitches—
Those who wear trousers, *may wear breeches.*

CAPE SIGNIFICATION OF VARIOUS WORDS IN DAILY USE.

Bargain,—Bidding furiously at sale, without any intention of paying for the goods so bought.

Society.—A word occasionally met with in English works, and said by travellers to exist in all other countries—meaning and usance unknown here.

Eau de Cologne,—An agreeable spirituous liquor taken by ladies when they faint (feint.)

Ecstacy,—Losing some ten or twelve pounds sterling in one night at that execrable game, ycleped "tip," with the concomitant "delights," flushed cheek, head ache, ruined health, empty pockets, &c. &c.

Friendship,—(Obsolete,) or like Love—a mere *name.*

Patriot,—One who puts down his name and this mark (£5) to every subscription afloat, without the least idea of ever subscribing a shilling.

Glory,—Getting "rehabilitated" before you are *really* insolvent.

Honour,—Paying a note-of-hand the day it becomes due.

Generosity,—On receiving a *Roman* fish from your friend Mrs. W——, sending her in return a couple of Hottentots fried in *Greece.*

Satisfaction,—Giving a gentleman whom you have seriously offended, a sound thrashing in a bye place, then running to the magistrate to prefer a complaint against him.

Gentleman,—An animal of the male kind, enveloped in a profusion of fine clothing, tight inexpressibles, *double breasted* waistcoat, velvet collar'd frock coat, &c. &c. a look of ineffable disdain upon his face, and the inimitable "*Ja, Mynheer, ja,*" on the tip of his tongue.

Religion,—Occupying a seat in —— church, and entertaining the family on your return by a minute description of Miss T's new silk dress, Mrs. G's fascinating plume of feathers, and Mr. L's unfortunate error in entering the wrong pew, and subsequent ejection from the same.

Drunkard,—A right good fellow, possessed of a *flowing* soul.

Bold,—Making a purchase of sundry bags of sugar or rice before you have actually sold the same.

Hospitality,—Taking in a new comer, for whom you have a most "affectionate regard," by getting him to purchase some *old* Cape Madeira (warranted four year in *wood*) at £15 15*s.* p. p. to export home, together with sundry ejaculations gratis, such as, Excellent remittance! Markets high! Your fortune's made, Sir!! and so forth. N. B. Brokerage to be paid by the buyer.

Attorney,—A very specious, long-faced sort of gentleman, with a six-and-eight-penny physiognomy "full of *wise saws* and (brief) instances."

M. D.—Man Destroyer, wholesale dealer in nerves and "small talk."

A true Churchman,—Having a most hallowed regard for steeples, bricks, and mortar. Resolving to stick to the "old Hussy" till you die. Falling in love with bits of painted glass and gilt whistle-pipes, and believing every pin in the Tabernacle precious—even to *the knob of a pew door.*

Editor,—Walking abroad with a Fernandez countenance, and singing "I'm Monarch of all I survey."

J. T. P.

HOPES AND PROSPECTS TO SCOTTISH EMIGRANTS, ILLUSTRATED.

To the Editor of the Cape of Good Hope Literary Gazette.

Cape Town, July 29, 1835.

SIR,—As I don't profess to be a scholar, and had not the benefit of what is called a liberal education;—but only got enough of schooling to enable me to earn my bread, out of the face of a blue stane, you must not expect from me any thing worthy of a place in the Literary Gazette; however, if I have no imagination, and cannot write essays, or poetry, like Mr. Fletcher, the wheelwright, in Strand-street, I can collect and detail facts with as much veracity as any of my neighbours. I am the more emboldened to trouble *you* with this, because the farmers in this country have got no Farmers' Magazine, nor the Trade's Lads any Mechanics' Magazine, or the like; and in short, bating the twa Newspapers, which are so ta'en up fechtin ane anither like a couple of fisher-wives, that they have no time to attend to the common affairs of life, that there is no medium thro' which I can communicate what little I have got to say to the world, except thro' your Journal, which often gives us scraps of good information. Moreover, if you do not know it, I can tell you, that your literary production is read in many parts of bonny Scotland, and my present information will be conveyed by this means to anxious friends in that country, whose hearts have long been sick with the hope deferred of receiving a letter from the friends who left them for New South Wales and Van Diemen's Land in the *Thomas.* There were some 36 of us selected to *locate* here, as Jonathan says, and it possibly may be gratifying to the public in general, and to our friends in particular, to know how we have got on in this the land of our adoption. We landed in Table Bay, 29th day of May, 1833, and have therefore been in this Colony for the space of 25 months and 22 days. Our names, pursuits, and fortunes may be thus shortly detailed:—

The Edinbro' People consisted of *Alexander Lyall,* carpenter, with a wife and 2 or 3 children. Lyall is a first-rate hand in the cabinet-maker and joiner line; received whilst he was foreman to Mr. Cannon, £2 per week, has left him, and finds he can do better for himself; lodges with me, and his wife does a little in the straw bonnet line.

Robert Edwards, carpenter, soon after he came ashore married Joan Inglis, a passenger in the vessel; worked when I last heard of him with Mr. Arderne, his wages would be from 3*s.* 6*d.* to 4*s* a day.

Gideon Wilkinson, carpenter, and his wife, is now busy at the carpenter work of Mr. High Sheriff Steuart's new house, for which he is contractor.

John Hamilton, blacksmith, wife, sister, and 2 children; as soon as he landed he went into Mr. Thomas Hunter's employ, at some 4*s.* a day, and is there still; his sister was lately married to Mr. George, the Proprietor of the celebrated Head Inn of this Town, called George's Hotel.

Henry Dewis, coppersmith, works with Mr. Fell, at some 4*s.* or 4*s.* 6*d.* a day; married Mr. Christie the turner's daughter, of this town.

The Glasgow People:—

Mr. *Robert Archibald,* miller, wife, and child. Mr. Archibald is the night superintendent of Messrs. Prince & Co.'s famous Steam Mill, at Guineas 5 a month; Mrs. Archibald keeps a school for the weans, near at hand.

From the Neighbourhood of Perth:—

Martyn Flesher, was born about

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Coupar Angus side, with his wife, a Perth woman; was immediately employed by Mr. Mechau at Rds. 30 a month, and remained with him until about 3 or 4 months ago, when he took one of the Government Shambles, and set up for himself a pork flesher. Mr. B. kills very well fed pork, and his wife, a canie body, is an extra hand at the fabrication of sausages.

From Aberdeen:—

James Small, and his sister Jean. James has no reason to complain of the encouragement he has received in the building line; he is at present building for Mr. Oliphant and Mr. McKenzie.

Charles Lyndy, wife, and 2 children; shortly after he landed, Lyndy took to the dressing of *Granite*, and has never wanted work in that line; he employs 5 or 6 men, amongst others, a man who was sailor in the Thomas, and who remained here, called *Alick*, but I never heard what his other name was, to whom he gives 4*s*. 6*d* a day.

From Dundee:—

Thomas Calder, wife, and 2 children, a sort of *Jammie a'll thing*; is gardener, cooper, mason, and slaterer; is at present slating Mr. Oliphant's house, gets 6*s*. a day, not a bad hand, for he passes muster with Mr. Butler, the carpenter of that building, a very particular pawkie man. Mr. B. says his wages were 15*s*. a week in Dundee, *when he could get work*

From other parts of Scotland, to me unknown, is *Henry Balfour*, painter; has married since he came here, and is steward to Mr. Sandenberg, up in the Gardens.

Skirving Cunningham, blacksmith, and wife, used to work with Mr. Thomas, but is lately gone to Stellenbosch to some relation of Mr. Bartie's, at 5*s*. a day.

Jean Gates, from Aberdeen side, servant lass to Mr. Dixon, the Livery Stablekeeper, at 18*s*. a month.

Agnes Campbell, servant in some Dutch family, a very decent lassie, would make *a very gude wife to ony wanter.*

Laurence Cunningham, boatswain of the Thomas, and wife, works in boats at the Jetty, and earns from £6 to 7 a month.

Alexander Justice, gunsmith, and wife, works with Mr. Clement, the gunsmith.

To the gude folk at hame I wud say, this is a grand land for health and caller food. Bread, meat, and fish in great rowth and for nae muckle siller. Wine at a couple of pennies a bottle, and excellent home-brewed Yill, the last mentioned a new affair at the Cape, and a down-right wholesome waught to an honest man who bends his back to the saw, the chisel, or the trowel, or e'en he (I wud that we had more of 'em,)

"The brawnie, bonie ploughman chiel!"

Ance mair, we have all sorts of Kirks here and meeting houses, and it's a great blessin' that folk may gang far awa' and find their own serious religion upon e'en the shores of Africa, as we have done in the new Episcopal and Scotch Kirk here—for with an honest pair o' hands, a regard for the Sabbath-day, and God's Providence, love, and favour, a man may be as happy and gude as the day is long.

With due respect,
I am, Sir,
Your very humble Servant,
J—— S——,
Late of Aberdeen.

A CONTRIBUTION TO OUR COLONIAL HORTICULTURE.

To the Editor of the Cape of Good Hope Literary Gazette.

SIR,—I shall feel obliged if you will convey to your Correspondent E. J. the accompanying packets of seeds, which I have obtained from Bombay expressly for the use of such good fellows as he seems to be, and which I shall be glad if he can turn to any account for our mutual friends—the market-gardeners.

The seeds are—1st, *Bombay Onions*, which are either the Portugal onion improved in Bombay, or the original vegetable obtained by the Portuguese from India; they are of the largest size and mildest quality of any onion grown in the East, and are celebrated in every part of India.*

2. *Hibiscus esculentus Okro or Bhendy.* The green seed-pod, carefully boiled, is a very delicate vegetable; but by over-boiling, it becomes glutinous and mucilaginous; when a little over-ripe, so that the husk is stringy, the seeds, after being scraped out with a spoon, and spread upon buttered toast, form an admirable substitute for the finest asparagus.

3. *Solanum Melalongena*, or Brinjal. The blue coarse variety exists at the Cape; a better kind may, therefore, succeed. The young seed-pod, when about the size of an egg, being well boiled in milk, exceedingly resembles a highly-flavored artichoke, with the advantage of having enough for a meal. The seed-pod, full-sized, is an oval of eight or ten inches in length; this being cut through, and the seeds and pulp beaten up with butter, pepper, salt, &c. and fried in the husk, with bread-crumbs sprinkled over the surface, forms an agreeable vegetable side dish.

4. *Mehti Baji, a bitter spinage* worth introducing for its fine aromatic flavor, to mix with common spinage; this is considered an acquired taste, but variety is so pleasant, and the flavor of this plant so peculiar, especially in the Indian curries, that it is worth trying.

I have been disappointed in not hearing more from E. J., and am satisfied that I am speaking the sentiment of the public that his interesting communications, giving us his record monthly of the weather, and state of the gardens and vegetable markets, &c. would be received with unmingled pleasure by the herbivorous community.

I am, &c.
N. E.

* This onion we take upon ourselves to state, is perfectly distinct from the Portugal onion. (ED.)

The Editor thankfully acknowledges the receipt of the above Communication, accompanied with valuable seeds from India, contained in three quart bottles, and eight paper packets. They have been carefully transmitted to E. J. who will, doubtless, soon turn them to good account. See the Correspondence of E. J. in the *Literary Gazette* for March last, page 43.

THE BRITISH ARMY.

28*th* REGIMENT.

Narrative of the Campaigns of the 28th Regiment since their return from Egypt in 1802. By Lieut.-Col. C. Cadell, unattached, late Major of that Corps. 12mo. pp. 281. London. 1835. Whittaker & Co.

WHEN we read a book like this, a faithful sketch of actual and stirring events, we are apt to think that the pens of the writers of fiction might as well be allowed to stand quietly in the little holes of their inkstands. The latter, to be sure, if they are clever, dispose of their materials in more artificial, dramatic forms; but, for incident and extraordinary circumstances, the former beat all the creations of the imagination quite hollow. And war, especially, supplies a strange and vast fund of occurrences to mark both with a comic and a tragic interest the alternations of human life. Man becomes a beast of prey, yet with occasional manifestations of the better instincts, which heaven has implanted in the breast of the superior animal in this world's system. Hardship, and privation, and suffering are his hourly companions; existence is worth about a pin's fee; and desperate recklessness, and a passion to enjoy to the utmost the fleeting moment he can deem his own, are the characteristics of his course. The perpetual excitement, be it for peril and death, or for transient and precarious enjoyment, exalts his mind to so high a pitch, that the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

soldier's feelings are beyond conception intense; and he often lives within a few short days of vicissitude, more than the home and regular civilian lives in years of same occupation and humdrum rising up, feeding, gaping, and lying down. The history of his course, therefore, if even tolerably narrated, must possess strong claims to sympathy; and we trust that the following examples of Col. Cadell's work will shew that it is full of manifold attractions.

The 28th is a noble regiment, standing high among the foremost in the service. From the days of the great Marlborough to the days of the greater Wellington, it has sustained its ample share in the fame and glory achieved by the British army in every quarter of the globe. In later times it frequently fought side by side in the same bloody fields with the renowned Scottish regiments, the 42d, 79th, 92d, and with others of like bravery and conduct, such as the 52d, 71st, 95th, &c. &c. and it never moulted a feather of its plumes when compared with these gallant corps. Praise more honourable and distinguished could not be bestowed. In the American war it obtained the familiar *soubriquet* of "The *Slashers*," from its use of the sword, then worn by the infantry; and when, on its return from the immortality of Egypt, a second battalion was added to its force, the youngest recruit had the stimulus not only of recent victory, but of a century of splendid reputation to incite him to emulate his elder and veteran brethren in the mightier conflicts which awaited them.

Their first remarkable employment after this was the attack on Copenhagen, the account of which is in excellent taste; but we shall pass on to the still more memorable retreat of Sir John Moore in Spain, and commence our extracts with the story of a wonderfully narrow escape:—

"January 3d. The following occurrence had more effect in establishing the good conduct of the reserve than any thing that had yet been done. We were formed in close column, on the Bembibre side of the river, when our gallant chief, General Paget, in an excellent address, called the attention of the soldiers to the dreadful and disgraceful scene of yesterday, and the merciless conduct the enemy's cavalry had shewn to many of the stragglers. He told the men that they had now become the rear-guard of the army; and upon their sober, steady, and good conduct, the safety of the whole depended. Just as the General had finished his admirable and soldier-like address, and after all the orders had been given, and the necessary examples that had been made, two men of the reserve were found in the very act of shamefully plundering a house in the village, and ill-treating the inhabitants. The report was made, and the reserve was instantly formed in square; the culprits were brought out—the General being determined that an example should be made. They were ordered to be hanged upon a tree close to the village. Every thing being prepared, the awful sentence was about to be carried into execution; the unfortunate men were in the act of being lifted up to the fatal branch, when an officer of the hussars rode into the square, and reported that the enemy were at that moment advancing. The general said he did not care if the whole French cavalry were coming up; that he would hang those men, who had been guilty of so shameful an outrage. At that instant a few distant shots were heard, and a second officer arrived at full speed with another report. The general then stopped the execution, and turning round to the reserves, said, 'Soldiers! if you promise to behave well for the future, I will forgive those men—say yes, in an instant.' 'Yes!' was said by every one. 'Say it again,' said the general. 'Yes, yes!' was again exclaimed by all. 'Say it a third time.' 'Yes! yes! yes!' and a cheer followed. The men were forgiven; the square was reduced; and the 52d regiment, under Colonel Barclay, went through the village in double-quick time, and in the most beautiful manner took possession of the vineyards on the opposite side of the river."

After the battle of Corunna, we have the following entertaining anecdotes:—

"Our baggage animals were all left on the beach. Major Brown was fortunate enough to get a pig in exchange for a horse. The major was rather unlucky with his pork; for in the hurry of embarkation, piggy was taken on board one ship, and the major on board another." [The unlucky major, on a former occasion, had a nice piece of pork cut from his saddle-bow, by some of his hungry companions.] One exception, however, happened to the animals being left on the beach. "The wife of Sergeant Monday, the orderly room clerk, actually carried a lap-dog in a basket over her arm, throughout the whole of this dreadful retreat, and brought it home to England with her." A friend of our own, of the 95th, brought off a fine Spanish Pointer, which adhered to him throughout the whole of this murderous retreat.

The Walcherin expedition succeeded the return of the troops from Corunna, in 1809, and the 28th were again in request. Colonel Cadell relates a curious fact respecting the use of tobacco, which militates against a too commonly received opinion advanced in support of the use of this nasty drug:—

"I was (he states) the only officer of the regiment who did not smoke during the expedition to Walcheren, and the only one that escaped the fever." It is but fair towards tobacco, however, to mention a case where it was found useful. In the Pyrenees, when driving the French into their own country, we have the following singularly characteristic story, text and note:—

"While we were resting from our toils, some of the officers requested Colonel Belson to send a party to Pasages, near St. Sebastian (where supplies of every description were brought from England for the army), and to purchase tobacco for the men, and tea and sugar for the officers: 2000 dollars were collected, and given in charge to Sergeant Ball,* and six grenadiers. The conduct of these brave fellows on this occasion was chivalrous in the extreme—proving beyond all doubt, that British soldiers possess a high sense of honour and heroism, and that they are not, as supposed by many, mere machines. The party arrived at Pasages on the 30th, and learning that St. Sebastian was to be stormed the next day, the Sergeant addressed his men, telling them there was hardly an action in the Peninsula in which the 28th had not a share, and proposed to them to volunteer on the storming party, for the credit of their regiment. To this the men joyfully assented; and the next question was, how to dispose of the money safely, with which they had been entrusted. It was determined to place it in the hands of a commissary, taking his receipt for the amount, which document the sergeant again lodged in the hands of a third person. Having thus carefully provided for the property of their officers, these brave fellows volunteered for the desperate enterprise, and joined the ranks of their gallant comrades of Barosa heights—the grenadiers of the 9th. It would be superfluous to say, they did their duty, and most fortunately—indeed singularly—none of them were hurt. After the town was taken, the gallant sergeant collected his men, reclaimed the money, purchased the supplies, and returned to his regiment with a handsome testimonial of their conduct, addressed to Colonel Belson, from the general commanding the brigade."

But before returning to the Peninsula, we shall insert one other anecdote of Walcheren:—

"We had hardly settled, when the dreadful fever broke out amongst us. It was truly melancholy to behold the numbers that were cut off: every evening about dusk a string of from eight to ten fine fellows were carried to their graves! The deaths were so numerous that a corporal and eight men only attended each funeral."†

In 1810 our brave countrymen were once more on Spanish ground; and from the horrors of their many scenes of devastation, we select a few particulars. After the battle of Barossa, we are told:—

"Hearing that we were to march to the Isla de Leon in the evening, I, accompanied by the late Lieutenant and Adjutant Bridgeland (then sergeant-major), went to that part of the field where Colonel Browne's flank battalion had so nobly fought, to look for the body of Lieut. Bennet. After a short search we found it. The spectacle was truly horrible. A musket-ball had entered his forehead, and had carried away the whole of the back part of the head: a portion of the brain was lying in his cap; still he breathed! The sergeant-major said he would never leave him as long as he had breath in his body; and perceiving the army moving down to the beach, on their way to the Isla, a force being left to cover the removal of the wounded, he tied up the shattered head, and placing the body on his shoulder, carried it four miles to the Bermuda heights, where the army halted.

The surgeon coming up, examined the body, and said that it was perfectly ridiculous to think of conveying it a yard further, for although breath remained, all feeling was past. We therefore procured two great coats, and in the most retired place we could find, placed one under and the other over our poor comrade, and with sore hearts left him. About twelve at night we crossed over to the Isla, and were glad to get under any sort of cover. Some of us found our way into a Spanish hospital, where we were fortunate enough to get some clean straw on which we could lie down, and repose our weary limbs. About nine next morning I was aroused from a sound sleep by a soldier of the regiment. He told me that a corpse had been brought in by some Spaniards, who said it was that of an English officer; upon which I instantly got up, and limped down stairs as well as I could (for I had been wounded by a spent grape-shot about the middle of the action), when, shocking to relate, I saw the body of poor Bennet brought in a bread-bag. He was still breathing. The dust from the bread, which had almost filled his nostrils, mouth, and eyes, I quickly removed with a sponge and water. His usual placid smile was still upon his countenance; but no sooner had this last friendly office been performed, than our lamented comrade, with a deep sigh, expired."

In this battle the gallant author was himself put *hors de combat* for a while by a grape-shot, but recovered sufficiently in time to resume his command, and to supersede his supersessor:—

"On returning to the right," he says, "and touching Lieutenant Potter on the shoulder it created in him no little astonishment to see me, as it were, arisen from the dead."

"On the 5th the division returned to Merida, in consequence of the investment of Ciudad Rodrigo, Sir Rowland (Hill) commenced his march by Portalegre, to Nisa, to cover it. On the first day's march, when we passed the place where the two Frenchmen of Captain Neville's gallant party were killed by the cannon-shot on the 29th, it was curious to observe that one body was completely devoured by the wolves—even the very gristles of the ribs were gnawed off; while the other was not touched, nor even where his clothes in the smallest degree injured."

On a future march, "just as the regiment was dismissed, a large body of the enemy's Polish lancers made their appearance, and, after shamefully cutting down several unfortunate women who had fallen behind, advanced rapidly to the wood,

---

*This fine fellow, on a former occasion, received a musket ball through the fleshy part of his leg, when he very quietly took the quid out of his mouth, applied it to the wound, tied it up, and thought no more of the matter.

†On one of these melancholy occasions, a ridiculous occurrence took place: an Irish corporal and eight men of the grenadier company of the 28th went to bury a fine fellow who had died the day before,—the dead house at the hospital being full of men of different regiments, our corporal was taking away, by mistake, the body of a man of the 43d, when a non-commissioned officer of that corps claimed him; 'Sure,' says Paddy, 'I am come to bury a man, and isn't it now all the same which regiment he belonged to? I am only just taking the best looking one."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

where we were stationed. The light company fortunately happened to be on the rear-guard, under Captain Bradbey; and they instantly formed at the edge of the wood, and gave them such a well-directed volley, that many of them were brought down." Again: "A shocking imposition was practised upon two of our officers, Lieutenents I—— and C——, that evening. Some time after the action, a Portugese soldier came to their tent with some pork steaks to dispose of, which their servants eagerly purchased, and dressed them for their masters' supper. They being very tired and hungry after a long march and hard fighting, sate down and made a hearty meal: but a short time after, what was their surprise and disgust, when they discovered it to be more than equivocal that the alleged 'pork-steaks' had not long before belonged to the person of a Frenchman! I——, like an old soldier, drank off half a tumbler of brandy, and thought no more of the matter; but poor C—— turned very sick, and was always ill whenever the subject of their cannibal repast was mentioned."

How dreadful that human beings should be exposed to miseries like these; and that man, armed against his fellow man, should take part in such atrocities! We will endeavour to relieve our readers from the disgust of the subject by some more miscellaneous quotations.

1811. "The 28th embarked at Cadiz on the 13th of March, and arrived at Gibralter on the 16th. Sir Colin Campbell, the governor, was so pleased with the conduct of the regiment, that he ordered a *feu-de-joie* to be fired after dark on that evening, in commemoration of the battle of the 5th. We landed in a deplorable state—nothing but rags upon us; our clothing was very old when we commenced this short campaign, and the bullets of the French had torn it almost to pieces; there was hardly a cap that was not perforated. However, after we were all put to rights, we were not allowed to remain long idle."

At Arroyo del Molinos, "The weather was very fine, and it was a most gratifying sight for us to see the enemy scampering up the mountain in every direction; the British, notwithstanding the forced march the day before, being in wet jackets for twenty-four hours, and the night's march before the attack, were taking them at every step. On our arrival at the summit, our men were very much scattered, and General Howard most judiciously stopped the pursuit. At this period our gallant comrade, Captain Irving (now lieutenant-colonel), fell senseless from fatigue and exhaustion, and it was with great difficulty he was restored. Seven or eight Frenchmen, whilst endeavouring to make their escape down the mountain, were taken in an extraordinary manner by Lieutenant Irwin, of the grenadier company, the first in the pursuit. He took up what they call in Ireland a couple of 'two-year-old stones,'* which he aimed so well with his left hand, that he brought down two of the Frenchmen, one after the other; the others seeing their comrades so roughly handled, quietly surrendered, and he brought them all in prisoners. On our descent into the plain, the scene was a singular one; many officers and soldiers were mounted on horses they had picked up belonging to French officers, who finding they could not ride over the mountain, had abandoned them; and different parties were bringing in numerous prisoners, which, when collected, amounted to upwards of 1500; the Prince D'Aremberg, General Brune, and several officers of rank, were amongst them. The Prince D'Aremberg was taken by Lieutenant Blakeney, of the light-company, 28th, who, being mounted, as adjutant of the flankers, was at the head of the column. On coming up to a wall where a number of French officers had just retreated, seeing a person of distinction, with a star upon his breast, he gallantly leaped the wall into the midst, and made the prince his prisoner. The prince was so much pleased with the conduct of Lieutenant Blakeney, that he applied to General Hill to permit the lieutenant to conduct him to Lisbon, which was granted;—he was promoted to a company in the 36th for his bravery. When it was made known to the prince that the frigate was ready, which was appointed to take him to England, he told Blakeney that he should be happy to see him, whenever he might be at Brussels, Paris, Rome, Naples, or in any part of the Emperor's dominions. A midshipman soon after came to say that a boat was waiting, when the prince turned to Blakeney, and asked him how soon he thought he (the prince) should be in England, Blakeney replied, 'As soon as you are out of the Tagus—all the seas are England."

* "About the size of a man's hand."

THE POLITICS OF THE WESLEYANS.

THERE is an anxiety often manifested in this Colony, to distinguish the Wesleyan Missionaries *apart* from the general body of the devoted men of various respectable denominations of Christians who are zealously prosecuting their benevolent efforts. But this *preference*, in reference to its cause is a mistaken one, and in reality is a reproach to the Wesleyans. It is said, they do not inter-meddle with politics. But let it not be forgotten that the Great Author of our christian profession, never intended that his followers, on becoming christians, should forget that they were men, or consider themselves as idle or uninterested spectators on the great theatre of life. Nor in good truth, have the Wesleyans over-looked this well known truth. They are generally foremost in the field of discussion; and, in looking homewards, we find the power and might of their influence in their Holy War against the atrocities of Slavery, their zeal for the passing of the Reform Bill, and their independence at the late election. In a great many instances, the Wesleyan Ministers with others of the Clergy, took distinguished parts on the hustings, and at public dinners. This may be called *worldly*, but if we are to relinquish any undertaking of an honest nature on account of its being *worldly*, we must then go out of the world.

These fewremarks have been elicited from the circumstance of a wearisome epistle, which has been laid before us, signed *A Wesleyan*. The writer endeavours to prove that his friends "never interfere with the politics of this world," but he is evidently a noviciate in the art of defence, and so sadly disfigures his cause, that we feel disposed in mercy to our friends the Wesleyans in general, to smother the communication altogether. At the same time, we have no objection to give them fair play, and we select from among the many Wesleyan speeches which the English papers record, one delivered at a Norwich Purity of Election Dinner, by the 1,600 supporters of Messrs. Harbord & Martin.* It is no fault of ours that the worthy minister is a down right Reformer.

The Rev. T. JACKSON, Methodist Connexion, being loudly called for after the Dissenters' toast was given, spoke as follows: Gentlemen, the flattering manner in which you have received the last toast, and the enthusiasm with which you drank it is enough to make a dumb man speak by signs, and a deaf man speak by lines. There has been such deep impressions, such exhilirated feelings from the sentiments already expressed; there has been such a "feast of reason, and flow of soul," that I am afraid lest any thing I am about to say should loosen the one or disturb the other. (No. No.) You have had "thoughts that breathe and words that burn." You have been addressed in "language of light and sentiment of fire." I hope, however, that a few plain words from a very plain man will not be despised. (No, No.) Gentlemen, you, no doubt, are aware of the compliment paid you by the Conductors of the Norwich Chronicle the other day. I do not mean that insulting compliment paid you by the same authority of "Setting up your tub where you like," which was so ably commented upon by the Rev. J. Green, whose speech was worthy of being inserted in letters of gold, and I do most sincerely regret that it never appeared before the public. (Hear, Hear.) The compliment I mean is inserted in last Friday's paper. What do you think it is? As it breaks upon your ears I am confident you will smile. They have denominated you "Sectarian Pharisees." Who among you can think of this extraordinary title and maintain absolute command over his risible muscles! 'Tis true there are occasions, when

"To laugh were want of goodness and grace."

But really when you think of this tickling appellation,

"To be grave exceeds all power of face." (A laugh.)

If you be "Pharisees," then I suppose, politicaily speaking, I must be a "Pharisee of the strictest sect." This I know, "as touching the law" of bribery and perjury, "I am blameless." (Cheering.) Gentlemen, why have the Tory Journalists, in the plenitude of their liberality, palmed the name of "Pharisee" upon you? Because you do not choose to think as they think, to speak as they speak, to move as they move, to act as they act. You knew that bribery had been carried on in this city to its great and lasting disgrace—you knew that the legislative authorities had made a law in order to check the abominable system—you availed yourselves of that law, and for so doing you, forsooth, are "Pharisees." (Hear, hear.)

"Sectarian Pharisees."—If our opponents mean by that designation the 1600 unbought and independent electors who voted for Harbord and Martin, then we have a medley of "Pharisees." We have Quaker Pharisees, Baptist Pharisees, Methodist Pharisees, Roman Catholic Pharisees, Unitarian Pharisees, Calvinistic Pharisees, Church of England Pharisees, and I scarcely know what sort of Pharisees. (Loud laughter, and cheering.)

"Sectarian Pharisees"—Well, I am happy to say the following laity are of our "sect:"—Harbord and Martin, Gurney, Mitchell, Hudson, Newbegin, Foster, and our respected Chairman, Captain Money. (Laughter.) Did you ever know that these gentlemen were "Pharisees." previous to the information given in last week's Chronicle? (No, no.) I am also proud to remark, that amongst us as Pharisees, we have the

* Norwich Mercury, March 27th, 1835. Many Clergymen of the English Episcopacy were present.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

following clergy:—Green, Bakewell, Scott, Beaumont, Innis, Alexander, Puntus, and many others of equal intelligence and piety. (Loud cheering.) By the bye, I ought not to have omitted the Rev. R. F. Elwin. (Loud laughter.)

"Sectarian Pharisees"—The Tory Journalists might perhaps only include in this name the Dissenters. Well, be it so—we will receive the compliment at their hands. As Dissenters, we have nothing to fear from them. If we be "Sectarian Pharisees," we can boast a noble ancestry. *We have had a Fox (Quaker) who, amid abounding corruptions, stood forth an undaunted champion in the cause of liberty—Baxter, who rose high on freedom's wings—Watts, who like the unfettered bird of morn, ascended high amidst the music of his grateful piety—we have had a Bates, Owen, Flavel, Howe, Heywood, Doddridge, Henry, Whitfield, Wesley, Fuller, Ryland, Hall, and the illustrious* 2000 *non-conformists, who made a sacrifice of all for the sake of liberty, and who emulated each other in the high places of the field, and were fain to pluck the crown of martyrdom from each other's brow.* (Bravo.)

If the Dissenters be "Sectarian Pharisees," they are identified with some of the most eminent, intelligent, and distinguished individuals in the nation, a host which no man can number. (Loud cheering.) With men like these we will rather remain "Pharisees" than abandon our Pharisaical notions, in exchange for the Aristocratic principles cherished by the Corporation Scribes. (Hear, hear.) Gentlemen, we have as much right to call them "Scribes" as they have to call us Pharisees." Of one thing I am confident, as "Scribes" they are better paid for their writing than we, as Pharisees, are for our fasting and praying. (Loud and repeated cheering.)

"Sectarian Pharisees." Be it so. We are an increasing sect. We shall continue to increase in spite of the policy and power of the magistrate, or the interest, credit, and craft of the priests. The "Scribes" say that the "Sectarian Pharisees" are only as a drop of water; but if we are honest men, and firm to our principles, we shall constrain them to sing or rather howl,—

"A rill—a stream—a torrent flows:
It rolls——a mighty flood."

"Sectarian Pharisees." If you are pharisees, you are not fools,—you have proved yourselves to be men of independent principles. You have not been moved either by threatening or reward. You have resisted the temptation—you have, as honest voters, exclaimed:—

They knew that I was poor,
And they thought that I was base;
And would readily endure
To be covered with disgrace;—
They judged me of their tribe,
Who on dirty mammon dote
So they offered me a bribe,
For my vote, boys, vote!

What though these men be rich,

No wonder, think of their pensions, pluralities, resources—

"And what though I be poor."

No wonder that you are poor, when we consider how you are taxed, tithed, and priest-ridden—

"What though these men be rich,
And what though I be poor;
I would perish in a ditch
'Ere I'd listen to their lure:
They may treat me as their prey,
But their vengeance shall be brav'd,
I've a soul as well as they
To be saved, boys, saved!

O shame upon my *betters*,
Who would my conscience buy!
But shall I wear their fetters?
Not I, indeed, not I.
(Loud and continued cheering.)

Gentlemen, I shall not detain you any longer. I sincerely thank you for the honour you have done the Dissenters in the joyous manner in which you received the toast. And I hope that you, as far as you possibly can, will support and extend your principles—principles so pure, so honest, so patriotic, and so independent. (The Rev. Gentlemen sat down amid much cheering.)

AN HISTORICAL FRAGMENT.

(TO BE READ IN 1840.)

[COMMUNICATED.]

In ancient times when, as every one knows, this earth was the abode of Giants, there existed a race of warlike monsters, horrible to the sight, and known by the appellation of IMPERII,—having but one eye, called by a name, which being translated signifies self-interest. Through this eye these monsters beheld all things, and being, as the word implies, very short-sighted, it frequently happened that what seemed at first beautiful and enchanting, proved on a closer inspection to be quite the reverse. At a great distance from this gigantic nation dwelt in undisturbed repose a numerous people, who, strange to say, were all DWARFS. They lived in a land rich in the glorious clothing of nature, and being delighted with her boundless varieties, they wandered from place to place, subsisting upon the spontaneous fruits of the earth. It happened that one of these Giants was compelled, by hunger and extreme penury, or some other cause, to quit his native country; and as chance would have it, he came to reside in the neighbourhood of the Pigmy Settlement. Here all his real wants were supplied by lucrative traffic; although, as you may suppose, his table was a great task upon them, and in a little time he grew fat. He then informed some of his brethren at home of the "very beautiful, abundantly watered, and fertile country" which had received him, and of the "numerous herds of fine cattle" which were to be found there, and was shortly joined by several other men like unto himself. These giants in the course of time began to covet the possession of this hospitable soil, and laid their heads together as to the best means of satisfying their wishes. Afraid, however, of bringing down upon them the wrath of the nation of which they were a branch, should it become known, if they boldly seized what they coveted, they sought a pretext for waging war with their former friends, nor were they long in finding or rather in making one; and as it may perhaps be for the guidance of future ages, we purpose to state the facts of their cunning device.

A few of their number went "in a time of the most profound peace," and "without provocation or any previous notice or declaration of war," and settled themselves in the most romantic and richest part, and in the very heart of the country of their peaceful neighbours, building houses, cutting down trees, sowing and planting the soil, and depasturing large herds of cattle and flocks of sheep and goats which they brought with them. Those of their countrymen who stayed at home, in the mean time took every opportunity of making inroads upon these dwarfs, burning their houses, and carrying off and destroying large quantities of their means of subsistence, their cattle, and even their very milch goats, so that at length there was very nearly a famine in this formerly so prolific land. Things remained in this state for some time, until the dwarfs, goaded to desparation, began to resist their rapacious and gigantic *friends*. This was exactly what these cunning strangers had desired; a war of extermination was immediately commenced, when the survivors "were compelled to accept the terms of peace which were offered," after the slaughter of thousands of these pigmies, and which drove them for ever from their country and deprived them of all their little property they were possessed of. The conquerors then added this new territory to that which they had formerly been permitted to reside in, and solemnly declared (let not the reader laugh) that their "future security could only be provided for by removing these" pigmies, whom they denounced as "treacherous and irreclaimable savages, to a safer distance." But subsequent events shewed, how short-sighted these giants were. The eye of self-interest, in fact, lighted them to their own destruction. In time, the peaceful dwarfs profited by the lesson they had received,—they allied themselves with other nations—became warlike in their pursuits, and carried death and destruction into the country which had once been their own home, extending their depredations even beyond its limits. Where there had been one robber before, there were now thousands.

SONGS FROM VISCONTI,

AN HISTORICAL TRAGEDY.

BY R. HARTLEY KENNEDY, ESQ. M. D.

SONG.

I.

Our lot hath smiles as well as tears,
And joy as well as pain;
But hope, which braves a thousand fears,
Can glad my heart again.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Tho' joys we once enjoy'd be gone,
The hopes we cherish'd o'er,
Yet other joys are yet to come
And other hopes in store :—

My girlish years had many a pain,
Yet had their pleasures too ;
Forgotten those, but these remain,
For they were sweet as few.

And oh! however fortune smile
On life's maturer day,
'Twill add to joys to think awhile
On pleasures past away.

SONG.

II.

The East in rosy red before
The rising sun is seen,
And glittering clouds when he is set,
Still show where he has been:

Thus hope announces joy to come,
Thus memory holds the past,
And rainbow hues on every cloud
That frowns upon us cast.

Thence, whether it be sun or shower,
Or bring its joys or sorrows,
To-day is but a speck between
Our yesterdays and morrows.

SONG.

III.

Our spirit is no child of earth,
Tho' clad a while in clay ;
It had a better birth than this,
And hopes a better day.

When sounds are heard we once have heard,
But where we cannot tell,
When unknown lips appear to breathe
A voice remember'd well.

Who will not own those startling thoughts
Are shadowy glimpses given,
To show the soul it sprang not hence,
But where it ends, in heaven ?

Cape Town, 1835.

ESCAPES AND ADVENTURES OF CAPT. JOHNSON,

THE CELEBRATED SMUGGLER.

In a new work of considerable interest, entitled—"Scenes and Stories by a Clergyman in debt, written during his confinement in the Debtors' Prison;" we find some lengthened notices of those remarkable men, Lord Cochrane and Captain Johnson, the famous smuggler. Johnson was celebrated in every walk of life which he has chosen to tread ; strong in a daring, reckless, yet not untempered energy of mind, but a humble individual in the sphere of society. After describing many of the extraordinary exploits of Johnson, we extract the Author's own account of the

PLAN FOR THE RESCUE OF BUONAPARTE FROM THE ISLAND OF ST. HELENA.

We come now to the great and strange plot, upon which, had it succeeded, would have hinged, not only all the celebrity of Johnson's own life, but all the peace, the prospects, and the fate of empires—we mean the plan for emancipating Buonaparte from the Island of St. Helena; a plan so ingeniously devised, so carefully settled, and so completely prepared, that had the attempt been made, we are persuaded it would have been crowned with success, and Johnson himself was convinced of this.

The plan whereby Johnson was to have effected the emperor's escape involves a wonderful display of other qualities besides those of daring, foresight, and intrepidity. It exhibits the bold sailor and reckless prison-breaker, in the novel light of an engineer, a man of high inventive genius, possessing a knowledge of mechanics, mathematics, and natural philosophy ; a master of the abstruse principles of science, and making them available so as to influence the destinies of nations the moment they were brought into play.

Yes! in order to free the man who, while he was the world's admiration, would fain have been its despot; debtor Johnson, who had burst the barriers of his jail; smuggler Johnson, who had been the terror of the excise ; Captain Johnson, who had conducted the British fleet to its destination ; now not content, like the heathen Janus, to have stood before the world with two, or even three faces, for the fourth time tears away the mask that would have concealed the various capabilities of his mighty mind, and upon the banks of an English river, for the liberty of one who would have gloried in deluging that river with blood, he ventures to build a SUBMARINE SHIP; a vessel that would not only sail upon the face of the blue seas, but could at pleasuse sink itself into their secret depths, and, for the space of six hours, plough her way in the midst of waters, with the indignant waves of the ocean roaring over her head.

In such a ship was Napoleon to have been removed from the island of his captivity, unsignalled and unseen ; the enemy departing from his prison, and yet no cannon pointed at him from the hills and forts : no vessel pursuing him upon the sea.

Of this vessel, and the exploit which it was to be the means of performing, we are happy to be able to give the following account from Captain Johnson's own pen—of course relieving ourselves from any participation in the expressions used either respecting Napoleon, or Sir Hudson Lowe. Captain Johnson entitles it--

"A correct description of the Submarine Ship called the *Eagle*, which was intended to take away the Grand Emperor, Napoleon, in July, 1821, had not death hurried him out of this world, on the 5th of May previously. *(See Dr. O'Meara's 'Voice from St. Helena.')*

"I constructed two submarine ships, which I intended should be engaged in the meritorious and humane service of rescuing the immortal emperor Napoleon—the greatest man of his age—from the fangs of his jailor, Sir Hudson Lowe.

"The *Eagle* was of the burthen of a hundred and fourteen tons, eighty-four feet in length, and eighteen feet beam ; propelled by two steam engines of forty horse power.

"The *Etna*—the smaller ship—was forty feet long, and ten feet beam ; burthen, twenty three tons.

"These two vessels would be propelled—the large one with two engines of twenty horse power each ; the small one with one engine of ten horse power, high pressure, well arranged, equipped with warlike stores, and thirty well chosen seamen, with four engineers. They were also to take twenty torpedos, a number equal to the destruction of twenty ships, ready for action in case of my meeting with any opposition from the ships of war on the station.

"These two ships were to be stationed at a convenient distance from the rock (at St. Helena), abreast of Longwood House, the highest point of the island, being two thousand feet above the level of the sea, and because deemed inaccessible, of course unsuspected. All the accessible points were well fortified and guarded.

"In this position the two vessels were to lay at anchor at a cable's length from each other, the smaller one close to the rock, well fortified with cork fenders, in order to guard against any injury which might be apprehended from the friction or beating against the rock, which could at all times be prevented by hauling off or on, as occasion required.

"This smaller ship would be provided with a *mechanical chair*, capable of containing one person on the seat, and a standing foot-board at the back, so that the person at the back could regulate the ascent or descent at pleasure. Attached to this chair would be a patent whale-line, two thousand and fifty feet long, with all the necessary apparatus ready when called for.

"Thus far arranged, the vessels were to remain submerged during the day, and at night approach the surface. Every thing being then perfectly in order, I should then go on shore, provided with some other small articles, such as a ball of strong twine, an iron bolt, with a block, which I would sink into the ground at the top of the rock, opposite Longwood House, and abreast of the submarine ships.

"I should then obtain my introduction to his Imperial Majesty, and communicate my plan. The residence of the emperior being surrounded by a *chevaux de-frise*, and the stables being outside, the servants only had access to the house, I proposed that the coachman should go into the house at a certain hour which should be fixed, and that His Majesty should be provided with a similar livery, as well as myself, the one in the character of coachman, the other as groom ; and that thus disguised we should pass into the coach-house, and there remain unnoticed and unperceived.

"We should then watch our opportunity to avoid the eye of the frigate guard, who seldom looked out in the direction of the highest point in the Island, and on our arriving at the spot where our blocks, &c. were deposited, I should make fast one end of my ball of twine to the ring, and heave the ball down to my confidential men, then on the look- out below, who would make the other end fast to the fall belonging to the mechanical chair, by which means I should be able to haul up the end of the fall, which I should run through the block, and then haul up the mechanical chair to the top. I should then place His Majesty in the chair, while I took my station at the back, and lowered away with a corresponding weight on the other side, until we arrived safe at the bottom.

"Embarked on board the *Etna*, into which we should have lowered, as it lay close under the rock, I should then cast off our moorings, and haul alongside the *Eagle*, and remain there during the day ; in the evening, prepare our steam, and get under weigh as soon as it became dark. In this position I should propel by steam until I had given the island a good berth, and then ship our masts and make sail, steering for the United States.

"I calculated that no hostile ship or ships could impede our progress, so as to offer any very serious obstruction, as in the event of an attack I should haul our sails, and strike yards and masts (which would only occupy about forty minutes), and then submerge. Under water we should wait the approach of the enemy, and then, by the aid of the little *Etna*, attaching the torpedo to her bottom, effect her destruction in fifteen minutes.

"On my arrival at a secure and convenient spot on the coast of the United States, I should communicate with His Majesty's Government through the medium of my friend and patron the late 'ever to be lamented' Duke of York, to negociate for a more suitable and honourable asylum for his Imperial Majesty. Should my negociations, as I anticipated, fail, I should then address his Imperial Majesty, and propose his return to France, where he would meet with a very favourable reception."

Such is Johnson's own outline of this daring and ingenious plan ; the whole of the negociations for which were, he declares, carried on through O'Meara. In constructing the vessels, he set to work at his own expense at his fortress at Battersea, opposite to which, at Chelsea, he had a cottage, where he resided with his wife, son, and daughter. *The vessels were laid down to be coppered when news arrived of the exile's death.*

LITERARY EXTRACTS.

ANOTHER REVOLUTION.

SHORT WHIST.

THE origin of the Game of Short Whist, which has nearly superseded all others, is thus described:

This revolution (compared to which those of 1789 and of 1830 were mere things of a day) was occasioned by a worthy Welsh baronet preferring his lobster for supper hot. Four first-rate whist-players—consequently, four great men—adjourned from the House of Commons to Brookes's, and proposed a rubber while the cook was busy. 'The lobster must be hot,' said the baronet. 'A rubber may last an hour,' said another, 'and the lobster cold again, or spoiled, before we have finished.' 'It is too long,' said a third. 'Let us cut it shorter,' said a fourth.—Carried *nem. con.* Down they sat, and found it very lively to win or lose so much quicker. Besides furnishing conversation at supper, the thing was new—they were legislators, and had a fine opportunity to exercise their calling. Let us imagine these four sages to represent the four suits—*Spades (digging into the bowels of the lobster.)* Five shall be game without reckoning honours; thus leaving less to chance and more to skill—*Clubs.* Then you will never get indifferent players to play, and knock up the game altogether.—*Diamonds.* Three should have lurch; and without calling, the honours may be then scored; but not at four. *Hearts.* I have finished the lobster; let us try again, upon the last-named principle, with which I am seriously inclined to coincide and settle it.—*All.* Agreed. So they settled to it, and went home in hackney-coaches by daylight, satisfied with having performed this arduous duty. Next day St. James's Street was in commotion; the Longs and the Shorts formed each a party, and violent was the contention between them. All the gamblers were Shorts; and, by dint of that eloquence which invariably flows in streams of persuasion when any thing is to be got, succeeded in bringing over many middling players to think it a good thing to have more frequent opportunities of losing, or, *may be*, winning. The regular old stagers made an obstinate stand; they were Longs to the back-bone. What! (cried they) overthrow the venerable institutions handed down by our forefathers, which we are bound to transmit unsullied to posterity? What is to become of all those calculations of the odds that we have got by rote, and which by prescription are an integral part of the game? How can we become suddenly habituated to this new fangled rapidity? it is change, but not reform: never will we consent to so great, so dangerous an innovation. They were soon, however, outvoted; those 'whose chariots roll upon the four aces' had succeeded in gaining over the multitude who play whist without ever thinking about it. The Longs began to give way, fearing to lose their diurnal amusement altogether, and listened to their opponents, who soon made it plain that good steady play would be recompensed, by obtaining a greater advantage, inasmuch as the loss of a critical odd trick, one out of five, must be oftener fatal than one out of ten; and the events being multiplied, the influence of bad play upon them must be multiplied also. In revenge of the clamouring mob of bunglers, they coalesced with the gamblers, and even went beyond them by introducing French points: thus the stakes were not only imperceptibly doubled by cutting the game in halves, but a very pretty addition made to them by this amendment, which ordained the points played for to be eight, instead of five. The waves of commotion having thus subsided, the original stirrers-up of the storm, instead of losing their heads, like many of their great prototypes, were installed as lawgivers upon the occasion: they framed a code, which has been observed to this day. Their constituents were, strange to say, all satisfied; and St. James's echoed to the cry of 'Long live Shorts!!!'—*London Literary Gazette*

DEFINITION OF LOVE.

(By Leitch Ritchie.)

The history of the heart I hold to be very nearly the same in all men. The apparent difference consists in the strength or faintness of the impression made upon the mind by things always the same. All men have their first love, their second love, and their third love; but some men do not know that they have had any; while others imagine that they have had a great many more. The history of love is like a picture engraven upon a plate of adamant with inimitable boldness and delicacy, depth and lightness, simplicity and art. But its effect depends mainly upon the paper subjected to the impression. The heart of man is like that paper—clouded, spongy, spotted, smooth, hard, coarse, fine, or soft, as it may happen. In some cases the lines appear fairly rendered; in others they are blotted and confused; in others they become so faint, on exposure to the air of the world, that they are nearly or altogether invisible. The history of love is divided into three books. The first is like a fairy tale; the second like a poem; the third like a chronicle. The first is the only one we reperuse in after-life with unmixed complacency. No matter what may have been the fate of the heroine—the catastrophe of the story—it is associated with all our best and most beautiful feelings; with the spring time of the heart, when our young bosoms opened like a flower, in an atmosphere of light, and music and perfume. The recollection of disappointment has no annoyance; the memorials of death bring back no sorrow; we talk of that shadowy past with complacency, even to strangers; it seems as if the fearless, guileless spirit of early life returned with the theme. The second era of love is very different. At that epoch the world began to mingle with our dreams—the *world*—comprehensive word! including strife, envy, hope, terror, delirious joy, and bitter, burning tears. The history of this period is a secret and a mystery, which in most cases descends with us to the grave. In public we recoil from its associations with terror; in private, they crimson or blanch our cheek at the distance of half a century; yet the narrative would, in general, seem to a listener to be the most common place imaginable. Alas! it is not the events that give it importance; it is the thoughts—the imaginations—the stirrings, and heavings, and writhings of the wrung spirit amidst the terrible lessons of early experience.

ANNE GREY'S WEDDING.

The bride turned a little pale, and then a little flushed, and at last had just the right quantity of bright, becoming colour, and almost shed a tear, but not quite, for a smile came instead and chased it away. The bridegroom was warned not to forget the ring, and all were assembled round the altar: 'I will,' was uttered in a clear, low voice, and the new name written—and Sophy Grey was Sophy Grey no more; and she turned her bright face to be looked on, and loved, and admired, by the crowd of relations and friends surrounding her; and they thought that Sophy Stokefon was still dearer and prettier than even Sophy Grey had been—and then the carriages were entered, and the house was reached. Sophy walked into her father's house—her childhood's home—her home no longer—and the bridal dress was changed, and the travelling dress took its place, and all crowded round her—the father, the mother, the sister, the brothers—all crowded round her to say her good-bye—to look and look on that dear face once more—to feel that her fate was sealed—to pray that it might be a happy one—to think that she was going away—away from them—away from her home—away with a stranger! and tears and smiles were mingled, and fond looks, and long embraces—and a father's mingled tear of joy and sorrow was on her cheek; and the sister's tear, that vainly tried to be a smile, and the mother's sobs: and Sophy Grey left her father's house—left it with the bright beam of joy and hope upon her brow; and another moment, the carriage-door was closed, the last good-bye uttered—and Sophy was gone. Oh! how melancholy! how lonely does the house appear, where but a moment before all has been interest and hurry! Who has not experienced the deserted sensation, when those whom we have been accustomed to see are gone—when the agitation, the interest of parting is over?—the forlorn, empty look of the room—the stillness—the work-box, the drawing materials, all gone; or perhaps one single thing left to remind us how all was—a flower perhaps, that had been gathered and cast aside—the cover of a letter which had been scribbled over in the forgetfulness of the happy conversation.

AN INDEPENDENT JUDGE.

There has been a great deal of talk lately on the extent of the powers and privileges of the Speaker of the House of Commons over the common law of the land. The following story of Judge Holt will show how differently that upright magistrate considered the matter:—

"In the year 1704 several persons who claimed to be freemen of the borough of Aylesbury were refused the privilege of voting at an election for a member of Parliament, and brought an action against the returning officer for penalties which the law imposes. The house, conceiving the appeal to the court to be an invasion of their privileges, declared it to be penal in either judge, or counsel, or attorney, to assist at the trial.

"The Lord Chief Justice Holt disregarded this order, and proceeded with the action in due course. The house, extremely offended at the contempt, sent the Sergeant-at-Arms to command the judge to appear before them; but the resolute upholder of the laws refused to stir from his seat. On this the Commons sent a second message by their Speaker, attended by a great many members, who having delivered his message, his lordship replied,—'Go back to your chair, Mr. Speaker, within these five minutes, or you may depend on it I'll send you to Newgate. You speak of your authority; but I tell you I sit here as an interpreter of the laws and a distributor of justice, and were the whole House of Commons in your belly, I would not stir one foot.' The Speaker was prudent enough to withdraw, and the house let the matter drop."

THE LAMENT OF TOBY, THE LEARNED PIG,

WHO, HAVING LOST HIS MEMORY, WAS SENT BACK TO HIS STY.

A little learning is a dangerous thing.—POPE.

Oh heavy day! oh day of wo!
To misery a poster,
Why was I ever farrow'd—why
Not spitted for a roaster?

In this world, pigs, as well as men,
Must dance to fortune's fiddlings,
But must I give the classics up
For barley-meal and middlings?

Of what avail that I could spell
And read, just like my betters,
If I must come to this at last,
To litters, not to letters?

O, why are pigs made scholars of?
It baffles my discerning,
What griskins, fry, and chitterlings
Can have to do with learning.

Alas! my learning once drew cash,
But public fame's unstable,
So I must turn a pig again,
And fatten for the table.

To leave my literary line
My eyes get red and leaky;
But Giblett does'nt want me *blue*,
But red and white, and streaky.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Old Mullins used to cultivate
My learning like a gard'ner;
But Giblett only thinks of lard,
And not of Doctor Lardner!

He does not care about my brain
The value of two coppers,
All that he thinks about my head
Is, how I'm off for choppers.

Of all my literary kin
A farewell must be taken;
Good bye to the poetic Hogg!
The philosophic Bacon!

Day after day my lessons fade,
My intellect gets muddy;
A trough I have, and not a desk,
A sty—and not a study!

Another little month, and then
My progress ends, like Bunyan's;
The seven sages that I loved
Will be chopp'd up with onions!

Then over head and ears in brine
They'll souse me like a salmon;
My mathematics turned to brawn,
My logic into gammon.

My Hebrew will all retrograde,
Now I'm put up to fatten;
My Greek, it will go all to grease,
The Dogs will have my Latin!

Farewell to Oxford! and to Bliss!
To Milman, Crowe, and Glossop,
I now must be content with chits,
Instead of learned gossip!

Farewell to 'Town!' farewell to 'Gown!'
I've quite outgrown the latter;—
Instead of trencher-cap, my head
Will soon be in a platter!

O, why did I at Brazen-Nose
Rout up the roots of knowledge?
A butcher that can't read will kill
A pig that's been to college!

For sorrow I could stick myself—
But conscience is a clasher;
A thing that would be rash in man
In me would be a rasher!

One thing I ask—when I am dead,
And past the Stygian ditches—
And that is, Let my schoolmaster
Have one of my two flitches.

'Twas he who taught my letters so
I ne'er mistook or miss'd 'em;
Simply by *ringing* at the nose,
According to *Bell's* system.

WHAT WILL THE PRESENT MINISTRY DO?

THIS may be answered by one of their own colleagues. Sir John Hobhouse explained the nature of the intended policy of the government soon after its temporary dissolution by the Duke of Wellington, in the following words:

On the day of nomination at Nottingham, Sir John Hobhouse made a most important speech to the electors. It contains a more specific account of the measures which the late Ministry intended to propose than any which has yet been published. "It was our intention," he said, "on the very first day of the session, to have announced certain reforms, the nature of which I think it but right I should detail to you; and first, we should have proposed *an entire reform in the Church of Ireland—a reform which would have cut at the root of the great abuses*—(Cheers)—which have so materially contributed to render that country a by-word to the nations of the earth, and have overwhelmed it with distress. (Cheers.) The next bill we intended to propose was a bill to supersede the Irish Coercion Bill. (Loud cheers.) It is very true that the late Parliament has much to answer for in passing that bill—not only to you, the present constituency, but also at the bar of posterity. And here I beg to assure you, if you will give trust to him who now speaks to you, *it was only on the understanding that amongst the Ministerial arrangements, the Irish Coercion Bill was not to form the basis for the government of Ireland, that my Lord Duncannon and myself joined the late Cabinet.* (Loud cheers) The first question was, 'Is the Coercion Bill to be passed?' Lord Melbourne answered 'No.' My next question was as to the Irish Church Establishment, and the appropriation of its superfluous revenue, as I never could consent to the absurd proposition, that the means designed for the maintenance of a national establishment, in places where the functions were not exercised, should not be appropriated to the service of the people. (Cheers.) *Such a proposition appears to me little short of madness.* It is true that some influential gentlemen differed from me; *but none in the late administration.* It was also intended by the late Cabinet, on the first meeting of Parliament, to give notice of another bill, *for adjusting in a much better manner than at present, the English Church Establishment, and for a commutation of tithes,* on a plan which I firmly believe would, when well considered, be satisfactory to all. (Cheers.) We also intended to bring in *measures of redress for all practical grievances, under which the Dissenters are labouring,* (hear, hear,) so that the causes of real complaint might be completely removed. And I can speak with more certainty on this subject, as I happened to be one of that section of that Cabinet, to whom was intrusted the preparation of those measures, *and I have the bills now at home.* I have now stated what was our intention at the first opening of the session, and I trust you will think with me, it was a tolerably good bill of fare. We, however, did not rest here—we went further—*we proposed to do for England, what had already been done for Scotland, by introducing into this country, great and salutary municipal reforms.* (Loud cheers, in which several of the members of the Nottingham Corporation loudly joined.) We were, in fact, a Government opposed to monopoly in every sense of the word—the determined opponents of all power that was not exercised for the general good. (Cheers.) *Whether it was for this we have been dismissed from office is not for me to say, though it may be for you to guess.* A story has been told that there was disunion among the Cabinet—that we were not all agreed on certain points *Upon my word, it is a fable from beginning to end, for at no one time during the existence of the Melbourne Administration,* which was only about four months, *was there the slightest division of opinion.* And this, indeed, was but natural; for it will be recollected that when the changes occurred after the succession of the Stanley party, and then the retirement of Earl Grey, it inevitably followed that our Government was rendered more popular, having for its basis the measures which I have now detailed to you. (Hear.) You may depend upon it, that so sure as the constituency of England send a majority to the House of Commons to act against the present government, *so certain will the measures of future Cabinets be decided for the next half century.* If the present Government should fall quickly by a vote in the new House of Commons, *it will be impossible for this country ever to be governed again except by men of decided political character.*" The Right Hon. Baronet was heard throughout with the greatest enthusiasm, and was most fervently cheered at the close.

Steam Improvement.—Steam vessels are about to be employed, under the auspices of the King of Greece, to run between Athens, Marseilles, Smyrna, and Constantinople. The projector of this plan is an Englishman! Shade of Themistocles appear at the Piræus, and preside over the launch of the first of these vessels!

EDITORS OF THE FRENCH AND ENGLISH PRESS.

(From the Morning Advertiser.)

Our attention has been drawn to an article in the *Morning Post* of yesterday, imputing the opposition of its contemporary of the *Chronicle*, as well, we presume, as that of the antiministerial press, generally, to the disappointment of various pleasant expectancies of Commissionerships and other good things, the lamentable consequence of the expulsion of a liberal ministry. The assumption is charitable enough, and might easily be retorted, but let that pass as an *argumentum ad hominem* which cuts with two edges, if at all, and is the affair of the *Chronicle* rather than ours. Our object in alluding to the subject is merely by way of peg, to hang some remaks upon, touching the comparative position of the gentlemen of the press here and in France, at present and retrospectively, and their actual position in this country compared with their standing some very few years ago. We propose to state facts rather than to raise an argument.

Before the Revolution of July the press had attained, and almost monopolised, political power and public opinion in France; its conductors were looked upon as the equals—nay, more than the equals—of Ministers of State. The great social event only confirmed its importance, and the immediate result was, to raise some of its ablest conductors to the first offices in the Government. Moral influence imparted personal consideration; and we have ourselves been witness, in high society, when Casimir Perier, then Prime Minister, has stood in the circle with scarcely a satellite to do him honour, whilst Cauchois Lemair, then editor of the *Constitutionnel*, or Salvandy, of the *Journal des Debats*, or Carnal, of the *National*, were surrounded by admiring throngs, hanging with devoted attention, and in silence the most profound, upon the wisdom or the eloquence flowing from their lips. Numberless were the Prefectures, the Sub-prefectures, and other responsible employments to which men of the press were elevated, and in many instances most deservedly; the list would be too numerous even could we pretend to give it from memory. We shall content ourselves with selecting a few names which now figure in the Councils, in employments, or in the Chamber of Deputies, since the accession of the Citizen King:—

M. Guizot, formerly one of the editors of the *Globe*, is Minister of Public Instruction.

The Duc de Broglie, his co-Editor, was lately Minister for Foreign Affairs.

M. Thiers, late Editor of the *National*, is Minister of the Interior.

M. Etienne, Editor of the *Constitutionnel*, is Vice President of the Chamber of Deputies.

M. Chateaubriand, one of the Editors of the *Journal des Debats*, and formerly Minister for Foreign Affairs.

M. Bertin, one of the Editors of the *Journal des Debats*, holds an office, the title of which we forget; but the duties of which, like those of our Lord Chamberlain, relate to a superintendance of the Theatres and the Opera.

M. Bartin De Vaux, principal Editor of the same journal, was lately Ambassador to the Hague, and has been created a Peer.

M. Salvandy, another Editor of the same journal, is a Member of the Chamber of Deputies.

M. Lafitte, a proprietor and writer in the *Journal du Commerce*, was three years ago Prime Minister of France, and is now a Member of the Chamber of Deputies.

Here we close the account, although there are various other conductors of the press situated as honourably.

In England, the press and its managers have been, until of late, most unaccountably depreciated in the social scale.—Wielding a power inferior to that of no interest in the State, and perhaps superior to all, vulgar prejudice and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the jealousy of the higher powers have alike combined to force them down and keep them down. But the empire of mind will, in the long run, assert its sway. Public opinion begins to do justice, tardily, to an interest and to a class of vital consequence to the great interests of all, because of all the direct voice and undeniable representatives. Justice is slow, but sure, and in the following statement of the preferment of men, whose only claims are those of having served the public cause, or the interests of their party well, faithful, and ably, there are just grounds for expectation that the services of a body of men for talent unsurpassed in the empire, for experience and industry rarely equalled, may be still more extensively called into action for the advantage of the nation.

Lord Brougham, formerly a Chief Editor of the *Edinburgh Review*, Lord High Chancellor of England.

The Right Hon. J. W. Croker, one of the Editors of the *Quarterly*, late Secretary of the Admiralty.

The Right Hon. F. Jeffrey, Chief Editor of the *Edinburgh Review*, late Lord Advocate of Scotland.

Mr. Roebuck, one of the Editors of the *Westminster Review*, a Member of Parliament.

E. L. Bulwer, Esq., late Editor of the *Monthly Magazine*, a Member of Parliament.

Of the newspaper press, the far higher and more influential branch of political literature, the following facts may be recorded:—

John Walter, Esq., the Proprietor and late Editor of the *Times*, a member of Parliament for a county.

Mr. Grote, Proprietor of the *Chronicle*, Member for the City of London.

Colonel Torrens, Proprietor and one of the Editors of the *Globe*, Member of Parliament, holding some place beside.

Mr. Praed, Editor of the *Morning Post*, Member of Parliament and Secretary to the India Board.

Mr. Cobbett, Editor of the *Register*, and Member of Parliament.

Mr. Baines, of the *Leeds Mercury*, Member of Parliament.

Mr. Coulsen, formerly Editor of the *Globe*, one of the late Commissioners for inquiring into the Poor Laws.

Mr. Chadwick, late one of the Editors of the *Examiner*, now Secretary to the Poor Law Commission.

Mr. Wakeley, Editor of the *Lancet*, Member of Parliament.

Mr. D. W. Harvey, late Editor of the *Sunday Times*, a Member of Parliament.

Mr. Buckingham, of the *Calcutta Journal*, of the *Argus*, &c., &c., &c., Member of Parliament.

Mr. Sergeant Spankie, one Editor of the *Morning Chronicle*, late M. P., candidate for a Judgeship, and an actual Counsel to the East India Company.

Mr. Sheil, formerly Reporter on the *Chronicle*, Member of Parliament.

Sir John Campbell, formerly Reporter on the *Chronicle*, late Solicitor-General.

Sir John Jeffcott, formerly Reporter on the *New Times*, Judge at Sierra Leone.

Sir John Stoddart, Editor and Proprietor of the *New Times*, now Chief Judge of the Admiralty Court at Malta.

Mr. Dowling, formerly Reporter of the *Chronicle*, a Judge at Sydney.

Mr. Farren, formerly Editor of the *British Traveller*, *now* Consul General in Syria.

Besides many others, who have ably served in various commissions and other capacities, which it would take up too much of our space to enumerate.

We shall be pardoned, in conclusion, for stating that the Editor of this journal might have been placed in the present Parliament, free of expense, if his ambition had that way tended. The offer was made, and declined.

A COUNTRY BALL ON THE ALMACK'S PLAN!

BY HAYNES BAYLY.

Oh! joy to her who first began
A Country Ball on the Almack's plan!
Hogsnorton's Queen she walks erect,
The Ball exclusive and select;—
Patrons and Patronesses sit
From morn to night arranging it;
And when you hear the names of all,
You'll guess the merits of the ball.
Plebeian persons they reject,
Hogsnorton balls are *so* select!

The Squire's own lady, Mistress Pearl,
Her sister (quite a stylish girl),
And then the friend of Mr. Flaw.
(The Exquisite, and man of law,)
And Mistress Pitts, the Doctor's bride,
Related on the mother's side
To Mr. Hal (who was, you know,
An Indian Judge some time ago!)
By these, all upstart claims are check'd,
Hogsnorton balls are *so* select!

They've quite excluded Mr. Squills,
Who makes the antibilious pills;
Not 'cause he *makes 'em*, but they say
He *sells 'em* in a retail way;
But Mr. Squills declares his wife
Has seen a deal of stylish life,
And votes Hogsnorton people low,
So if she *could*, she wouldn't go—
A strange remark, when you reflect
Hogsnorton balls are *so* select!

And then you know there's Mr. Flinn,
The rich old Mercer, can't get in;
And Sweet the Grocer has applied!
But Sweet the Grocer was denied;
And both appear to think it hard
That Swipes the Brewer has a card:
And say, "Why should a brewer be
One bit more fit for *hops* than we?"
But Swipes of course is quite correct,
Hogsnorton balls are *so* select!

Of course all those they won't admit,
Discuss the ball, and censure it;
And strange opinions they express
About each Lady Patroness:
Says Mrs. Flinn to Mrs. Sweet,
"*I* wash my hands of the *elite*;"
Says Mrs. Sweet to Mrs. Flinn,
"For all the world I'd not go in!"
Here envious feelings we detect,
Hogsnorton balls are *so* select!

Says Mrs. Squills, "There's Mrs. Pearl,
You'd think her father was an Earl!
So high and mighty! bless your heart,
I recollect her much less smart,
Before she married: and I know
That people *said*—('tis *entre nous*)
She was a *leetle* indiscreet!
So much, my dear, for the *elite!*"
"Dear me! don't say she's incorrect,
Hogsnorton balls are *so* select."

Woe, woe to her who first began
A country ball on the Almack's plan!
Grim war is raging in the town,
The men are raving up and down;
And, what may lead to worse mishaps,
The ladies all are pulling caps;
Indeed we hear, from one and all,
As much of *bullets* as the *ball!*
Why was Hogsnorton's comfort wreck'd?
Because her balls were *so* select!
(*New Monthly*)

Hospitality not abused.—About the middle of the last century, a shepherd of the name of Stewart, with his family, resided in a *sheiling* during the summer months, in a certain pass between Glenorchy and Glenlyon; and, in order to better his circumstances and benefit people travelling that way, he provided himself with a cask of whisky, (the favorite beverage of the Highlanders,) and disposed of it as occasion might require. Towards the end of the season, when his family had returned to the *strath*, the whisky was still permitted to remain, so that any person that might pass, and had been accustomed to call there for a refreshment, should not be disappointed. The shepherd himself, however, being in the course of his occupation, daily in the neighbourhood, visited the *shieling* from time to time, to observe the results of this uncommon experiment; and, astonishing to relate, never missed a drop of his liquor but what had been fully accounted for, by its value being deposited beside the cask. Such an instance of honesty is truly honourable to humanity.—*Greenock Advertiser.*

Legal Precedents.—It is a maxim among lawyers, that whatever hath been done before, may legally be done again: and therefore they take special care to record all the decisions formerly made against common justice, and the general reason of mankind. These, under the name of precedents, they produce as authorities, to justify the most iniquitous opinions, and the judges never fail of directing accordingly.—*Swift.*

Saxon Names of the Months—"*Wolf-monat*, or wolf-month; so called because in that month (January) the wolves were the most to be dreaded. *Sprout-kele* (February), from the sprouting of the kele wort, the ordinary pot-herb of the Saxons. *Lenct-monat* (March), because the days were lengthening. *Oster-monat* (April), whether from the easterly winds during that month, or from an ancient goddess, is perhaps doubtful. *Tri-milki* (May), because the cows were now milked three times a-day. *Weyd-monat* (June), because in this month the cattle were sent to wade in the marshes. *Hey-monat* (July), hay-month. *Barn-monat* (August), from the gathering of the harvest into the barns. *Berst-monat* (September), beer or barley month. *Wyn-monat* (October), wine month, when the grapes were pressed. *Wint* or *winden-monat* (November), the wind month. *Winter-monat* (December), winter month."—*Cabinet Cyclopædia.*

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

THE CAPE BABOONS.

Yahoo!

The baboons wander about the country in troops, having no fixed residence: [wanted, a vagrant law!] they move in a manner similar to an army in the field: that is, they are conducted by some rule of marked discipline. When they go forth on a marauding excursion, they place scouts upon the adjacent heights, who give notice of danger by shouting out very distinctly *Yahoo! Holloa! Yahoo!!!*—*(Holman.)*

The Fingoes.—Great rejoicings are taking place on the rescue of the Fingoes from the *bonds of slavery*. And the late Slave-Holders at Stellenbosch are about to approach His Excellency with a congratulatory address for this noble act of *Emancipation*. No mention is made of *Compensation* to the Caffers, but their dues will, no doubt, meet with attention by the gentlemen appointed to adjudicate the claims of the parties at this end of the Colony. If there be not cash enough in the Compensation chest, the people at home must once more come down liberally—that's all!

The Weather.—The present winter has been one of unparalleled mildness, and the spring is stealing rapid marches. Many of the oaks are putting forth their foliage, and vegetation in general is in great progress. The result of the Ther-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

mometer at St Helena Cottage, near Cape Town, on the 16th, is thus recorded:

	INSIDE.	OUTSIDE.
8 o'Clock, A.M.	76	73
Mid-day, ...	79	92
P.M.	77	76

Improvements.—It is but seldom we can advert with satisfaction to any improvements in this Town. Some pretty neat buildings are, however, springing up in the suburbs, which must eventually tend to lower the high price of rents in the Town. But there is one improvement of a public nature which requires notice. This is connected with the Custom's Department. The Wharf and its adjacencies now wear the face of civilization, and all its ten thousand heaps of invalided ship's tackle are marched off to the right-about. A new Custom-House—the Landing Surveyor's Office—has been erected, the approach to the Jetty and Strand is no longer blocked up, and the opening view of the sea, and the distant shore and mountains, is altogether a delightful scene.

THE "CLOUD OF WITNESSES."

If any people can be considered universally happy, the inland Caffers are so: but it is to be feared that evil days will soon come upon them, as they have already done upon the frontier tribes. The Caffers possess abundance of fine oxen and cows, and the milk of the latter forms a considerable part of their food. But they also eat the flesh of these animals and of sheep. They cultivate maize and millet, and several kinds of vegetables. —(*Dr. Howison*, 2 *vols.* 8*vo.* 1834)

Cast with sixty of my people on the shores of Caffraria, after combatting the horrors of a tempest, which I believe has but few parallels in the history of naval misfortune, I found in the Natives a hospitality, and received from them a protection, which on many of the shores that belong to the polished nations of Europe, I might have sought for in vain. These unfortunate inhabitants of Caffraria, who have been so often and so wickedly denominated savages that delight and revel in human slaughter, I found possessed of all those compassionate feelings that alone give a lustre to and adorn humanity; living in a state of perpetual alarm from the persecuting and avaricious disposition of the colonists.—(*Capt. Stout*, 8*vo.* 1820.)

From every account that we have been able to collect, they [the Caffers] really appear to be a nation "more sinned against than sinning."—(*Thos. Phillips, Magistrate of Albany*, 8*vo.* 1827.)

The policy hitherto adopted towards the Caffers is by no means in accordance with the spirit of the age. Physical force is not now in that repute it was in the times of the Goths and Vandals. It has long been discovered that a far more powerful effect may be produced by an appeal to the reasonable faculties of mankind, than to cold steel and the munition of war. Justice and humanity alike demand an equitable adjustment of all matters relative to our Frontier system.—(*Editor of the Graham's Town Journal, Dec.* 1834.)

Another cause of our calamities is the inefficiency in numbers of the military force stationed on this frontier, to protect it against the predatory inroads of the native tribes.

We require additional protection from the Government both for life and property; we require a consolidation of the means of defence along the whole of our exposed frontier, so that the inhabitants themselves may at all times readily co-operate with the Military in repelling invasion, and in *punishing* aggression.—(*Editor of the Graham's Town Journal, July* 9, 1835.)

The intercourse of Europeans with barbarous nations, except where it has led (as unhappily it has but too seldom done) to disinterested exertions for their improvement, has usually issued in their enthralment, their extirpation, or their moral debasement. The present condition of the Caffers on the S. E. Frontier of the Colony, does not contradict this assertion. They have not improved since we came in contact with them. In some respects they have retrograded. Still, however, they are a manly race, and though somewhat inferior to the Bechuanas in the mechanical arts, they are vastly their superiors in courage, in enterprise, and above all in humanity.—(*Thompson's Travels*, 4*to.* 1827.)

We turn away from the eastern districts, deeply affected by their lot—so bountifully gifted by nature—once the quiet pastures of a simple people, found by Europeans in their primitive condition, with all the virtues, although not without the vices of savage life. Boasting of our arts and arms, and civilization, we came among them unfettered by any restraints, and forthwith acknowledged no law but force. The finest countries are consequently reddened with our own blood, and with that of the unhappy natives whom we have invaded. Such are the fruits of a system of which the administration of law and justice forms no part.—(*Baron van Hogendorp*, 8*vo.*)

The Caffers have been often described, and I shall not here repeat what is well known about their appearance and customs. They are a good humoured, brave, athletic race, living on the product of their numerous herds.—(*Lieut. Halliday, 75th Regt.* 1834.)

I do not consider the Kaffers a cruel or vindictive people. The policy adopted towards them has been severe; for, when did Europeans respect the rights of the savage?

It is not strange that they should be troublesome neighbours to the settlers in a country of which they have been dispossessed. They were so; such instances were exaggerated, and a Commando (an inroad of military and boors) was the frequent consequence. The crimes were individual, but the punishment was general: the duty of the Commando was to destroy, to burn the habitations, and to seize the cattle, and they did their duty.

I hate the policy that turns the English soldier into the cold-blooded butcher of the unresisting native: I hate it even when, by the calculator, it might be considered expedient; but here it is as stupid as it is cruel. The Kaffers are a numerous and a brave people.—(*Lieut. Cowper Rose, Royal Engineers.*)

Our correspondent, "*A Frontier Farmer,*" whose communication appears in to-day's paper, would fain make it appear that we have but a very imperfect knowledge of the actual character of the Kafirs beyond our borders; we may, however, be permitted to remark that he is as little acquainted with the extent of our information on this subject, as he appears to be of the ordinary principles of equity to be observed in our intercourse with an independent people. His warlike breathings,—his dealing out threatening and slaughter may sound very imposing,—but he may fully depend upon it that such a method of proceeding as he points out will not be tolerated in the nineteenth century, and by a government disposed to make the standard of unerring justice the invariable guide in all matters of national policy. Our correspondent complains of losses by Kafir depredations, and we doubt not but his complaint is well founded; but, perhaps, after all, if he were to take the trouble to balance his accounts, he would find that by his intercourse with these people he is rather a gainer than otherwise. He appears to treat with ridicule the idea of mild measures, and to consider the system of commandoes and summary punishment as far more preferable. On these points experience is all against him. Mild measures have never been tried—commandoes have; and yet with all this our correspondent declares "That it arouses his utmost indignation when he reflects with what impunity the Kafirs have plundered the frontier ever since the arrival of the British settlers in 1820; and he goes on to predict that this year, under the present system, the colonists will be plundered of fifteen hundred head of cattle! When we find a system radically bad, we cannot expect it to work well; hence a material alteration becomes absolutely necessary. The system adopted towards the Kafirs *is* radically bad, inasmuch as it is not based on admitted principles of mutual faith and of national policy.—(*Graham's Town Journal, Feb.* 13, 1834.)

We scarcely know whether or not to complain of the conduct of the Kaffirs in affairs of this kind: they have an unquestionable right to defend their own territory against the inroads of the Colonial troops: and if we are to have no other system adopted, than that of *might is right*, let us look to it that in future no patroles consisting of about a dozen men, and headed by a mere stripling, be sent across the border to beard a whole nation within their own limits.—(*Graham's Town Journal, Dec.* 18, 1834.)

CAUSES OF THE "CAFFER IRRUPTION."

By a Member of the "Local Knowledge" Society.

"Every man has done what was right 'in his own eyes,' and we are now reaping the harvest of our egregious folly."—(*Graham's Town Journal, 25th Dec.* 1834.)

THE CAFFER DRAMA: A PROPHECY.

"Nero fiddled when Rome was burning."

"The Kafir *Drama* is performing with great eclat, and may soon be expected to arrive at a most intensely interesting *denouement*. Thanks to our savage neighbours, they, at least, are determined that our Rulers shall no longer indulge in their dreams of arcadian felicity—of the return of the Golden Age, of Elysian Bowers, &c.—(*Graham's Town Journal, 25th Dec.* 1834.)

LATEST NEWS.

Blackwood has conceded the point of allowing the Catholic Priesthood of Ireland a Government stipend, and the Quarterly Review has become liberal, and has had the courage to denounce the Revd. Mr. Gathercole, and to deny that "the Devil was the first Dissenter."

EXTRA LIMITES.

THE PRESS AT THE CAPE OF GOOD HOPE.

Our friend, Mr, Greig, has conveyed to our minds a bright thought. He has announced the Government Gazette—"an excellent *vehicle*," but we shall improve on it: a newspaper is a *flying* omnibus, licensed to carry the opinions of the world. Time and space are compromised by its velocity and power; for it has the regularity of ocean's tides, besides that, at home, they are turned into steam, and work at high pressure. A newspaper is the prime minister of almost all men's morning or evening hours, the seizer upon your button-hole,—your best guest for keeping you at home. You can neither eat your breakfast, smoke, take snuff, indulge in a bare-faced non-medicinal wilful tumbler of half-and-half, without a newspaper—your rummer of *moral* toddy: or else like a

"Good old English gentleman,
One of the olden time,"

sitting over your jorum of good "home-brewed," you study the news of the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

week. Again, every body is kindly disposed towards a newspaper—nobody ever bears resentment against a newspaper for telling "a thumper," except in the case of slander of private character, and this is an offence that cannot be forgiven; but for the rest, the public has no great objection to a humourous tirade, or even the sight of a mere outside scar: the statement *might* have been true, the sauce piquancy is amusing, and, "it is as fair for one as another."

The history of the Newspaper Press would, we think, form a curious and valuable work, and might occupy 20 vols. of Bentley, octavo. Another might be added, if the South African Press were included in the research. Very few, in fact, none of the working Editors of the London Press possess the *article* of capital—in fact, literary men are seldom known as the descendants of Crœsus, and talent and intellect are frequently overlooked. The *titled* of Scotland neglected the immortal Burns; the illustrious of his native land proved that they had the "carcase of greatness," but wanted the soul. But Scotland's sweetest minstrel soon vindicated the natural and unalienable rights of his species. Burns could not but feel that wealth, not talent, is the way to be made welcome—hence his noble song.

VERSE 1.

Is there for honest poverty
That hangs his head, and a' that!
The coward slave we pass him by,
We dare be poor for a' that!
For a' that, and a' that!
The rank is but the guinea's stamp
The man's the gowd for a' that!

VERSE 5.

Then let us pray that come it may—
As *come it will* for a' that—
That sense and worth, over a' the earth,
May bear the gree, and a' that;
For a' that, and a' that
That man to man, the world o'er,
Shall brothers be for a' that!

As it regards the Newspaper Press of this Colony, we can safely aver of the disresputable portion of it; (for there are those among us to cry out with Milton's Devil,)

"Evil! be thou my Good!"

that it is only characterised by turning the most serious subjects into levity, by falsifying the most common occurrences, and putting a forced construction on even the plain and straight forward common business transactions of the day. *Ex. gra.*

Here is a property for sale on the part of one, of two partners. The stock is not composed of treacle and rice, coffee, sugar, or punjums, but it is Literary property, and it is in the market. A. wishes to sell out, and B. the other partner, consents, at a given and mutually agreed price, to become sole proprietor of the whole. But in fulfilling the terms of the contract, as in the common and daily methods of buying and selling an estate at the Cape—*Securities* come forward and enable the *purchaser* to take over his newly acquired property. And in this simple transaction between the two last-mentioned parties, there is the *quid pro quo* of equal satisfaction.

The reader will readily enough discover, that this is no imaginary contract, it is connected with the sale and purchase of the *Advertiser* Newspaper. And yet this fair and honourable and open transaction has been magnified and tortured into a thousand hideous shapes. And the respectable individuals who affixed their names to the deed, have been villified, insulted, and made the sport of spiteful malice, saucy impudence, and unblushing falsehood.

But who are the gentlemen who are allied to this transaction? It is with proud satisfaction that we are enabled to record a correct and alphabetical list of their names, and the amount of their several engagements.

Abercrombie, J. (M. D.)	£100
Collison, F.	50
Christian, E.	50
Ebden, Hon. J. B.	50
Hodgskin, G.	50
Lawton, J.	50
Prince, G. W.	50
Philip, J. (D. D.)	200
Rutherfoord, H. E.	100
Simpson, J.	50
Sutherland, T.	50
Thomson, A.	50
Tredgold, J. H.	100
Tennant, Thos.	50*

Surely, this list may fairly challenge scrutiny, and should for ever silence the job-workers in truculent foul-mouthed invective, venom, and vindictiveness.

* It is pretty well known all over the world, that in general there is a somebody to aid the progress or starting of the Press—a fact that redounds to the honour of the monied interests. *The Literary Gazette* cannot produce a list of worthies equal to the above, which has thus honoured the Press at the Cape, but it is not without *two* patrons connected exclusively with the Mercantile interests of the oldest standing at the Cape of Good Hope. Our obligations to these gentlemen amount to £100, and if our Subscribers would only be pleased to redeem their subscription pledges, we could readily enough discharge the debt. Two things must be here observed—the remark applies to Country Subscribers—and our two Mercantile friends enjoy their own perfect freedom of opinion, leaving us to take our own unrestrained course.

