

Control strategies for citrus postharvest diseases

by

Erika Elizabeth Auret

Submitted to the Faculty of Natural and Agricultural Sciences
(Department of Microbiology and Plant Pathology)
UNIVERSITY OF PRETORIA

in partial fulfilment of the requirements for
the degree of MSc

October 2000

ACKNOWLEDGEMENTS

There are many people to thank, as no scientific pursuit is solitary. Along the way, I have been driven, inspired and supported by many people who placed their confidence in me. In particular, I give deep thanks to my parents, Bertus en Lizzie Auret, for their unconditional love and for teaching me to trust in God. My sister Irma Badenhorst, brother Willie Auret and their families, for their friendship and encouragement.

I am also more grateful than I can express to Prof. Lisa Korsten, my supervisor, for inspiring me to believe in science. Prof. Fritz Wehner for valuable comments, especially the humorous remarks keeping my spirits high during the arduous editing phase. My friends Elizabeth de Jager, Kerien van Dyk, Anneliese Heitmann, Jacomina Bloem, Eric and Magdaleen Juckers for their support, motivation and invaluable assistance. Johan Janse van Rensburg and Sandra Lamprecht, my colleagues and friends, whose encouragement prevented this work from languishing somewhere in a dusty filing cabinet.

Finally I wish to thank Letaba Estates (Tzaneen), especially Fanus Swart and Sam Smith, for providing fruit and packhouse facilities for postharvest experiments, as well as assistance and advice, which was always on target.

I dedicate this manuscript to all of you!

Erika E. Auret