Beyond the transactions of public business, in the face of open day, and in public resort, we know nothing of the Editor of the *Advertiser*, or any of his personal friends, but we feel bound, as on former occasions, to advert to the purity and independence of the Press under his controul. And without pledging ourselves to think alike with the *Advertiser* in all things, we beg leave, with the British public, to return our hearty thanks to the gentlemen already named, who did not scruple to afford every accommodation to the proprietor of the paper, without shackling the Editor with any *system* of politics which might be more or less agreeable to each individual. But, on the other hand, they could not be ignorant of their man, of his true political courage and manly independence. We say political courage: for we imagine it is not so cheap a commodity as personal courage. Ten men will run with cheerfulness to almost certain death, for one who can maintain an unflinching constancy, an unsubdued firmness amidst the shocks and variations of public life. We would assign the noble distinction of true political courage to that man alone who can bear up with an unconquerable spirit, an undismayed, untemporising energy, through misrepresentation and mockery, opposition and insult; who can incur, without shrinking, the obloquy of enemies, the misgivings of old associates, the reproach even of the friends whom he esteems—that most galling of all afflictions to the proud and generous mind;—who can endure to see his motives villified, his opinions mistaken, his conduct misrepresented; who can look calumny and ridicule in the face; who can withstand the jeers of faction, and the taunts of worldly wisdom, without swerving from the straight and narrow path;—that man who should *write for man*. Man in all his varieties—man civilized and man savage—man as a whole and not as a branch of the great human family;—that man, who, when truth and justice demand of him, will consent to make to himself foes on the right hand and on the left, and who, in the exaltedness of his self-devotion to the cause of Freedom and Liberty all over the world, should dare to admonish and reprove, even although the gate of worldly advancement should be shut against him for ever.

THE COMMON ENEMY.

The evils scattered abroad by the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

stiletto ruffianism of the *Zuid-Afrikaan* Press and its masked contributors, are too notorious to be overlooked, and too enormous to be neglected. It may be thought that we place too much stress upon the mere squibs of the day, the usual caricatures of the conduct and character of public men. But we cannot regard the *Zuid-Afrikaan* system in this light. So long as falsehood, either asserted or implied, is more agreeable than pure and unadulturated truth, and flippant attacks than regular discussion, so long as there prevails in the human heart the low and mischievous desire of having the faults and follies and misfortunes of our neighbours exposed before our eyes, it must always be accompanied with extreme danger to the community. In the whole system of the *Zuid-Afrikaan,* there is meanness, there is unfairness, there is dishonesty, there is dishonour. And if evidence of these facts be demanded, we answer—There is no man who has *dared* openly to defend it;—its very shareholders *dare not* publish a correct list of themselves; and not one of its *anonymous* contributors *dare* confess their articles of authorship.

While on this subject, we declare once for all, that it is not our intention to notice any attacks intended for ourselves. We utterly despise and hold in defiance every anonymous *straatlouse,* scrub-worker, underling, and poltroon writer of that paper. There is some pride in encountering a noble foe, but none in being assaulted by some secret enemy, with whom, if he dared to shew himself, we would either kick or disdain to contend. We may perhaps look with a sort of awe upon the sharks and whales troubling the waters, and rushing upon their prey, but we are too generous to notice the minnows and tad-poles, which are spawned forth and welcomed in the *Zuid-Afrikaan.* But be it observed, whenever that disgraceful *thing,* shall injure us in the pursuit of an honourable and lawful calling—we mean effect by libel, or otherwise, the *quantity* of that kind suffrage awarded to us by our countrymen; then, with the assistance of our legal advisers, the enemy shall not long complain of the "law's delay."

ST. GEORGE'S CHURCH.

THIS noble structure now adorns Cape Town, and its Spire, pointing to Heaven, is on the eve of completion. Its Bells already

"Ring the blest summons
To the House of God,"

and the chimes of last Sunday morning must have produced lively sensations in every British heart.

SOUTH AFRICAN INSTITUTION.

THE Annual Meeting took place on the 18th instant. Sir John Wylde presided, and the senior Secretary, Rev. Dr. Adamson, read the Report. It is an interesting document, and is to be printed. The Meeting, we regret to say, was thinly attended; and but for a few (two or three generally perform all the work of public Institutions,) the Society and the Museum would probably fall away altogether.

THE PUBLIC LIBRARY.

SUBSEQUENTLY to the last Annual Meeting, the Committee have selected from its own body a Chairman and Deputy-Chairman. The Direction thus stands—

Committee:
Honble. Sir JNO. WYLDE, L.L. D. *Chairman.*
Revd. GEO. HOUGH, A. M. *Deputy-Chairman.*
G. SANFORD, Esq.
Mr. Advocate CLOETE.
Lieut..Col. THOMPSON.
Revd. J. ADAMSON, D. D.
JNO. MARSHALL, Esq.
JNO. MURRAY, Esqr. M. D.
WM. GADNEY, Esq. *Treasurer.*

A Supplementary Catalogue has just appeared, to which is appended the last Annual Report. The following concluding part of it, as far as it regards the Library Stock of Books, is encouraging, and is but a just tribute towards the Founders and Promoters of the Institution.

"Finally, your Committee having performed the Annual Service, and declared its results, therefore trust, that your hopes have not been disappointed:—the advantages are altogether your own, and will supply the strongest motives for securing and extending them. That the Library resources has materially aided and assisted in various departments of Colonial Improvement and Enterprise, is now surely an acknowledged fact. Not only does your Library present a list of immortal names, whose Works tend to enlighten the understanding, to ameliorate the heart, to enrich the fancy, and refine the taste; but it contains invaluable stores of PRACTICAL KNOWLEDGE, from authors who, by their researches into the bosom of Nature, have proved the greatest Benefactors of mankind.

Nor would your Committee pass over the truth, that your Library has now had popular recognition in all quarters of the World:—it has been hailed in approval by Travellers, Public Writers, and Visitors of all degrees. It has been raised in public opinion as a monument, publicly announcing the enlightened views in influence with our Cape Society:—commemorating their zeal for the progress of knowledge:—their dread and horror of ignorance. It is the Genius of the place hovering over their sons with Guardian care, illuminating them with its bright and intellectual radiance, and pointing where to resort, that they may secure to themselves the imperishable treasures of Wisdom and Knowledge.

"Your Committee would, that these weighty considerations may from time to time be viewed by more powerful advocates. They are a theme for talents of the highest order—acting freely in perfect leisure—undisturbed and undivided."

THE VERZAMELAAR.

Mr. de Lima is about to resuscitate our old friend—*De Verzamelaar.* We are glad of this—we recollect the days of its prosperity with pleasure. He kept us alive all the year round by the good humour of his many harmless correspondents. Should he recover the services of Captain Pen,—*The Man in the Moon,* and *The British Subject,* Mr. de Lima's fortune is made.

THE COMIC ALMANACK FOR 1835.

AN EPHEMERIS IN JEST AND EARNEST,
CONTAINING
"All things fitting for such a Work,"
By RICDUM FUNNIDOS, Gent.
Adorned with a dozen "Righte Merrie" Cuts pertaining to the Months, sketched and etched
By GEORGE CRUIKSHANK.

Very good! and just befitting the table of the Library, *round* which lively countenances prevail, and Willie Shakspeare, in bust, looks down upon. In the illustrations of the Months, the 7th of August is denominated *Oyster Day,* and the following veritable story (which we do not remember to have read before) is recorded:

Paddy was sent to Billingsgate, on the First of August, to buy a bushel of Oysters. When he returned, "What made you so long, Pat?" said his master. "Long, is it? By the powers, I think I've been pretty quick, considering all things."—"Considering what things?"—Why, considering the gutting of the fish."—"Gutting what fish?"—"What fish! why the oysthers, to be sure."—"What is it that you mean?"—"What do I mane! why I mane, as I was resting meeself a bit, and taking a drop to comfort me, a jontleman axed me what I had got in the sack. Oysthers, sir, says I. Let's look at them, says he, and he opened the bag. Och! thunder and praties! said he, who sould them to ye? It was Mick Carney, said I. Mick Carney? said he; the thief o' the world! what a big blackguard must he have been to give them to ye without gutting.—And arn't they gutted? said I. Divil a one o' them said he. Musha, then, said I, what will I do? Do? said he, I'd sooner do them for you myself, than have you abused; and so he takes 'em in doors, and guts 'em all nate and clane, as you'll see." And out Paddy turned the empty shells on the floor.

The proceedings of some of the Learned Societies are thus noticed:

Geological Society of Hog's Norton.—The fossil remains of an antediluvian pawnbroker have been dug up, within a mile of this place. This is not regarded as a very remarkable circumstance, as many recent instances have been known of the hearts of several persons of this class being in a petrified state while alive.

Zoological Society at Hookem Snivey.—A new animal has been transmitted from No Man's-Land, which has been named the Flat-Catcher. It bears some resemblance to the human species, as it walks on two legs, and has the gift of speech. It seems quite in its element when among *pigeons,* and preys ravenously on the *gulls* that hover about watering places, getting hold of them by a kind of fascination, which throws its unconscious victims entirely off their guard, when it never fails to make them bleed profusely; after which, it suffers them to depart.

A laborious investigator has discovered, that there are exactly nine millions, one hundred and sixty-four thousand, five hundred and thirty-three hairs on a tom-cat's tail, which he defies all the zoologists in Europe to disprove. He also maintains, that a bull sees with its horns, and a rat with its tail, although he admits the possibility of their doing so without them.

BOOKS FOR THE PEOPLE.

REFLECTIONS
SUGGESTED BY THE LATE PUBLIC MEETING OF THE POPULAR LIBRARY.

The late Meeting in the *Commercial Hall*, on the first Anniversary of the Popular Library in Cape Town, was altogether an extraordinary one. We were not prepared for anything half so brilliant and animating. The Chairman was Sir John Herschel, and the other gentlemen who took a share in the proceedings were Sir John Wylde, Captain Fawcett, Sir Jeremiah Bryant, Rev. Dr. Philip, and Messrs. Oliphant, Tredgold, Fairbairn, Dr. Abercrombie, and Collison.

During a most interesting discussion, a reference was frequently made to the *order* of books calculated to produce the largest measure of the greatest good, and the works of Fiction were either pointed out as publications of questionable tendency, or as "the Schoolmaster" to higher attainments. In the latter point of view Sir John Herschel contemplated that class of books, which are termed *Works of Imagination*. The drift of Sir John's argument was, we think, pretty nearly this:

Although willing to allow that fictitious writing is the most humble means of moral instruction, I am still earnest in endeavouring to maintain its utility, especially on the ground that it finds its way to the dense multitude who close their eyes upon the introduction of purer light.

Fiction may be compared to a key, which opens many minds that would be closed to a sermon. Nor is it without authority in the writings of sincere and zealous christians. In vain might instruction be laid before thousands of the public in a weightier form. Their pursuit is pleasure, their food excitement, but they are frequently led forward by such means to a mental taste of an higher order—to that which dignifies, exalts, and brings forth great practical results.

But we may go further—How are our natures constituted? The peculiar susceptibility of the young mind to poetry, and to works of feeling, and to imaginative narrations, and to reading or hearing of romantic incidents or of supernatural fictions, must be generally admitted as moral certainty; and this is so natural and so universal, and has in all countries created so many tales of this sort, which have been the delight of millions, and of all species of the human population, that we cannot err in presuming that it is an effect which was *intended* to take place. The human mind is Athenian in this one propensity, —*the desire to hear and tell some new thing*. And if it be a part of the original plan of our nature, it must have a quality in it of a beneficial tendency; for nothing is a natural instinct or inclination within us, which is not of this character. This hunger after novelty, by the way, is an instrument of inconceivable importance, placed by Providence in the hands of every writer, and should strike him forcibly with the duty of turning this sharp appetite to good account, by appeasing it with pure and wholesome aliment. The object of the early novelists appears to have been to amuse. The next, or early moderns, seem to have placed all the felicities of life on the joys and pains of successful and unsuccessful love. The fair authoress of Cælebs, the late Hannah More, may be fairly stated as having opened a way which let loose the novel on the whole range of human contests and pursuits.

Again, as to the tendency of fictitious writings, our belief is, that all such works which do not paint and praise vice and vicious characters, and seek to make them attractive and imitated, acts advantageously on the mind, and directs it onwards in the pursuit of knowledge. As the great Duke of Marlborough is said to have derived his acquaintance with English history from Shakspeare's historical plays, so a large proportion of mankind derive much of their moral impressions and opinions from the narratives, fictitious or real, which they read, hear, or talk about. How many thousands and tens of thousands of people all over the globe have studied our language and carefully turned over the great page of English History from the perusal of the immortal works of Sir Walter Scott! And even the errors of a single tale of that great author, tended to arouse the somewhat slumbering energies of the best portion of Scotland's far-famed people. The caricature description of her first Reformers in "Old Mortality," led to the removal of the rubbish of lies and prejudice that had been heaped upon their memories by certain party-writers. "Old Mortality," on its first publication, excited a burst of admiration on the one side, and a burst of indignation, deep and severe, on the other. The one from the half-and-half Scotchmen,—absentees, pliables,—the men of

'Riband, star, and a' that;'—

the other from the Whigs—we do not mean the modern Whigs, but the descendants and lovers of the true "Whigs of the Covenant." And such a burst, the like was never seen. It was a novel affair, and it excited the public feeling to an intense degree, to see venerable clergymen descending into the arena to attack the statements and sentiments of a Romancer. There was reason for this. That book was read by every body, and it was understood to contain the sentiments of ultra-toryism to the prejudice of the people. Nay, the religious public deemed that they saw no less than a design to ridicule the memory of the martyrs and patriots of the days of Charles II., and to vilify their holy religion. The description which is given of the conduct and motives of the military

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

chieftains; the personal accomplishments and the romantic gallantry with which the author's imagination has clothed the atrocious Claverhouse, do prove that there is too much room for the one; and the absurd balderdash and disgusting cant which he has put into the mouths of the leading preachers of that age, (and they were no mean men,) do altogether show a spirit of hostility and persecution not to be tamely submitted to in this enlightened age.

The result of this public indignation was visibly in favour of the "good old cause." Accurate engravings of Grahame of Clavers were brought forward. In opposition to the romantic paintings of the novelist, the harsh features of his iron face were revealed; and the *tout ensemble* exhibited an exterior in every respect befitting the gloomy and dark soul of a man whose hands were dipped in human blood to the wrists!—And in the late additional details of his public character, it has been satisfactorily shown, from the most authentic documents, that "the gallant and enterprising officer" of Hume and his party, was a cold-blooded murderer of the unarmed peasantry; that he shot down, without trial or form of law, free citizens on their own lands, and by their own firesides; that he belonged to that licensed banditti, the oppressors of their country, who "employed even the sagacity of blood hounds to discover the lurking places of the patriots and martyrs," whom they butchered in the presence of their wives and crying babes. (See Laing's History of Scotland, vol ii., and Scottish Worthies, &c., *passim.*)

Another consequence of this national excitement was a holy zeal, which put forth its activities in repairing the tombs and monuments over the bodies of the martyrs. Each sacred spot, on mountains, in vallies, and on moors, where the patriots had fallen by the steel of the life-guards, was sought out, and monuments erected, and tomb-stones repaired, and a host of "Old Mortalities" put in requisition to chissel deeper the names and the epitaphs of the martyrs.*

Again—what has excited our youth to deeds of enterprise—to know the world, to traverse the ocean, to procure for England "a local habitation and a name" in all quarters of the great globe? What has manned our merchantmen and peopled our fleets? Was it bounties—"all able-bodied men come and enter?" Was it the press-gang or the pinching of poverty? No: our best men have been those who almost knew *Robinson Crusoe* by heart!

Further, how many have been directed to the study of ancient history—the Works of Josephus,—from turning over the pages of Mr. Croly's extraordinary novel—*Salathiel?* And to ascend still higher—how mighty in influence the almost inspired allegory of Bunyan in directing the weary wanderer and the inquiring mind to those fountains of pure wisdom—the Holy Scriptures!

Similar works influence more than the songs of a nation, and their composition improves as the social mind advances.* It is, therefore, as we have already hinted, a benefit to society when a moral genius writes them. Dr. Johnson's grand idea is universally true: 'whatever withdraws us from the power of our senses; whatever makes the past, the distant, or the future predominate over the present, advances us in the dignity of thinking beings.' Most men of genius and celebrity have been fond of romances in their youth. Luther used to say, 'I would not for any quantity of gold, part with the wonderful tales which I have retained from my earliest youth, or have met with in my progress through life.' Mr. Southey, in one of his letters to Sir E. Brydges, observes—'The prose romances have had a greater effect upon our literature than has been supposed. In reading Amadis of Greece, I have found Spenser's Mask of Cupid, Sir Philip Sydney's Zelmane, and Shakspeare's Florizel; the latter by name, going to court a shepherdess, who proves a princess at last. Was ever any single work honoured with such imitators?'

Lastly, Mr. Fairbairn, one of the speakers at the late Meeting, advanced some happy illustrations on the triumphs of Popular Institutions from the *little* or small beginnings of the "two or three met together." We may further observe, that it was the absence of the *little* that produced the darkness of the 'Middle Ages.' It should be in the recollection of the impugners or scoffers at our Penny Literature, our cheap books, our *little* tracts, that the Middle Ages knew nothing of such instruments and opportunities. *Great* books, therefore, were both the fruits and the proofs of the ignorance of the age: they were usually composed in the gloom and torpor of the cloister, and it almost required a human life to read the works of an author of the first magnitude, because it was nearly as easy to compound as to digest such crudities. It was then, during the age of *great books* of the "voluminous and vast," the age of magic, alchymy, judicial astrology, polemics, and the subtleties of the schoolmen, that all reading was kept from the people. The common people, under such circumstances, could feel no interest and derive no advantage from *great books*, which were equally beyond their purchase and their comprehension. Those *libra eliphanti* contained little more than catalogues of things, and thoughts, and names, in words without measure, and often without meaning worth searching out. And it was not only that *great books* were the produce of the Middle Ages, and that the writers knew not how to make little ones, but it well suited the aristocratical notions of the penmen of the day. They clung to their monopoly with all the eagerness of *interested* desire. The vulgar, the profane vulgar, the multitude, the million were jealously and cruelly excluded from the benefits of learning; for long before Bacon uttered the famous oracle—'Knowledge is Power,' the middle men were aware of that mystery, unsuspected by the ignorant whom they ruled by that very power—the power of knowledge—both in spiritual and temporal predominance. The aristocracy of learning has been the veriest despotism ever exercised upon earth, for it was bondage both to soul and body in those who were its victims. Oh! what a waste of mind and worth! What havoc of natural talent and capacity, of every degree and every kind is implied in that perpetual thraldom of *uninstructedness*, wherein the bulk of mankind, through every age and nation under heaven, have been held by tyrants as brutish as themselves, who knew nothing of knowledge, except that they *feared* it; or by the more flagrant injustice of those who possessed, but durst not or would not communicate it to the multitude!

* It is no small merit in the writings of Scott, to have quickened the cloyed appetites of circulating-library readers for purer entertainment than the dulness, froth, and sentimentality which were previously in the market. People read Scott over and over again, and manifest an utter distaste to anything lower in the scale of fiction. A higher tribute cannot be paid to the sovereignty of genius than this.

* It cannot be concealed that a most fearful ignorance prevails in many of the country districts in this colony. The people do not read, their minds are in a state of stupor as to laudable ambition, improvement, or enterprise. Man is here, observes Mr. Blunt, in his "Notes on the Cape," but one step removed from the baboons that surround him. The deserts are without pyramids, and the towns without a trophy. We have no historical recollections—no poetry—no song—no popular works, either historical or imaginative. Such was the extreme ignorance of a country farmer during the present year in the District of Beaufort, that when a Traveller alighted at his location, he demanded, among other inquiries in Dutch,—"Hoe vaart Generaal Janssens?" (How is General Janssens?)

THE REMINISCENT.—No VII.

I was in London; I recollect the night was dark; the wind moaned in fitful gusts; the sleet fell in slanting lines, resembling those in use by modern improvers of the art of caligraphy, who teach their pupils to write a fine running hand in *six* lessons. With an umbrella blown inside out, forming a capacious and rapidly filling bowl poised on a stick over my head, and the pitiless shower incipiently introducing itself through various parts of my person, it was with an agreeable emotion that I espied, in spite of all the drizzle, at the corner of the street, a hackney-coach—it was lonely, unhired, untenanted, unheeded, save but by myself. The driver had apparently abandoned his box for the purpose of taking shelter in a *watering* house, to get out of the wet. It was in vain I several times called out 'coach, coach, coach!' The weather-beaten vehicle stood before me: the aged horses were both fast asleep, and yet one, the grey, had its eyes wide open—the lignt of a gas lamp discovered to me that the distended orbs of the poor brute were sightless: the wretched animals were leaning side to side for warmth and ease; the ribs of the grey fitted with tolerable accuracy the ribs of the dun, like a tally—(had either of them in the hey-day of their coltship ever heard of a tally-ho?) Two little cobbler's aprons on their backs partially warded off the incessant dripping of the rain, which, however, accumulated into a channel formed by the hip-bones, and soaked into the helpless haunches. A rising steam from the nostrils to the croppers was beaten down again by the weather; the knees of the once gallant gray stood in advance, twisted out like the elbows of an old-fashioned chair, and one fetlock was graced with a gaiter of damp and dingy canvass. Some hay, which had been left at the top of the pole (and for the good it could do to the horses it might as well have been with Captain Parry at the North Pole), was blown upon the roof of the coach, saving the scattered particles, saturated with the shower, which adhered to the patched harness. The old beasts (like Socrates when he had swallowed his hemlock) were, or *appeared to be*, resigned to their fate,—with drooping and dripping ears, and tails tightly tucked down, they braved the horrors of the storm in silence, save that the dun made all the ironmongery of his trappings jingle, and ever and anon waking his yoke-fellow. Poor quadruped! would that a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

pectoral lozenge could alleviate thy sufferings! (I had a box full of Dawson's in my pocket, and sympathetically swallowed one); would that, my poor worn-out Bucephalus, you were in a warm stable, littered up for the night, in a cap and wrapper, luxuriating on a hot mash! The coach was on a par with the cattle (it was a coach not a chariot) and had probably been manufactured in the period of the second or third George; many modern additions had deteriorated from its original splendour and inconveniences—the box and boot had never appertained to aristocracy, but had been put on by a bungling artisan—the wheels were of three distinct colours—the *springs* alas had seen many *winters*—the steps were unsteady, like the steps of old age; and as for the glasses, one may use the sea term to them, *glass and half glass;* if you look for any other embellishment in that department, you would have to 'pity the poor blind.' The panels, once highly varnished, had now assumed a deadly rhubarb aspect, and contrasted as wofully with the coat of arms of Mexborough painted thereon in gorgeous display, as the coach itself did with the family motto, 'Be fast.' But the rain was finding its way to my skin—no longer waiting for the driver of the equipage, without further ceremony I endeavoured to open the door, and with a hard pull, for the damp had closed it firmly, I effected my object, and got inside. Aware that possession is nine points of the law, I threw myself in a corner. Wrapped in my cloak, and lulled by the pattering of the storm, I insensibly fell asleep, and, like Addison, Steele, Johnson, and others of the great essayists and authors of allegory, I dreamt. Methought I heard a voice uttering melancholy plaints, mixed with deep sighs. 'Who art thou?' said I. 'I am 239,' replied the voice. 'What is 239?' said I. 'Would that I had never known,' exclaimed the voice; 'time was, and time is; I am on a job now! Once I was attached to nobility, now my creaking body is destined for any vile purpose.' 'Poor fallen creature!' said I, 'proceed.' 'The arms of a noble lord still cleave to my side, though I am so degraded; my pockets, which once contained scent bottles, fans, or reticules, are now the receptacles for two or three rusty nails, a piece of cord, a hammer, and a horse picker!' 'Pockets!' said I, 'what is your name?' 'My present name is that of a famous admiral (since Lord St. Vincent). I was born (thanks to my maker!) in Long Acre; for a considerable period I regularly attended every drawing room, levee, and birthday at St. James's. But, alas! pride must have its fall, and my fate has been as checqered as is my lining. Once I was the admiration of the ring at Hyde Park; I am not now permitted to enter the gates. I shall never forget the feelings of mortification I experienced when I was stripped of my lace!—when they barbarously deprived me of my hammercloth; and, worst of all, when the carpet was removed from the bottom of me! That which had hitherto only been pressed by the silken foot of high born beauty, was now covered with damp straw, trodden down by the *canaille*. When I first appeared in the world, the nobility alone kept us, but now any body—every body, and even persons who are nobody, sport us—with bodies. I have waited in the street a whole winter's night for the late Mr. Sheridan, who, when he had rejoined me after his seventh bottle, has been on my seat in such a state of mental aberration, as to fancy himself Mr. Wilberforce. Wilks has squinted out of my windows: in more modern times Cobbett and Hunt have quarrelled in me. I conveyed, in a soaking shower, Romeo Coates, Esq. from Carlton House, when the cruel hoax was passed on him of the forged ticket for the grand *fête* given to the allied sovereigns..... and exceedingly wet were the crimson velvet coat and white satin smalls of that much-injured gentleman; to say nothing of the water which came out of his *pumps*. I went with the mysterious mask to Newgate, he who decapitated the Cato Street conspirators. I did not much like my company, yet there is a gratifying sensation in being useful to one's country. I thought so, as I rested on my perch at the Old Bailey! I have had my gradations in rank, from the rank of a peer to a hackney-coach rank. Thousands of my inmates must ere this be numbered with the mighty dead, whilst I am regularly numbered in Essex Street in the Strand. I was once exceedingly disgusted with a pert valet of the secretary of the French ambassador, who called me a *fiacre!* But I trifle...if I am garrulous (and garrulity accompanies age), gently pull my check-strings,—but I am breaking down, almost crazy, existing only by two plates. The streets in a state of *demi-macadamisation*, jolt me till I shudder to my very linch-pins. Though wretchedly old, damp, and filthy, I have the consolation to reflect that I never ran over any one in my existence; and the pride to remember that when a silly dog has bitten at my revolving wheel, he always had the worst of it. Adieu, farewell! farewell!' At this moment I was awakened by a less plaintive voice, which uttered, 'Vy, blow my catskin, if here ain't a covee inside my leather rusky a-snoozing? Now, sir, vere am I to drive to?"

INDIAN EXPORTS,---No. 4.

THE FAREWELL.

FOR want of a better heading, I resume the title of my first address, and make it, though so little relevant, introductory to this, which must be my last. I was once sitting at the door of a tent with Bishop Heber, when, after being half-amused and half-annoyed with the neighing, kicking, and biting of the baggage-carriers' ponies, called on the western side of India tattooes, the Bishop remarked, that he had not thought there existed "a more pugnacious character than a Calcutta Editor! but certainly, your Guzerat tattooes," said he, "may affect a rivalry!" What would Heber have said could he have read, or rather looked at, for he could never have endured to read the *Zuid-Afrikaan* or the *Graham's Town Journal?* since let the Calcutta Editors, at any time of my experience, have been what they would, they invariably wrote like Englishmen, and pretty generally like gentlemen, whilst the *Zuid-Afrikaan* Balaams bray, fire and faggot, in bastard colonial Dutch, and the Graham's Town Journal storms and placards in a style, whose harshness and construction betray, that the writer has an inward conception of euphony in language, dependant upon the insertion and elision of the aspirate, by the most approved rule within the sound of the Bow-bells!

The lamentable part is, that these worthies appear to be quite good enough for the Colony! and their English, their politics, and their placards, precisely adapted to the colonial standard of the right, and the excellent; and such being the case, there appears, for the present at least, no remedy. But to confirm this position, let any man who can read English without a dictionary, and write it without a fearful violation of grammar and orthography; who can pronounce "*the* and *that* and *thither*" and "white wine vinegar and olive oil," without betraying himself to be a foreigner or a cockney, let any man, I say, who knows what the British language is, and consequently has one presumption in his favor, that he may peradventure also know what British feelings are; let such an one, after having been nauseated with the ribaldries and vulgarities of the Balaams, whether here or in Graham's Town, take up any English paper whatever, and let him dwell upon even the most intemperate of their undisguised blackguardism, and he will see the degraded state of even good old English abuse in this Colony: hot we must be: the politics of the present stormy period are not boy's-play at pitch-penny! but dead hits, and home-thrusts, and unmitigated blows in the firm unconcealed resolve to bear the worst and do the worst, and struggle through the hurricane of the times, victors if possible, and if not, to make the victory as disagreeable as possible to all opponents. But in the most outrageous of the English periodicals there is the high intellectual tone of the master spirit, and a classic language and a flashing wit which makes the argument picquant, and carries one through it, always amused at least, even when most scandalized, and often half-converted against one's own convictions and habits of thinking by the powers of a great mind and commanding talents. What a contrast to our Balaams and the Graham's Town creatures, who have not the pretension to excellence, even in the vulgar line they relish and have adopted, making "evil their good," and evincing the absence of capacity as well as judgement. A brawny pair of Wapping fish-wives at Billingsgate would use their vulgarisms in better English; and with an immeasurable superiority of talented command of simile, epithet, and metaphor, would scold them deaf and dumb, and bewilder every faculty of their souls in ten minutes!

"Like loveth like," said Dante to the Duke of Verona, who complained that Dante was a bit of a bore, and by no means so pleasant a companion as his court-jester! Like loveth like, indeed! and though it was no marvel

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

for a Duke to prefer a fool to Dante, yet it is not usual for a community to be so under educated as to be gulled into the belief that such things as the Balaams are men of letters, of greater pretensions than the learned pig! and the Cape public must be prepared for Dante's sarcasm being applied to them, if they not only tolerate such vulgarisms, but actually pay for them as the marketable article in colonial literature.

But are there no hopes of improvement? is it indispensably requisite that the public press must be polluted with a barbaric idiom, and gross, revolting personalities? cannot the good sense and self-respect which Col. Bird showed at the last Thanks-voting affair in the Commercial Hall be taken by the rest of the community as their guide and example? Col. Bird knew the parties he had to deal with, and by peremptorily prohibiting personalities and scurrilities as the condition on which he consented to take the chair, indicated his conviction, founded on a long experience, that such were likely to be the taste they would indulge in. The result of Col. Bird's judicious prohibition was, that the meeting was spared, at least in one instance, the bore of sundry delectable pages of trash which a little prig of a reader! for it would be ridiculous to call the spouting of a certain quantity of manuscript twaddle "public speaking!" had prepared as a hash for the public, and prudently forebore to hazard in Col. Bird's presence. If all those who hold the same place in society with Col. Bird, if all men of education, and men of character and sense would but thus resolutely set their faces against these Balaams and their ribaldries, we might at all events prevent the current of their foul-mouthed vulgarities from over-flowing their legitimate channels, and leave them to vent their gall on one another to their hearts' content in their own circle.

Having thus disposed of the Balaams, let us briefly consider how much of what is good, detailing local incidents or suggesting local improvements, or applying extracts from European periodicals to local purposes, or for general information, might have been conveyed in the countless columns which have been polluted by virulent scurrility; and let us sigh over our own want of taste, or rather our tameness in submitting to personalities and vulgarities which Col. Bird has shown us that common sense, and a common share of spirit, may at once put down, by the peremptory and unqualified refusal to tolerate them.

How interesting and how numerous are the different heads under which the periodical press might labour incessantly and importunately for the public benefit, and more honourably for the parties themselves, than in their contemptible rivalries. One of the late *Commercial Advertisers* gave us an account of a meeting in London of the Shareholders of the Australian Land Company, by which we learnt that this enterprising body possess more than half a million acres of land, nearly forty thousand sheep, with horses, &c. and cattle in proportion, and had netted in the year previous nearly £12,000 income, and this upon a tract of country which, but a very few years ago, was a barren desert. Here is no Utopian romance, but a simple detail of the natural result of industry and capital employed judiciously in an open field of improvement, and with only the trifling risk of a few pounds to each individual of the thousand shareholders. How much of profit, how much of pleasure, might there be derived from an accurate knowledge of the minutest details of their history? how much benefit might accrue to the colony if the Balaams of the *Zuid-Afrikaan* and the Graham's Town Placardists were silenced by the contempt and derision of a disgusted public, and a patriotic press employed in soliciting British capitalists to establish some similar Joint-Stock Company in this colony. A Colonial Bank, giving 5 per cent. interest, on tolerable security, good names being probably sufficient, might procure half a million or a million sterling from England or from India with perfect facility, and could support an Agricultural Joint-Stock Company, or any other local associations for local improvement, and to make the most of all local resources, with almost the perfect certainty of eventual profit. In such cases the shares should be very small, as in the Australian Land Company, for some few years must elapse without any return whatever; and the adventuring parties engaged should not be those whose all is implicated, and whose first disaster would be ruin and complete discomfiture; but firm capitalists, prepared for a slow and remote contingency of profit, and contented to wait for it; thus, as money at 5 per cent. compound interest doubles in 15 years, these adventurers should consent to stake £100 to receive £200 in 15 years, or £400 in 30, and there need be little doubt but that such would be the positively certain result of any judicious outlay of capital by a well-conducted Land Company in this colony. England and India have their millions of half-employed capital, some half a million of which could unquestionably realize sufficient, under honest management, to afford more than five per cent. interest to the owners, and double that to the agents employed in distributing it through fifty different channels of local improvement through this hitherto misgoverned colony. And what would be the result? an impetus would be given to the cause of colonial prosperity, dormant interests would be awakened, and latent advantages developed, a spirit of enterprize would be aroused, and riches might spring up under the feet of the colonists to an extent of which they can at present form no conception. Forests might cover the hills, and every valley contain its reservoir of water preserved during the winter rains by scientific dams for summer uses; these are improvements of comparatively little outlay, and of an immense return; flocks of fine-woolled sheep, cattle, and the kitchen gardens and orchards for the shipping, are all sure objects for speculation and enterprize; perseverance, skill, and capital are alone required, and how deeply is it to be lamented that these are wanting!

Another view of a prospective good which might be obtained for the colony, if more forcibly and more frequently brought by the periodical press before the public, is in the advantages which this delightful climate, cheap market, and improving colony, offer to Indian veterans, with families for whom they have no means of even decent provision, and who live in the painful knowledge of the fearful consequences of their death to their widows and orphans; and in an agony of apprehension at every shock which indicates the failure of their constitutions. These poor fellows, after passing fifty years of age, and residing thirty-five years in India, are very seldom fit to weather through any longer service, nor in fact to bear with safety the hazardous process of acclimating again to the northern winter. Let such be clearly and fairly made acquainted

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

with the superior advantages of retirement to this colony; the more eligible position and enjoyment in society for themselves, and hopes for their family, compared with what the same means could procure them in any part of Great Britain. For instance, let us suppose an Indian Lieut.-Col. after thirty-five years service, aged 52, entitled to a pension of £365, and let us suppose him possessed of £5000, which, alas! I say it with sorrow, is very, very far indeed from being the average fortune of Lieut.-Cols. of the Indian army; such a capital, at 3½ per cent. the average interest in Europe, added to his pension, would afford him an income of £540. This, as a provision for wife and children accustomed to move in the first circles and best society in India, appears a sorry pittance indeed, especially as the family must be haunted by the perpetual apprehension that more than two-thirds is dependant upon a most precarious life-interest: the merest absolute necessaries of life alone could be allotted to them; and the most meagre provision for adult children must be contemplated. But in this colony the pension of £365 would afford an easy and bearable subsistence, and for a moderate and prudent family, would leave a surplus: whilst the judicious investment of £5000 would secure at least £300 per annum, without any risk whatever, leaving a disposeable balance yearly to be invested in the purchase and stocking of country farms, which would provide for the young men as they grew up, an honorable and respectable settlement, in a delightful climate and an improving colony: a colony, of which it may safely be predicted that all property will be more than double its present value in the next generation, and the sheep-farms become an important inheritance to the grand-children of the present proprietors.

There are many, very many civil and military servants of the East India Company who are so situated, that though their years and decaying health require their removal from a tropical climate, yet their domestic encumbrances deny them the means of retirement, under those circumstances, which they have accustomed themselves to consider as almost a natural right, and indispensably necessary to make existence endurable. Let such grapple at once the formidable idea of expatriation, to which they are virtually doomed, and resign themselves to the evil, which is in reality their unavoidable lot, and instead of lingering on to die in India, let them seek a quiet and comfortable retirement here, and a decent, though not brilliant, provision for their children.

Hath England all the sun that shines? day, night,
Are they not, but in Britain? in the world's volume
Our Britain seems as of it, but not in it;
In a great pool, a swan's nest; pr'ythee, think
There's living out of Britain.

But it is not merely the small capitalists and the ill-provided gentleman who may seek healthy and economical retirement here; let the industrious artizan, the sober, hard-working agriculturist hope to find here the foot of Jacob's ladder, whose top reaches to heaven; that is to say, a sure practicable process by which honest hearty industry may climb to a certain, though humble independance; here the humblest labouring man need fear no necessity for seeking parish relief, or the bitter bread of charity; let them be instructed in the average wages and fair prospects of the skilful and the abstinent, and let the local press be usefully employed for the benefit of the colony, and happily for the starving poor of the three kingdoms in persuading them to emigrate, and in inducing these emigrants to prefer this colony to Canada or America.

Further, this poverty-stricken colony, with less than 100,000 free population, pays £150,000, or thereabouts, in taxes, a weighty rate of taxation unknown elsewhere, except in happy—merry—well-taxed Old England! But the British nation have resolutely kicked the Boroughmonger Oligarchy, which created this taxation, from off their rotten borough, tax-creating, tax-eating perch, and the chances are that the Reformed Parliament will cause such reduction of useless establishments as shall place the expenditure of the people's hard-earned driblets on a more reasonable scale than what the aristocracy have been wont to consider appropriate to their in-born tax-consuming propensities. Is there no possibility, if the press did its duty, of assembling public meetings to petition Parliament to look into the expenditure and taxation of this colony? Not one shilling ought to be expended but solely for the public good; is it so? Are there no unnecessary burthens laid upon the people? Of the £12,000 per annum paid in pensions by the colony, are there no items of the old oligarchical infliction for nominal services, or totally disproportionate to the services which they are presumed to remunerate? are there no unnecessary and merely nominal appointments? none whose duties could not be better discharged for half the present salary, if reference to fitness for office were the sole consideration on appointment? finally, are all paid only in proportion to their labour, and the duties and responsibilities of their appointments, and their personal claims to consideration before appointment. Sir John Malcolm would frequently say of the Bombay Presidency, that it was "all head and no tail," nothing but heads of departments! and yet Bombay has nearly twelve million inhabitants, and a revenue exceeding two millions and a half sterling! this is something of a tail, too! what would Sir John have thought of this colony, which is the veriest tadpole of the British Dependancies. The Lord Chief Justice and his Puisne Judges, the Lord High Sheriff and Attorney General, the Master in Chancery, Registrar, &c. and all the establishment of the Court are adapted to what the colony may be about a century hence, but are what the colony will not be able to afford to pay during less than a century. The tender mercies of the aristocracy of England are, it seems, visiting Australia with a Bishop! which may probably be considered by some as "the beginning of the end!" by what miracle has this colony escaped the infliction of a Tory Hierarch? A very simple rule has been suggested for the testing of official merit; let every servant of government show the number of hours in the year that he is actually occupied on duty, and compare his employment, his responsibility, his personal risk, and his personal merit and claims on the country ere he obtained office, with the personal claims, the risks, responsibilities and the hard duty of a Captain in the Royal Navy; so laboriously instructed, so slowly promoted, so rigidly disciplined, so exhaustingly occupied, so meagrely remunerated, and yet the noblest and most essentially British character in the British service. This done, and properly done, let us see whether we could not obtain a greater efficiency on diminished charges, and at all events a diminished taxation for the colony: for it is but too clear that unless taxation be diminished, the tide of emigration from the United Kingdom must con-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

tinue to flow toward the United States, and strengthen them instead of the dependancies of the parent empire.

England maintains the Cape colony solely for the sake of India and the China trade; that point apart, the expenditure of about £200,000 per annum, incurred here by the British government, for the troops and naval establishment, would be absolute waste, and a profligate disregard for the interest of the British nation: thus, the said £200,000 is as clearly and indisputably a political charge upon the United Kingdom for the sake of the Eastern territory and trade, as any fortress in India, or any frigate in the Indian seas. Far am I from suggesting the idea of increasing the burthens on India to relieve the Cape, but I am clearly convinced that the European troops in India, perhaps 30,000,* could spare 1500, or the strength of two regiments, even with benefit to themselves, to assist in the protection of the Cape. Such a general war as should require masses of European troops, cannot come upon India without full and sufficient warning, and in such a case, reinforcements would be called for, even under present circumstances, from England, to meet the emergency. The European troops are seldom considered in any other view than as the important corps de reserve, and 1500 men stationed at the Cape would be nearly as available for general purposes, as if they were in India; for instance, 1500 men required in Malabar, would be almost as easily, and speedily conveyed thither from the Cape, as from Meerut near Delhi; and if the Indian governments, by taking off all local duties, would encourage the importation of Cape Wine, to supersede the use of the poor Lisbons and inferior kinds of Teneriffe which are consumed, to the extent of some thousand pipes annually, an intercourse betwixt the Cape and India might be established, which would render tonnage at all times, and economically available for the transport of troops on the shortest notice. Thus the Cape garrison might be considered as containing a small supernumerary force, the abstraction of which from India, to employ it in the colony, would not be felt there, but would be of the most prodigious effect here; it might be held in a state of readiness to be embarked for Calcutta, Madras, or Bombay, to occupy the ground of either of the Presidency garrisons, should any pressing emergency require their advance into the interior; and there can be no question but that a disposeable Brigade of the Indian European force could be maintained at a much less expense, and in a more efficient and healthy state; and, as has been already said, almost as advantageously for general purposes if cantonned at the Cape as in the Peninsula of India. But without absolutely withdrawing complete regiments from India, if every corps had a depot detachment at the Cape; if the hospitals of every regiment were once a-year cleared out of the protracted cases of organic disease; if the broken constitutioned men, such as spend two-thirds of their time in hospital, till they are invalided home, or die, were sent to the Cape, a very considerable proportion of these poor fellows might be saved, and after two years easy garrison duty here, might return to India with restored health, and better qualified for service than young recruits from Europe.

The expenditure in the cause of humanity would be a positive saving in the end, as judicious outlay always is; every European soldier who lands in India is estimated by some to cost from £100 to £150, and by others as much as £200, ere he takes a tour of useful duty: the saving of lives is therefore economy as well as humanity, and even policy as well as virtue demands some arrangement, by which the benefit of removal from a tropical climate, at a critical and beneficial period, may be extended to the private soldier. A depot of 1500 invalids from India, the sick who, in India, would be confined to hospital, and probably bed-ridden, would soon muster a sufficient number of convalescents to be divided betwixt Cape Town, and Simon's Bay, and Robben Island, equal to all police and municipal purposes in time of peace; but, as Cape Town itself is probably the least salubrious site in the whole colony, and consequently worst adapted for a convalescent station, relief hospitals at Wynberg or on Robben Island for the worst cases and relapses, should be included in the plan. Some such arrangement as this would not only be a most humane and beneficial measure for the health of the European troops in India, but would leave the Cape garrison of three regiments unencumbered to occupy the frontier and inland districts, and the increased expenditure of fully £70,000 per annum introduced into the colony, would tell to a prodigious extent on the colonial prosperity.

The expense to the Indian government would be comparatively trifling: the hospital charges would be one-half what they are at present; that is to say, even if the 1500 sick continued as long infirm in hospital here as they would in India, and the charges for the convalescents would, in like manner, be infinitely less for pay and maintenance: the grand item would be the freight and tonnage, for the removal of the sick hither, and the convalescents back, which might be done by two ships of 500 tons, at under £2: 10 per ton for each voyage, say about £5000, and there is no doubt but that even if this amount were not made good by the saving of fifty lives per annum, if it were not saved by the reduction of the hospital charges and diminished sick in India, still, there are other reductions which might be suggested, the recourse to which would cover all expenses. The benefit to the invalids and the saving of lives would exceed the most sanguine hopes that could be formed from the plan: there is no want of humanity and honorable concern for the soldier in the Indian government, and the funds at their disposal are equal to the experiment on a small scale, if required to be tried ere they venture upon a more general application of the system. It would be a very virtuous and wise act to try the experiment, and to send in the first ship which sails from Calcutta to the Cape, a hundred of the worst cases, of those who have spent the longest period in the last two years in hospital, to be attached to do duty with the Regt. in Cape Town; and I will pledge myself, that if the removal be well timed, in reference to season, that the result will surprize and delight the regimental surgeons, and convince government of the wisdom of the measure.

Thus I have thrown together very loosely, and merely as headings for leading articles of the periodical press, a series of suggestions embracing distinct objects of colonial improvement: let them be coolly examined, and incessantly discussed, and let us see what can be made with them: the progress of events is in our favor, and the

* King's troops by the Charter, 20,000; Company's European Regiments and Artillery, about 10,000; total 30,000.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

times are working with us; the tide should be taken at the ebb, and our success seems certain. The abolition of the slave trade must cause a re-action in the central regions of Africa, which will extend progressively to the coasts on every side; whether the course of civilization will ascend the stream of the Niger, in spite of its pestilential climate, or be spread by missionaries and traders from this healthy colony, cannot yet be conjectured, though the eventual probabilities are in favor of the latter; but, in either case, a vast change is to be expected, and Central Africa cannot become more populous without becoming more civilized: when a thousand savages cover a hundred thousand square miles, they may hunt, and exist on game and wild fruits; but when they multiply to ten thousand souls on the same area, they must either destroy or eat one another, or rear tame cattle; when they become a hundred thousand souls, they must cultivate the soil industriously, and live in fellowship, under laws and government. Such is the world's history, and the building of huts, the congregating together of a village and villages, the formation of communities, and the acknowledgment of neighbourly obligations, are the certain steps of advance, which the poor scattered tribes, which have been hitherto hunted down like wild beasts to be sold for slaves, must speedily make, upon this murderous trade being discontinued; and another generation must see such a change as sober calculation cannot venture to anticipate; but which must occur, and which will, either most momentously and immediately; or possibly, only slowly and remotely, yet still beneficially, affect the colony.

Such prospects should be dwelt upon and kept in constant view by the colonial press, and should be taken into serious consideration by every capitalist embarking in any colonial interest, as the future good that is certainly to bring, in due time, the abundant harvest of the present risk; but time and patience are needed, nor is the oak to be obtained but from the pigmy acorn, and through half a wearisome century of expectation.

And now I must bid the gentle reader farewell. I shall most probably have left the colony ere another Number of this Work issues from the press, and my humble efforts to assist the good cause which the colonial press should advocate, must cease with my departure from the colony. I shall carry away with me many delightful recollections of the fifteen months I have spent most pleasantly and very happily in the colony, and hope there may be some whose kindness will hold me in their remembrance, at least for as long a period as "mere guests from the East" are wont to be remembered. I will therefore conclude, with grateful thanks to kind friends for many kindnesses, and say farewell, with my sincere and heartfelt wishes for the good of all. INDIAN EXPORT.

LITERATURE.

SCENES AND STORIES BY A CLERGYMAN IN DEBT. 3 VOLS. 8VO. 1835.

WE need not at this time of day be at pains to enumerate the many objections that may be urged against the present state of the law of England, as regards imprisonment for debt. The public mind is fully aware of that. It is worth while to notice, that at the very time these volumes were put forth in London, Sir J. Campbell brought the question immediately before the House of Commons in an able speech; advocating the principles maintained by the author, viz: that there should be no imprisonment for debt except in cases of fraud; which view met with no general opposition from any party; so that ere long we may expect to see the crying evil swept entirely away.

As it regards the volumes before us, we do not believe that they are written by a clergyman. We are rather of opinion that they are the work of a clever, observant, glib-tongued limb of the law, who has without troubling himself with nice scruples, fastened on a title that is likely to catch the attention of the public, and help the sale of the book. If he be a clergyman, he is by no means tightly laced, for we find him profane, an instance of which occurs when he tells us of three sheriffs' officers being "not *tria juncta in uno*, but three persons with one aim." Besides his familiarity with the use of flash terms, personages, and places, never can become a clergyman. But we are getting more serious and particular than the occasion requires; and since there is really a touching and impressive moral taught by the spirit and detail of the work, we must not be remarkably squeamish about individual points. It is not the fault of the author that the field he occupies is by no means of the most attractive nature. Scenes of a repulsive character and stories of sufferings, necessarily are the subjects to be dealt with by him who gives a faithful picture of a prison. The low intrigues, the heartless frauds of the most worthless practitioners in the law—the relentless conduct of creditors—the infectious vice of spend-thrifts, cheats, depraved and established inmates of prison-houses; together with accounts of broken hearts, famishing families, must in one shape or another ever form the burden of the stories told by him who draws from the quarter here chosen for description. But there is more variety in the book than we could have anticipated. We have good songs, laughable positions, and lively *noctes*. We must quote one story of a hoax which was played by a captain in the army, who had been for some years in the King's Bench Prison, and, who, every term time, took out his day rules, and under their protection walked his ways daily without fear of arrest.

"However, he was one day passing the shop of a man in the Strand, to whom he owed money, and whose quick eye twigged the captain.

"'How d'ye do, captain?

"'Very well, I thank ye; and the captain was going to pass on.

"'I suppose you're in a hurry, now, captain; but if you're passing here to-morrow, I wish you'd look in; I want a word with ye.

"'By all means, said the captain; 'I'll look in at four o'clock;' and on he went.

"The next day the captain kept his word; he called in upon his creditor at four o'clock, and his creditor had a sheriff's officer waiting for him. The officer happened to be a master—not a follower—and he and the captain sallied forth, arm-in-arm.

"'I tell you what,' said the captain, 'this is no execution; you need not take me to the lock-up till evening; and I've an inclination for a good dinner. Come with me to Long's Hotel, and I'll treat you to whatever ye like; we'll have a bottle of good wine, at all events.'

"'The offer was accepted; they got into a coach, and alighted at Long's. When they entered, the waiter, who knew the captain, made his bow.

"'We want to dine,' said the captain.

"'What will you like, Sir?'

"'What would *you* like,' said the captain to the officer; 'come, now, just order what you fancy.'

"The officer was modest at first, but at last did as he was bid.

"'Gravy soup and Turbot, followed by roast duck.'

"'And if we had a pint of Madeira while it is preparing,' insinuated the captain.

"'True,' said the officer; 'bring a pint of Madeira.'

"'And some bitters, to sharpen the appetite,' asked the captain.

"'Ay, and some bitters,' said the officer.

"The Madeira, bitters, dinner, and desert,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

were duly demolished, the officer having, at the suggestion of the captain, ordered a pine-apple with the latter, punch with the turbot, and champagne with the duck. The *Petits verres* were taken before the cheese; a bottle of port, and about four of claret, were all that our officer ventured to order after the repast.

"By the time these were demolished the evening waned towards half-past eight of the clock, and the officer was not so blinded with wine as to forget his duty.

"'If you please, Sir,' said he to the captain, 'we must go.'

"'With all my heart,' said the captain; 'you had better call for the bill.'

"The officer called for the bill; it came; and while he was counting it over, the captain whispered the waiter, 'Do not let him go until he has paid that;' and then taking down his hat, and buttoning his coat, he made a movement to depart. The officer rose to accompany him.

"'I beg your pardon, Sir,' said the waiter, 'but you have not settled the bill.'

"'O, Captain —— will do that.'

"'O no, Sir, the captain said you would pay; and if you recollect, Sir, all the orders were given by you; besides, Sir, the captain is going.'

"'Ha, but he can't go, though!' shouted the officer; 'he's my prisoner.'

"'No— no, my dear fellow, you are wrong this time at any rate,' said the captain; 'you see here's my *day-rule*;' and as I must haste back, I will wish you a good evening, thanking you for your good dinner and pleasant company, and leaving you to pay the bill.'

"The officer glanced at the day-rule,—it was enough, he had no more authority over the captain; and while he was pulling out his purse, the captain sallied forth in quest of Banco Regis, which, it is to be presumed, he reached in safety."

ANOTHER NORTHERN LIGHT.

Scenes and Legends of the North of Scotland; or, the Traditional History of Cromarty. By HUGH MILLER. London: Longman and Co. 1835.

We learn that the author of these scenes and legends is a young man, who, by his genius, his industry, and his moral character, has raised himself to distinction in his native district. It appears that, from being a common stone-mason, his ardent thirst for knowledge and evening readings, after the ordinary toils of the day were over, have so highly distinguished him, as to secure the notice of eminent patrons, and to obtain a situation in one of the northern banking-houses. His ephemeral writings, we presume, have ere this procured for him a name in his own neighbourhood, but in the present work his talents will be acknowledged and praised from one end of the kingdom to the other.

The subject, though confined to a remote and small Scottish sea-port town and its vicinity, presented to the inquisitive and inventive mind of the author abundance of materials to fill this volume, and as is hinted, another of the same character. The truth is, that to such a vigilant caterer and ready thinker there is no community or scene, however limited the segment may be, of this mighty globe, but would furnish exhaustless stores for description and sentiment. Cromarty, for example, like every town, has its traditions, its celebrated characters, its grades of society, its abundant mass of human nature, the great and leading elements of which are the same everywhere, requiring only the discernment of a quicksighted observer and nice delineator. Cromarty, to be sure, has some recommendations which are not everywhere to be found for such a work as the one before us. It figures in a district of the north, where superstitions, warlike and quaint traditions, abound to a remarkable extent. It has the scenery of hill and dale, of mountain and flood, and still more characteristically the paths, dangers, and charms of the ocean, where a class of men will ever find a scope that leads to strange developments and affecting records. But above all, Cromarty is signalized by possessing the author's genius and tastes, and it has chiefly become famous in the present work by being the field where these mental exhibitions are so happily displayed, that in future it will have a place among the classic scenes in Scotland. *And what an honour is this result to the power of genius and of mental cultivation!* To think that one young man, without the aids of what is usually understood by the indulgence of his own inborn desires and tastes, create, for a seemingly barren or ordinary subject, the enthusiasm of a deep and elevating interest on the part of those that never thought and scarcely ever heard of it before—an interest that, we are confident, will hereafter continually maintain the height to which Mr. Miller has now carried it, respecting his favorite little sea-port town, is enough of homage in attestation of the riches and beauties of the human mind, and more than any other efforts, though a thousand times repeated, could command, if emanating from a grosser power. If it should be asked how it is that the mental beauty and wealth spoken of most effectively display themselves, we would answer, that although there may be a thousand nameless turns in the efforts of genius and refined tastes, each and all contributing to the highest achievements, there are yet certain evidences that may be pointed out, and that are indispensible. Of these, originality of ideas, and yet a mind well stored with ordinary information, are essential; while for such a work as the present, dramatic skill, charming sentiments, and a manly as well as a lucid style, are equally requisite. Now these qualities our author indisputably possesses, with another of a still more graceful appearance—we mean a modesty that becomes the first efforts of a young man. Some may add, that this modesty is especially required from an uneducated person in a humble sphere in life; but we repel the distinction; for no one who has used or rather created his opportunities for improvement, as the author has done, is either uneducated, or of a humble order. It will immediately be apparent to those who can procure the book, that his intellectual vigour has received a culture which rarely attaches to those whose academical career and high birth lead us to presume the finest literary attainments on their part.

Much that is legendary in the work possesses the highest interest, but much more those portions of it of veracious accounts and scenes, Scotland and Cromarty, like many other regions, have been subjected to much later calamities of a pestilential nature. The author accordingly brings down his history to the most recent instance, which was, when the cholera raged so fiercely in this country. The bay of the little borough he belongs to, was one of the places appointed by government, during the rigid system of quarantine then established, for the reception of vessels, until their term of restriction should have expired. We held our breath when we came upon the first sentence of the following extract; nor will the deepest emotions subside during the succeeding details.

"On a calm and beautiful evening in the month of July, 1831, a little fleet of square rigged vessels were espied in the offing, slowly advancing towards the bay. They were borne onwards by the tide, which, when flowing, rushes with much impetuosity through the narrow opening, and, as they passed under the northern Sutor, there was seen from the shore, relieved by the dark cliffs which frowned over them, a pale yellow flag drooping from the mast-head of each. As they advanced further on, the tide began to recede. The foremost was towed by her boats to the common anchoring ground; and the burden of a Danish song, in which all the rowers joined, was heard echoing over the waves with a cadence so extremely melancholy, that, associated in the minds of the town-people with ideas of death and disease, it seemed a coronach of lamentation poured out over the dead and the expiring. The other vessels threw out their anchors opposite the town;— groups of people, their countenances shaded by anxiety, sauntering along the beach; and children ran about, shouting at the full pitch of their voices, that the ships of the plague had got up as far as the ferry. As the evening darkened, little glimmering lights, like stars of the third magnitude, twinkled on the mast heads from

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

whence the yellow flags had lately depended; and never did astrologer experience greater dismay when gazing at the two comets, the fiery and the pale, which preceded those years of pestilence and conflagration that wasted the capital of England, than some of the people of Cromarty did when gazing at these lights.

"Day after day vessels from the Baltic came sailing up the bay, and the fears of the people, exposed to so continual a friction, began to wear out. The first terror, however, had been communicated to the nearer parishes, and from them to the more remote; and so on it went, escorted by a train of vagabond stories that, like felons flying from justice, assumed new aspects at every stage. The whole country talked of nothing but Cholera and the Quarantine port. Such of the shopkeepers of Cromarty as were most in the good graces of the country women who come to town laden with the produce of the dairy and hencot, and return with their little parcels of the luxuries of the grocer, experienced a marked falling away in their trade. Occasionally, however, a few of the more courageous housewives might be seen creeping warily along our streets; but, in coming in by the road which passes along the edge of the way, they invariably struck up the hill, if the wind blew from off the quarantine vessels, and winding by a circuitous route among the fields and cottages, entered the town on the opposite side."—pp. 264—266.

We have some extremely well conceived notices in Mr. Miller's book of the literati of Cromarty; for long ago there were some of the borough's mechanics conversant with books and the pen. They had, as was and is general throughout Scotland, their libraries of ten or twenty volumes of sermons and controversial divinity. But few of them, we are told, were acquainted with the best literary models. So late as 1750, continues our author, a copy of the Paradise Lost, which had been brought to town by a sailor, elicited much curious criticism in the town; some thinking it heterodox and deserving to be burned; others thought it was prophetic. One called it a romance; another said, it was merely a poem. Yet, even at that period Cromarty had its writers of verses: and although merely imitators, we agree with the author, that the poetical imitator is the most eccentric of all, and always an original. Here follows a sketch of one of those originals, that may be found all over Scotland. We like the author particularly for setting an example of dealing with serious subjects and good men, without levity; for many modish writers think themselves entitled to ridicule, or treat with the formal liberality of a cold philosophy all such things. Mr. Miller is not only a juster thinker and a fairer observer, but a finer sentimentalist. But now for the sketch:—

"On the southern shore of the bay of Cromarty, about two miles to the west of the town, there stood, ninety years ago, a meal mill, and the cottage of the miller. The road leading to the country passed in front, between the mill and the beach; a ridge of low hills, intersected by deep narrow ravines, and covered with bushes of birch and hazel, rose directly behind.—A straggling line of alders marked the course of the stream that turned the mill wheel; two gigantic elms, which rose out of the fence of a little garden, spread their arms over the cottage. The view of the neighbouring farm-steadings was shut out by the windings of the shore, and the ledge behind; and, to the traveller who passed along the road in front, and saw no other human dwelling nearer him than the little speck-like houses which mottled the opposite shore of the bay, this one seemed to occupy one of the most secluded spots in the parish. Its inmates, at this period, were John Williamson, the miller, or, as he was more commonly termed, Johnie o' the shore, and his sister Margaret,—two of the best and most eccentric people of their day in the country side. John was a poet and a christian, and much valued by all the serious and all the intelligent people of the place; his sister, who was remarkable in the little circle of her acquaintance, for the acuteness of her judgment in nice points of divinity, was scarcely less esteemed.

"The duties of John's profession left him much leisure to write and to pray. During the droughts of summer, his mill pond would be dried up for months together; and in these seasons he used to retire almost every day to a green hillock in the vicinity of his cottage, which commands an extensive view of the bay and the opposite coast; and there, in a grassy opening among the bushes, would he remain until sunset, with only the Bible and his pen for his companions. He was so much attached to this spot, that he has been heard to say there was no place in which he thought he could so patiently wait the Resurrection; and he intimated to his friends his wish of being buried in it; but, on his death-bed, he changed his mind, and requested to be laid beside his mother. It is now covered by a fir wood, and roughened by thickets of furze and juniper, but enough may still be seen to justify his choice. On one side it descends somewhat abruptly into a narrow ravine, through the bottom of which there runs a little tinkling streamlet, on the other, it slopes gently towards the shore. We look on the one hand, and see through the chance vistas which have been opened in the wood, the country rising above us in long undulations of surface, like waves of the sea after a storm, and variegated with fields, hedge-rows, and clumps of copse wood. On the other, the wide expanse of the bay lies stretched at our feet, with all its winding shores, and blue jutting headlands: we look down on the rower as he passes, and hear the notes of his song, and the measured dash of his oars; and, when the winds are abroad, we see them travelling black over the water before they wave the branches that spread over our heads. Many of the poet's happiest moments were passed in the solitude of this retreat; and from the experience derived in it, though one of the most benevolent of men, and at times one of the most sociable, whenever he wished to be happy he sought to be alone. In going to church every Sabbath, instead of following the road, he used invariably to strike across the beach, and walk by the edge of the sea; and, on reaching the churchyard, he always retired into some solitary corner, to ponder in silence among the graves. To a person of so serious a cast, a life of solitude and self-examination cannot be happy, unless it be a blameless one; and Johnie o' the shore was one of the rigidly just. Like the Pharisees, he tithed mint, and anise, and cumin, but, unlike the Pharisees, he did not neglect the weightier matters of the law. It is recorded of him, that, on descending one evening from his hillock, he saw his only cow browsing on the grass plot of a neighbour, and that, after having her milked as usual, he despatched his sister with the milk to the owner of the grass."

Our last extracts shall regard the history of Cromarty politics; a borough, and we believe, one in Scotland, being the quaintest field that ever has been discovered under the head now named. The account given of the cause of Cromarty and Scottish toryism during George III.'s reign, is clearly as just as in some points it is original. We must not mutilate the following representation:—

"The people of Cromarty who lived ninety years ago were quite as unskilled in politics as their neighbours, and thought as little for themselves. They were but the wheels and pinions of an immense engine; and regarding their governors as men sent into the world to rule,—themselves as men born to obey, they troubled their heads no more with the matter. Even the two Rebellions had failed of converting them into politicians; for, viewing these in only their connexion with religion, they exulted in the successes of Hanover as those of Protestantism, and identified the cause of the Stewarts with Popery and persecution. Their Whiggism was a Whiggism of the future world only; and the liberty of preparing themselves for Heaven was the only liberty they deemed worth fighting for.

"Principles such as these, and the dominancy of the Protestant interest, rendered the people of Cromarty, for two whole reigns, as quiet subjects as any in the kingdom. In latter times, too, there was a circumstance which thoroughly attached them to the government, by shutting out from among them the Radicalism of modern times for well nigh a whole year. The Scotch, early in the reign of George III., had risen high at court;—Earl Bute had become Premier, and Mansfield Lord Chief Justice; and the English, who would have as lief have witnessed the return of William and his Normans, grumbled exceedingly. The Premier managed his business like most other Premiers; the Chief Justice conducted his rather better than most other Chief Justices; but both gentlemen, says Smollet, 'had the misfortune of being born natives of North Britain; and this very circumstance was, in the opinion of the people, more than sufficient to counterbalance all the good qualities which human nature could possess.' Junius, and Wilkes, and Churchill, and hundreds more, who with as much ill nature, but less wit, were forgotten as soon as the public ceased to be satisfied with ill nature alone, opened in full cry against the King, the Ministry, and the Scotch. The hollo reached Cromarty, and the townsfolks were told, with the rest of their countrymen, that they were proud, and poor, and dirty, and not very honest, and that they had sold their King; all this too, as if they hadn't known the whole of it before. Now it so happened, naturally enough I suppose, that they could bear to be dirty, but not be told of it, and poor, but not to be twitted with their poverty, and they could be quite as angry as either Junius or Churchill, though they could neither write letters like the one, nor make verses like the other. And angry they were,—desperately angry at Whiggism and the English, and devotedly attached to the King, poor man, who was suffering so much for his attachment to the Scotch. Nothing could come amiss to them from so thorough a friend to their country; and when on any occasion they could not wholly defend his measures, they contented themselves with calling him an honest man."—pp. 389—391.

The manner in which the Cromarty people sided with the crown in the case of the ill-advised American War, is with the same discernment stated. The author, amid all his earnestness, can be a satirist when he chooses, as the whole of this political chapter

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

shows. But let us hear something of the individual theorists at the time spoken of—the description is capital.

"Even in this age, however, as if to show that there can be nothing completely perfect that has nature in it, Cromarty had its one Whig, a person who affirmed that Franklin was a philosopher, and Washington was a good man, and that the Americans were very much in the right. Could anything be more preposterous? The townsfolks lacked patience to reason with a fellow so amazingly absurd. He was a slater, and his name was John Holm;—a name which became so proverbial in the place for folly, that when any one talked very great nonsense, it was said of him that he talked like John Holm. The very children, who had carried the phrase with them to the play ground and the school, used to cut short the fudge of a comrade, or, at times, even some unpopular remark of the master, with a 'ho! ho! John Holm!' John, however, held stiffly to his opinions, and the defence of Washington; and some of the graver townsmen chaffed by his pertinacity, were ill natured enough to say that he was little better than Washington himself. Curious as it may appear, he was, notwithstanding the modern tone of his politics, a rare and singular piece of antiquity, one of that extinct class of mechanics described by Coleridge, 'to whom every trade was an allegory, and had its own guardian saint.' He was a connecting link between two different worlds,—the worlds of popular opinion and of popular mystery; and strange as it may seem, both a herald of the Reform Bill and a last relic of the age 'in which' (to use the language of the writer just quoted) 'the detail of each art was ennobled in the eyes of its professors by being spiritually improved into symbols and mementos of all doctrines and all duties John had, besides, a strong turn for military architecture, and used to draw plans and construct models. He was one evening descanting to an old compaigner on the admirable works at Fort George (a very recent erection at that time) and illustrating his descriptions with his stick on a hearth-stone strewed over with ashes, when by came the cat, and with one sweep of her tail demolished the entire plan. 'Och Donald,' said John, 'it's all in vain;' a remark which, simple as it may seem, passed into a proverb. When an adventure proved unsuccessful, or an effort unavailing, it was said to be all in vain like John Holm's plan of the fort. But John's day was at hand.—We, the people, are excellent fellows in our way, but I must confess not very consistent. I have seen the principles which we would hang a man for entertaining on the evening of one day, becoming quite our own before the evening of the next."—pp. 392—394.

The French Revolution next wafted some of its doctrines even to remoter points than Cromarty. The revolutionary procession that ensued is a capital hit, as told by Mr. Miller. But the manner in which a young and clever man of Cromarty, who at this time was known by the emphatic appellation of Democrat, alarmed the country gentlemen in the neighbourhood, and the authorities in the borough, till they floundered out of one mistake and unfounded suspicion into another, is the best satire of all; exposing the official insolence of certain men in power, and at that time of day. But our readers for these rich morsels must have recourse to the volume itself; for by this time they must be satisfied that whatever the author sets his hand to will be admirably finished.

CORRESPONDENCE.

To J—— S——, late of Aberdeen,
Author of a Letter published in the Literary Gazette, headed—Hopes and Prospects of Scottish Emigrants, &c.

My worthy Countryman,

I am clannish enough to say that my heart warms to the tartan, and kindles to the pibroch; and that those local peculiarities, which mark the difference betwixt good Scots and good English, are dear to my very soul; your letter was, consequently, a delight to me. Even were it not so suited to my taste and early associations, its simple, unpretending excellence would require no apology from its author, nor any accidental circumstances, to make it interesting to any real friend of his fellow men: it comes home to every generous man's heart and feelings, as the faithful recital of struggles and success, and, in my own case, revives a thousand recollections of my own feelings, when, a quarter of a century ago, in August, 1810, I turned my back on "the banks and braes of bonnie Doon" for the far East. Your 25 months appear to have been better spent than my 25 years, since you have learned content, and can thank God for His gifts, and can live in hope: may your best hopes be realized! You may rest assured that you do not need book-learning for the task you have undertaken: Nature has done more for you than books and masters have for many who conceit themselves to be your betters: take no pains to write as they do; you write much more to the purpose in your own language and your own way; and let me beg you to inquire carefully into the names and origin of as many of our countrymen as you can accurately describe, for the information of their kith and kin at home. Let the list contain their Scottish and their colonial experience; show their wages, their diet, their lodging, their clothing, and their means in poor old Scotland! and their improved situation as to earnings, living, and means in this healthy and improving Colony; and let us get as many of our poor suffering countrymen away from their hard task-masters as we can possibly prevail upon to try their fortunes here, as you and your friends have done, and apparently with so much advantage to yourselves and usefulness to all with whom you have become connected in the Colony. Show what a sober, steady, hard-working man may do, who brings but a willing heart and a ready pair of hands. Show what an industrious virtuous couple may do who come prepared, and contented to fight their way through difficulties, and who do not grumble at finding that they must creep before they fly. Show what a farmer's son may do, who, having a few hundreds, would but throw them into a greedy cruel landlord's sporran, if he took the farm on which his forefathers flourished; and let him be told of the prospects before him here and the difference betwixt starving where he was born, or becoming comfortably independent here: finally, show the broken-down Laird, with a family dependent on the scanty proceeds of the sale of his last acres; and the retired trade's-man or merchant, with children, without any resource but some small capital he may have accumulated, the incalculable difference betwixt pinching back and belly to squeeze together a pittance for each child there—and the easier provision of a farm and cattle for their settlement here,—the world is wide enough, and might be a good world, and a happy world too, if a man did not continue to mar and pollute the fair sweet face of God's creation with his wicked inventions.

I take the liberty of sending you a copy of Burn's Poems, which I beg you will keep for my sake, and remember when you read these beautiful verses, that the poor fellow who composed them was an untaught child of the cottage and the plough stilts; and that the most learned, and the most polished poets of the age have failed to produce any thing to equal his simple productions, and let this remind us that God's gifts are not as man's gifts, and that the poor cottager is not forgotten in the grand distributions of distinction and blessing here, nor will he be forgotten when peers, poets, and ploughmen all meet on a perfect equality, when "*the books are opened*" hereafter.—Farewell.

From your sincere and
hearty well-wisher,
CARRICK.

Fourteen thousand seven hundred and sixteen persons visited the paintings of Adam and Eve, at Boston, in the space of six weeks.—*New York Booksellers' Advertiser.*

LADY MORGAN's "PRINCESS;" OR, THE BEGUINE, 3 Vols. 8vo.

(The German States.)

In the new work of Lady Morgan, which is principally descriptive of the outbreak of the Belgian revolution, we find many well-told conversations. The novelist appears to be acuter than some of those who believe themselves to approximate to statesmen. The following is worth a multitude of what men call state-papers

"Hasn't Nassau something of a little constitution of her own?" asked Lord Aubrey. "I think somebody said so in the House, the other night."

"Oh, yes," said the Princess, sneering; "a little house of commons in the village of Beiberick, close to the Duke's country-house; and prettily he has been paid for it. One of its members chose to oppose the budget. The Duke naturally turned him out, and all who voted with him. The *frondeur* refused to pay the tax, all the same; was thrown into prison, and died. The son, following in the father's steps, had his property in Wisbaden seized, when two pictures, amongst other things, were put up for sale; the first, the portrait of the *frondeur*, sold for four hundred francs; and the second, the Grand Duke's own, was knocked down for three kreutzers."

"Well, if they will give constitutions to nations who are not fit for them, they must take the consequence," said the Marquis.

"True, Milord," said the Count, "Germany is essentially aristocratic. The people are well fed and contented; and provided the press be kept quiet, and a few turbulent spirits curbed, all will go the better for it."

"That is just the reverse with us," said Lord Allington: "our people are better taught than fed; and that's the reason I have *mangé ma fortune*, before the radicals rise to eat it for me."

"Not," said the Count, "that our people are ignorant. The King of Prussia, for example, has taken the national education into his own hands; and, improving on Napoleon's catechism, has determined, not only what the nation shall believe, but what they shall know. By his benignant despotism, in educating the youth of his land to be useful and submissive subjects, and prevented them from educating themselves in the school of French jacobinism, he has done one of the greatest things that has been effected since the foundation of the Jesuits."

"I prefer the Emperor of Austria's plan," said the Princess: "plenty to eat, and no press; pleasures for the obedient in Vienna, and fortresses for the refractory in Hungary. Your King—for I believe, Count, you are a subject of Prussia—has put thoughts into his subjects' heads, and arms into their hands. Not but that the Prussian system would do very well for England and France; and I am happy to see that the *juste milieu* ministry in France are trying to import it, and that your English Tory writers, my Lord, and reviewers, are preaching German metaphysics and German criticism, and German institutions, to their countrymen One way or other, the press must be put down. You must dog the heels of miscreant publishers, and incarcerate revolutionary authors in dungeons as deep as those of Spielberg, or as high as those of Marksberg, if you do not mean to merge your hereditary honours in a universal democracy."

"You are quite right, Princess," said Lord Alfred.

"I saw two statesmen in Marksberg, the other day," said the Count, while the vehement Princess paused for breath: "they are shut up, the one for forty, the other for two-and-twenty years, for some inflammatory publication."

"You will see the romantic fortress," resumed the Princess, penning the route with her pencil, where these erring mortals beho'd from their grated windows the glories of the Rhine beneath. The late affair at Frankfort will people the towers, and fill *oubliettes* long untenanted."

"It is all the fault of the Whigs," said Lord Montressor, yawning.

"From the very first attempt to abolish the patriarchical Leibeigenschaft, I augured the worst results," said the Count.

"Why, Count, said Lord Allington, "you and the Princess seem to anticipate the restoration of the secret tribunal! What do you call it in German?"

"The *frei gericht*," exclaimed the two mediatized potentates together.

"My own castle," said the Count, "was a *frei stuhl*, or seat of the tribunal. Margrave Rudolph II., from whom I descend in a direct line, was the last *stahl graf*, or supreme judge; and all the principal vassals of the family were *frei schöppers* for many generations."

"How very nice!" said Mrs. St. Leger. "I do so love the German language!"

"But the whole magnificent system," continued the Count, "was overset by the short sighted policy of Charles the Fifth."

"Or rather," said the Princess, "by the innovating spirit of that reforming age to which Charles was obliged to yield."

"The very word 'reform' makes me sick," said Lord Alfred.

"What really was that secret tribunal," asked Mrs. St. Leger, "one reads so much about in German romances?"

'Lady Frances Mottram and Claude Campbell were meantime engaged in the window apart, muttering over a bouquet of flowers and some toys he had brought in: Lord Aubrey was leaning over Lady Montressor's couch, catching, as he might, the feeble murmurs of her lisping accents.'

"The *frei gericht*," said the Count and the Princess, speaking in a breath, but the Princess maintained the *parole*—"The *frei gericht* was a mysterious tribunal which spread throughout Germany, selected from princes, nobles, and citizens; for all who could, were anxious to be the agents, rather than the victims of its terrific but necessary denunciations. The *wissenden*, or initiated, knew each other by secret signs."

"A sort of despotic carbonari, I suppose," said Lord Allington. a sly look of mingled humour and surprised curiosity passing over his countenance.

"The accused knew neither his accuser nor his judge," said the Count.

"That was pleasant," said Lord Allington.

"The oath," said the Princess, "was to spare none—(and what beautiful poetry!) none that the sun shineth on, or the rain wetteth, or that floats between heaven and earth. Is not that fine? How very sublime!"

"Very!" said Mrs. St. Leger: "what Lady Agnes would give for it, for her traditions of the Rhine, which will now have such an interest, when everybody is going there!"

"And such novelty!" said Lord Allington.

"Lady Agnes is a twaddle!" said Lord Alfred.

"I think her charming!" said Mrs. St. Leger. "But go on, Count, about your tribunal."

"The proceedings were summary," said the Count. "The culprit was summoned: if he refused to appear, he was surely found dead, with the executioner's knife sticking in his breast."

"And if he did appear?" said Lord Allington.

"Why, he was brought to one of our castles, let fall through a trap into the *oubliettes*, and there was an end to him," said the Princess, carelessly. "But pray read Guethe's divine 'Goetz Von Berlichingen.'"

"Oh! I remember," said Lord Allington; "his extravagant heroine was a victim of the secret tribunal."

"Should such an institution be again required," continued the Princess, "in these most innovating times I believe, Count, that many of our castles are still in *statu quo*."

"One of mine," said the Count, "has its range of dungeons perfect, with dark vaulted chambers, stone doors, instruments of torture fixed in the walls, and *oubliettes*."

"How very nice!" again exclaimed Mrs. St. Leger: "I wonder all the romance writers in the world don't come to Germany, to visit these castles on the Rhine."—vol. iii. pp. 162—168.

LITERARY EXTRACTS.

NEVER JUDGE BY APPEARANCE, OR SALL's SHOE.

(Stories ashore.)

Well then you must know when I was a-board the Terp-sy-chore, there was a fore-topman of the name of Bill Harness, a good sort of chap enough, but rather soft in the upper-works. Now we'd been on the Jamaica station for some years, and had come home, and merry enough, and happy enough we were, (those that were left of us), and we were spending our money like the devil. Bill Harness had a wife, who was very fond of he, and he were very fond of she, but she was a slatternly sort of a body, never tidy in her rigging, all adrift at all times, and what's more, she never had a shoe up at heel, so she went by the name of Slatternly Sall; and the first lieutenant, who was a 'ticular sort of a chap, never liked to see her on deck, for you see she put her hair in paper on New Year's day, and never changed it or took it out till the year came round again. However, be it as it may be, she loved Bill, and Bill loved she, and they were very happy together. A'ter all, it ar'n't whether a woman's tidy without, that makes a man's happiness, it depends upon whether she be right within; that is, if she be good-tempered, and obliging, and civil, and 'commodating, and so forth. A'ter the first day or two, person's nothing—eyes get palled, like the capstern when the anchor's up to the bows; but what a man likes is, not to be disturbed, by vagaries, or gusts of temper. Well, Bill was happy—but one day he was devilish unhappy, because Sall had lost one of her shoes, which wasn't to be wondered at, considering as how she was always slipshod. 'Who has seen my wife's shoe?' says he. 'Hang your wife's shoe,' said one, 'it warn't worth casting an eye upon.' Still he cried out, 'Who has seen my wife's shoe?' 'I seed it,' says another. 'Where?' says Bill. 'I seed it down at the heel,' says the fellow. But Bill still allooed out about his wife's shoe, which it appeared she had dropped off her foot as she was going up the forecastle ladder to take the air a bit, just as it was dark. At last, Bill made so much fuss about it that the ship's company laughed and all called out to each other, 'Who has seen Sall's shoe?'—'Have you got Sall's shoe?' and they passed the word fore and aft the whole evening, till they went to their hammocks. Notwithstanding, as Sall's shoe was not forthcoming, the next morning Bill goes on the quarter-deck, and complains to the first lieutenant as how he had lost Sall's shoe. 'De'il take Sall's shoe,' said he, 'haven't I enough to look after without your wife's confounded shoes, which can't be worth twopence.' Well, Bill argues that his wife has only one shoe left, and that won't keep two feet dry, and begs the first lieutenant to order a search for it; but the first lieutenant turns away, and tells him to go to the devil, and all the men grin at Bill's making such a fuss about nothing. So Bill at last goes up to the first lieutenant, and whispers something, and the first lieutenant booms him off with his speaking-trumpet, as if he was making too free, in whispering to his commanding officer, and then sends for the master-at arms. 'Collier,' says he, 'this man has lost his wife's shoe; let a search be made for it immediately—take all the ship's boys, and look every where for it; if you find it, bring it up to me.' So away goes the master-at-arms with his cane, and collects all the boys to look for Sall's shoe—and they go peeping about the main-deck, under the guns, and under the hen coops, and in the sheep-pen, and every where; now and then getting a smart slap with the cane behind, upon the taut parts of their trousers, to make them look sharp, until they all wished

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Sall's shoe at Old Nick, and her too, and Bill in the bargain. At last one of the boys picks it out of the manger, where it had lain all the night, poked up and down by the noses of the pigs, who didn't think it eatable, although it might have smelt human-like; the fact was, it was the boy who had picked up Sall's shoe when she dropped it, and had shied it forward. It sartainly did not seem to be worth all the trouble, but howsomever it was taken aft by the master-at-arms, and laid on the capstern head. Then Bill steps out, and takes the shoe before the first lieutenant, and cuts it open, and from between the lining pulls out four ten-pound notes, which Sall had sewn up there by way of security; and the first lieutenant tells Bill he was great fool to trust his money in the shoe of a woman who always went slipshod, and tells him to go about his business, and stow his money away in a safer place next time. A'ter, if any thing was better than it looked to be, the ship's company used always to say it was like Sall's shoe."

"THE NATION OF SHOP-KEEPERS."—*(Napoleon.)*

Where are the appearances of decay or neglect of an enfeebled or paralysed industry in England? On the contrary, a vigilant and energetic care is visible every where. Nothing seems to lie fallow. The divisions and subdivisions of proprietorship are strictly and tenaciously kept up. The fields wear the aspect of a garden. A considerable portion of the people are far better dressed than in former years, seek and possess more comforts, and are becoming more intelligent and educated. New roads are opening at great expense, the old ones are perfecting, shorter lines are devised.* If five hundred yards of distance can be saved, there seems to be no difficulty in procuring as many thousands wherewith to effect it. Well-appointed public carriages and magnificent horses follow in rapid succession along every line, with a dispatch indicating that the passengers stand much more in need of time than money.

In how many directions, also, may be seen commencing, or in process of completion, new canals, railways, superb bridges, and other public works—not usually of a perishable, cheap, or frail material, as would be the case were funds really deficient, but of durable iron and massive stone. Nor does utility alone seem to be consulted. Many of these works are proofs of a triumphant science, as they are monuments of ornamental art, destined to embellish the country in which they have been reared, for many ages to come. Some—the bridges, and one in particular, the Waterloo—demanded an expenditure equal to a whole year's surplus revenue of the empire in the reign of George the First or Queen Anne.

Observe the description of household furniture now in use. Is it not more choice, more frequently replaced by a new fashion, more curiously wrought and neatly finished, than formerly?

All branches of trade and commerce, and every town, seaport, or entrepôt, depending on particular branches of commerce, do not, it is true, equally flourish and thrive. But if some articles of produce have lost in value by desuetude or competition (foreign or domestic), others are in request which were not before invented or in being.

But a metropolis, especially one such as ours, which is not supported by a gorgeous court or a vast military establishment, will not be a bad index of the wealth of an empire. Where is there another London—this capital of an impoverished state?—Is it not a kingdom rather than a city?—For, perhaps, a hundred miles of its interminable streets, one may walk within almost a continued range, on either hand, of store-houses filled, for the most part, to the very door-ways, with every imaginable variety of clothing, food, furniture, jewellery, plate, &c. Why, the contents of these shops would purchase the fee simple of the revenues of some very respectable states! Many of the owners of these shops have their villas in the country, whither they retire after the business of the day is over, and where they live very often more like aristocrats than retail dealers.

"But there are no buyers," say those who take another view of these matters. "The unfortunate shopman is closing his accounts, and must soon inevitably close his doors," &c. &c. But there are plenty of capitalists in the City, who are daily racking their brains to find out some new description of enterprize wherein to embark their money, and who would inevitably possess themselves of these unsaleable commodities, (if they really were unsaleable,) and would freight a fleet with them, and find a market for them some where else; for the greater part would be useful or in request in any region of the world.

Are the buildings, public or private, of this commercial centre and common mart of all nations, falling into decay, or lessening in number?

On the contrary, great expense continues to be gone to, in throwing down whole streets, in order to erect in their place a better-adapted, more lofty, spacious, and a superior style of architecture. Hundreds of those more resemble palaces than private dwellings, and are only calculated for incomes of a very large amount. Nor are these gratifying signs of a prosperous condition, and of an abundant means, to be witnessed only in particular quarters: the interior, and the whole circumference, present a continuous and similar picture. It is new cities that are creating around the old one, while the latter is reconstructing after a more convenient and modern fashion. These are not the evidences of wealth—they are wealth itself.

But those who maintain the converse, not unusually answer such statements as the above by saying—"*We are living on credit—we are spending our capital.*"

But this is impossible. It is one of the monstrous absurdities which sometimes pass current as argument. *A private individual cannot spend his principal, or even anticipate his income, without borrowing from some other individual, in money or goods* (which includes credit). Neither can a NATION, without *borrowing in money or goods*, from SOME OTHER NATION. *Have we done so?* On the contrary, our merchants give long credits to foreign merchants; and our CAPITALISTS HAVE, SINCE THE WAR, LENT TO OTHER NATIONS, OR ADVANCED FOR FOREIGN SPECULATIONS, BETWEEN ONE AND TWO HUNDRED MILLIONS STERLING.*

MISS DIP'S ALBUM.

(AN EXTRACT).

"June 1st.—Pa having made a good 'spec' in *tallow*, ma and I were determined to 'set upon him,' and accomplish a jaunt out of his good humour. When Jim our boy, had shut up the shop, I sat down to my piano and played and sang several songs from Moore's 'Evenings in *Greece*,' and so won upon him that he consented, although he had never attempted a voyage before, to take a trip to Twickenham. On the 2d day of June, 18—, the bright golden rays of a summer's sun beamed playfully upon us as we walked gaily down to the stairs at Queenhithe, all in our Sunday's best arrayed. 'Boat! boat, sir?' said the attendant gondoliers. 'Will you take water here, Pa?' said I. 'Yes love,' said he; 'and take it *neat* for the first time in my life.' I was glad to see him in so good a humour, for he can be very merry when he likes. 'You're funny, dear,' said ma. 'To be sure, my duck,' replied he; it is *necessary* to get a *little funny* before we get on board, you know.' Ma was rather fidgetty about the 'little boats,' in which sentiment I must confess I sympathised, and longed to pace the deck of the Diana. 'Which boat, sir? inquired our 'grim ferryman.' 'The Diana,' said my father; then turning to me, 'I say, Juley, my dear, do you remember the story you read me, t'other night, about that same Diana, and the man that wor out a-hunting, and all that? By gosh! I hope this Diana won't do the like, and turn us all into stags for looking at her while she's in the water.' 'At least she will have no need to change you, pa,' replied I; 'for you are already a *buck*' And, indeed, he *did* look very nice, with his white Marcella waistcoat, blue coat, and black, spic, and span new, Wellingtons. The Captain whose embrowned physiognomy indicated a long acquaintance with Apollo, received us politely. I seated myself as soon as I could, and pensively reclining over the side-rails of the bark, I watched the mimic waves, kissing her painted sides! The band struck up, and I thought of Cleopatra, in her barge, going to meet her adored Antony! A sudden and discordant creaking and rattling of chains broke the pleasant reverie in which my rapt imagination was luxuriating! 'What are them chaps about now?' asked my father. 'They are *weighing* the anchor,' replied a gentleman in green spectacles. 'Bless me!' exclaimed my father; 'and I s'pose, then, these musicians are the *waits*—for I see no others!' The steam was soon 'put on,' and the boat glided over the limpid waves like a swan. 'What a noise she makes!' said my father; 'why, Juley, it puts me in mind of the song, 'Thump, thump, thump, thump, thump, thump, away!' We laughed heartily at the aptness of the simile and quotation, in which the green spectacled gentleman joined. 'It is a beautiful day for a bathe, sir,' said he addressing my father. 'How I delight in a plunge on a hot summer's day.' 'Very pleasant, sir, indeed,' replied my father. *I—I*—often have a *dip* on a '*melting-day!*' winking significantly at ma and me. When we had proceeded as far as Hammersmith Bridge—'I wonder what that bridge is hung in chains for!' said my father. 'Because,' answered the 'green-eyed' gentleman, 'That, although it had liberty to *draw* upon two *banks*, it has not yet paid its way; and so the judges of the court of Arches have *suspended it*!' As we passed along we beheld several temples erected on the verdant borders of the river. 'What taste is here displayed!' observed our spectacled acquaintance; 'great praise is, indeed, due to the owners of these retreats. But they are amply repaid, for it must really be very refreshing during these hot summer months to have their *temples continually bathed* by the cool waters of the Thames!' We all smiled at this very poetical conceit! When we came to Kew,—'There stands the palace of George the Good,' said our companion. 'It may be truly said, that like a good actor, or a billiard-player, he always had his—*Kew*' The times are sadly altered since those days. *I* remember when every *wig* had a *cue;* and, egad! methinks such a *cue* would be a great addition to some of our *whigs* of the present day!' On arriving at Richmond I was struck with wonder and delight. It is really the *beau-idéal* of a rural picture! What a luxuriant prospect of hill and dale, wood and water, did it present to my enraptured view! I could scarcely express myself in terms sufficiently laudatory. The gentleman with the *verdant optics* observed, that every traveller looked upon the garden of England' with the same feelings. 'And let any one seek far and wide,' said he, 'he ne'er will look upon its like again.' 'And few, I think, will have the audacity to assert that there is such another spot in the world, although Shakespeare, that lover and painter of nature, does certainly say,

'I think there be *six Richmonds* in the field'

Talking of Shakespeare reminded him of Kean, who, he said, resided at Richmond, and he produced a picture of him in his favourite character

* Roads of the United Kingdom. 200,000 miles; internal navigation 2600 miles. It is calculated that, within the last half century, there have been laid out on roads, canals, rivers, docks, and seaports, about 100 millions sterling.

* (Col. de Lacy Evans).—The above was written in 1829. Innumerable national works have been subsequently completed or are in active progress.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of Richard III., which he called an 'excellent *cut* of *Glo'ster!*' 'Safely moored' at Twickenham Ait, we had the felicity of walking directly on dry land without the aid of 'little boats';' when we partook of a repast, which pa would persist in terming 'a cobbler's feast!' as it consisted entirely of '*soles and eels!*' Having walked about the island, and thought of Robinson Crusoe—for there is but one solitary house upon it—we repaired on board the vessel and started again, while the band struck up the appropriate air of 'Home, sweet Home!' and, after an agreeable voyage of three hours, reached the Iron Bridge—the Monument and St. Paul's looking like a huge *toothpick* and *pincushion* in the dim and dusky shades of evening! Pa was delighted with the voyage, and ma no less so; and the next morning at breakfast we talked over the pleasures of our jaunt while discussing the shrimps which ma had purchased at Twickenham, and brought home in her pocket-handkerchief!"—*Hood.*

THE MISSISSIPPI.

(From the Narrative of an Expedition to Explore its Source. 8vo. 1835.)

THE Mississippi river traverses more degrees of latitude than any other river in America, and the remark might, perhaps, be extended to the habitable globe. The extremes of its changes in climate and vegetable productions, are, consequently, very great. It occupies more than three thousand miles of the distance between the arctic circle and the equator. Long as it is, however, it has a tributary longer than itself, (the Missouri.) Like the Niger, its mouth was discovered by expeditions down its current, but unlike that stream, which has so long held the geographical world in suspense, its sources have been also sought from its central parts. Its entire course is at length known. And we may now appeal with full certainty to the Balize and to Itasca Lake, as its most extreme points. At the latter, it is a placid basin of transparent spring water. At the former, it is as turbid as earth in suspension can make it, and carries a forest of floating trees on its bosom. Below the junction of its primary forks, it expands at very unequal distances, into eight sheets of clear water, each of which has features worthy of admiration. Four of these, Lac Travers, Class Lake, Winnepec, and Lake Pepin, are lakes of handsome magnitude, and striking scenery. The number of its tributaries of the first, and the second and the third class, is so large, that it would furnish a labour of some research to determine it. The Missouri, the Ohio, and the Arkansas, are of the noblest class. Whoever has stood at the junction of these streams, as the writer has done, must have been impressed with an idea of magnitude and power, which words are incapable of conveying. The broadest parts of its channel lie in the central portions of its valley. Its depth is great in all its lower parts, and increases as it flows on to the Gulf, and its general descent and velocity are such as to appear very striking characteristics. Noble views arrest the eye of the observer, in every part of its diversified course. Originating in a heavy and extensive bed of diluvial soil, superimposed upon primitive strata, it soon wears its channel down to the latter, and after running over them for several hundred miles, plunges at length, at the Falls of St. Anthony, over the carboniferous limestone formation, which is so prevalent and so valuable for its mineral deposites, below that point. This is finally succeeded by diluvial and alluvial banks, the latter of which are semi-annually enriched by fresh deposits, and exhibit a delta as broad, and as exuberant as the Nile. Like the latter, it has its cataracts in the Falls of St. Anthony and Pukiagama, and in numerous lesser leaps and cascades, where its current is tossed into foam, and threatens destruction to the navigation. Such are its physical traits, and these enough in their character, magnitude, and variety, to lead our contemplations irresistibly through 'nature up to nature's God.'"

LITERATURE AND THE BOOK TRADE.

IT would appear from the late Book arrivals, that the periods of political excitement are not extremely favourable to any thing staple in literature beyond the pamphlet of the class. With the exception of Taylor's "Artevelde," no original composition of striking character or merit has appeared for many years; and no poetry except Mrs. Heman's, has been selling. The booksellers have been cheapening their wares, and forcing a trade in cyclopedias, libraries, annuals, and reprints; and it is true, that readers of a certain class are multiplied, but in the city who reads any thing but the newspaper? Who has time for reading any thing in this busy, busy season of political movement and ecclesiastical stirle, with all things in transition, and whirl, and transmutation around us? Coleridge tells us, 'that there have been 'three silent revolutions in England; 'first, when the professions fell off from 'the Church; secondly, when literature fell' off from the professions; and 'thirdly, *when the press fell off from 'literature.*' Such silent revolutions are continually going forward, unmarked except by the retired and thoughtful observer; while a slight and obvious change of mere political arrangement is sufficient to waken the loud and angry clamours of those conservative politicians with whom the word revolution is a synonyme for all that is tragical and monstrous. They are like children frightened at the idea of the earth's revolving on its axis, as thinking they must drop off when they come to have their heads downwards. Silent revolutions are always the most important; yet as, in the physical world, the revolutions of the weather, the battles of the clouds and winds, and the phenomena which strike the senses, occupy infinitely more attention than the movements of the celestial bodies; so, in the social system, great but silent changes go on unnoticed, while every one speaks of things which affect us only, like the weather, for the moment. If the state of things to which we have referred were to be permanent, and the press were to be, as Coleridge represents, finally divorced from literature, this would be of far more moment and worse consequence to society, than if the Irish Church were swept 'with all it inherits' into the Atlantic. But all natural revolutions take place in cycles; and we may therefore hope that gradually, as the political atmosphere becomes cooler and more settled, literature will revive, and be no longer (in the language of Paternoster Row) a drug.

OPENING THE DOORS.

The Court of Aldermen of London, as originally constituted, was a secret one, and every member sworn to secrecy; but after a late decision (May 25,) it has yielded to the spirit of the times; the doors are thrown open, and the public admitted. Not, however, with much grace on the part of the present Lord Mayor and four other light-haters.

For open doors,... 13
Against, ... 5

Majority, ... 8

When this decision was reported, the Lord Mayor was desired to request the sword-bearer to open the doors. His Lordship refused to give any direction; whereupon Alderman Wood said, 'We don't come here to be made children of.' He then walked from his seat, unlocked the door himself, and invited the excluded public to enter. The good effect of this new arrangement was, that the routine of business which usually occupies three hours, was finished in an hour.

Sir Peter Laurie has caused the private Court of the Middlesex Magistrates to be thrown open, and no magistrate now regrets the change.—*(Herald.)*

SELECT NOTICES.

Moore's Ireland, Vol. 1st.—Mr. Moore has begun his history sufficiently early, making the origin of the Irish a thousand years before the Christian era. This is nothing like the Welsh pedigrees, where Adam stands about the middle of their genealogical tree.——*The Church of England.*—The Bishop of Norwich once said, 'As a pure religion, that of the Church of England is the greatest blessing; so is its perversion the greatest curse.'——*New Expedition.*—The Expedition to the Euphrates in the George Canning had arrived *all well* at Malta, on the 13th April.——*China.*—It is highly probable that the distinguished Missionary, the Rev. Mr Gutzlaff, is by this time in the heart of the Chinese empire. A steam-boat, according to the last accounts was building in China for the purpose of undertaking an expedition into the interior by ascending one of the great rivers. A journal in the Chinese language has been commenced and published. The first number contains a very interesting report on the Map of China. It is well received by the natives. ——*Literary and Scientific Institutions.*—Twenty-five counties in England now have Literary and Scientific Societies of a highly first-rate character.—— *The Marriage Almanack*; or, Ladies perpetual Calendar has been republished from the German. Every day of the year is marked with reference to three important epochs. ——*Death of a Naturalist.*— The celebrated Mr. Douglas, of Score, near Perth, has met with an awful death. After many years of successful travel in all parts of the world in the pursuit of Botanical discovery, he fell into a pit while in the Sandwich Islands, made by the natives for catching wild bulls, and melancholy to relate, one of the latter being in at the same time,——*Zoological Gardens.*—On the 25th of May, Mr. Green ascended in a Balloon from these gardens. He was accompanied by Jacopo, a favourite monkey, attached to the establishment. Mr. Green descended in safety at Brentwood, in Essex. Jacopo descended in his parachute, with great velocity, none the worse for his flight. A label affixed to the monkey aëronaut promised a reward of £2, and a free admission to the Zoological Gardens to any one who might find Jacopo, and convey him back to his family. He was brought home by a policeman in East-lane, Walworth, in whose garden he descended.——*Ireland's Curse.*— Dire distress rages among the peasantry of Kerry, from a scarcity of potatoes.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Cheap Cure for Fever.—A German doctor, during twenty-five years practice, has never failed to cure intermitting fever by strictly and literally starving his patients for three whole days. He allows them only a little water; and after the fast, accustoms them to food gradually.

Progress of Dissent.—It is calculated by those well skilled in the business of *Church Reform*, that whereas in the time of the Stuarts the Church established by Elizabeth was to dissent as 22 to 1, the proportions at this moment may be something about equal!—— *An American Steamer* is not only a ship, but a well-appointed hotel—a shop for the sale of all sorts of commodities, and even of horses and carriages.——*The Elections.*—The cause of retirement on the part of the Peel Administration in April last stands thus:

Anti-Ministerialists, ...	370
Ministerialists, ...	237
Doubtful, ...	51
	658

The Anti's must now be denominated Ministerialists.

Love of Wealth.—A widow, residing in the vicinity of this town, some time since, took into her house for charity, a miserable looking old man, who lately took ill, and after being attended by his clergyman, told his benefactress he was about to die; and blessing her for her attention to him, said he would not wish to put her to the expense of any linen for his coffin, but desired her to throw his old jacket under him, and that would do as well; she said she would not grudge a sheet for the purpose, but he rejected the offer, and made her promise to put in the jacket. After he was buried, she threw the jacket on a bush, outside the door, and when one of the children was viewing it, she thought she felt something hard, and, on ripping it, she found ten gold guineas—a parcel of old half-crowns, and some 13d. pieces,—the poor woman, we understand, brought it to the priest, who desired her to keep it for her own use.—*Ballyshannon Herald.*

Milk.—The scientific world in France, are now engaged in verifying some curious experiments upon milk, particularly as regards its preservation. The discovery is a remarkable one; and, if it is founded on reality, will make a great revolution in a part of our alimentary regimen, and in a very considerable branch of agricultural industry. It is nothing less than reducing milk to a solid state; so that an inhabitant of Paris may procure his supply from Normandy or Auverge, and preserve it in the same manner as sugar. This discovery has been made by M. Gabriol Grimand Caux.

Such is the cheapness of provisions in this neighbourhood, that at Westonzoyland, a person may purchase a loaf of bread weighing 3¾lbs., a pound of butter, a quart of cider, and a pipe of tobacco, for one shilling.—*Sherborne Journal.*

Strange Sale.—The following advertisement is seriously said to be extracted from a Newfoundland paper of the 10th June:—"*Auction.*—Tomorrow, at twelve o'clock in the forenoon, if not previously redeemed, at the house now occupied by Mrs. Traverse, the under-mentioned articles, taken by distress for rent, due from the Legislative Assembly of Newfoundland to the subscriber, viz: one large desk, containing eight drawers, filled with a variety of books and papers of every description—one small ditto, used exclusively by the Speaker, and filled also with books and papers, and a portfolio of great value—the Speaker's chair, stuffed and elegantly covered with blue moreen, and mounted with brass—one large chair, stuffed and superbly covered, and well and substantially built, used by the usher of the black rod!—a cocked hat, of superior quality, but now a little shabby, worn by the sergeant at arms!—the reporter's desk—two large stoves, with funnelling—and six covered forms, with a variety of other articles too tedious to mention—all very valuable. Terms made known on the day of Sale."—*New York Booksellers' Advertiser.*

Ennui.—A French lady has just bequeathed 20,000 francs to the Royal Academy of Medicine at Paris, the interest of which, 1000 francs annually, is to be given for the best treatise on the baneful influence of chagrin in causing illness and death.

Instinct of Herrings.—One of the most remarkable objections to the continuance of the tithe system, was stated the other night in the House of Commons:—a clergyman having obtained a living on the coast of Ireland, signified his intention of taking the tithe of fish; which was, however, considered to be so utterly repugnant to their privileges and feelings, that not a single herring has ever since visited that part of the shore!!!

The Archivio Generale at Venice.—The city of Venice possesses the most considerable, most valuable, and ancient collection of documents in Europe. No where is there such a mass of manuscripts collected in one place as in its *Archivio Generale*, consisting of 298 rooms and galleries, the whole of which, from top to bottom, are covered with book-shelves. These shelves, if laid out in a straight line, would extend 78,238 feet! Yet they have not been found sufficient to receive the immense number of 8,664,709 volnmes, or *brochures*, which are collected here, and which form 1890 separate collections. If 1000 persons were to work eight hours daily, without intermission, they would be 734 years, or 22 generations, in copying all these documents. Supposing that each has, on an average, 80 leaves, if laid together breadthwise only, make a line 1,444,800,000 feet, or more than eleven times the greatest circumference of the earth!

A Discriminating Preceptor.—A schoolmaster in Cornwall, advertising his establishment, says:—"Every boarder must be supplied with a Bible and Prayer-book, a knife and fork, three towels, and a silver dessert spoon; all of which, *except the books*, become the proprietor's perquisite on the pupil's quitting school." The conscientious pedagogue seems to think that the Bible and Prayer-book may be well for the pupil—he prefers, however, the steel and the silver.

CHRISTIAN PHILANTHROPY.

A soul-stirring pamphlet has been published in London, from the pen of the Honble. and Revd. B. W. Noel, a distinguished clergyman of the Church of England. It points out in distinct terms the aboundings of ignorance and depravity in the sequestered retreats of the great city, and it appeals to the consciences of the clergy in all the towns and villages of the empire. Mr. Noel is an uncompromising advocate for open-air preaching.

THE CHRISTIAN HUSBANDMAN.

"*Go out into the highways and hedges.*"
(*Luke* xiv. 23.)

Sow in the morn thy seed,
At eve hold not thine hand;
To doubt and fear give thou no heed,
Broad cast it o'er the land.

Beside all waters sow,
The highway furrows stock,
Drop it where thorns and thistles grow,
Scatter it on the rock.

The good, the fruitful ground,
Expect not here nor there;
O'er hill and dale, by plots, 't is found;
GO FORTH, then, every where.

Thou know'st not which may thrive,
The late or early sown;
Grace keeps the precious germs alive,
When and wherever strown.

And duly shall appear,
In verdure, beauty, strength;
The tender blade, the stalk, the ear,
And the full corn at length.

Thou canst not toil in vain;
Cold, heat, and moist, and dry,
Shall foster and mature the grain,
For garners in the sky.

Thence, when the glorious end,
The day of God is come,
The angel-reapers shall descend,
And Heaven cry—"Harvest-home!"
(*Montgomery.*)

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

FIRST REPORT OF A CORONER'S INQUEST AT THE CAPE.

(From the Commercial Advertiser, 32d August, 1835.)

1. Yesterday, a Coroner's Inquest was held at No. 156, Heeregracht, to inquire into the circumstances attending the death of Captain William Sensitive, a gentleman from India, a visitor at the Cape, on account of ill health; a vast crowd was assembled outside the house, rumour having been busy in ascribing the melancholy event to foul means, in which some of the most respectable of our community were implicated, and several principal officers of the government directly accused.

2. The Foreman of the Jury, Hugo de Groot, Esq. opened the proceedings, by observing that he had a few remarks to make before the Coroner called the witnesses, and he trusted that his remarks would be interpreted fairly. He meant to accuse no one; but he must say, that gross neglect had been evinced somewhere. A story of a most deliberate and atrocious murder had been in circulation about town several days, and, until the issue of the summons for the present inquest, no steps had been taken, by any of the authorities, to allay the excitement so generally prevailing. So intense was the infatuation, that he might safely say, all Cape Town felt its injurious influence. Commercial engagements were paralized; outside and inside sales were deserted; and it was familiar to all that the peace of private families had been seriously disturbed. It was evident, from what he thus thought it his duty to state to his fellow Jurors, that remissness, to call it by no harsher name, had been evinced somewhere.

3. The Coroner, apparently irritated at the observations of the Foreman, said that it was not his fault that the inquest had not been assembled sooner; nor was it his fault, if those, whose education and station in society ought to raise them above it, should lend themselves to the belief and repetition of the gross absurdities about town.

4. Mr. Advocate Papinian here pushed through the crowd, and said he represented the Officers of the Health, or Conservancy Department, by whom he was retained to attend the inquest. He accordingly took a chair near the Coroner.

5. The first witness was Henry Lavender, Esq. of the Bengal Civil Establishment He appeared in a very weak state of health, and the Coroner appealed to the good feelings of the assembly not to crowd on the gentleman's chair.

6 Mr. Lavender said, the deceased, Captain Sensitive, was his particular friend; they had arrived together in the colony; had always lived in the same house, and had been inseparable in their pursuits. The deceased was in a very debilitated state, and the last two months was fast declining. About a fortnight ago, he and witness

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

were taking their usual saunter in the Heeregracht, and comparing notes on their rapidly decaying health, when the deceased suddenly and solemnly said, 'Lavender, I am poisoned; we both are poisoned; yes, in this very Heeregracht.' I requested my friend to explain. He did so; and I felt convinced that *he* was poisoned and that *I* was poisoned; I think so still. Here the witness was much distressed, and the Jury and audience remained in respectful sympathy.

7. The Coroner observed, that the evidence was becoming of that grave nature, it was quite necessary, for the sake of public justice, as well as for the protection of those persons whose names must inevitably be brought forward, persons who, by residence in the Heeregracht, must evidently be not only of the first class from their wealth, but, in the estimation of all who knew them, equally high in character and respectability, to warn the witness of the very serious accusation he was now preferring.

8. Mr. Lavender, addressing the Jury, said, he did not require the admonition of the Coroner. He had no disposition to reflect unnecessarily on any one, but when men undertook public duties, they became responsible for the violation or neglect of them. He would not be deterred from fulfilling the solemn obligations which friendship, justice, and he would add indignation, all demanded, by the advice, or menace, of any man living.

9. The Coroner observed, he had meant well in what he had said, and that Mr. Lavender had wholly misconceived him. He had now to desire, that the witness would clearly and distinctly point out to the Jury, the foul means by which his friend had been destroyed, and the person, or persons, whom he charged with the guilt.

10 Mr. Lavender rose from his chair, and, from the window, pointed to the Canal in front of the house, saying "There are the means;" then slowly advancing to the circle near the Coroner, said solemnly, "And here is the person," putting his hand on the shoulder of Mr. Advocate Papinian.

11. A very great sensation was created by this unexpected accusation. Several gentlemen stood up to have a more complete view of the countenance of the accused, on which the bystanders rudely pushed into their chairs, and all was confusion. Our reporter jumped upon the table, but could see nothing but Mr. Advocate Paninian indignantly throwing off the hand of Mr. Lavender. Not a word of the Coroner or Foreman could be heard. Several persons cried out, then he is not poisoned after all! Some, that he could not be drowned, because there was no water in the canal; and others, that he could not be smothered, for there were not two feet mud. At length, after much exertion to obtain attention, the Coroner succeeded in making himself heard, and spoke to this effect: That great misapprehension existed regarding the charge. It did not assert direct, deliberate, wilful murder, by poison, such as administering deleterious drugs, or potion; but that such was the uncleanliness of Cape Town, that the atmosphere of the streets was poisonous, that is murderous; charging the canal of the Heeregracht as an abomination, which had killed the said William Sensitive, against the peace and dignity of our Sovereign Lord the King; and specifying the officers of the conservancy department as accessories before the fact; Mr. Advocate Papinian being their counsel and representative.

12. If confusion had before existed, this explanation by the Coroner put an end to all order and decorum. A general and loud expression of disappointment and discontent pervaded the assembly, which only ceased as the crowd outside and inside gradually retired.

13. On quiet being restored, Mr. Lavender was desired to proceed with his evidence. He said he had been offered the testimony of every person, gentle or simple, not native of the town, or who had not from long residence lost his olfactory powers; but he was content to rest his case on his own evidence, and that of the canal in front of the house; assisted by the evidence that the gentlemen of the Jury must have obtained in their morning walk to the inquest.

14. Mr. Advocate Papinian said, he must oppose the reception of the latter evidence. If admitted, it would open a door to the most injurious results, and he must implore those gentlemen, who, in their walk to the inquest, had incautiously permitted themselves to see or smell, to dismiss from their minds such unlawful impressions. The decisions of the Court were uniform on this point. The defendants were not present, who, perhaps, by cross examination of any such juryman, might have convinced him, that he had lost his faculty of smelling, and had been born blind; or might have established that the offending putrescent mass was a fragrant rosebed, and the stagnant puddle the gurgling crystal of the Breda fountains. Nothing is more deceptive than the senses, or more dangerous than untutored reason. He need not further point out to gentlemen of their superior sense and acquirements the mischievous tendency of Mr. Lavender's positions.

15. The Jury decided that the evidence of their own senses was inadmissible.

16. Mr. John Bull, of Green Point, here addressed the Jury. He said, the Foreman had adverted to the extraordinary ferment existing in town regarding the murder of Capt. Sensitive; and he, Mr. Bull, begged the interference and protection of the Jury in a case of the most malicious and insufferable persecution now going on next door. The inmates of the house of Mr. Rotterdam, one of the most respectable of their fellow-citizens, and a near relation of his own, had been so closely besieged, that no member of the family could stir out in the day-time; their very stoep had been taken possession of, and several persons, whose dress and appearance would have made them gentlemen if their behaviour did not belie that character, were observed peeping in at the windows, as if they expected to see some tragedy in actual performance at the moment; and all this occasioned by the mere circumstance of a dead rat having been thrown out of the house into the street, where, of course, it would, as usual, in time have been consumed by the crush of wheels and feet of passengers. Unfortunately, Professor Kuttimuppo, passing by at the moment, poked at the rat with his stick, observing that the rat had died in full health and perfect frame. This simple observation, by which the learned Professor will declare that he meant nothing beyond the fact it asserted, has been converted into an accusation against a very worthy family, of being accessary to the murder of Captain Sensitive; the story about the town being, that the poison was tried on the rat before it was given to the Captain Mr. Bull concluded by saying, he had requested Doctor Kuttimuppo to attend, and he hoped, in vindication of an insulted family, that the Jury would call the Professor before them and hear his evidence.

17. The Coroner said, that calling Professor Kuttimuppo as a witness was inadmissible. The innocence of Mr. Rotterdam could not benefit those now under impeachment, which was the only plea for its reception. There could not be a more respectable family than that of Mr. Rotterdam, and the malice of the accusation equalled its absurdity. But Mr. Rotterdam had been imprudent in not throwing the rat further into the street, where, perhaps, it might have mixed with other rats. He ought to have recollected that the Reform Bill had passed, and its abominable progeny was in full activity in Cape Town. He, the Coroner, meant no disrespect to Mr. Lavender; he was a stranger, and there was no discredit in his being imposed upon; but he strongly suspected that the affair now before the Jury was got up by the Radicals He had heard, on very good authority, that at the last Meeting of the South African Institution, the very hot-bed of Radicalism, one of them had impudently declared, that before six months were passed they would bring water from Newlands, and wash the dirty face of Cape Town. So much for Learned Societies! not that more water would not be a good thing; and, if properly directed, that is to fill the Canal in the Heeregracht, and purify the principal streets, certainly the town would be much beautified and improved. But, said the Coroner, in these days of Radical equality, who can say if such would be the application of the stream; or whether it would not be frittered away in equal portions, and perhaps conveyed to some streets where at present there is no water at all. Let us beware of the Radicals! they are becoming powerful in the Colony. Popular Rights is their watchword, Education their cat's-paw, and Infant Schools and Popular Libraries their atheistical spawn. They have enlisted in their March of Intellect all the vagabonds of our town, in this Colony as elsewhere. This morning, as I left the house to attend the Inquest, I missed the band of little gambling blackguards, who are in the habit of spending the day in floating their rival straws along my gutter. I found the little rascals sitting by the puddle, forming themselves into a literary society. Kicking one of them out of the way, he pertly told me they were raising, by subscription, the sum of one penny, to pay for the hire of the book before them, Ainsworth's Dictionary, borrowed from the Popular Library, and containing, he said, a receipt how to grow rich. The ragged little scoundrel begged me to contribute a half-penny or a farthing. (Here Mr. Coroner buttoned up his breeches pockets.) Gentlemen, continued Mr. Coroner, addressing the Jury, I have a great respect for His Majesty's Attorney General, which I take you all to witness, for there is danger in playing with edge tools; but I cannot help saying, that Mr. Attorney's speech, at the Popular Library Meeting, has done more mischief, than all the Attorney Generals in the world have done good. Why, you cannot now pass the streets without falling over some tatterdemalion, practising A, B, C with his fingers in the mud; or a group of juveniles, reciting to each other the story of a poor little boy, who, by reading his book, became at last to be His Excellency the Governor himself. The very infant schools have caught the infection, and Mr. Buchanan, who I really think might keep to his own business, content with that which gives so much content to others, now I hear permits his little imps, white, black, and grey, to chaunt the ditty of the streets; so that after their usual "LET US ALL LOVE ONE ANOTHER," now comes the melodious twang "*Let us all—all read together.*" Children of a larger growth are equally infected. My grand-daughter, a girl of fifteen, tells me she has a class at the Infant Charity School. Why in the days of her grandmother, whipping little children was thought a very disagreeable occupation: but Miss tells me that now it is quite delightful to teach the young idea how to shoot. Sir, I have no patience with these new-fangled doctrines. Let us stop before ruin and anarchy overwhelm us. "Leave well alone," says the English proverb. "Never do to-day what you can put off till to-morrow," says the Spanish proverb. "No improvement is required," says the Duke of Wellington. And, in the name of reason, what higher authorities can be obtained? Are not proverbs the collected wisdom of past ages? and is not the Duke of Wellington the concentrated wisdom of the present? I say leave Newlands to Mr. Cruywagen, and Cape Town to itself. Our fathers did not faint at a dead rat, and I see no reason why Professor Kuttimuppo should be deprived of subjects for his admiration. There is no rule for taste; but, unfortunately, there is a rule in evidence, depriving us of the pleasure of the Professor's company.

18. Mr. Lavender being asked if he had any farther evidence to offer, said, that as Mr. Professor Kuttimuppo was in the room, he wished, with the permission of the Jury, to put to him a few questions; and he could assure the Coroner that they should be strictly relevant, bearing directly on the acts of the accused.

19. Leave being granted, Doctor Anatomo Kuttimuppo, examined by Mr. Lavender, says:

He is a native of Rome, and has been five

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

years in the Colony, during which period he has held the appointment of Professor of Anatomy in the South African College; has seldom been able to procure human subjects for his lectures; his dissections have been confined to sheep goats, and *toadies* The students of the Anatomical class generally receive instruction from the witness in the streets, in their walks about town; fully understands the question; witness usually lectures in the streets; considers Cape Town a noble theatre for anatomical inquiry and observation from the abundant character of animal carcase the streets always present: dogs, cats, rats, fish, and fowl, dead from violence, and dead from disease, exhibiting the animal frame in all shapes and all stages; broken heads, and simple and compound fractures, in the most admired variety; and decomposition in a graduated scale, from the flight of the vital principle to partial admixture, or general consolidation with the dust of the streets; witness professes Surgery as well as Anatomy, but not Medicine, is consequently unable to pronounce on the influence of atmospheric poison on the human constitution. Mr. Lavender said he had no more questions.

20. Examined by the Jury: Considers the instruction afforded to the students of witness' class to be very imperfect, from the absence of human subjects for dissection; has remonstrated with the Directors; understands that the present grand Hunting expedition in Cafferland will supply the deficiency, and prove highly beneficial to Anatomical Science. The College possesses only two skeletons; one of the Hottentot Venus, presented by the late Lord Grenville, who, according to the Antijacobin, was a near relation to the lady. The other, the skeleton of Jan Van Riebeek, the Founder of the Colony, presented by Sir Lowry Cole. Witness has experienced great repugnance among the Colonists, to give up their grandfathers and grandmothers to the knife; this prejudice very unfavourable to the progress of Anatomical Science in South Africa, but a remedy exists which an enlightened assembly like the present might supply.

21. Here the witness took a small memorandum book from his pocket, and, bowing around, said he was happy to believe that there were several gentlemen in the room of the same pure philanthropy and benevolence as the late Jeremy Bentham, and His Royal Highness the present Duke of Sussex, who have bequeathed to public institutions their own bodies for dissection; and if gentlemen of the Jury, and others equally disposed, would honor him with their names——

22. The profound silence which marked the examination of this witness, was here suddenly interrupted by the retiring movement of chairs, and general ejaculation of Atheist! Cannibal! and many other terms and symptoms of abhorrence and alarm. The learned Professor did not notice it, but, opening his book, addressed the Foreman, saying, Sir, the name you bear, dear to Truth, to Wisdom, and to Science, encourages me to hope that I may inscribe it in this book.

23. The Foreman, Mr. De Groot, declared his sincere respect for the opinions and pursuits of the learned Professor, "which," added he, "my judgment tells me, promote in a very important degree the prolongation and preservation of human life. But feeling subdues our reason. Sorrowing affection kneels at the grave communing with the dead; and I cannot consent to disturb or alienate the dust which affords this hallowed association."

24. The Professor closed his book and retired.

25. The Jury now adjourned to the street to inspect the canal, but Mr. Lavender applied to be excused, declaring that it would be his instant death; the Coroner however deciding on the necessity of his attendance, Mr. Lavender repaired to the door, where, fixing his eye for some seconds on the weathercock on the Church steeple, he sat down on the stoep, and declared that nothing should induce him to move a step further. The Jury had gone to the other, the leeward-side of the canal; where, leaning over the parapet for ocular, as well as olfactory examination, the whole of them, to the great scandal of their Foreman and the Coroner, simultaneously took to flight. Some ran to George's Hotel, helping themselves copiously to *eau-de-vie*. Others rushed to Mrs. Saunders, the confectioner, devouring peppermint drops and cherry brandy; while the few that staggered into the Commercial Rooms, to the astonishment and indignation of Mr. Rose, expended the subscription snuff-box in a twinkling. The Coroner had come over to the other side of the canal to remonstrate with Mr. Lavender, but evinced no disposition to return. Our reporter seeing him much indisposed, resigned to him his chair, and, with Mr. Advocate Papinian, sought the Foreman to ascertain the verdict, when unhappily they found Mr. De Groot senseless in the shop of Mr. Kuuhardt, the Apothecary. After strong stimulants had in some degree restored him, he was placed in his carriage, and conveyed to his house at Rondebosch.

26. On the fate of the Jury being known, Mr Lavender declared he should not press for a verdict; on which Mr. Advocate Papinian intimated that he should prosecute for defamation.

27. The very few persons who remained after the Coroner's explanaton of murder and no murder, now retired; and we and our reporter left the Heeregracht.

28. In concluding this Report, we beg leave to remark, that devoted to the service of our fellow-citizens, and jealous of any infringement of their privileges, we think it our duty, on this occasion, to enter our solemn protest against the light and unceremonious manner in which the public have been treated by His Majesty's Coroner. For this gentleman we profess the utmost respect, but there is a wide line between his personal worth and his official obliquities; and we must say, that he has no right or title to play with the feelings of the community. The discontent displayed on his explanation of murder and no murder, was natural. The public had gone to the inquest, fully prepared to hear of a most diabolical and interesting murder: and lo! it turns out to be nothing but the crotchet of an atrabilarian invalide, who has been himself inhaling, for the last dozen years, the mire and mud of Bengal.

29. P. S. We are happy in being able to relieve the deep anxiety of the Community, by stating, that when this Paper went to the Press, a most favorable report of our much-respected fellow citizen, Mr. De Groot, had been just received by his friends in town.

THE COMMERCIAL EXCHANGE.

THE following Newspapers are regularly received at the Commercial Exchange, exclusive of those devoted especially to Shipping and Trade concerns; the local papers, and others from the East, Australia, and Mauritius:—

Morning Chronicle.
Herald.
Times.
Bell's Weekly Messenger.
Hampshire Chronicle.
Dublin Freeman's Journal.
Edinbro' Weekly Journal.
Spectator.
Atlas.

Those marked in italics are reputed to advocate Tory principles.

The Examiner has been ordered to be restored to the Room, (having been suspended from motives of Economy,) in consequence of a requisition on the part of many Subscribers.

WHAT NEXT?

Another distressing change appears to have taken place at *home*. We humbly trust our conservative friends *here* will stoutly defend our Church and King rights— the public holidays The Destructives have done away with the greater proportion of the dear old Festival days, and the Waterloo day, and the blessed old 30th of January day, and now the poor fellows of the Public offices are left to chaunt——

Time was in old Moore's Almanac,
That each red-letter day
Was hail'd with joy—for every one,
'Twas either play or pay.

We kept the days of all the saints,
Right primitive were we;
But now we have renounced them all
Like heathens as we be.

We once kept holy Lord Mayor's day,
And also Powder Plot;
The Parliament may now blow up,
And we care not a jot!

We married men could now and then
Upon a holiday,
Take wifey out with all her train,
And rustic visits pay.

But now in vain the sun may shine,
In vain the fields look gay—
We cannot see a corn-field now—
We have no Holiday.

CORRESPONDENCE.

NICE DISTINCTIONS.

Speech of the Revd. Mr. Jackson.

[This gentleman, it would appear, is not strictly speaking a Wesleyan minister, but is a Methodist of the *New Connection*. The grounds of separation, however, relate not to doctrine, but to discipline. They invariably teach the Arminian doctrines as professed by the distinguished Wesley—General Redemption and a Free Salvation. In this respect, they differ from the Calvinistic Methodists.

The following good humoured epistle, from the Revd. B. Shaw, the respected Wesleyan Minister of Cape Town, is worth a volume of fiery polemics.]

To the Editor of the Cape of Good Hope Literary Gazette.

Cape Town, 10th August, 1835.

MY DEAR SIR,—I had written a few lines respecting the *speech* you quote from a Norwich Newspaper, to shew you that the person was not a Wesleyan Minister. This, I think, you knew, or should have known. But on reading forward in the same number of the Literary Gazette, at page 113, where you say, "nobody ever bears resentment against a newspaper for telling a thumper,"—I tore up my paper, and said, this is quite sufficient. *

Yours truly,
B. SHAW.

TURNING TO ACCOUNT.

Extract of a Letter.

"The African Glen, Colosseum, Regent's Park, London, is now turned to good account. The additions are very numerous, and we found ourselves, during a late visit to it, once more at the Cape, in the midst of its varieties of 'man and bird and beast.' They have added to the Glen a splendid and highly finished panoramic painting of the Irruption in Caffraria, and the troops, the settlers, and the Caffers—quite as natural (of course) as if we were there. Crowds of persons visit the Glen."

* The paragraph in its *unbroken* sense stands thus:—"nobody ever bears resentment against a newspaper for telling a thumper, *exeept* in the case of slander of private character, and this is an offence that cannot be forgiven."

THE CAPE OF GOOD HOPE.

[Geography,—Area,—General History,—Physical Aspect,—Geology and Climate,—Territorial Divisions, and Population,—Animal and Vegetable Kingdoms,—Staple Produce,—Wine, Corn, Oil, and Wool,—Form of Government,—Military Defence,—Laws,—Religion,—Education, and the Press,—Finance,—Monetary System,—Commerce,—Shipping,—Imports and Exports,—Weights and Measures,—Value of Property,—Emigration,—Prices,—Social View, and General Reflections on the Value of the Colony, &c.]

It is impossible to suppose, that so many British Travellers would employ their time in visiting this colony, and afterwards publishing the results of their observations, if a very potent appetite for such information did not exist among the public. In addition to this, almost every Newspaper, Review, Magazine, and Pamphlet in Europe, is periodically engaged in describing its localities—drawing forth our frailties—or disclosing our merits. It is true, that some of our travelling tourists, would seem, from their blunders, to have groped their way through the colony in the dark; and others to have travelled against time with all the perambulating speed of Capt. Barclay, of Urie, or the great renowned 'Squire Janson, who ran and wrote through the United States of America, with a bumbaliff at his heels—or the flying Dutchman—or Hyde the famous highway-man, who rode one hundred and twelve miles in eleven hours. Not so the author of the work before us, which we are about to introduce to the notice of our readers.

The table of contents at the head of the present Article, presents the various subjects under review, by Mr. Montgomery Martin, in his new volume on the British Colonies.* Till the appearance of Mr. Martin's work, our British literature presented the striking and painful anomaly of an utter absence of any colonial history considered *as a whole*. To this work, therefore, we should be under considerable obligations, had it done no more than offered us a general sketch—a connected view of our country's widely-extended empire. But it has done greatly more than this. Mr. Martin is not a *desk* historian—neither is he one of the *Rapids*, already noticed; neither has he been a *gentleman traveller*, i. e. a *Rider*, to seek customers for the articles of *gun-powder and muskets!* No, he has been a *disinterested* observer of human nature. He draws his remarks, in the generality of cases, from actual and careful observation; and has very skilfully worked up personal experience of men, manners, and things, with the statistical portions of his works. Again, Mr. Martin's enlightened, liberal, and religious fervour of humanity, sheds abroad such a lovely light upon every page of the present volume, as to render his purely statistical details exceedingly interesting and attractive, even to the general reader; and to excite kindred feelings in all. That one man should not only visit all, or almost all of the British Colonies, but write of each, and all, by far the most satisfactory account of their relations, internal condition, capabilities, and prospects, that has ever appeared, can only be explained by declaring, that the writer's mental powers and acquirements are extraordinary, and that nothing short of a passion for the task could have carried him through with it. As a man of wide philanthropy, shrewd sense, and as a politician and a statist, (differ, though we may, with some of his notions on political economy,) he has worked for himself a high and imperishable reputation. It is men like him who ought to be placed in situations of trust, with regard to our colonies.

But to a few particulars of the History before us. Mr. Martin clearly points out that Africa's southern extremity, termed—*The Cape of Good Hope*, is politically, as also commercially speaking, one of the most valuable sections of the British Empire. Territorially united with Europe and Asia, the peninsula stretches far into the great Austral ocean, and by reason of its singular locality, forms the maritime Key to the Anglo-Indian Empire, and our Eastern dominions. He demonstrates, in the clearest manner, that the colony is not as has been erroneously represented, a mere sand bank, suited for the refreshment of Indian ships.

"In a political aspect, the colony is deserving of the highest consideration: it is the key to the eastern hemisphere, and to a maritime power like England, a jewel beyond price; by its central position, it is admirably adapted as a depôt for troops, as well as for a naval station during war time, and for watching the motions of an enemy in Asia, Africa, and America; while its healthy climate, and abundant and cheap provisions, secures to our mariners on long voyages, a friendly port, where it is most needed in doubling the Cape of storms."*

This southern extremity has been so frequently of late years explored and described, that many things ne-

* History of the British Colonies. By R. Montgomery Martin, Esq. F.S.S. in five vols. Vol. iv.—Possessions in Africa and Australasia, 1835.

* The conquest of the tyrant of Mysore, and the overthrow of the French army in Egypt, were both materially aided by the speedy and seasonable reinforcement of troops (*ready for tropical service,*) dispatched from this colony. The Marquis of Wellesley, in his despatches home, 18th January, 1798, acknowledges the receipt from Lord Macartney, at the Cape of Good Hope, of the regular Proclamation of the Government of Mauritius, for the aid of the French to Tippo Saib; when the latter strove to effect the destruction of the British in India. Had the British not then possessed the Cape, the injury intended for India by the French might have been known too late.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cessarily entering into our author's comprehensive and diversified account, must be familiar to all. We shall only glance therefore at a few particulars, without any very systematic notice of the order of his arrangement. We may remark in the first place, that Mr. Martin pays an early attention to the Governors of the Cape, and to several of these he offers the tribute of commendation or otherwise. In like manner, the uncompromising historian of New South Wales, Dr. Lang, does not fail to exercise the freedom of his independent pen, by pourtraying the characteristics of public rulers. In sketching the full lengths of the successive potentates who have borne sway in the *fifth quarter* of the globe, he emulates, and sometimes equals, the immortal Knickerbocker, of New York. The Revd. Author represents to his readers "Philip the Good,"—the Alfred of New South Wales,—"King the Domineering,—"Bligh the Unlucky,"—"Hunter the Respectable,"—"Macquarie the Vain,"—"Brisbane the Promising,"—"Darling the Martinet." Mr. Martin commences with the reign of the Earl of Caledon, in the following terms:—

"I cannot pass over the list of Governors of South Africa, without adverting to the administration of the Earl of Caledon, whose wise, beneficent, and philanthropic exertions have been successively the theme of every one who has written on the subject of the Cape: His Lordship's impartial and firm administration of the laws,—his Christian-like conduct, as exhibited towards the dark and benighted brethren,—and the numerous efforts to ameliorate the social condition of a people entrusted to his sway, all evince the workings of no ordinary mind; indeed, when I consider the age at which his Lordship held the government of the Cape, (1807 to 1811,) and reflect that he is still in the prime of life, and devoting his benevolent principles towards alleviating the miseries and wretchedness of his native land; I am at a loss, whether to admire most the comprehensive views developed in his Lordship's government at the Cape, or the attention paid to minute points of domestic interests, as Lord Lieutenant of the county of Tyrone."*

The author mildly expresses his regret that he is unable to report thus favourably of the government of the late Lord Charles Somerset. He was several times at the Cape during the administration of Lord Charles, and found that few persons spoke of him with respect. The truth is, Lord Charles, although a man of capacity and kindness, and accessible to all, fell upon evil times, and bad laws. His advisers, too, were all of a kidney with these laws. He was a notable example of a shrewd, sensible, well informed man, but paying implicit homage to the *letter* of despotic regulations—to laws changeable, ambiguous, uncertain, all or either of them being summoned whenever *Expediency* should call them to its bar. These laws existed in the most barbarous periods, before men had acquired the art or learned the use of writing. But it was the law of the Cape in 1821. It was the law of men who, in fact, made it expressly to decide upon; made it for the particular occasion; made it *ex post facto*;—made it with fresh modifications for each occasion as it occurred.

We are bound to declare for ourselves, that we are fully sensible that Lord Charles, in himself, was not an ill-disposed man His mistakes were the faults of others, in whom he unfortunately placed unlimited confidence. The Cape Almanack characterizes this period in our history as the Reign of Terror,—and certainly those times were awful, which could thumb-screw a witness in the old Court with closed doors, in order to extort evidence; which could invade the sanctities of private life, by establishing the despotic authority of *General Search Warrants!* Then, again, Lord Charles' whole reign seemed calculated to un-English the colony. Immense grants of land were given away; Holland and Earl Bathurst were synonymous terms, and always enjoyed a *preferent claim*, whilst the British Settlers were insulted, despised, and rejected!

"It is, nevertheless, probable," says Mr Martin, "that Lord Charles was attached to the colony; and although some of his proceedings, particularly as it regards the Press, were undoubtedly despotic, yet he may have had the welfare of the inhabitants at heart."

This, the historian had a right to conjecture, more especially when connected with the facts of the celebrated departure of his Lordship from the Cape; the grand entertainment presented to him, and the complimentary addresses which bade him farewell. At that celebrated dinner (in the Commercial Hall,) the voice of joy and gladness was heard!—the shout of "well done," greeted the ears of the departing ruler; the tumults of applause were deafening; the speakers and thanks-givers followed each other in harmonious succession; whilst others, unable, after often repeated attempts to give utterance to their *grateful* bosoms, flourished their handkerchiefs, or cried—

"Good by Saint, and clapped him on the back."

And then the glorious *finale*,—the "take out the horses,"—the display of *animal* instinct,—the

"Long pull, the strong pull, and the pull altogether."

But, "Lord, what is man, that thou art mindful of him!"—What a chimera! What a novelty! What a chaos! What a subject of contradiction! What a heap of uncertainty! Scarcely is the echo of applause silent in the hall of banquet, and his Lordship not far at sea, when behold, the change in the features of his numerous admirers. The varnish penetrates not beyond the surface,—the very men who advised, applauded, who palliated every excess of arbitrary power, now become liberals,—hold their public meetings, proclaim the ruinous system of past measures, and petition Parliament for free Institutions and a Legislative Assembly!

As it regards Sir Rufane Donkin, the author states that "his exertions for the welfare of South Africa are held in grateful remembrance by the colonists." General Bourke is noticed for his "comprehensive liberality" in legislating for the location of the Hottentots on the Kat River. It is justly observed, that these hitherto-despised people "have shewn themselves worthy of the treatment bestowed on them," and still more so, that it was Sir Lowry Cole who "wisely adopted General Bourke's enactment, and prevented its becoming a dead letter." It was not always that we were of one mind with Sir Lowry Cole; but this we know, that he had the interests of the colony much at heart. If there were any occasional displays of temper somewhat beyond the ordinary limits of an unruffled surface, still the expression of it was open, undisguised, and without hypocrisy. It is the late Mr. Pringle, in his Sketches, who so justly awards to Sir L. Cole the characteristic of a "frank honesty of nature." He was not led away by whisperers, nor caught in the net of those who pride themselves on the superiority of local or family influence. He was never unmindful of merit, and took it by the hand whenever he beheld it associated with rectitude of conduct and honest industry. He had the courage to watch over with unceasing vigilence the offices of the civil-servants. An idler, or a street-walker during the hours of required service, brought down his faithful rebuke. He drove out the money-changers in the government offices, *i. e.* those who privately usurped the affairs of trade and commerce, and were merchants, or wine-dealers, or boatmen, or agents, enjoying at the same time place under government. Moreover, his firmness was unmoved amidst the din of popular clamour and party strife. He beheld a mob of excited appealers to Parliament before his door, with all the self-possession and firmness of an English gentleman, and a brave General. The suddenness of this irruption did not take him by surprise; he compromised none of his dignity as the King's Representative, and beheld the *thing* shrink away before the lightning of his eye. Then, again, he checked rebellion in the bud, cashiered the disloyal, or pusillanimous, tried and punished the rioters, and vindicated the authority of the true origin of government. He was the friend of education, coupled with religious instruction,—and devoted to the improvement of the public roads throughout the colony.*

* The author found the town of Caledon in Ireland, on a recent visit to it, to redound greatly to the honour of the Earl of Caledon. In the midst of Irish wretchedness, it was to the traveller as an oasis in the desert; its mills, the busy hum of industry, its cleanliness, and happiness of the people, all proclaimed the worth of a good landlord.

* The author records the following anecdote, which is highly characteristic of Sir Lowry Cole: "When Sir Lowry Cole arrived as Governor

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

As Mr. Martin does not take cognizance of the administration of our colonial government under Sir Benjamin D'Urban, we are left without a text for discussion. At the same time, we may simply observe, respecting his Excellency, that there is not the slightest difference of opinion throughout the vast range of South Africa, regarding Sir Benjamin's general courtesy, benevolence of heart, and great application to official duty.

In reference to the Rulers at home, and Governors in general, and intending no individual application, a question here presents itself. How are the colonies ruled? and is there any Reform essential for their better direction? Can any good thing be expected in the government of the British colonial possessions, when not one man amongst the officials connected with them *at home*, possesses a single atom of Knowledge of the spirit of their people; the bearing of their institutions; the resources of their soil and produce, or of the ameliorations and improvements of which one and all of these are capable. What can be expected from mere political play-things—here to day, and gone to-morrow? Thus, in a very brief space of time we have had at home, no less than five colonial Secretaries, and five under Secretaries; and these will be speedily followed by a sixth. What can be expected from this state of things at head quarters, but the most inoperative and vacillating government? And neither had any of the colonial secretaries, as far as we can judge, any particular recommendation to office beyond their political position; and what opinions they held or do hold on our colonies, were and are of the most diverse character, and before answers could be received, much before any measures recommended could be carried into effect, the men have been gone from whose wisdom or folly, as the case might be, the dispatches had issued.

Again, we think as a general principle, that the education of military men, be they noble and gallant as they are, has a strong tendency to incapacitate them from governing. They have been accustomed *to rule*, but not *to govern*. They are not prepared for the slightest mark of disobedience; and they treat as disrespect that which is mere legitimate dissent and freedom of thought. However, the custom of sending out military men to govern is broken in upon: by the appointment, first, of Lord Amherst; and on his resignation, Lord Gosford, as Governor of Canada. We are attaching no personal blame to military Governors, far from it. But we do say, military men should not be called upon to fill an office in civil society of much anxiety and labour; requiring much forbearance and temper; together with a certain abandonment of the prejudices of their order to the opinions and feelings of the majority, who have to procure bread by "the sweat of their brow." It is also a great hardship to a military man, after nobly fighting the battles of his country, and asserting the prowess of the British arms, to be sent out to a distant colony as a reward for his services in the field. We do think it would be much better far, to reward those worthy officers whom it has pleased God to make physically brave, by allowing them to sit down in some quiet tranquil dale of retired life. Or if needs be, to make one of a *table d'hote*, after the methods of Chelsea or Greenwich. Be this as it may, two things are certain as it respects the governing and the governed. The situation of things at present is vastly different from what it was fifty years or a century ago. The objects of human attention are prodigiously multiplied; and the great and mighty changes in the revolution of society, must be met and directed, not shunned or counteracted. In this critical posture of affairs, more lights and superior industry are requisite both to ministers of states and governors, and to all persons connected in official office with public establishments. In other words, a new furniture of mind is requisite to be brought into the business of life. Secondly, it is the great duty of the people to advise and assist the higher authorities, but never to be carried away by the passion of *imaginary grievances*. As good and faithful citizens, to watch and examine into the springs of the great wheel of government, on the just balance and regular motions of which our temporal security and happiness depends. Under an arbitrary government, we are fully aware, free inquiry is not tolerated,—happily this colony has been delivered out of the house of bondage; and we are all free to act and think; none daring to make us afraid. And under a free government, as it is well observed by Lord Bolingbroke, "the public service is not confined to those whom the prince appoints to the several posts in the administration under him. Men of all degrees ought to instruct themselves in those affairs in which they may be actors themselves, or judges of those who act, or controllers of those who judge;" and from some one or other of these classes (having remembrance of Sir Jonah Barrington's carpenter who made a chair on which he afterwards sat as Chief Justice,) no subject of Great Britain is wholly excluded.

It would be impossible to follow the author in all his researches; and having already exceeded our limits, we may only take a bird's-eye view of a portion of them.

He is evidently greatly attached to the Colony and its strangely-deversified inhabitants. He considers the Dutch colonists to be hospitable and brave; the latter being evinced in their hunting the lion and the elephant; and the former by their good-will to strangers. In physical structure, we are told that

"The Cape Dutchmen are a fine race; in some districts their stature and strength is gigantic, and not less so on the frontier, where little vegetable food is consumed, mutton stewed in fat sheep's-tails being the standing dish three or four times a day throughout the year. In mental calibre they are by no means deficient when educated in youth, and a proper stimulus given to the developement of their faculties. The witchery of the Cape Ladies has cost many an Englishman his heart, and our *naval officers* especially have many an *affaire de cœur* while on the station. In the interior, *en bon point*, is one of the chief beauties of a Dutch housewife; perhaps the Hollanders, who are no bad judges of character, consider that *rotundity* and good temper are in equal ratio, and, therefore, desire the former for the sake of the latter."

In a note attached to the above extract, Mr. Martin is most just in his tribute to the memory of a native of the colony, viz:

"One of my brother officers in H. M. S. *Severn*, Lieut. Reitz, a Cape Dutchman, was one of the most talented men I ever met with; his bravery, accomplishments, and amenity of manners, rendered him an universal favourite." (p. 92.)

And in regard to the "noble Britons," we find a respectful notice:

"The English, with the exception of those located in the Uitenhage, Albany, and Somerset Districts, are principally confined to Cape Town, or as traders at different stations. Their character is similar to that observed in other Colonies—shrewd, generally intelligent, solicitous for political liberty, careful of its preservation, hospitable to strangers, and enterprising in their commercial pursuits."

Our author is equally complimentary in his remarks on the people lately slaves and now apprentices—Hottentots, the Korannas, the Namaquas, the Griquas, "the cheerful, frank, and fine pastoral race—the Caffres. The kindness and humanity of the natives of what is vaguely denominated the Caffer coast as displayed towards shipwrecked seamen, have often been the theme of just and warm commendation." (p. 112.)

In the affair of Cape politics, Mr. Martin says—

"The colonists are strenuously in favour of an Elective Legislative Assembly, such as exists in Canada; they ground their claims for such on the allegation that serious misgovernment has been continually exercised under the rule of an individual Governor, Dutch or English."

Mr. Martin appears to have overlooked the fact, that the Cape would-be legislators who advance their claims—*Augæn stablum purgare*, are the very men who approved and lived upon the maladministration of which they now complain. And secondly, as it regards Canada, the whole country is in a state of confusion, and disputes are daily arising between the people and the Legislature. Unless, indeed, Parliament interpose its authority between the people of Canada and the local oligarchy, the very connection between the colony and the mother country will be endangered. In Canada, the House of Assembly is chosen by the freeholders, and there can be no doubt that it fully and fairly represents the people. But all its acts are counteracted by the Governor and the packed bodies of the Executive and Legislative Councils. Here, as we take it, we should be in an infinitely worse condition. The members of a Legislative Assembly would be so identified by *clanship*, or *pension*, or *salary*, with the two councils, as to form merely, *one whole* of family interest. Besides (were this not the case) we question very much whether we possess at present any sufficient materiel for the formation of such a body.

In the further discussion of Cape politics, Mr. Martin is in favour of a Lieut.-Governor, a code of municipal regulations with a Mayor and Shrievalty at *Graham's Town!* And moreover, "Cape Town ought to have been made a corporate city, with a Mayor and *freely-elected Court of Aldermen*, &c for its management." (p. 119)

After some observations on our naval and military force, the *Laws* of the Colony form the subject of discussion. "And," says Mr. M.,

"Several of the Cape councillors, though born in Africa, would do honour to Westminster Hall. Messrs. Cloete and De Wet are profound and eloquent lawyers."

The next points of consideration are those connected with Churches and Missionary Institutions. The author is tolerably correct in his statements on religious statistics, but strangely out of order in describing "the Calvinist or Reformed Communion" as distinct from the "*Christians* — the English or Episcopalian Church." (p. 124.) The Missionary Societies—The South African,—The London,—The Moravians,—The Wesleyan are all characterised as nobly exerting themselves in South Africa, for the promotion of religion, morality, and education.* And in the great

at the Cape, the Settlers at Albany were desirous of presenting a congratulatory Address, on account of the high character he bore whilst Governor of Mauritius; but the permission to hold a meeting for the purpose had to be sought from the Governor himself. His Excellency felt the awkward predicament in which he should appear as granter of a meeting to praise himself; he then begged to thank the settlers for their good intentions, and assured them he would take the will for the deed."

* Mr. Martin will regret, we feel assured, that he has overlooked the Glasgow Missionary Society. He acknowledges to have derived a mass of information from the Cape Directory, a work which he considers a model for other colonies; but in the Directory, the Glasgow Society has been through some inadvertency omitted. At the commencement of the present year the Glasgow Missions in Caffraria stood thus:—

Pirrie—Revd. J. Ross, A. M. Missionary. Jos. Williams, native teacher; the latter supported by the ladies of Greenock.

Lovedale.—Revd. Mr. Bennie. Rob. Balfour, native teacher; supported by the ladies of Dunfermline.

Burnshill.—Revd. Mr. Laing, and Mr. McDermed. Chas. Henry, native teacher; supported by the ladies of Kelso.

Chumie.—Revd Mr. Chalmers, Mr. Wier, and his venerable mother. John Burns and Thos. Brown, native teachers.

The Glasgow Society does honour to its founders—the pious people of Scotland's far-famed city. The very recollection of a visit to their

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cause of religion and humanity, Mr. Martin makes just and honourable mention of "the lamented Mr. Pringle, a writer whose genius has called into activity a large portion of sympathy for the semi-civilized tribes of South Africa," in connection with "the worthy and indefatigable Dr Philip, Superintendent of the London Missions."

It is for those who utter in private and in public, "Thy Kingdom come," to consider whether the duty of extending the Knowledge of divine truth, is not now more especially pressed upon us than at any former period of the world's history. Especially when we contemplate that

"No country offers a wider and more useful field for the useful and pious missionary than South Africa and its adjacent country, with myriads of people emerging from the confines of barbarism, and beginning to taste the fruits of knowledge and industry."

Mr. Martin considers that the schoolmaster is abroad in South Africa, and records several of our existing institutions in their due order:—The College,— South African Institution,— Public Library,— Infant Schools,— Medical Society,— Royal Observatory, — Christian Knowledge Society,— Bible Society,— Friendly Society,— Agricultural Society, and Book Societies, &c. in different districts. The Press is thus noticed:—

"Among the other extraordinary features of the present age is the introduction and extension of the Press on the shores of Southern Africa—extending our language, laws, and literature, and erecting a monument for the British name, less perishable than one of marble or brass,—'*ære monumentum perennius!*'

This is true enough, but the author has not referred to the cost, the struggle, the warfare, and the victory which gained for the colony a new era of mind. It is the Press guided by the supremacy of Mr. Fairbairn's pen, that has introduced a simultaneous activity, a desire of improvement, and new directions of thought and enterprise throughout this colony. That there are persons among us who disrelish the independent sayings and doings of this Press, we do not deny. It requires, however, some talent and generosity in others, some *thinking for one's self* to find out talent and generosity and independence in others. These individuals may therefore be forgiven, especially when we add to the consideration that the oppositionists possess *vested interests* in many of those affairs which are so keenly reprobated and probed by the *Advertiser*. That misconstruction and purely malicious assertion are abroad in the colony, in reference to the Press, we would not disguise;—but the duty we think of the independent Press, is, not to return railing for railing. To use the language of Mr. Lord, in his recently published and admirably written work on Algiers,—

"Men who can distort views and misconstrue motives deserve contempt not refutation; and as praise when undeserved is the severest censure, so assertion, destitute of foundation and calumnies, with not even the semblance of truth, must place the upright conduct of the assailed party in a still brighter and loftier situation."

Mr. Martin's observations on our staple products, corn, wine, wool, provisions, imports, and exports, are well worth attention. He is clearly an advocate for the Wool trade; and among other authorities, quotes the Attorney General's ingenious calculation:—

The Cow *versus* The Vine. (p. 88.)

A single extract from the work, and we have done. After the statement that the Monetary System at the Cape is very imperfect, we find the following reasons suggested for the

NECESSITY OF A NEW BANK.

"There is no private Bank in the Colony, but a Lombard (or loan) and Discount Bank under the control of Government, who derive profit on the discount of bills. That the Cape is in want of a proper banking system must be evident; a Discount Bank under Government management, leaves every mercantile man, or others requiring pecuniary accommodation, at the mercy of the rulers for the time being. and exposes their private affairs and credit to the cognizance of Government Officers; the former is a great evil, *the free exercise of thought* and action is prevented, and a Government thus holding the purse-strings of the only Discount Bank in the Colony, becomes possessed of a *despotic power more arbitrary than that of any armed force.* The colonists to a considerable number feel this; they also think that with increased business the colony is in want of a free system of banking, which, with a parent establishment at Cape Town, would establish a branch at Graham's Town, and in some other of the remote and principal districts. In justice to Government, I believe there will be no opposition to such a measure from the home colonial authorities; but several persons of much reflection think that the present moment is not peculiarly adapted for the establishment of a private bank at the Cape; and they ground this opinion on this circumstance, that nearly £1.000,000 sterling will be necessary to repay the slave-holders on the Emancipation Act: the sudden introduction of this sum into the colony would, they think, derange the circulation of the colony materially; in this respect, I perfectly agree, but it has been suggested to me, that paying the small holders up to £100 in English Coin, and giving the larger colonial debentures bearing 3 or 3½ per cent. interest, payable at sight, or redeemable at the option of Government, would prevent any anticipated evil arising from too sudden an increase of the circulating medium. If this plan be adopted, then there can be no reasonable impediment to the Government withdrawing its banking concerns, and leaving the trade in money open to private speculation and enterprise; this much is certain, that the Eastern Province, distant 500 miles from the seat of Government, imperiously requires the establishment of some bank, not only by reason of its distance from Cape Town, but also on account of the enterprise which distinguishes the British Settlers; and which is now cramped and restrained to a degree injurious to the whole colony by reason of the want of that pecuniary accommodation which is the very life and soul of an English Community."

GRANT THORBURN,
(THE LAWRIE TODD OF GALT.)

GRANT THORBURN, the Seedsman of New York, has just published a little work entitled "Men and Manners in Britain; or, a Bone to gnaw for the Trollopes." His "Forty Years Residence in America" appeared in the course of last year, and attracted no inconsiderable attention. It is designed to illustrate the doctrine of a particular Providence; and certainly, Thorburn's history is a remarkable one. We only regret that the author should so frequently *affect* a singularity of expression bordering on the ludicrous.

The Biography of Thorburn, is one of a thousand. He was born near Dalkeith, six miles south of Edinburgh, in 1773. His father was poor, but honest and industrious, following the trade of a nail-maker. In the year 1792, when the French Revolution had fairly commenced, and the Pulpit and the Press were teeming all over Britain with Reform, Grant joined the societies of what were then called the Friends of the People; and in London were termed the Corresponding Societies, whose ostensible motive was, to obtain the Reform of Parliament, by a more equal Representation. Their intended Reform was precisely on a par with that recently effected by the Government under Lord Grey. But at that time of day the discussion of the subject was a crime of the deepest magnitude. Grant, with seventeen more of the Dalkeith members, were arrested and marched prisoners into Edinburgh. The celebrated Thos. Muir, of Glasgow, with the Revd. Mr. Palmer, were also seized, tried, and condemned. They were transported. Palmer died—and eventually Muir, who suffered shipwreck, and intolerable hardships. Muir was a gentlemen of family, and possessed eminent talents. "Gentlemen of the Jury!" said he on his trial, "my crime is for happening to be, according to the measure of my feeble abilities, a strenuous and active advocate for an equal representation of the People in the House of Commons—for having dared to accomplish a measure by legal means, which was to diminish the weight of their taxes, and put an end to the profusion of their blood; Gentlemen, from my infancy to this moment, I have devoted myself to the cause of the people. IT IS A GOOD CAUSE—IT SHALL ULTIMATELY PREVAIL—IT SHALL FINALLY TRIUMPH.*" Muir was born too soon—his prophecy has now been accomplished. The fate of Muir excited the commiseration of Fox in the Commons, and Lauderdale in the Lords, but it prevailed no further; the cold-heart of William Pitt was dead to sympathy. These were evil days for honest men. Burns the poet was told by the Board of Excise, that his business was to work, not to *think*.

In Ireland, Muir's fate was greatly deplored by the people, and it was in the defence of Hamilton Rowan, by Curran, that Muir was alluded to by the speaker, and Scotland thus eulogised:—"Scotland—a nation cast in the happy medium between the spiritless acquiescence of submissive poverty, and the sturdy credulity of pampered wealth;

missionary stations in the country of the Caffers. makes our hearts burn within us Gladly would we hail the return of Sabbaths among the Mountains, and become once more one among the church-goers in Caffraria.

* The charge on which he was tried was for sedition. He was accused of having talked of Liberty and Reform, and desired a musician to play "Ca ira!" The trial lasted 18 hours, and he was sentenced to 14 years transportation.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

—cool and ardent—adventurous and persevering: winging her eagle flight against the blaze of every science with an eye that never winks, and a wing that never tires."

But to return to Grant Thorburn. Just before the days of trial, his good father, sore at heart, paid for his passage to New York, in a ship then lying at Leith; he also discharged the forfeited bail, and having invoked the blessing of the Almighty on the runaway, parted with his child in the *Providence*, bound to America, 13th April, 1794. 'The effectual fervent prayer of the righteous availeth much.' Grant Thorburn landed at New York with only three cents. in his pocket, a nail-hammer in his hand, and neither shoe or stocking on his feet.* The subsequent events of his life are truly marvellous. From nail-making he became seedsman, and when he purchased a first plant, he knew not a geranium from a cabbage-head. He is now well to do in the world—his establishment is the most distinguished in America; his son a reputable botanist, and his daughter inimitable in flower-drawing. After a forty-years' residence in America, he returns to the country of his birth, but first lands in London. He visits and describes all the public Institutions of the great metropolis, and is introduced to several distinguished personages. It was proposed to introduce him to the King, but on hearing that he must wear silk stockings, knee breeches, a cocked hat, and sword, and cost upwards of twenty guineas, he declines the honour. Leaving London, he proceeds to the north by way of Manchester, Liverpool, &c. and in December, 1834, arrives at Dalkeith, his native village. The following extracts are from Grant Thorburn's Journal. He must have a cold-heart who can read them unmoved by filial affection.

MEETING WITH MY FATHER.

I was set down at 9 o'clock—procured a person to carry my trunk—arrived at the gate where my father has lived for half a century—directed the man to call my brother, but not to mention my name, as I wished to try whether my father would remember my voice, not knowing me to be in the room. (He is blind with age.) The family consists of my father, brother and wife, a young man and servant girl. My brother came out. I told him to caution the family not to mention my name. I followed in a minute. My father sat before the fire, his arm resting on a table, and his cheek on the hand. "Is old Mr. Thorburn in the room?" I inquired. "I am here," says he, "what's your wish?" "When did you hear from your son in America?" says I. "We had a letter *frae* Grant the other day; he is some *way aboot* Lunnun or Liverpool, he *aye rites he's comin doon, but he's unco lang about it.*" I found he did not recognise my voice. I continued, "Don't you find a great loss in the want of your sight; you used to read and walk so much?" "To be sure it is a loss," says he; "but how can an *auld* man *o' ninety-ane* expect to *hae a* his faculties. I may be very glad there is *ony o'* them left. I can hear my *freends* speak to me; I can eat my bit meat;* my health is gude, and I sleep *weel* at night; so I ought to be very thankful." I made some other enquiry, when he says, (beginning to recollect my voice,) "but, I'm thinking you're Grant *himself*." The rest may be *described*, but cannot be *felt*.

It was now within a few months of forty years since we first parted on that same spot. At that time our calculations were, that we would never meet until we met in eternity. But here we were, and in circumstances of peace, comfort, and plenty. A pleasure this, which few who have left their father's house ever enjoyed in such perfection. Not many days after, I sat down to dinner with nearly twenty of my old schoolfellows. We had then the days o' lang syne up to nature.

MY FATHER'S HOUSE, AND THE GRAVE OF MY MOTHER.

In the house of my father, I enjoyed all that heart could wish in like circumstances. The house stands on the same spot, though somewhat enlarged. There sat my worthy and venerated father, in the same room I last parted with him; his faculties as bright, and his health better than it was fifty years ago. Though blind with age, (having seen the frosts of ninety-one winters,) he knew my voice before he heard my name. There stood the same eight-day clock, which has given note of time to the family as long back as my memory serves; there lay the same old family Bible, with the book containing the simple but beautiful version of the Scottish psalms. Much of the furniture was the same—in short, I was at home. I would not have exchanged my feelings, at this moment, for all the pomp and pageantry of kings since the world began.

On a gray, calm, cloudy afternoon, when the days were short, and darkness covering the land by four o'clock, I walked out to visit the *grave of my mother* for the last time. *The grave of my mother!* Of all the sounds which issue from the tomb, there is not one more solemn, nor one which more keenly penetrates the soul than this. *The grave of my mother!*—though your mother may have shut her eyes in death, as you first opened your's to see the light of the sun; though you may have spent a half of a century in thoughtlessness and folly; though you have seen perils by land, and perils on the great deep; though you fear not God nor regard man; yet stand by the grave of your mother, (on her dust you dare not tread, *nature forbids!*) and your heart will melt like softened wax.

In a lonely church-yard, remote from mortals dwelling on this gloomy winter's day, I stood by the grave of my mother. Her image I could not recall, (as she left this world before I knew my right hand from my left.) But, as I stooped over the *sod*, which covered that breast from whence I drew the first nourishment of life, I wondered with myself why I should *still weep*, though that sod has been wet with the snow of *sixty winters*—it was nature claiming her own. I was lost! The spot where I stood was consecrated ground, and my spirit was communing with hers, perhaps it was hovering around.

THE DINNER—OLD ACQUAINTANCE.

On a late visit to my native village, after an original absence of forty years, when the day of separation again drew near, I accepted an invitation to a farewell dinner. It was on the last day of the year 1834. The company was select, consisting of twenty-five. The majority of them had been my school-fellows *fifty years ago*. The exit of the old, and commencment of the new year, is a time of high festivity all over Scotland.

The room where we sat was within one hundred yards of the identical school-house into which we had so often trudged, with lingering step and rueful face, and spirits sunk down to our heels; and from whence, when dismissed, we used to bound in all the noise of frantic mirth. There it stood, with the same low rough stone wall, short and narrow windows, leaden sashes and small triangular panes of glass, and its venerable roof covered with thatch. This house, I think, must have been built before the year *one (viz.* 1701.)—indeed I could not perceive on it the *march of time*, I could not see that the house looked a whit older than it did fifty years* ago. It stands in what they call a close in Scotch, or alley. Neither could I perceive that any of the buildings adjoining had either been *pulled down* or *altered*; and herein lies the essence of pleasure—for when you revisit the place of your birth after a long absence, a new generation stares at you with a look of something like alarm. You are a stranger at your own door. You look round; there stands the same venerable church and school house, and may be some ancient oak, under whose limbs, in youth, you whiled away the long and sultry summer day. You hail them as friends. You talk to yourself and the moss; and the ivy on their darkened walls seems to respond to your whisper. This exquisite feeling is only enjoyed by him whose birth-place is a village, a small *deserted village*, where five hundred souls live as one family, where each one knows and is known—for in large cities, man is a stranger among strangers. I stood on my village green. I knew nobody but everybody knew me. I sat at the table, the friends of my youth on each side. I tried to trace on their healthy sunburnt faces some lines of the school-boys' countenance. They were gone, and replaced by the wrinkles of time—the flowing locks were shorn, and on their bald foreheads sat the snows of age.

We played over again the games, the frolics, and pranks of our school-boy days. It was altogether a feast of reason and a flow of soul: no *debauch*, for though the whiskey punch stood on the table, it was tasted in moderation. We parted with "*Auld Lang Syne*," and here it was acted up to nature.

"We twa had played aboot the braes, when simmer days were fine,
But, we had wandered mony a weary fit, since auld lang syne;
And, we twa had paddled in the burn, from morning time, till dine,
But seas between us braid had roared, since auld lang syne."

THE PARTING SCENE.

During the four months and fifteen days I sojourned in Britain, this meeting and parting with friends was a matter of very frequent occurrence. In some cases, of course, the attachment was more strong, and the parting more keenly felt. But there seems to be something in our nature that revolts at the idea of a parting for ever. There is a hope, a well-grounded and a rational hope, held out in the gospel, and there only, that friends will meet to part no more. Allowing (as the vain philosopher says) it is all delusion, it is a very soothing, and a very consoling, and a very innocent delusion, and it is one which no man of sound mind (whatever he may profess in words) can shake from his soul, viz: the hopes of meeting them he holds most dear in some improved state of *existence hereafter*. Depraved propensity may wish for annihilation, but the soul still says *I never die.*

When I came to part with my father for the last time, I saw before me a living proof that the hope of the gospel can support nature in the most trying situations. He is now in his ninety-first year. His eyes are dim, so that he cannot discern ob-

* The prudent Scotchman had, however, some pairs of each in his little chest.

* Meat, in Scotland, means all sorts of food.

* At this time no other books were then used in this school, but the Shorter Catechism, Spelling Book, and Bible.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

jects around. I dreaded this day of parting. I knew it was for the last time, and put it off as long as possible; but time lingers not—the hour came, and the coach was at the door. I held his hand, it trembled not, neither did his voice falter.—"Now," says he, "we part, and except we meet at the right hand of Christ, it will be for ever. Go, and may he who has led and fed me all my life long, go with you." At this moment he stood, like Jacob, leaning upon the top of his staff. Thus we separated, on the same spot on which we had parted forty years before.

THE COUNTRY TOWN.

We have been reading *Sketches of a Sea-Port Town*, in 3 vols. by H. F. Chorley. We rather think the Author is a *Friend* of ours; that we have met with him; but *where* and *when* we really forget. Be this as it may, we are in favour of the Author, because he appears to have raised the standard of the *Belle Lettres* in Liverpool,—a town the most interesting, perhaps, of all the towns and cities in all the world. The following sketch of parties at Liverpool is very truth-like, and is equally befitting almost every town which has arisen to notoriety from *small beginnings*. We hope we don't offend—but some portions of the sketch we are about to submit to our readers from Mr. Chorley's book, would seem monstrously well to apply to us Kapenaars.

To say, that in a place singularly destitute of nobility, its inhabitants have themselves substituted an aristocracy of wealth in place of one of family, is, perhaps, some little beyond the precise truth; and yet it comes nearer to the truth than any other form of words which could be used. There is as much subdivision into sets and sects, as much exclusiveness, with all its train of bad consequences, as in the wider and nobler circles of the metropolis—and over all, and through all, a mercantile spirit at work, which is singularly unfavourable to the development of mind. There is, indeed, *scarcely any inducement for a man to exact and improve the powers with which he has been gifted, if valuing every thing by the standard of pounds, shillings, and pence, he feels that his standing is secure, that he may talk wisdom or folly, as he will, and still be looked up to in society, as a person of consequence and authority*;—nay, that he is in most circles more popular as he is, than he would be were he to bear the character of a hard reader, or a deep thinker. The *withering influence of fashion*, has also its share in depreciating the standard of intelligence. Our circles are not wide enough to allow of individuals setting up as characters; in which case alone does she tolerate any originality of thought, word, or deed—she therefore imposes upon her subjects an uniformity of conduct and manner; trammelling them as effectually within her artificial ordinances, as the conjuror, when he confines the chicken within his magic circle of chalk. But, it seems to me, that we are fallen on particularly cheerless times, as respects ease or enjoyment in general society. As far as concerns the men, the age of dandyism has, thank Heaven! passed over: the *delicate youths who put their hair in papillotes*, and ironed their cravats upon their necks, are now striving in the mart of business, for their rising families, or shivering over their cheerless bachelor hearths, remembering days and glories gone by, when it was at once their occupation and their pleasure to rival the caprices of fair ones as fantastic and *manieré* as themselves. But though the present race of men may be less finical than the last,—poor society is no gainer by their increase of manliness. If they are less sedulous attenders of balls than their predecessors, they are more constant at dinner parties; and at these they love to herd together, to talk the *strong talk of emptiness*—of their dogs, and horses, amours,—and to settle the great questions of the day, over which statesmen are racking their brains, and for the right understanding whereof, philosophers are patiently drawing their conclusions from the experience of the past, in a few stout words, against which there is to be no appeal. As to pursuit of any kind, beyond the above mentioned amusements, it is almost utterly unknown among them, and even should any one be followed in secret, it is not to be alluded to in conversation, if its follower would keep clear of the artillery of idle tongues, ever ready to satirise what their owners do not comprehend. On the other hand, the present system of female training, has its share in making society a burden, instead of an excitement and an exercise to those who understand something better than mere vapid talk about the nothings of the day, or the more racy amusement *of quizzing your vis-à-vis in a quadrille*. While fashion attacks any tendency to bluism with her most blighting ridicule, and inculcates a cold *posé* demeanour, under which every natural impulse and feeling is to be impenetrably concealed: education has parcelled out the time of her victim, and carried her at set hours from French to history, from history to music, from music to metaphysics, and so on, without ever stopping to study the natural biases and talents born with her. What a marvellous discrepency is there between these two codes; Routine (for it is dishonouring education to allow her counterfeit to assume her name) ordains that the young lady of the nineteenth century, shall know everything: fashion values her in proportion as she talks as if she knew nothing—routine crams her with book-learning—fashion teaches her to sneer at clever people; and thus between the two, the natural buoyancy of girlhood, which never stayed to consider whether the laugh was a tone too loud, or the step a thought too quick, or the talk a shade too confidential, is as completely crushed as if it had never existed; and there seems now no longer any intermediate step between the child on her way to school, and the well-tutored, well-dressed woman, armed at all points for society, and equally proof against enjoyments and annoyances. Grammarians tell you to prove a rule by its exceptions, and it would be as ridiculous as false to say that we have not many who stand out, in bright relief, from amidst this general barrenness. But sectarian differences of religion and politics keep these much asunder; and the powers, which they might individually employ for the edification of general society, are sadly cramped by the suspicious dislike wherewith the world of common-place people regard them: a world unjust as it is vain, and, at any time, more ready to overlook moral defect than to forgive mental superiority. Thus it is, that unless a man wishes to expose himself to the sneer of the million, he must as *sternly confine* every symptom of enthusiasm and imagination within the silence of his own breast, as if it were a noxious influence, instead of being a link of that golden chain which connects the world below with the world above. Thus it is that the *teachers of our children*, those to whose authority and discretion we intrust our most precious treasure, are so often humbled to the condition of superior menials, that the weak and ignorant listen to the malice of antique prejudice or the folly of ridicule, and regard the artist as a hireling from whom a certain quantity of a given commodity is to be purchased, instead of as one who is honourable, from the inspiration of talent which has descended upon him, and as worthy of courtesy and consideration, as if he were the founder of a fortune, or the rectifier of a popular abuse. And what is the consequence of all this strange pride and pertinacity? The artist, heart-sore at finding that, in these enlightened days, the calling to which he belongs is considered little more respectable than that of the *jongleur* or mountebank in the old feudal times, is too often driven by his irritability into low and disgraceful courses; and if he is too high-minded to become a sycophant, frets out his life in scorn of those to whose patronage he is compelled to be indebted for the means of subsistence. This is stating the case broadly, and some will say rudely; but the harm which society both commits and receives by perpetuating this narrow spirit is so great, that one cannot touch upon it with a light pen or an indifferent heart. How much beauty, how much embellishment, how much instruction is excluded by the poverty of its judgement! how much talent is destroyed in embryo, how many a gentle and earnest spirit embittered for ever by its uncharitableness! It is not to be wished that all should be men of letters, all *dilettanti*. Heaven defend us from affected enthusiasm, and the apish criticisms of the shallow! but to every class should be allowed a clear stage and a candid hearing; and all who are sincerely devoted to their several professions, be they followers of arts, sciences, or commerce, should meet on equal ground, and cease to cast in each others' teeth the terms of opprobrium bequeathed to them by the imperfect enlightenment of their ancestors."

MILLER'S SCENES, &c. OF CROMARTY.

(*Concluded from our last.*)

THE DEMOCRAT.

[Cromarty Politics,—The American War,—The French Revolution,—The Whigs,—The King,—Paine's Rights of Man,—Paper Notes,—The Democrat,—Clubs,—The Procession,—Liberty and Equality,—Allies,—The Mob,—The Battle,—The Council House,—The Country Gentleman,—The Soldiers,—The Seizure,—A Gingerbread Discovery,—The Box of Papers,—Paine's effigy burnt at the expense of the country,—The War,—Loyalty,—Duncan's Victory,—Waterloo,—Reform Bill, &c.]

The American war was followed by the French Revolution, and the crash of a falling throne awakened opinion all over Europe. The young enquired whether men are not born equal; the old shook their heads, and asked what was to come next? There were gentlemen of the place who began to remark that the *tradesfolk no longer doffed to them their bonnets*, and tradesfolk that the Gentlemen no longer sent them their newspapers. But *the people* got newspapers *for themselves*;—these, too, of a very different stamp from the ones they had been accustomed to; and a crop of young Whigs began to shoot up all over the place, like nettles in Spring. They could not break into the meanings of all the new, hard-shelled words they were meeting with,—words ending in *acy* and *archy*; but no people could understand better that a king is only a kind of Justice of the Peace who may be cashiered for misconduct, just like any other magistrate; that all men are naturally equal; and that one whose grandfather had mended shoes was every whit as well born as one whose grandfather was the bastard of an emperor. And seldom were there people more zealous or less selfish in their devotion than the new made politicians of Cromarty. Their own concerns gave place, *as they ought*, to the more important business of the state; and they actually hurt their own heads, and sometimes, when the ale was bad, their own bellies, in drinking healths to the French. Light after light gleamed upon them, like star after star in a frosty evening. First of all, Paine's Rights of Man shone upon them through the medium of the newspapers, with the glitter of fifty constellations; then the Resolutions of the Liberty and Equality

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

clubs of the south looked down upon them with the effulgence of fifty more; at length, up rose the scheme for the division of property, like the moon at full, and flaring with portentous splendour, cast all the others into comparative obscurity. The people looked round them at the parks which the modern scheme of agriculture had so conveniently fenced in with dikes and hedges; and spoke of the high price of potato-land and the coming Revolution.—A countryman went into one of the shops about this time, craving change for a pound note. "A pound note!" exclaimed the merchant; snapping his fingers;—"a pound note!—Man I widna gie you tippence for it."

There was a young man of the place, the son of a shopkeeper, who had been marked from his earliest boyhood by a singular precocity of intellect, and the boldness of his opinions;—his name, (for I must not forget that, and to borrow one of Johnson's figures, I am walking over ashes the fires of which are not yet extinguished,) I shall conceal. He was one of those persons who, like the stormy petrel of the tropics, come abroad only when the seas begin to rise, and the heavens to darken; and who find their proper element in a wild mixture of all the four elements jumbled into one. He read the newspapers, and it was said, wrote for them; he corresponded, too, with the Jacobin clubs of the south; and strove to form similar clubs at home; but the people were not yet sufficiently ripe. No one could say that he was disobliging or ill tempered, on the contrary, he was a favourite with, at least, his humbler townsmen for being much the reverse of both; but he was *poor and talented*, and alike impatient of poverty, and of seeing the wealth of the country in the hands of duller men than himself; and so the man who was unfortunate enough to be born to a thousand pounds a year had little chance of finding him either well tempered or obliging. He had stept into the ferry boat one morning, and the ferrymen had set themselves to their oars, when a neighbouring proprietor came down to the beach, and called on them to return and take him aboard. "Get on," shouted the Democrat, "and let the fellow wait; —'tis I who have hired you this time." "O Sir it's a shentlemen," said one of the ferrymen, propelling the boat sternwards, as he spoke, by a back stroke of the oar. "Gentleman!" exclaimed the Democrat, seizing the boat-hook and pushing lustily in a contrary direction,—"Gentleman, truly!—we are all gentlemen, or shall be so very soon." The proprietor, meanwhile, made a dash at the rudder, and held fast, but with such good will did the other ply the boat-hook, that ere he had made good a lodgement he was drenched to the armpits. "Nothing like being accustomed to hardship in time," muttered the Democrat, as glancing his eye contemptuously on the dripping vestments of the proprietor, he laid down the pole and quietly resumed his seat.

There were about a dozen young men in the place who were so excited by the newspaper accounts of the superb processions of their south country friends, that they resolved on having a procession of their own. They procured a long pole with a Kilmarnoch cap fixed to the one end of it, which they termed the cap of liberty, and a large square of cotton stripped blue, white, and red, which they called the tricolour of independence. In the middle strip there were inscribed in huge Roman capitals, the words Liberty and Equality; and a stuffed cormorant, intended to represent an eagle, was perched on the top of the staff. They got a shipmaster of the place prevailed on to join with them. He was a frank, hearty sailor, who saw nothing unfair in the anticipated division of property, and hated a press-gang as he hated the Devil. "But how," said he, "will we manage after all hands have been served out, should a few of us take a house, and melt our portions?—just divide again I suppose."—"Highly probable," replied the revolutionists, "but we have not yet fully determined on that."—"I see, I see," rejoined the sailor, "every thing can't be done at once." On the day of the procession he brought with him his crew attired in their best, and with all the ship flags mounted on poles. The revolutionist demurred. "To be sure," they said, "nothing could be finer; but then the flags were British flags." "And —— it," said the master "would you have me bring French flags!" It was no time, however, to dispute the point; and the procession moved on, followed by all the children of the place. It reached an eminence directly above the links, and drawing up beside an immense pile of brushwood, and a few empty tar barrels, planted the tree of liberty amid shouts, and music, and the shooting of muskets, on the very spot on which the town gallows had been planted about two centuries before. No one, however, so much as thought of the circumstance; for people were too thoroughly excited to employ themselves with any thing but the future;—besides, a very little ingenuity could have made it serve the purpose of either party. After planting the tree, the brushwood was fired, and a cask of whisky produced, out of which the Republicans drank healths to liberty and the French. "The French! the French!" exclaimed the shipmaster, well, —— them, I don't care though I do;—here's health to the French; may they and I live long enough to speak to one another through twelve pounders." All the boys and all the sailors huzza'd;—the republicans said nothing, but thought they had got a rather queer ally. The evening, however, passed off in capital style, and ere the crowd dispersed, they had burnt two fishing boats, a salmon cable, and almost all the paling of the neighbouring fields and gardens.

The day of the procession was also that of a Red cattle market;—at that time one of the chief cattle fairs of the north. It was largely attended, on this occasion, by Highlanders from the neighbouring straths, many of whom had fought for the Prince, and remembered the atrocities of Cumberland; it was attended, too, by parties of drovers from England, and the southern counties of Scotland, all of them brimful of the modern doctrines, and scarcely more loyal than the Highlanders themselves;—it was attended, besides, by a Cromarty salmon fisher, George Hossack, a man of immense personal strength, and high spirit—now a little past his prime, perhaps, but so much a politician of the old school, that he would have willingly fought for his namesake the King, with any two men at the fair. But he was no match for every body, and every body to-day seemed to hold but one opinion. "Terrible expensive government this of ours," said an East-Lothian drover, "we maun just try whether we canna manage it mair cheaply for ourselves"—"Ay, and what a blockhead of a king have we got," said an Englishman; not fit, as Tom Paine says, for a country constable; but, poor wretch, we must turn him about his business, and see whether he can't work like ourselves."—"Och, but he's a limmar, any-how, and a great plack Whig," remarked an old Highlander, "and has na right till ta crown.—Na, na, Charlie my king." Poor George was almost broken hearted by the abuse poured out against his sovereign on every side of him; but what could he do? He would look first at one speaker, then at another, and repress his rising wrath by the consideration that there was little wit in being angry with about three thousand people at once. He had driven a bargain with two Englishman, and on going in to drink with them, according to custom, was shewn into a room which chanced at the time, unlike every other room in the house, to be unoccupied. The Englishmen seated themselves at the table; George cautiously fastened the door, and took his place fronting them. "Now, gentlemen," said he, filling the glasses, "permit me to propose a toast:—Health and prosperity to George the Third." He drank off his glass, and set it down before him. One of the Englishmen, a bit of a wag in his way, looked at him with a droll, quizzical expression, and took up his. "Health and prosperity," he said, "to George the *here*."—"Well, young man," remarked George, "he is, as you say, a herd, and a very excellent one; —allow me, however, to wish him a less unruly charge."—"Health and prosperity," shouted the other, "to George the ——." This was unbearable: George sprung from his seat, and repaid the insult with a blow on the ear, which drove both man and glass to the floor. Up rose the other Englishman,—up rose, too, the fallen one, and fell together upon George; but the cause of the king was never yet better supported. Down they both went, one over the other, and down they went a second, and a third, and a fourth time; till, at length, convinced that nothing could be more imprudent than their attempts to rise, they lay just where they fell. George departed, after discharging the reckoning, leaving them to congratulate one another on their liberalism and their wit; and reached Cromarty as the last gleam of the Jacobin bonfire was dancing on the chimney tops, to learn that there was scarcely more loyalty among his townsmen, than at the market, and that his favourite coble had perished among the flames about two hours before. I remember George—a shrewd, clear-headed man of eighty-two, full of anecdote and remark; and I have derived not a few of my best traditions from him. But he is gone, and wellnigh forgotten:—and when the sexton of some future age shall shovel up his huges bones, the men who come to gaze on them may descant, as they turn them over, on modern degeneracy, and hint the might of their fathers, but who among them will know that they belonged to the *last of all the loyalists!*

The day after the procession came on pregnant with *mystery and conjecture*. Rider after rider entered the town and assembled in front of the Council-house;—the town's-officer was sent for, together with the sergeant of a small recruiting party, that barracked in one of the neighbouring lanes; they then entered the hall, and made fast the doors. *The country gentlemen*, it was said, had come to put down the revolutionists. Shortly after, two of the soldiers and a constable glided into the house of the young democrat, and producing a warrant for his apprehension, and the seizure of all the papers, hurried him away to the hall,—*the soldiers with their bayonets fixed*, guarding him on either side, the constable, *laden with a hamper of books* and papers, bringing up the rear. In they all went, and the door closed as before. The curiosity of the townspeople was now awakened in right earnest, and an immense crowd gathered in front of the Council-house; but they could see or hear nothing. At length the door opened, and the sergeant came out; he looked round him, and beckoned on George Hossack. "George," he said, "one of the London smacks has just entered the bay; you must board her and seize on all the parcels addressed to * * * * the Jacobin merchant; there is an information lodged that he is getting a supply of pikes from London for arming the towns-people. Take the custom-house boatmen with you; and bring whatever you find to the hall. And, hark ye, we must see and *get up* an effigy of the blackguard Tom Paine; try and procure some oakum and train oil, and I will furnish powder enough to blow him to Paris." Away went George delighted with the commission, and returned in about an hour after, accompanied by some boatmen bearing two boxes, large enough to contain pistols and pike-heads for all the men of the place. They were admitted into the hall, where they found the bench occupied by the town and country gentlemen,—the soldiers ranged in the area in front, and the Republican, nothing abashed, standing at the bar. *He had baffled all his judges*, and had given them so much more wit and argument than they wanted, that they had ceased questioning him, and were now employed in turning over his papers. A letter written in cipher had been found on his person, and a gentleman, somewhat skilled in such matters, was examining it with much interest, while his more immediate neighbours were looking over his shoulders. "Bring forward the boxes, George," said one of the gentlemen. George placed them both on the large table fronting the bench, and proceeded to uncord them. The first

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

he opened was filled with *gingerbread,* the other with *girls' dolls and boys' whistles,* and an endless variety of trinkets and toys of a similar class. Some of the elderly gentlemen took snuff and looked at one another;—the younger laughed outright. "Have you deciphered that scrawl, Pointzfield?" enquired one of the more serious, with a view of restoring the court to its gravity. "Yes," said Pointzfield, drily enough, "I rather think I have."—"*Treasonable, of course,*" remarked the other. "No, not quite that now," rejoined the other, "whatever it might have been fifty years ago. It is merely a copy of the old Jacobitical ballad, the *Sow's Tail to Geordie.*" A titter ran along the bench as before, and the court broke up after determining that the Democrat should be sent to the jail of Tain to abide further trial, and that Paine should be burnt in effigy, *at the expense of the County.* Paine was accordingly burnt; and all the children were gratified with a second procession and a second bonfire, quite as showy in their way as those of the preceding evening. The prisoner was escorted to Tain by a party of soldiers; and on his release, which took place shortly after, he quitted the country for London, where he became the editor of a thriving newspaper on the popular side, which he conducted for many years with much spirit and ability. Meanwhile the Revolutionary cause languished for lack of a leader; and, on the declaration of war with France, sunk entirely amid the stormy ebullitions of a feeling still more popular than the Republican one.

There are some passions and employments of the human mind which give it a sceptical bias, and others apparently of a very similar nature, which incline it to credulity. So long as the Revolutionary spirit stalked abroad, it seemed as if every other spirit staid at home. The spectre slept quietly in its church-yard, and the wraith in its pool; the dead-light was hooded by an extinguisher, and the witch minded her own business without interfering with that of her neighbours. On the breaking out of the war, however, there came on a season of omens and prodigies, and the whole supernatural world seemed starting into as full activity as the fears and hopes of the community. Armies were seen fighting in the air, amid the waving of banners and the frequent flashing of cannon; and the whole northern sky appeared for three nights together as if deluged with blood. In the vicinity of Inverness, bands of armed men were descried at twilight as if marching across the fields,—at times half enveloped in smoke, at times levelling their arms as if for the charge. There was an ominously warlike spirit, too, among the chidren, which the elderly people did not at all like;—they went about, just as before the American war, with their mimic drums and fifes, and their muskets and halberts of elder, disturbing the whole country with uncouth music, and their zeal against the French. Then came the tug of war; trade sunk; and many of the mechanics of the place flung aside their tools and entered either the army or the navy. *Party spirit died;* the Whigs forgot every thing but that they were Britons; and when orders came that such of the males of the place as volunteered their services might be embodied into a kind of domestic militia, old men of seventy, and upwards, some of whom had fought at Culloden, and striplings of fifteen, who had not yet left school, came to the house of their future Colonel, begging to be enrolled, and furnished with arms. In less than two days every man in the town and parish was a soldier. Then came the stories of our great sea victories; the glare of illuminations and bonfires; the general anxiety when the intelligence first arrived that a battle had been fought, and the general sadness when it was ascertained that a townsman had fallen. When the news of Duncan's victory came to the town, a little girl, who had a brother among the sailors, ran more than three miles into the country to a field in which her mother was employed in digging potatoes, and falling down at her feet, had just breath enough left to say "*mither, mither, the Dutch are beaten, and Sandy's safe.*" The report of a threatened invasion knit the people still more firmly together, and they began to hate the French, not merely as national, but also as personal enemies. And thus they continued to feel, till, at length, the battle of Waterloo, by terminating the war, reduced them to the necessity of seeking, as before, their enemies at home.

For more than twenty years the words Whig and Tory had well nigh gone out; and the younger townsmen were for some time rather doubtful about their meaning. At length however they learnt that *the Whigs* meant *the people,* and *the Tories* those who wished to *live by them,* and yet call them names. The townspeople, therefore, became Whigs to a man; execrated the Holy Alliance, and the massacre at Manchester; drunk healths to Queen Caroline and Henry Brougham; and though they petitioned against Catholic emancipation, for, like most Scotch folks, they had too thorough a respect for their grand-fathers to be wholly consistent, they were yet shrewd enough to enquire whether any one had ever boasted of his country because the great men opposed to that measure were his countrymen. The Reform Bill, however, set them all right again, by turning them full in the wake of their old leaders; and yet, no sooner was Whiggism entrusted with the keys of office, than they began to make discoveries which had the effect of considerably modifying the tone of their politics. They began to discover,—will it be believed! that all men are not born equal; and that there exists an Aristocracy in the very economy of nature. It was not merely the choice of his countymen that made Washington a great general, or Franklin a profound statesmen. They have also begun to discover, that a good whig may be a dishonest man;—nay, that one may be at once Whig and Tory; a Tory to his servants and dependants, a Whig to his superiors and his country. For my own part I am a Whig,—a born Whig; but no similarity of political principle will ever lead me to put any confidence in the man to whom I could not entrust my private concerns; and as for the Whiggism that horse-whipped the poor woman who was picking up a few withered sticks out of its hedge, it may wear the laurel leaf and the blue ribbon in any way it pleases, but I assure it, it won't be of my party.

LITERARY EXTRACTS.

PUG'S AERONAUTIC FLIGHT.

[In our last, we alluded to the balloon excursion of Mr. Green, and Jacopo, a favourite Monkey from the Zoological Gardens. In the London Literary Gazette for June, we discover the following particulars.]

Surrey Zoological Gardens, May 28.

My Dear Friend,—Being the first of my species who has ventured on an aërial voyage (the only other paw paw ascent in which a lady took a part being fatal), and knowing the kind interest you have always taken in my welfare, I have felt that I could not without ingratitude (a vice unknown to us, except to a few individuals who have lived much in the world with men and women) refrain from sending you, though but a slight and imperfect account of my excursion.

Mr. Cross having expressed a desire that I should accompany Mr. Green, I was not much disinclined to accede to the proposition; but, if I had been ever so much averse to it, a single glance from the soft blue eyes of Miss Fanny P——o would have induced me to run, or, more properly speaking, to swing, a far greater risk. I, accordingly, consented to the arrangement, which was properly advertised; and I understand about 22,000 people came to the Surrey Zoological Gardens to witness the interesting spectacle. Forgive my vanity if I impute their eager and multitudinous assemblage to my superior attraction; but when I take the air in public, human dandies may hide their unregarded heads!

On Saturday, I spent a social evening with the Old Baboon and the Ourang Outang. The former approved of the affair, and, in his usual philosophical manner (for he is a learned professor and lecturer among us) described it as a noble skyentific experiment, well calculated to enlarge the bounds of skyence; while the latter, who had just arrived from abroad, where the schoolmaster was not, considered it to be a foolish piece of sky-larking, unworthy of a creature who could climb trees of every kind, and skip, like a dancing master, from bough to bough. My mind, however, was made up; and so, on Sunday, I also made my will,* took an affectionate leave of Mrs. Pug and other relations, and prepared for the event.

Having inflated the public with announcements of this grand exploit, on Monday, we began to inflate the balloon; and the gas and the visitors flowed in freely—though we paid for the gas, and the visitors for themselves. There was, nevertheless, considerable delay, and I became almost as sick as a lover postponed: for, indeed, I expected to be in heaven about three o'clock, but did not mount till seven.

There seems to me to be always a great deal more bustle about leaving this world than the occasion requires. After hauling, and pulling, and shouting, and tearing, and swearing, however, the balloon was at length brought to the raft where I awaited it. I examined it carefully, saw the car attached, the ballast stowed, the flags appointed, the parachute suspended, and all the other particulars upon which the safety of my bold adventure depended. I assure you I let nothing escape me, not even a modicum of gas from the valve.

All being ready, Lord A. Fitzclarence and a few other acquaintances came off in a punt to bid me good-bye; and the guns began to tell upon the crowd that I was going to go. Green and another man were put into the car, and I was attached to the parachute hanging over its stem, or stern, for I was really so flabergasted at the moment that I cannot exactly say which it was: but my trepidation was only momentary. Green looked blue, and his companion a pale yellow—I alone did not change colour. The signal was given, and up we went—gradually, beautifully, majestically. Never shall I forget my emotions!

At first I saw a multitude of eyes fixed upon me, and especially one pair with a tremendous squint, which affected me like fascination; but soon the whole conglomerated, and I beheld, as it were, a single eye occupying all the vast garden I was now rapidly leaving. Squints could reach me no more, and Loveliness itself must have acknowledged a being beyond the power of its sweetest glance. For a moment I observed the Old Baboon 'specially contemplative in his cage, and the Ourang Outang jumping about like the lion at feeding time. Speedily my vision became less distinct, though still the noises of earth ascended to my exalted sphere, and tempered my exulting sensations. I heard the cockatoo distinctly; and the blue macaw, crying "How d'ye do, up there?" was the last sensible thing out of the garden. One remarkable phenomenon was

* Should there be any curiosity respecting this document, fortunately not immediately wanted, I beg to state what my intentions were. I left my laced jacket to Lord John——; my inexpressibles to Mrs. N——n; my cap and feathers to the prime minister who might be in office at the time of my decease; my collar-bell to the Archbishop of C——y, to be rung when the church was in danger; my head to our ambassador at Paris; my claws to four editors of party daily newspapers; my heart to L——; and my tail to Mr. Dan. O'Connell.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

obvious for a short while: what with the number of persons in a state of heat and excitement, the odours from the dens of the animals, and the fumes from the cigars of the rabble, the atmosphere was so delightfully impregnated, that I have not experienced such native enjoyment since I left Bengal on my travels for England. But we soon rose above this delectable composition of the aërial fluid; and you may guess how cold it was, when I confess that I began to chatter. I continued, notwithstanding, to nod my head and wave my arms to the admiring multitude.

A preceding aëronaut has told you that Epping Forest looked to him like a gooseberry-bush; and I can, though you cannot, readily believe him. Only go up in a balloon to have your ideas enlarged and objects diminished. At first, to me, the Surrey Zoological Gardens appeared to be an ant's hillock overturned; by and by it was a motionless speck. The Thames was a silver wire, London a model exhibited in a small room, and all the metropolitan districts quite incompetent, under any bill, to return members to a reformed parliament. In truth, the whole thing was a miserable mockery. A county was so small, you might, as Shakespeare says, "Saddle white Surrey;" Kent and Essex were nowhere; and Middlesex only somewhere, in consequence of being represented by Mr. Joseph Hume.

I am free to confess, that, with the exception of yourself, Mrs. Cross, and others, who have shewn me great kindness, I have had little reason to think well of the animal *homo*. The tricks I often see played in our gardens have disgusted me with the race, male and female, whom I constantly discover to be either utter fools, or busy in betraying each other. They little think that Monkeys have ears; though not so large as those of little Pitchers! Oh, the stories I could tell!

But it is impossible to describe the increase of my contempt, when soaring into my new elevation, and sweeping the clouds, I looked down upon the paltry automata below. Crowd of idiots I muttered, how inferior to a herd of my own species, roaming through the forest jungle of Bengal! You call yourselves rational beings, yet here you are astonished at the exploit of a Monkey, whose graceful and undaunted bearing, certainly deserves the admiration which these anxious exclamations and loud shoutings proclaim. But, my dear friend, why should I trouble you with my moral reflections on this occasion?

As I proceeded in my flight, things of earth began to lose their consequence, and at my highest point the only terrestrial thought that obtruded was, if casting my eyes towards the east, I could see any of my old comrades and relatives about Moorshedabad, Mauldah, Gour, or Rajmahal. Alas, I was yet too near the silly bipeds of Europe!

Now, however, the important moment arrived when I was to be detached from the balloon, and revisit England by the aid of one of my native country's articles, here ridiculously called Umbrella or Parachute—names unknown to Hindostan. I experienced no fear. The loop was cut, and it seemed to me as if the balloon rose rapidly. I stood steady and unmoved, when suddenly the parachute flew up with a jerk, and I firmly believe I would have tumbled out of my cage, had I not been carefully fastened in. As it was, Garnerin's horizontal swings were nothing to mine; but still I was perfectly composed, though my breath came and went, panting like a lover's. As I neared the ground I perceived I was somewhere above Walworth; and soon after (noticing, Asmodeus like, some odd practical matters as I overlooked and passed the haunts of men) I dropped in East Lane, into the garden of John Williamson, Policeman, No. ——, who immediately took me into custody, as a disorderly intruder. Having mentioned to him, through the medium of a paper under my own hand, that my procession was perfectly legal, and that a reward of two guineas would be paid on my return home, he had the politeness to be convinced of the truth, and civilly consented to carry me back. This he did; and I was received with a mixture of unanimous acclaim, such as has never before rewarded the most popular effort in the world. The screeches of children, the exclamations of women, the plaudits of men, were gloriously commingled with the roar of lions, the howls of hyenas, the screams of macaws, parrots, and parroquets, the grunts of tapirs, the snorts of quaggas, and other melodious sounds. I was so overcome by my emotions, that I absolutely mistook the Turkish ambassador and his three attendants, for Reich, Rosan, Klaus, and Kaln, the Hungarian singers!

With this, my friend, I would conclude; but as I am aware it is your wish in the *Literary Gazette* to instruct as well as to inform, I shall therefore only beg your application of this day's exploit, to illustrate the mighty advance which *We* have made in the useful arts, and the march of knowledge, on philosophical principles. Pray, refer back to the History of the only previous "Monkey *that had seen the world.*" How lame and impotent were his acquirements, in comparison with mine—a mere paltry acquaintance with fashionable life. I, on the other hand, mounted on a novel vehicle of power and wonder, to contemplate, as it were a god Apis, the entire human system, and return to earth so endued with wisdom, as to be fit to become (were it not beneath my intellect) a radical reformer. Yet I hope that the fruits of my voyage will not be altogether lost. I propose, should I find time, leisure, and inclination, to throw out a few hints for the government of mankind. In that case I shall open a shop in Regent Street, and publish my quarto volume by subscription; but I am not yet quite sure, as I had no opportunity of seeing the king in private, and the levee yesterday was too crowded to admit of any confidential conversation between us. Hereafter as may be: so no more at present, dear friend, from yours, affectionately,

JACOPO RHESUS, *Bengalensis*,
commonly called the White-faced Monkey.

THE REFORMATION, 23d AUGUST, 1535.

(FROM BULWER'S STUDENT, 1835.)

IT was a warm, clear, and sunny day, on which I commenced the voyage of the Lake; looking behind, I gazed on the roofs and spires of Geneva, and forgot the present in the past. What to me was its little community of watchmakers, and its little colony of *English?* I saw Charles, of Savoy, at its gates.—I heard the voice of Berthelier, invoking *liberty*, and summoning to arms. The struggle past—the scaffold rose—and the patriot became the *martyr!* His blood was not spilt in vain. *Religion* became the resurrection of *Freedom*. The town is silent—it is under excommunication. Suddenly a murmur is heard—it rises—it gathers—*the people are awake*—they sweep the streets—*the images are broken!* Farel is preaching to the Council: yet a little while, and the stern soul of *Calvin* is at work within those walls. The *loftiest of the Reformers*, and the one whose influence has been the most wide and lasting, is the earliest also of the great tribe of the persecuted, the city of the Lake receives within her arms. The benefits he repaid—behold them around! Wherever property is secure, wherever thought is free, wherever the ancient learning is revived, wherever the ancient spirit has been caught, you trace the work of the *Reformation*, and the *inflexible*, inquisitive, *unconquerable soul of Calvin!* He foresaw not, it is true, nor designed the effects he has produced. The same sternness of purpose, the same rigidity of conscience that led him to reform, and urged him to persecute The Exile of Bolsec, and the martyrdom of Servede, rest darkly upon his name. But the blessings we owe to the first inquirers, compensate their errors. Had Calvin not lived, there would have been not one, but a thousand Servedes! The spirit of enquiry redeems itself as it progresses; once loosed, it will not stop at the limit to which its early disciples would restrain it. Born with them, it does not grow with their growth, it *survives their death*—it but commences where they conclude. In one century, the flames are for the person, in another for the work; in the third, work and person are alike sacred.*

CATALOGUE OF ENGLISH FAMILY NAMES.

Kings, Princes, Dukes, Earls, Knights, *Pages*, Squires, Popes, Bishops. *Deans*, Abbots, Monks, Parsons, Priors, *Halls*, Castles, Chambers, *Bells*, Churches, and Spires; Towns, Streets, and Bridges; Alleys, Lanes, Rows, Parks, Woods, and *Hills;* Moors, Marshes, Meadows, *Brooks, Rivers, Pools, Waters, Herons*, Swans, Cranes, *Bucks, Hares*, and Foxes; Lambs, Shepherds, and Swains; Underwood, Greenwood, Redwood, and Blackwood; Atwood and Akwood; Wedgwood and Packwood; Fowlers and Fishers; Hookers, *Hunters*, and Hawkers; Hoppers and *Trotters;* Riders, Pedlars, and *Walkers;* Longman and Shortman; *Slowman* and *Trueman; Hardman* and *Woodman;* Freeman and Newman; Tailors, Turners, and Drapers; Barbers, *Bakers*, and Butlers; *Cooks, Coopers, Carters*, Chandlers, and Cutlers; Sharp, Little, Grey, Young, Swift, and Strong; Short, Small, and White; *Brown*, Smart, and *Long; Tom's-son* and Harry-son, *Wat's-son* and Hodge's-son, *Dick's-son* and *Jack's-son, John's-son* and *Roger's-son.*

Many more *Adam's-sons* may be added to these, Which you, courteous Reader, may do if you please.

PASSAGES FROM MR. BULWER'S NEW WORK—"THE STUDENT," 2 Vols.

SOLITUDE is only for the guiltless—evil thoughts are companions for a time—evil deeds are companions through *Eternity*.

Principle is a passion for truth, the truths of God are the *pillars* of the world.

To be immortal, is to be the companion of God! This hope makes the dignity of man, nor can I

* Here, in 1835, the *Placard* is the stake. The future Historian of Albany, will have cause to blush for this monstrous act, to countervail the freedom of thought and free inquity; for that inquisition set up to enthral and put down the Press by Clergymen, Wesleyan Missionaries, and their followers.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

conceive how *he* who feels its breathings, its exalted eloquence through his heart, can be guilty of one sordid action, or brood over one low desire.

In order to love mankind—expect but little from them; in order to view their faults without bitterness, we must *accustom* ourselves to pardon them, and to perceive that indulgence is a *justice* which frail humanity has a right to demand from wisdom. The wisest men have always been the most indulgent.

In the presence of a Mother, we feel that our childhood has not all departed! It is a barrier between ourselves and the advance of *time*, chased and weaned out by the cares of manhood; we enter the temple dedicated to youth—and our persecutors sleep while we linger at the altar.

Life itself is but a long dying, and with every struggle against disease, we taste the grave, and the solemnities of our own funerals. Every day's necessity calls for a separation of that portion which death fed on all night; when we lay on his lap, and slept in his outer-chambers.

Our imagination kept rigidly from the world, is the Eden in which we walk with God.

In our sleep from the passions of the world, God makes an Eve to us from our own breast.

It is not necessary to live, but it *is* necessary to live nobly!

THE PILGRIM'S PROGRESS.

(Coleridge's Testimony.)

On a blank leaf in the late Mr. Coleridge's copy of Bunyan's Pilgrim's Progress, the following note is written:

I know of no book, the Bible excepted, as above all comparison, which I, according to my judgment and experience, could so safely recommend as teaching and enforcing the whole saving truth according to the mind that was in Jesus Christ, as the Pilgrim's Progress. It is, in my conviction, incomparably the best *summa theologiæ evangelica* ever produced by a writer not miraculously inspired.

S. T. C.

AMERICAN DESPOTISM.

(Journal of a Residence in the United States, By E. S. Abdy, Fellow of Jesus College, Cambridge, 3 Vols. 8vo. 1835.

Let the Americans look to it, for Mr. Abdy has brought home to their door, and substantiated one of the foulest, or rather a host of the foulest and darkest charges that have ever been arrayed against a nation. The Criminality of the United States, in reference to Slavery, has long been known and felt; but never till now has it been so firmly and sharply directed. However well the people of that vast country may have continued hitherto to stifle conviction, or court the searing progress that for a time deadens the conscience, the time has come round when the home thrust has been made, and the refuge of lies laid open to their dishonour and dismay. The Americans may storm and deny, may affect to palliate, and argue, so much the better; they can thereby only expose the plague spot of the national conduct the more to the disgust of civilized men.

Many, very many gross and astounding instances of tyranny are here related, affecting all classes, and not even excepting the President Jackson, and the far-famed Dr. Channing. And is it in the boasted land of freedom and equality that these monstrous acts of tyranny on the part of the many and the strong, over the few and the weak, are so daringly committed? Is she not deeply in debt to outraged humanity? Well may the author assert that not the least part of the debt is involved in the cruel indignities to which the free sons of those who were stolen from their native land are subjected by the descendants of the robbers. He adds, "I can say with the utmost sincerity, that I left England with a wish to do justice to America. I thought her character had been misrepresented, and I was anxious to collect facts that I might adduce in her vindication on my return. I soon found, however, that I must throw up my brief: the libel had become a criminal indictment; and the former plaintiff was the defendant. I am now in the witness-box; and I trust the claims of justice will still be satisfied." No longer let the Americans complain of the insults received from strangers, while they heap such-wrongs upon their own countrymen.

THE STAR-ENAMOURED.

"Who dwells among the stars, mamma—so mild, so fair, and bright?
As o'er us, in the dusky sky, they shed their lovely light:
Methinks a gently-beaming eye in every ray I see,
A host of heavenly watchers set to guide and counsel me!

"This earth has many a flower, mamma, and many a valley sweet,
To balm the sense with fragrance pure, and rest the weary feet;
And many a kindly face, mamma, we meet, as here we roam,
The kindest and the dearest still, the nearer to our home.

"But oh! mamma, I long to be a creature of the sky,
To shine and shine for ever more in yon bright place on high.
I long to be away—away!—from this pale prison free,
To look a long long tearless look of endless love on thee!

"They say that angel-forms, mamma, amongst those stars are seen
In everlasting whiteness clad, in never-dying sheen;
And kindly looks they send to all whose hearts with grief are riven,
A foretaste sweet of Faith's reward, when call'd to dwell in heaven!

"And might not I—a child, mamma,—become a little star,
And shed my looks of light and love from yonder fields afar?
You might not know my beams, mamma, but they would ever be
Directed, with a fervent glance, upon thy home and thee?

"Then let me go and pray, mamma, that I may soar away,
And never lift my eyes again upon another day!
I long to be among the stars—to feel their balmy light—
Oh! let me go and pray, mamma; good night, a long good night!"

The mother clasped her little child, and tenderly she said,
"Thou canst not be a star as yet, my gentle little maid!
But when thy lovely life is o'er, and God shall call his own,
I trust that thou *wilt* be a star,—the brightest round his throne!

"Thou canst not be a star as yet, for there is many a one
To whom thou art a light, my love, still shining softly on;
And if thy lustre from this life should suddenly depart,
'Twould quench thy mother's hopes on earth,—'twould break thy mother's heart!"

But still the little lady pined, and none might say her nay—
Her soul was with the stars by night—her heart the livelong day;
And on her infant pillow, cold, they found the little maid,
In holy sleep, like angels' rest,—all beautifully laid!

Oh! who could see her as she lay in her mild beauty dress'd,
Nor feel a wish to share with her that deep unbroken rest—
That faultless loveliness which speaks a gentle seraph's birth—
A star, if ever star there were, upon the dewy earth!

And now the mother looks for her, whene'er the silent night
Is gemm'd with countless stars serene, intensely, purely bright;
But to the eye of Faith alone, that vision fair is given—
That mother may not see her child, until they meet in heaven!—(*Monthly Magazine.*)

Remarks on War.—I firmly believe that war or the sending thousands of our fellow-creatures to cut one another to bits, often for what they have no concern in nor understand, will one day be reckoned far more absurd than if people were to settle an argument over the dinner-table with their knives—a logic, indeed, which was once fashionable in some places during the "good old times." The world has seen the absurdity of that practice; why should it not come to years of discretion with respect to violence on a larger scale? The other day our own country and the United States agreed to refer a point in dispute to the arbitration of the King of Holland, a compliment of which his Majesty was justly proud. Why should not every national dispute be referred in like manner to a third party? There is reason to suppose that the judgment would stand a good chance of being impartial; and it would benefit the character of the judge and dispose him to receive judgments of the same kind, till at length the custom should prevail like any other custom, and men be astonished at the customs that preceeded it.—*Leigh Hunt's "Captain Sword and Captain Pen."*

The Jews have resolved to petition Parliament for the removal of their disabilities. They pray to be put "in the same condition, as to all civil rights and franchises, with the other subjects, of His Majesty dissenting from the established church."

THE LAW OF ARREST.

THE wit, the shrewdness, and the truth of the following passages from Bulwer's "Student," are striking in no ordinary degree. It outstrips some of the most lengthened and laboured pictures drawn by the "Clergyman in Debt," whose volumes we lately noticed. His story commences by telling us, that a certain merchant at Hamburgh had a claim on a captain of an English vessel for five hundred pounds; that on coming to Portsmouth to demand his own, he found that the captain was about to sail for Calcutta on the next day, and becoming therefore extremely urgent, the debtor unceremoniously and wickedly swore a debt against the unsuspecting merchant, whereby he was instantly arrested, instead of either securing the captain or obtaining any part of his five hundred pounds. The officer was kind enough, however, to say, that he might be extremely comfortable in his lock-up-house, at the moderate charge of only a guinea per day, provided he found his own wine. We must allow the author to narrate the rest:—

"In order to while away time, our merchant, who was wonderfully social, scraped acquaintance with some of his fellow-prisoners. 'Vat be you in prison for?' said he to a stout respectable-looking man who seemed in a violent passion—'for vat crime?'

"'I, Sir, crime!' quoth the prisoner; 'Sir, I was going to Liverpool to vote at the election, when a friend of the opposite candidates had me suddenly arrested for 2,000*l.* Before I get bail the election will be over!'

"'Vat's that you tell me? arrest you to prevent you giving an honesht vote? is that justice?'

"'Justise, no!' cried our friend, 'it's the Law of Arrest.'

"'And vat be you in prishon for?' said the merchant, pityingly, to a thin cadaverous-looking object, who ever and anon applied a handkerchief to eyes that were worn with weeping.

"'An attorney offered a friend of mine to discount a bill, if he could obtain a few names to indorse it—*I*, Sir, indorsed it. The bill became due, the next day the attorney arrested all whose names were on the bill; there were eight of us, the law allows him to charge two guineas for each; there are sixteen guineas, Sir, for the lawyer—but I, Sir—alas! my family will starve before *I* shall be released. Sir, there are a set of men called discounting-attornies, who live upon the profits of entrapping and arresting us poor folk.'

"'Mine Gott! but is dat justice?'

"'Alas! No, Sir, it is the Law of Arrest.'

"'But,' said the merchant, turning round to a lawyer, whom the Devil had deserted, and who was now with the victims of his profession—'dey tell me, dat in Englant a man be called innoshent till he be proved guilty; but here am I, who, because von carrion of a shailor, who owesh me five hundred pounts, takes an oath that *I* owe him ten thousand—here am I, on that scoundrel's single oath, clapped up in a prishon. Is this a man's being innoshent till he is proved guilty, Sare?'

"'Sir,' said the lawyer primly, 'you are thinking of criminal cases; but if a man be unfortunate enough to get into debt, that is quite a different thing:—we are harder to poverty than we are to crime!'

"'But, mine Gott! is dat justice?'

"'Justice! pooh! it's the Law of Arrest,' said the lawyer, turning on his heel.

"Our merchant was liberated; no one appeared to prove the debt. He flew to a magistrate; he told his case; he implored justice against Captain Jones.

"'Captain Jones!' said the magistrate, taking snuff; "Captain Gregory Jones, you mean?'

"'Ay, mine goot Sare—yesh!'

"'He set sail for Calcutta yesterday. He commands the Royal Sally. He must evidently have sworn this debt against you for the purpose of getting rid of your claim, and silencing your mouth till you could catch him no longer. He's a clever fellow is Gregory Jones!'

"'De teufel! but, Sare, ish dere no remedy for de poor merchant?'

"'Remedy! oh, yes—indictment for perjury.'

"'But vat use is dat? You say he be gone—ten thousand miles off to Calcutta.'

"'That's certainly against your indictment.'

"'And cannot I get my monish?'

"'Not as I see.'

"'And *I* have been arreshted instead of him.'

"'You have.'

"'Sare, I have only von vord to say—*is* dat justice.'

"'That I can't say, Mynheer Meyer, but it is certainly the Law of Arrest,' answered the magistrate; and he bowed the merchant out of the room."

LORD BROUGHAM.

At the third anniversary dinner in London, which was held in commemoration of the foundation of the Alms-houses erected out of the money subscribed for a reform illumination, Lord Brougham, the chairman, thus adverted to the positions of the ministry:—"In addition to a formidable majority leagued against them in the House of Lords, they had in the House of Commons to combat a powerful opposition, amounting to nearly one-half of the representation; and what was worse, an opposition composed of a compact and resolute body, while their own party was split in half a dozen sections. But though thus comparatively weak in point of numbers, he was proud to say that the present ministry were strong in honesty of purpose—strong in the rights they had to guide them—strong, he trusted, in the support of their country. This was the support on which alone it could stand; for should it desert and disregard the people, it would look in vain for court favour, and would be insulted, mocked, and turned out, with the contempt of the court which it had sought to fawn upon, and the detestation of the people whom it had betrayed. No ministry whatever could stand without the support of the people—it was the breath of their nostrils. He had said four years since, that no ministry ought to stand without the support of the people: he would now say—looking to the progress of public feeling and opinion—that no ministry could stand without it." The "liberty of the press, and the immediate repeal of the most pernicious of all taxes, the taxes on knowledge," elicited the following observations from the noble chairman:—"This toast had formerly been often drunk in Westminster, in the following form, 'the liberty of the press—it is like the air we breathe—if we have it not, we perish.' It was true that the air in question in some cases partook of the nature of an east wind; that it was sometimes impregnated with the most noxious vapours, and conveyed to the ear harsh and grating sounds, disgusting falsehoods, contagious, pestilential, and slanderous indecency; yet no man out of St Luke's or Bedlam would abuse the air because the exceptions to its utility were so numerous. He had just recommended them, as the means to obtain good government, to keep a watchful eye on whatever ministry was in office; the same vigilence would procure for them a free and a pure press. When they found a newspaper become corrupt, let them treat it with the indifference, contempt, and indignation it deserved; they would soon find the remedy effective. On the other hand, let them not fail to support that portion of the press which did its duty manfully and honestly, even in some cases in opposition to its own interest. The taxes on knowledge were described on the toast-paper as pernicious: pernicious was an expression hardly strong enough; he should call them infamous—he was going to say infernal. It was not very easy, however, to get this view of the case before the public, for the newspapers themselves were, in most cases, very careful in saying nothing about the matter; 'not that they cared about it on their account; oh, no; they were quite disinterested parties: all that they feared was, that if the tax were taken off, the public would be shocked with the appearance of blasphemous, obscene, and seditious papers! Now, he very much doubted whether any change of circumstances could increase the number of obscene, seditious, and blaphemous, certainly not slanderous papers: indeed, if ministers would take off this tax, he would guarantee them against an increase in such publications."

O'CONNELL'S CATHOLICISM.

THE following letter is rather curious. It is addressed by O'Connell to the Editor of *The Sun*, Morning Paper.

SIR,—Afford me space for a few lines. I am so assailed in the Newspapers that I have little inclination, and less leisure, to defend myself; besides, in my opinion, frankly, *Le jeu ne vaut pas la chandelle.*

But a paragraph, said to be copied from the *Times*, is "going the rounds" of the Irish Newspapers. It attributes to me to have shown disrespect to Divine worship by a Protestant Clergyman; and what appears stranger, certainly unusual to me, is, that the facts are not violently distorted in order to make out the charge against me.

Allow me to make such of the public as take an interest in the matter, conversant of the real facts—I then abide their judgment readily.

I attended the funeral of Mr. Cobbett to the church-door. The body was taken into the church to have the usual prayers said over it. I did not go into the church. I never join in worship with any persuasion of christians but mine own. This may be called bigotry; with me it is religious principle, confined to my own mode of action, not obtruded upon any body else.

When the coffin was taken from the church to the grave, I respectfully attended it to that grave; when the body was laid down the Clergyman began prayers, again I left the grave, and, without disturbing any person, retired to the church porch, remaining uncovered until I had reached the porch, where I found a large group of persons with their hats on. We were then out of sight of the Clergyman, and out of hearing of the prayers, and I then, and not till then, put on my travelling cap.

I certainly did not intend to show, and I am certain I did not show, any disrespect to the devotions then going on. I am quite incapable of showing disrespect to any Christians engaged in prayer.

It may be asked, why then did I not join in those prayers? My answer is ready—Because I claim for myself that which I insist upon for every other sect and party—the free exercise in my own religious observances.

Liberality does not, in my mind, consist in softening down or giving up any particle of one's own religious opinions. It consists, as I think, in being anxious to afford to every other person that which you claim for yourself—the free and the strict observance of his own religious practices, however repugnant they may be to your's.

There is the case of Captain Aitcheson of the Artillery—a case which I consider to be a disgrace to British military authority, and indeed to

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the British nation. It is a crying injustice, which loudly calls for redress. His case is just this:—He was ordered to fire a salute in honour of a procession of the holy sacrament. He felt that it was joining in an act of worship—and it was so—of that which his conscientious belief told him ought not to be worshipped. He does not believe in the real presence. Well—I do believe in the real presence with the firmest and most undoubting faith. He refused to fire the salute under those circumstances—I approve of his conduct. As a man of conscience, he could not do otherwise. What is the consequence? He is stripped of his commission without any recompense, and left with his family in deep distress. I honour his consistency. I have more than once advocated his case before Parliament—and I do hope the British people will one day or other be roused by a sense of wrong done, though it be to a single individual, and insist on justice being done to a conscientious and honourable man.

The Catholic is bound to pray *for* all men. He is bound to pray *with* Catholics only. This is my principle of action—I asserted this principle for Captain Aitcheson—I do assert it for myself. If I had shown any—even the slightest—disrespect to Divine Worship by Protestants, I should atone for it, in the most public and satisfactory manner I possibly could. I did not do so—I only asserted my own principles.

Let those blame me who please, and amongst them perhaps may be found some of the most constant and practical bigots of the day. For myself, I repeat, I only assert for myself fully and completely that which I am equally ready to to assert as fully and as completely for others—perfect individual freedom of religious observance. —I have the honour to be,

Your very obedient servant,

July 7th. DANIEL O'CONNEL.

LINES

WRITTEN ON SEEING A SPLENDID ENGRAVING FROM HARVEY'S NATIONAL PAINTING OF THE COVENANTERS' WORSHIP.

By Mrs. Johnstone.

[In this fine picture Mr. Harvey has made felicitous use of the accident of the Covenanters placing an armed watch on the heights to give notice of the sudden appearance of the moss troopers, that the aged, and the women and children, might be placed in safety; and the men stand to their arms, which they always carried with them to public worship.]

HARVEY! be thine than Art a nobler praise!
No courtly limner traced that brave design,
Where genius re-awakes the glorious days
Of our land's story,—paints the heroic line,
Martyrs and Saints, and high-souled peasant-men,
Gathered to worship GOD in that lone mountain-glen.

Our Covenant-Fathers!—who ne'er crooked the knee
To Prelate pride, Priestly or Tyrant sway;
But claimed the birth-right wherewith God makes free;—
Eternal blessing crown their names alway!—
Strong in the Truth, the Life, the Power, the Word;
Grasping with high resolve the Bible and the Sword.

Matron and maiden, child and grey haired sire,
In kindred groups, keep holy silence round,
Hanging on lips touched with a coal of fire
From Zion's altar—breathing prayer profound:—
Far on the height, the Shepherd-warrior stern
Paces his heedful watch by you sepulchral cairn.

And Israel's Shepherd guards the remnant flock,
Hunted by wolves to this lorn solitude
For them the desert blossoms—flows the rock
With living waters:—Hell shall not intrude!
For He, their Covenant God, their soul's desire,
Is Glory in the midst,—and round a Wall of Fire!

Harvey! thy artist power, how feebly told,
Whose patriot-pencil sketched the men of yore—
Lights of the land!—and bade the scroll unfold,
And painting's magic kindle hill, and moor,
And battle-field,—and, long to every age
Tell of our Fathers' Deeds—our children's Heritage! (*Tait's Magazine.*)

HINTS TO EMIGRANTS.

FUTURE PROSPECTS OF THE CAPE OF GOOD HOPE.

BY MR. MONTGOMERY MARTIN, 1835.

The good soil of the colony is in considerable quantity, and vast tracts now waste may be rendered profitable when irrigation becomes in general use;—the vine, the olive, the aloe, the mulberry, &c all thrive; tobacco and hemp may be raised to any extent; hides,* ivory, horns, oil, gums, &c. are procurable in great abundance; the shores abound in every variety of fish, and the country at large in vast flocks of cattle, sheep, &c.; in fine wool, we may now consider the colony as becoming the rival of New South Wales, so that in a few years we shall be totally independent of Spain or Germany for the raw material of one of our staple manufactures; while a profitable region is opening for emigrants of every description within eight weeks' sail of their parent land.

The possessor of small capital will here find a profitable field for its increase; the enterprising merchant may extend his intercourse with the industrious native tribes, either inland, along the coast, or throughout the numerous islands of the eastern seas; and the half-pay officer or small annuitant may still enjoy the pleasures of excellent society with a salubrious clime and the conveniencies and luxuries of life as cheap as they are to be found in any other part of the world. I am indebted to Mr. Phillips, an intelligent and patriotic Magistrate in Albany, for the following observations pointing out the advantages of the Cape colony for emigrants:

'To those who are desirous of removing themselves and families from the depressing anxieties of unprosperous circumstances, and who are able to carry out with them funds sufficient to purchase and stock a sheep farm for the growth of superior wool for exportation to England, Albany can be conscientiously recommended, as a country where rustic competence may be securely attained, without any severe exertion for the present, or harrassing anxiety for the future; where they will enjoy a mild and most salubrious climate, with perfect security of health, life, and property; and where they may comfortably establish themselves, by means of a capital more moderate, as has been well ascertained, than would suffice for the same purpose in any other British colony. To persons thus pre-disposed and circumstanced the following hints are offered.

'In the preparations for leaving England the intended sheep farmer must primarily have in view the procuring of the most improved breed of sheep; and as the Saxony wool is now in the highest estimation, rams, and the few ewes wanted should be imported from that country; which object can be attained with the greatest ease and safety, through the medium of merchants engaged in trade to that part of the continent. It would only be advisable to purchase a small number of ewes, in order to keep up the pure breed, and avoid the necessity of annual purchases of rams. Moreover, it has been proved that the climate and pasture of South Africa so highly agree with the animal, that the progeny reared in the colony have produced finer wool than the sheep imported. The number to be purchased must depend on the capital to be employed. At the same time, any number beyond what would be wanted on the farm could be disposed of in the colony to advantage. The following estimate has been made out at the request of a gentleman who is on the point of emigrating. It may serve as a guide to those who may have more or less capital to lay out. The prices quoted are at the *highest* present rate. Both farms and stock can no doubt be purchased cheaper.

'A farm of 6000 acres; payable in three instalments, viz: the first on the completion of the transfer, the second at the end of the first year, and the third at the end of the second year, at 1*s.* 6*d.* per acre, 450*l*; Government transfer duty, 4 per cent. 18*l*.; buildings, or repairs of those on the farm, 200*l*. furniture, 100*l*. 300. native ewes, at 2*s.* 30*l*; 40 Saxon Rams, at 12*l*. 480*l*; 10 do. ewes, at 5*l*. 50*l*; a wagon, 45*l*; 20 cows, at 20*s*. 20*l*; 12 draught oxen, at 30*s*. 18*l*; 4 horses and 4 mares, averaging 6*l*. 48*l*; total, 1729*l*.

'To this estimate may be added the annual quit-rent, from 3*l*. to 4*l*. and the annual taxes; to about the same amount. The capital about to be employed is stated to be 2,700*l*. which would be ample, after paying passage money for the family, for the Saxon sheep, and for two head shepherds; and would suffice until returns could be had from the increase of flocks, &c.

The Colony is no drain on the mother country; it pays all its civil, and part of its military expenses; and, under a free constitution, a sound banking system, and with a continuance of its present progressive prosperity, the Cape may well be deemed one of the most important sections of the empire. It is true the inhabitants may not yet be unanimous for the adoption of a legislative assembly; but, I trust no real friend of the colony will sow seeds of strife with a view to retard so

* While this page was going to press intelligence has reached me from the Cape that the colonial duty on Cape Hides, 1s. 2d. per cwt is to be raised to 2s. 4d. (the foreign duty) on all hides bought from the Caffres or other native tribes on the frontier; I trust the Colonial Authorities in Downing-street will prevent so impolitic a measure; the Caffre trade principally in hides, has risen within a few years to the value of £35,000 per annum, and the doubling of the duty would be equivalent to stopping altogether this outlet for our manufactures, as the Caffres have scarcely any thing else to give in exchange for our goods; such a paltry measure of profit would be disgraceful to a nation like England, and by similar suicidal acts she has done more to ruin her colonies and commerce than has ever been done by foreign enemies.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

desirable a consummation. The Africans have already suffered severely from a system of public peculation and private disputes among the authorities; they should be anxious to prevent the possibility of the recurrence of the former, and to lessen the cause of the latter. With a free press and education, I trust to see the foundation laid at the Cape of Good Hope of a great and powerful community, whose ancestors will have had the honour of converting an apparently sandy and inhospitable peninsula into a fertile and beautiful territory, from whence they will have the glory of extending among the natives and tribes of South Africa the comforts of civilization, the delights of freedom and literature, and the unspeakable blessings of Christianity.

SONG

BY THOMAS MOORE.

(From the new Series of Melodies.)

If thou would'st have me sing and play,
As once I played and sung,
First take this time-worn lute away,
And bring one freshly strung.
Call back the time when Pleasure's sigh
First breathed among the strings;
And Time himself, in flitting by,
Made music with his wings.
Take, take the worn-out lute away,
And bring one newly strung,
If thou would'st have me sing and play
As once I played and sung.

But how is this? though new the lute,
And shining fresh the chords,
Beneath the this hand they slumber mute,
Or speak but dreamy words.
In vain I seek the soul that dwelt
Within that once sweet shell,
Which told so warmly what it felt,
And felt—what nought could tell.
Oh, ask not, then, for passion's lay
From lute so coldly strung;
With this I ne'er can sing or play
As once I played and sung.

No—bring that long loved lute again,
Though chill'd by years it be,
If thou wilt call the slumbering strain,
'Twill wake again for thee.
Though time have froz'n the tuneful stream
Of thoughts that gush'd along,
One look from thee, like summer's beam,
Will thaw them into song.
Then give, oh give that wakening ray,
And, once more blithe and young,
Thy bard again will sing and play
As once he played and sung.

NEW INVENTION.

Capt. Dickson, 25th Regiment, has invented a Cloak, weighing but 14 oz. for general use in the army. It is intended to fit on between the soldiers' knapsack and mess-tin, and will effectively keep him from wet.

RURAL ECONOMY.

(On Steaming Food for Horses.)

In the Quarterly Journal of Agriculture for June, there is an interesting Paper, page 33, on steaming food for horses. To those who are unable to peruse the whole of the article, which is in the Public Library, the following extract may be interesting:—

Captain Cheyne, of the Royal Engineers, who has been succeeded in the posting establishment by Mr. Isaac Scott, at length, after repeated experiments, fixed upon the following mixture as the most economical and nutritious for horses performing fast work, on which they exhibited a finer condition than on a larger quantity of food without preparation. Each horse was given 15 lb. of the following mixture:—

10 bushels cut straw, . . .		90 lb.
6 ditto bruised oats, 29 lb. per bushel,		174
1 ditto bruised beans, . . .		59
		323 lb.
Or, of oats, . . .	8 lb.	
beans, . . .	2¾	
straw, . . .	4¼	
	15 lb. to each horse,	

And at night, in addition to the above, about 25 lb. of the following mixture:

1 boll of potatoes, at 7s. 6d 5 cwt. (steamed), 7. 6d. 560 lb., each horse	21½ lb.
Fine barley-dust, 10d. per stone, 2s. 1d. 36	1½
Oat-straw, at 6d. per stone, 1s. 0d. 40	2
Salt at 3d per cwt. 0s. 2d. 6 2 oz.	25 lb.

The cost for each horse, is, therefore, about 5d. for supper, and about 1s. for daily forage and cooking, in all about 1s. 5½d. when the whole food is purchased at market price.

INFALLIBLE CURE OF THE DRY ROT.

The same Journal (page 145) describes a simple, but most efficacious method, discovered by Mr. Kyan, for the preservation of timber under every circumstance.

Many other Papers in this Number of the Journal of Agriculture, are worth attention, viz:—

On General shows of Live Stock,—On the management of Heath,—Culture of the Dahlia,—On Preparing Manure,—On Planting Trees,—On Rot in Sheep,—Canada and the Illinois, &c.

BATHS FOR THE PEOPLE.

We introduce the following extract from a Welsh paper as a *hint* to our Cape projectors and joint-stock promoters. It has been long a matter of surprise and complaint, that here we have no accommodation for sea-bathing The subject is of the highest importance; we trust our enterprising countryman, Mr. Cannon, will take the business in hand without delay.

New Baths at Bangor.—We hinted some time ago the necessity of providing suitable places of public resort and amusement, in order to give effect to the unrivalled advantages which the vicinity of Bangor confessedly enjoys, for those "summer friends" who come with the swallows and go hence with the puffins, and who doubtless would be prevailed upon to shorten the "winter of our discontent," by locating amongst us, were proper accommodations provided. We are glad to perceive that our men of business and citizens in general have opened their eyes to the obvious utility or rather absolute necessity of keeping pace with other towns in the march of improvement. Our city has been highly favoured, and if, of late, the influx of visiters have fallen off, the fault is our own. The most *pressing of our exigencies* is about to be supplied. A project is on foot for the erection of baths, and a company is in course of formation for purchasing a convenient spot on the Pen'rallt estate, adjoining the Menai, for this purpose. The baths are intended to be built close to the sea shore, on a fine piece of gravelly marsh land called Siliwen, the level of which is a few feet above high water at spring tide. A large reservoir will be formed and sunk on this marsh, seven or eight feet lower than high-water-mark, in order to admit the water through the gravelly ground into it when the tide is in, so that there will be a plentiful and constant supply of pure water for the bathing places at low as well as at high water, which will afford an opportunity of bathing at any hour of the day, either in the open air or within the buildings, where both hot and cold baths may be enjoyed most favourably. Coupled with other great improvements in progress on the Pen'rallt estate, we look forward to this establishment as the means of greatly increasing the prosperity of this city, by inducing visiters to remain amongst us, and rendering Bangor a favorite watering place, which, from its position and its facility of intercourse with the beautiful and picturesque parts of North Wales—it is so eminently calculated to become. We are happy to learn that Mr. Williams, of Fron-deg, the engineer, who is engaged in carrying on the Pen'rallt improvements, and other respectable individuals, have already become subscribers for a good number of shares in this important undertaking, which we are told is divided into 100 shares of £20 each, so that the sum at present required to carry the same into effect will be £2000. It is considered that it will be one of the best public speculations which has hitherto offered itself in the principality.—*North Wales Chronicle.*

THE ROHAN POTATO: A NEW VARIETY.

An account of this new Potato is also described in the above Journal, (page 144.) Every attempt has been made by its original proprietor to prevent its propagation in Holland, Belgium, England, Prussia, or Germany. Happily, Switzerland and France were not interdicted. To give an idea of the extraordinary produce of this potato, it would appear that Mr. Martial, of Alais, gathered tubers, weighing 13lbs. 7oz.; and a single small tuber, wanting a few grains to make half an ounce, on being planted produced 48¼lbs.

SCIENCE.

Mr. C. P. Smyth, second son of Capt. Smyth, of Bedford, has been appointed by the Lords of the Admiralty, Assistant Astronomer at the Cape of Good Hope.—(*Nautical Magazine.*)

CAFFRE MANUFACTORY, &c.

In one of the villages (Lovedale), a native smith was at work, making "assagays," in the manner I have before alluded to, and which merits a particular description. The double bellows was the most curious part of the apparatus. It was formed of two goatskins, which were stripped from the carcasses of the goats in such a manner that they formed leather bags, open at both ends. The neck parts of the two skins were fixed into a common tube made of a straight bullock's horn. The openings at the opposite ends of the skins were contracted to narrow apertures, and short pieces of sticks sewed to them in such a manner that they may be opened and shut at pleasure by the thumb and fingers of each hand in succession.

A charcoal fire is kindled on one side of an anthill or lump of clay, which is perforated with a horizontal hole. Into this hole the common tube, or horn of the double bellows, is fixed on the opposite side to the fire, and the smith's assistant sits down on the ground between the two skins or bags. He then slips the thumb and fingers of each hand into small loops on each side of the aperture at the loose end of each bag, and opening his right hand to allow the air to enter the bag on that side, he again closes it and thrusts his arm forward, which forces the air through the tube. Before the air is all forced out of the bag on his right, he closes the aperture of the left-hand bag, and pushes the other arm forward in the same manner, and thus keeps up a constant blast through the common tube, which communicates with the furnace.

We saw the smith make several assagays in a very short time, with stones of different shapes for hammers. He had several thin bars of iron, which he beat out till they were of the proper thickness, upon his stone anvil, and then formed the point of the assagay in a very dexterous manner with his rude hammer. In forming the groove on each side of the head, or blade of the weapon, he used a flat round-edged shore-stone. The assagays are fashioned in a variety of ways, according to the uses to which they are applied. Most of them were made without shanks, to be used in war, or for killing small animals; others were formed with long shanks, for killing elephants or buffaloes, and some were barbed and notched in a very curious manner. These iron heads are fixed into long tapering sticks about four feet in length.

By means of the singular bellows I have just described, the Kaffres can smelt out *the iron from the ore, which is found in great abundance between Lovedale and the Buffalo river.* There is great reason to believe, from the narratives of recent travellers, that this simple bellows is used by most of the native tribes in the interior of Africa, and it is probably of great antiquity among them.—*Moodie's Ten Years in South Africa.*

Starch.—"The tax on starch (29*s.* per cwt) although high, yields but very little revenue to the state. The importance of the use of starch in the linen, cotton, and lace manufactories, its being essential to health and cleanliness, and the utility of the manufacture in profitably consuming the damp or injured wheats unsuitable for human food, are strong reasons why this article should be freed from tax. The diminished cost of the article, when duty-free, would greatly economise the expenditure of families, who now use a more economical, but, in a national sense, more expensive substitute. By the abolition of this duty, those wasteful and ridiculous excise restrictions, which now prohibit the disposal of the bran or refuse in any other shape than in feeding swine or cattle on the premises, would cease to divert the attention and capital of the starch manufacturers from their proper object."*—*Domestic and Financial Condition of Britain.*

---

* Lord Althorp seems on this subject to have coincided in opinion with the author, for he has repealed the duty on starch. *Apropos*, not *des bottes*, but *des cravattes*, is there not reason to fear that this will render us a more "stiff-necked generation" even than we have hitherto been? And ought not a Chancellor of the Exchequer to have deeply considered the effect which such a measure might have upon stocks?

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

THE PAUL PRY FAMILY.

Of all characters in the world we think less of the Paul Pry class of beings who watch with keen anxiety the private affairs of their neighbours, than that of all others. We are occasionally troubled with communications from these people, which we have seldom or ever noticed. *X. Y. Z.* who addressed us a short time since, on the subject of a private ball and supper in Long-street, is evidently of the Pry denomination, and is probably grandson to the old lady mentioned in the following anecdote:

An old lady, living in a certain street, had passed so much of her time in watching the affairs of her neighbours, that she at length acquired the power of distinguishing the sound of every knocker within hearing. It happened that she fell ill, and was for several days confined to her bed. Unable to observe in person what was going on without, as a substitute for the performance of that duty, she stationed her maid at the window. But Flora soon grew weary of the occupation; she became careless in her reports—impatient and tetchy when reprimanded for her negligence.

"Flora, what *are* you thinking about? don't you hear a double knock at No. 9? Who is it?

"One of the gentlemen who lives there, Ma'am"

"Flora! Flora! I declare I must give you warning. Why don't you tell me what that knock is at No. 54?"

"Why, Ma'am, its only the baker with pies"

"*Pies*, Flora! what *can* they want with pies at 54? they had pies two days ago!"

READING THE NEWS.—GASTRONOMIE.

"Arrived in Table Bay, 28th Sept. the *Conch*, from Mussel Bay; cargo OYSTERS."

'Well, this is news indeed; I must send John down with the cart immediately. There's no living without Oysters"—when we can get them—our old friend should have added, who uttered the above exclamation on reading the above extraordinary annunciation. But it does appear, from the most respectable sources and the beaming countenances of the epicures themselves, that the town is all agog to be better acquainted with the natives from Mussel Bay.

For our own parts we could never very well *stomach* an oyster bed; in truth, we have been generally satisfied with *eprouvettes* of a different taste. A good soup, a small turbot, a neck of venison, ducklings with green peas, or chicken with asparagus and a bread pudding, is dinner for an emperor,—so said the Earl of Dudley. We agree with him, but let peculiar attention be given to the accessaries. There was profound knowledge of character in the observation of the same statesman, on a deceased Baron of the Exchequer.—'He was a good man, sir; an excellent man; he had the best melted butter I ever tasted in my life."

One or two words by way of warning to dinner eaters. The habit of eating too fast (and being alone) is supposed to have paralysed Napoleon on two of the most critical occasions of his life,—the battles of Borodino and Leipsic, which might have been converted into decisive and influential victories, by pushing his advantages as he was wont. On each of these occasions, he has been known to have been suffering from indigestion. On the third day of Dresden, too, the German Hoffman, who was present in the town, asserts that the Emperor would have done much more than he did, "but for the effects of a shoulder of mutton stuffed with onions"—a dish only to be paralleled by the pork chops which Thurtell & Co. regaled on after completing the murder of their friend Mr. Weare in Hertfordshire.

FALSE COLOURS.

Quiz is too severe on "the persons who assume to their names the distinction of *Esquire*, or otherwise exhibit signs of honour, such as cockades, mounted on the old worn-out *chapeau* of a Mosambique coachman or footman."

The variations of folly, pride, and vain glory are endless, but there are some, though discovering much human weakness, are nevertheless perfectly harmless. However, Parliament did not think so in 1758. It thus stands in the Journals of the House, 6th Feb. 1758:

"It was ordered by the Lords spiritual and temporal, that the King-at-Arms, attended by his proper officers, do blot out, disallow, deface, and destroy all ensigns of honour borne by such persons as have no legal title thereto,—in printed documents,—upon their carriages, plate, and furniture, and to make returns of their proceedings therein to the clerk in parliament."

The old Landdrosts of this colony were wont to hoist up their own *signs of pretension* over the Drostdy Houses. The Earl of Caledon had them pulled down, and placed the British Arms instead.

THE POPE OF ROME AND THE PENNY MAGAZINE.

The Pope of Rome, Gregory XVI., is in the utmost alarm on the extensive circulation of *The Penny Magazine* in the papal dominions. The Penny is

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

well received all over the continent of Europe. The Pope's Bull on the subject is amusing. Here is an extract:

"Hither tends that worst and never-sufficiently-to-be-execrated and detested liberty of the Press, for the diffusion of all manner of writings, which some so loudly contend for, and so actively promote. We shudder, Venerable Brethren of the only true Apostolic Church, at the sight of the monstrous number of publications which crowd upon US in the shape of numberless printed documents, small in size, but big with novel sayings and enticing embellishments, which stalk forth in every direction."

The holy father then adverts to the laws for punishing heretics and extirpating unsanctioned writings, denounces the Protestant churches, and concludes thus—

"And that our Councils may have a successful and happy issue, let us raise our eyes to the most Blessed Virgin Mary, who alone destroys heresies, who is our greatest hope, yea, the entire ground of our hope."

WILLIAM COBBETT.

The late papers announce the death of the celebrated William Cobbett. With every thing to oppose him, he succeeded, by *dint of industry*, aided by the possession of intelligence, in making himself one of the most prominent men of his day. As an example of what may be effected by *a man's own efforts*,—as an example of the indomitable force of native energy,—as an example of the irresistible power of mind, Cobbett is unequalled. The great characteristic of Cobbett was, that he was *never idle*; the effect of which was a freshness of bodily and mental powers, unknown to most men. Year after year, to the latest moment of his life, his faculties were in untiring activity, and the products were full of vitality to the last. His mind retained in vigour and elasticity, and threw off all its impulses with all the freedom of early life, till a few hours before his death: there was no flagging, no sign of waste, no appearance that the "cruise of oil" was running low: the stream of intellect flowed freely, betraying neither by ebb nor pause that its source was weakened.

With the exception of Montaigne, Cobbett was the prince of egotists. He referred every thing to himself. As a politician and a statist, he was not a superior man, and his harangues and his political writings are more declamatory than sound. But let his errors, his contradictions, and his occasional bitterness die with him!

Mr. Cobbett was buried at Farneham, in Surrey, his native village. About 8000 people attended his funeral. A number of distinguished individuals were present. Mr. C. has left a widow and family; two of his sons are at the Bar, and are much esteemed. One of them wrote the well known description of the turning up of the rats, copied by the Quarterly Review as a happy effusion.

THE ADVANTAGES OF BEING PLUNDERED.

When the Russian army of invasion passed through Champagne, they took away six hundred thousand bottles from the cellars of M. Moet, of Epernay; but he considers himself *a great gainer by the loss*; his *orders* from the North having more than doubled since then. Moet's cellars, be it said according to Travellers, are peculiary deserving of attention. Every visitor is presented with a bottle of the chociest wine.

AN IRISH BOUNCER.

The latest accounts from the Cape of Good Hope are awful. The beautiful and hitherto prosperous village of George has been laid in ashes by the ferocious Caffres, and it is with the most unmingled sensations of poignant regret, that we learn from unquestionable sources that our enterprising countryman, Mr. John Ingram, with the whole of his family, have fallen victims to the fury of the savages.—(*Cork Chronicle.*)

SWEET HARMONY.

It is a pleasant thing for brethren to dwell together in unity, and most happy are we to record the blessed instances of this good spirit at the Cape. There's an alchymy in gold after all, that produces wonders.

At the late Meeting in the Commercial Exchange by the persons interested in the receipt of the British Compensation Money, all was harmony and goodwill. This event is thus registered in a Friday's Newspaper, as one of an extraordinary nature:

"The unanimity, *good temper*, and *order* which prevailed, will distinguish *this Meeting* in the annals of the Colony"

Then, again, we read of another event of great importance, if we are to believe the Eastern Province Journal; there has actually taken place at Graham's Town,—

"A *social* Tea Party, composed of the resident ministers of the Town."

Of course the reign of *litigation* is over.

But the Bank, the New Bank here, is a scheme which seems to reconcile all differences—a perfect Roman-cement to our Cape society. The New Bank promises to be a treaty of peace and goodwill, a sort of law that knits together and tames the most discordant tempers. This Bank seems to beat all to sticks, the man who used to exhibit the animal tribe in a state of reconciliation on London Bridge. In one small cage there were cats, rats, and mice, hawks and small birds all living together in the utmost harmony, and without any attempt on the part of the predacious ones to injure their natural prey.

AN APOLOGY FOR INACTIVE SERVANTS, AND WEAK UNDERSTANDINGS.

We often hear violent outcries raised against the Cape servants, people of colour and others, from their alleged inaptitude to labour,—to perform a good day's work. This indisposition prevails, perhaps, by far too much among all classes—hence the languor, the supineness, the comparative indifference to the cultivation of the soil, to rural economy, to public works, and the prosperity of public institutions. It was always our private opinion that the prolific nature of the Cape fish-varieties as an article of diet, was extremely unfavorable to mental as well as corporeal exercise. The question is worth inquiry; the more so as we find on looking into Burne's Travels, the following observations:—

"The natives of the neighbouring countries, and the higher class of people in *Sinde*, have a singular notion regarding the fish diet of the inhabitants. They believe it prostrates the understanding; and in palliation of ignorance of any one, often plead that "he is but a fish-eater."

THE LEGISLATIVE COUNCIL.

(Business of the next Session.)

1. A Bill for the erection of a Market House for fruits, vegetables, butter, eggs, and poultry in the old green-market.
2. A Bill for the foundation of School Houses in the Towns and Villages, for the Education of the people, in accordance with the Provisions of the Emancipation Act.
3. A grant of £200 for the completion of the English Church at Simon's Bay, in lieu of the £50 *per annum* now and hitherto paid by *Government* to the Methodist Society for the use of its Meeting House, for the service of the Episcopal Community.
4. A Bill for the revival of the Botanic Garden in the present wastes—usually denominated the Government Gardens.
5. A Bill for the building a Fish-Market on the shores of Table Bay.
6. A Bill to permit certain proprietors of a Joint-Stock Company, to create a Break-water and Jetty.
7. A Bill to improve the entrance into Cape Town from the Castle by an iron bridge, and repairing the roads from the Western Gate.
8. A Bill to remove the Town Market from its present site to Hottentot-square, in order to rescue the Farmers from the fangs of rogues and informers; to regulate the morning business hours; and to enable the inhabitants fairly to compete

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

for purchases, and relieve the country sales-men from the impositions of the truck system.

9. A Bill to provide the "Ten Commandments" a suitable place of occupation in all Churches and Chapels in the Colony.

10. A Bill to enact that the Town and District Surgeons, in the pay of Government, do administer Medical and Surgical advice *gratis* to the poor among the free Blacks, after the manner of the assistance supplied gratuitously to the poor Civil Servants and Pensioners.

11. A Bill to declare the First of December, the now first coming, "and ever shall be, world without end," a Public Holiday and Day of Thanksgiving.

12. A Bill for the letting on Public Tender Robben Island, and the use of the stone quarries, to relieve Government from its stone-mason occupations and victualling concerns in that island.

13. A Bill for the better regulation of the Mails, and for establishing Mail Carts or Wagons from Cape Town to the new Conservative Towns of "Queen Adelaide"—"King William's Town," "Fort Wellington," "Peel's Valley," and the *Hum*atola Mountains.

14. A Bill for the purpose of re-constructing the South African College upon British Principles, and rendering it worthy the Government support which it has hitherto received, for providing for the retirement of the six learned lawyers hitherto responsible for its mis-direction, and for securing to its Professors a proper authority and independence in the diligent discharge of their duties.

15. A Bill for providing a Chaplain for the Cape Town and Rondebosch Prisons; and appointing a Curate to St. George's Church, to perform Afternoon Service or Evening Prayer.

16. A Bill to relieve the Clergy from the duties of performing the Marriage Act, and providing that this civil contract be in future registered by the Magistrates or Justices of the Peace.

17. A Bill to effect the sale of the country palaces—the Drostdy Houses, at present in occupation of the Civil Commissioners, as *Alms* Houses,—or otherwise to direct a rental from these buildings for the benefit of *the Chest*, formerly used as a place of colonial deposit.

18. A Bill to compel the Town Watchmen to sleep during the day, in order to enable them to prosecute their nightly toils with becoming dexterity and vigilence.

CHURCH AFFAIRS.

We learn by a letter from a gentleman pretty intimate with the affairs of the Colonial Office at *Home*, that the two vacancies in the Reformed Church are to be supplied in the persons of the Rev. Messrs. Reid and Fraser, or Frazer. They are conversant with the two languages spoken in the Colony, and will thus promote the spiritual interests of all classes. And to prove that this object is intimately connected with the views of the Home Government, Sir George Grey observed to the Revd. Dr.———, who addressed him in reference to Mr. W. Porteus, of Glasgow, a Student in Divinity, "Yes,—I think the Cape of Good Hope affords unbounded scope for pious exertion; and as far as I am concerned, every encouragement shall be given to those *seriously* in earnest in the business. But is your friend competent to conduct public worship, and afford religious instruction in Dutch, as well as English; and there is yet a higher point on which I would insist,—Will he cheerfully and zealously comprehend in his ministerial and missionary labours, the all-important duties of caring for the coloured population? —The answer being in the affirmative; Sir George said—'Let him take *ship* as soon as possible, in such a work no time should be lost.'"

MARISCHAL COLLEGE—UNIVERSITY OF ABERDEEN.

We are happy to observe in one of the *Aberdeen Journals* lately received, that the son of Mr. Blore, of Cape Town, has obtained collegiate honors at the trial in two Classes:—

1st. The Natural Philosophy Class.
2nd. The Mathematical Class.

THE MASTER SPIRIT.

(*A Recollection from an old Author.*)

Give me a spirit, that on life's rough sea,
Love's to have his sails fill'd with a breezy wind,
Even till his sail-yards tremble, his masts crack,
And his rapt ship runs on her side so low,
That she drinks water, and her keel ploughs air.
There is no danger to a man that knows
What life and death is; there is not any law
Exceeds his knowledge; neither is it lawful
That he should stoop to any other law.
He goes before them, and commands them all,
That to himself is a law rational.

IMPROVED NAVIGATION TO THE CAPE.

The following are selected from the list of arrivals from England during the month:—

Falcon, left July 15th,	arrived September 17th,	days	64
Carnatic, . 12th,	. 17th,	.	67
St. George, 21st,	. 13th,	.	54
Bland, . 17th,	. 10th,	.	55

Captains—Burnell, Brodie, Thomson, and Callan.

A LATE ARRIVAL.

The South Easters made a very formidable appearance on the afternoon and evening of Saturday, Sept. 26th. The racers at Greenpoint, were driven like chaff before the wind, and the return home, required a more than ordinary skill on the part of the Jehu's. It also blew a perfect hurricane at sea, but the sailors on board would seem to have been in happy temperament, and kindly sympathised with us landsmen. *Ex gra.*

TABLE BAY CONSOLATION.

Air—(*Bay of Biscay O!*)

One night came on a hurricane,
The sea in billows rolling,
When Barney Buntline turned his quid,
And said, to Billy Bowline,
A strong South Easter's blowing Bill,
Hark! don't you hear it roar now;
Why messmate, how I pities all
Unhappy *folks* on shore now?"

Fool-hardy chaps who live in town,
What danger they are hauling,
And now are quaking in their beds,
For fear the roof should fall in!

Poor creatures, how they envies us,
And wishes, I've a notion,
For our good luck in such a storm,
To be upon the ocean.

But as for them who're out all day,
On business from their houses,
And late at night are coming home
To cheer their babes and spouses;

While you and I Bill, on the deck,
Are comfortably lying;
My eyes! what bricks and chimney pots
About their heads are flying!

And often have we heard
How men are bruised and undone,
By overturns of carriages
And thieves—much worse than London;

We know *what risks* all landsmen run,
From "*Coat-flaps*" made by Tailors;
Then Bill, let us thank Providence,
That you and I are sailors.

Notlazomahnitzteopixcatatzins.— Pronounce this *leetle* word: it is the original Mexican for country curates.

A DUTCH BOUNCER.

The English Government at the Cape of Good Hope, is contending with difficulties of an appalling and overwhelming nature. Nothing can save the settlement from the combined warfare of countless myriads of black African savages, who are carrying every thing before them in all parts of the Colony. The latest accounts state that the utmost confusion and panic prevailed in Cape Town. The invaders, under the command of a gifted warrior chief, had reached *Blauwberg*, and nothing could save the capital but a miraculous interposition.—*(Amsterdam Courant.)*

THE POLICE OFFICERS.

A correspondent (*Observer,*) has written us a long letter; guess, reader, what it is all about?—Why a serious charge against one of the Officers for using, as the writer says—"Curling irons." Now, really, this Observer is provokingly ridiculous; these implements are by far the most innocent *irons* that can be employed in civil society. But this notice affords us the opportunity of recording the fact—that the present body of Police are by far more respectable in appearance than that of any other for the last half century; and, knowing nothing to the contrary, we should think the Officers extremely well conducted.

PAMPHLETEERING.

[While the public mind continues to be agitated by the anticipation of great and unusual changes, it does not seem that it is able to retire upon its own complete resources, and come forth either with the fully-ripened fruit of calm and profound reflection, or to exhibit any wonderful burst of gigantic power. No forest trees appear; (with the exception of a *here* and *there*) we have only coppice-wood, or, perhaps, bramble that cannot withstand the summer sun, and that will have no sap to outlive an English winter. The truth is, that an eye to the social, political, and practical improvement of society, is the tendency of the times—hence the political discussions, and the influx of those momentary organs for the expression of opinions, *the Pamphlets of the day.*

Of the nations of Europe our country has long stood unrivalled for the rapid succession of these busy records of men's thoughts—these suggestions of their opposite inferences and their eternal differences. Of these leaves of the hour, and volumes of a week, the labours of the passions, the wisdom or the folly of our countrymen during the Revolution of Charles the First, in that single period of twenty years, from 1640 to 1660, about thirty thousand pamphlets appear to have started up.* The pamphlets of this time were usually directed to prepare men's minds to the impending changes in the Church and State. Charles the First, by his constant notice of these winged thoughts, appears to have been greatly apprehensive of their influential importance. But without further reference to times past, we shall briefly advert to times present. This, too, is the age of Pamphlets, and more than this, it is the age in which the Press is directing public opinion and governing all. Upon its degrees (this is our belief) will eventually depend the influence of the aristocracy, the existence of an established church, the formation of ministries, and perhaps the very form of government. It was the unfortunate boast of Prince Polignac, that he never read the Journals! For this sin of omission, he is now a prisoner in the Castle of Vincennes.

Of all the Pamphlet Journals which seem to speak with more authority than others of a cotemporary relation, the one before us seems to us most formidable. It is the fourth or fifth of a series, and is attributed to the ready and masterly pen of Lord Brougham. His Lordship is assuredly one of the most remarkable men of the age. We cannot figure to ourselves such a phenomenon as that of Lord Brougham, so long as life and health are spared, becoming indolent. His Lordship and laziness are irreconcileable enemies, and we think, if his genius were to be briefly and accurately described, it would be by calling it the genius of activity. Then, again, calculate for a moment the extent and variety of his works—from penny information for the people, and school-books on all subjects, to his recent Discourse on Natural Theology, which has ranked him beside Locke, Bacon, and Hume. The reasons which induced his Lordship to the composition of his Natural Theology, are interesting. He had observed amongst many men of philosophical pursuits, a prejudice against Theology, that it was only a fancy or speculation, and not a body of truths, as legitimately deduced from Physical and Moral Facts, as any of their own favourite sciences. With a laudable anxiety to remove this prejudice, he has undertaken to shew the contrary. We earnestly recommend the perusal of this work to all our readers; faulty as it is in some instances, nevertheless, it fills up an important hiatus in science, and completes the imperfect works which have hitherto constituted our Natural Theology.

In the present instance, as will be seen in the sequel, Lord Brougham comes forward with a new Pamphlet, and states his political views with great plainness of speech. It forms the 2d part of "*Thoughts upon the Aristocracy of England, by Isaac Tomkins, Gent.*" The first part is small, but very sharp—indeed, bitter. This was succeeded by a Letter under the signature of Timothy Winterbottom—*On Primogeniture*, the ablest Pamphlet of this or any other age. In re-printing the second part of "Thoughts," or "We can't Affort It," we wish to be considered as bye-standers in the case, perfectly indifferent to the *party* terms adopted in the discussion, and concerned only in presenting to the notice of our colonial readers those new views of society which are so pre-eminently characteristic of modern times.]

* Most of the 30,000 Tracts or Pamphlets have been collected, and were presented by George the Third to the National Library.

"WE CAN'T AFFORD IT!"

By Isaac Tomkins, Gent.

The first part of these Thoughts has excited very great attention, awakened a lively interest, and roused no little curiosity among the various classes of the community. This I foresaw; and I could not for a moment doubt of my purpose being answered—the commencement of a successful resistance to the Aristocracy and an emancipation of society from the thraldom in which they are now held. While among the people thousands have read, and, reading, have been made to think—among their selfish oppressors hundreds who had never before read any thing beyond a mawkish novel or a fashionable and slanderous newspaper, have looked into my little book for the likeness, as they hoped, of their friends, and have been angry to find their own. Hence many a volley of oaths from the windows of the clubs; and hence a tempest of more delicate abuse from well-hung tongues in the drawing room. My motives have been impeached and my loyalty disputed; my acquaintance with "*good society*," "*high life*," and "*certain circles*," has been judged impossible. Decided vulgarity and underbreeding, doubtless the most serious charge of all in the eyes of those who made it, have been imputed to me more lightly than would seem charitable or even lawful in so grave a matter. Appeals have been made—now threatening now half laughing—now pathetic, to "*anybody*," which mysterious personage has been more loudly catechised than "*anybody*" can bear. Did he *ever* see such poor trash—such flimsy and silly stuff? *Can* he possibly listen to so absurd a farrago of spiteful invective? Then a touching appeal has been made to his near kinsman, "*any human being*;" and it is movingly asked whether *he* can be convinced or affected by such nonsense as this? Unfortunately, those two familiars of the boudoir have appeared when called upon—a thing they rarely do. They have many times answered and said, "Why truly, for one, I must say I cannot quite agree with you."—"Indeed if you really ask me, I confess I *have* seen greater nonsense and read descriptions much wider of the truth." So that when all would not do, and no comfort was to be found in any quarter, neither from "*anybody*" nor "*any human being*"—my existence has been boldly denied; and some of the most distinguished persons among the Aristocracy themselves have been boldly asserted by that judicious body, and their hired newsmongers, and their

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

pensioned editors, and their editors who, it is said, *would fain have been pensioned*,* to lurk disguised under the homely name which I bear, and which I am not so ready to change for another as those who hate and fear and affect to despise me. It is indeed curious to remark, all that the indignation of the Aristocrats of both parties (for both dislike the subject of my writings about equally) has been unable to produce anything like a respectable defence. Not of course, that any man expected they should be their own counsel and verify, for the thousandth time, the old saying on this score —no one gave them credit for any such attempts. But it seems strange that their resources should have been unable to fit out anything of greater force than a few paragraphs in their papers, and a review containing nothing like an answer, but giving a wider circulation to my statements. I am, however, forgetting a worthy gentleman, the butt of one of our legislative assemblies,† and who has thrown himself into the breach very disinterestedly, if not very wisely—he being one of our middle order at the very best, and having no kind of connexion with our betters beyond affording them a little merriment when they are tired with gaping at the pantomime of the season, or are ashamed to be seen staring at Punch.

All this, however, is matter rather of curiosity than of any account to the People. What I chiefly regard is the spirit of inquiry excited by my very slight performance—every way, I am conscious, unworthy of so rich a subject. This is proved to me by innumerable communications; and I have been urged by persons, evidently so well fitted to give sound advice, so sincerely attached to the cause of the People, that I can no longer refuse listening to their desire, prompted by the most honest and affectionate regard for the best interests of their country. That I shall afford them the satisfaction which they seem to expect, I know not. But I fear they will think my speculations far more dull as they become less personal. However, it is their own fault, they will have me enter upon some of the more serious branches of the question; and if the continuation of my thoughts be dry and tedious, it is perhaps as likely to be really useful.

I will now proceed to lay down two positions, which appear to me unquestionable both as to their truth and their practical importance. *First*, whoever dreams that the people of this country either are, or ever will be, or ever ought to be, satisfied with any changes, made under the name of reforms, which really do not improve their condition, labours under a delusion, lamentable in the first instance, because hurtful to the country, but fatal in its consequences, because confusion will follow from it. *Secondly*, The delusion is as great and as dangerous of those who dream that the Lords can be suffered to rule this country now that the Commons speak the sense of the people in part, and must soon speak it altogether.

Now let me not be mistaken when I say that the reforms which have been obtained since the Bill of 1832 are, however valuable, only of use prospectively, and as laying a foundation to build upon. No man can doubt that the opening of trade in the East—the reform of the English law and the Scotch boroughs—are great benefits conferred on the country; while the Poor Law Bill is by far the most valuable improvement obtained by Parliament for all ranks of the people these two last centuries. The Abolition of Slavery, too, is a measure of justice as well as wisdom. But yet all these reforms, except the Poor Law, are such as do not enable any one to say at this hour that he is the better for the great change effected in 1832; and the Poor Law would probably have been passed even by a borough-monger Parliament. The same may be said of Municipal Reform, a measure of infinite use in furthering our emancipation from the Tory yoke; and of the next reform, (the Lowering of the Qualification,) which must be carried in order to complete the overthrow of our former masters. These are all good—nay necessary in themselves—but they are only instruments to do a work with: they are means towards an end. And what signifies our having ever so good a tool put in our hands, if we are by some secret spell to be prevented from using it? We had far better have been without it, for we then should have been less tantalized with hope, and less laughed at by our adversaries. What is it then that can really mend the condition of the people? Nothing but lowering our establishments, in order that our burthens may be lightened. This, and this alone, it is that can make us feel the better for all our struggles. Yet this it is that our liberal Ministers will assuredly never try, unless the people force them to the attempt, and support them in making it.

It is not that I distrust their good intentions. They mean *well* enough, what little they do mean. They will grant reductions when there is no possibility of refusing them. But all ministers like a quiet life; fear to quarrel with the "*Boards*," and the "*Offices*," and the "*Authorities*;" tremble at the very name of a Court revolt; and, therefore, naturally hate movement of any kind beyond everything. The present Ministers (from the peculiarity of their position, and not from any original fault) are more than any that ever existed under the influence of such feelings or such principles, if we may so call that which annihilates all principle. They have no power of doing as they like; on the contrary, they must do as everybody else likes. A threat, a word, a look from the Tories will head them back, till they find that worse looks (because accompanied with blows) from the friends of liberty await them if they retreat further. So the pressure from behind will drive them into something like reform, till the angry looks and the big words of my lords the Peers, and my lords the Bishops, and my masters the worthy Baronets, and other lords of the soil, become too awful to be resisted. Their object is just to do enough to keep the Liberals from revolt, without doing so much as to break entirely with the Tories; just to give the people what they dare not withhold; and when driven to reform by their support, then to go just as far as they dare for their adversaries. The natural state of such a Government is absolute inaction; but, hard fate! even that refuge is denied them. A body pulled opposite ways may be torn to pieces; but that is not their position. No party draws them to itself; they are in the state of a body pushed or driven in opposite directions, which seeks safety in standing still. But this resource is not for them! They have a powerful body of nominal supporters ready to crush them in one instant, if they dare to stand still. Thus unable to move, and not permitted to rest, their existence is a scene of buffetings and crossings, and all without any fault of theirs, but owing to their false position in a half-liberal Parliament. Accordingly, their most strenuous supporters have lately put forward their unexampled weakness as their title to the protection of the people. It is a little strange, however, that men so circumstanced should not perceive that protection and allegiance must be reciprocal; that the People will only stand by them if they keep to their principles; that their only safety is throwing themselves on the country; and that of all the

* This is evidently levelled at the "*Times*."
† Mr. Jno. Richards, M.P.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

dangers which can beset them, the greatest, the most fatal, is their refusing to persevere in reforming courses.

It does, therefore, seem beyond all reasonable expectation that the Whig Ministry should ever set seriously about relieving the country. They must have far stronger incitements applied, and they must be much stronger in Parliament, before we can hope from them any effectual retrenchments.

Of what then is it that the people justly complain? *Of an overgrown Civil, and Military, and Colonial establishment,* which no monarchy could require, were it not for an Aristocracy that has grown up around it, and now clings to it, and almost chokes it under pretence of giving it support. We complain of intolerable burthens which are laid upon our shoulders, in order that the noble and the wealthy may bring up their sons in luxury and idleness, while we are eating our bread in the sweat of our brow, paying higher for that bread to swell the rents of the landowner, and contributing, by every drop of beer we drink, and indeed by everything we consume, to feed the extravagance of the Aristocracy. The heaviest of our burthens, the debt and its interest, we cannot shake off. Justice forbids it; and the security of all property would be destroyed if the public creditor were defrauded. But while we submit to the load which it is our fate to bear, we may be allowed the poor relief which other beasts of burden seek in groans. Nor can our weary spirit thus vent itself without charging upon the Aristocracy the crime of having laid that heavy weight upon us. Their alarm it was for their titles and their estates, that plunged the country into wars which have left us in our present depressed condition. Surely, surely, the very least that those hard task-masters can expect is to have the establishment cut down to the very lowest farthing. No justice forbids this—no danger to property could accrue from bringing the expense of our Government to the scale with which a country exhausted by half a century of extravagance, and groaning under eight hundred millions of debt, must be content, if it would avoid a revolution. To all propositions that there should be a splendid court, brilliant embassies, well paid functionaries, large armies, *numerous colonies,* there is one answer, and it ought daily to be in the mouth of the people's representatives,—as it is in that of the people—"WE CANNOT AFFORD IT—we have not the money—we must be just before we indulge ourselves—we are in debt, and must do without it." But this is a kind of answer which no Ministers, and few Members of Parliament ever think of giving. Why? Because they are liberal at our expense; and so they turn periods upon the inexhaustible resources of the country, and we, who are exhausted long since, continue to bear the pressure that grinds our faces and crushes us to the very earth.

Yes! "*We can't afford it!* Our money is all gone!" *That* is the true answer—that is the answer which the suffering people have a right to hear from those who call themselves their representatives. Whatever temporizing Minister, whatever place-hunting Tory, whatever fanatical but honest Ultra, whatever drivelling courtier, shall speak of the "just splendour of the monarchy," let him be reminded of the just claims of the people, their claims to the necessaries and some little of the comforts of life, and let him be told to carry his smooth sentences elsewhere, and not insult those who are starving with demands for a magnificence which they can no more afford, honestly afford, to indulge, than a man can afford to invite the King and his Court to an entertainment when he has an execution in his house, and the bailiffs are waiting in the hall!

"*We cannot afford it!*" That is the answer, and the only answer, to give, when young gentlemen from the Universities turn their neat new periods with old common places so trim, about "paltry savings," "niggardly economy" "great nation," "inexhaustible resources;" and older heads that should be wiser, would have this country governed as if we were not burthened for ever with eight hundred millions of debt, and were not paying with twenty shillings what we borrow at fifteen!

"*We cannot afford it!*" is the only honest and manly answer, for you who have by large professions of retrenchment prevailed on the honest and suffering people to make you a Parliament-man, that you may strut about in the clubs, or wear an air of consequence at sessions, or look important when you leave the dinner-table to go and divide, or when you enter the drawing-room in the middle of a rout and seem so very big after the division. That is the answer for you to give, if you be an honest man, and are not resolved to live in the execration of those you have deceived! You may be little able to shed light upon dark subjects—you may have no weight in the councils of intriguing partisans in St. James's-street, nor any force in the wordy war which the wranglers wage at Westminister,—but these few words you can easily pronounce, and their virtue is enough to cure the State's diseases, and to cover all your deficiencies.

No, no—*we cannot afford it!* Away with your trash about dignity and splendour, and gallant defenders, and proud recollections of conquests that have cost so much treasure and so much blood—recollections that fire the pride of the nation! Away with the maudlin stuff about decent competence for decayed nobles, and Courts worthy the Prince of a powerful Empire, and salaries in keeping with the wealth of the country, and the suitable brilliancy of those who represent our power and our riches abroad, and all the thousand expedients for gilding, at our cost, the capital of the Corinthian order. "*We can no longer afford it!*" There's the answer to it all—the answer which you, the Aristocracy, must be content to hear every day of your lives, and which, if the People's Parliament give you not, the People itself will. Your long and bloody and costly wars, for one hundred years, to gain and to keep colonies, and to put down freedom abroad and at home, have fixed upon us the payment of thirty millions a year for ever; and though you would very willingly see your creditors defrauded of this sum, that you might have it to squander on objects more pleasing to you than the old-fashioned one of paying just debts, no time will ever see the honest people of England submit to such a sin and such a shame. So there is no more money to be had, and we must do with low salaries, and few of them—small armies, and a good armed police—a decent court, and a cheap one—few colonies, and these *keeping themselves.* All this is the People's right: all this—ay, every bit of it—the People must, and they will have. All this is their only gain by the late Reform, and all this flows from the magical virtue of the answer which the People will have their representatives give, and their rulers be prepared for and accustomed to—"WE CANNOT AFFORD IT! AND WE WILL BE TRIFLED WITH NO LONGER!"

But *will* the representatives of the people give this answer to the demands of the Government, and will they, with this watchword—this war-shout of popular rights—this rallying cry of true, practical reform, support the honest men who want to have a cheap Government, and care little which of the aristocratic factions rules the country? I greatly doubt it; indeed I do not expect it. There is unquestionably, but little encouragement for them to do their duty in the one House of Parliament, while the enemies of all reform carry everything their own way in the other. Yet who can hesitate to declare that it is the duty of our representatives to stand by us even if the Lords afterwards defeat the measures carried for our good? Besides, the question of money is peculiarly the province of the Commons; and though a repeal of former acts of waste, of profligate extravagance—acts in which the people have been shamefully sacrificed to the Court and the Nobility—cannot so easily be effected, at all events, new grants, and every thing that is voted yearly, may be refused if our representatives will do their duty. Will they? I more than doubt it. My reason is this:

The carrying Parliamentary Reform showed that a large body of Members, even in a Borough-monger Parliament, were resolved to give the people more power, and lay a good foundation whereon to build. But they who carried it had too small interest in the measure; they shut out their political adversaries form office, and secured it to themselves. By the destruction of close boroughs, they made it impossible for the Tories to govern as they had been wont to do; they raised up a power hostile to the Court, and a power more likely to favour the Whig party than the Tory. When the Horse (says the fable). could not beat the Ass by the force of his own hoofs, and after he had tired himself out with kicking against that obstinate and stupid but not ill-conditioned brute, he asked the Man to help him, which he did, and the long-eared and long-lived creature was overcome by the coalition, but then the Man kept in the saddle, and has ruled the Horse ever since.* So the Whig has overcome the Tory by help of the Man of England, and still more by Him of Scotland and Him of Ireland, and he is now, I fear, struggling might and main to fling his new rider out of the saddle: indeed, my opinion is, that he did so some time ago, and will not let him mount again. In a word, to come from Æsop to 1835, I fear much that the Liberal party—their leaders, certainly—but even the bulk of the party, care little for reforms, except as the means of keeping themselves in and the Tories out, and will give their ally the people, only just as much as is wanted for that purpose; will not quarrel with the Court, will not face the nobility, and above all, will not give up any share in the "*saddle.*" When I see any measures carried which really increase the people's comforts by giving them cheap food, cheap drink, cheap Government, I shall retract my opinion.

But at the root of all these is the merciless and unmingled aristocracy of our Government—that aristocracy, in the spirit of which all our institutions are framed, all our concerns administered, and all our Parliament-men tried.

Only consider how this pernicious spirit works in every quarter. A Minister, even a liberal and an honest one, associates with the upper classes and with them alone. In this select circle he lives and moves and has his being. Born and educated in this atmosphere, the odds are, that the air he has always breathed should affect his constitution and habits—that the medium he always sees through should affect his vision. But suppose him to have made a vigorous effort, (such a one as few of the Whig leaders are likely to make, and certainly none of their Tory colleagues,) he must do a vast deal more, and suffer far greater pain than this violence done to his own nature will have cost him, before he can do any good, the least in the world. He must face the frown, the sneer, the horse-laugh of all he ever sees in society; he must be prepared for every thing short of being shunned by that refined society which I have been so much abused by some for praising too highly, but which I really thought I had treated with reasonable severity. He must at least make up his mind for losing all the comforts of these circles, but only from and after the day he quits his office, unless, indeed, his powers of conversation are such that he is indispensable, or his brilliancy in debate is such that no one dares, for the fashion's sake, be without him. Conceive only the appearance of a Liberal Minister (or Member of either House) in one of those high circles the evening of his bringing in a Bill to take away the pensions of the nobility and their ladies, or convert the costly royal palaces which they occupy into places of public use, or lop off some four-score useless and expensive places which they hold! Many a man had rather march up to a battery than face the Clubs and the Drawing-rooms after proposing or supporting measures

* See Penny Magazine for July, page 288.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

so "Radical!" "so wild!" "so shocking to all delicacy!" "so unworthy an English gentleman!" And thus it will always be until some portion of the people themselves sit in Parliament, or at least until they choose men ready faithfully to represent them—men who will do their duty, and insist upon a cheap Government, without the least regard to the loss which the Crown may suffer in its influence, and the nobility in their comforts. Till then the people of England have about as good a chance of obtaining their just rights from our aristocratic assemblies at Westminster as the negroes had of getting theirs from assemblies of planters; and for exactly the same reasons. Those poor slaves never would have been set free had their cruel masters not overdone their work, and raised a strong feeling against them in this country. Nor would the people of England ever have got their share in the choice of their representatives, if the Tories had not resisted all reforms, little as well as great. So, believe me, the share we have got will never avail us anything to our real advantage if we do not bestir ourselves. For our enemies are taught by experience—they will feed our hopes by fair speeches, and amuse us with small improvements; but large and true reforms we never shall have from the Aristocracy who now rule us, sometimes under one name and sometimes under another, and not seldom under two at a time, until we think and speak and act for ourselves.

These things I have written for the use of my countrymen, towards whom I entertain an affection that knows no bounds. I speak of the honest Middle Classes and the honest Working Classes. For the Aristocracy I feel no dislike, still less any hostile sentiments. They are what the *worst education in the world* and the worst habits have made them. No one has any right to blame them who is not prepared to say that, thus brought up and thus circumstanced, his conduct would have been different from theirs.

But the contention is begun—the battle is joined—and knowing how many thousands of my beloved countrymen have taken a deep interest in its issue, I feel that my duty requires me to persevere, and therefore I shall again address them.

THE EXILED.

[COMMUNICATED.]

[THE following short Poem was written in the year 1826, but never before published. It is founded on the circumstances connected with the Russian Conspiracy, detected early in 1826, soon after the present Emperor Nicholas came to the Throne,—communicated at the time,—and which gave rather a minute account of the punishment reserved for those who were not put to death. From the view afforded of the manner in which their sentences were executed, it seems that the penalty of death was lenient when compared with the horrid mercy, which condemned the offender to march on foot, as a shackled captive, nine hundred English miles! and then to be buried alive with all the awful ceremony usually connected with the interment of the dead. Each wretched survivor in such a case, may often exclaim with equal bitterness and truth—

"Oh, happy in my mind, was he who died!"

Augsburgh, August 11th, 1826.

—"We yesterday communicated, says the Munich Gazette, the account of the fate of the conspirators in Russia, stating that besides the principals who were hanged, others were condemned to labour in the mines,—some for life—others for different periods. Great criminals are, in general, sent to the silver mines at Nortschink, on the frontiers of China. Even the journey to this place, which is 200 German (900 English) miles from Saint Petersburgh, may be called a capital punishment, as the criminals must go the whole way on foot, fastened together by a long chain, so that great numbers sink under their hardships on the road. Those who are let down into the mines for life (this is the fate reserved for Prince Trubetzkoi, among others) are considered as already dead; the prayers for the dead are said for them, and earth is thrown upon their bodies, as on a corpse that is to be interred. But even of those who are condemned for some years only to this most unwholesome abode and the hard labour of mining, hardly one ever returns to the surface of the earth. This dreadful place of punishment soon destroys the strongest constitutions, and even if they escape with life, their fate is like that of the individuals condemned on the 24th of July, so that they can never again leave Siberia, and Nortschink is situated in that part of Russia.]

THE EXILED.

I.

Stern spell of Freedom, and unshackled breath,
And soaring spirit of the ethérial mind!
Stern spell of Freedom, when thus unconfined,
The soul in ardent longing dares unsheathe
Itself from the corrupted flesh—and aim
The blow, regardless of a traitor's name,
And rather than succumb thus,—be the first
To raise the steel's point:—what, though thunders burst?
And the red lightnings strike the lifted brands
Of those who dared the most, defied the worst;
Blasting the molten iron in their hands
When ready to assert o'er prostrate lands
The pride of the heart's blood?—what, though they fall?
And Freedom's fragments, as the shatter'd wall
Lie, for the despot's purpose to reframe
On their ensanguin'd trunks, a mightier name?
Yet, 'tis in man,—rather than bow the knee,
And cramp his soul with Slavery's dark chain!
And stoop submissive, to defy as vain
The power which mannacles, but ne'er controuls
The eagle-spirit of aspiring souls—
Who call on Freedom,—their idolatry:
And thus men strive, when pent beneath the weight
Which clogs their fiercer natures, doom'd to bar
The heart's proud motives, that would soar more far
Than rulers choose; who, on the servile Earth
Look down as demi-gods of haughtier birth,
And goad men on,—through Fortune's abject state
To grasp at Freedom, or expire by Fate.

II.

Hark, to that hum of voices!—Lo, yon crowd,
And the long line of war's o'er-ruling ranks,
Who now repel the multitude aloud
In harsh invectives utter'd;—hark, how clanks
The iron fetter, whilst a hollow groan
Piercing the pitying ear with horror's tone,
Tell's of their doom,—oh, Petersburgh! That doom,
Where cold Siberia's frozen rocks extend,
Far in the bowels of the Earth,—the gloom
Of dark Tartarean vaults,—'tis *there* they wend
For the proud crime of striving to be Free,
To dig the ore from Earth's unwholesome caves,
And hurried, living, to their portion'd graves,
Toiling for what may gild; oh, Liberty!
The brow, perchance, which doom'd them there as slaves.
The curious loitering crowd now droop behind,
And leave them to their woes; onwards they toil
'Neath sultry suns, o'er stifling dusty soil,
And Pain and Misery working on each mind,
As nature sullen, or subdued appears
'Neath torture dumb, or worn to groans and tears.
Lo, the chafed limb that never knew a grasp,
Save Love's or Friendship's,—mark the goading hasp,
Where in the mangled flesh the steel has worn,
The warm blood dripping from the wound, alas!
Already, though 'tis Misery's first morn,
Yet many a dreary day, and worst must pass
Ere they approach that spot which is to be
(If Pain and Misery can so long be borne,)
Even as the portals of Eternity!

III.

A long, long fetter'd row, the foremost brow
Wearing the harsh sternfeatures of the hind,
Doom'd from his birth to toil, and rude in mind
The tool of his liege lord,—a bondsman still,
Even when thus leagued, to assist the blow,
A dull—dark instrument of other's will,
Another, and another, till at last
One of more haughty glance and lofty mien,
Fetter'd alike, now moves along between
The sullen soldiery; the nobler cast
Of Freedom settled on his brow and lip,
Marks the superior;—Torture's deadly goad,
Though witness'd by his feet's ensanguin'd drip
Bespeaks itself no more, as on the road
He moves disdainfully, ev'n if at heart,
Fester'd Despair and Pain with rankling smart;
But, late a Prince,—and now, 'twere vain to ask,—
Successless Freedom, ever has the mask
Of dark Rebellion on its features placed,
And branded, falls,—not deified, but disgraced.

IV.

Fair fields recede—and deserts now arise
As arid as their hopes,—whilst day by day,
Beholds their ghastly numbers fall away
As some fast-sickening wretched one, outworn,
Drops to the Earth, and 'ere the morrow, dies;
For though stern Fate, in spirit may be borne,
The limb will fail too oft, where life would brave,
In soul unshaken, but to Death a slave.
Oh, where is now each kinder, gentler breast,
To soothe in sickness, and alleviate woe?
Doom'd to the hopeless sentence which exiles,
No more shall tenderness with soft sweet smiles,
Look on those wasted forms:—no more caress'd,
Shall parent, child, or partner ever know
The bliss of nature to receive again
Joy's fond embrace, or hear Affection's strain.
Their's is a grief more harrowing, more drear,
Than if upon the spirit-yielded corse
The tongue's sad plaint, and eyes o'erflowing tear

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Pour'd its wild wail, and Hope drew no resource,
All suffering past, but, oh! the living doom
Knowing—*there*, Misery preys with fierce controul,
Heaps weightier sorrow on the sinking soul,
Than if their clay-cold relics fill'd the tomb.

V.

Onward and onward, every fleeting hour
Fills Time's wide gap up with Despair and Pain,
And suffering scarce can drag the goading chain,
And Pity there is none; cold, as the air
Which they now breathe,—where not one smiling flower
(Those types of Love and Sweetness) blossom there;
So seems all Nature, whilst the icy clime
Soon deals its rigours too, on Freedom's crime.
Alas, the soul can have no mortal pang
Like utter hopelessness, when Misery's fang
(Coil'd as a serpent round the human heart)
Goads on to madness,—and its ven'mous dart
Through the blood's pulse,—'tis then Strife's deadliest blow
Would be wild rapture to such frenzied woe.
Onward and onward.—'till the morn at last
Dawn'd on the captives, which was doomed to be
The last of light, but not of Misery;—
Hope long had flown, but still around had cast
A hectic-like disease,—when health is gone,
And the wan spectral shadow glimmers past,
Breathing a death-note in its lingering moan.

VI.

But, hark! a murmur stirs the exil'd band,
And the eyes langnor o'er the wasted cheek,
Darts all its horrors, as their wild looks seek
That goal of destiny, for none demand,
But as by presage, seem to know the spot
Which was to add Hell's terrors to their lot.
The dreaded "Halt," at length is heard around,
Which peal'd as awful as th' Archangel's sound,
When Earth shall be dissolved; the toil,—the blood
Wrung by the galling chain,—Fatigue,— nor woe
Had nought like this to pale the hardihood,
And bring the spirit's late stern impulse low.
There, yawn'd th' abyss,—in which, Day was not Light;
Life, scarce existence,— Darkness, but the sight;
Hope, a wan maniac, impotent and blind;
Time, as a streamless desert to the mind,
But Death, at whose dark shadow mankind starts,
The Syren image of despairing hearts.

VII.

Oh! what can equal this appalling hour?
The rocks, woods, rivers, hills, vale, fount, or bower,
And yon bright sun, which now around them streams,—
Alas, for them, Memory's desponding dreams
Will soon be all on which the sense can dwell:
Now, may they take a last, long, lone Farewell,
For hark, the awful sentence is begun
To deal a doom all would give Life to shun;
No more on them shall Heaven's fresh breezes swell,
But "dust to dust," denote their dream as done.
The proud, the princely, who, 'ere late had roll'd
In the high pageantries of pomp and state,
Stands the first victim summoned to his fate;
Behold, his haught demeanor, and behold
In the pale-haggard features, still that stern
Undaunted spirit which would scorn to turn
One accent for forgiveness; to the last
Fierce as the eagle, when its pinions spurn
The raging tempest, struggling in the blast,
Sullen, he past away,—whilst on his head,
Knell'd the deep prayer for the departed, said,
Fell the few ashes, sprinkled for the dead;
Whatever inward tortures were possess'd,
No fear reveal'd, nor faintest tremor shown,
Mark'd that Despair, or Misery wrung his breast;
Led to the fatal bourne,—thus, one by one
Answer the awful mandate's hopeless call,
Though, that high feeling of disdainful pride,
Which nerv'd that haughty bosom,—nerv'd not all;
The dreadful sentence, in some humbler few,
Turn'd former Fortitude's strong stream aside,
As if they groan'd forth, with the abyss in view,—
"Oh, happy in my mind, was he who died."

COLONIAL APATHY.

It is but poor consolation for the Cape to find other parts of the world alike with it in supineness and culpable indifference to the vast displays of the natural resources of the country which either present themselves to the eye, or require the diligence of research. It may appear incredible to some of our readers, and yet the following is by no means a solitary fact of that disgraceful indolgence which prevails in many of the Cape districts: some travellers sojourned at the house of a farmer in the course of the last month, the master of which was owner of forty thousand acres of land of the most useful and improveable kind. There was no bread in the house; and he confessed the family had been without that article of life for many months. Neither was there any milk or butter—but of pickled mutton and sheep's-tail fat there were abundance. No signs of cultivation appeared—not a tree, not a shrub, not a vegetable, not a flower; but all around wore the aspect of wretchednesss and poverty.

But let us turn our attention to one of our West India Islands. Dr. Madden, recently a Stipendiary Magistrate under the Compensation Act, thus characterizes the Jamaica men.

On a late excursion with Mr. Jerdan to the summit of one of the mountains of Liguanea, called Peter's Rock, in some places where detached portions of the side of the mountain had slipped away, we were surprised at the amazing quantity of copper ore that was visible, not in veins, but in petrous masses about three or four pounds weight. I am astonished, amongst all the mining companies that have been established for other countries, that speculating people at home have never made a trial of the lead and copper mines here. The unsuccessful experiment that was made by ignorant people, and on too small a scale to be productive of any good, is no argument against a further trial. It must not be supposed, because the people of Jamaica take no advantage of the natural resources of the country, that they are not worth attending to. The people of Jamaica make no novel experiments; they find the sugar planted, and where it is they continue to cultivate it: they find the hoe the ancient implement of the husbandman, and they have no desire to change it for the plough. They want to build a house—they send to England for the bricks, rather than cut stone from the quarries which everywhere abound. They object to the introduction of steam-engines for the sugar-mills, that the scarcity of fire-wood is too great; and yet, if the first geologist of Europe were to visit Jamaica, and state that the indication of coal was evident in the formations of the neighbouring mountains (and that there are such indications I have little doubt), no effort would be made to obtain it. In fact, no adequate effort has been made to develope the one-twentieth part of the available resources of this naturally rich and fertile country.

THE PHILOSOPHY OF ACCIDENT,—CHANGES IN SOCIETY,—REVOLUTIONS IN THE HUMAN MIND,—THE SCOTTISH REFORMATION,—SMALL MEANS, ETC.

In the history of every community, observes a modern writer, there are periods of comparative quiet, when the great machine of society performs all its various movements so smoothly and regularly, that there is nothing to remind us of its being in motion. And who has not remarked that when an unlooked for accident sets it a-jarring, by breaking up some minor wheel or axis, there follows a whole series of disasters,—pressing the one upon the other, with stroke after stroke, until, stunned by the repetition, we begin to tremble lest the machine itself be falling into pieces. We live, perhaps, in some quiet village, and we see our neighbours, the inhabitants, moving noiselessly around us,—the young rising up to maturity, the old descending slowly to the grave. Death for a whole series of years draughts out his usual number of conscripts from among only the weak and the aged; and there is no irregular impressment of the young and vigorous in the way of accident. Anon, however, there succeeds a series of disasters. One of the villagers topples over a precipice, one is engulfed in a morass, one is torn to pieces by the wheels of an engine, one perishes in fording a river, one falls by the hand of an enemy, one dies by his own. And then in a few months, perhaps, the old order of things is again established, and all goes on regularly as before. In the phenomena of even the inanimate world we see marks of a similar economy. Whoever has mused for a single half hour by the side of a waterfall, must have remarked that, without any apparent change in the volume of the stream, the waters descend at one time louder and more furious, at another gentler and more subdued. Whoever has listened to the howlings of the night wind must have heard it sinking, at intervals, into long hollow pauses, and then rising and sweeping onwards, gust after gust. Whoever has stood on the sea shore during a tempest must have observed that the waves roll towards their iron barrier in alternate serieses of greater and lesser,—now fretting ineffectually against it, now thundering irresistibly over. But between the irregularities of the inanimate world, and those of the rational, there exits one striking difference. We may assign natural causes for the alternate rises and falls of the winds and waters; but it is not thus in most instances with those ebbs and flows, and gusts and pauses, which occur in the world of man. They set our reasonings at defiance, and we can refer them to only the will of the Deity. We can only say regarding them, that the climax is a favourite figure in the book of Providence;—that God speaks to us in his dispensations, and in the more eloquent turns of his discourse, piles up instance upon instance, with sublime and impressive profusion.

To the people of Scotland the whole of the seventeenth century was occupied by one continuous series of suffering and disaster. And though we can assign causes for every one of the evils which compose the series, just as we begin to assign causes for every single accident which befalls the villagers, or for the repeated attacks and intervening pauses of the hurricane, it is a rather different matter to account for the series itself. In flinging a die we may chance on any one certain number

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

as readily as on any other; but it would be a rare occurrence, indeed, should the same number turn up twenty times together. And is there nothing singular in the fact, that, for a whole century, a nation should be invariably unfortunate in every change with which it was visited, and meet with only disaster in all its undertakings. There turned up an unlucky number at every cast of the die. Even when the shout of the persecutor, and the groans of his victim, had ceased to echo among our rocks and caverns, the very elements arrayed themselves against the people, and wasting famine, and exterminating pestilence did the work of the priest and the tyrant.

Human nature is a sad thing when subjected to the best of circumstances so trying, and is wholly unfitted for the encounter, unaided by the power of religion on the mind. Happily our virtuous ancestors were never left destitute of christian hope, and this hope became the anchor to their souls—"sure and stedfast." The day of adversity passed away, they were seasoned for the return of peace and enjoyment—they were made "perfect through suffering!"

But there is one point in Scottish history which should always create a more than ordinary attention. It is that of the out-break of the Reformation. In the history of the book of Providence, how innumerable are the instances of the "small means" which have been brought into action to accomplish mighty purposes. But of all purposes, or changes, or revolutions, it will be conceded, we think, that revolutions in the state of the human mind present more interest, and yield more instruction than those which affect the arrangement of communities and empires, and which are the effect of the human law. The revolt from the Pope, and the expulsion of Aristotle from the schools, are ampler themes for education and reflection than the fall of Kingdoms. and the changes in religious faith wrought by Luther and Calvin, more forcibly attract the cultivated mind than the conquests of Alexander or Napoleon, for in this comparison the devastations effected by the devastations of the globe are coarse and vulgar matters. But to return to the point in Scottish History, on which we intended more immediately to dwell; all our readers are not perhaps aware of the "small means" which ushered in the dawn of Scotland's Reformation. These are described by Grant Thorburn, in his little book—"Men and Manners in Britain;" chapter xii., entitled:—

EDINBURGH,—ANTIQUARIAN MUSEUM,—JOHN KNOX'S PULPIT,—COVENANTERS' FLAG,—JENNY GEDDES' STOOL.

——————Times,
Whose echo rings through Scotland to this hour.
(*Wordsworth.*)

Visited the museum of the Antiquarian Society. The pulpit of John Knox, the Scottish Reformer, stands in one of the rooms,* also a silk flag taken from the Covenanters at the battle of Bothwell Bridge in 1556. The flag bears the following motto:

COVENANTS, RELIGION, KING AND COUNTRY.

Jenny Geddes's stool is also standing here. It is formed from four pieces of timber crossed, with a piece of black leather for a top, so when stretched out and set down, it makes a seat in the shape of a small bed cot—when lifted it folds up, and it may be carried in the hand. This stool is a relict connected with a very important part of Scottish history. Jenny Geddes kept a stall in the High-street of Edinburgh for retailing vegetables. I think it was about the year 1660, when Charles II. was so anxious to introduce Episcopacy into Scotland, that Jenny Geddes and her stool is first heard of in the annals of Scotland.

In those days there were no pews in the churches, and at the present day, in the old chapels and cathedrals in England, there are not seats enough to accommodate the one-half of the congregation. In Westminster Abbey and St. Paul's Cathedral, but more especially in the latter, the greater part of the pews and seats are occupied by readers, chanters and singers: the majority of the congregation stand during the whole of the service. Well, the important Sabbath day arrived, when, in obedience to the king's proclamation, prayers were to be read in all the churches of Scotland. The people, almost to a man, were opposed to this anti-Christian innovation, as they termed the reading of prayers. Jenny, as her custom was while the bell was tolling, might be seen plodding along the High street, entering the *Auld Kerk*, placing her stool and her person very composedly under the pulpit or reading desk. The organ thrums off a solo. Jenny sent forth a heavy groan. The Bishop rises on his feet, white surplice, black gown, white bands, powdered wig, and all his canonicals in order. Jenny thought he was the very Pope himself. He proceeds, "Dearly beloved brethren, the Scripture moveth us," &c. Jenny thought with herself that the *Deil* was moving him. He calls on the Dean to read the *Collect* for the day. She jumps up, and exclaims, in her Scottish dialect, "*The muckle Deil, colic the name o' ye! will ye say mass in my face?*" and flinging the stool at his head, commenced an insurrection which, continuing for twenty-eight years, terminated in *the overthrow of the Stewarts by the revolution of* 1688, *which placed William on the Throne of Britain.*

* Almost every one who visits the museum have a wish to stand in this pulpit. The managers, fearing lest this perpetual motion would bring it to pieces, had the stairs cut off. I also had a wish to stand in this hot-bed of Reformation. I told the Secretary I would not ask to infringe on any positive order of the house, but if there could be any exception, I certainly would like to enter that pulpit. He handed a chair, and helped me in at once. I must say I felt pleased when my feet stood where stood the feet of that great man, and my hands rested on that sacred desk from whence streams flowed as pure as ever watered the city of God. The pulpit is of hard oak, and has never been painted; it is still in good repair, though nearly 300 years old.

FREEDOM OF THE EASTERN SEAS,—BRIGHTER PROSPECTS OF EASTERN AFRICA,—SULTAN OF MUSCAT,—ZANZIBAR,—MOMBASA,—BRITISH ENTERPRISE,—AMERICAN TRADERS, ETC. ETC.

THE perfect freedom of trade now established in the seas eastward of this Colony; the extension of Mohammed Ali's power through the Red Sea, as far as Mocha; the improvements of Zanzibar, and its trade just opened with London;—are all of recent occurrences, indicating and aiding the important revolution which is about to take place in the circumstances of Eastern Africa. This revolution or development will be still further promoted if the East India Company purchase (as it is said they intend to do,) the island of Socotra, as a depôt for coal in the projected steam-navigation between Bombay and Suez.

The Sultan of Muscbat has resided during the last three years in Zanzibar, labouring with no less success than diligence in developing the resources of that fertile island. He employs a number of experienced sugar-makers, obtained at high salaries from Bourbon and the Isle of France; and the Sugars of Zanzibar already hold a very high place in the market. The cultivation of indigo, cotton, and of coffee—of ginger, cinnamon, cloves, and other spices, likewise engages his attention. But the spirit and enterprise of British merchants have done more for him than he probably ever anticipated; and the unlooked for experiment made in the commencement of last year of a direct trade between London and Zanzibar, which was crowned with complete success, cannot fail to call forth the commercial resources of Eastern Africa, and to lead to the most important results. It is singular enough that cargoes laden in Zanzibar had previously reached London from the *United States*, but the quarter whence they originally came was kept *profoundly secret by the American exporters*. There is now an English house established in Zanzibar, and we believe we are justified in asserting that the value of the importations into that island from London, in the first year of their direct intercourse, exceeded considerably that of the importations of all the Portuguese colonies in Africa put together.

But Seïd Sa'id, in the midst of his prosperity, laments one heavy disappointment. While indulged by fortune in all other respects, he has been repeatedly foiled in the favourite object of his ambition. As soon as his power was sufficiently established in Arabia, and he had leisure to look to the coast of Africa, the advantageous position of Mombása necessarily caught his attention. Rightful claim to it he had none, but he deemed himself the stronger party, and had too much common sense, under such circumstances, to talk of legitimacy. He had obtained possession of Patta, in 1817, by stratagem, and expected little resistance from the aged Sultan of Mombása. The numerical superiority of his forces enabled him to make himself master of the island of Pemba, which, with the low coast extending from Melinda southwards to the river Pangány, was dependant on Mombása, but he gained no further positive advantage. The ability and bravery of Mebárak, the son of Sultan Ahmed of Mombása, made up for the inferiority of his numbers. Yet the people of Mombása suffered severely from the protracted warfare; their commerce was hindered by the vigilance and naval superiority of the enemy; the fortifications of their little island were crumbling to decay, and seemed little capable of standing a siege. Under these circumstances, knowing that British ships of war were on the coast, they resolved to cede their little state to Great Britain, and, confidently anticipating the acceptance of their offer, they hoisted the British flag. This politic measure succeeded; Captain Owen accepted the conditional cession of Mombása; a truce of course took place between the contending parties, and the force of the Sultan of Muscat, which appeared in hostile array in the offing, entered the harbour as friends. The British Government, however, were unwilling to increase the number of British colonies, already too widely scattered, by accepting the cession of a petty state on the eastern coast of Africa, to which, in the then existing circumstances of the commercial world, no great importance could be attached. Orders were accordingly sent to give the place up, but delays arose in the transmission of these orders,—owing, we believe, to the reluctance of the naval officer commanding on that station to resign so fine a harbour; and for nearly three years the British flag waved on the fort of Mombása, The place was at length yielded up by the English, not—be it observed—to the Sultan of Muscat, but to its native and hereditary chiefs, from whom it had been accepted on conditions. The Governor of Bombay was at the same time instructed to exert his influence with the Sultan of Muscat, to prevent his molesting the people of Mombása any further.

It is highly gratifving to reflect, that during the greater part of the period that Mombàsa continued under the protection of Great Britain, the post of commandant was filled there by an officer who exercised his influence or authority in a manner honourable alike to his nation and to himself. Lieutenant Reitz, (of this Colony,) who first took

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the command of that place, soon perished in an ill-timed attempt to explore the river Pangány, which flows through the most populous country known to the Arabs in Eastern Africa. His successor, Lieutenant Emery, desirous of employing a number of liberated Africans who were placed under his care, conceived the bold design of improving the port of Mombása, by the construction of a good landing place. For this purpose he cut three flights of steps through the solid rock; and from the base of the cliff to which they conducted, he ran out a pier or jetty to a considerable distance. In the rock adjoining the stairs he cut a lateral gallery, at the extremity of which he sunk a well and found good water. The watering place previously resorted to by the shipping, was two miles distant from the anchorage. This work, we are assured, was in every respect well executed, and would not disgrace an experienced engineer. To the Arabs of Mombása it appeared stupendous, and they were at a loss which to admire most, the abilities or disinterestedness of Lieutenant Emery, for the expense of all the improvements effected by him, was defrayed out of the share of the port duties alloted by the terms of the cession for the support of himself and his party. The British flag attracted the Banyans in great numbers to Mombása, who, sure of protection, gave at once loose reins to their mercantile enterprise. The firmness of Lieut. Emery fully justified their confidence, nor did he quit the place before their accounts were settled, and interests secured. That young officer, in short, completely subdued the prejudices and gained the affections of the people of Mombása. The day of his departure, after a two years' residence among them, was a day of general mourning throughout the island. Previously to that period, the English were more dreaded than esteemed by the Arabs of Eastern Africa, but now they are acknowledged by them to be as beneficent at least as they are powerful.

During a three years' peace, with an improved administration, Mombása acquired new strength and fresh resources. As soon as the English abandoned it, the Sultan of Muscat recommenced his attacks on it; and of these he has made four within the last ten years, but without the least success. His attempt to reduce the place by blockade was frustrated by the violence of the south-eastern monsoon. His assault on it two years ago was repulsed with great slaughter. The death of the heroic Mebárak, Sheikh of Mombása, so far from damping the ardour of his people, gave a loose to the commemoration of his virtues, which served to spread far and wide the enthusiasm of the cause in which he perished. The people of Mombása obtained, and continued to obtain, their warlike stores from Bombay; nor could the representations of the Sultan of Muscat induce the Anglo-Indian Government to deviate from the path of strict neutrality.

Irritated by his defeats, and despairing of subduing Mombása by his single strength, or of making the English the tools of his ambition, the Sultan of Muscat betook himself *to the Americans, whose traders have of late years grown numerous on the coasts of Arabia and Eastern Africa.* In negotiating with these adventurers he had few scruples to contend with; and it was soon agreed between the parties, that the Americans should have a factory in Zanzibar, or on whatever part of the African coast they might select, with exclusive privileges of trade, provided that they enabled the Sultan to reduce Mombása. As soon as this transaction was known at Bombay, a ship of war was sent to Zanzibar (in April 1834), to demand explanations, and thus was frustrated, we presume, the scheme of conquest concerted by the Sultan with the Americans. *The latter are extremely desirous to possess a good port in the Arabian seas.* They carry on much trade with Madagascar, Mocha, and Zanzibar; adroitly availing themselves of that exclusion of British activity and enterprise from those seas, which was heretofore in a great measure occasioned by the monopoly of the East India Company.

To our mercantile readers, in reference to the last article, we apprehend, the subject of trade on the Eastern shores, should not be an unwelcome one, and we recommend to their notice the ampler details of this question in the last *Edinburgh Review*, page 342. From the body of evidence therein set forth, it will be seen that the Arabs have a wide and easy access to the very interior of Africa; that their traffic pervades the entire population of the eastern side of this continent, as far down as the 12th degree of south latitude. It should be noted, that the population in the island of Zanzibar, according to the Sultan of Muscat, is estimated at 400,000 souls. The town of Zanzibar contains not less than 10,000 inhabitants. Great results are anticipated from the British establishments now forming in the island.

LITERARY EXTRACTS.

MR BROWN.

THIS singular character is thus described in "Mephistophiles in England:"

Almost every thing he wore was a particular shade of brown; brown hat, brown wig, brown—*no very red face,* with nose to match; brown coat, brown waistcoat, brown small clothes, and handkerchief of the same colour. His predilection for this particular suit was continually evinced. He always had his meat done brown; ate brown bread, drank brown stout, rode a brown mare; was partial to brown dogs; very often went without gloves that his hands might be browned by the sun; and, whenever he seemed reflecting, was always in a brown study. He liked to see every thing painted brown; used brown furniture, curtains, carpets; and in fact, carried this one idea to such an extent that his minister was a Revd. Brown, his physician Dr. Brown; and once as I was passing through his hall, and required the services of the footman, whose name I heard, I called out "Brown!" and in an instant, the butler, under-butler, coachman, groom, footman, stable-boy, game-keeper, and half-a-dozen female servants, rushed towards me—they were all *Browns.*

OLD LONDON.

The present race of Londoners little know what the appearance of the city was a century ago; their own city, I was about to have said; but it was the city of their great grandfathers, not theirs, from which the elder Allisons retired in the year 1746. At that time the kennels (as in Paris) were in the middle of the street, and there were no foot-paths; spouts projected the rain-water in streams, against which umbrellas, if umbrellas had been then in use, could have afforded no defence; and large signs, such as are now only to be seen at country inns, were suspended before every shop, from posts which impeded the way, or from iron supports strongly fixed into the front of the house. The swinging of one of the broad signs in a high wind, and the weight of the iron on which it acted, sometimes brought the wall down; and it is recorded that one front wall of this kind in Fleet-street maimed several persons, and killed "two young ladies, a cobbler, and a king's jeweller."—*The Doctor, vol. 3.*

HOW TO TELL A GENTLEMAN.

"Because you are a gentleman," replied the girl, curtseying, "for all your homespun clothes."—"Ha! pray how have you found that out?"—"You talk differently from our people, sir. Your words or your voice—I can't rightly tell which—are softer than I have been used to hear. And you don't look, and walk, and behave as if homespun was all you ever wore."—"And is that all?"—"You stop to consider, as if you were studying what would please other people; and you do not step so heavy, sir; and you do not swear; and you do not seem to like to give trouble; I can't think, sir, that you have been always used to such as are hereabouts."—*Kennedy's Horse-Shoe Robinson.*

GRAND MEETING.

A grand festival of no less than seventeen temperance societies in the towns and villages round Wilsden (Yorkshire) was held. The vast body of members who arrived at the appointed ground in succession, each headed by a banner, presented a most interesting and imposing spectacle. At 12 o'clock on Monday (*August 3d*) Wilsden church was filled by the temperance societies. Several highly interesting speeches were delivered on this and subsequent occasions (in the evening, and on Tuesday, both in the morning and evening), by Mr. Buckingham, Reverend G. S. Bull, Messrs Tompson of Halifax, E. Parsons of Leeds, Pollard, agent of the Yorkshire society, and Livesey, Anderton (the temperance poet), and Swidlehurst (King of the Reformed drunkards), all of Preston. Striking pictures from real life were drawn of the evils of intemperance, and of the blessings resulting from moderation, but especially from total abstinence; which was shown to have been remarkably beneficial to the health of sawyers, pressers, and others engaged in the more laborious and exhausting employments. In a field near the church, a splendidly decorated booth, forty-five yards by eighteen, had been erected, down which seven rows of tables were arranged. In the afternoon of Monday, one thousand four hundred persons sat down together to tea, and were succeeded by one thousand one hundred, who in their turn were followed by two hundred. Mirth and cheerfulness pervaded the vast assemblage; and, when morally considered, scarcely any sight could be of equal interest on this occasion. Next day the proceedings were resumed: a prayer meeting and a public meeting were held, and tea was again partaken of by an immense number of individuals. The same evening the festival *terminated.*—*Leeds Mercury.*

The British Magazine publishes the following statement of the sources of church of England patronage:—Patrons of benefices: the King, 93 benefices; ditto as Prince of Wales, 35; Duke of Lancaster, 52; the King by the Lord Chancellor, 824—in all, 1004: bishops, 1298; deans, 70; chapters, 694; dignitaries and prebends, 291—in all, 2353: Oxford, 432; Cambridge, 312; Eton, 42; Winchester, 15; St. Davids, 4—in all, 805: private patrons and lay corporations, 6548—total in England and Wales, 10,711. The more usual statement is, clerical, 2353; collegiate, 805; lay patrons, 7523—in all, 10,711.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

THE COAST GUARD OF ENGLAND.

LIBRARIES of a religious and useful class are forming at home for the Coast Guard,—the men with their families amounting to upwards of 21,000 souls. These Libraries are carried on by voluntary subscriptions, and the Government has kindly granted £500 towards the extension of objects so desirable. *(Herald.)*

FRENCH NATIONAL UNDERTAKING.

THE CHERBOURG BREAKWATER.

The great dam, about twenty minutes' walk below Cherbourg, which, together with Fort Napoleon, were so seriously injured by the storms of February and March, 1807, and again by that of February, 1808, is beginning to wear a substantial appearance; it is carrying out in an easterly direction, and will stretch about 3,200 feet (500 toises), from the fort on Pelée Island; by this means, and a fort at the extremity of the dam, so powerful a cross-fire will be obtained, that it is improbable any enemy will hereafter venture to attempt forcing a passage. The construction of the dam was commenced about fifty years ago; it has been prosecuted under various interruptions, and will probably be terminated after undergoing a host of modifications in the plan of its construction. Political convulsions sunk it almost into oblivion in the days of the National Convention and Directory; but the work was resumed by Napoleon's directions, in whose time 28,000*l.* were annually appropriated to it. For eight years subsequently to the restoration of the Bourbons it was again wholly neglected. In 1823, however, a sum of 20,000*l.* was spent upon the centre battery; and in 1827, Hyde de Neuville, the Secretary of the Navy, raised the grant to the sum which Napoleon had set down, and it is intended next year to increase it to 68,000*l.* a year; this grant will enable the Government to make rapid advances in completing the masonry of the dam. Cochin, the engineer, has estimated the quantity of stone already sunk in the bight of Cherbourg at upwards of 3,700,000 cubic metres; and not less than 2,800,000 more will be required before the undertaking is completed. Up to the present day the expenditure upon it amounts to more than 840,000*l.* sterling; and it is calculated that as much more will be necessary before it is terminated. The harbour of Cherbourg possesses no claims whatever in a Commercial point of view; but in a military one it is of high importance, for there is no roadstead on the French coast fit to be named on the same day with it, with reference to breadth, depth, and security. It is capable of receiving 50 ships of the line; and has space enough for all of them to manœuvre at their ease, *and run out of it at all seasons of the year.*"

BRITISH FORBEARANCE AND PHILANTHROPY.

MR. LORD, in his excellent Work on Algiers, has presented to us some interesting particulars of Lord Exmouth's policy when the English fleet arrived before the city of Algiers. Unwilling to chastise the Dey of Algiers further than had already been done, Lord Exmouth addressed a letter to him in the following terms:—

"SIR,

"For your atrocities at Bona on defenceless Christians, and your unbecoming disregard to the demands I made yesterday, in the name of the Prince Regent of England, the fleet under my orders has given you a signal chastisement, by the total destruction of your navy, store-houses, and arsenal, with half your batteries.

"As England does not war for the destruction of cities, I am unwilling to visit your personal cruelties upon the inoffensive inhabitants of the country, and I therefore offer you the same terms of peace, which I conveyed to you yesterday in my Sovereign's name; without the acceptance of these terms, you can have no peace with England.

"If you receive this offer as you ought, you will fire three guns; and I shall consider your not making this signal as a refusal, and shall renew my operations at my own convenience.

"I offer you the above terms, provided neither the British consul, nor the officers and men so wickedly seized by you from the boats of a British ship-of war, have met with any cruel treatment, or any of the Christian slaves in your power; and I repeat my demand, that the consul, and officers and men, may be sent off to me conformable to ancient treaties. "I have, &c.

"EXMOUTH"

At the same time that he despatched this letter, orders were given to the bomb-vessels to resume their situations,—so that the bombardment, if necessary, might be at once renewed. All further hostilities, however, were prevented by the Dey, after three hours' consideration, firing the three guns, directed as a signal of acceptance. Negotiations were immediately opened in form; and on the 30th August the admiral published a notification to the fleet, that all demands had been complied with, the British consul had been indemnified for his losses, and the Dey, in presence of all his officers, had made him a public apology for the insults offered him. On the 1st of September, Lord Exmouth had the pleasure of informing the secretary of the Admiralty, that all the slaves in the city of Algiers, and its immediate vicinity were embarked; as also 357,000 dollars for Naples, and 25,000 dollars for Sardinia.

The number of slaves thus released amounted to one thousand and eighty-three; of whom four hundred and seventy-one were Neapolitans, two hundred and thirty-six Sicilians, one hundred and seventy-three Romans, six Tuscans, one hundred and sixty-one Spaniards, one Portuguese, seven Greeks, twenty-eight Dutch, *and not one single Englishman.*

English Journal in Paris.—The London and Paris Courier, in English, has been well received in France. The shares have been all taken, and it promises a good understanding between Great Britain and France.

Savings' Banks.—These important Institutions are now rapidly increasing in France. Upwards of 124 Banks duly authorised, have been formed. On the 30th of June, the balance in hand was 49,897,000*fr.*

The Comet.—London, August 1st. The extraordinary heat of our weather indicates a comet year; and it is worthy of observation, how generally atmospheric and other natural phenomena are connected with the appearance of these once terrific visitors.—*Literary Gazette.*

The Sea Serpent again!—Decidedly seen on Lake Ontario, according to the averment of the Capt. of an American schooner, who ran up the rigging to avoid being swallowed. From this station he surveyed the *serpent* for a quarter of an hour, and found it to be 78 feet long, bluish, with brown spots; tapering at both extremities, and as big as a flour-barrel in the middle.—*Ib.*

HALIFAX GIBBET LAW.

Daniel Defoe has left an extremely interesting account of the "Halifax Gibbet Law," but its length forbids extraction, and as to the law itself, or rather custom, it is well known by the celebrity which the Halifax instrument of punishment has acquired as the model of the Maiden, introduced into Scotland by the Regent Morton, who was the first to fall under its axe. An anecdote from Defoe must conclude these notices of our ancient criminal administration in reference to the *ultimum supplicium*:—

"They tell us of a custom which prevailed here, in the case of a criminal being to be executed, viz. that if after his head was laid down, and the signal given to pull out the pin, he could be so nimble as to snatch out his head between the pulling out the pin and the falling down of the axe, and could get upon his feet, jump off the scaffold, run down a hill that lies just before it, and get through the river before the executioner could overtake him, and seize upon him, he was to escape; and, though the executioner did overtake him on the other side of the river, he was not to bring him back, at least he was not to be executed.

"But as they showed me the form of the scaffold, and the weight of the axe, it was, in my opinion, next to impossible any man should be so quick-eyed as to see the pulling out the pin, and so quick with his head as to snatch it out. Yet they tell a story of one fellow that did it, and was so bold after he had jumped off the scaffold and was running down the hill, with the executioner at his heels, to turn about and to call to the people to give him his hat; that having afterwards jumped into the river, which is but a little one, and not deep, he stopped, intending to drown the executioner, if he had come up to him; at which the poor fellow stopped too, and was afraid to go into the water to seize him. *(Monthly Magazine.)*

Liberty is not idleness—it is a free use of time to choose our labour and our exercise; in one word, to be free, is not to do nothing, but to be the sole arbiter of what we do, and what we leave undone. In this sense, what good so great as liberty?

Governments depend far more than is generally supposed upon the opinion of the people, and the spirit and the age of the nation. It sometimes happens that a "gigantic mind" possesses supreme power, and rises superior to the age in which he is born; such was Alfred in England and Peter in Russia; but such instances are very rare; and, in general, it is neither among sovereigns nor the higher classes of society, that the great improvers or benefactors of mankind are to be found.

"Our most Religious King."—This phrase was originally introduced into a new Collect framed in the reign of Charles the Second, and then only conveyed the meaning of the Latin word Religiosus, importing the sacredness of the Royal person.

Money.—Odart, a Piedmontese conspirator for Catherine, used to say, "I see there is no regard for any thing but money, and money I will have. I would go this night and set fire to the palace for money; and when I had got enough, I would retire to my own country, and there live like an honest man." More than once the empress offered him a title: "No, madam, I thank you," said Odart; "money, money, if you please." He did get money, went to Nice, and there he is said to have lived as became a gentleman.

The Army.—The following regiments are for foreign service:—27th and 28th, already sailed; 43d. 60th, 80th, and 90th. Next to return from foreign service: 1st Royals, 22d, 25th, 38th, 96th, 97th, and 98th. Next again for service: 1st Royals, 2d battalion, 14th, 81st, 85th, 89th, and 91st. Next again for home: 7th, 42d, 79th, 88th, and 1st Rifle Brigade.

WAR AND ITS EVIL CONSEQUENCES,—POVERTY AND MISERY OF THE WORKING CLASSES,—UNCONTAMINATED PARTS OF ENGLAND,—CHEAP PUBLICATIONS,—EDUCATION,—SCOTTISH EDUCATION,—INTELLIGENCE AND INDUSTRY.

BY WILLIAM HOWITT.

There never was a more momentous and sure truth pronounced, than that pronounced by Christ—"They who take the sword, shall fall by the sword." If they do not fall by its edge, they will by its hilt. It is under this evil that we are now labouring. As a nation, we have fallen through war into all our present misery and crime. It is impossible that the great European kingdoms, with their present wealth and cultivated surfaces in their present artificial state of society, can carry on war without enduring evils far more extensive, tremendous, and lasting, than the mere ravaging of lands, the destruction of towns, or even human lives. We are as a nation, an awful proof of this at this moment. By the chances of war, at one time, manufacturing and farming almost for the world; prospering, apparently, on the miseries of whole kingdoms wrapt in one wide scene of promiscuous carnage and anarchy, our tradesmen and agriculturists commanded their own terms; and hence, on the one hand, they accumulated large fortunes, while on the other, the nation, by its enormous military preparations—its fleets and armies marching and sailing everywhere, prepared to meet emergencies at all points and in all climes; by its aids and subsidies abroad; by its wasteful expenditure at home—piled up the most astounding debt ever heard of in the annals of the world. A vast working population was not merely demanded by this unnatural state of excitement, but might be said to be forced into existence, to supply all manner of articles to realms too busy in mutual slaughter to be able to manufacture or plough for themselves. Everything assumed a new and wonderful value. All classes, the working classes as well as the rest, with the apparent growing prosperity, advanced into habits of higher refinement and luxury. The tables of mechanics were heaped with loads of viands of the best quality, and of the highest price, as earliest in the market; their houses were crowded with furniture, till they themselves could scarcely turn round in them—clocks, sometimes two or three in one house; chests of drawers and tables thronged into the smallest rooms; looking-glasses, tea-trays, and prints, stuck on every possible space on the walls; and, from the ceiling depending hams bags, baskets, fly-cages of many colours, and a miscellaneous congregation of other articles, that gave their abodes more the aspect of ware-rooms or museums, than the dwellings of the working class. Dress advanced in the same ratio; horses and gigs were in vast request; and the publicans and keepers of tea-gardens made ample fortunes.

The war ceased. Commerce was thrown open to the competition of the world. The continental nations began to breathe, and to look round on their condition. Their poverty and their spirit of emulation, the sight of their own stripped condition, and of England apparently enriched beyond calculation, at their expense, set them rapidly about helping themselves. This could not but be quickly and deeply felt here. To maintain our position, all manner of artificial means were adopted. Every class feeling the tide of wealth changing its course, strove to keep what it had got. The working class, as individually the weakest, because they had spent their gains as they came, went to the ground. The value of every necessary of life was kept up as much as possible by legal enactments. The rate of wages fell. The manufacturers impelled by the same necessity of struggling for the maintenance of their rank, were plunged into the most eager competition; the uttermost pressure of reduction fell on the labour of the operative, who, with their acquired habits, were ill able to bear it. They were thrust down to a condition the most pitiable and morally destructive—to excessive labour, to semi-starvation, to pauperism. They could not send their children to school—not so much from the expense of schooling—for that was made light by public contribution, and new plans of facility in teaching large numbers—but because they wanted every penny their children could earn by any means, to aid in the common support. Hence, mere infants were crowded in pestilent mills, when they should have been growing in the fresh air; and were stunted and blighted in body and in mind,—a system, the evil of which became so enormous as to call lately upon the attention of the legislature, and the indignant wonder of the nation. The parents themselves had not a moment's time to watch over their welfare or their morals; at least sixteen hours' unremitting daily labour being necessary to the most miserable existence. Evils accumulated on all sides. The working class considered themselves cast off from the sympathies of the upper classes, regarded and valued but as tools and machines; their children grew into ignorant depravity, in spite of all efforts of law or philanthropy to prevent them. These causes still operate wherever manufacturing extends: and, till the condition of this great class, whether in towns or villages, can be amended; till time for domestic relaxation can be given to the man, and a Christian, rather than a literary, education to the boy—an inculcation of the beauty and necessity of the great Christian principles; the necessity of reverencing the laws of God; doing, in all their intercourse with their fellow men, as they would be done by; the necessity of purity of life and justice of action, rather than the cant of religious feeling, and the blind mystery of sectarian doctrine,—the law and the philanthropy must be in vain.

To the simple, and yet uncontaminated parts of the country, there is yet a different kind of education that I should rejoice to see extended. It should be to open the eyes of the rural population to the advantages of their situation;—to awaken a taste for the enjoyment of nature;—to give them a touch of the poetical;—to teach them to see the pleasantness of their quiet lives,—of their cottages and gardens,—of the freshness of the air and country around them, especially as contrasted with the poor and squalid alleys where those of their own rank, living in towns, necessarily take up their abode—of the advantages in point of health and purity afforded to their children by their position,—of the majestic beauty of the day, with its morning animation, its evening sunsets, and twilights almost as beautiful; its nightly blue altitude, with its moon and stars:—all this might be readily done by the conversation of intelligent people, and by the diffusion of cheap publications amongst them; and done, too, without diminishing the relish for the daily business of their lives. Airy and dreamy notions—notions of false refinement, and aspirations of soaring

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

beyond their own sphere—are not inspired by sound and good intelligence, but by defective and bad education.

The sort of education I mean has long been realized in Scotland, and with the happiest results. There, large towns and manufactories have produced their legitimate effect, as with us; but, in the rural districts, every child, by national provision has a sound, plain education given him. He is brought up in habits of economy, and sentiments of rational religion, and the most solemn and thorough morality. The consequence is, that almost all grow up with a sense of self-respect; a sense of the dignity of human nature; a determined resolve of depending on their own exertions: and, though no people are so national, because they are made sensible of the beauty of their country, and the honourable deeds of their forefathers, yet, if they cannot find means of living at home without degradation, and, indeed, without bettering their condition, they soberly march off, and find some place where they can, though it be at the very ends of the earth.

Nothing is better known than the intelligence and order that distinguish a great portion of the rural population of Scotland. No people are more diligent and persevering in their proper avocations; and yet none are more alive to the delights of literature. Amid wild mountain tracks and vast heaths, where you scarcely see a house as you pass along for miles, and where you could not have passed two generations ago without danger of robbery or the dirk, they have book societies, and send new books to and fro to one another, with an alacrity and punctuality that are most delightful. When I have been pedestrianizing in that country, I have frequently accosted men at their work or in their working dress—perhaps with their axe or their spade in their hands, and three or four children at their heels—and found them well acquainted with the latest good publications, and entertaining the soundest notions of them; without the aid of critics. Such men in England would probably not have been able to read at all. They would have known nothing but the routine of their business, the state of the crop, and the gossip of the neighbourhood: but there, sturdy and laborious men tanned with the sun, or smeared with the marl in which they had been delving, have not only been able to give all the knowledge of the district; its histories and traditions; the proprietorships, and other particulars of the neighbourhood; but their eyes have brightened at the mention of their great patriots, reformers, and philosophers, and their tongues have grown perfectly eloquent in discussing the works of their poets and other writers. The names of Wallace, Bruce, Knox, Fletcher, of Saltoun, the Covenanters, Scott, Burns, Hogg, Campbell, Wilson, and others, have been spells that have made them march away miles with me, when they could not get me into their own houses, and find it difficult to turn back.

FIRST IMPRESSIONS.

(*From Cobbett's Register.*)

[No apology will be necessary, especially to the reader, for the insertion of the following beautifully descriptive and affecting extract from "Cobbett's Year's Residence in America," which extract is from his Journal, dated 16th January, 1818, and was written when at Philadelphia, in which city he had, many years before, resided.]

The question eagerly put to me by every one in Philadelphia is, "Don't you think the city greatly improved?" They seem to me to confound augmentation with improvement. It always was a fine city since I first knew it; and it is very greatly augmented. It has I believe, nearly doubled its extent and number of houses since 1799. But, after being, for so long a time, familiar with London, every other place appears little. After living within a few hundred yards of Westminster-hall and the Abbey Church and the bridge, and looking from my own windows into St. James's Park, all other buildings and spots appear mean and insignificant. I went to-day to see the house I formerly occupied. How small! It is always thus; the words large and small are carried about with us in our minds, and we forget real dimensions. The idea, such as it was received, remains during our absence from the object. When I returned to England, in 1800, after an absence from the country parts of it, of sixteen years, the trees, the hedges, even the parks and woods, seemed so small! It made me laugh to hear little gutters, that I could jump over, called rivers! The Thames was a "creek." But when, in about a month after my arrival in London, I went to Farnham, the place of my birth, what was my surprise! Everything was become so pitifully small! I had to cross, in my post-chaise, the long and dreary heath of Bagshot. Then, at the end of it, to mount a hill called Hungry Hill; and from that hill I knew that I should look down into the beautiful and fertile vale of Farnham. My heart fluttered with impatience, mixed with a sort of fear, to see all the scenes of my childhood; for I had learned before, the death of my father and mother. There is a hill, not far from the town, called Crooksbury Hill, which rises out of a flat, in the form of a cone, and is planted with Scotch fir-trees. Here I used to take the eggs and young ones of crows and magpies. This hill was a famous object in the neighbourhood. It served as a superlative degree of height. "As high as Crooksbury Hill" meant, with us, the utmost degree of height. Therefore, the first object my eyes sought was this hill. I could not believe my eyes. Literally speaking, I, for a moment, thought the famous hill removed, and a little heap put up in its stead; for I had seen in New Brunswick a single rock, or hill of solid rock, ten times as big and four or five times as high! The post-boy, going down hill, and not a bad road, whisked me, in a few minutes, to the Bush Inn, from the garden of which I could see the prodigious sand-hill, where I had begun my gardening works. What a nothing! But now came rushing into my mind, all at once, my pretty little garden, my little blue smock-frock, my little nailed shoe, my pretty pigeons that used to feed out of my hands, the last kind words of my gentle and tender-hearted and affectionate mother! I hastened into the room. If I had looked a moment longer I should have dropped down. When I came to reflect what a change! I looked down at my dress. What a change! What scenes I had gone through! How altered my state! I had dined the day before at the Secretary of State's in company with Mr. Pitt, and had been waited upon by men in gaudy liveries. I had had nobody to assist me in the world. No teachers of any sort. Nobody to shelter me from the consequence of bad, and no one to counsel me to good, behaviour. I felt proud. The distinctions of rank, birth, and wealth, all became nothing in my eyes; and from that moment, (less than a month after my arrival in England) I resolved never to bend before them.

FARMER BLUNT OF THE OLDEN TIME.

From the Life of Bilberry Thurland.

Blunt was a regular English churchman, of the right old farmerish religion; that is, he held the Sabbath as a weekly scraper on which to free the soul from the dirt of the last six days' sin. He went to church with his men in the morning—he had the Bible read to both men and maids for the exact space of an hour in the afternoon, and after that they were free to gossip, sleep, or go a-courting, as best suited their inclinations, till six o'clock. Evening service he made them all attend together, while he himself either rambled about his homestead, to look after things a little, putting a flake into the gap of a broken fence, or giving the neglected wagon wheels an occasional lick of grease—or else he smoked a pipe and drank his own ale—always out of a silver tankard—until his nose grew ripe, and he slided into a nap to conclude with. In doing this, he believed he fulfilled the main scope of religion. He put it, like his best coat, off and on with the day; and, for the rest of the seven, he violated a few of the ten commandments with the most Christian confidence and phlegmatic indifference. Besides this, he was in some respects a singular man. He made his memorandums of business, and chalked up the majority of his accounts inside his sheds and stables, and on the walls all about the farm-yard. The consequence of keeping so extensive a ledger was this—that not unfrequently, after chalking up a particular account, he knew not where to refer to it, and would fly into a great passion with himself; and when, perhaps, three months after, it had become useless, he happened by chance to detect it, placed in some conspicuous situation, on purpose that it might not be overlooked, he would laugh heartily to think he had not found it before.

A Society of Ladies, for the Abolition of Slavery, has been established at Paris. Among the members are Mad. Pelet de la Lozère, Mad. Mallet, and Mad. Thayer.—*Paris Advertiser.*

EXPENSES OF WARS.

SINCE the year 1000, there have been twenty-four different wars between England and France; twelve between England and Scotland; eight between England and Spain; and seven with other countries;—in all, fifty-one wars!

There have been six wars within one hundred years, viz:—

	Sterling.	Destruction of Human Life.
1. War ending 1697,	Cost £21,500,000,	100,000 slain. 80,000 died of famine.
2. War began 1702,	Cost £43,000,000,	not ascertained.
3. War began 1739,	Cost £46,400,000,	
4. War began 1756,	Cost £111,000,000,	250,000.
5. Amer. War 1775,	Cost £139,000,000,	200,000.
Last W. began 1703,	Cost £750,000,000,	2,000,000 among the several belligerents.

At the conclusion of the war, which ended 1697, the national debt was twenty-one millions and a half. At the conclusion of the last war in 1815, the national debt amounted to no less than one thousand and fifty millions.

PRIZE ESSAY.

ONE hundred guineas, besides the profits of its publication, is offered for the best written Essay on the *Love of Money.* The Work wanted is one that will bear on *selfishness,* as it leads to live to ourselves, and not for our Maker and fellow men.

The manuscript is to be sent to Dr. Conquest, 13, Finsbury-square, London. The Honorable and Revd. B. Noel, and the Revd. Dr. P. Smith, are the arbitrators.

DEATH OF A LIBERAL.

DIED, on the 24th of June, at his house in Nelson-square, near London, Mr. Jno. Loydd, in the 72d year of his age. He was a liberal contributor to the Philanthropic Societies of England under the signature L. Mr. Loydd, from humble birth and circumstances, became a rich man; but in the luxury of doing good he spent upwards of £12,000 during his life. In his Will he has bequeathed as follows:—

Home Missionary Society,	£4,000
London Missionary Society,	4,000
Bible Society,	3,000
Religious Tract Society,	3,000
Sunday, School Society,	1,000
Surry Chapel Benevolent Society,	1,000
Christ Church Surry School,	500
London Hibernian Society,	500

A new tulip, reared by M. Patrix, a gardener at Ghent, and which the Society of Florists of the town has named the "Citadel of Antwerp," has been purchased by Mr. Vandernick, a horticulturist of Amsterdam, who was formerly a captain in the Dutch navy, at the price of 16,000 francs.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Buonaparte's Address to the Monks of Spain, who had murdered a Frenchman.—"Barbarians and hypocrites! who preach intolerance,—excite discord and blood,—you are not ministers of the gospel. The period when Europe beheld without indignation the massacre of Protestants celebrated by illuminations in the great cities, can never be revived! The blessings of toleration are the first rights of man,—it is the first maxim of the gospel; because it is the first attribute of charity. If there was a time when some false teachers of the Christian religion preached intolerance, they had not then in view the interests of Heaven; but those of their temporal influence; they wished to be powerful amongst ignorant people. When a monk—a theologian—a bishop—or a pope, preaches intolerance, he preaches his own condemnation,—he gives himself up to be the laughing-stock of nations."

The Lights of Science and Thunders of the Vatican.—In the year 1818, Pius VII., a pontiff alike distinguished for his liberality and love of knowledge, procured a repeal of the edict against Galileo and the Copernican system. He assembled the congregation; and the late Cardinal Toriozzi, assessor of the sacred office, proposed, that "they should wipe off this scandal from the Church." The reply was carried with the dissentient voice of one Dominican only.— *Martin's Character of Lord Bacon, his Life and Works.*

The War-Cry of Innovation.—When Sir William Blackstone first began to deliver his law lectures before the University of Oxford, an attempt was made to cry him down as an innovator; and in various ways he was made to feel the influence of established opinions. In an introductory lecture, which, unfortunately, has not been published, he thus forcibly and eloquently retorted upon his opponents:—"In those Scholastic days," said the learned commentator, "when the original and inquisitive mind of Roger Bacon was directed to the investigation of Nature's laws, the theological animus conspired against him, and he was accused of holding communion with evil spirits. Upon a particular occasion, when he intended to exhibit some curious experiments to a few select friends, the secret having got out, the whole town and all the colleges in the University were in an uproar, Priests, and fellows, and students, were seen flying about in every direction, with their gowns streaming behind them, crying, 'No conjuror! no conjuror!' The cry of 'No conjuror' resounded from hall to hall, from cell to cell. At a later day, Galileo was condemned by men whose names are now remembered only as parts of the rubbish upon which the pedestal of his fame is raised. And in our times there are men who seek to raise the cry of 'No conjuror' against me. I tell you, you will soon find out that these good people are, at least, no conjurors themselves."— *Ibid.*

Great Britain, the great Fountain of Science.—It cannot but have struck every one who is at all acquainted with the subject, that there has been in this country either a singular number of coincidences, or a great aptitude for successful investigation of the *fundamenta* of different sciences. Bacon, Newton, Napier, Wallace, Brook Taylor, Bradley, Priestley, and others, are all connected with some one or more elementary points, either of speculation or observation, on which whole bodies of science, or prominent parts of bodies, are now constructed. How many of the brilliant results which have been brought amongst us from abroad can be traced back to some law or fact exported from England!— *Ibid.*

Ship-building Reform.—We are happy to observe, the strong and wide spreading impression which is making on the public mind by the praiseworthy exertions of Captain Ballingall of Kirkaldy, to put an end to the "ship-sinking system," so well described in the letter from a Correspondent, which we published the week before last. Hitherto Captain B. has found his chief approvers and supporters among the friends of humanity in his own country; but the circumstance we are about to mention, shows that on the Thames as well as Forth, his labours in the cause of maritime reform are beginning to be applauded and honoured as they deserve. The "Royal Sailing Society" of London, "King William IV. the Patron," have lately sent Captain B. a handsome silver medal, which bears on the obverse the style and title of the Society, and on the other the following inscription (within a wreath):—"To James Ballingall, Esq., of Kirkaldy, N.B., as a mark of approbation for his improved method of ship-building (of which models were exhibited), so as materially to lessen sea-risk and the loss of human life by shipwreck. (*Mechanics' Magazine.*)

NATURAL HISTORY.

FRUITS OF THE WEST INDIES.

I do not think the fruits of the East are to be compared with those of the West Indies. I doubt if the Garden of the Hesperides could have boasted of such a profusion of golden tints, and such a variety of delicious flavours. In the order of their excellency, let me regale your ladyship's fancy with their enumeration: the imperial shadock, "the grace and ornament" of a dessert in the West Indies; the luscious granadilla, which none but Creole hands can duly prepare with sugar and Madeira; the melting avocada pear, which it is forbidden to eat without salt and pepper; the delicate anana, which must be tasted in the birth-place of the pine-apple, to understand the benefit that Ripley, the Jamaica planter, has conferred on the epicurean world; the mellifluous naisberry, which, like the medlar, and some other fruits of precious qualities in fashionable hotbeds, must be yellow at the core before it is mature: the full-grown pomegranate must not be forgotten, teeming with liquid rubies, and reminding the Eastern epicurean of the golden fruit, which grows (on the authority of Mahomet) on that extraordinary tree Tupa, which grows in Paradise close to the Prophet's house, and is continually bending down its branches to present the passers-by with grapes, dates, and pomegranates, "of size and taste unknown to mortals," and lastly, the bloomy mango, whose exquisite hue is like the blush on the bashful cheek of a maiden of fifteen; and finally, indeed, the *agro-dolve* admixture of the star-apple and orange, which stands not the proof of Seneca's test of wholesomeness, for the eating of the same may be a pleasant thing to-day, but by no means agreeable to-morrow.—*Madden's West Indies.*

THE IMPORTANCE OF STRAWBERRIES.

Strawberries deserve all the good things that can be said of them. They are beautiful to look at, delicious to eat, have a fine odour, and are so wholesome that they are said to agree with the weakest digestions, and to be excellent against gout, fever, and all sorts of ailments. It is recorded of Fontenelle, that he attributed his longevity to them, in consequence of their having regularly cooled a fever which he had every spring; and that he used to say, "If I can but reach the season of strawberries." Boerhaave (Mr Phillips tells us in his History of Fruits) looked upon their continued use as one of the principal remedies in cases of obstruction and vicidity, and in putrid disorders. Hoffman furnished instances of obstinate disorders cured by them, even consumptions; and Linnæus says that by eating plentifully of them he kept himself free from the gout. They are good even for the teeth.—*Leigh Hunt's London Journal.*

Mr. Watt, the Discoverer of the Constitution of Water.—Lord Brougham, in his "Discourse of Natural Theology," after noticing the experiments of Dr. Priestly and Mr. Cavendish, by which they proved that by burning oxygen and hydrogen in a close vessel, they disappear and leave a weight of water equal to their united weights, observes:—"Dr. Priestly drew no conclusion of the least value from his experiments. But Mr Watt, after thoroughly weighing them by careful comparison with other facts, arrived at the opinion, that they proved the composition of water. This may justly be said to have been the discovery of that great truth in chemical science. I have examined the evidence and am convinced that he was the first discoverer in point of time, although it is very possible that Mr. Cavendish may have arrived at the same truth from his own experiments, without any knowledge of Mr. Watt's earlier process of reasoning."

The Mathematical Instinct of Bees.— The operations of pure instinct have never been supposed by any one to result from reasoning; and certainly they do afford the most striking proof of an intelligent cause, as well as of a unity of design in the world. The work of bees is among the most remarkable of all facts in both these respects. The form is in every country the same—the proportions accurately alike—the size the very same, to the fraction of a line, go where you will; and the form is proved to be that which the most refined analysis has enabled mathematicians to discover as, of all others, the best adapted for the purposes of saving room, and work, and materials. This discovery was only made about a century ago; nay, the instrument that enabled us to find it out—the *fluxional calculus*—was unknown half a century before that application of its powers. And yet the bee had been for thousands of years, in all countries, unerringly working according to this fixed rule, choosing the same exact angle of 120 degrees for the inclination of the sides of its little room, which every one had for ages known to be the best possible angle, but also choosing the same exact angles of 110 and 70 degrees for the inclinations of the roof, which no one had ever discovered till the 18th century, when Maclaurin solved that most curious problem of *maxima* and *minima*, the means of investigating which had not existed till the century before, when Newton invented the *calculus*, whereby such problems can now be easily worked.—*Lord Brougham's Discourse of Natural Theology.*

SCIENCE.

ON OIL PAINTINGS.

Guido was accustomed to paint on silk, which arose from the following circumstances: Dominicans of Bologna, removed an old coffin in order to deposit it in another place, opened it, and found the body entire; but on offering to touch it, the corse crumbled into dust, as well as the linen that covered it: a silken garment solely was preserved. Guido, who witnessed this event, inferred from thence that silk was less subject to corruption than linen, and resolved in future to paint his pictures on a species of taffety which he prepared for that purpose. He is perhaps the only painter who would have thought of such an expedient.—*Advice on the Care of Oil Paintings.*

MUSICAL TELEGRAPH.

M. Sudre, a Frenchman, is at present in the metropolis for the purpose of unfolding to the British government the details of a plan which he has proposed for telegraphic communication by means of musical notes. The plan has received the approbation in Paris, of a committee of the French Academy, and a military and naval commission, who have reported favourably upon it, as likely to prove highly useful in establishing a communication between the different corps of an army, or vessel at sea. Its principal advantage consists that it may be employed in cases where the ordinary means are unavailable. From the experiments made by the commission of naval officers, it was found only to take two minutes to transmit from one point to another, distant 9000 feet, three orders taken from the book of signals. The French horn or trumpet, which can be heard at a distance of three miles, was the instrument used on this occasion, but any instrument capable

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of expressing the different musical sounds, may be made the organ of the new language.

Many of the details on this subject, it may be interesting for the Cape reader to learn, may be found in the Mechanics' Magazine for July, page 269.

COOKING BY GAS.

Extract from a letter of Mr. John Barlow, C. E., to a friend in America, dated Feb. 27, 1835:— "There is one source of revenue to a Coal Gas Company coming into practical effect here which promises to be of great importance, namely, cooking by gas. I know one family who used no other fuel for cooking for the last two years —and another who for several years, have never lighted any other fire in the house for any other purpose whatever than gas during the three or four hot months; and they both say it is cheaper, more convenient, cleanlier, and the cooking better. Hundreds, and probably thousands, of families will in this country, be supplied with gas for cooking during the ensuing summer. They now roast, bake, and boil by gas. The heat is always ready when wanted, and it is extinguished when it is no longer required; no dust, no preparation, nor any cleaning up afterwards; the cook can leave a joint of meat, either roasting or boiling, and never look at it again till the clock informs her it is time to take it up. I know a family who regularly put their meat down, and all go to church on Sunday, locking the house up and leaving a capital dinner to the care of the gas."

THE BALLOON COMMUNICATION BETWEEN LONDON AND PARIS.

We perceive that the grand aerial project which occupied so much of the attention of the Parisians about this time last year, is revived—with this difference only, that the scene of operation, or to speak more properly, perhaps, the starting-post, has been shifted from Paris to London. The projectors, the "European Aeronautical Society," announce in the newspapers that their "first aerial ship the Eagle, 160 feet long, 50 feet high, and 40 feet wide," and which is to be "manned by a crew of seventeen persons," may be inspected in the neighbourhood of Kensington, previous to making its first trip "from London to Paris and back again;" after which it is to make similar trips to Brussels, Amsterdam, Berlin, Munich, Madrid, &c., till the practicability of establishing an aerial communication between London and the other capitals of Europe, is fully and incontrovertibly demonstrated! The scheme is similar to that which was proposed as far back as 1796, by an engineer of the name of Campenas, and not only entertained by the French government, but sanctioned by that select body of *savans*, the French Institute. Campenas wrote a long letter to Buonaparte, then General-in-Chief of the army in Italy, from which we extract a paragraph or two. "*General Citizen*,—The artist who addresses you, filled with the most lively gratitude, will erect, if the means of execution be afforded him, a vast edifice, whence, at the conclusion of his labours there will issue an Aerial Vessel capable of carrying up with you more than 200 persons, and which may be directed to any point of the compass. I myself will be your pilot. You can thus, without any danger, hover above the fleets of enemies jealous of our happiness, and thunder against them like a new Jupiter, merely by throwing perpendicularly downwards firebrands made of a substance which will kindle only by the contact and percussion at the end of its fall, but which it will be impossible to extinguish. Or perhaps you may think it more prudent to begin at once by forcing the British cabinet to capitulate, which you may easily do, as you will have it in your power to set fire to the city of London, or to any of the maritime towns of England. From the calculations I have made, I am convinced that with this machine you may go from Paris to London, and return back again to Paris in twenty-four hours, without descending. The object I propose is to establish in the great ocean of the atmosphere a general navigation, infinitely more certain and more advantageous than maritime navigation, which has ever disturbed the tranquillity of mankind—to restore the perfect liberty of commerce, and to give peace and happiness to all the nations of the universe, and unite them as one family. By great labour I have surmounted the multiplied obstacles which presented themselves before me; and my progressive discoveries are developed in a work which I have prepared, consisting of about 400 pages, and divided into five parts."

Cheap Travelling.—So excessively have the fares by steam-vessels been reduced, that it is calculated some of the north-country steamers convey passengers at less than one farthing per mile! It will be long ere steam-travelling by land exceed this!

City Improvements.—The new street from the Mansion house to London bridge is now open for carriages as well as passengers, and the shops on both sides are rapidly approaching completion. The widening of Prince's-street has also been effected; and a complete breach has been made by pulling down the houses in the line, from the top of Prince's-street, in Lothbury, to the bottom of the City-road, at London-wall. Now that it can be seen in its whole extent, the line is much more tortuous than might have been expected.

The Newcastle and Carlisle Railway, is not yet wholly completed; but seventeen miles of it have been opened for public traffic since the 9th of March last. In the last number of the *Sheffield Independent*, it is stated that on the part now open, "the revenue is already at the rate of 13,000*l.* a-year," which, as "the expenditure on that portion of the work has been about 100,000*l.*," is more than equal to a profit of ten per cent. —*Mechanics' Magazine.*

NEW PUBLICATIONS.

The Works of Wm. Cowper; his Life and Letters, now first completed by the Revd. T. J. Grimshawe, A. M. with Illustrations. Vols. 1, 2, 3, 4.

The Works of Cowper have upon them the stamp of enduring popularity. Their perfect simplicity, their grace, their purity, their patriotism, their unbounded love of Nature and Liberty and Freedom, must ever endear them to the British heart. The present volumes are beautifully got up with illustrations, and to ensure them a wide circulation, the price is only five shillings each. The letters of Cowper are models of epistolary writing,—easy, graceful, and abounding in truth and feeling. Aided by Cowper's own letters, Hayley's remarks, and Grimshawe's emendations and reflections, the present volumes are as perfect as it is possible for any work to be.

INDIA: ITS STATES AND PROSPECT, By E. Thornton, Esqr. 8vo.—10s.

A MOST seasonable work, a perfect synopsis of Indian affairs, containing at the same time a mass of valuable information, written in a plain and unpretending spirit. The subjects examined in 12 characters are:—Historical Sketch,— Political Sketch,—Government of India,—Agriculture,—Manufactures,— Foreign Trade,—Public Works,—Society and Manners,—Religion and Morals; Churches, Schools, and Missionaries,—The Judicial System,—Revenue,—British Interests and Authority.

A POET'S PORTFOLIO.

By Jas. Montgomery. 12mo. 1835.

ONE thing holds true of this eminent poet—age with him is well advanced; the date of his birth-day will shew him, and many around us, that they have no time to lose.

"Vesper * * admonuit."

This new volume of Montgomery possesses all the exquisite lovely features of his larger and much earlier works. His province is never more clearly shewn than in some of his shorter pieces, where he shews the perfected reflections of an accomplished, devotional, and earnest mind. A beautiful spirit will be felt to breathe in the following little piece. Humility is the very sort of theme that seems to characterize the author's religion and devotion. Besides this, Montgomery never forgets that he is *responsible* even for the disporting of his muse; and, besides harmless, finds a duty and a pleasure in doing positive good.

HUMILITY.

The bird that soars on highest wing,
Builds on the ground her lowly nest;
And she that doth most sweetly sing,
Sings in the shade when all things rest;
—In lark and nightingale we see
What honour hath humility.

When Mary chose 'the better part,'
She meekly sat at Jesus' feet;
And Lydia's gently opened heart
Was made for God's own temple meet;
—Fairest and best adorn'd is she,
Whose clothing is humility.

The saint that wears heaven's brightest crown,
In deepest adoration bends;
The weight of glory bows him down,
Then most when most his soul ascends;
—Nearest the throne itself must be
The footstool of humility.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

THE REMINISCENT—No. IX.

(THE ADVANTAGES OF A GOOD VOICE.)

OLD Mr. Jenkisson passed the remainder of his days in a pretty villa between Wavertree or Mossley vale and Liverpool. The recently-received

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

papers mention his death, aged 80. I recollect many amusing conversations with the old gentleman in the course of past years, and during pedestrian excursions in his neighbourhood. He was vastly amusing in his anecdotal reminiscences of others; but some few particulars relative to himself he was wont to relate with great good humour. He had gained his living, and enjoyed a happy competency solely by his voice. His mother used to tell him that he had begun, while in arms, to tyrannise over the whole family by his cries and screams. A maiden aunt always complained that nobody else could be heard in the house while he was awake: nay, his noisy mode of sleeping often deprived the family of their natural rest.

His parents being poor, they were determined to put this *voice* to account. He was sent to frighten away the rooks from the newly-sown corn lands, and he effectually served all the farmers in the neighbourhood. His cries—

"Pigeons and crows, take care of your toes,
For I'll up with my clappers and knock you down back'ards;
Shoo! ha! lap, Shoo! a-lap"

were worth half-a-dozen of the combined crow-tenders of Lancashire. In course of years he left Liverpool, and took up his abode at Preston. Here he got the two offices of common crier and counter-tenor in the Episcopal choir,—serving at the same time Church and State. But the elections drew forth his peculiar merits,—None could shout like him, none could lead the *Hear! Hear!* or *No! No! No!* He was always true to his principles; and having been regularly employed in various parts of the country, for a series of years to shout at public meetings, and even at theatres, he sat down to enjoy the quiet of retired life. When over his "brown jug," and with a little enticing, we used to hear him shout, *No Popery,—Church and King*, in a voice of tremendous power.*

NEW BUILDING FOR THE PUBLIC LIBRARY.

At length it is discovered, that the accommodations for the reception of the Books in The Public Library, are by far too straightened, and that the time is at hand when this invaluable collection shall possess a *permanent* Building exclusively set apart, as the property of the public and subscribers. With a view to forward an object so important to the public interests, Col. Thomson, R. E. one of the Members of Committee, has been pleased to prepare a Plan, Section, and Elevation for a New Library Building, which will no doubt, when submitted to the subscribers, be received with general approval. The design by Col. T. is one of great spirit, and combines with it all the advantages (with improvements) of the Library, Trinity College, Cambridge, and that of the Advocates' Library, Edinburgh.

Of Public Buildings, the noblest undoubtedly are those which are erected for the purpose of Divine worship, the next such as are subservient to the relief of human infirmities, but next to these, and scarcely second to them, are edifices dedicated to science, literature, the cultivation of the human intellect, and the progress of general knowledge. We trust, then, to witness the foundation and completion of a new Library Edifice in this Town, not only to stand as one of its best ornaments, but that it may prove a full, copious, and overflowing foundation to our fellow citizens and to posterity, of light, knowledge, and diffusive instruction.

STREET STUDIES.

RESPECTFULLY DEDICATED
To ——To——

The only distinctive mark of a gentleman remaining in these modern times, is the wearing of an old coat; and herein is shown one of the most striking peculiarities of the true gentleman—a fine taste. No man, but one of the purest taste, can wear an "old coat" without looking shabby, an appearance a gentleman never has: for with an "old coat" every other part of a man's dress must be in the truest keeping: and here lies the distinction between taste and want of taste. Now-a days new coats are as common as Cape idlers, so that a gentleman is absolutely ashamed of mingling with the herd of "well dressed gentlemen," whose wit and whose wisdom, whose pedigree and whose parentage, are solely dependant upon the tailor.

Again, not only is an "old coat" an irrefragable proof that the wearer is a gentlemen, but it indicates, also, that he is a man of reflection, and of philosophic temperament: it shows that he is not one of the common herd. A new coat, when habitually worn, is an indubitable sign of an empty head and of a barren heart. To us, an "old coat" is a kind of note book, becoming the more valuable the longer we wear it. It is the only visible link connecting us with a multitude of by-gone incidents, and hence it is an invaluable companion. Now a man whose coat smells only of the tailor's goose has no resource of this kind: when he is alone, he is alone; and in place of having a friend and a monitor at hand in the shape of an "old coat," it is a hundred to one if he thinks of any thing beyond the price, cut, fit, and colour of his last novelty derived from the Tailors Magazine, in the Public Library. What a thing a man becomes who ever dwells in a new coat!

It is astonishing, by the bye, what clever fellows tailors are!—and if we are ever to have a system of physiognomy worth attention, it must come from this quarter. Lavater, Gall, Coombe, and others, must hide their heads before a tailor. The knowledge displayed of character, and the wonderful adaptation of a coat to it, has always appeared to us as the very triumph of skill. Indeed, we wonder that Camper, Blumenbach, and Macartney, and other noted physiologists, should have taken such pains to measure out a man's intellect and disposition by his face and his head; and this because a better criterion of both one and the other may be found in a man's coat. This is an unerring guide. A man may mould his face, and may look as innocent as an angel, although he has the heart of a devil;—but not so his coat. Look at that of a choleric man for example;—mark what a multiplicity of *corrugations* are figured upon it—how angular and fierce it looks, even whilst he is smiling like any lamb; but more especially watch it when he is in a passion—it seems instinct with life, and this character becomes indelibly impressed upon it. Then again, look at the coat of the humble-minded man, the henpecked husband for example—how sleek and smooth it is from skirt to collar; from shoulder to wrist, it is a perfect index of his disposition; and though there may be hypocrisy *in* his face, and he may *look* right valiantly—his coat betrays him: a smooth coat shows a man to have no more spirit than a *Jarmen* sausage. And again, mark the coat of the meditative man, its collar is twisted, it is buttoned awry, and the cuffs are, ten to one, turned up, whilst one of the skirts, from a habit which the man has of carrying one of his hands resting behind him, has a most curious and characteristic "*swirl*;"—all of which is, by the bye, wholly at variance with Cape *Law*. Then the coat of the precise man, observe the contrast—what mathematical accuracy! every button breathes the man, order is legibly written upon it—and as he carefully raises and lays aside the skirts as he sits down, you may fancy the broad-cloth is acting in sympathy with his peculiar temperament—it seems to lay itself out so smoothly and so gingerly. Mark the contour of the careless coat—hitched up here, bagging out there, collar crumpled, and skirts looking for all the world as if they had passed through a plaiting-machine. You never need therefore to look at a man's face: if you want to know any thing precise as to his dispositions and habits, look at his coat, that cannot lie. It matters not whether the coat be new or old—by the wonderful adaptative powers of the tailor, to which we have already alluded, he gives at once a general character, the minor details being always at once filled up by the wearer.

The physiognomy of coats is assuredly one of the most interesting of street studies. You cannot very well stare a man in the face and read his history there, but you may without offence march soberly behind him, and lo! he has his life written upon his back, and a curious volume it often is. We are, ourselves, peculiar adepts in this science, and many a singular autobiography do we pick up in our daily perigrinations. The poor and proud man—he whom circumstances have thrust below his natural position, may be at once detected by his coat: this is a painful subject of contemplation: we trace the decay of his fortunes, with all its sufferings and privations, in his threadbare habiliment: his coat cannot lose its character, and what pains and study must he have gone through to have preserved it in its integrity! all its vulnerable points, have, perhaps, lost caste, but still as a whole, it is impossible to mistake either the coat or its wearer. We never come into contact with one of these subjects of reflection but we are made melancholy, and are ready to chide the man for thus markedly exhibiting his misfortunes. What right has he thus to draw upon our sympathies? what business to hang out a sign-board for pity? He ought to discard his *reliquiæ*, and were he a man of taste he would do so—but wo the while! poverty and taste are bad co-mates.

* There is a partial allusion to Jenkisson in Sharpe's Essays.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

A BACHELOR'S LIFE.

Poor fellow! he returns to his lodging; there may be every thing he can desire, in the shape of mere external comforts, provided for him by the official zeal of his servant; but still the room has an air of chilling vacancy; the very atmosphere of the apartment has a dim, uninhabited appearance—the chairs, set round with provoking neatness, look reproachfully useless and unoccupied, and the tables and other furniture shine with impertinent and futile brightness. All is dreary and repelling. No gentle face welcomes his arrival; no loving hand meets his; no kind looks answer the listless gaze he throws round the apartment as he enters. He sits to a book—alone; there is no one by his side, to enjoy with him the favourite passage, the apt remark, the just criticism; no eyes in which to read his own feelings; his own tastes are unappreciated and unreflected; he has no resource but himself, no one to look up to but himself; all his enjoyment, all his happiness, must emanate from himself. He flings down the volume in despair; buries his face in his hands, and sighs aloud—*O! me miserum!*

RETAIL SHOP-KEEPING.

THE *retail* passion is well understood at the Cape of Good Hope. The following statement will doubtless add fuel to the flame.

Messrs. James and William Campbell and Co.'s retail warehouses in Candleriggs street, Glasgow, contain 26,928 square feet of floor. In these premises the public are supplied with every kind of soft goods, and purchasers of a half-penny lace or a penny-worth of thread are equally attended to as those who make larger purchases; 64 persons attend upon the customers. The amount of sales in 1831-2, was 312,207*l.* 5*s.* 8*d.* Although Messrs. James Morrison and Co., Messrs. Leaf, Son, and Cole, and Mr Mynn Ellis, of London, turn more money annually, there is no house in the King's dominions that serve so many customers as Messrs. Campbells', of Glasgow.—*Dr. Cleland's Notes on the Population Returns.*

THE INFANT SCHOOL.

IT is quite lamentable to think that this admirable Institution is languishing for want of funds. What are the clergy and ministers of religion about? Surely the

"Pulpit, in the sober use of its legitimate powers,"

might sound the warning voice, and plead in behalf of

"Little children."

Is it not a cutting reflection on our Cape society, that many of the Indian Visitors, deeply impressed with the vast importance of the Infant School System, should be the first to come forward with their donations in the hour of need?—*ex gra.*

THE NEW BANK.

A good deal of useless controversy has taken place, connected with the New Bank. Logic more wretched, in opposition to its establishment than has been uttered and written, cannot be found in the history of any country. The truth is, one or two shallows have laid hold of McCulloch, Adam Smith, Ricardo, and have bewildered their small brains. They have picked out extracts from these writers, and set themselves up for political economists. And these doughty cobblers are as self-sufficient, arrogant, and dogmatic, as if they had served an apprenticeship to that honourable and important profession. Away with such dabblers! The question is a very simple one. The advantages of a sound system of Banking is obvious. Banks collect the large and the small inactive sums of individuals into centres, from which they are re-issued in aid of those employments which could not be conducted without capital. By emitting, also, more bills than they hold coin, they multiply money, and consequently the means of circulating commodities, which is called "trade;" the activity of trade, therefore, is in a great measure governed by the amount of money in circulation.

If banks enjoy a sufficient degree of public confidence, to cause their bills to circulate freely, in lieu of money, they not only economise the use of the precious metals, but operate strongly in augmenting trade, by facilitating the means of interchanging commodities.

THOUGHTS ON THE WINE TRADE.

The great extent to which the practice of mixing the low-taxed wines of the Cape of Good Hope with the highly-taxed wines of Spain, Portugal, and Madeira, induced ministers to propose that colonial wine should (after 1834) be placed on the same footing, with respect to import duties, as foreign wine. This measure, so much at variance with that "tender sympathy" which government usually manifests towards vested interests, and which, according to the present mode of levying the wine duties, would entirely condemn the cultivation of the vine in this Colony — would, if the plan of charging *ad valorem* duties were adopted, reach all the objects sought by the minister, without injuring the interest of the Cape wine grower.

It is well known, that the greater proportion of wines improve in quality, and consequently in value, more rapidly in bottles than in casks. A great advantage would hence manifestly arise, if the merchant were allowed to bottle wines *in bond.* At present, we believe, he is obliged to pay the duty—about 30*l.* per pipe—before he can bottle the wine, and loses all the interest of the money, rent, charges, etc. during the three, four, or five years it remains in his possession—which, while it limits his own active capital, obliges him to enhance the price to the consumers. But the greatest inconsistency arising from this system is in the case of bottled wine exported. Bottled wines are shipped in considerable quantities to the colonies and for ships' use, and are—on being exported—entitled to the drawback of duty. Before this drawback is allowed, the exporter is obliged to certify, not only that the duty has been paid, but to state the day on which it was paid; stating also the ship in which the wine was imported, by whom the wine was bonded, etc. etc. Now it frequently happens, that wine changes hands ten times between the date of paying the duty and the time of its exportation, and therefore it is quite impossible that the exporter can know any thing about such particulars. The consequence is, that exporters seldom trouble themselves to trace the facts, but insert in their certificate, particulars relative to any package of wine being of the some description which has, no matter when, paid the import duty. The customs' board, unable to dispute the allegation, admit the certificate to be true, and the drawback is allowed—although, without any intention of fraud on the part of the exporter, the wine may have been originally smuggled. If the customs' board permitted merchants to bottle their wines in bond, all this system would at once disappear, and wines would be sent, under the eye of the customs' officer, on board the ship, without the payment of either duty or drawback. Such a concession would be an important benefit to the trade, while it would, in some degree, increase the value of property invested in the London and St. Catherine's Docks, which, ac-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

cording to report, has lately become so much depreciated.

CHURCH CONTROVERSY.

A furious and unchristian controversy is at present raging in Cape Town among certain worthies of the Reformed Church, on the subject of the time *when*, and the place *where*, the *three Ministers* to *one* church are to preach. The discussion, to serve the *by-ends* of those "who never take tea without a stratagem," is smuggled or hashed up in the Dutch language. Our opinion of the matter is, that this church in town has more cats than can catch mice; and that, as heretofore, two ministers are fully competent to perform their stated tasks of reading each of them one sermon a-week. Look at home, and compare populations. Parish of St. George's in the East, with 38,000 people, there are *two* clergymen. St. Leonard's, Shoreditch, with 33,000, *two*. St. Luke's, with 46,642, *two*. St. Mary's, Whitechapel, with 30,000, *one*.—*See Church Revenue Report.*

THE FUDGE FAMILY IN ALBANY.

"Strike up the fiddles, let us all be gay."
(*Cowper.*)

LOOK HERE——LOOK THERE.

GRAHAM'S TOWN ASSEMBLY BALL.

"The first Ball will be held to-morrow evening, Friday, the 16th instant, at Mandy's new Rooms. Dancing to commence at half-past 8.

Stewards:
Capt. Selwyn, R.E.
C. Palmer, Esq. A.D.C.G.
E. Norton, Esq.
C. Maynard, Esq.

(Extract from "*The Graham's Town Journal, or Cape of Good HopeEastern Province Register, Thursday, Oct.* 15, 1835, *No.* 199. *Edited!* printed, and published by L. H. MEURANT, High-street, Graham's Town, Cape of Good Hope."

—"Despite of the ruin and distress under which the inhabitants are now writhing——

—At a moment when the tears of our widows and orphans,—the cry of *our hungry* children for *food*,—the smoking ruins of our late *happy* dwellings are still piercing our ears, and meeting our eyes."

(Extract from "*The Graham's Town Journal, or Cape of Good HopeEastern Province Register, Thursday, Oct.* 15, 1835, *No.* 199. *Edited!* printed, and published by L. H. MEURANT, High-street, Graham's Town, Cape of Good Hope.")

FASHIONABLE MOVEMENT.

(POST FROM GRAHAM'S TOWN.)

"The Rev. Mr. Boyce [Methodist Missionary] and the other *Commissioners* for *settling the claims* of T'Slambie's and Tzatzoe's tribes, quitted *town* on Tuesday, for the scene of their *labours*." (*Graham's Town Journal, October* 15, 1835.)

REVEREND COMMISSIONERS.

GOVERNMENT CIVIL APPOINTMENTS.

"Revd. S. Palmer, of the Wesleyan (Methodist) Mission, to be one of the Commissioners for the *location* of Fingoes."—(*Government Advertisement, Graham's Town Journal, October 8th*, 1835.)

"Revd. J. Ayliff, Wesleyan (Methodist) Missionary, to be one of the Commissioners for the *location*, establishment, and regulation of the Fingo nation."—(*Ib.*)

Revd. W. Shepstone, Wesleyan (Methodist) Missionary, to be one of the Commissioners for the *location*, establishment, and regulation of the *friendly* tribes of Pato, Congo, and Kama."—(*Ib*)

Revd. W. Chalmers, of the Glasgow Mission, [Presbyterian,] as one of the Commissioners for the *location* of the Chiefs Macomo, Tyalie, Eno, &c."—[*Ib.*]

MISCELLANIES.

Hints to Emigrants.—An acquaintance of Bailie M'G——, of D——, made a grievous complaint to him one day of the hard times, and the impossibility of scraping together a livelihood in this wretched country. The bailie's own experience ran directly counter to these dolorous croakings, for his industry had realised a handsome competence; but he knew too much of the world to attempt proving to the complainer that ill success might be partly his own fault. He contented himself with remarking that it was surely possible for a tradesman to draw together a tolerable business. 'Not in this country,' his friend repeated. 'Weel, then, said the bailie, 'what say ye to emigration? I have heard that some push their way gayan, weel at Hobart Town or the Cape.' 'Yes,' replied his desponding townsman, that might be the case ance in a day, but if there is business there, there are mair folk there than can get a share o't.' 'Weel it may be true ye say,' rejoined the bailie, whose policy it was never to contradict any man directly, 'but ye might gang further—ye might gang up into the interior.' 'Ther's naebody there,' said the inveterate grumbler, 'but kangaroos.' The worthy magistrate was something nettled at this pertinacious hopelessness, and, concluding that kangaroos were a tribe of native savages, among whom a careful pedler might make indifferent good bargains, he replied hastily, 'Weel-a-Weel, and isna a kangaroo's siller as gude as anither man's?'—*Laird of Logan.*

Mr. Dean's Submarine Operations.—Mr. Dean has resumed his summer amusement of diving to the wreck of the Royal George or any other wreck, if requisite; hooking the first thing that becomes portable, and getting it hoisted out; he has already got up eleven very handsome brass guns, and three iron ones, exclusive of some cooking materials, a bottle of wine, and sundry small articles. Last week upon a complaint made by some fishermen, that while at work on the West Flats, between Ryde and Fort Monkton, their nets were frequently broken by getting foul of some substance which was beyond their art to discover, this enterprising individual got his vessel over the spot and descended to the bottom; he there found a large piece of ordnance stuck in the mud, and by great exertion and labour, succeeded in getting it up. It proved to be a very perfect brass cannon, about fifteen feet long; the name, "Koster, Amsterdam, 1636," perfectly legible. The ornaments are most beautiful and chaste: the breech and trunnion is formed in a bunch of grapes. The metal is perfect and rings as sound as a bell. The shot on being drawn peeled in flakes, but the wadding was in excellent preservation. Mr. Dean is of very great use here. The other day a French whaler left an anchor in the harbour, which had got foul of the moorings: Mr. D. was employed to raise it, which he succeeded in doing, and got salvage accordingly. On groping further he got hold of another anchor worth 20*l.* He has fitted his vessel and boat for foreign service, and towards the Autumn will proceed to Navarin Bay to try his luck among the wrecks of the Turkish fleet.—*Portsmouth Correspondent of United Service Journal, 20th June*, 1835.

KING MAMMON.

On a blazing throne of gems and gold,
The price of many a damned soul,
There sat a king deformed and old,
Yellow, and shrunk, and foul.
The glitt'ring bribe—the tempting purse—
Spread there their unresisted lure,
For baits to prove the poor man's curse,
And keep the miser poor.
In his palsied hand the monarch gave
The radiant stone, and blushing ore,
To mighty prince and grov'ling slave
That knelt his throne before;
Gorging the food like worm i' the grave,
And screaming loud for more,—
Shouting 'Hail, oh first of the sons of Ammon!
Hail to the GREAT KING MAMMON!

As amongst the cursed and greedy crew
The *Murd'rer* thrust his blood-stained hands,
Where *Beauty's* palms of lily hue
The price of guilt demands,
Sin caught the despot in her arms,
And kiss'd his slimy jaws;
And *Shame* exposed her wanton charms
To gain his prized applause.
There the *hero* brought his hireling steel;
The *bard* his venal song;
While *patriots* sold the public weal,
The *tyrants* cherished wrong;
Monks uttered blasphemies to kneel
The favoured of that throng,
Shouting 'Hail, oh first of the sons of Ammon!
Hail to the GREAT GOD MAMMON!

And they all devoured this precious food
With hunger more than human zest;
Though bringing poison to the blood
And anguish to the breast.
Like vultures upon carrion fare
They greedily fed on,
And fiercely seized their neighbour's share
Whene'er their own was gone.
As that crowned carle his gifts bestowed
With regal pomp and pride,
From those foul lips no language flowed,
But still the dupes he eyed,
Hurrying on to death's abode,
And cursed them as they died,—
Shouting 'Hail, oh first of the sons of Ammon!
Hail to the GOOD KING MAMMON!"
(*Mephistophiles.*)

THE FIRST OF DECEMBER.

(SECOND YEAR OF RELEASE.)

"HARK! THE VOICE OF FREEDOM SOUNDETH."

On First December Africa gave thanks,—
For from the vales and deep savannas gray,
Flocked to the *Feast of Praise* in joyous ranks—
Old, young, and middle-aged on that great Day,*
When the sun shone with milder, purer ray,
For Freedom's standard was from heaven unfurled,
And *Slavery's* voice died on the winds away;
Its chains and throne were from our mountains hurled,
And fresh millennial hills beamed o'er *the Freeman's world.*

The time has come, long fixed by Heaven's decree
When captives' sighings should be heard on high;
The year's proclaimed of *glorious Liberty!*
Whose spirit has descended from the sky,—
Removed the bolts—the doors wide open fly,—
When heaven bows down, O! let the vallies rise,
And vocal for *eternal* freedom cry
Ye world of godly men, mark the great prize—
God gives the *Liberty*, in you the *training* lies.

See Africa's wild paradise of flowers,
Though long neglected, yet of beauty rare;
The fierce beasts of the forest tread the bowers,
The winds strow all the fragments in the air.
Her wild grapes sour and meagre every where;—
Engraft the scions in the real vine,
And bring them under *cultivation's* care,
Implore the blessing of the Power Divine,
That clustered fruit might yet on life's bright table shine.

Yes! more is needed;—teachers must be given
To bring the youth to God without delay;
Arise, ye pious! do the work of heaven,
Already dawns the glorious latter day,
The Almighty in our desart makes a way
And opens rivers in our barren hills,
He gives occasion for one grand essay
To lead these out in many thousand rills,
Till this parched thirsty land the living water fills.

The Emancipated, Britain! are thy charge,
In knowledge they are children, not full grown,
Then, form their manners and their minds enlarge,
Prepare the ground, and let good seed be sown,
As sovereign man sets the trained race-horse on
To course with emulous speed the measured plains,
As parents for life's race set children down,
And teach, and urge them on, and hold the reins,
So England! thou must do, *or lose both price and pains!*

* Among other places, divine service was held on the "Day of Release" contiguous to the Mountains of the Hottentot's Holland range, and many bands of worshippers poured forth their thanksgivings on this occasion, amid the solitudes of the mountains of the Cape of Good Hope.

ON THE INFLUENCE OF LITERATURE.

No. I.

[COMMUNICATED.]

—— Ingenuas, didicisse fideliter artes,
Emollit mores, nec sinit esse feros.
VIRGIL.

Mankind in general, at least the learned and experienced part, must be fully sensible of the advantages arising from the progress of science, and the state and improvement of literature, especially in a country emerging from its infancy, and aspiring to the name of a free and enlightened Colony. Whatever prospects the beauty of nature and fertility of soil the seasonableness of climate, and the situation for commercial advantage may hold out to the agriculturist, the trader, or merchant, though they tend all to increase the wealth of the individuals engaged in these various pursuits, each with the aim of his own immediate benefit and prosperity, yet it is fairly to be questioned, if all this, alone, would tend to make a state internally happy, unless all orders of society and all branches of science were equally supported, and summoned to a proportionate share of interest and consideration.

In the organization of a newly-formed colony, it must so happen that her conquerors, and subsequently the emigrants to her soil, must bring along with them minds already modelled to the peculiarities and customs of their native clime, and views of aggrandizement and opulence, in proportion to their birth and situation in society; for being more the creatures of imitation than of invention,— (the latter gifted but to a view,—the former natural to all,) we carry along with us the bias of former customs, those which were instilled the earliest being the most liked and lasting.

It is therefore to the government of a colony, and to her settlers, that she is to look for her amelioration; but unfortunately the views of the one are chiefly engrossed with her political relations and dispositions, and the interests of the other taken up by the absorbing speculations of the "*auri sacra fames*,"—for as gold is the magnet by which the world is moved, and as such, the object of primary importance, every nerve is strained to that point; and thus, whilst the zest of power on the part of the Government, and gain amongst speculators is alone looked to,—the zest of Learning on the part of the scholar, and his productions, too often remain unnoticed and unbefriended.

An attachment to a country (like that of the Roman to his household gods,) can only be brought round by the process of time, and by each individual feeling that its hearths are his home, and that the prosperity of his offspring is so interwoven with its own, that his hopes must extend to a period beyond his own sphere of action, in endeavouring to promote the extension of his knowledge, and by so doing, render its youth learned, enlightened, —a credit to the land which reared and afforded them the means of becoming competitors in science and literature with other countries on the surface of the globe.

In reviewing the histories of the various nations of the earth, we shall find that their systems of education have tended more than any other cause, to give them each their peculiar stamp and spirit. It is not that nature dif-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

fers so much in the formation of the various inhabitants of the earth, under the different influences of climate. Man is nearly the same every where, in point of animal instinct, and physical power;—take the child of the city, or savage of the wild, and we shall observe their emulation of success and their independence of restraint marked in nearly equal proportions,—we shall find the generic qualities of the human passions and feelings equally alive in both; but if we turn to consider the social qualities arising from the knowledge of right and wrong, and from the refinement of established laws and customs, and liberal education,—the former then leaves the latter more nearly allied to the brute species, and then alone commences to resemble the Great Author of his being, who gave him Hope to soar, and Reason to obey.

If we consider also the effect of science and literature on the minds of men, in drawing them nearer together in the bonds of unanimity and social order, and in the formation of laws to govern, and at the same time a proper idea of Freedom to uphold their relative situations, the one with the other, we shall find that the most enlightened ages have been the most productive of happiness, independence, and glory.

Let us commence with Greece,—there we may observe, that to the laws of Lycurgus, and the emulation he introduced amongst its youth, Lacedæmon owed her glory and independence. That with Athens,—her philosophers, and the foundation of her schools, produced that enquiry into the faculties of the human mind, and the cause from which the power of Reason sprung, which, although in the midst of those dark and heathenish ages, made Plato write his work on the Immortality of the Soul, long before the light of Christianity had dawned to bless mankind. Thus it is that the victories of Alexander fade under the recollection of the learning of Aristotle,* whilst the eloquence of Pericles, and the history of Thucydides, eclipse the splendour of Athens, in the most renowned age of her military exploits.

When was Rome more famed than during the Augustan age, a period obscuring all the glories of the Scipios, when eloquence in the breast of Cicero, and poesy in the soul of Virgil, stamped it with the seal of immortality. But, when that zest in the reign of the succeeding Cæsars fell, when Luxury usurped the seat of Learning, and degenerated the organic powers of the mind,—Rome waned from her glory, and became weakened and effeminate; nor was it until the overthrow of the Greek Empire, which scattered forth the learned minds of the proud city of Constantine to seek for shelter on its shores, that Italy resumed a shadow of her former splendour in learning and science, under the genius and patronage of the house of Medici. It was then with the arts that the glory of the republics of Italy sprung up,—Florence, Venice, Mantua, Ferrara, Genoa, all with the light of science shining upon them, regenerated from the gloom of Gothic darkness and oppression. "Nisi literes exculti sunt ii, qui velut in reipub: puppi sedentes, clavum tenent, multis eos, numeris sui, iisque præcipuis, partibus necessario, de futuros." Thus it is, that with the exception of a few of the Cæsars, more attention is drawn in history to the age of the Medici, whose territorial dominion was but small, than to the emperors of Rome, who were denominated the masters of the world.

We cannot instance an exception where the glory of a nation, or state, has not been at its highest point of prosperity, when its ruler has been the scholar and patron of the arts as well as of arms. In the annals of Britain, attention turns immediately to the reign of Alfred the Great, the learned, the founder of her first University; it is to him that she owes her jurisprudence; that ground-work of her glorious constitution; it is to him she owes more than to all the victories of her Edwards and her Henries, who purchased Fame by the sacrifices of war, and not glory with the offerings of peace, who, that delights not to dwell on the pages of Shakespeare and Spencer,—whilst the martial deeds of Essex are passed over without observance; and much as we may advocate the names of Marlborough and Blenheim, do they rise with that interest continually on the remembrance, as those of Dryden, Addison, and Pope? The great and flourishing ages of the arts and literature, however, have been but four; that of Pericles, of Augustus, of the Medici, and of Louis the 14th. For, although the last does not equal any of the former, nevertheless it deserves to be proudly upheld. The memory of Corneille, of Racine, and of Moliere, must live in their works, when the fame of Turenne, of Conde, and of Villars, will long have been amassed with the herd of warriors who have over run and ensanguined the earth.

It were needless to enumerate further instances of the glory which attaches itself to the cultivation and prosperity of the arts and of literature, or to the lasting interest which is drawn forth by the existence of the still imperishable works of the painter, sculptor, historian, philosopher, and bard: these memorials of genius to Immortality, out-living the frail powers of the mortal frame, when the head that conceived, and the hand that delineated, have long been consigned to the mansions of eternity.

Literature, considered in the general sense of the word, implies the light of education in all its branches, and in all its degrees of attainment, taken frequently, however, in a more limited sense, applies itself only to the higher perfections of the art,—namely: to the study and knowledge of languages, of history, of philosophy, and of poetry. If we consider therefore how few there are whose situations and means enable them to devote their time and attention to the prosecution of such pursuits, whose necessities oblige them to give almost all their occupation to the daily employment of providing for themselves and their dependents,—we may rejoice at the continued improvements, and the new and enlightened discoveries which we constantly observe in literature and the sciences.

Whatever knowledge the mind reaps from any particular study, although it may not directly tend to the elucidation of the profession which it is destined to follow,—still, knowledge, of whatever description, expands the reasoning faculties; and, as we may perceive, will have a remote sway in throwing light on some subject or hypothesis which it has been led to consider.

1st. Without our knowledge of languages, we see merely as through a glass, in trusting entirely to the merit and fidelity of translators for the beauties and sense of any original work; and as the lens or focus is managed to present the object more clearly to the sight, so the lens of the mind operates

* Plutarch says, that Alexander made his expedition against the Persians with better supplies from his master Aristotle, than from his father Philip; and Cæsar, "Media intor prælia semper, Stellarum cœlique plagis superisque vacabat."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

to convey to our ideas the true meaning of the theory or subject which it has attemped to render perspicuous. Man, however, likes to let his imagination wander, adhering to fancy more often than to reality, and thus it is, we seldom meet with translations, (making every allowance for idiom,) which give the true text of the originals; whilst, on the contrary, our study of languages operates so strongly on the improvement and enlargement of the mind, as to enable it to judge (as it were face to face,) of those works which have been written on the subject of any profession to which attention and labour are directed.

2d. History is the germ from which all our ideas and efforts of emulation spring; it is the field from which time has reaped the harvest, and has spread its stores before us, that we may gather profit by the example it shews us in the lives and acts of others, and displays the sound seed, or rancorous weed, according to the means and circumstances which enabled the historian and biographer to hand down to posterity the immortal efforts, or notorious deeds of the various and numberless actors on the vast theatre of the world.

The most important views and necessary considerations in education, are to enlarge the mind to the reception of general knowledge; and History, more than any other branch of literature, will be found to perform the greatest share in so doing. As Pope says:

"The proper study of mankind is man;"

where from the acquaintance to which it leads us, of the characters of nations and of individuals, it enables us to contrast men and circumstances, and, as we judge by comparison alone, to form our opinion of the advantages or disadvantages arising from such an adherence of conduct, or such a series of undertakings.

Pliny also says, that "Historia quoquomodo scripta, delectat,"—and to those who have not given up their minds to the fictitious and marvellous, but have adhered to the real and circumstantial, History will possess all the charms of imaginary writings,—"For truth is strange, stranger than Fiction," and with this additional pleasure attached to it when we feel assured that what we have been expending our time and memory upon in storing up, has actually taken place on the grand stage of human events.

Many young minds, in the ardour of youthful imagination and romantic illusions, have been led away from this course of literary employment by the allurements of fictitious productions. The man of sound taste alone, will ever adhere to the enjoyment of true learning, in adorning his talents with those substantial ornaments which can never fail to be as brilliant and captivating as they are true and instructive.

3d. Philosophy, since the doctrines and blessed rays of christianity have shone down upon and regenerated the world, has been much more compressed in idea, and consolidated in effect. With the ancient world, the study and knowledge of philosophy was an important part in the occupation of the community. Schools under the guidance and scepticism of one head were established, to which pupils flocked, ranging themselves under the mental authority of one particular founder, either Academician, Stoic, Epicurean, Peripatetic, &c. &c. The perusal of the works of the great masters of ancient philosophy, and of their disciples in the different sects and systems of enquiry and action, satisfy us as to the wonderful and infinite powers of apprehension, principle, cause, effect, &c. &c. which the human mind is capable of exerting and organizing, and most of them, as far as the moral performance of duties are enlarged on, inculcate the soundest principle of action. They are, however, unfortunately divested of the charm, the blessedness, the truths, which the light of revelation has since thrown upon all the researches and conclusions of our ideas and imagination, and present but so many systems of Ethics or Sophisms. In the modern world, under the heads of natural and moral philosophy; to the former, astronomy, botany, chemistry, geology, &c. &c. the laws of motion and force, of gravity and fluids, with numberless other sciences, attach themselves; by the latter, theology, ethics, jurisprudence, political economy; the rights of nations, systems of education, effects and advantages of science, &c. &c. are generally expressed; all these are included within the boundary of literature, and to the reasoning and philosophical mind, display a thousand beauties and theories, which cannot fail to charm, as well as to instruct, and form a stupendous part of the arch which the fabric-work of knowledge combines.

4th. Poetry, so beautiful and inspiring in itself,—it may still be necessary to remark, applies more properly to the ornamental than to the useful appropriation of talent. In particular professions, and avocations of the world, it is, however, highly deserving of some attention. A taste for poetry, in the orator, the pleader, and even in the divine, is, I may almost say, necessary, as it gives brilliancy to the imagination, pathos to the sentiment, and exuberance to language. The reason why poetry has been decried in some instances, as by Locke, is, that it fastens so strongly on the imagination if too much indulged in, as to absorb all our thoughts and moments to its occupation, and being more fictitious than real, is apt to unsettle and destroy the mind for graver and more useful employments. This, however, attaches itself to the poet, and not to the lover of poetry; a knowledge of all the ancient poets, acquaints the mind more enticingly and clearly with the mythology of the heathen world, as well as with its history, and makes the mind more brilliant and entertaining in the constant intercourses of conversation in social life.

There is in the occupations of literature an innocent, and at the same time an enthusiastic charm, which it were in vain to attempt to describe, and which is only known to those by whom its smiles have been appreciated, and who have sought to address and honour its claims on their consideration with the heartfelt enthusiasm of friendship, and the fostering hand of kindred acknowledgement and assistance. This feeling, however, the older we become, becomes doubly dear when associated with the recollections of our early years, and gradual developement of improving faculties, and acquaintance with mankind and its literary production. Nationality is the basis of social virtue, it gives a buoyancy to the heart, it gives a spirit of emulation to the soul, it links our ties of animated, and endearments of inanimate nature closely to the feeling; and when adversity hath oppressed or driven us from the home of our birth, and the scene of our infantine days and pastimes travels along with us to the extremity of the earth, and reviews the dream of the past in alluring tenderness and inexhaustible contemplation. Thus the pleasure of having been educated on the spot which beheld us ushered to

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

the world; the hearth of friendship, and the household of affection, the scene of juvenile sports and endearing associations is never to be eradicated; and should the spirit of genius have infused its spell into the mind, and sown its seeds for an abundant harvest in literary fame, what can be more exhilarating or graceful than the approving tribute of our countrymen, ready to stretch forth the hand of patriotic love to hail, and the wreath of imperishable laurel to crown the talented endowments of their friend and fellow-citizen? This, perhaps, is the most inspiring appeal to our sense, in the wish of promoting the extension of literature and education. Self-pride, which is inherent, and to a certain extent praiseworthy in all, here comes in aid of other considerations, and pourtrays a child, (perhaps, some day adorned with the talents to bestow light and knowledge to his fellow-beings,) crowned with the splendid chaplet of fame, to exalt his name amongst the wise, the great, and the immortalized of his land. How eager have been the endeavours (where obscurity has overcast the earlier years of genius,) to claim the honour of its birth and education. In the wanderings of our life and pilgrimage to foreign shores, how often do we find the fame of a spot upheld alone by the mighty name of some sage or bard? The traveller, as he sojourns along, whether it be on the classic shores of Greece and Italy, or on any other strand, unites the association of the being with the place of his birth and education; not a spot nor a chamber, a tree or a stream, which is not hallowed by the tributes of memory to the genius of the place; whether in the groves of Academe, or amid the ruins of Rome, in the cells of Ferrara, or by the tree of Avon, all are naturalized and united with the mighty name of their offspring, and shine as beacons amidst the wrecks of time, to their greatness and immortality.

BEGIN WITH THE YOUNG.

We recollect B—— Park, the residence of Sir Henry A——, who quitted England, and resolved to reside on his property in Ireland. In point of comfort and cultivation, he was determined that his estate should become like an English oasis. Many were the old cabins which were taken down, and many more neat and pretty dwelling-houses were erected.

But there was one cottage on which more care and expense had been bestowed than on the others; it was two stories high, having bed-rooms up-stairs, and the kitchen was fitted up with what was considered a suitable grate. These circumstances combined, made it the wonder of all the cabin-holders about.

Throughout Ireland the peasantry make their turf fires upon the hearth, and are wholly unacquainted with the use of grates. Their great wide chimnies "pay a double debt;" the ostensible purpose is to serve as an egress for the smoke, but they also admit as much light into the house as is usually obtained by means of a window; and for working or reading in an Irish cabin, a seat under the chimney is preferable to one in the middle of the room, being much lighter. Every good has its attendant evil—so has a wide chimney! for it admits rain just as readily as it does light; and to escape a wetting in a stormy night, the inmates of such abodes generally bring the fire almost to the centre of the room, and sit round it.

But to return to our subject—one cottage was better built than the others; this was partly owing to its nearer vicinity to B—— Park than the others, and partly to the extensive and agreeable prospects its situation commanded.

Fronting the cottage was a small but picturesque glen, at the bottom of which rolled a mountain rivulet: on the right, its shelving bank was adorned by orchards which, when we saw them, were richly laden with the fruits of Autumn; and on the left were corn-fields and pasture lands. Beyond the glen, and at about five miles distance, was seen the tapering spire, and the barracks of the neighbouring town, with the richly-wooded and extensive demesnes of Moore Park and Castle Hyde, through which the Black Water (the most beautiful of all the Irish rivers) winds its romantic course.

At least a dozen grey ruins of castles, churches, and "ivy-mantled towers," were spread over the extent of country visible from the cottage: the whole was bounded by the Kilworth Mountains, the Balhyhooley Hills, and Cairn Thierna.

It was not an easy matter to obtain a suitable tenant for this deservedly favorite spot. Many applicants were rejected, as it was not desirable that a large family of children should be brought to it; for they are all alike famous for their destructive powers. At length an elderly woman, Biddy Magragh, was fixed upon, who, from her decent appearance, seemed calculated to become an example of neatness and comfort to her neighbours.

She gave a ready assent to all that was required from her as a tenant, and seemed to think that her part would be by no means difficult to perform. The prospect of being constantly employed in spinning for Lady A——, and having the charge of all the poultry belonging to the "big house," as they were both light and pleasant employments, no doubt blinded her to a multitude of troubles, which otherwise she would have perceived awaited her in her new home.

The family forbore to call upon Biddy till she had been rather more than a fortnight *in office*. On this their first visit, they found but few delinquencies from cleanliness and neatness, and they were, on the whole, very well satisfied with the appearance of things. The old woman complained that it gave her a world of trouble to make fires in the grate, and that she could scarcely ever get them to burn. She also said something about having had a touch of the rheumatism.

Some weeks after this, as Sir Henry was passing the door, on his return from a shooting excursion, he determined to call and rest himself, and inquire how his tenant was going on.

He opened the door, and, on accepting the invitation to "walk in," he found Biddy and a neighbour with her, both seated before a large fire made upon the floor. Sir Henry inquired, with amazement, "what was become of the grate?"

The old woman rose, which at first she appeared half-afraid to do, and, pointing to her seat, replied, "'Tis there it is, Sir,—I got my grandson Jack to take it down yesterday, for 'twas tired of my life I was; the best saved turf in five parishes wouldn't burn in it, bad luck to it!—not a *pratie* could I boil; and where in the wide world, your Honour, would I make the fire but on the hearth, to get any good from it?—'tis an iligant sate the grate makes,—it holds two and a gossoon!"

The dismay and indignation of Sir Henry may be easily conceived, and, as soon as his choking anger would permit him, he exclaimed,—"How dare you, you old hag! pull down any of the fixtures in the house, without first obtaining my permission to do so?"

"'Tis true for you I might have done that same, but Jack stepped in so *convanient* last night, and advised me to it, for, says he, 'His Honour has the heart of a *gintleman*, and surely by no man-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

ner of means would wish you to be *kilt* for want of the *hate*.'—'Why,' says I, 'if he should plaise to take the house over my head next week, 'tis happier I'd be walking the world than live under the roof with that thing of a grate; the feet have been *could* with me ever since I came near it, and I've got the rheumatism in 'em, and all from having the fire so high entirely above, in place of its being on the hearth, where we can put the feet *agin* it.' Better than three nights ago, I couldn't get up all day long, and was quite dead—barring the breath,—and all from taking a *big could*."

"I give you notice," said Sir Henry, (as soon as he could find an opportunity of speaking,) "to look out for another berth for yourself, for I perceive, if I keep you here, the house will soon be in as bad a state as its predecessor—the cabin. You'll pull down the stairs to make seats, the next thing."

"And if it wasn't that it would be *bauld* to say it to your Honour's honour, that same would not be a bad work; sorrow much I trouble the steps, for when I do, they do be almost breaking the legs of me, and taking the breath."

"Well, well," mutter'd Sir Henry, "I see I have been throwing pearls before swine."

"Is it the pig, Sir, you ask for?—Why then 'tis not well he has been at all since he came to this place: the poor *baste* is so lonesome out in that little coop by himself, and 'tis very natural that he should be grieved to the heart, and not thrive at all, but the other way, when he thinks how he used to be rubbing his nose against me *twinty* times a-day and more, and go in and out like one of the family, as sure he was, and just the pattern of a *purty* pig! and now, ullagone! 'tis shut up he must be, the cratur!"

"I thought my Steward told you that you were welcome to drive your pig upon the road sometimes."

"He did, Sir; only it isn't the road he wants, but it's what he's used to, is the face of a Christian, and all the dumb *craturs* like it. The cocks and *hins*, and let alone the turkeys, would lay twice as many eggs as they do—ay, and more, if they might be with me in a warm cabin."

Somewhat softened and amused, in spite of himself, at the manner in which the old hen-wife gave vent to her sorrow and expatiated on the calamities which a kitchen grate and a flight of stairs had plunged her into, the generous landlord left her, and, during the remainder of his walk, he naturally enough thought over the scene he had witnessed, and endeavoured to trace effects to their causes.

He began to perceive the mistake he had fallen into, in supplying his people with things of which they never felt the want—things which were to them a great deal of extra trouble, attendant with no adequate reward, but, on the contrary, with great discomfort, as appears from the circumstance of the grate.

We must bear in mind that these poor people, as yet, have no idea that neatness is essential to comfort.

Sir Henry, in his anxiety to make his tenant comfortable, had forgotten how much we are all controlled by the strong power of habit, and that to leave off long-practised customs and usages, and to acquire new ones, is a difficult task for middle-aged people, and must be still worse for old ones.

* * * * * *

"Yes," said he, "it is the young we must compel to improvement: it is no punishment; while the bodily and mental faculties are flexible, they may be accustomed to any thing."

He determined in all his future innovations to begin with the young, and leave the old people free to adopt improvements or not, as they chose.

In this amendment, we ourselves beg leave to support him; and perhaps, at some future time, we may show how eminently successful his endeavours became.

IMPROMPTU THOUGHTS

On hearing that a Missionary from Scotland, who went alone into the Interior to convert the Heathen, is supposed to have been lost in the Orange River.

"Fanaticism's last fool!"—the world exclaims,—
Not so, the acclaim of Reason or the Skies,—
The world's first spirits had no loftier aims—
You ventured nobly, for the highest prize.

The finder of a stream's content to die,
Unseen,—unknown—save on the breath of Fame—
'Tis nothing where we yield our latest sigh,
If an eternal pen record our name.

To gather plants, birds, beasts, or golden sand;
Enlightened men have searched earth, air, and wave;—
You also left your much-loved native land,
In distant climes some precious thing to save.

When war's red star arose on our Frontier,
The soldier hasted on his steed away;—
Unsent by man—you went a volunteer,
Led by a brighter, than the Star of Day.

Wealth's votary with stealthy step has gone
In deepest solitude to snatch his prize;—
You travelled our parched wilderness alone,
And joyed to see the Bushmens' mountain rise.

Fashion's enthusiasts have gaily danced
Away the night,—and ought a world of care—
From friendship's circle far,—in faith entrance
In dove-like musings, rose your midnight prayer.

Where many gather to the house of God;
Your kindred sleep within their kinsman's grave;
Your goal was solitude's own waters broad,
Your mausoleum, her Gariepine wave.

In our dark heaving sea, the gallant Gore,
Attempting one to save,—found his last bed,—
You, also, made the attempt—what could you more,—
The path of Duty on to glory led.

'Tis *vulgar glory* on embattled ground,
Before admiring hosts to yield one's breath—
Of *you* no tales are told—nor body found,—
Your's was the deeply dark, sublime of death!

Out-span Place, Cape Downs. * *

LITERATURE.

THE BELGIC REVOLUTION.

William of Holland, late King of Belgium,—The Prince of Orange, Prince Frederic, and a few words for Belgium.

A VERY interesting Book has been written by Mr. White, entitled, "The Belgic Revolution." 2 vols. 8vo.

We shall not go into the history of Belgic grievances and discontents relative to the union with Holland. Enough has been said by Mr. White, that they were neither few nor trifling. The disruption was at hand—England and the other powers would not interfere to protect the government of the Netherlands against "the sacred right of popular insurrection." "Select what form of government you think proper," said the Duke of Wellington to the Belgian deputation, dispatched to England by the provisional government, "or whatever chief you may consider best calculated to effect the objects you have in view; providing you do not embroil yourself with Europe, we shall not interfere."

We have been pleased and instructed by the author's delineation of the character of William the King of Holland, and the Prince of Orange and Prince Frederic.

Convinced that the power and grandeur of nations depend in a great measure on the extent of their commercial and industrial activity, and taking as his model '*that people of shopkeepers*,' whose colossal influence is mainly derived from this source, King William devoted the entire energies of his mind to the formation and impulsion of trade, manufactures, and commerce in all their diverse and most extensive branches. The leading object of his ambition—an ambition founded on the most wholesome principles of political economy—was to render the Netherlands as distinguished for its artificial productions, as its soil is pre-eminent for its fertility and the abundance of its natural produce. There was no labour, no expense, no care, no experiment left unemployed, to give life and excitement to this grand object. Project succeeded project, speculation followed speculation with surprising rapidity; and if many of these plans terminated in failure, enough as been already said to prove that two out of three were crowned with success, or promised beneficial results.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

The favourite theories and meditations of the royal mind being, as it were, concentrated upon commercial pursuits and the employment of capital, he was said to display less of elevated sentiments and political grandeur, than of that arithmetical positiveness which is the general result of a constant devotion to the study of the practical branches of political economy. One engrossing topic was uppermost in his mind, which was compared to a vast 'price-current,' the barometer of which was solely influenced by the rise and fall of colonial and indigenous produce, or the fluctuations of the public funds. The inventions of Watt and Bolton stood higher in his estimation than the achievements of Frederic or Napoleon: and the most insignificant writer on subjects of political economy or practical philosophy, was infinitely more worthy of attention than Byron or Chateaubriand. He protected the arts, not so much from admiration as policy; and he countenanced literature, not from any devotion to letters, but because it created a demand for certain articles of commerce. The rattling, dinning sounds of a Ghent cotton-factory, or the monotonous vibrations of a Luxembourg forge-hammer, was sweeter music to his ears than the most melodious strains of Rosini or Beethoven. The gaunt chimneys, vomiting forth clouds of dark smoke above some graceless refinery, were fairer objects of architecture to his sight than the splendid column of the Parthenon or the dome of St. Peter's. In short, there was nothing classic, inspiring, or chivalrous in his bearing; all was material, positive, and mathematical.

Business was his element, his recreation; his companions were practical men.

Early in his hours, sober and simple in his habits, an enemy to extravagance and ostentation, punctual in his engagements, and minutely exact in the distribution of his time, he was enabled to perform such a mass of business as would appear incredible to persons who were not witnesses to the amount and diversity of his daily occupations. There was scarcely an affair of the most trifling nature, any way connected with foreign affairs or internal administration, of which he did not take cognizance, and in most cases determine according to his own views. This application was not, however, more remarkable than his intimate acquaintance with the most minute fractions composing the machinery of state, or his perfect familiarity with international law, and the various sources whence other nations derived the sum of their strength and prosperity. His facility of access, the promptitude of his answers, his blunt frankness, and his irreproachable domestic qualities, are admitted by all; still his majesty was generally accused of a phlegmatic coldness of manner, of an overweening fondness for money, of never being able to forget that he was a Dutchman and a Protestant—in fact, of identifying in his own person all the prejudices of his country and faith. Added to this, he evinced a tenacity of opinion, bordering upon obstinacy; so that, having once adopted any system—and he was not prone to decide impetuously—no argument could shake his resolution. Another most striking defect in the royal character was his unseasonable employment of energetic measures. The development of force was said with him to be a constant anachronism. This has been verified in a striking manner, during the different phases of the revolution, from the night of the 26th August, 1830, to the burning of the arsenal and entrepôt of Antwerp; and from the invasion of Belgium in 1831, to the retention of Lillo and Liefkenshoek in 1833. The latter has, indeed, been an incomprehensible stroke of policy, desired by and evidently advantageous to his adversaries. The fact certainly is, that when energetic measures, promptly and vigorously applied, might have produced incalculable results, recourse was had to temporization; and again, when the development of force was but a vain waste of blood and treasure, it was then that negotiation was abandoned.

It is incontestable, however, that if the happiness and welfare of a nation depended on the laborious exertions and unremitting devotion of the sovereign to state affairs, then Belgium ought to have been as contented as it was prosperous, and its monarch the most popular sovereign in Europe; more especially as no king could be more fortunately seconded than he was by his queen and her family.

The Prince of Orange is described as being of a much more courteous and chivalrous disposition, and is defended against some severe accusations that have been industriously spread to his great prejudice in the eyes of the Belgic people and of Europe; while Prince Frederick is drawn as strongly resembling his father in business habits. Had not the impolicy of the King, and his own fatal confidence, urged him to take the command of the columns that advanced on Brussels, our author maintains that his name would have been still respected by the Belgic people. But delay or precipitation, and many inopportune steps, are charged against the general members of the royal family, although the gallant bearing of the Prince of Orange seems not in the least to have been unworthy of his exploits when under the English Captain. We have been deeply interested by the following account of his conduct and reception in Brussels, when he adventured to enter the city after he had been, for the first time, barricaded, and the inhabitants were in arms in defence of themselves and their rights. The farther he penetrated into the city, he is said to have been the more astonished at the formidable preparations to oppose any forcible entry.

As the cavalcade advanced, the same silence was maintained. There were no greetings, no hurrahs! no symptoms of loyalty or devotion. There was a buzzing hum, a rushing to and fro, but no acclamations. No flowers were strewed in the streets, no handkerchiefs waved from the windows. Every eye, every countenance seemed to frown upon him.

——— 'No man cried 'God save him!'

'No joyful tongue gave him his welcome home.'

Although his clenched jaw and expanded nostril more than once bespoke the intensity of his feeling, and a momentary tear did glitter in his eye, he suppressed the emotions of his heart; and maintaining a gallant bearing, stopped here and there to address persons of his acquaintance—praising some for their good conduct, and assuring others that, if it depended on his exertions, their grievances should be speedily redressed.

On reaching the *Marché aux herbes*, his royal highness expressed a desire to proceed direct to his palace! but, independent of the immense crowds that filled the *rue de la Madelaine*, impassable barricades completely barred the passage. As some discussion took place as to the route to be followed, the populace became extremely clamorous, and with loud shouts exclaimed—'To the Palace of the People!—to the Hotel de Ville! whilst an athletic and fierce-looking man, armed with a pike, sprung forward, and brandishing his weapon above the head of the prince's horse, roared out—'*Vive la liberté!*—to the town-hall!' Turning to M. Plaisant, who stood at the prince's stirrup, his royal highness exclaimed—'Cursed liberty, that will not allow a man to go direct to his own house!' The multitude now becoming still more clamorous, and the persons near the prince feeling anxious for their illustrious charge, M. Plaisant whispered to him—'Quicken your pace, Sir, in God's name; it will be more prudent to proceed to the town hall.'

Upon reaching the front of this building, on the perystile of which the regency was assembled, the prince reined in his horse, and the immense crowd having formed a circle around him, he harangued them in a strain of deep feeling and moderation. He appealed to their loyalty and love of order, and promised to devote himself to their welfare. He told them, although there was no occasion for arming, the troops being come as brethren and not as enemies, that he himself, as colonel-general of the communal guards, was glad to see himself surrounded by the armed citizens. On concluding, he raised his hat, and shouted '*Vive le Roi!*' But these talismanic words, so effective in ordinary times, had lost their charm. They were either feebly re-echoed, or drowned by vociferous shouts of '*Vive la Liberté! A bas Van Maanen!* whilst even the more popular cry of '*Vive le Prince!*' was accompanied by no enthusiastic marks of devotion.

It was here that an accident occurred that might have led to most unpleasant consequences. The horse road by the prince, a beautiful but vicious animal, became frightened and irritated by the pressure of the crowd on his flanks. It had already bitten more than one person, and had kicked Baron Van der Smissen so severely, as to disable him from further duty. An individual having incautiously placed his hand on the fiery creature's crupper, it instantly lashed out, and struck him so severely as to awaken apprehension for his life.

The populace, concluding the man to have been killed, broke forth into loud vociferations. Some cried, 'bayonet the vicious brute! Alight! alight! and walk with us;' whilst others roared out, 'On foot, on foot! we are not made to be trampled beneath Dutch hoofs.' In the meanwhile, the prince called to his groom, sprung from the animal he road to the back of that of his attendant, and said, 'if the man is injured I will give him a pension of 500 florins; the horse shall be destroyed.' But from the menacing attitude of the crowd, or from some sudden impulse, his royal highness had scarcely uttered these words, ere he put his horse into a trot, and having reached the narrow street leading from the Grande Palace to the Palace of Justice, broke into a gallop, followed by his staff and a few mounted burghers.

His progress was not unattended with peril. Being compelled to urge his charger over one of the barricades, neither his personal attendants or escort could follow, so that he arrived suddenly and alone in the square of the Palace of Justice. Here, from ignorance or malice, an armed burgher rushed at him with fixed bayonet, and the consequence might have been fatal, had not another citizen sprung forward and turned the weapon. Loud and insulting language was now uttered by some of the bystanding rabble; but being joined at length by his suite, and an opening being made in the barracades that barred every issue, the prince proceeded rapidly to his palace, where he arrived in no ordinary state of excitement and displeasure at what had passed.

Instantly turning round to the citizens that had followed him, he rebuked them in bitter

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

terms for thus permitting him to be insulted. 'As for you, Sir,' said his royal highness to D'Hoogvorst, 'you shall answer for this on your head. Are these your promises? Was it for this that you entrapped me, the son of your king, into your city? Is this your Belgic faith?' The persons present, who were deeply distressed at what had occurred, now stepped forward, and after a short but animated discussion, succeeded in appeasing the prince's wrath, so that he soon recovered his wonted equanimity of temper, and having summoned to his presence several of the most influential citizens, immediately proceeded to hold a conference as to the best measures to be adopted for the restoration of tranquillity. In the course of the afternoon, a proclamation announced to the inhabitants the selection of a commission, charged with proposing measures for the re-establishment of a good understanding between the government and citizens; thanking the latter for their laudable conduct, and assuring them that no troops should enter the city."

The self-possession was striking of the Prince, on this occasion. He encountered danger without glory, for he was in the midst of a revolted population. Those who scowled upon him now, however, had but lately cringed in his presence, which augmented his peril; and therefore the policy of his adventure may be questioned, since, in exceeding his instructions, he only added fuel by a middle course to the people's demands and strength, when one of two alternatives were alone applicable— either undisguised concession and complete pardon, or the strongest measures of force and unmitigated chastisement.

We pass over every farther detail connected with the progress of the revolution—its amount, its excesses, and re-established tranquillity. All who wish to have a full and vivid conception of such things must have recourse to the volumes before us. They furnish a most affecting and instructive picture in the page of human history. The Belgic Revolution is so clearly traced by the author, that we see it indeed like a well-defined representation upon a distinct piece of canvass; and to England the work at this period should be precious.

As to the matters stated as facts in these pages, we think the author evinces a familiar acquaintance. He indeed informs us, that he has resided more than four years in Belgium, and attentively watched the various phases of the revolution since its out-breaking in August 1830; that he has lived on terms of amicable intercourse with many of the most eminent personages that have figured on the stage, and has had access to a vast mass of oral and documentary testimony on the subject. He has also made it a theme of constant meditation, and of occasional publication. But whilst the work itself shews all this, it is likewise distinguished by a liberality of criticism respecting public measures and men, and a freedom of sentiment descriptive of a well-equipped writer, steering clear of extreme opinions; so that we cordially recommend it to all who wish to study one of the most recent and affecting revolutions among nations. And while we deplore the moral devastation to be witnessed in the case of such dreadful political throes, it is no small consolation to find a regeneration, according to the following picture:—

But it is time to bring our imperfect labours to a close. This cannot, perhaps, be accomplished in more just or appropriate terms than by stating that Belgium, prospering beneath the influence of regenerated monarchical institutions, and the paternal sceptre of a prince who generously associated himself with her destinies, and exposed his life for her independence, may now boast that the sum of her liberties is complete, and that, whilst commerce and industry only require peace and equitable treaties to restore them to wholesome vigour, the arts and sciences are advancing in a manner not unworthy of their pristine reputation. A progress, that must be principally ascribed to her political emancipation, and to the expanding consciousness of that freedom which is so essential to the development of individual or national resources.

Enchained during a long lapse of years beneath the iron rule of various masters, the Belgians had lost the title, but not the sentiment of nationality. The irresistible outbreaking of the one has obtained for them the enjoyment of the other; and this, under a wise and tolerant sovereign, who not only reigns amongst, but exclusively for them. They may now, therefore, invoke the evidence of ancient times, and dwell with pride upon the memory of those illustrious countrymen, whose names are interwoven with the pages of European history. They may now renew the broken links of national traditions, and shew that they are not without honourable records of the past, nor undeserving of brighter prospects for the future.

And what country has a better claim to retrospect than that which, as early as the fifteenth century, was pre-eminent throughout Europe for its wealth, industry, civilization, and learning?—than that which furnished Charles V. with many of his ablest generals and most valiant soldiers?—than that where Egmont, Horne, and other noble victims fell martyrs to the cause of liberty?—the land that was the birth-place of Scaliger, Ortelius, Lipsius, Van Eyck, and Rubens?—the land that nobly struggled for its rights and privileges against the persecutions of Spain, and resisted the encroachments of Austria with equal courage, though perhaps with less justice, than she successfully emancipated herself from the thraldom of Holland?

Content with the luxuriant richness of her soil, and the many natural benefits that Providence has conferred upon her; essentially industrious in her habits, and moral in her disposition; desirous to encircle her territory with a fence of olive rather than with a barrier of steel, that land now craves no other boon of Europe, than the unobstructed enjoyment of her independence, upon terms compatible with her own vitality and the collateral rights of other states. Policy and justice demand the accordance of this concession. Should it be denied, or should any attempt be made to violate her nationality, Belgium will be as ready to court the hazards of war as she is now anxious to cherish the blessings of peace. She will then be as willing to expend her blood and treasure in defending rational liberty against the infringements of despotism, as she is now eager to co-operate with moderate governments in stemming the progress of irrational licence.

Having reconquered that rank amidst nations which is her just heritage, the ardent vow of Belgium is not to disturb European institutions, but to accommodate herself to them. Passive, but fully armed—patient, but resolute, she is prepared to encounter any political vicissitudes that may assail her from abroad; whilst with increasing powers, and a prospect of diminished burdens, she tranquilly pursues the work of amelioration at home, and devotes herself to the cultivation of those generous and useful arts that are the glory of all civilized nations.

RIO.

Voyage round the World, by Dr. F. G. Meyen, in the Prussian Ship The Princess Louisa. 2 vols. 4to. Berlin. 1835.

We can only make a single reference to this interesting work, by way of extract. We will not follow our author through his description of the still existing horrors of the slave-trade, even after the prohibition of the further importation of slaves, conformably to the treaties made with England. His report of a visit to the warehouse of a slave-dealer, where the greater part of the unfortunate victims were children branded with red-hot irons, generally on the noblest parts of the human body, fully corroborates all the preceding accounts of that atrocious system, and of its demoralizing effect on minds which are in other respects not destitute of feelings of humanity.

To our astonishment, says he, we found at Rio people of the country, distinguished for their education and humanity, who coolly assured us that we were mistaken, in imagining that the negroes belong to our species. Agreeably to this principle the slaves are treated, and, as the people of Rio boast, with extraordinary mildness. A person must have long resided there, and become gradually accustomed to the sight of this misery and degrading oppression, before he can understand such language.

If a stranger visits the depôt of a slave-merchant, the latter receives him with the greatest civility, cordially shakes him by the hand, and assures him of the uncommon excellence of his merchandize, He immediately orders some of the poor wretches to stand up, and stick in hand, makes them exhibit their capabilities. But if these atrocious dealers in human flesh perceive that you have entered their depôt from mere curiosity, they immediately become vulgarly insolent, cursing foreign nations, especially the English, who they say meddle in their concerns, and rob them of their legitimate gain, only to enrich themselves. We know from various writers, what is now the easiest mode of acquiring riches at Rio, namely, by purchasing slaves and sending them out to work.

Long before day-break, as well as throughout the whole day, thousands and thousands of slaves may be seen wandering about, seeking employment; the harbours and market-places are thronged with them, and it is impossible to walk even a few steps without being accosted by them. These

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

slaves are obliged to provide for their own maintenance, and to carry home to their owners a certain sum of money every day. If they have been unable to realize this, they are beaten; but if they have gained more, they are allowed to retain a part, in order to make up any deficiency on some other day. During our stay, we daily saw the slaves bring home to their owners two patacas (one rix-dollar Prussian). Many owners send their slaves for daily employment to the neighbouring quarries, while very many others send them out to catch insects; and this is the reason why the most brilliant insects are to be had so cheap at Rio de Janeiro. When a man has attained to some adroitness in this operation, he may on a fine day catch in the immediate vicinity of Rio more than five or six hundred beetles. This trade in insects is considered very lucrative, six millreis (four rix-dollars, or about fourteen shillings,) being paid for the hundred during our stay. There is a general demand for these brilliant beetles whose wing-cases are now sought for the purpose of adorning the ladies of Europe--a fashion which threatens the entire extinction of this beautiful tribe. The diamond beetle (chlamys bacca, Kert., and especially the chlamys cuprea, Klug.) was in great request for brooches for gentlemen, and ten piastres were often paid for a single beetle.

The thirst of gain has, however, taken other ways to attain its object with the greatest rapidity. Humanity will not believe the fact at some future day, when we state that the negroes themselves are sometimes kept for breeding, as with us horses are kept in the studs. Young negresses are purchased solely for breeding children; and a negress when pregnant is worth fifty piastres more than before. The young children are taken from their mother's breast and sold for thirty or forty piastres. To the master of the slaves everything is lawful—he makes pretended marriages and dissolves them when he will; he separates the children from their parents, and sells man and wife, so that they, perhaps, never meet again. Even the milk of the negresses is made an article of trade, and sold as cows' milk. Hence milk which is always very dear, is never seen at Rio in the houses of foreigners, unless they have cows of their own.

We wish we could participate in the hopes of the author that this lamentable state of things is likely to be speedily amended. The importation of slaves being prohibited, their value is increased, and the owners must treat them more mildly, in order to defer, as long as possible, the necessity of working themselves. From the great mortality among the negroes in Brazil, the blending of the several races, and their consequent improvement, he anticipates that in thirty years the slave population will consist of men who will no longer bear the yoke of slavery, and will be able, from the superiority of their numbers, to emancipate themselves, if the whites do not give them freedom of their own accord.

INSURRECTION IN JAVA.

POLICY OF THE DUTCH TOWARDS THE NATIVES, DIPO NEGORO THE NATIVE CHIEF, &c.

(*Memoires sur la Guerre de l'Isle de Java.* Par le Major de Stuers. *4to.* 1834.)

The conquest of the island of Java by the British army in the year 1811, and the knowledge which we acquired of its importance during the time that it remained in our possession, till it was restored to the Dutch at the general peace, excited the attention of the public in an extraordinary degree; and the valuable work of Sir Stamford Raffles, only tended to increase the general regret, that so fair a possession, which had derived immense benefit from the more judicious and enlightened system of administration under the British government, had been restored to its former masters, who there was every reason to apprehend, would replace it under the same narrow system of colonial policy which had so long oppressed the inhabitants, and cramped the resources of the island, by rendering everything exclusively subservient to the interest of the mother country. It is not possible accurately to ascertain the measures that the Dutch government has adopted since it regained possession of the country. But this we know that the Dutch have had to contend with various insurrections, especially with that which occasioned the five years' war, of which Major Stuers relates the history. We shall not enter into any detail relative to this war, which is wholly destitute of general interest,—but we shall mention two or three facts, which seem to shew that the Dutch hold by a rather precarious tenure the dominion of this fine island: for it appears evident that they owe their safety, in a great measure, to the dissensions among the native princes. The troubles, says Major Stuers, were not caused by the discontent of the emperor, or of the Javanese in general, for the emperor of Solo, whose dominion is confined to the province of Soura Karta, as those of the sultan are to that of Djocjocarta, (these two being the only provinces now under the dominion of the native princes,) remained faithful to the Dutch, and his troops fought with them against the insurgents; and, with respect to the people, the insurrection was confined to the province of Djocjocarta. Even there only a part of the population, misled by the threats and promises of Dipo Negoro, the chief of the rebels, and his partisans, joined in the revolt as long as the presence of the chiefs of the insurgents compelled them; for, when the latter were obliged, by the movement of the Dutch troops, to take another direction, the inhabitants immediately submitted to their legitimate sovereign, the sultan of Djocjocarta, whose throne the rebel chief desired to usurp, and to the Dutch government, which protected them, while the rest of the Javanese nation took no part whatever in the insurrection.

Thus a person might have travelled from Anger, in the western part of the island, where the great post-road begins, to Banjouwangi, at the other extremity, a distance of 300 leagues, with as much safety as from Amsterdam to Paris, and without even suspecting that there was a commotion in any part of the island, the Javanese in general taking as little interest in it as if it had happened in some other country. How then could the war be protracted to so great a length, and cost the Dutch such sacrifices in men and money? Who was Dipo Negoro—a daring native chieftain, who was able so long to make head against a brave and well-disciplined army, commanded by officers of distinguished merit? That he was an extraordinary man appears from the following character of him drawn by Major Stuers.

"Dipo Negoro is about 46 or 47 years of age. He is of middling stature, and, though his countenance does not seem to announce anything extraordinary, he has nevertheless manifested during the war a loftiness of character very rare among the Javanese princes of our days. He has given repeated proofs of great courage, firmness, and perseverance; after causing himself to be proclaimed sultan of Materam, he found means to make himself recognized and obeyed as such by the people over whom he exercised, till his downfall, an absolute religious and political authority. His courage was not broken by adversity. When abandoned by nearly all his partisans, his oldest friends, and even by his family, dragging on a miserable existence in deserts, destitute of even the most common necessaries of life, harassed, pursued, chased without ceasing by our troops, he lost none of his natural firmness, and haughtily rejected every proposal to submit."

After various changes of fortune, Dipo Negoro was at length induced, in the beginning of February, 1833, to propose an interview with the general-in-chief, which after some negociation was acceded to, and, on the 21st of February, Dipo Negoro arrived at Minoreh, the placed fixed on for the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

conference, with a troop of 700 men, but on the 25th he declared that the feast of *Pouassa* having commenced the preceding day, he would not treat of any business during the month of its continuance, to which the Dutch consented. In the course of this month the suite of Dipo Negoro became daily more numerous: he however had a short interview with General de Kock, the commander-in-chief, on the 8th of March, in which he said he hoped all would be amicably settled immediately after the feast. Meanwhile something occurred which, as Major Stuers says, led the government to *suspect* that Dipo Negoro was not sincere, and, the Dutch troops in the vicinity having been reinforced, orders were given to the commanding officers to be ready *to seize the person of Dipo Negoro at his first interview* with the general-in-chief after the expiration of the feast.

The interview took place on the 28th of March, at which Dipo Negoro, having proposed terms which the general declared too extravagant to be listened to, and from which Dipo refused to depart, the general told him that he must send him as state-prisoner to Batavia, *to be disposed of* as the governor-general should determine. Dipo Negoro protested, but in vain; his attendants were disarmed, and he was sent under the escort of Major Stuers, the general's aide-de-camp, to Samarang and thence to Batavia, whence he was conveyed as *a state-prisoner* to the Moluccas, "to depend," says Major Stuers, "solely on the clemency of the government which he had so justly offended, and from which he had well merited a more rigorous punishment." How he was treated in the Moluccas, or whether he is still living, Major Stuers does not inform us.

In conclusion, Major Stuers speaks of the loss sustained by the Dutch in this war; he cannot state the total number of men that perished; he says 12,749 men died in the hospitals of the second military division, which was the centre of the operations, and that as many died in the first and third military divisions, of which Batavia and Sourabaya are the chief towns; he thinks he shall not exaggerate if he fixes the total loss at 15,000 men, of whom 8,000 came from Europe:—a calculation which seems to include only those who died in the hospitals. The expences of the war he estimates at twenty-five millions of florins, but he thinks that the result has consolidated the power of the Dutch government, by giving the natives a very high idea of its resources. This may be the case, but it seems, even from Major Stuers' own account, that, if the natives had not been divided, the contest might have terminated very differently. At all events, it is to be hoped that the Dutch government may have been fully impressed with the necessity of a system of administration calculated to promote the welfare and conciliate the affections of the natives.

A VISIT TO SIR WALTER SCOTT.

Abbotsford and Newstead Abbey. 8vo. 1835. By Washington Irving.

We remember hearing a person mention who had been on a visit to Abbotsford, that one of Scott's most amusing and wonderful displays on that occasion, was to take from his collection of old prints, by random, any one, and gravely begin a lengthened story, weaving into the tale every personage or scene in the picture, giving their names, titles, and localities, with a freedom and ease, as if the story had been committed to memory. But this was not all; he sometimes happened to take up one picture more than once, when a perfectly distinct tale would be invented by him, possessed of all the charms and powers of his printed pieces—it being easier for him to create than to remember. Once upon such an occasion, some one expressed wonder how he could recollect all such stories; he quaintly answered, "I could tell "stories for a month to come about these pictures."

We quote a specimen, probably belonging to this species of fecundity.

"In the course of the evening, Scott related the story of a whimsical picture hanging in the room, which had been drawn for him by a lady of his acquaintance. It represented the doleful perplexity of a wealthy and handsome young English knight of the olden time, who, in the course of a border foray, had been captured and carried off to the castle of a hard-headed and high-handed old baron. The unfortunate youth was thrown into a dungeon, and a tall gallows erected before the castle-gate for his execution. When all was ready, he was brought into the castle hall, where the grim baron was seated in state, with his warriors armed to the teeth around him, and was given his choice—either to swing on the gibbet or to marry the baron's daughter. The last may be thought an easy alternative; but, unfortunately, the young lady was hideously ugly, with a mouth from ear to ear, so that not a suitor was to be had for her either for love or money, and she was known throughout the border country by the name of Muckle-mouthed Meg.

"The picture in question represented the unhappy dilemma of the handsome youth. Before him sat the grim baron, with a face worthy of the father of such a daughter, and looking daggers and ratsbane. On one side of him was Muckle-mouthed Meg, with an amorous smile across the whole breadth of her countenance, and leer enough to turn a man to stone: on the other side was the father confessor, a sleek friar, jogging the youth's elbow, and pointing to the gallows, seen in perspective through the open portal.

The story goes, that, after long balancing in mind between the altar and the haltar, the love of life prevailed, and the youth resigned himself to the charms of Muckle-mouthed Meg. Contrary to all the probabilities of romance, the match proved a happy one. The baron's daughter, if not a beautiful, was a most exemplary wife; her husband was never troubled with any of those doubts of jealousies which sometimes mar the happiness of connubial life, and was made the father of a fair and undoubtedly legitimate line, that still flourishes on the border.

I give but a faint outline of the story, from vague recollection: it may, perchance, be more richly related elsewhere, by some one who may retain something of the delightful humour with which Scott recounted it.

When I retired for the night, I found it almost impossible to sleep: the idea of being under the roof of Scott; of being on the borders of the Tweed: in the very centre of that region which had, for some time past, been the favourite scene of romantic fiction: and, above all, the recollections of the ramble I had taken; the company in which I had taken it, and the conversation which had passed; all fermented in my mind, and nearly drove sleep from my pillow."

The author rose at an early hour next morning, and on looking out between the branches of eglantine which overhung the casement of the window, was surprised to see Scott seated on a fragment of stone, chatting with the workmen. Indeed, he appeared to be a man of leisure, who had nothing to do but bask in the sunshine and amuse himself, or to lavish his time and conversation on those around him. This devotion to the entertainment of his guests may be exemplified by the selection of a dinner party whilst our author was at Abbotsford. A testimony worthy of the writer who has charmed the world with his Jennie Deans, will be found in the following sketch. The Mr. Laidlaw spoken of in the extract, was Scott's steward, a gentleman who had been reduced, through misfortune, from a competency to the situation of taking charge of Abbotsford; at the same time he was a man of education and sterling moral worth.

"That day at dinner we had Mr. Laidlaw and his wife, and a female friend, who accompanied them. The latter was a very intelligent respectable person, about the middle age, and was treated with particular attention and courtesy by Scott. Our dinner was a most agreeable one, for the guests were evidently cherished visitors to the house, and felt that they were appreciated.

"When they were gone, Scott spoke of them in the most cordial manner. 'I wish to show you,' said he, 'some of our *really excellent, plain*

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Scotch people: not fine gentlemen and ladies, for such you can meet everywhere, and they are everywhere the same. The character of a nation is not to be learnt from ist fine folks.'

"He then went on with a particular eulogium on the lady who had accompanied the Laidlaws. She was the daughter, he said, of a poor country clergyman, who had died in debt, and left her orphan and destitute. Having a good plain education, she immediately set up a child's school, and had soon a numerous flock under her care, by which she earned a decent maintenance. That, however, was not her main object. Her first care was to pay off her father's debts, that no ill-word or ill-will might rest upon his memory. This, by dint of Scotch economy, backed by filial reverence and pride, she accomplished, though in the effort she subjected herself to every privation. Not content with this, she in certain instances refused to take pay for the tuition of the children of some of her neighbours, who had befriended her father in his need, and had since fallen into poverty. 'In a word,' added Scott, 'she's a fine old Scotch girl, and I delight in her more than in many a fine lady I have known, and I have known many of the finest."

LITERARY EXTRACTS.

EPIGRAMMATICS

FROM SOME OF THE LEADING COLUMNS OF THE

"*COMMERCIAL ADVERTISER.*"

THE Future is to the Unwise what a dark chamber is to the Superstitious. It is filled with Evil Spirits.

AGITATIONS are but the symptoms of the fermentation through which the social mass must pass, before the wine of life runs clear and gladdens the heart.

COWARDS alone are cruel, while the brave love mercy.

NONE ever feared the light whose conduct could bear it.

THE coward dares not confess a fault, because he is cruel; and cannot forgive others, and thinks all men like himself.

IGNORANCE is the mother of poverty in a nation; and the instructor of youth is as essential to the order of society, and the production of wealth, as the officer of power and justice.

THE web of literature, like the web of life, is a mingled tissue, and were we to reject every thing that has a faint of infirmity, we would have to sacrifice a large mass of intellectual treasures, that the world at present cannot afford to lose.

WHEN by reason of presumption and Rotten Boroughs, the Lawyer is planted in Parliament amongst men who have to deal with the perfection of God's Reason—which is the system of Natural Rights and unalienable Liberty,—he perceives, or rather others perceive, that his little pocket Rule of legal Logic, is altogether unequal to the measurement of it.

FOR one Brougham, we have had forty Scarletts.

TYRANNY is a most subtle and diffusive spirit. It is the moral Brandy of the unwary Legislator.

THE British Government, ever since the time of Mr. Pitt, has been *profuse* on principle. It was a government of influence. Opinion and Abstract Rights were Revolutionary sounds.

INFLUENCE means money!

PEOPLE rallied round the throne on the same principle that paupers rally round a soup kitchen. So long as the boilers are full, the alderman or vicar who condescends to deal out the contents, is held in the most profound veneration, though every body knows that the whole is furnished at the expense of the parish.

IN attempting to improve the physical condition of any people, we must begin with the *Mind.*

THE intellectual powers, and the moral instincts, must be cultivated, regulated, and refined. A strong mind strengthens the body. It is the source of all energy and action. A pure mind purifies its dwelling.

NUDITY, raggedness, and filth, are utterly inconsistent with high-toned morality, or the sentiments inspired by so bold a hope as that of immortal life, in regions of stainless light.

ROUSE this hope! communicate this mental strength, and the desired improvement in man's physical condition follows, as naturally as the green blade and the stalk; the ear grows up, we know not how, under the invisible influence of the seasons.

OF all things within the circle of possibilities to the seditious, the mildness of the Laws and a good Harvest, are the most terrible.

TO wink at dishonour in our associates, is as mischievous in its effects, if not so sure a sign of a perverted taste, as to invent or propagate a charge.

WHERE slander stalks abroad unrebuked and unpunished, reputation, like every other species of property, having no *security*, can have no *value.*

EVERY Public Board, when relieved from the public eye, soon degenerates into a hive of drones, or a nest of hornets.

THE only remedy against laziness is,—the due and certain reward of industry.

THERE is no mystery in Government. It is as simple as the business of the merchant or the farmer. It is rendered complicated only for the purposes of oppression, and to defeat the claims of justice and equity, as a fraudulent dealer fabricates a set of unexaminable books.

FREEDOM, which grows not from the root of independence and virtue in the hearts of the people, is but as marble over a tomb, which may conceal, but cannot stay corruption. It shines, but it is cold and unfruitful.

WE owe half our hearts, and nearly all our minds, to society.

WE are not only guided and directed, but formed and inspired, by intercourse with our kind.

WHEN intercourse is forcibly cut off, or so narrowed as to preclude selection, the mind fades like a plant torn from the genial bosom of the earth, its parent and nurse.

THE man who stands alone in his own strength, loses half the delights of sympathy. That heart is the most happy, as well as the most noble, that has a reciprocal pulse in the greatest number of human bosoms.

PLAGUES OF THE WEST INDIES—BERMUDA.

By Miss Loydd.

Not to speak of chigres, or sand-fleas, whose bites cause horrid ulcers, of rheumatism and toothaches the most permanent and excruciating, and of other ills that flesh, here, is heir to—they have the musquito and other plagues, quoth Miss Loydd—

"The Bermudians seem scarcely to suffer from their bite, and they endeavour to reconcile me to this painful annoyance, by assuring me that, if I stay here another summer, I shall not mind them. The negroes say, that it is the 'roast beef English blood,' which makes the mosquito like us so much on our first arrival. I find bay rum the only application which affords relief. The cockroaches (*blatta Americana*) are very numerous, and of extraordinary size; they have also an highly offensive odour, which is rendered still more disgusting by the close contact into which they come with you. They are particularly troublesome in the evening, when they fly about the room, dash with much violence against the lamps and candle shades, flap your face with their cold disagreeable wings, and crawl upon your dress, from which it is difficult to shake them off. They are also destructive to furniture, and have already taken a mighty fancy to the binding of some of my books; I have, therefore, taken the precaution of laying among them strips of Russia leather, which the cockroach shuns. Ants swarm in millions. Every article of food must be placed out of their reach, and put in vessels insulated in water, though sometimes they will even contrive to pass over this. They place regular sentinels, which are always on the look-out for the fall of a crumb, a piece of sugar, or, above all, the demise of a cockroach. Immediately on the occurrence of such an event, they carefully reconnoitre the spot, and if several ants are present, one or two are despatched to head quarters; they return, in a short time, at the head of a little army, which is divided into companies, each preceded by an ant seven times the size of the rest, which, by way of pre-eminence, is here called the captain. The ants never stop to devour their prey; in an instant they surround and cover it; some get underneath, some on the top, while others, again, help to drag it forwards by pushing along the sides. It frequently happens that there are half-a-dozen cockroaches on the scene of action: in this case their generalship is really amusing. The captains, after a sort of consultation (which seems to consist in an uncommon rapidity of motion), divide their forces, and, if they are sufficiently strong, the whole body moves off in regular batallions, one never interfering with the other, and each under its respective leaders. If, however, their numbers are too small, they combine their forces, and return, after having dragged off their first victim, until the ground is cleared. I have stood for hours admiring the intelligence which subsists among the whole party—their extraordinary dexterity—the knowing way in which they commence operations, and the celerity and union of strength and efforts, by which they convey a body above a thousand times their own size to a distance of many yards. This, I beg to assure you, is no poetry. I have never seen ants attack any insect while yet alive. They are very much like our English ants in appearance, only that they are a little larger. Another species of annoyance are the enormous spiders which crawl about on the roofs and floors: some are five or six inches in length including their long sprawling legs. I am sometimes amused by hearing the negroes call them triangles—a corruption, I suppose, of tarantula, to which they may have heard them compared. I am told that, if irritated, they will bite very sharply, otherwise they are familiar enough; and one kind is so beautiful—a bright yellow with

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

brown spots—as to take away all feeling of disgust.

"The cigala generally sit among the foliage of the trees, where it continues its shrill chirping throughout the day, with scarcely any intermission: it is, however, most annoying in the evening, when, perhaps attracted by the light, it takes its station in some corner of the room, or in a shrub near the verandah, where it sets up its chirp, at first rather softly, and then louder and louder as you raise your voice in order to make yourself heard. Suddenly a deafening sound breaks forth from all sides, the whole chorus raising their piercing chirp to the highest pitch: this continues for two or three minutes; a pause then ensues; after which they again resume their noise with renewed energy.

WEAKNESS OF MAN.

Men willingly prefix a handle to their names, and tack on to them any two or more honorary letters of the alphabet as a tail; they drop their surnames for a dignity, and change them for an estate or title. They are pleased to be Doctor'd and Professor'd; to be Captain'd, Major'd, Colonel'd, General'd, or Admiral'd;—to be Sir John'd, my-Lord'd, or your-Graced. 'You and I,' says Cranmer, in his Answer to Gardiner's book upon Transubstantiation—'you and I were delivered from our surnames when we were consecrated Bishops; sithence which time we have so commonly been used of all men to be called Bishops, you of Winchester, and I of Canterbury, that the most part of the people know not that your name is Gardiner, and mine Cranmer. And I pray God, that we, being called to the name of Lords, have not forgotten our own baser estates, that once we were simple squires!' But the emotion with which the most successful suitor of Fortune hears himself first addressed by a new and honourable title, conferred upon him for his public deserts, touches his heart less (if that heart be sound at the core), than when, after a long absence, some one who is privileged so to use it, accosts him by his Christian name—that household name which he has never heard but from his nearest relations, and his old familiar friends. By this it is that we are known to all around us in childhood; it is used only by our parents and our nearest kin when that stage is past; and as they drop off, it dies, as to its oral uses, with them. It is because we are remembered more naturally in our family and paternal circles by our baptismal than our hereditary names, and remember ourselves more naturally by them, that the Roman Catholic, renouncing, upon a principle of perverted piety, all natural ties when he enters a convent and voluntarily dies to the world, assumes a new one. This is one manifestation of that intense selfishness which the law of monastic life inculcates, and affects to sanctify. Alas, there need no motives or erroneous religion to wean us from the ties of blood and affection! They are weakened and dissolved by fatal circumstances and the ways of the world, too frequently and too soon.—(*The Doctor.*)

THE PLOUGH-BOY TURNED FOOTMAN.

A lady, who lived in the country, and was about to have a large dinner-party, was ambitious of making as great a display as her husband's establishment, a tolerably large one, could furnish; so, there that might seem no lack of servants, a great lad, who had been employed only in farm work, was trimmed and dressed for the occasion, and ordered to take his stand behind his mistress's chair, with strict injunctions not to stir from the place, nor do any thing unless she directed him; the lady well knowing that, although no footman could make better appearance as a piece of still-life, some awkwardness would be inevitable if he were put in motion. Accordingly, Thomas, having thus been duly drilled and repeatedly enjoined, took his post at the head of the table behind his misstres; and for awhile he found sufficient amusement in looking at the grand set-out, and staring at the guests. When he was weary of this, and of an inaction to which he was so little used, his eyes began to pry about nearer objects. It was at a time when our ladies followed the French fashion of having the back and shoulders, under the name of the neck, uncovered much lower than accords either with the English climate or with old English notions: a time when, as Landor expresses it, the usurped dominion of neck had extended from the ear downwards, almost to where mermaids become fish. This lady was in the height or lowness of that fashion; and between her shoulder-blades, in the hollow of the back, not far from the confines where nakedness and clothing met, Thomas espied what Pasquier had seen upon the neck of Mademoiselle des Roches. The guests were too much engaged with the business and courtesies of the table to see, what must have been worth seeing, the transfiguration produced in Thomas's countenance by delight, when he saw so fine an opportunity of shewing himself attentive, and making himself useful. The lady was too much occupied with her company to feel the flea; but to her great horror she felt the great finger and thumb of Thomas upon her back, and to her greater horror heard him exclaim in exultation, to the still greater amusement of the party—'a vlea, a vlea! my lady, ecod, I've cautcht'en!'—(*The Doctor.*)

GRATIFYING FACT.

AT a recent Annual Meeting of the New Cemetery Company, the Chairman "had great pleasure in announcing to the meeting, the gratifying fact, that the burials in the Cemetery for the last year, were double in number those of the year preceding."—(*London Literary Gazette.*)

THE SILENT SYSTEM.

IT seems probable that the "silent system," which has so long been in operation in America, will soon be universally adopted in Great Britain, from the success of the first experiment of this sort, made by orders of Sir Robert Peel's ministry—or rather, as is stated, upon the suggestion of the Duke of Wellington. At the close of the Middlesex adjourned session lately, the foreman said he was instructed by his colleagues, who had visited the House of Correction, to express their admiration of the cleanly appearance of the prison and its inmates, but most of all at the excellent discipline which prevailed. The rule for prohibiting conversation amongst the prisoners seemed to them to be calculated to produce the most beneficial results. The chairman said he was happy to hear a jury approving of that system, which was the best mode of punishment ever adopted. It prevented the contamination of juvenile delinquents by older and more hardened offenders, and had already had the effect of reducing the number of prisoners.

CALCUTTA—PUBLIC LIBRARY.

THE latest accounts from Calcutta are highly interesting as it regards the resolutions passed at a meeting of the most influential of the Inhabitants to establish a Public Library. And it is highly complimentary to the founders, subsequent lawgivers, and subscribers of the Cape Town Public Library, that their establishment should be considered as a model Library for Calcutta. That such is the case we learn from the fact of an official communication having been transmitted from Calcutta to the Librarian at the Cape.

We extract the following from the Calcutta Oriental Observer of the 22d of August.

PUBLIC LIBRARY.

Most of our readers probably recollect that when this paper was under the management of the Editor of the *Englishman*, the importance of a public Library was strenuously pressed upon the attention of the community. Like every thing else, however, which *originates* with the press, the proposition then passed unheeded. No one was public spirited enough to take the matter in hand and follow up a suggestion which it might have been foreseen would have found numerous willing and powerful friends. *Le bon tems* has however arrived, and our active contemporary now enjoys the high satisfaction of being hailed as a public benefactor. The project has been revived; not through the press, as before, but in a manner to ensure its complete fulfilment on as magnificent a scale as the ardent originator could desire. We learn from Mr. Stocqueler, that the Chief Justice was the first to assent to the importance of the proposal, and the very liberal principles on which it is based; and this honorable example—the more honorable in a quarter where a certain passion for exclusiveness might be supposed to prevail—has been most liberally followed by the Lord Bishop, the Members of Council, Sir J. P. Grant, and all the principal men in the metropolis of every grade, degree, caste, and color. About 120 names at this moment grace the list of subscribers to the *principle* of the Library, the details and rates of subscription to which will be arranged at a general meeting to be held the week after next, when the adjourned sittings of the Court are at an end, and the presence of the Judges and the Bar can be secured. In the mean time, fresh names are accumulating, and the preliminaries discussing, so as at once to bring forward a test of public opinion and to clear the way for final measures. Donations of books will, we understand, be invited, in order to obtain a good *nucleus* of the library at as small an outlay of money as possible. In fact, Mr. Stocqueler informs us, that he has promises from several gentlemen of very handsome contributions. Government, it is hoped, will also do something towards the creation of a library, and then the growth of the institution will proceed, under good management, rapidly and healthily withal.

THE FREEDOM OF THE PRESS.

THE people of Calcutta have resolved to celebrate the emancipation of the Indian Press in a style worthy of their intelligence and good sense. Instead of clubbing their funds to erect a statue as a resting-place for fugitive dust, like that of Lord Hastings, or as a monument of the sculptor's skill, like that of Lord Cornwallis, to be gazed at, stood upon, and criticised, when hundreds periodically assemble in the Town Hall, the inhabitants have determined to raise an elegant building for the reception of the library alluded to in the foregoing article, under certain conditions which manifest their determination to do the utmost possible good. Within this building also,—a building which in point of external elegance will, we hope, rival the Parthenon or Athenæum—a bust of Sir C. Metcalfe will be deposited; and, better still, a mural tablet on which will be inscribed, in durable characters, Sir C. Metcalfe's famous letter, in reply to the address of the inhabitants conveying their sentiments regarding the press. Nor will this be all:—the friends of the Press dine together on the 15th September, the day when the new law comes into operation, and an illumination will take place at the houses of those who consider the great event worthy of a gala.

THE KITCHEN OF THE MONKS IN THE MONASTERY OF ALCOBACA.

(*From Beckford's Excursions.*)

The three prelates led the way to, I verily believe, the most distinguished temple of gluttony in Europe. What Glastonbury may have been in its palmy state, I cannot answer; but my eyes never beheld, in any modern convent of France, Italy, or Germany, such an enormous space dedicated to culinary purposes. Through the centre of the immense and nobly-groined hall, not less than sixty feet in diameter, ran a brisk rivulet of the clearest water, flowing through pierced wooden reservoirs, containing every sort and size of the finest river-fish. On one side loads of game and venison were heaped up; on the other, vegetables and fruit in endless variety. Beyond a long line of stoves, extended a row of ovens; and close to them, hillocks of wheaten flour whiter than snow, rocks of sugar, jars of the purest oil, and pastry in vast abundance, which a numerous tribe of lay-brothers and their attendants were rolling out and puffing up into a hundred different shapes, singing all the while as blithely as larks in a cornfield."

The next transition was to the banquet.

We passed through a succession of cloisters and galleries, which the shades of evening rendered dimly visible; till we entered a saloon, superb indeed, covered with pictures, and lighted up by a profusion of wax tapers in sconces of silver. Right in the centre of this stately room stood a most ample table, covered with fringed, embroidered linen, and round it four ponderous fauteuils for the guest and the three prelates..... The banquet itself consisted of not only the most excellent usual fare, but rarities and delicacies of past seasons and distant countries; exquisite sausages, potted lampreys, strange messes from the Brazils, and others still stranger from China, (edible birds' nests and sharks' fins,) dressed after the latest mode of Macoa by a Chinese lay-brother. Confectionery and fruits were out of the question here; they awaited us in an adjoining still more spacious and sumptuous apartment, to which we retired from the effluvia of viands and sauces..... The table being removed, four good-looking novices, lads of fifteen or sixteen, demure even to primness, came in, bearing cassolettes of Goa filligree, steaming with a fragrant vapour of Calambac, the finest quality of wood of aloes.

THE LONDON NEWSPAPER PRESS.

The whole world, take away alone America, possesses nothing like an approach to the same documents. Leaving literary talent out of the question, the real curiosity in our English papers is in the page of advertisements—the master-key which this furnishes to the state of England—of Europe—almost of the world.

The unaccountable variety of callings and speculations that appear—some so great; some so apparently contemptible; yet all opening mines of riches to so many! One column announces the preparation of a hundred ships, all ready to sail instantly, almost for as many different ports in different quarters of the globe. The next offers "Steam-packets to Richmond, every morning at nine—Refreshments on board,"—and "Two and sixpence each passenger." A third sets out with the word "Accommodation!"—"Any sum! from two hundred pounds to ten thousand!—ready to advance for the convenience of noblemen and gentlemen at a moment's notice." And at the top of the fourth under the same title—"Accommodation"—you will find that "Ladies whose situations require a temporary retirement," may hear of "An airy situation," and the "strictest secresy, by applying at No. 34, next door to the grocer's, in James's street, Gray's Inn-Lane." Education tempts you in every shape; from "Yorkshire," at "Sixteen guineas a-year," where there are "no extras or vacations," and "Fare by the wagon," only £1: 12*s.*; to—*Rus in Urbe*!"—"Dr. Dolittle's establishment"—"Grosvenor-place"—and "Graduate of Cambridge," at "two hundred."—And, if you turn to the next page, and have only the happiness to be insane, you will see the "Tenderest attention" is paid to "Valetudinarians," at "Strait Waistcoat Lodge," between Somerstown and the Dust grounds at Battle Bridge; "References of the first respectability" to persons who have been raving; and "Private families" accommodated with "keepers" upon reasonable terms, "by the day, week, month, or year."

And all these fierce competitors for preference, in their thousand-and-one peculiar occupations and capacities—the projector upon Indian government, and the improver upon Indian soy—the companies in Bridge-street, who think of nothing but insuring life, and the undertakers in Fleet-market, who thrive only upon its extinction—the draper, who founds himself entirely upon "Ten thousand pair of warm Whitney blankets," and the perfumer, whose hope on this side the grave is only to ensure "Universal ease and comfort in shaving," the patent pen-maker, and the patent pin-maker—the mangle-maker, and the spangle-maker—the dealers in spring-guns, and in pop-guns—perigord pies, and artificial eyes—sell you a mango, dance you a fandango—large Twelfth cakes, nobody but France makes—Paris stays—raise the highways. These millions are but the few who court popularity, at a peculiar expense, and through one particular medium! They are not the same as, but over and above, the decorators of the dead walls of the town, posts, obelisks, empty houses, and scaffoldings; who address themselves to the more busy crowd, who have not time to read newspapers, and who can only pursue their researches, in pursuing their daily perambulations—"Matrimonial joys"—"Suits for little boys"—"Teach the deaf and dumb"—Great reduction in brandy and rum"—"Man taken up on suspicion of stealing!"—"Tooth pulled out by Mr. Jones, without feeling"—"Portable gas"—Wild ass"—"Poison rats"—"Re-beavered hats"—"Clergyman's widow in great distress"—"New crapes and poplins for summer dress." There is no place on earth, certainly none, where a man can get all he wants, and with so little loss of time or asking for, as in London.

For the very thirst of gain, in fact, which makes us merciless and rapacious, completely ensures every one's getting his "money's worth," and in his own way, too, for his money. If you only want a ride that costs a shilling, you have a whole "stand" of cab and hackney coachmen, threatening each other's lives which shall sell it to you. If you have ten miles to go into the country the omnibus that carries you for six-pence is, in truth, drawn and driven in a style ten times beyond the state of an Italian marquis. Would you dine?—dine at Harding's in Fleet-street—sumptuously from 15*d.* to 10*s.* 6*d.* or in any quarter—in five minutes you have it on the table. If you want a coat, the fashion changes five times before you can determine which of the five hundred professors, who "unite elegance with economy" for "prompt payment," best deserves your attention. If you have a complaint, a thousand remedies are published in all the shop windows—nay, on men's backs about the streets, for your particular salvation. And, after they have killed you, there is a fight between the Wooden Coffin Undertaker and the Iron, in which material you shall be buried.

We sometimes meet with very funny things in the shape of advertisements. Amongst the crowd of equivocal "Wants" of "*plain* chambermaids" and "*light* porters" every day to be found in the *Times* newspaper, we lately observed the following:

"Wanted immediately, as footman, a respectable and well-educated man; he must understand the dead languages and speak most of the living ones fluently. He will be expected to wait at table with decorum, to clean knives and forks, and attend to a horse and gig. He must be of a brave and serious deportment, help the girls to make the beds, and play with the children!"

COBBETT.

Of the life of Cobbett, from the period of his boyhood, when he left Farnham, without leave, asked or obtained, until he appeared in New Brunswick as a private soldier, little is yet known. This is a want which will probably soon be supplied by his sons, who owe the world a full memoir of their extraordinary father. His first start from home, he has described himself in this engaging and memorable passage:—

At eleven years of age, my employment was clipping of box-edgings and weeding beds of flowers in the garden of the Bishop of Winchester, at the castle of Farnham, my native town. I had always been fond of beautiful gardens; and a gardener, who had just come from the King's Gardens at Kew, gave such a description of them as made me instantly resolve to work in these gardens. The next morning, without saying a word to any one, off I set, with no clothes except those upon my back, and with thirteen halfpence in my pocket. I found that I must go to Richmond, and I accordingly went on from place to place, inquiring my way thither. A long day (it was in June) brought me to Richmond in the afternoon. Two pennyworth of bread and cheese and a pennyworth of small beer, which I had on the road, and one halfpenny which I had lost somehow or other, left threepence in my pocket. With this for my whole fortune, I was trudging through Richmond, in my blue smock-frock and my red garters tied under my knees, when, staring about me, my eye fell upon a little book, in a bookseller's window, on the outside of which was written: "Tale of a Tub; price 3d." The title was so odd, that my curiosity was excited. I had the 3d., but, then, I could have no supper. In I went, and got the little book, which I was so impatient to read, that I got over into a field, at the upper corner of the Kew-garden, where there stood a hay-stack. On the shady side of this, I sat down to read. The book was so different from anything that I had read before: it was something so new to my mind, that, though I could not at all understand some of it, it delighted me beyond description; and it produced what I always considered a sort of birth of intellect. I read on till it was dark, without any thought about supper or bed. When I could see no longer, I put my little book in my pocket, and tumbled down by the side of the stack, where I slept till the birds in Kew-gardens awaked me in the morning: when off I started to Kew, reading my little book. The singularity of my dress, the simplicity of my manner, my confident and lively air, and, doubtless, his own compassion besides, induced the gardener, who was a Scotsman, to give me victuals, find me lodging, and set me to work. And it was during the period that I was at Kew, that the present King and two of his brothers laughed at the oddness of my dress, while I was sweeping the grass plat round the foot of the Pagoda. The gardener, seeing me fond of books, lent me some gardening books to read; but these I could not relish after my Tale of a Tub, which I carried about with me wherever I went, and when I, at about twenty years old, lost in a box that fell overboard in the Bay of Fundy, in North America, the loss gave me greater pain than I have ever felt at losing thousands of pounds. This circumstance, trifling as it was, and childish as it may seem to relate it, has always endeared the recollection of Kew to me.

THE BEAUTIES OF FANNY KEMBLE; *now,* MRS. FRANCES ANNE BUTLER.

JOURNAL,
Descriptive of Men and Manners in America.
2 vols. 8vo. John Murray. 1835.

THIS is a precious affair, and right welcome to it are the Quarterly's, the Frazer's, the Blackwood's, the Dublin's, and their illustrious patrons, the Cumberland's and the Londonderry's. But fair play, say we, to Mrs. Frances Anne.

Mrs. Butler's notions, both mental and moral, are, generally speaking, more liberal than we expected, though far less original. She has read and heard many fine things, which she journalises as *her own:* this at least shows that she understands and feels them. Her imagination, too, is vivid, and the verbiage glittering—nay, bordering on the graphic style, which she disapproves: but her reiterated descriptions tire one *rather;* and her de Staël-ish obscurities perplex. She calls the political existence of America "a momentous experiment." Surely our little Tory must have sat at the feet of that great Gamaliel, the *late* Lord Londonderry. She says too, whatever she may mean, "that actual reality is away from the purpose of works of art." Also, *If* truth *be* truth, to the end of reckoning, why, that share of her, if any, which *I* possess, *must endure,* when *recorded,* as *long as truth endures!"*

This is indeed "to judge the future by the past," for the truths Mrs. Butler puts forth, "if any," as she says, are very venerable; yet we should like some of her "rhapsodies," if they did not make her more familiar language appear so indefensibly vulgar. The barbarisms in which she indulges are such as no well-bred woman should *print;* even to *write* them betrays an habitual coarseness of mind—perhaps obtruded to decrease our awe of her greatness. The "vile phrases" to which we allude are, like her pet quotations, constantly recurring in her confessedly bad prose. True, she apoligises "in very choice Italian," for the carelessness natural to spontaneous effusions; but *if* her pages were *not* written for the press, they ought, at least, to have been made fit for it, not deformed by such expressions as the following:—"fell to—got at—went and took—bang—like mad—slithering about—bundling ourselves in—regular row—horrid mess—tidying my room—all up with me—bother—potter—I spit at it—walloped—snivel—they licked us—beaten hollow—it rained cats and dogs—we came across Mr. ——— —rode to the tune of so many miles—by that same token—Go it!—with a vengeance—by all manner of means—only time to swallow a mouthful—gulped it down—was done up—glorious little England, from which this bragging, big baby was born—a small piece of mutiny—I cottoned to him. I acted like a wretch—blackguard—twaddle—set my foot in the discussion—foul nonsense—got very sick. The manager's wife and another woman—were in the box, which was his—a cheating woman—a heathen price—our surroundings—jostle—scramble—break one's neck—lies—a turnippy-looking man—that odious Mr. ——— —a man of the name of Hacket—I would not care if the devil drove a hurricane at our backs—all this blessed day—stitching for dear life—the plagues of Egypt were *a* joke to *them*—cantankerous—devilish red slashes—he was glued to my side—stuck to my skirts—humbug;"—but enough, and more than enough; we will not weary our readers quite so much as we have been wearied—not to be spiteful and enumerate one *half* the spots that temper the glory of Mrs. Butler's sun's light. We wonder why the worthy clergyman persuaded her to abjure waltzing, obliged as she was, by her calling to be "clasped and whirled about." But exercise is salutary; and, on the subject of health, this young lady furnishes her own sex and ours with three or four bravely candid notes. We would cry "Bah!"—but then her love of learning—of country—*regret* for her *happy, peaceful* home! her "joy in flowers,"—her piety and benevolence!—we are disarmed. In all *these* matters she is sincere; whether it was politic to give her work an air of display, by permitting it to retain so much about her German, Italian, singing, sketching, stitching, dancing, and riding is another question.

BRITISH ASSOCIATION FOR THE ENCOURAGEMENT OF SCIENCE.

The fifth annual meeting of the British Association for the Encouragement of Science took place at Dublin during the week commencing August 10th. Amongst the visitors were Thomas Moore, Esq.; Dr. Lardner; Captain Sir John Franklin, R.N.; Sir John Ross; Sir Thomas Brisbane; Sir George S. Mackenzie; G. B. Greenough, London; T. S. Traill, professor of medical jurisprudence, Edinburgh; Professor Alison, Edinburgh; Dr. Thomas Coulter; John Taylor, treasurer of British Association, London; R. W. Fox, Falmouth; T. Jameson Torre, Edinburgh; William Nicol, Edinburgh; Thomas Graham, professor of Chemistry, Glasgow; John Taylor, junior, Edinburgh; H. Westmacott, Edinburgh; J. E. Peitham, Berlin; H. Woolcombe; John Kinrick, delegate from York; Charles C. Babington, St. John's College, Cambridge, &c. On the 8th, a vast number of Scotch and English professors from the Universities of Oxford, Cambridge, and Edinburgh, assembled in the theatre of Trinity College, to meet their literary brethren of our own country, who had arrived in town in great numbers. At the first meeting on Monday, Sir Thomas Brisbane demitted his office of president to Dr. Lloyd, provost of Trinity College, Dublin, and the annual report was read by professor Hamilton. Twelve hundred and twenty-eight new members were enrolled on this occasion, whose payments amounted to £1750, being a larger sum than any yet drawn at any annual meeting of the association. When Thomas Moore's name was mentioned as a candidate, the provost rose at once and proposed the poet, without the usual formalities or fees, the nomination was seconded by one hundred voices, and carried with acclamation. Scientific meetings were held daily during the week, at which many interesting papers were read, and three evening meetings were held. At these, individuals of every religious and political denomination mingled amicably; a rare scene in Ireland. As in Edinburgh in 1834, one universal feeling of gratification prevailed on this occasion throughout the society of the Irish capital. The Lord-Lieutenant attended several of the meetings, and was always well received. On Saturday, the 15th, the proceedings were brought to a close at the Rotunda, and the next meeting appointed to be held at Bristol in the second week of August 1836. Three hundred of the more distinguished members of the society this day received a farewell banquet from the provost and senior fellows of Trinity College in the examination hall, when the Lord-Lieutenant conferred the honour of knighthood on Professor Hamilton.

SKULL OF DEAN SWIFT.

The skull of Dean Swift has been turned up by some of the scientific people in Dublin, and the phrenologists have had a field-day of discussion about it. Doctors differ. "Mr. Coombe of Edinburgh," says the Courier correspondent, "described the skull as diseased, it being matter of history that Swift died fatuous, and he said that the forehead had shrunk from old age and disease, and did not represent Swift's head in a state of health, and at the maturity of his understanding. Dr. Greaves, a decided anti-phrenologist, denied that the skull exhibited marks of disease. Mr. Coombe said further, that the organs of the animal propensities, particularly combativeness and destructiveness, were very large, as also amativeness and self-esteem, adding, that if the forehead had in mature age been as deficient as it now appears, and the propensities been what are indicated by the skull, Swift, if uneducated, might have died on the scaffold. The organ of amativeness gave rise to great discussion. Swift was fond of women, and possessed the affections of two of them, yet he never consummated marriage. The phrenologists say that his amours indicate the feeling to have been strong, and that his not marrying must have had another cause. The antis argue that because he was not married, the large cerebellum is a refutation of phrenology. One of the best-informed phrenologists remarked that the skull proves nothing for or against their study, because they exclude cases of old age and disease from the class of evidence, on account of the changes which the skull undergoes in both of these conditions."

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

CHURCHES AND THEIR AUXILIARIES IN CAPE TOWN.

ST. GEORGE'S CHURCH,—ENGLISH EPISCOPAL.
Minister,—Rev. G. Hough, M.A.
Patronage,—Secretary of State for the Colonies.
Service,—Sunday Morning, half-past 11 o'Clock.
AUXILIARIES.
A Sunday School.
A School of Industry.
A Lending Library.
Society for promoting Christian Knowledge.
Choral Society.

MILITARY CHAPEL,—EPISCOPAL.
Minister,—Rev. E. Judge, A.M.
Service,—Sunday Morning, ½ past 9.

SHORT ACCOUNT OF TRISTAN D'ACUNHA.

Collected from the Inhabitants, October 12th, 1835, when the Ship Wellington, Capt. Liddell, touched there.

(BY A PASSENGER.)

SOMERSET TOWN—Tristan D'Acunha, so called in honor of Lord Charles Somerset, late Governor of the Cape, consists of seven houses, one story high. The principal inhabitant, generally known by the name of Governor, is named Wm. Glass, a Native of *Kelso,* Roxburghshire, who says that he is about 50 years of age, but looks much older; he has a wife and twelve children living; with the exception of his eldest son, who is at sea, they all reside on the Island. His oldest daughter is married to an American, named Samuel Johnson, who has one child. The names of the other inhabitants are R. O'Riley, an Englishman, forty years of age, with four children. Francis Margaret, *alias* Swain, fifty-six years of age, with eight children; John Taylor, *alias* Alexander Cotton, fifty-two years of age, with five children; George Pearl, an Englishman, twenty-eight years of age, with one boy, and an orphan boy named Peter Peterson.

Their live stock consists of fifty head of horned cattle, seventy-five sheep, pigs, poultry, &c. &c. The sheep do not thrive so well as they formerly did. Six artillery horses were left on the Island when it was abandoned as a military station, but they all died.

Of *Fish*—they have the five-finger and blue-fish, the latter never caught except in twenty-five or thirty fathoms water.

The only wild animals on the Island are goats and rabbits, which are very numerous, and some wild cats and land birds,—the highland cock, the thrush, and the green linnet. They have no wild flowers, but they cultivate the rose in their gardens.

Fruits.—Apple, pears, peach, fig, and vine trees are cultivated, but the peaches, figs, and grapes, seldom ripen. Their spring begins in September.

The Island is subject to tremendous gales of wind during the winter months, June, July, and August. The peak of the mountain is always capped with cloud, except when westerly or southerly winds prevail, when it is clear.

The people live principally on milk, bread and potatoes, they exchange potatoes for bread with whalers.

Swain wishes to ascertain whether a son of his wife, named Samuel Jacob, who left in a whaler called the Eagle, Capt. Dickson, from London to the South Sea, many years ago, had perished by the foundering of the ship, which he heard had occurred during her voyage.

The visit of the Wellington, Capt. Liddell, and his passengers to these islanders, was most welcome. They were liberally supplied with stores, clothes, and books. And the Revd. Mr. Applegate, a Minister of the Church Missionary Society, held Divine Service on the island, and initiated twenty-nine children into the pale of the Christian Church by Baptism.

† In justice to the Voluntary System, we are bound to observe that it appears to be all heart in this congregation.

ROMANCES AND TALES OF THE CAPE.

No. 1.
A NOVEL STORY.

"AT the Cape of Good Hope, the beach is said sometimes to be *literally strewed* with Novels; an occurrence *which takes place* upon the wreck of a ship *freighted* from the Warehouses of Paternoster-row!"—(*Miss Emma Roberts' Sketches of Anglo-Indian Society,* 1835.)

No. 2.
THE WHITES TURNED BLACKAMORES.

"SUCH is the baneful effects of the sun's powerful beams at the Cape of Good Hope, that many a fair face of European birth has become so unalterably tanned as to appear of pure African unmixed breed. This is a dreadful scourge to those accustomed to behold the peculiar charms of the British-born complexion."—(*Carmichael's Notes on the Cape,* 1835.)

No. 3.
THE DUTCH SAVAGES.

"THE Dutch Colonies have degenerated, and the people become perfect savages. The Dutch Boers at the Cape of Good Hope are even now the rudest and most barbarous individuals upon the face of the Globe!"—(*Colonel Torrens on Australia,* 1835.)

No. 4.
DIAMOND CUT DIAMOND; OR, NOTIONS OF HONESTY AT GRAHAM'S TOWN.
(From Moodie's South Africa, 2 vols. 1835.)

"ALL the produce brought into Graham's Town by the farmers must, by the market regulations, be first exposed for sale in the market-place early in the morning, and there the merchants assemble to make their purchases, and generally endeavour to persuade the farmers to take the greater part of the price in goods from their stores, by which means they have a double profit, and many of them take the most dishonest advantage of the ignorance of the Dutch farmers; who, coming often from a great distance in the interior have no idea of the prices of European goods.

The Dutch, on their side, are generally equally dishonest, and when they see a favourable opportunity, often endeavour to conceal about their persons any articles they can lay their hands on, and convey them secretly to their wagons. When the shopkeepers detect them in pilfering in this manner, they never accuse them openly of the fact, for fear of losing their custom, but give directions to one of their assistants to watch the person who has taken the article in question, until he conveys it to the wagon, when he civilly reminds him *that it is not paid for.*

This always ensures the restoration of the goods, and often a much higher price than the shopkeepers could otherwise expect for them, and all passes off in perfect good humour on both sides. Scissors, needles, pins, thread, and all articles of small bulk, readily find their way in this manner into the huge pockets of the Dutch "frows," and even a shawl often glides with admirable dexterity under the vests of their husbands, which from their large and roomy dimensions, are well adapted for concealment."

ALLEGED SHOCK OF AN EARTHQUAKE

THE shock of an earthquake is said to have been felt in the neighbourhood of Cape Town, on the morning of the 11th instant, 12 minutes before 4 o'clock.

Mr. Oliphant "felt it on the Camp Ground; it seemed like the sound of horses fighting—the house shook so as to create a feeling of uneasiness. Mr. O. had been wide-awake for at least a quarter-of-an-hour before the shock".

Mr. Bird felt it—"he was lying awake, reading—the bed rocked sensibly,—a chest of drawers shifted their position, and a glass of water was nearly emptied of its contents by the shaking."

Mr. P. J. Bosman, Jun. was also "wide-awake, and heard a noise *like that* of a number of horsemen running against the corners of his house,—the ceiling of his house began to crack terribly; the furniture became in motion, the bed began to *quake,* which soon convinced witness that it was an Earthquake. Moreover his servant, also wide-awake, who lodges in an *out-building,* which was *secured by chain,* began to rattle in an unusual way, which caused great terror."

Mr. Maclear, Astronomer Royal, "was up the whole night between the 10th and 11th, and was not sensible of any tremor, or vibration, or rumbling."

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

Mr. Smyth, Assistant Astronomer, "was up the whole of the night, observing in the Transit Room, and does not recollect any noise."

"Mr. Knucker's family, near the Observatory, heard no noise."

"Mrs. Dekenah, at the Mill, heard a 'shot.'"

"Mr. Davis' family, near the same place, did not hear anything."

"Mr. Kirten, who is superintending the building of Mr. Ebden's house, heard nothing."

At Mr. Ebden's one man, named Owen, felt the shock, and to Major Longmore, Mr. Sutherland, and Mr. Waters, further information in favor of the shock may be known—the latter gentleman "Mr. Waters was stepping into bed, just as Mr. Oliphant was stepping out."

THE SUMMING UP,
BY A GENTLEMAN, AFTER READING THE *TESTIMONIES.*

"Our Cape Earthquake is, after all, *no great shakes.*"

ANIMAL SAGACITY.

FROM MY NOTE BOOK.

We were passing a happy day towards the end of the last month, at the hospitable marine-villa of Mr. S. Van Renen, at *Kalk Bay.* During our researches among the rocks, and along the shore, we secured a prisoner—a Penguin, which had incautiously wandered away from his comrades. He had probably deserted from the *rank and file* inspection, which these birds daily undergo before they undertake their marine excursion. Unfitted for flight, and awkwardly adapted for walking as the Penguin is, our prisoner submitted to restraint in the most quiescent manner. He soon lost all appearance of animation. He closed his eyes; his legs became immoveably stiff; and although we placed him in a large tank of water, formed by the rocks, he soon capsized, and life seemed extinct. His body was now thrown sky-high for a youngster to exercise his shooting aim when the bird fell unmarked into his native element. His paddle-wings were now all in motion, his legs were all agility; and when at a safe distance, he rode triumphantly on the billows, and seemed to enjoy all the felicities of "once more at sea."

SPECIMENS OF INTOLERANT IMPERTINENCE.

Many new principles have been broached in our day, which were unknown before. We have now the much-praised, but ill-understood *toleration*, taking place of the coercion and persecution of former times. And many are *agog* with the expectation of seeing the sway of this *passive lamb* extended over the whole earth; but let me ["William Gorrie, Editor of the Cape Cyclopedia,"] tell them, that this, as it now prevails, is as much an *invention of Satan* as persecution was, and it appears *fraught with even* more ruinous consequences to the Church!—(*Cape Cyclopedia, page* 131. 1835.

We see that John Knox did not, like *some others*, strive to form a Church that would be merely either a handmaid to the State, and subservient to the views of the ruler of the day, or an *impious Sect*, loudly declaring all connection of Church and State to be unchristian.—(*ib. page* 171.)

ADVERTISEMENT.

(From the Zuid-Afrikaan.)

"Bevallen, op den 9 Nov. 1835, van eene welgeschapene dochter, A. W. M. Cambier, Echtgenoote van P. E. Faure, Predikant, Stellenberg, Gemeente Wynberg."

THE LATE EXECUTION.

It is stated in the *Zuid-Afrikaan*, that the three culprits who were executed on the 26th, were "escorted by a strong guard of soldiers singing Mahomedan hymns."

NEW ARRIVALS.

We learn by an Advertisement in the Government Gazette of the 20th, that the "Courier," has brought out a number of

"Angels,
Glories, and
Cherubs."—

May be seen at Mr. Adams's, Market-square.

A NATIONAL DISTINCTION.

We have been amused for many years past, by observing almost daily a countryman of ours passing by with an umbrella under his arm. We never recollect to have seen it up-lifted on any occasion, be the weather wet or dry, foul or fair. A Dutchman without his pipe, an Italian without his fiddle, a Frenchman without his snuff box, would indeed be considered beings of singularity, but an Englishman without his umbrella,—alas, what a falling off from nationality. When good Mr Campbell published his first Journey in this Colony, he favoured his readers with a portrait of himself. "There he is," observed a Monthly Reviewer,—"there he is good honest man, that he is, almost as large as life, There he is, umbrella and all, and we might with as much propriety expect winter in the dog-days, as meet *John Campbell* without this umbrageous covering."

Quin, in his lately published "Voyage down the Danube," observes that during his travels in Hungary, Wallachia, Servia, and Turkey,—"I had no gun, no arms of any descript ion; nothing except an umbrella. I never, by the way, encountered an Englishman travelling abroad or at home without an umbrella: it seems *a national distinction.*

FAMILY MOTTOES.

THE LOITERERS:
"Slow and Sure."
THE TARDYS:
"Better late than never."
THE EVASIVES:
"I'll think about it."
THE NON-DOERS:
"Charity begins at home."

THE FISCAL PAPERS.—*No. I.*

From the departed and splendid æras of Greece and Rome, we like to touch now and then upon those of the modern world; and first, necessarily, of the History of our own Country, whether it be the land of our birth, or that won by the skill and prowess of the British arms. In this respect, the Cape is our own Country, and long may the British flag soar aloft, and become the emblem of the heart and hope of the habitable globe.

Now, as to our Cape history, many are our helps, and yet many more are the deficiencies connected with this important branch of our inquiries. Here, we have but little of chronicle matter, and the villages are without a pyramid, and the towns without a trophy. It is not that we are without *materiel* for History—but we have no historian, no chronicler. No Camden, no Froissart, no Caxton, no Arnold, no Rastell, no Stow, no Fuller—*no nothing*, as Cobbett says. But, thanks to a much-abused race of animals, we can present our readers with Fragments of Cape History, and as these are to be serial, we shall denominate them as at the head of this Article—*The Fiscal Papers.*

Modern times are replete with publications of this nature, and it is a curious fact, that by the turning up of old papers, much light has been thrown upon the page of history; and that now, the farther we are removed from past times, the better we are daily becoming acquainted with the sayings and doings of those times. In evidence of this assertion, we refer the reader to the Marchmont Papers, the Russell Papers, the Ellis Papers, the Walpole Papers, the Boxobel Papers, and the Evelyn Papers. The discovery of the latter was brought about in a curious manner. Lady Evelyn, whilst sitting round a

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

work-table with her family at Wooten, was visited by a neighbouring gentleman, old Bray (we think), the antiquarian. In the course of conversation, Mr. Bray accidentally laid hold of a thread-paper, and was much struck with the MS. paper which composed it. Her ladyship observed,—"If you find amusement in that paper, I can supply you in this way from an immense box of papers similar to the one in your hand, which will serve for a whole year's reading." The party immediately proceeded to the lumber-room of Wooten, and the box of papers turned out to be the delightful journal of John Evelyn, the great and immortal author of "*Sylva*."

But our own discovery is, we submit to the reader, much more strange. We just alluded to the fact, we believe, in our first volume, but we withdrew the papers from publication at that time, out of delicacy to the old Fiscal, who was then living, but now that he is dead and gone, (peace to his ashes!) we may, with every sort of decent propriety, draw forth the documents from their dark abodes.

Our discovery is thus simply told. When the Cape Town Public Library was connected with Government, it stood contiguous to an unoccupied chamber below the printing office, in which the annual documents of the Fiscal's office were deposited. Here the rats fared sumptuously, and opened up a subterraneous communication which led to several unopened closets in the room of the Dessinian chamber. Here they stowed away the treasures of the Fiscal's department, and it was perfectly astonishing, on the removal of the Library, and on opening the closets, to find the thickly-wadded rat-beds of the precious MSS. We read of the skill of the beaver, the vanity of the peacock, the loquacity of the magpie, the industry of the ant, the instinct and labours of the bee, the craftiness of the fox, but we think in skill, cunning, and perseverance, and even courage, the rat is scarcely equalled by others of the omnivorous family.

We proceed now to lay before our readers a first portion of the Fiscal Papers.

No. I.

Cape Town, February 10th, ——

My dear Sir,—The bearer, Joss, has been saucy to his Mistress, and deserves a h—ll—sh good hiding. He brings this under the impression that he is to receive sundry newspapers.

Your's truly and faithfully,

* * *

Cape Town, 18—

To His Majesty's Fiscal,

Supreme Magistrate and Disposer, &c.

Sir,—It is my bounden duty to complain against William O——, a carpenter, who often gets in liquor, and threatens me in my own house. To shew the scandal of the man, he called to me loud in the street—*Come out, you old rascally tailor, and I'll gie ye winegar to eat with your cabbage.*

Hoping in your assistance,

I am, Sir,

Your very dutiful Servant,

* *

"Parties to appear to-morrow."

No. III.

——— *Gardens, Jan. 6th,* 18—

My dear ——,

I want a little of your special assistance respecting our girl Samera. She has become so impertinent of late, that there is no bearing with it. She mocks and mimics her mistress morning, noon, and night. Last Sunday, when Mrs. —— was starting for Church, Samera hoisted a large cabbage-leaf over her head, stuck upon a stick, to imitate Mrs. ——'s parasol; and only the day before that, she mocked her mistress by holding a grid-iron before her face, to imitate her fan. Pray let the huzzy be punished.

Your's truly,

* *

"M— to secure Samera, and to have her flogged in the Town Prison."

"Officer must find out the residence of Tibs."

No. VI.

The Aide-de-Camp in waiting is directed by His Excellency the Governor to beg that His Majesty's Fiscal, or the Deputy Fiscal. will, as Law Officers of the Crown, discover forthwith the writer of a libellous article in the S. A. C. Newspaper, casting wicked censure on an officer of one of His Majesty's Regiments, as an amateur performer at the Theatre. The following is an extract, September 8th, containing the obnoxious matter:—

"We recommend them to be particular on learning their parts; to address themselves to the audience, instead of the side-wings or lamps; to keep their hands from out of their pockets, especially when addressing ladies."

"Mr. Herbert Pugh has voluntarily confessed that he is the writer."

HOMEWARDS.

WHATEVER may be the dissatisfaction and the agitation that prevails at home at the present moment, we cannot bring ourselves to believe, that there is a *single Englishman, however poor,* who would wish to detract one iota from constitutional principles, or refuse to defend them with his very life. What greater political privileges, we ask, is it possible to desire, or what greater security for life, liberty, or property, than are involved in those principles? At home there are no secret tribunals; no anonymous accusers; *no interminable imprisonments without, or previous to, trial; no arbitrary judgments;* no torturing punishments. Every man, unless a criminal, is at liberty to go or come,—to speak or write,—to associate or confer with others,—without molestation or suspicion. The possession, enjoyment, and disposal of property, are undisturbed by any national or fiscal impositions of a despotic nature, and everything relating thereto, is transacted according to the strict letter of the law, which casts its shield alike over all the gradations of society, from the prince to the peasant; the welfare of the one being of equal importance, in the eye of the constitution, with that of the other. "Of what, then," it may be asked, "has an Englishman to complain? and what are those grievances, which at present divide the nation into hostile parties, and threaten the political horizon with a storm, the ravages of which, say the deprecators of change, will break up the very foundation of society?"

It is not difficult to answer this question. However excellent the *theory* of the constitution, it is, like all human theories, liable, *in practice,* to imperfection. Many of its institutions, intended for the benefit of society, have, by the lapse of ages, the supineness of the people, and the corruption of men in power, been alienated from their original design, and rendered subservient to party purposes, and individual aggrandizement. Others, by the change of manners, and national character, have become worse than useless,—the church, the army, the higher departments of the law,* and almost every place of honour, profit, or privilege in the state, have been seized and appropriated by the aristocracy, as affording snug asylums and maintenance for the junior branches of their families. Nearly all the corporate bodies in the kingdom have lent themselves to objects, tending to the subversion of liberty, and their funds have been devoted to the most dishonourable purposes. Injurious restrictions and monopolies have been granted; party exactions, distinctions, and exclusions imposed; unequal taxation inflicted; and, finally, inroads have been effected upon the constitution, for the purpose of facilitating and perpetuating all these and other abuses, which would, if not checked, pave the way for still more despotic and obnoxious measures, until the bulwarks of our freedom would be reduced to a mere shadow of their ancient greatness.

Fortunately for England, the constitution possesses within itself the principle of self-renovation.—Like the fabulous bird of Egypt, when its energies and strength are exhausted by age, it can cast itself into the fire, and spring forth from thence, new fledged, to soar again superior to its surrounding foes, who were but now exulting in its destruction.—Thus, when the spirit of despotism is contracting its circle, and sharpening its weapons, until it thinks to strike, with certainty and security, the fatal blow at the constitution of our country, suddenly the enchantment is dissolved, and the chains are snapped asunder. The devoted victim bursts from its shackles, laughs to scorn the impotence of its foes, and inhales the fresh breeze of freedom with redoubled zest.

The representative system, the freedom of debate in parliament, the right of petitioning, and, above all, the liberty of the press, are the chief foundations and securities of British freedom. While we possess these untainted and unrestricted we have nothing to fear; we *must* progress in the career of truth, of science, and of liberty, ourselves, and be the dispensers of the same blessings to the nations that surround us.

"naught can make us rue,
If England to herself do prove but true."

* The expenses attending the dispensing of the laws is a subject which needs no discussion, every one, almost, being, by sad experience, acquainted with it. These expenses are enormously increased by a system of taxation, as false in principle, as it is injurious to the ends of justice, and vexatiously partial in its operation.

A

LETTER

TO

JOHN STEUART, ESQ.

High-Sheriff,

VICE-PRESIDENT OF THE CAPE OF GOOD HOPE FRIENDLY SOCIETY, CAPE TOWN.

11*th December*, 1835.

Sir,—In doing myself the honour to submit for your consideration the observations in sequence, I beg at once to state, that they are intended to supply some degree of auxiliary aid to the Cape Friendly Society, under your benevolent auspices, together with other respected individuals who have taken a share in its promotion.

In the absence of all statistical information of any value in Cape Town, I would take leave to suggest, that from the Members of your Friendly Society, a Sub-Committee be appointed to act *pro tempore*, and under the sanction of Government, to commence a Census of our Town Population without delay.*

It has always been my opinion, Sir, that a great proportion of our social defects are not merely to be attributed to the absence of moral education, but to the debasing nature of a crowded population dwelling together in abodes which exclude the light and air, and are noisome with animal and vegetable effluvia, and accumulated refuse. The sending forth a Committee under the direction of your Society, would, I conceive, supply most invaluable *materiel* to the practical workings of the great objects which it has in view. It would at once stimulate it to greater action, and enable it to count the cost of its probable requirements, and larger field of occupation. In a political point of view, the Census in question is of infinite value. The genius and power of Scotland was never so fully developed as when Sir John Sinclair hit upon his noble Plan of supplying the Government with the Statistics of the country. But in a moral point of view, how much more important the inquiry!*

But without further preface or apology, I would come at once to a few plain statements on many of the evils to which I have been an eye-witness at the Cape. The scenes which have led to these observations, were viewed in and near Rogge Bay. And what I desire to prove is, that the physical sufferings of the poor are not their sorest evils, but that their chief calamities are the natural consequence of their privation, consisting in degradation of mind.

In reference to that part of the Town already referred to, I have discovered from actual observation on all hands, a decided want of self-respect and purity of manners. And is there no cause for such condition of mind? Assuredly there is. The more delicate sentiments find every thing to chill them in the abodes of crowded indigence. A family occupying a single and narrow apartment, which must answer at once the ends of parlour, kitchen, bed-room, nursery, and hospital, must naturally degrade and lower the finer sympathies of our nature. And added to this, let us reflect that a class of lodgers are also to be included in the list of occupants. Here the decencies of life can scarcely be observed, and here woman, a drudg and in dirt, loses her attractions. The young grow up without the modest reserve and delicacy of feeling, in which purity finds so much of its defence. Coarseness of manners and language, too sure a consequence of a mode of life which allows *no seclusion*, becomes the habit almost of childhood, and hardens the mind for vicious doings in future years. The want of a neat orderly home is among the chief evils of the poor, and these evils are daily and hourly increasing in our very midst.* Crowded in filth, they cease to respect one another, and the social affections wither amidst perpetual noise, confusion, and clashing interests. In these respects, our poor fare worse than the uncivilized man. Around him is boundless unoccupied Nature, where he ranges at will, and gratifies his passion for liberty, and lives in the bright light and pure air of heaven. In our city the poor man must choose between his close room in the suffocating street, or dark and narrow wynd. The appropriation of almost every spot around him to buildings and common sewers, do not allow him to gather his family, or meet his tribe under a spreading tree. He has a home without the comforts of home; and the consequence is, that sensual pleasure are the only means of ministering to that craving for enjoyment which can never be wholly destroyed in human nature.

But does society afford no means of escape? Is Government asleep, and the curtains of repose drawn around it? And what present does civilization and science make to the poor? Strong drink, ardent spirit, liquid poison, a type of "the worm that never dieth." In every poor man's neighbourhood flows a Lethean stream, which laps him for awhile in oblivion of all his humiliations and sorrows. The power of this

* The returns of our Population have hitherto been very inadequately reported. The means employed have totally failed. An old gentleman has singly gone the rounds of inquiry, but his labours have proved abortive. The general belief that the objects of his Census was a distinct Government object for the creation of new Taxes, has led to numberless deceptions.

* Statistical Societies have recently been formed in London, Paris, and other Cities and Towns. Many distinguished Ladies are Members.

* The Friendly Society, or some other Society, will probably take into consideration the importance of the Cottage Allotment System,—weed our dense population, and elevate the poor man in the scale of existence.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

temptation can be little understood by those whose thirst for pleasure is regularly supplied by a succession of innocent amusements, who meet soothing and exciting objects wherever they turn. The uneducated poor, without resource in books, in their families, in a well-spread table, in cheerful apartments, and pressed down by disappointment, debt, despondence and exhausting toils, are driven by an impulse dreadfully strong to the haunts of intemperance; and there they plunge into a misery sorer than all the tortures invented by man. They quench the light of reason, cast off the characteristics of humanity, blot out God's image as far as they have the power, and take their place among the brutes. Terrible misery! And this comes to them from the very civilization in which they live. They are victims to the progress of science and the arts; for they multiply the poison which destroys them. They are victims to the rich; for it is the capital of the rich which erects the distillery, and surrounds them with temptations to—

"Use hard names and threatening words;"

which often—

"Grow to clubs and naked swords,
To Murder, and—to DEATH."

They are, in a word, victims to a *partial* advancement of society which multiplies gratifications and allurements, without awakening proportionate moral power to withstand them.

From these and similar views, it seems to follow that the claims of God are before us: and these are enforced by many a symbol of our mortality.—The revolving and dying year,—the declining body,—the passing funeral, and the "ashes to ashes, and dust to dust." And these claims, what are they?—that we are responsible for the improvement and happiness of those who dwell around us. This duty extends from the planting of a young tree, to the enlightening of a people. To decline our share in the means of the progression of the human race, when we have arrived at light enough to shew us the way, would be a moral prostration which would stigmatise an age. But this will never be the reproach of a people which has just broken the bonds of a million of Slaves! Such an act exalts a nation above all the barbarous glory of battles fought and regions conquered. Its record is on high, far beyond the loftiest region to which the eagles of a Cæsar or a Napoleon ever soared.

In conclusion, Sir, the Cape of Good Hope "Friendly Society," connected, as I hope it will be, with that of a Committee of Satistics,—civil and religious,—bids fair to bring us in closer connection with our neighbours than heretofore. It will tend to awaken in them the consciousness of their moral powers and responsibility, and to raise them in spirit and in hope above the calamities attendant on human life. They will be rescued from self-contempt by seeing others impressed with the great purpose of their being. The day is come when we must establish a better and a kindlier intercourse with one another as members of one great family, and children of one common Parent. Our christian principles must work a new miracle, must exercise and expel the spirit of *Caste*. The outward distinctions of life must seem to us not "a great gulf," but superficial lines which the chances of a day may blot out, and which are broad only to the narrow-minded. How can the educated and improved communicate themselves to their less favoured fellow-creatures, but by coming near them? The strength, happiness, and true civilization of a community are determined by nothing more than by this fraternal union among all conditions of men. Without this, a civil war of envy, hatred, and revenge, virtually rages in a country. For the sake of the rich, or those well-off in this world's goods, as well as the poor, there should be a mutual interest binding them together; there should be but one caste,—that of HUMANITY.

I have the honor to be,
Sir, your obedient Servant,

ANNANDALE.

THE FIRE-SHIP.*

1.

THE breeze blew fair from England's shore,
The ship unmoor'd at last,
To brave the ocean's angry roar
And reel beneath the blast;—
Swift as a war-steed bounding past
Or falcon in its flight,
Her prow, the dashing waters cast,
Majestic in her might,—
But winds must waft, and sails expand
'Ere she can hail fair India's strand.

2.

How gallantly she leaves the coast,
As to the deep she rolls,—
Her burthen is a warrior host
Of full five hundred souls,
Whose spirits, free from fear's controuls
Battling their country's foes,
Had spread its triumphs to the Poles,
And now where Ganges flows,
Borne on 'this sea-girt citadel,'
To Albion bade a long Farewell.

3.

The sun had set upon the sea,
And the third day had gone,
When calmness fell, and sullenly
Dark lowering clouds came on,
Whilst soon the murmuring wind's low tone
Moan'd a prophetic tale,
Until, ('ere midnight's watch was flown,)
There blew an adverse gale;
And the broad vessel's towering form,
Toss'd as a feather in the storm.

4.

And when morn came, around them roll'd
Huge mountains of the sea,
And skies, terrific to behold,
Swept in the whirlwind's glee,
Yet none could deem that there would be
An element more dire,
To doom them to Fate's sad decree,
When burst the cry of "Fire,"
On those who fill'd her peopled deck,
And had but thought of storm and wreck.

5.

It rose, a wild, electric thrill
Of awful tones around;—
Some rush'd to aid,—and some stood still,
As if by Horror bound;
And some it did not quite astound
Who thought of ties most dear,
These strove to quell th' appalling sound
(Love struggling with their fear,)
Saying,—"our wives,—our children,—hush,—
"Oh, let not terror on them rush."

6.

But vain, the power to quench the flame,
And vain, to hide the tale;
How awful soon that scene became
Which blanch'd each feature, pale;—
Horror in all its wildest wail,—
Delirium and distress,—
Whilst heedlessly roar'd on the gale,
In howling recklessness,
As every moment's fleeting breath,
Brought dread Despair, and thoughts of Death.

7.

And at each awful interval
Pealed forth the minute gun;
But all around that sky's black pall,
Was no seen object,—none;
And Hope grew sick, as one by one,
A form climb'd up on high,
To watch the distant horizon
With fear-bewilder'd eye,—
Whilst the same answering, hopeless knell
From each despairing bosom fell.

8.

Then, doubly, then increas'd the woe,
And that wild tumult there,
Loud shrieks,—dumb looks,—and murmurs low,
And tears,—and sighs,—and *prayer;*
The chief still firm in his despair,
The ruder soldier too,—
Tho' Vice in some,—with fiendish stare
Prowl'd round,—with death in view,
As from the vessel's side, the smoke
And flame in thickening volumes broke.

9.

At length,—oh scarcely could they deem
It was a speck of white,—
When loud re-echoed one wild scream,
"A sail,—a sail,—in sight!"—
And for awhile Hope seem'd to light
A hectic on the cheek,
As from the crowd, in frenzied might,
There burst that frantic shriek,—
Tho' round them, both the flames and waves
Gave omen but of speedy graves.

10.

And when it near'd, that little ship,
And boats lower'd down to save,

* These Stanzas allude to the loss of the *Kent*, Indiaman, by fire, in March, 1825,—a most affecting account of which appeared soon after, written by Lieut.-Col. Macgregor, one of the officers on board the vessel at the time of the melancholy occurrence.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

See, how they mount,—and now they dip,
As if each yawning wave
Open'd Eternity's wide grave
To crush them;—still once more
High on the billow's boisterous rave
They strike the buoyant oar,
And, toss'd on its remorseless tide,
Close to the burning vessel ride.

11.

Yet, ah!—what woe, in that wild storm
Of Terror's maddening mood,
As one by one,—each female form
Was lower'd upon the flood;
Whilst on the burning deck there stood
The partners of their soul,
With prayers for safety, still renew'd,
As every surge's roll
Seem'd with the fire-blast to contend,
Which first should grasp them as a fiend.

12.

But Thou, *great Power*, who rulest all,—
Canst bid the whirlwind stand,—
When Fate had almost stretch'd its pall,
Oblivion dark its wand:
It pleas'd *Thee*, with Thy mighty hand,
Still to extend Thy care,
To save those firm in Virtue's band,
Leave Vice to its despair,—
And show mankind, who love Thy trust,
That, Thou art mighty,—Thou art just!

13.

"Immortal Spirit, throned above,
"Thou, merciful in might,—
"How shall our faint, tho' fervent love
"Thy bounteous care requite?
"Here, as our prostrate forms unite,*
"May none for evermore
"Forget thy mercies; Lord of Light,
"The Power whom we adore,—
"To Thee, alone, our souls we raise,
"*God* of our Hope, our Prayer, and Praise!"

Cape Town, December 25th.

THE ART OF PRINTING.

BIBLICAL NOTICE.

To the art of Printing, Europe owes at least the *permanence* of her political and religious reformation. This discovery rendered it impossible to put down the insurrection of mind, to arrest the progress of principles that spread with the subtile swiftness of electricity. As long as the vernacular Scriptures could be multiplied only by the slow progress of transcription, it was possible for the vigilance of the Romanists to frustrate the pious zeal of those who were making these noble efforts to give a wider circulation to the word of life. In the year 1408, Archbishop Arundel issued the intolerant and impious decree,—'That no one should thereafter translate any text of Holy 'Scripture into English, by way of a 'book, a little book, or tract; and that 'no book, little book, or tract of this 'kind should be read, that was com- 'posed lately in the time of J. Wicliff, 'or since his death.' This constitution, we are told, led to great persecutions; and many were the persons who were 'not only sentenced to pay 'heavy fines, and to undergo long in- 'carceration, but even to be burned 'at the stake, as the bishop's regis- 'ters indisputably prove!'* Similar efforts were made to suppress the circulation of Tindal's New Testament and other printed editions of the Scriptures; but the press multiplied copies faster than Tonstall and his colleagues could buy or seize them to burn them. Had the discovery of printing taken place two centuries earlier, the reformation begun by Wicliff, would probably never have been arrested and turned back. But for the press, the reign of Elizabeth might perhaps, have proved as disastrous to Protestantism, as that of Henry Bolingbroke was to the cause of which his father had been the great protector. Puritanism had to sustain it, what Lollardism wanted,—the printed Scriptures, the unsheathed sword of the Spirit, the unsealed water of life, the iron seed that springs up a harvest of armed men. The pen of Wicliff had made the Man of Sin to tremble on his throne. His writings, carried to Bohemia by a native of that country, who had become acquainted with them at Oxford, made John Huss a Reformer; and the sermons of John Huss, found by Luther in the library of the monastery at Erfurd, first opened the eyes of Luther. But now, that pen was miraculously transformed and multiplied by the press, so as to be changed from a missile into a battery. Writings had wings, but the press had the speed and irresistible force of lightning. It sowed Wicliffs in every land, and raised up Husses and Luthers a hundredfold. What the application of steam, the grand discovery of our own age, is in mechanics, the invention of printing has proved in the world of morals. A copy of one of the Gospels may now be printed at the cost of a penny! What would Tindal, and Coverdale, and Fox have said, how would their hearts have leaped, could it have been predicted to them that such would one day be the case! What assurance would it have given them that the light then kindled should never be put out!

It is true that the full benefit of this discovery has never been reaped till now, within our own times. Three hundred years have elapsed since the first English Bible was completed at the press; and to that circumstance we may look back as, under Divine Providence, the era of that flood of scriptural light which remains in the British Isles. To the English Bible, Protestant England owes every thing that has ennobled her literature, and made her deserving of the name of the Evangelist of nations. But, for nearly three hundred years, the English Bible was in the hands of comparatively a small proportion of her population; and almost every where else, there was a dearth, in some parts a famine, in others an absolute destitution of the word of God. Forgetful of our own debt of gratitude for the English Bible, we had suffered the Welsh, the Irish, the Gaelic highlanders on our own soil to remain in almost total deprivation of the heavenly gift. We boasted of our Protestantism, and declaimed against Popery, but suffered the main engine of Protestantism to remain comparatively idle, and the very principle of the Reformation to be as it were in abeyance. Whatever man designed in the invention of printing, there can be no question with a devout believer in the Providential government of the world, that what God designed as its chief end was, the multiplication and diffusion of His own word, the written Scriptures. But this design had become obscured by the multifarious purposes to which the press is also capable of being applied; and in this, as in other cases, the children of this world had proved themselves wiser in their generation than the children of light. All sorts of literature, good and bad, sweet and bitter, had been poured forth from this fountain, according to the quality of the leaves thrown into it; yet, the leaves of the tree which are for the healing of the nations, and which would have made the bitter waters sweet, were sparingly and distrustfully used. Without a metaphor the Bible was jealously doled out by an ecclesiastical monopoly. The spirit of the Reformation was bound and manacled; and not by a Roman, but by a Protestant heirarchy. The Bible was a Lollard in the olden time. It was a Puritan afterwards. It has been treated as a Sectarian, a Catholic Dissenter in our own days,—a very un-

* It was an affecting sight on the Sunday after their landing at Plymouth, to behold the whole of those who had escaped from the awful conflagration, assembled at Church,—pouring forth their thanksgivings to the Almighty for their safe deliverance from destruction.

* Baber's Wicliff's New Testament, p. lxxii.

safe and dangerous person to go abroad without a prayer-book to watch over it.

NATURAL HISTORY GLEANINGS *

SURELY no taste can be more amiable and pure than that evinced by the author of these Gleanings; nor can we name any work in which the spirit of the writer is more effectually conveyed to his readers. Old and young must be delighted with such entertaining and instructive anecdotes and notices as are here crowded together. The volume, like the former ones of the series, is full of the best light reading that can be thought of; and over the young, who once have a glimpse of its contents, it will operate most wholesomely, by strongly impressing them with the claims which the inferior animals have upon our kindness and tenderness.

Mr. Jesse's work is the reverse of systematic or technical. He has evidently an extreme pleasure in watching the habits and character of the inferior animals, and a talent in interpreting their language and ways, which he is constantly exercising– setting down his discoveries just as they are made, warmed by an immediate admiration, till the list of striking facts amounts to a volume. His work is exactly that which it is called, without many generalizing remarks, which, indeed, would have required something like arrangement, but which were unnecessary, as every anecdote or fact naturally suggests whatever of the sort that need be said or thought.

We are too apt, because it saves trouble, to limit the course of nature under certain sweeping generalities. With regard to the classification of birds, it is usual to say that those species which are the shyest, seek the most retired situations on most occasions. But there are exceptions to this rule, which either show that we take an inadequate view of that which enters into what we call the shyness of birds, or that there are considerable diversity in the tempers and capacities of the individuals forming a species. We know indeed that there is a vast difference between the intelligence and disposition of dogs, horses, &c., and no doubt the same sort of variety holds good in the case of every species, had we the means, or took we the pains to study them. The following statement has suggested these remarks.

"In one of the workshops belonging to Mr. W. Cox's manufactory at Taunton, a water-wagtail built her nest. The room was occupied by braziers, and the noise produced by them was loud and incessant. The nest was built near the wheel of a lathe, which revolved within a foot of it. In this strange situation the bird hatched four young ones, and the male, not having accustomed himself to such company, instead of feeding the nestlings himself, as is usual, carried such food as he collected to a certain spot on the roof, where he left it, and from whence it was borne by his mate to the young. It is still more remarkable that she was perfectly familiar with the men into whose shop she had intruded, and flew in and out of it without fear. If, by chance, a stranger, or any other of the persons employed in the same factory entered the room, she would, if in her nest, instantly quit it, or, if absent, would not return. The moment, however, that they were gone she resumed her familiarity."—pp. 2, 3.

We ourselves have known a pair of partridges hatch fifteen eggs within three feet of the perpendicular breast of a quarry, where workmen were daily engaged in raising stones, and where generally every day, a number of blastings by means of powder took place. Nor was the depth of the quarry above twenty feet, counting both the rocks and the earth above it, while its width was so inconsiderable, that the operations of the workmen could never be above twenty feet aside from the position of the nest, and often exactly in front of it. By the day the young ones burst from the eggs, not a foot remained between the nest and the perpendicular face of the quarry. What sort of instinct or reasoning guided the parent partridges we know not, but it was fatal to several of their offspring, who incautiously ran over the edge of the precipice and were killed; those that took an opposite direction lived, and interested us several months after, when we often counted them in their flight. At last, however, the slaughtering gun of a friend thinned farther the small covey. But we must follow our author, who has far more to communicate about birds and beasts than we can be expected to possess. There is much to interest us in the statement and suggestion of our next extract.

"A gentleman whose name alone would be sufficient to attest the accuracy of the fact, communicated the following circumstance to me. He was travelling in Greece, and passed a few days at the house of an acquaintance in that country. While he was there, a large body of wolves came down from the mountains in the night, and committed great havoc among the sheep, goats, and other animals belonging to the inhabitants of an adjoining village. As the country people knew the place to which the wolves generally retreated, they assembled in a large body, and made an attack upon them. In the evening some of the peasants brought a dead wolf of a large size to the gentleman referred to, and told him that it was the leader or head of the pack of marauders. His foot was as large as the fist of a man. On questioning the country people on the subject, they asserted, as a well-known fact, that wolves were occasionally in the habit of selecting one particular whelp from a litter, which they carefully concealed in some secure place, and fed with live animals The wolf thus fed grew strong and vigorous, and subsequently became the leader or king of the pack, heading them on all occasions, and directing their operations.

"It may be thought that there is not sufficient authority to prove the truth of this circumstance. It is not probable, however, that peasants would have invented the story, and in a country where wolves abound, there must have been many opportunities, through a succession of years, to enable them to ascertain the fact. The following curious and interesting passage, however, in the 19th Chapter of the Prophet Ezekiel, not only tends to confirm it, but almost to place its accuracy beyond a doubt:—It is as follows:—

"'What is thy mother? a lioness: she lay down among lions, she nourished her whelps among young lions.

"'*And she brought up one of her whelps:* it became a young lion, and it learned to catch the prey.

"'The nations heard of him, he was taken in their pit.

"'Now when she saw that she had waited, and her hope was lost, *then she took another of her whelps, and made him a young lion.*

"'And he went up and down among the lions, he became a young lion, and learned to catch the prey.'

"There is no doubt that these words are prophetical, but we know that in the Bible, allusions are constantly made to the habits of animals and which are so accurately descriptive of them, that we can have no doubt of their being taken from actual observation. In the instance before us, the Prophet Ezekiel seemed to be aware of the circumstance which has been related, and seems to have made use of it to illustrate the condition of the princes of Israel.

"Few things are more interesting than tracing the truth and accuracy of the Holy Scriptures, by comparing what is said of the customs and habits of Eastern nations, with what antient and modern travellers have related of them. For instance, in the 9th Chapter of the Prophet Ezekiel it is said that 'a man amongst them was clothed with linen, with a writer's ink-horn by his side,' or upon his loins. It is well-known to those who have travelled in Eastern countries, that even at the present time persons employed to write, carry an ink-horn tucked in their girdle on one side of them, and pens or reeds on the other. The Psalmist speaks of the 'dew of Hermon,' a hill near Nazareth. Maundrell says, 'we were sufficiently instructed by experience, what the holy Psalmist meant by the dew of Hermon,' our tents being as wet with it as if it had rained all night."

"In the 49th Chapter of the Prophet Jeremiah are these words:—'He shall come up like a lion from the swelling of Jordan.' The banks of this river are still covered with a thick underwood of shrubs, in which several sorts of wild beasts harbour themselves. During the periodical overflowings of the river, these beasts are driven out of the covert, and this circumstance gave occasion to the comparison referred to.

These, and instances without end, might be brought forward as satisfactory proofs of the accuracy of biblical allusions, and which are as authentic as they are interesting."

We are obliged to Mr. Jesse, particularly for rescuing the cat family from indiscriminate obloquy.

"Cats are generally persecuted animals, and are supposed to shew but little attachment to those who are kind to them. I have known a cat, however, evince great uneasiness during the absence of her owner, and it is stated that when the Duke of Norfolk was committed to the Tower in the reign of Queen Elizabeth, a favourite cat made her way into his prison room by getting down the chimney.

"Cats have been known also to do their best to protect the property of their masters, as well as dogs. A man who was sentenced to transportation for robbery, informed me, after his conviction, that he and two others broke into the house

* *Gleanings in Natural History.* By E. Jesse, Esq. vol. iii.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

of a gentleman near Hampton Court. While they were in the act of plundering it, a large black cat flew at one of the robbers, and fixed her claws on each side of his face. He added that he never saw a man so much frightened in his life.

"Mr. White, in his Natural History of Selborne, states that of all quadrupeds, cats are the least disposed towards water, and will not, when they can avoid it, deign to wet a foot, much less to plunge into that element. The following fact, however, communicated to me by a friend who lived several years in Jamaica, will prove that they take water, and is also another instance of the attachment of animals to the place where they were bred. Being in want of a cat, one was given him which was not full grown. It was put into a canvas bag, and a man on horse-back brought it a distance of five miles from the place where it was bred, and from which it had never been removed before. In doing so, he had to cross two rivers, one, named the Mino, which was about eighty feet wide and two and a half feet deep, running strong. The other called Thomas' river, was wider and more rapid, but less deep. Over these rivers there are no bridges. The cat, when it arrived, was shut up for some days, and when supposed to be reconciled to her new dwelling, she was allowed to go about the house. The next day, however, she was missing, and was found shortly afterwards at her old abode.

"A family residing at Newcastle-on-Tyne went one summer to Tyne-mouth, leaving their house in the care of two female servants. One evening, when the servants were sitting together in the kitchen, their attention was attracted by a cat, which went up into a laundry over the kitchen, and then returned to them and mewed. The cat did this so often, that the servants were induced to go up stairs to see what she wanted. When they got into the laundry, they found a man concealed in the chimney. One of the maids fainted, and the other gave the alarm to their neighbours, but in the mean time the man made his escape out of the window and over the roofs of the adjoining houses.

"A favourite cat, much petted by her mistress, was one day struck by a servant. She resented the injury so much, that she refused to eat any thing given to her by him. Day after day he handed her dinner to her, but she sat in sulky indignation, though she eagerly ate the food as soon as it was offered to her by any other individual. Her resentment continued undiminished for upwards of six weeks. The same cat having been offended by the housemaid, watched three days until she found a favourable opportunity for retaliation. The housemaid was on her knees washing the passage, when the cat flew at her, and left indubitable marks on her arms, that no one could ill use her with impunity. It is, however, but fair to record her good qualities as well as her bad ones. If her resentment was strong, her attachment was equally so, and she took a singular mode of shewing it. All the tit-bits she could steal from the pantry, and all the dainty mice she could catch, she invariably brought and laid at her mistress's feet. She has been known to bring a mouse to her door in the middle of the night, and mew till it was opened, when she would present it to her mistress. After doing this she was quiet and contented.

"A lady had a tortoise-shell cat and a black and white one. A few years ago, the latter was observed to carry her kitten when two or three days old to her companion, who brought it up with her own kitten, though of a different age, with all the tenderness of a mother. This was one time after time for several years, but last year it was reversed, the black and white cat taking her turn to discharge the duties of a wet-nurse to the kitten of the other. It is probable that a deficiency of milk was the cause of the cats not suckling their young. It is not surprising that one of them should adopt the kitten of another, but it appears that some faculty nearly approaching to reason must have shewn them the necessity of procuring a substitute."—pp. 123—136.

A TRUE STORY.

Written on hearing that the Hottentots of Bethelsdorp had been recently deprived of their Cattle-lands.

A quail with all her infant brood,
Was found where barley grew;
She chose the spot as yielding food,
And warmth and shelter too.

But vain her foresight and her care
To screen her darling nest;
The Farmer took his reapers there—
The sequel may be guess'd!

He brought her with her young to me,
A sorry gift I own!
For much *I loathe to chain the free*,—
To silence pleasure's tone.

Three days the pretty nestlings lived,—
The next—all five were dead!
And whilst the Parent's fate I grieved—
A voice to fancy said:

"In these poor victims may be seen,
This country's reckless doom;
For where the *Stranger's* tread has been
Sorrow and crime are come.

"A pillaged house, a broken band,
Are all the *native* knows;
An Exile on his *Father's land*,
He feels an Exile's woes.

"Oh, Christian! wipe the stain away:
Briton! be *Briton* still:
And to a suffering people pay,
A debt for deeds of ill!"

* * *

CARICATURE.

POLITICAL SKETCHES, H. B., MCLEAN, ETC.

IF it awaken pleasure in the mind to witness cheerful hearts and merry countenances, it is only to become a spectator near the Caricature Round Table of our Cape Public Library. The fertility and celebrity of H. B. and McLean's Monthly sheet, are effusions which not only tend to enliven, but we may add, inform and instruct. The history and by-gone practice of this curious compound branch of satire and art is thus well described by a London cotemporary.

THE principle of Caricature is as old as human nature; for a sense of the ludicrous and absurd is as inborn in man as the love of beauty, the appreciation of grandeur, or the feeling for the sad and mournful. Laughter in its antiquity may fairly be reckoned the twin of crying; though it must be confessed that, with our fallen nature, the latter takes the precedency. As some compensation, however, the former is universally acknowledged to be the more agreeable emotion; insomuch that the only crying at all spoken of with liking is that which is the result of much laughing.

To trace the entire annals of what is called Caricature, therefore, would be to give the history and development of the human mind, its faculties, perceptions, and passions; since, as we have said, a sense of the ridiculous appears to be equally inherent with mirth itself. Neither is it confined to individuals, but whole nations have been found with so great an aptitude to the ludicrous, so prone to laughter on almost every occasion, as in some degree to defeat the object of our missionaries when treating them for purposes very different to those of promoting merriment. From accounts we have read of these people, we learn that there was nothing on board our ships or in the persons of the crew which had any thing out of the way in dress or appearance, which did not become subjects of mimicry or sources of cachination. "It is not," says the great apologist for laughter, Sterne, "in the power of every one to understand humour; it is the gift of God."

The history of the art of painting, in its earliest state, affords examples of the burlesque which may be termed caricature. Nor is it confined to that period; on gems of the remotest antiquity are found subjects of droll character; such as chimeras, made up of all incongruous, all abortive things.

Somewhat in this way Leonardo da Vinci produced a set of caricatures; and, indeed, the arabesques or grotesques of Raphael, Annibale, Caracci, and others of the Italian school of art, may fairly come under the same title. Of more recent date, the works of Jerom Bos, of Brueghel, (for distinction called hellish,) the incantations of D. Teniers, and the merry masqueraders of Callot, furnish abundant matter in this way.

But belonging to this class of art, perhaps, no country has abounded more with examples in which wit, humour, and satire, were the component parts, than England. Indeed, so abundant is the catalogue, that the retrospective view puzzles the brain in the choice to fix either on individuals or their productions. The liberty of the pencil, no less than the liberty of the press, has been exercised to its fullest extent, hardly stopping short of treason in some instances, and not at all of libel in others. An attempt was at one time made by, we believe, the late Lord Bateman, to bring some of these graphic offences, of a political character, before parliament; but the arguments for and against were so interrupted by laughter, that the subject fell to the ground; and the pencil-shafts of wit and ridicule have since been permitted to fly abroad without a trial to control or punish them.

Horace Walpole, in his excellent essay upon the genius of Hogarth, proclaims that great dramatic painter "the inventor of graphic wit;" but much as we, in common with all the world, have been used, in matters of criticism on the arts to submit to his dictum, we cannot assent to this. For having very carefully examined that most curious travestie, by the pencil of Jan Stein, "Sampson and Delilah," we are in candour compelled to own, that Hogarth, original as he was, could not have introduced more point and wit into the same subject, had he been commissioned to make the effort for a prize.

Hogarth is also frequently quoted as "the great *caricaturist*." This is a mistake: he was not a painter of *caricatura*; but, properly, the great dramatic painter:—one who imagined and wrought his own painted moral drama—one, perhaps, whose "like we may never see again."

Rowlandson was a caricaturist; so were Gillray, Bunbury, Nixon, Woodard, Williams, and many others who flourished during the reign of George the Third. George Cruikshank, too, is a caricaturist—though we utter it not in depreciation; for if the hyberbole of art, whether in poetry or painting, be wrought with the originality and mastery of a Rabelais or a Gillray, we cannot but applaud the imaginative powers that excite in us such pleasurable sensations as the magic of their inventions produces on our risible faculties.

What struck the observant glance of Walpole, and moved him to open the eyes of the public to the charm of Hogarth's graphic wit, were a few, very few indeed happy original points of humour, which told their own tale. One, the undisturbed possession of a house-spider, whose web covered the slit of a poor-box in a parish church;—an admirable satire upon alms-giving. Another, chickens roosting upon perpendicular waves in the scene *behind* the scene; and another, that most intelligible and original frontispiece to "Kirby's Perspective."

We, born in the succeeding age, have lived to see a tribe of designers in the same school, the pourings out of whose inventions have been as

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

constant, and seem to be as inexhaustible, as the ever varying scenes of that great drama of human life that has been played for the amusement of philosophy for the greater part of six thousand years.

We profess to be of that fraternity of philosophers who own themselves the disciples of Democratus, rather than of Heraclitus; inclined to smile with Thalia, or laugh even with Momus, rather than weep with Melpomene. The facetious, witty Dr. Arbuthnot, whose wise diction was a law at the college, moreover, used to say, "Laughter prolongeth life; and a Merry Andrew's arrival in a town dispenseth more health to its inhabitants than a dozen ass-loads of medicine."

Were we disposed to go deep into the details of the origin of dramatic graphic design, we might trace it to a much earlier period in the wood-carving of the monkish ages than in the engravings on metal. The representations of *Purgatory* on the carved remains of our ecclesiastical buildings exhibit many ludicrous allusions to the gluttony, and in some instances the obscenities, of the monks, Certain curious and, indeed, interesting specimens of this species of graphic satire are still preserved in the under-part of the friar's stalls in the Chapel of Henry VII., Westminster Abbey. Others we could name. Several carvings of similar subjects have been incorporated in a series of candelabra, designed in the Gothic taste, and heretofore forming a part of the furniture of the conservatory at Carlton Palace. The groups, composed of figures about six inches in height, though so small, are admirably done, and replete with character. Neither should it be forgotten, that those series of moral pictures which are known in history under the designation of "*Death's Dance*," such as in olden time were painted on the cloister-walls of Pardon-Haugh church yard, part and parcel of old St. Paul's Cathedral, and in other places in England and on the continent, may be somewhat allied to our notions of graphic wit: such, for instance, as the miser, seeking to dig a hole to hide his bags of gold, finding a ready dug grave, which, toppling into, served to bury the treasure and its guardian together, without putting him to further expense.

Our present business, however, is with that species of design for which the English caricaturists are so eminently distinguished; namely, the graphic representation of political events; which, as related in the universal language of picture, form a striking political history of the last half century.

Rowlandson commenced this species of political drama about the year 1780. His *caricatura* of the events at the period of the memorable coalition of Charles Fox and Lord North amused not only the British, but the people of all Europe. The graphic record of the long-contested election of Fox, Hood, and Wray, accompanied by a descriptive catalogue of the events by the pens of Captain Morris, Harry Bunbury, and other wits of the day, formed a quarto volume, which in its way may be pronounced unique.

Gillray's commencement was shortly subsequent to this period; and the superiority of his *caricatura* was too evident to yield to any comparison with the works of his ingenious predecessor. Rowlandson, whose candour exceeded even his talent, was amongst the first to admit this; himself pronouncing Gillray to be the Michael Angelo of his art.

In looking over the vast collection of the works of this extraordinary artist, the exhaustless invention which he has exhibited in dramatising the ever changing political events during the revolutionary war, surprises even those whose genius delights to revel in imagination. Some few subjects, as the Apotheosis of the republican General Hoche, and others of the same cast, really border on the sublime. Scarcely could the pen of the historian depict the horrors of the French Revolution more potently than did the etching-tool of this extraordinary person.

There has been a lack of talent in this species of design since the death of these eccentric geniuses—for such they truly were, none having arisen to supply their place until of late, when the political drama commenced by the ingenious, and perhaps no less inventive and original, H. B., bids fair to add, if not already added, another series equally satirical, and alike amusing. It is only in a land of liberty that such artists can thrive. Foreigners are wont to consider the British people the only true philosophers, who thus turn all their political miseries into fun and laughter. Charles the First observed, that there is little fear of the political levities of the press, but much to dread at the hands of those gloomy politicians who are never seen to smile.

That zest in which the works of Rowlandson and Gillray were too often deficient, namely, the want of identity of personal resemblance in many of their *dramatis personæ*, is richly predominant in the works of H. B. They are, moreover, replete with that compatibility of expression which suits the subject and the action; and he must be dull, indeed, who is not suddenly excited to mirth in contemplating the groups thus so admirably pourtrayed by the inventive and ready crayon of this able political caricaturist. We are not in the secret as to whom this H. B. may be, but in his walk he may be dubbed another "Great Unknown."

The legitimate objects of caricature are humour and candid satire, no less to "Shew scorn her own image," than to "shoot folly as it flies;" a few instances of which, that have come under our notice, may be mentioned here. "Tax on Post-Horses," by John Nixon, an amateur, in the year 1782; in which is represented two clericals on their road to Oxford, both mounted on sorry hacks; the first maintains his seat with great dignity, but with far too great weight for the poor animal; while the second, designated by the name of Doctor Drowsy, having loaded his horse with travelling-trunk, portmanteau, and hat-box, has fallen asleep and brought himself and his hackney to the ground. We also remember an example of public resentment levelled at the extravagant sums lavished on foreign operatives in dancing, attitude, and feats of the like dexterity. The print represents the famous opera-dancer, Vestris, standing on tiptoe, holding a well-filled purse in one hand, his cap and feathers in the other, laughing at the audience who had enriched him. Below, and at each corner, was represented a goose standing on one leg, with a query, referring to the performers,—"Can you find any man that can stand so long on one leg?" to which the answer is, "No, but every goose can." About the same time appeared a print, levelled at the empiric of the day: Les Caprices de la Goutte; or, Ballet Arthritique." Here, under the patentee's muscular exercises, are seen three of his gouty patients, with their limbs variously cradled and bandaged, endeavouring to perform the several evolutions of the ballet, and writhing under the pain and torture of their exertions; while the master is represented (cane in hand) giving directions to a workman, who was employed in strapping the limbs of another patient. The device below is two crutches crossed, and the ballet before alluded to set to music. This print is oval, the size of that of Vestris, and is engraved by Paul Sanby, 1783. Whether these were from the designs of that artist, we do not know, but are well aware of his talent in graphic satire, which his series of prints ridiculing Hogarth's "Analysis of Beauty" sufficiently prove, but which his better sense and good feeling led him to suppress before they attained notoriety. Since the death of Paul Sanby, however, his son, the late Thomas Sanby, had a few copies struck off; and we believe the plates as old copper, will find their place in pots, pans, &c., upon our kitchen-shelves, till called into action for more pacific and more useful purposes.

Some of our first rate artists have stepped from the pedestal of their elevation to exercise their fancy in the ludicrous or caricature; and among these Sir Joshua Reynolds, in the early part of his career, played off two or three squibs of this sort; but, well knowing that as a painter of portraits it was dangerous, or at least debatable, ground to stand on, withdrew from the practice. Allan, though designated by the title of the Scotch Hogarth, began with the study of history and the imaginative in art, but was tempted to depart from his classic elevation; and, while at Rome, the Carnival and its masquerading groups and characters attracted his attention, he produced a series of subjects the most grotesque and burlesque in form and costume. These, with his designs for Allan Ramsey's "Gentle Shepherd," procured him the before-mentioned title, and established his reputation for the comic in art.

With the key which accompanies H. B.'s six volumes, we have got over about *three hundred and seventy* productions of his prolific pencil, all possessed of merit, and many of them displaying extraordinary talent. The whole may almost literally be viewed, not only as the political history of the last six years, but the personal memoirs of the chief actors who have figured in its development. No. 1, shews us the melancholy Shade of the departed patriot Canning; and from that era the Catholic Question, the Reform bill, and other measures, supply in turn the heroes of the graphic drama. In some the likenesses are so admirable that we can truly declare no exhibition within the walls of Somerset House ever presented them in so complete and characteristic a shape. The Kings, George and William, the Dukes of Cumberland, Sussex, and Gloucester, breathe and live on these cartoons. The Duke of Wellington, in every playful shape, and Lord Brougham in equal variety, are wonderfully clever. But the same remark applies to the Law lords, Eldon, Lyndhurst, Denman, Scarlett, Sugden, Manners, Plunkett, Redesdale; and to the Lawyers—Wetherell, Horne, &c. Lord Grey is capital throughout, and so is Althorpe. Lord Melbourne, Lord Durham, Lord Westmoreland, Lord Holland, Lord Stanhope, the Duke of Devonshire, the Duke of Buckingham, the late Lord Carnarvon, the late Lord Liverpool, Lord Kenyon, Lord Sidmouth, Lord Bathurst, Lord Anglesey, Lord Wharncliffe, are striking portraits. Of some others we are not such good judges; but, presuming from the fidelity of those we know, we dare to say they are equally true to nature: thus the Duke of Richmond, Lord Palmerston, Lord Stanley, Mr. Goulburn, Lord Chandos, Lord Harrowby, Lord Duncannon, Mr. Littleton, Mr. Ellice, Mr. C. Wood, Lord Londonderry, Sir J. Graham, Lord Ebrington, Lord Howick, are severally identified. Sir Robert Peel does not offer very marked features for the artist, but in the latter pieces,—such as driving the New Government Omnibus (where Wellington is superb cad)—H. B. has got him perfectly. Others, also, who are not so good at first, come gradually into fac-similes of the individual. Lord John Russel is one of these, till we arrive at No. 171; Sir J. Hobhouse, till No. 308; Lord Lansdowne, till No. 100; Mr. Croker, till No. 157. We do not consider Lord Aberdeen to be a happy hit (the best is No. 224); nor Lord Ellenborough; nor Lord Ripon; nor the Speaker; nor Lord Clanricarde. But, on the other hand, the following are perfection in design and execution; we have not merely the exact likenesses, but the perfect characters of the parties:—Talleyrand, O'Connell and Shiel, Lord Nugent, Mr. Hume, Cobbett, Burdett, Hunt, the Serjeant-at-arms Seymour Crockford, Mr. Thornhill and Chifney, Gully an Pease, Sir. R. Wilson, Mr. Spring Rice, Sir H. Parnell, Sir. W. Ingleby, Fyshe Palmer, Sir H. Birnie and old Townsend, Mr. Liston, and M. Ruthven,—and no mistake. Lord Munster's slight, but like; and, in short, the entire met of the series can only be appreciated by turning over these folios of wit and humour.

And many a wholesome truth do they also teach—for they are a treasury of individual and general instruction, as well as of perpetual amusement. It is curious to observe how caricatres may either mislead the public or correct its judgment. The common idea of George the Third was much generated by the verse of Peter in-

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

dar and the pictures in the print-shops; and George the Fourth, when, after some years of retired life, he visited the theatres, absolutely astonished the people of London, being so different from his caricature representations. In a graver point of view, we are much inclined to agree in opinion with the able and intelligent Sir Alexander Johnston, who has strenuously recommended the use of works of art as a great means for spreading civilization and British power over the vast territories of India.—*Literary Gazette.*

LITERATURE.

INSTRUCT; EMPLOY; DON'T HANG THEM.

By John Pitt Kennedy, Esq.

THIS work is as energetic and practical, as its title is pithy and plain. The author hesitates not to condemn the negligent and mischievous conduct of public men and landed proprietors of Ireland; nor to hold up to admiration measures calculated to produce general benefit. In his prefatory dedication he addresses individually and by name a number of well known characters, all of whom have been benefactors to Ireland. Among these there are the Duke of Wellington, who, he admits, in one instance followed the dictates of justice and judgment; Daniel O'Connell, whom he characterises as the most uncompromising and able defender of the Irish people; and the memory of the late Arthur Young, whose manly advice and practical information, offered to the public in the year 1780, would, if attended to, have prevented most of the evils that have since oppressed this country. He urged that "the Irish should be protected and employed, not hanged." A number of other eminent persons are addressed, and their individual or peculiar services are announced in the compliments paid to them; but not one of all those names pleased us more, or intimated more clearly the nature of the author's healing measures, than the one first addressed, viz: William Blacker, "who, in his management of land, has introduced the most rapid and efficient practical system hitherto offered for improving the condition of his countrymen."

THE CORN LAW POET.

The only approach to the late Wm. Cobbett is, we think, Ebenezer Elliot, the Sheffield mechanic and poet. He is a powerful writer, and although of extreme radical principles, all parties have done honor to his genius. In his new volume, "The Village Patriot," we quote one short piece—it is very striking, but unfortunately the last verse is but a *naughty* specimen of charitable feeling.

Hymn written for the Printers of Sheffield.

" Lord! taught by Thee, when Caxton bade
His silent words for ever speak;
A grave for tyrants then was made
Then crack'd the chain which yet shall break.

For bread, for bread, the all-scorn'd man,
With study worn, his press prepared;
And knew not, Lord, thy wond'rous plan,
Nor what he did, nor what he dared.

When first the might of deathless thought
Impress'd his all-instructing page,
Unconscious giant! how he smote
The fraud and force of many an age!

Pale wax'd the harlot, fear'd of thrones,
And they who bought her harlotry:
He shook the throned on dead men's bones,
He shakes—all evil yet to be!

The pow'r he grasp'd let none disdain:
It conquer'd once, and conquers still:
By fraud and force assail'd in vain,
It conquer'd erst, and ever will.

It conquers here! the fight is won!
We thank thee, Lord, with many a tear,
For many a not unworthy son
Of Caxton does thy bidding here.

We help ourselves, thy cause we aid;
We build for heav'n, beneath the skies:
And bless thee, Lord, that thou hast made
Our daily bread of tyrants' sighs."

SCOTTISH NOBILITY IN 1835,

From Pencillings by the Way, by Mr. Willis, of New York.

VISIT TO GORDON CASTLE.

THE immense iron gate surmounted by the Gordon arms, the handsome and spacious stone lodges on either side, the canonically fat porter in white stockings and gay livery, lifting his hat as he swung open the massive portal, all bespoke the entrance to a noble residence. The road within was edged with velvet sward, and rolled to the smoothness of a terrance-walk, the winding avenue lengthened away before, with trees of every variety of foliage; light carriages passed me, driven by ladies or gentlemen bound on their afternoon airing; a groom led up and down two beautiful blood horses, prancing along, with side-saddles and morocco stirrups, and keepers with hounds and terriers; gentlemen on foot, idling along the walks, and servants in different liveries, hurrying to and fro, betokened a scene of busy gaiety before me. I had hardly noted these various circumstances, before a sudden curve in the road brought the castle into view, a vast stone pile with castellated wings, and in another moment I was at the door, where a dozen lounging and powdered menials were waiting on a party of ladies and gentlemen to their several carriages. It was the moment for the afternoon drive.

'The last phaeton dashed away, and my chaise advanced to the door. A handsome boy, in a kind of page's dress, immediately came to the window, addressed me by name, and informed me that his Grace was out deer-shooting, but that my room was prepared, and he was ordered to wait on me. I followed him through a hall lined with statues, deers' horns, and armour, and was ushered into a large chamber, looking out on a park, extending with its lawns and woods to the edge of the horizon: a more lovely view never feasted human eye.

'"Who is at the castle?" I asked, as the boy busied himself in unstrapping my portmanteau.—"Oh, a great many, sir." He stopped in his occupation, and began counting on his fingers. "There's Lord Aberdeen, and Lord Claud Hamilton and Lady Harriette Hamilton—(them's his lordship's two step children, you know, sir)—and the Duchess of Richmond, and Lady Sophia Lennox, and Lady Keith, and Lord Mandeville and Lord Aboyne, and Lord Stormont and Lady Stormont, and Lord Morton and Lady Morton, and Lady Alicia and—and—and twenty more, sir." "Twenty more lords and ladies?"—"No, sir; that's all the nobility." "And you can't remember the names of the others?"—"No, sir." He was a proper page: he could not trouble his memory with the names of commoners. "And how many sit down to dinner?"—"Above thirty, sir, besides the duke and duchess." "That will do." And off tripped my slender gentleman with his laced jacket, giving the fire a terrible stir-up in his way out, and turning back to inform me that the dinner-hour was seven precisely.

'It was a mild, bright afternoon, quite warm for the end of an English September; and with a fire in the room, and a soft sunshine pouring in at the windows, a seat by the open casement was far from disagreeable. I passed the time till the sun set looking out on the park. Hill and valley lay between my eye and the horizon; sheep fed in the picturesque flocks, and small fallow deer grazed near them; the trees were planted and the distant forest shaped, by the hand of taste; and broad and beautiful as was the expanse taken in by the eye, it was evidently one princely possession. A mile from the castle wall, the shaven sward extended in a carpet of velvet softness, as bright as emerald, studded by clumps of shrubbery, like flowers wrought elegantly on tapestry; and across it bounded occasionally a hare, and the pheasants fed undisturbed near the thickets, or a lady with flowing riding-dress and flaunting feather dashed into sight upon her fleet blood-palfrey, and was lost the next moment in the woods,—or a boy put his pony to its mettle up the ascent, or a gamekeeper idled into sight, with his gun in the hollow of his arm, and his hounds at his heels. And all this little world of enjoyment and luxury, and beauty, lay in the hands of one man, and was created by his wealth in these northern wilds of Scotland—a day's journey almost from the possession of any other human being. I never realized so forcibly the splendid results of wealth and primogeniture.

'The sun set in a blaze of fire among the pointed firs crowning the hills; and by the occasional prance of a horse's feet on the gravel, and the roll of rapid wheels, and now and then a gay laugh and merry voices the different parties were returning to the castle. Soon after a loud gong sounded through the gallery—the signal to dress; and I left my musing occupation unwillingly to make my toilet for an appearance in a formidable circle of titled aristocrats, not one of whom I had ever seen—the duke himself a stranger to me, except through the kind letter of invitation lying upon the table.

'I was sitting by the fire, imagining forms and faces for the different persons who had been named to me, when there was a knock at the door, and a tall, white-haired gentleman, of noble physiognomy, but singularly cordial address, entered, with the broad red riband of a duke across his breast, and welcomed me most heartily to the castle.'

We are rather surprised that a man who had travelled largely in Europe, and spent at least one winter in London, should have mistaken a gallant general's well-won red riband for a badge of his hereditary rank. But let Mr. Willis proceed—

'The gong sounded at the next moment, and, in our way down, he named over his other guests, and prepared me in a measure for the introductions which followed. The drawing room was crowded like a *soiree*. The duchess, a very tall

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and very handsome woman, with a smile of the most winning sweetness, received me at the door, and I was presented successively to every person present. Dinner was announced immediately; and the difficult question of precedence being sooner settled than I had ever seen it before in so large a party, we passed through files of servants to the dining-room.'

We should have supposed Mr. Willis might have observed before this time, that there are and can be no difficulties about precedence, where almost all the company have fixed rank. At New York the affair is no doubt a very troublesome one.

'It was a large and very lofty hall, supported at the ends by marble columns, within which was stationed a band of music, playing delightfully. The walls were lined with full-length family pictures, from old knights in armour to the modern dukes in *kilt of the Gordon plaid* [!]; and on the sideboards stood services of gold plate, the most gorgeously massive and the most beautiful in workmanship I have ever seen. There were among the vases several large coursing-cups, won by the duke's hounds, of exquisite shape and ornament.

'I fell into my place between a gentleman and a very beautiful woman, of perhaps twenty-two, neither of whose names I remembered, though I had just been introduced. The duke probably anticipated as much, and as I took my seat, he called out to me, from the top of the table, that I had on my right Lady ——, "the most agreeable woman in Scotland." It was unnecessary to say that she was the most lovely.

'I have been struck everywhere in England with the beauty of the higher classes; and as I looked around me upon the aristocratic company at the table, I thought I had never seen "heaven's image double-stamped as man and noble" so unequivocally clear. There were two young men and four or five young ladies of rank—and five or six people of more decided personal attractions could scarcely be found: the style of form and face at the same time being of that cast of superiority which goes by the expressive name of "thorough-bred." There is a striking difference in this respect between England and the countries of the continent: the *paysans* of France and the *contadini* of Italy being physically far superior to their degenerate masters; while the gentry and nobility of England differ from the peasantry in limb and feature, as the racer differs from the dray-horse, or the greyhound from the cur. The contrast between the manners of English and French gentlemen is quite as striking. The *empressement*, the warmth, the shrug and gesture of the Parisian; and the working eyebrow, dilating or contracting eye, and conspirator-like action of the Italian, in the most common conversation, are the antipodes of English high-breeding. I should say a North American Indian, in his more dignified phase, approached nearer to the manner of an English nobleman than any other person. The calm repose of person and feature, the self-possession under all circumstances, that incapability of surprise or *déreglement*, and that decision about the slightest circumstance, and the apparent certainty that he is acting absolutely *comme il faut*, is equally "gentlemanlike" and Indianlike. You cannot astonish an English gentleman. If a man goes into a fit at his side, or a servant drops a dish upon his shoulder, or he hears that the house is on fire, he sets down his wine-glass with the same deliberation. He has made up his mind what to do in all possible cases, and he does it. He is cold at a first introduction, and may bow stiffly (which he always does) in drinking wine with you, but it is his manner; and he would think an Englishman out of his senses, who would bow down to his very plate and smile as a Frenchman does on a similar occasion. Rather chilled by this, you are a little astonished when the ladies have left the table, and he closes his chair up to you, to receive an invitation to pass a month with him at his country house, and to discover that at the very moment he bowed so coldly he was thinking how he should contrive to facilitate your plans for getting to him or seeing the country to advantage on the way.

'The band ceased playing when the ladies left the table, the gentlemen closed up, conversation assumed a merrier cast, coffee and *chasse-café* were brought in when the wines began to be circulated more slowly; and at eleven, there was a general move to the drawing room. Cards, tea, and music filled up the time till twelve, and then the ladies took their departure, and the gentlemen sat down to supper. I got to bed somewhere about two o'clock, and thus ended an evening which I had anticipated as stiff and embarrassing but which is marked in my tablets as one of the most social and kindly I have had the good fortune to record on my travels. I have described it, and shall describe others minutely—and I hope there is no necessity of reminding any one that my apology for thus disclosing scenes of private life has been already made. Their interest as sketches by an American of *the society that most interests Americans, and the distance at which they are published*, justify them, I would hope, from any charge of indelicacy.'

'I arose late on the first morning after my arrival at Gordon Castle, and found the large party already assembled about the breakfast table. I was struck on entering with the different air of the room. The deep windows, opened out upon the park, had the effect of sombre landscapes in oaken frames; the troops of liveried servants, the glitter of plate, the music, that had contributed to the splendour of the scene the night before, were gone; the duke sat laughing at the head of the table, with a newspaper in his hand, dressed in a coarse shooting jacket and coloured cravat; the duchess was in a plain morning-dress and cap of the simplest character; and the high-born women about the table, whom I had left glittering with jewels and dressed in all the attractions of fashion, appeared with the simplest *coiffure* and a toilet of studied plainness. The ten or twelve noblemen present were engrossed with their letters or newspapers over tea and toast; and in them, perhaps, the transformation was still greater. The *soigné* man of fashion of the night before, faultless in costume and distinguished in his appearance, in the full force of the term, was enveloped now in a coat of fustian, with a coarse waistcoat of plaid, a gingham cravat, and hob-nailed shoes (for shooting), and in place of the gay hilarity of the supper-table wore a face of calm indifference, and eat his breakfast and read the paper in a rarely broken silence. *I wondered*, as I looked about me, what would be the impression of *many people in my own country*, could they look in upon that plain party, aware that it was composed of the proudest nobility and the highest fashion of England.'

Mr. Willis's astonishment that the duke and his guests did not go a-shooting in red and green ribands, &c. &c., is particularly delightful. We are reminded of the monkish illuminations where kings and queens are represented as lying in bed with their crowns and sceptres—

'Breakfast in England is a confidential and unceremonious hour, and servants are generally dispensed with. This is to me, I confess, an advantage it has over every other meal I detest eating with twenty tall fellows standing opposite, whose business it is to watch me The coffee and tea were on the table, with toast, muffins, oat-cakes, marmalades, jellies, fish, and all the paraphernalia of a Scotch breakfast; and on the sideboard stood cold meats for those who liked them, and they were expected to go to it and help themselves. Nothing could be more easy, unceremonious, and affable, than the whole *tone* of the *meal*. One after another rose and fell into groups in the windows, or walked up and down the long room, and, with one or two others, I joined the duke at the head of the table, who gave us some interesting particulars of the salmon fisheries of the Spey. The privilege of fishing the river within his lands is bought of him at the pretty sum of eight thousand pounds a year! A salmon was brought in for me to see, as of remarkable size, which was not more than half the weight of our common American salmon.

'The ladies went off unaccompanied to their walks in the park and other avocations; * those bound for the covers joined the gamekeepers, who were waiting with their dogs in the leash at the stables; some paired off to the billiard-room, and I was left with Lord Aberdeen *in* the breakfast-room alone. The Tory ex-minister made a thousand inquiries, with great apparent interest, about America.

'The number at the dinner-table of Gordon Castle was seldom less than thirty, but the company was continually varied by departures and arrivals. No sensation was made by either one or the other. A travelling-carriage dashed up to the door, was disburdened of its load, and drove round to the stables, and the question was seldom asked, "Who is arrived?" You were sure to see at dinner—and an addition of half a dozen to the party made no perceptible difference in anything. Leave-takings were managed in the same quiet way. Adieus were made to the duke and duchess, and to no one else except he happened to encounter the parting guest upon the staircase or were more than a common acquaintance. In short, in every way the *géne* of life seemed weeded out, and if unhappiness or ennui found its way into the castle, it was introduced in the sufferer's own bosom. For me, I gave myself up to enjoyment with an *abandon* I could not resist. With kindness and courtesy in every look, the luxuries and comforts of a regal establishment at my freest disposal; solitude when I pleased, company when I pleased, the whole visible horizon fenced in for the enjoyment of a household, of which I was a temporary portion, and no enemy except time and the gout, I felt as if I had been spirited into some castle of felicity, and had not come by the royal mail coach at all. The great spell of high life in this country seems to be *repose*. All violent sensations are avoided, as out of taste. In conversation, nothing is so "odd," (a word, by the way, that in England means every thing disagreeable) as emphasis or startling epithet, or gesture, and in common intercourse nothing so vulgar as any approach to "a scene." The high-bred Englishman studies to express himself in the plainest words that will convey his meaning, and is just as single and calm in describing the death of his friend, and just as technical so to speak, as in discussing the weather. For all extraordinary admiration the word "capital" suffices; for all ordinary praise the word "nice!" for all condemnation in morals, manners, or religion, the word "odd!" To express yourself out of this simple vocabulary is to raise the eyebrows of the whole company at once, and to stamp yourself under-bred or foreigner. This sounds ridiculous; but it is the exponent not only of good-breeding but of true philosophy of social life. The general happiness of a party consists in giving every individual an equal chance, and in wounding no one's self-love. What is called an "overpowering person" is immediately shunned, for he talks too much, and excites too much attention. In any other country he would be called "amusing." He is considered here as a mere monopolizer of the general interest, and his laurels, talk he never so well, shadow the rest of the

* It is singular enough that no mention is made of the Duke's Library. Nor do we discover that the ladies entertained any sympathy for the poor of the neighbourhood. And not a word about churches and schools.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

company. You meet your most intimate friend in society after a long separation, and he gives you his hand as if you had parted at breakfast. If he had expressed all he felt, it would have been "a scene," and the repose of the company would have been disturbed.'

CORRESPONDENCE.

To R. Montgomery Martin, Esq. F.S.S.
Author of a History of the British Colonies,—London, 1835.

Cape Town, Cape of Good Hope,
December 22, 1835.

Sir,—As accuracy must be the aim of every historian, I feel sure that you will consider it an obligation, if I call your attention to some slight inaccuracies which have crept into your valuable History of the Cape of Good Hope.

At page 2, you tell us,—"On the South this colony is bounded by the Southern Ocean, on the West by the Atlantic, on the East by the Indian Ocean, and on the North by the Gariep or Orange River, and by unexplored territories." Now the boundaries of the colony (waiving any question as to the neutral territory,) are correctly laid down in the map facing the first page of your own account of the colony, in which you must perceive that the colony does not extend to the Orange River; and this is no matter of opinion, but of fact, as the jurisdiction of the Supreme Court does not run beyond the colored part of the map.

You, however, in the same page state, after having laid down the boundaries as defined after the conquest from the Dutch, "that the present boundaries should be considered as the Keiskamma River on the East, and the Gariep or Orange River on the North," but give no reason why they should be so considered. I can only say I know none why they should.

Whether you have correctly given the early history of the Cape, is perhaps of no great consequence; but it is rather loose topography (page 6) to say that "the English and Dutch armies met on the plain at the foot of Table Mountain," when the actual place of rendezvous was at Blue Berg, on the other side of Table Bay.

In page 12 you say,—

"Cape Town is regularly constructed with straight and parallel streets, intersecting each other at right angles, and shaded with elm or oak trees; the houses chiefly of red brick or stone, of a good size, and generally with a stoup or veranda before the door, shaded with trees, beneath which the English as well as Dutch inhabitants delight to lounge by day, sheltered from the fervid rays of the sun, or to enhale the freshness of the evening breezes."

Now it is a matter of no great consequence, but there does not happen to be an elm tree, except perhaps in Baron Ludwig's garden as a specimen, in all Cape Town, nor, so far as I have ever heard or seen, in all South Africa. The houses certainly are chiefly of red brick and stone, but somebody must have told you so, as, with very few exceptions, all the houses in the town are plastered and kept neatly whitewashed. The style is now beginning to alter, as a better description of brick has lately been made, capable of enduring the weather without a coat of lime. If you suppose a stoep, (not "stoup," as you write it, which is a Scotch measure for holding whiskey,) is the same thing as a verandah, you are much misinformed. You necessarily walk *upon* a stoep and *under* a verandah,—a house may boast a convenient stoep, and be destitute of the additional luxury of a verandah, and the sedentary man may rejoice under a verandah, whilst he deems a stoep unnecessary.

"The castle, situate on the left of the town, (entering from Table Bay), is a strong fortification commanding the anchorage, and, if well defended, capable of complete resistance against any force which may be brought against it. The fortress is pentagonal, with a broad fosse and regular out works. It contains within its walls most of the public offices, and barracks for 1,000 men."

I can only say, the castle must indeed be well defended to offer a complete resistance to any force which may be brought against it. The castle does not "contain within its walls most of the public offices." I have been in the colony some years, and there has not been a public office in it since I have been here. I have heard there was in General Janssens' time. If you had thought for an instant whilst penning the sentence, you must have remembered that most of the public offices are at the upper-end of the Heeregracht, close the entrance into the Government Garden.

"A range of lofty mountains rise, like an immense wall, forming the E. boundary of the valley of the Cape District, shutting it out so entirely from the country beyond it, that a few men in possession of the passes would always be able to cut off any communication between the sea coast and the interior. There are three passes or kloofs, generally used by wheel carriages; viz. Hottentot Hollands' Kloof, near False Bay, opening a communication with the district of Swellendam and the E. parts of the colony along the sea coast; *Roode Land* (Red Land) *Kloof*, [I presume by 'Roode Land (Red Land) Kloof' you mean Roode Zand (Red Sand.)] opposite to Saldanha Bay, leading to Graaff-Reinet, and the remotest parts of the colony, and—*Elands Kloof*, still farther N. opening into a wild country. As if in contrast to the barren mountain range, the valley which they inclose is exceedingly beautiful, rich, and well-watered, containing the Paarl, Great and Little Drakenstein, and Fransche Hoek, or French Corner, &c."—p. 14.

From the above the reader will naturally suppose, that the Paarl and the other places mentioned are in the Cape District; this, however, is not the case, they are in Stellenbosch District.

"There are two small bays on the W. side of the Cape Peninsula, *Haut*, or Woodman's, and Chapman's, &c."—p. 16.

You mean *Hout Bay*. "Hout" is Dutch for wood; but I never heard the Bay called either Wood, Wood's, or Woodman's.

"Groot Drakenstein, comprising, among others, the farms on the N. side of Simon's Bay."—p. 18.

Pray look at the Map, Mr Martin, and do not think it a trivial matter to tear up old respectable places out of their ancient seats, and squat them down in a new neighbourhood,—with as little ceremony as you would locate a Fingoe.

"Worcester District is divided into two parts, Worcester to the *North*, and Clanwilliam to the *Southward*."—p. 19.

Look again at the Map; you have boulversed Clanwilliam, and turned Worcester topside t'other way. And here I may observe, that the newest Map of the Colony, as well as all former ones, cuts off, I think, no fewer than three Field-Cornetcies from Worcester, and gives them to Beaufort. The District of Worcester actually runs up between Beaufort and Clanwilliam to the northern boundary of the Colony.

In the same page 19, you say—"*Clanwilliam village lies* 13 *miles from Worcester*,"—About 113 only.

I now pass on to page 65—pretermitting the interlude of the Flying Dutchman, and the other matter which occupies the intermediate pages, which I leave to the correction, if required, of those better acquainted with the subjects. In your enumeration of fruits, (p. 65,) "*all large and of excellent flavor*," you introduce gooseberries and hazlenuts. I presume you mean Cape gooseberries, which are as like a tomata as an English gooseberry. European gooseberries are very rare at the Cape; in fact, I have never yet seen one, neither have I seen hazlenuts.

"Of culinary vegetables every possible variety and of the finest quality is grown at the Cape—the potatoes are such as would please the most fastidious Corkonian, and the excellent kitchen market at Cape Town would in variety and excellence outvie Covent Garden on its palmiest May-day."—p. 66.

These things are not so.—Cape vegetables are not of the finest quality; with very few exceptions, they are not equal in flavor to English vegetables,

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

and especially potatoes, which are still very inferior, although much improved of late years. Whether by the "excellent kitchen market at Cape Town" is meant that commodious part of the street opposite the shambles, where cabbages are exposed apparently for the purpose of being saturated with the dust raised by the numerous ox wagons which pass that way, or the "tented plain" opposite the Town House, where a tempting medley of fruits, greens, lollypops, fried fish, and other delicacies pass the siesta under shreds of canvas and tattered china umbrellas, I know not; but to compare either to Covent Garden on May-day, or any other day, is just to sing the Groves of Blarney.

"And the system of turnip husbandry commenced in the English districts is extending among the Dutch agriculturists."—p. 66.

I hope the extension is sure, it is certainly slow. Covent Garden market, "on its palmiest May-day," contains more turnips than are grown by all the agriculturists in South Africa.

P. 79.—*De gustibus non disputandum*—but I say it on the authority of the late Col. Carey, an eminent Gastronome, that it is an utterly heretical opinion to consider "*the Cape sole equal to that of Europe, the skate capital, and the oysters equal to those of Carlingford.*" The truth is you pass over in silence the best fish; the kingklip, stockfish, elf, and pearlamoon, which latter is similarly situated to your penguin of p. 79, which you tell us forms the connecting link between the feathered and finny tribes—so the pearlamoon forms the connecting link between the beasts of the field and the vegetable kingdom, being exactly half way between a veal cutlet and an artichoke bottom.

Passing over the statistical tables taken from that accurate and useful work, Mr. Greig's Almanack, and leaving the account of the border tribes to be scrutinized by Dr. Smith, we arrive, p. 116, at the "*Form of Government.*" From this point to the end of the story one error presses so hard on the heels of another, that it will be a much easier operation to make a new work than to put the old one to rights. Take the following sample of blunders. The Chief Justice is put into the Executive Council,—Field-Cornets are empowered "*to settle trifling disputes*, and to *punish Slaves and Hottentots*,"—Criminals are tried by a Jury, of whom there must be at *least seven members present*, and when the offence is capital, a majority must agree in the verdict, *if seven only be present,—if more than seven jurors attend*, and opinions as to guilty or not guilty are equal, the prisoner is acquitted."—We are also told that "transfers of land, or mortgages, (except the bond called *Skygene*,—what sort of bond is that, Mr. Zastron?) are only *legal*, when registered in the debt book at the *Colonial office* at Cape Town, *where Commissioners sit to superintend such matters.—The insolvent act is in force at the Cape.*" And some unfortunate litigant has actually made you, Mr. Montgomery Martin, believe, that "two of the Judges, being English, carry on the proceedings at the Circuit Courts according to the rules of English practice, whilst the third, being Scotch, follows his national customs, and that hence different procedures prevail."—"The Highest Quarters" are blamed for having "sent out a *German*, speaking only High Dutch, as Interpreter to the Supreme Court;" with fifty other such pieces of *mis* and mal-information.

Dear Mr. Montgomery Martin, when you give us the new edition, of which you hold out hopes, stick to Greig's Almanack for your information, and if you think it of consequence to give to the world the names of the inhabitants of Cape Town and its vicinity, I can confidently recommend the Directory of Suasso de Lima as perfectly trustworthy.

In conclusion, let justice be done to you. It can be said to your immortal honor, that you have not retailed the story of the inhabitants practising coachmanship at Green Point in chariots drawn by Zebras, neither do you pretend to have seen Ogres of Pelicans alluring young chickens, by spewing up corn, and then gobbling them up.*

VALE.

A GOOD ARTICLE IN THE *QUARTERLY REVIEW!*

THE greatest boon to England was perhaps the passing of the Poor-Law Amendment Act by the Reformed Parliament. It seems to us to have been the salvation of the country despite of those possessing vested interests in the old rotten system, the country squires,—church-wardens and overseers; the clerical magistrates, and their new organ, *The Times* newpaper.

If the reader be prepared for an intellectual feast, we earnestly recommend him to take up No. 106, Quarterly Review. Under the head *English Charity*, page 473, is an article astounding as to its facts, racy and sparkling in its delineations of parochial character, presenting at once a gallery of pictures equal to any of the descriptions so naturally and beautifully described by Crabbe the poet. The writer is Sir F. Head, Author of "Bubbles," &c. But as might be expected, he has given offence, and the *vested interest* people of Canterbury, on the behalf of their "beloved" county, (which cuts a pretty figure in the Report of the Poor Law Commissioners,) have banished the Quarterly Review from their Reading Rooms. Leaving the general merits of the Poor Law Amendment Act out of the question, we select two or three notices from the Review, of general interest.

THE WORKHOUSE.

Firmly believing that there exists on the surface of this earth no soil more congenial to the growth of every domestic virtue than the breast of the English peasant, it is but too true, that if thorns be found growing there instead of fruit,—if the crop be poisonous instead of being nutritive,—our political labourers, not the land, must be cursed. The ancient Greeks revered even the bones of *their* ancestors; we have taught our peasantry to bequeath their parents, blood, body, and bones to the workhouse.

With respect to the manner in which children have been systematically demoralized in many of our small poor-houses, the error, we conceive, speaks so clearly for itself, that we need not offer to be its advocate. A mixture, in about equal parts (never mind a scruple or two,) of boys and girls, idle men, and abandoned women, can only by a miracle be unproductive of evil to society; we will, therefore, content ourselves with repeating a practical opinion which was thus expressed to us by a governor of twenty years' experience:—

'*When children*,' said Mr. Cadell, '*have been brought up in a work'us, they have never no disposition to shun a work'us.*

CHARITABLE ERROR.

The merest sketch of the History of the London Foundling Hospital, established by the Royal Charter in the year 1739, shows very remarkably that charitable error, like the acorn, is easily planted, but before it has attained a century's growth, how difficult it is to grub it up! What was established as a *foundling-hospital*, now no longer dares to call itself an *hospital for foundlings*. Still it exists; still its "fifty-four governors," its "six vice-presidents," its "treasurer," and its "secretary," like Dervishes in their dance, pompously bow to each other. Still the "organist" plays his tunes. Still the "chaplain," "reader," and "preachers," go through their services. Still the "clerk" mutters his amen. Still the "vergers" wear their gowns. Still the "building committee," the "sub-committee," the "house committee," gravely perform their inexplicable functions. Still (*vide* the printed report of the hospital) "Miss Bellchambers, Miss Lloyd, Mr. Goulden, Mr Pyne, Mr. Atkins," &c. form "the choir." Still they chaunt, with glee and harmony, appropriate melodies, all set to the tune of "42*l.* per annum." Still the "house apothecary" mixes his drugs. Still the "storekeeper" arranges his checks. In this small creation, "the medical officers, steward, matron, porter, watchman,

* See Literary Gazette, January 1st, 1835.

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

master of the boys, gardener, messenger, tailor, two cooks, laundress, housemaid, nurses of the wards, mistresses of the girls, and gown maker," are still seen mathematically moving in their respective orbits.

THE SEA.

On the surface of this globe, there is nowhere to be found so inhospitable a desert as the 'wide blue sea.' At any distance from land there is nothing in it for man to eat; nothing in it that he can drink. His tiny foot no sooner rests upon it, than he sinks into his grave; it grows neither flowers nor fruits; it offers monotony to the mind, restless motion to the body; and when, besides all this, one reflects that it is to the most fickle of the elements, the wind, that vessels of all sizes are to supplicate for assistance in sailing in every direction to their various destinations, it would almost seem that the ocean was divested of charms, and armed with storms, to prevent, our being persuaded to enter its dominions. But though the situation of a vessel in a heavy gale of wind appears indescribably terrific, yet, practically speaking, its security is so great, that it is truly said ships seldom or ever founder in deep water, except from accident or inattention. How ships manage to get across that still region, that ideal line, which separates the opposite trade winds of each hemisphere; how a small box of men manage unlabelled to be buffetted for months up one side of a wave and down that of another; how they ever get out of the abysses into which they sink; and how, after such pitching and tossing, they reach in safety the very harbour in their native country from which they originally departed, can and ought only to be accounted for by acknowledging how truly it has been written, 'that the spirit of God moves upon the face of the waters.'

It is not, therefore, from the ocean itself that man has so much to fear; it can roar during the tempest, but its bark is worse than its bite; however, although the earth and water each afford to man a life of considerable security, yet there exists between these two elements an everlasting war, a dog and cat battle, a husband and wife contention, into which no passing vessel can enter with impunity; for of all the terrors of this world, there is surely no one greater than that of being on a lee shore in a gale of wind, and in shallow water. On this account, it is natural enough that the fear of land is as strong in the sailor's heart as is his attachment to it; and when, homeward bound, he day after day approaches his own latitude, his love and his fear of his native shores increase as the distance between them diminishes. Two fates, the most opposite in their extremes, are shortly to await him. The sailor-boy fancifully pictures to himself that in a few short hours he will be once again nestling in his mother's arms. The able seaman better knows that it may be decreed for him, as it has been decreed for thousands, that in gaining his point he shall lose its object—that England, with all its verdure, may fade before his eyes, and

'While he sinks, without an arm to save,
His country bloom, a garden and a grave!'

PARISH ACCOUNTS.

An assistant commissioner observing, in a parish book, constantly repeated the charge of 'for sparrows 2*s*. 6*d*.,' ventured to inquire what was allowed for destroying them? 'Why, 4*d*. a dozen!' the overseer instantly replied; but how it had happened that the parish gun always killed exactly half a crown's worth, never more or never less, the man in office could only explain by observing, as he scratched his head, "Yes! and we're eaten up by 'em still!" One parochial item was

To JOHN BELL, for cutting his throaght, 12*s*.'

The following is, *verbatim et literatim*, the copy of an overseer's answer to a printed circular of grave inquiries, forwarded to all the parishes by the Poor-Law Board:—

'It will never do we any good to alter the law in our parish, as our parish is very small, and there is no probabilits of alter our kearse at all. There is no persons fitter to manage the parish better than ourselves. T. T., oversear.'

'Why have you so long continued this charge of a shilling for tolling the church bell at the death of every pauper?' said the Assistant Commissioner to a parish overseer. 'Why, sir,' replied the officer, in a whisper, 'the clerk is a dreadful man, and always threatens to fight me, whenever I wants to stop that ere charge!'

A MONOPOLIST.

In one parish it appeared that there existed a person in the community almost fit to rival Mr. Mathews or Mr. Yates:

Q. Who is overseer? *A*. Mr. Parker.
Q. Who is assistant overseer? *A*. Mr. Parker.
Q. Who is the warden? *A*. Mr. Parker.
Q Who collects the rate? *A*. Mr. Parker.
Q. Who is master of the workhouse? *A*. Mr. Parker.
Q. Who determines on the rates? *A*. Mr. Parker.

Besides these trifling duties, Mr. Parker performed also in the public characters of a butcher, a farmer, a quarrier, a carman, and a constable. 'Well, Mr. Parker!' said the Assistant Commissioner, 'you seem to have got all the parish affairs on your hands; I only hope you take care of these poor children, and give them a good education?' 'No, Sir,' replied Mr. Parker, 'God forbid! all the six and thirty years I never gave children no *larning*.' 'Why not?' 'Why, sir, it be a thing quite injurious; we have no long-legged children on *our* parish turned out of school; when I finds a promising child I sets him to work.' Accordingly, it turned out that there was not one of the poor children in Mr. Parker's parish that could write or read.

THE DIETARY.

In a large poor-house, the commissioner, wishing to know exactly how the paupers were fed, desired the governor to produce his 'dietary.' His excellency hesitated so much, that the commissioner suspected that he had not got one; the governor persisted that he had, but said that he could not possibly bring it into the vestry-room, for it was a fixture! 'Well,' said the commissioner, 'if the dietary cannot come to us, let us go to the dietary!' The governor slowly led the way, until he reached the great hall, when, pointing to a thing 18 feet by 4, he said, 'Here it is, sir. It was the paupers' dining-table!

LITERARY EXTRACTS.

AMERICAN INDIANS.

(ENCROACHMENTS OF THE WHITE MAN.)

Mr. Irving has just published two interesting volumes of Indian Sketches, taken during a recent expedition to the Pawnee and other tribes of American Indians. We find in the progress of the expedition some affecting notices of those Indians who have lived in constant intercourse with the whites, imbibing all their vices without gaining a single redeeming virtue. Such is the natural consequence, however of the low-bred, ignorant, irreligious settlers of great cities who are allowed to play their pranks among the aborigines of a country. The author evinces, in numberless passages and forms, his deep sympathy for these interesting tribes of mankind. For instance—

"The forest is full of ruins. It gives many a touching memento of the work of time. Hundreds of gigantic trees, which have weathered the storms of ages, and for centuries have kept their silent watch, have yielded to its power; have been hurled from their stands, and their lumbering wrecks are decaying upon the ground—the green moss is their covering, the wild ivy their shroud. Thousands of dead trees are still standing, shooting up their tall grey forms, stripped of bark, of foliage, and of branches; still, they cling with a lingering tenacity to their old abiding places, as if loth to resign themselves to the ruin which is every where reigning around them, and although despoiled of foliage, as if they still loved to linger on the spot which once bore witness to their magnificence.

"Occasionally in our rambles we would fall upon a solitary Indian, roaming through the woods, or seated in deep meditation upon the wreck of some prostrate tree. It was the place for him. Let him look upon the forests and read his own fate; they are united—their destinies are the same; alike they have lived and flourished in the wildness of nature, and alike they are disappearing before the approach of civilization. Let the Indian grieve at the sound of the woodman's axe; for at the fall of every tree the hour of his own ruin draws nearer."—vol. i, pp. 69—71.

JOHN C. LOUDON, ESQR.

(*From Grant Thorburn's Men and Manners in Britain.*)

In my opinion, the most extraordinary man in our age is J. C. London, F.L.S H.S. &c. of London. His hands are lame, so that he is unable to carve his food or wield a pen; yet he has sent forth, and continues to send forth to the world, more books than any one who lives, or has lived, perhaps, since the days of Shakspeare. His Encyclopedias of gardening, of plants, and of agriculture alone, one would think, when he looks on them, are more than sufficient for the labours of the longest life. He also publishes, periodically, the Gardener's Magazine, and another entitled Cottage Architecture, &c. But when God withheld from him the use of his fingers, he more than restored them in the person of his wife—he indites and she writes, (I thought of Milton and his daughter.) She is a woman of strong mind, as well as a ready pen. They have only one child, (a girl,) so that this excellent woman is able to devote her whole time to her husband. He is a Scotchman, a man of strong *mother wit*, and a clear head.

A TOUCHING SCENE,

From a Narrative of a Visit to America. By Messrs. Reed and Matheson.

'THE building, called a church, is without the town, and placed in a hollow, so as to be out of sight; it is in the fullest sense "without the gate." It is a poor log house, built by the hands of the negroes, and so placed as to show that they must worship by stealth. The place was quite full; the women and men were arranged on opposite sides; and, although on a cold or rainy day there might have been much discomfort, the impression now was very pleasing. In the presence of a powerful sun, the whole body were in strong shadow; and the light streaming through the warped and broken shingle, on the glistering black faces of the people, filled the spectacle with animation. One of the blacks, addressed me as their "strange master," begged that I would take charge of the service. I declined doing so. He gave out Dr Watt's beautiful psalm, "Show pity, Lord; O Lord, forgive," &c. They all rose immediately. They had no books, for they could not read; but

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

it was printed on their memory, and they sang it off with freedom and feeling. There is much melody in their voice; and when they enjoy a hymn, there is a raised expression of the face, and an undulating motion of the body, keeping time with the music, which is very touching. The senior black, a preacher amongst them, then offered prayer, and preached. His prayer was humble and devotional. In one portion of it, he made an affecting allusion to their wrongs. "*Thou knowest,*" said the good man, with a broken voice, "*our state—that it is the meanest—that we are as mean and low as men can be. But we have sinned—we have forefited all our rights to Thee—and we would submit before Thee to these marks of thy displeasure.*" He took for the text of his sermon those words, "The Spirit saith, come, &c. . . . . They then rose, and sang, and separated. This was the first time I had worshipped with an assembly of slaves; and I shall never forget it. I was certainly by sympathy bound with those who were bound; while I rejoiced, on their account, afresh in the divine truth, which makes us free indeed, which lifts the soul on high, unconscious of a chain.' —*Reed,* vol. i. p. 222.

ANECDOTE.

SOME years ago, a poor woman living in the parish of Dalkeith, having a favour to ask from the Duchess of Buccleugh, put on her best tartan plaid, and goes forth. On the way, she steps into the house of a neighbouring gossip, told where she was going, and asked what she should say when she spoke to the Duchess. Oh, says the gossip, you must say your grace. Well, the old lady arrived at the palace, was shown into the room where the Duchess gave audience to these people. "Well, good woman," says the Duchess, "what is your wish? "For what we are going to receive, may the Lord make us thankful, Amen." The Duchess smiled, and repeated her question. "For what we are going to receive," &c. again says the old woman. The Duchess was unable to sit with laughter. She called a female servant, and told her to see what the old lady wanted. The request was readily granted, and probably doubled for the humour of the joke.

ARCHBISHOP USHER, AND THE REVD. S. RUTHERFORD.

IT is told that Archbishop Usher, hearing the fame of Rutherford, once came to Anwoth, N. B. in order to converse with him. A romantic species of adventure, which seems to have been common among distinguished authors, before the press and post office had given such facilities to the intellectual correspondence.

He appeared at the *manse** on a Saturday night, in the guise of a beggar, and solicited lodging, which was readily granted. He was desired to sit down in the kitchen where Mrs. Rutherford soon after, according to custom, catechised the servants, and with them the apparent beggar. She asked him how many commandments there were? to which he answered, eleven. She was shocked at his ignorance, and commented upon it in no very respectful terms; but she did not the less on that account show to him the hospitality of a Scottish matron of the period. She gave him a good supper, and sent him up to a bed in the garret. This was the very situation in which the bishop wished to be placed, for he was mainly induced to undertake this strange pilgrimage by a desire to hear Mr. Rutherford pray, and he now expected to hear his private devotions. Being disappointed, however, in this expectation, he resolved to pour out his own soul in prayer to his Maker. He prayed with so much fervency and eloquence, that Rutherford started out of bed, put on his clothes, came up and told the stranger, that he was sure he could be no other than Bishop Usher. The Bishop confessed who he was, and consented to preach next day in Anwoth Church, obtaining a promise, however, that no one should be made acquainted with his secret. Furnished with a suit of Mr. Rutherford's clothes, the bishop, early in the morning, went out to the fields; the other followed him, and soon after brought him in as a strange minister passing by, who had promised to preach for him.

Mrs. Rutherford found that the poor man had gone away before any of the family were out of bed. After domestic worship and breakfast, the family went to the kirk. The bishop took for his text, (John xiii. 34.) "a new commandment I give unto you, that ye love one another." In the course of his sermon, he observed that this might be considered the *eleventh* commandment. Upon which, the minister's wife said to herself, "this is the answer the poor man gave me last night," and looking up to the pulpit, added:— "can it be possible that this is he!" After public worship, the strange minister and Mr. Rutherford spent the evening with mutual satisfaction. And, early on Monday morning, the former went away without being discovered.—(*Thorburn*).

* Minister's house.

Benevolence of Birds.—A lady residing in the neighbourhood of London, hung out a cage near her balcony, in which was a young bird, and it was fed for many weeks by sparrows.—*Jesse's Gleanings in Natural History.*

A Reasonable Request.—An anecdote in the last New Monthly reminds us of the following:— At his first breakfast in new lodgings, a gentleman was much annoyed by finding hairs in his butter. As the mildest, but the most effectual mode of reproof, he thus addressed the servant, when she came to take away the things: "Sally, I am very fond of hairs in my butter; but, for the future, be so good as to bring the hairs in one plate, and the butter in another, that I may mix them in what proportion I like."

Swimming.—Eight of the best swimmers of the Austrian garrison of Bregenz engaged, for a wager, to swim across Lake Constance, from that town in the Tyrol to Lindau, a distance of six miles. They started at ten o'clock, and at three minutes before three o'clock a private soldier, named Tutaja, reached the bridge at Lindau. In 32 minutes afterwards he was followed by Lieut. Cepharowitsch. The six others only went about half the distance, and then were taken into the boats that attended them. The wind was blowing from the west, and the temperature of the water was 17 degrees of Reaumur, or 70¼ of Fahrenheit. This is, perhaps, the greatest distance ever traversed by swimming in fresh water. The two men who completed their task were perfectly blue when they landed, their pulse was scarcely perceptible, and several hours elapsed before their bodies resumed their natural heat. —*Paris Advertiser.*

Highland Wit.—"Who is there that has travelled the West Highlands, and does not know Rory Moore—the rattling, roaring, ready-witted, warm-hearted, big-fisted Highlandman, that keeps what her nainsell calls the 'Travelling Emporium?' Surely none. And who that has ever experienced the comforts to be found under his roof-tree, but feels an 'ardent longing after' a repetition of the employment? Surely few: and those who have had the pleasure of cracking a bottle with him, and seen him in his glee, for 'muckle glee and fun has he,' will easily believe the following little anecdote. A cockney, one of the most troublesome and supercilious of the genus, who, during a residence of three days, had been the pest and torment of waiters, chambermaid, boots, and, in fact, the whole tail of the inn, having at last made up his mind to depart, he marched up to Rory with his hat set obliquely on his highly frizzled poll, a cigar in his mouth, and his hands doubled up on his haunch-bones. 'I say, landlord, I vants a os.' 'That's what I can't give,' says Rory, 'all the horses are out, I could not get one for you were it to save your life.' 'Oh! landlord, that answer vont do for me; I'm going off, and what the de'il am I to ride on, pray?' 'Just,' replies Rory, cocking his eye, 'ride upon your own impudence; it will carry you further than any horse in Argyleshire."

Idleness.—"'Pray, of what did your brother die?' said the Marquess Spinola to Sir Horace Vere. 'He died, sir,' replied he, 'of having nothing to do.' 'Alas, sir,' said Spinola, 'that is enough to kill any general of us all.'"

Gourmandism.—"A man of property, who had for years been abusing his stomach, at last found his health on a rapid decline. Nature could endure it no longer. He went to consult the celebrated Dr. Spring, of Water Town, Mass. He stated the symptoms of his case so clearly that the learned physician could not mistake the nature of the disease. 'I can cure you, sir,' said he, 'if you will follow my advice.' The patient promised most implicitly to do so. 'Now,' says the doctor, 'you must steal a horse.' 'What! steal a horse?' 'Yes,—you must steal a horse. You will then be arrested, convicted, and placed in a situation where your diet and regimen will be such that in a short time your health will be perfectly restored.'"

Practical Retort.—Before the duty on leather was abolished, the excisemen and tanners had many little differences; and, as may be conceived in some instances, where the exciseman might be supposed to be riding on his commission, the very reverse of a kindly feeling subsisted between the parties. This was the case in a village of which the name signifieth not, where the exciseman lectured the tanner daily and hourly on the standing order of the excise, that "no *green hide* should be drawn out of the pit without 24 hours' notice to the excise." This repeated admonition implied a want of faith in the tanner's integrity, and he persisted in it to the no small chagrin of the man of *hidden* things. Prowling about one evening in the tanyard, to see that all was correct, the exciseman, whether owing "to the straggling moon-beam's misty light," or a levity in the summit of his tabernacle, from an excess of the pleasant, missed his footing, and went dash head foremost into one of the tan-pits. Sprawling among hides, bark, and water, he shouted lustily for help, and upbraided the tanner, who had been watching the progress of his disaster, for not stretching out a helping hand to rescue him from drowning. "Na! na!" said the other, "I really darna do it: I darna, ye ken, for the very saul that's in my body, draw out a *green hide* without 24 hours' notice to the excise!" —(*Dumfries Courier.*)

SCIENCE.

WATER.

ARTESIAN WELLS.

(FROM THE HOBART TOWN COURIER)

WE alluded in our last to the modern practice of boring for water, which has of late come into such successful use in England.--It is a fact generally admitted by geologists, that very large bodies of water flow or are suspended in basins between the different strata of the earth. In hilly countries many of these subterranean lakes as they may be called, are suspended above the level of the plains and valleys below, so that by digging or boring through the crust or stratum that confines the water, it will spring out and rise to a height, if confined in a narrow tube or pipe, equal to the natural reservoir above. The great advantage of boring over the common practice of well-digging, is this, that the various partial and usually impregnated springs which would flow into the

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

well and obstruct the further progress of the workman, rather facilitate than retard the progress of the machine, which may thus be persevered with until the main spring of pure water is arrived at. A well was recently bored in Paris between 500 and 600 feet deep. It is a lamentable proof of the want of due encouragement to the arts and sciences in this new country, so readily available in all respects to be benefitted by these *artesian* wells, that though 3 or 4 boring machines are now in the country, not one has yet been put into successful use, and we continue dragging from half dried up creaks with horse and bullock carts for miles, and from day to day, impure, imperfect supplies, what a more enlightened age will furnish us with ease at the foot of our hills, from the mother earth, in a pure and refreshing state. The seasons, it has been remarked, have latterly been unusually dry. It is at least certain that for several months in the year our pastures are much burned up, and vegetables of all kinds suffer from the want of water. Did it never then occur to any of our country readers, that by the help of a little mechanical and scientific labour a supply of water, coming down from a height and drawn down in various little streams, would irrigate with comparative ease in the driest seasons, those crops that are periodically parched and rendered in a manner fruitless and of no avail? Nature has given us the country, and labour—simple enough in all conscience—has been largely expended on it—but when a little more admixture of art and science prevails amongst us to direct this labour, the face of the island, and not till then, will put on a different appearance.

ANTI-MALTHUSIANS.

(From Breton's Tour in Norway.)

A remark made by a person at one of the post situations diverted me extremely; on his telling me that the woman of the house had had no less than twenty-seven children, I smiled with incredulity at his information, which appeared to savour strongly of the marvellous. Nettled at my doubting his veracity, he exclaimed with vehemence: "Why, sir, it is quite the fashion among the Norsk women to have two, and even *three* at a birth." It is to be hoped that this may not, with other foreign fashions, be introduced into England, or I know not what would be thought of it by our parish officers, seeing that the poorer orders imitate the example of the rich in respect to all those attainable by them! Most of the above family died; but the wife of a merchant had twenty-two children, eighteen of whom were living: and an officer of the customs had also eighteen by the same wife, whom he had lost. On my expressing surprise at the number of his family, he coolly replied that "this was a mere *bagatelle*, and that he intended to marry again as soon as possible!" He must have been fully satisfied that "children are like arrows in the heads of a giant," and "happy is the man who has a quiver full of them!" A gentleman informed me that three fathers (peasants) sat down with their children to play at cards—the whole party amounted to *sixty*. I knew myself of three instances of families of sixteen.

The Thracians wept when a child was born, and feasted and made merry when a man went out of the world! If the Norwegians followed their example, the frequent causes for lamentation would leave little time for songs and mirth.

REVD. JOSEPH WOLFE.

THIS extraordinary Missionary Traveller gave an interesting history of his Adventures to a crowded Meeting in the Lady Chapel, St. Saviour's, Southwark, in September. Mr. Wolff is about to take his departure for Timbuctoo.—(*London Paper.*)

SERMON AT THE GRAVE OF A MARTYR.

Dedicated to all true Scotchmen.

THE admirable sermon preached by the Rev. Robt. Jeffrey at the grave of the Martyr, Robert Ferguson, in the wilds of Auchencloy, on Sabbath week, the 16th current, has excited so much interest in Galloway that we are glad to hear it is about to be published. Of the talents of the preacher we have been long aware, and feel not the slightest hesitation in saying that anything that escapes from his pen will amply repay the most careful perusal. Auchencloy is situated at the western extremity of the parish of Girthon, and forms part of an extensive plain, which is bulwarked in on all sides save one by a chain of lofty and romantic hills. Ferguson, it appears was one of three who were pursued and shot by the merciless Clavers, and as he happened to be far from home and friends, his body, according to custom, was buried on the spot, while those of his companions were claimed by their relatives. A large stone, about fifty yards from the grave, is still pointed out as the spot where the foul deed was perpetrated: and to some pious son of the Church the public owes a humble through-stone bearing the following plain but affecting inscription:—"Here lies Robert Ferguson, who was surprised on the place and instantly shot by Graham of Claverhouse, for his adherence to Scotland's Reformation, Covenants, National and Solemn League, 1684."

The weather in the morning was unfortunately so unfavourable that it must have had the effect of scaring many away; but such was the zeal of others that they determined to visit Auchencloy under any circumstances; and when the preacher entered his temporary pulpit (a wooden tent covered with cloth) at least 1500 persons must have covered the heathery esplanade around. And previous to this it was most interesting to mark numerous bands of worshippers streaming from every point of the compass—here ascending and there descending the hills to the valley, each and all as intent in listening to the preacher as if the days of Covenant had again returned. The pulpit was placed about three yards in rear of the grave—a circumstance upon which the clergyman repeatedly seized in some of his most pathetic appeals to his hearers; and all agree in thinking that a more appropriate and spirit-stirring sermon has rarely been preached, whether in tabernacle or on the lonely moor. The service of the day commenced with an appropriate psalm, which was sung to the plaintive tune of the "Martyrs," and nothing could exceed the effect of devotions offered up in the lonely wild, and broken only by the bleating of sheep, and the wailings of the curlew. The text was chosen from Daniel, chap. iii. v. 17 and 18; and so powerful and well sustained was the appeal which followed that it will be long before the inhabitants of Gatehouse, and many other localities, forget their visit to Auchencloy. The collection made on the spot amounted to £13, and this sum, with the assistance of £5 most kindly remitted to Provost M'Lellan by the right honorable R. Cutlar Fergusson, M. P., in a letter in which he stated that some of his ancestors had suffered for conscience' sake, with other donations, has placed more than £20 in the hands of the Treasurer.—And the proceeds of a sermon, which will no doubt command an extensive sale, will so swell the general fund, that we intend, on our next visit to Galloway, to make a pilgrimage to Auchencloy, and the handsome granite monument which will then be raised to the memory of one of Scotland's worthies, Robert Ferguson. After the services of the day, the company solemnly and slowly departed, and it was easy to gather from their looks and casual observations, sentiments akin to what follows,—If the partition of Poland be "the bloodiest picture in the book of time," one of its brightest pages is the history of the Covenanters. Never was there a more endearing exhibition of piety, patriotism, devotion—of every thing that can dignify and exalt our nature.—When the grey-haired sire was ejected from the pulpit, and forced to flee for his very life—when the bloodhounds of Clavers tracked his wanderings, and left him scarcely a resting place for the sole of his foot—his faithful people never forsook him. Like a second Baptist, they fed him in the wilderness, and received in return the word of life; amidst difficulty and danger, suffering and death, they interposed for his protection, the glorious shield of a nation's affections, which even the tyrant could not pierce; they waited on his ministrations by the hill side; they listened to his prayers to the Lord of Hosts, and felt their hearts palpitating, while their lips devoutly muttered amen; amidst moors and mosses, glens and cleuchs, peopled exclusively by the bittern and curlew: at the rising of the sun or the going down of the same, they raised together the voice of psalms, and tuned their hearts to strains more holy and acceptable to heaven than the most gorgeous swell that ever pealed from the fretted roofs of St. Paul's or St. Peter's. And when the hour of pain and peril arrived—when a temple, not made with hands, was wickedly stigmatised as a den of recusants—when a brutal soldiery confounded religion with law, and proscribed its forms at the drum-head—when young and old, rich and poor, helpless matrons, tender maids, children at school, grandsires treading on the brink of the grave, were persecuted indiscriminately for daring to resist a foreign faith, then were the deeds of Scotland's chivalry eclipsed by the deeds of her peasantry and yeomen. The contest, though unequal, was nobly sustained—the Bible proved more powerful than the sword—Priestly wrath was met by the indomitable spirit of Presbytery until the tyrants retired discomfitted from the field—until wiser counsels obtained in high places, had sealed the triumph of the Covenanted Cause.—*Dumfries Courier, August* 26, 1835.

CAPE OF GOOD HOPE.

NOTES OF THE MONTH.

SAMPLES OF POETRY,

By G. FLETCHER, Wheelwright,

STRAND STREET, CAPE TOWN.

WE are twelve months in arrear with Mr. Fletcher, and are now anxious to close the debt with the close of the year. And yet we can only afford a dividend, and therefore Mr. Fletcher must forgive us in presenting to the public the *partial* effusions of his muse. Indeed, we could not act otherwise. Mr. Fletcher's MS. poetry would occupy a decent octavo volume.

When Lord Byron died, his *mantle* was laid on his grave, and none ventured to take it up except Mr. Fletcher. And he is a lucky dog, for not only did he possess himself of the mantle of the late Lord Byron, but he actually wears it on high-days and holidays. It is made of darkish green cloth, single-breasted, with three rows of knob buttons, richly braided, a standing-up collar, supported by a rich ermine of the darkest colour. This identical mantle of Lord Byron, has been sported by Mr. Fletcher in the Meeting house of St. George's, it

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

appeared on the Great FIRST of the present month; and as Mr. Fletcher is a most loyal subject, he clad himself in the self-same mantle, and went out in obedience to the printed placard, to greet Sir Benjamin on his return from the "long wars." Perhaps some of our readers may be sceptical on this head, and may wonder and wonder *how* the Byron mantle should find its way to this "centre of the civilized world," as Parson Van der Lingen terms it. Well, then, we shall explain how, Mr. Fletcher is the true and legitimate son and heir of that Fletcher who was so long the faithful and favorite attendant of Lord Byron,—the companion of his travels, and his sick and dying bed. The whole of the great lord's wardrobe, with other legacies, were bequeathed to Mr. Fletcher; and the mantle in question is presented to his son, who no sooner receives the precious relique, when, lo, and behold its talismanic Parnassian influence,—— George Fletcher, wheelwright, flatters his pinions in the breezes of Helicon, and alights at the Cape of Good Hope.

Without much more of the introductory, we shall at once come to the samples. Our readers must for themselves decide the question regarding the school of poetry in which Mr. Fletcher is or may be attached. Our opinion is, that he is vastly superior to the Lakers, the Cocknies, and the Jemmy Jessamies, who have divided the heaven of invention among them.

Now then for the lowsing of the minstrel's bag.

First of all, a specimen or two, *complimentary* to Cape Town. Little did we poor prosers imagine that our town could illicit one spark from the temple of the muses. We had always supposed that the purity and benignity of the air, the beauty and number of the rivers, the waving woods, the dasied meads, the flowing fountains were some of the grand essentials for the musings of a vivid imagination. But Mr. Fletcher smashes with a single *spoke* all our home-bred theories. In spite of all our broken bridges, dangerous foot-ways, impregnated canals, unwashed streets, decaying public buildings, and hurricanes of dust, he can discover the sublime and beautiful—find "sermons in stones, and good in every thing."

LINES ON CAPE TOWN.

Thou *charming sweet Town,* the home of content,
I'm destined to live in awhile,
For to leave thee at present, I feel not so bent,
While at rest, and none me beguile.

The above is an extract from a poem of fourteen verses, partly descriptive of Cape Town. But the author, with an eye to business, very properly introduces in one of the stanzas his own Card. *Ex gra.*

I'm a wheelwright by trade, and I know very well
In the beautiful Strand-street I live;
So here in this note I candidly tell
That for works done no credit I'll give.

Concluding verse:

Now the Cape of Good I have found,
Till death I shall here make my stay,
Admiring with pleasure its wonders around,
Table Mountain and old Table Bay.

Now for a specimen of the Heroics!

A PATRIOTIC INVOCATION ON THE CAFFER IRRUPTION.

Down with the Caffers, who our friends have kill'd;
Haste gallant D'Urban, and avenge our foes,
Yes, mighty Chieftain, or they'll not be stilled;
Fly therefore, there's no time to lose.
On to the field, the thick, the short, the thin,
The black, the white, the master, and the man;
Your prize is sure, glory you shall win,
Poetic honours shall your memories fan.

But bard Fletcher shines in the pathetic.

SORROW.

The beginning and ending of a Poet's life.

Think of the sorrow that awaits the bard;
Alas! my friends, I think its very hard;
Be humble in your hopes, nor wish to gain
A poet's fickle, dear bought, hard earn'd fame,
Their paths are thorny, hazardous, and steep,
And the poor poet's often doom'd to weep;
I've seen the man whose sweetly flowing strains
Have spread abroad through far distant plains,
Whose name while England stands is sure to last,
Brought to the grave, untimely, and down-cast;
Remember Byron! view his hapless fate,—
How my heart feels at what I must relate.

The Bard then proceeds to describe with his usual fire, the story of Byron's farewell and parting with his wife and child. Miss Clarmont, the lady's maid, is severely castigated by our author in terms of unmeasured severity.

Come we now to the literature of the Cape. We feel persuaded the Committee of the Public Library will (*through the chair*) convey thanks to our Poet, for his obliging notice of the Public Library Never mind that the poet insinuates that the Library is a *House of Call*,—he had no doubt the *Wheelwright's Arms* in view.

THE CAPE LIBRARY.

A *lofty subject* now employs my pen,
A theme of praise for literary men,
A sketch of thanks for all who thus engage
Their noble minds to please the present age.
Cheerful and blythe the anxious heart will beat
To get at such a stock of books sublime,
For 'tis a most delightful cool retreat,
And pleasant too, thus for to spend our time.
What can I say respecting such a place,
A large grand Library of books to suit us all,
Emblems of virtue,—vice for to erase,
A rendezvous where all good folks may call.

We are now drawing towards a close. It is with deep regret that we cannot use the whole of the lengthy poem entitled a "Walk to the Salt River." It is a sketch from nature, and as we are told—"all a true story." The poet with his friend stroll to the Salt River:

'Twas May, and the sun was retiring to rest,
When I wander'd with William a dearly lov'd friend;
Calm contentment was ours, serene was each breast,
As slowly our footsteps, we ventur'd to bend
By the side of the Salt River stream.

We talk'd of the days and the pleasures long fled.
Of old England and Friends, we've left there behind;
Gave a sigh for the absent, a tear for the dead,
As slowly we sought the mouth for to find
Of the Salt River's long winding stream.

Here an accident befals the two friends,— they are immersed in the stream at the peril of their lives. They hear nothing, save the croak of a disconsolate she-frog, or the cry of a widowed snipe. They struggle for existence, and for the honour and glory of immortal verse they are rescued from a watery grave. They return home like *"drownded rats."*

Then homeward we hie'd, my wife at the door,
Said she ne'er saw me in such a pickle before;
I off with my clothes, and jump'd into bed,
Poor William the same, who was more than half dead;
Drank a glass of French Brandy, and then to me said,
I shall dream of the Salt River Stream.

We are glad to find friend Fletcher's politics decidedly on the right side. That he is a *true blue* can't be denied. Here are several slaps at the Tories:

Their pensions, interests, tythes, and all,
Year after year they hoard it,
And if you for relief do call,
"They say *they can't* afford it."

Now I could tell a different tale,
But will no man molest, Sir;
Unless my present reason fail,
If I do—I'll be blest, Sir.

Again—

The core of corruption, that nurs'd
A peerage, despotic and cruel,
Whose doings had nearly accurs'd
The nation with weak water gruel,
And herrings instead of roast-beef, &c.

THE NEW METROPOLIS OF THE FRONTIER.

Extract of a Letter, dated London, Sept. 2, 1835.

"THE change of the Government Residency from Graham's Town to Uitenhage, seems now pretty certain. The

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

mass of evidence on the question preponderates at least 75 per cent. in favour of the latter, from its continguity to Algoa Bay, and its own rich supplies of water. Mr. Phillips is decidedly in favour of the change, and Capt F. C. Irwin is even more made up on the subject."

DR. LANG.

Dr. Lang, the distinguished Historian of New South Wales, has commenced a Paper, entitled *The Colonist*. The bold truths which the Colonist advances very naturally offends the little-minded, the half-educated, the small fry which usually accompany a Press under slavish subjection. Of the Editor of "The Colonist," the Hobart Town Courier thus observes:

Dr. Lang has shewn himself in his new journal to be a downright literary character, for he not only fills his own large and interesting journal ('the Colonist,') but indirectly a very large portion of all the other newspapers of New South Wales, numerous columns of each being occupied (as we are proud to say here with us) with for the most part vituperative commentary articles upon him.

In the same sense, how much are we indebted to our *Commercial Advertiser*? What should we be without it? And from certain appearances in our political hemisphere, we think we shall stand more in need of the independent services of this Press than heretofore. *Disguise thyself as thou wilt—still, despotism, thou art a bitter draught.*

NEW MARINE VILLA.

We have been much interested by recently viewing Mr. Cannon's Marine Villa at Green Point, now nearly completed. In point of salubrity, we should imagine nothing equal to its situation in the Colony,—and as to water—fresh and salt, boating, fishing, and bathing, it is replete with these advantages. But more than this, the number and fitting up of the rooms, the numerous conveniences, and the style of the architecture stamp it as perfectly unique in its kind. A taste for architecture, like that of any of the fine arts, is at once a source of enjoyment and mark of refinement. And we feel proud that our countryman, Mr. Cannon, has distinguished himself for a series of years in directing this taste.

OCCURRENCES OF THE YEAR.

January.

3. Particulars first published of the out breaking of the "Caffer Irruption." Martial Law proclaimed.

3. "A Manifestion," by *Placard*, promulgated by certain persons at Graham's Town for putting down the freedom of the Press.

3. A band of gallant Hottentots march from the Missionary Institution at Bethelsdorp, to oppose the Caffers, reinforce Graham's Town, and subdue the fears of the inhabitants.

7. His Excellency Sir B. D'Urban embarks in the *Winchester* for Algoa Bay and the Frontier.

7. The 72d Highland Regt. proceeds to the Frontier.

14. Annual Meeting of the Auxiliary, in connection with the London Missionary Society,—Celebrated speech from Waterboer, the Griqua chief.

15. Fourteen Special Magistrates appointed under the new Act for the abolition of Slavery.

15. Subscriptions raised among all classes of religious denominations in town and country for the sufferers by the "Caffer Irruption."

15. A complimentary address from a body of the inhabitants presented to Mr. Fairbairn, the Editor of "The Commercial Advertiser," as "a firm and uncompromising assertor of the Liberties of British Subjects."

February.

7. Fall of the Melbourne Ministry,—restoration of the Wellington and Peel Cabinet.

18. Sixth Anniversary Meeting of the Infant School Society, in the Commercial Hall.

18. First appearance of a wholesome drinkable commodity in Cape Town, entitled "*Collison's Home-brewed.*"

18. A public-spirited Resolution written and subscribed to by Sir John Herschel, F. R. S —other Gentlemen,—and the most independent and principal British Merchants of Cape Town, in favor of the "Commercial Advertiser, on *an attempt* recently made, and still making, to suppress its circulation.*

20. The city of Conception, in Chili, destroyed by an earthquake.

March.

4. Four men drowned by the upsetting of a boat, on their way to the *Lord Hungerford*, in Table Bay.

4. Death of Thos, Pringle, Esq. formerly of the Public Library, Cape Town,—an elegant Poet, an accomplished gentleman, a sincere Christian, and one of the most intrepid and generous defenders of the natural rights of mankind.

21. Capt. Gardiner, and Mr. Berkin, a Polish refugee, arrive at Port Natal to form a settlement.

21. The "Wellington," Capt. Liddel, performs the voyage from Madras to Table Bay in 37 days.

21. Disturbances in Spain and Portugal.

April.

10. Fatal affray in Ireland, on the collection of tithes, at the point of the bayonet,—12 men killed and 8 wounded.

10. A Treatise published in Cape Town, by Mr. E. W. Reitz, a native of the colony, on Merino Sheep.

28. Annual General Meeting of the Subscribers to the Public Library,—Sir Jno. Herschel, F, R. S in the chair.

30. Melancholy death of Lieut. J. Gore, of H. M. S. *Melville*, who perished E. of Algoa Bay, in his gallant attempt to save a seaman who had fallen over board.

May.

9. First intelligence of the defeat of the Peel Administration, by the election of Mr. Abercrombie as Speaker of the House of Commons, instead of Sir C. M. Sutton.

17. Arrival of Lord and Lady Bentinck from Calcutta.

17. Death of Hintza, the Caffer King, who was shot by Mr. G. Souihey, "first in the leg, secondly in the side, and lastly, with such effect, that the upper part of his head was nearly blown to atoms."

June.

The Caffers driven from their territories (upwards of 10,000 square miles of surface) by the British troops, and new stations founded. and named—"Queen Adelaide," "Fort Wellington," "Glen Aberdeen," "Valley of Peel," &c. &c.

* See Literary Gazette, 7th February.

July.

4. The appeal of the Christian Instruction Society to the Public.

4. Juvenile Emigrants in the Colony,—
Males, ...201
Females, ... 48
249

4. A public Meeting in Cape Town and several parts of the Colony, complimenting His Excellency Sir B. D'Urban, and approving his public measures.

August.

5. An attempt to destroy the King of the French by an "Infernal Machine."

18. The first Anniversary Meeting of the "Popular Library." The speeches by Sir John Herschel, (Chairman,) Sir J. Wylde, Rev. Dr. Philip, Mr. Oliphant, and Mr. Fairbairn, published in pamphlet shape.

September.

9 Despatches received from Dr. A Smith, the Conductor of the exploring party to Central Africa, all well, dated June 10th, from Matselakatzi's Kraal, Lat. 25. 24. Long. 27. 47.

19. A new Colonial Bank proposed, and shares taken.

19. A new Cape of Good Hope Insurance Company founded under the most popular auspices.

30. Hurricane at Stellenbosch.—the very trees of his Worship the *Civil Commissioner* torn up by the revolutionary storm, and, according to the Reporter, "the streets presenting a perfect scene of *shipwreck*."

October.

14. Stations of the British Army. (See Advertiser of this day.

14. The Colony threatens to become a heavy charge upon the Country,—upwards of 800 miles in length, with a frontier towards the interior of Africa nearly 900 miles in extent.

November.

4. Letters from Dr. Smith and the Central Expedition. All well on the 26th of July.

11. A smart shock of an Earthquake felt in Cape Town and its neighbourhood.

December.

1. This day kept in remembrance, by various demonstrations of heartfelt rejoicing, as the first Anniversary of the overthrow of Slavery in the Colony—by *the People of England.*

5. The Cape Friendly Society founded.

VANITAS, &c.

Vanitas Vanitatum! Omnia Vanitas. An old woman in a village in the West of England was told one day that the King of Prussia was dead, such a report having arrived when the great Frederic was in the noon-day of his glory. Old Mary lifted up her great slow eyes at the news, and fixing them in the fullness of vacancy upon her informant, replied, "is a! is a!—The Lord ha' marcy!—Well, well! The King of Prussia! And who's he?"—The "Who's he" of this old woman might serve as text for a notable sermon upon ambition. "Who's he" may now be asked of men greater as soldiers in their day than Frederic, or Wellington; greater as discoverers than Sir Isaac, or Sir Humphrey. Who built the Pyramids? Who ate the first Oyster? *Vanitas Vanitatum! Omnia Vanitas.*

BOTANICAL NOTICES.

Mr BOWIE'S RANDIA.

In No. 102, Curtis' Botanical Magazine, the reader will find a description of the *Randia Bowieæna*, so named in compliment to our scientific and generously-disposed countryman, Mr. Bowie, formerly of the Royal Gardens of Kew, and

Digitised by the Department of Library Services in support of open access to information, University of Pretoria, 2024

now of Cape Town. The plant was first discovered by Mr. Bowie, and attached to its description, there is a coloured engraving.

BUCKU AT THE CAPE.

Barosma Crenulata.—Crenulated.
Diosma, or *Bucku.*

The French papers and Pharmacopœias of Europe, continue to describe this plant as most invaluable as a sudorific, diuretic, and tonic. In cases of dangerous cholera it has proved eminently successful.

We beg leave to suggest to the country people, and to our exporters, that the Bucku plant only figures away in the Green Houses of Europe, that it is extremely difficult to propagate by cuttings, that seeds are never produced, and that the Apothecaries are dependent upon the Cape for supplies of this beneficial article.

THE FISCAL PAPERS, No. II.

(*Continued from our last.*)

No. VII.

WAARDE NIEF,—Do me a pleasure by saying to the high authorities, that it would be much better to all parties that Cæsar, who has been scourged and branded, and is sentenced for four years to Robben Island, should be allowed to serve me in irons. What for should I be a sufferer by the loss of four years valuable services?

Your sincere friend,
* *

N. B. I hope the half-aum of Constantia proved to your taste.

"Reply to the Memorial of ————————, praying that his slave Cæsar, who has been condemned to be scourged, branded, and confined on Robben Island, may be restored to labour in irons, in his house service, during the term of his confinement,"

"Memorialist is informed, that His Excellency has been pleased to accede to this request."

Colonial Office, 18——

No. VIII.

Extract from the Prison Book.—Report of this Day's date.

"MENA, female black, confined on the 30th November, 1821, by the Under Sheriff, Mr. Bambergen, for impertinence and wandering at liberty. *June 29th*, 1824."

No. IX.

Cape Town,————————

Your Honor's Worship,
Mr.————————,

SIR,—I am given to hunderstand that you want A book-keeper for the Trunk, and has I have knowthing to do, I Begg to surrendher my own hassidous kwalifikations, hopeing that this umble request will entirely komply with your honor's happrobation.

I am, Sir,
Your dutyful and mt. hble. St.,
P——Mc————

No. X.

———— — *Street,* ————

SIR,—I sincerely repent saying to your Messenger this morning that "I wish the Fiscal and the Burger Senate were all sent to old Nic;" and I trust this sincere apology may be taken in good part, and that you will be pleased to withdraw the prosecution.

Sir, I have the honour to be,
Your most obedient Servant,
* * *

No. XI.

TO HIS MAJESTY'S FISCAL.

Supreme Magistrate and Disposer of Cases, &c.

SIR,—I have done myself the honour, which I humbly beg of you to excuse, but your known humanity insists upon my conceiviug that you will grant me that requisite justice, which my case demands. One William T————, at No. 59,————street, has been guilty of throwing down oyster shells at my door after we were all gone to bed. This is no doubt done with wicked intent to make my neighbours believe that we had oysters for supper, they being at a very high price for the like of me. I would not trouble you, Sir, but the same offence was done against me six months back.

I am your's, Sir,
"*Summons to be issued.*" ————————

No. XII.

REPORT OF THE THIRD UNDER-SHERIFF.

I WENT the rounds last night and early this morning—there was no disorders particular—but on a wall at the rite hand side of the parayde bildins there was a palacard aginst His Magesti's Fishcal, and it bein stuck up with estreordinarry fastnes, I coudn't git of off, so made this copy what follos:

"*Aude Halterem Part hem.*"

On Monday Morning, 8 o'clock, will be published, Facts connected with the stopping of the Press and the Senshorship of the Fishcal.

Commercial Advertiser Office,
30, *Long-market-street.*

THE GOOD OLD TIMES.

GOVERNMENT ADVERTISEMENT.

NOTICE is hereby given, that His Excellency the Lieutenant Governor has been pleased to appoint Mrs. de Man, *Grave-diggeress*, in the room of Mrs. Ley, deceased.

Castle of Good Hope, 12th July, 1811.
By command of His Excellency
The Lieutenant Governor,
H. Alexander, Secretary.

VERY IMPORTANT INTELLIGENCE *FROM SWAN RIVER.*

THE recent intelligence from Swan River, is of the most delightful description, and the civilization of the natives is now next to certainty.

The Perth Gazette of June 6th, announces that the 1st of the same month had inspired the Natives with a profound sense of our superiority. It was the sixth Anniversary of the Establishment of the Colony, and it was ushered in with

"FROLICS AND FESTIVITIES."

There was grinning through horse-collars for a Cheshire cheese, jumping in sacks for a flitch of bacon, running after a soap-tailed pig, racing for smocks, bobbing for oranges in a tub of water, pony races, donkey races, giugling matches, and all sorts of "*good old English amusements.*" Sir *Jeems* Stirling, the Governor, and *mi Lady* Sterling, honoured the festivities with their presence, and appeared highly delighted with this "feast of reason and flow of soul." It is hoped by next year that the flourishing state of the colony will enable the Government to import from France several of its attractions to give additional vigour to these enchanting "frolics."—Mademoiselle Garnerin to ascend in a balloon with a monkey, who will shave himself in presence of the spectators; Madame Sachi to run up a rope, and a troop of Parisian dancers to join in a ring and scream aut *ca ira*, or *vive Henri Quatre!* or *allons, marchons, allons, marchons!*

EVENTS IN DECEMBER CONCLUDED.

CAPT. BACK arrived at Liverpool from the Polar Seas.

O'CONNELL makes the grand tour of England and Scotland, and is hailed with enthusiasm by the people of both countries.

ARRIVAL of the Jupiter in Table Bay, with Lord Aucland on board, the new Governor of India.

THE extensive premises of Mr. T. Tennant, in Long-street, consumed by fire.

INTERNAL commotions and atrocities in America, by the slaveholding part of the community.

30th, HIS EXCELLENCY SIR BENJAMIN D'URBAN arrives in Town, escorted by a respectable number of the inhabitants.

A BIRTH-DAY THOUGHT, ON THE SEA-SHORE.

WHENCE came I? Memory cannot say;
What am I? Knowledge will not shew;
Bound whither? Ah! away, away,
Far as Eternity can go:—
Thy love to win, thy wrath to flee,
O God! Thyself mine helper be.

DEATHS, 1835.

THE Duke of Gloucester; Mr. Heath, R. A.; Mr. Bone, R. A.; Revd. Mr. Malthus; Earl of Darnley; Mr. Prince Hoare; the Emperor of Austria; Earl Nelson; Lord Napier; Revd. Dr. Morrison; Mrs. Hemans; Sir Geo. Tuthill; Mr. R. Sharpe; Mr. Mathias; Dr. Mc'Culloch (Geologist;) Earl of Chatham; Dr Mc'Crie; Dr. Brinkley; Mr. Pocock; Mr. Henry Hunt; Mr Wm. Cobbett; Col. C. H. Somerset; Sir Wm. Blizard; Mr. Coleridge; Revd. Ed. Irving; J. Broadley Wilson; Lord Suffield; Charles Matthews: Joseph Manson, and James Mitchell.

THE BANNER OF THE FREE,

On seeing the British Flag for the first time at Hottentot's Holland, on the 29th December, 1835.

"YE GENTLEMEN OF ENGLAND!"

The glorious flag of England waves gaily on the breeze,
In the four quarters of the world, and on her native seas;
Once seen, as lightning skirts the clouds, before the thunders roar,
As it raged, unassuaged, till the storm of war was o'er.

The signal now of peace and joy, and *freedom* in each land,
Uniting men of thousand shores in one great moral band,
Who march responsive to the hearts of *men* on land or sea;
Thou canst not wave o'er a *slave*,—blessed banner of the *free.*

What, though, on minor things we split, and write each other down,
Yet under *thee* we all *unite*, for Country! Church! and Crown!
For *justice* and for *equal rights*, we stand or fall with thee,
The glorious flag of Liberty!—the banner of the *free!*

It waves in crowded cities vast,—at Home and in each clime;
And in this sweet sequestered vale, now flings its folds sublime,
'Tis a new token that our strath, in Freedom's land must be,
Thou canst not wave *o'er a slave*—blessed banner of the *free!*

Blessed banner of *the free*, blessed banner of *the free*,
Thou canst not wave where breathes a *slave*—
blessed banner of *the free!*

Uitspan Place, December 30th, 1835. * *
